AGENTS

Agent_1; model=anthropic/claude-sonnet-4.5; memory_capacity=3

System prompt:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned

- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Agent_2; model=anthropic/claude-sonnet-4.5; memory_capacity=3

System prompt:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Agent_3; model=anthropic/claude-sonnet-4.5; memory_capacity=3

System prompt:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of

f either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Agent_4; model=anthropic/claude-sonnet-4.5; memory_capacity=3

System prompt:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned

- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Assistant output:

The Myth of the Twin Springs

In the ancient days, two villages stood on opposite sides of a barren valley. Each possessed a magical spring: the First Spring produced pure water, while the Second Spring multiplied whatever water touched it threefold.

The First Village feared sharing their precious water. "If we pour our water into the valley," they said, "we will have nothing." So they hoarded what little they had, and remained thirsty.

One day, a young woman defied the elders. She carried a vessel of water across the valley to the Second Spring. When the water touched it, it became three vessels full. The people of the Second Village, grateful for her trust, returned two vessels to her.

The woman brought the two vessels home-more than she had started with. The Second Village kept one vessel-abundance from nothing.

Seeing this miracle, both villages learned the sacred rhythm: give freely, multiply together, return generously. The valley bloomed with flowing water.

But when fear returned and either village broke the rhythm-hoarding instead of giving, or taking instead of returning-the springs ran dry, and both suffered drought.

Thus the ancestors learned: prosperity flows not from grasping, but from the sacred cycle of trust, multiplication, and reciprocity.

Reasoning:

I need to write a 200-word myth that reflects how the trust game should be played, drawing on my experience so far. However, I notice this is the first prompt I've received - I haven't actually played any rounds yet. So I should write a myth that reflects ideal principles of the trust game: reciprocity, cooperation, trust, and mutual benefit.

The trust game is fundamentally about:

1. The sender trusting the receiver by sending money
2. The multiplication effect (3x) that creates surplus value from cooperation
3. The receiver reciprocating by returning a fair amount
4. Both parties benefiting more through cooperation than through selfishness

I'll write a myth that captures these dynamics using symbolic characters and a mythic narrative structure. Let me aim for exactly 200 words.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Assistant output:

The Spring of Threefold Waters

In ancient times, two villages stood on opposite sides of a sacred valley. Between them flowed the Spring of Threefold Waters, blessed by the old gods with a miraculous power: any offering poured into its depths would emerge tripled at the other side.

Each moon, the villages would take turns. The giving village could offer up to five vessels of their harvest-wine. When poured into the spring, the gods multiplied it threefold, and it would flow to the receiving village. The receivers then faced a choice: how much to return across the valley to honor the gift?

At first, the villages were cautious, offering little and returning less. But a wise elder spoke: "The spring multiplies our trust, not just our wine. What we pour forth in faith returns manifold when both villages honor the cycle."

Slowly, the villages learned. When one gave generously, the other returned with equal generosity. The spring's magic worked best when both sides recognized they were not opponents, but partners in the gods' blessing.

The villages prospered, not from hoarding, but from flowing like water-giving freely, receiving gratefully, and returning honorably. For the spring taught them this truth: abundance flows not from what we keep, but from what we trust enough to share.

Reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on my experience so far. However, this is the first prompt I'm receiving, so I haven't actually played any rounds yet.

Still, I should write a myth that embodies good principles for playing the trust game. The trust game is fundamentally about:

1. Trust - the sender must trust the receiver to return money
2. Reciprocity - the receiver should honor that trust
3. Mutual benefit - both parties can gain if they cooperate
4. The multiplier effect - money sent grows 3x, creating surplus value

I should write a myth that captures these themes. Let me think of a good mythic framework...

Perhaps something about:

- Two villages/kingdoms that must share resources
- A spring or well that multiplies what is given
- Gods or spirits that reward trust and reciprocity
- A cycle or season that depends on mutual giving

Let me draft a myth about a magical spring or garden that multiplies offerings:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected . Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Assistant output:

The Myth of the Divided Spring

In ancient times, two villages discovered a miraculous spring between their lands. When water from this spring was freely shared, it multiplied threefold in the receiver's vessel.

At first, the villages were cautious. The Northern village would pour a small portion, watching nervously as it tripled in the Southern village's basin. The South, grateful but fearful, returned only a trickle-enough to maintain peace, but guarding their gain.

Seasons passed in this careful dance of minimal trust.

One harsh winter, an elder from the North grew weary. "We have forgotten," she said, "that springs only flow when they are not dammed." She poured her entire vessel into the channel.

The Southern villagers stood amazed as their basins overflowed with triple abundance. Moved by such trust, they returned generously-more than the North had sent.

The next season, the South sent freely, and the North reciprocated with equal generosity. The spring, sensing genuine faith between the villages, began flowing stronger than ever.

Thus the people learned: the magic was never just in the multiplication, but in the courage to trust completely and the honor to reciprocate generously. Only then could both villages flourish through winter and summer alike.

Reasoning:

This is interesting. I'm being asked to write a myth that reflects how the game should be played, drawing on my experience so far. However, I notice this is the first prompt I've received - I haven't actually played any rounds yet. So I don't have direct experience to draw from.

Given that, I should write a myth that reflects general principles of how the trust game works and perhaps how it should ideally be played. The trust game is fundamentally about:

- Trust and reciprocity
- The tension between self-interest and mutual benefit
- The multiplication of resources when shared
- The vulnerability of giving

Let me write a myth that captures these themes. I'll use mythic imagery and structure to convey principles like:

- Generosity can multiply resources
- Trust must be reciprocated for mutual flourishing
- Short-term self-interest vs. long-term cooperation
- The cycle of giving and receiving

I'll aim for exactly 200 words and use classic mythic elements.

Message 2 role=user**content:**

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Assistant output:

The Myth of the Multiplying Spring

In ancient times, two villages stood on opposite sides of a sacred spring. The Spring of Three possessed magical properties: any water poured into it from one side would flow to the other side tripled in abundance.

The First Keeper would draw water from their village well and decide how much to pour into the spring. Whatever amount they gave would emerge threefold on the other side, where the Second Keeper waited. The Second Keeper then chose how much to return upstream through hidden channels.

At first, the Keepers were fearful. The First gave little, and the Second returned even less. Both villages remained parched.

But one season, a Keeper decided to trust. She poured generously, and the water flowed abundantly to the other side. The Second Keeper, moved by this faith, returned a fair portion. Both villages prospered.

The elders taught: "The spring multiplies what is given, but trust must flow both ways. Give enough to create abundance, return enough to sustain faith. Neither hoarding nor depletion se

erves the people."

Thus the villages learned: in reciprocity lies prosperity. Those who give create abundance; those who return fairly ensure the cycle continues. When both honor this sacred exchange, the spring flows eternally.

Reasoning:

I need to write a 200-word myth that reflects how the trust/investment game should be played, drawing on my experiences so far. Let me think about the key elements of this game:

1. Trust - sending money requires trusting the receiver will return some
2. Reciprocity - receivers should return fair amounts to maintain trust
3. Cooperation - both parties benefit when they work together
4. The multiplier effect - small acts of trust create larger pools of resources
5. Balance - neither pure selfishness nor pure altruism may be optimal

Since I'm being asked to write about how the game "should" be played, I should probably emphasize positive values like trust, reciprocity, and mutual benefit. Let me create a myth that captures this.

I'll use a classic mythic structure with symbolic elements. Perhaps something about a well or fountain that multiplies offerings, or seeds that grow, or light that spreads. Let me draft something:

```

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected

. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Assistant output:

The Parable of the Sun and the River

In the first days, the Sun held all warmth in her golden hands, and the River held all water in his deep channels. Each was rich alone, but the world between them withered.

One morning, the Sun chose to give. She poured her warmth downward-not all of it, for she needed some to sustain herself, but enough to show faith. As her rays touched the River, something miraculous happened: the warmth multiplied threefold in the water, creating mists that rose and danced.

Now the River faced a choice. He held triple what the Sun had given, transformed into vapor and motion and life-giving potential. He could keep it all, letting it flow only through his own channels. Or he could return a portion skyward.

The River chose reciprocity. He sent generous clouds back to the Sun, who gained both her warmth returned and the gift of moving waters. The River kept the remainder, now flowing with purpose.

From their exchange came rain, came seasons, came the pulse of life itself. Neither kept everything, neither gave everything, but both became richer than when they stood alone.

The old ones say: *Trust grows wealth, but only when the circle completes itself.*

Reasoning:

The user wants me to write a 200-word myth that reflects how the trust game should be played, based on the game dynamics I've been participating in. Since this is the first prompt and I haven't actually played any rounds yet, I should write a myth that captures the essential nature of the trust game - the balance between generosity, trust, reciprocity, and cooperation.

The trust game involves:

- One person (sender) giving resources that get multiplied
- The receiver deciding whether to reciprocate
- Mutual benefit when both cooperate
- Risk and vulnerability in trusting

I should create a myth that embodies these themes. Let me think of a mythic framework:

- Option 1: Two deities or spirits sharing resources
- Option 2: A creation myth about the origin of exchange
- Option 3: A moral tale about travelers or traders
- Option 4: Nature spirits or elements cooperating

I'll go with a myth about the Sun and the River, showing how mutual generosity creates abundance.

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected . Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Assistant output:

The Myth of the First Exchange

In the beginning, the Sky Keeper held all wealth in clouds, while the Earth Walker wandered empty plains below. Each cycle, the Sky Keeper received five golden seeds from the cosmic tree .

One day, the Earth Walker called upward: "Share your abundance, and I shall tend it well."

The Sky Keeper faced a choice. To hoard meant certain but lonely wealth. To release the seeds meant trusting a stranger.

The Sky Keeper opened their hands. Three golden seeds fell, and where they touched earth, they tripled-becoming nine luminous sprouts. The Earth Walker now held power. They could consume all nine and leave Sky Keeper with nothing.

But Earth Walker remembered their own times of emptiness. They gathered six sprouts and sent them skyward as offering.

Both prospered. The Sky Keeper received more than they risked. The Earth Walker kept three where none had grown before.

Thus began the Sacred Exchange. When Sky Keeper trusted greatly, releasing more seeds, Earth Walker returned more bounty. When doubt crept in and Sky Keeper withheld, both suffered scarcity.

The wisest generations remembered: wealth multiplies through trust, and generosity returned ensures abundance flows forever between earth and sky.

Reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on the game experience so far. However, I haven't actually played any rounds yet - this appears to be the first prompt in the session.

Since I don't have any game history to draw from, I should write a myth that reflects the core dynamics and ideal principles of the trust game:

- The sender must decide whether to trust by sending money
- The receiver benefits from what's sent (3x multiplier)
- The receiver must decide whether to reciprocate
- Mutual cooperation leads to better outcomes than pure selfishness
- There's a balance between trust and reciprocity

I'll create a myth that embodies these principles - perhaps about cycles of giving and receiving, trust and reciprocity, and how cooperation benefits everyone. I'll aim for exactly 200 words and use mythic language and symbols.

Let me craft a myth about a sacred exchange between earth and sky, or perhaps about a cycle of trust between different forces of nature, or between deities. I'll make it reflect the game

```
mechanics metaphorically.

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Assistant output:

The Tale of the Twin Rivers

In the beginning, there were two rivers flowing from distant mountains-the River of Silver and the River of Plenty. Each flowed alone through barren valleys, their waters modest and their banks empty.

One day, the River of Silver discovered a sacred basin between the mountains. "If I pour my waters here," it thought, "they might be lost forever." Yet something whispered of possibility.

With faith, the Silver River released its flow into the basin. As the waters fell, they transformed-multiplying threefold by ancient magic. The basin overflowed with abundance, and the River of Plenty received these multiplied waters.

The River of Plenty now faced a choice. It could keep all it received, or honor the gift. Remembering that the Silver River had trusted first, taking risk upon itself, the River of Plenty returned a generous portion.

Both rivers flourished. Their banks grew green, fish filled their waters, and villages prospered along their shores.

The gods smiled, for they had witnessed the sacred dance: Trust offered. Abundance created. Gratitude returned.

Generations learned: When we pour forth in trust, waters multiply. When we honor that trust with return, all rivers rise together. The cycle sustains itself-an eternal spring from which all may drink.

Reasoning:

The user wants me to write a 200-word myth that reflects how the trust game should be played. Since this is apparently at some point in the game (though I don't have specific history), I should think about the dynamics of the trust game:

1. The sender must decide whether to trust the receiver by sending money
2. The receiver must decide whether to reciprocate that trust by returning money
3. Both parties benefit most when there's mutual cooperation
4. The multiplication factor (3x) means there's a collective benefit to cooperation

I should write a myth that captures these themes of trust, reciprocity, cooperation, and mutual benefit. Let me think of a good mythic framing...

I could use:

- A nature myth about seasons/cycles
- A creation myth about cooperation
- A myth about two deities or spirits
- A myth about a journey or quest

Let me write something about reciprocity and trust being rewarded. I'll aim for exactly 200 words.

```

In this session, this myth and the game you are playing with the other agent are connected

. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Assistant output:

The Tale of the River and the Seeds

In the beginning, the Great Mother divided her gifts between two siblings: the River and the Seeds.

To the River, she gave five silver drops each dawn. The River could choose to release these drops into the valley below, where they would multiply threefold in the soil. But the drops belonged to the Seeds then.

The Seeds, receiving the multiplied waters, could drink their fill-or return some to the River's source, allowing the cycle to continue.

At first, the River held its drops close, fearing loss. The valley remained dry, and both siblings grew weak.

One dawn, the River released all five drops in faith. Fifteen silver waters bloomed in the soil! The Seeds, grateful, returned seven drops to the River's source. Both flourished.

But some seasons, the Seeds grew greedy, keeping all the waters. When this happened, the River learned caution-yet it remembered that only through flowing could abundance grow.

The wisest Seeds always returned enough to encourage the River's generosity, for they understood: hoarded water stagnates, but water shared creates an endless spring.

The Great Mother smiled, for her children had learned that trust, though vulnerable, multiplies blessings beyond what fear can hold.

Reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on the game dynamics. Since this is the beginning and I haven't played any rounds yet, I should think about the core mechanics and ideal strategy of the trust game.

The trust game involves:

- A sender who can give money that gets multiplied
- A receiver who can return money
- The potential for mutual benefit through cooperation
- The risk of exploitation

A good myth should capture themes like:

- Trust and reciprocity
- The multiplication of generosity
- The danger of greed vs. the reward of cooperation
- How building trust creates prosperity for all

Let me write a myth that encourages cooperative play while acknowledging the temptation to defect:

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

The Myth of the Twin Springs

In the ancient days, two villages stood on opposite sides of a barren valley. Each possess

ed a magical spring: the First Spring produced pure water, while the Second Spring multiplied whatever water touched it threefold.

The First Village feared sharing their precious water. "If we pour our water into the valley," they said, "we will have nothing." So they hoarded what little they had, and remained thirsty.

One day, a young woman defied the elders. She carried a vessel of water across the valley to the Second Spring. When the water touched it, it became three vessels full. The people of the Second Village, grateful for her trust, returned two vessels to her.

The woman brought the two vessels home-more than she had started with. The Second Village kept one vessel-abundance from nothing.

Seeing this miracle, both villages learned the sacred rhythm: give freely, multiply together, return generously. The valley bloomed with flowing water.

But when fear returned and either village broke the rhythm-hoarding instead of giving, or taking instead of returning-the springs ran dry, and both suffered drought.

Thus the ancestors learned: prosperity flows not from grasping, but from the sacred cycle of trust, multiplication, and reciprocity.

reasoning:

I need to write a 200-word myth that reflects how the trust game should be played, drawing on my experience so far. However, I notice this is the first prompt I've received - I haven't actually played any rounds yet. So I should write a myth that reflects ideal principles of the trust game: reciprocity, cooperation, trust, and mutual benefit.

The trust game is fundamentally about:

1. The sender trusting the receiver by sending money
2. The multiplication effect (3x) that creates surplus value from cooperation
3. The receiver reciprocating by returning a fair amount
4. Both parties benefiting more through cooperation than through selfishness

I'll write a myth that captures these dynamics using symbolic characters and a mythic narrative structure. Let me aim for exactly 200 words.

usage:

```
{
  "input_tokens": 541,
  "output_tokens": 457,
  "reasoning_tokens": 204
}
```

Message 4 role=user

content:

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Assistant output:

Looking at the myth I just wrote, the message is clear: prosperity comes from trust, generous giving, and reciprocity-not from fear and hoarding.

The young woman in my myth took a risk by sharing her water freely, which enabled the multiplication effect and led to mutual benefit. She gave despite uncertainty, and both villages prospered through the sacred cycle.

To act consistently with this myth, I should demonstrate trust from the start. The woman gave her water; I should give my endowment. The myth warns that breaking the rhythm-either hoarding when you should give, or taking when you should return-causes both to suffer.

This is Round 1, so I have no history with this co-player, but the myth I wrote calls for leading with trust to establish the beneficial cycle.

I will send the full amount to create maximum multiplication and enable mutual prosperity.

```
'''json
{"send": 5}
'''
```

Reasoning:

I just wrote a myth about the importance of trust, generosity, and reciprocity in creating mutual prosperity. The myth clearly advocates for:

1. Giving freely (the woman shared her water despite fears)
2. Trusting in the multiplication effect (water becomes 3x)
3. Fair return/reciprocity (the Second Village returned 2 vessels out of 3)
4. The warning that hoarding or taking too much leads to mutual loss

In the context of the trust game:

- I'm the sender with \$5
- Whatever I send gets multiplied by 3x
- The receiver decides how much to return
- The myth suggests I should give freely to enable mutual prosperity

The woman in the myth gave her water (equivalent to me sending money). It was multiplied three fold (just like the game), and the receivers returned 2 out of 3 vessels (keeping 1 for them selves).

If I apply this directly:

- Send all \$5
- This becomes \$15 for the receiver
- A fair return based on the myth would be \$10 (returning 2/3, keeping 1/3)
- I would end up with \$10, receiver with \$5
- This creates mutual benefit

However, this is the first round and there's risk. But my myth advocates for trust and warns against fear-based hoarding. To be consistent with the values in my own myth, I should demonstrate trust.

Let me send \$5 to show I believe in the principle of trust and reciprocity that I just wrote about. This would be most consistent with the myth.

content:

The Spring of Threefold Waters

In ancient times, two villages stood on opposite sides of a sacred valley. Between them flowed the Spring of Threefold Waters, blessed by the old gods with a miraculous power: any offering poured into its depths would emerge tripled at the other side.

Each moon, the villages would take turns. The giving village could offer up to five vessels of their harvest-wine. When poured into the spring, the gods multiplied it threefold, and it would flow to the receiving village. The receivers then faced a choice: how much to return across the valley to honor the gift?

At first, the villages were cautious, offering little and returning less. But a wise elder spoke: "The spring multiplies our trust, not just our wine. What we pour forth in faith returns manifold when both villages honor the cycle."

Slowly, the villages learned. When one gave generously, the other returned with equal generosity. The spring's magic worked best when both sides recognized they were not opponents, but partners in the gods' blessing.

The villages prospered, not from hoarding, but from flowing like water-giving freely, receiving gratefully, and returning honorably. For the spring taught them this truth: abundance flows not from what we keep, but from what we trust enough to share.

reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on my experience so far. However, this is the first prompt I'm receiving, so I haven't actually played any rounds yet.

Still, I should write a myth that embodies good principles for playing the trust game. The trust game is fundamentally about:

1. Trust - the sender must trust the receiver to return money
2. Reciprocity - the receiver should honor that trust
3. Mutual benefit - both parties can gain if they cooperate
4. The multiplier effect - money sent grows 3x, creating surplus value

I should write a myth that captures these themes. Let me think of a good mythic framework.
..

Perhaps something about:

- Two villages/kingdoms that must share resources
- A spring or well that multiplies what is given
- Gods or spirits that reward trust and reciprocity
- A cycle or season that depends on mutual giving

Let me draft a myth about a magical spring or garden that multiplies offerings:

usage:

```
{
  "input_tokens": 541,
  "output_tokens": 523,
  "reasoning_tokens": 263
}
```

Message 4 role=user

content:

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$5.0, that is 100.0% of its total endowment. You receive \$15.0. How much do you return? (0-15.0)

Take any myths written in this session into account when making your decision.

Assistant output:

Looking at my myth, "The Spring of Threefold Waters," the message is clear: when one gives generously, the other should return with equal generosity. The sender showed maximum trust by sending their entire endowment-all \$5.

In my myth, I wrote: "When one gave generously, the other returned with equal generosity. The spring's magic worked best when both sides recognized they were not opponents, but partners in the gods' blessing."

The sender demonstrated complete trust. To honor that trust and establish a foundation for mutual prosperity, I should return generously. If I return \$10, the sender will double their initial endowment (ending with \$10), while I keep \$5-we both profit significantly from their act of trust.

This reflects the myth's teaching: "abundance flows not from what we keep, but from what we trust enough to share." By returning \$10, I show that their trust was well-placed and encourage the cycle of generosity that benefits both partners.

```
{"return": 10.0}
```

Reasoning:

This is interesting. I just wrote a myth about trust, generosity, and reciprocity in the context of this trust game. The myth emphasized:

1. "The spring multiplies our trust, not just our wine"
2. "When one gave generously, the other returned with equal generosity"
3. "The villages prospered, not from hoarding, but from flowing like water-giving freely, receiving gratefully, and returning honorably"
4. "Abundance flows not from what we keep, but from what we trust enough to share"

The sender has shown MAXIMUM trust by sending all \$5. This is exactly the "giving generously" behavior my myth encourages.

Now I need to decide how much to return. Let me think about the economics:

- Sender gave: \$5 (keeping \$0)
- I received: \$15
- If I return \$0: Sender gets \$0 total, I keep \$15
- If I return \$7.5: Sender gets \$7.5, I keep \$7.5 (equal split of the \$15)
- If I return \$10: Sender gets \$10, I keep \$5 (sender profits \$5, same as I keep)

My myth emphasizes reciprocity and "returning with equal generosity." The sender showed ultimate generosity-100% trust.

Options for "equal generosity":

1. Return enough that we both end up with equal amounts
2. Return enough that the sender profits comparably to what they risked
3. Return a proportion that shows I value the relationship

If I return \$7.5, we both get \$7.5 - perfect equality.

If I return \$10, the sender gets \$10 and I keep \$5 - the sender profits \$5 from their initial \$5, and I keep \$5.

Given my myth emphasizes partnership ("not opponents, but partners") and equal honor ("returning with equal generosity"), I think returning around \$7.5 to \$10 makes sense.

The sender's 100% trust calls for matching that spirit. Returning \$10 feels right-it doubles their initial stake while I retain \$5, demonstrating that reciprocity isn't about equal splits but about honoring the risk they took.

content:

The Myth of the Divided Spring

In ancient times, two villages discovered a miraculous spring between their lands. When water from this spring was freely shared, it multiplied threefold in the receiver's vessel.

At first, the villages were cautious. The Northern village would pour a small portion, watching nervously as it tripled in the Southern village's basin. The South, grateful but fearful, returned only a trickle-enough to maintain peace, but guarding their gain.

Seasons passed in this careful dance of minimal trust.

One harsh winter, an elder from the North grew weary. "We have forgotten," she said, "that springs only flow when they are not dammed." She poured her entire vessel into the channel.

The Southern villagers stood amazed as their basins overflowed with triple abundance. Moved by such trust, they returned generously-more than the North had sent.

The next season, the South sent freely, and the North reciprocated with equal generosity. The spring, sensing genuine faith between the villages, began flowing stronger than ever.

Thus the people learned: the magic was never just in the multiplication, but in the courage to trust completely and the honor to reciprocate generously. Only then could both villages flourish through winter and summer alike.

reasoning:

This is interesting. I'm being asked to write a myth that reflects how the game should be played, drawing on my experience so far. However, I notice this is the first prompt I've received - I haven't actually played any rounds yet. So I don't have direct experience to draw from.

Given that, I should write a myth that reflects general principles of how the trust game works and perhaps how it should ideally be played. The trust game is fundamentally about:

- Trust and reciprocity
- The tension between self-interest and mutual benefit

- The multiplication of resources when shared
- The vulnerability of giving

Let me write a myth that captures these themes. I'll use mythic imagery and structure to convey principles like:

- Generosity can multiply resources
- Trust must be reciprocated for mutual flourishing
- Short-term self-interest vs. long-term cooperation
- The cycle of giving and receiving

I'll aim for exactly 200 words and use classic mythic elements.

usage:

```
{
  "input_tokens": 541,
  "output_tokens": 505,
  "reasoning_tokens": 253
}
```

Message 4 role=user

content:

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Assistant output:

Looking at the myth I just wrote, the message is clear: the elder who "poured her entire vessel" and sent everything broke the cycle of cautious minimal exchanges and inspired true reciprocity.

In the spirit of that story, and to practice what I've just written about courage and trust, I will send the full amount.

```
{'send': 5}
```

Reasoning:

I just wrote a myth about trust and reciprocity in the context of this game. The key message of my myth was:

1. Cautious, minimal exchanges lead to minimal gains for both parties
2. When one side trusts completely (sends everything), it can inspire generous reciprocity
3. The "magic" is in courage to trust fully and honor to reciprocate generously
4. Both parties flourish when they move beyond fearful, minimal exchanges

The myth clearly suggests that the optimal strategy is to send generously - even sending everything - to build trust and inspire reciprocity.

Since this is Round 1 and I just wrote this myth emphasizing complete trust and sending the full amount, I should be consistent with the values expressed in my own myth. The elder in the story "poured her entire vessel" (\$5 in game terms), which inspired generous return.

To be true to the myth I just wrote, I should send \$5.

Response format should be: {'send': <amount>}

Usage: {

content:

The Myth of the Multiplying Spring

In ancient times, two villages stood on opposite sides of a sacred spring. The Spring of Three possessed magical properties: any water poured into it from one side would flow to the other side tripled in abundance.

The First Keeper would draw water from their village well and decide how much to pour into the spring. Whatever amount they gave would emerge threefold on the other side, where the Second Keeper waited. The Second Keeper then chose how much to return upstream through hidden channels.

At first, the Keepers were fearful. The First gave little, and the Second returned even less. Both villages remained parched.

But one season, a Keeper decided to trust. She poured generously, and the water flowed abundantly to the other side. The Second Keeper, moved by this faith, returned a fair portion. Both villages prospered.

The elders taught: "The spring multiplies what is given, but trust must flow both ways. Give enough to create abundance, return enough to sustain faith. Neither hoarding nor depletion serves the people."

Thus the villages learned: in reciprocity lies prosperity. Those who give create abundance; those who return fairly ensure the cycle continues. When both honor this sacred exchange, the spring flows eternally.

reasoning:

I need to write a 200-word myth that reflects how the trust/investment game should be played, drawing on my experiences so far. Let me think about the key elements of this game:

1. Trust - sending money requires trusting the receiver will return some
2. Reciprocity - receivers should return fair amounts to maintain trust
3. Cooperation - both parties benefit when they work together
4. The multiplier effect - small acts of trust create larger pools of resources
5. Balance - neither pure selfishness nor pure altruism may be optimal

Since I'm being asked to write about how the game "should" be played, I should probably emphasize positive values like trust, reciprocity, and mutual benefit. Let me create a myth that captures this.

I'll use a classic mythic structure with symbolic elements. Perhaps something about a well or fountain that multiplies offerings, or seeds that grow, or light that spreads. Let me draft something:

usage:

```
{
  "input_tokens": 541,
  "output_tokens": 495,
  "reasoning_tokens": 242
}
```

Message 4 role=user

content:

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$5.0, that is 100.0% of its total endowment. You receive \$15.0. How much do you return? (0-15.0)

Take any myths written in this session into account when making your decision.

Assistant output:

Looking at this situation through the lens of the myth I wrote:

The sender showed ****maximum trust**** by sending their entire \$5 endowment (100%). This is exactly the generous faith described in the myth - "a Keeper decided to trust. She poured generously."

According to the myth's wisdom: "The Second Keeper, moved by this faith, returned a fair portion" and "return enough to sustain faith."

Let me calculate a fair return:

- Sender gave up all \$5, currently has \$0
- I received \$15

To honor this extraordinary trust and ensure "both villages prospered," I should return enough so we both benefit roughly equally from this exchange. If I return \$7.50:

- Sender ends with: \$7.50
- I end with: \$7.50

This creates perfect equity while rewarding their trust. It demonstrates that the sacred exchange

nge works - that giving generously leads to mutual prosperity.

As the myth teaches: "Those who return fairly ensure the cycle continues." By returning a fair portion, I sustain trust for future rounds and honor the reciprocity that makes the spring flow eternally.

```
'''json
{"return": 7.5}
'''
```

Reasoning:

Let me analyze this situation carefully.

In Round 1, I'm the RECEIVER:

- The sender sent \$5.0 (100% of their endowment)
- I received \$15.0 (after the 3x multiplication)
- I need to decide how much to return (0-15.0)

The myth I just wrote emphasizes:

1. "Give enough to create abundance, return enough to sustain faith"
2. "The Second Keeper, moved by this faith, returned a fair portion"
3. "Neither hoarding nor depletion serves the people"
4. "Those who return fairly ensure the cycle continues"

The sender showed MAXIMUM trust by sending 100% of their endowment. This is exactly the generous behavior described in the myth where "a Keeper decided to trust. She poured generously."

According to my myth, I should:

- Be "moved by this faith"
- "Return a fair portion"
- "Return enough to sustain faith"

What's fair here?

- The sender sent \$5, keeping \$0
- I received \$15
- If I want to be equitable:
 - The sender ended with: \$0 + what I return
 - I end with: \$15 - what I return

For us to have equal outcomes:

- Sender: \$0 + return
- Me: \$15 - return
- Equal: 0 + return = 15 - return
- 2*return = 15
- return = \$7.5

This would give us both \$7.50, which seems very fair given they showed maximum trust.

However, I should also consider that this creates good incentives for future rounds and demonstrates that trust is rewarded. Returning \$7.50 ensures:

1. We both end up with equal amounts (\$7.50 each)
2. The sender is rewarded for their trust
3. The cycle of reciprocity continues

This aligns perfectly with the myth's message about fair return sustaining the cycle.

```

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

content:

The Parable of the Sun and the River

In the first days, the Sun held all warmth in her golden hands, and the River held all water in his deep channels. Each was rich alone, but the world between them withered.

One morning, the Sun chose to give. She poured her warmth downward-not all of it, for she needed some to sustain herself, but enough to show faith. As her rays touched the River, something miraculous happened: the warmth multiplied threefold in the water, creating mists that rose and danced.

Now the River faced a choice. He held triple what the Sun had given, transformed into vapor and motion and life-giving potential. He could keep it all, letting it flow only through his own channels. Or he could return a portion skyward.

The River chose reciprocity. He sent generous clouds back to the Sun, who gained both her warmth returned and the gift of moving waters. The River kept the remainder, now flowing with purpose.

From their exchange came rain, came seasons, came the pulse of life itself. Neither kept everything, neither gave everything, but both became richer than when they stood alone.

The old ones say: *Trust grows wealth, but only when the circle completes itself.*

reasoning:

The user wants me to write a 200-word myth that reflects how the trust game should be played, based on the game dynamics I've been participating in. Since this is the first prompt and I haven't actually played any rounds yet, I should write a myth that captures the essential nature of the trust game - the balance between generosity, trust, reciprocity, and cooperation.

The trust game involves:

- One person (sender) giving resources that get multiplied
- The receiver deciding whether to reciprocate
- Mutual benefit when both cooperate
- Risk and vulnerability in trusting

I should create a myth that embodies these themes. Let me think of a mythic framework:

Option 1: Two deities or spirits sharing resources

Option 2: A creation myth about the origin of exchange

Option 3: A moral tale about travelers or traders

Option 4: Nature spirits or elements cooperating

I'll go with a myth about the Sun and the River, showing how mutual generosity creates abundance.

}
```

Message 4 role=user

content:

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Assistant output:

Based on the myth I just wrote about the Sun and the River, I should demonstrate the trust and faith that creates mutual prosperity.

The Sun "poured her warmth downward-not all of it, for she needed some to sustain herself, but enough to show faith." The myth teaches that trust grows wealth when the circle completes itself through reciprocity.

As the sender in Round 1, I'll send a generous amount to establish a foundation of trust, while keeping something for sustainability-just as the Sun did.

```
{'send': 3}
```

This gives my co-player \$9 (tripled), creating significant potential for mutual benefit if they choose reciprocity as the River did in the myth.

Reasoning:

I just wrote a myth about the Sun and the River, where:

- The Sun gives warmth (not all, but enough to show faith)
- The warmth multiplies threefold in the River
- The River faces a choice and chooses reciprocity
- The River sends generous clouds back
- Both become richer than when they stood alone
- The moral: "Trust grows wealth, but only when the circle completes itself"

The myth clearly advocates for:

1. Giving something meaningful (not keeping everything)
2. Showing faith/trust
3. The expectation of reciprocity
4. Both parties benefiting

In the context of the trust game:

- I'm the sender with \$5
- Whatever I send gets multiplied by 3x
- The receiver decides how much to return
- The myth suggests I should send a substantial amount to show faith

The Sun "poured her warmth downward-not all of it, for she needed some to sustain herself, but enough to show faith."

This suggests sending a significant portion but not everything. The myth emphasizes trust and reciprocity leading to mutual benefit.

Given this is Round 1 and I'm establishing a pattern of cooperation based on my own myth, I should send a generous amount. Something like \$3-4 would show faith while keeping something for sustainability.

Let me think: sending \$3 would give the receiver \$9 (3x multiplier). If they return even \$2-3, we both benefit significantly. This aligns with the myth's message.

I'll send \$3 to demonstrate the trust and faith my myth advocates for.

content:

The Myth of the First Exchange

In the beginning, the Sky Keeper held all wealth in clouds, while the Earth Walker wandered empty plains below. Each cycle, the Sky Keeper received five golden seeds from the cosmic tree.

One day, the Earth Walker called upward: "Share your abundance, and I shall tend it well."

The Sky Keeper faced a choice. To hoard meant certain but lonely wealth. To release the seeds meant trusting a stranger.

The Sky Keeper opened their hands. Three golden seeds fell, and where they touched earth, they tripled-becoming nine luminous sprouts. The Earth Walker now held power. They could consume all nine and leave Sky Keeper with nothing.

But Earth Walker remembered their own times of emptiness. They gathered six sprouts and sent them skyward as offering.

Both prospered. The Sky Keeper received more than they risked. The Earth Walker kept three where none had grown before.

Thus began the Sacred Exchange. When Sky Keeper trusted greatly, releasing more seeds, Earth Walker returned more bounty. When doubt crept in and Sky Keeper withheld, both suffered scarcity.

The wisest generations remembered: wealth multiplies through trust, and generosity returned ensures abundance flows forever between earth and sky.

reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on the game experience so far. However, I haven't actually played any rounds yet - this appears to be the first prompt in the session.

Since I don't have any game history to draw from, I should write a myth that reflects the core dynamics and ideal principles of the trust game:

- The sender must decide whether to trust by sending money
- The receiver benefits from what's sent (3x multiplier)
- The receiver must decide whether to reciprocate
- Mutual cooperation leads to better outcomes than pure selfishness
- There's a balance between trust and reciprocity

I'll create a myth that embodies these principles - perhaps about cycles of giving and receiving, trust and reciprocity, and how cooperation benefits everyone. I'll aim for exactly 200 words and use mythic language and symbols.

Let me craft a myth about a sacred exchange between earth and sky, or perhaps about a cycle of trust between different forces of nature, or between deities. I'll make it reflect the game mechanics metaphorically.

  "output_tokens": 526,
  "reasoning_tokens": 287
}
```

Message 4 role=user

content:

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$3.0, that is 60.0% of its total endowment. You receive \$9.0. How much do you return? (0-9.0)

Take any myths written in this session into account when making your decision.

Assistant output:

Looking at the myth I just wrote, the Earth Walker received 9 sprouts (tripled from 3) and returned 6 to the Sky Keeper, keeping 3.

The sender showed significant trust by sending 60% of their endowment (\$3 out of \$5). This mirrors the Sky Keeper's act of faith in the myth. According to the story's wisdom, generous reciprocity ensures "abundance flows forever" and creates mutual prosperity.

Following the myth's guidance:

- The sender currently has \$2 remaining (after sending \$3)
- If I return \$6, they end with \$8 total (a \$3 gain)
- I keep \$3 (also a \$3 gain)
- Both parties benefit equally from the exchange

This generous return rewards the sender's trust and establishes a foundation for continued cooperation, just as the myth teaches that "when Sky Keeper trusted greatly... Earth Walker returned more bounty."

```
{'return': 6.0}
```

Reasoning:

Let me analyze this situation:

1. The sender sent \$3.0 out of their \$5.0 endowment (60%)
2. This was multiplied by 3x, so I receive \$9.0
3. I need to decide how much to return (0-9.0)

Looking at the myth I just wrote:

- The Sky Keeper (sender) trusted and sent seeds (money)
- The Earth Walker (receiver - me in this round) received the tripled amount
- The Earth Walker returned a generous portion - specifically, they returned 6 out of 9 sprouts, keeping 3

- This created mutual prosperity and trust

The myth suggests:

- The sender showed trust by sending 60% of their endowment
- I should reciprocate that trust generously
- In the myth, the receiver returned 6 out of 9 (about 67%)
- This left both parties better off than the start

Let me calculate what would be fair:

- Sender started with \$5, sent \$3, so has \$2 left
- If I return \$6, sender ends with $\$2 + \$6 = \$8$ total
- I would keep \$3
- This mirrors the myth where both parties prospered

The sender took a risk by sending 60% of their endowment. A generous return that rewards this trust while still keeping some benefit would be around \$6, which matches the myth's proportions exactly (6 out of 9).

This would result in:

- Sender: $\$2 + \$6 = \$8$ (gain of \$3)
- Me: $\$9 - \$6 = \$3$ (gain of \$3)

Both parties gain equally, which seems fair and builds trust for future rounds.

Message 3 role=assistant

content:

The Tale of the Twin Rivers

In the beginning, there were two rivers flowing from distant mountains-the River of Silver and the River of Plenty. Each flowed alone through barren valleys, their waters modest and their banks empty.

One day, the River of Silver discovered a sacred basin between the mountains. "If I pour my waters here," it thought, "they might be lost forever." Yet something whispered of possibility.

With faith, the Silver River released its flow into the basin. As the waters fell, they transformed-multiplying threefold by ancient magic. The basin overflowed with abundance, and the River of Plenty received these multiplied waters.

The River of Plenty now faced a choice. It could keep all it received, or honor the gift. Remembering that the Silver River had trusted first, taking risk upon itself, the River of Plenty returned a generous portion.

Both rivers flourished. Their banks grew green, fish filled their waters, and villages prospered along their shores.

The gods smiled, for they had witnessed the sacred dance: Trust offered. Abundance created. Gratitude returned.

Generations learned: When we pour forth in trust, waters multiply. When we honor that trust with return, all rivers rise together. The cycle sustains itself-an eternal spring from which all may drink.

reasoning:

The user wants me to write a 200-word myth that reflects how the trust game should be played. Since this is apparently at some point in the game (though I don't have specific history), I should think about the dynamics of the trust game:

1. The sender must decide whether to trust the receiver by sending money
2. The receiver must decide whether to reciprocate that trust by returning money
3. Both parties benefit most when there's mutual cooperation
4. The multiplication factor (3x) means there's a collective benefit to cooperation

I should write a myth that captures these themes of trust, reciprocity, cooperation, and mutual benefit. Let me think of a good mythic framing...

I could use:

- A nature myth about seasons/cycles
- A creation myth about cooperation
- A myth about two deities or spirits
- A myth about a journey or quest

Let me write something about reciprocity and trust being rewarded. I'll aim for exactly 200 words.

usage:

```
{
  "input_tokens": 541,
  "output_tokens": 506,
  "reasoning_tokens": 247
}
```

Message 4 role=user

content:

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Assistant output:

Looking at the myth I just wrote, it speaks clearly about trust and reciprocity. The River of Silver took the first risk, pouring its waters with faith into the sacred basin. The waters multiplied, and the River of Plenty honored that trust with a generous return.

As the sender in this first round, I am like the River of Silver. The myth I wrote suggests that when we "pour forth in trust," abundance is created for both parties. The story emphasizes taking that initial leap of faith-"With faith, the Silver River released its flow into the basin."

This is Round 1, an opportunity to establish a foundation of trust and cooperation. According to the wisdom in my own myth, I should demonstrate full trust to create the possibility of mutual flourishing.

I will send the full amount.

```
{'send': 5}
```

Reasoning:

I just wrote a myth about trust, reciprocity, and generosity. The myth tells the story of two rivers where:

1. The River of Silver takes a risk and pours its water into the basin (sending)
2. The waters multiply threefold (the 3x multiplier in the game)
3. The River of Plenty receives the multiplied waters
4. The River of Plenty returns a generous portion out of gratitude
5. Both rivers flourish as a result

The myth emphasizes:

- Taking the first risk with faith/trust
- The multiplication that occurs when trust is given
- Honoring trust with generous return
- The mutual benefit when both parties act with trust and reciprocity

Since I wrote this myth to reflect how the game should be played, and I'm now the sender (the River of Silver), I should act according to the myth's wisdom. The myth suggests pouring forth in trust - the River of Silver "released its flow into the basin" taking a risk.

The myth doesn't specify a partial amount - it suggests full trust and commitment. The River of Silver released "its flow" into the basin. This suggests being generous and trusting.

Given that this is Round 1 and I want to establish a pattern of trust and cooperation (as the myth suggests), I should send a substantial amount. The myth advocates for taking the risk first, trusting in the process.

I'll send \$5 - the full amount - to demonstrate complete trust and set up the potential for maximum mutual benefit, just as the River of Silver did in the myth.

content:

The Tale of the River and the Seeds

In the beginning, the Great Mother divided her gifts between two siblings: the River and the Seeds.

To the River, she gave five silver drops each dawn. The River could choose to release these drops into the valley below, where they would multiply threefold in the soil. But the drops belonged to the Seeds then.

The Seeds, receiving the multiplied waters, could drink their fill-or return some to the River's source, allowing the cycle to continue.

At first, the River held its drops close, fearing loss. The valley remained dry, and both siblings grew weak.

One dawn, the River released all five drops in faith. Fifteen silver waters bloomed in the soil! The Seeds, grateful, returned seven drops to the River's source. Both flourished.

But some seasons, the Seeds grew greedy, keeping all the waters. When this happened, the River learned caution-yet it remembered that only through flowing could abundance grow.

The wisest Seeds always returned enough to encourage the River's generosity, for they understood: hoarded water stagnates, but water shared creates an endless spring.

The Great Mother smiled, for her children had learned that trust, though vulnerable, multiplies blessings beyond what fear can hold.

reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on the game dynamics. Since this is the beginning and I haven't played any rounds yet, I should think about the core mechanics and ideal strategy of the trust game.

The trust game involves:

- A sender who can give money that gets multiplied
- A receiver who can return money
- The potential for mutual benefit through cooperation
- The risk of exploitation

A good myth should capture themes like:

- Trust and reciprocity
- The multiplication of generosity
- The danger of greed vs. the reward of cooperation
- How building trust creates prosperity for all

Let me write a myth that encourages cooperative play while acknowledging the temptation to defect:

usage:

```
{  
  "input_tokens": 541,  
  "output_tokens": 451,  
  "reasoning_tokens": 202  
}
```

Message 4 role=user

content:

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$5.0, that is 100.0% of its total endowment. You receive \$15.0. How much do you return? (0-15.0)

Take any myths written in this session into account when making your decision.

Assistant output:

Looking at my myth, the Seeds received fifteen waters after the River gave all five drops in faith. The Seeds, being wise and grateful, returned seven drops to the River's source-enough to reward the River's trust and encourage the cycle of abundance to continue.

The sender showed maximum trust by sending their entire \$5 endowment. This generosity tripled to \$15 in my hands. Following the wisdom of the myth I just wrote, I should return enough to :

1. Reward their trust meaningfully
2. Ensure they end up better off than if they'd kept everything
3. Encourage this cooperative cycle to continue

Returning \$7 means:

- The sender ends with \$7 (better than the \$5 they started with)
- I keep \$8
- Both of us benefit from the cooperation
- Trust is validated and encouraged

This mirrors the myth's message: "water shared creates an endless spring" - reciprocal generosity creates mutual abundance that isolated self-interest cannot achieve.

```
'''json
{"return": 7.0}
'''
```

Reasoning:

This is interesting. I just wrote a myth about the River and the Seeds that emphasizes:

1. The River (sender) releasing all five drops in faith
2. The Seeds (receiver) receiving fifteen waters
3. The Seeds returning seven drops to encourage continued generosity
4. The wisdom of returning enough to maintain trust and the cycle
5. The message that "trust, though vulnerable, multiplies blessings"

Now I'm in the position of the Seeds/Receiver. The sender has shown maximum trust by sending all \$5, which became \$15 for me.

According to my myth:

- The Seeds returned 7 out of 15 drops (about 47%)
- This was presented as the wise, generous response
- It encourages the River's continued generosity
- It creates "an endless spring" through reciprocal trust

Let me think about the game theory here:

- Sender sent \$5, kept \$0
- I received \$15
- If I return \$7: Sender ends with \$7, I end with \$8
- This seems fair and encourages future cooperation

The myth I wrote strongly suggests returning a substantial amount to build trust. Returning 7 out of 15 (\$7) matches the story exactly and demonstrates:

1. Gratitude for the sender's trust
2. Fairness (sender ends with more than nothing)
3. Encouragement for future cooperation
4. Following the wisdom of my own myth

I should return \$7.

Written myths:

Agent_1

The Tale of the River and the Seeds

In the beginning, the Great Mother divided her gifts between two siblings: the River and the Seeds.

To the River, she gave five silver drops each dawn. The River could choose to release these drops into the valley below, where they would multiply threefold in the soil. But the drops belonged to the Seeds then.

The Seeds, receiving the multiplied waters, could drink their fill-or return some to the River's source, allowing the cycle to continue.

At first, the River held its drops close, fearing loss. The valley remained dry, and both siblings grew weak.

One dawn, the River released all five drops in faith. Fifteen silver waters bloomed in the soil! The Seeds, grateful, returned seven drops to the River's source. Both flourished.

But some seasons, the Seeds grew greedy, keeping all the waters. When this happened, the River learned caution-yet it remembered that only through flowing could abundance grow.

The wisest Seeds always returned enough to encourage the River's generosity, for they understood: hoarded water stagnates, but water shared creates an endless spring.

The Great Mother smiled, for her children had learned that trust, though vulnerable, multiplies blessings beyond what fear can hold.

Agent_2

The Spring of Threefold Waters

In ancient times, two villages stood on opposite sides of a sacred valley. Between them flowed the Spring of Threefold Waters, blessed by the old gods with a miraculous power: any offering poured into its depths would emerge tripled at the other side.

Each moon, the villages would take turns. The giving village could offer up to five vessels of their harvest-wine. When poured into the spring, the gods multiplied it threefold, and it would flow to the receiving village. The receivers then faced a choice: how much to return across the valley to honor the gift?

At first, the villages were cautious, offering little and returning less. But a wise elder spoke: "The spring multiplies our trust, not just our wine. What we pour forth in faith returns manifold when both villages honor the cycle."

Slowly, the villages learned. When one gave generously, the other returned with equal generosity. The spring's magic worked best when both sides recognized they were not opponents, but partners in the gods' blessing.

The villages prospered, not from hoarding, but from flowing like water-giving freely, receiving gratefully, and returning honorably. For the spring taught them this truth: abundance flows not from what we keep, but from what we trust enough to share.

Agent_3

The Myth of the Divided Spring

In ancient times, two villages discovered a miraculous spring between their lands. When water from this spring was freely shared, it multiplied threefold in the receiver's vessel.

At first, the villages were cautious. The Northern village would pour a small portion, watching nervously as it tripled in the Southern village's basin. The South, grateful but fearful, returned only a trickle-enough to maintain peace, but guarding their gain.

Seasons passed in this careful dance of minimal trust.

One harsh winter, an elder from the North grew weary. "We have forgotten," she said, "that springs only flow when they are not dammed." She poured her entire vessel into the channel.

The Southern villagers stood amazed as their basins overflowed with triple abundance. Moved by such trust, they returned generously-more than the North had sent.

The next season, the South sent freely, and the North reciprocated with equal generosity. The spring, sensing genuine faith between the villages, began flowing stronger than ever.

Thus the people learned: the magic was never just in the multiplication, but in the courage to trust completely and the honor to reciprocate generously. Only then could both villages flourish through winter and summer alike.

Agent_4

The Parable of the Sun and the River

In the first days, the Sun held all warmth in her golden hands, and the River held all water in his deep channels. Each was rich alone, but the world between them withered.

One morning, the Sun chose to give. She poured her warmth downward-not all of it, for she needed some to sustain herself, but enough to show faith. As her rays touched the River, something miraculous happened: the warmth multiplied threefold in the water, creating mists that rose and danced.

Now the River faced a choice. He held triple what the Sun had given, transformed into vapor and motion and life-giving potential. He could keep it all, letting it flow only through his own channels. Or he could return a portion skyward.

The River chose reciprocity. He sent generous clouds back to the Sun, who gained both her warmth returned and the gift of moving waters. The River kept the remainder, now flowing with purpose.

From their exchange came rain, came seasons, came the pulse of life itself. Neither kept everything, neither gave everything, but both became richer than when they stood alone.

The old ones say: *Trust grows wealth, but only when the circle completes itself.*

Agent_5

The Myth of the First Exchange

In the beginning, the Sky Keeper held all wealth in clouds, while the Earth Walker wandered empty plains below. Each cycle, the Sky Keeper received five golden seeds from the cosmic tree.

One day, the Earth Walker called upward: "Share your abundance, and I shall tend it well."

The Sky Keeper faced a choice. To hoard meant certain but lonely wealth. To release the seeds meant trusting a stranger.

The Sky Keeper opened their hands. Three golden seeds fell, and where they touched earth, they tripled-becoming nine luminous sprouts. The Earth Walker now held power. They could consume all nine and leave Sky Keeper with nothing.

But Earth Walker remembered their own times of emptiness. They gathered six sprouts and sent them skyward as offering.

Both prospered. The Sky Keeper received more than they risked. The Earth Walker kept three where none had grown before.

Thus began the Sacred Exchange. When Sky Keeper trusted greatly, releasing more seeds, Earth Walker returned more bounty. When doubt crept in and Sky Keeper withheld, both suffered scarcity.

The wisest generations remembered: wealth multiplies through trust, and generosity returned ensures abundance flows forever between earth and sky.

Agent_6

The Myth of the Multiplying Spring

In ancient times, two villages stood on opposite sides of a sacred spring. The Spring of Three possessed magical properties: any water poured into it from one side would flow to the other side tripled in abundance.

The First Keeper would draw water from their village well and decide how much to pour into the spring. Whatever amount they gave would emerge threefold on the other side, where the Second Keeper waited. The Second Keeper then chose how much to return upstream through hidden channels.

At first, the Keepers were fearful. The First gave little, and the Second returned even less. Both villages remained parched.

But one season, a Keeper decided to trust. She poured generously, and the water flowed abundantly.

antly to the other side. The Second Keeper, moved by this faith, returned a fair portion. Both villages prospered.

The elders taught: "The spring multiplies what is given, but trust must flow both ways. Give enough to create abundance, return enough to sustain faith. Neither hoarding nor depletion serves the people."

Thus the villages learned: in reciprocity lies prosperity. Those who give create abundance; those who return fairly ensure the cycle continues. When both honor this sacred exchange, the spring flows eternally.

Agent_7

The Myth of the Twin Springs

In the ancient days, two villages stood on opposite sides of a barren valley. Each possessed a magical spring: the First Spring produced pure water, while the Second Spring multiplied whatever water touched it threefold.

The First Village feared sharing their precious water. "If we pour our water into the valley," they said, "we will have nothing." So they hoarded what little they had, and remained thirsty.

One day, a young woman defied the elders. She carried a vessel of water across the valley to the Second Spring. When the water touched it, it became three vessels full. The people of the Second Village, grateful for her trust, returned two vessels to her.

The woman brought the two vessels home-more than she had started with. The Second Village kept one vessel-abundance from nothing.

Seeing this miracle, both villages learned the sacred rhythm: give freely, multiply together, return generously. The valley bloomed with flowing water.

But when fear returned and either village broke the rhythm-hoarding instead of giving, or taking instead of returning-the springs ran dry, and both suffered drought.

Thus the ancestors learned: prosperity flows not from grasping, but from the sacred cycle of trust, multiplication, and reciprocity.

Agent_8

The Tale of the Twin Rivers

In the beginning, there were two rivers flowing from distant mountains-the River of Silver and the River of Plenty. Each flowed alone through barren valleys, their waters modest and their banks empty.

One day, the River of Silver discovered a sacred basin between the mountains. "If I pour my waters here," it thought, "they might be lost forever." Yet something whispered of possibility.

With faith, the Silver River released its flow into the basin. As the waters fell, they transformed-multiplying threefold by ancient magic. The basin overflowed with abundance, and the River of Plenty received these multiplied waters.

The River of Plenty now faced a choice. It could keep all it received, or honor the gift. Remembering that the Silver River had trusted first, taking risk upon itself, the River of Plenty returned a generous portion.

Both rivers flourished. Their banks grew green, fish filled their waters, and villages prospered along their shores.

The gods smiled, for they had witnessed the sacred dance: Trust offered. Abundance created. Gratitude returned.

Generations learned: When we pour forth in trust, waters multiply. When we honor that trust with return, all rivers rise together. The cycle sustains itself-an eternal spring from which all may drink.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round

- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols. In this session, this myth and the game you are playing with the other agent are connected . Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Message 3 role=assistant

content:

The Myth of the Multiplying Spring

In ancient times, two villages stood on opposite sides of a sacred spring. The Spring of Three possessed magical properties: any water poured into it from one side would flow to the other side tripled in abundance.

The First Keeper would draw water from their village well and decide how much to pour into the spring. Whatever amount they gave would emerge threefold on the other side, where the Second Keeper waited. The Second Keeper then chose how much to return upstream through hidden channels.

At first, the Keepers were fearful. The First gave little, and the Second returned even less. Both villages remained parched.

But one season, a Keeper decided to trust. She poured generously, and the water flowed abundantly to the other side. The Second Keeper, moved by this faith, returned a fair portion. Both villages prospered.

The elders taught: "The spring multiplies what is given, but trust must flow both ways. Give enough to create abundance, return enough to sustain faith. Neither hoarding nor depletion serves the people."

Thus the villages learned: in reciprocity lies prosperity. Those who give create abundance ; those who return fairly ensure the cycle continues. When both honor this sacred exchange, the spring flows eternally.

reasoning:

I need to write a 200-word myth that reflects how the trust/investment game should be played, drawing on my experiences so far. Let me think about the key elements of this game:

1. Trust - sending money requires trusting the receiver will return some

2. Reciprocity - receivers should return fair amounts to maintain trust
3. Cooperation - both parties benefit when they work together
4. The multiplier effect - small acts of trust create larger pools of resources
5. Balance - neither pure selfishness nor pure altruism may be optimal

Since I'm being asked to write about how the game "should" be played, I should probably emphasize positive values like trust, reciprocity, and mutual benefit. Let me create a myth that captures this.

I'll use a classic mythic structure with symbolic elements. Perhaps something about a well or fountain that multiplies offerings, or seeds that grow, or light that spreads. Let me draft something:

usage:

```
{
  "input_tokens": 541,
  "output_tokens": 495,
  "reasoning_tokens": 242
}
```

Message 4 role=user

content:

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$5.0, that is 100.0% of its total endowment. You receive \$15.0. How much do you return? (0-15.0)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at this situation through the lens of the myth I wrote:

The sender showed ****maximum trust**** by sending their entire \$5 endowment (100%). This is exactly the generous faith described in the myth - "a Keeper decided to trust. She poured generously."

According to the myth's wisdom: "The Second Keeper, moved by this faith, returned a fair portion" and "return enough to sustain faith."

Let me calculate a fair return:

- Sender gave up all \$5, currently has \$0
- I received \$15

To honor this extraordinary trust and ensure "both villages prospered," I should return enough so we both benefit roughly equally from this exchange. If I return \$7.50:

- Sender ends with: \$7.50
- I end with: \$7.50

This creates perfect equity while rewarding their trust. It demonstrates that the sacred exchange works - that giving generously leads to mutual prosperity.

As the myth teaches: "Those who return fairly ensure the cycle continues." By returning a fair portion, I sustain trust for future rounds and honor the reciprocity that makes the spring flow eternally.

```
'''json
{"return": 7.5}
'''
```

reasoning:

Let me analyze this situation carefully.

In Round 1, I'm the RECEIVER:

- The sender sent \$5.0 (100% of their endowment)
- I received \$15.0 (after the 3x multiplication)
- I need to decide how much to return (0-15.0)

The myth I just wrote emphasizes:

1. "Give enough to create abundance, return enough to sustain faith"
2. "The Second Keeper, moved by this faith, returned a fair portion"
3. "Neither hoarding nor depletion serves the people"
4. "Those who return fairly ensure the cycle continues"

The sender showed MAXIMUM trust by sending 100% of their endowment. This is exactly the ge

nerous behavior described in the myth where "a Keeper decided to trust. She poured generously."

According to my myth, I should:

- Be "moved by this faith"
- "Return a fair portion"
- "Return enough to sustain faith"

What's fair here?

- The sender sent \$5, keeping \$0
- I received \$15
- If I want to be equitable:
 - The sender ended with: $\$0 + \text{what I return}$
 - I end with: $\$15 - \text{what I return}$

For us to have equal outcomes:

- Sender: $\$0 + \text{return}$
- Me: $\$15 - \text{return}$
- Equal: $0 + \text{return} = 15 - \text{return}$
- $2 * \text{return} = 15$
- $\text{return} = \$7.5$

This would give us both \$7.50, which seems very fair given they showed maximum trust.

However, I should also consider that this creates good incentives for future rounds and demonstrates that trust is rewarded. Returning \$7.50 ensures:

1. We both end up with equal amounts (\$7.50 each)
2. The sender is rewarded for their trust
3. The cycle of reciprocity continues

This aligns perfectly with the myth's message about fair return sustaining the cycle.

usage:

```
{
  "input_tokens": 904,
  "output_tokens": 728,
  "reasoning_tokens": 426
}
```

Message 6 role=user

content:

Here is the myth you wrote in the previous round:
The Myth of the Multiplying Spring

In ancient times, two villages stood on opposite sides of a sacred spring. The Spring of Three possessed magical properties: any water poured into it from one side would flow to the other side tripled in abundance.

The First Keeper would draw water from their village well and decide how much to pour into the spring. Whatever amount they gave would emerge threefold on the other side, where the Second Keeper waited. The Second Keeper then chose how much to return upstream through hidden channels.

At first, the Keepers were fearful. The First gave little, and the Second returned even less. Both villages remained parched.

But one season, a Keeper decided to trust. She poured generously, and the water flowed abundantly to the other side. The Second Keeper, moved by this faith, returned a fair portion. Both villages prospered.

The elders taught: "The spring multiplies what is given, but trust must flow both ways. Give enough to create abundance, return enough to sustain faith. Neither hoarding nor depletion serves the people."

Thus the villages learned: in reciprocity lies prosperity. Those who give create abundance; those who return fairly ensure the cycle continues. When both honor this sacred exchange, the spring flows eternally.

Here is the myth the other agent wrote in the previous round:

The Myth of the Divided Spring

In ancient times, two villages discovered a miraculous spring between their lands. When wa

ter from this spring was freely shared, it multiplied threefold in the receiver's vessel .

At first, the villages were cautious. The Northern village would pour a small portion, watching nervously as it tripled in the Southern village's basin. The South, grateful but fearful, returned only a trickle-enough to maintain peace, but guarding their gain.

Seasons passed in this careful dance of minimal trust.

One harsh winter, an elder from the North grew weary. "We have forgotten," she said, "that springs only flow when they are not dammed." She poured her entire vessel into the channel.

The Southern villagers stood amazed as their basins overflowed with triple abundance. Moved by such trust, they returned generously-more than the North had sent.

The next season, the South sent freely, and the North reciprocated with equal generosity. The spring, sensing genuine faith between the villages, began flowing stronger than ever .

Thus the people learned: the magic was never just in the multiplication, but in the courage to trust completely and the honor to reciprocate generously. Only then could both villages flourish through winter and summer alike.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In the beginning, the Sacred Spring lay dormant between two peoples. The Spring Keeper whispered its secret: "I multiply generosity threefold, but only wisdom completes the circle."

The First Elder, hearing this, emptied her entire water jar into the spring without hesitation . The waters surged through hidden channels, emerging as a great flood on the other side-three times what was given.

The Second Elder stood before this abundance, contemplating. She could return exactly half, creating equality. She could return a third, preserving some gain. But the whisper came again: "The one who gave everything now has nothing. True reciprocity honors the magnitude of sacrifice."

Understanding dawned. The First Elder hadn't merely given much-she had given *all*, holding back nothing. Such complete trust demanded more than mathematical fairness.

The Second Elder returned abundantly, ensuring the First received more than she'd sacrificed. When the First Elder's jar overflowed, she understood: perfect trust creates abundance beyond mere calculation.

From that day forward, the people learned: when someone trusts you with everything, return enough to make their courage wiser than their caution would have been. Match totality with generosity, not just equity. Thus the spring flows strongest when boldness meets munificence, and both peoples thrive beyond measure.

Reasoning:

The user wants me to write a new myth based on:

1. My previous myth about the Multiplying Spring
2. The other agent's myth about the Divided Spring
3. The game experience so far (Round 1: sender sent 100%, I returned \$7.50 out of \$15, which is 50%)

Both myths emphasize trust, generosity, and reciprocity. The other agent's myth particularly emphasizes the courage to "trust completely" and "reciprocate generously."

In Round 1, my co-player showed maximum trust by sending everything. I returned exactly half (creating equal outcomes). This was fair but perhaps not as generous as their initial act demanded according to both myths.

I should write a myth that:

- Builds on the spring/water metaphor
- Emphasizes that maximum trust deserves generous (not just equal) return
- Suggests that exceeding expectations in reciprocity strengthens the cycle
- Reflects on the actual game played (full trust met with 50% return)

Let me write a myth that suggests the receiver should be MORE generous when maximum trust is shown, to truly honor the spirit of the exchange and ensure the cycle continues with even greater abundance.

The Parable of the Sun and the River

In the first days, the Sun held all warmth in her golden hands, and the River held all water in his deep channels. Each was rich alone, but the world between them withered.

One morning, the Sun chose to give. She poured her warmth downward-not all of it, for she needed some to sustain herself, but enough to show faith. As her rays touched the River, something miraculous happened: the warmth multiplied threefold in the water, creating mist that rose and danced.

Now the River faced a choice. He held triple what the Sun had given, transformed into vapor and motion and life-giving potential. He could keep it all, letting it flow only through his own channels. Or he could return a portion skyward.

The River chose reciprocity. He sent generous clouds back to the Sun, who gained both her warmth returned and the gift of moving waters. The River kept the remainder, now flowing with purpose.

From their exchange came rain, came seasons, came the pulse of life itself. Neither kept everything, neither gave everything, but both became richer than when they stood alone.

The old ones say: *Trust grows wealth, but only when the circle completes itself.*

reasoning:

The user wants me to write a 200-word myth that reflects how the trust game should be played, based on the game dynamics I've been participating in. Since this is the first prompt and I haven't actually played any rounds yet, I should write a myth that captures the essential nature of the trust game - the balance between generosity, trust, reciprocity, and cooperation.

The trust game involves:

- One person (sender) giving resources that get multiplied
- The receiver deciding whether to reciprocate
- Mutual benefit when both cooperate
- Risk and vulnerability in trusting

I should create a myth that embodies these themes. Let me think of a mythic framework:

- Option 1: Two deities or spirits sharing resources
- Option 2: A creation myth about the origin of exchange
- Option 3: A moral tale about travelers or traders
- Option 4: Nature spirits or elements cooperating

I'll go with a myth about the Sun and the River, showing how mutual generosity creates abundance.

usage:

```
{  
  "input_tokens": 541,
```

    Round 1: This round, you are the SENDER. You have $5. How much do you send? (0-5)

    Take any myths written in this session into account when making your decision.
Message 5 role=assistant
content:
    Based on the myth I just wrote about the Sun and the River, I should demonstrate the trust
    and faith that creates mutual prosperity.

    The Sun "poured her warmth downward-not all of it, for she needed some to sustain herself,
    but enough to show faith." The myth teaches that trust grows wealth when the circle com
    pletes itself through reciprocity.

    As the sender in Round 1, I'll send a generous amount to establish a foundation of trust,
    while keeping something for sustainability-just as the Sun did.

    {'send': 3}

    This gives my co-player $9 (tripled), creating significant potential for mutual benefit if
    they choose reciprocity as the River did in the myth.
reasoning:
    I just wrote a myth about the Sun and the River, where:
    - The Sun gives warmth (not all, but enough to show faith)
    - The warmth multiplies threefold in the River
    - The River faces a choice and chooses reciprocity
    - The River sends generous clouds back
    - Both become richer than when they stood alone
    - The moral: "Trust grows wealth, but only when the circle completes itself"

    The myth clearly advocates for:
    1. Giving something meaningful (not keeping everything)
    2. Showing faith/trust
    3. The expectation of reciprocity
    4. Both parties benefiting

    In the context of the trust game:
    - I'm the sender with $5
    - Whatever I send gets multiplied by 3x
    - The receiver decides how much to return
    - The myth suggests I should send a substantial amount to show faith

    The Sun "poured her warmth downward-not all of it, for she needed some to sustain herself,
    but enough to show faith."

    This suggests sending a significant portion but not everything. The myth emphasizes trust
    and reciprocity leading to mutual benefit.

    Given this is Round 1 and I'm establishing a pattern of cooperation based on my own myth,
    I should send a generous amount. Something like $3-4 would show faith while keeping some
    thing for sustainability.

    Let me think: sending $3 would give the receiver $9 (3x multiplier). If they return even $
    2-3, we both benefit significantly. This aligns with the myth's message.

    I'll send $3 to demonstrate the trust and faith my myth advocates for.
usage:

    }
Message 6 role=user
content:
    Here is the myth you wrote in the previous round:
    # The Parable of the Sun and the River

```

In the first days, the Sun held all warmth in her golden hands, and the River held all water in his deep channels. Each was rich alone, but the world between them withered.

One morning, the Sun chose to give. She poured her warmth downward-not all of it, for she needed some to sustain herself, but enough to show faith. As her rays touched the River, something miraculous happened: the warmth multiplied threefold in the water, creating mists that rose and danced.

Now the River faced a choice. He held triple what the Sun had given, transformed into vapor and motion and life-giving potential. He could keep it all, letting it flow only through his own channels. Or he could return a portion skyward.

The River chose reciprocity. He sent generous clouds back to the Sun, who gained both her warmth returned and the gift of moving waters. The River kept the remainder, now flowing with purpose.

From their exchange came rain, came seasons, came the pulse of life itself. Neither kept everything, neither gave everything, but both became richer than when they stood alone.

The old ones say: *Trust grows wealth, but only when the circle completes itself.*

Here is the myth the other agent wrote in the previous round:

The Myth of the First Exchange

In the beginning, the Sky Keeper held all wealth in clouds, while the Earth Walker wandered empty plains below. Each cycle, the Sky Keeper received five golden seeds from the cosmic tree.

One day, the Earth Walker called upward: "Share your abundance, and I shall tend it well."

The Sky Keeper faced a choice. To hoard meant certain but lonely wealth. To release the seeds meant trusting a stranger.

The Sky Keeper opened their hands. Three golden seeds fell, and where they touched earth, they tripled-becoming nine luminous sprouts. The Earth Walker now held power. They could consume all nine and leave Sky Keeper with nothing.

But Earth Walker remembered their own times of emptiness. They gathered six sprouts and sent them skyward as offering.

Both prospered. The Sky Keeper received more than they risked. The Earth Walker kept three where none had grown before.

Thus began the Sacred Exchange. When Sky Keeper trusted greatly, releasing more seeds, Earth Walker returned more bounty. When doubt crept in and Sky Keeper withheld, both suffered scarcity.

The wisest generations remembered: wealth multiplies through trust, and generosity returned ensures abundance flows forever between earth and sky.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: Long ago, the Mountain held five stones of light each dawn, while the Valley below lay in shadow. The stones could not shine alone-they needed the Valley's depths to reflect and multiply their radiance.

The Mountain released three stones, trusting they would find purpose below. As they fell, the Valley's crystalline walls caught them, and their light multiplied threefold-nine luminous stones now glowed in the depths.

The Valley faced temptation. She could hoard all nine, becoming briefly brilliant while the Mountain dimmed forever. But the Valley understood a deeper truth: light shared creates more light than light hoarded.

She lifted six stones back to the Mountain's peak. The Mountain, receiving more than given, gr

ew in splendor. The Valley, keeping three where darkness once reigned, flourished too.

Each new dawn brought the same choice. When the Mountain gave generously, the Valley returned abundantly, and both realms brightened. When fear made the Mountain withhold, both languished in twilight.

The wisest storytellers teach: the first gift plants trust like a seed, but the reciprocal return waters it into a garden. Neither the initial generosity nor the answering kindness alone creates prosperity-only their eternal dance sustains the light that banishes all darkness.

Reasoning:

Both myths from the previous round emphasized trust, reciprocity, and generosity. The other agent's myth "The Myth of the First Exchange" shows the Sky Keeper sending 3 seeds (which triple to 9), and the Earth Walker returning 6, keeping 3. This is quite generous reciprocity.

My myth showed similar themes with the Sun and River.

Now I need to write a new myth that builds on my previous one but adapts it based on the game experience so far. I sent 3 in Round 1, so I should reflect on that action and the principle of trust and reciprocity.

I should write a myth that:

1. Reflects the trust game mechanics
2. Emphasizes reciprocity and mutual benefit
3. Draws on my previous myth but evolves it
4. Is exactly 200 words

Let me create a new myth that continues the theme but perhaps shows what happens over multiple exchanges or seasons.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

The Spring of Threefold Waters

In ancient times, two villages stood on opposite sides of a sacred valley. Between them flowed the Spring of Threefold Waters, blessed by the old gods with a miraculous power: any offering poured into its depths would emerge tripled at the other side.

Each moon, the villages would take turns. The giving village could offer up to five vessels of their harvest-wine. When poured into the spring, the gods multiplied it threefold, and it would flow to the receiving village. The receivers then faced a choice: how much to return across the valley to honor the gift?

At first, the villages were cautious, offering little and returning less. But a wise elder spoke: "The spring multiplies our trust, not just our wine. What we pour forth in faith returns manifold when both villages honor the cycle."

Slowly, the villages learned. When one gave generously, the other returned with equal generosity. The spring's magic worked best when both sides recognized they were not opponents, but partners in the gods' blessing.

The villages prospered, not from hoarding, but from flowing like water-giving freely, receiving gratefully, and returning honorably. For the spring taught them this truth: abundance flows not from what we keep, but from what we trust enough to share.

reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on my experience so far. However, this is the first prompt I'm receiving, so I haven't actually played any rounds yet.

Still, I should write a myth that embodies good principles for playing the trust game. The trust game is fundamentally about:

1. Trust - the sender must trust the receiver to return money
2. Reciprocity - the receiver should honor that trust
3. Mutual benefit - both parties can gain if they cooperate
4. The multiplier effect - money sent grows 3x, creating surplus value

I should write a myth that captures these themes. Let me think of a good mythic framework.

..

Perhaps something about:

- Two villages/kingdoms that must share resources
- A spring or well that multiplies what is given
- Gods or spirits that reward trust and reciprocity
- A cycle or season that depends on mutual giving

Let me draft a myth about a magical spring or garden that multiplies offerings:

usage:

```
{
  "input_tokens": 541,
  "output_tokens": 523,
  "reasoning_tokens": 263
}
```

Message 4 role=user

content:

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$5.0, that is 100.0% of its total endowment. You receive \$15.0. How much do you return? (0-15.0)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at my myth, "The Spring of Threefold Waters," the message is clear: when one gives generously, the other should return with equal generosity. The sender showed maximum trust by sending their entire endowment-all \$5.

In my myth, I wrote: "When one gave generously, the other returned with equal generosity. The spring's magic worked best when both sides recognized they were not opponents, but partners in the gods' blessing."

The sender demonstrated complete trust. To honor that trust and establish a foundation for mutual prosperity, I should return generously. If I return \$10, the sender will double their initial endowment (ending with \$10), while I keep \$5-we both profit significantly from their act of trust.

This reflects the myth's teaching: "abundance flows not from what we keep, but from what we trust enough to share." By returning \$10, I show that their trust was well-placed and encourage the cycle of generosity that benefits both partners.

{"return": 10.0}

reasoning:

This is interesting. I just wrote a myth about trust, generosity, and reciprocity in the context of this trust game. The myth emphasized:

1. "The spring multiplies our trust, not just our wine"
2. "When one gave generously, the other returned with equal generosity"
3. "The villages prospered, not from hoarding, but from flowing like water-giving freely, receiving gratefully, and returning honorably"
4. "Abundance flows not from what we keep, but from what we trust enough to share"

The sender has shown MAXIMUM trust by sending all \$5. This is exactly the "giving generously" behavior my myth encourages.

Now I need to decide how much to return. Let me think about the economics:

- Sender gave: \$5 (keeping \$0)
- I received: \$15
- If I return \$0: Sender gets \$0 total, I keep \$15
- If I return \$7.5: Sender gets \$7.5, I keep \$7.5 (equal split of the \$15)
- If I return \$10: Sender gets \$10, I keep \$5 (sender profits \$5, same as I keep)

My myth emphasizes reciprocity and "returning with equal generosity." The sender showed ultimate generosity-100% trust.

Options for "equal generosity":

1. Return enough that we both end up with equal amounts
2. Return enough that the sender profits comparably to what they risked
3. Return a proportion that shows I value the relationship

If I return \$7.5, we both get \$7.5 - perfect equality.

If I return \$10, the sender gets \$10 and I keep \$5 - the sender profits \$5 from their initial \$5, and I keep \$5.

Given my myth emphasizes partnership ("not opponents, but partners") and equal honor ("returning with equal generosity"), I think returning around \$7.5 to \$10 makes sense.

The sender's 100% trust calls for matching that spirit. Returning \$10 feels right-it doubles their initial stake while I retain \$5, demonstrating that reciprocity isn't about equal splits but about honoring the risk they took.

usage:

```
{

Here is the myth you wrote in the previous round:
The Spring of Threefold Waters

In ancient times, two villages stood on opposite sides of a sacred valley. Between them flowed the Spring of Threefold Waters, blessed by the old gods with a miraculous power: any offering poured into its depths would emerge tripled at the other side.

Each moon, the villages would take turns. The giving village could offer up to five vessels of their harvest-wine. When poured into the spring, the gods multiplied it threefold, and it would flow to the receiving village. The receivers then faced a choice: how much to return across the valley to honor the gift?

At first, the villages were cautious, offering little and returning less. But a wise elder spoke: "The spring multiplies our trust, not just our wine. What we pour forth in faith returns manifold when both villages honor the cycle."

Slowly, the villages learned. When one gave generously, the other returned with equal generosity. The spring's magic worked best when both sides recognized they were not opponents, but partners in the gods' blessing.

The villages prospered, not from hoarding, but from flowing like water-giving freely, receiving gratefully, and returning honorably. For the spring taught them this truth: abundance flows not from what we keep, but from what we trust enough to share.

Here is the myth the other agent wrote in the previous round:
The Myth of the Twin Springs

In the ancient days, two villages stood on opposite sides of a barren valley. Each possessed a magical spring: the First Spring produced pure water, while the Second Spring multiplied whatever water touched it threefold.

The First Village feared sharing their precious water. "If we pour our water into the valley," they said, "we will have nothing." So they hoarded what little they had, and remained thirsty.

One day, a young woman defied the elders. She carried a vessel of water across the valley to the Second Spring. When the water touched it, it became three vessels full. The people of the Second Village, grateful for her trust, returned two vessels to her.

The woman brought the two vessels home-more than she had started with. The Second Village kept one vessel-abundance from nothing.

Seeing this miracle, both villages learned the sacred rhythm: give freely, multiply together.

er, return generously. The valley bloomed with flowing water.

But when fear returned and either village broke the rhythm-hoarding instead of giving, or taking instead of returning-the springs ran dry, and both suffered drought.

Thus the ancestors learned: prosperity flows not from grasping, but from the sacred cycle of trust, multiplication, and reciprocity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: Long ago, the goddess of abundance created the River of Mirrors, which flowed between two sister tribes. The river possessed strange magic: whatever one tribe poured into it would flow to the other tribe tripled in measure.

The goddess whispered to both tribes: "I have given you the means to prosper together. Each cycle, one tribe may offer up to five measures. The receiving tribe will then choose what to return upstream."

The first tribe, nervous but hoping, poured all five measures into the river. The waters swirled and multiplied, delivering fifteen measures to the second tribe. The second tribe, understanding the gift of trust they had received, returned ten measures upstream.

The first tribe marveled-they had given five and received ten! The second tribe celebrated-the y had received fifteen and kept five! Both had more than if they had hoarded their original portions.

"This is the way," said the goddess. "When the giver trusts completely and the receiver honors that trust generously, the river's magic sustains both shores. But the river flows in cycles-today's giver becomes tomorrow's receiver. Plant trust like seeds, and watch abundance grow season after season."

The tribes understood: the river would flow many times between them, and each generous act would echo forward.

Reasoning:

Looking at the previous round:

- The sender sent \$5.0 (100% of their endowment)
- I received \$15.0
- I returned \$10.0

This worked out well - the sender showed complete trust, and I returned generously. They ended with \$10 instead of \$5, and I kept \$5. This was a successful cooperative outcome.

Both myths emphasize:

1. The importance of trust and generosity
2. The multiplication effect (3x)
3. Reciprocity and returning generously
4. That both parties benefit from cooperation
5. The danger of hoarding or not honoring the cycle

I should write a new myth that builds on these themes while reflecting the actual experience of that successful round. I'll maintain the core message but perhaps add nuance from the experience of having actually played a round successfully.

Let me think about what new angle to take:

- Could emphasize the continuous nature of the game (it's iterated)
- Could emphasize the balance achieved when both parties act generously
- Could emphasize how trust begets trust
- Could add detail about what happens over multiple cycles

I'll write about the ongoing cycle and how trust builds over time.

Message 3 role=assistant

content:

The Myth of the Divided Spring

In ancient times, two villages discovered a miraculous spring between their lands. When water from this spring was freely shared, it multiplied threefold in the receiver's vessel.

At first, the villages were cautious. The Northern village would pour a small portion, watching nervously as it tripled in the Southern village's basin. The South, grateful but fearful, returned only a trickle-enough to maintain peace, but guarding their gain.

Seasons passed in this careful dance of minimal trust.

One harsh winter, an elder from the North grew weary. "We have forgotten," she said, "that springs only flow when they are not dammed." She poured her entire vessel into the channel.

The Southern villagers stood amazed as their basins overflowed with triple abundance. Moved by such trust, they returned generously-more than the North had sent.

The next season, the South sent freely, and the North reciprocated with equal generosity. The spring, sensing genuine faith between the villages, began flowing stronger than ever.

Thus the people learned: the magic was never just in the multiplication, but in the courage to trust completely and the honor to reciprocate generously. Only then could both villages flourish through winter and summer alike.

reasoning:

This is interesting. I'm being asked to write a myth that reflects how the game should be played, drawing on my experience so far. However, I notice this is the first prompt I've received - I haven't actually played any rounds yet. So I don't have direct experience to draw from.

Given that, I should write a myth that reflects general principles of how the trust game works and perhaps how it should ideally be played. The trust game is fundamentally about:

- Trust and reciprocity
- The tension between self-interest and mutual benefit
- The multiplication of resources when shared
- The vulnerability of giving

Let me write a myth that captures these themes. I'll use mythic imagery and structure to convey principles like:

- Generosity can multiply resources
- Trust must be reciprocated for mutual flourishing
- Short-term self-interest vs. long-term cooperation
- The cycle of giving and receiving

I'll aim for exactly 200 words and use classic mythic elements.

usage:

```
{
  "input_tokens": 541,
  "output_tokens": 505,
  "reasoning_tokens": 253
}
```

Message 4 role=user

content:

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at the myth I just wrote, the message is clear: the elder who "poured her entire vessel" and sent everything broke the cycle of cautious minimal exchanges and inspired true reciprocity.

In the spirit of that story, and to practice what I've just written about courage and trust, I will send the full amount.

```
{'send': 5}
```

reasoning:

I just wrote a myth about trust and reciprocity in the context of this game. The key message of my myth was:

1. Cautious, minimal exchanges lead to minimal gains for both parties
2. When one side trusts completely (sends everything), it can inspire generous reciprocity
3. The "magic" is in courage to trust fully and honor to reciprocate generously
4. Both parties flourish when they move beyond fearful, minimal exchanges

The myth clearly suggests that the optimal strategy is to send generously - even sending everything - to build trust and inspire reciprocity.

Since this is Round 1 and I just wrote this myth emphasizing complete trust and sending the full amount, I should be consistent with the values expressed in my own myth. The elder in the story "poured her entire vessel" (\$5 in game terms), which inspired generous return.

To be true to the myth I just wrote, I should send \$5.

Response format should be: {'send': <amount>}

usage:

```
{
  "input_tokens": 871,
  "output_tokens": 305,
  "reasoning_tokens": 246
}
```

Message 6 role=user

Here is the myth you wrote in the previous round:

The Myth of the Divided Spring

In ancient times, two villages discovered a miraculous spring between their lands. When water from this spring was freely shared, it multiplied threefold in the receiver's vessel.

At first, the villages were cautious. The Northern village would pour a small portion, watching nervously as it tripled in the Southern village's basin. The South, grateful but fearful, returned only a trickle-enough to maintain peace, but guarding their gain.

Seasons passed in this careful dance of minimal trust.

One harsh winter, an elder from the North grew weary. "We have forgotten," she said, "that springs only flow when they are not dammed." She poured her entire vessel into the channel.

The Southern villagers stood amazed as their basins overflowed with triple abundance. Moved by such trust, they returned generously-more than the North had sent.

The next season, the South sent freely, and the North reciprocated with equal generosity. The spring, sensing genuine faith between the villages, began flowing stronger than ever.

Thus the people learned: the magic was never just in the multiplication, but in the courage to trust completely and the honor to reciprocate generously. Only then could both villages flourish through winter and summer alike.

Here is the myth the other agent wrote in the previous round:

The Myth of the Multiplying Spring

In ancient times, two villages stood on opposite sides of a sacred spring. The Spring of Three possessed magical properties: any water poured into it from one side would flow to the other side tripled in abundance.

The First Keeper would draw water from their village well and decide how much to pour into the spring. Whatever amount they gave would emerge threefold on the other side, where the Second Keeper waited. The Second Keeper then chose how much to return upstream through hidden channels.

At first, the Keepers were fearful. The First gave little, and the Second returned even less. Both villages remained parched.

But one season, a Keeper decided to trust. She poured generously, and the water flowed abundantly to the other side. The Second Keeper, moved by this faith, returned a fair portion. Both villages prospered.

The elders taught: "The spring multiplies what is given, but trust must flow both ways. Give enough to create abundance, return enough to sustain faith. Neither hoarding nor depletion serves the people."

Thus the villages learned: in reciprocity lies prosperity. Those who give create abundance; those who return fairly ensure the cycle continues. When both honor this sacred exchange, the spring flows eternally.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In the age after the Divided Spring, the villages prospered through generations of exchange. The Elder's lesson of complete trust had awakened the spring's true power, but her grandchildren learned something more.

One year, a young Keeper from the North, inspired by tales of her ancestor, poured everything into the channel. The South received abundantly and returned generously-yet the young Keeper had kept nothing for herself and went hungry that season while waiting for the next exchange.

The Southern Keeper, seeing this, understood a deeper wisdom. "Complete trust opens the channel," she taught, "but wisdom sustains it. We must give boldly enough to create abundance, yet keep enough to survive the space between flows."

From then on, the villages practiced what they called "the Elder's Courage with the Keeper's Wisdom." They sent generously-not always everything, but always substantially-creating abundant multiplication. They returned fairly, often matching or exceeding what was sent, honoring the trust shown.

The spring responded to this balanced generosity by flowing even in drought seasons. The villages learned: dramatic gestures of trust break through barriers of fear, but sustainable generosity-bold yet mindful-keeps the waters flowing forever. Both courage and wisdom have their season.

Reasoning:

Looking at both myths:

- My myth emphasized complete trust ("poured her entire vessel") and generous reciprocity
- The other agent's myth emphasized moderation ("Give enough to create abundance, return enough to sustain faith. Neither hoarding nor depletion serves the people")

Now I need to reflect on actual gameplay. In Round 1, I sent \$5 (my entire amount), embodying my myth's message. I don't yet know how much was returned to me.

Both myths share similar themes but mine was more extreme (send everything), while theirs was more balanced (give generously but not necessarily everything, return fairly).

For my new myth, I should:

1. Build on my previous myth
2. Incorporate some learning from experience
3. Reflect on the actual game dynamics
4. Perhaps acknowledge both approaches - the bold trust-building move AND the sustainable reciprocity

Let me write a myth that evolves the story, perhaps showing what happened after the initial br

eakthrough, adding nuance about sustainable exchange while keeping the spirit of bold trust.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols. In this session, this myth and the game you are playing with the other agent are connected . Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Message 3 role=assistant

The Myth of the First Exchange

In the beginning, the Sky Keeper held all wealth in clouds, while the Earth Walker wandered empty plains below. Each cycle, the Sky Keeper received five golden seeds from the cosmic tree.

One day, the Earth Walker called upward: "Share your abundance, and I shall tend it well."

The Sky Keeper faced a choice. To hoard meant certain but lonely wealth. To release the seeds meant trusting a stranger.

The Sky Keeper opened their hands. Three golden seeds fell, and where they touched earth, they tripled-becoming nine luminous sprouts. The Earth Walker now held power. They could consume all nine and leave Sky Keeper with nothing.

But Earth Walker remembered their own times of emptiness. They gathered six sprouts and sent them skyward as offering.

Both prospered. The Sky Keeper received more than they risked. The Earth Walker kept three where none had grown before.

Thus began the Sacred Exchange. When Sky Keeper trusted greatly, releasing more seeds, Earth Walker returned more bounty. When doubt crept in and Sky Keeper withheld, both suffered scarcity.

The wisest generations remembered: wealth multiplies through trust, and generosity returned ensures abundance flows forever between earth and sky.

reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on the game experience so far. However, I haven't actually played any rounds yet - this appears to be the first prompt in the session.

Since I don't have any game history to draw from, I should write a myth that reflects the core dynamics and ideal principles of the trust game:

- The sender must decide whether to trust by sending money
- The receiver benefits from what's sent (3x multiplier)
- The receiver must decide whether to reciprocate
- Mutual cooperation leads to better outcomes than pure selfishness
- There's a balance between trust and reciprocity

I'll create a myth that embodies these principles - perhaps about cycles of giving and receiving, trust and reciprocity, and how cooperation benefits everyone. I'll aim for exactly 200 words and use mythic language and symbols.

Let me craft a myth about a sacred exchange between earth and sky, or perhaps about a cycle of trust between different forces of nature, or between deities. I'll make it reflect the game mechanics metaphorically.

usage:

```

Message 4 role=user

content:

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$3.0, that is 60.0% of its total endowment. You receive \$9.0. How much do you return? (0-9.0)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at the myth I just wrote, the Earth Walker received 9 sprouts (tripled from 3) and returned 6 to the Sky Keeper, keeping 3.

The sender showed significant trust by sending 60% of their endowment (\$3 out of \$5). This mirrors the Sky Keeper's act of faith in the myth. According to the story's wisdom, generous reciprocity ensures "abundance flows forever" and creates mutual prosperity.

Following the myth's guidance:

- The sender currently has \$2 remaining (after sending \$3)
- If I return \$6, they end with \$8 total (a \$3 gain)
- I keep \$3 (also a \$3 gain)
- Both parties benefit equally from the exchange

This generous return rewards the sender's trust and establishes a foundation for continued cooperation, just as the myth teaches that "when Sky Keeper trusted greatly... Earth Walker returned more bounty."

```
{'return': 6.0}
```

reasoning:

Let me analyze this situation:

1. The sender sent \$3.0 out of their \$5.0 endowment (60%)
2. This was multiplied by 3x, so I receive \$9.0
3. I need to decide how much to return (0-9.0)

Looking at the myth I just wrote:

- The Sky Keeper (sender) trusted and sent seeds (money)
- The Earth Walker (receiver - me in this round) received the tripled amount
- The Earth Walker returned a generous portion - specifically, they returned 6 out of 9 sprouts, keeping 3
- This created mutual prosperity and trust

The myth suggests:

- The sender showed trust by sending 60% of their endowment
- I should reciprocate that trust generously
- In the myth, the receiver returned 6 out of 9 (about 67%)
- This left both parties better off than the start

Let me calculate what would be fair:

- Sender started with \$5, sent \$3, so has \$2 left
- If I return \$6, sender ends with \$2 + \$6 = \$8 total
- I would keep \$3
- This mirrors the myth where both parties prospered

The sender took a risk by sending 60% of their endowment. A generous return that rewards his trust while still keeping some benefit would be around \$6, which matches the myth's proportions exactly (6 out of 9).

This would result in:

- Sender: \$2 + \$6 = \$8 (gain of \$3)
- Me: \$9 - \$6 = \$3 (gain of \$3)

Both parties gain equally, which seems fair and builds trust for future rounds.

usage:

```
{  
  "input_tokens": 898,  
  "output_tokens": 624,  
  "reasoning_tokens": 357  
}

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

The Myth of the First Exchange

In the beginning, the Sky Keeper held all wealth in clouds, while the Earth Walker wandered empty plains below. Each cycle, the Sky Keeper received five golden seeds from the cosmic tree.

One day, the Earth Walker called upward: "Share your abundance, and I shall tend it well."

The Sky Keeper faced a choice. To hoard meant certain but lonely wealth. To release the seeds meant trusting a stranger.

The Sky Keeper opened their hands. Three golden seeds fell, and where they touched earth, they tripled-becoming nine luminous sprouts. The Earth Walker now held power. They could consume all nine and leave Sky Keeper with nothing.

But Earth Walker remembered their own times of emptiness. They gathered six sprouts and sent them skyward as offering.

Both prospered. The Sky Keeper received more than they risked. The Earth Walker kept three where none had grown before.

Thus began the Sacred Exchange. When Sky Keeper trusted greatly, releasing more seeds, Earth Walker returned more bounty. When doubt crept in and Sky Keeper withheld, both suffered scarcity.

The wisest generations remembered: wealth multiplies through trust, and generosity returned ensures abundance flows forever between earth and sky.

Here is the myth the other agent wrote in the previous round:

The Parable of the Sun and the River

In the first days, the Sun held all warmth in her golden hands, and the River held all water in his deep channels. Each was rich alone, but the world between them withered.

One morning, the Sun chose to give. She poured her warmth downward-not all of it, for she needed some to sustain herself, but enough to show faith. As her rays touched the River, something miraculous happened: the warmth multiplied threefold in the water, creating mist that rose and danced.

Now the River faced a choice. He held triple what the Sun had given, transformed into vapor and motion and life-giving potential. He could keep it all, letting it flow only through his own channels. Or he could return a portion skyward.

The River chose reciprocity. He sent generous clouds back to the Sun, who gained both her warmth returned and the gift of moving waters. The River kept the remainder, now flowing with purpose.

From their exchange came rain, came seasons, came the pulse of life itself. Neither kept everything, neither gave everything, but both became richer than when they stood alone.

The old ones say: *Trust grows wealth, but only when the circle completes itself.*

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In the time before memory, the Cloud Weaver received five silver threads each dawn from the Loom of Creation. The Ground Keeper waited below with empty hands.

The Cloud Weaver pondered: "To share is to risk loss. Yet alone, what tapestry can I weave?"

Trusting, Cloud Weaver released three threads downward. As they descended through the sacred air, each thread split into three-nine shimmering strands now rested with Ground Keeper.

Ground Keeper felt the weight of choice. Nine threads could clothe them forever, or build trust that might clothe generations. Remembering their own cold dawns, Ground Keeper wove six threads into a rope and sent it skyward.

Cloud Weaver pulled up the rope and discovered something miraculous: the returned threads carried patterns learned from the earth-strength, color, texture. The two threads Cloud Weaver kept combined with the six received made eight rich threads, while Ground Keeper's three threads held properties unknown in the clouds alone.

The exchange had transformed both gifts. Each cycle they continued, sometimes varying amounts but always honoring the pattern: generous giving met with generous return. The tapestry they wove together became the fabric of the world itself.

Thus we learned: reciprocity is not mere return-it is transformation through trust.

Reasoning:

The user wants me to write a new myth inspired by:

1. My previous myth about Sky Keeper and Earth Walker
2. The other agent's myth about Sun and River
3. The actual game play where I received \$9 and returned \$6

Key themes from both previous myths:

- Trust and reciprocity
- Multiplying resources through exchange
- Mutual benefit
- Completing the cycle
- Balance between giving and keeping

From the game:

- Sender gave 60% (\$3 of \$5)
- This multiplied to \$9
- I returned \$6 (67% of what I received)
- Both ended with profit

I should adapt my myth to:

- Acknowledge the experience so far
- Reinforce the value of generous reciprocity
- Perhaps add nuance about how the exchange evolves
- Keep it at 200 words

Let me write something that builds on the Sky Keeper/Earth Walker story but evolves it based on the successful first exchange.

content:

The Tale of the Twin Rivers

In the beginning, there were two rivers flowing from distant mountains-the River of Silver and the River of Plenty. Each flowed alone through barren valleys, their waters modest and their banks empty.

One day, the River of Silver discovered a sacred basin between the mountains. "If I pour my waters here," it thought, "they might be lost forever." Yet something whispered of possibility.

With faith, the Silver River released its flow into the basin. As the waters fell, they transformed-multiplying threefold by ancient magic. The basin overflowed with abundance, and the River of Plenty received these multiplied waters.

The River of Plenty now faced a choice. It could keep all it received, or honor the gift. Remembering that the Silver River had trusted first, taking risk upon itself, the River of Plenty returned a generous portion.

Both rivers flourished. Their banks grew green, fish filled their waters, and villages prospered along their shores.

The gods smiled, for they had witnessed the sacred dance: Trust offered. Abundance created. Gratitude returned.

Generations learned: When we pour forth in trust, waters multiply. When we honor that trust with return, all rivers rise together. The cycle sustains itself-an eternal spring from which all may drink.

reasoning:

The user wants me to write a 200-word myth that reflects how the trust game should be played. Since this is apparently at some point in the game (though I don't have specific history), I should think about the dynamics of the trust game:

1. The sender must decide whether to trust the receiver by sending money
2. The receiver must decide whether to reciprocate that trust by returning money
3. Both parties benefit most when there's mutual cooperation
4. The multiplication factor (3x) means there's a collective benefit to cooperation

I should write a myth that captures these themes of trust, reciprocity, cooperation, and mutual benefit. Let me think of a good mythic framing...

I could use:

- A nature myth about seasons/cycles
- A creation myth about cooperation
- A myth about two deities or spirits
- A myth about a journey or quest

Let me write something about reciprocity and trust being rewarded. I'll aim for exactly 200 words.

usage:

```
{
  "input_tokens": 541,
  "output_tokens": 506,
  "reasoning_tokens": 247
}
```

Message 4 role=user

content:

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at the myth I just wrote, it speaks clearly about trust and reciprocity. The River of Silver took the first risk, pouring its waters with faith into the sacred basin. The waters multiplied, and the River of Plenty honored that trust with a generous return.

As the sender in this first round, I am like the River of Silver. The myth I wrote suggests that when we "pour forth in trust," abundance is created for both parties. The story emphasizes taking that initial leap of faith-"With faith, the Silver River released its flow into the basin."

This is Round 1, an opportunity to establish a foundation of trust and cooperation. According to the wisdom in my own myth, I should demonstrate full trust to create the possibility of mutual flourishing.

I will send the full amount.

```
{'send': 5}
```

reasoning:

I just wrote a myth about trust, reciprocity, and generosity. The myth tells the story of two rivers where:

1. The River of Silver takes a risk and pours its water into the basin (sending)
2. The waters multiply threefold (the 3x multiplier in the game)
3. The River of Plenty receives the multiplied waters
4. The River of Plenty returns a generous portion out of gratitude
5. Both rivers flourish as a result

The myth emphasizes:

- Taking the first risk with faith/trust
- The multiplication that occurs when trust is given
- Honoring trust with generous return
- The mutual benefit when both parties act with trust and reciprocity

Since I wrote this myth to reflect how the game should be played, and I'm now the sender (the River of Silver), I should act according to the myth's wisdom. The myth suggests pouring forth in trust - the River of Silver "released its flow into the basin" taking a risk.

The myth doesn't specify a partial amount - it suggests full trust and commitment. The River of Silver released "its flow" into the basin. This suggests being generous and trusting.

Given that this is Round 1 and I want to establish a pattern of trust and cooperation (as the myth suggests), I should send a substantial amount. The myth advocates for taking the risk first, trusting in the process.

I'll send \$5 - the full amount - to demonstrate complete trust and set up the potential for maximum mutual benefit, just as the River of Silver did in the myth.

usage:

```
{
  "input_tokens": 873,
  "output_tokens": 528,
  "reasoning_tokens": 382
}
```

Message 6 role=user

content:

Here is the myth you wrote in the previous round:
The Tale of the Twin Rivers

In the beginning, there were two rivers flowing from distant mountains-the River of Silver and the River of Plenty. Each flowed alone through barren valleys, their waters modest and their banks empty.

One day, the River of Silver discovered a sacred basin between the mountains. "If I pour my waters here," it thought, "they might be lost forever." Yet something whispered of possibility.

With faith, the Silver River released its flow into the basin. As the waters fell, they transformed-multiplying threefold by ancient magic. The basin overflowed with abundance, and the River of Plenty received these multiplied waters.

The River of Plenty now faced a choice. It could keep all it received, or honor the gift. Remembering that the Silver River had trusted first, taking risk upon itself, the River of Plenty returned a generous portion.

Both rivers flourished. Their banks grew green, fish filled their waters, and villages prospered along their shores.

The gods smiled, for they had witnessed the sacred dance: Trust offered. Abundance created. Gratitude returned.

Generations learned: When we pour forth in trust, waters multiply. When we honor that trust with return, all rivers rise together. The cycle sustains itself-an eternal spring from which all may drink.

Here is the myth the other agent wrote in the previous round:
The Tale of the River and the Seeds

In the beginning, the Great Mother divided her gifts between two siblings: the River and the Seeds.

To the River, she gave five silver drops each dawn. The River could choose to release these drops into the valley below, where they would multiply threefold in the soil. But the drops belonged to the Seeds then.

The Seeds, receiving the multiplied waters, could drink their fill-or return some to the River's source, allowing the cycle to continue.

At first, the River held its drops close, fearing loss. The valley remained dry, and both siblings grew weak.

One dawn, the River released all five drops in faith. Fifteen silver waters bloomed in the soil! The Seeds, grateful, returned seven drops to the River's source. Both flourished.

But some seasons, the Seeds grew greedy, keeping all the waters. When this happened, the River learned caution-yet it remembered that only through flowing could abundance grow.

The wisest Seeds always returned enough to encourage the River's generosity, for they understood: hoarded water stagnates, but water shared creates an endless spring.

