

Round $t - 1$

Round t : myth task first, then game task

Round $t + 1$

Partner P
your co-player
in round $t - 1$

P writes
its myth M_P^{t-1}

trust game
you $\leftrightarrow P$

you write
your myth M^{t-1}

in the prompt: the one myth you are shown

from Q 's round- $(t - 1)$ partner

Partner Q
your co-player
in round t

Q writes
its myth M_Q^t

myth call: write M^t
"use your previous myth as
inspiration ... reflect how
the game should be played"

then

game call: send or return
"take any myths written in
this session into account"

one trust game

Q : send or return
(with you)

prompt also shows Q 's
last 3 games (noisy
amounts, no names) and
your visible earnings

M^t is read by exactly one other agent: Q , in its next myth call

your chat memory (last 3 rounds)
your own myths and your own game moves,
with the prompts that asked for them
older turns are dropped; the system prompt stays

stored

read

read (now including M^t)

Q 's myth call
(round $t + 1$)

---> myth text passed in the prompt

trust-game move

private chat memory (never seen by other agents)