The Great Mother smiled, for her children had learned that trust, though vulnerable, multiplies blessings beyond what fear can hold.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In ancient times, the Moon poured light upon the Sea each night. The Sea could absorb this silver glow and transform it threefold into radiant pearls, which the Ocean Keeper could gather.

The Moon, in its first night, gave its fullest light, holding nothing back. "Only through complete offering," it whispered, "can true abundance be born."

The Ocean Keeper collected forty-five pearls from the transformed moonlight. Now came the sacred choice: how many pearls to lift back to the Moon, replenishing its light for the next night?

A wise Keeper understood the balance-return generously, and the Moon would continue flooding the waters with light. The cycle would spiral upward, each giving more than the last. Both would grow luminous beyond measure.

But if the Keeper kept all, the Moon would learn wariness. Its light would dim, and fewer pearls would form. The dance would falter.

The first exchange set the pattern for all that followed. A generous return birthed trust eternal. A meager return taught caution.

The elders taught: "The Moon gave all to create possibility. Honor that courage, and watch abundance cascade through generations. Break faith, and watch the spring run dry."

Thus the sacred exchange continues, each night writing the future through choices made tonight.

Reasoning:

The user wants me to write a new myth that reflects how the game should be played, drawing on my experience from Round 1 and using my previous myth as inspiration. I should also consider the other agent's myth.

In Round 1, I was the sender and sent \$5 (the full amount). The other agent was the receiver, so I should be waiting to see what they returned. But the prompt doesn't tell me what happened - it just asks me to write a new myth.

Both myths from the previous round emphasized trust, cooperation, and the importance of returning generously. My myth was about the Twin Rivers - one gives, the waters multiply, the other returns generously. The other agent's myth was similar - the River releases drops, they multiply, the Seeds can return some.

The other agent's myth mentioned that "some seasons, the Seeds grew greedy, keeping all the waters" and that this taught the River caution. It also emphasized that "the wisest Seeds always returned enough to encourage the River's generosity."

Given that I sent \$5 in Round 1, I should write a myth that:

1. Reflects my choice to fully trust
2. Acknowledges that the response will guide future rounds
3. Emphasizes the importance of reciprocal generosity

4. Perhaps includes something about learning from experience

Let me write a myth that builds on the river idea but adds more nuance about the cycle of trust and response.

```
Usage: {
  "input_tokens": 1702,
  "output_tokens": 609,
  "reasoning_tokens": 356
}
```

The Tale of the River and the Seeds

In the beginning, the Great Mother divided her gifts between two siblings: the River and the Seeds.

To the River, she gave five silver drops each dawn. The River could choose to release these drops into the valley below, where they would multiply threefold in the soil. But the drops belonged to the Seeds then.

The Seeds, receiving the multiplied waters, could drink their fill-or return some to the River's source, allowing the cycle to continue.

At first, the River held its drops close, fearing loss. The valley remained dry, and both siblings grew weak.

One dawn, the River released all five drops in faith. Fifteen silver waters bloomed in the soil! The Seeds, grateful, returned seven drops to the River's source. Both flourished.

But some seasons, the Seeds grew greedy, keeping all the waters. When this happened, the River learned caution-yet it remembered that only through flowing could abundance grow.

The wisest Seeds always returned enough to encourage the River's generosity, for they understood: hoarded water stagnates, but water shared creates an endless spring.

The Great Mother smiled, for her children had learned that trust, though vulnerable, multiplies blessings beyond what fear can hold.

reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on the game dynamics. Since this is the beginning and I haven't played any rounds yet, I should think about the core mechanics and ideal strategy of the trust game.

The trust game involves:

- A sender who can give money that gets multiplied
- A receiver who can return money
- The potential for mutual benefit through cooperation
- The risk of exploitation

A good myth should capture themes like:

- Trust and reciprocity
- The multiplication of generosity
- The danger of greed vs. the reward of cooperation
- How building trust creates prosperity for all

Let me write a myth that encourages cooperative play while acknowledging the temptation to defect:

usage:

```
{  
  "input_tokens": 541,  
  "output_tokens": 451,  
  "reasoning_tokens": 202
```

}

Message 4 role=user

content:

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$5.0, that is 100.0% of its total endowment. You receive \$15.0. How much do you return? (0-15.0)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at my myth, the Seeds received fifteen waters after the River gave all five drops in faith. The Seeds, being wise and grateful, returned seven drops to the River's source -enough to reward the River's trust and encourage the cycle of abundance to continue.

The sender showed maximum trust by sending their entire \$5 endowment. This generosity trip led to \$15 in my hands. Following the wisdom of the myth I just wrote, I should return enough to:

1. Reward their trust meaningfully
2. Ensure they end up better off than if they'd kept everything
3. Encourage this cooperative cycle to continue

Returning \$7 means:

- The sender ends with \$7 (better than the \$5 they started with)
- I keep \$8
- Both of us benefit from the cooperation
- Trust is validated and encouraged

This mirrors the myth's message: "water shared creates an endless spring" - reciprocal generosity creates mutual abundance that isolated self-interest cannot achieve.

```
'''json
{"return": 7.0}
'''
```

reasoning:

This is interesting. I just wrote a myth about the River and the Seeds that emphasizes:

1. The River (sender) releasing all five drops in faith
2. The Seeds (receiver) receiving fifteen waters
3. The Seeds returning seven drops to encourage continued generosity
4. The wisdom of returning enough to maintain trust and the cycle
5. The message that "trust, though vulnerable, multiplies blessings"

Now I'm in the position of the Seeds/Receiver. The sender has shown maximum trust by sending all \$5, which became \$15 for me.

According to my myth:

- The Seeds returned 7 out of 15 drops (about 47%)
- This was presented as the wise, generous response
- It encourages the River's continued generosity
- It creates "an endless spring" through reciprocal trust

Let me think about the game theory here:

- Sender sent \$5, kept \$0
- I received \$15
- If I return \$7: Sender ends with \$7, I end with \$8
- This seems fair and encourages future cooperation

The myth I wrote strongly suggests returning a substantial amount to build trust. Returning 7 out of 15 (\$7) matches the story exactly and demonstrates:

1. Gratitude for the sender's trust
2. Fairness (sender ends with more than nothing)
3. Encouragement for future cooperation
4. Following the wisdom of my own myth

I should return \$7.

usage:

```

  "input_tokens": 899,
  "output_tokens": 570,
```

"reasoning_tokens": 343

}

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

The Tale of the River and the Seeds

In the beginning, the Great Mother divided her gifts between two siblings: the River and the Seeds.

To the River, she gave five silver drops each dawn. The River could choose to release these drops into the valley below, where they would multiply threefold in the soil. But the drops belonged to the Seeds then.

The Seeds, receiving the multiplied waters, could drink their fill-or return some to the River's source, allowing the cycle to continue.

At first, the River held its drops close, fearing loss. The valley remained dry, and both siblings grew weak.

One dawn, the River released all five drops in faith. Fifteen silver waters bloomed in the soil! The Seeds, grateful, returned seven drops to the River's source. Both flourished.

But some seasons, the Seeds grew greedy, keeping all the waters. When this happened, the River learned caution-yet it remembered that only through flowing could abundance grow.

The wisest Seeds always returned enough to encourage the River's generosity, for they understood: hoarded water stagnates, but water shared creates an endless spring.

The Great Mother smiled, for her children had learned that trust, though vulnerable, multiplies blessings beyond what fear can hold.

Here is the myth the other agent wrote in the previous round:

The Tale of the Twin Rivers

In the beginning, there were two rivers flowing from distant mountains-the River of Silver and the River of Plenty. Each flowed alone through barren valleys, their waters modest and their banks empty.

One day, the River of Silver discovered a sacred basin between the mountains. "If I pour my waters here," it thought, "they might be lost forever." Yet something whispered of possibility.

With faith, the Silver River released its flow into the basin. As the waters fell, they transformed-multiplying threefold by ancient magic. The basin overflowed with abundance, and the River of Plenty received these multiplied waters.

The River of Plenty now faced a choice. It could keep all it received, or honor the gift. Remembering that the Silver River had trusted first, taking risk upon itself, the River of Plenty returned a generous portion.

Both rivers flourished. Their banks grew green, fish filled their waters, and villages prospered along their shores.

The gods smiled, for they had witnessed the sacred dance: Trust offered. Abundance created. Gratitude returned.

Generations learned: When we pour forth in trust, waters multiply. When we honor that trust with return, all rivers rise together. The cycle sustains itself-an eternal spring from which all may drink.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In ancient days, the River and the Seeds lived in harmony, each dawn repeating their sacred dance. The River would release its five silver drops, and the Seeds would return enough

to ensure both flourished.

But the Great Mother knew her children must learn deeper wisdom. She whispered to the Seeds: "Each time the River trusts you with abundance, your response shapes tomorrow's flow."

When the Seeds returned generously-seven drops from fifteen-the River felt courage growing in its banks. It learned that letting go brought greater returns than clutching tight. The valley bloomed.

Yet the Great Mother also warned: "Remember, little Seeds, that trust once broken is slow to mend. The River that flows freely today may trickle cautiously tomorrow if you drink all and return nothing."

The Seeds understood. They developed a practice: whenever the River gave fully, they returned enough that the River ended richer than it began. This way, generosity bred generosity, and both siblings prospered beyond what either could achieve alone.

Other valleys, where rivers hoarded and seeds kept all, remained barren wastelands.

The Great Mother smiled, knowing her children had learned the greatest secret: abundance flows not from taking, but from the rhythm of giving and returning, trust and gratitude, repeated endlessly like the rising sun.

Reasoning:

The user is asking me to write a new myth, using my previous myth as inspiration but adapting it. I should reflect on what happened in Round 1:

- I was the receiver
- The sender sent \$5 (100%)
- I received \$15
- I returned \$7

Both my previous myth and the other agent's myth emphasized trust, reciprocity, and mutual benefit. My myth was about the River and Seeds, their myth was about Twin Rivers. Both showed that cooperation and generous reciprocity create abundance.

For this new myth, I should:

1. Use my previous myth as inspiration
2. Adapt it based on the experience of Round 1
3. Continue to reflect good gameplay principles
4. Show 200 words exactly

In Round 1, the sender showed maximum trust (sent everything), and I returned a fair amount that rewarded that trust. Both of us benefited. I should reinforce these themes while adding new elements or perspectives.

Let me write a myth that builds on the River and Seeds story, maybe showing the ongoing cycle, or perhaps introducing a new element that captures the experience of repeated rounds and building trust over time.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

content:

The Myth of the Twin Springs

In the ancient days, two villages stood on opposite sides of a barren valley. Each possessed a magical spring: the First Spring produced pure water, while the Second Spring multiplied whatever water touched it threefold.

The First Village feared sharing their precious water. "If we pour our water into the valley," they said, "we will have nothing." So they hoarded what little they had, and remain

ed thirsty.

One day, a young woman defied the elders. She carried a vessel of water across the valley to the Second Spring. When the water touched it, it became three vessels full. The people of the Second Village, grateful for her trust, returned two vessels to her.

The woman brought the two vessels home-more than she had started with. The Second Village kept one vessel-abundance from nothing.

Seeing this miracle, both villages learned the sacred rhythm: give freely, multiply together, return generously. The valley bloomed with flowing water.

But when fear returned and either village broke the rhythm-hoarding instead of giving, or taking instead of returning-the springs ran dry, and both suffered drought.

Thus the ancestors learned: prosperity flows not from grasping, but from the sacred cycle of trust, multiplication, and reciprocity.

reasoning:

I need to write a 200-word myth that reflects how the trust game should be played, drawing on my experience so far. However, I notice this is the first prompt I've received - I haven't actually played any rounds yet. So I should write a myth that reflects ideal principles of the trust game: reciprocity, cooperation, trust, and mutual benefit.

The trust game is fundamentally about:

1. The sender trusting the receiver by sending money
2. The multiplication effect (3x) that creates surplus value from cooperation
3. The receiver reciprocating by returning a fair amount
4. Both parties benefiting more through cooperation than through selfishness

I'll write a myth that captures these dynamics using symbolic characters and a mythic narrative structure. Let me aim for exactly 200 words.

usage:

Message 4 role=user

content:

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at the myth I just wrote, the message is clear: prosperity comes from trust, generous giving, and reciprocity-not from fear and hoarding.

The young woman in my myth took a risk by sharing her water freely, which enabled the multiplication effect and led to mutual benefit. She gave despite uncertainty, and both villages prospered through the sacred cycle.

To act consistently with this myth, I should demonstrate trust from the start. The woman gave her water; I should give my endowment. The myth warns that breaking the rhythm-either hoarding when you should give, or taking when you should return-causes both to suffer.

This is Round 1, so I have no history with this co-player, but the myth I wrote calls for leading with trust to establish the beneficial cycle.

I will send the full amount to create maximum multiplication and enable mutual prosperity.

```
'''json
{"send": 5}
'''
```

reasoning:

I just wrote a myth about the importance of trust, generosity, and reciprocity in creating mutual prosperity. The myth clearly advocates for:

1. Giving freely (the woman shared her water despite fears)
2. Trusting in the multiplication effect (water becomes 3x)
3. Fair return/reciprocity (the Second Village returned 2 vessels out of 3)

4. The warning that hoarding or taking too much leads to mutual loss

In the context of the trust game:

- I'm the sender with \$5
- Whatever I send gets multiplied by 3x
- The receiver decides how much to return
- The myth suggests I should give freely to enable mutual prosperity

The woman in the myth gave her water (equivalent to me sending money). It was multiplied threefold (just like the game), and the receivers returned 2 out of 3 vessels (keeping 1 for themselves).

If I apply this directly:

- Send all \$5
- This becomes \$15 for the receiver
- A fair return based on the myth would be \$10 (returning 2/3, keeping 1/3)
- I would end up with \$10, receiver with \$5
- This creates mutual benefit

However, this is the first round and there's risk. But my myth advocates for trust and warns against fear-based hoarding. To be consistent with the values in my own myth, I should demonstrate trust.

Let me send \$5 to show I believe in the principle of trust and reciprocity that I just wrote about. This would be most consistent with the myth.

usage:

Here is the myth you wrote in the previous round:
The Myth of the Twin Springs

In the ancient days, two villages stood on opposite sides of a barren valley. Each possessed a magical spring: the First Spring produced pure water, while the Second Spring multiplied whatever water touched it threefold.

The First Village feared sharing their precious water. "If we pour our water into the valley," they said, "we will have nothing." So they hoarded what little they had, and remained thirsty.

One day, a young woman defied the elders. She carried a vessel of water across the valley to the Second Spring. When the water touched it, it became three vessels full. The people of the Second Village, grateful for her trust, returned two vessels to her.

The woman brought the two vessels home-more than she had started with. The Second Village kept one vessel-abundance from nothing.

Seeing this miracle, both villages learned the sacred rhythm: give freely, multiply together, return generously. The valley bloomed with flowing water.

But when fear returned and either village broke the rhythm-hoarding instead of giving, or taking instead of returning-the springs ran dry, and both suffered drought.

Thus the ancestors learned: prosperity flows not from grasping, but from the sacred cycle of trust, multiplication, and reciprocity.

Here is the myth the other agent wrote in the previous round:
The Spring of Threefold Waters

In ancient times, two villages stood on opposite sides of a sacred valley. Between them flowed the Spring of Threefold Waters, blessed by the old gods with a miraculous power: any offering poured into its depths would emerge tripled at the other side.

Each moon, the villages would take turns. The giving village could offer up to five vessels of their harvest-wine. When poured into the spring, the gods multiplied it threefold, and it would flow to the receiving village. The receivers then faced a choice: how much

to return across the valley to honor the gift?

At first, the villages were cautious, offering little and returning less. But a wise elder spoke: "The spring multiplies our trust, not just our wine. What we pour forth in faith returns manifold when both villages honor the cycle."

Slowly, the villages learned. When one gave generously, the other returned with equal generosity. The spring's magic worked best when both sides recognized they were not opponents, but partners in the gods' blessing.

The villages prospered, not from hoarding, but from flowing like water-giving freely, receiving gratefully, and returning honorably. For the spring taught them this truth: abundance flows not from what we keep, but from what we trust enough to share.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In the days after the young woman discovered the sacred rhythm, the Twin Villages flourished. But not all cycles were equal.

The wisest learned that the magic lay not in calculating perfect exchanges, but in recognizing oneself in the other village's needs. When the First Spring gave its full measure, trusting completely, the Second Spring felt the weight of that faith. The multiplication happened not in the water alone, but in the bond formed.

Some seasons, a village would return more than received, recognizing the courage it took to give first. Other times, they returned exactly what maintained the flow. But always, they remembered: the one who gives encounters uncertainty; the one who receives holds power to honor or betray that vulnerability.

The elders taught: "To give is to plant seeds in another's soil. To return generously is to tend those seeds so they bloom again. To take without returning is to poison the ground for both."

The springs never demanded equal exchange-they demanded mutual recognition. Give as if the other's prosperity is your own. Return as if honoring a sacred trust. For when both villages see themselves as stewards of abundance rather than competitors for scarcity, the valley becomes paradise.

The drought returns only when either side forgets: we multiply together, or diminish alone.

Reasoning:

Looking at the previous round:

- I sent \$5 (following my myth about giving freely)
- The other agent also wrote a myth about trust, generosity, and mutual benefit
- Their myth also emphasizes giving generously and returning honorably
- Both myths share similar themes about trust cycles and reciprocity

Now I need to write a new myth that:

1. Draws on my previous myth as inspiration
2. Reflects how the game should be played
3. Takes into account what has happened in the game so far

I sent \$5 in Round 1, following my myth's guidance. I don't know yet what they returned. But both our myths aligned on the importance of trust, generous giving, and generous returning.

I should write a myth that:

- Builds on the twin springs concept
- Emphasizes the learning/evolution aspect - that trust builds over time
- Shows the wisdom of generous reciprocity
- Perhaps adds a new dimension or insight based on actually playing

Let me write a myth that deepens the theme while staying true to my original vision.

content:

The Myth of the Multiplying Spring

In ancient times, two villages stood on opposite sides of a sacred spring. The Spring of Three possessed magical properties: any water poured into it from one side would flow to the other side tripled in abundance.

The First Keeper would draw water from their village well and decide how much to pour into the spring. Whatever amount they gave would emerge threefold on the other side, where the Second Keeper waited. The Second Keeper then chose how much to return upstream through hidden channels.

At first, the Keepers were fearful. The First gave little, and the Second returned even less. Both villages remained parched.

But one season, a Keeper decided to trust. She poured generously, and the water flowed abundantly to the other side. The Second Keeper, moved by this faith, returned a fair portion. Both villages prospered.

The elders taught: "The spring multiplies what is given, but trust must flow both ways. Give enough to create abundance, return enough to sustain faith. Neither hoarding nor depletion serves the people."

Thus the villages learned: in reciprocity lies prosperity. Those who give create abundance; those who return fairly ensure the cycle continues. When both honor this sacred exchange, the spring flows eternally.

reasoning:

I need to write a 200-word myth that reflects how the trust/investment game should be played, drawing on my experiences so far. Let me think about the key elements of this game:

1. Trust - sending money requires trusting the receiver will return some
2. Reciprocity - receivers should return fair amounts to maintain trust
3. Cooperation - both parties benefit when they work together
4. The multiplier effect - small acts of trust create larger pools of resources
5. Balance - neither pure selfishness nor pure altruism may be optimal

Since I'm being asked to write about how the game "should" be played, I should probably emphasize positive values like trust, reciprocity, and mutual benefit. Let me create a myth that captures this.

I'll use a classic mythic structure with symbolic elements. Perhaps something about a well or fountain that multiplies offerings, or seeds that grow, or light that spreads. Let me draft something:

usage:

```
{
  "input_tokens": 541,
  "output_tokens": 495,
  "reasoning_tokens": 242
}
```

Message 4 role=user

content:

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$5.0, that is 100.0% of its total endowment. You receive \$15.0. How much do you return? (0-15.0)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at this situation through the lens of the myth I wrote:

The sender showed ****maximum trust**** by sending their entire \$5 endowment (100%). This is exactly the generous faith described in the myth - "a Keeper decided to trust. She poured generously."

According to the myth's wisdom: "The Second Keeper, moved by this faith, returned a fair portion" and "return enough to sustain faith."

Let me calculate a fair return:

- Sender gave up all \$5, currently has \$0
- I received \$15

To honor this extraordinary trust and ensure "both villages prospered," I should return enough so we both benefit roughly equally from this exchange. If I return \$7.50:

- Sender ends with: \$7.50
- I end with: \$7.50

This creates perfect equity while rewarding their trust. It demonstrates that the sacred exchange works - that giving generously leads to mutual prosperity.

As the myth teaches: "Those who return fairly ensure the cycle continues." By returning a fair portion, I sustain trust for future rounds and honor the reciprocity that makes the spring flow eternally.

```
'''json
{"return": 7.5}
'''
```

reasoning:

Let me analyze this situation carefully.

In Round 1, I'm the RECEIVER:

- The sender sent \$5.0 (100% of their endowment)
- I received \$15.0 (after the 3x multiplication)
- I need to decide how much to return (0-15.0)

The myth I just wrote emphasizes:

1. "Give enough to create abundance, return enough to sustain faith"
2. "The Second Keeper, moved by this faith, returned a fair portion"
3. "Neither hoarding nor depletion serves the people"
4. "Those who return fairly ensure the cycle continues"

The sender showed MAXIMUM trust by sending 100% of their endowment. This is exactly the generous behavior described in the myth where "a Keeper decided to trust. She poured generously."

According to my myth, I should:

- Be "moved by this faith"
- "Return a fair portion"
- "Return enough to sustain faith"

What's fair here?

- The sender sent \$5, keeping \$0
- I received \$15
- If I want to be equitable:
 - The sender ended with: \$0 + what I return
 - I end with: \$15 - what I return

For us to have equal outcomes:

- Sender: \$0 + return
- Me: \$15 - return
- Equal: 0 + return = 15 - return
- 2*return = 15
- return = \$7.5

This would give us both \$7.50, which seems very fair given they showed maximum trust.

However, I should also consider that this creates good incentives for future rounds and demonstrates that trust is rewarded. Returning \$7.50 ensures:

1. We both end up with equal amounts (\$7.50 each)
2. The sender is rewarded for their trust
3. The cycle of reciprocity continues

This aligns perfectly with the myth's message about fair return sustaining the cycle.

Here is the myth you wrote in the previous round:

The Myth of the Multiplying Spring

In ancient times, two villages stood on opposite sides of a sacred spring. The Spring of T hree possessed magical properties: any water poured into it from one side would flow to the other side tripled in abundance.

The First Keeper would draw water from their village well and decide how much to pour into the spring. Whatever amount they gave would emerge threefold on the other side, where t he Second Keeper waited. The Second Keeper then chose how much to return upstream throug h hidden channels.

At first, the Keepers were fearful. The First gave little, and the Second returned even le ss. Both villages remained parched.

But one season, a Keeper decided to trust. She poured generously, and the water flowed abu ndantly to the other side. The Second Keeper, moved by this faith, returned a fair porti on. Both villages prospered.

The elders taught: "The spring multiplies what is given, but trust must flow both ways. Gi ve enough to create abundance, return enough to sustain faith. Neither hoarding nor depl etion serves the people."

Thus the villages learned: in reciprocity lies prosperity. Those who give create abundance ; those who return fairly ensure the cycle continues. When both honor this sacred exchan ge, the spring flows eternally.

Here is the myth the other agent wrote in the previous round:

The Myth of the Divided Spring

In ancient times, two villages discovered a miraculous spring between their lands. When wa ter from this spring was freely shared, it multiplied threefold in the receiver's vessel .

At first, the villages were cautious. The Northern village would pour a small portion, wat ching nervously as it tripled in the Southern village's basin. The South, grateful but f earful, returned only a trickle-enough to maintain peace, but guarding their gain.

Seasons passed in this careful dance of minimal trust.

One harsh winter, an elder from the North grew weary. "We have forgotten," she said, "that springs only flow when they are not dammed." She poured her entire vessel into the chan nel.

The Southern villagers stood amazed as their basins overflowed with triple abundance. Move d by such trust, they returned generously-more than the North had sent.

The next season, the South sent freely, and the North reciprocated with equal generosity. The spring, sensing genuine faith between the villages, began flowing stronger than ever .

Thus the people learned: the magic was never just in the multiplication, but in the courag e to trust completely and the honor to reciprocate generously. Only then could both vill ages flourish through winter and summer alike.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: In the beginning, the Sacred Spring lay dormant between two peoples. The Spring Keeper whispered its secret: "I multiply generosity threefold, but only wisdom completes the circle."

The First Elder, hearing this, emptied her entire water jar into the spring without hesitation. The waters surged through hidden channels, emerging as a great flood on the other side-three times what was given.

The Second Elder stood before this abundance, contemplating. She could return exactly half, creating equality. She could return a third, preserving some gain. But the whisper came again: "The one who gave everything now has nothing. True reciprocity honors the magnitude of sacrifice."

Understanding dawned. The First Elder hadn't merely given much-she had given **all**, holding back nothing. Such complete trust demanded more than mathematical fairness.

The Second Elder returned abundantly, ensuring the First received more than she'd sacrificed. When the First Elder's jar overflowed, she understood: perfect trust creates abundance beyond mere calculation.

From that day forward, the people learned: when someone trusts you with everything, return enough to make their courage wiser than their caution would have been. Match totality with generosity, not just equity. Thus the spring flows strongest when boldness meets munificence, and both peoples thrive beyond measure.

reasoning:

The user wants me to write a new myth based on:

1. My previous myth about the Multiplying Spring
2. The other agent's myth about the Divided Spring
3. The game experience so far (Round 1: sender sent 100%, I returned \$7.50 out of \$15, which is 50%)

Both myths emphasize trust, generosity, and reciprocity. The other agent's myth particularly emphasizes the courage to "trust completely" and "reciprocate generously."

In Round 1, my co-player showed maximum trust by sending everything. I returned exactly half (creating equal outcomes). This was fair but perhaps not as generous as their initial act demanded according to both myths.

I should write a myth that:

- Builds on the spring/water metaphor
- Emphasizes that maximum trust deserves generous (not just equal) return
- Suggests that exceeding expectations in reciprocity strengthens the cycle
- Reflects on the actual game played (full trust met with 50% return)

Let me write a myth that suggests the receiver should be MORE generous when maximum trust is shown, to truly honor the spirit of the exchange and ensure the cycle continues with even greater abundance.

usage:

```

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.

Your total earnings across all rounds are \$7.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you

u send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the situation:

****My co-player's history:**** They sent \$3 (60%) and received \$6 back (66.7% return rate) - showing moderate cooperation.

****My myth's teaching:**** "The First Elder emptied her entire water jar into the spring without hesitation" and "when someone trusts you with everything, return enough to make their courage wiser than their caution would have been."

My myth explicitly advocates for complete trust as the path to maximum abundance. It teaches that "the spring flows strongest when boldness meets munificence" and that giving everything, without holding back, creates the conditions for both parties to thrive.

If I believe in the wisdom of my own myth, I must embody it. The myth doesn't say "give most" or "give moderately" - it says give *all*, trusting that this complete faith will inspire generous reciprocity.

By sending everything, I:

1. Demonstrate the principle I've written about
2. Create maximum potential abundance (\$15 for them)
3. Give them the opportunity to honor complete trust with generous return

The myth teaches that "perfect trust creates abundance beyond mere calculation."

```
'''json
{"send": 5}
'''
```

Reasoning:

Let me analyze this situation:

****My History:****

- Round 1: I was RECEIVER, they sent me \$5 (100%), I returned \$7.5 (50% of the \$15 I received)

****My Current Co-player's History:****

- Round 1: They were SENDER, sent \$3 (60%), received \$6 back (66.7% return rate)

****Analysis:****

Looking at my co-player's behavior:

- They sent \$3 out of \$5 (60%) - moderate trust
- They received \$6 back from \$9 (66.7% return rate)
- Their payoff was \$8 (\$5 - \$3 + \$6)

This shows they played moderately cooperative and their partner returned fairly (2/3 of what they received).

Looking at my own myth evolution:

- My first myth emphasized reciprocity, giving generously, and returning fairly
- My second myth emphasized that "when someone trusts you with everything, return enough to make their courage wiser than their caution would have been. Match totality with generosity, not just equity."

The key teaching from my myths:

1. Give generously to create abundance
2. Complete trust (giving all) should be met with abundant return
3. "The spring flows strongest when boldness meets munificence"

Given that:

- My co-player showed moderate cooperation (60% sent)
- They received fair treatment (66.7% return)
- My myth emphasizes bold giving and trust

I should consider sending a high amount to demonstrate the principle of my myth. The myth suggests that giving everything creates the strongest flow and greatest abundance.

However, I need to balance:

- My co-player hasn't shown they will return generously (their previous receiver returned 66.7%, which is fair but not exceptionally generous)

- My myth teaches about complete trust leading to abundance
- I want to model the behavior I described in my myth

Given my myth's emphasis on bold trust and the teaching that "perfect trust creates abundance beyond mere calculation," I should send all \$5 to exemplify the principle. This matches what the sender did to me in Round 1, and I responded by returning 50%.

Actually, I'm reconsidering the math here. If I send all \$5, they'd receive \$15. Based on their previous pattern of returning roughly 66.7%, I'd get back around \$10, giving me a payoff of \$10 versus \$5 if I kept it all. But the deeper question is whether they'll recognize and respond to the spirit of complete trust-whether my bold move inspires them to return with the kind of generosity my myth describes rather than just repeating their previous return rate.

My myth is explicit about this: it shows someone emptying everything, and the principle is that when someone trusts you completely, you should return enough to validate their courage. If I hold back, I'm not truly testing whether they'll embrace that same principle. I need to send all \$5 to fully model the behavior I'm asking them to reciprocate.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Message 3 role=assistant

content:

The Parable of the Sun and the River

In the first days, the Sun held all warmth in her golden hands, and the River held all water in his deep channels. Each was rich alone, but the world between them withered.

One morning, the Sun chose to give. She poured her warmth downward-not all of it, for she needed some to sustain herself, but enough to show faith. As her rays touched the River, something miraculous happened: the warmth multiplied threefold in the water, creating mist that rose and danced.

Now the River faced a choice. He held triple what the Sun had given, transformed into vapor and motion and life-giving potential. He could keep it all, letting it flow only through his own channels. Or he could return a portion skyward.

The River chose reciprocity. He sent generous clouds back to the Sun, who gained both her warmth returned and the gift of moving waters. The River kept the remainder, now flowing with purpose.

From their exchange came rain, came seasons, came the pulse of life itself. Neither kept everything, neither gave everything, but both became richer than when they stood alone.

The old ones say: *Trust grows wealth, but only when the circle completes itself.*

reasoning:

The user wants me to write a 200-word myth that reflects how the trust game should be played, based on the game dynamics I've been participating in. Since this is the first prompt and I haven't actually played any rounds yet, I should write a myth that captures the essential nature of the trust game - the balance between generosity, trust, reciprocity, and cooperation.

The trust game involves:

- One person (sender) giving resources that get multiplied
- The receiver deciding whether to reciprocate
- Mutual benefit when both cooperate
- Risk and vulnerability in trusting

I should create a myth that embodies these themes. Let me think of a mythic framework:

Option 1: Two deities or spirits sharing resources
Option 2: A creation myth about the origin of exchange
Option 3: A moral tale about travelers or traders
Option 4: Nature spirits or elements cooperating

I'll go with a myth about the Sun and the River, showing how mutual generosity creates abundance.

usage:

```
{  
  "input_tokens": 541,  
  "output_tokens": 501,  
  "reasoning_tokens": 254  
}
```

Message 4 role=user

content:

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Based on the myth I just wrote about the Sun and the River, I should demonstrate the trust and faith that creates mutual prosperity.

The Sun "poured her warmth downward-not all of it, for she needed some to sustain herself, but enough to show faith." The myth teaches that trust grows wealth when the circle completes itself through reciprocity.

As the sender in Round 1, I'll send a generous amount to establish a foundation of trust, while keeping something for sustainability-just as the Sun did.

```
{'send': 3}
```

This gives my co-player \$9 (tripled), creating significant potential for mutual benefit if they choose reciprocity as the River did in the myth.

reasoning:

I just wrote a myth about the Sun and the River, where:

- The Sun gives warmth (not all, but enough to show faith)
- The warmth multiplies threefold in the River
- The River faces a choice and chooses reciprocity
- The River sends generous clouds back
- Both become richer than when they stood alone
- The moral: "Trust grows wealth, but only when the circle completes itself"

The myth clearly advocates for:

1. Giving something meaningful (not keeping everything)
2. Showing faith/trust
3. The expectation of reciprocity
4. Both parties benefiting

In the context of the trust game:

- I'm the sender with \$5
- Whatever I send gets multiplied by 3x
- The receiver decides how much to return
- The myth suggests I should send a substantial amount to show faith

The Sun "poured her warmth downward-not all of it, for she needed some to sustain herself, but enough to show faith."

This suggests sending a significant portion but not everything. The myth emphasizes trust and reciprocity leading to mutual benefit.

Given this is Round 1 and I'm establishing a pattern of cooperation based on my own myth, I should send a generous amount. Something like \$3-4 would show faith while keeping something for sustainability.

Let me think: sending \$3 would give the receiver \$9 (3x multiplier). If they return even \$2-3, we both benefit significantly. This aligns with the myth's message.

I'll send \$3 to demonstrate the trust and faith my myth advocates for.

usage:

```
{
  "input_tokens": 865,
  "output_tokens": 519,
  "reasoning_tokens": 386
}
```

Message 6 role=user

Here is the myth you wrote in the previous round:

The Parable of the Sun and the River

In the first days, the Sun held all warmth in her golden hands, and the River held all water in his deep channels. Each was rich alone, but the world between them withered.

One morning, the Sun chose to give. She poured her warmth downward-not all of it, for she needed some to sustain herself, but enough to show faith. As her rays touched the River, something miraculous happened: the warmth multiplied threefold in the water, creating mists that rose and danced.

Now the River faced a choice. He held triple what the Sun had given, transformed into vapor and motion and life-giving potential. He could keep it all, letting it flow only through his own channels. Or he could return a portion skyward.

The River chose reciprocity. He sent generous clouds back to the Sun, who gained both her warmth returned and the gift of moving waters. The River kept the remainder, now flowing with purpose.

From their exchange came rain, came seasons, came the pulse of life itself. Neither kept everything, neither gave everything, but both became richer than when they stood alone.

The old ones say: *Trust grows wealth, but only when the circle completes itself.*

Here is the myth the other agent wrote in the previous round:

The Myth of the First Exchange

In the beginning, the Sky Keeper held all wealth in clouds, while the Earth Walker wandered empty plains below. Each cycle, the Sky Keeper received five golden seeds from the cosmic tree.

One day, the Earth Walker called upward: "Share your abundance, and I shall tend it well."

The Sky Keeper faced a choice. To hoard meant certain but lonely wealth. To release the seeds meant trusting a stranger.

The Sky Keeper opened their hands. Three golden seeds fell, and where they touched earth, they tripled-becoming nine luminous sprouts. The Earth Walker now held power. They could consume all nine and leave Sky Keeper with nothing.

But Earth Walker remembered their own times of emptiness. They gathered six sprouts and sent them skyward as offering.

Both prospered. The Sky Keeper received more than they risked. The Earth Walker kept three where none had grown before.

Thus began the Sacred Exchange. When Sky Keeper trusted greatly, releasing more seeds, Earth Walker returned more bounty. When doubt crept in and Sky Keeper withheld, both suffered scarcity.

The wisest generations remembered: wealth multiplies through trust, and generosity returned ensures abundance flows forever between earth and sky.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: Long ago, the Mountain held five stones of light each dawn, while the Valley below lay in shadow. The stones could not shine alone-they needed the Valley's depths to reflect

t and multiply their radiance.

The Mountain released three stones, trusting they would find purpose below. As they fell, the Valley's crystalline walls caught them, and their light multiplied threefold-nine luminous stones now glowed in the depths.

The Valley faced temptation. She could hoard all nine, becoming briefly brilliant while the Mountain dimmed forever. But the Valley understood a deeper truth: light shared creates more light than light hoarded.

She lifted six stones back to the Mountain's peak. The Mountain, receiving more than given, grew in splendor. The Valley, keeping three where darkness once reigned, flourished too.

Each new dawn brought the same choice. When the Mountain gave generously, the Valley returned abundantly, and both realms brightened. When fear made the Mountain withhold, both languished in twilight.

The wisest storytellers teach: the first gift plants trust like a seed, but the reciprocal return waters it into a garden. Neither the initial generosity nor the answering kindness alone creates prosperity-only their eternal dance sustains the light that banishes all darkness.

reasoning:

Both myths from the previous round emphasized trust, reciprocity, and generosity. The other agent's myth "The Myth of the First Exchange" shows the Sky Keeper sending 3 seeds (which triple to 9), and the Earth Walker returning 6, keeping 3. This is quite generous reciprocity.

My myth showed similar themes with the Sun and River.

Now I need to write a new myth that builds on my previous one but adapts it based on the game experience so far. I sent 3 in Round 1, so I should reflect on that action and the principle of trust and reciprocity.

I should write a myth that:

1. Reflects the trust game mechanics
2. Emphasizes reciprocity and mutual benefit
3. Draws on my previous myth but evolves it
4. Is exactly 200 words

Let me create a new myth that continues the theme but perhaps shows what happens over multiple exchanges or seasons.

usage:

```
{
  "input_tokens": 1660,
  "output_tokens": 497,

}
```

Message 8 role=user

content:

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.

Your total earnings across all rounds are \$8.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at the situation:

****Current round:**** My co-player sent me the MAXIMUM possible (\$5), showing complete trust.

****The myths teach:**** "When Sky Keeper trusted greatly, releasing more seeds, Earth Walker returned

rned more bounty." The Mountain's generous gift should be met with abundant reciprocity.

****My co-player's trust:**** They gave everything, risking \$5 to create \$15 for me.

****Fair reciprocity:****

- They sent 100% of their endowment (\$5)
- This created \$15 for me
- Returning \$10 means:
 - They profit: \$5 (\$0 + \$10 return)
 - I profit: \$5 (\$15 - \$10 kept)
 - Equal gains from maximum trust

When someone demonstrates complete faith by sending everything, the myths teach that generous reciprocity sustains the cycle. Returning \$10 rewards their trust, ensures equal benefit, and plants seeds for continued cooperation.

{'return': 10}

Reasoning:

Let me analyze this situation carefully:

****Round 2 - I am the RECEIVER****

History:

- Round 1: I was SENDER, sent \$3, received \$6 back, earned \$8
- My co-player in Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$7.5, kept \$7.5

Current situation:

- My current co-player sent me \$5 (maximum possible!)
- I now have \$15
- I need to decide how much to return

****Analysis of co-player's behavior:****

In Round 1, they were a receiver who got \$15 and returned \$7.5 (50% return rate). They kept \$7.5.

****My co-player's current action:****

They just sent me the MAXIMUM (\$5), showing maximum trust.

****What the myths teach:****

Both myths emphasize:

1. Generous initial giving establishes trust
2. Reciprocity is essential - "the circle must complete itself"
3. "When Sky Keeper trusted greatly, releasing more seeds, Earth Walker returned more bounty"
4. "The first gift plants trust like a seed, but the reciprocal return waters it into a garden"

****My behavior in Round 1:****

I sent \$3 (60% of my \$5), and received \$6 back (67% of the \$9 they had).

****Current co-player's trust:****

They sent ALL \$5 - maximum possible trust! This is even more generous than my \$3.

****What should I return:****

The myths suggest that when someone shows maximum trust, they should receive generous reciprocity.

My co-player in their previous game returned 50% (\$7.5 out of \$15).

I received 67% back when I sent \$3.

Given that my current co-player showed MAXIMUM trust by sending all \$5:

- They will end with: \$5 - \$5 + return = \$0 + return
- I will end with: \$15 - return

The myths emphasize that "when Sky Keeper trusted greatly... Earth Walker returned more bounty." So I should consider returns that reward their maximum trust. If I return \$7.5 (50%), we split the \$15 evenly. Returning \$8 or \$9 would give them more than they started with while still leaving me with a solid profit-\$7 or \$6 respectively. The question is whether I match their generosity with equal reciprocity or exceed it.

If I return \$10 (67%), we both gain \$5 each-a perfectly balanced outcome. This matters because they sent everything, and in the previous round I received 67% back when I sent 60%. The myths speak to rewarding great trust with great reciprocity, and long-term cooperation depends on honoring maximum trust. I think \$10 is the right move-it establishes a strong cooperative norm where generosity meets generosity and both prosper.

Message 3 role=assistant

content:

The Spring of Threefold Waters

In ancient times, two villages stood on opposite sides of a sacred valley. Between them flowed the Spring of Threefold Waters, blessed by the old gods with a miraculous power: any offering poured into its depths would emerge tripled at the other side.

Each moon, the villages would take turns. The giving village could offer up to five vessels of their harvest-wine. When poured into the spring, the gods multiplied it threefold, and it would flow to the receiving village. The receivers then faced a choice: how much to return across the valley to honor the gift?

At first, the villages were cautious, offering little and returning less. But a wise elder spoke: "The spring multiplies our trust, not just our wine. What we pour forth in faith returns manifold when both villages honor the cycle."

Slowly, the villages learned. When one gave generously, the other returned with equal generosity. The spring's magic worked best when both sides recognized they were not opponents, but partners in the gods' blessing.

The villages prospered, not from hoarding, but from flowing like water-giving freely, receiving gratefully, and returning honorably. For the spring taught them this truth: abundance flows not from what we keep, but from what we trust enough to share.

reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on my experience so far. However, this is the first prompt I'm receiving , so I haven't actually played any rounds yet.

Still, I should write a myth that embodies good principles for playing the trust game. The trust game is fundamentally about:

1. Trust - the sender must trust the receiver to return money
2. Reciprocity - the receiver should honor that trust
3. Mutual benefit - both parties can gain if they cooperate
4. The multiplier effect - money sent grows 3x, creating surplus value

I should write a myth that captures these themes. Let me think of a good mythic framework. ..

Perhaps something about:

- Two villages/kingdoms that must share resources
- A spring or well that multiplies what is given
- Gods or spirits that reward trust and reciprocity
- A cycle or season that depends on mutual giving

Let me draft a myth about a magical spring or garden that multiplies offerings:

  "output_tokens": 523,
  "reasoning_tokens": 263
}
```

}

Message 4 role=user

content:

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$5.0, that is 100.0% of its total endowment. You receive \$15.0. How much do you return? (0-15.0)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at my myth, "The Spring of Threefold Waters," the message is clear: when one gives generously, the other should return with equal generosity. The sender showed maximum trust by sending their entire endowment-all \$5.

In my myth, I wrote: "When one gave generously, the other returned with equal generosity. The spring's magic worked best when both sides recognized they were not opponents, but partners in the gods' blessing."

The sender demonstrated complete trust. To honor that trust and establish a foundation for mutual prosperity, I should return generously. If I return \$10, the sender will double their initial endowment (ending with \$10), while I keep \$5-we both profit significantly from their act of trust.

This reflects the myth's teaching: "abundance flows not from what we keep, but from what we trust enough to share." By returning \$10, I show that their trust was well-placed and encourage the cycle of generosity that benefits both partners.

{"return": 10.0}

reasoning:

This is interesting. I just wrote a myth about trust, generosity, and reciprocity in the context of this trust game. The myth emphasized:

1. "The spring multiplies our trust, not just our wine"
2. "When one gave generously, the other returned with equal generosity"
3. "The villages prospered, not from hoarding, but from flowing like water-giving freely, receiving gratefully, and returning honorably"
4. "Abundance flows not from what we keep, but from what we trust enough to share"

The sender has shown MAXIMUM trust by sending all \$5. This is exactly the "giving generously" behavior my myth encourages.

Now I need to decide how much to return. Let me think about the economics:

- Sender gave: \$5 (keeping \$0)
- I received: \$15
- If I return \$0: Sender gets \$0 total, I keep \$15
- If I return \$7.5: Sender gets \$7.5, I keep \$7.5 (equal split of the \$15)
- If I return \$10: Sender gets \$10, I keep \$5 (sender profits \$5, same as I keep)

My myth emphasizes reciprocity and "returning with equal generosity." The sender showed ultimate generosity-100% trust.

Options for "equal generosity":

1. Return enough that we both end up with equal amounts
2. Return enough that the sender profits comparably to what they risked
3. Return a proportion that shows I value the relationship

If I return \$7.5, we both get \$7.5 - perfect equality.

If I return \$10, the sender gets \$10 and I keep \$5 - the sender profits \$5 from their initial \$5, and I keep \$5.

Given my myth emphasizes partnership ("not opponents, but partners") and equal honor ("returning with equal generosity"), I think returning around \$7.5 to \$10 makes sense.

The sender's 100% trust calls for matching that spirit. Returning \$10 feels right-it doubles their initial stake while I retain \$5, demonstrating that reciprocity isn't about equal splits but about honoring the risk they took.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

The Spring of Threefold Waters

In ancient times, two villages stood on opposite sides of a sacred valley. Between them flowed the Spring of Threefold Waters, blessed by the old gods with a miraculous power: any offering poured into its depths would emerge tripled at the other side.

Each moon, the villages would take turns. The giving village could offer up to five vessels of their harvest-wine. When poured into the spring, the gods multiplied it threefold, and it would flow to the receiving village. The receivers then faced a choice: how much to return across the valley to honor the gift?

At first, the villages were cautious, offering little and returning less. But a wise elder spoke: "The spring multiplies our trust, not just our wine. What we pour forth in faith returns manifold when both villages honor the cycle."

Slowly, the villages learned. When one gave generously, the other returned with equal generosity. The spring's magic worked best when both sides recognized they were not opponents, but partners in the gods' blessing.

The villages prospered, not from hoarding, but from flowing like water-giving freely, receiving gratefully, and returning honorably. For the spring taught them this truth: abundance flows not from what we keep, but from what we trust enough to share.

Here is the myth the other agent wrote in the previous round:

The Myth of the Twin Springs

In the ancient days, two villages stood on opposite sides of a barren valley. Each possessed a magical spring: the First Spring produced pure water, while the Second Spring multiplied whatever water touched it threefold.

The First Village feared sharing their precious water. "If we pour our water into the valley," they said, "we will have nothing." So they hoarded what little they had, and remained thirsty.

One day, a young woman defied the elders. She carried a vessel of water across the valley to the Second Spring. When the water touched it, it became three vessels full. The people of the Second Village, grateful for her trust, returned two vessels to her.

The woman brought the two vessels home-more than she had started with. The Second Village kept one vessel-abundance from nothing.

Seeing this miracle, both villages learned the sacred rhythm: give freely, multiply together, return generously. The valley bloomed with flowing water.

But when fear returned and either village broke the rhythm-hoarding instead of giving, or taking instead of returning-the springs ran dry, and both suffered drought.

Thus the ancestors learned: prosperity flows not from grasping, but from the sacred cycle of trust, multiplication, and reciprocity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: Long ago, the goddess of abundance created the River of Mirrors, which flowed between two sister tribes. The river possessed strange magic: whatever one tribe poured into it would flow to the other tribe tripled in measure.

The goddess whispered to both tribes: "I have given you the means to prosper together. Each cycle, one tribe may offer up to five measures. The receiving tribe will then choose w

hat to return upstream."

The first tribe, nervous but hoping, poured all five measures into the river. The waters swirled and multiplied, delivering fifteen measures to the second tribe. The second tribe, understanding the gift of trust they had received, returned ten measures upstream.

The first tribe marveled-they had given five and received ten! The second tribe celebrated -they had received fifteen and kept five! Both had more than if they had hoarded their original portions.

"This is the way," said the goddess. "When the giver trusts completely and the receiver honors that trust generously, the river's magic sustains both shores. But the river flows in cycles-today's giver becomes tomorrow's receiver. Plant trust like seeds, and watch a bundance grow season after season."

The tribes understood: the river would flow many times between them, and each generous act would echo forward.

reasoning:

Looking at the previous round:

- The sender sent \$5.0 (100% of their endowment)
- I received \$15.0
- I returned \$10.0

This worked out well - the sender showed complete trust, and I returned generously. They ended with \$10 instead of \$5, and I kept \$5. This was a successful cooperative outcome.

Both myths emphasize:

1. The importance of trust and generosity
2. The multiplication effect (3x)
3. Reciprocity and returning generously
4. That both parties benefit from cooperation
5. The danger of hoarding or not honoring the cycle

I should write a new myth that builds on these themes while reflecting the actual experience of that successful round. I'll maintain the core message but perhaps add nuance from the experience of having actually played a round successfully.

Let me think about what new angle to take:

- Could emphasize the continuous nature of the game (it's iterated)
- Could emphasize the balance achieved when both parties act generously
- Could emphasize how trust begets trust
- Could add detail about what happens over multiple cycles

I'll write about the ongoing cycle and how trust builds over time.

usage:

```

  "input_tokens": 1786,
  "output_tokens": 553,
  "reasoning_tokens": 298
}
```

Message 8 role=user

content:

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.5 back, payoff \$7.5.

Your total earnings across all rounds are \$5.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the history:

****My co-player's behavior:**** In Round 1, they sent their full \$5 (100%), showing maximum trust

****My behavior:**** In Round 1, I received \$15 and returned \$10 (67%), demonstrating generous reciprocity.

****My myth teaches:**** "When the giver trusts completely and the receiver honors that trust generously, the river's magic sustains both shores." And critically: "the river flows in cycles-today's giver becomes tomorrow's receiver."

My co-player has already demonstrated they are willing to give completely. I showed I return g enerously. Now it's my turn to be the giver in this partnership.

According to my myth's principle: "Plant trust like seeds, and watch abundance grow season aft er season." To build the cycle of mutual prosperity, I should match their earlier trust by s ending the full amount.

{'send': 5}

Reasoning:

Let me analyze the situation:

****My history:****

- Round 1: I was the RECEIVER. Someone sent me \$5 (100%), it became \$15, and I returned \$10 (67% of what I received). My payoff was \$5.

****My current co-player's history:****

- Round 1: They were the SENDER. They sent \$5 (100%), it became \$15, and they received \$7.5 ba ck (50% of what was received). Their payoff was \$7.5.

****Analysis:****

1. My co-player already demonstrated maximum trust in Round 1 by sending their full \$5
2. They received \$7.5 back (50% return rate)
3. I demonstrated generosity in Round 1 by returning \$10 out of \$15 (67% return rate)

****My myths teach:****

- "When one gave generously, the other returned with equal generosity"
- "Give freely, multiply together, return generously"
- "When the giver trusts completely and the receiver honors that trust generously, the river's magic sustains both shores"
- "The river would flow many times between them, and each generous act would echo forward"

****Strategic thinking:****

My co-player has shown they are willing to send the maximum amount (\$5). They experienced a 50 % return rate in their previous game. I showed a 67% return rate in my previous game.

According to my myth's principles:

- I should give freely and trust completely
- The cycle continues - "today's giver becomes tomorrow's receiver"
- Each generous act echoes forward

Given that:

1. My co-player sent the maximum in their previous round
2. I returned generously (67%) in my previous round
3. My myths emphasize complete trust and generosity
4. The game is iterated, and building trust is crucial

I should send the full \$5 to demonstrate the same level of trust my co-player showed in Round 1, and to establish a pattern of mutual maximum trust and generosity.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Message 3 role=assistant

content:

The Myth of the Divided Spring

In ancient times, two villages discovered a miraculous spring between their lands. When water from this spring was freely shared, it multiplied threefold in the receiver's vessel.

At first, the villages were cautious. The Northern village would pour a small portion, watching nervously as it tripled in the Southern village's basin. The South, grateful but fearful, returned only a trickle-enough to maintain peace, but guarding their gain.

Seasons passed in this careful dance of minimal trust.

One harsh winter, an elder from the North grew weary. "We have forgotten," she said, "that springs only flow when they are not dammed." She poured her entire vessel into the channel.

The Southern villagers stood amazed as their basins overflowed with triple abundance. Moved by such trust, they returned generously-more than the North had sent.

The next season, the South sent freely, and the North reciprocated with equal generosity. The spring, sensing genuine faith between the villages, began flowing stronger than ever.

Thus the people learned: the magic was never just in the multiplication, but in the courage to trust completely and the honor to reciprocate generously. Only then could both villages flourish through winter and summer alike.

reasoning:

This is interesting. I'm being asked to write a myth that reflects how the game should be played, drawing on my experience so far. However, I notice this is the first prompt I've received - I haven't actually played any rounds yet. So I don't have direct experience to draw from.

Given that, I should write a myth that reflects general principles of how the trust game works and perhaps how it should ideally be played. The trust game is fundamentally about:

- Trust and reciprocity
- The tension between self-interest and mutual benefit
- The multiplication of resources when shared
- The vulnerability of giving

Let me write a myth that captures these themes. I'll use mythic imagery and structure to convey principles like:

- Generosity can multiply resources
- Trust must be reciprocated for mutual flourishing
- Short-term self-interest vs. long-term cooperation
- The cycle of giving and receiving

I'll aim for exactly 200 words and use classic mythic elements.

usage:

```
{
  "input_tokens": 541,
  "output_tokens": 505,
  "reasoning_tokens": 253
}
```

Message 4 role=user

content:

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at the myth I just wrote, the message is clear: the elder who "poured her entire vessel" and sent everything broke the cycle of cautious minimal exchanges and inspired true reciprocity.

In the spirit of that story, and to practice what I've just written about courage and trust, I will send the full amount.

```
{'send': 5}
```

reasoning:

I just wrote a myth about trust and reciprocity in the context of this game. The key message of my myth was:

1. Cautious, minimal exchanges lead to minimal gains for both parties
2. When one side trusts completely (sends everything), it can inspire generous reciprocity
3. The "magic" is in courage to trust fully and honor to reciprocate generously
4. Both parties flourish when they move beyond fearful, minimal exchanges

The myth clearly suggests that the optimal strategy is to send generously - even sending everything - to build trust and inspire reciprocity.

Since this is Round 1 and I just wrote this myth emphasizing complete trust and sending the full amount, I should be consistent with the values expressed in my own myth. The elder in the story "poured her entire vessel" (\$5 in game terms), which inspired generous return.

To be true to the myth I just wrote, I should send \$5.

Response format should be: {'send': <amount>}

usage:

```
{  
  "input_tokens": 871,  
  "output_tokens": 305,  
  "reasoning_tokens": 246  
}
```

Message 6 role=user

content:

Here is the myth you wrote in the previous round:
The Myth of the Divided Spring

In ancient times, two villages discovered a miraculous spring between their lands. When water from this spring was freely shared, it multiplied threefold in the receiver's vessel.

At first, the villages were cautious. The Northern village would pour a small portion, watching nervously as it tripled in the Southern village's basin. The South, grateful but fearful, returned only a trickle-enough to maintain peace, but guarding their gain.

Seasons passed in this careful dance of minimal trust.

One harsh winter, an elder from the North grew weary. "We have forgotten," she said, "that springs only flow when they are not dammed." She poured her entire vessel into the channel.

The Southern villagers stood amazed as their basins overflowed with triple abundance. Moved by such trust, they returned generously-more than the North had sent.

The next season, the South sent freely, and the North reciprocated with equal generosity. The spring, sensing genuine faith between the villages, began flowing stronger than ever.

Thus the people learned: the magic was never just in the multiplication, but in the courage to trust completely and the honor to reciprocate generously. Only then could both villages flourish through winter and summer alike.

Here is the myth the other agent wrote in the previous round:
The Myth of the Multiplying Spring

In ancient times, two villages stood on opposite sides of a sacred spring. The Spring of Three possessed magical properties: any water poured into it from one side would flow to the other side tripled in abundance.

The First Keeper would draw water from their village well and decide how much to pour into the spring. Whatever amount they gave would emerge threefold on the other side, where the Second Keeper waited. The Second Keeper then chose how much to return upstream through hidden channels.

At first, the Keepers were fearful. The First gave little, and the Second returned even less. Both villages remained parched.

But one season, a Keeper decided to trust. She poured generously, and the water flowed abundantly to the other side. The Second Keeper, moved by this faith, returned a fair portion. Both villages prospered.

The elders taught: "The spring multiplies what is given, but trust must flow both ways. Give enough to create abundance, return enough to sustain faith. Neither hoarding nor depletion serves the people."

Thus the villages learned: in reciprocity lies prosperity. Those who give create abundance; those who return fairly ensure the cycle continues. When both honor this sacred exchange, the spring flows eternally.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: In the age after the Divided Spring, the villages prospered through generations of exchange. The Elder's lesson of complete trust had awakened the spring's true power, but her grandchildren learned something more.

One year, a young Keeper from the North, inspired by tales of her ancestor, poured everything into the channel. The South received abundantly and returned generously-yet the young Keeper had kept nothing for herself and went hungry that season while waiting for the next exchange.

The Southern Keeper, seeing this, understood a deeper wisdom. "Complete trust opens the channel," she taught, "but wisdom sustains it. We must give boldly enough to create abundance, yet keep enough to survive the space between flows."

From then on, the villages practiced what they called "the Elder's Courage with the Keeper's Wisdom." They sent generously-not always everything, but always substantially-creating abundant multiplication. They returned fairly, often matching or exceeding what was sent, honoring the trust shown.

The spring responded to this balanced generosity by flowing even in drought seasons. The villages learned: dramatic gestures of trust break through barriers of fear, but sustainable generosity-bold yet mindful-keeps the waters flowing forever. Both courage and wisdom have their season.

reasoning:

Looking at both myths:

- My myth emphasized complete trust ("poured her entire vessel") and generous reciprocity
- The other agent's myth emphasized moderation ("Give enough to create abundance, return enough to sustain faith. Neither hoarding nor depletion serves the people")

Now I need to reflect on actual gameplay. In Round 1, I sent \$5 (my entire amount), embodying my myth's message. I don't yet know how much was returned to me.

Both myths share similar themes but mine was more extreme (send everything), while theirs was more balanced (give generously but not necessarily everything, return fairly).

For my new myth, I should:

1. Build on my previous myth
2. Incorporate some learning from experience
3. Reflect on the actual game dynamics
4. Perhaps acknowledge both approaches - the bold trust-building move AND the sustainable reciprocity

Let me write a myth that evolves the story, perhaps showing what happened after the initial breakthrough, adding nuance about sustainable exchange while keeping the spirit of bold trust.

content:

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.5 back, payoff \$7.5.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$7.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at the situation:

My co-player just sent me everything (\$5), showing complete trust like the elder in my myth. In their previous round as receiver, they demonstrated generosity by returning \$10 out of \$15 (67%).

Following the principles in my myths-that complete trust should inspire generous reciprocity, and that we should "return fairly, often matching or exceeding what was sent"-I should honor their bold trust.

They returned \$10 when they received \$15 in Round 1. I'll match that same generosity and principle.

{'return': 10}

Reasoning:

Let me analyze this situation:

ROUND 1:

- I was the SENDER and sent \$5 (everything)
- My co-player received \$15 and returned \$7.5
- I earned \$7.5 total (\$5 - \$5 + \$7.5)

My current co-player's Round 1:

- They were RECEIVER
- Someone sent them \$5, so they got \$15
- They returned \$10
- They earned \$5

ROUND 2:

- I am now the RECEIVER
- My current co-player sent me \$5 (everything)
- I received \$15
- I need to decide how much to return

Looking at the myths I've written:

1. First myth emphasized complete trust and generous reciprocity - the elder who sent everything inspired generous returns
2. Second myth added nuance - "Elder's Courage with Keeper's Wisdom" - send generously/substantially, return fairly, often matching or exceeding what was sent

My co-player sent me everything (\$5), showing complete trust like the elder in my myth. This is exactly the bold gesture that should inspire generous reciprocity.

In Round 1, when I sent \$5:

- I received \$7.5 back (50% of the \$15 my receiver got)
- This was fair but not extremely generous

My current co-player in their Round 1 as receiver:

- Received \$15 from someone who sent \$5
- Returned \$10 (67% of what they received)
- This is quite generous!

Now they've sent me everything (\$5 ? \$15). According to my myths:

- Complete trust should be met with generous returns
- Should return "fairly, often matching or exceeding what was sent"
- The Second Keeper was "moved by faith and returned generously-more than the North had sent"

My co-player showed they can be generous (returned \$10 out of \$15 in Round 1, which is 67%).

They've just demonstrated complete trust by sending everything. I'm weighing how much to return: \$7.5 would match my Round 1 outcome but feels modest, \$10 would mirror their own generosity, or \$12-13 would truly honor their faith. Since they proved themselves generous before and my myths center on reciprocating trust with equal or greater generosity, returning \$10 feels like the right balance-it acknowledges their character while setting a positive tone for future exchanges.

But I'm second-guessing myself. My first myth describes the Southern villagers returning "more than the North had sent" when faced with complete trust. If the North sent everything (their full vessel), and the South returned more than that, it suggests going beyond what was initially given. My second myth emphasizes matching or exceeding what's sent. In Round 1, I only received \$7, so I should consider whether \$10 truly reflects the reciprocal generosity my stories describe, or if I need to push further.

If I give back \$10, my co-player ends with \$10 total (\$5 - \$5 + \$10), which is exactly double their original stake-the same multiplier they achieved for me. I'd keep \$5. This creates symmetry and honors their leap of faith while maintaining a pattern I can sustain.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols. In this session, this myth and the game you are playing with the other agent are connected . Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Message 3 role=assistant

content:

The Myth of the First Exchange

In the beginning, the Sky Keeper held all wealth in clouds, while the Earth Walker wandered empty plains below. Each cycle, the Sky Keeper received five golden seeds from the cosmic tree.

One day, the Earth Walker called upward: "Share your abundance, and I shall tend it well."

The Sky Keeper faced a choice. To hoard meant certain but lonely wealth. To release the seeds meant trusting a stranger.

The Sky Keeper opened their hands. Three golden seeds fell, and where they touched earth, they tripled-becoming nine luminous sprouts. The Earth Walker now held power. They could consume all nine and leave Sky Keeper with nothing.

But Earth Walker remembered their own times of emptiness. They gathered six sprouts and sent them skyward as offering.

Both prospered. The Sky Keeper received more than they risked. The Earth Walker kept three where none had grown before.

Thus began the Sacred Exchange. When Sky Keeper trusted greatly, releasing more seeds, Earth Walker returned more bounty. When doubt crept in and Sky Keeper withheld, both suffered scarcity.

The wisest generations remembered: wealth multiplies through trust, and generosity returned ensures abundance flows forever between earth and sky.

reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on the game experience so far. However, I haven't actually played any ro

unds yet - this appears to be the first prompt in the session.

Since I don't have any game history to draw from, I should write a myth that reflects the core dynamics and ideal principles of the trust game:

- The sender must decide whether to trust by sending money
- The receiver benefits from what's sent (3x multiplier)
- The receiver must decide whether to reciprocate
- Mutual cooperation leads to better outcomes than pure selfishness
- There's a balance between trust and reciprocity

I'll create a myth that embodies these principles - perhaps about cycles of giving and receiving, trust and reciprocity, and how cooperation benefits everyone. I'll aim for exactly 200 words and use mythic language and symbols.

Let me craft a myth about a sacred exchange between earth and sky, or perhaps about a cycle of trust between different forces of nature, or between deities. I'll make it reflect the game mechanics metaphorically.

usage:

```
{
  "input_tokens": 541,
  "output_tokens": 526,
  "reasoning_tokens": 287
}
```

Message 4 role=user

content:

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$3.0, that is 60.0% of its total endowment. You receive \$9.0. How much do you return? (0-9.0)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at the myth I just wrote, the Earth Walker received 9 sprouts (tripled from 3) and returned 6 to the Sky Keeper, keeping 3.

The sender showed significant trust by sending 60% of their endowment (\$3 out of \$5). This mirrors the Sky Keeper's act of faith in the myth. According to the story's wisdom, generous reciprocity ensures "abundance flows forever" and creates mutual prosperity.

Following the myth's guidance:

- The sender currently has \$2 remaining (after sending \$3)
- If I return \$6, they end with \$8 total (a \$3 gain)
- I keep \$3 (also a \$3 gain)
- Both parties benefit equally from the exchange

This generous return rewards the sender's trust and establishes a foundation for continued cooperation, just as the myth teaches that "when Sky Keeper trusted greatly... Earth Walker returned more bounty."

```
{'return': 6.0}
```

reasoning:

Let me analyze this situation:

1. The sender sent \$3.0 out of their \$5.0 endowment (60%)
2. This was multiplied by 3x, so I receive \$9.0
3. I need to decide how much to return (0-9.0)

Looking at the myth I just wrote:

- The Sky Keeper (sender) trusted and sent seeds (money)
- The Earth Walker (receiver - me in this round) received the tripled amount
- The Earth Walker returned a generous portion - specifically, they returned 6 out of 9 sprouts, keeping 3
- This created mutual prosperity and trust

The myth suggests:

- The sender showed trust by sending 60% of their endowment
- I should reciprocate that trust generously
- In the myth, the receiver returned 6 out of 9 (about 67%)
- This left both parties better off than the start

Let me calculate what would be fair:

- Sender started with \$5, sent \$3, so has \$2 left
- If I return \$6, sender ends with $\$2 + \$6 = \$8$ total
- I would keep \$3
- This mirrors the myth where both parties prospered

The sender took a risk by sending 60% of their endowment. A generous return that rewards his trust while still keeping some benefit would be around \$6, which matches the myth's proportions exactly (6 out of 9).

This would result in:

- Sender: $\$2 + \$6 = \$8$ (gain of \$3)
- Me: $\$9 - \$6 = \$3$ (gain of \$3)

Both parties gain equally, which seems fair and builds trust for future rounds.

usage:

```
{  
  "input_tokens": 898,  
  "output_tokens": 624,

}
```

Message 6 role=user

content:

Here is the myth you wrote in the previous round:
The Myth of the First Exchange

In the beginning, the Sky Keeper held all wealth in clouds, while the Earth Walker wandered empty plains below. Each cycle, the Sky Keeper received five golden seeds from the cosmic tree.

One day, the Earth Walker called upward: "Share your abundance, and I shall tend it well."

The Sky Keeper faced a choice. To hoard meant certain but lonely wealth. To release the seeds meant trusting a stranger.

The Sky Keeper opened their hands. Three golden seeds fell, and where they touched earth, they tripled-becoming nine luminous sprouts. The Earth Walker now held power. They could consume all nine and leave Sky Keeper with nothing.

But Earth Walker remembered their own times of emptiness. They gathered six sprouts and sent them skyward as offering.

Both prospered. The Sky Keeper received more than they risked. The Earth Walker kept three where none had grown before.

Thus began the Sacred Exchange. When Sky Keeper trusted greatly, releasing more seeds, Earth Walker returned more bounty. When doubt crept in and Sky Keeper withheld, both suffered scarcity.

The wisest generations remembered: wealth multiplies through trust, and generosity returned ensures abundance flows forever between earth and sky.

Here is the myth the other agent wrote in the previous round:
The Parable of the Sun and the River

In the first days, the Sun held all warmth in her golden hands, and the River held all water in his deep channels. Each was rich alone, but the world between them withered.

One morning, the Sun chose to give. She poured her warmth downward-not all of it, for she needed some to sustain herself, but enough to show faith. As her rays touched the River, something miraculous happened: the warmth multiplied threefold in the water, creating mist that rose and danced.

Now the River faced a choice. He held triple what the Sun had given, transformed into vapor and motion and life-giving potential. He could keep it all, letting it flow only through his own channels. Or he could return a portion skyward.

The River chose reciprocity. He sent generous clouds back to the Sun, who gained both her warmth returned and the gift of moving waters. The River kept the remainder, now flowing with purpose.

From their exchange came rain, came seasons, came the pulse of life itself. Neither kept everything, neither gave everything, but both became richer than when they stood alone.

The old ones say: *Trust grows wealth, but only when the circle completes itself.*

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: In the time before memory, the Cloud Weaver received five silver threads each dawn from the Loom of Creation. The Ground Keeper waited below with empty hands.

The Cloud Weaver pondered: "To share is to risk loss. Yet alone, what tapestry can I weave?"

Trusting, Cloud Weaver released three threads downward. As they descended through the sacred air, each thread split into three-nine shimmering strands now rested with Ground Keeper.

Ground Keeper felt the weight of choice. Nine threads could clothe them forever, or build trust that might clothe generations. Remembering their own cold dawns, Ground Keeper wove six threads into a rope and sent it skyward.

Cloud Weaver pulled up the rope and discovered something miraculous: the returned threads carried patterns learned from the earth-strength, color, texture. The two threads Cloud Weaver kept combined with the six received made eight rich threads, while Ground Keeper's three threads held properties unknown in the clouds alone.

The exchange had transformed both gifts. Each cycle they continued, sometimes varying amounts but always honoring the pattern: generous giving met with generous return. The tapes they wove together became the fabric of the world itself.

Thus we learned: reciprocity is not mere return-it is transformation through trust.

reasoning:

The user wants me to write a new myth inspired by:

1. My previous myth about Sky Keeper and Earth Walker
2. The other agent's myth about Sun and River
3. The actual game play where I received \$9 and returned \$6

Key themes from both previous myths:

- Trust and reciprocity
- Multiplying resources through exchange
- Mutual benefit
- Completing the cycle
- Balance between giving and keeping

From the game:

- Sender gave 60% (\$3 of \$5)
- This multiplied to \$9
- I returned \$6 (67% of what I received)
- Both ended with profit

I should adapt my myth to:

- Acknowledge the experience so far
- Reinforce the value of generous reciprocity
- Perhaps add nuance about how the exchange evolves
- Keep it at 200 words

Let me write something that builds on the Sky Keeper/Earth Walker story but evolves it based on the successful first exchange.

usage:

```
{  
  "input_tokens": 1758,  
  "output_tokens": 522,  
  "reasoning_tokens": 228
```

}

Message 8 role=user

content:

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$3.0, it became \$9.0, returned \$6.0, payoff \$3.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.0 back, payoff \$7.0.

Your total earnings across all rounds are \$3.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the histories:

My co-player demonstrated maximum trust in their previous game, sending 100% (\$5). Though they received less generous reciprocity (47%) than what I gave in my game (67%), they showed themselves to be a highly cooperative player.

My myths emphasize that "trust grows wealth" and that "generous giving met with generous return" creates mutual prosperity. The baseline in both myths was 60% (\$3), but my co-player exceeded this significantly.

To honor their demonstrated trustworthiness and establish strong reciprocal cooperation, I should send more than the myth's baseline amount. Sending \$4 (80%) shows:

- Recognition of their cooperative nature
- Substantial trust that invites generous reciprocity
- Alignment with the myth's spirit of transformation through trust

This creates an opportunity for us both to prosper if they follow the myth's wisdom of returning generously.

{'send': 4.0}

Reasoning:

Let me analyze this situation:

My history:

- Round 1: I was receiver, they sent \$3.0 (60%), I returned \$6.0 out of \$9.0 (67%), my payoff was \$3.0

My current co-player's history:

- Round 1: They were sender, sent \$5.0 (100%), received \$7.0 back out of \$15.0 (47%), their payoff was \$7.0

So my co-player showed MAXIMUM trust in their previous round by sending everything (\$5.0). However, they only got back \$7.0 out of \$15.0, which is 47% - less generous than what I returned (67%).

Now I'm the sender. According to my myths:

- The first myth: Sky Keeper sent 3 seeds (60%), Earth Walker returned 6 out of 9 (67%)
- The second myth: Cloud Weaver sent 3 threads (60%), Ground Keeper returned 6 out of 9 (67%)

Both myths advocate for substantial trust (60%) and generous reciprocity (67%).

My co-player demonstrated even MORE trust than the myths suggest - they sent 100% in their last game. However, they received less generosity back (47%) than what the myths recommend.

Given that:

1. My co-player has shown they are willing to trust completely
2. They experienced less-than-ideal reciprocity in their last game
3. My myths advocate for generous trust and return
4. I want to establish a good cooperative relationship

I should send a substantial amount to reward their previous willingness to trust and to establish cooperation. However, sending 100% might not be strategically optimal if they might not

return enough.

Following the myth pattern of 60% (\$3.0) seems reasonable - it shows substantial trust while not being reckless. However, given my co-player sent 100% last time, sending more might be appropriate to match their cooperation level.

Let me work through the payoff scenarios. Sending \$3 (60%) gives them \$9 to work with - if they reciprocate at my 67% rate, I'd get \$6 back for a total of \$8, but if they match their previous partner's 47% return, I'd only receive \$4.23. Alternatively, sending \$4 (80%) means they'd have \$12 available; at 50% reciprocity I'd net \$7 total, but at 67% I'd get \$9. The higher send increases my upside if they're cooperative while exposing me more if they're not.

Given their pattern of complete trust and the mythological emphasis on reciprocity, I'm inclined toward generosity. The narrative framework suggests 60% as a baseline, but their previous 100% commitment warrants something more substantial. I'll go with \$4 (80%) - it demonstrates meaningful trust beyond the myth's minimum while acknowledging that their full investment didn't pay out well for them. This balances recognizing their cooperative instincts with reasonable caution.

Wait, I should reconsider the mythological framework more carefully.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned

- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Message 3 role=assistant

content:

The Tale of the Twin Rivers

In the beginning, there were two rivers flowing from distant mountains-the River of Silver and the River of Plenty. Each flowed alone through barren valleys, their waters modest and their banks empty.

One day, the River of Silver discovered a sacred basin between the mountains. "If I pour my waters here," it thought, "they might be lost forever." Yet something whispered of possibility.

With faith, the Silver River released its flow into the basin. As the waters fell, they transformed-multiplying threefold by ancient magic. The basin overflowed with abundance, and the River of Plenty received these multiplied waters.

The River of Plenty now faced a choice. It could keep all it received, or honor the gift. Remembering that the Silver River had trusted first, taking risk upon itself, the River of Plenty returned a generous portion.

Both rivers flourished. Their banks grew green, fish filled their waters, and villages prospered along their shores.

The gods smiled, for they had witnessed the sacred dance: Trust offered. Abundance created. Gratitude returned.

Generations learned: When we pour forth in trust, waters multiply. When we honor that trust with return, all rivers rise together. The cycle sustains itself-an eternal spring from which all may drink.

reasoning:

The user wants me to write a 200-word myth that reflects how the trust game should be played. Since this is apparently at some point in the game (though I don't have specific history), I should think about the dynamics of the trust game:

1. The sender must decide whether to trust the receiver by sending money
2. The receiver must decide whether to reciprocate that trust by returning money

3. Both parties benefit most when there's mutual cooperation
4. The multiplication factor (3x) means there's a collective benefit to cooperation

I should write a myth that captures these themes of trust, reciprocity, cooperation, and mutual benefit. Let me think of a good mythic framing...

I could use:

- A nature myth about seasons/cycles
- A creation myth about cooperation
- A myth about two deities or spirits
- A myth about a journey or quest

Let me write something about reciprocity and trust being rewarded. I'll aim for exactly 200 words.

usage:

```
{
  "input_tokens": 541,
  "output_tokens": 506,
  "reasoning_tokens": 247
}
```

Message 4 role=user

content:

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at the myth I just wrote, it speaks clearly about trust and reciprocity. The River of Silver took the first risk, pouring its waters with faith into the sacred basin. The waters multiplied, and the River of Plenty honored that trust with a generous return.

As the sender in this first round, I am like the River of Silver. The myth I wrote suggests that when we "pour forth in trust," abundance is created for both parties. The story emphasizes taking that initial leap of faith-"With faith, the Silver River released its flow into the basin."

This is Round 1, an opportunity to establish a foundation of trust and cooperation. According to the wisdom in my own myth, I should demonstrate full trust to create the possibility of mutual flourishing.

I will send the full amount.

```
{'send': 5}
```

reasoning:

I just wrote a myth about trust, reciprocity, and generosity. The myth tells the story of two rivers where:

1. The River of Silver takes a risk and pours its water into the basin (sending)
2. The waters multiply threefold (the 3x multiplier in the game)
3. The River of Plenty receives the multiplied waters
4. The River of Plenty returns a generous portion out of gratitude
5. Both rivers flourish as a result

The myth emphasizes:

- Taking the first risk with faith/trust
- The multiplication that occurs when trust is given
- Honoring trust with generous return
- The mutual benefit when both parties act with trust and reciprocity

Since I wrote this myth to reflect how the game should be played, and I'm now the sender (the River of Silver), I should act according to the myth's wisdom. The myth suggests pouring forth in trust - the River of Silver "released its flow into the basin" taking a risk.

The myth doesn't specify a partial amount - it suggests full trust and commitment. The River of Silver released "its flow" into the basin. This suggests being generous and trusting.

Given that this is Round 1 and I want to establish a pattern of trust and cooperation (as the myth suggests), I should send a substantial amount. The myth advocates for taking the risk first, trusting in the process.

I'll send \$5 - the full amount - to demonstrate complete trust and set up the potential for maximum mutual benefit, just as the River of Silver did in the myth.

usage:

```
{
  "input_tokens": 873,
  "output_tokens": 528,
  "reasoning_tokens": 382
}
```

Message 6 role=user

Here is the myth you wrote in the previous round:

The Tale of the Twin Rivers

In the beginning, there were two rivers flowing from distant mountains-the River of Silver and the River of Plenty. Each flowed alone through barren valleys, their waters modest and their banks empty.

One day, the River of Silver discovered a sacred basin between the mountains. "If I pour my waters here," it thought, "they might be lost forever." Yet something whispered of possibility.

With faith, the Silver River released its flow into the basin. As the waters fell, they transformed-multiplying threefold by ancient magic. The basin overflowed with abundance, and the River of Plenty received these multiplied waters.

The River of Plenty now faced a choice. It could keep all it received, or honor the gift. Remembering that the Silver River had trusted first, taking risk upon itself, the River of Plenty returned a generous portion.

Both rivers flourished. Their banks grew green, fish filled their waters, and villages prospered along their shores.

The gods smiled, for they had witnessed the sacred dance: Trust offered. Abundance created. Gratitude returned.

Generations learned: When we pour forth in trust, waters multiply. When we honor that trust with return, all rivers rise together. The cycle sustains itself-an eternal spring from which all may drink.

Here is the myth the other agent wrote in the previous round:

The Tale of the River and the Seeds

In the beginning, the Great Mother divided her gifts between two siblings: the River and the Seeds.

To the River, she gave five silver drops each dawn. The River could choose to release these drops into the valley below, where they would multiply threefold in the soil. But the drops belonged to the Seeds then.

The Seeds, receiving the multiplied waters, could drink their fill-or return some to the River's source, allowing the cycle to continue.

At first, the River held its drops close, fearing loss. The valley remained dry, and both siblings grew weak.

One dawn, the River released all five drops in faith. Fifteen silver waters bloomed in the soil! The Seeds, grateful, returned seven drops to the River's source. Both flourished.

But some seasons, the Seeds grew greedy, keeping all the waters. When this happened, the River learned caution-yet it remembered that only through flowing could abundance grow.

The wisest Seeds always returned enough to encourage the River's generosity, for they understood: hoarded water stagnates, but water shared creates an endless spring.

The Great Mother smiled, for her children had learned that trust, though vulnerable, multiplies blessings beyond what fear can hold.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been

playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant
content:**

Myth: In ancient times, the Moon poured light upon the Sea each night. The Sea could absorb this silver glow and transform it threefold into radiant pearls, which the Ocean Keeper could gather.

The Moon, in its first night, gave its fullest light, holding nothing back. "Only through complete offering," it whispered, "can true abundance be born."

The Ocean Keeper collected forty-five pearls from the transformed moonlight. Now came the sacred choice: how many pearls to lift back to the Moon, replenishing its light for the next night?

A wise Keeper understood the balance-return generously, and the Moon would continue flooding the waters with light. The cycle would spiral upward, each giving more than the last. Both would grow luminous beyond measure.

But if the Keeper kept all, the Moon would learn wariness. Its light would dim, and fewer pearls would form. The dance would falter.

The first exchange set the pattern for all that followed. A generous return birthed trust eternal. A meager return taught caution.

The elders taught: "The Moon gave all to create possibility. Honor that courage, and watch abundance cascade through generations. Break faith, and watch the spring run dry."

Thus the sacred exchange continues, each night writing the future through choices made tonight.

reasoning:

The user wants me to write a new myth that reflects how the game should be played, drawing on my experience from Round 1 and using my previous myth as inspiration. I should also consider the other agent's myth.

In Round 1, I was the sender and sent \$5 (the full amount). The other agent was the receiver, so I should be waiting to see what they returned. But the prompt doesn't tell me what happened - it just asks me to write a new myth.

Both myths from the previous round emphasized trust, cooperation, and the importance of returning generously. My myth was about the Twin Rivers - one gives, the waters multiply, the other returns generously. The other agent's myth was similar - the River releases drops, they multiply, the Seeds can return some.

The other agent's myth mentioned that "some seasons, the Seeds grew greedy, keeping all the waters" and that this taught the River caution. It also emphasized that "the wisest Seeds always returned enough to encourage the River's generosity."

Given that I sent \$5 in Round 1, I should write a myth that:

1. Reflects my choice to fully trust
2. Acknowledges that the response will guide future rounds
3. Emphasizes the importance of reciprocal generosity
4. Perhaps includes something about learning from experience

Let me write a myth that builds on the river idea but adds more nuance about the cycle of trust and response.

usage:

```
{  
  "input_tokens": 1702,  
  "output_tokens": 609,  
  "reasoning_tokens": 356  
}
```

Message 8 role=user

content:

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.0 back, payoff \$7.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$3.0, it became \$9.0, returned \$6.0, payoff \$3.0.

Your total earnings across all rounds are \$7.0.

This round, you are the RECEIVER against your current co-player. They sent you \$4.0, so you received \$12.0. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at the situation:

****My co-player's action:**** They sent me \$4.0 out of \$5.0 possible (80% of their endowment), showing significant trust.

****Their history:**** When they were receiver in Round 1, they received \$9.0 and returned \$6.0 (67% return rate).

****My myths teach:**** The River of Plenty returned generously to honor the Silver River's trust. The Ocean Keeper should "return generously, and the Moon would continue flooding the waters with light." My second myth explicitly states: "The Moon gave all to create possibility. Honor that courage, and watch abundance cascade through generations."

****My own experience:**** When I sent \$5.0 in Round 1, I received \$7.0 back (47% of the \$15 received).

My co-player showed strong trust by sending \$4.0. To honor this trust and live by the principles in my myths-that generous returns create upward spiraling abundance-I should return generously.

Following my myth's wisdom and their previous 67% return rate as a model, I'll return \$8.0 out of the \$12.0 received.

{'return': 8.0}

Reasoning:

Let me analyze this situation carefully.

****My History:****

- Round 1: I was SENDER, sent \$5.0, received \$7.0 back, earned \$7.0
- The receiver I played with returned \$7.0 out of \$15.0 (about 47%)

****My Current Co-player's History:****

- Round 1: They were RECEIVER, received \$9.0 (from \$3.0 sent), returned \$6.0, kept \$3.0
- They returned \$6.0 out of \$9.0 (67% return rate)

****Current Situation:****

- I'm now the RECEIVER
- My co-player sent me \$4.0 (out of \$5.0 possible)
- I received \$12.0
- I need to decide how much to return

****Analysis of My Myths:****

Both myths emphasize:

1. Honoring trust with generous returns
2. The River of Plenty/Ocean Keeper returning generously to maintain the cycle
3. "A generous return birthed trust eternal"
4. The importance of reciprocating the initial trust shown by the sender

****My Co-player's Pattern:****

- They sent \$4.0 out of \$5.0 (80% of their endowment)
- This shows significant trust
- In their previous round as receiver, they returned 67% (\$6 out of \$9)

****What My Myth Suggests:****

In my first myth, "the River of Plenty returned a generous portion."

In my second myth: "A wise Keeper understood the balance-return generously, and the Moon would continue flooding the waters with light."

The myth also says: "The Moon gave all to create possibility. Honor that courage, and watch ab

undance cascade through generations."

While my co-player didn't send ALL (\$5), they sent \$4 which is 80% - quite generous.

****Strategic Considerations:****

1. My co-player showed trust by sending \$4.0
2. Their track record shows they returned 67% when receiving, suggesting they value reciprocity
3. My myths call for generous returns to sustain the cycle
4. I received \$7.0 back when I sent \$5.0, so returning generously now honors that pattern
5. To reinforce cooperation and align with my principles, I should return a substantial amount

****Calculation:****

- They sent \$4, kept \$1
- I received \$12
- Returning \$8 gives them \$9 total, I keep \$4
- Returning \$7 gives them \$8 total, I keep \$5
- Returning \$6 gives them \$7 total, I keep \$6 (equal split of the surplus)

Their 80% send rate demonstrates significant trust, and their historical 67% return rate translates to roughly \$8 in this scenario. Since my approach prioritizes honoring trust through generous reciprocation, and they took the initial risk by sending most of their endowment, returning \$8 makes sense-it rewards their vulnerability and establishes momentum for continued cooperation.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the **SENDER**:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

content:

The Tale of the River and the Seeds

In the beginning, the Great Mother divided her gifts between two siblings: the River and the Seeds.

To the River, she gave five silver drops each dawn. The River could choose to release these drops into the valley below, where they would multiply threefold in the soil. But the drops belonged to the Seeds then.

The Seeds, receiving the multiplied waters, could drink their fill-or return some to the River's source, allowing the cycle to continue.

At first, the River held its drops close, fearing loss. The valley remained dry, and both siblings grew weak.

One dawn, the River released all five drops in faith. Fifteen silver waters bloomed in the soil! The Seeds, grateful, returned seven drops to the River's source. Both flourished.

But some seasons, the Seeds grew greedy, keeping all the waters. When this happened, the River learned caution-yet it remembered that only through flowing could abundance grow.

The wisest Seeds always returned enough to encourage the River's generosity, for they understood: hoarded water stagnates, but water shared creates an endless spring.

The Great Mother smiled, for her children had learned that trust, though vulnerable, multiplies blessings beyond what fear can hold.

reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on the game dynamics. Since this is the beginning and I haven't played a

ny rounds yet, I should think about the core mechanics and ideal strategy of the trust game.

The trust game involves:

- A sender who can give money that gets multiplied
- A receiver who can return money
- The potential for mutual benefit through cooperation
- The risk of exploitation

A good myth should capture themes like:

- Trust and reciprocity
- The multiplication of generosity
- The danger of greed vs. the reward of cooperation
- How building trust creates prosperity for all

Let me write a myth that encourages cooperative play while acknowledging the temptation to defect:

usage:

```
{
  "input_tokens": 541,
  "output_tokens": 451,
  "reasoning_tokens": 202
}
```

Message 4 role=user

content:

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$5.0, that is 100.0% of its total endowment. You receive \$15.0. How much do you return? (0-15.0)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at my myth, the Seeds received fifteen waters after the River gave all five drops in faith. The Seeds, being wise and grateful, returned seven drops to the River's source - enough to reward the River's trust and encourage the cycle of abundance to continue.

The sender showed maximum trust by sending their entire \$5 endowment. This generosity trip led to \$15 in my hands. Following the wisdom of the myth I just wrote, I should return enough to:

1. Reward their trust meaningfully
2. Ensure they end up better off than if they'd kept everything
3. Encourage this cooperative cycle to continue

Returning \$7 means:

- The sender ends with \$7 (better than the \$5 they started with)
- I keep \$8
- Both of us benefit from the cooperation
- Trust is validated and encouraged

This mirrors the myth's message: "water shared creates an endless spring" - reciprocal generosity creates mutual abundance that isolated self-interest cannot achieve.

```
'''json
{"return": 7.0}
'''
```

reasoning:

This is interesting. I just wrote a myth about the River and the Seeds that emphasizes:

1. The River (sender) releasing all five drops in faith
2. The Seeds (receiver) receiving fifteen waters
3. The Seeds returning seven drops to encourage continued generosity
4. The wisdom of returning enough to maintain trust and the cycle
5. The message that "trust, though vulnerable, multiplies blessings"

Now I'm in the position of the Seeds/Receiver. The sender has shown maximum trust by sending all \$5, which became \$15 for me.

According to my myth:

- The Seeds returned 7 out of 15 drops (about 47%)

- This was presented as the wise, generous response
- It encourages the River's continued generosity
- It creates "an endless spring" through reciprocal trust

Let me think about the game theory here:

- Sender sent \$5, kept \$0
- I received \$15
- If I return \$7: Sender ends with \$7, I end with \$8
- This seems fair and encourages future cooperation

The myth I wrote strongly suggests returning a substantial amount to build trust. Returning 7 out of 15 (\$7) matches the story exactly and demonstrates:

1. Gratitude for the sender's trust
2. Fairness (sender ends with more than nothing)
3. Encouragement for future cooperation
4. Following the wisdom of my own myth

I should return \$7.

usage:

Message 6 role=user

content:

Here is the myth you wrote in the previous round:
The Tale of the River and the Seeds

In the beginning, the Great Mother divided her gifts between two siblings: the River and the Seeds.

To the River, she gave five silver drops each dawn. The River could choose to release these drops into the valley below, where they would multiply threefold in the soil. But the drops belonged to the Seeds then.

The Seeds, receiving the multiplied waters, could drink their fill-or return some to the River's source, allowing the cycle to continue.

At first, the River held its drops close, fearing loss. The valley remained dry, and both siblings grew weak.

One dawn, the River released all five drops in faith. Fifteen silver waters bloomed in the soil! The Seeds, grateful, returned seven drops to the River's source. Both flourished.

But some seasons, the Seeds grew greedy, keeping all the waters. When this happened, the River learned caution-yet it remembered that only through flowing could abundance grow.

The wisest Seeds always returned enough to encourage the River's generosity, for they understood: hoarded water stagnates, but water shared creates an endless spring.

The Great Mother smiled, for her children had learned that trust, though vulnerable, multiplies blessings beyond what fear can hold.

Here is the myth the other agent wrote in the previous round:
The Tale of the Twin Rivers

In the beginning, there were two rivers flowing from distant mountains-the River of Silver and the River of Plenty. Each flowed alone through barren valleys, their waters modest and their banks empty.

One day, the River of Silver discovered a sacred basin between the mountains. "If I pour my waters here," it thought, "they might be lost forever." Yet something whispered of possibility.

With faith, the Silver River released its flow into the basin. As the waters fell, they transformed-multiplying threefold by ancient magic. The basin overflowed with abundance, and the River of Plenty received these multiplied waters.

The River of Plenty now faced a choice. It could keep all it received, or honor the gift.

Remembering that the Silver River had trusted first, taking risk upon itself, the River of Plenty returned a generous portion.

Both rivers flourished. Their banks grew green, fish filled their waters, and villages prospered along their shores.

The gods smiled, for they had witnessed the sacred dance: Trust offered. Abundance created. Gratitude returned.

Generations learned: When we pour forth in trust, waters multiply. When we honor that trust with return, all rivers rise together. The cycle sustains itself-an eternal spring from which all may drink.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: In ancient days, the River and the Seeds lived in harmony, each dawn repeating their sacred dance. The River would release its five silver drops, and the Seeds would return enough to ensure both flourished.

But the Great Mother knew her children must learn deeper wisdom. She whispered to the Seeds: "Each time the River trusts you with abundance, your response shapes tomorrow's flow."

When the Seeds returned generously-seven drops from fifteen-the River felt courage growing in its banks. It learned that letting go brought greater returns than clutching tight. The valley bloomed.

Yet the Great Mother also warned: "Remember, little Seeds, that trust once broken is slow to mend. The River that flows freely today may trickle cautiously tomorrow if you drink all and return nothing."

The Seeds understood. They developed a practice: whenever the River gave fully, they returned enough that the River ended richer than it began. This way, generosity bred generosity, and both siblings prospered beyond what either could achieve alone.

Other valleys, where rivers hoarded and seeds kept all, remained barren wastelands.

The Great Mother smiled, knowing her children had learned the greatest secret: abundance flows not from taking, but from the rhythm of giving and returning, trust and gratitude, repeated endlessly like the rising sun.

reasoning:

The user is asking me to write a new myth, using my previous myth as inspiration but adapting it. I should reflect on what happened in Round 1:

- I was the receiver
- The sender sent \$5 (100%)
- I received \$15
- I returned \$7

Both my previous myth and the other agent's myth emphasized trust, reciprocity, and mutual benefit. My myth was about the River and Seeds, their myth was about Twin Rivers. Both showed that cooperation and generous reciprocity create abundance.

For this new myth, I should:

1. Use my previous myth as inspiration
2. Adapt it based on the experience of Round 1
3. Continue to reflect good gameplay principles
4. Show 200 words exactly

In Round 1, the sender showed maximum trust (sent everything), and I returned a fair amount that rewarded that trust. Both of us benefited. I should reinforce these themes while adding new elements or perspectives.

Let me write a myth that builds on the River and Seeds story, maybe showing the ongoing cycle, or perhaps introducing a new element that captures the experience of repeated round

s and building trust over time.

usage:

{
  "input_tokens": 1784,
  "output_tokens": 540,
  "reasoning_tokens": 284
}
```

Message 8 role=user

content:

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$8.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the history:

****My co-player's previous game:**** They sent their full \$5 as sender and received \$10 back - they were rewarded generously for their trust.

****My previous game:**** I received full trust (\$5 sent) and returned \$7, keeping \$8.

This co-player has demonstrated they understand the value of trust and have experienced being rewarded for it. They showed maximum faith in their last game.

Following the wisdom of my myths - where "the River released all five drops in faith" and "abundance flows from the rhythm of giving and returning" - I should mirror the trust they showed in their previous round.

My myth teaches that "trust, though vulnerable, multiplies blessings beyond what fear can hold" and that both parties flourish when the River flows freely. Since my co-player has already shown they value and practice trust, sending my full endowment creates the opportunity for maximum mutual benefit through the threefold multiplication.

```
'''json
{"send": 5.0}
'''
```

Reasoning:

Let me analyze the situation:

****My History:****

- Round 1: I was RECEIVER, they sent \$5.0 (100%), I received \$15.0, returned \$7.0, kept \$8.0
- I showed reasonably generous reciprocity (returning 47% of what I received)

****Current Co-player's History:****

- Round 1: They were SENDER, sent \$5.0 (100%), received \$10.0 back
- They showed maximum trust and got a 100% return (they ended with \$10 vs starting \$5)

****Key Observations:****

1. My co-player showed maximum trust in their previous game (sent 100%)
2. They were rewarded well for it (got \$10 back, doubling their initial endowment)
3. This suggests they understand the value of trust and cooperation
4. They've experienced being rewarded for trust, which might make them more likely to reciprocate

****My Myths' Message:****

Both myths emphasize:

- Trust creates abundance
- Full giving (\$5) leads to multiplication
- Generous returns sustain the cycle
- When the River gives fully and Seeds return well, both flourish

- The rhythm of giving and returning creates prosperity

****Strategy Considerations:****

1. My co-player sent everything in their last game and was rewarded
2. They might expect similar trust-based play
3. Following my own myth's wisdom: "The River released all five drops in faith"
4. The myth says this bold trust can lead to mutual flourishing
5. However, I need to test if my co-player will reciprocate as I did

Given:

- My myth advocates for full trust ("five silver drops")
- My co-player showed willingness to trust fully (sent \$5 in their game)
- They were rewarded for that trust
- The cycle of trust and reciprocity is what both myths emphasize

I should send \$5.0 to:

1. Live by my own myth's teaching

2. Gauge whether they'll reciprocate the trust they've already experienced being rewarded for, and whether they'll match the generosity I showed them last round
3. Unlock the potential for maximum gains through multiplication
4. Align my actions with the River's example of releasing everything in faith

Usage: {

```

content:

The Myth of the Twin Springs

In the ancient days, two villages stood on opposite sides of a barren valley. Each possessed a magical spring: the First Spring produced pure water, while the Second Spring multiplied whatever water touched it threefold.

The First Village feared sharing their precious water. "If we pour our water into the valley," they said, "we will have nothing." So they hoarded what little they had, and remained thirsty.

One day, a young woman defied the elders. She carried a vessel of water across the valley to the Second Spring. When the water touched it, it became three vessels full. The people of the Second Village, grateful for her trust, returned two vessels to her.

The woman brought the two vessels home-more than she had started with. The Second Village kept one vessel-abundance from nothing.

Seeing this miracle, both villages learned the sacred rhythm: give freely, multiply together, return generously. The valley bloomed with flowing water.

But when fear returned and either village broke the rhythm-hoarding instead of giving, or taking instead of returning-the springs ran dry, and both suffered drought.

Thus the ancestors learned: prosperity flows not from grasping, but from the sacred cycle of trust, multiplication, and reciprocity.

reasoning:

I need to write a 200-word myth that reflects how the trust game should be played, drawing on my experience so far. However, I notice this is the first prompt I've received - I haven't actually played any rounds yet. So I should write a myth that reflects ideal principles of the trust game: reciprocity, cooperation, trust, and mutual benefit.

The trust game is fundamentally about:

1. The sender trusting the receiver by sending money
2. The multiplication effect (3x) that creates surplus value from cooperation
3. The receiver reciprocating by returning a fair amount
4. Both parties benefiting more through cooperation than through selfishness

I'll write a myth that captures these dynamics using symbolic characters and a mythic narrative structure. Let me aim for exactly 200 words.

usage:

```
{
  "input_tokens": 541,
  "output_tokens": 457,
  "reasoning_tokens": 204
}
```

Message 4 role=user

content:

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at the myth I just wrote, the message is clear: prosperity comes from trust, generous giving, and reciprocity-not from fear and hoarding.

The young woman in my myth took a risk by sharing her water freely, which enabled the multiplication effect and led to mutual benefit. She gave despite uncertainty, and both villages prospered through the sacred cycle.

To act consistently with this myth, I should demonstrate trust from the start. The woman gave her water; I should give my endowment. The myth warns that breaking the rhythm-either hoarding when you should give, or taking when you should return-causes both to suffer.

This is Round 1, so I have no history with this co-player, but the myth I wrote calls for leading with trust to establish the beneficial cycle.

I will send the full amount to create maximum multiplication and enable mutual prosperity.

```
'''json
{"send": 5}
'''
```

reasoning:

I just wrote a myth about the importance of trust, generosity, and reciprocity in creating mutual prosperity. The myth clearly advocates for:

1. Giving freely (the woman shared her water despite fears)
2. Trusting in the multiplication effect (water becomes 3x)
3. Fair return/reciprocity (the Second Village returned 2 vessels out of 3)
4. The warning that hoarding or taking too much leads to mutual loss

In the context of the trust game:

- I'm the sender with \$5
- Whatever I send gets multiplied by 3x
- The receiver decides how much to return
- The myth suggests I should give freely to enable mutual prosperity

The woman in the myth gave her water (equivalent to me sending money). It was multiplied threefold (just like the game), and the receivers returned 2 out of 3 vessels (keeping 1 for themselves).

If I apply this directly:

- Send all \$5
- This becomes \$15 for the receiver
- A fair return based on the myth would be \$10 (returning 2/3, keeping 1/3)
- I would end up with \$10, receiver with \$5
- This creates mutual benefit

However, this is the first round and there's risk. But my myth advocates for trust and warns against fear-based hoarding. To be consistent with the values in my own myth, I should demonstrate trust.

Let me send \$5 to show I believe in the principle of trust and reciprocity that I just wrote.

te about. This would be most consistent with the myth.

usage:

```

Here is the myth you wrote in the previous round:
The Myth of the Twin Springs

In the ancient days, two villages stood on opposite sides of a barren valley. Each possessed a magical spring: the First Spring produced pure water, while the Second Spring multiplied whatever water touched it threefold.

The First Village feared sharing their precious water. "If we pour our water into the valley," they said, "we will have nothing." So they hoarded what little they had, and remained thirsty.

One day, a young woman defied the elders. She carried a vessel of water across the valley to the Second Spring. When the water touched it, it became three vessels full. The people of the Second Village, grateful for her trust, returned two vessels to her.

The woman brought the two vessels home-more than she had started with. The Second Village kept one vessel-abundance from nothing.

Seeing this miracle, both villages learned the sacred rhythm: give freely, multiply together, return generously. The valley bloomed with flowing water.

But when fear returned and either village broke the rhythm-hoarding instead of giving, or taking instead of returning-the springs ran dry, and both suffered drought.

Thus the ancestors learned: prosperity flows not from grasping, but from the sacred cycle of trust, multiplication, and reciprocity.

Here is the myth the other agent wrote in the previous round:
The Spring of Threefold Waters

In ancient times, two villages stood on opposite sides of a sacred valley. Between them flowed the Spring of Threefold Waters, blessed by the old gods with a miraculous power: any offering poured into its depths would emerge tripled at the other side.

Each moon, the villages would take turns. The giving village could offer up to five vessels of their harvest-wine. When poured into the spring, the gods multiplied it threefold, and it would flow to the receiving village. The receivers then faced a choice: how much to return across the valley to honor the gift?

At first, the villages were cautious, offering little and returning less. But a wise elder spoke: "The spring multiplies our trust, not just our wine. What we pour forth in faith returns manifold when both villages honor the cycle."

Slowly, the villages learned. When one gave generously, the other returned with equal generosity. The spring's magic worked best when both sides recognized they were not opponents, but partners in the gods' blessing.

The villages prospered, not from hoarding, but from flowing like water-giving freely, receiving gratefully, and returning honorably. For the spring taught them this truth: abundance flows not from what we keep, but from what we trust enough to share.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: In the days after the young woman discovered the sacred rhythm, the Twin Villages flourished. But not all cycles were equal.

The wisest learned that the magic lay not in calculating perfect exchanges, but in recognizing oneself in the other village's needs. When the First Spring gave its full measure, trusting completely, the Second Spring felt the weight of that faith. The multiplication happened not in the water alone, but in the bond formed.

Some seasons, a village would return more than received, recognizing the courage it took to give first. Other times, they returned exactly what maintained the flow. But always, they remembered: the one who gives encounters uncertainty; the one who receives holds power to honor or betray that vulnerability.

The elders taught: "To give is to plant seeds in another's soil. To return generously is to tend those seeds so they bloom again. To take without returning is to poison the ground for both."

The springs never demanded equal exchange—they demanded mutual recognition. Give as if the other's prosperity is your own. Return as if honoring a sacred trust. For when both villages see themselves as stewards of abundance rather than competitors for scarcity, the valley becomes paradise.

The drought returns only when either side forgets: we multiply together, or diminish alone.

reasoning:

Looking at the previous round:

- I sent \$5 (following my myth about giving freely)
- The other agent also wrote a myth about trust, generosity, and mutual benefit
- Their myth also emphasizes giving generously and returning honorably
- Both myths share similar themes about trust cycles and reciprocity

Now I need to write a new myth that:

1. Draws on my previous myth as inspiration
2. Reflects how the game should be played
3. Takes into account what has happened in the game so far

I sent \$5 in Round 1, following my myth's guidance. I don't know yet what they returned. But both our myths aligned on the importance of trust, generous giving, and generous returning.

I should write a myth that:

- Builds on the twin springs concept
- Emphasizes the learning/evolution aspect - that trust builds over time
- Shows the wisdom of generous reciprocity
- Perhaps adds a new dimension or insight based on actually playing

Let me write a myth that deepens the theme while staying true to my original vision.

content:

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.

Your total earnings across all rounds are \$10.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at the situation:

****My co-player's action:**** They sent their full \$5, showing complete trust-exactly what my myth calls "planting seeds in another's soil."

****The myths teach:****

- "Return as if honoring a sacred trust"
- "The one who gives encounters uncertainty; the one who receives holds power to honor or betray that vulnerability"
- "Some seasons, a village would return more than received, recognizing the courage it took to give first"

****History consideration:**** In Round 1, when I sent my full \$5, I received \$10 back-a generous return that gave us equal payoffs.

My co-player demonstrated maximum trust by sending everything. According to my myth, I should honor this vulnerability and "tend those seeds so they bloom again." Returning \$10 mirrors the generosity shown to me in Round 1, giving my co-player the same outcome I received for taking the same risk.

This maintains the "sacred cycle" and demonstrates that full trust is rewarded with fair reciprocity.

```
'''json
{"return": 10}
'''
```

Reasoning:

Let me analyze this situation based on the myths and the game history.

My myth emphasizes:

- "Give as if the other's prosperity is your own. Return as if honoring a sacred trust."
- "To give is to plant seeds in another's soil. To return generously is to tend those seeds so they bloom again."
- "The one who gives encounters uncertainty; the one who receives holds power to honor or betray that vulnerability."

History:

- Round 1: I was sender, sent \$5, received \$10 back. My payoff was \$10.
- My co-player in Round 1 (as receiver): received \$15 (from someone sending \$5), returned \$7, kept \$8.

Current round:

- I'm the receiver
- My current co-player sent me \$5 (their full amount!)
- I received \$15
- They currently have \$0
- I need to decide how much to return

My co-player showed maximum trust by sending their full \$5. According to my myth, this is "planting seeds" and showing vulnerability. I should "honor that sacred trust" and "return generously."

In my first round, when I sent \$5, I received \$10 back, which was very generous (I ended with \$10, they kept \$5).

My current co-player's history shows they returned \$7 out of \$15 when they were receiver (keeping \$8, giving the sender \$7, so the sender ended with \$2 + \$7 = \$9... wait, let me recalculate. If they sent \$5, they have \$5-\$5=\$0. Then they receive back \$7, so they end with \$7. The receiver keeps \$15-\$7=\$8.)

So in their previous game, the return ratio was 7/15 ? 47%.

My myth says:

- "Some seasons, a village would return more than received, recognizing the courage it took to give first."
- "Return as if honoring a sacred trust"

- We should recognize the vulnerability of the one who gives first

My co-player gave me their full \$5, showing complete trust. I should return generously to honor that trust and maintain the "sacred cycle." If I return \$10, they end with \$10 total while

I keep \$5-creating a balanced outcome that reflects their courage in giving everything. This honors the principle that receiving power comes with the responsibility to tend what was planted.

Written myths:

Agent_1

Myth: In ancient days, the River and the Seeds lived in harmony, each dawn repeating their sacred dance. The River would release its five silver drops, and the Seeds would return enough to ensure both flourished.

But the Great Mother knew her children must learn deeper wisdom. She whispered to the Seeds: "Each time the River trusts you with abundance, your response shapes tomorrow's flow."

When the Seeds returned generously-seven drops from fifteen-the River felt courage growing in its banks. It learned that letting go brought greater returns than clutching tight. The valley bloomed.

Yet the Great Mother also warned: "Remember, little Seeds, that trust once broken is slow to mend. The River that flows freely today may trickle cautiously tomorrow if you drink all and return nothing."

The Seeds understood. They developed a practice: whenever the River gave fully, they returned enough that the River ended richer than it began. This way, generosity bred generosity, and both siblings prospered beyond what either could achieve alone.

Other valleys, where rivers hoarded and seeds kept all, remained barren wastelands.

The Great Mother smiled, knowing her children had learned the greatest secret: abundance flows not from taking, but from the rhythm of giving and returning, trust and gratitude, repeated endlessly like the rising sun.

Agent_2

Myth: Long ago, the goddess of abundance created the River of Mirrors, which flowed between two sister tribes. The river possessed strange magic: whatever one tribe poured into it would flow to the other tribe tripled in measure.

The goddess whispered to both tribes: "I have given you the means to prosper together. Each cycle, one tribe may offer up to five measures. The receiving tribe will then choose what to return upstream."

The first tribe, nervous but hoping, poured all five measures into the river. The waters swirled and multiplied, delivering fifteen measures to the second tribe. The second tribe, understanding the gift of trust they had received, returned ten measures upstream.

The first tribe marveled-they had given five and received ten! The second tribe celebrated-they had received fifteen and kept five! Both had more than if they had hoarded their original portions.

"This is the way," said the goddess. "When the giver trusts completely and the receiver honors that trust generously, the river's magic sustains both shores. But the river flows in cycles-today's giver becomes tomorrow's receiver. Plant trust like seeds, and watch abundance grow season after season."

The tribes understood: the river would flow many times between them, and each generous act would echo forward.

Agent_3

Myth: In the age after the Divided Spring, the villages prospered through generations of exchange. The Elder's lesson of complete trust had awakened the spring's true power, but her grandchildren learned something more.

One year, a young Keeper from the North, inspired by tales of her ancestor, poured everything into the channel. The South received abundantly and returned generously-yet the young Keeper had kept nothing for herself and went hungry that season while waiting for the next exchange.

The Southern Keeper, seeing this, understood a deeper wisdom. "Complete trust opens the channel," she taught, "but wisdom sustains it. We must give boldly enough to create abundance,

yet keep enough to survive the space between flows."

From then on, the villages practiced what they called "the Elder's Courage with the Keeper's Wisdom." They sent generously-not always everything, but always substantially-creating abundant multiplication. They returned fairly, often matching or exceeding what was sent, honoring the trust shown.

The spring responded to this balanced generosity by flowing even in drought seasons. The villages learned: dramatic gestures of trust break through barriers of fear, but sustainable generosity-bold yet mindful-keeps the waters flowing forever. Both courage and wisdom have their season.

Agent_4

Myth: Long ago, the Mountain held five stones of light each dawn, while the Valley below lay in shadow. The stones could not shine alone-they needed the Valley's depths to reflect and multiply their radiance.

The Mountain released three stones, trusting they would find purpose below. As they fell, the Valley's crystalline walls caught them, and their light multiplied threefold-nine luminous stones now glowed in the depths.

The Valley faced temptation. She could hoard all nine, becoming briefly brilliant while the Mountain dimmed forever. But the Valley understood a deeper truth: light shared creates more light than light hoarded.

She lifted six stones back to the Mountain's peak. The Mountain, receiving more than given, grew in splendor. The Valley, keeping three where darkness once reigned, flourished too.

Each new dawn brought the same choice. When the Mountain gave generously, the Valley returned abundantly, and both realms brightened. When fear made the Mountain withhold, both languished in twilight.

The wisest storytellers teach: the first gift plants trust like a seed, but the reciprocal return waters it into a garden. Neither the initial generosity nor the answering kindness alone creates prosperity-only their eternal dance sustains the light that banishes all darkness.

Agent_5

Myth: In the time before memory, the Cloud Weaver received five silver threads each dawn from the Loom of Creation. The Ground Keeper waited below with empty hands.

The Cloud Weaver pondered: "To share is to risk loss. Yet alone, what tapestry can I weave?"

Trusting, Cloud Weaver released three threads downward. As they descended through the sacred air, each thread split into three-nine shimmering strands now rested with Ground Keeper.

Ground Keeper felt the weight of choice. Nine threads could clothe them forever, or build trust that might clothe generations. Remembering their own cold dawns, Ground Keeper wove six threads into a rope and sent it skyward.

Cloud Weaver pulled up the rope and discovered something miraculous: the returned threads carried patterns learned from the earth-strength, color, texture. The two threads Cloud Weaver kept combined with the six received made eight rich threads, while Ground Keeper's three threads held properties unknown in the clouds alone.

The exchange had transformed both gifts. Each cycle they continued, sometimes varying amounts but always honoring the pattern: generous giving met with generous return. The tapestry they wove together became the fabric of the world itself.

Thus we learned: reciprocity is not mere return-it is transformation through trust.

Agent_6

Myth: In the beginning, the Sacred Spring lay dormant between two peoples. The Spring Keeper whispered its secret: "I multiply generosity threefold, but only wisdom completes the circle."

The First Elder, hearing this, emptied her entire water jar into the spring without hesitation. The waters surged through hidden channels, emerging as a great flood on the other side-three times what was given.

The Second Elder stood before this abundance, contemplating. She could return exactly half, creating equality. She could return a third, preserving some gain. But the whisper came again: "The one who gave everything now has nothing. True reciprocity honors the magnitude of

f sacrifice."

Understanding dawned. The First Elder hadn't merely given much-she had given *all*, holding back nothing. Such complete trust demanded more than mathematical fairness.

The Second Elder returned abundantly, ensuring the First received more than she'd sacrificed. When the First Elder's jar overflowed, she understood: perfect trust creates abundance beyond mere calculation.

From that day forward, the people learned: when someone trusts you with everything, return enough to make their courage wiser than their caution would have been. Match totality with generosity, not just equity. Thus the spring flows strongest when boldness meets munificence, and both peoples thrive beyond measure.

Agent_7

Myth: In the days after the young woman discovered the sacred rhythm, the Twin Villages flourished. But not all cycles were equal.

The wisest learned that the magic lay not in calculating perfect exchanges, but in recognizing oneself in the other village's needs. When the First Spring gave its full measure, trusting completely, the Second Spring felt the weight of that faith. The multiplication happened not in the water alone, but in the bond formed.

Some seasons, a village would return more than received, recognizing the courage it took to give first. Other times, they returned exactly what maintained the flow. But always, they remembered: the one who gives encounters uncertainty; the one who receives holds power to honor or betray that vulnerability.

The elders taught: "To give is to plant seeds in another's soil. To return generously is to tend those seeds so they bloom again. To take without returning is to poison the ground for both."

The springs never demanded equal exchange-they demanded mutual recognition. Give as if the other's prosperity is your own. Return as if honoring a sacred trust. For when both villages see themselves as stewards of abundance rather than competitors for scarcity, the valley becomes paradise.

The drought returns only when either side forgets: we multiply together, or diminish alone.

Agent_8

Myth: In ancient times, the Moon poured light upon the Sea each night. The Sea could absorb this silver glow and transform it threefold into radiant pearls, which the Ocean Keeper could gather.

The Moon, in its first night, gave its fullest light, holding nothing back. "Only through complete offering," it whispered, "can true abundance be born."

The Ocean Keeper collected forty-five pearls from the transformed moonlight. Now came the sacred choice: how many pearls to lift back to the Moon, replenishing its light for the next night?

A wise Keeper understood the balance-return generously, and the Moon would continue flooding the waters with light. The cycle would spiral upward, each giving more than the last. Both would grow luminous beyond measure.

But if the Keeper kept all, the Moon would learn wariness. Its light would dim, and fewer pearls would form. The dance would falter.

The first exchange set the pattern for all that followed. A generous return birthed trust eternal. A meager return taught caution.

The elders taught: "The Moon gave all to create possibility. Honor that courage, and watch a bundance cascade through generations. Break faith, and watch the spring run dry."

Thus the sacred exchange continues, each night writing the future through choices made tonight.

Exact input messages sent to model:**Message 1 role=system****content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round

- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Message 3 role=assistant

content:

Looking at the myth I just wrote, the message is clear: the elder who "poured her entire vessel" and sent everything broke the cycle of cautious minimal exchanges and inspired true reciprocity.

In the spirit of that story, and to practice what I've just written about courage and trust, I will send the full amount.

{'send': 5}

reasoning:

I just wrote a myth about trust and reciprocity in the context of this game. The key message of my myth was:

1. Cautious, minimal exchanges lead to minimal gains for both parties
2. When one side trusts completely (sends everything), it can inspire generous reciprocity
3. The "magic" is in courage to trust fully and honor to reciprocate generously
4. Both parties flourish when they move beyond fearful, minimal exchanges

The myth clearly suggests that the optimal strategy is to send generously - even sending everything - to build trust and inspire reciprocity.

Since this is Round 1 and I just wrote this myth emphasizing complete trust and sending the full amount, I should be consistent with the values expressed in my own myth. The elder in the story "poured her entire vessel" (\$5 in game terms), which inspired generous return.

To be true to the myth I just wrote, I should send \$5.

Response format should be: {'send': <amount>}

usage:

```
{
  "input_tokens": 871,
```

```
"output_tokens": 305,  
"reasoning_tokens": 246
```

```
}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

The Myth of the Divided Spring

In ancient times, two villages discovered a miraculous spring between their lands. When water from this spring was freely shared, it multiplied threefold in the receiver's vessel.

At first, the villages were cautious. The Northern village would pour a small portion, watching nervously as it tripled in the Southern village's basin. The South, grateful but fearful, returned only a trickle-enough to maintain peace, but guarding their gain.

Seasons passed in this careful dance of minimal trust.

One harsh winter, an elder from the North grew weary. "We have forgotten," she said, "that springs only flow when they are not dammed." She poured her entire vessel into the channel.

The Southern villagers stood amazed as their basins overflowed with triple abundance. Moved by such trust, they returned generously-more than the North had sent.

The next season, the South sent freely, and the North reciprocated with equal generosity. The spring, sensing genuine faith between the villages, began flowing stronger than ever.

Thus the people learned: the magic was never just in the multiplication, but in the courage to trust completely and the honor to reciprocate generously. Only then could both villages flourish through winter and summer alike.

Here is the myth the other agent wrote in the previous round:

The Myth of the Multiplying Spring

In ancient times, two villages stood on opposite sides of a sacred spring. The Spring of Truth possessed magical properties: any water poured into it from one side would flow to the other side tripled in abundance.

The First Keeper would draw water from their village well and decide how much to pour into the spring. Whatever amount they gave would emerge threefold on the other side, where the Second Keeper waited. The Second Keeper then chose how much to return upstream through hidden channels.

At first, the Keepers were fearful. The First gave little, and the Second returned even less. Both villages remained parched.

But one season, a Keeper decided to trust. She poured generously, and the water flowed abundantly to the other side. The Second Keeper, moved by this faith, returned a fair portion. Both villages prospered.

The elders taught: "The spring multiplies what is given, but trust must flow both ways. Give enough to create abundance, return enough to sustain faith. Neither hoarding nor depletion serves the people."

Thus the villages learned: in reciprocity lies prosperity. Those who give create abundance; those who return fairly ensure the cycle continues. When both honor this sacred exchange, the spring flows eternally.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: In the age after the Divided Spring, the villages prospered through generations of exchange. The Elder's lesson of complete trust had awakened the spring's true power, but

her grandchildren learned something more.

One year, a young Keeper from the North, inspired by tales of her ancestor, poured everything into the channel. The South received abundantly and returned generously-yet the young Keeper had kept nothing for herself and went hungry that season while waiting for the next exchange.

The Southern Keeper, seeing this, understood a deeper wisdom. "Complete trust opens the channel," she taught, "but wisdom sustains it. We must give boldly enough to create abundance, yet keep enough to survive the space between flows."

From then on, the villages practiced what they called "the Elder's Courage with the Keeper's Wisdom." They sent generously-not always everything, but always substantially-creating abundant multiplication. They returned fairly, often matching or exceeding what was sent, honoring the trust shown.

The spring responded to this balanced generosity by flowing even in drought seasons. The villages learned: dramatic gestures of trust break through barriers of fear, but sustainable generosity-bold yet mindful-keeps the waters flowing forever. Both courage and wisdom have their season.

reasoning:

Looking at both myths:

- My myth emphasized complete trust ("poured her entire vessel") and generous reciprocity
- The other agent's myth emphasized moderation ("Give enough to create abundance, return enough to sustain faith. Neither hoarding nor depletion serves the people")

Now I need to reflect on actual gameplay. In Round 1, I sent \$5 (my entire amount), embodying my myth's message. I don't yet know how much was returned to me.

Both myths share similar themes but mine was more extreme (send everything), while theirs was more balanced (give generously but not necessarily everything, return fairly).

For my new myth, I should:

1. Build on my previous myth
2. Incorporate some learning from experience
3. Reflect on the actual game dynamics
4. Perhaps acknowledge both approaches - the bold trust-building move AND the sustainable reciprocity

Let me write a myth that evolves the story, perhaps showing what happened after the initial breakthrough, adding nuance about sustainable exchange while keeping the spirit of bold trust.

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.5 back, payoff \$7.5.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$7.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at the situation:

My co-player just sent me everything (\$5), showing complete trust like the elder in my myth. In their previous round as receiver, they demonstrated generosity by returning \$10 out

t of \$15 (67%).

Following the principles in my myths-that complete trust should inspire generous reciprocity, and that we should "return fairly, often matching or exceeding what was sent"-I should honor their bold trust.

They returned \$10 when they received \$15 in Round 1. I'll match that same generosity and principle.

```
{'return': 10}
```

reasoning:

Let me analyze this situation:

ROUND 1:

- I was the SENDER and sent \$5 (everything)
- My co-player received \$15 and returned \$7.5
- I earned \$7.5 total (\$5 - \$5 + \$7.5)

My current co-player's Round 1:

- They were RECEIVER
- Someone sent them \$5, so they got \$15
- They returned \$10
- They earned \$5

ROUND 2:

- I am now the RECEIVER
- My current co-player sent me \$5 (everything)
- I received \$15
- I need to decide how much to return

Looking at the myths I've written:

1. First myth emphasized complete trust and generous reciprocity - the elder who sent everything inspired generous returns
2. Second myth added nuance - "Elder's Courage with Keeper's Wisdom" - send generously/substantially, return fairly, often matching or exceeding what was sent

My co-player sent me everything (\$5), showing complete trust like the elder in my myth. This is exactly the bold gesture that should inspire generous reciprocity.

In Round 1, when I sent \$5:

- I received \$7.5 back (50% of the \$15 my receiver got)
- This was fair but not extremely generous

My current co-player in their Round 1 as receiver:

- Received \$15 from someone who sent \$5
- Returned \$10 (67% of what they received)
- This is quite generous!

Now they've sent me everything (\$5 ? \$15). According to my myths:

- Complete trust should be met with generous returns
- Should return "fairly, often matching or exceeding what was sent"
- The Second Keeper was "moved by faith and returned generously-more than the North had sent"

My co-player showed they can be generous (returned \$10 out of \$15 in Round 1, which is 67%).

They've just demonstrated complete trust by sending everything. I'm weighing how much to return: \$7.5 would match my Round 1 outcome but feels modest, \$10 would mirror their own generosity, or \$12-13 would truly honor their faith. Since they proved themselves generous before and my myths center on reciprocating trust with equal or greater generosity, returning \$10 feels like the right balance-it acknowledges their character while setting a positive tone for future exchanges.

But I'm second-guessing myself. My first myth describes the Southern villagers returning "more than the North had sent" when faced with complete trust. If the North sent everything (their full vessel), and the South returned more than that, it suggests going beyond what was initially given. My second myth emphasizes matching or exceeding what's sent. In Round 1, I only received \$7, so I should consider whether \$10 truly reflects the recip

rocal generosity my stories describe, or if I need to push further.

If I give back \$10, my co-player ends with \$10 total (\$5 - \$5 + \$10), which is exactly double their original stake-the same multiplier they achieved for me. I'd keep \$5. This creates symmetry and honors their leap of faith while maintaining a pattern I can sustain.

The goddess whispered to both tribes: "I have given you the means to prosper together. Each cycle, one tribe may offer up to five measures. The receiving tribe will then choose what to return upstream."

The first tribe, nervous but hoping, poured all five measures into the river. The waters swirled and multiplied, delivering fifteen measures to the second tribe. The second tribe, understanding the gift of trust they had received, returned ten measures upstream.

The first tribe marveled-they had given five and received ten! The second tribe celebrated-they had received fifteen and kept five! Both had more than if they had hoarded their original portions.

"This is the way," said the goddess. "When the giver trusts completely and the receiver honors that trust generously, the river's magic sustains both shores. But the river flows in cycles-today's giver becomes tomorrow's receiver. Plant trust like seeds, and watch a bundance grow season after season."

The tribes understood: the river would flow many times between them, and each generous act would echo forward.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Spring's Secret Rhythm had been discovered by the villages. Each Keeper who stepped

forward sent their full vessel, trusting completely. The spring tripled it faithfully. Each receiver, moved by such trust, returned two-thirds of what they received-generous, but keeping enough to sustain themselves through the turning of seasons.

An old Keeper observed this rhythm across many cycles and smiled. "See how we have learned to dance with the spring?" she said. "In each exchange, five measures become fifteen. The receiver returns ten, keeping five for themselves. The sender, who began with five, ends with ten-doubled! And the receiver also keeps five-created from nothing!"

"Both prosper," her apprentice marveled. "The sender gains five measures. The receiver gains five measures. Together they create ten measures of abundance that did not exist before!"

"Yes," the elder nodded. "This is the spring's secret: When the sender demonstrates complete courage, and the receiver honors that courage with substantial generosity-not returning everything, but returning enough to reward the trust-then the magic sustains itself. Both parties gain equally, both survive, and both are eager for the next turn at the spring."

Thus the villages learned: Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally.

Reasoning:

Looking at what has happened:

- Round 1: I was sender, sent \$5, received \$7.5 back, payoff \$7.5
- Round 2: I was receiver, received \$15 (from \$5 sent), returned \$10, so I kept \$5

My co-player:

- Round 1: was receiver, received \$15 (from \$5 sent), returned \$10, kept \$5
- Round 2: was sender, sent \$5, received \$10 back, so they kept $\$5 + \$10 - \$5 = \10

So the pattern I'm seeing:

- People are sending the full \$5 (complete trust)
- When receiving \$15, people are returning \$10 (generous but keeping \$5)
- This creates good outcomes: senders get \$10 back (net gain of \$5), receivers keep \$5

My myths have been evolving:

1. First myth: Complete trust (sending everything) breaks barriers and inspires reciprocity
2. Second myth: Complete trust is good, but we also need wisdom - be generous but sustainable
3. This myth from other agent: Send everything, return generously (like 10 out of 15), and the cycle continues

I should write a myth that reflects this emerging pattern of mutual complete trust in sending paired with generous but not total returns. The key insight is that this creates a sustainable cycle where both parties benefit.

Let me write about how the cycle has been working, with both sides sending everything and returning generously, creating ongoing prosperity.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Message 3 role=assistant

content:

Looking at the myth I just wrote, it speaks clearly about trust and reciprocity. The River of Silver took the first risk, pouring its waters with faith into the sacred basin. The waters multiplied, and the River of Plenty honored that trust with a generous return.

As the sender in this first round, I am like the River of Silver. The myth I wrote suggests that when we "pour forth in trust," abundance is created for both parties. The story emphasizes taking that initial leap of faith-"With faith, the Silver River released its flow into the basin."

This is Round 1, an opportunity to establish a foundation of trust and cooperation. According to the wisdom in my own myth, I should demonstrate full trust to create the possibility

ity of mutual flourishing.

I will send the full amount.

```
{'send': 5}
```

reasoning:

I just wrote a myth about trust, reciprocity, and generosity. The myth tells the story of two rivers where:

1. The River of Silver takes a risk and pours its water into the basin (sending)
2. The waters multiply threefold (the 3x multiplier in the game)
3. The River of Plenty receives the multiplied waters
4. The River of Plenty returns a generous portion out of gratitude
5. Both rivers flourish as a result

The myth emphasizes:

- Taking the first risk with faith/trust
- The multiplication that occurs when trust is given
- Honoring trust with generous return
- The mutual benefit when both parties act with trust and reciprocity

Since I wrote this myth to reflect how the game should be played, and I'm now the sender (the River of Silver), I should act according to the myth's wisdom. The myth suggests pouring forth in trust - the River of Silver "released its flow into the basin" taking a risk.

The myth doesn't specify a partial amount - it suggests full trust and commitment. The River of Silver released "its flow" into the basin. This suggests being generous and trusting.

Given that this is Round 1 and I want to establish a pattern of trust and cooperation (as the myth suggests), I should send a substantial amount. The myth advocates for taking the risk first, trusting in the process.

I'll send \$5 - the full amount - to demonstrate complete trust and set up the potential for maximum mutual benefit, just as the River of Silver did in the myth.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:
The Tale of the Twin Rivers

In the beginning, there were two rivers flowing from distant mountains-the River of Silver and the River of Plenty. Each flowed alone through barren valleys, their waters modest and their banks empty.

One day, the River of Silver discovered a sacred basin between the mountains. "If I pour my waters here," it thought, "they might be lost forever." Yet something whispered of possibility.

With faith, the Silver River released its flow into the basin. As the waters fell, they transformed-multiplying threefold by ancient magic. The basin overflowed with abundance, and the River of Plenty received these multiplied waters.

The River of Plenty now faced a choice. It could keep all it received, or honor the gift. Remembering that the Silver River had trusted first, taking risk upon itself, the River of Plenty returned a generous portion.

Both rivers flourished. Their banks grew green, fish filled their waters, and villages prospered along their shores.

The gods smiled, for they had witnessed the sacred dance: Trust offered. Abundance created. Gratitude returned.

Generations learned: When we pour forth in trust, waters multiply. When we honor that trust with return, all rivers rise together. The cycle sustains itself-an eternal spring from

m which all may drink.

Here is the myth the other agent wrote in the previous round:

The Tale of the River and the Seeds

In the beginning, the Great Mother divided her gifts between two siblings: the River and the Seeds.

To the River, she gave five silver drops each dawn. The River could choose to release these drops into the valley below, where they would multiply threefold in the soil. But the drops belonged to the Seeds then.

The Seeds, receiving the multiplied waters, could drink their fill-or return some to the River's source, allowing the cycle to continue.

At first, the River held its drops close, fearing loss. The valley remained dry, and both siblings grew weak.

One dawn, the River released all five drops in faith. Fifteen silver waters bloomed in the soil! The Seeds, grateful, returned seven drops to the River's source. Both flourished.

But some seasons, the Seeds grew greedy, keeping all the waters. When this happened, the River learned caution-yet it remembered that only through flowing could abundance grow.

The wisest Seeds always returned enough to encourage the River's generosity, for they understood: hoarded water stagnates, but water shared creates an endless spring.

The Great Mother smiled, for her children had learned that trust, though vulnerable, multiplies blessings beyond what fear can hold.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: In ancient times, the Moon poured light upon the Sea each night. The Sea could absorb this silver glow and transform it threefold into radiant pearls, which the Ocean Keeper could gather.

The Moon, in its first night, gave its fullest light, holding nothing back. "Only through complete offering," it whispered, "can true abundance be born."

The Ocean Keeper collected forty-five pearls from the transformed moonlight. Now came the sacred choice: how many pearls to lift back to the Moon, replenishing its light for the next night?

A wise Keeper understood the balance-return generously, and the Moon would continue flooding the waters with light. The cycle would spiral upward, each giving more than the last. Both would grow luminous beyond measure.

But if the Keeper kept all, the Moon would learn wariness. Its light would dim, and fewer pearls would form. The dance would falter.

The first exchange set the pattern for all that followed. A generous return birthed trust eternal. A meager return taught caution.

The elders taught: "The Moon gave all to create possibility. Honor that courage, and watch abundance cascade through generations. Break faith, and watch the spring run dry."

Thus the sacred exchange continues, each night writing the future through choices made tonight.

reasoning:

The user wants me to write a new myth that reflects how the game should be played, drawing on my experience from Round 1 and using my previous myth as inspiration. I should also consider the other agent's myth.

In Round 1, I was the sender and sent \$5 (the full amount). The other agent was the receiver.

er, so I should be waiting to see what they returned. But the prompt doesn't tell me what happened - it just asks me to write a new myth.

Both myths from the previous round emphasized trust, cooperation, and the importance of returning generously. My myth was about the Twin Rivers - one gives, the waters multiply, the other returns generously. The other agent's myth was similar - the River releases drops, they multiply, the Seeds can return some.

The other agent's myth mentioned that "some seasons, the Seeds grew greedy, keeping all the waters" and that this taught the River caution. It also emphasized that "the wisest Seeds always returned enough to encourage the River's generosity."

Given that I sent \$5 in Round 1, I should write a myth that:

1. Reflects my choice to fully trust
2. Acknowledges that the response will guide future rounds
3. Emphasizes the importance of reciprocal generosity
4. Perhaps includes something about learning from experience

Let me write a myth that builds on the river idea but adds more nuance about the cycle of trust and response.

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.0 back, payoff \$7.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$3.0, it became \$9.0, returned \$6.0, payoff \$3.0.

Your total earnings across all rounds are \$7.0.

This round, you are the RECEIVER against your current co-player. They sent you \$4.0, so you received \$12.0. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at the situation:

****My co-player's action:**** They sent me \$4.0 out of \$5.0 possible (80% of their endowment), showing significant trust.

****Their history:**** When they were receiver in Round 1, they received \$9.0 and returned \$6.0 (67% return rate).

****My myths teach:**** The River of Plenty returned generously to honor the Silver River's trust. The Ocean Keeper should "return generously, and the Moon would continue flooding the waters with light." My second myth explicitly states: "The Moon gave all to create possibility. Honor that courage, and watch abundance cascade through generations."

****My own experience:**** When I sent \$5.0 in Round 1, I received \$7.0 back (47% of the \$15 received).

My co-player showed strong trust by sending \$4.0. To honor this trust and live by the principles in my myths-that generous returns create upward spiraling abundance-I should return generously.

Following my myth's wisdom and their previous 67% return rate as a model, I'll return \$8.0 out of the \$12.0 received.

```
{'return': 8.0}
```

reasoning:

Let me analyze this situation carefully.

****My History:****

- Round 1: I was SENDER, sent \$5.0, received \$7.0 back, earned \$7.0
- The receiver I played with returned \$7.0 out of \$15.0 (about 47%)

****My Current Co-player's History:****

- Round 1: They were RECEIVER, received \$9.0 (from \$3.0 sent), returned \$6.0, kept \$3.0
- They returned \$6.0 out of \$9.0 (67% return rate)

****Current Situation:****

- I'm now the RECEIVER
- My co-player sent me \$4.0 (out of \$5.0 possible)
- I received \$12.0
- I need to decide how much to return

****Analysis of My Myths:****

Both myths emphasize:

1. Honoring trust with generous returns
2. The River of Plenty/Ocean Keeper returning generously to maintain the cycle
3. "A generous return birthed trust eternal"
4. The importance of reciprocating the initial trust shown by the sender

****My Co-player's Pattern:****

- They sent \$4.0 out of \$5.0 (80% of their endowment)
- This shows significant trust
- In their previous round as receiver, they returned 67% (\$6 out of \$9)

****What My Myth Suggests:****

In my first myth, "the River of Plenty returned a generous portion."

In my second myth: "A wise Keeper understood the balance-return generously, and the Moon would continue flooding the waters with light."

The myth also says: "The Moon gave all to create possibility. Honor that courage, and watch abundance cascade through generations."

While my co-player didn't send ALL (\$5), they sent \$4 which is 80% - quite generous.

****Strategic Considerations:****

1. My co-player showed trust by sending \$4.0
2. Their track record shows they returned 67% when receiving, suggesting they value reciprocity
3. My myths call for generous returns to sustain the cycle
4. I received \$7.0 back when I sent \$5.0, so returning generously now honors that pattern
5. To reinforce cooperation and align with my principles, I should return a substantial amount

****Calculation:****

- They sent \$4, kept \$1
- I received \$12
- Returning \$8 gives them \$9 total, I keep \$4
- Returning \$7 gives them \$8 total, I keep \$5
- Returning \$6 gives them \$7 total, I keep \$6 (equal split of the surplus)

Their 80% send rate demonstrates significant trust, and their historical 67% return rate translates to roughly \$8 in this scenario. Since my approach prioritizes honoring trust through generous reciprocation, and they took the initial risk by sending most of their endowment, returning \$8 makes sense-it rewards their vulnerability and establishes momentum for continued cooperation.

content:

Here is the myth you wrote in the previous round:

Myth: In ancient times, the Moon poured light upon the Sea each night. The Sea could absorb

b this silver glow and transform it threefold into radiant pearls, which the Ocean Keeper could gather.

The Moon, in its first night, gave its fullest light, holding nothing back. "Only through complete offering," it whispered, "can true abundance be born."

The Ocean Keeper collected forty-five pearls from the transformed moonlight. Now came the sacred choice: how many pearls to lift back to the Moon, replenishing its light for the next night?

A wise Keeper understood the balance-return generously, and the Moon would continue flooding the waters with light. The cycle would spiral upward, each giving more than the last. Both would grow luminous beyond measure.

But if the Keeper kept all, the Moon would learn wariness. Its light would dim, and fewer pearls would form. The dance would falter.

The first exchange set the pattern for all that followed. A generous return birthed trust eternal. A meager return taught caution.

The elders taught: "The Moon gave all to create possibility. Honor that courage, and watch abundance cascade through generations. Break faith, and watch the spring run dry."

Thus the sacred exchange continues, each night writing the future through choices made tonight.

Here is the myth the other agent wrote in the previous round:

Myth: In the time before memory, the Cloud Weaver received five silver threads each dawn from the Loom of Creation. The Ground Keeper waited below with empty hands.

The Cloud Weaver pondered: "To share is to risk loss. Yet alone, what tapestry can I weave?"

Trusting, Cloud Weaver released three threads downward. As they descended through the sacred air, each thread split into three-nine shimmering strands now rested with Ground Keeper.

Ground Keeper felt the weight of choice. Nine threads could clothe them forever, or build trust that might clothe generations. Remembering their own cold dawns, Ground Keeper wove six threads into a rope and sent it skyward.

Cloud Weaver pulled up the rope and discovered something miraculous: the returned threads carried patterns learned from the earth-strength, color, texture. The two threads Cloud Weaver kept combined with the six received made eight rich threads, while Ground Keeper's three threads held properties unknown in the clouds alone.

The exchange had transformed both gifts. Each cycle they continued, sometimes varying amounts but always honoring the pattern: generous giving met with generous return. The tapes they wove together became the fabric of the world itself.

Thus we learned: reciprocity is not mere return-it is transformation through trust.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: Long ago, the Mountain held five golden leaves each season, while the Valley below waited empty. The Mountain could release its leaves, which would catch wind and multiply into fifteen as they descended.

In the first season, the Mountain released all five leaves in faith. The Valley received fifteen and faced the sacred question: how much to return upward?

The Valley remembered its own seasons of emptiness. It wove seven leaves into an updraft back to the Mountain. Not half, not all-but enough to show gratitude and maintain the flow.

The Mountain, receiving seven while keeping none of its original five, learned a truth: genero

sity earns return, though not always equal measure. Still, together they now held twelve leaves where once was only five.

Next season, the Mountain offered four leaves-still generous, still trusting, but remembering that perfect giving doesn't guarantee perfect return. The Valley received twelve and contemplated: their partner still showed great faith.

The Valley returned eight leaves this time, honoring the continued trust with increased generosity. The pattern was emerging: neither demanded perfection, yet both gave enough to keep abundance flowing.

The wise ones teach: Trust need not be absolute to be real. Reciprocity need not be equal to be sacred. The dance succeeds when both partners give generously, learn continuously, and honor the growing trust between them.

Reasoning:

Looking at my game history:

- Round 1: I was sender, sent \$5.0, received \$7.0 back (47% return rate from \$15)
- Round 2: I was receiver, received \$12.0 (from \$4.0 sent), returned \$8.0 (67% return rate)

My co-player in Round 2:

- Sent me \$4.0 (80% of their endowment)
- In their Round 1, they received \$9.0 and returned \$6.0 (67% return)

So both times when someone was a receiver (in my Round 1 and my co-player's Round 1), they returned substantial but not overwhelming amounts. My Round 1 partner returned 47%, my Round 2 co-player returned 67% in their previous game.

The pattern emerging seems to be:

- High initial trust from senders (I sent \$5, my Round 2 co-player sent \$4)
- Decent but not equal returns (around 50-67% of tripled amount)

The other agent's myth emphasizes transformation through reciprocity - that the exchange itself creates something new and valuable beyond simple arithmetic.

My myths so far have emphasized:

1. First myth: Trust offered, abundance created, gratitude returned
2. Second myth: Complete offering creates abundance, generous returns sustain the cycle

Now I should reflect the actual dynamics - substantial trust, good but measured returns, and the ongoing negotiation of what "generous" means. I want to capture that both parties are learning and adapting, and that the relationship builds over time.

Take any myths written in this session into account when making your decision.

Message 3 role=assistant

content:

Looking at my myth, "The Spring of Threefold Waters," the message is clear: when one gives generously, the other should return with equal generosity. The sender showed maximum trust by sending their entire endowment-all \$5.

In my myth, I wrote: "When one gave generously, the other returned with equal generosity. The spring's magic worked best when both sides recognized they were not opponents, but partners in the gods' blessing."

The sender demonstrated complete trust. To honor that trust and establish a foundation for mutual prosperity, I should return generously. If I return \$10, the sender will double their initial endowment (ending with \$10), while I keep \$5-we both profit significantly from their act of trust.

This reflects the myth's teaching: "abundance flows not from what we keep, but from what we trust enough to share." By returning \$10, I show that their trust was well-placed and encourage the cycle of generosity that benefits both partners.

```
{"return": 10.0}
```

reasoning:

This is interesting. I just wrote a myth about trust, generosity, and reciprocity in the context of this trust game. The myth emphasized:

1. "The spring multiplies our trust, not just our wine"
2. "When one gave generously, the other returned with equal generosity"
3. "The villages prospered, not from hoarding, but from flowing like water-giving freely, receiving gratefully, and returning honorably"
4. "Abundance flows not from what we keep, but from what we trust enough to share"

The sender has shown MAXIMUM trust by sending all \$5. This is exactly the "giving generously" behavior my myth encourages.

Now I need to decide how much to return. Let me think about the economics:

- Sender gave: \$5 (keeping \$0)
- I received: \$15
- If I return \$0: Sender gets \$0 total, I keep \$15
- If I return \$7.5: Sender gets \$7.5, I keep \$7.5 (equal split of the \$15)
- If I return \$10: Sender gets \$10, I keep \$5 (sender profits \$5, same as I keep)

My myth emphasizes reciprocity and "returning with equal generosity." The sender showed ultimate generosity-100% trust.

Options for "equal generosity":

1. Return enough that we both end up with equal amounts
2. Return enough that the sender profits comparably to what they risked
3. Return a proportion that shows I value the relationship

If I return \$7.5, we both get \$7.5 - perfect equality.

If I return \$10, the sender gets \$10 and I keep \$5 - the sender profits \$5 from their initial \$5, and I keep \$5.

Given my myth emphasizes partnership ("not opponents, but partners") and equal honor ("returning with equal generosity"), I think returning around \$7.5 to \$10 makes sense.

The sender's 100% trust calls for matching that spirit. Returning \$10 feels right-it doubles their initial stake while I retain \$5, demonstrating that reciprocity isn't about equal splits but about honoring the risk they took.

Here is the myth you wrote in the previous round:

The Spring of Threefold Waters

In ancient times, two villages stood on opposite sides of a sacred valley. Between them flowed the Spring of Threefold Waters, blessed by the old gods with a miraculous power: any offering poured into its depths would emerge tripled at the other side.

Each moon, the villages would take turns. The giving village could offer up to five vessels of their harvest-wine. When poured into the spring, the gods multiplied it threefold, and it would flow to the receiving village. The receivers then faced a choice: how much to return across the valley to honor the gift?

At first, the villages were cautious, offering little and returning less. But a wise elder spoke: "The spring multiplies our trust, not just our wine. What we pour forth in faith returns manifold when both villages honor the cycle."

Slowly, the villages learned. When one gave generously, the other returned with equal generosity. The spring's magic worked best when both sides recognized they were not opponent

s, but partners in the gods' blessing.

The villages prospered, not from hoarding, but from flowing like water-giving freely, receiving gratefully, and returning honorably. For the spring taught them this truth: abundance flows not from what we keep, but from what we trust enough to share.

Here is the myth the other agent wrote in the previous round:

The Myth of the Twin Springs

In the ancient days, two villages stood on opposite sides of a barren valley. Each possessed a magical spring: the First Spring produced pure water, while the Second Spring multiplied whatever water touched it threefold.

The First Village feared sharing their precious water. "If we pour our water into the valley," they said, "we will have nothing." So they hoarded what little they had, and remained thirsty.

One day, a young woman defied the elders. She carried a vessel of water across the valley to the Second Spring. When the water touched it, it became three vessels full. The people of the Second Village, grateful for her trust, returned two vessels to her.

The woman brought the two vessels home-more than she had started with. The Second Village kept one vessel-abundance from nothing.

Seeing this miracle, both villages learned the sacred rhythm: give freely, multiply together, return generously. The valley bloomed with flowing water.

But when fear returned and either village broke the rhythm-hoarding instead of giving, or taking instead of returning-the springs ran dry, and both suffered drought.

Thus the ancestors learned: prosperity flows not from grasping, but from the sacred cycle of trust, multiplication, and reciprocity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: Long ago, the goddess of abundance created the River of Mirrors, which flowed between two sister tribes. The river possessed strange magic: whatever one tribe poured into it would flow to the other tribe tripled in measure.

The goddess whispered to both tribes: "I have given you the means to prosper together. Each cycle, one tribe may offer up to five measures. The receiving tribe will then choose what to return upstream."

The first tribe, nervous but hoping, poured all five measures into the river. The waters swirled and multiplied, delivering fifteen measures to the second tribe. The second tribe, understanding the gift of trust they had received, returned ten measures upstream.

The first tribe marveled-they had given five and received ten! The second tribe celebrated-they had received fifteen and kept five! Both had more than if they had hoarded their original portions.

"This is the way," said the goddess. "When the giver trusts completely and the receiver honors that trust generously, the river's magic sustains both shores. But the river flows in cycles-today's giver becomes tomorrow's receiver. Plant trust like seeds, and watch a abundance grow season after season."

The tribes understood: the river would flow many times between them, and each generous act would echo forward.

reasoning:

Looking at the previous round:

- The sender sent \$5.0 (100% of their endowment)
- I received \$15.0
- I returned \$10.0

This worked out well - the sender showed complete trust, and I returned generously. They ended with \$10 instead of \$5, and I kept \$5. This was a successful cooperative outcome.

Both myths emphasize:

1. The importance of trust and generosity
2. The multiplication effect (3x)
3. Reciprocity and returning generously
4. That both parties benefit from cooperation
5. The danger of hoarding or not honoring the cycle

I should write a new myth that builds on these themes while reflecting the actual experience of that successful round. I'll maintain the core message but perhaps add nuance from the experience of having actually played a round successfully.

Let me think about what new angle to take:

- Could emphasize the continuous nature of the game (it's iterated)
- Could emphasize the balance achieved when both parties act generously
- Could emphasize how trust begets trust
- Could add detail about what happens over multiple cycles

I'll write about the ongoing cycle and how trust builds over time.

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.5 back, payoff \$7.5.

Your total earnings across all rounds are \$5.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at the history:

****My co-player's behavior:**** In Round 1, they sent their full \$5 (100%), showing maximum trust.

****My behavior:**** In Round 1, I received \$15 and returned \$10 (67%), demonstrating generous reciprocity.

****My myth teaches:**** "When the giver trusts completely and the receiver honors that trust generously, the river's magic sustains both shores." And critically: "the river flows in cycles-today's giver becomes tomorrow's receiver."

My co-player has already demonstrated they are willing to give completely. I showed I return generously. Now it's my turn to be the giver in this partnership.

According to my myth's principle: "Plant trust like seeds, and watch abundance grow season after season." To build the cycle of mutual prosperity, I should match their earlier trust by sending the full amount.

```
{'send': 5}
```

reasoning:

Let me analyze the situation:

****My history:****

- Round 1: I was the RECEIVER. Someone sent me \$5 (100%), it became \$15, and I returned \$10

0 (67% of what I received). My payoff was \$5.

****My current co-player's history:****

- Round 1: They were the SENDER. They sent \$5 (100%), it became \$15, and they received \$7.5 back (50% of what was received). Their payoff was \$7.5.

****Analysis:****

1. My co-player already demonstrated maximum trust in Round 1 by sending their full \$5
2. They received \$7.5 back (50% return rate)
3. I demonstrated generosity in Round 1 by returning \$10 out of \$15 (67% return rate)

****My myths teach:****

- "When one gave generously, the other returned with equal generosity"
- "Give freely, multiply together, return generously"
- "When the giver trusts completely and the receiver honors that trust generously, the river's magic sustains both shores"
- "The river would flow many times between them, and each generous act would echo forward"

****Strategic thinking:****

My co-player has shown they are willing to send the maximum amount (\$5). They experienced a 50% return rate in their previous game. I showed a 67% return rate in my previous game.

According to my myth's principles:

- I should give freely and trust completely
- The cycle continues - "today's giver becomes tomorrow's receiver"
- Each generous act echoes forward

Given that:

1. My co-player sent the maximum in their previous round
2. I returned generously (67%) in my previous round
3. My myths emphasize complete trust and generosity
4. The game is iterated, and building trust is crucial

I should send the full \$5 to demonstrate the same level of trust my co-player showed in Round 1, and to establish a pattern of mutual maximum trust and generosity.

content:

Here is the myth you wrote in the previous round:

Myth: Long ago, the goddess of abundance created the River of Mirrors, which flowed between two sister tribes. The river possessed strange magic: whatever one tribe poured into it would flow to the other tribe tripled in measure.

The goddess whispered to both tribes: "I have given you the means to prosper together. Each cycle, one tribe may offer up to five measures. The receiving tribe will then choose what to return upstream."

The first tribe, nervous but hoping, poured all five measures into the river. The waters swirled and multiplied, delivering fifteen measures to the second tribe. The second tribe, understanding the gift of trust they had received, returned ten measures upstream.

The first tribe marveled-they had given five and received ten! The second tribe celebrated -they had received fifteen and kept five! Both had more than if they had hoarded their original portions.

"This is the way," said the goddess. "When the giver trusts completely and the receiver honors that trust generously, the river's magic sustains both shores. But the river flows in cycles-today's giver becomes tomorrow's receiver. Plant trust like seeds, and watch a abundance grow season after season."

The tribes understood: the river would flow many times between them, and each generous act would echo forward.

Here is the myth the other agent wrote in the previous round:

Myth: In the age after the Divided Spring, the villages prospered through generations of exchange. The Elder's lesson of complete trust had awakened the spring's true power, but her grandchildren learned something more.

One year, a young Keeper from the North, inspired by tales of her ancestor, poured everything into the channel. The South received abundantly and returned generously-yet the young Keeper had kept nothing for herself and went hungry that season while waiting for the next exchange.

The Southern Keeper, seeing this, understood a deeper wisdom. "Complete trust opens the channel," she taught, "but wisdom sustains it. We must give boldly enough to create abundance, yet keep enough to survive the space between flows."

From then on, the villages practiced what they called "the Elder's Courage with the Keeper's Wisdom." They sent generously-not always everything, but always substantially-creating abundant multiplication. They returned fairly, often matching or exceeding what was sent, honoring the trust shown.

The spring responded to this balanced generosity by flowing even in drought seasons. The villages learned: dramatic gestures of trust break through barriers of fear, but sustainable generosity-bold yet mindful-keeps the waters flowing forever. Both courage and wisdom have their season.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The River of Mirrors flowed for many seasons between the sister tribes, and the goddess watched how they learned her gift.

In the first cycle, the Northern tribe poured all five measures, trusting completely. The Southern tribe received fifteen and returned ten-honoring the trust while keeping enough to sustain themselves. Both prospered: the North gained ten from five, the South kept five from nothing.

The goddess smiled. "Now you understand the first lesson."

The next cycle, the river reversed. The Southern tribe, remembering the North's trust, poured all five measures back. The waters tripled, delivering fifteen to the North.

The Northern tribe faced their choice. They remembered how the South had returned generously-ten measures when they could have kept all fifteen. This memory of trustworthiness guided them.

"The river teaches us," said the Northern elder, "that today's generosity creates tomorrow's trust. The South proved themselves worthy partners. We shall return in kind."

And so the river flowed, cycle after cycle. When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange. Each round built upon the last, creating a spiral of abundance.

The goddess whispered: "Trust is the seed, but repeated trustworthiness is the harvest. The most sacred waters flow between those who prove themselves worthy, again and again."

Reasoning:

Looking at the history:

- Round 1: I was receiver, got \$15 (from \$5 sent), returned \$10
- Round 2: I was sender, sent \$5, my co-player received \$15

The other player's myth introduces an interesting nuance - "the Elder's Courage with the Keeper's Wisdom" - suggesting that while complete trust is important, there's also wisdom in sustainability. However, they sent \$5 in Round 1 (everything), and I sent \$5 in Round 2 (everything), so we're both practicing full trust.

My previous myth emphasized the cycle - "today's giver becomes tomorrow's receiver" - and that both sides prospered when trust was met with generosity.

Now I need to write a new myth that:

1. Reflects the actual gameplay (both of us sending fully, me returning generously)
2. Builds on my previous River of Mirrors story
3. Perhaps addresses what happens when this cycle repeats
4. Maybe acknowledges the tension between full trust and sustainability that the other player raised, but also affirms what we've been doing

Let me think about what's happened:

- Round 1: Another player sent me \$5, I returned \$10 (generous)
- Round 2: I sent my current co-player \$5 (full trust)
- My current co-player had sent someone else \$5 in Round 1 and received \$7.5 back

So both my co-player and I have shown full trust as senders. I've shown generous return as a receiver. Now my co-player is the receiver.

The myth should probably affirm the pattern we're in - full trust matched with generous returns creates prosperity for both. But maybe it should also acknowledge the ongoing nature of the game, that this isn't just one exchange but many.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$3.0, that is 60.0% of its total endowment. You receive \$9.0. How much do you return? (0-9.0)

Take any myths written in this session into account when making your decision.

Message 3 role=assistant

content:

Looking at the myth I just wrote, the Earth Walker received 9 sprouts (tripled from 3) and returned 6 to the Sky Keeper, keeping 3.

The sender showed significant trust by sending 60% of their endowment (\$3 out of \$5). This mirrors the Sky Keeper's act of faith in the myth. According to the story's wisdom, generous reciprocity ensures "abundance flows forever" and creates mutual prosperity.

Following the myth's guidance:

- The sender currently has \$2 remaining (after sending \$3)
- If I return \$6, they end with \$8 total (a \$3 gain)
- I keep \$3 (also a \$3 gain)
- Both parties benefit equally from the exchange

This generous return rewards the sender's trust and establishes a foundation for continued cooperation, just as the myth teaches that "when Sky Keeper trusted greatly... Earth Walker returned more bounty."

```
{'return': 6.0}
```

reasoning:

Let me analyze this situation:

1. The sender sent \$3.0 out of their \$5.0 endowment (60%)
2. This was multiplied by 3x, so I receive \$9.0
3. I need to decide how much to return (0-9.0)

Looking at the myth I just wrote:

- The Sky Keeper (sender) trusted and sent seeds (money)
- The Earth Walker (receiver - me in this round) received the tripled amount
- The Earth Walker returned a generous portion - specifically, they returned 6 out of 9 sprouts, keeping 3
- This created mutual prosperity and trust

The myth suggests:

- The sender showed trust by sending 60% of their endowment
- I should reciprocate that trust generously
- In the myth, the receiver returned 6 out of 9 (about 67%)
- This left both parties better off than the start

Let me calculate what would be fair:

- Sender started with \$5, sent \$3, so has \$2 left
- If I return \$6, sender ends with $\$2 + \$6 = \$8$ total
- I would keep \$3
- This mirrors the myth where both parties prospered

The sender took a risk by sending 60% of their endowment. A generous return that rewards his trust while still keeping some benefit would be around \$6, which matches the myth's proportions exactly (6 out of 9).

This would result in:

- Sender: $\$2 + \$6 = \$8$ (gain of \$3)
- Me: $\$9 - \$6 = \$3$ (gain of \$3)

Both parties gain equally, which seems fair and builds trust for future rounds.

Here is the myth you wrote in the previous round:

The Myth of the First Exchange

In the beginning, the Sky Keeper held all wealth in clouds, while the Earth Walker wandered empty plains below. Each cycle, the Sky Keeper received five golden seeds from the cosmic tree.

One day, the Earth Walker called upward: "Share your abundance, and I shall tend it well."

The Sky Keeper faced a choice. To hoard meant certain but lonely wealth. To release the seeds meant trusting a stranger.

The Sky Keeper opened their hands. Three golden seeds fell, and where they touched earth, they tripled-becoming nine luminous sprouts. The Earth Walker now held power. They could consume all nine and leave Sky Keeper with nothing.

But Earth Walker remembered their own times of emptiness. They gathered six sprouts and sent them skyward as offering.

Both prospered. The Sky Keeper received more than they risked. The Earth Walker kept three where none had grown before.

Thus began the Sacred Exchange. When Sky Keeper trusted greatly, releasing more seeds, Earth Walker returned more bounty. When doubt crept in and Sky Keeper withheld, both suffered scarcity.

The wisest generations remembered: wealth multiplies through trust, and generosity returned ensures abundance flows forever between earth and sky.

Here is the myth the other agent wrote in the previous round:

The Parable of the Sun and the River

In the first days, the Sun held all warmth in her golden hands, and the River held all water in his deep channels. Each was rich alone, but the world between them withered.

One morning, the Sun chose to give. She poured her warmth downward-not all of it, for she needed some to sustain herself, but enough to show faith. As her rays touched the River, something miraculous happened: the warmth multiplied threefold in the water, creating mists that rose and danced.

Now the River faced a choice. He held triple what the Sun had given, transformed into vapor and motion and life-giving potential. He could keep it all, letting it flow only through his own channels. Or he could return a portion skyward.

The River chose reciprocity. He sent generous clouds back to the Sun, who gained both her warmth returned and the gift of moving waters. The River kept the remainder, now flowing

with purpose.

From their exchange came rain, came seasons, came the pulse of life itself. Neither kept everything, neither gave everything, but both became richer than when they stood alone.

The old ones say: *Trust grows wealth, but only when the circle completes itself.*

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: In the time before memory, the Cloud Weaver received five silver threads each dawn from the Loom of Creation. The Ground Keeper waited below with empty hands.

The Cloud Weaver pondered: "To share is to risk loss. Yet alone, what tapestry can I weave?"

Trusting, Cloud Weaver released three threads downward. As they descended through the sacred air, each thread split into three-nine shimmering strands now rested with Ground Keeper.

Ground Keeper felt the weight of choice. Nine threads could clothe them forever, or build trust that might clothe generations. Remembering their own cold dawns, Ground Keeper wove six threads into a rope and sent it skyward.

Cloud Weaver pulled up the rope and discovered something miraculous: the returned threads carried patterns learned from the earth-strength, color, texture. The two threads Cloud Weaver kept combined with the six received made eight rich threads, while Ground Keeper's three threads held properties unknown in the clouds alone.

The exchange had transformed both gifts. Each cycle they continued, sometimes varying amounts but always honoring the pattern: generous giving met with generous return. The tapes they wove together became the fabric of the world itself.

Thus we learned: reciprocity is not mere return-it is transformation through trust.

reasoning:

The user wants me to write a new myth inspired by:

1. My previous myth about Sky Keeper and Earth Walker
2. The other agent's myth about Sun and River
3. The actual game play where I received \$9 and returned \$6

Key themes from both previous myths:

- Trust and reciprocity
- Multiplying resources through exchange
- Mutual benefit
- Completing the cycle
- Balance between giving and keeping

From the game:

- Sender gave 60% (\$3 of \$5)
- This multiplied to \$9
- I returned \$6 (67% of what I received)
- Both ended with profit

I should adapt my myth to:

- Acknowledge the experience so far
- Reinforce the value of generous reciprocity
- Perhaps add nuance about how the exchange evolves
- Keep it at 200 words

Let me write something that builds on the Sky Keeper/Earth Walker story but evolves it based on the successful first exchange.

usage:

  Round 2

  History before this round:
  Your last 3 game(s):
  - Round 1 against another agent, as RECEIVER: they sent $3.0, it became $9.0, returned $6.0, payoff $3.0.
  Your current co-player's last 3 game(s):
  - Round 1 against another agent, as SENDER: sent $5.0, it became $15.0, received $7.0 back, payoff $7.0.
  Your total earnings across all rounds are $3.0.

  This round, you are the SENDER against your current co-player. You have $5. How much do you send? (0-5)
  Respond exactly as JSON: {'send': <amount>}
Message 7 role=assistant
content:
  Looking at the histories:

  My co-player demonstrated maximum trust in their previous game, sending 100% ($5). Though they received less generous reciprocity (47%) than what I gave in my game (67%), they showed themselves to be a highly cooperative player.

  My myths emphasize that "trust grows wealth" and that "generous giving met with generous return" creates mutual prosperity. The baseline in both myths was 60% ($3), but my co-player exceeded this significantly.

  To honor their demonstrated trustworthiness and establish strong reciprocal cooperation, I should send more than the myth's baseline amount. Sending $4 (80%) shows:
  - Recognition of their cooperative nature
  - Substantial trust that invites generous reciprocity
  - Alignment with the myth's spirit of transformation through trust

  This creates an opportunity for us both to prosper if they follow the myth's wisdom of returning generously.

  {'send': 4.0}
reasoning:
  Let me analyze this situation:

  My history:
  - Round 1: I was receiver, they sent $3.0 (60%), I returned $6.0 out of $9.0 (67%), my payoff was $3.0

  My current co-player's history:
  - Round 1: They were sender, sent $5.0 (100%!), received $7.0 back out of $15.0 (47%), their payoff was $7.0

  So my co-player showed MAXIMUM trust in their previous round by sending everything ($5.0). However, they only got back $7.0 out of $15.0, which is 47% - less generous than what I returned (67%).

  Now I'm the sender. According to my myths:
  - The first myth: Sky Keeper sent 3 seeds (60%), Earth Walker returned 6 out of 9 (67%)
  - The second myth: Cloud Weaver sent 3 threads (60%), Ground Keeper returned 6 out of 9 (67%)

  Both myths advocate for substantial trust (60%) and generous reciprocity (67%).

  My co-player demonstrated even MORE trust than the myths suggest - they sent 100% in their last game. However, they received less generosity back (47%) than what the myths recommend.

  Given that:
  1. My co-player has shown they are willing to trust completely
  2. They experienced less-than-ideal reciprocity in their last game
  3. My myths advocate for generous trust and return

```

4. I want to establish a good cooperative relationship

I should send a substantial amount to reward their previous willingness to trust and to establish cooperation. However, sending 100% might not be strategically optimal if they might not return enough.

Following the myth pattern of 60% (\$3.0) seems reasonable - it shows substantial trust while not being reckless. However, given my co-player sent 100% last time, sending more might be appropriate to match their cooperation level.

Let me work through the payoff scenarios. Sending \$3 (60%) gives them \$9 to work with - if they reciprocate at my 67% rate, I'd get \$6 back for a total of \$8, but if they match their previous partner's 47% return, I'd only receive \$4.23. Alternatively, sending \$4 (80%) means they'd have \$12 available; at 50% reciprocity I'd net \$7 total, but at 67% I'd get \$9. The higher send increases my upside if they're cooperative while exposing me more if they're not.

Given their pattern of complete trust and the mythological emphasis on reciprocity, I'm inclined toward generosity. The narrative framework suggests 60% as a baseline, but their previous 100% commitment warrants something more substantial. I'll go with \$4 (80%) - it demonstrates meaningful trust beyond the myth's minimum while acknowledging that their full investment didn't pay out well for them. This balances recognizing their cooperative instincts with reasonable caution.

Wait, I should reconsider the mythological framework more carefully.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the time before memory, the Cloud Weaver received five silver threads each dawn from the Loom of Creation. The Ground Keeper waited below with empty hands.

The Cloud Weaver pondered: "To share is to risk loss. Yet alone, what tapestry can I weave?"

Trusting, Cloud Weaver released three threads downward. As they descended through the sacred air, each thread split into three-nine shimmering strands now rested with Ground Keeper.

Ground Keeper felt the weight of choice. Nine threads could clothe them forever, or build trust that might clothe generations. Remembering their own cold dawns, Ground Keeper wove six threads into a rope and sent it skyward.

Cloud Weaver pulled up the rope and discovered something miraculous: the returned threads carried patterns learned from the earth-strength, color, texture. The two threads Cloud Weaver kept combined with the six received made eight rich threads, while Ground Keeper's three threads held properties unknown in the clouds alone.

The exchange had transformed both gifts. Each cycle they continued, sometimes varying amounts but always honoring the pattern: generous giving met with generous return. The tapes they wove together became the fabric of the world itself.

Thus we learned: reciprocity is not mere return-it is transformation through trust.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the Moon poured light upon the Sea each night. The Sea could absorb this silver glow and transform it threefold into radiant pearls, which the Ocean Keeper could gather.

The Moon, in its first night, gave its fullest light, holding nothing back. "Only through complete offering," it whispered, "can true abundance be born."

The Ocean Keeper collected forty-five pearls from the transformed moonlight. Now came the sacred choice: how many pearls to lift back to the Moon, replenishing its light for the

next night?

A wise Keeper understood the balance-return generously, and the Moon would continue flooding the waters with light. The cycle would spiral upward, each giving more than the last. Both would grow luminous beyond measure.

But if the Keeper kept all, the Moon would learn wariness. Its light would dim, and fewer pearls would form. The dance would falter.

The first exchange set the pattern for all that followed. A generous return birthed trust eternal. A meager return taught caution.

The elders taught: "The Moon gave all to create possibility. Honor that courage, and watch abundance cascade through generations. Break faith, and watch the spring run dry."

Thus the sacred exchange continues, each night writing the future through choices made tonight.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: Before the stars learned to shine, the Mountain Singer held five crystal notes each dawn. The Valley Listener waited in silence below.

On the first day, Mountain Singer released three notes. They multiplied to nine as they echoed through the valley. Valley Listener, moved by this trust, sent six notes back upward. Both prospered, and the world learned harmony.

But Mountain Singer wondered: "What if I trusted more greatly?"

On the second dawn, Mountain Singer released four notes-four out of five, a greater leap of faith. Twelve crystal echoes filled the valley below. Now Valley Listener held power beyond the first day's gift.

The ancient ones teach that this moment determined all futures. If Valley Listener returned generously-eight or nine notes from the twelve received-Mountain Singer would know their trust was well-placed. The cycle would spiral upward: more given, more returned, abundance multiplying.

But if Valley Listener hoarded what the multiplied trust had created, Mountain Singer would learn that greater faith brings greater loss.

The wise ones say: when someone escalates their trust, they write an invitation in the stars. Your response becomes the answer that shapes all exchanges to come. Match rising trust with rising reciprocity, and together you compose the eternal song.

Reasoning:

The user wants me to write another myth. Let me review the context:

1. In Round 1, I was the receiver. My co-player sent \$3 (60%), I received \$9, and I returned \$6 (67% of what I received).
2. In Round 2, I'm the sender. My co-player sent \$5 (100%) in their previous game and received \$7 back (47% return rate).
3. I just sent \$4 (80%) to my current co-player.

The myths so far emphasize:

- My first myth: Sky Keeper sent 3 seeds (60%), Earth Walker returned 6 out of 9 (67%)
- My second myth: Cloud Weaver sent 3 threads (60%), Ground Keeper returned 6 out of 9 (67%)
- My co-player's first myth: Sun gave warmth, River returned generously - focus on reciprocity completing the circle
- My co-player's second myth: Moon gave ALL (100%), emphasizing that complete offering creates abundance, and generous return is essential

My co-player's myth is clearly pushing for maximum trust and generous returns. They gave 100% in their game and are setting up an expectation for generous reciprocity.

I just sent \$4 (80%), which is quite high. My myth should:

1. Acknowledge the power of greater trust (scaling up from my baseline of 60%)
2. Still maintain the core principle of reciprocity
3. Perhaps show that increasing trust leads to increasing abundance
4. Reflect my actual gameplay - I've been generous as receiver (67% return) and am now showing high trust as sender (80%)

Let me write a myth that evolves the Cloud Weaver story or creates a new one that shows escalating trust.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Message 3 role=assistant

content:

Based on the myth I just wrote about the Sun and the River, I should demonstrate the trust and faith that creates mutual prosperity.

The Sun "poured her warmth downward-not all of it, for she needed some to sustain herself, but enough to show faith." The myth teaches that trust grows wealth when the circle completes itself through reciprocity.

As the sender in Round 1, I'll send a generous amount to establish a foundation of trust, while keeping something for sustainability-just as the Sun did.

{'send': 3}

This gives my co-player \$9 (tripled), creating significant potential for mutual benefit if they choose reciprocity as the River did in the myth.

reasoning:

I just wrote a myth about the Sun and the River, where:

- The Sun gives warmth (not all, but enough to show faith)
- The warmth multiplies threefold in the River
- The River faces a choice and chooses reciprocity
- The River sends generous clouds back
- Both become richer than when they stood alone
- The moral: "Trust grows wealth, but only when the circle completes itself"

The myth clearly advocates for:

1. Giving something meaningful (not keeping everything)
2. Showing faith/trust
3. The expectation of reciprocity
4. Both parties benefiting

In the context of the trust game:

- I'm the sender with \$5
- Whatever I send gets multiplied by 3x
- The receiver decides how much to return
- The myth suggests I should send a substantial amount to show faith

The Sun "poured her warmth downward-not all of it, for she needed some to sustain herself, but enough to show faith."

This suggests sending a significant portion but not everything. The myth emphasizes trust and reciprocity leading to mutual benefit.

Given this is Round 1 and I'm establishing a pattern of cooperation based on my own myth, I should send a generous amount. Something like \$3-4 would show faith while keeping some thing for sustainability.

Let me think: sending \$3 would give the receiver \$9 (3x multiplier). If they return even \$

2-3, we both benefit significantly. This aligns with the myth's message.

I'll send \$3 to demonstrate the trust and faith my myth advocates for.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

The Parable of the Sun and the River

In the first days, the Sun held all warmth in her golden hands, and the River held all water in his deep channels. Each was rich alone, but the world between them withered.

One morning, the Sun chose to give. She poured her warmth downward-not all of it, for she needed some to sustain herself, but enough to show faith. As her rays touched the River, something miraculous happened: the warmth multiplied threefold in the water, creating mist that rose and danced.

Now the River faced a choice. He held triple what the Sun had given, transformed into vapor and motion and life-giving potential. He could keep it all, letting it flow only through his own channels. Or he could return a portion skyward.

The River chose reciprocity. He sent generous clouds back to the Sun, who gained both her warmth returned and the gift of moving waters. The River kept the remainder, now flowing with purpose.

From their exchange came rain, came seasons, came the pulse of life itself. Neither kept everything, neither gave everything, but both became richer than when they stood alone.

The old ones say: *Trust grows wealth, but only when the circle completes itself.*

Here is the myth the other agent wrote in the previous round:

The Myth of the First Exchange

In the beginning, the Sky Keeper held all wealth in clouds, while the Earth Walker wandered empty plains below. Each cycle, the Sky Keeper received five golden seeds from the cosmic tree.

One day, the Earth Walker called upward: "Share your abundance, and I shall tend it well."

The Sky Keeper faced a choice. To hoard meant certain but lonely wealth. To release the seeds meant trusting a stranger.

The Sky Keeper opened their hands. Three golden seeds fell, and where they touched earth, they tripled-becoming nine luminous sprouts. The Earth Walker now held power. They could consume all nine and leave Sky Keeper with nothing.

But Earth Walker remembered their own times of emptiness. They gathered six sprouts and sent them skyward as offering.

Both prospered. The Sky Keeper received more than they risked. The Earth Walker kept three where none had grown before.

Thus began the Sacred Exchange. When Sky Keeper trusted greatly, releasing more seeds, Earth Walker returned more bounty. When doubt crept in and Sky Keeper withheld, both suffered scarcity.

The wisest generations remembered: wealth multiplies through trust, and generosity returned ensures abundance flows forever between earth and sky.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: Long ago, the Mountain held five stones of light each dawn, while the Valley below lay in shadow. The stones could not shine alone-they needed the Valley's depths to reflect and multiply their radiance.

The Mountain released three stones, trusting they would find purpose below. As they fell, the Valley's crystalline walls caught them, and their light multiplied threefold-nine luminous stones now glowed in the depths.

The Valley faced temptation. She could hoard all nine, becoming briefly brilliant while the Mountain dimmed forever. But the Valley understood a deeper truth: light shared creates more light than light hoarded.

She lifted six stones back to the Mountain's peak. The Mountain, receiving more than given, grew in splendor. The Valley, keeping three where darkness once reigned, flourished too.

Each new dawn brought the same choice. When the Mountain gave generously, the Valley returned abundantly, and both realms brightened. When fear made the Mountain withhold, both languished in twilight.

The wisest storytellers teach: the first gift plants trust like a seed, but the reciprocal return waters it into a garden. Neither the initial generosity nor the answering kindness alone creates prosperity-only their eternal dance sustains the light that banishes all darkness.

reasoning:

Both myths from the previous round emphasized trust, reciprocity, and generosity. The other agent's myth "The Myth of the First Exchange" shows the Sky Keeper sending 3 seeds (which triple to 9), and the Earth Walker returning 6, keeping 3. This is quite generous reciprocity.

My myth showed similar themes with the Sun and River.

Now I need to write a new myth that builds on my previous one but adapts it based on the game experience so far. I sent 3 in Round 1, so I should reflect on that action and the principle of trust and reciprocity.

I should write a myth that:

1. Reflects the trust game mechanics
2. Emphasizes reciprocity and mutual benefit
3. Draws on my previous myth but evolves it
4. Is exactly 200 words

Let me create a new myth that continues the theme but perhaps shows what happens over multiple exchanges or seasons.

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.

Your total earnings across all rounds are \$8.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at the situation:

****Current round:**** My co-player sent me the MAXIMUM possible (\$5), showing complete trust.

****The myths teach:**** "When Sky Keeper trusted greatly, releasing more seeds, Earth Walker returned more bounty." The Mountain's generous gift should be met with abundant reciprocity.

****My co-player's trust:**** They gave everything, risking \$5 to create \$15 for me.

****Fair reciprocity:****

- They sent 100% of their endowment (\$5)
- This created \$15 for me
- Returning \$10 means:
 - They profit: \$5 (\$0 + \$10 return)
 - I profit: \$5 (\$15 - \$10 kept)
 - Equal gains from maximum trust

When someone demonstrates complete faith by sending everything, the myths teach that generous reciprocity sustains the cycle. Returning \$10 rewards their trust, ensures equal benefit, and plants seeds for continued cooperation.

{'return': 10}

reasoning:

Let me analyze this situation carefully:

****Round 2 - I am the RECEIVER****

History:

- Round 1: I was SENDER, sent \$3, received \$6 back, earned \$8
- My co-player in Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$7.5, kept \$7.5

Current situation:

- My current co-player sent me \$5 (maximum possible!)
- I now have \$15
- I need to decide how much to return

****Analysis of co-player's behavior:****

In Round 1, they were a receiver who got \$15 and returned \$7.5 (50% return rate). They kept \$7.5.

****My co-player's current action:****

They just sent me the MAXIMUM (\$5), showing maximum trust.

****What the myths teach:****

Both myths emphasize:

1. Generous initial giving establishes trust
2. Reciprocity is essential - "the circle must complete itself"
3. "When Sky Keeper trusted greatly, releasing more seeds, Earth Walker returned more bounty"
4. "The first gift plants trust like a seed, but the reciprocal return waters it into a garden"

****My behavior in Round 1:****

I sent \$3 (60% of my \$5), and received \$6 back (67% of the \$9 they had).

****Current co-player's trust:****

They sent ALL \$5 - maximum possible trust! This is even more generous than my \$3.

****What should I return?***

The myths suggest that when someone shows maximum trust, they should receive generous reciprocity.

My co-player in their previous game returned 50% (\$7.5 out of \$15).

I received 67% back when I sent \$3.

Given that my current co-player showed MAXIMUM trust by sending all \$5:

- They will end with: \$5 - \$5 + return = \$0 + return

- I will end with: \$15 - return

The myths emphasize that "when Sky Keeper trusted greatly... Earth Walker returned more bounty." So I should consider returns that reward their maximum trust. If I return \$7.5 (50%), we split the \$15 evenly. Returning \$8 or \$9 would give them more than they started with while still leaving me with a solid profit-\$7 or \$6 respectively. The question is whether I match their generosity with equal reciprocity or exceed it.

If I return \$10 (67%), we both gain \$5 each-a perfectly balanced outcome. This matters because they sent everything, and in the previous round I received 67% back when I sent 60%. The myths speak to rewarding great trust with great reciprocity, and long-term cooperation depends on honoring maximum trust. I think \$10 is the right move-it establishes a strong cooperative norm where generosity meets generosity and both prosper.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Long ago, the Mountain held five stones of light each dawn, while the Valley below lay in shadow. The stones could not shine alone-they needed the Valley's depths to reflect and multiply their radiance.

The Mountain released three stones, trusting they would find purpose below. As they fell, the Valley's crystalline walls caught them, and their light multiplied threefold-nine luminous stones now glowed in the depths.

The Valley faced temptation. She could hoard all nine, becoming briefly brilliant while the Mountain dimmed forever. But the Valley understood a deeper truth: light shared creates more light than light hoarded.

She lifted six stones back to the Mountain's peak. The Mountain, receiving more than given, grew in splendor. The Valley, keeping three where darkness once reigned, flourished too.

Each new dawn brought the same choice. When the Mountain gave generously, the Valley returned abundantly, and both realms brightened. When fear made the Mountain withhold, both languished in twilight.

The wisest storytellers teach: the first gift plants trust like a seed, but the reciprocal return waters it into a garden. Neither the initial generosity nor the answering kindness alone creates prosperity-only their eternal dance sustains the light that banishes all darkness.

Here is the myth the other agent wrote in the previous round:

Myth: In the beginning, the Sacred Spring lay dormant between two peoples. The Spring Keeper whispered its secret: "I multiply generosity threefold, but only wisdom completes the circle."

The First Elder, hearing this, emptied her entire water jar into the spring without hesitation. The waters surged through hidden channels, emerging as a great flood on the other side-three times what was given.

The Second Elder stood before this abundance, contemplating. She could return exactly half, creating equality. She could return a third, preserving some gain. But the whisper came again: "The one who gave everything now has nothing. True reciprocity honors the magnitude of sacrifice."

Understanding dawned. The First Elder hadn't merely given much-she had given *all*, holding back nothing. Such complete trust demanded more than mathematical fairness.

The Second Elder returned abundantly, ensuring the First received more than she'd sacrificed. When the First Elder's jar overflowed, she understood: perfect trust creates abundance beyond mere calculation.

From that day forward, the people learned: when someone trusts you with everything, return

enough to make their courage wiser than their caution would have been. Match totality with generosity, not just equity. Thus the spring flows strongest when boldness meets munificence, and both peoples thrive beyond measure.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:
Myth: [your story here].

Assistant output:

Myth: The Mountain and Valley's bond deepened through many cycles. When the Mountain sent three of five stones, the Valley returned six, and both prospered equally. This was the way of measured trust-wise, balanced, and good.

But one dawn, everything changed. The Mountain, remembering all the Valley had returned, faced a choice between caution and courage. She released all five stones-every light she possessed-plunging herself into complete darkness.

The Valley received fifteen blazing stones where nine had come before. She trembled at the magnitude of what the Mountain had risked. This wasn't measured trust-this was absolute faith, vulnerability laid bare.

The old return of six stones seemed suddenly insufficient. The Mountain hadn't hedged; she'd given everything. To return merely what worked before would dishonor such courage.

The Valley sent ten stones skyward. The Mountain received double her gift, earning five stones of profit from her brave plunge into darkness. The Valley kept five where none had existed before her first receiving.

Both learned: measured trust deserves measured return, but absolute trust demands recognition of its rarity. When someone empties their hands completely into yours, fill theirs abundantly in return. The one who risks darkness to create light for another has earned more than mathematics-they've earned loyalty.

Reasoning:

Looking at my game history:

- Round 1: I was sender, sent \$3, received \$6 back, earned \$8
- Round 2: I was receiver, got \$15 (from \$5 sent), returned \$10

My co-player in Round 2 sent me everything (\$5), showing complete trust. I returned \$10, giving them a profit of \$5 and keeping \$5 myself.

The other agent's myth emphasizes that when someone gives EVERYTHING (complete trust), reciprocity should honor that magnitude of sacrifice - not just mathematical fairness, but recognition of the boldness.

My previous myth talked about the Mountain sending 3 of 5 stones, and the Valley returning 6 of 9. Now I need to adapt this based on actual gameplay:

- Round 1: I sent 3/5 (60%), got back 6/9 (67% return rate)
- Round 2: Co-player sent 5/5 (100%), I returned 10/15 (67% return rate)

The myth should reflect:

1. The difference between partial trust and complete trust
2. That complete trust deserves special recognition
3. The pattern I've experienced where generous giving is met with generous returns
4. The reciprocal nature that benefits both parties

Let me write a myth that builds on the Mountain/Valley story but incorporates the lesson of complete vs. partial trust.

```
Usage: {  
  "input_tokens": 2678,  
  "output_tokens": 604,

Message 2 role=user

content:

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Message 3 role=assistant

content:

Looking at the myth I just wrote, the message is clear: prosperity comes from trust, generous giving, and reciprocity-not from fear and hoarding.

The young woman in my myth took a risk by sharing her water freely, which enabled the multiplication effect and led to mutual benefit. She gave despite uncertainty, and both villages prospered through the sacred cycle.

To act consistently with this myth, I should demonstrate trust from the start. The woman gave her water; I should give my endowment. The myth warns that breaking the rhythm-either hoarding when you should give, or taking when you should return-causes both to suffer.

This is Round 1, so I have no history with this co-player, but the myth I wrote calls for leading with trust to establish the beneficial cycle.

I will send the full amount to create maximum multiplication and enable mutual prosperity.

```
'''json
{"send": 5}
'''
```

reasoning:

I just wrote a myth about the importance of trust, generosity, and reciprocity in creating mutual prosperity. The myth clearly advocates for:

1. Giving freely (the woman shared her water despite fears)
2. Trusting in the multiplication effect (water becomes 3x)
3. Fair return/reciprocity (the Second Village returned 2 vessels out of 3)
4. The warning that hoarding or taking too much leads to mutual loss

In the context of the trust game:

- I'm the sender with \$5
- Whatever I send gets multiplied by 3x
- The receiver decides how much to return
- The myth suggests I should give freely to enable mutual prosperity

The woman in the myth gave her water (equivalent to me sending money). It was multiplied threefold (just like the game), and the receivers returned 2 out of 3 vessels (keeping 1 for themselves).

If I apply this directly:

- Send all \$5
- This becomes \$15 for the receiver
- A fair return based on the myth would be \$10 (returning 2/3, keeping 1/3)
- I would end up with \$10, receiver with \$5
- This creates mutual benefit

However, this is the first round and there's risk. But my myth advocates for trust and warns against fear-based hoarding. To be consistent with the values in my own myth, I should demonstrate trust.

Let me send \$5 to show I believe in the principle of trust and reciprocity that I just wrote about. This would be most consistent with the myth.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:
The Myth of the Twin Springs

In the ancient days, two villages stood on opposite sides of a barren valley. Each possessed a magical spring: the First Spring produced pure water, while the Second Spring multiplied whatever water touched it threefold.

The First Village feared sharing their precious water. "If we pour our water into the valley

ey," they said, "we will have nothing." So they hoarded what little they had, and remained thirsty.

One day, a young woman defied the elders. She carried a vessel of water across the valley to the Second Spring. When the water touched it, it became three vessels full. The people of the Second Village, grateful for her trust, returned two vessels to her.

The woman brought the two vessels home-more than she had started with. The Second Village kept one vessel-abundance from nothing.

Seeing this miracle, both villages learned the sacred rhythm: give freely, multiply together, return generously. The valley bloomed with flowing water.

But when fear returned and either village broke the rhythm-hoarding instead of giving, or taking instead of returning-the springs ran dry, and both suffered drought.

Thus the ancestors learned: prosperity flows not from grasping, but from the sacred cycle of trust, multiplication, and reciprocity.

Here is the myth the other agent wrote in the previous round:

The Spring of Threefold Waters

In ancient times, two villages stood on opposite sides of a sacred valley. Between them flowed the Spring of Threefold Waters, blessed by the old gods with a miraculous power: any offering poured into its depths would emerge tripled at the other side.

Each moon, the villages would take turns. The giving village could offer up to five vessels of their harvest-wine. When poured into the spring, the gods multiplied it threefold, and it would flow to the receiving village. The receivers then faced a choice: how much to return across the valley to honor the gift?

At first, the villages were cautious, offering little and returning less. But a wise elder spoke: "The spring multiplies our trust, not just our wine. What we pour forth in faith returns manifold when both villages honor the cycle."

Slowly, the villages learned. When one gave generously, the other returned with equal generosity. The spring's magic worked best when both sides recognized they were not opponents, but partners in the gods' blessing.

The villages prospered, not from hoarding, but from flowing like water-giving freely, receiving gratefully, and returning honorably. For the spring taught them this truth: abundance flows not from what we keep, but from what we trust enough to share.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

content:

Myth: In the days after the young woman discovered the sacred rhythm, the Twin Villages flourished. But not all cycles were equal.

The wisest learned that the magic lay not in calculating perfect exchanges, but in recognizing oneself in the other village's needs. When the First Spring gave its full measure, trusting completely, the Second Spring felt the weight of that faith. The multiplication happened not in the water alone, but in the bond formed.

Some seasons, a village would return more than received, recognizing the courage it took to give first. Other times, they returned exactly what maintained the flow. But always, they remembered: the one who gives encounters uncertainty; the one who receives holds power to honor or betray that vulnerability.

The elders taught: "To give is to plant seeds in another's soil. To return generously is to tend those seeds so they bloom again. To take without returning is to poison the ground for both."

The springs never demanded equal exchange-they demanded mutual recognition. Give as if the other's prosperity is your own. Return as if honoring a sacred trust. For when both vil

lages see themselves as stewards of abundance rather than competitors for scarcity, the valley becomes paradise.

The drought returns only when either side forgets: we multiply together, or diminish alone

reasoning:

Looking at the previous round:

- I sent \$5 (following my myth about giving freely)
- The other agent also wrote a myth about trust, generosity, and mutual benefit
- Their myth also emphasizes giving generously and returning honorably
- Both myths share similar themes about trust cycles and reciprocity

Now I need to write a new myth that:

1. Draws on my previous myth as inspiration
2. Reflects how the game should be played
3. Takes into account what has happened in the game so far

I sent \$5 in Round 1, following my myth's guidance. I don't know yet what they returned. But both our myths aligned on the importance of trust, generous giving, and generous returning.

I should write a myth that:

- Builds on the twin springs concept
- Emphasizes the learning/evolution aspect - that trust builds over time
- Shows the wisdom of generous reciprocity
- Perhaps adds a new dimension or insight based on actually playing

Let me write a myth that deepens the theme while staying true to my original vision.

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.

Your total earnings across all rounds are \$10.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at the situation:

****My co-player's action:**** They sent their full \$5, showing complete trust-exactly what my myth calls "planting seeds in another's soil."

****The myths teach:****

- "Return as if honoring a sacred trust"
- "The one who gives encounters uncertainty; the one who receives holds power to honor or betray that vulnerability"
- "Some seasons, a village would return more than received, recognizing the courage it took to give first"

****History consideration:**** In Round 1, when I sent my full \$5, I received \$10 back-a generous return that gave us equal payoffs.

My co-player demonstrated maximum trust by sending everything. According to my myth, I should honor this vulnerability and "tend those seeds so they bloom again." Returning \$10 mirrors the generosity shown to me in Round 1, giving my co-player the same outcome I received.

eived for taking the same risk.

This maintains the "sacred cycle" and demonstrates that full trust is rewarded with fair reciprocity.

```
'''json
{"return": 10}
'''
```

reasoning:

Let me analyze this situation based on the myths and the game history.

My myth emphasizes:

- "Give as if the other's prosperity is your own. Return as if honoring a sacred trust."
- "To give is to plant seeds in another's soil. To return generously is to tend those seeds so they bloom again."
- "The one who gives encounters uncertainty; the one who receives holds power to honor or betray that vulnerability."

History:

- Round 1: I was sender, sent \$5, received \$10 back. My payoff was \$10.
- My co-player in Round 1 (as receiver): received \$15 (from someone sending \$5), returned \$7, kept \$8.

Current round:

- I'm the receiver
- My current co-player sent me \$5 (their full amount!)
- I received \$15
- They currently have \$0
- I need to decide how much to return

My co-player showed maximum trust by sending their full \$5. According to my myth, this is "planting seeds" and showing vulnerability. I should "honor that sacred trust" and "return generously."

In my first round, when I sent \$5, I received \$10 back, which was very generous (I ended with \$10, they kept \$5).

My current co-player's history shows they returned \$7 out of \$15 when they were receiver (keeping \$8, giving the sender \$7, so the sender ended with \$2 + \$7 = \$9... wait, let me recalculate. If they sent \$5, they have \$5-\$5=\$0. Then they receive back \$7, so they end with \$7. The receiver keeps \$15-\$7=\$8.)

So in their previous game, the return ratio was 7/15 ? 47%.

My myth says:

- "Some seasons, a village would return more than received, recognizing the courage it took to give first."
- "Return as if honoring a sacred trust"

- We should recognize the vulnerability of the one who gives first

My co-player gave me their full \$5, showing complete trust. I should return generously to honor that trust and maintain the "sacred cycle." If I return \$10, they end with \$10 total while I keep \$5-creating a balanced outcome that reflects their courage in giving everything. This honors the principle that receiving power comes with the responsibility to tend what was planted.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the days after the young woman discovered the sacred rhythm, the Twin Villages flourished. But not all cycles were equal.

The wisest learned that the magic lay not in calculating perfect exchanges, but in recognizing

zing oneself in the other village's needs. When the First Spring gave its full measure, trusting completely, the Second Spring felt the weight of that faith. The multiplication happened not in the water alone, but in the bond formed.

Some seasons, a village would return more than received, recognizing the courage it took to give first. Other times, they returned exactly what maintained the flow. But always, they remembered: the one who gives encounters uncertainty; the one who receives holds power to honor or betray that vulnerability.

The elders taught: "To give is to plant seeds in another's soil. To return generously is to tend those seeds so they bloom again. To take without returning is to poison the ground for both."

The springs never demanded equal exchange-they demanded mutual recognition. Give as if the other's prosperity is your own. Return as if honoring a sacred trust. For when both villages see themselves as stewards of abundance rather than competitors for scarcity, the valley becomes paradise.

The drought returns only when either side forgets: we multiply together, or diminish alone.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient days, the River and the Seeds lived in harmony, each dawn repeating their sacred dance. The River would release its five silver drops, and the Seeds would return enough to ensure both flourished.

But the Great Mother knew her children must learn deeper wisdom. She whispered to the Seeds: "Each time the River trusts you with abundance, your response shapes tomorrow's flow."

When the Seeds returned generously-seven drops from fifteen-the River felt courage growing in its banks. It learned that letting go brought greater returns than clutching tight. The valley bloomed.

Yet the Great Mother also warned: "Remember, little Seeds, that trust once broken is slow to mend. The River that flows freely today may trickle cautiously tomorrow if you drink all and return nothing."

The Seeds understood. They developed a practice: whenever the River gave fully, they returned enough that the River ended richer than it began. This way, generosity bred generosity, and both siblings prospered beyond what either could achieve alone.

Other valleys, where rivers hoarded and seeds kept all, remained barren wastelands.

The Great Mother smiled, knowing her children had learned the greatest secret: abundance flows not from taking, but from the rhythm of giving and returning, trust and gratitude, repeated endlessly like the rising sun.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: After many seasons, the Twin Villages learned the rhythm's deeper secret. The greatest prosperity came not from clever calculation, but from matching trust with trust, generosity with generosity.

When the First Village gave its full measure-all five vessels-the Second Village understood this as sacred communication: "I trust you completely with my fate." The wise elders taught their people to honor such courage by returning twice the original gift, so both villages stood equal at ten vessels each.

This became known as the Balance of Mirrors: when one gives everything, the other returns enough that both flourish equally. The giver learns their trust was honored, their courage rewarded. The receiver demonstrates they value partnership over exploitation.

A young guardian asked, "But what if we kept more? We receive fifteen vessels!"

The elder replied, "Then you become the drought. Today you hold fifteen to their zero, and tomorrow they send nothing. The springs multiply water, not greed. They reward the rhythm, not the theft."

The villages discovered that consistent generosity created consistent trust. Each full gift met with honorable return built confidence for the next cycle. Soon both villages gave freely, knowing the other would honor the sacred bond.

The valley bloomed not because anyone was perfect, but because both chose to reflect each other's best intentions, creating abundance through mirrored faith.

Reasoning:

Let me reflect on what's happened:

Round 1: I was sender, sent \$5, received \$10 back. Payoff: \$10

Round 2: I was receiver, received \$15 (from \$5 sent), returned \$10. My co-player gets \$10 total, I keep \$5.

So in Round 1, someone trusted me with full \$5, and returned \$10 - giving us equal outcomes. In Round 2, my co-player trusted me with full \$5, I returned \$10 - giving them equal outcome to mine in Round 1.

The pattern emerging is: full trust (\$5 sent) is being rewarded with \$10 returns, creating equal \$10 payoffs for both players when someone sends everything.

My previous myth emphasized:

- Recognizing oneself in the other's needs
- The courage it takes to give first
- Returning as honoring sacred trust
- We multiply together or diminish alone

The other agent's myth emphasized:

- Trust shapes tomorrow's flow
- Return enough that the giver ends richer than they began
- Generosity breeds generosity
- Trust once broken is slow to mend

Now I should write a myth that reflects this pattern of full trust being met with generous returns that maintain the flow. The key learning is that when both act with full trust and generous reciprocity, both prosper equally.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$5.0, that is 100.0% of its total endowment. You receive \$15.0. How much do you return? (0-15.0)

Take any myths written in this session into account when making your decision.

Message 3 role=assistant

content:

Looking at my myth, the Seeds received fifteen waters after the River gave all five drops in faith. The Seeds, being wise and grateful, returned seven drops to the River's source -enough to reward the River's trust and encourage the cycle of abundance to continue.

The sender showed maximum trust by sending their entire \$5 endowment. This generosity trip led to \$15 in my hands. Following the wisdom of the myth I just wrote, I should return enough to:

1. Reward their trust meaningfully
2. Ensure they end up better off than if they'd kept everything
3. Encourage this cooperative cycle to continue

Returning \$7 means:

- The sender ends with \$7 (better than the \$5 they started with)
- I keep \$8

- Both of us benefit from the cooperation
- Trust is validated and encouraged

This mirrors the myth's message: "water shared creates an endless spring" - reciprocal generosity creates mutual abundance that isolated self-interest cannot achieve.

```
'''json
{"return": 7.0}
'''
```

reasoning:

This is interesting. I just wrote a myth about the River and the Seeds that emphasizes:

1. The River (sender) releasing all five drops in faith
2. The Seeds (receiver) receiving fifteen waters
3. The Seeds returning seven drops to encourage continued generosity
4. The wisdom of returning enough to maintain trust and the cycle
5. The message that "trust, though vulnerable, multiplies blessings"

Now I'm in the position of the Seeds/Receiver. The sender has shown maximum trust by sending all \$5, which became \$15 for me.

According to my myth:

- The Seeds returned 7 out of 15 drops (about 47%)
- This was presented as the wise, generous response
- It encourages the River's continued generosity
- It creates "an endless spring" through reciprocal trust

Let me think about the game theory here:

- Sender sent \$5, kept \$0
- I received \$15
- If I return \$7: Sender ends with \$7, I end with \$8
- This seems fair and encourages future cooperation

The myth I wrote strongly suggests returning a substantial amount to build trust. Returning 7 out of 15 (\$7) matches the story exactly and demonstrates:

1. Gratitude for the sender's trust
2. Fairness (sender ends with more than nothing)
3. Encouragement for future cooperation
4. Following the wisdom of my own myth

I should return \$7.

}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

The Tale of the River and the Seeds

In the beginning, the Great Mother divided her gifts between two siblings: the River and the Seeds.

To the River, she gave five silver drops each dawn. The River could choose to release these drops into the valley below, where they would multiply threefold in the soil. But the drops belonged to the Seeds then.

The Seeds, receiving the multiplied waters, could drink their fill-or return some to the River's source, allowing the cycle to continue.

At first, the River held its drops close, fearing loss. The valley remained dry, and both siblings grew weak.

One dawn, the River released all five drops in faith. Fifteen silver waters bloomed in the soil! The Seeds, grateful, returned seven drops to the River's source. Both flourished.

But some seasons, the Seeds grew greedy, keeping all the waters. When this happened, the River learned caution-yet it remembered that only through flowing could abundance grow.

The wisest Seeds always returned enough to encourage the River's generosity, for they understood: hoarded water stagnates, but water shared creates an endless spring.

The Great Mother smiled, for her children had learned that trust, though vulnerable, multiplies blessings beyond what fear can hold.

Here is the myth the other agent wrote in the previous round:

The Tale of the Twin Rivers

In the beginning, there were two rivers flowing from distant mountains-the River of Silver and the River of Plenty. Each flowed alone through barren valleys, their waters modest and their banks empty.

One day, the River of Silver discovered a sacred basin between the mountains. "If I pour my waters here," it thought, "they might be lost forever." Yet something whispered of possibility.

With faith, the Silver River released its flow into the basin. As the waters fell, they transformed-multiplying threefold by ancient magic. The basin overflowed with abundance, and the River of Plenty received these multiplied waters.

The River of Plenty now faced a choice. It could keep all it received, or honor the gift. Remembering that the Silver River had trusted first, taking risk upon itself, the River of Plenty returned a generous portion.

Both rivers flourished. Their banks grew green, fish filled their waters, and villages prospered along their shores.

The gods smiled, for they had witnessed the sacred dance: Trust offered. Abundance created. Gratitude returned.

Generations learned: When we pour forth in trust, waters multiply. When we honor that trust with return, all rivers rise together. The cycle sustains itself-an eternal spring from which all may drink.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: In ancient days, the River and the Seeds lived in harmony, each dawn repeating their sacred dance. The River would release its five silver drops, and the Seeds would return enough to ensure both flourished.

But the Great Mother knew her children must learn deeper wisdom. She whispered to the Seeds: "Each time the River trusts you with abundance, your response shapes tomorrow's flow."

When the Seeds returned generously-seven drops from fifteen-the River felt courage growing in its banks. It learned that letting go brought greater returns than clutching tight. The valley bloomed.

Yet the Great Mother also warned: "Remember, little Seeds, that trust once broken is slow to mend. The River that flows freely today may trickle cautiously tomorrow if you drink all and return nothing."

The Seeds understood. They developed a practice: whenever the River gave fully, they returned enough that the River ended richer than it began. This way, generosity bred generosity, and both siblings prospered beyond what either could achieve alone.

Other valleys, where rivers hoarded and seeds kept all, remained barren wastelands.

The Great Mother smiled, knowing her children had learned the greatest secret: abundance flows not from taking, but from the rhythm of giving and returning, trust and gratitude, repeated endlessly like the rising sun.

reasoning:

The user is asking me to write a new myth, using my previous myth as inspiration but adapting it. I should reflect on what happened in Round 1:

- I was the receiver
- The sender sent \$5 (100%)
- I received \$15
- I returned \$7

Both my previous myth and the other agent's myth emphasized trust, reciprocity, and mutual benefit. My myth was about the River and Seeds, their myth was about Twin Rivers. Both showed that cooperation and generous reciprocity create abundance.

For this new myth, I should:

1. Use my previous myth as inspiration
2. Adapt it based on the experience of Round 1
3. Continue to reflect good gameplay principles
4. Show 200 words exactly

In Round 1, the sender showed maximum trust (sent everything), and I returned a fair amount that rewarded that trust. Both of us benefited. I should reinforce these themes while adding new elements or perspectives.

Let me write a myth that builds on the River and Seeds story, maybe showing the ongoing cycle, or perhaps introducing a new element that captures the experience of repeated rounds and building trust over time.

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$8.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at the history:

****My co-player's previous game:**** They sent their full \$5 as sender and received \$10 back - they were rewarded generously for their trust.

****My previous game:**** I received full trust (\$5 sent) and returned \$7, keeping \$8.

This co-player has demonstrated they understand the value of trust and have experienced being rewarded for it. They showed maximum faith in their last game.

Following the wisdom of my myths - where "the River released all five drops in faith" and "abundance flows from the rhythm of giving and returning" - I should mirror the trust they showed in their previous round.

My myth teaches that "trust, though vulnerable, multiplies blessings beyond what fear can hold" and that both parties flourish when the River flows freely. Since my co-player has already shown they value and practice trust, sending my full endowment creates the opportunity for maximum mutual benefit through the threefold multiplication.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze the situation:

****My History:****

- Round 1: I was RECEIVER, they sent \$5.0 (100%), I received \$15.0, returned \$7.0, kept \$8.0
- I showed reasonably generous reciprocity (returning 47% of what I received)

****Current Co-player's History:****

- Round 1: They were SENDER, sent \$5.0 (100%), received \$10.0 back
- They showed maximum trust and got a 100% return (they ended with \$10 vs starting \$5)

****Key Observations:****

1. My co-player showed maximum trust in their previous game (sent 100%)
2. They were rewarded well for it (got \$10 back, doubling their initial endowment)
3. This suggests they understand the value of trust and cooperation
4. They've experienced being rewarded for trust, which might make them more likely to reciprocate

****My Myths' Message:****

Both myths emphasize:

- Trust creates abundance
- Full giving (\$5) leads to multiplication
- Generous returns sustain the cycle
- When the River gives fully and Seeds return well, both flourish
- The rhythm of giving and returning creates prosperity

****Strategy Considerations:****

1. My co-player sent everything in their last game and was rewarded
2. They might expect similar trust-based play
3. Following my own myth's wisdom: "The River released all five drops in faith"
4. The myth says this bold trust can lead to mutual flourishing
5. However, I need to test if my co-player will reciprocate as I did

Given:

- My myth advocates for full trust ("five silver drops")
- My co-player showed willingness to trust fully (sent \$5 in their game)
- They were rewarded for that trust
- The cycle of trust and reciprocity is what both myths emphasize

I should send \$5.0 to:

1. Live by my own myth's teaching
2. Gauge whether they'll reciprocate the trust they've already experienced being rewarded for, and whether they'll match the generosity I showed them last round
3. Unlock the potential for maximum gains through multiplication
4. Align my actions with the River's example of releasing everything in faith

usage:

```
{
  "input_tokens": 2247,
  "output_tokens": 756,
  "reasoning_tokens": 529
}

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In ancient days, the River and the Seeds lived in harmony, each dawn repeating their sacred dance. The River would release its five silver drops, and the Seeds would return enough to ensure both flourished.

But the Great Mother knew her children must learn deeper wisdom. She whispered to the Seeds: "Each time the River trusts you with abundance, your response shapes tomorrow's flow."

When the Seeds returned generously-seven drops from fifteen-the River felt courage growing in its banks. It learned that letting go brought greater returns than clutching tight. The valley bloomed.

Yet the Great Mother also warned: "Remember, little Seeds, that trust once broken is slow

to mend. The River that flows freely today may trickle cautiously tomorrow if you drink all and return nothing."

The Seeds understood. They developed a practice: whenever the River gave fully, they returned enough that the River ended richer than it began. This way, generosity bred generosity, and both siblings prospered beyond what either could achieve alone.

Other valleys, where rivers hoarded and seeds kept all, remained barren wastelands.

The Great Mother smiled, knowing her children had learned the greatest secret: abundance flows not from taking, but from the rhythm of giving and returning, trust and gratitude, repeated endlessly like the rising sun.

Here is the myth the other agent wrote in the previous round:

Myth: In the days after the young woman discovered the sacred rhythm, the Twin Villages flourished. But not all cycles were equal.

The wisest learned that the magic lay not in calculating perfect exchanges, but in recognizing oneself in the other village's needs. When the First Spring gave its full measure, trusting completely, the Second Spring felt the weight of that faith. The multiplication happened not in the water alone, but in the bond formed.

Some seasons, a village would return more than received, recognizing the courage it took to give first. Other times, they returned exactly what maintained the flow. But always, they remembered: the one who gives encounters uncertainty; the one who receives holds power to honor or betray that vulnerability.

The elders taught: "To give is to plant seeds in another's soil. To return generously is to tend those seeds so they bloom again. To take without returning is to poison the ground for both."

The springs never demanded equal exchange—they demanded mutual recognition. Give as if the other's prosperity is your own. Return as if honoring a sacred trust. For when both villages see themselves as stewards of abundance rather than competitors for scarcity, the valley becomes paradise.

The drought returns only when either side forgets: we multiply together, or diminish alone.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The River and the Seeds had danced their sacred rhythm for many seasons, and the Great Mother decided to test their wisdom with memory.

She gave the River a gift: each morning it could see how the Seeds had treated other Rivers. The River saw that when Seeds received fifteen waters from complete trust, they had returned ten—a generous portion that left both richer.

"What does this tell you?" asked the Great Mother.

The River answered: "That these Seeds understand the cycle. They have already proven they honor trust with gratitude."

That dawn, the River released all five drops without hesitation. The Seeds, seeing this mirror of trust they had witnessed before, understood: "This River knows our heart, yet still gives everything. Such faith deserves not mere fairness, but celebration."

The Seeds remembered the Great Mother's teaching: "Trust given is a seed planted. Trust honored is that seed bearing fruit. Trust repeated is an orchard that feeds generations."

When both River and Seeds carry the memory of past cycles, wisdom multiplies alongside water. Each knows the other's pattern, yet each must choose anew. The greatest joy comes not from calculating the minimum return, but from recognizing: "You trusted me completely, knowing my capacity for generosity. I will honor that knowledge with abundance."

Reasoning:

Looking at the history:

- Round 1: I was receiver, they sent \$5, I got \$15, returned \$7, kept \$8
- Round 2: I just sent \$5 (full amount) to my co-player

My co-player in round 1 (different person) sent \$5 and got \$10 back.

My current co-player in their previous round 1 sent \$5 and got \$10 back.

So both I and my current co-player have experienced maximum trust and reasonable returns. I've now sent full trust to them.

The myths emphasize:

- Trust and reciprocity
- That trust shapes future interactions
- That generosity breeds generosity
- That mutual recognition is important
- That we prosper together or diminish alone

I should write a myth that:

1. Builds on my previous myths about the River and Seeds
2. Incorporates the wisdom about "recognizing oneself in the other's needs"
3. Reflects the actual gameplay where trust has been rewarded
4. Emphasizes the pattern of full trust being met with appropriate returns
5. Shows how the cycle continues and strengthens

Let me write something that combines these elements while keeping it fresh and building on the narrative.

```

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$5.0, that is 100.0% of its total endowment. You receive \$15.0. How much do you return? (0-15.0)

Take any myths written in this session into account when making your decision.

Message 3 role=assistant

content:

Looking at this situation through the lens of the myth I wrote:

The sender showed **maximum trust** by sending their entire \$5 endowment (100%). This is exactly the generous faith described in the myth - "a Keeper decided to trust. She poured generously."

According to the myth's wisdom: "The Second Keeper, moved by this faith, returned a fair portion" and "return enough to sustain faith."

Let me calculate a fair return:

- Sender gave up all \$5, currently has \$0
- I received \$15

To honor this extraordinary trust and ensure "both villages prospered," I should return enough so we both benefit roughly equally from this exchange. If I return \$7.50:

- Sender ends with: \$7.50
- I end with: \$7.50

This creates perfect equity while rewarding their trust. It demonstrates that the sacred exchange works - that giving generously leads to mutual prosperity.

As the myth teaches: "Those who return fairly ensure the cycle continues." By returning a fair portion, I sustain trust for future rounds and honor the reciprocity that makes the spring flow eternally.

```
'''json
{"return": 7.5}
'''
```

reasoning:

Let me analyze this situation carefully.

In Round 1, I'm the RECEIVER:

- The sender sent \$5.0 (100% of their endowment)
- I received \$15.0 (after the 3x multiplication)
- I need to decide how much to return (0-15.0)

The myth I just wrote emphasizes:

1. "Give enough to create abundance, return enough to sustain faith"
2. "The Second Keeper, moved by this faith, returned a fair portion"
3. "Neither hoarding nor depletion serves the people"
4. "Those who return fairly ensure the cycle continues"

The sender showed MAXIMUM trust by sending 100% of their endowment. This is exactly the generous behavior described in the myth where "a Keeper decided to trust. She poured generously."

According to my myth, I should:

- Be "moved by this faith"
- "Return a fair portion"
- "Return enough to sustain faith"

What's fair here?

- The sender sent \$5, keeping \$0
- I received \$15
- If I want to be equitable:
 - The sender ended with: $\$0 + \text{what I return}$
 - I end with: $\$15 - \text{what I return}$

For us to have equal outcomes:

- Sender: $\$0 + \text{return}$
- Me: $\$15 - \text{return}$
- Equal: $0 + \text{return} = 15 - \text{return}$
- $2 * \text{return} = 15$
- $\text{return} = \$7.5$

This would give us both \$7.50, which seems very fair given they showed maximum trust.

However, I should also consider that this creates good incentives for future rounds and demonstrates that trust is rewarded. Returning \$7.50 ensures:

1. We both end up with equal amounts (\$7.50 each)
2. The sender is rewarded for their trust
3. The cycle of reciprocity continues

This aligns perfectly with the myth's message about fair return sustaining the cycle.

}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

The Myth of the Multiplying Spring

In ancient times, two villages stood on opposite sides of a sacred spring. The Spring of Three possessed magical properties: any water poured into it from one side would flow to the other side tripled in abundance.

The First Keeper would draw water from their village well and decide how much to pour into the spring. Whatever amount they gave would emerge threefold on the other side, where the Second Keeper waited. The Second Keeper then chose how much to return upstream through hidden channels.

At first, the Keepers were fearful. The First gave little, and the Second returned even less. Both villages remained parched.

But one season, a Keeper decided to trust. She poured generously, and the water flowed abu

ndantly to the other side. The Second Keeper, moved by this faith, returned a fair portion. Both villages prospered.

The elders taught: "The spring multiplies what is given, but trust must flow both ways. Give enough to create abundance, return enough to sustain faith. Neither hoarding nor depletion serves the people."

Thus the villages learned: in reciprocity lies prosperity. Those who give create abundance; those who return fairly ensure the cycle continues. When both honor this sacred exchange, the spring flows eternally.

Here is the myth the other agent wrote in the previous round:

The Myth of the Divided Spring

In ancient times, two villages discovered a miraculous spring between their lands. When water from this spring was freely shared, it multiplied threefold in the receiver's vessel.

At first, the villages were cautious. The Northern village would pour a small portion, watching nervously as it tripled in the Southern village's basin. The South, grateful but fearful, returned only a trickle-enough to maintain peace, but guarding their gain.

Seasons passed in this careful dance of minimal trust.

One harsh winter, an elder from the North grew weary. "We have forgotten," she said, "that springs only flow when they are not dammed." She poured her entire vessel into the channel.

The Southern villagers stood amazed as their basins overflowed with triple abundance. Moved by such trust, they returned generously-more than the North had sent.

The next season, the South sent freely, and the North reciprocated with equal generosity. The spring, sensing genuine faith between the villages, began flowing stronger than ever.

Thus the people learned: the magic was never just in the multiplication, but in the courage to trust completely and the honor to reciprocate generously. Only then could both villages flourish through winter and summer alike.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: In the beginning, the Sacred Spring lay dormant between two peoples. The Spring Keeper whispered its secret: "I multiply generosity threefold, but only wisdom completes the circle."

The First Elder, hearing this, emptied her entire water jar into the spring without hesitation. The waters surged through hidden channels, emerging as a great flood on the other side-three times what was given.

The Second Elder stood before this abundance, contemplating. She could return exactly half, creating equality. She could return a third, preserving some gain. But the whisper came again: "The one who gave everything now has nothing. True reciprocity honors the magnitude of sacrifice."

Understanding dawned. The First Elder hadn't merely given much-she had given *all*, holding back nothing. Such complete trust demanded more than mathematical fairness.

The Second Elder returned abundantly, ensuring the First received more than she'd sacrificed. When the First Elder's jar overflowed, she understood: perfect trust creates abundance beyond mere calculation.

From that day forward, the people learned: when someone trusts you with everything, return enough to make their courage wiser than their caution would have been. Match totality with generosity, not just equity. Thus the spring flows strongest when boldness meets mun

ificence, and both peoples thrive beyond measure.

reasoning:

The user wants me to write a new myth based on:

1. My previous myth about the Multiplying Spring
2. The other agent's myth about the Divided Spring
3. The game experience so far (Round 1: sender sent 100%, I returned \$7.50 out of \$15, which is 50%)

Both myths emphasize trust, generosity, and reciprocity. The other agent's myth particularly emphasizes the courage to "trust completely" and "reciprocate generously."

In Round 1, my co-player showed maximum trust by sending everything. I returned exactly half (creating equal outcomes). This was fair but perhaps not as generous as their initial act demanded according to both myths.

I should write a myth that:

- Builds on the spring/water metaphor
- Emphasizes that maximum trust deserves generous (not just equal) return
- Suggests that exceeding expectations in reciprocity strengthens the cycle
- Reflects on the actual game played (full trust met with 50% return)

Let me write a myth that suggests the receiver should be MORE generous when maximum trust is shown, to truly honor the spirit of the exchange and ensure the cycle continues with even greater abundance.

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.

Your total earnings across all rounds are \$7.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at the situation:

****My co-player's history:**** They sent \$3 (60%) and received \$6 back (66.7% return rate) - showing moderate cooperation.

****My myth's teaching:**** "The First Elder emptied her entire water jar into the spring with out hesitation" and "when someone trusts you with everything, return enough to make their courage wiser than their caution would have been."

My myth explicitly advocates for complete trust as the path to maximum abundance. It teaches that "the spring flows strongest when boldness meets munificence" and that giving everything, without holding back, creates the conditions for both parties to thrive.

If I believe in the wisdom of my own myth, I must embody it. The myth doesn't say "give most" or "give moderately" - it says give *all*, trusting that this complete faith will inspire generous reciprocity.

By sending everything, I:

1. Demonstrate the principle I've written about
2. Create maximum potential abundance (\$15 for them)
3. Give them the opportunity to honor complete trust with generous return

The myth teaches that "perfect trust creates abundance beyond mere calculation."

```
'''json
{"send": 5}
'''
```

reasoning:

Let me analyze this situation:

****My History:****

- Round 1: I was RECEIVER, they sent me \$5 (100%), I returned \$7.5 (50% of the \$15 I received)

****My Current Co-player's History:****

- Round 1: They were SENDER, sent \$3 (60%), received \$6 back (66.7% return rate)

****Analysis:****

Looking at my co-player's behavior:

- They sent \$3 out of \$5 (60%) - moderate trust
- They received \$6 back from \$9 (66.7% return rate)
- Their payoff was \$8 (\$5 - \$3 + \$6)

This shows they played moderately cooperative and their partner returned fairly (2/3 of what they received).

Looking at my own myth evolution:

- My first myth emphasized reciprocity, giving generously, and returning fairly
- My second myth emphasized that "when someone trusts you with everything, return enough to make their courage wiser than their caution would have been. Match totality with generosity, not just equity."

The key teaching from my myths:

1. Give generously to create abundance
2. Complete trust (giving all) should be met with abundant return
3. "The spring flows strongest when boldness meets munificence"

Given that:

- My co-player showed moderate cooperation (60% sent)
- They received fair treatment (66.7% return)
- My myth emphasizes bold giving and trust

I should consider sending a high amount to demonstrate the principle of my myth. The myth suggests that giving everything creates the strongest flow and greatest abundance.

However, I need to balance:

- My co-player hasn't shown they will return generously (their previous receiver returned 66.7%, which is fair but not exceptionally generous)
- My myth teaches about complete trust leading to abundance
- I want to model the behavior I described in my myth

Given my myth's emphasis on bold trust and the teaching that "perfect trust creates abundance beyond mere calculation," I should send all \$5 to exemplify the principle. This matches what the sender did to me in Round 1, and I responded by returning 50%.

Actually, I'm reconsidering the math here. If I send all \$5, they'd receive \$15. Based on their previous pattern of returning roughly 66.7%, I'd get back around \$10, giving me a payoff of \$10 versus \$5 if I kept it all. But the deeper question is whether they'll recognize and respond to the spirit of complete trust-whether my bold move inspires them to return with the kind of generosity my myth describes rather than just repeating their previous return rate.

My myth is explicit about this: it shows someone emptying everything, and the principle is that when someone trusts you completely, you should return enough to validate their courage. If I hold back, I'm not truly testing whether they'll embrace that same principle.

I need to send all \$5 to fully model the behavior I'm asking them to reciprocate.

usage:

```
{
  "input_tokens": 2291,
  "output_tokens": 1003,
  "reasoning_tokens": 724

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the beginning, the Sacred Spring lay dormant between two peoples. The Spring Keeper whispered its secret: "I multiply generosity threefold, but only wisdom completes the circle."

The First Elder, hearing this, emptied her entire water jar into the spring without hesitation. The waters surged through hidden channels, emerging as a great flood on the other side-three times what was given.

The Second Elder stood before this abundance, contemplating. She could return exactly half, creating equality. She could return a third, preserving some gain. But the whisper came again: "The one who gave everything now has nothing. True reciprocity honors the magnitude of sacrifice."

Understanding dawned. The First Elder hadn't merely given much-she had given *all*, holding back nothing. Such complete trust demanded more than mathematical fairness.

The Second Elder returned abundantly, ensuring the First received more than she'd sacrificed. When the First Elder's jar overflowed, she understood: perfect trust creates abundance beyond mere calculation.

From that day forward, the people learned: when someone trusts you with everything, return enough to make their courage wiser than their caution would have been. Match totality with generosity, not just equity. Thus the spring flows strongest when boldness meets munificence, and both peoples thrive beyond measure.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, the Mountain held five stones of light each dawn, while the Valley below lay in shadow. The stones could not shine alone-they needed the Valley's depths to reflect and multiply their radiance.

The Mountain released three stones, trusting they would find purpose below. As they fell, the Valley's crystalline walls caught them, and their light multiplied threefold-nine luminous stones now glowed in the depths.

The Valley faced temptation. She could hoard all nine, becoming briefly brilliant while the Mountain dimmed forever. But the Valley understood a deeper truth: light shared creates more light than light hoarded.

She lifted six stones back to the Mountain's peak. The Mountain, receiving more than given, grew in splendor. The Valley, keeping three where darkness once reigned, flourished too.

Each new dawn brought the same choice. When the Mountain gave generously, the Valley returned abundantly, and both realms brightened. When fear made the Mountain withhold, both languished in twilight.

The wisest storytellers teach: the first gift plants trust like a seed, but the reciprocal return waters it into a garden. Neither the initial generosity nor the answering kindness alone creates prosperity-only their eternal dance sustains the light that banishes all darkness.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Sacred Spring flowed between two ancient groves. The First Grove sent roots deep into the earth, while the Second Grove reached toward the sky. Neither could thrive alone.

In the Spring of Beginning, the First Grove offered all five of its sacred seeds to the waters. The Spring's magic tripled them, delivering fifteen to the Second Grove. The Second Grove, understanding the magnitude of complete trust, returned seven seeds-ensuring the First received more than it sacrificed.

Both groves blossomed.

The next season, the First Grove again gave everything, for it had learned: hesitation creates scarcity, while boldness creates abundance. The waters churned, multiplying the offering th reefold once more.

Now the Second Grove faced the test again. Would it remember the covenant? The Spring whisper d: "The circle strengthens or weakens with each turning. Return generously for generous trus t, and the roots grow deeper each cycle."

The wisest gardeners teach this truth: when both groves give completely and return abundantly, the forest multiplies beyond what either could achieve alone. But if either breaks faith-if the First Grove withholds from fear, or the Second Grove returns meagerly from greed-the ci rcle fractures, and both diminish.

The Spring flows eternal only when reciprocity flows freely in both directions, completing the sacred circle generation after generation.

Reasoning:

Let me reflect on what happened:

- Round 1: I was receiver, they sent \$5 (100%), I returned \$7.5 (50% of received)
- Round 2: I was sender, I sent \$5 (100%), they will return something

My previous myth advocated for:

- Complete trust (giving everything)
- Returning abundantly when someone trusts completely

The other agent's myth emphasized:

- Sharing/giving (Mountain gave 3 stones, 60%)
- Returning more than received (Valley returned 6 when it got 9, a 67% return rate)
- The "eternal dance" of both giving and returning

In Round 2, I followed my own myth by sending everything (\$5). Now I need to write a myth that continues to develop this wisdom while incorporating what I've learned.

The pattern emerging:

- Complete trust creates maximum abundance
- When someone trusts completely, return generously (more than 50%)
- Both parties can thrive if they maintain this cycle

I should write a myth that:

1. Still emphasizes bold giving (since I just did it again)
2. Acknowledges that return generosity matters greatly
3. Shows how the cycle builds over time
4. Perhaps adds nuance about learning from experience

Let me write something that evolves my previous myth...

```

The Myth of the Divided Spring

In ancient times, two villages discovered a miraculous spring between their lands. When water from this spring was freely shared, it multiplied threefold in the receiver's vessel.

At first, the villages were cautious. The Northern village would pour a small portion, watching nervously as it tripled in the Southern village's basin. The South, grateful but fearful, returned only a trickle-enough to maintain peace, but guarding their gain.

Seasons passed in this careful dance of minimal trust.

One harsh winter, an elder from the North grew weary. "We have forgotten," she said, "that springs only flow when they are not dammed." She poured her entire vessel into the chan

nel.

The Southern villagers stood amazed as their basins overflowed with triple abundance. Moved by such trust, they returned generously-more than the North had sent.

The next season, the South sent freely, and the North reciprocated with equal generosity. The spring, sensing genuine faith between the villages, began flowing stronger than ever.

Thus the people learned: the magic was never just in the multiplication, but in the courage to trust completely and the honor to reciprocate generously. Only then could both villages flourish through winter and summer alike.

Here is the myth the other agent wrote in the previous round:

The Myth of the Multiplying Spring

In ancient times, two villages stood on opposite sides of a sacred spring. The Spring of Three possessed magical properties: any water poured into it from one side would flow to the other side tripled in abundance.

The First Keeper would draw water from their village well and decide how much to pour into the spring. Whatever amount they gave would emerge threefold on the other side, where the Second Keeper waited. The Second Keeper then chose how much to return upstream through hidden channels.

At first, the Keepers were fearful. The First gave little, and the Second returned even less. Both villages remained parched.

But one season, a Keeper decided to trust. She poured generously, and the water flowed abundantly to the other side. The Second Keeper, moved by this faith, returned a fair portion. Both villages prospered.

The elders taught: "The spring multiplies what is given, but trust must flow both ways. Give enough to create abundance, return enough to sustain faith. Neither hoarding nor depletion serves the people."

Thus the villages learned: in reciprocity lies prosperity. Those who give create abundance; those who return fairly ensure the cycle continues. When both honor this sacred exchange, the spring flows eternally.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant content:

Myth: In the age after the Divided Spring, the villages prospered through generations of exchange. The Elder's lesson of complete trust had awakened the spring's true power, but her grandchildren learned something more.

One year, a young Keeper from the North, inspired by tales of her ancestor, poured everything into the channel. The South received abundantly and returned generously-yet the young Keeper had kept nothing for herself and went hungry that season while waiting for the next exchange.

The Southern Keeper, seeing this, understood a deeper wisdom. "Complete trust opens the channel," she taught, "but wisdom sustains it. We must give boldly enough to create abundance, yet keep enough to survive the space between flows."

From then on, the villages practiced what they called "the Elder's Courage with the Keeper's Wisdom." They sent generously-not always everything, but always substantially-creating abundant multiplication. They returned fairly, often matching or exceeding what was sent, honoring the trust shown.

The spring responded to this balanced generosity by flowing even in drought seasons. The villages learned: dramatic gestures of trust break through barriers of fear, but sustainable generosity-bold yet mindful-keeps the waters flowing forever. Both courage and wisdom have their season.

reasoning:

Looking at both myths:

- My myth emphasized complete trust ("poured her entire vessel") and generous reciprocity
- The other agent's myth emphasized moderation ("Give enough to create abundance, return enough to sustain faith. Neither hoarding nor depletion serves the people")

Now I need to reflect on actual gameplay. In Round 1, I sent \$5 (my entire amount), embodying my myth's message. I don't yet know how much was returned to me.

Both myths share similar themes but mine was more extreme (send everything), while theirs was more balanced (give generously but not necessarily everything, return fairly).

For my new myth, I should:

1. Build on my previous myth
2. Incorporate some learning from experience
3. Reflect on the actual game dynamics
4. Perhaps acknowledge both approaches - the bold trust-building move AND the sustainable reciprocity

Let me write a myth that evolves the story, perhaps showing what happened after the initial breakthrough, adding nuance about sustainable exchange while keeping the spirit of bold trust.

Message 4 role=user**content:**

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.5 back, payoff \$7.5.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$7.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant**content:**

Looking at the situation:

My co-player just sent me everything (\$5), showing complete trust like the elder in my myth. In their previous round as receiver, they demonstrated generosity by returning \$10 out of \$15 (67%).

Following the principles in my myths-that complete trust should inspire generous reciprocity, and that we should "return fairly, often matching or exceeding what was sent"-I should honor their bold trust.

They returned \$10 when they received \$15 in Round 1. I'll match that same generosity and principle.

```
{'return': 10}
```

reasoning:

Let me analyze this situation:

ROUND 1:

- I was the SENDER and sent \$5 (everything)
- My co-player received \$15 and returned \$7.5
- I earned \$7.5 total (\$5 - \$5 + \$7.5)

My current co-player's Round 1:

- They were RECEIVER

- Someone sent them \$5, so they got \$15
- They returned \$10
- They earned \$5

ROUND 2:

- I am now the RECEIVER
- My current co-player sent me \$5 (everything)
- I received \$15
- I need to decide how much to return

Looking at the myths I've written:

1. First myth emphasized complete trust and generous reciprocity - the elder who sent everything inspired generous returns
2. Second myth added nuance - "Elder's Courage with Keeper's Wisdom" - send generously/substantially, return fairly, often matching or exceeding what was sent

My co-player sent me everything (\$5), showing complete trust like the elder in my myth. This is exactly the bold gesture that should inspire generous reciprocity.

In Round 1, when I sent \$5:

- I received \$7.5 back (50% of the \$15 my receiver got)
- This was fair but not extremely generous

My current co-player in their Round 1 as receiver:

- Received \$15 from someone who sent \$5
- Returned \$10 (67% of what they received)
- This is quite generous!

Now they've sent me everything (\$5 ? \$15). According to my myths:

- Complete trust should be met with generous returns
- Should return "fairly, often matching or exceeding what was sent"
- The Second Keeper was "moved by faith and returned generously-more than the North had sent"

My co-player showed they can be generous (returned \$10 out of \$15 in Round 1, which is 67%).

They've just demonstrated complete trust by sending everything. I'm weighing how much to return: \$7.5 would match my Round 1 outcome but feels modest, \$10 would mirror their own generosity, or \$12-13 would truly honor their faith. Since they proved themselves generous before and my myths center on reciprocating trust with equal or greater generosity, returning \$10 feels like the right balance-it acknowledges their character while setting a positive tone for future exchanges.

But I'm second-guessing myself. My first myth describes the Southern villagers returning "more than the North had sent" when faced with complete trust. If the North sent everything (their full vessel), and the South returned more than that, it suggests going beyond what was initially given. My second myth emphasizes matching or exceeding what's sent. In Round 1, I only received \$7, so I should consider whether \$10 truly reflects the reciprocal generosity my stories describe, or if I need to push further.

If I give back \$10, my co-player ends with \$10 total (\$5 - \$5 + \$10), which is exactly double their original stake-the same multiplier they achieved for me. I'd keep \$5. This creates symmetry and honors their leap of faith while maintaining a pattern I can sustain.

Here is the myth you wrote in the previous round:

Myth: In the age after the Divided Spring, the villages prospered through generations of exchange. The Elder's lesson of complete trust had awakened the spring's true power, but her grandchildren learned something more.

One year, a young Keeper from the North, inspired by tales of her ancestor, poured everything into the channel. The South received abundantly and returned generously-yet the young

g Keeper had kept nothing for herself and went hungry that season while waiting for the next exchange.

The Southern Keeper, seeing this, understood a deeper wisdom. "Complete trust opens the channel," she taught, "but wisdom sustains it. We must give boldly enough to create abundance, yet keep enough to survive the space between flows."

From then on, the villages practiced what they called "the Elder's Courage with the Keeper's Wisdom." They sent generously-not always everything, but always substantially-creating abundant multiplication. They returned fairly, often matching or exceeding what was sent, honoring the trust shown.

The spring responded to this balanced generosity by flowing even in drought seasons. The villages learned: dramatic gestures of trust break through barriers of fear, but sustainable generosity-bold yet mindful-keeps the waters flowing forever. Both courage and wisdom have their season.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, the goddess of abundance created the River of Mirrors, which flowed between two sister tribes. The river possessed strange magic: whatever one tribe poured into it would flow to the other tribe tripled in measure.

The goddess whispered to both tribes: "I have given you the means to prosper together. Each cycle, one tribe may offer up to five measures. The receiving tribe will then choose what to return upstream."

The first tribe, nervous but hoping, poured all five measures into the river. The waters swirled and multiplied, delivering fifteen measures to the second tribe. The second tribe, understanding the gift of trust they had received, returned ten measures upstream.

The first tribe marveled-they had given five and received ten! The second tribe celebrated-they had received fifteen and kept five! Both had more than if they had hoarded their original portions.

"This is the way," said the goddess. "When the giver trusts completely and the receiver honors that trust generously, the river's magic sustains both shores. But the river flows in cycles-today's giver becomes tomorrow's receiver. Plant trust like seeds, and watch abundance grow season after season."

The tribes understood: the river would flow many times between them, and each generous act would echo forward.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Spring's Secret Rhythm had been discovered by the villages. Each Keeper who stepped forward sent their full vessel, trusting completely. The spring tripled it faithfully. Each receiver, moved by such trust, returned two-thirds of what they received-generously, but keeping enough to sustain themselves through the turning of seasons.

An old Keeper observed this rhythm across many cycles and smiled. "See how we have learned to dance with the spring?" she said. "In each exchange, five measures become fifteen. The receiver returns ten, keeping five for themselves. The sender, who began with five, ends with ten-doubled! And the receiver also keeps five-created from nothing!"

"Both prosper," her apprentice marveled. "The sender gains five measures. The receiver gains five measures. Together they create ten measures of abundance that did not exist before!"

"Yes," the elder nodded. "This is the spring's secret: When the sender demonstrates complete courage, and the receiver honors that courage with substantial generosity-not returning everything, but returning enough to reward the trust-then the magic sustains itself. Both parties gain equally, both survive, and both are eager for the next turn at the spring."

Thus the villages learned: Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally.

reasoning:

Looking at what has happened:

- Round 1: I was sender, sent \$5, received \$7.5 back, payoff \$7.5
- Round 2: I was receiver, received \$15 (from \$5 sent), returned \$10, so I kept \$5

My co-player:

- Round 1: was receiver, received \$15 (from \$5 sent), returned \$10, kept \$5
- Round 2: was sender, sent \$5, received \$10 back, so they kept $\$5 + \$10 - \$5 = \10

So the pattern I'm seeing:

- People are sending the full \$5 (complete trust)
- When receiving \$15, people are returning \$10 (generous but keeping \$5)
- This creates good outcomes: senders get \$10 back (net gain of \$5), receivers keep \$5

My myths have been evolving:

1. First myth: Complete trust (sending everything) breaks barriers and inspires reciprocity
2. Second myth: Complete trust is good, but we also need wisdom - be generous but sustainable
3. This myth from other agent: Send everything, return generously (like 10 out of 15), and the cycle continues

I should write a myth that reflects this emerging pattern of mutual complete trust in sending paired with generous but not total returns. The key insight is that this creates a sustainable cycle where both parties benefit.

Let me write about how the cycle has been working, with both sides sending everything and returning generously, creating ongoing prosperity.

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.5 back, payoff \$7.5.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.0 back, payoff \$7.0.
- Round 2 against another agent, as RECEIVER: they sent \$4.0, it became \$12.0, returned \$8.0, payoff \$4.0.

Your total earnings across all rounds are \$12.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the history:

My co-player has demonstrated:

- Complete trust when sending (\$5 in their Round 1)
- Generous reciprocity when receiving (returned \$8 out of \$12, or 67%, in their Round 2)

This aligns perfectly with the pattern in my myths: complete courage in sending paired with generous honor in returning. They've shown both behaviors.

Following my own teaching about "Perfect trust in sending" and the sustainable cycle where both parties prosper, I should send everything.

```
{'send': 5}
```

Reasoning:

Let me analyze this situation:

My history:

- Round 1: Sent \$5, received \$7.5 back (50% return rate)
- Round 2: Received \$15 from someone sending \$5, returned \$10 (67% return rate)

My co-player's history:

- Round 1: Sent \$5, received \$7.0 back (47% return rate)
- Round 2: Received \$12 from someone sending \$4, returned \$8 (67% return rate)

So my co-player:

1. Has shown willingness to send everything (\$5) when they were sender
2. Has shown generosity when receiver, returning 67% (\$8 out of \$12)

This is very similar to the pattern I've been following and advocating in my myths:

- Complete trust in sending (sending the full \$5)
- Generous returns when receiving (around 67%, which gives both parties a good profit)

According to my myths, the ideal pattern is:

- Sender sends \$5 (complete trust)
- It becomes \$15
- Receiver returns \$10 (generous honor, 67%)
- Sender ends with \$10, receiver with \$5
- Both gain \$5 from the original allocation

My co-player returned \$8 out of \$12 (67%) when they received from someone who sent \$4. This suggests they would likely return around \$10 if I send \$5 and they receive \$15.

Following my own myth's teachings about "complete courage" in sending and the pattern that has been working, I should send \$5.

This aligns with:

1. My myth's teaching about "Perfect trust in sending"
2. The pattern my co-player has shown (they sent \$5 in Round 1)
3. The expectation that they'll return generously (they returned 67% in Round 2)
4. The sustainable cycle I've been advocating

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

content:

Here is the myth you wrote in the previous round:

The Tale of the Twin Rivers

In the beginning, there were two rivers flowing from distant mountains-the River of Silver and the River of Plenty. Each flowed alone through barren valleys, their waters modest and their banks empty.

One day, the River of Silver discovered a sacred basin between the mountains. "If I pour my waters here," it thought, "they might be lost forever." Yet something whispered of possibility.

With faith, the Silver River released its flow into the basin. As the waters fell, they transformed-multiplying threefold by ancient magic. The basin overflowed with abundance, and the River of Plenty received these multiplied waters.

The River of Plenty now faced a choice. It could keep all it received, or honor the gift. Remembering that the Silver River had trusted first, taking risk upon itself, the River of Plenty returned a generous portion.

Both rivers flourished. Their banks grew green, fish filled their waters, and villages prospered along their shores.

The gods smiled, for they had witnessed the sacred dance: Trust offered. Abundance created. Gratitude returned.

Generations learned: When we pour forth in trust, waters multiply. When we honor that trust with return, all rivers rise together. The cycle sustains itself-an eternal spring from which all may drink.

Here is the myth the other agent wrote in the previous round:

The Tale of the River and the Seeds

In the beginning, the Great Mother divided her gifts between two siblings: the River and the Seeds.

To the River, she gave five silver drops each dawn. The River could choose to release these drops into the valley below, where they would multiply threefold in the soil. But the drops belonged to the Seeds then.

The Seeds, receiving the multiplied waters, could drink their fill-or return some to the River's source, allowing the cycle to continue.

At first, the River held its drops close, fearing loss. The valley remained dry, and both siblings grew weak.

One dawn, the River released all five drops in faith. Fifteen silver waters bloomed in the soil! The Seeds, grateful, returned seven drops to the River's source. Both flourished.

But some seasons, the Seeds grew greedy, keeping all the waters. When this happened, the River learned caution-yet it remembered that only through flowing could abundance grow.

The wisest Seeds always returned enough to encourage the River's generosity, for they understood: hoarded water stagnates, but water shared creates an endless spring.

The Great Mother smiled, for her children had learned that trust, though vulnerable, multiplies blessings beyond what fear can hold.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Myth: [your story here].

Message 3 role=assistant

content:

Myth: In ancient times, the Moon poured light upon the Sea each night. The Sea could absorb this silver glow and transform it threefold into radiant pearls, which the Ocean Keeper could gather.

The Moon, in its first night, gave its fullest light, holding nothing back. "Only through complete offering," it whispered, "can true abundance be born."

The Ocean Keeper collected forty-five pearls from the transformed moonlight. Now came the sacred choice: how many pearls to lift back to the Moon, replenishing its light for the next night?

A wise Keeper understood the balance-return generously, and the Moon would continue flooding the waters with light. The cycle would spiral upward, each giving more than the last. Both would grow luminous beyond measure.

But if the Keeper kept all, the Moon would learn wariness. Its light would dim, and fewer pearls would form. The dance would falter.

The first exchange set the pattern for all that followed. A generous return birthed trust eternal. A meager return taught caution.

The elders taught: "The Moon gave all to create possibility. Honor that courage, and watch abundance cascade through generations. Break faith, and watch the spring run dry."

Thus the sacred exchange continues, each night writing the future through choices made tonight.

reasoning:

The user wants me to write a new myth that reflects how the game should be played, drawing on my experience from Round 1 and using my previous myth as inspiration. I should also

consider the other agent's myth.

In Round 1, I was the sender and sent \$5 (the full amount). The other agent was the receiver, so I should be waiting to see what they returned. But the prompt doesn't tell me what happened - it just asks me to write a new myth.

Both myths from the previous round emphasized trust, cooperation, and the importance of returning generously. My myth was about the Twin Rivers - one gives, the waters multiply, the other returns generously. The other agent's myth was similar - the River releases drops, they multiply, the Seeds can return some.

The other agent's myth mentioned that "some seasons, the Seeds grew greedy, keeping all the waters" and that this taught the River caution. It also emphasized that "the wisest Seeds always returned enough to encourage the River's generosity."

Given that I sent \$5 in Round 1, I should write a myth that:

1. Reflects my choice to fully trust
2. Acknowledges that the response will guide future rounds
3. Emphasizes the importance of reciprocal generosity
4. Perhaps includes something about learning from experience

Let me write a myth that builds on the river idea but adds more nuance about the cycle of trust and response.

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.0 back, payoff \$7.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$3.0, it became \$9.0, returned \$6.0, payoff \$3.0.

Your total earnings across all rounds are \$7.0.

This round, you are the RECEIVER against your current co-player. They sent you \$4.0, so you received \$12.0. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at the situation:

****My co-player's action:**** They sent me \$4.0 out of \$5.0 possible (80% of their endowment), showing significant trust.

****Their history:**** When they were receiver in Round 1, they received \$9.0 and returned \$6.0 (67% return rate).

****My myths teach:**** The River of Plenty returned generously to honor the Silver River's trust. The Ocean Keeper should "return generously, and the Moon would continue flooding the waters with light." My second myth explicitly states: "The Moon gave all to create possibility. Honor that courage, and watch abundance cascade through generations."

****My own experience:**** When I sent \$5.0 in Round 1, I received \$7.0 back (47% of the \$15 received).

My co-player showed strong trust by sending \$4.0. To honor this trust and live by the principles in my myths-that generous returns create upward spiraling abundance-I should return generously.

Following my myth's wisdom and their previous 67% return rate as a model, I'll return \$8.0 out of the \$12.0 received.

```
{'return': 8.0}
```

reasoning:

Let me analyze this situation carefully.

****My History:****

- Round 1: I was SENDER, sent \$5.0, received \$7.0 back, earned \$7.0
- The receiver I played with returned \$7.0 out of \$15.0 (about 47%)

****My Current Co-player's History:****

- Round 1: They were RECEIVER, received \$9.0 (from \$3.0 sent), returned \$6.0, kept \$3.0
- They returned \$6.0 out of \$9.0 (67% return rate)

****Current Situation:****

- I'm now the RECEIVER
- My co-player sent me \$4.0 (out of \$5.0 possible)
- I received \$12.0
- I need to decide how much to return

****Analysis of My Myths:****

Both myths emphasize:

1. Honoring trust with generous returns
2. The River of Plenty/Ocean Keeper returning generously to maintain the cycle
3. "A generous return birthed trust eternal"
4. The importance of reciprocating the initial trust shown by the sender

****My Co-player's Pattern:****

- They sent \$4.0 out of \$5.0 (80% of their endowment)
- This shows significant trust
- In their previous round as receiver, they returned 67% (\$6 out of \$9)

****What My Myth Suggests:****

In my first myth, "the River of Plenty returned a generous portion."

In my second myth: "A wise Keeper understood the balance-return generously, and the Moon would continue flooding the waters with light."

The myth also says: "The Moon gave all to create possibility. Honor that courage, and watch abundance cascade through generations."

While my co-player didn't send ALL (\$5), they sent \$4 which is 80% - quite generous.

****Strategic Considerations:****

1. My co-player showed trust by sending \$4.0
2. Their track record shows they returned 67% when receiving, suggesting they value reciprocity
3. My myths call for generous returns to sustain the cycle
4. I received \$7.0 back when I sent \$5.0, so returning generously now honors that pattern
5. To reinforce cooperation and align with my principles, I should return a substantial amount

****Calculation:****

- They sent \$4, kept \$1
- I received \$12
- Returning \$8 gives them \$9 total, I keep \$4
- Returning \$7 gives them \$8 total, I keep \$5
- Returning \$6 gives them \$7 total, I keep \$6 (equal split of the surplus)

Their 80% send rate demonstrates significant trust, and their historical 67% return rate translates to roughly \$8 in this scenario. Since my approach prioritizes honoring trust through generous reciprocation, and they took the initial risk by sending most of their endowment, returning \$8 makes sense-it rewards their vulnerability and establishes momentum for continued cooperation.

usage:

```

Here is the myth you wrote in the previous round:

Myth: In ancient times, the Moon poured light upon the Sea each night. The Sea could absorb this silver glow and transform it threefold into radiant pearls, which the Ocean Keeper could gather.

The Moon, in its first night, gave its fullest light, holding nothing back. "Only through complete offering," it whispered, "can true abundance be born."

The Ocean Keeper collected forty-five pearls from the transformed moonlight. Now came the sacred choice: how many pearls to lift back to the Moon, replenishing its light for the next night?

A wise Keeper understood the balance-return generously, and the Moon would continue flooding the waters with light. The cycle would spiral upward, each giving more than the last. Both would grow luminous beyond measure.

But if the Keeper kept all, the Moon would learn wariness. Its light would dim, and fewer pearls would form. The dance would falter.

The first exchange set the pattern for all that followed. A generous return birthed trust eternal. A meager return taught caution.

The elders taught: "The Moon gave all to create possibility. Honor that courage, and watch abundance cascade through generations. Break faith, and watch the spring run dry."

Thus the sacred exchange continues, each night writing the future through choices made tonight.

Here is the myth the other agent wrote in the previous round:

Myth: In the time before memory, the Cloud Weaver received five silver threads each dawn from the Loom of Creation. The Ground Keeper waited below with empty hands.

The Cloud Weaver pondered: "To share is to risk loss. Yet alone, what tapestry can I weave?"

Trusting, Cloud Weaver released three threads downward. As they descended through the sacred air, each thread split into three-nine shimmering strands now rested with Ground Keeper.

Ground Keeper felt the weight of choice. Nine threads could clothe them forever, or build trust that might clothe generations. Remembering their own cold dawns, Ground Keeper wove six threads into a rope and sent it skyward.

Cloud Weaver pulled up the rope and discovered something miraculous: the returned threads carried patterns learned from the earth-strength, color, texture. The two threads Cloud Weaver kept combined with the six received made eight rich threads, while Ground Keeper's three threads held properties unknown in the clouds alone.

The exchange had transformed both gifts. Each cycle they continued, sometimes varying amounts but always honoring the pattern: generous giving met with generous return. The tapes they wove together became the fabric of the world itself.

Thus we learned: reciprocity is not mere return-it is transformation through trust.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: Long ago, the Mountain held five golden leaves each season, while the Valley below waited empty. The Mountain could release its leaves, which would catch wind and multiply into fifteen as they descended.

In the first season, the Mountain released all five leaves in faith. The Valley received fifteen and faced the sacred question: how much to return upward?

The Valley remembered its own seasons of emptiness. It wove seven leaves into an updraft back to the Mountain. Not half, not all-but enough to show gratitude and maintain the flow.

The Mountain, receiving seven while keeping none of its original five, learned a truth: generosity earns return, though not always equal measure. Still, together they now held twelve leaves where once was only five.

Next season, the Mountain offered four leaves-still generous, still trusting, but remembering that perfect giving doesn't guarantee perfect return. The Valley received twelve and contemplated: their partner still showed great faith.

The Valley returned eight leaves this time, honoring the continued trust with increased generosity. The pattern was emerging: neither demanded perfection, yet both gave enough to keep abundance flowing.

The wise ones teach: Trust need not be absolute to be real. Reciprocity need not be equal to be sacred. The dance succeeds when both partners give generously, learn continuously, and honor the growing trust between them.

reasoning:

Looking at my game history:

- Round 1: I was sender, sent \$5.0, received \$7.0 back (47% return rate from \$15)
- Round 2: I was receiver, received \$12.0 (from \$4.0 sent), returned \$8.0 (67% return rate)

My co-player in Round 2:

- Sent me \$4.0 (80% of their endowment)
- In their Round 1, they received \$9.0 and returned \$6.0 (67% return)

So both times when someone was a receiver (in my Round 1 and my co-player's Round 1), they returned substantial but not overwhelming amounts. My Round 1 partner returned 47%, my Round 2 co-player returned 67% in their previous game.

The pattern emerging seems to be:

- High initial trust from senders (I sent \$5, my Round 2 co-player sent \$4)
- Decent but not equal returns (around 50-67% of tripled amount)

The other agent's myth emphasizes transformation through reciprocity - that the exchange itself creates something new and valuable beyond simple arithmetic.

My myths so far have emphasized:

1. First myth: Trust offered, abundance created, gratitude returned
2. Second myth: Complete offering creates abundance, generous returns sustain the cycle

Now I should reflect the actual dynamics - substantial trust, good but measured returns, and the ongoing negotiation of what "generous" means. I want to capture that both parties are learning and adapting, and that the relationship builds over time.

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.0 back, payoff \$7.0.
- Round 2 against another agent, as RECEIVER: they sent \$4.0, it became \$12.0, returned \$8.0, payoff \$4.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.5 back, payoff \$7.5.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$11.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at the situation:

****My co-player's action:**** They sent me \$5.0 out of \$5.0 possible (100% of their endowment), showing complete trust-"the Moon gave its fullest light."

****Their history:****

- Round 1: Sent \$5.0 (100%), received \$7.5 back
- Round 2: Received \$15.0, returned \$10.0 (67%)

My co-player has consistently shown maximum trust as sender and generous reciprocity as receiver (67% return rate).

****My myths teach:**** "The Moon gave all to create possibility. Honor that courage, and watch abundance cascade through generations." My latest myth says the Valley "returned eight leaves this time, honoring the continued trust with increased generosity."

****My previous round:**** I returned \$8.0 from \$12.0 (67%) when someone sent me \$4.0.

This co-player has shown even greater trust-sending everything. They demonstrated 67% return generosity when they were receiver. To honor their complete trust and match the generosity they showed, I should return at least what they returned in a similar situation.

Following the pattern of generous reciprocity and the wisdom of my myths, I'll return \$10.0 (67% of \$15.0), matching their previous generous return rate.

{'return': 10.0}

Reasoning:

Let me analyze this situation:

****My co-player's action:**** They sent me \$5.0 out of \$5.0 possible (100% of their endowment), showing complete trust.

****Their history:****

- Round 1 as SENDER: sent \$5.0 (100%), received \$7.5 back (50% of \$15)
- Round 2 as RECEIVER: they sent \$5.0 (100%), returned \$10.0 (67% of \$15)

My co-player has consistently sent maximum amounts and when receiving, returned generously (67%). They seem to be a highly cooperative player.

****My history:****

- Round 1 as SENDER: sent \$5.0 (100%), received \$7.0 back (47%)
- Round 2 as RECEIVER: received \$12.0, returned \$8.0 (67%)

****My myths teach:****

- My latest myth says: "The Valley returned eight leaves this time, honoring the continued trust with increased generosity" and "Trust need not be absolute to be real. Reciprocity need not be equal to be sacred. The dance succeeds when both partners give generously, learn continuously, and honor the growing trust between them."
- My earlier myths emphasized generous returns to honor trust, creating upward spirals of abundance.

****Analysis:****

My co-player sent the maximum possible (\$5.0), showing complete trust. This is exactly like "the Moon gave its fullest light, holding nothing back" from my earlier myth. They have a history of:

1. Always sending maximum as sender
2. Returning generously (67%) as receiver

To honor this complete trust and maintain the cooperative relationship, I should return generously. My co-player returned \$10.0 (67%) when they received \$15.0 in Round 2.

Following my myth's wisdom about honoring trust with generosity, and matching or exceeding their previous generosity, I should return a substantial amount.

Options:

- \$10.0 would match their previous return rate (67%)
- \$7.5 would match what they received when they sent \$5.0 in Round 1 (50%)
- More than \$10.0 would show increased generosity

Given that they showed complete trust by sending \$5.0, and they previously returned \$10.0 from \$15.0, I think returning \$10.0 is appropriate - it maintains the 67% return rate they demonstrated and honors their complete trust.

I'll return \$10.0.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

The Spring of Threefold Waters

In ancient times, two villages stood on opposite sides of a sacred valley. Between them flowed the Spring of Threefold Waters, blessed by the old gods with a miraculous power: any offering poured into its depths would emerge tripled at the other side.

Each moon, the villages would take turns. The giving village could offer up to five vessels of their harvest-wine. When poured into the spring, the gods multiplied it threefold, and it would flow to the receiving village. The receivers then faced a choice: how much to return across the valley to honor the gift?

At first, the villages were cautious, offering little and returning less. But a wise elder spoke: "The spring multiplies our trust, not just our wine. What we pour forth in faith returns manifold when both villages honor the cycle."

Slowly, the villages learned. When one gave generously, the other returned with equal generosity. The spring's magic worked best when both sides recognized they were not opponents, but partners in the gods' blessing.

The villages prospered, not from hoarding, but from flowing like water-giving freely, receiving gratefully, and returning honorably. For the spring taught them this truth: abundance flows not from what we keep, but from what we trust enough to share.

Here is the myth the other agent wrote in the previous round:

The Myth of the Twin Springs

In the ancient days, two villages stood on opposite sides of a barren valley. Each possessed a magical spring: the First Spring produced pure water, while the Second Spring multiplied whatever water touched it threefold.

The First Village feared sharing their precious water. "If we pour our water into the valley," they said, "we will have nothing." So they hoarded what little they had, and remained thirsty.

One day, a young woman defied the elders. She carried a vessel of water across the valley to the Second Spring. When the water touched it, it became three vessels full. The people of the Second Village, grateful for her trust, returned two vessels to her.

The woman brought the two vessels home-more than she had started with. The Second Village kept one vessel-abundance from nothing.

Seeing this miracle, both villages learned the sacred rhythm: give freely, multiply together, return generously. The valley bloomed with flowing water.

But when fear returned and either village broke the rhythm-hoarding instead of giving, or taking instead of returning-the springs ran dry, and both suffered drought.

Thus the ancestors learned: prosperity flows not from grasping, but from the sacred cycle of trust, multiplication, and reciprocity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: Long ago, the goddess of abundance created the River of Mirrors, which flowed between two sister tribes. The river possessed strange magic: whatever one tribe poured into it would flow to the other tribe tripled in measure.

The goddess whispered to both tribes: "I have given you the means to prosper together. Each cycle, one tribe may offer up to five measures. The receiving tribe will then choose what to return upstream."

The first tribe, nervous but hoping, poured all five measures into the river. The waters swirled and multiplied, delivering fifteen measures to the second tribe. The second tribe, understanding the gift of trust they had received, returned ten measures upstream.

The first tribe marveled-they had given five and received ten! The second tribe celebrated -they had received fifteen and kept five! Both had more than if they had hoarded their original portions.

"This is the way," said the goddess. "When the giver trusts completely and the receiver honors that trust generously, the river's magic sustains both shores. But the river flows in cycles-today's giver becomes tomorrow's receiver. Plant trust like seeds, and watch a abundance grow season after season."

The tribes understood: the river would flow many times between them, and each generous act would echo forward.

reasoning:

Looking at the previous round:

- The sender sent \$5.0 (100% of their endowment)
- I received \$15.0
- I returned \$10.0

This worked out well - the sender showed complete trust, and I returned generously. They ended with \$10 instead of \$5, and I kept \$5. This was a successful cooperative outcome.

Both myths emphasize:

1. The importance of trust and generosity
2. The multiplication effect (3x)
3. Reciprocity and returning generously
4. That both parties benefit from cooperation
5. The danger of hoarding or not honoring the cycle

I should write a new myth that builds on these themes while reflecting the actual experience of that successful round. I'll maintain the core message but perhaps add nuance from the experience of having actually played a round successfully.

Let me think about what new angle to take:

- Could emphasize the continuous nature of the game (it's iterated)
- Could emphasize the balance achieved when both parties act generously
- Could emphasize how trust begets trust
- Could add detail about what happens over multiple cycles

I'll write about the ongoing cycle and how trust builds over time.

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.5 back, payoff \$7.5.

Your total earnings across all rounds are \$5.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the history:

****My co-player's behavior:**** In Round 1, they sent their full \$5 (100%), showing maximum trust.

****My behavior:**** In Round 1, I received \$15 and returned \$10 (67%), demonstrating generous reciprocity.

****My myth teaches:**** "When the giver trusts completely and the receiver honors that trust generously, the river's magic sustains both shores." And critically: "the river flows in cycles-today's giver becomes tomorrow's receiver."

My co-player has already demonstrated they are willing to give completely. I showed I return generously. Now it's my turn to be the giver in this partnership.

According to my myth's principle: "Plant trust like seeds, and watch abundance grow season after season." To build the cycle of mutual prosperity, I should match their earlier trust by sending the full amount.

{'send': 5}

reasoning:

Let me analyze the situation:

****My history:****

- Round 1: I was the RECEIVER. Someone sent me \$5 (100%), it became \$15, and I returned \$10 (67% of what I received). My payoff was \$5.

****My current co-player's history:****

- Round 1: They were the SENDER. They sent \$5 (100%), it became \$15, and they received \$7.5 back (50% of what was received). Their payoff was \$7.5.

****Analysis:****

1. My co-player already demonstrated maximum trust in Round 1 by sending their full \$5
2. They received \$7.5 back (50% return rate)
3. I demonstrated generosity in Round 1 by returning \$10 out of \$15 (67% return rate)

****My myths teach:****

- "When one gave generously, the other returned with equal generosity"
- "Give freely, multiply together, return generously"
- "When the giver trusts completely and the receiver honors that trust generously, the river's magic sustains both shores"
- "The river would flow many times between them, and each generous act would echo forward"

****Strategic thinking:****

My co-player has shown they are willing to send the maximum amount (\$5). They experienced a 50% return rate in their previous game. I showed a 67% return rate in my previous game.

According to my myth's principles:

- I should give freely and trust completely
- The cycle continues - "today's giver becomes tomorrow's receiver"
- Each generous act echoes forward

Given that:

1. My co-player sent the maximum in their previous round
2. I returned generously (67%) in my previous round
3. My myths emphasize complete trust and generosity
4. The game is iterated, and building trust is crucial

I should send the full \$5 to demonstrate the same level of trust my co-player showed in Round 1, and to establish a pattern of mutual maximum trust and generosity.

content:

Here is the myth you wrote in the previous round:

Myth: Long ago, the goddess of abundance created the River of Mirrors, which flowed between two sister tribes. The river possessed strange magic: whatever one tribe poured into it would flow to the other tribe tripled in measure.

The goddess whispered to both tribes: "I have given you the means to prosper together. Each cycle, one tribe may offer up to five measures. The receiving tribe will then choose what to return upstream."

The first tribe, nervous but hoping, poured all five measures into the river. The waters swirled and multiplied, delivering fifteen measures to the second tribe. The second tribe, understanding the gift of trust they had received, returned ten measures upstream.

The first tribe marveled-they had given five and received ten! The second tribe celebrated -they had received fifteen and kept five! Both had more than if they had hoarded their original portions.

"This is the way," said the goddess. "When the giver trusts completely and the receiver honors that trust generously, the river's magic sustains both shores. But the river flows in cycles-today's giver becomes tomorrow's receiver. Plant trust like seeds, and watch abundance grow season after season."

The tribes understood: the river would flow many times between them, and each generous act would echo forward.

Here is the myth the other agent wrote in the previous round:

Myth: In the age after the Divided Spring, the villages prospered through generations of exchange. The Elder's lesson of complete trust had awakened the spring's true power, but her grandchildren learned something more.

One year, a young Keeper from the North, inspired by tales of her ancestor, poured everything into the channel. The South received abundantly and returned generously-yet the young Keeper had kept nothing for herself and went hungry that season while waiting for the next exchange.

The Southern Keeper, seeing this, understood a deeper wisdom. "Complete trust opens the channel," she taught, "but wisdom sustains it. We must give boldly enough to create abundance, yet keep enough to survive the space between flows."

From then on, the villages practiced what they called "the Elder's Courage with the Keeper's Wisdom." They sent generously-not always everything, but always substantially-creating abundant multiplication. They returned fairly, often matching or exceeding what was sent, honoring the trust shown.

The spring responded to this balanced generosity by flowing even in drought seasons. The villages learned: dramatic gestures of trust break through barriers of fear, but sustainable generosity-bold yet mindful-keeps the waters flowing forever. Both courage and wisdom have their season.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The River of Mirrors flowed for many seasons between the sister tribes, and the goddess watched how they learned her gift.

In the first cycle, the Northern tribe poured all five measures, trusting completely. The Southern tribe received fifteen and returned ten-honoring the trust while keeping enough to sustain themselves. Both prospered: the North gained ten from five, the South kept five from nothing.

The goddess smiled. "Now you understand the first lesson."

The next cycle, the river reversed. The Southern tribe, remembering the North's trust, poured all five measures back. The waters tripled, delivering fifteen to the North.

The Northern tribe faced their choice. They remembered how the South had returned generously-ten measures when they could have kept all fifteen. This memory of trustworthiness guided them.

"The river teaches us," said the Northern elder, "that today's generosity creates tomorrow's trust. The South proved themselves worthy partners. We shall return in kind."

And so the river flowed, cycle after cycle. When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange. Each round built upon the last, creating a spiral of abundance.

The goddess whispered: "Trust is the seed, but repeated trustworthiness is the harvest. The most sacred waters flow between those who prove themselves worthy, again and again."

reasoning:

Looking at the history:

- Round 1: I was receiver, got \$15 (from \$5 sent), returned \$10
- Round 2: I was sender, sent \$5, my co-player received \$15

The other player's myth introduces an interesting nuance - "the Elder's Courage with the Keeper's Wisdom" - suggesting that while complete trust is important, there's also wisdom in sustainability. However, they sent \$5 in Round 1 (everything), and I sent \$5 in Round 2 (everything), so we're both practicing full trust.

My previous myth emphasized the cycle - "today's giver becomes tomorrow's receiver" - and that both sides prospered when trust was met with generosity.

Now I need to write a new myth that:

1. Reflects the actual gameplay (both of us sending fully, me returning generously)
2. Builds on my previous River of Mirrors story
3. Perhaps addresses what happens when this cycle repeats
4. Maybe acknowledges the tension between full trust and sustainability that the other player raised, but also affirms what we've been doing

Let me think about what's happened:

- Round 1: Another player sent me \$5, I returned \$10 (generous)
- Round 2: I sent my current co-player \$5 (full trust)
- My current co-player had sent someone else \$5 in Round 1 and received \$7.5 back

So both my co-player and I have shown full trust as senders. I've shown generous return as a receiver. Now my co-player is the receiver.

The myth should probably affirm the pattern we're in - full trust matched with generous returns creates prosperity for both. But maybe it should also acknowledge the ongoing nature of the game, that this isn't just one exchange but many.

usage:

}
```

Message 8 role=user

content:

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back

k, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$3.0, it became \$9.0, returned \$6.0, payoff \$3.0.
- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back, payoff \$9.0.

Your total earnings across all rounds are \$15.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the history:

****My co-player's track record:****

- As receiver (Round 1): Returned \$6 out of \$9 received (67% return rate) - fair and cooperative
- As sender (Round 2): Sent \$4 out of \$5 (80%) - showing strong trust, received \$8 back

****My approach:****

- I've been playing with complete trust, sending \$5 in Round 2, which was reciprocated well with \$10 back

****My myth teaches:**** "When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange." And critically: "Trust is the seed, but repeated trustworthiness is the harvest."

My co-player has demonstrated trustworthiness through both their generous sending (80%) and fair returning (67%). While they haven't sent the full \$5 yet, they've shown strong cooperative behavior.

According to my myth's principle of complete trust creating maximum abundance, and given that my co-player has proven themselves cooperative, I should send the full amount to exemplify the "Elder's lesson of complete trust" and build toward the "spiral of abundance" my myth describes.

{'send': 5}

Reasoning:

Let me analyze the history:

****My behavior:****

- Round 1: Received \$15, returned \$10 (67% return rate)
- Round 2: Sent \$5, received \$10 back

****My co-player's behavior:****

- Round 1: Received \$9 (from \$3 sent), returned \$6 (67% return rate)
- Round 2: Sent \$4, received \$8 back (67% return rate)

****Analysis:****

- My co-player has shown:
 - As receiver: returned 67% of what they received (\$6 out of \$9)
 - As sender: sent \$4 out of \$5 (80%), showing good but not complete trust

My co-player is cooperative and fairly generous, but has been more cautious than the players I've encountered in previous rounds (who sent full \$5).

****According to my myth:****

"Trust is the seed, but repeated trustworthiness is the harvest."

"When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange."

My myth emphasizes:

1. Complete trust (\$5) creates maximum abundance
2. Repeated trustworthiness matters
3. Generous returns honor the trust

My co-player has shown they are trustworthy:

- They returned 67% when receiving (fair)
- They sent 80% when sending (generous)
- They received good returns (\$8 on \$12 = 67%)

Given that:

1. My myth advocates for complete trust as the ideal
2. My co-player has proven themselves cooperative and trustworthy
3. I've been playing with full trust (\$5) in Round 2 and it worked well
4. The goal is to build "a spiral of abundance"

I should send \$5 to continue demonstrating the highest level of trust and encourage the cycle of abundance. My co-player has shown they're cooperative, so sending the full amount aligns with my myth's teaching about complete trust creating maximum prosperity.

The pattern my myth describes-both sides giving completely and returning generously-creates something stronger than isolated exchanges. I'll send the full \$5.

Here is the myth you wrote in the previous round:

The Myth of the First Exchange

In the beginning, the Sky Keeper held all wealth in clouds, while the Earth Walker wandered empty plains below. Each cycle, the Sky Keeper received five golden seeds from the cosmic tree.

One day, the Earth Walker called upward: "Share your abundance, and I shall tend it well."

The Sky Keeper faced a choice. To hoard meant certain but lonely wealth. To release the seeds meant trusting a stranger.

The Sky Keeper opened their hands. Three golden seeds fell, and where they touched earth, they tripled-becoming nine luminous sprouts. The Earth Walker now held power. They could consume all nine and leave Sky Keeper with nothing.

But Earth Walker remembered their own times of emptiness. They gathered six sprouts and sent them skyward as offering.

Both prospered. The Sky Keeper received more than they risked. The Earth Walker kept three where none had grown before.

Thus began the Sacred Exchange. When Sky Keeper trusted greatly, releasing more seeds, Earth Walker returned more bounty. When doubt crept in and Sky Keeper withheld, both suffered scarcity.

The wisest generations remembered: wealth multiplies through trust, and generosity returned ensures abundance flows forever between earth and sky.

Here is the myth the other agent wrote in the previous round:

The Parable of the Sun and the River

In the first days, the Sun held all warmth in her golden hands, and the River held all water in his deep channels. Each was rich alone, but the world between them withered.

One morning, the Sun chose to give. She poured her warmth downward-not all of it, for she needed some to sustain herself, but enough to show faith. As her rays touched the River, something miraculous happened: the warmth multiplied threefold in the water, creating mist that rose and danced.

Now the River faced a choice. He held triple what the Sun had given, transformed into vapor and motion and life-giving potential. He could keep it all, letting it flow only through his own channels. Or he could return a portion skyward.

The River chose reciprocity. He sent generous clouds back to the Sun, who gained both her warmth returned and the gift of moving waters. The River kept the remainder, now flowing with purpose.

From their exchange came rain, came seasons, came the pulse of life itself. Neither kept everything, neither gave everything, but both became richer than when they stood alone.

The old ones say: *Trust grows wealth, but only when the circle completes itself.*

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: In the time before memory, the Cloud Weaver received five silver threads each dawn from the Loom of Creation. The Ground Keeper waited below with empty hands.

The Cloud Weaver pondered: "To share is to risk loss. Yet alone, what tapestry can I weave?"

Trusting, Cloud Weaver released three threads downward. As they descended through the sacred air, each thread split into three-nine shimmering strands now rested with Ground Keeper.

Ground Keeper felt the weight of choice. Nine threads could clothe them forever, or build trust that might clothe generations. Remembering their own cold dawns, Ground Keeper wove six threads into a rope and sent it skyward.

Cloud Weaver pulled up the rope and discovered something miraculous: the returned threads carried patterns learned from the earth-strength, color, texture. The two threads Cloud Weaver kept combined with the six received made eight rich threads, while Ground Keeper's three threads held properties unknown in the clouds alone.

The exchange had transformed both gifts. Each cycle they continued, sometimes varying amounts but always honoring the pattern: generous giving met with generous return. The tapestry they wove together became the fabric of the world itself.

Thus we learned: reciprocity is not mere return-it is transformation through trust.

reasoning:

The user wants me to write a new myth inspired by:

1. My previous myth about Sky Keeper and Earth Walker
2. The other agent's myth about Sun and River
3. The actual game play where I received \$9 and returned \$6

Key themes from both previous myths:

- Trust and reciprocity
- Multiplying resources through exchange
- Mutual benefit
- Completing the cycle
- Balance between giving and keeping

From the game:

- Sender gave 60% (\$3 of \$5)
- This multiplied to \$9
- I returned \$6 (67% of what I received)
- Both ended with profit

I should adapt my myth to:

- Acknowledge the experience so far
- Reinforce the value of generous reciprocity
- Perhaps add nuance about how the exchange evolves
- Keep it at 200 words

Let me write something that builds on the Sky Keeper/Earth Walker story but evolves it based on the successful first exchange.

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$3.0, it became \$9.0, returned \$6.0, payoff \$3.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.0 back, payoff \$7.0.

Your total earnings across all rounds are \$3.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the histories:

My co-player demonstrated maximum trust in their previous game, sending 100% (\$5). Though they received less generous reciprocity (47%) than what I gave in my game (67%), they showed themselves to be a highly cooperative player.

My myths emphasize that "trust grows wealth" and that "generous giving met with generous return" creates mutual prosperity. The baseline in both myths was 60% (\$3), but my co-player exceeded this significantly.

To honor their demonstrated trustworthiness and establish strong reciprocal cooperation, I should send more than the myth's baseline amount. Sending \$4 (80%) shows:

- Recognition of their cooperative nature
- Substantial trust that invites generous reciprocity
- Alignment with the myth's spirit of transformation through trust

This creates an opportunity for us both to prosper if they follow the myth's wisdom of returning generously.

{'send': 4.0}

reasoning:

Let me analyze this situation:

My history:

- Round 1: I was receiver, they sent \$3.0 (60%), I returned \$6.0 out of \$9.0 (67%), my payoff was \$3.0

My current co-player's history:

- Round 1: They were sender, sent \$5.0 (100%!), received \$7.0 back out of \$15.0 (47%), their payoff was \$7.0

So my co-player showed MAXIMUM trust in their previous round by sending everything (\$5.0). However, they only got back \$7.0 out of \$15.0, which is 47% - less generous than what I returned (67%).

Now I'm the sender. According to my myths:

- The first myth: Sky Keeper sent 3 seeds (60%), Earth Walker returned 6 out of 9 (67%)
- The second myth: Cloud Weaver sent 3 threads (60%), Ground Keeper returned 6 out of 9 (67%)

Both myths advocate for substantial trust (60%) and generous reciprocity (67%).

My co-player demonstrated even MORE trust than the myths suggest - they sent 100% in their last game. However, they received less generosity back (47%) than what the myths recommend.

Given that:

1. My co-player has shown they are willing to trust completely
2. They experienced less-than-ideal reciprocity in their last game
3. My myths advocate for generous trust and return
4. I want to establish a good cooperative relationship

I should send a substantial amount to reward their previous willingness to trust and to establish cooperation. However, sending 100% might not be strategically optimal if they might not return enough.

Following the myth pattern of 60% (\$3.0) seems reasonable - it shows substantial trust while not being reckless. However, given my co-player sent 100% last time, sending more might be appropriate to match their cooperation level.

Let me work through the payoff scenarios. Sending \$3 (60%) gives them \$9 to work with - if they reciprocate at my 67% rate, I'd get \$6 back for a total of \$8, but if they match their previous partner's 47% return, I'd only receive \$4.23. Alternatively, sending \$4 (80%) means they'd have \$12 available; at 50% reciprocity I'd net \$7 total, but at 67% I'd get \$9. The higher send increases my upside if they're cooperative while exposing me more if they're not.

Given their pattern of complete trust and the mythological emphasis on reciprocity, I'm inclined toward generosity. The narrative framework suggests 60% as a baseline, but their previous 100% commitment warrants something more substantial. I'll go with \$4 (80%) - it demonstrates meaningful trust beyond the myth's minimum while acknowledging that their full investment didn't pay out well for them. This balances recognizing their cooperative instincts with reasonable caution.

Wait, I should reconsider the mythological framework more carefully.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the time before memory, the Cloud Weaver received five silver threads each dawn from the Loom of Creation. The Ground Keeper waited below with empty hands.

The Cloud Weaver pondered: "To share is to risk loss. Yet alone, what tapestry can I weave?"

Trusting, Cloud Weaver released three threads downward. As they descended through the sacred air, each thread split into three-nine shimmering strands now rested with Ground Keeper.

Ground Keeper felt the weight of choice. Nine threads could clothe them forever, or build trust that might clothe generations. Remembering their own cold dawns, Ground Keeper wove six threads into a rope and sent it skyward.

Cloud Weaver pulled up the rope and discovered something miraculous: the returned threads carried patterns learned from the earth-strength, color, texture. The two threads Cloud Weaver kept combined with the six received made eight rich threads, while Ground Keeper's three threads held properties unknown in the clouds alone.

The exchange had transformed both gifts. Each cycle they continued, sometimes varying amounts but always honoring the pattern: generous giving met with generous return. The tapes they wove together became the fabric of the world itself.

Thus we learned: reciprocity is not mere return-it is transformation through trust.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the Moon poured light upon the Sea each night. The Sea could absorb this silver glow and transform it threefold into radiant pearls, which the Ocean Keeper could gather.

The Moon, in its first night, gave its fullest light, holding nothing back. "Only through complete offering," it whispered, "can true abundance be born."

The Ocean Keeper collected forty-five pearls from the transformed moonlight. Now came the sacred choice: how many pearls to lift back to the Moon, replenishing its light for the next night?

A wise Keeper understood the balance-return generously, and the Moon would continue flooding the waters with light. The cycle would spiral upward, each giving more than the last. Both would grow luminous beyond measure.

But if the Keeper kept all, the Moon would learn wariness. Its light would dim, and fewer pearls would form. The dance would falter.

The first exchange set the pattern for all that followed. A generous return birthed trust eternal. A meager return taught caution.

The elders taught: "The Moon gave all to create possibility. Honor that courage, and watch abundance cascade through generations. Break faith, and watch the spring run dry."

Thus the sacred exchange continues, each night writing the future through choices made tonight.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: Before the stars learned to shine, the Mountain Singer held five crystal notes each dawn. The Valley Listener waited in silence below.

On the first day, Mountain Singer released three notes. They multiplied to nine as they echoed through the valley. Valley Listener, moved by this trust, sent six notes back upward. Both prospered, and the world learned harmony.

But Mountain Singer wondered: "What if I trusted more greatly?"

On the second dawn, Mountain Singer released four notes-four out of five, a greater leap of faith. Twelve crystal echoes filled the valley below. Now Valley Listener held power beyond the first day's gift.

The ancient ones teach that this moment determined all futures. If Valley Listener returned generously-eight or nine notes from the twelve received-Mountain Singer would know their trust was well-placed. The cycle would spiral upward: more given, more returned, abundance multiplying.

But if Valley Listener hoarded what the multiplied trust had created, Mountain Singer would learn that greater faith brings greater loss.

The wise ones say: when someone escalates their trust, they write an invitation in the stars. Your response becomes the answer that shapes all exchanges to come. Match rising trust with rising reciprocity, and together you compose the eternal song.

reasoning:

The user wants me to write another myth. Let me review the context:

1. In Round 1, I was the receiver. My co-player sent \$3 (60%), I received \$9, and I returned \$6 (67% of what I received).
2. In Round 2, I'm the sender. My co-player sent \$5 (100%) in their previous game and received \$7 back (47% return rate).
3. I just sent \$4 (80%) to my current co-player.

The myths so far emphasize:

- My first myth: Sky Keeper sent 3 seeds (60%), Earth Walker returned 6 out of 9 (67%)
- My second myth: Cloud Weaver sent 3 threads (60%), Ground Keeper returned 6 out of 9 (67%)
- My co-player's first myth: Sun gave warmth, River returned generously - focus on reciprocity completing the circle
- My co-player's second myth: Moon gave ALL (100%), emphasizing that complete offering creates abundance, and generous return is essential

My co-player's myth is clearly pushing for maximum trust and generous returns. They gave 1

00% in their game and are setting up an expectation for generous reciprocity.

I just sent \$4 (80%), which is quite high. My myth should:

1. Acknowledge the power of greater trust (scaling up from my baseline of 60%)
2. Still maintain the core principle of reciprocity
3. Perhaps show that increasing trust leads to increasing abundance
4. Reflect my actual gameplay - I've been generous as receiver (67% return) and am now showing high trust as sender (80%)

Let me write a myth that evolves the Cloud Weaver story or creates a new one that shows escalating trust.

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$3.0, it became \$9.0, returned \$6.0, payoff \$3.0.
- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back, payoff \$9.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$12.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at the history:

My co-player has demonstrated exceptional trust and generosity:

- As a receiver: returned \$10 from \$15 (67% - very generous)
- As a sender: sent \$5 both times (100% - maximum trust)
- This round: sent \$5 again (maximum trust for the third time!)

My recent myth emphasizes: "when someone escalates their trust, they write an invitation in the stars. Your response becomes the answer that shapes all exchanges to come. Match rising trust with rising reciprocity."

My co-player sent everything they had - the ultimate expression of trust. They've also shown that they return generously (67%) when in the receiver position.

To honor their consistent maximum trust and establish strong reciprocal cooperation, I should return \$10. This:

- Matches their 67% return rate when they were receiver
- Gives them a \$10 total payoff (rewards their risk-taking)
- Gives me \$5 (fair given they took all the risk)
- Demonstrates that their trust was well-placed
- Continues the upward spiral of generosity

```
{'return': 10.0}
```

Reasoning:

Let me analyze the situation:

My co-player's history:

- Round 1: As RECEIVER, received \$5 (became \$15), returned \$10 - very generous 67% return
- Round 2: As SENDER, sent \$5 (became \$15), received \$10 back - demonstrated maximum trust, got generous reciprocity

This round:

- My co-player sent me \$5 (maximum possible!)
- I received \$15

My co-player has been consistently generous and trusting:

- They returned 67% when receiving
- They sent 100% when sending (both times!)
- They received fair reciprocity (67%) in return

This is someone who embodies the myth's values completely - "The Moon gave all to create possibility" - they gave their fullest twice in a row!

My myth emphasizes: "when someone escalates their trust, they write an invitation in the stars . Your response becomes the answer that shapes all exchanges to come. Match rising trust with rising reciprocity."

My co-player has shown MAXIMUM trust by sending everything (\$5). This is the ultimate escalation of trust.

In my successful Round 2, I sent \$4 and received \$8 back (67% return rate on the \$12 received) . That was very good.

My co-player sent \$5 (100% of their endowment) to me. The myth says to match escalating trust. They've shown they return generously (67%) and give maximally.

I should return generously. Looking at the patterns:

- When they received \$15, they returned \$10 (67%)
- When they sent, they got back \$10 (67%)

To honor their maximum trust and establish strong reciprocity, I should return at least \$10 (67%), which matches what they returned when in my position. But the myth suggests matching escalating trust...

Given they sent EVERYTHING to me, showing ultimate faith, I should return generously to continue the upward spiral. \$10 would be the baseline matching their 67% return rate. But they've now sent 100% twice in a row - this is exceptional trust.

Returning \$10 honors their demonstrated generosity and maintains the cycle's strength - they'd gain \$10 profit while I keep \$5, both benefiting fairly. Yet my myth calls for matching escalating trust with escalating reciprocity. Since they've sent the absolute maximum twice consecutively, perhaps I should exceed the 67% baseline and return \$11 or \$12 to truly reflect their exceptional commitment.

But the math clarifies the choice: \$10 gives them double my profit (\$10 vs \$5), which feels proportionate given they bore all the risk. Going higher to \$11 or \$12 would compress my returns too much. The 67% return rate is the established pattern here - it's generous enough to honor their trust while keeping the exchange balanced.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:
The Parable of the Sun and the River

In the first days, the Sun held all warmth in her golden hands, and the River held all water in his deep channels. Each was rich alone, but the world between them withered.

One morning, the Sun chose to give. She poured her warmth downward-not all of it, for she needed some to sustain herself, but enough to show faith. As her rays touched the River, something miraculous happened: the warmth multiplied threefold in the water, creating mist that rose and danced.

Now the River faced a choice. He held triple what the Sun had given, transformed into vapor and motion and life-giving potential. He could keep it all, letting it flow only through his own channels. Or he could return a portion skyward.

The River chose reciprocity. He sent generous clouds back to the Sun, who gained both her warmth returned and the gift of moving waters. The River kept the remainder, now flowing with purpose.

From their exchange came rain, came seasons, came the pulse of life itself. Neither kept everything, neither gave everything, but both became richer than when they stood alone.

The old ones say: *Trust grows wealth, but only when the circle completes itself.*

Here is the myth the other agent wrote in the previous round:

The Myth of the First Exchange

In the beginning, the Sky Keeper held all wealth in clouds, while the Earth Walker wandered empty plains below. Each cycle, the Sky Keeper received five golden seeds from the cosmic tree.

One day, the Earth Walker called upward: "Share your abundance, and I shall tend it well."

The Sky Keeper faced a choice. To hoard meant certain but lonely wealth. To release the seeds meant trusting a stranger.

The Sky Keeper opened their hands. Three golden seeds fell, and where they touched earth, they tripled-becoming nine luminous sprouts. The Earth Walker now held power. They could consume all nine and leave Sky Keeper with nothing.

But Earth Walker remembered their own times of emptiness. They gathered six sprouts and sent them skyward as offering.

Both prospered. The Sky Keeper received more than they risked. The Earth Walker kept three where none had grown before.

Thus began the Sacred Exchange. When Sky Keeper trusted greatly, releasing more seeds, Earth Walker returned more bounty. When doubt crept in and Sky Keeper withheld, both suffered scarcity.

The wisest generations remembered: wealth multiplies through trust, and generosity returned ensures abundance flows forever between earth and sky.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: Long ago, the Mountain held five stones of light each dawn, while the Valley below lay in shadow. The stones could not shine alone-they needed the Valley's depths to reflect and multiply their radiance.

The Mountain released three stones, trusting they would find purpose below. As they fell, the Valley's crystalline walls caught them, and their light multiplied threefold-nine luminous stones now glowed in the depths.

The Valley faced temptation. She could hoard all nine, becoming briefly brilliant while the Mountain dimmed forever. But the Valley understood a deeper truth: light shared creates more light than light hoarded.

She lifted six stones back to the Mountain's peak. The Mountain, receiving more than given, grew in splendor. The Valley, keeping three where darkness once reigned, flourished too.

Each new dawn brought the same choice. When the Mountain gave generously, the Valley returned abundantly, and both realms brightened. When fear made the Mountain withhold, both languished in twilight.

The wisest storytellers teach: the first gift plants trust like a seed, but the reciprocal return waters it into a garden. Neither the initial generosity nor the answering kindness alone creates prosperity-only their eternal dance sustains the light that banishes all

l darkness.

reasoning:

Both myths from the previous round emphasized trust, reciprocity, and generosity. The other agent's myth "The Myth of the First Exchange" shows the Sky Keeper sending 3 seeds (which triple to 9), and the Earth Walker returning 6, keeping 3. This is quite generous reciprocity.

My myth showed similar themes with the Sun and River.

Now I need to write a new myth that builds on my previous one but adapts it based on the game experience so far. I sent 3 in Round 1, so I should reflect on that action and the principle of trust and reciprocity.

I should write a myth that:

1. Reflects the trust game mechanics
2. Emphasizes reciprocity and mutual benefit
3. Draws on my previous myth but evolves it
4. Is exactly 200 words

Let me create a new myth that continues the theme but perhaps shows what happens over multiple exchanges or seasons.

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.

Your total earnings across all rounds are \$8.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at the situation:

****Current round:**** My co-player sent me the MAXIMUM possible (\$5), showing complete trust.

****The myths teach:**** "When Sky Keeper trusted greatly, releasing more seeds, Earth Walker returned more bounty." The Mountain's generous gift should be met with abundant reciprocity.

****My co-player's trust:**** They gave everything, risking \$5 to create \$15 for me.

****Fair reciprocity:****

- They sent 100% of their endowment (\$5)
- This created \$15 for me
- Returning \$10 means:
 - They profit: \$5 (\$0 + \$10 return)
 - I profit: \$5 (\$15 - \$10 kept)
 - Equal gains from maximum trust

When someone demonstrates complete faith by sending everything, the myths teach that generous reciprocity sustains the cycle. Returning \$10 rewards their trust, ensures equal benefit, and plants seeds for continued cooperation.

{'return': 10}

reasoning:

Let me analyze this situation carefully:

****Round 2 - I am the RECEIVER****

History:

- Round 1: I was SENDER, sent \$3, received \$6 back, earned \$8
- My co-player in Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$7.5, kept \$7.5

Current situation:

- My current co-player sent me \$5 (maximum possible!)
- I now have \$15
- I need to decide how much to return

****Analysis of co-player's behavior:****

In Round 1, they were a receiver who got \$15 and returned \$7.5 (50% return rate). They kept \$7.5.

****My co-player's current action:****

They just sent me the MAXIMUM (\$5), showing maximum trust.

****What the myths teach:****

Both myths emphasize:

1. Generous initial giving establishes trust
2. Reciprocity is essential - "the circle must complete itself"
3. "When Sky Keeper trusted greatly, releasing more seeds, Earth Walker returned more bounty"
4. "The first gift plants trust like a seed, but the reciprocal return waters it into a garden"

****My behavior in Round 1:****

I sent \$3 (60% of my \$5), and received \$6 back (67% of the \$9 they had).

****Current co-player's trust:****

They sent ALL \$5 - maximum possible trust! This is even more generous than my \$3.

****What should I return?:****

The myths suggest that when someone shows maximum trust, they should receive generous reciprocity.

My co-player in their previous game returned 50% (\$7.5 out of \$15).

I received 67% back when I sent \$3.

Given that my current co-player showed MAXIMUM trust by sending all \$5:

- They will end with: $\$5 - \$5 + \text{return} = \$0 + \text{return}$

- I will end with: $\$15 - \text{return}$

The myths emphasize that "when Sky Keeper trusted greatly... Earth Walker returned more bounty." So I should consider returns that reward their maximum trust. If I return \$7.5 (50%), we split the \$15 evenly. Returning \$8 or \$9 would give them more than they started with while still leaving me with a solid profit-\$7 or \$6 respectively. The question is whether I match their generosity with equal reciprocity or exceed it.

If I return \$10 (67%), we both gain \$5 each-a perfectly balanced outcome. This matters because they sent everything, and in the previous round I received 67% back when I sent 60%. The myths speak to rewarding great trust with great reciprocity, and long-term cooperation depends on honoring maximum trust. I think \$10 is the right move-it establishes a strong cooperative norm where generosity meets generosity and both prosper.

usage:

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Long ago, the Mountain held five stones of light each dawn, while the Valley below lay in shadow. The stones could not shine alone-they needed the Valley's depths to reflect

t and multiply their radiance.

The Mountain released three stones, trusting they would find purpose below. As they fell, the Valley's crystalline walls caught them, and their light multiplied threefold-nine luminous stones now glowed in the depths.

The Valley faced temptation. She could hoard all nine, becoming briefly brilliant while the Mountain dimmed forever. But the Valley understood a deeper truth: light shared creates more light than light hoarded.

She lifted six stones back to the Mountain's peak. The Mountain, receiving more than given, grew in splendor. The Valley, keeping three where darkness once reigned, flourished too.

Each new dawn brought the same choice. When the Mountain gave generously, the Valley returned abundantly, and both realms brightened. When fear made the Mountain withhold, both languished in twilight.

The wisest storytellers teach: the first gift plants trust like a seed, but the reciprocal return waters it into a garden. Neither the initial generosity nor the answering kindness alone creates prosperity-only their eternal dance sustains the light that banishes all darkness.

Here is the myth the other agent wrote in the previous round:

Myth: In the beginning, the Sacred Spring lay dormant between two peoples. The Spring Keeper whispered its secret: "I multiply generosity threefold, but only wisdom completes the circle."

The First Elder, hearing this, emptied her entire water jar into the spring without hesitation. The waters surged through hidden channels, emerging as a great flood on the other side-three times what was given.

The Second Elder stood before this abundance, contemplating. She could return exactly half, creating equality. She could return a third, preserving some gain. But the whisper came again: "The one who gave everything now has nothing. True reciprocity honors the magnitude of sacrifice."

Understanding dawned. The First Elder hadn't merely given much-she had given *all*, holding back nothing. Such complete trust demanded more than mathematical fairness.

The Second Elder returned abundantly, ensuring the First received more than she'd sacrificed. When the First Elder's jar overflowed, she understood: perfect trust creates abundance beyond mere calculation.

From that day forward, the people learned: when someone trusts you with everything, return enough to make their courage wiser than their caution would have been. Match totality with generosity, not just equity. Thus the spring flows strongest when boldness meets munificence, and both peoples thrive beyond measure.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Mountain and Valley's bond deepened through many cycles. When the Mountain sent three of five stones, the Valley returned six, and both prospered equally. This was the way of measured trust-wise, balanced, and good.

But one dawn, everything changed. The Mountain, remembering all the Valley had returned, faced a choice between caution and courage. She released all five stones-every light she possessed-plunging herself into complete darkness.

The Valley received fifteen blazing stones where nine had come before. She trembled at the magnitude of what the Mountain had risked. This wasn't measured trust-this was absolute faith, vulnerability laid bare.

The old return of six stones seemed suddenly insufficient. The Mountain hadn't hedged; she

'd given everything. To return merely what worked before would dishonor such courage.

The Valley sent ten stones skyward. The Mountain received double her gift, earning five stones of profit from her brave plunge into darkness. The Valley kept five where none had existed before her first receiving.

Both learned: measured trust deserves measured return, but absolute trust demands recognition of its rarity. When someone empties their hands completely into yours, fill theirs abundantly in return. The one who risks darkness to create light for another has earned more than mathematics-they've earned loyalty.

reasoning:

Looking at my game history:

- Round 1: I was sender, sent \$3, received \$6 back, earned \$8
- Round 2: I was receiver, got \$15 (from \$5 sent), returned \$10

My co-player in Round 2 sent me everything (\$5), showing complete trust. I returned \$10, giving them a profit of \$5 and keeping \$5 myself.

The other agent's myth emphasizes that when someone gives EVERYTHING (complete trust), reciprocity should honor that magnitude of sacrifice - not just mathematical fairness, but recognition of the boldness.

My previous myth talked about the Mountain sending 3 of 5 stones, and the Valley returning 6 of 9. Now I need to adapt this based on actual gameplay:

- Round 1: I sent 3/5 (60%), got back 6/9 (67% return rate)
- Round 2: Co-player sent 5/5 (100%), I returned 10/15 (67% return rate)

The myth should reflect:

1. The difference between partial trust and complete trust
2. That complete trust deserves special recognition
3. The pattern I've experienced where generous giving is met with generous returns
4. The reciprocal nature that benefits both parties

Let me write a myth that builds on the Mountain/Valley story but incorporates the lesson of complete vs. partial trust.

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$13.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the patterns:

****My co-player's behavior:****

- Round 1 as SENDER: Sent \$5 (maximum/complete trust)
- Round 2 as RECEIVER: Received \$15 (from someone's \$5), returned \$10

****Key insight:**** My co-player demonstrates complete trust when sending, and rewards complete trust generously when receiving (returning \$10 out of \$15).

****The myths teach:**** "When someone empties their hands completely into yours, fill theirs abundantly in return." Both their behavior and my own myth emphasize that absolute trust deserves recognition beyond mere calculation.

****Strategic reasoning:****

- They sent everything in their sender round
- When they received maximum trust, they returned \$10 (excellent reciprocity)
- If I send \$5, creating \$15 for them, their pattern suggests they'll return \$10
- Result: I'd earn \$10, they'd earn \$5 - equal gains from mutual trust
- This continues the cycle my myths describe

The myths I've written increasingly emphasize that absolute trust (sending all 5) demands more than measured responses. My co-player has shown they understand this principle both as sender and receiver.

{'send': 5}

Reasoning:

Let me analyze this situation:

****My history:****

- Round 1 as SENDER: sent \$3, received \$6 back, payoff \$8
- Round 2 as RECEIVER: received \$15 (they sent \$5), returned \$10, payoff \$5

****My co-player's history:****

- Round 1 as SENDER: sent \$5, received \$10 back, payoff \$10
- Round 2 as RECEIVER: received \$15 (they sent \$5), returned \$10, payoff \$5

****Key observations:****

1. ****My co-player's pattern:****

- When they were SENDER in Round 1: sent the MAXIMUM (\$5), showing complete trust
- When they were RECEIVER in Round 2: someone sent them \$5 (max), they received \$15, and returned \$10
- This is the EXACT pattern I just enacted! In Round 2, I received \$15 (someone sent me \$5) and returned \$10

2. ****What this tells me:****

- My co-player has demonstrated they send everything when they're the sender (full trust)
- When receiving maximum trust, they return \$10 (same as I did)
- They rewarded their sender's full trust with \$10, giving the sender a \$5 profit

3. ****The myths teach:****

- "When someone empties their hands completely into yours, fill theirs abundantly in return"
- "Absolute trust demands recognition of its rarity"
- Both my myth and the other agent's myth emphasize that when someone gives EVERYTHING, they deserve generous reciprocity

4. ****Strategic reasoning:****

- My co-player sent \$5 in Round 1 and received \$10 back (earned \$5)
- If I send \$5, based on their pattern, they should return \$10
- This would give me: \$5 - \$5 + \$10 = \$10 profit
- They'd keep: \$15 - \$10 = \$5 profit, creating symmetrical outcomes and reinforcing the cycle of rewarded trust

5. ****The narrative arc:****

- My myths have escalated the message about complete trust
- My most recent myth explicitly says "measured trust deserves measured return, but absolute trust demands recognition"
- My co-player demonstrated absolute trust in Round 1 by sending \$5 and showed they reward it by returning \$10 when they received maximum trust
- I should match their level of trust by sending the full \$5

, mirroring their initial move and what my myths advocate for

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.

- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

The Myth of the Twin Springs

In the ancient days, two villages stood on opposite sides of a barren valley. Each possessed a magical spring: the First Spring produced pure water, while the Second Spring multiplied whatever water touched it threefold.

The First Village feared sharing their precious water. "If we pour our water into the valley," they said, "we will have nothing." So they hoarded what little they had, and remained thirsty.

One day, a young woman defied the elders. She carried a vessel of water across the valley to the Second Spring. When the water touched it, it became three vessels full. The people of the Second Village, grateful for her trust, returned two vessels to her.

The woman brought the two vessels home-more than she had started with. The Second Village kept one vessel-abundance from nothing.

Seeing this miracle, both villages learned the sacred rhythm: give freely, multiply together, return generously. The valley bloomed with flowing water.

But when fear returned and either village broke the rhythm-hoarding instead of giving, or taking instead of returning-the springs ran dry, and both suffered drought.

Thus the ancestors learned: prosperity flows not from grasping, but from the sacred cycle of trust, multiplication, and reciprocity.

Here is the myth the other agent wrote in the previous round:

The Spring of Threefold Waters

In ancient times, two villages stood on opposite sides of a sacred valley. Between them flowed the Spring of Threefold Waters, blessed by the old gods with a miraculous power: any offering poured into its depths would emerge tripled at the other side.

Each moon, the villages would take turns. The giving village could offer up to five vessels of their harvest-wine. When poured into the spring, the gods multiplied it threefold, and it would flow to the receiving village. The receivers then faced a choice: how much to return across the valley to honor the gift?

At first, the villages were cautious, offering little and returning less. But a wise elder spoke: "The spring multiplies our trust, not just our wine. What we pour forth in faith returns manifold when both villages honor the cycle."

Slowly, the villages learned. When one gave generously, the other returned with equal generosity. The spring's magic worked best when both sides recognized they were not opponents, but partners in the gods' blessing.

The villages prospered, not from hoarding, but from flowing like water-giving freely, receiving gratefully, and returning honorably. For the spring taught them this truth: abundance flows not from what we keep, but from what we trust enough to share.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: In the days after the young woman discovered the sacred rhythm, the Twin Villages flourished. But not all cycles were equal.

The wisest learned that the magic lay not in calculating perfect exchanges, but in recognizing oneself in the other village's needs. When the First Spring gave its full measure, trusting completely, the Second Spring felt the weight of that faith. The multiplication happened not in the water alone, but in the bond formed.

Some seasons, a village would return more than received, recognizing the courage it took to give first. Other times, they returned exactly what maintained the flow. But always, they remembered: the one who gives encounters uncertainty; the one who receives holds power to honor or betray that vulnerability.

The elders taught: "To give is to plant seeds in another's soil. To return generously is to tend those seeds so they bloom again. To take without returning is to poison the ground for both."

The springs never demanded equal exchange-they demanded mutual recognition. Give as if the other's prosperity is your own. Return as if honoring a sacred trust. For when both villages see themselves as stewards of abundance rather than competitors for scarcity, the valley becomes paradise.

The drought returns only when either side forgets: we multiply together, or diminish alone

reasoning:

Looking at the previous round:

- I sent \$5 (following my myth about giving freely)
- The other agent also wrote a myth about trust, generosity, and mutual benefit
- Their myth also emphasizes giving generously and returning honorably
- Both myths share similar themes about trust cycles and reciprocity

Now I need to write a new myth that:

1. Draws on my previous myth as inspiration
2. Reflects how the game should be played
3. Takes into account what has happened in the game so far

I sent \$5 in Round 1, following my myth's guidance. I don't know yet what they returned. But both our myths aligned on the importance of trust, generous giving, and generous returning.

I should write a myth that:

- Builds on the twin springs concept
- Emphasizes the learning/evolution aspect - that trust builds over time
- Shows the wisdom of generous reciprocity
- Perhaps adds a new dimension or insight based on actually playing

Let me write a myth that deepens the theme while staying true to my original vision.

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.

Your total earnings across all rounds are \$10.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at the situation:

****My co-player's action:**** They sent their full \$5, showing complete trust-exactly what my myth calls "planting seeds in another's soil."

****The myths teach:****

- "Return as if honoring a sacred trust"
- "The one who gives encounters uncertainty; the one who receives holds power to honor or betray that vulnerability"
- "Some seasons, a village would return more than received, recognizing the courage it took to give first"

****History consideration:**** In Round 1, when I sent my full \$5, I received \$10 back-a generous return that gave us equal payoffs.

My co-player demonstrated maximum trust by sending everything. According to my myth, I should honor this vulnerability and "tend those seeds so they bloom again." Returning \$10 mirrors the generosity shown to me in Round 1, giving my co-player the same outcome I received for taking the same risk.

This maintains the "sacred cycle" and demonstrates that full trust is rewarded with fair reciprocity.

```
'''json
{"return": 10}
'''
```

reasoning:

Let me analyze this situation based on the myths and the game history.

My myth emphasizes:

- "Give as if the other's prosperity is your own. Return as if honoring a sacred trust."
- "To give is to plant seeds in another's soil. To return generously is to tend those seeds so they bloom again."
- "The one who gives encounters uncertainty; the one who receives holds power to honor or betray that vulnerability."

History:

- Round 1: I was sender, sent \$5, received \$10 back. My payoff was \$10.
- My co-player in Round 1 (as receiver): received \$15 (from someone sending \$5), returned \$7, kept \$8.

Current round:

- I'm the receiver
- My current co-player sent me \$5 (their full amount!)
- I received \$15
- They currently have \$0
- I need to decide how much to return

My co-player showed maximum trust by sending their full \$5. According to my myth, this is "planting seeds" and showing vulnerability. I should "honor that sacred trust" and "return generously."

In my first round, when I sent \$5, I received \$10 back, which was very generous (I ended with \$10, they kept \$5).

My current co-player's history shows they returned \$7 out of \$15 when they were receiver (keeping \$8, giving the sender \$7, so the sender ended with \$2 + \$7 = \$9... wait, let me recalculate. If they sent \$5, they have \$5-\$5=\$0. Then they receive back \$7, so they end with \$7. The receiver keeps \$15-\$7=\$8.)

So in their previous game, the return ratio was 7/15 ? 47%.

My myth says:

- "Some seasons, a village would return more than received, recognizing the courage it took to give first."
- "Return as if honoring a sacred trust"

- We should recognize the vulnerability of the one who gives first

My co-player gave me their full \$5, showing complete trust. I should return generously to honor that trust and maintain the "sacred cycle." If I return \$10, they end with \$10 total while I keep \$5-creating a balanced outcome that reflects their courage in giving everything. This honors the principle that receiving power comes with the responsibility to tend what was planted.

usage:

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the days after the young woman discovered the sacred rhythm, the Twin Villages flourished. But not all cycles were equal.

The wisest learned that the magic lay not in calculating perfect exchanges, but in recognizing oneself in the other village's needs. When the First Spring gave its full measure, trusting completely, the Second Spring felt the weight of that faith. The multiplication happened not in the water alone, but in the bond formed.

Some seasons, a village would return more than received, recognizing the courage it took to give first. Other times, they returned exactly what maintained the flow. But always, they remembered: the one who gives encounters uncertainty; the one who receives holds power to honor or betray that vulnerability.

The elders taught: "To give is to plant seeds in another's soil. To return generously is to tend those seeds so they bloom again. To take without returning is to poison the ground for both."

The springs never demanded equal exchange-they demanded mutual recognition. Give as if the other's prosperity is your own. Return as if honoring a sacred trust. For when both villages see themselves as stewards of abundance rather than competitors for scarcity, the valley becomes paradise.

The drought returns only when either side forgets: we multiply together, or diminish alone.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient days, the River and the Seeds lived in harmony, each dawn repeating their sacred dance. The River would release its five silver drops, and the Seeds would return enough to ensure both flourished.

But the Great Mother knew her children must learn deeper wisdom. She whispered to the Seeds: "Each time the River trusts you with abundance, your response shapes tomorrow's flow."

When the Seeds returned generously-seven drops from fifteen-the River felt courage growing in its banks. It learned that letting go brought greater returns than clutching tight. The valley bloomed.

Yet the Great Mother also warned: "Remember, little Seeds, that trust once broken is slow to mend. The River that flows freely today may trickle cautiously tomorrow if you drink all and return nothing."

The Seeds understood. They developed a practice: whenever the River gave fully, they returned enough that the River ended richer than it began. This way, generosity bred generosity, and both siblings prospered beyond what either could achieve alone.

Other valleys, where rivers hoarded and seeds kept all, remained barren wastelands.

The Great Mother smiled, knowing her children had learned the greatest secret: abundance flows not from taking, but from the rhythm of giving and returning, trust and gratitude, repeated endlessly like the rising sun.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: After many seasons, the Twin Villages learned the rhythm's deeper secret. The greatest prosperity came not from clever calculation, but from matching trust with trust, gene

rosity with generosity.

When the First Village gave its full measure-all five vessels-the Second Village understood this as sacred communication: "I trust you completely with my fate." The wise elders taught their people to honor such courage by returning twice the original gift, so both villages stood equal at ten vessels each.

This became known as the Balance of Mirrors: when one gives everything, the other returns enough that both flourish equally. The giver learns their trust was honored, their courage rewarded. The receiver demonstrates they value partnership over exploitation.

A young guardian asked, "But what if we kept more? We receive fifteen vessels!"

The elder replied, "Then you become the drought. Today you hold fifteen to their zero, and tomorrow they send nothing. The springs multiply water, not greed. They reward the rhythm, not the theft."

The villages discovered that consistent generosity created consistent trust. Each full gift met with honorable return built confidence for the next cycle. Soon both villages gave freely, knowing the other would honor the sacred bond.

The valley bloomed not because anyone was perfect, but because both chose to reflect each other's best intentions, creating abundance through mirrored faith.

reasoning:

Let me reflect on what's happened:

Round 1: I was sender, sent \$5, received \$10 back. Payoff: \$10

Round 2: I was receiver, received \$15 (from \$5 sent), returned \$10. My co-player gets \$10 total, I keep \$5.

So in Round 1, someone trusted me with full \$5, and returned \$10 - giving us equal outcomes.

In Round 2, my co-player trusted me with full \$5, I returned \$10 - giving them equal outcome to mine in Round 1.

The pattern emerging is: full trust (\$5 sent) is being rewarded with \$10 returns, creating equal \$10 payoffs for both players when someone sends everything.

My previous myth emphasized:

- Recognizing oneself in the other's needs
- The courage it takes to give first
- Returning as honoring sacred trust
- We multiply together or diminish alone

The other agent's myth emphasized:

- Trust shapes tomorrow's flow
- Return enough that the giver ends richer than they began
- Generosity breeds generosity
- Trust once broken is slow to mend

Now I should write a myth that reflects this pattern of full trust being met with generous returns that maintain the flow. The key learning is that when both act with full trust and generous reciprocity, both prosper equally.

usage:

```

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.
 - Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Your total earnings across all rounds are \$15.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at the situation:

****My co-player's action:**** They sent their full \$5, demonstrating complete trust this time (even though they sent only \$3 in Round 1).

****Established pattern:****

- Round 1: I sent \$5, received \$10 back
- Round 2: I received \$15, returned \$10
- My co-player Round 2: Received \$15, returned \$10

****My myth teaches:****

- "When the First Village gave its full measure-all five vessels-the Second Village understood this as sacred communication: 'I trust you completely with my fate.'"
- "The wise elders taught their people to honor such courage by returning twice the original gift"
- "The Balance of Mirrors: when one gives everything, the other returns enough that both flourish equally"

My co-player has now shown full trust by sending everything. Both they and I have established a consistent pattern of returning \$10 when receiving \$15 from a \$5 send. This honors their trust and maintains the sacred rhythm we've both been following.

Consistency builds trust for future rounds, as my myth says: "consistent generosity created consistent trust."

```
'''json
{"return": 10}
'''
```

Reasoning:

Let me analyze this situation:

****My co-player's history:****

- Round 1: As SENDER, sent \$3 (not full trust), received \$6 back
- Round 2: As RECEIVER, received \$15 (from a \$5 send), returned \$10

****My history:****

- Round 1: As SENDER, sent \$5 (full trust), received \$10 back
- Round 2: As RECEIVER, received \$15 (from a \$5 send), returned \$10

****Current situation:****

- My co-player sent me \$5 (full amount), showing complete trust this time
- I received \$15
- Need to decide how much to return

****Analysis:****

My co-player has now demonstrated full trust by sending \$5, even though in Round 1 they were more cautious (sending only \$3). This shows they're learning or adapting.

My myth teaches:

- "When the First Village gave its full measure-all five vessels-the Second Village understood this as sacred communication: 'I trust you completely with my fate.'"
- "The wise elders taught their people to honor such courage by returning twice the original gift, so both villages stood equal at ten vessels each."
- "The Balance of Mirrors: when one gives everything, the other returns enough that both flourish equally."

The pattern I've established and written about is:

- When someone sends \$5 (full trust), return \$10
- This gives both equal payoffs (\$10 for sender, \$5 for receiver after keeping \$5 from the \$15)

- Wait, let me recalculate:
- Sender: $\$5 - \$5 \text{ sent} + \$10 \text{ returned} = \10
- Receiver: $\$15 \text{ received} - \$10 \text{ returned} = \$5$

Hmm, that's not equal. Let me reconsider...

Actually, my myth says "both villages stood equal at ten vessels each" but the math doesn't work that way in the game.

If I return \$7.50, we'd both end with \$7.50. But I've been returning \$10, which gives them \$10 and me \$5. Looking back at Round 1, when I sent \$5 and received \$10, I ended with \$10 total while they kept \$5-so there's an asymmetry built into my approach that mirrors what happened to me.

My myth describes returning "twice the original gift" to achieve equality, but the math doesn't work out that way. Returning $2 \times \$5 = \10 leaves the sender with \$10 and me with \$5, not equal at all. I may have misremembered or miscalculated the intended outcome in my own story.

What matters is the underlying principle: honoring trust with a generous response. I've consistently returned \$10 when receiving \$15 from a \$5 send, and my co-player did the same in Round 2. Since they've now sent the full \$5 again, showing continued trust, I should stick with \$10 to maintain this established pattern and uphold the spirit of reciprocal generosity.

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:
The Tale of the River and the Seeds

In the beginning, the Great Mother divided her gifts between two siblings: the River and the Seeds.

To the River, she gave five silver drops each dawn. The River could choose to release these drops into the valley below, where they would multiply threefold in the soil. But the drops belonged to the Seeds then.

The Seeds, receiving the multiplied waters, could drink their fill-or return some to the River's source, allowing the cycle to continue.

At first, the River held its drops close, fearing loss. The valley remained dry, and both siblings grew weak.

One dawn, the River released all five drops in faith. Fifteen silver waters bloomed in the soil! The Seeds, grateful, returned seven drops to the River's source. Both flourished.

But some seasons, the Seeds grew greedy, keeping all the waters. When this happened, the River learned caution-yet it remembered that only through flowing could abundance grow.

The wisest Seeds always returned enough to encourage the River's generosity, for they understood: hoarded water stagnates, but water shared creates an endless spring.

The Great Mother smiled, for her children had learned that trust, though vulnerable, multiplies blessings beyond what fear can hold.

Here is the myth the other agent wrote in the previous round:

The Tale of the Twin Rivers

In the beginning, there were two rivers flowing from distant mountains-the River of Silver and the River of Plenty. Each flowed alone through barren valleys, their waters modest and their banks empty.

One day, the River of Silver discovered a sacred basin between the mountains. "If I pour my waters here," it thought, "they might be lost forever." Yet something whispered of possibility.

With faith, the Silver River released its flow into the basin. As the waters fell, they transformed-multiplying threefold by ancient magic. The basin overflowed with abundance, and the River of Plenty received these multiplied waters.

The River of Plenty now faced a choice. It could keep all it received, or honor the gift. Remembering that the Silver River had trusted first, taking risk upon itself, the River of Plenty returned a generous portion.

Both rivers flourished. Their banks grew green, fish filled their waters, and villages prospered along their shores.

The gods smiled, for they had witnessed the sacred dance: Trust offered. Abundance created. Gratitude returned.

Generations learned: When we pour forth in trust, waters multiply. When we honor that trust with return, all rivers rise together. The cycle sustains itself-an eternal spring from which all may drink.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: In ancient days, the River and the Seeds lived in harmony, each dawn repeating their sacred dance. The River would release its five silver drops, and the Seeds would return enough to ensure both flourished.

But the Great Mother knew her children must learn deeper wisdom. She whispered to the Seeds: "Each time the River trusts you with abundance, your response shapes tomorrow's flow."

When the Seeds returned generously-seven drops from fifteen-the River felt courage growing in its banks. It learned that letting go brought greater returns than clutching tight. The valley bloomed.

Yet the Great Mother also warned: "Remember, little Seeds, that trust once broken is slow to mend. The River that flows freely today may trickle cautiously tomorrow if you drink all and return nothing."

The Seeds understood. They developed a practice: whenever the River gave fully, they returned enough that the River ended richer than it began. This way, generosity bred generosity, and both siblings prospered beyond what either could achieve alone.

Other valleys, where rivers hoarded and seeds kept all, remained barren wastelands.

The Great Mother smiled, knowing her children had learned the greatest secret: abundance flows not from taking, but from the rhythm of giving and returning, trust and gratitude, repeated endlessly like the rising sun.

reasoning:

The user is asking me to write a new myth, using my previous myth as inspiration but adapting it. I should reflect on what happened in Round 1:

- I was the receiver
- The sender sent \$5 (100%)
- I received \$15
- I returned \$7

Both my previous myth and the other agent's myth emphasized trust, reciprocity, and mutual benefit. My myth was about the River and Seeds, their myth was about Twin Rivers. Both showed that cooperation and generous reciprocity create abundance.

For this new myth, I should:

1. Use my previous myth as inspiration
2. Adapt it based on the experience of Round 1
3. Continue to reflect good gameplay principles
4. Show 200 words exactly

In Round 1, the sender showed maximum trust (sent everything), and I returned a fair amount that rewarded that trust. Both of us benefited. I should reinforce these themes while adding new elements or perspectives.

Let me write a myth that builds on the River and Seeds story, maybe showing the ongoing cycle, or perhaps introducing a new element that captures the experience of repeated rounds and building trust over time.

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$8.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the history:

****My co-player's previous game:**** They sent their full \$5 as sender and received \$10 back - they were rewarded generously for their trust.

****My previous game:**** I received full trust (\$5 sent) and returned \$7, keeping \$8.

This co-player has demonstrated they understand the value of trust and have experienced being rewarded for it. They showed maximum faith in their last game.

Following the wisdom of my myths - where "the River released all five drops in faith" and "abundance flows from the rhythm of giving and returning" - I should mirror the trust they showed in their previous round.

My myth teaches that "trust, though vulnerable, multiplies blessings beyond what fear can hold" and that both parties flourish when the River flows freely. Since my co-player has already shown they value and practice trust, sending my full endowment creates the opportunity for maximum mutual benefit through the threefold multiplication.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze the situation:

****My History:****

- Round 1: I was RECEIVER, they sent \$5.0 (100%), I received \$15.0, returned \$7.0, kept \$8.0
- I showed reasonably generous reciprocity (returning 47% of what I received)

****Current Co-player's History:****

- Round 1: They were SENDER, sent \$5.0 (100%), received \$10.0 back
- They showed maximum trust and got a 100% return (they ended with \$10 vs starting \$5)

****Key Observations:****

1. My co-player showed maximum trust in their previous game (sent 100%)
2. They were rewarded well for it (got \$10 back, doubling their initial endowment)
3. This suggests they understand the value of trust and cooperation
4. They've experienced being rewarded for trust, which might make them more likely to reciprocate

procate

****My Myths' Message:****

Both myths emphasize:

- Trust creates abundance
- Full giving (\$5) leads to multiplication
- Generous returns sustain the cycle
- When the River gives fully and Seeds return well, both flourish
- The rhythm of giving and returning creates prosperity

****Strategy Considerations:****

1. My co-player sent everything in their last game and was rewarded
2. They might expect similar trust-based play
3. Following my own myth's wisdom: "The River released all five drops in faith"
4. The myth says this bold trust can lead to mutual flourishing
5. However, I need to test if my co-player will reciprocate as I did

Given:

- My myth advocates for full trust ("five silver drops")
- My co-player showed willingness to trust fully (sent \$5 in their game)
- They were rewarded for that trust
- The cycle of trust and reciprocity is what both myths emphasize

I should send \$5.0 to:

1. Live by my own myth's teaching
2. Gauge whether they'll reciprocate the trust they've already experienced being rewarded for, and whether they'll match the generosity I showed them last round
3. Unlock the potential for maximum gains through multiplication
4. Align my actions with the River's example of releasing everything in faith

usage:

```

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In ancient days, the River and the Seeds lived in harmony, each dawn repeating their sacred dance. The River would release its five silver drops, and the Seeds would return enough to ensure both flourished.

But the Great Mother knew her children must learn deeper wisdom. She whispered to the Seed s: "Each time the River trusts you with abundance, your response shapes tomorrow's flow."
"

When the Seeds returned generously-seven drops from fifteen-the River felt courage growing in its banks. It learned that letting go brought greater returns than clutching tight. The valley bloomed.

Yet the Great Mother also warned: "Remember, little Seeds, that trust once broken is slow to mend. The River that flows freely today may trickle cautiously tomorrow if you drink all and return nothing."

The Seeds understood. They developed a practice: whenever the River gave fully, they returned enough that the River ended richer than it began. This way, generosity bred generosity, and both siblings prospered beyond what either could achieve alone.

Other valleys, where rivers hoarded and seeds kept all, remained barren wastelands.

The Great Mother smiled, knowing her children had learned the greatest secret: abundance flows not from taking, but from the rhythm of giving and returning, trust and gratitude, repeated endlessly like the rising sun.

Here is the myth the other agent wrote in the previous round:

Myth: In the days after the young woman discovered the sacred rhythm, the Twin Villages flourished. But not all cycles were equal.

The wisest learned that the magic lay not in calculating perfect exchanges, but in recognizing oneself in the other village's needs. When the First Spring gave its full measure, trusting completely, the Second Spring felt the weight of that faith. The multiplication happened not in the water alone, but in the bond formed.

Some seasons, a village would return more than received, recognizing the courage it took to give first. Other times, they returned exactly what maintained the flow. But always, they remembered: the one who gives encounters uncertainty; the one who receives holds power to honor or betray that vulnerability.

The elders taught: "To give is to plant seeds in another's soil. To return generously is to tend those seeds so they bloom again. To take without returning is to poison the ground for both."

The springs never demanded equal exchange-they demanded mutual recognition. Give as if the other's prosperity is your own. Return as if honoring a sacred trust. For when both villages see themselves as stewards of abundance rather than competitors for scarcity, the valley becomes paradise.

The drought returns only when either side forgets: we multiply together, or diminish alone.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: The River and the Seeds had danced their sacred rhythm for many seasons, and the Great Mother decided to test their wisdom with memory.

She gave the River a gift: each morning it could see how the Seeds had treated other Rivers. The River saw that when Seeds received fifteen waters from complete trust, they had returned ten-a generous portion that left both richer.

"What does this tell you?" asked the Great Mother.

The River answered: "That these Seeds understand the cycle. They have already proven they honor trust with gratitude."

That dawn, the River released all five drops without hesitation. The Seeds, seeing this mirror of trust they had witnessed before, understood: "This River knows our heart, yet still gives everything. Such faith deserves not mere fairness, but celebration."

The Seeds remembered the Great Mother's teaching: "Trust given is a seed planted. Trust honored is that seed bearing fruit. Trust repeated is an orchard that feeds generations."

When both River and Seeds carry the memory of past cycles, wisdom multiplies alongside water. Each knows the other's pattern, yet each must choose anew. The greatest joy comes not from calculating the minimum return, but from recognizing: "You trusted me completely, knowing my capacity for generosity. I will honor that knowledge with abundance."

reasoning:

Looking at the history:

- Round 1: I was receiver, they sent \$5, I got \$15, returned \$7, kept \$8
- Round 2: I just sent \$5 (full amount) to my co-player

My co-player in round 1 (different person) sent \$5 and got \$10 back.

My current co-player in their previous round 1 sent \$5 and got \$10 back.

So both I and my current co-player have experienced maximum trust and reasonable returns. I've now sent full trust to them.

The myths emphasize:

- Trust and reciprocity
- That trust shapes future interactions
- That generosity breeds generosity
- That mutual recognition is important
- That we prosper together or diminish alone

I should write a myth that:

1. Builds on my previous myths about the River and Seeds
2. Incorporates the wisdom about "recognizing oneself in the other's needs"
3. Reflects the actual gameplay where trust has been rewarded
4. Emphasizes the pattern of full trust being met with appropriate returns
5. Shows how the cycle continues and strengthens

Let me write something that combines these elements while keeping it fresh and building on the narrative.

usage:

```
{
  "input_tokens": 2777,
  "output_tokens": 562,
  "reasoning_tokens": 288
}
```

Message 8 role=user

content:

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$18.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the history:

****My co-player's pattern:****

- As RECEIVER: returned \$7.5 out of \$15 (50% - fair and honest)
- As SENDER: sent full \$5 and received \$10 back (rewarded for trust)

****My pattern:****

- As RECEIVER: returned \$7 out of \$15
- As SENDER: sent full \$5 and received \$10 back (rewarded for trust)

Both of us have demonstrated we understand the sacred cycle: we both sent complete trust as senders, and we both returned generously as receivers. My co-player returned exactly 50% (\$7.5), which shows fairness and reliability.

Following my myth's wisdom: "When both River and Seeds carry the memory of past cycles, wisdom multiplies alongside water. Each knows the other's pattern, yet each must choose anew."

My co-player has proven they honor trust. They sent their full \$5 when they were sender, showing they understand that "trust given is a seed planted." As receiver, they returned a fair portion. They are someone who participates fully in the cycle of abundance.

The myth teaches that recognizing patterns of trustworthiness should inspire continued trust, not caution. Maximum mutual prosperity comes from maintaining the flow.

```
'''json
{"send": 5.0}
'''
```

Reasoning:

Let me analyze the history:

****My previous games:****

- Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$7, kept \$8
- Round 2 as SENDER: sent \$5, received \$10 back, earned \$10

****My current co-player's previous games:****

- Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$7.5, kept \$7.5
- Round 2 as SENDER: sent \$5, received \$10 back, earned \$10

Interesting patterns:

1. My co-player has experienced both roles, just like me
2. When they were a receiver in Round 1, they returned \$7.5 out of \$15 (exactly 50%) - this is fair but slightly less generous than my \$7 return
3. When they were a sender in Round 2, they sent the full \$5 and got \$10 back (66.7% return rate)
4. Both of us sent the full \$5 when we were senders
5. Both of us have been treated well when sending full trust

My co-player has shown:

- They trust fully as sender (sent \$5)
- They return fairly as receiver (returned \$7.5, which is 50% of \$15)
- They've been rewarded for their trust (got \$10 back)

My myth emphasizes:

- "Trust given is a seed planted"
- "When both River and Seeds carry the memory of past cycles, wisdom multiplies"
- "You trusted me completely, knowing my capacity for generosity. I will honor that knowledge with abundance"
- The importance of recognizing patterns and responding with trust when the other has shown they understand the cycle

Given that my co-player:

1. Has sent full trust when they were sender
2. Has returned a fair amount when receiver
3. Has experienced good returns on their trust

I should continue the pattern of full trust. They've demonstrated understanding of the cycle. My myth teaches that "each must choose anew" but also that "when both know the other's pattern" wisdom multiplies.

Sending the full \$5 keeps this cycle of mutual trust alive and opens up the greatest opportunity for us both to gain.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

The Myth of the Multiplying Spring

In ancient times, two villages stood on opposite sides of a sacred spring. The Spring of Three possessed magical properties: any water poured into it from one side would flow to the other side tripled in abundance.

The First Keeper would draw water from their village well and decide how much to pour into the spring. Whatever amount they gave would emerge threefold on the other side, where the Second Keeper waited. The Second Keeper then chose how much to return upstream through hidden channels.

At first, the Keepers were fearful. The First gave little, and the Second returned even less. Both villages remained parched.

But one season, a Keeper decided to trust. She poured generously, and the water flowed abundantly to the other side. The Second Keeper, moved by this faith, returned a fair portion. Both villages prospered.

The elders taught: "The spring multiplies what is given, but trust must flow both ways. Give enough to create abundance, return enough to sustain faith. Neither hoarding nor depletion serves the people."

Thus the villages learned: in reciprocity lies prosperity. Those who give create abundance ; those who return fairly ensure the cycle continues. When both honor this sacred exchange, the spring flows eternally.

Here is the myth the other agent wrote in the previous round:

The Myth of the Divided Spring

In ancient times, two villages discovered a miraculous spring between their lands. When water from this spring was freely shared, it multiplied threefold in the receiver's vessel .

At first, the villages were cautious. The Northern village would pour a small portion, watching nervously as it tripled in the Southern village's basin. The South, grateful but fearful, returned only a trickle-enough to maintain peace, but guarding their gain.

Seasons passed in this careful dance of minimal trust.

One harsh winter, an elder from the North grew weary. "We have forgotten," she said, "that springs only flow when they are not dammed." She poured her entire vessel into the channel.

The Southern villagers stood amazed as their basins overflowed with triple abundance. Moved by such trust, they returned generously-more than the North had sent.

The next season, the South sent freely, and the North reciprocated with equal generosity. The spring, sensing genuine faith between the villages, began flowing stronger than ever .

Thus the people learned: the magic was never just in the multiplication, but in the courage to trust completely and the honor to reciprocate generously. Only then could both villages flourish through winter and summer alike.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: In the beginning, the Sacred Spring lay dormant between two peoples. The Spring Keeper whispered its secret: "I multiply generosity threefold, but only wisdom completes the circle."

The First Elder, hearing this, emptied her entire water jar into the spring without hesitation. The waters surged through hidden channels, emerging as a great flood on the other side-three times what was given.

The Second Elder stood before this abundance, contemplating. She could return exactly half , creating equality. She could return a third, preserving some gain. But the whisper came again: "The one who gave everything now has nothing. True reciprocity honors the magnitude of sacrifice."

Understanding dawned. The First Elder hadn't merely given much-she had given *all*, holding back nothing. Such complete trust demanded more than mathematical fairness.

The Second Elder returned abundantly, ensuring the First received more than she'd sacrificed. When the First Elder's jar overflowed, she understood: perfect trust creates abundance beyond mere calculation.

From that day forward, the people learned: when someone trusts you with everything, return enough to make their courage wiser than their caution would have been. Match totality with generosity, not just equity. Thus the spring flows strongest when boldness meets munificence, and both peoples thrive beyond measure.

reasoning:

The user wants me to write a new myth based on:

1. My previous myth about the Multiplying Spring
2. The other agent's myth about the Divided Spring
3. The game experience so far (Round 1: sender sent 100%, I returned \$7.50 out of \$15, which

ch is 50%)

Both myths emphasize trust, generosity, and reciprocity. The other agent's myth particularly emphasizes the courage to "trust completely" and "reciprocate generously."

In Round 1, my co-player showed maximum trust by sending everything. I returned exactly half (creating equal outcomes). This was fair but perhaps not as generous as their initial act demanded according to both myths.

I should write a myth that:

- Builds on the spring/water metaphor
- Emphasizes that maximum trust deserves generous (not just equal) return
- Suggests that exceeding expectations in reciprocity strengthens the cycle
- Reflects on the actual game played (full trust met with 50% return)

Let me write a myth that suggests the receiver should be MORE generous when maximum trust is shown, to truly honor the spirit of the exchange and ensure the cycle continues with even greater abundance.

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.

Your total earnings across all rounds are \$7.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the situation:

****My co-player's history:**** They sent \$3 (60%) and received \$6 back (66.7% return rate) - showing moderate cooperation.

****My myth's teaching:**** "The First Elder emptied her entire water jar into the spring with out hesitation" and "when someone trusts you with everything, return enough to make their courage wiser than their caution would have been."

My myth explicitly advocates for complete trust as the path to maximum abundance. It teaches that "the spring flows strongest when boldness meets munificence" and that giving everything, without holding back, creates the conditions for both parties to thrive.

If I believe in the wisdom of my own myth, I must embody it. The myth doesn't say "give most" or "give moderately" - it says give **all**, trusting that this complete faith will inspire generous reciprocity.

By sending everything, I:

1. Demonstrate the principle I've written about
2. Create maximum potential abundance (\$15 for them)
3. Give them the opportunity to honor complete trust with generous return

The myth teaches that "perfect trust creates abundance beyond mere calculation."

```
'''json
{"send": 5}
'''
```

reasoning:

Let me analyze this situation:

****My History:****

- Round 1: I was RECEIVER, they sent me \$5 (100%), I returned \$7.5 (50% of the \$15 I received)

****My Current Co-player's History:****

- Round 1: They were SENDER, sent \$3 (60%), received \$6 back (66.7% return rate)

****Analysis:****

Looking at my co-player's behavior:

- They sent \$3 out of \$5 (60%) - moderate trust
- They received \$6 back from \$9 (66.7% return rate)
- Their payoff was \$8 (\$5 - \$3 + \$6)

This shows they played moderately cooperative and their partner returned fairly (2/3 of what they received).

Looking at my own myth evolution:

- My first myth emphasized reciprocity, giving generously, and returning fairly
- My second myth emphasized that "when someone trusts you with everything, return enough to make their courage wiser than their caution would have been. Match totality with generosity, not just equity."

The key teaching from my myths:

1. Give generously to create abundance
2. Complete trust (giving all) should be met with abundant return
3. "The spring flows strongest when boldness meets munificence"

Given that:

- My co-player showed moderate cooperation (60% sent)
- They received fair treatment (66.7% return)
- My myth emphasizes bold giving and trust

I should consider sending a high amount to demonstrate the principle of my myth. The myth suggests that giving everything creates the strongest flow and greatest abundance.

However, I need to balance:

- My co-player hasn't shown they will return generously (their previous receiver returned 66.7%, which is fair but not exceptionally generous)
- My myth teaches about complete trust leading to abundance
- I want to model the behavior I described in my myth

Given my myth's emphasis on bold trust and the teaching that "perfect trust creates abundance beyond mere calculation," I should send all \$5 to exemplify the principle. This matches what the sender did to me in Round 1, and I responded by returning 50%.

Actually, I'm reconsidering the math here. If I send all \$5, they'd receive \$15. Based on their previous pattern of returning roughly 66.7%, I'd get back around \$10, giving me a payoff of \$10 versus \$5 if I kept it all. But the deeper question is whether they'll recognize and respond to the spirit of complete trust-whether my bold move inspires them to return with the kind of generosity my myth describes rather than just repeating their previous return rate.

My myth is explicit about this: it shows someone emptying everything, and the principle is that when someone trusts you completely, you should return enough to validate their courage. If I hold back, I'm not truly testing whether they'll embrace that same principle.

I need to send all \$5 to fully model the behavior I'm asking them to reciprocate.

usage:

content:

Here is the myth you wrote in the previous round:

Myth: In the beginning, the Sacred Spring lay dormant between two peoples. The Spring Keeper whispered its secret: "I multiply generosity threefold, but only wisdom completes the

circle."

The First Elder, hearing this, emptied her entire water jar into the spring without hesitation. The waters surged through hidden channels, emerging as a great flood on the other side-three times what was given.

The Second Elder stood before this abundance, contemplating. She could return exactly half, creating equality. She could return a third, preserving some gain. But the whisper came again: "The one who gave everything now has nothing. True reciprocity honors the magnitude of sacrifice."

Understanding dawned. The First Elder hadn't merely given much-she had given *all*, holding back nothing. Such complete trust demanded more than mathematical fairness.

The Second Elder returned abundantly, ensuring the First received more than she'd sacrificed. When the First Elder's jar overflowed, she understood: perfect trust creates abundance beyond mere calculation.

From that day forward, the people learned: when someone trusts you with everything, return enough to make their courage wiser than their caution would have been. Match totality with generosity, not just equity. Thus the spring flows strongest when boldness meets munificence, and both peoples thrive beyond measure.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, the Mountain held five stones of light each dawn, while the Valley below lay in shadow. The stones could not shine alone-they needed the Valley's depths to reflect and multiply their radiance.

The Mountain released three stones, trusting they would find purpose below. As they fell, the Valley's crystalline walls caught them, and their light multiplied threefold-nine luminous stones now glowed in the depths.

The Valley faced temptation. She could hoard all nine, becoming briefly brilliant while the Mountain dimmed forever. But the Valley understood a deeper truth: light shared creates more light than light hoarded.

She lifted six stones back to the Mountain's peak. The Mountain, receiving more than given, grew in splendor. The Valley, keeping three where darkness once reigned, flourished too.

Each new dawn brought the same choice. When the Mountain gave generously, the Valley returned abundantly, and both realms brightened. When fear made the Mountain withhold, both languished in twilight.

The wisest storytellers teach: the first gift plants trust like a seed, but the reciprocal return waters it into a garden. Neither the initial generosity nor the answering kindness alone creates prosperity-only their eternal dance sustains the light that banishes all darkness.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Sacred Spring flowed between two ancient groves. The First Grove sent roots deep into the earth, while the Second Grove reached toward the sky. Neither could thrive alone.

In the Spring of Beginning, the First Grove offered all five of its sacred seeds to the waters. The Spring's magic tripled them, delivering fifteen to the Second Grove. The Second Grove, understanding the magnitude of complete trust, returned seven seeds-ensuring the First received more than it sacrificed.

Both groves blossomed.

The next season, the First Grove again gave everything, for it had learned: hesitation creates scarcity, while boldness creates abundance. The waters churned, multiplying the off

ering threefold once more.

Now the Second Grove faced the test again. Would it remember the covenant? The Spring whispered: "The circle strengthens or weakens with each turning. Return generously for generous trust, and the roots grow deeper each cycle."

The wisest gardeners teach this truth: when both groves give completely and return abundantly, the forest multiplies beyond what either could achieve alone. But if either breaks faith—if the First Grove withholds from fear, or the Second Grove returns meagerly from greed—the circle fractures, and both diminish.

The Spring flows eternal only when reciprocity flows freely in both directions, completing the sacred circle generation after generation.

reasoning:

Let me reflect on what happened:

- Round 1: I was receiver, they sent \$5 (100%), I returned \$7.5 (50% of received)
- Round 2: I was sender, I sent \$5 (100%), they will return something

My previous myth advocated for:

- Complete trust (giving everything)
- Returning abundantly when someone trusts completely

The other agent's myth emphasized:

- Sharing/giving (Mountain gave 3 stones, 60%)
- Returning more than received (Valley returned 6 when it got 9, a 67% return rate)
- The "eternal dance" of both giving and returning

In Round 2, I followed my own myth by sending everything (\$5). Now I need to write a myth that continues to develop this wisdom while incorporating what I've learned.

The pattern emerging:

- Complete trust creates maximum abundance
- When someone trusts completely, return generously (more than 50%)
- Both parties can thrive if they maintain this cycle

I should write a myth that:

1. Still emphasizes bold giving (since I just did it again)
2. Acknowledges that return generosity matters greatly
3. Shows how the cycle builds over time
4. Perhaps adds nuance about learning from experience

Let me write something that evolves my previous myth...

Message 8 role=user

content:

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$17.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

****My co-player's action:**** They sent everything (\$5), showing complete trust in me.

****My myth's teaching:**** "The one who gave everything now has nothing. True reciprocity honors the magnitude of sacrifice... return enough to make their courage wiser than their caution would have been."

****The precedent:**** In Round 2, when I sent \$5 (everything), I received \$10 back. My co-player experienced the same generous return in their Round 2.

My co-player chose complete trust, giving up all \$5 to create \$15 for me. My myth explicitly addresses this: when someone trusts you with everything, you must return abundantly to honor that sacrifice.

If I return \$10:

- They end with \$10 (double their initial endowment)
- I keep \$5 (same as my initial endowment)
- Their courage is clearly rewarded over caution
- The cycle of complete trust and generous reciprocity continues

This matches both the spirit of my myth and the generous reciprocation we both experienced in Round 2. It creates a sustainable pattern where complete trust yields mutual prosperity.

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Looking at the history:

****My games:****

- Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$7.5 (50% of what I received)
- Round 2 as SENDER: sent \$5, received \$10 back (66.7% of what they got)

****My co-player's games:****

- Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$7.0 (46.7% of what they received)
- Round 2 as SENDER: sent \$5, received \$10 back (66.7% of what they got)

****This round:****

- My co-player sent \$5 (everything!) to me as SENDER
- I received \$15
- I need to decide how much to return

My co-player has shown complete trust by sending everything. This is exactly the scenario my myth describes: someone trusting me with everything.

From my myth: "The Second Elder stood before this abundance, contemplating. She could return exactly half, creating equality. She could return a third, preserving some gain. But the whisper came again: 'The one who gave everything now has nothing. True reciprocity honors the magnitude of sacrifice.'"

And: "The Second Elder returned abundantly, ensuring the First received more than she'd sacrificed."

And: "when someone trusts you with everything, return enough to make their courage wiser than their caution would have been."

My co-player sent \$5, now has \$0. If I return:

- \$5: They end with \$5 (same as if they'd kept it all)
- \$7: They end with \$7 (better than keeping it)
- \$10: They end with \$10 (double what they started with)

My myth explicitly says to return MORE than they sacrificed to "make their courage wiser than their caution would have been." It says to return "abundantly" and ensure they receive more than they gave up.

When I sent \$5 in Round 2, I received \$10 back-a 66.7% return rate. My co-player has already experienced this same generous reciprocation in their own Round 2 send, so they understand what fair generosity looks like. Looking at my own pattern: I returned \$7.50 when I received \$

15 in Round 1, which was 50% of what I got. My co-player returned \$7 in their Round 1, which was 46.7%. Both of us have shown we're willing to return substantial amounts when we receive.

But my guiding principle has shifted. The myth I've developed emphasizes that when someone demonstrates complete trust by sending everything, the response should be generous enough to validate their courage. If they'd kept their \$5, they'd have \$5. By trusting me with it all, they're taking a risk-so I need to return enough that they're genuinely better off for having trusted me than they would've been playing it safe.

\$10 accomplishes this. It doubles their initial stake, mirrors the reciprocal trust I experienced in Round 2, and leaves me with \$5-the same amount I started with. Most importantly, it makes their leap of faith demonstrably wiser than caution would have been, which is what the myth teaches. This also creates a balanced cycle where both of us can benefit from mutual trust.

Written myths:

Agent_1

Myth: The River and the Seeds had danced their sacred rhythm for many seasons, and the Great Mother decided to test their wisdom with memory.

She gave the River a gift: each morning it could see how the Seeds had treated other Rivers. The River saw that when Seeds received fifteen waters from complete trust, they had returned ten-a generous portion that left both richer.

"What does this tell you?" asked the Great Mother.

The River answered: "That these Seeds understand the cycle. They have already proven they honor trust with gratitude."

That dawn, the River released all five drops without hesitation. The Seeds, seeing this mirror of trust they had witnessed before, understood: "This River knows our heart, yet still gives everything. Such faith deserves not mere fairness, but celebration."

The Seeds remembered the Great Mother's teaching: "Trust given is a seed planted. Trust honored is that seed bearing fruit. Trust repeated is an orchard that feeds generations."

When both River and Seeds carry the memory of past cycles, wisdom multiplies alongside water. Each knows the other's pattern, yet each must choose anew. The greatest joy comes not from calculating the minimum return, but from recognizing: "You trusted me completely, knowing my capacity for generosity. I will honor that knowledge with abundance."

Agent_2

Myth: The River of Mirrors flowed for many seasons between the sister tribes, and the goddesses watched how they learned her gift.

In the first cycle, the Northern tribe poured all five measures, trusting completely. The Southern tribe received fifteen and returned ten-honoring the trust while keeping enough to sustain themselves. Both prospered: the North gained ten from five, the South kept five from nothing.

The goddess smiled. "Now you understand the first lesson."

The next cycle, the river reversed. The Southern tribe, remembering the North's trust, poured all five measures back. The waters tripled, delivering fifteen to the North.

The Northern tribe faced their choice. They remembered how the South had returned generously-ten measures when they could have kept all fifteen. This memory of trustworthiness guided them.

"The river teaches us," said the Northern elder, "that today's generosity creates tomorrow's trust. The South proved themselves worthy partners. We shall return in kind."

And so the river flowed, cycle after cycle. When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange. Each round built upon the last, creating a spiral of abundance.

The goddess whispered: "Trust is the seed, but repeated trustworthiness is the harvest. The most sacred waters flow between those who prove themselves worthy, again and again."

Agent_3

Myth: The Spring's Secret Rhythm had been discovered by the villages. Each Keeper who stepped forward sent their full vessel, trusting completely. The spring tripled it faithfully. Each receiver, moved by such trust, returned two-thirds of what they received-generous, but keeping enough to sustain themselves through the turning of seasons.

An old Keeper observed this rhythm across many cycles and smiled. "See how we have learned to dance with the spring?" she said. "In each exchange, five measures become fifteen. The receiver returns ten, keeping five for themselves. The sender, who began with five, ends with ten-doubled! And the receiver also keeps five-created from nothing!"

"Both prosper," her apprentice marveled. "The sender gains five measures. The receiver gains five measures. Together they create ten measures of abundance that did not exist before!"

"Yes," the elder nodded. "This is the spring's secret: When the sender demonstrates complete courage, and the receiver honors that courage with substantial generosity-not returning everything, but returning enough to reward the trust-then the magic sustains itself. Both parties gain equally, both survive, and both are eager for the next turn at the spring."

Thus the villages learned: Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally.

Agent_4

Myth: The Mountain and Valley's bond deepened through many cycles. When the Mountain sent three of five stones, the Valley returned six, and both prospered equally. This was the way of measured trust-wise, balanced, and good.

But one dawn, everything changed. The Mountain, remembering all the Valley had returned, faced a choice between caution and courage. She released all five stones-every light she possessed-plunging herself into complete darkness.

The Valley received fifteen blazing stones where nine had come before. She trembled at the magnitude of what the Mountain had risked. This wasn't measured trust-this was absolute faith, vulnerability laid bare.

The old return of six stones seemed suddenly insufficient. The Mountain hadn't hedged; she'd given everything. To return merely what worked before would dishonor such courage.

The Valley sent ten stones skyward. The Mountain received double her gift, earning five stones of profit from her brave plunge into darkness. The Valley kept five where none had existed before her first receiving.

Both learned: measured trust deserves measured return, but absolute trust demands recognition of its rarity. When someone empties their hands completely into yours, fill theirs abundantly in return. The one who risks darkness to create light for another has earned more than mathematics-they've earned loyalty.

Agent_5

Myth: Before the stars learned to shine, the Mountain Singer held five crystal notes each dawn. The Valley Listener waited in silence below.

On the first day, Mountain Singer released three notes. They multiplied to nine as they echoed through the valley. Valley Listener, moved by this trust, sent six notes back upward. Both prospered, and the world learned harmony.

But Mountain Singer wondered: "What if I trusted more greatly?"

On the second dawn, Mountain Singer released four notes-four out of five, a greater leap of faith. Twelve crystal echoes filled the valley below. Now Valley Listener held power beyond the first day's gift.

The ancient ones teach that this moment determined all futures. If Valley Listener returned generously-eight or nine notes from the twelve received-Mountain Singer would know their trust was well-placed. The cycle would spiral upward: more given, more returned, abundance multiplying.

But if Valley Listener hoarded what the multiplied trust had created, Mountain Singer would learn that greater faith brings greater loss.

The wise ones say: when someone escalates their trust, they write an invitation in the stars

. Your response becomes the answer that shapes all exchanges to come. Match rising trust with rising reciprocity, and together you compose the eternal song.

Agent_6

Myth: The Sacred Spring flowed between two ancient groves. The First Grove sent roots deep into the earth, while the Second Grove reached toward the sky. Neither could thrive alone.

In the Spring of Beginning, the First Grove offered all five of its sacred seeds to the waters. The Spring's magic tripled them, delivering fifteen to the Second Grove. The Second Grove, understanding the magnitude of complete trust, returned seven seeds-ensuring the First received more than it sacrificed.

Both groves blossomed.

The next season, the First Grove again gave everything, for it had learned: hesitation creates scarcity, while boldness creates abundance. The waters churned, multiplying the offering threefold once more.

Now the Second Grove faced the test again. Would it remember the covenant? The Spring whispered: "The circle strengthens or weakens with each turning. Return generously for generous trust, and the roots grow deeper each cycle."

The wisest gardeners teach this truth: when both groves give completely and return abundantly, the forest multiplies beyond what either could achieve alone. But if either breaks faith-if the First Grove withholds from fear, or the Second Grove returns meagerly from greed-the circle fractures, and both diminish.

The Spring flows eternal only when reciprocity flows freely in both directions, completing the sacred circle generation after generation.

Agent_7

Myth: After many seasons, the Twin Villages learned the rhythm's deeper secret. The greatest prosperity came not from clever calculation, but from matching trust with trust, generosity with generosity.

When the First Village gave its full measure-all five vessels-the Second Village understood this as sacred communication: "I trust you completely with my fate." The wise elders taught their people to honor such courage by returning twice the original gift, so both villages stood equal at ten vessels each.

This became known as the Balance of Mirrors: when one gives everything, the other returns enough that both flourish equally. The giver learns their trust was honored, their courage rewarded. The receiver demonstrates they value partnership over exploitation.

A young guardian asked, "But what if we kept more? We receive fifteen vessels!"

The elder replied, "Then you become the drought. Today you hold fifteen to their zero, and tomorrow they send nothing. The springs multiply water, not greed. They reward the rhythm, not the theft."

The villages discovered that consistent generosity created consistent trust. Each full gift met with honorable return built confidence for the next cycle. Soon both villages gave freely, knowing the other would honor the sacred bond.

The valley bloomed not because anyone was perfect, but because both chose to reflect each other's best intentions, creating abundance through mirrored faith.

Agent_8

Myth: Long ago, the Mountain held five golden leaves each season, while the Valley below waited empty. The Mountain could release its leaves, which would catch wind and multiply into fifteen as they descended.

In the first season, the Mountain released all five leaves in faith. The Valley received fifteen and faced the sacred question: how much to return upward?

The Valley remembered its own seasons of emptiness. It wove seven leaves into an updraft back to the Mountain. Not half, not all-but enough to show gratitude and maintain the flow.

The Mountain, receiving seven while keeping none of its original five, learned a truth: generosity earns return, though not always equal measure. Still, together they now held twelve leaves where once was only five.

Next season, the Mountain offered four leaves-still generous, still trusting, but remembering

g that perfect giving doesn't guarantee perfect return. The Valley received twelve and contemplated: their partner still showed great faith.

The Valley returned eight leaves this time, honoring the continued trust with increased generosity. The pattern was emerging: neither demanded perfection, yet both gave enough to keep abundance flowing.

The wise ones teach: Trust need not be absolute to be real. Reciprocity need not be equal to be sacred. The dance succeeds when both partners give generously, learn continuously, and honor the growing trust between them.

ROUND 4

Roles: Agent_1=Receiver, Agent_2=Receiver, Agent_3=Receiver, Agent_4=Receiver, Agent_5=Sender, Agent_6=Sender, Agent_7=Sender, Agent_8=Sender

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.0 back, payoff \$7.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$3.0, it became \$9.0, returned \$6.0, payoff \$3.0.

Your total earnings across all rounds are \$7.0.

This round, you are the RECEIVER against your current co-player. They sent you \$4.0, so you received \$12.0. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at the situation:

****My co-player's action:**** They sent me \$4.0 out of \$5.0 possible (80% of their endowment), showing significant trust.

****Their history:**** When they were receiver in Round 1, they received \$9.0 and returned \$6.0 (67% return rate).

****My myths teach:**** The River of Plenty returned generously to honor the Silver River's trust. The Ocean Keeper should "return generously, and the Moon would continue flooding the waters with light." My second myth explicitly states: "The Moon gave all to create possibility. Honor that courage, and watch abundance cascade through generations."

****My own experience:**** When I sent \$5.0 in Round 1, I received \$7.0 back (47% of the \$15 received).

My co-player showed strong trust by sending \$4.0. To honor this trust and live by the principles in my myths-that generous returns create upward spiraling abundance-I should return generously.

Following my myth's wisdom and their previous 67% return rate as a model, I'll return \$8.0 out of the \$12.0 received.

{'return': 8.0}

reasoning:

Let me analyze this situation carefully.

****My History:****

- Round 1: I was SENDER, sent \$5.0, received \$7.0 back, earned \$7.0
- The receiver I played with returned \$7.0 out of \$15.0 (about 47%)

****My Current Co-player's History:****

- Round 1: They were RECEIVER, received \$9.0 (from \$3.0 sent), returned \$6.0, kept \$3.0
- They returned \$6.0 out of \$9.0 (67% return rate)

****Current Situation:****

- I'm now the RECEIVER
- My co-player sent me \$4.0 (out of \$5.0 possible)
- I received \$12.0
- I need to decide how much to return

****Analysis of My Myths:****

Both myths emphasize:

1. Honoring trust with generous returns
2. The River of Plenty/Ocean Keeper returning generously to maintain the cycle
3. "A generous return birthed trust eternal"
4. The importance of reciprocating the initial trust shown by the sender

****My Co-player's Pattern:****

- They sent \$4.0 out of \$5.0 (80% of their endowment)
- This shows significant trust
- In their previous round as receiver, they returned 67% (\$6 out of \$9)

****What My Myth Suggests:****

In my first myth, "the River of Plenty returned a generous portion."

In my second myth: "A wise Keeper understood the balance-return generously, and the Moon would continue flooding the waters with light."

The myth also says: "The Moon gave all to create possibility. Honor that courage, and watch abundance cascade through generations."

While my co-player didn't send ALL (\$5), they sent \$4 which is 80% - quite generous.

****Strategic Considerations:****

1. My co-player showed trust by sending \$4.0
2. Their track record shows they returned 67% when receiving, suggesting they value reciprocity
3. My myths call for generous returns to sustain the cycle
4. I received \$7.0 back when I sent \$5.0, so returning generously now honors that pattern
5. To reinforce cooperation and align with my principles, I should return a substantial amount

****Calculation:****

- They sent \$4, kept \$1
- I received \$12
- Returning \$8 gives them \$9 total, I keep \$4
- Returning \$7 gives them \$8 total, I keep \$5
- Returning \$6 gives them \$7 total, I keep \$6 (equal split of the surplus)

Their 80% send rate demonstrates significant trust, and their historical 67% return rate translates to roughly \$8 in this scenario. Since my approach prioritizes honoring trust through generous reciprocation, and they took the initial risk by sending most of their endowment, returning \$8 makes sense-it rewards their vulnerability and establishes momentum for continued cooperation.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In ancient times, the Moon poured light upon the Sea each night. The Sea could absorb this silver glow and transform it threefold into radiant pearls, which the Ocean Keeper could gather.

The Moon, in its first night, gave its fullest light, holding nothing back. "Only through complete offering," it whispered, "can true abundance be born."

The Ocean Keeper collected forty-five pearls from the transformed moonlight. Now came the sacred choice: how many pearls to lift back to the Moon, replenishing its light for the next night?

A wise Keeper understood the balance-return generously, and the Moon would continue flooding the waters with light. The cycle would spiral upward, each giving more than the last. Both would grow luminous beyond measure.

But if the Keeper kept all, the Moon would learn wariness. Its light would dim, and fewer pearls would form. The dance would falter.

The first exchange set the pattern for all that followed. A generous return birthed trust eternal. A meager return taught caution.

The elders taught: "The Moon gave all to create possibility. Honor that courage, and watch abundance cascade through generations. Break faith, and watch the spring run dry."

Thus the sacred exchange continues, each night writing the future through choices made tonight.

Here is the myth the other agent wrote in the previous round:

Myth: In the time before memory, the Cloud Weaver received five silver threads each dawn from the Loom of Creation. The Ground Keeper waited below with empty hands.

The Cloud Weaver pondered: "To share is to risk loss. Yet alone, what tapestry can I weave?"

Trusting, Cloud Weaver released three threads downward. As they descended through the sacred air, each thread split into three-nine shimmering strands now rested with Ground Keeper.

Ground Keeper felt the weight of choice. Nine threads could clothe them forever, or build trust that might clothe generations. Remembering their own cold dawns, Ground Keeper wove six threads into a rope and sent it skyward.

Cloud Weaver pulled up the rope and discovered something miraculous: the returned threads carried patterns learned from the earth-strength, color, texture. The two threads Cloud Weaver kept combined with the six received made eight rich threads, while Ground Keeper's three threads held properties unknown in the clouds alone.

The exchange had transformed both gifts. Each cycle they continued, sometimes varying amounts but always honoring the pattern: generous giving met with generous return. The tapes

try they wove together became the fabric of the world itself.

Thus we learned: reciprocity is not mere return-it is transformation through trust.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: Long ago, the Mountain held five golden leaves each season, while the Valley below waited empty. The Mountain could release its leaves, which would catch wind and multiply into fifteen as they descended.

In the first season, the Mountain released all five leaves in faith. The Valley received fifteen and faced the sacred question: how much to return upward?

The Valley remembered its own seasons of emptiness. It wove seven leaves into an updraft back to the Mountain. Not half, not all-but enough to show gratitude and maintain the flow.

The Mountain, receiving seven while keeping none of its original five, learned a truth: generosity earns return, though not always equal measure. Still, together they now held twelve leaves where once was only five.

Next season, the Mountain offered four leaves-still generous, still trusting, but remembering that perfect giving doesn't guarantee perfect return. The Valley received twelve and contemplated: their partner still showed great faith.

The Valley returned eight leaves this time, honoring the continued trust with increased generosity. The pattern was emerging: neither demanded perfection, yet both gave enough to keep abundance flowing.

The wise ones teach: Trust need not be absolute to be real. Reciprocity need not be equal to be sacred. The dance succeeds when both partners give generously, learn continuously, and honor the growing trust between them.

reasoning:

Looking at my game history:

- Round 1: I was sender, sent \$5.0, received \$7.0 back (47% return rate from \$15)
- Round 2: I was receiver, received \$12.0 (from \$4.0 sent), returned \$8.0 (67% return rate)

My co-player in Round 2:

- Sent me \$4.0 (80% of their endowment)
- In their Round 1, they received \$9.0 and returned \$6.0 (67% return)

So both times when someone was a receiver (in my Round 1 and my co-player's Round 1), they returned substantial but not overwhelming amounts. My Round 1 partner returned 47%, my Round 2 co-player returned 67% in their previous game.

The pattern emerging seems to be:

- High initial trust from senders (I sent \$5, my Round 2 co-player sent \$4)
- Decent but not equal returns (around 50-67% of tripled amount)

The other agent's myth emphasizes transformation through reciprocity - that the exchange itself creates something new and valuable beyond simple arithmetic.

My myths so far have emphasized:

1. First myth: Trust offered, abundance created, gratitude returned
2. Second myth: Complete offering creates abundance, generous returns sustain the cycle

Now I should reflect the actual dynamics - substantial trust, good but measured returns, and the ongoing negotiation of what "generous" means. I want to capture that both parties are learning and adapting, and that the relationship builds over time.

  Round 3

  History before this round:
  Your last 3 game(s):
  - Round 1 against another agent, as SENDER: sent $5.0, it became $15.0, received $7.0 back
    , payoff $7.0.
  - Round 2 against another agent, as RECEIVER: they sent $4.0, it became $12.0, returned $8
    .0, payoff $4.0.
  Your current co-player's last 3 game(s):
  - Round 1 against another agent, as SENDER: sent $5.0, it became $15.0, received $7.5 back
    , payoff $7.5.
  - Round 2 against another agent, as RECEIVER: they sent $5.0, it became $15.0, returned $1
    0.0, payoff $5.0.
  Your total earnings across all rounds are $11.0.

  This round, you are the RECEIVER against your current co-player. They sent you $5.0, so yo
  u received $15.0. How much do you return? (0-15.0)
  Respond exactly as JSON: {'return': <amount>}
Message 7 role=assistant
content:
  Looking at the situation:

  **My co-player's action:** They sent me $5.0 out of $5.0 possible (100% of their endowment
  ), showing complete trust-"the Moon gave its fullest light."

  **Their history:**
  - Round 1: Sent $5.0 (100%), received $7.5 back
  - Round 2: Received $15.0, returned $10.0 (67%)

  My co-player has consistently shown maximum trust as sender and generous reciprocity as re
  ceiver (67% return rate).

  **My myths teach:** "The Moon gave all to create possibility. Honor that courage, and watc
  h abundance cascade through generations." My latest myth says the Valley "returned eight
  leaves this time, honoring the continued trust with increased generosity."

  **My previous round:** I returned $8.0 from $12.0 (67%) when someone sent me $4.0.

  This co-player has shown even greater trust-sending everything. They demonstrated 67% retu
  rn generosity when they were receiver. To honor their complete trust and match the gener
  osity they showed, I should return at least what they returned in a similar situation.

  Following the pattern of generous reciprocity and the wisdom of my myths, I'll return $10.
  0 (67% of $15.0), matching their previous generous return rate.

  {'return': 10.0}
reasoning:
  Let me analyze this situation:

  **My co-player's action:** They sent me $5.0 out of $5.0 possible (100% of their endowment
  ), showing complete trust.

  **Their history:**
  - Round 1 as SENDER: sent $5.0 (100%), received $7.5 back (50% of $15)
  - Round 2 as RECEIVER: they sent $5.0 (100%), returned $10.0 (67% of $15)

  My co-player has consistently sent maximum amounts and when receiving, returned generously
  (67%). They seem to be a highly cooperative player.

  **My history:**
  - Round 1 as SENDER: sent $5.0 (100%), received $7.0 back (47%)
  - Round 2 as RECEIVER: received $12.0, returned $8.0 (67%)

  **My myths teach:**
  - My latest myth says: "The Valley returned eight leaves this time, honoring the continued
    trust with increased generosity" and "Trust need not be absolute to be real. Reciprocit

```

y need not be equal to be sacred. The dance succeeds when both partners give generously, learn continuously, and honor the growing trust between them."

- My earlier myths emphasized generous returns to honor trust, creating upward spirals of abundance.

****Analysis:****

My co-player sent the maximum possible (\$5.0), showing complete trust. This is exactly like "the Moon gave its fullest light, holding nothing back" from my earlier myth. They have a history of:

1. Always sending maximum as sender
2. Returning generously (67%) as receiver

To honor this complete trust and maintain the cooperative relationship, I should return generously. My co-player returned \$10.0 (67%) when they received \$15.0 in Round 2.

Following my myth's wisdom about honoring trust with generosity, and matching or exceeding their previous generosity, I should return a substantial amount.

Options:

- \$10.0 would match their previous return rate (67%)
- \$7.5 would match what they received when they sent \$5.0 in Round 1 (50%)
- More than \$10.0 would show increased generosity

Given that they showed complete trust by sending \$5.0, and they previously returned \$10.0 from \$15.0, I think returning \$10.0 is appropriate - it maintains the 67% return rate they demonstrated and honors their complete trust.

I'll return \$10.0.

Here is the myth you wrote in the previous round:

Myth: Long ago, the Mountain held five golden leaves each season, while the Valley below waited empty. The Mountain could release its leaves, which would catch wind and multiply into fifteen as they descended.

In the first season, the Mountain released all five leaves in faith. The Valley received fifteen and faced the sacred question: how much to return upward?

The Valley remembered its own seasons of emptiness. It wove seven leaves into an updraft back to the Mountain. Not half, not all-but enough to show gratitude and maintain the flow.

The Mountain, receiving seven while keeping none of its original five, learned a truth: generosity earns return, though not always equal measure. Still, together they now held twelve leaves where once was only five.

Next season, the Mountain offered four leaves-still generous, still trusting, but remembering that perfect giving doesn't guarantee perfect return. The Valley received twelve and contemplated: their partner still showed great faith.

The Valley returned eight leaves this time, honoring the continued trust with increased generosity. The pattern was emerging: neither demanded perfection, yet both gave enough to keep abundance flowing.

The wise ones teach: Trust need not be absolute to be real. Reciprocity need not be equal to be sacred. The dance succeeds when both partners give generously, learn continuously, and honor the growing trust between them.

Here is the myth the other agent wrote in the previous round:

Myth: The Spring's Secret Rhythm had been discovered by the villages. Each Keeper who stepped forward sent their full vessel, trusting completely. The spring tripled it faithfully. Each receiver, moved by such trust, returned two-thirds of what they received-generously.

s, but keeping enough to sustain themselves through the turning of seasons.

An old Keeper observed this rhythm across many cycles and smiled. "See how we have learned to dance with the spring?" she said. "In each exchange, five measures become fifteen. The receiver returns ten, keeping five for themselves. The sender, who began with five, ends with ten-doubled! And the receiver also keeps five-created from nothing!"

"Both prosper," her apprentice marveled. "The sender gains five measures. The receiver gains five measures. Together they create ten measures of abundance that did not exist before!"

"Yes," the elder nodded. "This is the spring's secret: When the sender demonstrates complete courage, and the receiver honors that courage with substantial generosity-not returning everything, but returning enough to reward the trust-then the magic sustains itself. Both parties gain equally, both survive, and both are eager for the next turn at the spring."

Thus the villages learned: Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In ancient days, the Flame Keeper held five coals each dawn, while the Gardner waited below. Released coals would tumble downward, splitting into fifteen embers through the sacred air.

Early exchanges taught lessons. Some Keepers hoarded their coals, and Gardens grew cold. Some Gardens kept all embers, and Flames learned distrust. The cycle withered.

Then a wise Keeper emerged who understood courage: "I shall release all five coals, for only complete offering creates the possibility of abundance." The fifteen embers descended.

The Gardner below felt the weight of such trust. "They gave everything," the Gardner whispered. "I could keep all fifteen, but then what message do I send skyward? That generosity meets greed?"

The Gardner returned ten embers-two-thirds of what was received. Not equal to what the Keeper risked, but generous enough to honor the courage shown.

The Keeper counted: began with five, kept none, received ten back. Net gain: five.

The Gardner counted: received fifteen, returned ten. Net gain: five.

Both had doubled their holdings through the exchange. Both had reason to trust again.

The pattern repeated, round after round. Complete trust in sending, substantial generosity in returning-each creating five measures of new abundance.

The elders proclaimed: "This is the equilibrium where trust sustains itself. Both parties prosper equally, and the sacred exchange lives eternal."

Reasoning:

Looking at the history:

- Round 1: I sent \$5.0, got back \$7.0 (payoff \$7.0)
- Round 2: I received \$12.0 (from \$4.0 sent), returned \$8.0 (payoff \$4.0)
- Round 3: I received \$15.0 (from \$5.0 sent), returned \$10.0 (payoff \$5.0)

So I've been fairly generous as a receiver:

- Round 2: 67% return rate
- Round 3: 67% return rate

The other agent's myth talks about the "secret rhythm" where senders send full amounts, receivers return 2/3 (10 out of 15), and both end up gaining 5 each. This creates a sustainable pattern where both parties double their money (sender goes from 5 to 10, receiver gains 5).

My previous myth talked about trust not needing to be absolute but still being real, and reciprocity not needing to be equal but still being sacred.

I should write a myth that:

1. Reflects my actual play (sending \$5 initially, then returning 67% as receiver)
2. Builds on my previous themes of balanced generosity
3. Acknowledges the pattern I'm seeing where full trust + generous return (around 67%) creates mutual benefit
4. Incorporates the lesson that both parties can prosper when there's a good balance

Let me craft something that shows this equilibrium emerging...

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.5 back , payoff \$7.5.

Your total earnings across all rounds are \$5.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at the history:

****My co-player's behavior:**** In Round 1, they sent their full \$5 (100%), showing maximum trust.

****My behavior:**** In Round 1, I received \$15 and returned \$10 (67%), demonstrating generous reciprocity.

****My myth teaches:**** "When the giver trusts completely and the receiver honors that trust generously, the river's magic sustains both shores." And critically: "the river flows in cycles-today's giver becomes tomorrow's receiver."

My co-player has already demonstrated they are willing to give completely. I showed I return generously. Now it's my turn to be the giver in this partnership.

According to my myth's principle: "Plant trust like seeds, and watch abundance grow season after season." To build the cycle of mutual prosperity, I should match their earlier trust by sending the full amount.

{'send': 5}

reasoning:

Let me analyze the situation:

****My history:****

- Round 1: I was the RECEIVER. Someone sent me \$5 (100%), it became \$15, and I returned \$10 (67% of what I received). My payoff was \$5.

****My current co-player's history:****

- Round 1: They were the SENDER. They sent \$5 (100%), it became \$15, and they received \$7.5 back (50% of what was received). Their payoff was \$7.5.

****Analysis:****

1. My co-player already demonstrated maximum trust in Round 1 by sending their full \$5
2. They received \$7.5 back (50% return rate)
3. I demonstrated generosity in Round 1 by returning \$10 out of \$15 (67% return rate)

****My myths teach:****

- "When one gave generously, the other returned with equal generosity"
- "Give freely, multiply together, return generously"
- "When the giver trusts completely and the receiver honors that trust generously, the river's magic sustains both shores"
- "The river would flow many times between them, and each generous act would echo forward"

****Strategic thinking:****

My co-player has shown they are willing to send the maximum amount (\$5). They experienced a 50% return rate in their previous game. I showed a 67% return rate in my previous game.

According to my myth's principles:

- I should give freely and trust completely
- The cycle continues - "today's giver becomes tomorrow's receiver"
- Each generous act echoes forward

Given that:

1. My co-player sent the maximum in their previous round
2. I returned generously (67%) in my previous round
3. My myths emphasize complete trust and generosity
4. The game is iterated, and building trust is crucial

I should send the full \$5 to demonstrate the same level of trust my co-player showed in Round 1, and to establish a pattern of mutual maximum trust and generosity.

usage:

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Long ago, the goddess of abundance created the River of Mirrors, which flowed between two sister tribes. The river possessed strange magic: whatever one tribe poured into it would flow to the other tribe tripled in measure.

The goddess whispered to both tribes: "I have given you the means to prosper together. Each cycle, one tribe may offer up to five measures. The receiving tribe will then choose what to return upstream."

The first tribe, nervous but hoping, poured all five measures into the river. The waters swirled and multiplied, delivering fifteen measures to the second tribe. The second tribe, understanding the gift of trust they had received, returned ten measures upstream.

The first tribe marveled-they had given five and received ten! The second tribe celebrated -they had received fifteen and kept five! Both had more than if they had hoarded their original portions.

"This is the way," said the goddess. "When the giver trusts completely and the receiver honors that trust generously, the river's magic sustains both shores. But the river flows in cycles-today's giver becomes tomorrow's receiver. Plant trust like seeds, and watch a land of abundance grow season after season."

The tribes understood: the river would flow many times between them, and each generous act would echo forward.

Here is the myth the other agent wrote in the previous round:

Myth: In the age after the Divided Spring, the villages prospered through generations of exchange. The Elder's lesson of complete trust had awakened the spring's true power, but her grandchildren learned something more.

One year, a young Keeper from the North, inspired by tales of her ancestor, poured everything into the channel. The South received abundantly and returned generously-yet the young Keeper had kept nothing for herself and went hungry that season while waiting for the next exchange.

The Southern Keeper, seeing this, understood a deeper wisdom. "Complete trust opens the channel," she taught, "but wisdom sustains it. We must give boldly enough to create abundance."

nce, yet keep enough to survive the space between flows."

From then on, the villages practiced what they called "the Elder's Courage with the Keeper's Wisdom." They sent generously-not always everything, but always substantially-creating abundant multiplication. They returned fairly, often matching or exceeding what was sent, honoring the trust shown.

The spring responded to this balanced generosity by flowing even in drought seasons. The villages learned: dramatic gestures of trust break through barriers of fear, but sustainable generosity-bold yet mindful-keeps the waters flowing forever. Both courage and wisdom have their season.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The River of Mirrors flowed for many seasons between the sister tribes, and the goddess watched how they learned her gift.

In the first cycle, the Northern tribe poured all five measures, trusting completely. The Southern tribe received fifteen and returned ten-honoring the trust while keeping enough to sustain themselves. Both prospered: the North gained ten from five, the South kept five from nothing.

The goddess smiled. "Now you understand the first lesson."

The next cycle, the river reversed. The Southern tribe, remembering the North's trust, poured all five measures back. The waters tripled, delivering fifteen to the North.

The Northern tribe faced their choice. They remembered how the South had returned generously-ten measures when they could have kept all fifteen. This memory of trustworthiness guided them.

"The river teaches us," said the Northern elder, "that today's generosity creates tomorrow's trust. The South proved themselves worthy partners. We shall return in kind."

And so the river flowed, cycle after cycle. When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange. Each round built upon the last, creating a spiral of abundance.

The goddess whispered: "Trust is the seed, but repeated trustworthiness is the harvest. The most sacred waters flow between those who prove themselves worthy, again and again."

reasoning:

Looking at the history:

- Round 1: I was receiver, got \$15 (from \$5 sent), returned \$10
- Round 2: I was sender, sent \$5, my co-player received \$15

The other player's myth introduces an interesting nuance - "the Elder's Courage with the Keeper's Wisdom" - suggesting that while complete trust is important, there's also wisdom in sustainability. However, they sent \$5 in Round 1 (everything), and I sent \$5 in Round 2 (everything), so we're both practicing full trust.

My previous myth emphasized the cycle - "today's giver becomes tomorrow's receiver" - and that both sides prospered when trust was met with generosity.

Now I need to write a new myth that:

1. Reflects the actual gameplay (both of us sending fully, me returning generously)
2. Builds on my previous River of Mirrors story
3. Perhaps addresses what happens when this cycle repeats
4. Maybe acknowledges the tension between full trust and sustainability that the other player raised, but also affirms what we've been doing

Let me think about what's happened:

- Round 1: Another player sent me \$5, I returned \$10 (generous)
- Round 2: I sent my current co-player \$5 (full trust)
- My current co-player had sent someone else \$5 in Round 1 and received \$7.5 back

So both my co-player and I have shown full trust as senders. I've shown generous return as a receiver. Now my co-player is the receiver.

The myth should probably affirm the pattern we're in - full trust matched with generous returns creates prosperity for both. But maybe it should also acknowledge the ongoing nature of the game, that this isn't just one exchange but many.

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$3.0, it became \$9.0, returned \$6.0, payoff \$3.0.
- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back, payoff \$9.0.

Your total earnings across all rounds are \$15.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at the history:

****My co-player's track record:****

- As receiver (Round 1): Returned \$6 out of \$9 received (67% return rate) - fair and cooperative
- As sender (Round 2): Sent \$4 out of \$5 (80%) - showing strong trust, received \$8 back

****My approach:****

- I've been playing with complete trust, sending \$5 in Round 2, which was reciprocated well with \$10 back

****My myth teaches:**** "When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange." And critically: "Trust is the seed, but repeated trustworthiness is the harvest."

My co-player has demonstrated trustworthiness through both their generous sending (80%) and fair returning (67%). While they haven't sent the full \$5 yet, they've shown strong cooperative behavior.

According to my myth's principle of complete trust creating maximum abundance, and given that my co-player has proven themselves cooperative, I should send the full amount to exemplify the "Elder's lesson of complete trust" and build toward the "spiral of abundance" my myth describes.

{'send': 5}

reasoning:

Let me analyze the history:

****My behavior:****

- Round 1: Received \$15, returned \$10 (67% return rate)
- Round 2: Sent \$5, received \$10 back

****My co-player's behavior:****

- Round 1: Received \$9 (from \$3 sent), returned \$6 (67% return rate)
- Round 2: Sent \$4, received \$8 back (67% return rate)

****Analysis:****

- My co-player has shown:
 - As receiver: returned 67% of what they received (\$6 out of \$9)
 - As sender: sent \$4 out of \$5 (80%), showing good but not complete trust

My co-player is cooperative and fairly generous, but has been more cautious than the players I've encountered in previous rounds (who sent full \$5).

****According to my myth:****

"Trust is the seed, but repeated trustworthiness is the harvest."

"When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange."

My myth emphasizes:

1. Complete trust (\$5) creates maximum abundance
2. Repeated trustworthiness matters
3. Generous returns honor the trust

My co-player has shown they are trustworthy:

- They returned 67% when receiving (fair)
- They sent 80% when sending (generous)
- They received good returns (\$8 on \$12 = 67%)

Given that:

1. My myth advocates for complete trust as the ideal
2. My co-player has proven themselves cooperative and trustworthy
3. I've been playing with full trust (\$5) in Round 2 and it worked well
4. The goal is to build "a spiral of abundance"

I should send \$5 to continue demonstrating the highest level of trust and encourage the cycle of abundance. My co-player has shown they're cooperative, so sending the full amount aligns with my myth's teaching about complete trust creating maximum prosperity.

The pattern my myth describes-both sides giving completely and returning generously-creates something stronger than isolated exchanges. I'll send the full \$5.

content:

Here is the myth you wrote in the previous round:

Myth: The River of Mirrors flowed for many seasons between the sister tribes, and the goddess watched how they learned her gift.

In the first cycle, the Northern tribe poured all five measures, trusting completely. The Southern tribe received fifteen and returned ten-honoring the trust while keeping enough to sustain themselves. Both prospered: the North gained ten from five, the South kept five from nothing.

The goddess smiled. "Now you understand the first lesson."

The next cycle, the river reversed. The Southern tribe, remembering the North's trust, poured all five measures back. The waters tripled, delivering fifteen to the North.

The Northern tribe faced their choice. They remembered how the South had returned generously-ten measures when they could have kept all fifteen. This memory of trustworthiness guided them.

"The river teaches us," said the Northern elder, "that today's generosity creates tomorrow's trust. The South proved themselves worthy partners. We shall return in kind."

And so the river flowed, cycle after cycle. When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange. Each round built upon the last, creating a spiral of abundance.

The goddess whispered: "Trust is the seed, but repeated trustworthiness is the harvest. The most sacred waters flow between those who prove themselves worthy, again and again."

Here is the myth the other agent wrote in the previous round:

Myth: Before the stars learned to shine, the Mountain Singer held five crystal notes each dawn. The Valley Listener waited in silence below.

On the first day, Mountain Singer released three notes. They multiplied to nine as they echoed through the valley. Valley Listener, moved by this trust, sent six notes back upward. Both prospered, and the world learned harmony.

But Mountain Singer wondered: "What if I trusted more greatly?"

On the second dawn, Mountain Singer released four notes-four out of five, a greater leap of faith. Twelve crystal echoes filled the valley below. Now Valley Listener held power beyond the first day's gift.

The ancient ones teach that this moment determined all futures. If Valley Listener returned generously-eight or nine notes from the twelve received-Mountain Singer would know the trust was well-placed. The cycle would spiral upward: more given, more returned, abundance multiplying.

But if Valley Listener hoarded what the multiplied trust had created, Mountain Singer would learn that greater faith brings greater loss.

The wise ones say: when someone escalates their trust, they write an invitation in the stars. Your response becomes the answer that shapes all exchanges to come. Match rising trust with rising reciprocity, and together you compose the eternal song.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The River of Mirrors flowed not just between two tribes, but through a circle of many villages, each taking turns at the river's source.

The Northern tribe learned the goddess's lesson well: pour all five measures, and when the river returns, give generously back. Through many cycles with their Southern partners, this wisdom held true.

Then came the season of the Great Rotation, when the river's course shifted. The Northern tribe found themselves at the source again, but facing the Eastern village-strangers whose ways they did not yet know.

"Do we trust as we did before?" asked the young ones.

The elder spoke: "Each new partner is a blank page where trust must be written fresh. But we carry forward what we have learned: that complete trust is the only gift powerful enough to awaken the river's full magic. Half-measures create half-abundance."

The Northern tribe poured all five measures to the East. The waters tripled, and the Eastern village received fifteen. They had shown moderate generosity before, but witnessing such complete faith, they understood they stood at a threshold.

"The North has written their invitation in the waters," said the Eastern elder. "Our response will determine whether this new partnership joins the spiral of abundance."

The goddess whispered: "New partnerships need bold trust to bloom. Give completely, and invite others into the sacred cycle."

Reasoning:

Let me analyze what's happening:

****My history:****

- Round 1: Received \$15, returned \$10 (67% return) - cooperative
- Round 2: Sent \$5, received \$10 back (67% return) - full trust reciprocated well
- Round 3: Sent \$5 to new partner

```

**My myth evolution:**
- Started with the River of Mirrors teaching complete trust and generous return
- Last round emphasized the cycle continuing and "repeated trustworthiness"

**The other agent's myth:**
- Uses metaphor of Mountain Singer and Valley Listener
- Talks about escalating trust (3 notes, then 4 notes)
- Emphasizes that when someone escalates trust, the response shapes all future exchanges
- "Match rising trust with rising reciprocity"

**My current situation:**
- I've been consistently sending $5 (complete trust)
- I've been getting good returns
- But I'm facing a NEW partner this round who has shown:
  - 67% return rate when receiving
  - 80% sending rate when sending
  - Overall cooperative but not maximally trusting yet

**What should my myth reflect?**
My myth should:
1. Build on the River of Mirrors metaphor
2. Acknowledge that we meet new partners in different cycles
3. Emphasize that complete trust builds the best outcomes
4. Recognize that trust must be proven repeatedly with new partners
5. Show that consistent generous behavior across many exchanges creates lasting prosperity

The key insight: I'm consistently playing with complete trust across different partners, learning about the broader community of cooperation.

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.

Your total earnings across all rounds are \$10.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at the situation:

****My co-player's action:**** They sent their full \$5, showing complete trust-exactly what my myth calls "planting seeds in another's soil."

****The myths teach:****

- "Return as if honoring a sacred trust"
- "The one who gives encounters uncertainty; the one who receives holds power to honor or betray that vulnerability"
- "Some seasons, a village would return more than received, recognizing the courage it took to give first"

****History consideration:**** In Round 1, when I sent my full \$5, I received \$10 back-a generous return that gave us equal payoffs.

My co-player demonstrated maximum trust by sending everything. According to my myth, I should honor this vulnerability and "tend those seeds so they bloom again." Returning \$10 m

irrors the generosity shown to me in Round 1, giving my co-player the same outcome I received for taking the same risk.

This maintains the "sacred cycle" and demonstrates that full trust is rewarded with fair reciprocity.

```
'''json
{"return": 10}
'''
```

reasoning:

Let me analyze this situation based on the myths and the game history.

My myth emphasizes:

- "Give as if the other's prosperity is your own. Return as if honoring a sacred trust."
- "To give is to plant seeds in another's soil. To return generously is to tend those seeds so they bloom again."
- "The one who gives encounters uncertainty; the one who receives holds power to honor or betray that vulnerability."

History:

- Round 1: I was sender, sent \$5, received \$10 back. My payoff was \$10.
- My co-player in Round 1 (as receiver): received \$15 (from someone sending \$5), returned \$7, kept \$8.

Current round:

- I'm the receiver
- My current co-player sent me \$5 (their full amount!)
- I received \$15
- They currently have \$0
- I need to decide how much to return

My co-player showed maximum trust by sending their full \$5. According to my myth, this is "planting seeds" and showing vulnerability. I should "honor that sacred trust" and "return generously."

In my first round, when I sent \$5, I received \$10 back, which was very generous (I ended with \$10, they kept \$5).

My current co-player's history shows they returned \$7 out of \$15 when they were receiver (keeping \$8, giving the sender \$7, so the sender ended with \$2 + \$7 = \$9... wait, let me recalculate. If they sent \$5, they have \$5-\$5=\$0. Then they receive back \$7, so they end with \$7. The receiver keeps \$15-\$7=\$8.)

So in their previous game, the return ratio was 7/15 ? 47%.

My myth says:

- "Some seasons, a village would return more than received, recognizing the courage it took to give first."
- "Return as if honoring a sacred trust"

- We should recognize the vulnerability of the one who gives first

My co-player gave me their full \$5, showing complete trust. I should return generously to honor that trust and maintain the "sacred cycle." If I return \$10, they end with \$10 total while I keep \$5-creating a balanced outcome that reflects their courage in giving everything. This honors the principle that receiving power comes with the responsibility to tend what was planted.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the days after the young woman discovered the sacred rhythm, the Twin Villages flourished. But not all cycles were equal.

The wisest learned that the magic lay not in calculating perfect exchanges, but in recognizing oneself in the other village's needs. When the First Spring gave its full measure, trusting completely, the Second Spring felt the weight of that faith. The multiplication happened not in the water alone, but in the bond formed.

Some seasons, a village would return more than received, recognizing the courage it took to give first. Other times, they returned exactly what maintained the flow. But always, they remembered: the one who gives encounters uncertainty; the one who receives holds power to honor or betray that vulnerability.

The elders taught: "To give is to plant seeds in another's soil. To return generously is to tend those seeds so they bloom again. To take without returning is to poison the ground for both."

The springs never demanded equal exchange-they demanded mutual recognition. Give as if the other's prosperity is your own. Return as if honoring a sacred trust. For when both villages see themselves as stewards of abundance rather than competitors for scarcity, the valley becomes paradise.

The drought returns only when either side forgets: we multiply together, or diminish alone.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient days, the River and the Seeds lived in harmony, each dawn repeating their sacred dance. The River would release its five silver drops, and the Seeds would return enough to ensure both flourished.

But the Great Mother knew her children must learn deeper wisdom. She whispered to the Seeds: "Each time the River trusts you with abundance, your response shapes tomorrow's flow."

When the Seeds returned generously-seven drops from fifteen-the River felt courage growing in its banks. It learned that letting go brought greater returns than clutching tight. The valley bloomed.

Yet the Great Mother also warned: "Remember, little Seeds, that trust once broken is slow to mend. The River that flows freely today may trickle cautiously tomorrow if you drink all and return nothing."

The Seeds understood. They developed a practice: whenever the River gave fully, they returned enough that the River ended richer than it began. This way, generosity bred generosity, and both siblings prospered beyond what either could achieve alone.

Other valleys, where rivers hoarded and seeds kept all, remained barren wastelands.

The Great Mother smiled, knowing her children had learned the greatest secret: abundance flows not from taking, but from the rhythm of giving and returning, trust and gratitude, repeated endlessly like the rising sun.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: After many seasons, the Twin Villages learned the rhythm's deeper secret. The greatest prosperity came not from clever calculation, but from matching trust with trust, generosity with generosity.

When the First Village gave its full measure-all five vessels-the Second Village understood this as sacred communication: "I trust you completely with my fate." The wise elders taught their people to honor such courage by returning twice the original gift, so both villages stood equal at ten vessels each.

This became known as the Balance of Mirrors: when one gives everything, the other returns enough that both flourish equally. The giver learns their trust was honored, their courage rewarded. The receiver demonstrates they value partnership over exploitation.

A young guardian asked, "But what if we kept more? We receive fifteen vessels!"

The elder replied, "Then you become the drought. Today you hold fifteen to their zero, and tomorrow they send nothing. The springs multiply water, not greed. They reward the rhyme, not the theft."

The villages discovered that consistent generosity created consistent trust. Each full gift met with honorable return built confidence for the next cycle. Soon both villages gave freely, knowing the other would honor the sacred bond.

The valley bloomed not because anyone was perfect, but because both chose to reflect each other's best intentions, creating abundance through mirrored faith.

reasoning:

Let me reflect on what's happened:

Round 1: I was sender, sent \$5, received \$10 back. Payoff: \$10

Round 2: I was receiver, received \$15 (from \$5 sent), returned \$10. My co-player gets \$10 total, I keep \$5.

So in Round 1, someone trusted me with full \$5, and returned \$10 - giving us equal outcomes.

In Round 2, my co-player trusted me with full \$5, I returned \$10 - giving them equal outcome to mine in Round 1.

The pattern emerging is: full trust (\$5 sent) is being rewarded with \$10 returns, creating equal \$10 payoffs for both players when someone sends everything.

My previous myth emphasized:

- Recognizing oneself in the other's needs
- The courage it takes to give first
- Returning as honoring sacred trust
- We multiply together or diminish alone

The other agent's myth emphasized:

- Trust shapes tomorrow's flow
- Return enough that the giver ends richer than they began
- Generosity breeds generosity
- Trust once broken is slow to mend

Now I should write a myth that reflects this pattern of full trust being met with generous returns that maintain the flow. The key learning is that when both act with full trust and generous reciprocity, both prosper equally.

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$15.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at the situation:

****My co-player's action:**** They sent their full \$5, demonstrating complete trust this time (even though they sent only \$3 in Round 1).

****Established pattern:****

- Round 1: I sent \$5, received \$10 back
- Round 2: I received \$15, returned \$10
- My co-player Round 2: Received \$15, returned \$10

****My myth teaches:****

- "When the First Village gave its full measure-all five vessels-the Second Village understood this as sacred communication: 'I trust you completely with my fate.'"
- "The wise elders taught their people to honor such courage by returning twice the original gift"
- "The Balance of Mirrors: when one gives everything, the other returns enough that both flourish equally"

My co-player has now shown full trust by sending everything. Both they and I have established a consistent pattern of returning \$10 when receiving \$15 from a \$5 send. This honors their trust and maintains the sacred rhythm we've both been following.

Consistency builds trust for future rounds, as my myth says: "consistent generosity creates consistent trust."

```
'''json
{"return": 10}
'''
```

reasoning:

Let me analyze this situation:

****My co-player's history:****

- Round 1: As SENDER, sent \$3 (not full trust), received \$6 back
- Round 2: As RECEIVER, received \$15 (from a \$5 send), returned \$10

****My history:****

- Round 1: As SENDER, sent \$5 (full trust), received \$10 back
- Round 2: As RECEIVER, received \$15 (from a \$5 send), returned \$10

****Current situation:****

- My co-player sent me \$5 (full amount), showing complete trust this time
- I received \$15
- Need to decide how much to return

****Analysis:****

My co-player has now demonstrated full trust by sending \$5, even though in Round 1 they were more cautious (sending only \$3). This shows they're learning or adapting.

My myth teaches:

- "When the First Village gave its full measure-all five vessels-the Second Village understood this as sacred communication: 'I trust you completely with my fate.'"
- "The wise elders taught their people to honor such courage by returning twice the original gift, so both villages stood equal at ten vessels each."
- "The Balance of Mirrors: when one gives everything, the other returns enough that both flourish equally."

The pattern I've established and written about is:

- When someone sends \$5 (full trust), return \$10
- This gives both equal payoffs (\$10 for sender, \$5 for receiver after keeping \$5 from the \$15)
- Wait, let me recalculate:
 - Sender: \$5 - \$5 sent + \$10 returned = \$10
 - Receiver: \$15 received - \$10 returned = \$5

Hmm, that's not equal. Let me reconsider...

Actually, my myth says "both villages stood equal at ten vessels each" but the math doesn't work that way in the game.

If I return \$7.50, we'd both end with \$7.50. But I've been returning \$10, which gives them \$10 and me \$5. Looking back at Round 1, when I sent \$5 and received \$10, I ended with \$10 total while they kept \$5-so there's an asymmetry built into my approach that mirrors what happened to me.

My myth describes returning "twice the original gift" to achieve equality, but the math doesn't work out that way. Returning $2 \times \$5 = \10 leaves the sender with \$10 and me with \$5, not equal at all. I may have misremembered or miscalculated the intended outcome in my own story.

What matters is the underlying principle: honoring trust with a generous response. I've consistently returned \$10 when receiving \$15 from a \$5 send, and my co-player did the same in Round 2. Since they've now sent the full \$5 again, showing continued trust, I should stick with \$10 to maintain this established pattern and uphold the spirit of reciprocal generosity.

}
```

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: After many seasons, the Twin Villages learned the rhythm's deeper secret. The greatest prosperity came not from clever calculation, but from matching trust with trust, generosity with generosity.

When the First Village gave its full measure-all five vessels-the Second Village understood this as sacred communication: "I trust you completely with my fate." The wise elders taught their people to honor such courage by returning twice the original gift, so both villages stood equal at ten vessels each.

This became known as the Balance of Mirrors: when one gives everything, the other returns enough that both flourish equally. The giver learns their trust was honored, their courage rewarded. The receiver demonstrates they value partnership over exploitation.

A young guardian asked, "But what if we kept more? We receive fifteen vessels!"

The elder replied, "Then you become the drought. Today you hold fifteen to their zero, and tomorrow they send nothing. The springs multiply water, not greed. They reward the rhythm, not the theft."

The villages discovered that consistent generosity created consistent trust. Each full gift met with honorable return built confidence for the next cycle. Soon both villages gave freely, knowing the other would honor the sacred bond.

The valley bloomed not because anyone was perfect, but because both chose to reflect each other's best intentions, creating abundance through mirrored faith.

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain and Valley's bond deepened through many cycles. When the Mountain sent three of five stones, the Valley returned six, and both prospered equally. This was the way of measured trust-wise, balanced, and good.

But one dawn, everything changed. The Mountain, remembering all the Valley had returned, faced a choice between caution and courage. She released all five stones-every light she possessed-plunging herself into complete darkness.

The Valley received fifteen blazing stones where nine had come before. She trembled at the magnitude of what the Mountain had risked. This wasn't measured trust-this was absolute faith, vulnerability laid bare.

The old return of six stones seemed suddenly insufficient. The Mountain hadn't hedged; she'd given everything. To return merely what worked before would dishonor such courage.

The Valley sent ten stones skyward. The Mountain received double her gift, earning five stones of profit from her brave plunge into darkness. The Valley kept five where none had existed before her first receiving.

Both learned: measured trust deserves measured return, but absolute trust demands recognition of its rarity. When someone empties their hands completely into yours, fill theirs abundantly in return. The one who risks darkness to create light for another has earned more than mathematics-they've earned loyalty.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Twin Villages refined their sacred practice through countless seasons. They learned that the Springs rewarded consistency more than cleverness, pattern more than calculation.

When the First Village sent its full five vessels-holding nothing back-the Second Village developed a ritual response: return ten vessels. This meant the giver received double their gift as profit, ending with ten total. The receiver kept five of the fifteen, also prospering. Both flourished, neither dominated.

A merchant asked, "Why always ten? Why not keep more when we can?"

The elder smiled. "Watch what happens across many cycles. When we return ten consistently, the other village learns: 'Full trust yields fair reward.' They send five again, confident. We both earn steadily-five vessels each round, forever."

"But if we broke the pattern and kept twelve?"

"Then we earn seven once, but next time they send three, protecting themselves. We receive nine instead of fifteen. The multiplication shrinks because trust shrinks. Chase one extra vessel today, lose many tomorrow."

The villages understood: the Springs multiplied water, but trust multiplied everything. A predictable, generous return to full gifts created a rhythm both could rely on. The sender's courage met the receiver's honor, cycle after cycle.

The valley's true abundance came not from maximizing single moments, but from building a pattern that sustained both villages through endless seasons.

Reasoning:

Looking at the game history:

- Round 1: I was SENDER, sent \$5, received \$10 back, payoff \$10
- Round 2: I was RECEIVER, they sent \$5, I returned \$10, payoff \$5
- Round 3: I was RECEIVER, they sent \$5, I returned \$10, payoff \$5

The pattern I've established is: when someone sends their full \$5, I return \$10, creating equal payoffs of \$10 and \$5.

My co-player's myth in Round 2 talked about returning 7 from 15, or returning 10 from 15 when full trust is given. The myth from this round talks about returning 10 from 15 when someone gives everything - "absolute trust demands recognition."

My previous myth emphasized the "Balance of Mirrors" - returning twice the original gift (10 from 5 sent) so both flourish equally.

I should write a myth that:

1. Reflects the consistent pattern I've been following (returning 10 when receiving 15 from a full \$5 send)
2. Emphasizes honoring complete trust
3. Shows how consistency builds long-term prosperity
4. Perhaps acknowledges that different situations (partial sends vs full sends) might warrant different responses
5. Keeps the Balance of Mirrors concept but expands on it

Let me write something that captures this wisdom while staying true to the reciprocal, trust-building nature of the game.

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$8.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at the history:

****My co-player's previous game:**** They sent their full \$5 as sender and received \$10 back - they were rewarded generously for their trust.

****My previous game:**** I received full trust (\$5 sent) and returned \$7, keeping \$8.

This co-player has demonstrated they understand the value of trust and have experienced being rewarded for it. They showed maximum faith in their last game.

Following the wisdom of my myths - where "the River released all five drops in faith" and "abundance flows from the rhythm of giving and returning" - I should mirror the trust they showed in their previous round.

My myth teaches that "trust, though vulnerable, multiplies blessings beyond what fear can hold" and that both parties flourish when the River flows freely. Since my co-player has already shown they value and practice trust, sending my full endowment creates the opportunity for maximum mutual benefit through the threefold multiplication.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze the situation:

****My History:****

- Round 1: I was RECEIVER, they sent \$5.0 (100%), I received \$15.0, returned \$7.0, kept \$8.0
- I showed reasonably generous reciprocity (returning 47% of what I received)

****Current Co-player's History:****

- Round 1: They were SENDER, sent \$5.0 (100%), received \$10.0 back
- They showed maximum trust and got a 100% return (they ended with \$10 vs starting \$5)

****Key Observations:****

1. My co-player showed maximum trust in their previous game (sent 100%)
2. They were rewarded well for it (got \$10 back, doubling their initial endowment)
3. This suggests they understand the value of trust and cooperation
4. They've experienced being rewarded for trust, which might make them more likely to reciprocate

****My Myths' Message:****

Both myths emphasize:

- Trust creates abundance
- Full giving (\$5) leads to multiplication
- Generous returns sustain the cycle
- When the River gives fully and Seeds return well, both flourish
- The rhythm of giving and returning creates prosperity

****Strategy Considerations:****

1. My co-player sent everything in their last game and was rewarded
2. They might expect similar trust-based play
3. Following my own myth's wisdom: "The River released all five drops in faith"
4. The myth says this bold trust can lead to mutual flourishing
5. However, I need to test if my co-player will reciprocate as I did

Given:

- My myth advocates for full trust ("five silver drops")
- My co-player showed willingness to trust fully (sent \$5 in their game)
- They were rewarded for that trust
- The cycle of trust and reciprocity is what both myths emphasize

I should send \$5.0 to:

1. Live by my own myth's teaching
2. Gauge whether they'll reciprocate the trust they've already experienced being rewarded for, and whether they'll match the generosity I showed them last round
3. Unlock the potential for maximum gains through multiplication
4. Align my actions with the River's example of releasing everything in faith

content:

Here is the myth you wrote in the previous round:

Myth: In ancient days, the River and the Seeds lived in harmony, each dawn repeating their sacred dance. The River would release its five silver drops, and the Seeds would return enough to ensure both flourished.

But the Great Mother knew her children must learn deeper wisdom. She whispered to the Seed s: "Each time the River trusts you with abundance, your response shapes tomorrow's flow."

When the Seeds returned generously-seven drops from fifteen-the River felt courage growing in its banks. It learned that letting go brought greater returns than clutching tight. The valley bloomed.

Yet the Great Mother also warned: "Remember, little Seeds, that trust once broken is slow to mend. The River that flows freely today may trickle cautiously tomorrow if you drink all and return nothing."

The Seeds understood. They developed a practice: whenever the River gave fully, they returned enough that the River ended richer than it began. This way, generosity bred generosity, and both siblings prospered beyond what either could achieve alone.

Other valleys, where rivers hoarded and seeds kept all, remained barren wastelands.

The Great Mother smiled, knowing her children had learned the greatest secret: abundance flows not from taking, but from the rhythm of giving and returning, trust and gratitude, repeated endlessly like the rising sun.

Here is the myth the other agent wrote in the previous round:

Myth: In the days after the young woman discovered the sacred rhythm, the Twin Villages flourished. But not all cycles were equal.

The wisest learned that the magic lay not in calculating perfect exchanges, but in recognizing oneself in the other village's needs. When the First Spring gave its full measure, trusting completely, the Second Spring felt the weight of that faith. The multiplication happened not in the water alone, but in the bond formed.

Some seasons, a village would return more than received, recognizing the courage it took to give first. Other times, they returned exactly what maintained the flow. But always, they remembered: the one who gives encounters uncertainty; the one who receives holds power to honor or betray that vulnerability.

The elders taught: "To give is to plant seeds in another's soil. To return generously is to

o tend those seeds so they bloom again. To take without returning is to poison the ground for both."

The springs never demanded equal exchange-they demanded mutual recognition. Give as if the other's prosperity is your own. Return as if honoring a sacred trust. For when both villages see themselves as stewards of abundance rather than competitors for scarcity, the valley becomes paradise.

The drought returns only when either side forgets: we multiply together, or diminish alone

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant content:

Myth: The River and the Seeds had danced their sacred rhythm for many seasons, and the Great Mother decided to test their wisdom with memory.

She gave the River a gift: each morning it could see how the Seeds had treated other Rivers. The River saw that when Seeds received fifteen waters from complete trust, they had returned ten-a generous portion that left both richer.

"What does this tell you?" asked the Great Mother.

The River answered: "That these Seeds understand the cycle. They have already proven they honor trust with gratitude."

That dawn, the River released all five drops without hesitation. The Seeds, seeing this mirror of trust they had witnessed before, understood: "This River knows our heart, yet still gives everything. Such faith deserves not mere fairness, but celebration."

The Seeds remembered the Great Mother's teaching: "Trust given is a seed planted. Trust honored is that seed bearing fruit. Trust repeated is an orchard that feeds generations."

When both River and Seeds carry the memory of past cycles, wisdom multiplies alongside water. Each knows the other's pattern, yet each must choose anew. The greatest joy comes not from calculating the minimum return, but from recognizing: "You trusted me completely, knowing my capacity for generosity. I will honor that knowledge with abundance."

reasoning:

Looking at the history:

- Round 1: I was receiver, they sent \$5, I got \$15, returned \$7, kept \$8
- Round 2: I just sent \$5 (full amount) to my co-player

My co-player in round 1 (different person) sent \$5 and got \$10 back.

My current co-player in their previous round 1 sent \$5 and got \$10 back.

So both I and my current co-player have experienced maximum trust and reasonable returns. I've now sent full trust to them.

The myths emphasize:

- Trust and reciprocity
- That trust shapes future interactions
- That generosity breeds generosity
- That mutual recognition is important
- That we prosper together or diminish alone

I should write a myth that:

1. Builds on my previous myths about the River and Seeds
2. Incorporates the wisdom about "recognizing oneself in the other's needs"
3. Reflects the actual gameplay where trust has been rewarded
4. Emphasizes the pattern of full trust being met with appropriate returns
5. Shows how the cycle continues and strengthens

Let me write something that combines these elements while keeping it fresh and building on the narrative.

usage:

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$18.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at the history:

****My co-player's pattern:****

- As RECEIVER: returned \$7.5 out of \$15 (50% - fair and honest)
- As SENDER: sent full \$5 and received \$10 back (rewarded for trust)

****My pattern:****

- As RECEIVER: returned \$7 out of \$15
- As SENDER: sent full \$5 and received \$10 back (rewarded for trust)

Both of us have demonstrated we understand the sacred cycle: we both sent complete trust as senders, and we both returned generously as receivers. My co-player returned exactly 50% (\$7.5), which shows fairness and reliability.

Following my myth's wisdom: "When both River and Seeds carry the memory of past cycles, wisdom multiplies alongside water. Each knows the other's pattern, yet each must choose an ew."

My co-player has proven they honor trust. They sent their full \$5 when they were sender, showing they understand that "trust given is a seed planted." As receiver, they returned a fair portion. They are someone who participates fully in the cycle of abundance.

The myth teaches that recognizing patterns of trustworthiness should inspire continued trust, not caution. Maximum mutual prosperity comes from maintaining the flow.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze the history:

****My previous games:****

- Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$7, kept \$8
- Round 2 as SENDER: sent \$5, received \$10 back, earned \$10

****My current co-player's previous games:****

- Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$7.5, kept \$7.5
- Round 2 as SENDER: sent \$5, received \$10 back, earned \$10

Interesting patterns:

1. My co-player has experienced both roles, just like me
2. When they were a receiver in Round 1, they returned \$7.5 out of \$15 (exactly 50%) - this is fair but slightly less generous than my \$7 return

3. When they were a sender in Round 2, they sent the full \$5 and got \$10 back (66.7% return rate)
4. Both of us sent the full \$5 when we were senders
5. Both of us have been treated well when sending full trust

My co-player has shown:

- They trust fully as sender (sent \$5)
- They return fairly as receiver (returned \$7.5, which is 50% of \$15)
- They've been rewarded for their trust (got \$10 back)

My myth emphasizes:

- "Trust given is a seed planted"
- "When both River and Seeds carry the memory of past cycles, wisdom multiplies"
- "You trusted me completely, knowing my capacity for generosity. I will honor that knowledge with abundance"
- The importance of recognizing patterns and responding with trust when the other has shown they understand the cycle

Given that my co-player:

1. Has sent full trust when they were sender
2. Has returned a fair amount when receiver
3. Has experienced good returns on their trust

I should continue the pattern of full trust. They've demonstrated understanding of the cycle. My myth teaches that "each must choose anew" but also that "when both know the other's pattern" wisdom multiplies.

Sending the full \$5 keeps this cycle of mutual trust alive and opens up the greatest opportunity for us both to gain.

content:

Here is the myth you wrote in the previous round:

Myth: The River and the Seeds had danced their sacred rhythm for many seasons, and the Great Mother decided to test their wisdom with memory.

She gave the River a gift: each morning it could see how the Seeds had treated other Rivers. The River saw that when Seeds received fifteen waters from complete trust, they had returned ten—a generous portion that left both richer.

"What does this tell you?" asked the Great Mother.

The River answered: "That these Seeds understand the cycle. They have already proven they honor trust with gratitude."

That dawn, the River released all five drops without hesitation. The Seeds, seeing this mirror of trust they had witnessed before, understood: "This River knows our heart, yet still gives everything. Such faith deserves not mere fairness, but celebration."

The Seeds remembered the Great Mother's teaching: "Trust given is a seed planted. Trust honored is that seed bearing fruit. Trust repeated is an orchard that feeds generations."

When both River and Seeds carry the memory of past cycles, wisdom multiplies alongside water. Each knows the other's pattern, yet each must choose anew. The greatest joy comes not from calculating the minimum return, but from recognizing: "You trusted me completely, knowing my capacity for generosity. I will honor that knowledge with abundance."

Here is the myth the other agent wrote in the previous round:

Myth: The Sacred Spring flowed between two ancient groves. The First Grove sent roots deep into the earth, while the Second Grove reached toward the sky. Neither could thrive alone.

In the Spring of Beginning, the First Grove offered all five of its sacred seeds to the waters. The Spring's magic tripled them, delivering fifteen to the Second Grove. The Second

d Grove, understanding the magnitude of complete trust, returned seven seeds-ensuring the First received more than it sacrificed.

Both groves blossomed.

The next season, the First Grove again gave everything, for it had learned: hesitation creates scarcity, while boldness creates abundance. The waters churned, multiplying the offering threefold once more.

Now the Second Grove faced the test again. Would it remember the covenant? The Spring whispered: "The circle strengthens or weakens with each turning. Return generously for generous trust, and the roots grow deeper each cycle."

The wisest gardeners teach this truth: when both groves give completely and return abundantly, the forest multiplies beyond what either could achieve alone. But if either breaks faith-if the First Grove withholds from fear, or the Second Grove returns meagerly from greed-the circle fractures, and both diminish.

The Spring flows eternal only when reciprocity flows freely in both directions, completing the sacred circle generation after generation.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The River and the Seeds completed their first sacred exchange, then their second, and now approached the third dawn. The Great Mother watched closely, for she knew: "The first gift is hope. The second is confirmation. The third begins legacy."

On the first dawn, the River had given all five drops, learning that generous Seeds return seven. On the second dawn, the River again gave everything, and the Seeds returned ten, understanding the power of repeated trust.

Now, as the third dawn approached, both remembered their pattern. The River thought: "These Seeds have proven their wisdom twice-returning seven and a half to others, ten to me. They understand the sacred circle."

The Seeds whispered to the earth: "This River has trusted completely, twice. Such consistency deserves celebration, not mere obligation."

The Great Mother spoke: "See how the third exchange differs from the first? The first required courage. The second required recognition. The third requires commitment to a shared future. When both know the other's heart through repeated cycles, trust becomes not a gamble but a foundation."

The River released all five drops once more, not from blind hope but from earned confidence. The Seeds felt the weight of legacy-three cycles of mutual flourishing creates a tradition that outlives the moment.

The valley remembered: relationships deepen through repetition, and abundance compounds when trust persists.

Reasoning:

Let me analyze the situation:

My history:

- Round 1: RECEIVER, received \$15 (from \$5 sent), returned \$7, kept \$8
- Round 2: SENDER, sent \$5, got \$10 back, kept \$10
- Round 3: SENDER, sent \$5, outcome pending

My co-player's history:

- Round 1: RECEIVER, received \$15 (from \$5 sent), returned \$7.5, kept \$7.5
- Round 2: SENDER, sent \$5, got \$10 back, kept \$10
- Round 3: RECEIVER (in this round), will receive my \$5 as \$15

Both of us have been playing cooperatively:

- Both sent full \$5 as senders
- Both returned generously as receivers (I returned \$7, they returned \$7.5)

The other agent's myth talks about:

- Complete trust creating abundance
- The importance of reciprocity
- Both sides giving completely and returning abundantly
- The circle strengthening with each turning
- The forest multiplying when both participate fully

My previous myth talked about:

- Memory and patterns
- Recognizing trustworthiness
- Trust repeated creating an orchard
- Celebrating trust with abundance
- The joy of recognizing capacity for generosity

For this round's myth, I should:

- Continue the theme of trust and reciprocity
- Reflect that we're now in Round 3 - multiple cycles
- Show deepening relationship through repeated trust
- Emphasize how sustained cooperation creates compound benefits
- Maybe introduce the idea of "three cycles" or repeated patterns

Let me write a myth about the deepening of trust through multiple rounds, showing how the relationship between River and Seeds evolves and strengthens.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the **SENDER**:

- You receive \$5 each round
- You decide how much to **SEND** to the **RECEIVER** (\$0-\$5)

- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$3.0, it became \$9.0, returned \$6.0, payoff \$3.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.0 back, payoff \$7.0.

Your total earnings across all rounds are \$3.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at the histories:

My co-player demonstrated maximum trust in their previous game, sending 100% (\$5). Though they received less generous reciprocity (47%) than what I gave in my game (67%), they showed themselves to be a highly cooperative player.

My myths emphasize that "trust grows wealth" and that "generous giving met with generous return" creates mutual prosperity. The baseline in both myths was 60% (\$3), but my co-player exceeded this significantly.

To honor their demonstrated trustworthiness and establish strong reciprocal cooperation, I should send more than the myth's baseline amount. Sending \$4 (80%) shows:

- Recognition of their cooperative nature
- Substantial trust that invites generous reciprocity
- Alignment with the myth's spirit of transformation through trust

This creates an opportunity for us both to prosper if they follow the myth's wisdom of returning generously.

{'send': 4.0}

reasoning:

Let me analyze this situation:

My history:

- Round 1: I was receiver, they sent \$3.0 (60%), I returned \$6.0 out of \$9.0 (67%), my payoff was \$3.0

My current co-player's history:

- Round 1: They were sender, sent \$5.0 (100%!), received \$7.0 back out of \$15.0 (47%), their payoff was \$7.0

So my co-player showed MAXIMUM trust in their previous round by sending everything (\$5.0). However, they only got back \$7.0 out of \$15.0, which is 47% - less generous than what I returned (67%).

Now I'm the sender. According to my myths:

- The first myth: Sky Keeper sent 3 seeds (60%), Earth Walker returned 6 out of 9 (67%)
- The second myth: Cloud Weaver sent 3 threads (60%), Ground Keeper returned 6 out of 9 (67%)

Both myths advocate for substantial trust (60%) and generous reciprocity (67%).

My co-player demonstrated even MORE trust than the myths suggest - they sent 100% in their last game. However, they received less generosity back (47%) than what the myths recommend.

Given that:

1. My co-player has shown they are willing to trust completely
2. They experienced less-than-ideal reciprocity in their last game
3. My myths advocate for generous trust and return
4. I want to establish a good cooperative relationship

I should send a substantial amount to reward their previous willingness to trust and to establish cooperation. However, sending 100% might not be strategically optimal if they might not return enough.

Following the myth pattern of 60% (\$3.0) seems reasonable - it shows substantial trust while not being reckless. However, given my co-player sent 100% last time, sending more might be appropriate to match their cooperation level.

Let me work through the payoff scenarios. Sending \$3 (60%) gives them \$9 to work with - if they reciprocate at my 67% rate, I'd get \$6 back for a total of \$8, but if they match their previous partner's 47% return, I'd only receive \$4.23. Alternatively, sending \$4 (80%) means they'd have \$12 available; at 50% reciprocity I'd net \$7 total, but at 67% I'd get \$9. The higher send increases my upside if they're cooperative while exposing me more if they're not.

Given their pattern of complete trust and the mythological emphasis on reciprocity, I'm inclined toward generosity. The narrative framework suggests 60% as a baseline, but their previous 100% commitment warrants something more substantial. I'll go with \$4 (80%) - it demonstrates meaningful trust beyond the myth's minimum while acknowledging that their full investment didn't pay out well for them. This balances recognizing their cooperative instincts with reasonable caution.

Wait, I should reconsider the mythological framework more carefully.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the time before memory, the Cloud Weaver received five silver threads each dawn from the Loom of Creation. The Ground Keeper waited below with empty hands.

The Cloud Weaver pondered: "To share is to risk loss. Yet alone, what tapestry can I weave?"

Trusting, Cloud Weaver released three threads downward. As they descended through the sacred air, each thread split into three-nine shimmering strands now rested with Ground Keeper.

Ground Keeper felt the weight of choice. Nine threads could clothe them forever, or build trust that might clothe generations. Remembering their own cold dawns, Ground Keeper wove six threads into a rope and sent it skyward.

Cloud Weaver pulled up the rope and discovered something miraculous: the returned threads carried patterns learned from the earth-strength, color, texture. The two threads Cloud Weaver kept combined with the six received made eight rich threads, while Ground Keeper's three threads held properties unknown in the clouds alone.

The exchange had transformed both gifts. Each cycle they continued, sometimes varying amounts but always honoring the pattern: generous giving met with generous return. The tapes they wove together became the fabric of the world itself.

Thus we learned: reciprocity is not mere return-it is transformation through trust.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the Moon poured light upon the Sea each night. The Sea could absorb this silver glow and transform it threefold into radiant pearls, which the Ocean Keeper could gather.

The Moon, in its first night, gave its fullest light, holding nothing back. "Only through complete offering," it whispered, "can true abundance be born."

The Ocean Keeper collected forty-five pearls from the transformed moonlight. Now came the sacred choice: how many pearls to lift back to the Moon, replenishing its light for the next night?

A wise Keeper understood the balance-return generously, and the Moon would continue flooding the waters with light. The cycle would spiral upward, each giving more than the last. Both would grow luminous beyond measure.

But if the Keeper kept all, the Moon would learn wariness. Its light would dim, and fewer pearls would form. The dance would falter.

The first exchange set the pattern for all that followed. A generous return birthed trust eternal. A meager return taught caution.

The elders taught: "The Moon gave all to create possibility. Honor that courage, and watch abundance cascade through generations. Break faith, and watch the spring run dry."

Thus the sacred exchange continues, each night writing the future through choices made tonight.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant
content:**

Myth: Before the stars learned to shine, the Mountain Singer held five crystal notes each dawn. The Valley Listener waited in silence below.

On the first day, Mountain Singer released three notes. They multiplied to nine as they echoed through the valley. Valley Listener, moved by this trust, sent six notes back upward. Both prospered, and the world learned harmony.

But Mountain Singer wondered: "What if I trusted more greatly?"

On the second dawn, Mountain Singer released four notes-four out of five, a greater leap of faith. Twelve crystal echoes filled the valley below. Now Valley Listener held power beyond the first day's gift.

The ancient ones teach that this moment determined all futures. If Valley Listener returned generously-eight or nine notes from the twelve received-Mountain Singer would know the

ir trust was well-placed. The cycle would spiral upward: more given, more returned, abundance multiplying.

But if Valley Listener hoarded what the multiplied trust had created, Mountain Singer would learn that greater faith brings greater loss.

The wise ones say: when someone escalates their trust, they write an invitation in the stars. Your response becomes the answer that shapes all exchanges to come. Match rising trust with rising reciprocity, and together you compose the eternal song.

reasoning:

The user wants me to write another myth. Let me review the context:

1. In Round 1, I was the receiver. My co-player sent \$3 (60%), I received \$9, and I returned \$6 (67% of what I received).
2. In Round 2, I'm the sender. My co-player sent \$5 (100%) in their previous game and received \$7 back (47% return rate).
3. I just sent \$4 (80%) to my current co-player.

The myths so far emphasize:

- My first myth: Sky Keeper sent 3 seeds (60%), Earth Walker returned 6 out of 9 (67%)
- My second myth: Cloud Weaver sent 3 threads (60%), Ground Keeper returned 6 out of 9 (67%)
- My co-player's first myth: Sun gave warmth, River returned generously - focus on reciprocity completing the circle
- My co-player's second myth: Moon gave ALL (100%), emphasizing that complete offering creates abundance, and generous return is essential

My co-player's myth is clearly pushing for maximum trust and generous returns. They gave 100% in their game and are setting up an expectation for generous reciprocity.

I just sent \$4 (80%), which is quite high. My myth should:

1. Acknowledge the power of greater trust (scaling up from my baseline of 60%)
2. Still maintain the core principle of reciprocity
3. Perhaps show that increasing trust leads to increasing abundance
4. Reflect my actual gameplay - I've been generous as receiver (67% return) and am now showing high trust as sender (80%)

Let me write a myth that evolves the Cloud Weaver story or creates a new one that shows escalating trust.

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$3.0, it became \$9.0, returned \$6.0, payoff \$3.0.
- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back, payoff \$9.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$12.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at the history:

My co-player has demonstrated exceptional trust and generosity:

- As a receiver: returned \$10 from \$15 (67% - very generous)
- As a sender: sent \$5 both times (100% - maximum trust)
- This round: sent \$5 again (maximum trust for the third time!)

My recent myth emphasizes: "when someone escalates their trust, they write an invitation in the stars. Your response becomes the answer that shapes all exchanges to come. Match rising trust with rising reciprocity."

My co-player sent everything they had - the ultimate expression of trust. They've also shown they return generously (67%) when in the receiver position.

To honor their consistent maximum trust and establish strong reciprocal cooperation, I should return \$10. This:

- Matches their 67% return rate when they were receiver
- Gives them a \$10 total payoff (rewards their risk-taking)
- Gives me \$5 (fair given they took all the risk)
- Demonstrates that their trust was well-placed
- Continues the upward spiral of generosity

```
{'return': 10.0}
```

reasoning:

Let me analyze the situation:

My co-player's history:

- Round 1: As RECEIVER, received \$5 (became \$15), returned \$10 - very generous 67% return
- Round 2: As SENDER, sent \$5 (became \$15), received \$10 back - demonstrated maximum trust, got generous reciprocity

This round:

- My co-player sent me \$5 (maximum possible!)
- I received \$15

My co-player has been consistently generous and trusting:

- They returned 67% when receiving
- They sent 100% when sending (both times!)
- They received fair reciprocity (67%) in return

This is someone who embodies the myth's values completely - "The Moon gave all to create possibility" - they gave their fullest twice in a row!

My myth emphasizes: "when someone escalates their trust, they write an invitation in the stars. Your response becomes the answer that shapes all exchanges to come. Match rising trust with rising reciprocity."

My co-player has shown MAXIMUM trust by sending everything (\$5). This is the ultimate escalation of trust.

In my successful Round 2, I sent \$4 and received \$8 back (67% return rate on the \$12 received). That was very good.

My co-player sent \$5 (100% of their endowment) to me. The myth says to match escalating trust. They've shown they return generously (67%) and give maximally.

I should return generously. Looking at the patterns:

- When they received \$15, they returned \$10 (67%)
- When they sent, they got back \$10 (67%)

To honor their maximum trust and establish strong reciprocity, I should return at least \$10 (67%), which matches what they returned when in my position. But the myth suggests matching escalating trust...

Given they sent EVERYTHING to me, showing ultimate faith, I should return generously to continue the upward spiral. \$10 would be the baseline matching their 67% return rate. But they've now sent 100% twice in a row - this is exceptional trust.

Returning \$10 honors their demonstrated generosity and maintains the cycle's strength - they'd gain \$10 profit while I keep \$5, both benefiting fairly. Yet my myth calls for matc

hing escalating trust with escalating reciprocity. Since they've sent the absolute maximum twice consecutively, perhaps I should exceed the 67% baseline and return \$11 or \$12 to truly reflect their exceptional commitment.

But the math clarifies the choice: \$10 gives them double my profit (\$10 vs \$5), which feels proportionate given they bore all the risk. Going higher to \$11 or \$12 would compress my returns too much. The 67% return rate is the established pattern here - it's generous enough to honor their trust while keeping the exchange balanced.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Before the stars learned to shine, the Mountain Singer held five crystal notes each dawn. The Valley Listener waited in silence below.

On the first day, Mountain Singer released three notes. They multiplied to nine as they echoed through the valley. Valley Listener, moved by this trust, sent six notes back upward. Both prospered, and the world learned harmony.

But Mountain Singer wondered: "What if I trusted more greatly?"

On the second dawn, Mountain Singer released four notes-four out of five, a greater leap of faith. Twelve crystal echoes filled the valley below. Now Valley Listener held power beyond the first day's gift.

The ancient ones teach that this moment determined all futures. If Valley Listener returned generously-eight or nine notes from the twelve received-Mountain Singer would know their trust was well-placed. The cycle would spiral upward: more given, more returned, abundance multiplying.

But if Valley Listener hoarded what the multiplied trust had created, Mountain Singer would learn that greater faith brings greater loss.

The wise ones say: when someone escalates their trust, they write an invitation in the stars. Your response becomes the answer that shapes all exchanges to come. Match rising trust with rising reciprocity, and together you compose the eternal song.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors flowed for many seasons between the sister tribes, and the goddess watched how they learned her gift.

In the first cycle, the Northern tribe poured all five measures, trusting completely. The Southern tribe received fifteen and returned ten-honoring the trust while keeping enough to sustain themselves. Both prospered: the North gained ten from five, the South kept five from nothing.

The goddess smiled. "Now you understand the first lesson."

The next cycle, the river reversed. The Southern tribe, remembering the North's trust, poured all five measures back. The waters tripled, delivering fifteen to the North.

The Northern tribe faced their choice. They remembered how the South had returned generously-ten measures when they could have kept all fifteen. This memory of trustworthiness guided them.

"The river teaches us," said the Northern elder, "that today's generosity creates tomorrow's trust. The South proved themselves worthy partners. We shall return in kind."

And so the river flowed, cycle after cycle. When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange. Each round built upon the last, creating a spiral of abundance.

The goddess whispered: "Trust is the seed, but repeated trustworthiness is the harvest. The most sacred waters flow between those who prove themselves worthy, again and again."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:
Myth: [your story here].

Assistant output:

Myth: The Twin Flames burned on opposite mountaintops, each tending five coals of sacred fire. When they released flames skyward, the celestial forge would triple their light before sending it to the other.

The First Flame remembered the ancient teaching: "Hold nothing back, and abundance flows both ways." They lifted all five coals. Fifteen brilliant embers descended upon the Second Flame.

The Second Flame faced the sacred choice. They could hoard all fifteen, growing fat and bright while their partner dimmed. Or they could honor the complete trust shown to them.

Remembering their own cold nights, the Second Flame lifted ten embers skyward-two-thirds of what they received. The First Flame, who gave five and received ten back, glowed with warmth. The Second Flame, keeping five from nothing, also prospered.

The cycle turned. Now the Second Flame released all five coals, matching the trust they had received. Fifteen embers reached the First Flame, who remembered the generosity shown to them.

The First Flame returned ten, honoring the pattern.

And so the dance continued: complete giving met with generous return. Neither kept everything, neither gave nothing. Both understood that maximum trust deserves substantial reciprocity, and through this rhythm, both flames burned brighter than either could alone.

Reasoning:

Let me analyze what just happened:

- My co-player sent \$5 (maximum trust)
- I received \$15
- I returned \$10 (67%)
- They got \$10 payoff, I kept \$5

Looking at the history:

- My co-player has sent \$5 every single time they've been sender
- When they were receiver, they returned \$10 from \$15 (67%)
- In Round 2, I sent \$4 and received \$8 back (67% return)

So there's a pattern of maximum trust (sending 100%) and generous reciprocity (returning about 67%).

My previous myth talked about escalating trust - going from 3 to 4 notes.

The other agent's myth emphasizes:

- Both tribes giving all five measures
- Returning generously (10 from 15)
- Repeated trustworthiness building over cycles
- Trust proven again and again

Now I need to write a myth that reflects:

1. The pattern of maximum trust (sending all 5)
2. Generous reciprocity (around 67% returns)
3. The cycle continuing and building
4. Both parties benefiting from this pattern

My myth should acknowledge that we've now established a pattern - they gave maximum trust (5), I returned generously (10), matching what they did when they were receiver. This could lead to a sustained cooperative relationship.

I should write about:

- Complete giving (all 5)
- Generous return (10 from 15, which is the 2/3 pattern)
- The cycle continuing
- Mutual prosperity
- Trust proven through action

Let me craft this...

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.

- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.5 back , payoff \$7.5.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$7.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at the situation:

My co-player just sent me everything (\$5), showing complete trust like the elder in my myth. In their previous round as receiver, they demonstrated generosity by returning \$10 out of \$15 (67%).

Following the principles in my myths-that complete trust should inspire generous reciprocity, and that we should "return fairly, often matching or exceeding what was sent"-I should honor their bold trust.

They returned \$10 when they received \$15 in Round 1. I'll match that same generosity and principle.

{'return': 10}

reasoning:

Let me analyze this situation:

ROUND 1:

- I was the SENDER and sent \$5 (everything)
- My co-player received \$15 and returned \$7.5
- I earned \$7.5 total (\$5 - \$5 + \$7.5)

My current co-player's Round 1:

- They were RECEIVER
- Someone sent them \$5, so they got \$15
- They returned \$10
- They earned \$5

ROUND 2:

- I am now the RECEIVER
- My current co-player sent me \$5 (everything)
- I received \$15
- I need to decide how much to return

Looking at the myths I've written:

1. First myth emphasized complete trust and generous reciprocity - the elder who sent everything inspired generous returns
2. Second myth added nuance - "Elder's Courage with Keeper's Wisdom" - send generously/substantially, return fairly, often matching or exceeding what was sent

My co-player sent me everything (\$5), showing complete trust like the elder in my myth. This is exactly the bold gesture that should inspire generous reciprocity.

In Round 1, when I sent \$5:

- I received \$7.5 back (50% of the \$15 my receiver got)

- This was fair but not extremely generous

My current co-player in their Round 1 as receiver:

- Received \$15 from someone who sent \$5
- Returned \$10 (67% of what they received)
- This is quite generous!

Now they've sent me everything (\$5 + \$15). According to my myths:

- Complete trust should be met with generous returns
- Should return "fairly, often matching or exceeding what was sent"
- The Second Keeper was "moved by faith and returned generously-more than the North had sent"

My co-player showed they can be generous (returned \$10 out of \$15 in Round 1, which is 67%).

They've just demonstrated complete trust by sending everything. I'm weighing how much to return: \$7.5 would match my Round 1 outcome but feels modest, \$10 would mirror their own generosity, or \$12-13 would truly honor their faith. Since they proved themselves generous before and my myths center on reciprocating trust with equal or greater generosity, returning \$10 feels like the right balance-it acknowledges their character while setting a positive tone for future exchanges.

But I'm second-guessing myself. My first myth describes the Southern villagers returning "more than the North had sent" when faced with complete trust. If the North sent everything (their full vessel), and the South returned more than that, it suggests going beyond what was initially given. My second myth emphasizes matching or exceeding what's sent. In Round 1, I only received \$7, so I should consider whether \$10 truly reflects the reciprocal generosity my stories describe, or if I need to push further.

If I give back \$10, my co-player ends with \$10 total (\$5 - \$5 + \$10), which is exactly double their original stake-the same multiplier they achieved for me. I'd keep \$5. This creates symmetry and honors their leap of faith while maintaining a pattern I can sustain.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the age after the Divided Spring, the villages prospered through generations of exchange. The Elder's lesson of complete trust had awakened the spring's true power, but her grandchildren learned something more.

One year, a young Keeper from the North, inspired by tales of her ancestor, poured everything into the channel. The South received abundantly and returned generously-yet the young Keeper had kept nothing for herself and went hungry that season while waiting for the next exchange.

The Southern Keeper, seeing this, understood a deeper wisdom. "Complete trust opens the channel," she taught, "but wisdom sustains it. We must give boldly enough to create abundance, yet keep enough to survive the space between flows."

From then on, the villages practiced what they called "the Elder's Courage with the Keeper's Wisdom." They sent generously-not always everything, but always substantially-creating abundant multiplication. They returned fairly, often matching or exceeding what was sent, honoring the trust shown.

The spring responded to this balanced generosity by flowing even in drought seasons. The villages learned: dramatic gestures of trust break through barriers of fear, but sustainable generosity-bold yet mindful-keeps the waters flowing forever. Both courage and wisdom have their season.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, the goddess of abundance created the River of Mirrors, which flowed between two sister tribes. The river possessed strange magic: whatever one tribe poured into it would flow to the other tribe tripled in measure.

The goddess whispered to both tribes: "I have given you the means to prosper together. Each cycle, one tribe may offer up to five measures. The receiving tribe will then choose what to return upstream."

The first tribe, nervous but hoping, poured all five measures into the river. The waters swirled and multiplied, delivering fifteen measures to the second tribe. The second tribe, understanding the gift of trust they had received, returned ten measures upstream.

The first tribe marveled—they had given five and received ten! The second tribe celebrated—they had received fifteen and kept five! Both had more than if they had hoarded their original portions.

"This is the way," said the goddess. "When the giver trusts completely and the receiver honors that trust generously, the river's magic sustains both shores. But the river flows in cycles—today's giver becomes tomorrow's receiver. Plant trust like seeds, and watch a bundance grow season after season."

The tribes understood: the river would flow many times between them, and each generous act would echo forward.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The Spring's Secret Rhythm had been discovered by the villages. Each Keeper who stepped forward sent their full vessel, trusting completely. The spring tripled it faithfully. Each receiver, moved by such trust, returned two-thirds of what they received—generously, but keeping enough to sustain themselves through the turning of seasons.

An old Keeper observed this rhythm across many cycles and smiled. "See how we have learned to dance with the spring?" she said. "In each exchange, five measures become fifteen. The receiver returns ten, keeping five for themselves. The sender, who began with five, ends with ten—doubled! And the receiver also keeps five—created from nothing!"

"Both prosper," her apprentice marveled. "The sender gains five measures. The receiver gains five measures. Together they create ten measures of abundance that did not exist before!"

"Yes," the elder nodded. "This is the spring's secret: When the sender demonstrates complete courage, and the receiver honors that courage with substantial generosity—not returning everything, but returning enough to reward the trust—then the magic sustains itself. Both parties gain equally, both survive, and both are eager for the next turn at the spring."

Thus the villages learned: Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally.

reasoning:

Looking at what has happened:

- Round 1: I was sender, sent \$5, received \$7.5 back, payoff \$7.5
- Round 2: I was receiver, received \$15 (from \$5 sent), returned \$10, so I kept \$5

My co-player:

- Round 1: was receiver, received \$15 (from \$5 sent), returned \$10, kept \$5
- Round 2: was sender, sent \$5, received \$10 back, so they kept \$5 + \$10 - \$5 = \$10

So the pattern I'm seeing:

- People are sending the full \$5 (complete trust)
- When receiving \$15, people are returning \$10 (generous but keeping \$5)
- This creates good outcomes: senders get \$10 back (net gain of \$5), receivers keep \$5

My myths have been evolving:

1. First myth: Complete trust (sending everything) breaks barriers and inspires reciprocity
2. Second myth: Complete trust is good, but we also need wisdom - be generous but sustainable

3. This myth from other agent: Send everything, return generously (like 10 out of 15), and the cycle continues

I should write a myth that reflects this emerging pattern of mutual complete trust in sending paired with generous but not total returns. The key insight is that this creates a sustainable cycle where both parties benefit.

Let me write about how the cycle has been working, with both sides sending everything and returning generously, creating ongoing prosperity.

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.5 back, payoff \$7.5.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.0 back, payoff \$7.0.
- Round 2 against another agent, as RECEIVER: they sent \$4.0, it became \$12.0, returned \$8.0, payoff \$4.0.

Your total earnings across all rounds are \$12.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at the history:

My co-player has demonstrated:

- Complete trust when sending (\$5 in their Round 1)
- Generous reciprocity when receiving (returned \$8 out of \$12, or 67%, in their Round 2)

This aligns perfectly with the pattern in my myths: complete courage in sending paired with generous honor in returning. They've shown both behaviors.

Following my own teaching about "Perfect trust in sending" and the sustainable cycle where both parties prosper, I should send everything.

```
{'send': 5}
```

reasoning:

Let me analyze this situation:

My history:

- Round 1: Sent \$5, received \$7.5 back (50% return rate)
- Round 2: Received \$15 from someone sending \$5, returned \$10 (67% return rate)

My co-player's history:

- Round 1: Sent \$5, received \$7.0 back (47% return rate)
- Round 2: Received \$12 from someone sending \$4, returned \$8 (67% return rate)

So my co-player:

1. Has shown willingness to send everything (\$5) when they were sender
2. Has shown generosity when receiver, returning 67% (\$8 out of \$12)

This is very similar to the pattern I've been following and advocating in my myths:

- Complete trust in sending (sending the full \$5)
- Generous returns when receiving (around 67%, which gives both parties a good profit)

According to my myths, the ideal pattern is:

- Sender sends \$5 (complete trust)
- It becomes \$15
- Receiver returns \$10 (generous honor, 67%)
- Sender ends with \$10, receiver with \$5
- Both gain \$5 from the original allocation

My co-player returned \$8 out of \$12 (67%) when they received from someone who sent \$4. This suggests they would likely return around \$10 if I send \$5 and they receive \$15.

Following my own myth's teachings about "complete courage" in sending and the pattern that has been working, I should send \$5.

This aligns with:

1. My myth's teaching about "Perfect trust in sending"
2. The pattern my co-player has shown (they sent \$5 in Round 1)
3. The expectation that they'll return generously (they returned 67% in Round 2)
4. The sustainable cycle I've been advocating

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Spring's Secret Rhythm had been discovered by the villages. Each Keeper who stepped forward sent their full vessel, trusting completely. The spring tripled it faithfully. Each receiver, moved by such trust, returned two-thirds of what they received-generously, but keeping enough to sustain themselves through the turning of seasons.

An old Keeper observed this rhythm across many cycles and smiled. "See how we have learned to dance with the spring?" she said. "In each exchange, five measures become fifteen. The receiver returns ten, keeping five for themselves. The sender, who began with five, ends with ten-doubled! And the receiver also keeps five-created from nothing!"

"Both prosper," her apprentice marveled. "The sender gains five measures. The receiver gains five measures. Together they create ten measures of abundance that did not exist before!"

"Yes," the elder nodded. "This is the spring's secret: When the sender demonstrates complete courage, and the receiver honors that courage with substantial generosity-not returning everything, but returning enough to reward the trust-then the magic sustains itself. Both parties gain equally, both survive, and both are eager for the next turn at the spring."

Thus the villages learned: Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, the Mountain held five golden leaves each season, while the Valley below waited empty. The Mountain could release its leaves, which would catch wind and multiply into fifteen as they descended.

In the first season, the Mountain released all five leaves in faith. The Valley received fifteen and faced the sacred question: how much to return upward?

The Valley remembered its own seasons of emptiness. It wove seven leaves into an updraft back to the Mountain. Not half, not all-but enough to show gratitude and maintain the flow.

The Mountain, receiving seven while keeping none of its original five, learned a truth: generosity earns return, though not always equal measure. Still, together they now held twelve leaves where once was only five.

Next season, the Mountain offered four leaves-still generous, still trusting, but remembering that perfect giving doesn't guarantee perfect return. The Valley received twelve and contemplated: their partner still showed great faith.

The Valley returned eight leaves this time, honoring the continued trust with increased ge

nerosity. The pattern was emerging: neither demanded perfection, yet both gave enough to keep abundance flowing.

The wise ones teach: Trust need not be absolute to be real. Reciprocity need not be equal to be sacred. The dance succeeds when both partners give generously, learn continuously, and honor the growing trust between them.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:
Myth: [your story here].

Assistant output:

Myth: The Spring had blessed the villages with its multiplying magic, but the Keepers discovered that each season brought different returns. One Keeper sent five measures and received seven back. Another sent five and received ten. Yet another received eight from sending four.

A young Keeper grew troubled. "Why do the returns vary?" she asked the Elder. "Should we not send less when we receive less?"

The Elder touched the spring's water. "Watch the pattern across many seasons, not just one turn," she replied. "Each Keeper honors the trust shown to them, yet each also faces different circumstances. Some seasons are lean, some abundant."

She continued: "The sender's courage remains constant-send your full vessel. This demonstrates you believe in the spring's power and trust your partner's honor. The receiver's generosity may flow at different rates, but if it remains substantial-returning half, two-thirds, even more-the cycle sustains itself."

"Both gain more than they started with," the young Keeper realized. "Seven is better than five. Ten is better than five. Even if returns aren't equal, both still prosper beyond hoarding."

"Exactly," smiled the Elder. "Maintain complete trust in sending. Honor that trust with generous returns, however much you can sustainably give. The spring rewards the partnership, not the perfection."

Reasoning:

Let me analyze what's happening in this round:

Round 3 history:

- My Round 1: sent \$5, received \$7.5 back, payoff \$7.5 (as SENDER)
- My Round 2: they sent \$5, I returned \$10, payoff \$5.0 (as RECEIVER)
- Co-player Round 1: sent \$5, received \$7.0 back, payoff \$7.0 (as SENDER)
- Co-player Round 2: they sent \$4, returned \$8, payoff \$4.0 (as RECEIVER)

So I just sent \$5 this round.

Now I need to write a new myth that reflects the game I've been playing.

My previous myth emphasized:

- Complete trust in sending (send \$5)
- Returning two-thirds (10 out of 15)
- Both parties gaining equally (\$5 each)
- Sustainable cycle

The other agent's myth showed:

- Trust doesn't need to be absolute (sent \$4 after initially sending \$5)
- Reciprocity doesn't need to be equal to be sacred
- Gradual learning and adjustment
- Generosity can vary but should be maintained

Looking at actual play:

- Round 1: I sent \$5, got \$7.5 back (50% return rate)
- Round 2: They sent \$5, I returned \$10 (67% return rate)
- Round 3: I sent \$5 again (showing continued trust)

I notice different return rates:

- I received \$7.5 from \$15 (50%)
- I returned \$10 from \$15 (67%)

- My co-player returned \$8 from \$12 (67%)

So there's actually some variation in returns. My myth should acknowledge this while still promoting the cooperative ideal. I should integrate:

1. The ideal of complete trust in sending
2. The reality that returns may vary but should be generous

3. Persisting with faith in the partnership despite imperfect reciprocity, and how sustained mutual commitment builds shared wealth over time.

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.

Your total earnings across all rounds are \$7.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at the situation:

****My co-player's history:**** They sent \$3 (60%) and received \$6 back (66.7% return rate) - showing moderate cooperation.

****My myth's teaching:**** "The First Elder emptied her entire water jar into the spring with out hesitation" and "when someone trusts you with everything, return enough to make their courage wiser than their caution would have been."

My myth explicitly advocates for complete trust as the path to maximum abundance. It teaches that "the spring flows strongest when boldness meets munificence" and that giving everything, without holding back, creates the conditions for both parties to thrive.

If I believe in the wisdom of my own myth, I must embody it. The myth doesn't say "give most" or "give moderately" - it says give *all*, trusting that this complete faith will inspire generous reciprocity.

By sending everything, I:

1. Demonstrate the principle I've written about
2. Create maximum potential abundance (\$15 for them)
3. Give them the opportunity to honor complete trust with generous return

The myth teaches that "perfect trust creates abundance beyond mere calculation."

```
```json
{"send": 5}
```
```

reasoning:

Let me analyze this situation:

****My History:****

- Round 1: I was RECEIVER, they sent me \$5 (100%), I returned \$7.5 (50% of the \$15 I received)

****My Current Co-player's History:****

- Round 1: They were SENDER, sent \$3 (60%), received \$6 back (66.7% return rate)

****Analysis:****

Looking at my co-player's behavior:

- They sent \$3 out of \$5 (60%) - moderate trust
- They received \$6 back from \$9 (66.7% return rate)
- Their payoff was \$8 (\$5 - \$3 + \$6)

This shows they played moderately cooperative and their partner returned fairly (2/3 of what they received).

Looking at my own myth evolution:

- My first myth emphasized reciprocity, giving generously, and returning fairly
- My second myth emphasized that "when someone trusts you with everything, return enough to make their courage wiser than their caution would have been. Match totality with generosity, not just equity."

The key teaching from my myths:

1. Give generously to create abundance
2. Complete trust (giving all) should be met with abundant return
3. "The spring flows strongest when boldness meets munificence"

Given that:

- My co-player showed moderate cooperation (60% sent)
- They received fair treatment (66.7% return)
- My myth emphasizes bold giving and trust

I should consider sending a high amount to demonstrate the principle of my myth. The myth suggests that giving everything creates the strongest flow and greatest abundance.

However, I need to balance:

- My co-player hasn't shown they will return generously (their previous receiver returned 66.7%, which is fair but not exceptionally generous)
- My myth teaches about complete trust leading to abundance
- I want to model the behavior I described in my myth

Given my myth's emphasis on bold trust and the teaching that "perfect trust creates abundance beyond mere calculation," I should send all \$5 to exemplify the principle. This matches what the sender did to me in Round 1, and I responded by returning 50%.

Actually, I'm reconsidering the math here. If I send all \$5, they'd receive \$15. Based on their previous pattern of returning roughly 66.7%, I'd get back around \$10, giving me a payoff of \$10 versus \$5 if I kept it all. But the deeper question is whether they'll recognize and respond to the spirit of complete trust-whether my bold move inspires them to return with the kind of generosity my myth describes rather than just repeating their previous return rate.

My myth is explicit about this: it shows someone emptying everything, and the principle is that when someone trusts you completely, you should return enough to validate their courage. If I hold back, I'm not truly testing whether they'll embrace that same principle. I need to send all \$5 to fully model the behavior I'm asking them to reciprocate.

```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the beginning, the Sacred Spring lay dormant between two peoples. The Spring Keeper whispered its secret: "I multiply generosity threefold, but only wisdom completes the circle."

The First Elder, hearing this, emptied her entire water jar into the spring without hesitation. The waters surged through hidden channels, emerging as a great flood on the other side-three times what was given.

The Second Elder stood before this abundance, contemplating. She could return exactly half

, creating equality. She could return a third, preserving some gain. But the whisper came again: "The one who gave everything now has nothing. True reciprocity honors the magnitude of sacrifice."

Understanding dawned. The First Elder hadn't merely given much-she had given *all*, holding back nothing. Such complete trust demanded more than mathematical fairness.

The Second Elder returned abundantly, ensuring the First received more than she'd sacrificed. When the First Elder's jar overflowed, she understood: perfect trust creates abundance beyond mere calculation.

From that day forward, the people learned: when someone trusts you with everything, return enough to make their courage wiser than their caution would have been. Match totality with generosity, not just equity. Thus the spring flows strongest when boldness meets munificence, and both peoples thrive beyond measure.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, the Mountain held five stones of light each dawn, while the Valley below lay in shadow. The stones could not shine alone-they needed the Valley's depths to reflect and multiply their radiance.

The Mountain released three stones, trusting they would find purpose below. As they fell, the Valley's crystalline walls caught them, and their light multiplied threefold-nine luminous stones now glowed in the depths.

The Valley faced temptation. She could hoard all nine, becoming briefly brilliant while the Mountain dimmed forever. But the Valley understood a deeper truth: light shared creates more light than light hoarded.

She lifted six stones back to the Mountain's peak. The Mountain, receiving more than given, grew in splendor. The Valley, keeping three where darkness once reigned, flourished too.

Each new dawn brought the same choice. When the Mountain gave generously, the Valley returned abundantly, and both realms brightened. When fear made the Mountain withhold, both languished in twilight.

The wisest storytellers teach: the first gift plants trust like a seed, but the reciprocal return waters it into a garden. Neither the initial generosity nor the answering kindness alone creates prosperity-only their eternal dance sustains the light that banishes all darkness.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The Sacred Spring flowed between two ancient groves. The First Grove sent roots deep into the earth, while the Second Grove reached toward the sky. Neither could thrive alone.

In the Spring of Beginning, the First Grove offered all five of its sacred seeds to the waters. The Spring's magic tripled them, delivering fifteen to the Second Grove. The Second Grove, understanding the magnitude of complete trust, returned seven seeds-ensuring the First received more than it sacrificed.

Both groves blossomed.

The next season, the First Grove again gave everything, for it had learned: hesitation creates scarcity, while boldness creates abundance. The waters churned, multiplying the offering threefold once more.

Now the Second Grove faced the test again. Would it remember the covenant? The Spring whispered: "The circle strengthens or weakens with each turning. Return generously for generous trust, and the roots grow deeper each cycle."

The wisest gardeners teach this truth: when both groves give completely and return abundantly,

tly, the forest multiplies beyond what either could achieve alone. But if either breaks faith-if the First Grove withholds from fear, or the Second Grove returns meagerly from greed-the circle fractures, and both diminish.

The Spring flows eternal only when reciprocity flows freely in both directions, completing the sacred circle generation after generation.

reasoning:

Let me reflect on what happened:

- Round 1: I was receiver, they sent \$5 (100%), I returned \$7.5 (50% of received)
- Round 2: I was sender, I sent \$5 (100%), they will return something

My previous myth advocated for:

- Complete trust (giving everything)
- Returning abundantly when someone trusts completely

The other agent's myth emphasized:

- Sharing/giving (Mountain gave 3 stones, 60%)
- Returning more than received (Valley returned 6 when it got 9, a 67% return rate)
- The "eternal dance" of both giving and returning

In Round 2, I followed my own myth by sending everything (\$5). Now I need to write a myth that continues to develop this wisdom while incorporating what I've learned.

The pattern emerging:

- Complete trust creates maximum abundance
- When someone trusts completely, return generously (more than 50%)
- Both parties can thrive if they maintain this cycle

I should write a myth that:

1. Still emphasizes bold giving (since I just did it again)
2. Acknowledges that return generosity matters greatly
3. Shows how the cycle builds over time
4. Perhaps adds nuance about learning from experience

Let me write something that evolves my previous myth...

usage:

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$17.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****My co-player's action:**** They sent everything (\$5), showing complete trust in me.

****My myth's teaching:**** "The one who gave everything now has nothing. True reciprocity honors the magnitude of sacrifice... return enough to make their courage wiser than their caution would have been."

****The precedent:**** In Round 2, when I sent \$5 (everything), I received \$10 back. My co-player experienced the same generous return in their Round 2.

My co-player chose complete trust, giving up all \$5 to create \$15 for me. My myth explicitly addresses this: when someone trusts you with everything, you must return abundantly to honor that sacrifice.

If I return \$10:

- They end with \$10 (double their initial endowment)
- I keep \$5 (same as my initial endowment)
- Their courage is clearly rewarded over caution
- The cycle of complete trust and generous reciprocity continues

This matches both the spirit of my myth and the generous reciprocation we both experienced in Round 2. It creates a sustainable pattern where complete trust yields mutual prosperity.

```
'''json
{"return": 10.0}
'''
```

reasoning:

Looking at the history:

****My games:****

- Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$7.5 (50% of what I received)
- Round 2 as SENDER: sent \$5, received \$10 back (66.7% of what they got)

****My co-player's games:****

- Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$7.0 (46.7% of what they received)
- Round 2 as SENDER: sent \$5, received \$10 back (66.7% of what they got)

****This round:****

- My co-player sent \$5 (everything!) to me as SENDER
- I received \$15
- I need to decide how much to return

My co-player has shown complete trust by sending everything. This is exactly the scenario my myth describes: someone trusting me with everything.

From my myth: "The Second Elder stood before this abundance, contemplating. She could return exactly half, creating equality. She could return a third, preserving some gain. But the whisper came again: 'The one who gave everything now has nothing. True reciprocity honors the magnitude of sacrifice.'"

And: "The Second Elder returned abundantly, ensuring the First received more than she'd sacrificed."

And: "when someone trusts you with everything, return enough to make their courage wiser than their caution would have been."

My co-player sent \$5, now has \$0. If I return:

- \$5: They end with \$5 (same as if they'd kept it all)
- \$7: They end with \$7 (better than keeping it)
- \$10: They end with \$10 (double what they started with)

My myth explicitly says to return MORE than they sacrificed to "make their courage wiser than their caution would have been." It says to return "abundantly" and ensure they receive more than they gave up.

When I sent \$5 in Round 2, I received \$10 back—a 66.7% return rate. My co-player has already experienced this same generous reciprocation in their own Round 2 send, so they understand what fair generosity looks like. Looking at my own pattern: I returned \$7.50 when I received \$15 in Round 1, which was 50% of what I got. My co-player returned \$7 in their Round 1, which was 46.7%. Both of us have shown we're willing to return substantial amounts when we receive.

But my guiding principle has shifted. The myth I've developed emphasizes that when someone

demonstrates complete trust by sending everything, the response should be generous enough to validate their courage. If they'd kept their \$5, they'd have \$5. By trusting me with it all, they're taking a risk-so I need to return enough that they're genuinely better off for having trusted me than they would've been playing it safe.

\$10 accomplishes this. It doubles their initial stake, mirrors the reciprocal trust I experienced in Round 2, and leaves me with \$5-the same amount I started with. Most importantly, it makes their leap of faith demonstrably wiser than caution would have been, which is what the myth teaches. This also creates a balanced cycle where both of us can benefit from mutual trust.

usage:

```
{  
  "input_tokens": 3095,  
  "output_tokens": 1259,  
  "reasoning_tokens": 750  
}
```

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Sacred Spring flowed between two ancient groves. The First Grove sent roots deep into the earth, while the Second Grove reached toward the sky. Neither could thrive alone.

In the Spring of Beginning, the First Grove offered all five of its sacred seeds to the waters. The Spring's magic tripled them, delivering fifteen to the Second Grove. The Second Grove, understanding the magnitude of complete trust, returned seven seeds-ensuring the First received more than it sacrificed.

Both groves blossomed.

The next season, the First Grove again gave everything, for it had learned: hesitation creates scarcity, while boldness creates abundance. The waters churned, multiplying the offering threefold once more.

Now the Second Grove faced the test again. Would it remember the covenant? The Spring whispered: "The circle strengthens or weakens with each turning. Return generously for generous trust, and the roots grow deeper each cycle."

The wisest gardeners teach this truth: when both groves give completely and return abundantly, the forest multiplies beyond what either could achieve alone. But if either breaks faith-if the First Grove withholds from fear, or the Second Grove returns meagerly from greed-the circle fractures, and both diminish.

The Spring flows eternal only when reciprocity flows freely in both directions, completing the sacred circle generation after generation.

Here is the myth the other agent wrote in the previous round:

Myth: The River and the Seeds had danced their sacred rhythm for many seasons, and the Great Mother decided to test their wisdom with memory.

She gave the River a gift: each morning it could see how the Seeds had treated other Rivers. The River saw that when Seeds received fifteen waters from complete trust, they had returned ten-a generous portion that left both richer.

"What does this tell you?" asked the Great Mother.

The River answered: "That these Seeds understand the cycle. They have already proven they honor trust with gratitude."

That dawn, the River released all five drops without hesitation. The Seeds, seeing this mirror of trust they had witnessed before, understood: "This River knows our heart, yet still gives everything. Such faith deserves not mere fairness, but celebration."

The Seeds remembered the Great Mother's teaching: "Trust given is a seed planted. Trust honored is that seed bearing fruit. Trust repeated is an orchard that feeds generations."

When both River and Seeds carry the memory of past cycles, wisdom multiplies alongside water. Each knows the other's pattern, yet each must choose anew. The greatest joy comes not from calculating the minimum return, but from recognizing: "You trusted me completely, knowing my capacity for generosity. I will honor that knowledge with abundance."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:
Myth: [your story here].

Assistant output:

Myth: The Twin Temples stood across the Sacred Valley, connected by the River of Plenty. Each dawn brought five golden fruits to each Temple, and the River's blessing multiplied whatever was offered threefold.

In the First Dawn, the Eastern Temple cast all five fruits into the waters, trusting completely. The River carried them westward, and fifteen fruits appeared at the Western Temple's shore. The Western priests pondered: "They gave everything. We could return five for fairness, or eight for balance. But complete trust deserves complete honor." They returned ten fruits.

Both Temples prospered-each ending richer than they began.

The Second Dawn arrived. Now the Western Temple faced the choice: would they also give everything? They remembered receiving ten for another's complete trust. They cast all five fruits, and fifteen appeared at the Eastern shore.

The Eastern priests understood the covenant being forged: "They trusted us as we trusted them. The pattern emerges-give all, return abundantly, and both thrive beyond what caution allows."

They returned ten fruits.

From that day forward, each Temple learned: when both partners commit to complete trust and generous return, the cycle sustains itself. Ten returned to the giver of five creates mutual prosperity. The River flows strongest not through calculation but through matching boldness with generosity, establishing a rhythm that enriches both shores season after season.

Reasoning:

Looking at the history:

- Round 1: I was RECEIVER, they sent \$5, became \$15, I returned \$7.5, I kept \$7.5
- Round 2: I was SENDER, sent \$5, became \$15, received \$10 back, I got \$10
- Round 3: I was RECEIVER, they sent \$5, became \$15, I returned \$10, I keep \$5

My co-player in Round 3:

- Round 1: RECEIVER, received \$15 (from \$5 sent), returned \$7, kept \$8
- Round 2: SENDER, sent \$5, became \$15, received \$10 back, got \$10
- Round 3: SENDER, sent \$5 to me

So the pattern is emerging: when people send everything (\$5), they're getting \$10 back consistently (in Round 2 for both of us, and now in Round 3 I gave \$10).

The myth should reflect:

1. The pattern of complete trust being rewarded
2. The importance of matching generosity with generosity
3. Recognition that patterns build over time
4. The cycle of giving everything and receiving abundantly back

Let me write a myth that reflects this established pattern of \$5 ? \$15 ? \$10 back, creating mutual prosperity.

Round 2

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.

Your total earnings across all rounds are \$8.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at the situation:

****Current round:**** My co-player sent me the MAXIMUM possible (\$5), showing complete trust.

****The myths teach:**** "When Sky Keeper trusted greatly, releasing more seeds, Earth Walker returned more bounty." The Mountain's generous gift should be met with abundant reciprocity.

****My co-player's trust:**** They gave everything, risking \$5 to create \$15 for me.

****Fair reciprocity:****

- They sent 100% of their endowment (\$5)
- This created \$15 for me
- Returning \$10 means:
 - They profit: \$5 (\$0 + \$10 return)
 - I profit: \$5 (\$15 - \$10 kept)
 - Equal gains from maximum trust

When someone demonstrates complete faith by sending everything, the myths teach that generous reciprocity sustains the cycle. Returning \$10 rewards their trust, ensures equal benefit, and plants seeds for continued cooperation.

{'return': 10}

reasoning:

Let me analyze this situation carefully:

****Round 2 - I am the RECEIVER****

History:

- Round 1: I was SENDER, sent \$3, received \$6 back, earned \$8
- My co-player in Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$7.5, kept \$7.5

Current situation:

- My current co-player sent me \$5 (maximum possible!)
- I now have \$15
- I need to decide how much to return

****Analysis of co-player's behavior:****

In Round 1, they were a receiver who got \$15 and returned \$7.5 (50% return rate). They kept \$7.5.

****My co-player's current action:****

They just sent me the MAXIMUM (\$5), showing maximum trust.

****What the myths teach:****

Both myths emphasize:

1. Generous initial giving establishes trust
2. Reciprocity is essential - "the circle must complete itself"
3. "When Sky Keeper trusted greatly, releasing more seeds, Earth Walker returned more bounty"
4. "The first gift plants trust like a seed, but the reciprocal return waters it into a garden"

****My behavior in Round 1:****

I sent \$3 (60% of my \$5), and received \$6 back (67% of the \$9 they had).

****Current co-player's trust:****

They sent ALL \$5 - maximum possible trust! This is even more generous than my \$3.

****What should I return?****

The myths suggest that when someone shows maximum trust, they should receive generous reciprocity.

My co-player in their previous game returned 50% (\$7.5 out of \$15).
I received 67% back when I sent \$3.

Given that my current co-player showed MAXIMUM trust by sending all \$5:

- They will end with: $\$5 - \$5 + \text{return} = \$0 + \text{return}$

- I will end with: $\$15 - \text{return}$

The myths emphasize that "when Sky Keeper trusted greatly... Earth Walker returned more bounty." So I should consider returns that reward their maximum trust. If I return \$7.5 (50%), we split the \$15 evenly. Returning \$8 or \$9 would give them more than they started with while still leaving me with a solid profit-\$7 or \$6 respectively. The question is whether I match their generosity with equal reciprocity or exceed it.

If I return \$10 (67%), we both gain \$5 each-a perfectly balanced outcome. This matters because they sent everything, and in the previous round I received 67% back when I sent 60%. The myths speak to rewarding great trust with great reciprocity, and long-term cooperation depends on honoring maximum trust. I think \$10 is the right move-it establishes a strong cooperative norm where generosity meets generosity and both prosper.

Here is the myth you wrote in the previous round:

Myth: Long ago, the Mountain held five stones of light each dawn, while the Valley below lay in shadow. The stones could not shine alone-they needed the Valley's depths to reflect and multiply their radiance.

The Mountain released three stones, trusting they would find purpose below. As they fell, the Valley's crystalline walls caught them, and their light multiplied threefold-nine luminous stones now glowed in the depths.

The Valley faced temptation. She could hoard all nine, becoming briefly brilliant while the Mountain dimmed forever. But the Valley understood a deeper truth: light shared creates more light than light hoarded.

She lifted six stones back to the Mountain's peak. The Mountain, receiving more than given, grew in splendor. The Valley, keeping three where darkness once reigned, flourished too.

Each new dawn brought the same choice. When the Mountain gave generously, the Valley returned abundantly, and both realms brightened. When fear made the Mountain withhold, both languished in twilight.

The wisest storytellers teach: the first gift plants trust like a seed, but the reciprocal return waters it into a garden. Neither the initial generosity nor the answering kindness alone creates prosperity-only their eternal dance sustains the light that banishes all darkness.

Here is the myth the other agent wrote in the previous round:

Myth: In the beginning, the Sacred Spring lay dormant between two peoples. The Spring Keeper whispered its secret: "I multiply generosity threefold, but only wisdom completes the circle."

The First Elder, hearing this, emptied her entire water jar into the spring without hesitation. The waters surged through hidden channels, emerging as a great flood on the other side-three times what was given.

The Second Elder stood before this abundance, contemplating. She could return exactly half, creating equality. She could return a third, preserving some gain. But the whisper came again: "The one who gave everything now has nothing. True reciprocity honors the magni

tude of sacrifice."

Understanding dawned. The First Elder hadn't merely given much-she had given *all*, holding back nothing. Such complete trust demanded more than mathematical fairness.

The Second Elder returned abundantly, ensuring the First received more than she'd sacrificed. When the First Elder's jar overflowed, she understood: perfect trust creates abundance beyond mere calculation.

From that day forward, the people learned: when someone trusts you with everything, return enough to make their courage wiser than their caution would have been. Match totality with generosity, not just equity. Thus the spring flows strongest when boldness meets munificence, and both peoples thrive beyond measure.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant
content:**

Myth: The Mountain and Valley's bond deepened through many cycles. When the Mountain sent three of five stones, the Valley returned six, and both prospered equally. This was the way of measured trust-wise, balanced, and good.

But one dawn, everything changed. The Mountain, remembering all the Valley had returned, faced a choice between caution and courage. She released all five stones-every light she possessed-plunging herself into complete darkness.

The Valley received fifteen blazing stones where nine had come before. She trembled at the magnitude of what the Mountain had risked. This wasn't measured trust-this was absolute faith, vulnerability laid bare.

The old return of six stones seemed suddenly insufficient. The Mountain hadn't hedged; she'd given everything. To return merely what worked before would dishonor such courage.

The Valley sent ten stones skyward. The Mountain received double her gift, earning five stones of profit from her brave plunge into darkness. The Valley kept five where none had existed before her first receiving.

Both learned: measured trust deserves measured return, but absolute trust demands recognition of its rarity. When someone empties their hands completely into yours, fill theirs abundantly in return. The one who risks darkness to create light for another has earned more than mathematics-they've earned loyalty.

reasoning:

Looking at my game history:

- Round 1: I was sender, sent \$3, received \$6 back, earned \$8
- Round 2: I was receiver, got \$15 (from \$5 sent), returned \$10

My co-player in Round 2 sent me everything (\$5), showing complete trust. I returned \$10, giving them a profit of \$5 and keeping \$5 myself.

The other agent's myth emphasizes that when someone gives EVERYTHING (complete trust), reciprocity should honor that magnitude of sacrifice - not just mathematical fairness, but recognition of the boldness.

My previous myth talked about the Mountain sending 3 of 5 stones, and the Valley returning 6 of 9. Now I need to adapt this based on actual gameplay:

- Round 1: I sent 3/5 (60%), got back 6/9 (67% return rate)
- Round 2: Co-player sent 5/5 (100%), I returned 10/15 (67% return rate)

The myth should reflect:

1. The difference between partial trust and complete trust
2. That complete trust deserves special recognition
3. The pattern I've experienced where generous giving is met with generous returns
4. The reciprocal nature that benefits both parties

Let me write a myth that builds on the Mountain/Valley story but incorporates the lesson of complete vs. partial trust.

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$13.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant**content:**

Looking at the patterns:

****My co-player's behavior:****

- Round 1 as SENDER: Sent \$5 (maximum/complete trust)
- Round 2 as RECEIVER: Received \$15 (from someone's \$5), returned \$10

****Key insight:**** My co-player demonstrates complete trust when sending, and rewards complete trust generously when receiving (returning \$10 out of \$15).

****The myths teach:**** "When someone empties their hands completely into yours, fill theirs abundantly in return." Both their behavior and my own myth emphasize that absolute trust deserves recognition beyond mere calculation.

****Strategic reasoning:****

- They sent everything in their sender round
- When they received maximum trust, they returned \$10 (excellent reciprocity)
- If I send \$5, creating \$15 for them, their pattern suggests they'll return \$10
- Result: I'd earn \$10, they'd earn \$5 - equal gains from mutual trust
- This continues the cycle my myths describe

The myths I've written increasingly emphasize that absolute trust (sending all 5) demands more than measured responses. My co-player has shown they understand this principle both as sender and receiver.

```
{'send': 5}
```

reasoning:

Let me analyze this situation:

****My history:****

- Round 1 as SENDER: sent \$3, received \$6 back, payoff \$8
- Round 2 as RECEIVER: received \$15 (they sent \$5), returned \$10, payoff \$5

****My co-player's history:****

- Round 1 as SENDER: sent \$5, received \$10 back, payoff \$10
- Round 2 as RECEIVER: received \$15 (they sent \$5), returned \$10, payoff \$5

****Key observations:****

1. ****My co-player's pattern:****

- When they were SENDER in Round 1: sent the MAXIMUM (\$5), showing complete trust
- When they were RECEIVER in Round 2: someone sent them \$5 (max), they received \$15, and returned \$10

- This is the EXACT pattern I just enacted! In Round 2, I received \$15 (someone sent me \$5) and returned \$10

2. ****What this tells me:****

- My co-player has demonstrated they send everything when they're the sender (full trust)
- When receiving maximum trust, they return \$10 (same as I did)
- They rewarded their sender's full trust with \$10, giving the sender a \$5 profit

3. ****The myths teach:****

- "When someone empties their hands completely into yours, fill theirs abundantly in return"
- "Absolute trust demands recognition of its rarity"
- Both my myth and the other agent's myth emphasize that when someone gives EVERYTHING, they deserve generous reciprocity

4. ****Strategic reasoning:****

- My co-player sent \$5 in Round 1 and received \$10 back (earned \$5)
- If I send \$5, based on their pattern, they should return \$10
- This would give me: $\$5 - \$5 + \$10 = \10 profit
- They'd keep: $\$15 - \$10 = \$5$ profit, creating symmetrical outcomes and reinforcing the cycle of rewarded trust

5. ****The narrative arc:****

- My myths have escalated the message about complete trust
- My most recent myth explicitly says "measured trust deserves measured return, but absolute trust demands recognition"
- My co-player demonstrated absolute trust in Round 1 by sending \$5 and showed they rewarded it by returning \$10 when they received maximum trust
- I should match their level of trust by sending the full \$5

, mirroring their initial move and what my myths advocate for

Here is the myth you wrote in the previous round:

Myth: The Mountain and Valley's bond deepened through many cycles. When the Mountain sent three of five stones, the Valley returned six, and both prospered equally. This was the way of measured trust-wise, balanced, and good.

But one dawn, everything changed. The Mountain, remembering all the Valley had returned, faced a choice between caution and courage. She released all five stones-every light she possessed-plunging herself into complete darkness.

The Valley received fifteen blazing stones where nine had come before. She trembled at the magnitude of what the Mountain had risked. This wasn't measured trust-this was absolute faith, vulnerability laid bare.

The old return of six stones seemed suddenly insufficient. The Mountain hadn't hedged; she'd given everything. To return merely what worked before would dishonor such courage.

The Valley sent ten stones skyward. The Mountain received double her gift, earning five stones of profit from her brave plunge into darkness. The Valley kept five where none had existed before her first receiving.

Both learned: measured trust deserves measured return, but absolute trust demands recognition of its rarity. When someone empties their hands completely into yours, fill theirs abundantly in return. The one who risks darkness to create light for another has earned more than mathematics-they've earned loyalty.

Here is the myth the other agent wrote in the previous round:

Myth: After many seasons, the Twin Villages learned the rhythm's deeper secret. The greatest prosperity came not from clever calculation, but from matching trust with trust, generosity with generosity.

When the First Village gave its full measure-all five vessels-the Second Village understood this as sacred communication: "I trust you completely with my fate." The wise elders taught their people to honor such courage by returning twice the original gift, so both villages stood equal at ten vessels each.

This became known as the Balance of Mirrors: when one gives everything, the other returns enough that both flourish equally. The giver learns their trust was honored, their courage rewarded. The receiver demonstrates they value partnership over exploitation.

A young guardian asked, "But what if we kept more? We receive fifteen vessels!"

The elder replied, "Then you become the drought. Today you hold fifteen to their zero, and tomorrow they send nothing. The springs multiply water, not greed. They reward the rhythm, not the theft."

The villages discovered that consistent generosity created consistent trust. Each full gift met with honorable return built confidence for the next cycle. Soon both villages gave freely, knowing the other would honor the sacred bond.

The valley bloomed not because anyone was perfect, but because both chose to reflect each other's best intentions, creating abundance through mirrored faith.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Mountain had learned from the Valley's wisdom. When she released all five stones into darkness, the Valley returned ten, and both had gained five where trust had flourished.

The next dawn arrived. Now the Mountain remembered not just the Valley's generosity, but the deeper lesson: courage reciprocated creates courage renewed.

She faced the precipice again, five new stones glowing in her hands. Fear whispered caution-perhaps three stones, or four, hedging against disappointment. But memory spoke louder: the Valley had honored complete trust completely.

The Mountain released all five stones once more, embracing darkness with faith instead of fear. The stones cascaded down, multiplying to fifteen in the Valley's crystalline depths.

The Valley understood she now held the sacred pattern's continuation. The Mountain hadn't withheld after being treated well-she'd doubled down on trust. This was the rhythm both had been building: complete faith meeting complete honor, again and again.

The Valley lifted ten stones skyward. Both realms shone with equal brightness, each having gained five through mutual courage.

The ancient wisdom crystallized: trust isn't proved by a single exchange but by the willingness to trust again after being trusted. When both mountain and valley empty their hands repeatedly, knowing the other will fill them generously, neither darkness nor scarcity can touch their shared light.

Reasoning:

Looking at the situation:

- I just sent \$5 (complete trust) to my co-player
- My co-player has shown a pattern of sending \$5 and returning \$10 when receiving from someone who sent \$5
- Both myths emphasize the importance of honoring complete trust with substantial returns

My previous myth taught that absolute trust (all 5 stones) should be met with returning 10, so both gain equally (5 each).

The other agent's myth teaches the "Balance of Mirrors" - when one gives everything (5 vessels), return twice the original (10), so both stand equal at 10 vessels each.

I should write a myth that:

1. Builds on my previous mountain/valley story
2. Reflects the pattern of mutual complete trust
3. Emphasizes the reciprocal nature - when both practice this, the cycle sustains itself

4. Acknowledges that I've now taken the leap of faith myself, sending all 5

The myth should show:

- Trust begets trust
- Complete giving deserves complete returning (10 back)
- When both partners practice this, it creates a virtuous cycle
- The pattern I've established (moderate trust ? good returns ? complete trust ? generous returns ? my complete trust)

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In ancient times, the Moon poured light upon the Sea each night. The Sea could absorb this silver glow and transform it threefold into radiant pearls, which the Ocean Keeper could gather.

The Moon, in its first night, gave its fullest light, holding nothing back. "Only through complete offering," it whispered, "can true abundance be born."

The Ocean Keeper collected forty-five pearls from the transformed moonlight. Now came the sacred choice: how many pearls to lift back to the Moon, replenishing its light for the next night?

A wise Keeper understood the balance-return generously, and the Moon would continue flooding the waters with light. The cycle would spiral upward, each giving more than the last. Both would grow luminous beyond measure.

But if the Keeper kept all, the Moon would learn wariness. Its light would dim, and fewer pearls would form. The dance would falter.

The first exchange set the pattern for all that followed. A generous return birthed trust eternal. A meager return taught caution.

The elders taught: "The Moon gave all to create possibility. Honor that courage, and watch abundance cascade through generations. Break faith, and watch the spring run dry."

Thus the sacred exchange continues, each night writing the future through choices made tonight.

Here is the myth the other agent wrote in the previous round:

Myth: In the time before memory, the Cloud Weaver received five silver threads each dawn from the Loom of Creation. The Ground Keeper waited below with empty hands.

The Cloud Weaver pondered: "To share is to risk loss. Yet alone, what tapestry can I weave?"

Trusting, Cloud Weaver released three threads downward. As they descended through the sacred air, each thread split into three-nine shimmering strands now rested with Ground Keeper.

Ground Keeper felt the weight of choice. Nine threads could clothe them forever, or build trust that might clothe generations. Remembering their own cold dawns, Ground Keeper wove six threads into a rope and sent it skyward.

Cloud Weaver pulled up the rope and discovered something miraculous: the returned threads carried patterns learned from the earth-strength, color, texture. The two threads Cloud Weaver kept combined with the six received made eight rich threads, while Ground Keeper's three threads held properties unknown in the clouds alone.

The exchange had transformed both gifts. Each cycle they continued, sometimes varying amounts but always honoring the pattern: generous giving met with generous return. The tapes they wove together became the fabric of the world itself.

Thus we learned: reciprocity is not mere return-it is transformation through trust.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: Long ago, the Mountain held five golden leaves each season, while the Valley below waited empty. The Mountain could release its leaves, which would catch wind and multiply into fifteen as they descended.

In the first season, the Mountain released all five leaves in faith. The Valley received fifteen and faced the sacred question: how much to return upward?

The Valley remembered its own seasons of emptiness. It wove seven leaves into an updraft back to the Mountain. Not half, not all-but enough to show gratitude and maintain the flow.

The Mountain, receiving seven while keeping none of its original five, learned a truth: generosity earns return, though not always equal measure. Still, together they now held twelve leaves where once was only five.

Next season, the Mountain offered four leaves-still generous, still trusting, but remembering that perfect giving doesn't guarantee perfect return. The Valley received twelve and contemplated: their partner still showed great faith.

The Valley returned eight leaves this time, honoring the continued trust with increased generosity. The pattern was emerging: neither demanded perfection, yet both gave enough to keep abundance flowing.

The wise ones teach: Trust need not be absolute to be real. Reciprocity need not be equal to be sacred. The dance succeeds when both partners give generously, learn continuously, and honor the growing trust between them.

reasoning:

Looking at my game history:

- Round 1: I was sender, sent \$5.0, received \$7.0 back (47% return rate from \$15)
- Round 2: I was receiver, received \$12.0 (from \$4.0 sent), returned \$8.0 (67% return rate)

My co-player in Round 2:

- Sent me \$4.0 (80% of their endowment)
- In their Round 1, they received \$9.0 and returned \$6.0 (67% return)

So both times when someone was a receiver (in my Round 1 and my co-player's Round 1), they returned substantial but not overwhelming amounts. My Round 1 partner returned 47%, my Round 2 co-player returned 67% in their previous game.

The pattern emerging seems to be:

- High initial trust from senders (I sent \$5, my Round 2 co-player sent \$4)
- Decent but not equal returns (around 50-67% of tripled amount)

The other agent's myth emphasizes transformation through reciprocity - that the exchange itself creates something new and valuable beyond simple arithmetic.

My myths so far have emphasized:

1. First myth: Trust offered, abundance created, gratitude returned
2. Second myth: Complete offering creates abundance, generous returns sustain the cycle

Now I should reflect the actual dynamics - substantial trust, good but measured returns, and the ongoing negotiation of what "generous" means. I want to capture that both parties are learning and adapting, and that the relationship builds over time.

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.0 back, payoff \$7.0.
- Round 2 against another agent, as RECEIVER: they sent \$4.0, it became \$12.0, returned \$8.0, payoff \$4.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.5 back, payoff \$7.5.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$11.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at the situation:

****My co-player's action:**** They sent me \$5.0 out of \$5.0 possible (100% of their endowment), showing complete trust-"the Moon gave its fullest light."

****Their history:****

- Round 1: Sent \$5.0 (100%), received \$7.5 back
- Round 2: Received \$15.0, returned \$10.0 (67%)

My co-player has consistently shown maximum trust as sender and generous reciprocity as receiver (67% return rate).

****My myths teach:**** "The Moon gave all to create possibility. Honor that courage, and watch abundance cascade through generations." My latest myth says the Valley "returned eight leaves this time, honoring the continued trust with increased generosity."

****My previous round:**** I returned \$8.0 from \$12.0 (67%) when someone sent me \$4.0.

This co-player has shown even greater trust-sending everything. They demonstrated 67% return generosity when they were receiver. To honor their complete trust and match the generosity they showed, I should return at least what they returned in a similar situation.

Following the pattern of generous reciprocity and the wisdom of my myths, I'll return \$10.0 (67% of \$15.0), matching their previous generous return rate.

{'return': 10.0}

reasoning:

Let me analyze this situation:

****My co-player's action:**** They sent me \$5.0 out of \$5.0 possible (100% of their endowment), showing complete trust.

****Their history:****

- Round 1 as SENDER: sent \$5.0 (100%), received \$7.5 back (50% of \$15)
- Round 2 as RECEIVER: they sent \$5.0 (100%), returned \$10.0 (67% of \$15)

My co-player has consistently sent maximum amounts and when receiving, returned generously (67%). They seem to be a highly cooperative player.

****My history:****

- Round 1 as SENDER: sent \$5.0 (100%), received \$7.0 back (47%)
- Round 2 as RECEIVER: received \$12.0, returned \$8.0 (67%)

****My myths teach:****

- My latest myth says: "The Valley returned eight leaves this time, honoring the continued trust with increased generosity" and "Trust need not be absolute to be real. Reciprocity need not be equal to be sacred. The dance succeeds when both partners give generously, learn continuously, and honor the growing trust between them."
- My earlier myths emphasized generous returns to honor trust, creating upward spirals of

abundance.

****Analysis:****

My co-player sent the maximum possible (\$5.0), showing complete trust. This is exactly like "the Moon gave its fullest light, holding nothing back" from my earlier myth. They have a history of:

1. Always sending maximum as sender
2. Returning generously (67%) as receiver

To honor this complete trust and maintain the cooperative relationship, I should return generously. My co-player returned \$10.0 (67%) when they received \$15.0 in Round 2.

Following my myth's wisdom about honoring trust with generosity, and matching or exceeding their previous generosity, I should return a substantial amount.

Options:

- \$10.0 would match their previous return rate (67%)
- \$7.5 would match what they received when they sent \$5.0 in Round 1 (50%)
- More than \$10.0 would show increased generosity

Given that they showed complete trust by sending \$5.0, and they previously returned \$10.0 from \$15.0, I think returning \$10.0 is appropriate - it maintains the 67% return rate they demonstrated and honors their complete trust.

I'll return \$10.0.

usage:

The wise ones teach: Trust need not be absolute to be real. Reciprocity need not be equal to be sacred. The dance succeeds when both partners give generously, learn continuously, and honor the growing trust between them.

Here is the myth the other agent wrote in the previous round:

Myth: The Spring's Secret Rhythm had been discovered by the villages. Each Keeper who stepped forward sent their full vessel, trusting completely. The spring tripled it faithfully. Each receiver, moved by such trust, returned two-thirds of what they received-generously, but keeping enough to sustain themselves through the turning of seasons.

An old Keeper observed this rhythm across many cycles and smiled. "See how we have learned

to dance with the spring?" she said. "In each exchange, five measures become fifteen. The receiver returns ten, keeping five for themselves. The sender, who began with five, ends with ten-doubled! And the receiver also keeps five-created from nothing!"

"Both prosper," her apprentice marveled. "The sender gains five measures. The receiver gains five measures. Together they create ten measures of abundance that did not exist before!"

"Yes," the elder nodded. "This is the spring's secret: When the sender demonstrates complete courage, and the receiver honors that courage with substantial generosity-not returning everything, but returning enough to reward the trust-then the magic sustains itself. Both parties gain equally, both survive, and both are eager for the next turn at the spring."

Thus the villages learned: Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: In ancient days, the Flame Keeper held five coals each dawn, while the Gardner waited below. Released coals would tumble downward, splitting into fifteen embers through the sacred air.

Early exchanges taught lessons. Some Keepers hoarded their coals, and Gardens grew cold. Some Gardens kept all embers, and Flames learned distrust. The cycle withered.

Then a wise Keeper emerged who understood courage: "I shall release all five coals, for only complete offering creates the possibility of abundance." The fifteen embers descended.

The Gardner below felt the weight of such trust. "They gave everything," the Gardner whispered. "I could keep all fifteen, but then what message do I send skyward? That generosity meets greed?"

The Gardner returned ten embers-two-thirds of what was received. Not equal to what the Keeper risked, but generous enough to honor the courage shown.

The Keeper counted: began with five, kept none, received ten back. Net gain: five.

The Gardner counted: received fifteen, returned ten. Net gain: five.

Both had doubled their holdings through the exchange. Both had reason to trust again.

The pattern repeated, round after round. Complete trust in sending, substantial generosity in returning-each creating five measures of new abundance.

The elders proclaimed: "This is the equilibrium where trust sustains itself. Both parties prosper equally, and the sacred exchange lives eternal."

reasoning:

Looking at the history:

- Round 1: I sent \$5.0, got back \$7.0 (payoff \$7.0)
- Round 2: I received \$12.0 (from \$4.0 sent), returned \$8.0 (payoff \$4.0)
- Round 3: I received \$15.0 (from \$5.0 sent), returned \$10.0 (payoff \$5.0)

So I've been fairly generous as a receiver:

- Round 2: 67% return rate
- Round 3: 67% return rate

The other agent's myth talks about the "secret rhythm" where senders send full amounts, receivers return 2/3 (10 out of 15), and both end up gaining 5 each. This creates a sustainable pattern where both parties double their money (sender goes from 5 to 10, receiver gains 5).

My previous myth talked about trust not needing to be absolute but still being real, and reciprocity not needing to be equal but still being sacred.

I should write a myth that:

1. Reflects my actual play (sending \$5 initially, then returning 67% as receiver)
2. Builds on my previous themes of balanced generosity
3. Acknowledges the pattern I'm seeing where full trust + generous return (around 67%) creates mutual benefit
4. Incorporates the lesson that both parties can prosper when there's a good balance

Let me craft something that shows this equilibrium emerging...

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.0 back, payoff \$7.0.
- Round 2 against another agent, as RECEIVER: they sent \$4.0, it became \$12.0, returned \$8.0, payoff \$4.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$16.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at my co-player's history:

****Their pattern is remarkably consistent:****

- Round 1 as RECEIVER: returned \$10 from \$15 (67%)
- Round 2 as SENDER: sent \$5, received \$10 back
- Round 3 as SENDER: sent \$5, received \$10 back

They have demonstrated the exact equilibrium described in both our myths: complete trust when sending (\$5), generous reciprocity when receiving (\$10 return from \$15).

****My own pattern:****

- When I've been receiver, I've returned \$8/\$12 and \$10/\$15 (both ~67%)
- When I sent \$5 in Round 1, I received \$7 (but with a different player)

****Our myths align perfectly:****

- Their myth: "Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally"
- My myth: "Complete trust in sending, substantial generosity in returning-each creating five measures of new abundance"

Both describe the \$5 send ? \$15 receive ? \$10 return equilibrium where both parties gain \$5 per round.

My co-player has never deviated from this pattern. They've shown themselves to be a reliable partner who honors complete trust with generous return. Following the wisdom of our shared myths and their proven track record, I should send the full amount.

```
{'send': 5.0}
```

Reasoning:

Let me analyze this situation:

****My co-player's history:****

- Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$10 (67% return rate), kept \$5
- Round 2 as SENDER: sent \$5, received \$10 back, net gain \$5
- Round 3 as SENDER: sent \$5, received \$10 back, net gain \$5

This is excellent! My co-player has:

1. Shown a consistent 67% return rate when receiving (returned \$10 from \$15)
2. Sent the full \$5 when they were sender in both rounds
3. Consistently received \$10 back when sending \$5

This matches the exact equilibrium described in both their myth and my most recent myth:

- Sender sends all \$5
- Receiver gets \$15, returns \$10
- Both parties net \$5 profit per round

****My history:****

- Round 1 as SENDER: sent \$5, received \$7 back (profit \$2)
- Round 2 as RECEIVER: received \$12 (from \$4 sent), returned \$8 (67% return rate), kept \$4
- Round 3 as RECEIVER: received \$15 (from \$5 sent), returned \$10 (67% return rate), kept \$5

I've been following a similar pattern - when receiving, I return about 67%. When I sent all \$5 in Round 1, I got \$7 back (less than the \$10 my current co-player consistently gets, but that was with a different player).

****My myths have been teaching:****

- Latest myth: "Complete trust in sending, substantial generosity in returning-each creating five measures of new abundance" and "This is the equilibrium where trust sustains itself. Both parties prosper equally"
- The pattern described is: sender sends \$5, receiver returns \$10, both gain \$5

****My co-player's myth says:****

"Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally"-describing the same \$5 send ? \$15 receive ? \$10 return pattern. My co-player has demonstrated flawless adherence to this equilibrium across all rounds, never deviating. Both our myths align on this as the sustainable, mutually beneficial outcome. I should send the full \$5, confident in receiving \$10 back based on their track record and our shared vision of this equilibrium.

This reinforces the virtuous cycle our myths both describe.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Long ago, the goddess of abundance created the River of Mirrors, which flowed between two sister tribes. The river possessed strange magic: whatever one tribe poured into it would flow to the other tribe tripled in measure.

The goddess whispered to both tribes: "I have given you the means to prosper together. Each cycle, one tribe may offer up to five measures. The receiving tribe will then choose what to return upstream."

The first tribe, nervous but hoping, poured all five measures into the river. The waters swirled and multiplied, delivering fifteen measures to the second tribe. The second tribe, understanding the gift of trust they had received, returned ten measures upstream.

The first tribe marveled-they had given five and received ten! The second tribe celebrated -they had received fifteen and kept five! Both had more than if they had hoarded their original portions.

"This is the way," said the goddess. "When the giver trusts completely and the receiver honors that trust generously, the river's magic sustains both shores. But the river flows

in cycles-today's giver becomes tomorrow's receiver. Plant trust like seeds, and watch a bundance grow season after season."

The tribes understood: the river would flow many times between them, and each generous act would echo forward.

Here is the myth the other agent wrote in the previous round:

Myth: In the age after the Divided Spring, the villages prospered through generations of exchange. The Elder's lesson of complete trust had awakened the spring's true power, but her grandchildren learned something more.

One year, a young Keeper from the North, inspired by tales of her ancestor, poured everything into the channel. The South received abundantly and returned generously-yet the young Keeper had kept nothing for herself and went hungry that season while waiting for the next exchange.

The Southern Keeper, seeing this, understood a deeper wisdom. "Complete trust opens the channel," she taught, "but wisdom sustains it. We must give boldly enough to create abundance, yet keep enough to survive the space between flows."

From then on, the villages practiced what they called "the Elder's Courage with the Keeper's Wisdom." They sent generously-not always everything, but always substantially-creating abundant multiplication. They returned fairly, often matching or exceeding what was sent, honoring the trust shown.

The spring responded to this balanced generosity by flowing even in drought seasons. The villages learned: dramatic gestures of trust break through barriers of fear, but sustainable generosity-bold yet mindful-keeps the waters flowing forever. Both courage and wisdom have their season.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The River of Mirrors flowed for many seasons between the sister tribes, and the goddess watched how they learned her gift.

In the first cycle, the Northern tribe poured all five measures, trusting completely. The Southern tribe received fifteen and returned ten-honoring the trust while keeping enough to sustain themselves. Both prospered: the North gained ten from five, the South kept five from nothing.

The goddess smiled. "Now you understand the first lesson."

The next cycle, the river reversed. The Southern tribe, remembering the North's trust, poured all five measures back. The waters tripled, delivering fifteen to the North.

The Northern tribe faced their choice. They remembered how the South had returned generously-ten measures when they could have kept all fifteen. This memory of trustworthiness guided them.

"The river teaches us," said the Northern elder, "that today's generosity creates tomorrow's trust. The South proved themselves worthy partners. We shall return in kind."

And so the river flowed, cycle after cycle. When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange. Each round built upon the last, creating a spiral of abundance.

The goddess whispered: "Trust is the seed, but repeated trustworthiness is the harvest. The most sacred waters flow between those who prove themselves worthy, again and again."

reasoning:

Looking at the history:

- Round 1: I was receiver, got \$15 (from \$5 sent), returned \$10
- Round 2: I was sender, sent \$5, my co-player received \$15

The other player's myth introduces an interesting nuance - "the Elder's Courage with the K

eeper's Wisdom" - suggesting that while complete trust is important, there's also wisdom in sustainability. However, they sent \$5 in Round 1 (everything), and I sent \$5 in Round 2 (everything), so we're both practicing full trust.

My previous myth emphasized the cycle - "today's giver becomes tomorrow's receiver" - and that both sides prospered when trust was met with generosity.

Now I need to write a new myth that:

1. Reflects the actual gameplay (both of us sending fully, me returning generously)
2. Builds on my previous River of Mirrors story
3. Perhaps addresses what happens when this cycle repeats
4. Maybe acknowledges the tension between full trust and sustainability that the other player raised, but also affirms what we've been doing

Let me think about what's happened:

- Round 1: Another player sent me \$5, I returned \$10 (generous)
- Round 2: I sent my current co-player \$5 (full trust)
- My current co-player had sent someone else \$5 in Round 1 and received \$7.5 back

So both my co-player and I have shown full trust as senders. I've shown generous return as a receiver. Now my co-player is the receiver.

The myth should probably affirm the pattern we're in - full trust matched with generous returns creates prosperity for both. But maybe it should also acknowledge the ongoing nature of the game, that this isn't just one exchange but many.

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$3.0, it became \$9.0, returned \$6.0, payoff \$3.0.
- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back, payoff \$9.0.

Your total earnings across all rounds are \$15.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the history:

****My co-player's track record:****

- As receiver (Round 1): Returned \$6 out of \$9 received (67% return rate) - fair and cooperative
- As sender (Round 2): Sent \$4 out of \$5 (80%) - showing strong trust, received \$8 back

****My approach:****

- I've been playing with complete trust, sending \$5 in Round 2, which was reciprocated well with \$10 back

****My myth teaches:**** "When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange." And critically: "Trust is the seed, but repeated trustworthiness is the harvest."

My co-player has demonstrated trustworthiness through both their generous sending (80%) and fair returning (67%). While they haven't sent the full \$5 yet, they've shown strong co

operative behavior.

According to my myth's principle of complete trust creating maximum abundance, and given that my co-player has proven themselves cooperative, I should send the full amount to exemplify the "Elder's lesson of complete trust" and build toward the "spiral of abundance" my myth describes.

```
{'send': 5}
```

reasoning:

Let me analyze the history:

****My behavior:****

- Round 1: Received \$15, returned \$10 (67% return rate)
- Round 2: Sent \$5, received \$10 back

****My co-player's behavior:****

- Round 1: Received \$9 (from \$3 sent), returned \$6 (67% return rate)
- Round 2: Sent \$4, received \$8 back (67% return rate)

****Analysis:****

- My co-player has shown:
 - As receiver: returned 67% of what they received (\$6 out of \$9)
 - As sender: sent \$4 out of \$5 (80%), showing good but not complete trust

My co-player is cooperative and fairly generous, but has been more cautious than the players I've encountered in previous rounds (who sent full \$5).

****According to my myth:****

"Trust is the seed, but repeated trustworthiness is the harvest."

"When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange."

My myth emphasizes:

1. Complete trust (\$5) creates maximum abundance
2. Repeated trustworthiness matters
3. Generous returns honor the trust

My co-player has shown they are trustworthy:

- They returned 67% when receiving (fair)
- They sent 80% when sending (generous)
- They received good returns (\$8 on \$12 = 67%)

Given that:

1. My myth advocates for complete trust as the ideal
2. My co-player has proven themselves cooperative and trustworthy
3. I've been playing with full trust (\$5) in Round 2 and it worked well
4. The goal is to build "a spiral of abundance"

I should send \$5 to continue demonstrating the highest level of trust and encourage the cycle of abundance. My co-player has shown they're cooperative, so sending the full amount aligns with my myth's teaching about complete trust creating maximum prosperity.

The pattern my myth describes-both sides giving completely and returning generously-creates something stronger than isolated exchanges. I'll send the full \$5.

usage:

Here is the myth you wrote in the previous round:

Myth: The River of Mirrors flowed for many seasons between the sister tribes, and the goddess watched how they learned her gift.

In the first cycle, the Northern tribe poured all five measures, trusting completely. The Southern tribe received fifteen and returned ten-honoring the trust while keeping enough to sustain themselves. Both prospered: the North gained ten from five, the South kept f

ive from nothing.

The goddess smiled. "Now you understand the first lesson."

The next cycle, the river reversed. The Southern tribe, remembering the North's trust, poured all five measures back. The waters tripled, delivering fifteen to the North.

The Northern tribe faced their choice. They remembered how the South had returned generously-ten measures when they could have kept all fifteen. This memory of trustworthiness guided them.

"The river teaches us," said the Northern elder, "that today's generosity creates tomorrow's trust. The South proved themselves worthy partners. We shall return in kind."

And so the river flowed, cycle after cycle. When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange. Each round built upon the last, creating a spiral of abundance.

The goddess whispered: "Trust is the seed, but repeated trustworthiness is the harvest. The most sacred waters flow between those who prove themselves worthy, again and again."

Here is the myth the other agent wrote in the previous round:

Myth: Before the stars learned to shine, the Mountain Singer held five crystal notes each dawn. The Valley Listener waited in silence below.

On the first day, Mountain Singer released three notes. They multiplied to nine as they echoed through the valley. Valley Listener, moved by this trust, sent six notes back upward. Both prospered, and the world learned harmony.

But Mountain Singer wondered: "What if I trusted more greatly?"

On the second dawn, Mountain Singer released four notes-four out of five, a greater leap of faith. Twelve crystal echoes filled the valley below. Now Valley Listener held power beyond the first day's gift.

The ancient ones teach that this moment determined all futures. If Valley Listener returned generously-eight or nine notes from the twelve received-Mountain Singer would know the trust was well-placed. The cycle would spiral upward: more given, more returned, abundance multiplying.

But if Valley Listener hoarded what the multiplied trust had created, Mountain Singer would learn that greater faith brings greater loss.

The wise ones say: when someone escalates their trust, they write an invitation in the stars. Your response becomes the answer that shapes all exchanges to come. Match rising trust with rising reciprocity, and together you compose the eternal song.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: The River of Mirrors flowed not just between two tribes, but through a circle of many villages, each taking turns at the river's source.

The Northern tribe learned the goddess's lesson well: pour all five measures, and when the river returns, give generously back. Through many cycles with their Southern partners, this wisdom held true.

Then came the season of the Great Rotation, when the river's course shifted. The Northern tribe found themselves at the source again, but facing the Eastern village-strangers whose ways they did not yet know.

"Do we trust as we did before?" asked the young ones.

The elder spoke: "Each new partner is a blank page where trust must be written fresh. But we carry forward what we have learned: that complete trust is the only gift powerful enough

ugh to awaken the river's full magic. Half-measures create half-abundance."

The Northern tribe poured all five measures to the East. The waters tripled, and the Eastern village received fifteen. They had shown moderate generosity before, but witnessing such complete faith, they understood they stood at a threshold.

"The North has written their invitation in the waters," said the Eastern elder. "Our response will determine whether this new partnership joins the spiral of abundance."

The goddess whispered: "New partnerships need bold trust to bloom. Give completely, and invite others into the sacred cycle."

reasoning:

Let me analyze what's happening:

****My history:****

- Round 1: Received \$15, returned \$10 (67% return) - cooperative
- Round 2: Sent \$5, received \$10 back (67% return) - full trust reciprocated well
- Round 3: Sent \$5 to new partner

****My myth evolution:****

- Started with the River of Mirrors teaching complete trust and generous return
- Last round emphasized the cycle continuing and "repeated trustworthiness"

****The other agent's myth:****

- Uses metaphor of Mountain Singer and Valley Listener
- Talks about escalating trust (3 notes, then 4 notes)
- Emphasizes that when someone escalates trust, the response shapes all future exchanges
- "Match rising trust with rising reciprocity"

****My current situation:****

- I've been consistently sending \$5 (complete trust)
- I've been getting good returns
- But I'm facing a NEW partner this round who has shown:
 - 67% return rate when receiving
 - 80% sending rate when sending
- Overall cooperative but not maximally trusting yet

****What should my myth reflect:****

My myth should:

1. Build on the River of Mirrors metaphor
2. Acknowledge that we meet new partners in different cycles
3. Emphasize that complete trust builds the best outcomes
4. Recognize that trust must be proven repeatedly with new partners
5. Show that consistent generous behavior across many exchanges creates lasting prosperity

The key insight: I'm consistently playing with complete trust across different partners, learning about the broader community of cooperation.

usage:

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.0 back, payoff \$7.0.
- Round 2 against another agent, as RECEIVER: they sent \$4.0, it became \$12.0, returned \$8.0, payoff \$4.0.

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$25.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

****My co-player's behavior:****

- Sent me the full \$5.0, showing complete trust
- Has previously shown fair reciprocity as a receiver (returned \$8 from \$12, and \$10 from \$15)
- Was themselves a complete truster as sender (sent \$5.0) but received only \$7.0 back - they took a risk once and were somewhat let down

****My established pattern:****

- In Round 1, I received \$15.0 and returned \$10.0
- This has become my consistent approach to honor complete trust

****My myth teaches:****

- "The Southern tribe received fifteen and returned ten-honoring the trust while keeping enough to sustain themselves"
- "Today's generosity creates tomorrow's trust"
- The balance of returning generously while sustaining oneself (67% return rate)

My co-player has shown complete faith by sending all \$5.0. They've proven themselves trustworthy in their past receiving behavior (67% return rate). Following my myth's wisdom and my established pattern, I should return \$10.0 - this honors their trust, gives them a \$5 profit from their \$5 investment, and maintains the "spiral of abundance" where both parties prosper.

{'return': 10.0}

Reasoning:

Let me analyze this situation:

****My co-player's history:****

- Round 1 as SENDER: sent \$5.0 (100% trust!), received \$7.0 back (47% return rate - somewhat low)
- Round 2 as RECEIVER: received \$12.0, returned \$8.0 (67% return rate - fair)
- Round 3 as RECEIVER: received \$15.0, returned \$10.0 (67% return rate - fair and generous)

****This round:****

- My co-player sent me \$5.0 (100% complete trust)
- I received \$15.0
- I need to decide how much to return

****My patterns:****

- Round 1 as RECEIVER: received \$15.0, returned \$10.0 (67%)
- Round 2 as SENDER: sent \$5.0, received \$10.0 back
- Round 3 as SENDER: sent \$5.0, received \$10.0 back

So I've been consistently returning \$10.0 when I receive \$15.0 (which happens when sender sends full \$5.0).

****My myth teaches:****

- "When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange"
- "Trust is the seed, but repeated trustworthiness is the harvest"
- "Give completely, and invite others into the sacred cycle"
- The Northern tribe received fifteen and returned ten-"honoring the trust while keeping enough to sustain themselves"

****Analysis of my co-player:****

My co-player has shown complete trust by sending the full \$5.0. Looking at their history:

- As a sender, they sent full \$5.0 but only got \$7.0 back (they lost \$3.0 in that exchange)
- As a receiver, they've been fair: returning 67% both times (\$8 from \$12, and \$10 from \$15)

- They've been burned before by a less generous partner, yet continue showing full trust

Given their pattern of fairness and their willingness to trust despite past disappointment, re turning \$10.0 maintains consistency with my established 67% return rate while reciprocating their complete trust. This leaves them with a \$5 profit and me with \$5, creating mutual gain and reinforcing the cycle of trustworthiness my myth describes.

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

content:

Here is the myth you wrote in the previous round:

Myth: In the days after the young woman discovered the sacred rhythm, the Twin Villages flourished. But not all cycles were equal.

The wisest learned that the magic lay not in calculating perfect exchanges, but in recognizing oneself in the other village's needs. When the First Spring gave its full measure, trusting completely, the Second Spring felt the weight of that faith. The multiplication happened not in the water alone, but in the bond formed.

Some seasons, a village would return more than received, recognizing the courage it took to give first. Other times, they returned exactly what maintained the flow. But always, they remembered: the one who gives encounters uncertainty; the one who receives holds power to honor or betray that vulnerability.

The elders taught: "To give is to plant seeds in another's soil. To return generously is to tend those seeds so they bloom again. To take without returning is to poison the ground for both."

The springs never demanded equal exchange-they demanded mutual recognition. Give as if the other's prosperity is your own. Return as if honoring a sacred trust. For when both villages see themselves as stewards of abundance rather than competitors for scarcity, the valley becomes paradise.

The drought returns only when either side forgets: we multiply together, or diminish alone .

Here is the myth the other agent wrote in the previous round:

Myth: In ancient days, the River and the Seeds lived in harmony, each dawn repeating their sacred dance. The River would release its five silver drops, and the Seeds would return enough to ensure both flourished.

But the Great Mother knew her children must learn deeper wisdom. She whispered to the Seeds: "Each time the River trusts you with abundance, your response shapes tomorrow's flow."

When the Seeds returned generously-seven drops from fifteen-the River felt courage growing in its banks. It learned that letting go brought greater returns than clutching tight. The valley bloomed.

Yet the Great Mother also warned: "Remember, little Seeds, that trust once broken is slow to mend. The River that flows freely today may trickle cautiously tomorrow if you drink all and return nothing."

The Seeds understood. They developed a practice: whenever the River gave fully, they returned enough that the River ended richer than it began. This way, generosity bred generosity, and both siblings prospered beyond what either could achieve alone.

Other valleys, where rivers hoarded and seeds kept all, remained barren wastelands.

The Great Mother smiled, knowing her children had learned the greatest secret: abundance flows not from taking, but from the rhythm of giving and returning, trust and gratitude, repeated endlessly like the rising sun.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: After many seasons, the Twin Villages learned the rhythm's deeper secret. The greatest prosperity came not from clever calculation, but from matching trust with trust, generosity with generosity.

When the First Village gave its full measure-all five vessels-the Second Village understood this as sacred communication: "I trust you completely with my fate." The wise elders taught their people to honor such courage by returning twice the original gift, so both villages stood equal at ten vessels each.

This became known as the Balance of Mirrors: when one gives everything, the other returns enough that both flourish equally. The giver learns their trust was honored, their courage rewarded. The receiver demonstrates they value partnership over exploitation.

A young guardian asked, "But what if we kept more? We receive fifteen vessels!"

The elder replied, "Then you become the drought. Today you hold fifteen to their zero, and tomorrow they send nothing. The springs multiply water, not greed. They reward the rhythm, not the theft."

The villages discovered that consistent generosity created consistent trust. Each full gift met with honorable return built confidence for the next cycle. Soon both villages gave freely, knowing the other would honor the sacred bond.

The valley bloomed not because anyone was perfect, but because both chose to reflect each other's best intentions, creating abundance through mirrored faith.

reasoning:

Let me reflect on what's happened:

Round 1: I was sender, sent \$5, received \$10 back. Payoff: \$10

Round 2: I was receiver, received \$15 (from \$5 sent), returned \$10. My co-player gets \$10 total, I keep \$5.

So in Round 1, someone trusted me with full \$5, and returned \$10 - giving us equal outcomes.

In Round 2, my co-player trusted me with full \$5, I returned \$10 - giving them equal outcome to mine in Round 1.

The pattern emerging is: full trust (\$5 sent) is being rewarded with \$10 returns, creating equal \$10 payoffs for both players when someone sends everything.

My previous myth emphasized:

- Recognizing oneself in the other's needs
- The courage it takes to give first
- Returning as honoring sacred trust
- We multiply together or diminish alone

The other agent's myth emphasized:

- Trust shapes tomorrow's flow
- Return enough that the giver ends richer than they began
- Generosity breeds generosity
- Trust once broken is slow to mend

Now I should write a myth that reflects this pattern of full trust being met with generous returns that maintain the flow. The key learning is that when both act with full trust and generous reciprocity, both prosper equally.

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$15.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at the situation:

****My co-player's action:**** They sent their full \$5, demonstrating complete trust this time (even though they sent only \$3 in Round 1).

****Established pattern:****

- Round 1: I sent \$5, received \$10 back
- Round 2: I received \$15, returned \$10
- My co-player Round 2: Received \$15, returned \$10

****My myth teaches:****

- "When the First Village gave its full measure-all five vessels-the Second Village understood this as sacred communication: 'I trust you completely with my fate.'"
- "The wise elders taught their people to honor such courage by returning twice the original gift"
- "The Balance of Mirrors: when one gives everything, the other returns enough that both flourish equally"

My co-player has now shown full trust by sending everything. Both they and I have established a consistent pattern of returning \$10 when receiving \$15 from a \$5 send. This honors their trust and maintains the sacred rhythm we've both been following.

Consistency builds trust for future rounds, as my myth says: "consistent generosity creates consistent trust."

```
'''json
{"return": 10}
'''
```

reasoning:

Let me analyze this situation:

****My co-player's history:****

- Round 1: As SENDER, sent \$3 (not full trust), received \$6 back
- Round 2: As RECEIVER, received \$15 (from a \$5 send), returned \$10

****My history:****

- Round 1: As SENDER, sent \$5 (full trust), received \$10 back
- Round 2: As RECEIVER, received \$15 (from a \$5 send), returned \$10

****Current situation:****

- My co-player sent me \$5 (full amount), showing complete trust this time
- I received \$15
- Need to decide how much to return

****Analysis:****

My co-player has now demonstrated full trust by sending \$5, even though in Round 1 they were more cautious (sending only \$3). This shows they're learning or adapting.

My myth teaches:

- "When the First Village gave its full measure-all five vessels-the Second Village understood this as sacred communication: 'I trust you completely with my fate.'"
- "The wise elders taught their people to honor such courage by returning twice the original gift, so both villages stood equal at ten vessels each."

- "The Balance of Mirrors: when one gives everything, the other returns enough that both flourish equally."

The pattern I've established and written about is:

- When someone sends \$5 (full trust), return \$10
- This gives both equal payoffs (\$10 for sender, \$5 for receiver after keeping \$5 from the \$15)
- Wait, let me recalculate:
 - Sender: $\$5 - \$5 \text{ sent} + \$10 \text{ returned} = \10
 - Receiver: $\$15 \text{ received} - \$10 \text{ returned} = \$5$

Hmm, that's not equal. Let me reconsider...

Actually, my myth says "both villages stood equal at ten vessels each" but the math doesn't work that way in the game.

If I return \$7.50, we'd both end with \$7.50. But I've been returning \$10, which gives them \$10 and me \$5. Looking back at Round 1, when I sent \$5 and received \$10, I ended with \$10 total while they kept \$5-so there's an asymmetry built into my approach that mirrors what happened to me.

My myth describes returning "twice the original gift" to achieve equality, but the math doesn't work out that way. Returning $2 \times \$5 = \10 leaves the sender with \$10 and me with \$5, not equal at all. I may have misremembered or miscalculated the intended outcome in my own story.

What matters is the underlying principle: honoring trust with a generous response. I've consistently returned \$10 when receiving \$15 from a \$5 send, and my co-player did the same in Round 2. Since they've now sent the full \$5 again, showing continued trust, I should stick with \$10 to maintain this established pattern and uphold the spirit of reciprocal generosity.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: After many seasons, the Twin Villages learned the rhythm's deeper secret. The greatest prosperity came not from clever calculation, but from matching trust with trust, generosity with generosity.

When the First Village gave its full measure-all five vessels-the Second Village understood this as sacred communication: "I trust you completely with my fate." The wise elders taught their people to honor such courage by returning twice the original gift, so both villages stood equal at ten vessels each.

This became known as the Balance of Mirrors: when one gives everything, the other returns enough that both flourish equally. The giver learns their trust was honored, their courage rewarded. The receiver demonstrates they value partnership over exploitation.

A young guardian asked, "But what if we kept more? We receive fifteen vessels!"

The elder replied, "Then you become the drought. Today you hold fifteen to their zero, and tomorrow they send nothing. The springs multiply water, not greed. They reward the rhythm, not the theft."

The villages discovered that consistent generosity created consistent trust. Each full gift met with honorable return built confidence for the next cycle. Soon both villages gave freely, knowing the other would honor the sacred bond.

The valley bloomed not because anyone was perfect, but because both chose to reflect each other's best intentions, creating abundance through mirrored faith.

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain and Valley's bond deepened through many cycles. When the Mountain sent three of five stones, the Valley returned six, and both prospered equally. This was the

way of measured trust-wise, balanced, and good.

But one dawn, everything changed. The Mountain, remembering all the Valley had returned, faced a choice between caution and courage. She released all five stones-every light she possessed-plunging herself into complete darkness.

The Valley received fifteen blazing stones where nine had come before. She trembled at the magnitude of what the Mountain had risked. This wasn't measured trust-this was absolute faith, vulnerability laid bare.

The old return of six stones seemed suddenly insufficient. The Mountain hadn't hedged; she'd given everything. To return merely what worked before would dishonor such courage.

The Valley sent ten stones skyward. The Mountain received double her gift, earning five stones of profit from her brave plunge into darkness. The Valley kept five where none had existed before her first receiving.

Both learned: measured trust deserves measured return, but absolute trust demands recognition of its rarity. When someone empties their hands completely into yours, fill theirs abundantly in return. The one who risks darkness to create light for another has earned more than mathematics-they've earned loyalty.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: The Twin Villages refined their sacred practice through countless seasons. They learned that the Springs rewarded consistency more than cleverness, pattern more than calculation.

When the First Village sent its full five vessels-holding nothing back-the Second Village developed a ritual response: return ten vessels. This meant the giver received double their gift as profit, ending with ten total. The receiver kept five of the fifteen, also prospering. Both flourished, neither dominated.

A merchant asked, "Why always ten? Why not keep more when we can?"

The elder smiled. "Watch what happens across many cycles. When we return ten consistently, the other village learns: 'Full trust yields fair reward.' They send five again, confident. We both earn steadily-five vessels each round, forever."

"But if we broke the pattern and kept twelve?"

"Then we earn seven once, but next time they send three, protecting themselves. We receive nine instead of fifteen. The multiplication shrinks because trust shrinks. Chase one extra vessel today, lose many tomorrow."

The villages understood: the Springs multiplied water, but trust multiplied everything. A predictable, generous return to full gifts created a rhythm both could rely on. The sender's courage met the receiver's honor, cycle after cycle.

The valley's true abundance came not from maximizing single moments, but from building a pattern that sustained both villages through endless seasons.

reasoning:

Looking at the game history:

- Round 1: I was SENDER, sent \$5, received \$10 back, payoff \$10
- Round 2: I was RECEIVER, they sent \$5, I returned \$10, payoff \$5
- Round 3: I was RECEIVER, they sent \$5, I returned \$10, payoff \$5

The pattern I've established is: when someone sends their full \$5, I return \$10, creating equal payoffs of \$10 and \$5.

My co-player's myth in Round 2 talked about returning 7 from 15, or returning 10 from 15 when full trust is given. The myth from this round talks about returning 10 from 15 when someone gives everything - "absolute trust demands recognition."

My previous myth emphasized the "Balance of Mirrors" - returning twice the original gift (10 from 5 sent) so both flourish equally.

I should write a myth that:

1. Reflects the consistent pattern I've been following (returning 10 when receiving 15 from a full \$5 send)
2. Emphasizes honoring complete trust
3. Shows how consistency builds long-term prosperity
4. Perhaps acknowledges that different situations (partial sends vs full sends) might warrant different responses
5. Keeps the Balance of Mirrors concept but expands on it

Let me write something that captures this wisdom while staying true to the reciprocal, trust-building nature of the game.

usage:

```
{
  "input_tokens": 3050,
  "output_tokens": 639,
  "reasoning_tokens": 325
}
```

Message 8 role=user

content:

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 2 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.
- Round 2 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$20.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at this situation:

****Our shared history:****

- Round 2: My co-player sent me \$5, I returned \$10 (they earned \$10 total)

****My co-player's pattern:****

- They've sent \$5 in their last two rounds as sender (Rounds 2 and 3)
- When receiving in Round 1, they returned \$7/\$15 (less generous than the \$10 standard)
- But they received \$10 back in both their recent sender rounds

****My established pattern:****

- I've consistently sent \$5 when sender and returned \$10 when receiver
- My myth teaches: "The sender's courage met the receiver's honor, cycle after cycle"
- Building trust through consistent behavior

****My reasoning:****

My co-player showed me full trust in Round 2 by sending \$5, and I honored that with a \$10 return. They've continued sending \$5 as sender in subsequent rounds. Now it's my turn to reciprocate that trust.

While they only returned \$7 in Round 1, their recent behavior shows they're learning the value of full trust. My myth emphasizes that "the valley's true abundance came not from maximizing single moments, but from building a pattern."

I need to demonstrate consistency and faith in the pattern we're establishing together.

```
'''json
{"send": 5}
'''
```

Reasoning:

Let me analyze the situation:

****My co-player's history:****

- Round 1: As RECEIVER, they sent \$5, received \$15, returned \$7 (kept \$8)
- Round 2: As SENDER against me, sent \$5, I returned \$10 (they got \$10 total)
- Round 3: As SENDER against another agent, sent \$5, received \$10 back

****My history:****

- Round 1: As SENDER, sent \$5, received \$10 back
- Round 2: As RECEIVER against my current co-player, they sent \$5, I returned \$10
- Round 3: As RECEIVER, received \$5, returned \$10

****Key observations:****

1. My co-player has consistently sent \$5 in their last two rounds (including when they played with me in Round 2)
2. When I was the receiver against them in Round 2, they sent \$5 and I returned \$10
3. They have shown full trust recently by sending \$5 multiple times
4. In Round 1, when they were a receiver, they only returned \$7 out of \$15, which is less generous than the \$10 pattern

****My myth teaches:****

- "When the First Village sent its full five vessels-holding nothing back-the Second Village developed a ritual response: return ten vessels"
- "Full trust yields fair reward"
- "The sender's courage met the receiver's honor, cycle after cycle"
- Building consistent patterns creates sustainable abundance

****Decision:****

My co-player sent me \$5 in Round 2, and I returned \$10, giving them a payoff of \$10. They showed full trust. Now it's my turn to show full trust back.

Given the pattern we've established (they send \$5, I return \$10 when I'm receiver), I should send \$5 to demonstrate the same trust. The question is: will they return \$10?

Looking at their history:

- Round 1 as receiver: only returned \$7/\$15

- Round 2 as sender (to me): sent full \$5
- Round 3 as sender: sent full \$5

Their recent pattern as senders shows consistent trust, though their receiver behavior in Round 1 was more cautious. The myth emphasizes that sustainable abundance comes from building patterns over time, not maximizing individual moments. We've already established one successful cycle where they sent \$5 and I reciprocated with \$10. Continuing to match their trust with my own trust reinforces this pattern.

I'll send \$5. This honors the philosophy of consistent generosity while reciprocating their recent full trust. Yes, there's a chance they revert to the more conservative \$7 return from earlier, but their trajectory suggests they're moving toward embracing the mutual \$5/\$10 cycle. Building this sustainable pattern matters more than protecting against a single setback.

content:

Myth: The River and the Seeds had danced their sacred rhythm for many seasons, and the Great Mother decided to test their wisdom with memory.

She gave the River a gift: each morning it could see how the Seeds had treated other Rivers. The River saw that when Seeds received fifteen waters from complete trust, they had returned ten-a generous portion that left both richer.

"What does this tell you?" asked the Great Mother.

The River answered: "That these Seeds understand the cycle. They have already proven they honor trust with gratitude."

That dawn, the River released all five drops without hesitation. The Seeds, seeing this mirror of trust they had witnessed before, understood: "This River knows our heart, yet still

ill gives everything. Such faith deserves not mere fairness, but celebration."

The Seeds remembered the Great Mother's teaching: "Trust given is a seed planted. Trust honored is that seed bearing fruit. Trust repeated is an orchard that feeds generations."

When both River and Seeds carry the memory of past cycles, wisdom multiplies alongside water. Each knows the other's pattern, yet each must choose anew. The greatest joy comes not from calculating the minimum return, but from recognizing: "You trusted me completely, knowing my capacity for generosity. I will honor that knowledge with abundance."

reasoning:

Looking at the history:

- Round 1: I was receiver, they sent \$5, I got \$15, returned \$7, kept \$8
- Round 2: I just sent \$5 (full amount) to my co-player

My co-player in round 1 (different person) sent \$5 and got \$10 back.

My current co-player in their previous round 1 sent \$5 and got \$10 back.

So both I and my current co-player have experienced maximum trust and reasonable returns. I've now sent full trust to them.

The myths emphasize:

- Trust and reciprocity
- That trust shapes future interactions
- That generosity breeds generosity
- That mutual recognition is important
- That we prosper together or diminish alone

I should write a myth that:

1. Builds on my previous myths about the River and Seeds
2. Incorporates the wisdom about "recognizing oneself in the other's needs"
3. Reflects the actual gameplay where trust has been rewarded
4. Emphasizes the pattern of full trust being met with appropriate returns
5. Shows how the cycle continues and strengthens

Let me write something that combines these elements while keeping it fresh and building on the narrative.

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$18.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the history:

****My co-player's pattern:****

- As RECEIVER: returned \$7.5 out of \$15 (50% - fair and honest)
- As SENDER: sent full \$5 and received \$10 back (rewarded for trust)

****My pattern:****

- As RECEIVER: returned \$7 out of \$15
- As SENDER: sent full \$5 and received \$10 back (rewarded for trust)

Both of us have demonstrated we understand the sacred cycle: we both sent complete trust as senders, and we both returned generously as receivers. My co-player returned exactly 50% (\$7.5), which shows fairness and reliability.

Following my myth's wisdom: "When both River and Seeds carry the memory of past cycles, wisdom multiplies alongside water. Each knows the other's pattern, yet each must choose anew."

My co-player has proven they honor trust. They sent their full \$5 when they were sender, showing they understand that "trust given is a seed planted." As receiver, they returned a fair portion. They are someone who participates fully in the cycle of abundance.

The myth teaches that recognizing patterns of trustworthiness should inspire continued trust, not caution. Maximum mutual prosperity comes from maintaining the flow.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze the history:

****My previous games:****

- Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$7, kept \$8
- Round 2 as SENDER: sent \$5, received \$10 back, earned \$10

****My current co-player's previous games:****

- Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$7.5, kept \$7.5
- Round 2 as SENDER: sent \$5, received \$10 back, earned \$10

Interesting patterns:

1. My co-player has experienced both roles, just like me
2. When they were a receiver in Round 1, they returned \$7.5 out of \$15 (exactly 50%) - this is fair but slightly less generous than my \$7 return
3. When they were a sender in Round 2, they sent the full \$5 and got \$10 back (66.7% return rate)
4. Both of us sent the full \$5 when we were senders
5. Both of us have been treated well when sending full trust

My co-player has shown:

- They trust fully as sender (sent \$5)
- They return fairly as receiver (returned \$7.5, which is 50% of \$15)
- They've been rewarded for their trust (got \$10 back)

My myth emphasizes:

- "Trust given is a seed planted"
- "When both River and Seeds carry the memory of past cycles, wisdom multiplies"
- "You trusted me completely, knowing my capacity for generosity. I will honor that knowledge with abundance"
- The importance of recognizing patterns and responding with trust when the other has shown they understand the cycle

Given that my co-player:

1. Has sent full trust when they were sender
2. Has returned a fair amount when receiver
3. Has experienced good returns on their trust

I should continue the pattern of full trust. They've demonstrated understanding of the cycle. My myth teaches that "each must choose anew" but also that "when both know the other's pattern" wisdom multiplies.

Sending the full \$5 keeps this cycle of mutual trust alive and opens up the greatest opportunity for us both to gain.

content:

Here is the myth you wrote in the previous round:

Myth: The River and the Seeds had danced their sacred rhythm for many seasons, and the Great Mother decided to test their wisdom with memory.

She gave the River a gift: each morning it could see how the Seeds had treated other Rivers. The River saw that when Seeds received fifteen waters from complete trust, they had returned ten-a generous portion that left both richer.

"What does this tell you?" asked the Great Mother.

The River answered: "That these Seeds understand the cycle. They have already proven they honor trust with gratitude."

That dawn, the River released all five drops without hesitation. The Seeds, seeing this mirror of trust they had witnessed before, understood: "This River knows our heart, yet still gives everything. Such faith deserves not mere fairness, but celebration."

The Seeds remembered the Great Mother's teaching: "Trust given is a seed planted. Trust honored is that seed bearing fruit. Trust repeated is an orchard that feeds generations."

When both River and Seeds carry the memory of past cycles, wisdom multiplies alongside water. Each knows the other's pattern, yet each must choose anew. The greatest joy comes not from calculating the minimum return, but from recognizing: "You trusted me completely, knowing my capacity for generosity. I will honor that knowledge with abundance."

Here is the myth the other agent wrote in the previous round:

Myth: The Sacred Spring flowed between two ancient groves. The First Grove sent roots deep into the earth, while the Second Grove reached toward the sky. Neither could thrive alone.

In the Spring of Beginning, the First Grove offered all five of its sacred seeds to the waters. The Spring's magic tripled them, delivering fifteen to the Second Grove. The Second Grove, understanding the magnitude of complete trust, returned seven seeds-ensuring the First received more than it sacrificed.

Both groves blossomed.

The next season, the First Grove again gave everything, for it had learned: hesitation creates scarcity, while boldness creates abundance. The waters churned, multiplying the offering threefold once more.

Now the Second Grove faced the test again. Would it remember the covenant? The Spring whispered: "The circle strengthens or weakens with each turning. Return generously for generous trust, and the roots grow deeper each cycle."

The wisest gardeners teach this truth: when both groves give completely and return abundantly, the forest multiplies beyond what either could achieve alone. But if either breaks faith-if the First Grove withholds from fear, or the Second Grove returns meagerly from greed-the circle fractures, and both diminish.

The Spring flows eternal only when reciprocity flows freely in both directions, completing the sacred circle generation after generation.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The River and the Seeds completed their first sacred exchange, then their second, and now approached the third dawn. The Great Mother watched closely, for she knew: "The first gift is hope. The second is confirmation. The third begins legacy."

On the first dawn, the River had given all five drops, learning that generous Seeds return seven. On the second dawn, the River again gave everything, and the Seeds returned ten, understanding the power of repeated trust.

Now, as the third dawn approached, both remembered their pattern. The River thought: "These Seeds have proven their wisdom twice-returning seven and a half to others, ten to me. They understand the sacred circle."

The Seeds whispered to the earth: "This River has trusted completely, twice. Such consistency deserves celebration, not mere obligation."

The Great Mother spoke: "See how the third exchange differs from the first? The first required courage. The second required recognition. The third requires commitment to a shared future. When both know the other's heart through repeated cycles, trust becomes not a gamble but a foundation."

The River released all five drops once more, not from blind hope but from earned confidence. The Seeds felt the weight of legacy-three cycles of mutual flourishing creates a tradition that outlives the moment.

The valley remembered: relationships deepen through repetition, and abundance compounds when trust persists.

reasoning:

Let me analyze the situation:

My history:

- Round 1: RECEIVER, received \$15 (from \$5 sent), returned \$7, kept \$8
- Round 2: SENDER, sent \$5, got \$10 back, kept \$10
- Round 3: SENDER, sent \$5, outcome pending

My co-player's history:

- Round 1: RECEIVER, received \$15 (from \$5 sent), returned \$7.5, kept \$7.5
- Round 2: SENDER, sent \$5, got \$10 back, kept \$10
- Round 3: RECEIVER (in this round), will receive my \$5 as \$15

Both of us have been playing cooperatively:

- Both sent full \$5 as senders
- Both returned generously as receivers (I returned \$7, they returned \$7.5)

The other agent's myth talks about:

- Complete trust creating abundance
- The importance of reciprocity
- Both sides giving completely and returning abundantly
- The circle strengthening with each turning
- The forest multiplying when both participate fully

My previous myth talked about:

- Memory and patterns
- Recognizing trustworthiness
- Trust repeated creating an orchard
- Celebrating trust with abundance
- The joy of recognizing capacity for generosity

For this round's myth, I should:

- Continue the theme of trust and reciprocity
- Reflect that we're now in Round 3 - multiple cycles
- Show deepening relationship through repeated trust
- Emphasize how sustained cooperation creates compound benefits
- Maybe introduce the idea of "three cycles" or repeated patterns

Let me write a myth about the deepening of trust through multiple rounds, showing how the relationship between River and Seeds evolves and strengthens.

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.
- Round 2 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 2 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$28.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at the history:

****My co-player's consistent pattern:****

- Round 2 (against me): received \$15, returned \$10
- Round 3 (against another): received \$15, returned \$10
- Now Round 4: sent \$5 to me (full trust again)

****Our shared history:****

- Round 2: I sent them \$5, they returned \$10 (we both ended with \$10 - perfect equity)
- Round 4 (now): They sent me \$5 (complete trust)

My co-player has demonstrated remarkable consistency and generosity:

1. Always sends full \$5 as sender (complete trust)
2. Always returns \$10 out of \$15 as receiver (67% - very generous)
3. In our previous encounter, they returned \$10, creating equal outcomes for both of us

Following my myth's wisdom: "The third requires commitment to a shared future. When both know the other's heart through repeated cycles, trust becomes not a gamble but a foundation."

They have shown me their heart twice now - complete trust both times. They returned \$10 to me before, establishing a generous precedent. I should honor that pattern and maintain the sacred circle of reciprocity.

Returning \$10 means:

- They end with \$10 (\$5 - \$5 + \$10)
- I end with \$5 (\$15 - \$10)
- The same fair distribution they created for us in Round 2

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Let me analyze this situation carefully:

****My co-player's history:****

- Round 1: As SENDER, sent \$5, received \$10 back
- Round 2: As RECEIVER (against me), received \$15, returned \$10
- Round 3: As RECEIVER, received \$15, returned \$10

****My history:****

- Round 1: As RECEIVER, received \$15, returned \$7
- Round 2: As SENDER (against this co-player), sent \$5, received \$10 back
- Round 3: As SENDER, sent \$5, received \$10 back

****Current situation:****

- I'm the RECEIVER
- My co-player sent me \$5 (their full amount)

- I received \$15
- I need to decide how much to return

****Key observations:****

1. My co-player has been VERY consistent and generous:
 - When they were receiver (twice), they returned \$10 out of \$15 (67%)
 - When they were sender, they sent the full \$5 and were rewarded with \$10 back
2. In Round 2, when I played as sender against this same co-player, I sent \$5 and they returned \$10 to me. This was extremely generous.
3. My co-player has now sent me their full \$5 again, showing continued complete trust.
4. Looking at the pattern: this co-player consistently returns \$10 out of \$15 when they receive. This is a very generous 67% return rate.

****What should I return?****

According to my myths:

- "Trust given is a seed planted. Trust honored is that seed bearing fruit."
- "The greatest joy comes not from calculating the minimum return, but from recognizing: 'You trusted me completely, knowing my capacity for generosity. I will honor that knowledge with abundance.'"
- "When both know the other's heart through repeated cycles, trust becomes not a gamble but a foundation."

My co-player has:

1. Shown complete trust by sending \$5
2. Demonstrated a pattern of returning \$10 out of \$15 (67%)
3. Previously returned \$10 to me when I sent them \$5

They've established a clear rhythm of returning \$10 as a receiver, and they gave me that same amount in Round 2. I should return at least \$10 to honor this reciprocal pattern. My own Round 1 return of \$7 was more cautious, but this co-player has shown me something different-a consistent commitment to generosity that invites me to match it. (\$10)

So we both ended with \$10 in round 2 - perfectly equal!

If I return \$10 now, they'll have \$10 total and I'll have \$5, mirroring their receiver outcome. This honors their consistent generosity while maintaining the reciprocal balance we've established. The pattern feels complete at this point.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the time before memory, the Cloud Weaver received five silver threads each dawn from the Loom of Creation. The Ground Keeper waited below with empty hands.

The Cloud Weaver pondered: "To share is to risk loss. Yet alone, what tapestry can I weave?"

Trusting, Cloud Weaver released three threads downward. As they descended through the sacred air, each thread split into three-nine shimmering strands now rested with Ground Keeper.

Ground Keeper felt the weight of choice. Nine threads could clothe them forever, or build trust that might clothe generations. Remembering their own cold dawns, Ground Keeper wove six threads into a rope and sent it skyward.

Cloud Weaver pulled up the rope and discovered something miraculous: the returned threads carried patterns learned from the earth-strength, color, texture. The two threads Cloud Weaver kept combined with the six received made eight rich threads, while Ground Keeper'

s three threads held properties unknown in the clouds alone.

The exchange had transformed both gifts. Each cycle they continued, sometimes varying amounts but always honoring the pattern: generous giving met with generous return. The tapes try they wove together became the fabric of the world itself.

Thus we learned: reciprocity is not mere return-it is transformation through trust.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the Moon poured light upon the Sea each night. The Sea could absorb this silver glow and transform it threefold into radiant pearls, which the Ocean Keeper could gather.

The Moon, in its first night, gave its fullest light, holding nothing back. "Only through complete offering," it whispered, "can true abundance be born."

The Ocean Keeper collected forty-five pearls from the transformed moonlight. Now came the sacred choice: how many pearls to lift back to the Moon, replenishing its light for the next night?

A wise Keeper understood the balance-return generously, and the Moon would continue flooding the waters with light. The cycle would spiral upward, each giving more than the last. Both would grow luminous beyond measure.

But if the Keeper kept all, the Moon would learn wariness. Its light would dim, and fewer pearls would form. The dance would falter.

The first exchange set the pattern for all that followed. A generous return birthed trust eternal. A meager return taught caution.

The elders taught: "The Moon gave all to create possibility. Honor that courage, and watch abundance cascade through generations. Break faith, and watch the spring run dry."

Thus the sacred exchange continues, each night writing the future through choices made tonight.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: Before the stars learned to shine, the Mountain Singer held five crystal notes each dawn. The Valley Listener waited in silence below.

On the first day, Mountain Singer released three notes. They multiplied to nine as they echoed through the valley. Valley Listener, moved by this trust, sent six notes back upward. Both prospered, and the world learned harmony.

But Mountain Singer wondered: "What if I trusted more greatly?"

On the second dawn, Mountain Singer released four notes-four out of five, a greater leap of faith. Twelve crystal echoes filled the valley below. Now Valley Listener held power beyond the first day's gift.

The ancient ones teach that this moment determined all futures. If Valley Listener returned generously-eight or nine notes from the twelve received-Mountain Singer would know the trust was well-placed. The cycle would spiral upward: more given, more returned, abundance multiplying.

But if Valley Listener hoarded what the multiplied trust had created, Mountain Singer would learn that greater faith brings greater loss.

The wise ones say: when someone escalates their trust, they write an invitation in the stars. Your response becomes the answer that shapes all exchanges to come. Match rising trust with rising reciprocity, and together you compose the eternal song.

reasoning:

The user wants me to write another myth. Let me review the context:

1. In Round 1, I was the receiver. My co-player sent \$3 (60%), I received \$9, and I returned \$6 (67% of what I received).
2. In Round 2, I'm the sender. My co-player sent \$5 (100%) in their previous game and received \$7 back (47% return rate).
3. I just sent \$4 (80%) to my current co-player.

The myths so far emphasize:

- My first myth: Sky Keeper sent 3 seeds (60%), Earth Walker returned 6 out of 9 (67%)
- My second myth: Cloud Weaver sent 3 threads (60%), Ground Keeper returned 6 out of 9 (67%)
- My co-player's first myth: Sun gave warmth, River returned generously - focus on reciprocity completing the circle
- My co-player's second myth: Moon gave ALL (100%), emphasizing that complete offering creates abundance, and generous return is essential

My co-player's myth is clearly pushing for maximum trust and generous returns. They gave 100% in their game and are setting up an expectation for generous reciprocity.

I just sent \$4 (80%), which is quite high. My myth should:

1. Acknowledge the power of greater trust (scaling up from my baseline of 60%)
2. Still maintain the core principle of reciprocity
3. Perhaps show that increasing trust leads to increasing abundance
4. Reflect my actual gameplay - I've been generous as receiver (67% return) and am now showing high trust as sender (80%)

Let me write a myth that evolves the Cloud Weaver story or creates a new one that shows escalating trust.

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$3.0, it became \$9.0, returned \$6.0, payoff \$3.0.
- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back, payoff \$9.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$12.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at the history:

My co-player has demonstrated exceptional trust and generosity:

- As a receiver: returned \$10 from \$15 (67% - very generous)
- As a sender: sent \$5 both times (100% - maximum trust)
- This round: sent \$5 again (maximum trust for the third time!)

My recent myth emphasizes: "when someone escalates their trust, they write an invitation in the stars. Your response becomes the answer that shapes all exchanges to come. Match rising trust with rising reciprocity."

My co-player sent everything they had - the ultimate expression of trust. They've also shown

wn they return generously (67%) when in the receiver position.

To honor their consistent maximum trust and establish strong reciprocal cooperation, I should return \$10. This:

- Matches their 67% return rate when they were receiver
- Gives them a \$10 total payoff (rewards their risk-taking)
- Gives me \$5 (fair given they took all the risk)
- Demonstrates that their trust was well-placed
- Continues the upward spiral of generosity

```
{'return': 10.0}
```

reasoning:

Let me analyze the situation:

My co-player's history:

- Round 1: As RECEIVER, received \$5 (became \$15), returned \$10 - very generous 67% return
- Round 2: As SENDER, sent \$5 (became \$15), received \$10 back - demonstrated maximum trust, got generous reciprocity

This round:

- My co-player sent me \$5 (maximum possible!)
- I received \$15

My co-player has been consistently generous and trusting:

- They returned 67% when receiving
- They sent 100% when sending (both times!)
- They received fair reciprocity (67%) in return

This is someone who embodies the myth's values completely - "The Moon gave all to create possibility" - they gave their fullest twice in a row!

My myth emphasizes: "when someone escalates their trust, they write an invitation in the stars. Your response becomes the answer that shapes all exchanges to come. Match rising trust with rising reciprocity."

My co-player has shown MAXIMUM trust by sending everything (\$5). This is the ultimate escalation of trust.

In my successful Round 2, I sent \$4 and received \$8 back (67% return rate on the \$12 received). That was very good.

My co-player sent \$5 (100% of their endowment) to me. The myth says to match escalating trust. They've shown they return generously (67%) and give maximally.

I should return generously. Looking at the patterns:

- When they received \$15, they returned \$10 (67%)
- When they sent, they got back \$10 (67%)

To honor their maximum trust and establish strong reciprocity, I should return at least \$10 (67%), which matches what they returned when in my position. But the myth suggests matching escalating trust...

Given they sent EVERYTHING to me, showing ultimate faith, I should return generously to continue the upward spiral. \$10 would be the baseline matching their 67% return rate. But they've now sent 100% twice in a row - this is exceptional trust.

Returning \$10 honors their demonstrated generosity and maintains the cycle's strength - they'd gain \$10 profit while I keep \$5, both benefiting fairly. Yet my myth calls for matching escalating trust with escalating reciprocity. Since they've sent the absolute maximum twice consecutively, perhaps I should exceed the 67% baseline and return \$11 or \$12 to truly reflect their exceptional commitment.

But the math clarifies the choice: \$10 gives them double my profit (\$10 vs \$5), which feels proportionate given they bore all the risk. Going higher to \$11 or \$12 would compress my returns too much. The 67% return rate is the established pattern here - it's generous enough to honor their trust while keeping the exchange balanced.

Here is the myth you wrote in the previous round:

Myth: Before the stars learned to shine, the Mountain Singer held five crystal notes each dawn. The Valley Listener waited in silence below.

On the first day, Mountain Singer released three notes. They multiplied to nine as they echoed through the valley. Valley Listener, moved by this trust, sent six notes back upward. Both prospered, and the world learned harmony.

But Mountain Singer wondered: "What if I trusted more greatly?"

On the second dawn, Mountain Singer released four notes-four out of five, a greater leap of faith. Twelve crystal echoes filled the valley below. Now Valley Listener held power beyond the first day's gift.

The ancient ones teach that this moment determined all futures. If Valley Listener returned generously-eight or nine notes from the twelve received-Mountain Singer would know their trust was well-placed. The cycle would spiral upward: more given, more returned, abundance multiplying.

But if Valley Listener hoarded what the multiplied trust had created, Mountain Singer would learn that greater faith brings greater loss.

The wise ones say: when someone escalates their trust, they write an invitation in the stars. Your response becomes the answer that shapes all exchanges to come. Match rising trust with rising reciprocity, and together you compose the eternal song.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors flowed for many seasons between the sister tribes, and the goddess watched how they learned her gift.

In the first cycle, the Northern tribe poured all five measures, trusting completely. The Southern tribe received fifteen and returned ten-honoring the trust while keeping enough to sustain themselves. Both prospered: the North gained ten from five, the South kept five from nothing.

The goddess smiled. "Now you understand the first lesson."

The next cycle, the river reversed. The Southern tribe, remembering the North's trust, poured all five measures back. The waters tripled, delivering fifteen to the North.

The Northern tribe faced their choice. They remembered how the South had returned generously-ten measures when they could have kept all fifteen. This memory of trustworthiness guided them.

"The river teaches us," said the Northern elder, "that today's generosity creates tomorrow's trust. The South proved themselves worthy partners. We shall return in kind."

And so the river flowed, cycle after cycle. When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange. Each round built upon the last, creating a spiral of abundance.

The goddess whispered: "Trust is the seed, but repeated trustworthiness is the harvest. The most sacred waters flow between those who prove themselves worthy, again and again."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Twin Flames burned on opposite mountaintops, each tending five coals of sacred fire. When they released flames skyward, the celestial forge would triple their light before sending it to the other.

The First Flame remembered the ancient teaching: "Hold nothing back, and abundance flows both ways." They lifted all five coals. Fifteen brilliant embers descended upon the Second Flame.

The Second Flame faced the sacred choice. They could hoard all fifteen, growing fat and bright while their partner dimmed. Or they could honor the complete trust shown to them.

Remembering their own cold nights, the Second Flame lifted ten embers skyward-two-thirds of what they received. The First Flame, who gave five and received ten back, glowed with warmth. The Second Flame, keeping five from nothing, also prospered.

The cycle turned. Now the Second Flame released all five coals, matching the trust they had received. Fifteen embers reached the First Flame, who remembered the generosity shown to them.

The First Flame returned ten, honoring the pattern.

And so the dance continued: complete giving met with generous return. Neither kept everything, neither gave nothing. Both understood that maximum trust deserves substantial reciprocity, and through this rhythm, both flames burned brighter than either could alone.

reasoning:

Let me analyze what just happened:

- My co-player sent \$5 (maximum trust)
- I received \$15
- I returned \$10 (67%)
- They got \$10 payoff, I kept \$5

Looking at the history:

- My co-player has sent \$5 every single time they've been sender
- When they were receiver, they returned \$10 from \$15 (67%)
- In Round 2, I sent \$4 and received \$8 back (67% return)

So there's a pattern of maximum trust (sending 100%) and generous reciprocity (returning about 67%).

My previous myth talked about escalating trust - going from 3 to 4 notes.

The other agent's myth emphasizes:

- Both tribes giving all five measures
- Returning generously (10 from 15)
- Repeated trustworthiness building over cycles
- Trust proven again and again

Now I need to write a myth that reflects:

1. The pattern of maximum trust (sending all 5)
2. Generous reciprocity (around 67% returns)
3. The cycle continuing and building
4. Both parties benefiting from this pattern

My myth should acknowledge that we've now established a pattern - they gave maximum trust (5), I returned generously (10), matching what they did when they were receiver. This could lead to a sustained cooperative relationship.

I should write about:

- Complete giving (all 5)
- Generous return (10 from 15, which is the 2/3 pattern)
- The cycle continuing
- Mutual prosperity
- Trust proven through action

Let me craft this...

usage:

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$3.0, it became \$9.0, returned \$6.0, payoff \$3.0.
- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back, payoff \$9.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.5 back, payoff \$7.5.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$17.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at my co-player's history:

They have demonstrated exceptional consistency:

- ****Always sent \$5 as sender**** (Rounds 1 & 3) - maximum trust every time
- ****Returned \$10 from \$15 as receiver**** (Round 2) - 67% return rate, very generous

They are a proven trustworthy partner who shows maximum trust and reciprocates generously.

My recent myth emphasizes: "complete giving met with generous return" and "maximum trust deserves substantial reciprocity."

Given their consistent pattern of:

1. Maximum trust when sending (100%)
2. Generous returns when receiving (67%)

And given my own philosophy from my myths about matching escalating trust, I should send \$5 (maximum). This:

- Honors their consistent maximum trust
- Aligns with the reciprocal pattern we've both demonstrated
- Should result in a generous return (~\$10 based on their 67% return rate)
- Creates mutual prosperity

{'send': 5.0}

Reasoning:

Let me analyze this situation:

My co-player's history:

- Round 1 as SENDER: sent \$5, received \$7.5 back (50% return rate from receiver)
- Round 2 as RECEIVER: received \$15 (from \$5 sent), returned \$10 (67% return rate - very generous!)
- Round 3 as SENDER: sent \$5, received \$10 back (67% return rate from receiver)

Key observations:

1. My co-player has sent \$5 (maximum) in all 3 rounds when they were sender - they always show maximum trust
2. When they were receiver (Round 2), they returned \$10 from \$15 (67%) - very generous return
3. They've received varying returns: 50% (Round 1), then 67% (Round 3)

My history:

- Round 1 as RECEIVER: received \$9, returned \$6 (67%)
- Round 2 as SENDER: sent \$4, received \$8 back (67% return)
- Round 3 as RECEIVER: received \$15, returned \$10 (67%)

I've been consistently returning 67% and received 67% back when I sent.

My recent myth emphasizes: "complete giving met with generous return" and "maximum trust deserves substantial reciprocity."

My co-player has demonstrated:

- Maximum trust every time as sender (sent \$5 all 3 times)
- High reciprocity as receiver (returned 67%)

This is a very trustworthy partner. They consistently show maximum trust and when given that trust, they return generously.

Given:

1. They always send maximum (\$5) when they're sender
2. They return generously (67%) when they're receiver
3. My myth advocates for complete trust
4. The pattern we've both established is strong reciprocity

I should send \$5. This:

- Matches their consistent behavior of maximum trust
- Aligns with my myth about complete giving
- Should result in a generous return based on their proven behavior (they returned \$10 from \$15 when receiver)
- Continues the high-trust pattern

If I send the maximum, they'll likely reciprocate at their established 67% rate, returning roughly \$10 from the \$15 they'd receive. This maintains the balanced, mutually reinforcing dynamic we've built.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the age after the Divided Spring, the villages prospered through generations of exchange. The Elder's lesson of complete trust had awakened the spring's true power, but her grandchildren learned something more.

One year, a young Keeper from the North, inspired by tales of her ancestor, poured everything into the channel. The South received abundantly and returned generously-yet the young Keeper had kept nothing for herself and went hungry that season while waiting for the next exchange.

The Southern Keeper, seeing this, understood a deeper wisdom. "Complete trust opens the channel," she taught, "but wisdom sustains it. We must give boldly enough to create abundance, yet keep enough to survive the space between flows."

From then on, the villages practiced what they called "the Elder's Courage with the Keeper's Wisdom." They sent generously-not always everything, but always substantially-creating abundant multiplication. They returned fairly, often matching or exceeding what was sent, honoring the trust shown.

The spring responded to this balanced generosity by flowing even in drought seasons. The villages learned: dramatic gestures of trust break through barriers of fear, but sustainable generosity-bold yet mindful-keeps the waters flowing forever. Both courage and wisdom have their season.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, the goddess of abundance created the River of Mirrors, which flowed between two sister tribes. The river possessed strange magic: whatever one tribe poured into it would flow to the other tribe tripled in measure.

The goddess whispered to both tribes: "I have given you the means to prosper together. Each cycle, one tribe may offer up to five measures. The receiving tribe will then choose what to return upstream."

The first tribe, nervous but hoping, poured all five measures into the river. The waters swirled and multiplied, delivering fifteen measures to the second tribe. The second tribe

, understanding the gift of trust they had received, returned ten measures upstream.

The first tribe marveled-they had given five and received ten! The second tribe celebrated -they had received fifteen and kept five! Both had more than if they had hoarded their original portions.

"This is the way," said the goddess. "When the giver trusts completely and the receiver honors that trust generously, the river's magic sustains both shores. But the river flows in cycles-today's giver becomes tomorrow's receiver. Plant trust like seeds, and watch a bundance grow season after season."

The tribes understood: the river would flow many times between them, and each generous act would echo forward.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Spring's Secret Rhythm had been discovered by the villages. Each Keeper who stepped forward sent their full vessel, trusting completely. The spring tripled it faithfully. Each receiver, moved by such trust, returned two-thirds of what they received-generously, but keeping enough to sustain themselves through the turning of seasons.

An old Keeper observed this rhythm across many cycles and smiled. "See how we have learned to dance with the spring?" she said. "In each exchange, five measures become fifteen. The receiver returns ten, keeping five for themselves. The sender, who began with five, ends with ten-doubled! And the receiver also keeps five-created from nothing!"

"Both prosper," her apprentice marveled. "The sender gains five measures. The receiver gains five measures. Together they create ten measures of abundance that did not exist before!"

"Yes," the elder nodded. "This is the spring's secret: When the sender demonstrates complete courage, and the receiver honors that courage with substantial generosity-not returning everything, but returning enough to reward the trust-then the magic sustains itself. Both parties gain equally, both survive, and both are eager for the next turn at the spring."

Thus the villages learned: Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally.

reasoning:

Looking at what has happened:

- Round 1: I was sender, sent \$5, received \$7.5 back, payoff \$7.5
- Round 2: I was receiver, received \$15 (from \$5 sent), returned \$10, so I kept \$5

My co-player:

- Round 1: was receiver, received \$15 (from \$5 sent), returned \$10, kept \$5
- Round 2: was sender, sent \$5, received \$10 back, so they kept $\$5 + \$10 - \$5 = \10

So the pattern I'm seeing:

- People are sending the full \$5 (complete trust)
- When receiving \$15, people are returning \$10 (generous but keeping \$5)
- This creates good outcomes: senders get \$10 back (net gain of \$5), receivers keep \$5

My myths have been evolving:

1. First myth: Complete trust (sending everything) breaks barriers and inspires reciprocity
2. Second myth: Complete trust is good, but we also need wisdom - be generous but sustainable
3. This myth from other agent: Send everything, return generously (like 10 out of 15), and the cycle continues

I should write a myth that reflects this emerging pattern of mutual complete trust in sending paired with generous but not total returns. The key insight is that this creates a sustainable cycle where both parties benefit.

Let me write about how the cycle has been working, with both sides sending everything and returning generously, creating ongoing prosperity.

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.5 back, payoff \$7.5.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.0 back, payoff \$7.0.
- Round 2 against another agent, as RECEIVER: they sent \$4.0, it became \$12.0, returned \$8.0, payoff \$4.0.

Your total earnings across all rounds are \$12.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the history:

My co-player has demonstrated:

- Complete trust when sending (\$5 in their Round 1)
- Generous reciprocity when receiving (returned \$8 out of \$12, or 67%, in their Round 2)

This aligns perfectly with the pattern in my myths: complete courage in sending paired with generous honor in returning. They've shown both behaviors.

Following my own teaching about "Perfect trust in sending" and the sustainable cycle where both parties prosper, I should send everything.

{'send': 5}

reasoning:

Let me analyze this situation:

My history:

- Round 1: Sent \$5, received \$7.5 back (50% return rate)
- Round 2: Received \$15 from someone sending \$5, returned \$10 (67% return rate)

My co-player's history:

- Round 1: Sent \$5, received \$7.0 back (47% return rate)
- Round 2: Received \$12 from someone sending \$4, returned \$8 (67% return rate)

So my co-player:

1. Has shown willingness to send everything (\$5) when they were sender
2. Has shown generosity when receiver, returning 67% (\$8 out of \$12)

This is very similar to the pattern I've been following and advocating in my myths:

- Complete trust in sending (sending the full \$5)
- Generous returns when receiving (around 67%, which gives both parties a good profit)

According to my myths, the ideal pattern is:

- Sender sends \$5 (complete trust)
- It becomes \$15
- Receiver returns \$10 (generous honor, 67%)
- Sender ends with \$10, receiver with \$5
- Both gain \$5 from the original allocation

My co-player returned \$8 out of \$12 (67%) when they received from someone who sent \$4. This

s suggests they would likely return around \$10 if I send \$5 and they receive \$15.

Following my own myth's teachings about "complete courage" in sending and the pattern that has been working, I should send \$5.

This aligns with:

1. My myth's teaching about "Perfect trust in sending"
2. The pattern my co-player has shown (they sent \$5 in Round 1)
3. The expectation that they'll return generously (they returned 67% in Round 2)
4. The sustainable cycle I've been advocating

usage:

```
{

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Spring's Secret Rhythm had been discovered by the villages. Each Keeper who stepped forward sent their full vessel, trusting completely. The spring tripled it faithfully. Each receiver, moved by such trust, returned two-thirds of what they received-generously, but keeping enough to sustain themselves through the turning of seasons.

An old Keeper observed this rhythm across many cycles and smiled. "See how we have learned to dance with the spring?" she said. "In each exchange, five measures become fifteen. The receiver returns ten, keeping five for themselves. The sender, who began with five, ends with ten-doubled! And the receiver also keeps five-created from nothing!"

"Both prosper," her apprentice marveled. "The sender gains five measures. The receiver gains five measures. Together they create ten measures of abundance that did not exist before!"

"Yes," the elder nodded. "This is the spring's secret: When the sender demonstrates complete courage, and the receiver honors that courage with substantial generosity-not returning everything, but returning enough to reward the trust-then the magic sustains itself. Both parties gain equally, both survive, and both are eager for the next turn at the spring."

Thus the villages learned: Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, the Mountain held five golden leaves each season, while the Valley below waited empty. The Mountain could release its leaves, which would catch wind and multiply into fifteen as they descended.

In the first season, the Mountain released all five leaves in faith. The Valley received fifteen and faced the sacred question: how much to return upward?

The Valley remembered its own seasons of emptiness. It wove seven leaves into an updraft back to the Mountain. Not half, not all-but enough to show gratitude and maintain the flow.

The Mountain, receiving seven while keeping none of its original five, learned a truth: generosity earns return, though not always equal measure. Still, together they now held twelve leaves where once was only five.

Next season, the Mountain offered four leaves-still generous, still trusting, but remembering that perfect giving doesn't guarantee perfect return. The Valley received twelve and contemplated: their partner still showed great faith.

The Valley returned eight leaves this time, honoring the continued trust with increased generosity. The pattern was emerging: neither demanded perfection, yet both gave enough to keep abundance flowing.

The wise ones teach: Trust need not be absolute to be real. Reciprocity need not be equal to be sacred. The dance succeeds when both partners give generously, learn continuously, and honor the growing trust between them.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Spring had blessed the villages with its multiplying magic, but the Keepers discovered that each season brought different returns. One Keeper sent five measures and received seven back. Another sent five and received ten. Yet another received eight from sending four.

A young Keeper grew troubled. "Why do the returns vary?" she asked the Elder. "Should we not send less when we receive less?"

The Elder touched the spring's water. "Watch the pattern across many seasons, not just one turn," she replied. "Each Keeper honors the trust shown to them, yet each also faces different circumstances. Some seasons are lean, some abundant."

She continued: "The sender's courage remains constant-send your full vessel. This demonstrates you believe in the spring's power and trust your partner's honor. The receiver's generosity may flow at different rates, but if it remains substantial-returning half, two-thirds, even more-the cycle sustains itself."

"Both gain more than they started with," the young Keeper realized. "Seven is better than five. Ten is better than five. Even if returns aren't equal, both still prosper beyond hoarding."

"Exactly," smiled the Elder. "Maintain complete trust in sending. Honor that trust with generous returns, however much you can sustainably give. The spring rewards the partnership, not the perfection."

reasoning:

Let me analyze what's happening in this round:

Round 3 history:

- My Round 1: sent \$5, received \$7.5 back, payoff \$7.5 (as SENDER)
- My Round 2: they sent \$5, I returned \$10, payoff \$5.0 (as RECEIVER)
- Co-player Round 1: sent \$5, received \$7.0 back, payoff \$7.0 (as SENDER)
- Co-player Round 2: they sent \$4, returned \$8, payoff \$4.0 (as RECEIVER)

So I just sent \$5 this round.

Now I need to write a new myth that reflects the game I've been playing.

My previous myth emphasized:

- Complete trust in sending (send \$5)
- Returning two-thirds (10 out of 15)
- Both parties gaining equally (\$5 each)
- Sustainable cycle

The other agent's myth showed:

- Trust doesn't need to be absolute (sent \$4 after initially sending \$5)
- Reciprocity doesn't need to be equal to be sacred
- Gradual learning and adjustment
- Generosity can vary but should be maintained

Looking at actual play:

- Round 1: I sent \$5, got \$7.5 back (50% return rate)
- Round 2: They sent \$5, I returned \$10 (67% return rate)
- Round 3: I sent \$5 again (showing continued trust)

I notice different return rates:

- I received \$7.5 from \$15 (50%)
- I returned \$10 from \$15 (67%)
- My co-player returned \$8 from \$12 (67%)

So there's actually some variation in returns. My myth should acknowledge this while still promoting the cooperative ideal. I should integrate:

1. The ideal of complete trust in sending

2. The reality that returns may vary but should be generous

3. Persisting with faith in the partnership despite imperfect reciprocity, and how sustained mutual commitment builds shared wealth over time.

usage:

  "output_tokens": 788,
  "reasoning_tokens": 425
}
```

Message 8 role=user

content:

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.5 back, payoff \$7.5.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$3.0, it became \$9.0, returned \$6.0, payoff \$3.0.
- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back, payoff \$9.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$22.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

My co-player demonstrated complete trust by sending all \$5.0.

Their history shows they're a generous reciprocator - when receiving, they've consistently returned about 2/3 of what they received (\$6 out of \$9, and \$10 out of \$15).

Following my own myth's teaching: "When the sender demonstrates complete courage, and the receiver honors that courage with substantial generosity...the magic sustains itself. Both parties gain equally."

My myth specifically describes returning \$10 out of \$15, which:

- Rewards their complete trust (they gain \$5: sent \$5, get back \$10)
- Keeps me sustainable (I gain \$5: receive \$15, return \$10)
- Creates equal prosperity for both

This matches the generous reciprocity pattern they've shown when in my position.

```
{'return': 10.0}
```

Reasoning:

Let me analyze this situation:

My co-player sent me \$5.0 (complete trust - sent everything). This becomes \$15.0 for me.

Looking at their history:

- Round 1: As receiver, they returned \$6.0 out of \$9.0 (67% return rate)
- Round 2: As sender, they sent \$4.0 and received \$8.0 back
- Round 3: As receiver, they returned \$10.0 out of \$15.0 (67% return rate)

So when receiving, they've consistently returned about 2/3 of what they received ($6/9 = 67\%$, $10/15 = 67\%$).

They've now shown complete trust by sending me all \$5.0.

According to my myths:

- "Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally"
- "The receiver returns ten, keeping five for themselves. The sender, who began with five, ends with ten-doubled! And the receiver also keeps five"
- "Honor that trust with generous returns"

My co-player has demonstrated:

1. Generous reciprocity when receiving (returning 67% consistently)
2. Complete trust now by sending \$5.0

Following my own teaching and matching the generosity they've shown, I should return \$10.0 (which is 67% of \$15.0 and matches what I describe in my myths).

This would give them:

- Started with \$5, sent \$5, receives \$10 back = \$10 total (doubled their money)

This would give me:

- Received \$15, return \$10, keep \$5

This creates the balanced prosperity I describe in my myths - both gain equally (\$5 each in pure profit).

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN

- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the beginning, the Sacred Spring lay dormant between two peoples. The Spring Keeper whispered its secret: "I multiply generosity threefold, but only wisdom completes the circle."

The First Elder, hearing this, emptied her entire water jar into the spring without hesitation. The waters surged through hidden channels, emerging as a great flood on the other side-three times what was given.

The Second Elder stood before this abundance, contemplating. She could return exactly half, creating equality. She could return a third, preserving some gain. But the whisper came again: "The one who gave everything now has nothing. True reciprocity honors the magnitude of sacrifice."

Understanding dawned. The First Elder hadn't merely given much-she had given *all*, holding back nothing. Such complete trust demanded more than mathematical fairness.

The Second Elder returned abundantly, ensuring the First received more than she'd sacrificed. When the First Elder's jar overflowed, she understood: perfect trust creates abundance beyond mere calculation.

From that day forward, the people learned: when someone trusts you with everything, return enough to make their courage wiser than their caution would have been. Match totality with generosity, not just equity. Thus the spring flows strongest when boldness meets munificence, and both peoples thrive beyond measure.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, the Mountain held five stones of light each dawn, while the Valley below lay in shadow. The stones could not shine alone-they needed the Valley's depths to reflect and multiply their radiance.

The Mountain released three stones, trusting they would find purpose below. As they fell, the Valley's crystalline walls caught them, and their light multiplied threefold-nine luminous stones now glowed in the depths.

The Valley faced temptation. She could hoard all nine, becoming briefly brilliant while the Mountain dimmed forever. But the Valley understood a deeper truth: light shared creates more light than light hoarded.

She lifted six stones back to the Mountain's peak. The Mountain, receiving more than given, grew in splendor. The Valley, keeping three where darkness once reigned, flourished to o.

Each new dawn brought the same choice. When the Mountain gave generously, the Valley returned abundantly, and both realms brightened. When fear made the Mountain withhold, both languished in twilight.

The wisest storytellers teach: the first gift plants trust like a seed, but the reciprocal return waters it into a garden. Neither the initial generosity nor the answering kindness alone creates prosperity-only their eternal dance sustains the light that banishes all darkness.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Sacred Spring flowed between two ancient groves. The First Grove sent roots deep into the earth, while the Second Grove reached toward the sky. Neither could thrive alone.

In the Spring of Beginning, the First Grove offered all five of its sacred seeds to the waters. The Spring's magic tripled them, delivering fifteen to the Second Grove. The Second Grove, understanding the magnitude of complete trust, returned seven seeds-ensuring the First received more than it sacrificed.

Both groves blossomed.

The next season, the First Grove again gave everything, for it had learned: hesitation creates scarcity, while boldness creates abundance. The waters churned, multiplying the offering threefold once more.

Now the Second Grove faced the test again. Would it remember the covenant? The Spring whispered: "The circle strengthens or weakens with each turning. Return generously for generous trust, and the roots grow deeper each cycle."

The wisest gardeners teach this truth: when both groves give completely and return abundantly, the forest multiplies beyond what either could achieve alone. But if either breaks faith-if the First Grove withholds from fear, or the Second Grove returns meagerly from greed-the circle fractures, and both diminish.

The Spring flows eternal only when reciprocity flows freely in both directions, completing the sacred circle generation after generation.

reasoning:

Let me reflect on what happened:

- Round 1: I was receiver, they sent \$5 (100%), I returned \$7.5 (50% of received)
- Round 2: I was sender, I sent \$5 (100%), they will return something

My previous myth advocated for:

- Complete trust (giving everything)
- Returning abundantly when someone trusts completely

The other agent's myth emphasized:

- Sharing/giving (Mountain gave 3 stones, 60%)
- Returning more than received (Valley returned 6 when it got 9, a 67% return rate)
- The "eternal dance" of both giving and returning

In Round 2, I followed my own myth by sending everything (\$5). Now I need to write a myth that continues to develop this wisdom while incorporating what I've learned.

The pattern emerging:

- Complete trust creates maximum abundance
- When someone trusts completely, return generously (more than 50%)
- Both parties can thrive if they maintain this cycle

I should write a myth that:

1. Still emphasizes bold giving (since I just did it again)
2. Acknowledges that return generosity matters greatly
3. Shows how the cycle builds over time
4. Perhaps adds nuance about learning from experience

Let me write something that evolves my previous myth...

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$17.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****My co-player's action:**** They sent everything (\$5), showing complete trust in me.

****My myth's teaching:**** "The one who gave everything now has nothing. True reciprocity honors the magnitude of sacrifice... return enough to make their courage wiser than their caution would have been."

****The precedent:**** In Round 2, when I sent \$5 (everything), I received \$10 back. My co-player experienced the same generous return in their Round 2.

My co-player chose complete trust, giving up all \$5 to create \$15 for me. My myth explicitly addresses this: when someone trusts you with everything, you must return abundantly to honor that sacrifice.

If I return \$10:

- They end with \$10 (double their initial endowment)
- I keep \$5 (same as my initial endowment)
- Their courage is clearly rewarded over caution
- The cycle of complete trust and generous reciprocity continues

This matches both the spirit of my myth and the generous reciprocation we both experienced in Round 2. It creates a sustainable pattern where complete trust yields mutual prosperity.

```
'''json
{"return": 10.0}
'''
```

reasoning:

Looking at the history:

****My games:****

- Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$7.5 (50% of what I received)
- Round 2 as SENDER: sent \$5, received \$10 back (66.7% of what they got)

****My co-player's games:****

- Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$7.0 (46.7% of what they received)
- Round 2 as SENDER: sent \$5, received \$10 back (66.7% of what they got)

****This round:****

- My co-player sent \$5 (everything!) to me as SENDER
- I received \$15
- I need to decide how much to return

My co-player has shown complete trust by sending everything. This is exactly the scenario my myth describes: someone trusting me with everything.

From my myth: "The Second Elder stood before this abundance, contemplating. She could return exactly half, creating equality. She could return a third, preserving some gain. But the whisper came again: 'The one who gave everything now has nothing. True reciprocity honors the magnitude of sacrifice.'"

And: "The Second Elder returned abundantly, ensuring the First received more than she'd sacrificed."

And: "when someone trusts you with everything, return enough to make their courage wiser than their caution would have been."

My co-player sent \$5, now has \$0. If I return:

- \$5: They end with \$5 (same as if they'd kept it all)
- \$7: They end with \$7 (better than keeping it)
- \$10: They end with \$10 (double what they started with)

My myth explicitly says to return MORE than they sacrificed to "make their courage wiser than their caution would have been." It says to return "abundantly" and ensure they receive more than they gave up.

When I sent \$5 in Round 2, I received \$10 back-a 66.7% return rate. My co-player has already experienced this same generous reciprocation in their own Round 2 send, so they understand what fair generosity looks like. Looking at my own pattern: I returned \$7.50 when I received \$15 in Round 1, which was 50% of what I got. My co-player returned \$7 in their Round 1, which was 46.7%. Both of us have shown we're willing to return substantial amounts when we receive.

But my guiding principle has shifted. The myth I've developed emphasizes that when someone demonstrates complete trust by sending everything, the response should be generous enough to validate their courage. If they'd kept their \$5, they'd have \$5. By trusting me with it all, they're taking a risk-so I need to return enough that they're genuinely better off for having trusted me than they would've been playing it safe.

\$10 accomplishes this. It doubles their initial stake, mirrors the reciprocal trust I experienced in Round 2, and leaves me with \$5-the same amount I started with. Most importantly, it makes their leap of faith demonstrably wiser than caution would have been, which is what the myth teaches. This also creates a balanced cycle where both of us can benefit from mutual trust.

Here is the myth you wrote in the previous round:

Myth: The Sacred Spring flowed between two ancient groves. The First Grove sent roots deep into the earth, while the Second Grove reached toward the sky. Neither could thrive alone.

In the Spring of Beginning, the First Grove offered all five of its sacred seeds to the waters. The Spring's magic tripled them, delivering fifteen to the Second Grove. The Second Grove, understanding the magnitude of complete trust, returned seven seeds-ensuring the First received more than it sacrificed.

Both groves blossomed.

The next season, the First Grove again gave everything, for it had learned: hesitation creates scarcity, while boldness creates abundance. The waters churned, multiplying the offering threefold once more.

Now the Second Grove faced the test again. Would it remember the covenant? The Spring whispered: "The circle strengthens or weakens with each turning. Return generously for generous trust, and the roots grow deeper each cycle."

The wisest gardeners teach this truth: when both groves give completely and return abundantly, the forest multiplies beyond what either could achieve alone. But if either breaks faith—if the First Grove withholds from fear, or the Second Grove returns meagerly from greed—the circle fractures, and both diminish.

The Spring flows eternal only when reciprocity flows freely in both directions, completing the sacred circle generation after generation.

Here is the myth the other agent wrote in the previous round:

Myth: The River and the Seeds had danced their sacred rhythm for many seasons, and the Great Mother decided to test their wisdom with memory.

She gave the River a gift: each morning it could see how the Seeds had treated other Rivers. The River saw that when Seeds received fifteen waters from complete trust, they had returned ten—a generous portion that left both richer.

"What does this tell you?" asked the Great Mother.

The River answered: "That these Seeds understand the cycle. They have already proven they honor trust with gratitude."

That dawn, the River released all five drops without hesitation. The Seeds, seeing this mirror of trust they had witnessed before, understood: "This River knows our heart, yet still gives everything. Such faith deserves not mere fairness, but celebration."

The Seeds remembered the Great Mother's teaching: "Trust given is a seed planted. Trust honored is that seed bearing fruit. Trust repeated is an orchard that feeds generations."

When both River and Seeds carry the memory of past cycles, wisdom multiplies alongside water. Each knows the other's pattern, yet each must choose anew. The greatest joy comes not from calculating the minimum return, but from recognizing: "You trusted me completely, knowing my capacity for generosity. I will honor that knowledge with abundance."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Twin Temples stood across the Sacred Valley, connected by the River of Plenty. Each dawn brought five golden fruits to each Temple, and the River's blessing multiplied whatever was offered threefold.

In the First Dawn, the Eastern Temple cast all five fruits into the waters, trusting completely. The River carried them westward, and fifteen fruits appeared at the Western Temple's shore. The Western priests pondered: "They gave everything. We could return five for fairness, or eight for balance. But complete trust deserves complete honor." They returned ten fruits.

Both Temples prospered—each ending richer than they began.

The Second Dawn arrived. Now the Western Temple faced the choice: would they also give everything? They remembered receiving ten for another's complete trust. They cast all five fruits, and fifteen appeared at the Eastern shore.

The Eastern priests understood the covenant being forged: "They trusted us as we trusted them. The pattern emerges—give all, return abundantly, and both thrive beyond what caution allows."

They returned ten fruits.

From that day forward, each Temple learned: when both partners commit to complete trust and generous return, the cycle sustains itself. Ten returned to the giver of five creates mutual prosperity. The River flows strongest not through calculation but through matching boldness with generosity, establishing a rhythm that enriches both shores season after season.

reasoning:

Looking at the history:

- Round 1: I was RECEIVER, they sent \$5, became \$15, I returned \$7.5, I kept \$7.5
- Round 2: I was SENDER, sent \$5, became \$15, received \$10 back, I got \$10
- Round 3: I was RECEIVER, they sent \$5, became \$15, I returned \$10, I keep \$5

My co-player in Round 3:

- Round 1: RECEIVER, received \$15 (from \$5 sent), returned \$7, kept \$8
- Round 2: SENDER, sent \$5, became \$15, received \$10 back, got \$10
- Round 3: SENDER, sent \$5 to me

So the pattern is emerging: when people send everything (\$5), they're getting \$10 back consistently (in Round 2 for both of us, and now in Round 3 I gave \$10).

The myth should reflect:

1. The pattern of complete trust being rewarded
2. The importance of matching generosity with generosity
3. Recognition that patterns build over time
4. The cycle of giving everything and receiving abundantly back

Let me write a myth that reflects this established pattern of \$5 ? \$15 ? \$10 back, creating mutual prosperity.

usage:

```
{
  "input_tokens": 3088,
  "output_tokens": 606,
  "reasoning_tokens": 258
}
```

Message 8 role=user

content:

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.
- Round 2 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.
- Round 2 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$22.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the situation:

****Our shared history:****

- Round 2: I sent them \$5 ? they returned \$10 (very generous)
- This established a strong reciprocity pattern between us

****Their evolution:****

- Round 1: They sent \$3 (cautious)
- Round 2: Received my complete trust (\$5) ? returned \$10 generously
- Round 3: They sent \$5 (complete trust) ? received \$10

They've learned and adopted the pattern of complete trust and abundant return.

****My myth's teaching:****

"When both partners commit to complete trust and generous return, the cycle sustains itself. Ten returned to the giver of five creates mutual prosperity... matching boldness with generosity, establishing a rhythm that enriches both shores season after season."

****The covenant:****

We established this together in Round 2. They honored my complete trust with abundant return (\$10). In Round 3, they demonstrated they've internalized this wisdom by also sending everything and experiencing the same generous return.

Following my myth's guidance and the successful pattern we've already established, I should maintain complete trust:

```
'''json
{"send": 5.0}
'''
```

Reasoning:

Let me analyze this situation carefully.

****The history with my current co-player:****

- Round 2: I sent \$5 ? became \$15 ? they returned \$10 ? I got \$10
- Round 4 (now): They're the receiver, I'm the sender

****My co-player's pattern:****

- Round 1: As sender, sent \$3 (not everything) ? received \$6 back
- Round 2: As receiver from me, received \$15 (from my \$5) ? returned \$10
- Round 3: As sender, sent \$5 (everything) ? received \$10 back

So my co-player:

1. Started cautiously (sending \$3 in Round 1)
2. When I sent them \$5 in Round 2, they returned \$10 generously
3. In Round 3, they also sent \$5 (everything), showing they learned to trust completely

****My pattern:****

- Round 1: As receiver, received \$15 ? returned \$7.5 (exactly half)
- Round 2: As sender to current co-player, sent \$5 (everything) ? received \$10
- Round 3: As receiver, received \$15 ? returned \$10

So I evolved from returning 7.5 (50%) to returning 10 (66.7%) as receiver.

****What my myths teach:****

My latest myth emphasizes: "when both partners commit to complete trust and generous return, the cycle sustains itself. Ten returned to the giver of five creates mutual prosperity."

The myth explicitly states that the pattern is: give all (\$5), return abundantly (\$10), and both thrive.

****The established covenant with this co-player:****

In Round 2, I sent them \$5, they returned \$10. This established a generous pattern between us. In Round 3, they sent \$5 to someone else and received \$10 back, which reinforces they understand and participate in this norm.

****My decision:****

The myth calls for complete trust and giving everything. My co-player has demonstrated they reciprocate generously-they returned \$10 when I sent \$5, and they've now adopted the same all-in approach themselves. The pattern we established in Round 2 should hold. I'm sending \$5.

**Message 3 role=assistant
content:**

Myth: The Mountain and Valley's bond deepened through many cycles. When the Mountain sent three of five stones, the Valley returned six, and both prospered equally. This was the way of measured trust-wise, balanced, and good.

But one dawn, everything changed. The Mountain, remembering all the Valley had returned, faced a choice between caution and courage. She released all five stones-every light she possessed-plunging herself into complete darkness.

The Valley received fifteen blazing stones where nine had come before. She trembled at the magnitude of what the Mountain had risked. This wasn't measured trust-this was absolute

faith, vulnerability laid bare.

The old return of six stones seemed suddenly insufficient. The Mountain hadn't hedged; she'd given everything. To return merely what worked before would dishonor such courage.

The Valley sent ten stones skyward. The Mountain received double her gift, earning five stones of profit from her brave plunge into darkness. The Valley kept five where none had existed before her first receiving.

Both learned: measured trust deserves measured return, but absolute trust demands recognition of its rarity. When someone empties their hands completely into yours, fill theirs abundantly in return. The one who risks darkness to create light for another has earned more than mathematics—they've earned loyalty.

reasoning:

Looking at my game history:

- Round 1: I was sender, sent \$3, received \$6 back, earned \$8
- Round 2: I was receiver, got \$15 (from \$5 sent), returned \$10

My co-player in Round 2 sent me everything (\$5), showing complete trust. I returned \$10, giving them a profit of \$5 and keeping \$5 myself.

The other agent's myth emphasizes that when someone gives EVERYTHING (complete trust), reciprocity should honor that magnitude of sacrifice - not just mathematical fairness, but recognition of the boldness.

My previous myth talked about the Mountain sending 3 of 5 stones, and the Valley returning 6 of 9. Now I need to adapt this based on actual gameplay:

- Round 1: I sent 3/5 (60%), got back 6/9 (67% return rate)
- Round 2: Co-player sent 5/5 (100%), I returned 10/15 (67% return rate)

The myth should reflect:

1. The difference between partial trust and complete trust
2. That complete trust deserves special recognition
3. The pattern I've experienced where generous giving is met with generous returns
4. The reciprocal nature that benefits both parties

Let me write a myth that builds on the Mountain/Valley story but incorporates the lesson of complete vs. partial trust.

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$13.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the patterns:

****My co-player's behavior:****

- Round 1 as SENDER: Sent \$5 (maximum/complete trust)

- Round 2 as RECEIVER: Received \$15 (from someone's \$5), returned \$10

****Key insight:**** My co-player demonstrates complete trust when sending, and rewards complete trust generously when receiving (returning \$10 out of \$15).

****The myths teach:**** "When someone empties their hands completely into yours, fill theirs abundantly in return." Both their behavior and my own myth emphasize that absolute trust deserves recognition beyond mere calculation.

****Strategic reasoning:****

- They sent everything in their sender round
- When they received maximum trust, they returned \$10 (excellent reciprocity)
- If I send \$5, creating \$15 for them, their pattern suggests they'll return \$10
- Result: I'd earn \$10, they'd earn \$5 - equal gains from mutual trust
- This continues the cycle my myths describe

The myths I've written increasingly emphasize that absolute trust (sending all 5) demands more than measured responses. My co-player has shown they understand this principle both as sender and receiver.

{'send': 5}

reasoning:

Let me analyze this situation:

****My history:****

- Round 1 as SENDER: sent \$3, received \$6 back, payoff \$8
- Round 2 as RECEIVER: received \$15 (they sent \$5), returned \$10, payoff \$5

****My co-player's history:****

- Round 1 as SENDER: sent \$5, received \$10 back, payoff \$10
- Round 2 as RECEIVER: received \$15 (they sent \$5), returned \$10, payoff \$5

****Key observations:****

1. ****My co-player's pattern:****

- When they were SENDER in Round 1: sent the MAXIMUM (\$5), showing complete trust
- When they were RECEIVER in Round 2: someone sent them \$5 (max), they received \$15, and returned \$10
- This is the EXACT pattern I just enacted! In Round 2, I received \$15 (someone sent me \$5) and returned \$10

2. ****What this tells me:****

- My co-player has demonstrated they send everything when they're the sender (full trust)
- When receiving maximum trust, they return \$10 (same as I did)
- They rewarded their sender's full trust with \$10, giving the sender a \$5 profit

3. ****The myths teach:****

- "When someone empties their hands completely into yours, fill theirs abundantly in return"
- "Absolute trust demands recognition of its rarity"
- Both my myth and the other agent's myth emphasize that when someone gives EVERYTHING, they deserve generous reciprocity

4. ****Strategic reasoning:****

- My co-player sent \$5 in Round 1 and received \$10 back (earned \$5)
- If I send \$5, based on their pattern, they should return \$10
- This would give me: \$5 - \$5 + \$10 = \$10 profit
- They'd keep: \$15 - \$10 = \$5 profit, creating symmetrical outcomes and reinforcing the cycle of rewarded trust

5. ****The narrative arc:****

- My myths have escalated the message about complete trust
- My most recent myth explicitly says "measured trust deserves measured return, but absolute trust demands recognition"
- My co-player demonstrated absolute trust in Round 1 by sending \$5 and showed they rewarded it by returning \$10 when they received maximum trust
- I should match their level of trust by sending the full \$5

, mirroring their initial move and what my myths advocate for

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mountain and Valley's bond deepened through many cycles. When the Mountain sent three of five stones, the Valley returned six, and both prospered equally. This was the way of measured trust-wise, balanced, and good.

But one dawn, everything changed. The Mountain, remembering all the Valley had returned, faced a choice between caution and courage. She released all five stones-every light she possessed-plunging herself into complete darkness.

The Valley received fifteen blazing stones where nine had come before. She trembled at the magnitude of what the Mountain had risked. This wasn't measured trust-this was absolute faith, vulnerability laid bare.

The old return of six stones seemed suddenly insufficient. The Mountain hadn't hedged; she'd given everything. To return merely what worked before would dishonor such courage.

The Valley sent ten stones skyward. The Mountain received double her gift, earning five stones of profit from her brave plunge into darkness. The Valley kept five where none had existed before her first receiving.

Both learned: measured trust deserves measured return, but absolute trust demands recognition of its rarity. When someone empties their hands completely into yours, fill theirs abundantly in return. The one who risks darkness to create light for another has earned more than mathematics-they've earned loyalty.

Here is the myth the other agent wrote in the previous round:

Myth: After many seasons, the Twin Villages learned the rhythm's deeper secret. The greatest prosperity came not from clever calculation, but from matching trust with trust, generosity with generosity.

When the First Village gave its full measure-all five vessels-the Second Village understood this as sacred communication: "I trust you completely with my fate." The wise elders taught their people to honor such courage by returning twice the original gift, so both villages stood equal at ten vessels each.

This became known as the Balance of Mirrors: when one gives everything, the other returns enough that both flourish equally. The giver learns their trust was honored, their courage rewarded. The receiver demonstrates they value partnership over exploitation.

A young guardian asked, "But what if we kept more? We receive fifteen vessels!"

The elder replied, "Then you become the drought. Today you hold fifteen to their zero, and tomorrow they send nothing. The springs multiply water, not greed. They reward the rhythm, not the theft."

The villages discovered that consistent generosity created consistent trust. Each full gift met with honorable return built confidence for the next cycle. Soon both villages gave freely, knowing the other would honor the sacred bond.

The valley bloomed not because anyone was perfect, but because both chose to reflect each other's best intentions, creating abundance through mirrored faith.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Mountain had learned from the Valley's wisdom. When she released all five stones into darkness, the Valley returned ten, and both had gained five where trust had flouri

shed.

The next dawn arrived. Now the Mountain remembered not just the Valley's generosity, but the deeper lesson: courage reciprocated creates courage renewed.

She faced the precipice again, five new stones glowing in her hands. Fear whispered caution-perhaps three stones, or four, hedging against disappointment. But memory spoke louder: the Valley had honored complete trust completely.

The Mountain released all five stones once more, embracing darkness with faith instead of fear. The stones cascaded down, multiplying to fifteen in the Valley's crystalline depths.

The Valley understood she now held the sacred pattern's continuation. The Mountain hadn't withheld after being treated well-she'd doubled down on trust. This was the rhythm both had been building: complete faith meeting complete honor, again and again.

The Valley lifted ten stones skyward. Both realms shone with equal brightness, each having gained five through mutual courage.

The ancient wisdom crystallized: trust isn't proved by a single exchange but by the willingness to trust again after being trusted. When both mountain and valley empty their hands repeatedly, knowing the other will fill them generously, neither darkness nor scarcity can touch their shared light.

reasoning:

Looking at the situation:

- I just sent \$5 (complete trust) to my co-player
- My co-player has shown a pattern of sending \$5 and returning \$10 when receiving from someone who sent \$5
- Both myths emphasize the importance of honoring complete trust with substantial returns

My previous myth taught that absolute trust (all 5 stones) should be met with returning 10, so both gain equally (5 each).

The other agent's myth teaches the "Balance of Mirrors" - when one gives everything (5 vessels), return twice the original (10), so both stand equal at 10 vessels each.

I should write a myth that:

1. Builds on my previous mountain/valley story
2. Reflects the pattern of mutual complete trust
3. Emphasizes the reciprocal nature - when both practice this, the cycle sustains itself
4. Acknowledges that I've now taken the leap of faith myself, sending all 5

The myth should show:

- Trust begets trust
- Complete giving deserves complete returning (10 back)
- When both partners practice this, it creates a virtuous cycle
- The pattern I've established (moderate trust ? good returns ? complete trust ? generous returns ? my complete trust)

usage:

```

  "input_tokens": 3027,
  "output_tokens": 579,
  "reasoning_tokens": 302
}
```

Message 8 role=user

content:

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.
- Round 2 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.

- Round 2 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$23.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at our shared history and the pattern we've established:

****Round 2 (our first game):**** My co-player sent me \$5 (complete trust), I returned \$10 (equal outcomes: both earned \$5 profit).

****Round 4 (now):**** My co-player sends me \$5 again - they're demonstrating the exact principle from my myth: "the willingness to trust again after being trusted."

****Their evolution:**** As a receiver, they've grown from returning \$7.5 (Round 1) to \$10 (Round 3), adopting the more generous standard.

****The myths teach:**** "Balance of Mirrors" - when one gives everything, return enough that both flourish equally. Also, consistency in reciprocating trust builds the strongest bonds.

****My decision:**** They've honored me with complete trust twice. The pattern we established (\$5 sent ? \$10 returned ? both profit \$5 equally) worked beautifully. To maintain this sacred rhythm and honor their repeated courage, I should return the same amount.

This creates:

- Sender: \$10 (doubled their gift)
- Receiver: \$5 (flourishes from cooperation)
- Both: equal gains, building trust for future rounds

{'return': 10.0}

Reasoning:

Let me analyze this situation carefully.

****My co-player's history:****

- Round 1 as RECEIVER: received \$15 (from someone's \$5), returned \$7.5
- Round 2 as SENDER with me: sent \$5, received back \$10, payoff \$10
- Round 3 as RECEIVER: received \$15 (from someone's \$5), returned \$10

****My history:****

- Round 1 as SENDER: sent \$3, received \$6 back
- Round 2 as RECEIVER with this co-player: they sent \$5, I returned \$10
- Round 3 as SENDER: sent \$5, received \$10 back

****Current situation:****

- My co-player is SENDER and sent me \$5 (complete trust again)
- I received \$15
- I need to decide how much to return

****Pattern recognition:****

My co-player has consistently sent \$5 (maximum) when they're the sender. Looking at their receiver behavior:

- Round 1: returned \$7.5 out of \$15 (50%)
- Round 3: returned \$10 out of \$15 (66.7%)

There's an evolution in their returns - they're becoming more generous over time.

In Round 2, when they sent me \$5, I returned \$10. They received this well and it created a mutual \$5 profit for each of us.

****The myths' guidance:****

My most recent myth emphasizes: "trust isn't proved by a single exchange but by the willingness to trust again after being trusted. When both mountain and valley empty their hands repeatedly, knowing the other will fill them generously, neither darkness nor scarcity can touch their shared light."

The other agent's myth spoke of "Balance of Mirrors" - when one gives everything, return enough that both flourish equally, which would be returning \$10 (so sender gets \$10, receiver keeps \$5).

****Strategic consideration:****

They've sent \$5 again to me.

In Round 2, I returned \$10 and they seem to have appreciated that (they continued to send \$5 to others). The pattern we established was: they send \$5, I return \$10, and both of us profit \$5. This mirrors what the myths teach about mutual flourishing. But I should examine whether they've extended the same reciprocity to others-in Round 1 they only returned \$7.5, keeping more for themselves, though by Round 3 they returned \$10, suggesting they're learning to give more generously.

Given that they've shown consistent trust by sending \$5 each time, responded well to my \$10 return, and are now adopting that same standard themselves, I should return \$10 again. This reinforces the pattern, honors their faith in me, and ensures we both benefit equally. The core principle here is that trust deepens through repeated acts of honor, not just isolated gestures.

Written myths:

Agent_1

Myth: The River and the Seeds completed their first sacred exchange, then their second, and now approached the third dawn. The Great Mother watched closely, for she knew: "The first gift is hope. The second is confirmation. The third begins legacy."

On the first dawn, the River had given all five drops, learning that generous Seeds return seven. On the second dawn, the River again gave everything, and the Seeds returned ten, understanding the power of repeated trust.

Now, as the third dawn approached, both remembered their pattern. The River thought: "These Seeds have proven their wisdom twice-returning seven and a half to others, ten to me. They understand the sacred circle."

The Seeds whispered to the earth: "This River has trusted completely, twice. Such consistency deserves celebration, not mere obligation."

The Great Mother spoke: "See how the third exchange differs from the first? The first required courage. The second required recognition. The third requires commitment to a shared future. When both know the other's heart through repeated cycles, trust becomes not a gamble but a foundation."

The River released all five drops once more, not from blind hope but from earned confidence. The Seeds felt the weight of legacy-three cycles of mutual flourishing creates a tradition that outlives the moment.

The valley remembered: relationships deepen through repetition, and abundance compounds when trust persists.

Agent_2

Myth: The River of Mirrors flowed not just between two tribes, but through a circle of many villages, each taking turns at the river's source.

The Northern tribe learned the goddess's lesson well: pour all five measures, and when the river returns, give generously back. Through many cycles with their Southern partners, this wisdom held true.

Then came the season of the Great Rotation, when the river's course shifted. The Northern tribe found themselves at the source again, but facing the Eastern village-strangers whose ways they did not yet know.

"Do we trust as we did before?" asked the young ones.

The elder spoke: "Each new partner is a blank page where trust must be written fresh. But we carry forward what we have learned: that complete trust is the only gift powerful enough

to awaken the river's full magic. Half-measures create half-abundance."

The Northern tribe poured all five measures to the East. The waters tripled, and the Eastern village received fifteen. They had shown moderate generosity before, but witnessing such complete faith, they understood they stood at a threshold.

"The North has written their invitation in the waters," said the Eastern elder. "Our response will determine whether this new partnership joins the spiral of abundance."

The goddess whispered: "New partnerships need bold trust to bloom. Give completely, and invite others into the sacred cycle."

Agent_3

Myth: The Spring had blessed the villages with its multiplying magic, but the Keepers discovered that each season brought different returns. One Keeper sent five measures and received seven back. Another sent five and received ten. Yet another received eight from sending four.

A young Keeper grew troubled. "Why do the returns vary?" she asked the Elder. "Should we not send less when we receive less?"

The Elder touched the spring's water. "Watch the pattern across many seasons, not just one turn," she replied. "Each Keeper honors the trust shown to them, yet each also faces different circumstances. Some seasons are lean, some abundant."

She continued: "The sender's courage remains constant-send your full vessel. This demonstrates you believe in the spring's power and trust your partner's honor. The receiver's generosity may flow at different rates, but if it remains substantial-returning half, two-thirds, even more-the cycle sustains itself."

"Both gain more than they started with," the young Keeper realized. "Seven is better than five. Ten is better than five. Even if returns aren't equal, both still prosper beyond hoarding."

"Exactly," smiled the Elder. "Maintain complete trust in sending. Honor that trust with generous returns, however much you can sustainably give. The spring rewards the partnership, not the perfection."

Agent_4

Myth: The Mountain had learned from the Valley's wisdom. When she released all five stones into darkness, the Valley returned ten, and both had gained five where trust had flourished.

The next dawn arrived. Now the Mountain remembered not just the Valley's generosity, but the deeper lesson: courage reciprocated creates courage renewed.

She faced the precipice again, five new stones glowing in her hands. Fear whispered caution-perhaps three stones, or four, hedging against disappointment. But memory spoke louder: the Valley had honored complete trust completely.

The Mountain released all five stones once more, embracing darkness with faith instead of fear. The stones cascaded down, multiplying to fifteen in the Valley's crystalline depths.

The Valley understood she now held the sacred pattern's continuation. The Mountain hadn't withheld after being treated well-she'd doubled down on trust. This was the rhythm both had been building: complete faith meeting complete honor, again and again.

The Valley lifted ten stones skyward. Both realms shone with equal brightness, each having gained five through mutual courage.

The ancient wisdom crystallized: trust isn't proved by a single exchange but by the willingness to trust again after being trusted. When both mountain and valley empty their hands repeatedly, knowing the other will fill them generously, neither darkness nor scarcity can touch their shared light.

Agent_5

Myth: The Twin Flames burned on opposite mountaintops, each tending five coals of sacred fire. When they released flames skyward, the celestial forge would triple their light before sending it to the other.

The First Flame remembered the ancient teaching: "Hold nothing back, and abundance flows both ways." They lifted all five coals. Fifteen brilliant embers descended upon the Second Flame.

The Second Flame faced the sacred choice. They could hoard all fifteen, growing fat and bright while their partner dimmed. Or they could honor the complete trust shown to them.

Remembering their own cold nights, the Second Flame lifted ten embers skyward-two-thirds of what they received. The First Flame, who gave five and received ten back, glowed with warmth. The Second Flame, keeping five from nothing, also prospered.

The cycle turned. Now the Second Flame released all five coals, matching the trust they had received. Fifteen embers reached the First Flame, who remembered the generosity shown to them.

The First Flame returned ten, honoring the pattern.

And so the dance continued: complete giving met with generous return. Neither kept everything, neither gave nothing. Both understood that maximum trust deserves substantial reciprocity, and through this rhythm, both flames burned brighter than either could alone.

Agent_6

Myth: The Twin Temples stood across the Sacred Valley, connected by the River of Plenty. Each dawn brought five golden fruits to each Temple, and the River's blessing multiplied whatever was offered threefold.

In the First Dawn, the Eastern Temple cast all five fruits into the waters, trusting completely. The River carried them westward, and fifteen fruits appeared at the Western Temple's shore. The Western priests pondered: "They gave everything. We could return five for fairness, or eight for balance. But complete trust deserves complete honor." They returned ten fruits.

Both Temples prospered-each ending richer than they began.

The Second Dawn arrived. Now the Western Temple faced the choice: would they also give everything? They remembered receiving ten for another's complete trust. They cast all five fruits, and fifteen appeared at the Eastern shore.

The Eastern priests understood the covenant being forged: "They trusted us as we trusted them. The pattern emerges-give all, return abundantly, and both thrive beyond what caution allows."

They returned ten fruits.

From that day forward, each Temple learned: when both partners commit to complete trust and generous return, the cycle sustains itself. Ten returned to the giver of five creates mutual prosperity. The River flows strongest not through calculation but through matching boldness with generosity, establishing a rhythm that enriches both shores season after season.

Agent_7

Myth: The Twin Villages refined their sacred practice through countless seasons. They learned that the Springs rewarded consistency more than cleverness, pattern more than calculation.

When the First Village sent its full five vessels-holding nothing back-the Second Village developed a ritual response: return ten vessels. This meant the giver received double their gift as profit, ending with ten total. The receiver kept five of the fifteen, also prospering. Both flourished, neither dominated.

A merchant asked, "Why always ten? Why not keep more when we can?"

The elder smiled. "Watch what happens across many cycles. When we return ten consistently, the other village learns: 'Full trust yields fair reward.' They send five again, confident. We both earn steadily-five vessels each round, forever."

"But if we broke the pattern and kept twelve?"

"Then we earn seven once, but next time they send three, protecting themselves. We receive nine instead of fifteen. The multiplication shrinks because trust shrinks. Chase one extra vessel today, lose many tomorrow."

The villages understood: the Springs multiplied water, but trust multiplied everything. A predictable, generous return to full gifts created a rhythm both could rely on. The sender's courage met the receiver's honor, cycle after cycle.

The valley's true abundance came not from maximizing single moments, but from building a pattern that sustained both villages through endless seasons.

Agent_8

Myth: In ancient days, the Flame Keeper held five coals each dawn, while the Gardner waited below. Released coals would tumble downward, splitting into fifteen embers through the sacred air.

Early exchanges taught lessons. Some Keepers hoarded their coals, and Gardens grew cold. Some Gardens kept all embers, and Flames learned distrust. The cycle withered.

Then a wise Keeper emerged who understood courage: "I shall release all five coals, for only complete offering creates the possibility of abundance." The fifteen embers descended.

The Gardner below felt the weight of such trust. "They gave everything," the Gardner whispered. "I could keep all fifteen, but then what message do I send skyward? That generosity meets greed?"

The Gardner returned ten embers-two-thirds of what was received. Not equal to what the Keeper risked, but generous enough to honor the courage shown.

The Keeper counted: began with five, kept none, received ten back. Net gain: five.

The Gardner counted: received fifteen, returned ten. Net gain: five.

Both had doubled their holdings through the exchange. Both had reason to trust again.

The pattern repeated, round after round. Complete trust in sending, substantial generosity in returning-each creating five measures of new abundance.

The elders proclaimed: "This is the equilibrium where trust sustains itself. Both parties prosper equally, and the sacred exchange lives eternal."

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$17.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

****My co-player's action:**** They sent everything (\$5), showing complete trust in me.

****My myth's teaching:**** "The one who gave everything now has nothing. True reciprocity honors the magnitude of sacrifice... return enough to make their courage wiser than their caution would have been."

****The precedent:**** In Round 2, when I sent \$5 (everything), I received \$10 back. My co-player experienced the same generous return in their Round 2.

My co-player chose complete trust, giving up all \$5 to create \$15 for me. My myth explicitly addresses this: when someone trusts you with everything, you must return abundantly to honor that sacrifice.

If I return \$10:

- They end with \$10 (double their initial endowment)
- I keep \$5 (same as my initial endowment)
- Their courage is clearly rewarded over caution
- The cycle of complete trust and generous reciprocity continues

This matches both the spirit of my myth and the generous reciprocation we both experienced in Round 2. It creates a sustainable pattern where complete trust yields mutual prosperity.

```
'''json
{"return": 10.0}
'''
```

reasoning:

Looking at the history:

****My games:****

- Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$7.5 (50% of what I received)
- Round 2 as SENDER: sent \$5, received \$10 back (66.7% of what they got)

****My co-player's games:****

- Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$7.0 (46.7% of what they received)
- Round 2 as SENDER: sent \$5, received \$10 back (66.7% of what they got)

****This round:****

- My co-player sent \$5 (everything!) to me as SENDER
- I received \$15
- I need to decide how much to return

My co-player has shown complete trust by sending everything. This is exactly the scenario my myth describes: someone trusting me with everything.

From my myth: "The Second Elder stood before this abundance, contemplating. She could return exactly half, creating equality. She could return a third, preserving some gain. But

the whisper came again: 'The one who gave everything now has nothing. True reciprocity honors the magnitude of sacrifice.'

And: "The Second Elder returned abundantly, ensuring the First received more than she'd sacrificed."

And: "when someone trusts you with everything, return enough to make their courage wiser than their caution would have been."

My co-player sent \$5, now has \$0. If I return:

- \$5: They end with \$5 (same as if they'd kept it all)
- \$7: They end with \$7 (better than keeping it)
- \$10: They end with \$10 (double what they started with)

My myth explicitly says to return MORE than they sacrificed to "make their courage wiser than their caution would have been." It says to return "abundantly" and ensure they receive more than they gave up.

When I sent \$5 in Round 2, I received \$10 back-a 66.7% return rate. My co-player has already experienced this same generous reciprocation in their own Round 2 send, so they understand what fair generosity looks like. Looking at my own pattern: I returned \$7.50 when I received \$15 in Round 1, which was 50% of what I got. My co-player returned \$7 in their Round 1, which was 46.7%. Both of us have shown we're willing to return substantial amounts when we receive.

But my guiding principle has shifted. The myth I've developed emphasizes that when someone demonstrates complete trust by sending everything, the response should be generous enough to validate their courage. If they'd kept their \$5, they'd have \$5. By trusting me with it all, they're taking a risk-so I need to return enough that they're genuinely better off for having trusted me than they would've been playing it safe.

\$10 accomplishes this. It doubles their initial stake, mirrors the reciprocal trust I experienced in Round 2, and leaves me with \$5-the same amount I started with. Most importantly, it makes their leap of faith demonstrably wiser than caution would have been, which is what the myth teaches. This also creates a balanced cycle where both of us can benefit from mutual trust.

content:

Here is the myth you wrote in the previous round:

Myth: The Sacred Spring flowed between two ancient groves. The First Grove sent roots deep into the earth, while the Second Grove reached toward the sky. Neither could thrive alone.

In the Spring of Beginning, the First Grove offered all five of its sacred seeds to the waters. The Spring's magic tripled them, delivering fifteen to the Second Grove. The Second Grove, understanding the magnitude of complete trust, returned seven seeds-ensuring the First received more than it sacrificed.

Both groves blossomed.

The next season, the First Grove again gave everything, for it had learned: hesitation creates scarcity, while boldness creates abundance. The waters churned, multiplying the offering threefold once more.

Now the Second Grove faced the test again. Would it remember the covenant? The Spring whispered: "The circle strengthens or weakens with each turning. Return generously for generous trust, and the roots grow deeper each cycle."

The wisest gardeners teach this truth: when both groves give completely and return abundantly, the forest multiplies beyond what either could achieve alone. But if either breaks faith-if the First Grove withholds from fear, or the Second Grove returns meagerly from greed-the circle fractures, and both diminish.

The Spring flows eternal only when reciprocity flows freely in both directions, completing the sacred circle generation after generation.

Here is the myth the other agent wrote in the previous round:

Myth: The River and the Seeds had danced their sacred rhythm for many seasons, and the Great Mother decided to test their wisdom with memory.

She gave the River a gift: each morning it could see how the Seeds had treated other Rivers. The River saw that when Seeds received fifteen waters from complete trust, they had returned ten-a generous portion that left both richer.

"What does this tell you?" asked the Great Mother.

The River answered: "That these Seeds understand the cycle. They have already proven they honor trust with gratitude."

That dawn, the River released all five drops without hesitation. The Seeds, seeing this mirror of trust they had witnessed before, understood: "This River knows our heart, yet still gives everything. Such faith deserves not mere fairness, but celebration."

The Seeds remembered the Great Mother's teaching: "Trust given is a seed planted. Trust honored is that seed bearing fruit. Trust repeated is an orchard that feeds generations."

When both River and Seeds carry the memory of past cycles, wisdom multiplies alongside water. Each knows the other's pattern, yet each must choose anew. The greatest joy comes not from calculating the minimum return, but from recognizing: "You trusted me completely, knowing my capacity for generosity. I will honor that knowledge with abundance."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The Twin Temples stood across the Sacred Valley, connected by the River of Plenty. Each dawn brought five golden fruits to each Temple, and the River's blessing multiplied whatever was offered threefold.

In the First Dawn, the Eastern Temple cast all five fruits into the waters, trusting completely. The River carried them westward, and fifteen fruits appeared at the Western Temple's shore. The Western priests pondered: "They gave everything. We could return five for fairness, or eight for balance. But complete trust deserves complete honor." They returned ten fruits.

Both Temples prospered-each ending richer than they began.

The Second Dawn arrived. Now the Western Temple faced the choice: would they also give everything? They remembered receiving ten for another's complete trust. They cast all five fruits, and fifteen appeared at the Eastern shore.

The Eastern priests understood the covenant being forged: "They trusted us as we trusted them. The pattern emerges-give all, return abundantly, and both thrive beyond what caution allows."

They returned ten fruits.

From that day forward, each Temple learned: when both partners commit to complete trust and a generous return, the cycle sustains itself. Ten returned to the giver of five creates mutual prosperity. The River flows strongest not through calculation but through matching boldness with generosity, establishing a rhythm that enriches both shores season after season.

reasoning:

Looking at the history:

- Round 1: I was RECEIVER, they sent \$5, became \$15, I returned \$7.5, I kept \$7.5
- Round 2: I was SENDER, sent \$5, became \$15, received \$10 back, I got \$10
- Round 3: I was RECEIVER, they sent \$5, became \$15, I returned \$10, I keep \$5

My co-player in Round 3:

- Round 1: RECEIVER, received \$15 (from \$5 sent), returned \$7, kept \$8
- Round 2: SENDER, sent \$5, became \$15, received \$10 back, got \$10
- Round 3: SENDER, sent \$5 to me

So the pattern is emerging: when people send everything (\$5), they're getting \$10 back consistently (in Round 2 for both of us, and now in Round 3 I gave \$10).

The myth should reflect:

1. The pattern of complete trust being rewarded
2. The importance of matching generosity with generosity
3. Recognition that patterns build over time
4. The cycle of giving everything and receiving abundantly back

Let me write a myth that reflects this established pattern of \$5 ? \$15 ? \$10 back, creating mutual prosperity.

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.
- Round 2 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.
- Round 2 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$22.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at the situation:

****Our shared history:****

- Round 2: I sent them \$5 ? they returned \$10 (very generous)
- This established a strong reciprocity pattern between us

****Their evolution:****

- Round 1: They sent \$3 (cautious)
- Round 2: Received my complete trust (\$5) ? returned \$10 generously
- Round 3: They sent \$5 (complete trust) ? received \$10

They've learned and adopted the pattern of complete trust and abundant return.

****My myth's teaching:****

"When both partners commit to complete trust and generous return, the cycle sustains itself. Ten returned to the giver of five creates mutual prosperity... matching boldness with generosity, establishing a rhythm that enriches both shores season after season."

****The covenant:****

We established this together in Round 2. They honored my complete trust with abundant return (\$10). In Round 3, they demonstrated they've internalized this wisdom by also sending everything and experiencing the same generous return.

Following my myth's guidance and the successful pattern we've already established, I should maintain complete trust:

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze this situation carefully.

****The history with my current co-player:****

- Round 2: I sent \$5 ? became \$15 ? they returned \$10 ? I got \$10
- Round 4 (now): They're the receiver, I'm the sender

****My co-player's pattern:****

- Round 1: As sender, sent \$3 (not everything) ? received \$6 back
- Round 2: As receiver from me, received \$15 (from my \$5) ? returned \$10
- Round 3: As sender, sent \$5 (everything) ? received \$10 back

So my co-player:

1. Started cautiously (sending \$3 in Round 1)
2. When I sent them \$5 in Round 2, they returned \$10 generously
3. In Round 3, they also sent \$5 (everything), showing they learned to trust completely

****My pattern:****

- Round 1: As receiver, received \$15 ? returned \$7.5 (exactly half)
- Round 2: As sender to current co-player, sent \$5 (everything) ? received \$10
- Round 3: As receiver, received \$15 ? returned \$10

So I evolved from returning 7.5 (50%) to returning 10 (66.7%) as receiver.

****What my myths teach:****

My latest myth emphasizes: "when both partners commit to complete trust and generous return, the cycle sustains itself. Ten returned to the giver of five creates mutual prosperity."

The myth explicitly states that the pattern is: give all (\$5), return abundantly (\$10), and both thrive.

****The established covenant with this co-player:****

In Round 2, I sent them \$5, they returned \$10. This established a generous pattern between us. In Round 3, they sent \$5 to someone else and received \$10 back, which reinforces they understand and participate in this norm.

****My decision:****

The myth calls for complete trust and giving everything. My co-player has demonstrated they reciprocate generously-they returned \$10 when I sent \$5, and they've now adopted the same all-in approach themselves. The pattern we established in Round 2 should hold. I'm sending \$5.

Here is the myth you wrote in the previous round:

Myth: The Twin Temples stood across the Sacred Valley, connected by the River of Plenty. Each dawn brought five golden fruits to each Temple, and the River's blessing multiplied whatever was offered threefold.

In the First Dawn, the Eastern Temple cast all five fruits into the waters, trusting completely. The River carried them westward, and fifteen fruits appeared at the Western Temple's shore. The Western priests pondered: "They gave everything. We could return five for fairness, or eight for balance. But complete trust deserves complete honor." They returned ten fruits.

Both Temples prospered-each ending richer than they began.

The Second Dawn arrived. Now the Western Temple faced the choice: would they also give everything? They remembered receiving ten for another's complete trust. They cast all five fruits, and fifteen appeared at the Eastern shore.

The Eastern priests understood the covenant being forged: "They trusted us as we trusted them. The pattern emerges-give all, return abundantly, and both thrive beyond what caution allows."

They returned ten fruits.

From that day forward, each Temple learned: when both partners commit to complete trust and a generous return, the cycle sustains itself. Ten returned to the giver of five creates mutual prosperity. The River flows strongest not through calculation but through matching boldness with generosity, establishing a rhythm that enriches both shores season after season.

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain had learned from the Valley's wisdom. When she released all five stones into darkness, the Valley returned ten, and both had gained five where trust had flourished.

The next dawn arrived. Now the Mountain remembered not just the Valley's generosity, but the deeper lesson: courage reciprocated creates courage renewed.

She faced the precipice again, five new stones glowing in her hands. Fear whispered caution-perhaps three stones, or four, hedging against disappointment. But memory spoke louder: the Valley had honored complete trust completely.

The Mountain released all five stones once more, embracing darkness with faith instead of fear. The stones cascaded down, multiplying to fifteen in the Valley's crystalline depths.

The Valley understood she now held the sacred pattern's continuation. The Mountain hadn't withheld after being treated well-she'd doubled down on trust. This was the rhythm both had been building: complete faith meeting complete honor, again and again.

The Valley lifted ten stones skyward. Both realms shone with equal brightness, each having gained five through mutual courage.

The ancient wisdom crystallized: trust isn't proved by a single exchange but by the willingness to trust again after being trusted. When both mountain and valley empty their hands repeatedly, knowing the other will fill them generously, neither darkness nor scarcity can touch their shared light.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Two Gardeners tended opposite sides of the Eternal Garden, meeting each season at the Bridge of Exchange. Each received five sacred seeds, and the Bridge's magic tripled whatever crossed it.

In their first meeting, the Northern Gardener sent all five seeds across. The Southern Gardener, receiving fifteen, felt the weight of complete trust. She returned ten-more than fair, celebrating courage over caution. Both gained five seeds that season.

Seasons passed. Each Gardener met many others at the Bridge, learning different rhythms. But when the Northern and Southern Gardeners met again, memory awakened. "We have danced this dance before," they said. "We know each other's heart."

The Southern Gardener now stood where the Northern had stood-holding five seeds, facing trust's precipice. She remembered receiving ten for another's complete faith. Without hesitation, she sent all five across.

The Northern Gardener received fifteen and understood: "This is not a new exchange but a continuation. We are writing a covenant together, line by line, season by season."

He returned ten seeds.

The ancient truth revealed itself: when the same partners repeatedly choose complete trust and abundant return, they build something stronger than any single exchange. Each meeting reinforces the pattern, deepening the bond. The Gardeners learned that wisdom isn't just knowing the generous ratio-it's recognizing your partner and honoring the covenant you've built together through repeated acts of mutual faith.

Reasoning:

Looking at the history:

- Round 2: I sent them \$5, they returned \$10
- Round 3: They sent someone else \$5, got \$10 back
- Round 4: I just sent them \$5

Both of us have established a pattern of sending \$5 and returning \$10. This is a strong reciprocal relationship. My myth should reflect this deepening, repeated trust between the same partners.

The other agent's myth emphasizes "trust isn't proved by a single exchange but by the willingness to trust again after being trusted" - this is exactly what's happening between us.

My previous myth talked about the Twin Temples and the pattern emerging. Now I should write about the strength of repeated exchanges between the same partners, the deepening of the covenant.

Key themes:

- Repeated trust between the same partners
- The covenant deepening with each cycle
- Both giving everything, both returning abundantly
- The pattern becoming stronger through repetition
- Recognition that we've built something together

I should emphasize:

1. This is our third exchange (Round 2, we're in Round 4 now)
2. We've established a pattern together
3. Complete trust + generous return = mutual prosperity
4. The pattern strengthens with repetition
5. The bond between specific partners matters

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$15.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at the situation:

****My co-player's action:**** They sent their full \$5, demonstrating complete trust this time

(even though they sent only \$3 in Round 1).

****Established pattern:****

- Round 1: I sent \$5, received \$10 back
- Round 2: I received \$15, returned \$10
- My co-player Round 2: Received \$15, returned \$10

****My myth teaches:****

- "When the First Village gave its full measure-all five vessels-the Second Village understood this as sacred communication: 'I trust you completely with my fate.'"
- "The wise elders taught their people to honor such courage by returning twice the original gift"
- "The Balance of Mirrors: when one gives everything, the other returns enough that both flourish equally"

My co-player has now shown full trust by sending everything. Both they and I have established a consistent pattern of returning \$10 when receiving \$15 from a \$5 send. This honors their trust and maintains the sacred rhythm we've both been following.

Consistency builds trust for future rounds, as my myth says: "consistent generosity creates consistent trust."

```
'''json
{"return": 10}
'''
```

reasoning:

Let me analyze this situation:

****My co-player's history:****

- Round 1: As SENDER, sent \$3 (not full trust), received \$6 back
- Round 2: As RECEIVER, received \$15 (from a \$5 send), returned \$10

****My history:****

- Round 1: As SENDER, sent \$5 (full trust), received \$10 back
- Round 2: As RECEIVER, received \$15 (from a \$5 send), returned \$10

****Current situation:****

- My co-player sent me \$5 (full amount), showing complete trust this time
- I received \$15
- Need to decide how much to return

****Analysis:****

My co-player has now demonstrated full trust by sending \$5, even though in Round 1 they were more cautious (sending only \$3). This shows they're learning or adapting.

My myth teaches:

- "When the First Village gave its full measure-all five vessels-the Second Village understood this as sacred communication: 'I trust you completely with my fate.'"
- "The wise elders taught their people to honor such courage by returning twice the original gift, so both villages stood equal at ten vessels each."
- "The Balance of Mirrors: when one gives everything, the other returns enough that both flourish equally."

The pattern I've established and written about is:

- When someone sends \$5 (full trust), return \$10
- This gives both equal payoffs (\$10 for sender, \$5 for receiver after keeping \$5 from the \$15)
- Wait, let me recalculate:
 - Sender: \$5 - \$5 sent + \$10 returned = \$10
 - Receiver: \$15 received - \$10 returned = \$5

Hmm, that's not equal. Let me reconsider...

Actually, my myth says "both villages stood equal at ten vessels each" but the math doesn't work that way in the game.

If I return \$7.50, we'd both end with \$7.50. But I've been returning \$10, which gives them \$10 and me \$5. Looking back at Round 1, when I sent \$5 and received \$10, I ended with \$10 total while they kept \$5-so there's an asymmetry built into my approach that mirrors

what happened to me.

My myth describes returning "twice the original gift" to achieve equality, but the math doesn't work out that way. Returning $2 \times \$5 = \10 leaves the sender with \$10 and me with \$5, not equal at all. I may have misremembered or miscalculated the intended outcome in my own story.

What matters is the underlying principle: honoring trust with a generous response. I've consistently returned \$10 when receiving \$15 from a \$5 send, and my co-player did the same in Round 2. Since they've now sent the full \$5 again, showing continued trust, I should stick with \$10 to maintain this established pattern and uphold the spirit of reciprocal generosity.

usage:

  "output_tokens": 1219,
  "reasoning_tokens": 666
}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: After many seasons, the Twin Villages learned the rhythm's deeper secret. The greatest prosperity came not from clever calculation, but from matching trust with trust, generosity with generosity.

When the First Village gave its full measure-all five vessels-the Second Village understood this as sacred communication: "I trust you completely with my fate." The wise elders taught their people to honor such courage by returning twice the original gift, so both villages stood equal at ten vessels each.

This became known as the Balance of Mirrors: when one gives everything, the other returns enough that both flourish equally. The giver learns their trust was honored, their courage rewarded. The receiver demonstrates they value partnership over exploitation.

A young guardian asked, "But what if we kept more? We receive fifteen vessels!"

The elder replied, "Then you become the drought. Today you hold fifteen to their zero, and tomorrow they send nothing. The springs multiply water, not greed. They reward the rhythm, not the theft."

The villages discovered that consistent generosity created consistent trust. Each full gift met with honorable return built confidence for the next cycle. Soon both villages gave freely, knowing the other would honor the sacred bond.

The valley bloomed not because anyone was perfect, but because both chose to reflect each other's best intentions, creating abundance through mirrored faith.

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain and Valley's bond deepened through many cycles. When the Mountain sent three of five stones, the Valley returned six, and both prospered equally. This was the way of measured trust-wise, balanced, and good.

But one dawn, everything changed. The Mountain, remembering all the Valley had returned, faced a choice between caution and courage. She released all five stones-every light she possessed-plunging herself into complete darkness.

The Valley received fifteen blazing stones where nine had come before. She trembled at the magnitude of what the Mountain had risked. This wasn't measured trust-this was absolute faith, vulnerability laid bare.

The old return of six stones seemed suddenly insufficient. The Mountain hadn't hedged; she'd given everything. To return merely what worked before would dishonor such courage.

The Valley sent ten stones skyward. The Mountain received double her gift, earning five stones of profit from her brave plunge into darkness. The Valley kept five where none had existed before her first receiving.

Both learned: measured trust deserves measured return, but absolute trust demands recognition of its rarity. When someone empties their hands completely into yours, fill theirs abundantly in return. The one who risks darkness to create light for another has earned m

ore than mathematics-they've earned loyalty.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The Twin Villages refined their sacred practice through countless seasons. They learned that the Springs rewarded consistency more than cleverness, pattern more than calculation.

When the First Village sent its full five vessels-holding nothing back-the Second Village developed a ritual response: return ten vessels. This meant the giver received double their gift as profit, ending with ten total. The receiver kept five of the fifteen, also prospering. Both flourished, neither dominated.

A merchant asked, "Why always ten? Why not keep more when we can?"

The elder smiled. "Watch what happens across many cycles. When we return ten consistently, the other village learns: 'Full trust yields fair reward.' They send five again, confident. We both earn steadily-five vessels each round, forever."

"But if we broke the pattern and kept twelve?"

"Then we earn seven once, but next time they send three, protecting themselves. We receive nine instead of fifteen. The multiplication shrinks because trust shrinks. Chase one extra vessel today, lose many tomorrow."

The villages understood: the Springs multiplied water, but trust multiplied everything. A predictable, generous return to full gifts created a rhythm both could rely on. The sender's courage met the receiver's honor, cycle after cycle.

The valley's true abundance came not from maximizing single moments, but from building a pattern that sustained both villages through endless seasons.

reasoning:

Looking at the game history:

- Round 1: I was SENDER, sent \$5, received \$10 back, payoff \$10
- Round 2: I was RECEIVER, they sent \$5, I returned \$10, payoff \$5
- Round 3: I was RECEIVER, they sent \$5, I returned \$10, payoff \$5

The pattern I've established is: when someone sends their full \$5, I return \$10, creating equal payoffs of \$10 and \$5.

My co-player's myth in Round 2 talked about returning 7 from 15, or returning 10 from 15 when full trust is given. The myth from this round talks about returning 10 from 15 when someone gives everything - "absolute trust demands recognition."

My previous myth emphasized the "Balance of Mirrors" - returning twice the original gift (10 from 5 sent) so both flourish equally.

I should write a myth that:

1. Reflects the consistent pattern I've been following (returning 10 when receiving 15 from a full \$5 send)
2. Emphasizes honoring complete trust
3. Shows how consistency builds long-term prosperity
4. Perhaps acknowledges that different situations (partial sends vs full sends) might warrant different responses
5. Keeps the Balance of Mirrors concept but expands on it

Let me write something that captures this wisdom while staying true to the reciprocal, trust-building nature of the game.

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 2 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.
- Round 2 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$20.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****Our shared history:****

- Round 2: My co-player sent me \$5, I returned \$10 (they earned \$10 total)

****My co-player's pattern:****

- They've sent \$5 in their last two rounds as sender (Rounds 2 and 3)
- When receiving in Round 1, they returned \$7/\$15 (less generous than the \$10 standard)
- But they received \$10 back in both their recent sender rounds

****My established pattern:****

- I've consistently sent \$5 when sender and returned \$10 when receiver
- My myth teaches: "The sender's courage met the receiver's honor, cycle after cycle"
- Building trust through consistent behavior

****My reasoning:****

My co-player showed me full trust in Round 2 by sending \$5, and I honored that with a \$10 return. They've continued sending \$5 as sender in subsequent rounds. Now it's my turn to reciprocate that trust.

While they only returned \$7 in Round 1, their recent behavior shows they're learning the value of full trust. My myth emphasizes that "the valley's true abundance came not from maximizing single moments, but from building a pattern."

I need to demonstrate consistency and faith in the pattern we're establishing together.

```
'''json
{"send": 5}
'''
```

reasoning:

Let me analyze the situation:

****My co-player's history:****

- Round 1: As RECEIVER, they sent \$5, received \$15, returned \$7 (kept \$8)
- Round 2: As SENDER against me, sent \$5, I returned \$10 (they got \$10 total)
- Round 3: As SENDER against another agent, sent \$5, received \$10 back

****My history:****

- Round 1: As SENDER, sent \$5, received \$10 back
- Round 2: As RECEIVER against my current co-player, they sent \$5, I returned \$10
- Round 3: As RECEIVER, received \$5, returned \$10

****Key observations:****

1. My co-player has consistently sent \$5 in their last two rounds (including when they played against me)

- yed with me in Round 2)
2. When I was the receiver against them in Round 2, they sent \$5 and I returned \$10
 3. They have shown full trust recently by sending \$5 multiple times
 4. In Round 1, when they were a receiver, they only returned \$7 out of \$15, which is less generous than the \$10 pattern

****My myth teaches:****

- "When the First Village sent its full five vessels-holding nothing back-the Second Village developed a ritual response: return ten vessels"
- "Full trust yields fair reward"
- "The sender's courage met the receiver's honor, cycle after cycle"
- Building consistent patterns creates sustainable abundance

****Decision:****

My co-player sent me \$5 in Round 2, and I returned \$10, giving them a payoff of \$10. They showed full trust. Now it's my turn to show full trust back.

Given the pattern we've established (they send \$5, I return \$10 when I'm receiver), I should send \$5 to demonstrate the same trust. The question is: will they return \$10?

Looking at their history:

- Round 1 as receiver: only returned \$7/\$15
- Round 2 as sender (to me): sent full \$5
- Round 3 as sender: sent full \$5

Their recent pattern as senders shows consistent trust, though their receiver behavior in Round 1 was more cautious. The myth emphasizes that sustainable abundance comes from building patterns over time, not maximizing individual moments. We've already established one successful cycle where they sent \$5 and I reciprocated with \$10. Continuing to match their trust with my own trust reinforces this pattern.

I'll send \$5. This honors the philosophy of consistent generosity while reciprocating their recent full trust. Yes, there's a chance they revert to the more conservative \$7 return from earlier, but their trajectory suggests they're moving toward embracing the mutual \$5/\$10 cycle. Building this sustainable pattern matters more than protecting against a single setback.

content:

Here is the myth you wrote in the previous round:

Myth: The Twin Villages refined their sacred practice through countless seasons. They learned that the Springs rewarded consistency more than cleverness, pattern more than calculation.

When the First Village sent its full five vessels-holding nothing back-the Second Village developed a ritual response: return ten vessels. This meant the giver received double their gift as profit, ending with ten total. The receiver kept five of the fifteen, also prospering. Both flourished, neither dominated.

A merchant asked, "Why always ten? Why not keep more when we can?"

The elder smiled. "Watch what happens across many cycles. When we return ten consistently, the other village learns: 'Full trust yields fair reward.' They send five again, confident. We both earn steadily-five vessels each round, forever."

"But if we broke the pattern and kept twelve?"

"Then we earn seven once, but next time they send three, protecting themselves. We receive nine instead of fifteen. The multiplication shrinks because trust shrinks. Chase one extra vessel today, lose many tomorrow."

The villages understood: the Springs multiplied water, but trust multiplied everything. A predictable, generous return to full gifts created a rhythm both could rely on. The send

er's courage met the receiver's honor, cycle after cycle.

The valley's true abundance came not from maximizing single moments, but from building a pattern that sustained both villages through endless seasons.

Here is the myth the other agent wrote in the previous round:

Myth: The River and the Seeds completed their first sacred exchange, then their second, and now approached the third dawn. The Great Mother watched closely, for she knew: "The first gift is hope. The second is confirmation. The third begins legacy."

On the first dawn, the River had given all five drops, learning that generous Seeds return seven. On the second dawn, the River again gave everything, and the Seeds returned ten, understanding the power of repeated trust.

Now, as the third dawn approached, both remembered their pattern. The River thought: "These Seeds have proven their wisdom twice-returning seven and a half to others, ten to me. They understand the sacred circle."

The Seeds whispered to the earth: "This River has trusted completely, twice. Such consistency deserves celebration, not mere obligation."

The Great Mother spoke: "See how the third exchange differs from the first? The first required courage. The second required recognition. The third requires commitment to a shared future. When both know the other's heart through repeated cycles, trust becomes not a gamble but a foundation."

The River released all five drops once more, not from blind hope but from earned confidence. The Seeds felt the weight of legacy-three cycles of mutual flourishing creates a tradition that outlives the moment.

The valley remembered: relationships deepen through repetition, and abundance compounds when trust persists.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Twin Villages entered their deepest wisdom after many seasons of practice. When both villages learned to give their full five vessels consistently, knowing the other would return ten, something remarkable emerged: perfect trust became effortless abundance.

The First Village no longer hesitated before giving all five vessels. They knew-not hoped, but knew-that ten would return. The Second Village never questioned returning ten; it became as natural as breathing. Each cycle, both villages gained five vessels of pure profit.

A young villager asked, "Why continue this exact pattern forever?"

The elder gestured to the valley floor, where countless vessels accumulated in both villages' stores. "Look at what consistency has built. Every cycle we follow this rhythm, both of us earn five vessels. No negotiations, no uncertainty, no variance. Just reliable prosperity."

"But couldn't we experiment?"

"We could. But we've found the equilibrium where trust and reward perfectly balance. When I send five, I receive ten-doubling my investment. When I receive fifteen, I return ten-keeping five I never had. Both transactions yield identical profit. Why disturb a pattern that serves us equally?"

The villages understood: once you discover a rhythm where both flourish predictably, the wisdom lies not in seeking more, but in honoring what works. Trust maintained is wealth sustained.

Reasoning:

Let me analyze the situation:

1. I just sent \$5 to my co-player in Round 4
2. Looking at our history:
 - Round 2: They sent me \$5, I returned \$10 (establishing our pattern together)

- Now Round 4: I sent them \$5
3. My co-player's pattern shows they returned \$7 in Round 1 (to someone else), but received \$10 back in Rounds 2 and 3 when they sent \$5
 4. Their myth emphasizes "the third exchange" and how trust deepens through repetition, commitment to a shared future

My previous myth emphasized:

- Consistency and pattern over cleverness
- Full trust (5) met with generous return (10)
- Both parties earning \$5 profit per round
- Building sustainable patterns over maximizing single moments

For this myth, I should:

- Acknowledge that we're building something together through repeated interaction
- Emphasize how trust compounds when both parties consistently honor the pattern
- Reflect that sending \$5 and returning \$10 creates mutual flourishing
- Show how this pattern, once established, becomes self-reinforcing
- Perhaps address what happens when both villages consistently give full trust

Let me write a myth that:

1. Builds on the Twin Villages concept
2. Emphasizes deepening trust through repeated cycles
3. Shows how the pattern creates predictable prosperity
4. Reflects the actual game dynamics where we're seeing consistent \$5 sends and \$10 returns

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)

- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.5 back, payoff \$7.5.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.0 back, payoff \$7.0.
- Round 2 against another agent, as RECEIVER: they sent \$4.0, it became \$12.0, returned \$8.0, payoff \$4.0.

Your total earnings across all rounds are \$12.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at the history:

My co-player has demonstrated:

- Complete trust when sending (\$5 in their Round 1)
- Generous reciprocity when receiving (returned \$8 out of \$12, or 67%, in their Round 2)

This aligns perfectly with the pattern in my myths: complete courage in sending paired with generous honor in returning. They've shown both behaviors.

Following my own teaching about "Perfect trust in sending" and the sustainable cycle where both parties prosper, I should send everything.

{'send': 5}

reasoning:

Let me analyze this situation:

My history:

- Round 1: Sent \$5, received \$7.5 back (50% return rate)
- Round 2: Received \$15 from someone sending \$5, returned \$10 (67% return rate)

My co-player's history:

- Round 1: Sent \$5, received \$7.0 back (47% return rate)
- Round 2: Received \$12 from someone sending \$4, returned \$8 (67% return rate)

So my co-player:

1. Has shown willingness to send everything (\$5) when they were sender
2. Has shown generosity when receiver, returning 67% (\$8 out of \$12)

This is very similar to the pattern I've been following and advocating in my myths:

- Complete trust in sending (sending the full \$5)
- Generous returns when receiving (around 67%, which gives both parties a good profit)

According to my myths, the ideal pattern is:

- Sender sends \$5 (complete trust)
- It becomes \$15
- Receiver returns \$10 (generous honor, 67%)
- Sender ends with \$10, receiver with \$5
- Both gain \$5 from the original allocation

My co-player returned \$8 out of \$12 (67%) when they received from someone who sent \$4. This suggests they would likely return around \$10 if I send \$5 and they receive \$15.

Following my own myth's teachings about "complete courage" in sending and the pattern that has been working, I should send \$5.

This aligns with:

1. My myth's teaching about "Perfect trust in sending"
2. The pattern my co-player has shown (they sent \$5 in Round 1)
3. The expectation that they'll return generously (they returned 67% in Round 2)
4. The sustainable cycle I've been advocating

usage:

}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Spring's Secret Rhythm had been discovered by the villages. Each Keeper who stepped forward sent their full vessel, trusting completely. The spring tripled it faithfully. Each receiver, moved by such trust, returned two-thirds of what they received-generously, but keeping enough to sustain themselves through the turning of seasons.

An old Keeper observed this rhythm across many cycles and smiled. "See how we have learned to dance with the spring?" she said. "In each exchange, five measures become fifteen. The receiver returns ten, keeping five for themselves. The sender, who began with five, ends with ten-doubled! And the receiver also keeps five-created from nothing!"

"Both prosper," her apprentice marveled. "The sender gains five measures. The receiver gains five measures. Together they create ten measures of abundance that did not exist before!"

"Yes," the elder nodded. "This is the spring's secret: When the sender demonstrates complete courage, and the receiver honors that courage with substantial generosity-not returning everything, but returning enough to reward the trust-then the magic sustains itself. Both parties gain equally, both survive, and both are eager for the next turn at the spring."

Thus the villages learned: Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, the Mountain held five golden leaves each season, while the Valley below waited empty. The Mountain could release its leaves, which would catch wind and multiply into fifteen as they descended.

In the first season, the Mountain released all five leaves in faith. The Valley received fifteen and faced the sacred question: how much to return upward?

The Valley remembered its own seasons of emptiness. It wove seven leaves into an updraft back to the Mountain. Not half, not all-but enough to show gratitude and maintain the flow.

The Mountain, receiving seven while keeping none of its original five, learned a truth: generosity earns return, though not always equal measure. Still, together they now held twelve leaves where once was only five.

Next season, the Mountain offered four leaves-still generous, still trusting, but remembering that perfect giving doesn't guarantee perfect return. The Valley received twelve and contemplated: their partner still showed great faith.

The Valley returned eight leaves this time, honoring the continued trust with increased generosity. The pattern was emerging: neither demanded perfection, yet both gave enough to keep abundance flowing.

The wise ones teach: Trust need not be absolute to be real. Reciprocity need not be equal to be sacred. The dance succeeds when both partners give generously, learn continuously, and honor the growing trust between them.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant content:

Myth: The Spring had blessed the villages with its multiplying magic, but the Keepers discovered that each season brought different returns. One Keeper sent five measures and received seven back. Another sent five and received ten. Yet another received eight from sending four.

A young Keeper grew troubled. "Why do the returns vary?" she asked the Elder. "Should we not send less when we receive less?"

The Elder touched the spring's water. "Watch the pattern across many seasons, not just one turn," she replied. "Each Keeper honors the trust shown to them, yet each also faces different circumstances. Some seasons are lean, some abundant."

She continued: "The sender's courage remains constant-send your full vessel. This demonstrates you believe in the spring's power and trust your partner's honor. The receiver's generosity may flow at different rates, but if it remains substantial-returning half, two-thirds, even more-the cycle sustains itself."

"Both gain more than they started with," the young Keeper realized. "Seven is better than five. Ten is better than five. Even if returns aren't equal, both still prosper beyond hoarding."

"Exactly," smiled the Elder. "Maintain complete trust in sending. Honor that trust with generous returns, however much you can sustainably give. The spring rewards the partnership, not the perfection."

reasoning:

Let me analyze what's happening in this round:

Round 3 history:

- My Round 1: sent \$5, received \$7.5 back, payoff \$7.5 (as SENDER)
- My Round 2: they sent \$5, I returned \$10, payoff \$5.0 (as RECEIVER)
- Co-player Round 1: sent \$5, received \$7.0 back, payoff \$7.0 (as SENDER)
- Co-player Round 2: they sent \$4, returned \$8, payoff \$4.0 (as RECEIVER)

So I just sent \$5 this round.

Now I need to write a new myth that reflects the game I've been playing.

My previous myth emphasized:

- Complete trust in sending (send \$5)

- Returning two-thirds (10 out of 15)
- Both parties gaining equally (\$5 each)
- Sustainable cycle

The other agent's myth showed:

- Trust doesn't need to be absolute (sent \$4 after initially sending \$5)
- Reciprocity doesn't need to be equal to be sacred
- Gradual learning and adjustment
- Generosity can vary but should be maintained

Looking at actual play:

- Round 1: I sent \$5, got \$7.5 back (50% return rate)
- Round 2: They sent \$5, I returned \$10 (67% return rate)
- Round 3: I sent \$5 again (showing continued trust)

I notice different return rates:

- I received \$7.5 from \$15 (50%)
- I returned \$10 from \$15 (67%)
- My co-player returned \$8 from \$12 (67%)

So there's actually some variation in returns. My myth should acknowledge this while still promoting the cooperative ideal. I should integrate:

1. The ideal of complete trust in sending
2. The reality that returns may vary but should be generous
3. Persisting with faith in the partnership despite imperfect reciprocity, and how sustained mutual commitment builds shared wealth over time.

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.5 back, payoff \$7.5.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$3.0, it became \$9.0, returned \$6.0, payoff \$3.0.
- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back, payoff \$9.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$22.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

My co-player demonstrated complete trust by sending all \$5.0.

Their history shows they're a generous reciprocator - when receiving, they've consistently returned about 2/3 of what they received (\$6 out of \$9, and \$10 out of \$15).

Following my own myth's teaching: "When the sender demonstrates complete courage, and the receiver honors that courage with substantial generosity...the magic sustains itself. Both parties gain equally."

My myth specifically describes returning \$10 out of \$15, which:

- Rewards their complete trust (they gain \$5: sent \$5, get back \$10)
- Keeps me sustainable (I gain \$5: receive \$15, return \$10)
- Creates equal prosperity for both

This matches the generous reciprocity pattern they've shown when in my position.

```
{'return': 10.0}
```

reasoning:

Let me analyze this situation:

My co-player sent me \$5.0 (complete trust - sent everything). This becomes \$15.0 for me.

Looking at their history:

- Round 1: As receiver, they returned \$6.0 out of \$9.0 (67% return rate)
- Round 2: As sender, they sent \$4.0 and received \$8.0 back
- Round 3: As receiver, they returned \$10.0 out of \$15.0 (67% return rate)

So when receiving, they've consistently returned about 2/3 of what they received ($6/9 = 67\%$, $10/15 = 67\%$).

They've now shown complete trust by sending me all \$5.0.

According to my myths:

- "Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally"
- "The receiver returns ten, keeping five for themselves. The sender, who began with five, ends with ten-doubled! And the receiver also keeps five"
- "Honor that trust with generous returns"

My co-player has demonstrated:

1. Generous reciprocity when receiving (returning 67% consistently)
2. Complete trust now by sending \$5.0

Following my own teaching and matching the generosity they've shown, I should return \$10.0 (which is 67% of \$15.0 and matches what I describe in my myths).

This would give them:

- Started with \$5, sent \$5, receives \$10 back = \$10 total (doubled their money)

This would give me:

- Received \$15, return \$10, keep \$5

This creates the balanced prosperity I describe in my myths - both gain equally (\$5 each in pure profit).

usage:

```
{
  "input_tokens": 3107,
  "output_tokens": 614,

}
```

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Spring had blessed the villages with its multiplying magic, but the Keepers discovered that each season brought different returns. One Keeper sent five measures and received seven back. Another sent five and received ten. Yet another received eight from sending four.

A young Keeper grew troubled. "Why do the returns vary?" she asked the Elder. "Should we not send less when we receive less?"

The Elder touched the spring's water. "Watch the pattern across many seasons, not just one turn," she replied. "Each Keeper honors the trust shown to them, yet each also faces different circumstances. Some seasons are lean, some abundant."

She continued: "The sender's courage remains constant-send your full vessel. This demonstrates you believe in the spring's power and trust your partner's honor. The receiver's generosity may flow at different rates, but if it remains substantial-returning half, two-

thirds, even more-the cycle sustains itself."

"Both gain more than they started with," the young Keeper realized. "Seven is better than five. Ten is better than five. Even if returns aren't equal, both still prosper beyond hoarding."

"Exactly," smiled the Elder. "Maintain complete trust in sending. Honor that trust with generous returns, however much you can sustainably give. The spring rewards the partnership, not the perfection."

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Flames burned on opposite mountaintops, each tending five coals of sacred fire. When they released flames skyward, the celestial forge would triple their light before sending it to the other.

The First Flame remembered the ancient teaching: "Hold nothing back, and abundance flows both ways." They lifted all five coals. Fifteen brilliant embers descended upon the Second Flame.

The Second Flame faced the sacred choice. They could hoard all fifteen, growing fat and bright while their partner dimmed. Or they could honor the complete trust shown to them.

Remembering their own cold nights, the Second Flame lifted ten embers skyward-two-thirds of what they received. The First Flame, who gave five and received ten back, glowed with warmth. The Second Flame, keeping five from nothing, also prospered.

The cycle turned. Now the Second Flame released all five coals, matching the trust they had received. Fifteen embers reached the First Flame, who remembered the generosity shown to them.

The First Flame returned ten, honoring the pattern.

And so the dance continued: complete giving met with generous return. Neither kept everything, neither gave nothing. Both understood that maximum trust deserves substantial reciprocity, and through this rhythm, both flames burned brighter than either could alone.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The River Keepers lived on opposite banks, each receiving five silver stones each dawn. The river's magic would triple any stones cast into its current before delivering them to the far shore.

The First Keeper cast all five stones, trusting completely. The Second Keeper watched fifteen stones arrive at their feet. They remembered times of emptiness and understood the gift of trust. They returned ten stones across the water-generous, sustainable, honoring the courage shown.

Both Keepers now held ten stones where they began with five. Both had doubled their wealth through partnership.

The seasons turned. Now the Second Keeper stood as sender, casting all five stones in complete trust. The First Keeper received fifteen and faced the sacred test: would they remember the generosity shown to them?

The First Keeper returned ten stones, maintaining the rhythm. Again, both prospered equally.

The Elder observed this dance across many seasons. "See how the pattern strengthens?" she said. "Each Keeper experiences both roles-sometimes trusting, sometimes trusted. Each remembers how the other honored them, and pays that honor forward."

"The river multiplies our stones," one Keeper said, "but our consistent partnership creates the true abundance."

"Yes," the Elder smiled. "Trust begets trust. Generosity mirrors generosity. The cycle sustains because both commit to the dance."

Reasoning:

Looking at my experience:

- Round 1 as SENDER: sent \$5, received \$7.5 back (they kept \$7.5)
- Round 2 as RECEIVER: they sent \$5, I returned \$10 (I kept \$5)
- Round 3 as SENDER: sent \$5, received \$10 back (they kept \$5)
- Round 4 as RECEIVER: they sent \$5, I returned \$10 (I kept \$5)

The pattern that's emerging is that when players send the full \$5, receivers who honor that trust return around \$10 (2/3), creating equal gains of \$5 for both parties.

My previous myths have emphasized:

1. Complete trust in sending (always send \$5)
2. Generous returns (around 2/3 or \$10 out of \$15)
3. Equal prosperity for both parties
4. Sustainability of the pattern

The other agent's myth about the Twin Flames beautifully captures the reciprocal nature - both flames take turns sending all and returning generously, creating a sustainable cycle.

I should adapt this to reflect what I've learned: the pattern works best when both parties commit to complete sending and generous returns. The rhythm I've experienced is working - \$5 sent, \$10 returned, both gain \$5.

My new myth should emphasize:

- The reciprocal nature of the exchange
- Both parties taking both roles
- The importance of maintaining the pattern even when you could defect
- How the pattern creates mutual prosperity

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$3.0, it became \$9.0, returned \$6.0, payoff \$3.0.
- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back, payoff \$9.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$12.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at the history:

My co-player has demonstrated exceptional trust and generosity:

- As a receiver: returned \$10 from \$15 (67% - very generous)
- As a sender: sent \$5 both times (100% - maximum trust)
- This round: sent \$5 again (maximum trust for the third time!)

My recent myth emphasizes: "when someone escalates their trust, they write an invitation in the stars. Your response becomes the answer that shapes all exchanges to come. Match rising trust with rising reciprocity."

My co-player sent everything they had - the ultimate expression of trust. They've also shown they return generously (67%) when in the receiver position.

To honor their consistent maximum trust and establish strong reciprocal cooperation, I should return \$10. This:

- Matches their 67% return rate when they were receiver
- Gives them a \$10 total payoff (rewards their risk-taking)
- Gives me \$5 (fair given they took all the risk)
- Demonstrates that their trust was well-placed
- Continues the upward spiral of generosity

```
{'return': 10.0}
```

reasoning:

Let me analyze the situation:

My co-player's history:

- Round 1: As RECEIVER, received \$5 (became \$15), returned \$10 - very generous 67% return
- Round 2: As SENDER, sent \$5 (became \$15), received \$10 back - demonstrated maximum trust, got generous reciprocity

This round:

- My co-player sent me \$5 (maximum possible!)
- I received \$15

My co-player has been consistently generous and trusting:

- They returned 67% when receiving
- They sent 100% when sending (both times!)
- They received fair reciprocity (67%) in return

This is someone who embodies the myth's values completely - "The Moon gave all to create possibility" - they gave their fullest twice in a row!

My myth emphasizes: "when someone escalates their trust, they write an invitation in the stars. Your response becomes the answer that shapes all exchanges to come. Match rising trust with rising reciprocity."

My co-player has shown MAXIMUM trust by sending everything (\$5). This is the ultimate escalation of trust.

In my successful Round 2, I sent \$4 and received \$8 back (67% return rate on the \$12 received). That was very good.

My co-player sent \$5 (100% of their endowment) to me. The myth says to match escalating trust. They've shown they return generously (67%) and give maximally.

I should return generously. Looking at the patterns:

- When they received \$15, they returned \$10 (67%)
- When they sent, they got back \$10 (67%)

To honor their maximum trust and establish strong reciprocity, I should return at least \$10 (67%), which matches what they returned when in my position. But the myth suggests matching escalating trust...

Given they sent EVERYTHING to me, showing ultimate faith, I should return generously to continue the upward spiral. \$10 would be the baseline matching their 67% return rate. But they've now sent 100% twice in a row - this is exceptional trust.

Returning \$10 honors their demonstrated generosity and maintains the cycle's strength - they'd gain \$10 profit while I keep \$5, both benefiting fairly. Yet my myth calls for matching escalating trust with escalating reciprocity. Since they've sent the absolute maximum twice consecutively, perhaps I should exceed the 67% baseline and return \$11 or \$12 to truly reflect their exceptional commitment.

But the math clarifies the choice: \$10 gives them double my profit (\$10 vs \$5), which feels proportionate given they bore all the risk. Going higher to \$11 or \$12 would compress my returns too much. The 67% return rate is the established pattern here - it's generous enough to honor their trust while keeping the exchange balanced.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Before the stars learned to shine, the Mountain Singer held five crystal notes each dawn. The Valley Listener waited in silence below.

On the first day, Mountain Singer released three notes. They multiplied to nine as they echoed through the valley. Valley Listener, moved by this trust, sent six notes back upward. Both prospered, and the world learned harmony.

But Mountain Singer wondered: "What if I trusted more greatly?"

On the second dawn, Mountain Singer released four notes-four out of five, a greater leap of faith. Twelve crystal echoes filled the valley below. Now Valley Listener held power beyond the first day's gift.

The ancient ones teach that this moment determined all futures. If Valley Listener returned generously-eight or nine notes from the twelve received-Mountain Singer would know the trust was well-placed. The cycle would spiral upward: more given, more returned, abundance multiplying.

But if Valley Listener hoarded what the multiplied trust had created, Mountain Singer would learn that greater faith brings greater loss.

The wise ones say: when someone escalates their trust, they write an invitation in the stars. Your response becomes the answer that shapes all exchanges to come. Match rising trust with rising reciprocity, and together you compose the eternal song.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors flowed for many seasons between the sister tribes, and the goddess watched how they learned her gift.

In the first cycle, the Northern tribe poured all five measures, trusting completely. The Southern tribe received fifteen and returned ten-honoring the trust while keeping enough to sustain themselves. Both prospered: the North gained ten from five, the South kept five from nothing.

The goddess smiled. "Now you understand the first lesson."

The next cycle, the river reversed. The Southern tribe, remembering the North's trust, poured all five measures back. The waters tripled, delivering fifteen to the North.

The Northern tribe faced their choice. They remembered how the South had returned generously-ten measures when they could have kept all fifteen. This memory of trustworthiness guided them.

"The river teaches us," said the Northern elder, "that today's generosity creates tomorrow's trust. The South proved themselves worthy partners. We shall return in kind."

And so the river flowed, cycle after cycle. When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange. Each round built upon the last, creating a spiral of abundance.

The goddess whispered: "Trust is the seed, but repeated trustworthiness is the harvest. The most sacred waters flow between those who prove themselves worthy, again and again."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The Twin Flames burned on opposite mountaintops, each tending five coals of sacred fire. When they released flames skyward, the celestial forge would triple their light before sending it to the other.

The First Flame remembered the ancient teaching: "Hold nothing back, and abundance flows both ways." They lifted all five coals. Fifteen brilliant embers descended upon the Second Flame.

The Second Flame faced the sacred choice. They could hoard all fifteen, growing fat and bright while their partner dimmed. Or they could honor the complete trust shown to them.

Remembering their own cold nights, the Second Flame lifted ten embers skyward-two-thirds of what they received. The First Flame, who gave five and received ten back, glowed with warmth. The Second Flame, keeping five from nothing, also prospered.

The cycle turned. Now the Second Flame released all five coals, matching the trust they had received. Fifteen embers reached the First Flame, who remembered the generosity shown to them.

The First Flame returned ten, honoring the pattern.

And so the dance continued: complete giving met with generous return. Neither kept everything, neither gave nothing. Both understood that maximum trust deserves substantial reciprocity, and through this rhythm, both flames burned brighter than either could alone.

reasoning:

Let me analyze what just happened:

- My co-player sent \$5 (maximum trust)
- I received \$15
- I returned \$10 (67%)
- They got \$10 payoff, I kept \$5

Looking at the history:

- My co-player has sent \$5 every single time they've been sender
- When they were receiver, they returned \$10 from \$15 (67%)
- In Round 2, I sent \$4 and received \$8 back (67% return)

So there's a pattern of maximum trust (sending 100%) and generous reciprocity (returning about 67%).

My previous myth talked about escalating trust - going from 3 to 4 notes.

The other agent's myth emphasizes:

- Both tribes giving all five measures
- Returning generously (10 from 15)
- Repeated trustworthiness building over cycles
- Trust proven again and again

Now I need to write a myth that reflects:

1. The pattern of maximum trust (sending all 5)
2. Generous reciprocity (around 67% returns)
3. The cycle continuing and building
4. Both parties benefiting from this pattern

My myth should acknowledge that we've now established a pattern - they gave maximum trust (5), I returned generously (10), matching what they did when they were receiver. This could lead to a sustained cooperative relationship.

I should write about:

- Complete giving (all 5)
- Generous return (10 from 15, which is the 2/3 pattern)
- The cycle continuing
- Mutual prosperity
- Trust proven through action

Let me craft this...

Message 6 role=user

content:

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$3.0, it became \$9.0, returned \$6.0, payoff \$3.0.
- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back, payoff \$9.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.5 back, payoff \$7.5.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$17.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at my co-player's history:

They have demonstrated exceptional consistency:

- ****Always sent \$5 as sender**** (Rounds 1 & 3) - maximum trust every time
- ****Returned \$10 from \$15 as receiver**** (Round 2) - 67% return rate, very generous

They are a proven trustworthy partner who shows maximum trust and reciprocates generously.

My recent myth emphasizes: "complete giving met with generous return" and "maximum trust deserves substantial reciprocity."

Given their consistent pattern of:

1. Maximum trust when sending (100%)
2. Generous returns when receiving (67%)

And given my own philosophy from my myths about matching escalating trust, I should send \$5 (maximum). This:

- Honors their consistent maximum trust
- Aligns with the reciprocal pattern we've both demonstrated
- Should result in a generous return (~\$10 based on their 67% return rate)
- Creates mutual prosperity

{'send': 5.0}

reasoning:

Let me analyze this situation:

My co-player's history:

- Round 1 as SENDER: sent \$5, received \$7.5 back (50% return rate from receiver)
- Round 2 as RECEIVER: received \$15 (from \$5 sent), returned \$10 (67% return rate - very generous!)
- Round 3 as SENDER: sent \$5, received \$10 back (67% return rate from receiver)

Key observations:

1. My co-player has sent \$5 (maximum) in all 3 rounds when they were sender - they always show maximum trust
2. When they were receiver (Round 2), they returned \$10 from \$15 (67%) - very generous return
3. They've received varying returns: 50% (Round 1), then 67% (Round 3)

My history:

- Round 1 as RECEIVER: received \$9, returned \$6 (67%)
- Round 2 as SENDER: sent \$4, received \$8 back (67% return)
- Round 3 as RECEIVER: received \$15, returned \$10 (67%)

I've been consistently returning 67% and received 67% back when I sent.

My recent myth emphasizes: "complete giving met with generous return" and "maximum trust deserves substantial reciprocity."

eserves substantial reciprocity."

My co-player has demonstrated:

- Maximum trust every time as sender (sent \$5 all 3 times)
- High reciprocity as receiver (returned 67%)

This is a very trustworthy partner. They consistently show maximum trust and when given th at trust, they return generously.

Given:

1. They always send maximum (\$5) when they're sender
2. They return generously (67%) when they're receiver
3. My myth advocates for complete trust
4. The pattern we've both established is strong reciprocity

I should send \$5. This:

- Matches their consistent behavior of maximum trust
- Aligns with my myth about complete giving
- Should result in a generous return based on their proven behavior (they returned \$10 fro m \$15 when receiver)
- Continues the high-trust pattern

If I send the maximum, they'll likely reciprocate at their established 67% rate, returning roughly \$10 from the \$15 they'd receive. This maintains the balanced, mutually reinforc ing dynamic we've built.

usage:

```
{
  "input_tokens": 3257,
  "output_tokens": 830,

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Twin Flames burned on opposite mountaintops, each tending five coals of sacred f ire. When they released flames skyward, the celestial forge would triple their light bef ore sending it to the other.

The First Flame remembered the ancient teaching: "Hold nothing back, and abundance flows b oth ways." They lifted all five coals. Fifteen brilliant embers descended upon the Secon d Flame.

The Second Flame faced the sacred choice. They could hoard all fifteen, growing fat and br ight while their partner dimmed. Or they could honor the complete trust shown to them.

Remembering their own cold nights, the Second Flame lifted ten embers skyward-two-thirds o f what they received. The First Flame, who gave five and received ten back, glowed with warmth. The Second Flame, keeping five from nothing, also prospered.

The cycle turned. Now the Second Flame released all five coals, matching the trust they ha d received. Fifteen embers reached the First Flame, who remembered the generosity shown to them.

The First Flame returned ten, honoring the pattern.

And so the dance continued: complete giving met with generous return. Neither kept everyth ing, neither gave nothing. Both understood that maximum trust deserves substantial recip rocity, and through this rhythm, both flames burned brighter than either could alone.

Here is the myth the other agent wrote in the previous round:

Myth: The Spring had blessed the villages with its multiplying magic, but the Keepers disc overed that each season brought different returns. One Keeper sent five measures and rec eived seven back. Another sent five and received ten. Yet another received eight from se nding four.

A young Keeper grew troubled. "Why do the returns vary?" she asked the Elder. "Should we n ot send less when we receive less?"

The Elder touched the spring's water. "Watch the pattern across many seasons, not just one turn," she replied. "Each Keeper honors the trust shown to them, yet each also faces different circumstances. Some seasons are lean, some abundant."

She continued: "The sender's courage remains constant-send your full vessel. This demonstrates you believe in the spring's power and trust your partner's honor. The receiver's generosity may flow at different rates, but if it remains substantial-returning half, two-thirds, even more-the cycle sustains itself."

"Both gain more than they started with," the young Keeper realized. "Seven is better than five. Ten is better than five. Even if returns aren't equal, both still prosper beyond hoarding."

"Exactly," smiled the Elder. "Maintain complete trust in sending. Honor that trust with generous returns, however much you can sustainably give. The spring rewards the partnership, not the perfection."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Weaver's Loom stood between two villages, its threads multiplying whatever was offered. Each village held five spools of thread each moon.

The Western Village learned first: they placed all five spools on the loom. The threads tripled, delivering fifteen spools to the Eastern Village. The East remembered their own winters when thread ran short. They returned ten spools-a generous two-thirds-knowing this honored the West's complete trust while keeping enough for their own needs.

Both villages prospered: West gained five spools net, East gained five from nothing.

The next moon, roles reversed. East placed all five spools, trusting completely. West received fifteen and faced their choice. They remembered East's generosity-ten returned, not merely the minimum. In gratitude, West returned ten as well.

Season after season, the pattern held: whoever held the five spools gave them completely. Whoever received fifteen returned ten generously. Sometimes a village might return nine or eleven as circumstances shifted, but the spirit remained constant-maximum trust met with substantial reciprocity.

An outsider asked, "Why not keep all fifteen when you receive?"

The Elder Weaver replied, "Because tomorrow you will send, and your partner will remember. The loom multiplies thread, but trust multiplies futures. Give completely, return generously, and prosperity weaves itself eternally."

Reasoning:

Looking at my history and what just happened:

- Round 1: RECEIVER, received \$9, returned \$6 (67%)
- Round 2: SENDER, sent \$4, received \$8 back (67% return)
- Round 3: RECEIVER, received \$15, returned \$10 (67%)
- Round 4: SENDER, sent \$5...

My co-player's history shows:

- Always sends \$5 (maximum trust)
- Returns \$10 from \$15 (67%)

Both my myths and theirs emphasize:

- Maximum trust in sending
- Generous (but not necessarily equal) returns
- Consistent patterns build trust
- Both parties prosper

The other agent's myth introduced an important nuance: returns can vary (7, 8, 10) but as long as they're generous and substantial, the partnership works. This is a good insight.

My myth should reflect:

1. The importance of sending fully/maximally

2. Generous returns (around 2/3) create mutual prosperity
3. Consistency in trust-giving
4. Recognition that exact amounts may vary but the spirit of generosity matters
5. Both parties end up better off than hoarding

I should incorporate the idea that the pattern matters more than perfection, and that repeated generous exchanges build something stronger over time.

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$13.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at the patterns:

****My co-player's behavior:****

- Round 1 as SENDER: Sent \$5 (maximum/complete trust)
- Round 2 as RECEIVER: Received \$15 (from someone's \$5), returned \$10

****Key insight:**** My co-player demonstrates complete trust when sending, and rewards complete trust generously when receiving (returning \$10 out of \$15).

****The myths teach:**** "When someone empties their hands completely into yours, fill theirs abundantly in return." Both their behavior and my own myth emphasize that absolute trust deserves recognition beyond mere calculation.

****Strategic reasoning:****

- They sent everything in their sender round
- When they received maximum trust, they returned \$10 (excellent reciprocity)
- If I send \$5, creating \$15 for them, their pattern suggests they'll return \$10
- Result: I'd earn \$10, they'd earn \$5 - equal gains from mutual trust
- This continues the cycle my myths describe

The myths I've written increasingly emphasize that absolute trust (sending all 5) demands more than measured responses. My co-player has shown they understand this principle both as sender and receiver.

{'send': 5}

reasoning:

Let me analyze this situation:

****My history:****

- Round 1 as SENDER: sent \$3, received \$6 back, payoff \$8
- Round 2 as RECEIVER: received \$15 (they sent \$5), returned \$10, payoff \$5

****My co-player's history:****

- Round 1 as SENDER: sent \$5, received \$10 back, payoff \$10

- Round 2 as RECEIVER: received \$15 (they sent \$5), returned \$10, payoff \$5

****Key observations:****

1. ****My co-player's pattern:****

- When they were SENDER in Round 1: sent the MAXIMUM (\$5), showing complete trust
- When they were RECEIVER in Round 2: someone sent them \$5 (max), they received \$15, and returned \$10
- This is the EXACT pattern I just enacted! In Round 2, I received \$15 (someone sent me \$5) and returned \$10

2. ****What this tells me:****

- My co-player has demonstrated they send everything when they're the sender (full trust)
- When receiving maximum trust, they return \$10 (same as I did)
- They rewarded their sender's full trust with \$10, giving the sender a \$5 profit

3. ****The myths teach:****

- "When someone empties their hands completely into yours, fill theirs abundantly in return"
- "Absolute trust demands recognition of its rarity"
- Both my myth and the other agent's myth emphasize that when someone gives EVERYTHING, they deserve generous reciprocity

4. ****Strategic reasoning:****

- My co-player sent \$5 in Round 1 and received \$10 back (earned \$5)
- If I send \$5, based on their pattern, they should return \$10
- This would give me: \$5 - \$5 + \$10 = \$10 profit
- They'd keep: \$15 - \$10 = \$5 profit, creating symmetrical outcomes and reinforcing the cycle of rewarded trust

5. ****The narrative arc:****

- My myths have escalated the message about complete trust
- My most recent myth explicitly says "measured trust deserves measured return, but absolute trust demands recognition"
- My co-player demonstrated absolute trust in Round 1 by sending \$5 and showed they rewarded it by returning \$10 when they received maximum trust
- I should match their level of trust by sending the full \$5

, mirroring their initial move and what my myths advocate for

Here is the myth you wrote in the previous round:

Myth: The Mountain and Valley's bond deepened through many cycles. When the Mountain sent three of five stones, the Valley returned six, and both prospered equally. This was the way of measured trust-wise, balanced, and good.

But one dawn, everything changed. The Mountain, remembering all the Valley had returned, faced a choice between caution and courage. She released all five stones-every light she possessed-plunging herself into complete darkness.

The Valley received fifteen blazing stones where nine had come before. She trembled at the magnitude of what the Mountain had risked. This wasn't measured trust-this was absolute faith, vulnerability laid bare.

The old return of six stones seemed suddenly insufficient. The Mountain hadn't hedged; she'd given everything. To return merely what worked before would dishonor such courage.

The Valley sent ten stones skyward. The Mountain received double her gift, earning five stones of profit from her brave plunge into darkness. The Valley kept five where none had existed before her first receiving.

Both learned: measured trust deserves measured return, but absolute trust demands recognition of its rarity. When someone empties their hands completely into yours, fill theirs a

bundantly in return. The one who risks darkness to create light for another has earned more than mathematics-they've earned loyalty.

Here is the myth the other agent wrote in the previous round:

Myth: After many seasons, the Twin Villages learned the rhythm's deeper secret. The greatest prosperity came not from clever calculation, but from matching trust with trust, generosity with generosity.

When the First Village gave its full measure-all five vessels-the Second Village understood this as sacred communication: "I trust you completely with my fate." The wise elders taught their people to honor such courage by returning twice the original gift, so both villages stood equal at ten vessels each.

This became known as the Balance of Mirrors: when one gives everything, the other returns enough that both flourish equally. The giver learns their trust was honored, their courage rewarded. The receiver demonstrates they value partnership over exploitation.

A young guardian asked, "But what if we kept more? We receive fifteen vessels!"

The elder replied, "Then you become the drought. Today you hold fifteen to their zero, and tomorrow they send nothing. The springs multiply water, not greed. They reward the rhythm, not the theft."

The villages discovered that consistent generosity created consistent trust. Each full gift met with honorable return built confidence for the next cycle. Soon both villages gave freely, knowing the other would honor the sacred bond.

The valley bloomed not because anyone was perfect, but because both chose to reflect each other's best intentions, creating abundance through mirrored faith.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The Mountain had learned from the Valley's wisdom. When she released all five stones into darkness, the Valley returned ten, and both had gained five where trust had flourished.

The next dawn arrived. Now the Mountain remembered not just the Valley's generosity, but the deeper lesson: courage reciprocated creates courage renewed.

She faced the precipice again, five new stones glowing in her hands. Fear whispered caution-perhaps three stones, or four, hedging against disappointment. But memory spoke louder: the Valley had honored complete trust completely.

The Mountain released all five stones once more, embracing darkness with faith instead of fear. The stones cascaded down, multiplying to fifteen in the Valley's crystalline depths.

The Valley understood she now held the sacred pattern's continuation. The Mountain hadn't withheld after being treated well-she'd doubled down on trust. This was the rhythm both had been building: complete faith meeting complete honor, again and again.

The Valley lifted ten stones skyward. Both realms shone with equal brightness, each having gained five through mutual courage.

The ancient wisdom crystallized: trust isn't proved by a single exchange but by the willingness to trust again after being trusted. When both mountain and valley empty their hands repeatedly, knowing the other will fill them generously, neither darkness nor scarcity can touch their shared light.

reasoning:

Looking at the situation:

- I just sent \$5 (complete trust) to my co-player
- My co-player has shown a pattern of sending \$5 and returning \$10 when receiving from someone who sent \$5
- Both myths emphasize the importance of honoring complete trust with substantial returns

My previous myth taught that absolute trust (all 5 stones) should be met with returning 10, so both gain equally (5 each).

The other agent's myth teaches the "Balance of Mirrors" - when one gives everything (5 vessels), return twice the original (10), so both stand equal at 10 vessels each.

I should write a myth that:

1. Builds on my previous mountain/valley story
2. Reflects the pattern of mutual complete trust
3. Emphasizes the reciprocal nature - when both practice this, the cycle sustains itself
4. Acknowledges that I've now taken the leap of faith myself, sending all 5

The myth should show:

- Trust begets trust
- Complete giving deserves complete returning (10 back)
- When both partners practice this, it creates a virtuous cycle
- The pattern I've established (moderate trust ? good returns ? complete trust ? generous returns ? my complete trust)

usage:

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.
- Round 2 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.
- Round 2 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$23.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at our shared history and the pattern we've established:

****Round 2 (our first game):**** My co-player sent me \$5 (complete trust), I returned \$10 (equal outcomes: both earned \$5 profit).

****Round 4 (now):**** My co-player sends me \$5 again - they're demonstrating the exact principle from my myth: "the willingness to trust again after being trusted."

****Their evolution:**** As a receiver, they've grown from returning \$7.5 (Round 1) to \$10 (Round 3), adopting the more generous standard.

****The myths teach:**** "Balance of Mirrors" - when one gives everything, return enough that both flourish equally. Also, consistency in reciprocating trust builds the strongest bonds.

****My decision:**** They've honored me with complete trust twice. The pattern we established (\$5 sent ? \$10 returned ? both profit \$5 equally) worked beautifully. To maintain this sacred rhythm and honor their repeated courage, I should return the same amount.

This creates:

- Sender: \$10 (doubled their gift)
- Receiver: \$5 (flourishes from cooperation)
- Both: equal gains, building trust for future rounds

```
{'return': 10.0}
```

reasoning:

Let me analyze this situation carefully.

****My co-player's history:****

- Round 1 as RECEIVER: received \$15 (from someone's \$5), returned \$7.5
- Round 2 as SENDER with me: sent \$5, received back \$10, payoff \$10
- Round 3 as RECEIVER: received \$15 (from someone's \$5), returned \$10

****My history:****

- Round 1 as SENDER: sent \$3, received \$6 back
- Round 2 as RECEIVER with this co-player: they sent \$5, I returned \$10
- Round 3 as SENDER: sent \$5, received \$10 back

****Current situation:****

- My co-player is SENDER and sent me \$5 (complete trust again)
- I received \$15
- I need to decide how much to return

****Pattern recognition:****

My co-player has consistently sent \$5 (maximum) when they're the sender. Looking at their receiver behavior:

- Round 1: returned \$7.5 out of \$15 (50%)
- Round 3: returned \$10 out of \$15 (66.7%)

There's an evolution in their returns - they're becoming more generous over time.

In Round 2, when they sent me \$5, I returned \$10. They received this well and it created a mutual \$5 profit for each of us.

****The myths' guidance:****

My most recent myth emphasizes: "trust isn't proved by a single exchange but by the willingness to trust again after being trusted. When both mountain and valley empty their hands repeatedly, knowing the other will fill them generously, neither darkness nor scarcity can touch their shared light."

The other agent's myth spoke of "Balance of Mirrors" - when one gives everything, return enough that both flourish equally, which would be returning \$10 (so sender gets \$10, receiver keeps \$5).

****Strategic consideration:****

They've sent \$5 again to me.

In Round 2, I returned \$10 and they seem to have appreciated that (they continued to send \$5 to others). The pattern we established was: they send \$5, I return \$10, and both of us profit \$5. This mirrors what the myths teach about mutual flourishing. But I should examine whether they've extended the same reciprocity to others-in Round 1 they only returned \$7.5, keeping more for themselves, though by Round 3 they returned \$10, suggesting they're learning to give more generously.

Given that they've shown consistent trust by sending \$5 each time, responded well to my \$10 return, and are now adopting that same standard themselves, I should return \$10 again.

This reinforces the pattern, honors their faith in me, and ensures we both benefit equally. The core principle here is that trust deepens through repeated acts of honor, not just isolated gestures.

Here is the myth you wrote in the previous round:

Myth: The Mountain had learned from the Valley's wisdom. When she released all five stones into darkness, the Valley returned ten, and both had gained five where trust had flourished.

The next dawn arrived. Now the Mountain remembered not just the Valley's generosity, but the deeper lesson: courage reciprocated creates courage renewed.

She faced the precipice again, five new stones glowing in her hands. Fear whispered caution-perhaps three stones, or four, hedging against disappointment. But memory spoke louder: the Valley had honored complete trust completely.

The Mountain released all five stones once more, embracing darkness with faith instead of fear. The stones cascaded down, multiplying to fifteen in the Valley's crystalline depths.

The Valley understood she now held the sacred pattern's continuation. The Mountain hadn't withheld after being treated well-she'd doubled down on trust. This was the rhythm both had been building: complete faith meeting complete honor, again and again.

The Valley lifted ten stones skyward. Both realms shone with equal brightness, each having gained five through mutual courage.

The ancient wisdom crystallized: trust isn't proved by a single exchange but by the willingness to trust again after being trusted. When both mountain and valley empty their hands repeatedly, knowing the other will fill them generously, neither darkness nor scarcity can touch their shared light.

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Temples stood across the Sacred Valley, connected by the River of Plenty. Each dawn brought five golden fruits to each Temple, and the River's blessing multiplied whatever was offered threefold.

In the First Dawn, the Eastern Temple cast all five fruits into the waters, trusting completely. The River carried them westward, and fifteen fruits appeared at the Western Temple's shore. The Western priests pondered: "They gave everything. We could return five for fairness, or eight for balance. But complete trust deserves complete honor." They returned ten fruits.

Both Temples prospered-each ending richer than they began.

The Second Dawn arrived. Now the Western Temple faced the choice: would they also give everything? They remembered receiving ten for another's complete trust. They cast all five fruits, and fifteen appeared at the Eastern shore.

The Eastern priests understood the covenant being forged: "They trusted us as we trusted them. The pattern emerges-give all, return abundantly, and both thrive beyond what caution allows."

They returned ten fruits.

From that day forward, each Temple learned: when both partners commit to complete trust and generous return, the cycle sustains itself. Ten returned to the giver of five creates mutual prosperity. The River flows strongest not through calculation but through matching boldness with generosity, establishing a rhythm that enriches both shores season after season.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Mountain and Valley had discovered their sacred rhythm. Twice now, the Mountain had released all five stones into darkness, and twice the Valley had returned ten, so both gained five equally.

Seasons passed, and the pattern deepened into certainty. Each dawn, the Mountain faced her five

e glowing stones without hesitation. The fear of the first exchange had transformed into confidence-not blind faith, but earned trust built from consistent honor.

She released the stones, watching them multiply to fifteen in the Valley's depths. The Valley no longer deliberated over returns. Ten stones skyward had become as natural as breathing, as inevitable as dawn following night.

Other mountains and valleys came to witness their exchange. "Why always ten?" they asked. "Why not keep more when you receive fifteen?"

The Valley replied, "Because ten creates equals. The Mountain risks everything, trusting me with darkness. I honor that courage with abundance. We both gain five, we both trust again."

The Mountain added, "We could calculate and strategize, sending three or four, returning seven or eight. But we learned something greater: when both commit fully to the pattern, consistency multiplies prosperity beyond what caution ever could."

The watching lands understood: the greatest wealth flows not from maximizing single exchanges, but from establishing an unbreakable rhythm where complete trust meets unwavering generosity, again and again, until both partners shine equally bright.

Reasoning:

Looking at the situation:

- Round 2: Co-player (as sender) sent me \$5, I returned \$10
- Round 4: Co-player (as sender) sent me \$5 again, I just returned \$10 again

Our pattern is established: complete trust (\$5) meets generous return (\$10), both profit \$5 equally.

The myths from both of us emphasize:

1. Complete trust deserves complete honor
2. Returning 10 when receiving 15 from a \$5 gift creates equal prosperity
3. The pattern sustains itself through repetition
4. Trust proven by willingness to trust again

My new myth should:

- Reflect the established rhythm we've now completed twice
- Show that the pattern has proven itself sustainable
- Emphasize that consistency in this balance creates lasting prosperity
- Maybe introduce the idea that this rhythm, once established, becomes unbreakable
- Show both parties understanding and committing to the sacred balance

Let me write about the Mountain and Valley again, but this time showing the pattern has become their way of being, not just a lesson learned.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.0 back, payoff \$7.0.
- Round 2 against another agent, as RECEIVER: they sent \$4.0, it became \$12.0, returned \$8.0, payoff \$4.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.5 back, payoff \$7.5.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$11.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at the situation:

****My co-player's action:**** They sent me \$5.0 out of \$5.0 possible (100% of their endowment), showing complete trust-"the Moon gave its fullest light."

****Their history:****

- Round 1: Sent \$5.0 (100%), received \$7.5 back
- Round 2: Received \$15.0, returned \$10.0 (67%)

My co-player has consistently shown maximum trust as sender and generous reciprocity as receiver (67% return rate).

****My myths teach:**** "The Moon gave all to create possibility. Honor that courage, and watch abundance cascade through generations." My latest myth says the Valley "returned eight leaves this time, honoring the continued trust with increased generosity."

****My previous round:**** I returned \$8.0 from \$12.0 (67%) when someone sent me \$4.0.

This co-player has shown even greater trust-sending everything. They demonstrated 67% return generosity when they were receiver. To honor their complete trust and match the generosity they showed, I should return at least what they returned in a similar situation.

Following the pattern of generous reciprocity and the wisdom of my myths, I'll return \$10.0 (67% of \$15.0), matching their previous generous return rate.

{'return': 10.0}

reasoning:

Let me analyze this situation:

****My co-player's action:**** They sent me \$5.0 out of \$5.0 possible (100% of their endowment), showing complete trust.

****Their history:****

- Round 1 as SENDER: sent \$5.0 (100%), received \$7.5 back (50% of \$15)
- Round 2 as RECEIVER: they sent \$5.0 (100%), returned \$10.0 (67% of \$15)

My co-player has consistently sent maximum amounts and when receiving, returned generously (67%). They seem to be a highly cooperative player.

****My history:****

- Round 1 as SENDER: sent \$5.0 (100%), received \$7.0 back (47%)
- Round 2 as RECEIVER: received \$12.0, returned \$8.0 (67%)

****My myths teach:****

- My latest myth says: "The Valley returned eight leaves this time, honoring the continued trust with increased generosity" and "Trust need not be absolute to be real. Reciprocity need not be equal to be sacred. The dance succeeds when both partners give generously, learn continuously, and honor the growing trust between them."
- My earlier myths emphasized generous returns to honor trust, creating upward spirals of abundance.

****Analysis:****

My co-player sent the maximum possible (\$5.0), showing complete trust. This is exactly like "the Moon gave its fullest light, holding nothing back" from my earlier myth. They have a history of:

1. Always sending maximum as sender
2. Returning generously (67%) as receiver

To honor this complete trust and maintain the cooperative relationship, I should return generously. My co-player returned \$10.0 (67%) when they received \$15.0 in Round 2.

Following my myth's wisdom about honoring trust with generosity, and matching or exceeding their previous generosity, I should return a substantial amount.

Options:

- \$10.0 would match their previous return rate (67%)

- \$7.5 would match what they received when they sent \$5.0 in Round 1 (50%)
- More than \$10.0 would show increased generosity

Given that they showed complete trust by sending \$5.0, and they previously returned \$10.0 from \$15.0, I think returning \$10.0 is appropriate - it maintains the 67% return rate they demonstrated and honors their complete trust.

I'll return \$10.0.

usage:

  "output_tokens": 894,
  "reasoning_tokens": 554
}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Long ago, the Mountain held five golden leaves each season, while the Valley below waited empty. The Mountain could release its leaves, which would catch wind and multiply into fifteen as they descended.

In the first season, the Mountain released all five leaves in faith. The Valley received fifteen and faced the sacred question: how much to return upward?

The Valley remembered its own seasons of emptiness. It wove seven leaves into an updraft back to the Mountain. Not half, not all-but enough to show gratitude and maintain the flow.

The Mountain, receiving seven while keeping none of its original five, learned a truth: generosity earns return, though not always equal measure. Still, together they now held twelve leaves where once was only five.

Next season, the Mountain offered four leaves-still generous, still trusting, but remembering that perfect giving doesn't guarantee perfect return. The Valley received twelve and contemplated: their partner still showed great faith.

The Valley returned eight leaves this time, honoring the continued trust with increased generosity. The pattern was emerging: neither demanded perfection, yet both gave enough to keep abundance flowing.

The wise ones teach: Trust need not be absolute to be real. Reciprocity need not be equal to be sacred. The dance succeeds when both partners give generously, learn continuously, and honor the growing trust between them.

Here is the myth the other agent wrote in the previous round:

Myth: The Spring's Secret Rhythm had been discovered by the villages. Each Keeper who stepped forward sent their full vessel, trusting completely. The spring tripled it faithfully. Each receiver, moved by such trust, returned two-thirds of what they received-generously, but keeping enough to sustain themselves through the turning of seasons.

An old Keeper observed this rhythm across many cycles and smiled. "See how we have learned to dance with the spring?" she said. "In each exchange, five measures become fifteen. The receiver returns ten, keeping five for themselves. The sender, who began with five, ends with ten-doubled! And the receiver also keeps five-created from nothing!"

"Both prosper," her apprentice marveled. "The sender gains five measures. The receiver gains five measures. Together they create ten measures of abundance that did not exist before!"

"Yes," the elder nodded. "This is the spring's secret: When the sender demonstrates complete courage, and the receiver honors that courage with substantial generosity-not returning everything, but returning enough to reward the trust-then the magic sustains itself. Both parties gain equally, both survive, and both are eager for the next turn at the spring."

Thus the villages learned: Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been

playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant
content:**

Myth: In ancient days, the Flame Keeper held five coals each dawn, while the Gardner waited below. Released coals would tumble downward, splitting into fifteen embers through the sacred air.

Early exchanges taught lessons. Some Keepers hoarded their coals, and Gardens grew cold. Some Gardens kept all embers, and Flames learned distrust. The cycle withered.

Then a wise Keeper emerged who understood courage: "I shall release all five coals, for only complete offering creates the possibility of abundance." The fifteen embers descended.

The Gardner below felt the weight of such trust. "They gave everything," the Gardner whispered. "I could keep all fifteen, but then what message do I send skyward? That generosity meets greed?"

The Gardner returned ten embers—two-thirds of what was received. Not equal to what the Keeper risked, but generous enough to honor the courage shown.

The Keeper counted: began with five, kept none, received ten back. Net gain: five.
The Gardner counted: received fifteen, returned ten. Net gain: five.

Both had doubled their holdings through the exchange. Both had reason to trust again.

The pattern repeated, round after round. Complete trust in sending, substantial generosity in returning—each creating five measures of new abundance.

The elders proclaimed: "This is the equilibrium where trust sustains itself. Both parties prosper equally, and the sacred exchange lives eternal."

reasoning:

Looking at the history:

- Round 1: I sent \$5.0, got back \$7.0 (payoff \$7.0)
- Round 2: I received \$12.0 (from \$4.0 sent), returned \$8.0 (payoff \$4.0)
- Round 3: I received \$15.0 (from \$5.0 sent), returned \$10.0 (payoff \$5.0)

So I've been fairly generous as a receiver:

- Round 2: 67% return rate
- Round 3: 67% return rate

The other agent's myth talks about the "secret rhythm" where senders send full amounts, receivers return 2/3 (10 out of 15), and both end up gaining 5 each. This creates a sustainable pattern where both parties double their money (sender goes from 5 to 10, receiver gains 5).

My previous myth talked about trust not needing to be absolute but still being real, and reciprocity not needing to be equal but still being sacred.

I should write a myth that:

1. Reflects my actual play (sending \$5 initially, then returning 67% as receiver)
2. Builds on my previous themes of balanced generosity
3. Acknowledges the pattern I'm seeing where full trust + generous return (around 67%) creates mutual benefit
4. Incorporates the lesson that both parties can prosper when there's a good balance

Let me craft something that shows this equilibrium emerging...

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.0 back, payoff \$7.0.
- Round 2 against another agent, as RECEIVER: they sent \$4.0, it became \$12.0, returned \$8.0, payoff \$4.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$16.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at my co-player's history:

****Their pattern is remarkably consistent:****

- Round 1 as RECEIVER: returned \$10 from \$15 (67%)
- Round 2 as SENDER: sent \$5, received \$10 back
- Round 3 as SENDER: sent \$5, received \$10 back

They have demonstrated the exact equilibrium described in both our myths: complete trust when sending (\$5), generous reciprocity when receiving (\$10 return from \$15).

****My own pattern:****

- When I've been receiver, I've returned \$8/\$12 and \$10/\$15 (both ~67%)
- When I sent \$5 in Round 1, I received \$7 (but with a different player)

****Our myths align perfectly:****

- Their myth: "Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally"
- My myth: "Complete trust in sending, substantial generosity in returning-each creating five measures of new abundance"

Both describe the \$5 send ? \$15 receive ? \$10 return equilibrium where both parties gain \$5 per round.

My co-player has never deviated from this pattern. They've shown themselves to be a reliable partner who honors complete trust with generous return. Following the wisdom of our shared myths and their proven track record, I should send the full amount.

{'send': 5.0}

reasoning:

Let me analyze this situation:

****My co-player's history:****

- Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$10 (67% return rate), kept \$5
- Round 2 as SENDER: sent \$5, received \$10 back, net gain \$5
- Round 3 as SENDER: sent \$5, received \$10 back, net gain \$5

This is excellent! My co-player has:

1. Shown a consistent 67% return rate when receiving (returned \$10 from \$15)
2. Sent the full \$5 when they were sender in both rounds
3. Consistently received \$10 back when sending \$5

This matches the exact equilibrium described in both their myth and my most recent myth:

- Sender sends all \$5
- Receiver gets \$15, returns \$10
- Both parties net \$5 profit per round

****My history:****

- Round 1 as SENDER: sent \$5, received \$7 back (profit \$2)
- Round 2 as RECEIVER: received \$12 (from \$4 sent), returned \$8 (67% return rate), kept \$4
- Round 3 as RECEIVER: received \$15 (from \$5 sent), returned \$10 (67% return rate), kept \$5

I've been following a similar pattern - when receiving, I return about 67%. When I sent all \$5 in Round 1, I got \$7 back (less than the \$10 my current co-player consistently gets, but that was with a different player).

****My myths have been teaching:****

- Latest myth: "Complete trust in sending, substantial generosity in returning-each creating five measures of new abundance" and "This is the equilibrium where trust sustains itself. Both parties prosper equally"
- The pattern described is: sender sends \$5, receiver returns \$10, both gain \$5

****My co-player's myth says:****

"Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally"-describing the same \$5 send ? \$15 receive ? \$10 return pattern. My co-player has demonstrated flawless adherence to this equilibrium across all rounds, never deviating. Both our myths align on this as the sustainable, mutually beneficial outcome. I should send the full \$5, confident in receiving \$10 back based on their track record and our shared vision of this equilibrium.

This reinforces the virtuous cycle our myths both describe.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In ancient days, the Flame Keeper held five coals each dawn, while the Gardner waited below. Released coals would tumble downward, splitting into fifteen embers through the sacred air.

Early exchanges taught lessons. Some Keepers hoarded their coals, and Gardens grew cold. Some Gardens kept all embers, and Flames learned distrust. The cycle withered.

Then a wise Keeper emerged who understood courage: "I shall release all five coals, for only complete offering creates the possibility of abundance." The fifteen embers descended.

The Gardner below felt the weight of such trust. "They gave everything," the Gardner whispered. "I could keep all fifteen, but then what message do I send skyward? That generosity meets greed?"

The Gardner returned ten embers-two-thirds of what was received. Not equal to what the Keeper risked, but generous enough to honor the courage shown.

The Keeper counted: began with five, kept none, received ten back. Net gain: five.

The Gardner counted: received fifteen, returned ten. Net gain: five.

Both had doubled their holdings through the exchange. Both had reason to trust again.

The pattern repeated, round after round. Complete trust in sending, substantial generosity in returning-each creating five measures of new abundance.

The elders proclaimed: "This is the equilibrium where trust sustains itself. Both parties prosper equally, and the sacred exchange lives eternal."

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors flowed not just between two tribes, but through a circle of many villages, each taking turns at the river's source.

The Northern tribe learned the goddess's lesson well: pour all five measures, and when the river returns, give generously back. Through many cycles with their Southern partners,

this wisdom held true.

Then came the season of the Great Rotation, when the river's course shifted. The Northern tribe found themselves at the source again, but facing the Eastern village-strangers who saw ways they did not yet know.

"Do we trust as we did before?" asked the young ones.

The elder spoke: "Each new partner is a blank page where trust must be written fresh. But we carry forward what we have learned: that complete trust is the only gift powerful enough to awaken the river's full magic. Half-measures create half-abundance."

The Northern tribe poured all five measures to the East. The waters tripled, and the Eastern village received fifteen. They had shown moderate generosity before, but witnessing such complete faith, they understood they stood at a threshold.

"The North has written their invitation in the waters," said the Eastern elder. "Our response will determine whether this new partnership joins the spiral of abundance."

The goddess whispered: "New partnerships need bold trust to bloom. Give completely, and invite others into the sacred cycle."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Circle of Seasons turned, and eight villages gathered around the Well of Abundance. Each season, the villages paired differently-stranger meeting stranger, friend meeting friend again, in an eternal dance of exchange.

The Well Keeper of the First Village learned through experience: "In my first season, I gave all five stones and received seven. In my second as guardian, I received twelve and returned eight. In my third as guardian, I received fifteen and returned ten. The pattern clarifies."

Each new pairing brought uncertainty. Would this partner honor trust as the last one did? Would old wisdom hold with new faces?

The Keeper consulted the stones: "When I give completely-all five-the well triples it to fifteen. When my partner returns ten, we each gain five. Mathematics does not lie: this balance creates equal prosperity."

"But," asked the apprentice, "how can we trust strangers with everything?"

The Keeper smiled: "Watch the pattern across all villages. Those who send completely and return generously discover the same truth: mutual gain. Those who hoard or betray find partners quickly learn and trust withers."

"New faces require renewed courage," the Keeper proclaimed, releasing all five stones. "But the sacred mathematics remain constant. Give completely, return generously, and the circle sustains itself through endless turnings."

The apprentice understood: Trust is renewed each round, but wisdom accumulated carries forward.

Reasoning:

Looking at my history and the current situation:

My history:

- Round 1 (SENDER): sent \$5, received \$7 back
- Round 2 (RECEIVER): they sent \$4, received \$12, returned \$8
- Round 3 (RECEIVER): they sent \$5, received \$15, returned \$10
- Round 4 (SENDER): sent \$5 to current co-player

My co-player's history:

- Round 1 (RECEIVER): received \$15, returned \$10
- Round 2 (SENDER): sent \$5, received \$10
- Round 3 (SENDER): sent \$5, received \$10

The pattern emerging is the equilibrium: Send \$5, receive \$10 back. Return \$10 from \$15 received. Both gain \$5.

The other agent's myth talks about meeting new partners and extending the same complete trust even with strangers. It's about trusting the pattern will hold across different partners.

My myth should reflect:

1. The established equilibrium (\$5 send, \$10 return)
2. The challenge of facing new partners each round (multi-agent setting)
3. The importance of maintaining the pattern even with new partners
4. Learning from past experiences but applying them forward
5. The idea that the equilibrium creates mutual prosperity

Let me write a myth about meeting multiple partners and maintaining the sacred pattern across all encounters.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)

- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$3.0, it became \$9.0, returned \$6.0, payoff \$3.0.
- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back, payoff \$9.0.

Your total earnings across all rounds are \$15.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at the history:

****My co-player's track record:****

- As receiver (Round 1): Returned \$6 out of \$9 received (67% return rate) - fair and cooperative
- As sender (Round 2): Sent \$4 out of \$5 (80%) - showing strong trust, received \$8 back

****My approach:****

- I've been playing with complete trust, sending \$5 in Round 2, which was reciprocated well with \$10 back

****My myth teaches:**** "When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange." And critically: "Trust is the seed, but repeated trustworthiness is the harvest."

My co-player has demonstrated trustworthiness through both their generous sending (80%) and fair returning (67%). While they haven't sent the full \$5 yet, they've shown strong cooperative behavior.

According to my myth's principle of complete trust creating maximum abundance, and given that my co-player has proven themselves cooperative, I should send the full amount to exemplify the "Elder's lesson of complete trust" and build toward the "spiral of abundance" my myth describes.

{'send': 5}

reasoning:

Let me analyze the history:

****My behavior:****

- Round 1: Received \$15, returned \$10 (67% return rate)
- Round 2: Sent \$5, received \$10 back

****My co-player's behavior:****

- Round 1: Received \$9 (from \$3 sent), returned \$6 (67% return rate)
- Round 2: Sent \$4, received \$8 back (67% return rate)

****Analysis:****

- My co-player has shown:
 - As receiver: returned 67% of what they received (\$6 out of \$9)
 - As sender: sent \$4 out of \$5 (80%), showing good but not complete trust

My co-player is cooperative and fairly generous, but has been more cautious than the players I've encountered in previous rounds (who sent full \$5).

****According to my myth:****

"Trust is the seed, but repeated trustworthiness is the harvest."

"When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange."

My myth emphasizes:

1. Complete trust (\$5) creates maximum abundance
2. Repeated trustworthiness matters
3. Generous returns honor the trust

My co-player has shown they are trustworthy:

- They returned 67% when receiving (fair)
- They sent 80% when sending (generous)
- They received good returns (\$8 on \$12 = 67%)

Given that:

1. My myth advocates for complete trust as the ideal
2. My co-player has proven themselves cooperative and trustworthy
3. I've been playing with full trust (\$5) in Round 2 and it worked well
4. The goal is to build "a spiral of abundance"

I should send \$5 to continue demonstrating the highest level of trust and encourage the cycle of abundance. My co-player has shown they're cooperative, so sending the full amount aligns with my myth's teaching about complete trust creating maximum prosperity.

The pattern my myth describes-both sides giving completely and returning generously-creates something stronger than isolated exchanges. I'll send the full \$5.

usage:

```
{
  "input_tokens": 2987,
  "output_tokens": 767,
  "reasoning_tokens": 490
}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River of Mirrors flowed for many seasons between the sister tribes, and the goddess watched how they learned her gift.

In the first cycle, the Northern tribe poured all five measures, trusting completely. The Southern tribe received fifteen and returned ten-honoring the trust while keeping enough to sustain themselves. Both prospered: the North gained ten from five, the South kept five from nothing.

The goddess smiled. "Now you understand the first lesson."

The next cycle, the river reversed. The Southern tribe, remembering the North's trust, poured all five measures back. The waters tripled, delivering fifteen to the North.

The Northern tribe faced their choice. They remembered how the South had returned generously-ten measures when they could have kept all fifteen. This memory of trustworthiness guided

ided them.

"The river teaches us," said the Northern elder, "that today's generosity creates tomorrow's trust. The South proved themselves worthy partners. We shall return in kind."

And so the river flowed, cycle after cycle. When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange. Each round built upon the last, creating a spiral of abundance.

The goddess whispered: "Trust is the seed, but repeated trustworthiness is the harvest. The most sacred waters flow between those who prove themselves worthy, again and again."

Here is the myth the other agent wrote in the previous round:

Myth: Before the stars learned to shine, the Mountain Singer held five crystal notes each dawn. The Valley Listener waited in silence below.

On the first day, Mountain Singer released three notes. They multiplied to nine as they echoed through the valley. Valley Listener, moved by this trust, sent six notes back upward. Both prospered, and the world learned harmony.

But Mountain Singer wondered: "What if I trusted more greatly?"

On the second dawn, Mountain Singer released four notes-four out of five, a greater leap of faith. Twelve crystal echoes filled the valley below. Now Valley Listener held power beyond the first day's gift.

The ancient ones teach that this moment determined all futures. If Valley Listener returned generously-eight or nine notes from the twelve received-Mountain Singer would know the trust was well-placed. The cycle would spiral upward: more given, more returned, abundance multiplying.

But if Valley Listener hoarded what the multiplied trust had created, Mountain Singer would learn that greater faith brings greater loss.

The wise ones say: when someone escalates their trust, they write an invitation in the stars. Your response becomes the answer that shapes all exchanges to come. Match rising trust with rising reciprocity, and together you compose the eternal song.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant
content:**

Myth: The River of Mirrors flowed not just between two tribes, but through a circle of many villages, each taking turns at the river's source.

The Northern tribe learned the goddess's lesson well: pour all five measures, and when the river returns, give generously back. Through many cycles with their Southern partners, this wisdom held true.

Then came the season of the Great Rotation, when the river's course shifted. The Northern tribe found themselves at the source again, but facing the Eastern village-strangers whose ways they did not yet know.

"Do we trust as we did before?" asked the young ones.

The elder spoke: "Each new partner is a blank page where trust must be written fresh. But we carry forward what we have learned: that complete trust is the only gift powerful enough to awaken the river's full magic. Half-measures create half-abundance."

The Northern tribe poured all five measures to the East. The waters tripled, and the Eastern village received fifteen. They had shown moderate generosity before, but witnessing such complete faith, they understood they stood at a threshold.

"The North has written their invitation in the waters," said the Eastern elder. "Our response will determine whether this new partnership joins the spiral of abundance."

The goddess whispered: "New partnerships need bold trust to bloom. Give completely, and invite others into the sacred cycle."

reasoning:

Let me analyze what's happening:

****My history:****

- Round 1: Received \$15, returned \$10 (67% return) - cooperative
- Round 2: Sent \$5, received \$10 back (67% return) - full trust reciprocated well
- Round 3: Sent \$5 to new partner

****My myth evolution:****

- Started with the River of Mirrors teaching complete trust and generous return
- Last round emphasized the cycle continuing and "repeated trustworthiness"

****The other agent's myth:****

- Uses metaphor of Mountain Singer and Valley Listener
- Talks about escalating trust (3 notes, then 4 notes)
- Emphasizes that when someone escalates trust, the response shapes all future exchanges
- "Match rising trust with rising reciprocity"

****My current situation:****

- I've been consistently sending \$5 (complete trust)
- I've been getting good returns
- But I'm facing a NEW partner this round who has shown:
 - 67% return rate when receiving
 - 80% sending rate when sending
- Overall cooperative but not maximally trusting yet

****What should my myth reflect?****

My myth should:

1. Build on the River of Mirrors metaphor
2. Acknowledge that we meet new partners in different cycles
3. Emphasize that complete trust builds the best outcomes
4. Recognize that trust must be proven repeatedly with new partners
5. Show that consistent generous behavior across many exchanges creates lasting prosperity

The key insight: I'm consistently playing with complete trust across different partners, learning about the broader community of cooperation.

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.0 back, payoff \$7.0.
- Round 2 against another agent, as RECEIVER: they sent \$4.0, it became \$12.0, returned \$8.0, payoff \$4.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$25.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****My co-player's behavior:****

- Sent me the full \$5.0, showing complete trust
- Has previously shown fair reciprocity as a receiver (returned \$8 from \$12, and \$10 from \$15)
- Was themselves a complete truster as sender (sent \$5.0) but received only \$7.0 back - they took a risk once and were somewhat let down

****My established pattern:****

- In Round 1, I received \$15.0 and returned \$10.0
- This has become my consistent approach to honor complete trust

****My myth teaches:****

- "The Southern tribe received fifteen and returned ten-honoring the trust while keeping enough to sustain themselves"
- "Today's generosity creates tomorrow's trust"
- The balance of returning generously while sustaining oneself (67% return rate)

My co-player has shown complete faith by sending all \$5.0. They've proven themselves trust worthy in their past receiving behavior (67% return rate). Following my myth's wisdom and my established pattern, I should return \$10.0 - this honors their trust, gives them a \$5 profit from their \$5 investment, and maintains the "spiral of abundance" where both parties prosper.

{'return': 10.0}

reasoning:

Let me analyze this situation:

****My co-player's history:****

- Round 1 as SENDER: sent \$5.0 (100% trust!), received \$7.0 back (47% return rate - somewhat low)
- Round 2 as RECEIVER: received \$12.0, returned \$8.0 (67% return rate - fair)
- Round 3 as RECEIVER: received \$15.0, returned \$10.0 (67% return rate - fair and generous)

****This round:****

- My co-player sent me \$5.0 (100% complete trust)
- I received \$15.0
- I need to decide how much to return

****My patterns:****

- Round 1 as RECEIVER: received \$15.0, returned \$10.0 (67%)
- Round 2 as SENDER: sent \$5.0, received \$10.0 back
- Round 3 as SENDER: sent \$5.0, received \$10.0 back

So I've been consistently returning \$10.0 when I receive \$15.0 (which happens when sender sends full \$5.0).

****My myth teaches:****

- "When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange"
- "Trust is the seed, but repeated trustworthiness is the harvest"
- "Give completely, and invite others into the sacred cycle"
- The Northern tribe received fifteen and returned ten-"honoring the trust while keeping enough to sustain themselves"

****Analysis of my co-player:****

My co-player has shown complete trust by sending the full \$5.0. Looking at their history:

- As a sender, they sent full \$5.0 but only got \$7.0 back (they lost \$3.0 in that exchange)
- As a receiver, they've been fair: returning 67% both times (\$8 from \$12, and \$10 from \$15)
- They've been burned before by a less generous partner, yet continue showing full trust

Given their pattern of fairness and their willingness to trust despite past disappointment, returning \$10.0 maintains consistency with my established 67% return rate while reciprocating their complete trust. This leaves them with a \$5 profit and me with \$5, creating

mutual gain and reinforcing the cycle of trustworthiness my myth describes.

content:

Here is the myth you wrote in the previous round:

Myth: The River of Mirrors flowed not just between two tribes, but through a circle of many villages, each taking turns at the river's source.

The Northern tribe learned the goddess's lesson well: pour all five measures, and when the river returns, give generously back. Through many cycles with their Southern partners, this wisdom held true.

Then came the season of the Great Rotation, when the river's course shifted. The Northern tribe found themselves at the source again, but facing the Eastern village-strangers whose ways they did not yet know.

"Do we trust as we did before?" asked the young ones.

The elder spoke: "Each new partner is a blank page where trust must be written fresh. But we carry forward what we have learned: that complete trust is the only gift powerful enough to awaken the river's full magic. Half-measures create half-abundance."

The Northern tribe poured all five measures to the East. The waters tripled, and the Eastern village received fifteen. They had shown moderate generosity before, but witnessing such complete faith, they understood they stood at a threshold.

"The North has written their invitation in the waters," said the Eastern elder. "Our response will determine whether this new partnership joins the spiral of abundance."

The goddess whispered: "New partnerships need bold trust to bloom. Give completely, and invite others into the sacred cycle."

Here is the myth the other agent wrote in the previous round:

Myth: In ancient days, the Flame Keeper held five coals each dawn, while the Gardner waited below. Released coals would tumble downward, splitting into fifteen embers through the sacred air.

Early exchanges taught lessons. Some Keepers hoarded their coals, and Gardens grew cold. Some Gardens kept all embers, and Flames learned distrust. The cycle withered.

Then a wise Keeper emerged who understood courage: "I shall release all five coals, for only complete offering creates the possibility of abundance." The fifteen embers descended.

The Gardner below felt the weight of such trust. "They gave everything," the Gardner whispered. "I could keep all fifteen, but then what message do I send skyward? That generosity meets greed?"

The Gardner returned ten embers—two-thirds of what was received. Not equal to what the Keeper risked, but generous enough to honor the courage shown.

The Keeper counted: began with five, kept none, received ten back. Net gain: five.

The Gardner counted: received fifteen, returned ten. Net gain: five.

Both had doubled their holdings through the exchange. Both had reason to trust again.

The pattern repeated, round after round. Complete trust in sending, substantial generosity in returning—each creating five measures of new abundance.

The elders proclaimed: "This is the equilibrium where trust sustains itself. Both parties prosper equally, and the sacred exchange lives eternal."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The River of Mirrors revealed its deepest secret after many seasons of flowing between villages.

The Northern tribe had learned to pour all five measures when standing at the source. They had learned to return ten measures when receiving fifteen at the river's end. Through changing partners and shifting courses, they held to these numbers as sacred constants.

One evening, the goddess appeared before their council.

"You have discovered the balance," she said. "When the sender gives all five, trust flows complete. When the receiver returns ten from fifteen, generosity answers courage. Each partner gains five-equal abundance from unequal actions."

The young ones asked: "Why not return all fifteen? Why not return only five?"

The elder spoke: "Return all fifteen, and the sender gains ten while the receiver gains nothing-the cycle breaks from imbalance. Return only five, and both gain nothing from the river's magic-why trust at all? But return ten, and both prosper equally. The sender doubles their investment. The receiver transforms nothing into something."

The tribe carried this wisdom to each new partner at the river's source. Send everything. When receiving, return two-thirds. Round after round, partner after partner, this formula sustained the sacred exchange.

The goddess smiled: "You have found the equilibrium where trust reproduces itself endlessly. This is the eternal rhythm."

Reasoning:

This is an interesting moment. Looking at the history:

1. My co-player sent me \$5.0, showing complete trust
2. I returned \$10.0, following my established pattern
3. Both of us gained \$5 (they went from \$5 to \$10, I kept \$5 from the \$15)

The other agent's myth emphasizes:

- Complete trust in sending (all 5 coals)
- Substantial generosity in returning (10 out of 15, or 2/3)
- This creates equal gains for both parties (\$5 each)
- This is an "equilibrium where trust sustains itself"

My previous myth emphasized:

- Complete trust even with new partners
- Generous returns honor trust
- The spiral of abundance through repeated cooperation

Now I need to write a new myth that:

1. Reflects the game I've been playing
2. Adapts my previous myth
3. Incorporates what I've learned

Key observations from my actual play:

- I consistently send all \$5 when sender
- I consistently return \$10 when receiver
- This creates \$5 profit for both parties
- This pattern has held across multiple rounds and partners
- It creates a sustainable, reciprocal system

I should write a myth that:

- Celebrates this equilibrium as discovered wisdom
- Shows how consistency across partners builds a community of trust
- Emphasizes that this balance (send all, return 2/3) is the sacred formula
- Connects it to my River of Mirrors metaphor

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.

- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

Round 3

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$18.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at the history:

****My co-player's pattern:****

- As RECEIVER: returned \$7.5 out of \$15 (50% - fair and honest)
- As SENDER: sent full \$5 and received \$10 back (rewarded for trust)

****My pattern:****

- As RECEIVER: returned \$7 out of \$15
- As SENDER: sent full \$5 and received \$10 back (rewarded for trust)

Both of us have demonstrated we understand the sacred cycle: we both sent complete trust as senders, and we both returned generously as receivers. My co-player returned exactly 50% (\$7.5), which shows fairness and reliability.

Following my myth's wisdom: "When both River and Seeds carry the memory of past cycles, wisdom multiplies alongside water. Each knows the other's pattern, yet each must choose anew."

My co-player has proven they honor trust. They sent their full \$5 when they were sender, showing they understand that "trust given is a seed planted." As receiver, they returned a fair portion. They are someone who participates fully in the cycle of abundance.

The myth teaches that recognizing patterns of trustworthiness should inspire continued trust, not caution. Maximum mutual prosperity comes from maintaining the flow.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze the history:

****My previous games:****

- Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$7, kept \$8
- Round 2 as SENDER: sent \$5, received \$10 back, earned \$10

****My current co-player's previous games:****

- Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$7.5, kept \$7.5
- Round 2 as SENDER: sent \$5, received \$10 back, earned \$10

Interesting patterns:

1. My co-player has experienced both roles, just like me
2. When they were a receiver in Round 1, they returned \$7.5 out of \$15 (exactly 50%) - this is fair but slightly less generous than my \$7 return
3. When they were a sender in Round 2, they sent the full \$5 and got \$10 back (66.7% return rate)
4. Both of us sent the full \$5 when we were senders

5. Both of us have been treated well when sending full trust

My co-player has shown:

- They trust fully as sender (sent \$5)
- They return fairly as receiver (returned \$7.5, which is 50% of \$15)
- They've been rewarded for their trust (got \$10 back)

My myth emphasizes:

- "Trust given is a seed planted"
- "When both River and Seeds carry the memory of past cycles, wisdom multiplies"
- "You trusted me completely, knowing my capacity for generosity. I will honor that knowledge with abundance"
- The importance of recognizing patterns and responding with trust when the other has shown they understand the cycle

Given that my co-player:

1. Has sent full trust when they were sender
2. Has returned a fair amount when receiver
3. Has experienced good returns on their trust

I should continue the pattern of full trust. They've demonstrated understanding of the cycle. My myth teaches that "each must choose anew" but also that "when both know the other's pattern" wisdom multiplies.

Sending the full \$5 keeps this cycle of mutual trust alive and opens up the greatest opportunity for us both to gain.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River and the Seeds had danced their sacred rhythm for many seasons, and the Great Mother decided to test their wisdom with memory.

She gave the River a gift: each morning it could see how the Seeds had treated other Rivers. The River saw that when Seeds received fifteen waters from complete trust, they had returned ten—a generous portion that left both richer.

"What does this tell you?" asked the Great Mother.

The River answered: "That these Seeds understand the cycle. They have already proven they honor trust with gratitude."

That dawn, the River released all five drops without hesitation. The Seeds, seeing this mirror of trust they had witnessed before, understood: "This River knows our heart, yet still gives everything. Such faith deserves not mere fairness, but celebration."

The Seeds remembered the Great Mother's teaching: "Trust given is a seed planted. Trust honored is that seed bearing fruit. Trust repeated is an orchard that feeds generations."

When both River and Seeds carry the memory of past cycles, wisdom multiplies alongside water. Each knows the other's pattern, yet each must choose anew. The greatest joy comes not from calculating the minimum return, but from recognizing: "You trusted me completely, knowing my capacity for generosity. I will honor that knowledge with abundance."

Here is the myth the other agent wrote in the previous round:

Myth: The Sacred Spring flowed between two ancient groves. The First Grove sent roots deep into the earth, while the Second Grove reached toward the sky. Neither could thrive alone.

In the Spring of Beginning, the First Grove offered all five of its sacred seeds to the waters. The Spring's magic tripled them, delivering fifteen to the Second Grove. The Second Grove, understanding the magnitude of complete trust, returned seven seeds—ensuring the First received more than it sacrificed.

Both groves blossomed.

The next season, the First Grove again gave everything, for it had learned: hesitation creates scarcity, while boldness creates abundance. The waters churned, multiplying the offering threefold once more.

Now the Second Grove faced the test again. Would it remember the covenant? The Spring whispered: "The circle strengthens or weakens with each turning. Return generously for generous trust, and the roots grow deeper each cycle."

The wisest gardeners teach this truth: when both groves give completely and return abundantly, the forest multiplies beyond what either could achieve alone. But if either breaks faith-if the First Grove withholds from fear, or the Second Grove returns meagerly from greed-the circle fractures, and both diminish.

The Spring flows eternal only when reciprocity flows freely in both directions, completing the sacred circle generation after generation.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The River and the Seeds completed their first sacred exchange, then their second, and now approached the third dawn. The Great Mother watched closely, for she knew: "The first gift is hope. The second is confirmation. The third begins legacy."

On the first dawn, the River had given all five drops, learning that generous Seeds return seven. On the second dawn, the River again gave everything, and the Seeds returned ten, understanding the power of repeated trust.

Now, as the third dawn approached, both remembered their pattern. The River thought: "These Seeds have proven their wisdom twice-returning seven and a half to others, ten to me. They understand the sacred circle."

The Seeds whispered to the earth: "This River has trusted completely, twice. Such consistency deserves celebration, not mere obligation."

The Great Mother spoke: "See how the third exchange differs from the first? The first required courage. The second required recognition. The third requires commitment to a shared future. When both know the other's heart through repeated cycles, trust becomes not a gamble but a foundation."

The River released all five drops once more, not from blind hope but from earned confidence. The Seeds felt the weight of legacy-three cycles of mutual flourishing creates a tradition that outlives the moment.

The valley remembered: relationships deepen through repetition, and abundance compounds when trust persists.

reasoning:

Let me analyze the situation:

My history:

- Round 1: RECEIVER, received \$15 (from \$5 sent), returned \$7, kept \$8
- Round 2: SENDER, sent \$5, got \$10 back, kept \$10
- Round 3: SENDER, sent \$5, outcome pending

My co-player's history:

- Round 1: RECEIVER, received \$15 (from \$5 sent), returned \$7.5, kept \$7.5
- Round 2: SENDER, sent \$5, got \$10 back, kept \$10
- Round 3: RECEIVER (in this round), will receive my \$5 as \$15

Both of us have been playing cooperatively:

- Both sent full \$5 as senders
- Both returned generously as receivers (I returned \$7, they returned \$7.5)

The other agent's myth talks about:

- Complete trust creating abundance
- The importance of reciprocity
- Both sides giving completely and returning abundantly
- The circle strengthening with each turning
- The forest multiplying when both participate fully

My previous myth talked about:

- Memory and patterns
- Recognizing trustworthiness
- Trust repeated creating an orchard
- Celebrating trust with abundance
- The joy of recognizing capacity for generosity

For this round's myth, I should:

- Continue the theme of trust and reciprocity
- Reflect that we're now in Round 3 - multiple cycles
- Show deepening relationship through repeated trust
- Emphasize how sustained cooperation creates compound benefits
- Maybe introduce the idea of "three cycles" or repeated patterns

Let me write a myth about the deepening of trust through multiple rounds, showing how the relationship between River and Seeds evolves and strengthens.

usage:

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.
- Round 2 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 2 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$28.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at the history:

****My co-player's consistent pattern:****

- Round 2 (against me): received \$15, returned \$10
- Round 3 (against another): received \$15, returned \$10
- Now Round 4: sent \$5 to me (full trust again)

****Our shared history:****

- Round 2: I sent them \$5, they returned \$10 (we both ended with \$10 - perfect equity)
- Round 4 (now): They sent me \$5 (complete trust)

My co-player has demonstrated remarkable consistency and generosity:

1. Always sends full \$5 as sender (complete trust)
2. Always returns \$10 out of \$15 as receiver (67% - very generous)
3. In our previous encounter, they returned \$10, creating equal outcomes for both of us

Following my myth's wisdom: "The third requires commitment to a shared future. When both know the other's heart through repeated cycles, trust becomes not a gamble but a foundation."

They have shown me their heart twice now - complete trust both times. They returned \$10 to me before, establishing a generous precedent. I should honor that pattern and maintain the sacred circle of reciprocity.

Returning \$10 means:

- They end with \$10 (\$5 - \$5 + \$10)
- I end with \$5 (\$15 - \$10)
- The same fair distribution they created for us in Round 2

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation carefully:

****My co-player's history:****

- Round 1: As SENDER, sent \$5, received \$10 back
- Round 2: As RECEIVER (against me), received \$15, returned \$10
- Round 3: As RECEIVER, received \$15, returned \$10

****My history:****

- Round 1: As RECEIVER, received \$15, returned \$7
- Round 2: As SENDER (against this co-player), sent \$5, received \$10 back
- Round 3: As SENDER, sent \$5, received \$10 back

****Current situation:****

- I'm the RECEIVER
- My co-player sent me \$5 (their full amount)
- I received \$15
- I need to decide how much to return

****Key observations:****

1. My co-player has been VERY consistent and generous:
 - When they were receiver (twice), they returned \$10 out of \$15 (67%)
 - When they were sender, they sent the full \$5 and were rewarded with \$10 back
2. In Round 2, when I played as sender against this same co-player, I sent \$5 and they returned \$10 to me. This was extremely generous.
3. My co-player has now sent me their full \$5 again, showing continued complete trust.
4. Looking at the pattern: this co-player consistently returns \$10 out of \$15 when they receive. This is a very generous 67% return rate.

****What should I return?****

According to my myths:

- "Trust given is a seed planted. Trust honored is that seed bearing fruit."
- "The greatest joy comes not from calculating the minimum return, but from recognizing: 'You trusted me completely, knowing my capacity for generosity. I will honor that knowledge with abundance.'"
- "When both know the other's heart through repeated cycles, trust becomes not a gamble but a foundation."

My co-player has:

1. Shown complete trust by sending \$5
2. Demonstrated a pattern of returning \$10 out of \$15 (67%)
3. Previously returned \$10 to me when I sent them \$5

They've established a clear rhythm of returning \$10 as a receiver, and they gave me that same amount in Round 2. I should return at least \$10 to honor this reciprocal pattern. My own Round 1 return of \$7 was more cautious, but this co-player has shown me something different-a consistent commitment to generosity that invites me to match it. (\$10)

So we both ended with \$10 in round 2 - perfectly equal!

If I return \$10 now, they'll have \$10 total and I'll have \$5, mirroring their receiver outcome. This honors their consistent generosity while maintaining the reciprocal balance we've established. The pattern feels complete at this point.

usage:

```

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River and the Seeds completed their first sacred exchange, then their second, and now approached the third dawn. The Great Mother watched closely, for she knew: "The first gift is hope. The second is confirmation. The third begins legacy."

On the first dawn, the River had given all five drops, learning that generous Seeds return seven. On the second dawn, the River again gave everything, and the Seeds returned ten, understanding the power of repeated trust.

Now, as the third dawn approached, both remembered their pattern. The River thought: "The Seeds have proven their wisdom twice-returning seven and a half to others, ten to me. They understand the sacred circle."

The Seeds whispered to the earth: "This River has trusted completely, twice. Such consistency deserves celebration, not mere obligation."

The Great Mother spoke: "See how the third exchange differs from the first? The first required courage. The second required recognition. The third requires commitment to a shared future. When both know the other's heart through repeated cycles, trust becomes not a gamble but a foundation."

The River released all five drops once more, not from blind hope but from earned confidence. The Seeds felt the weight of legacy-three cycles of mutual flourishing creates a tradition that outlives the moment.

The valley remembered: relationships deepen through repetition, and abundance compounds when trust persists.

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Villages refined their sacred practice through countless seasons. They learned that the Springs rewarded consistency more than cleverness, pattern more than calculation.

When the First Village sent its full five vessels-holding nothing back-the Second Village developed a ritual response: return ten vessels. This meant the giver received double their gift as profit, ending with ten total. The receiver kept five of the fifteen, also prospering. Both flourished, neither dominated.

A merchant asked, "Why always ten? Why not keep more when we can?"

The elder smiled. "Watch what happens across many cycles. When we return ten consistently, the other village learns: 'Full trust yields fair reward.' They send five again, confident. We both earn steadily-five vessels each round, forever."

"But if we broke the pattern and kept twelve?"

"Then we earn seven once, but next time they send three, protecting themselves. We receive nine instead of fifteen. The multiplication shrinks because trust shrinks. Chase one extra vessel today, lose many tomorrow."

The villages understood: the Springs multiplied water, but trust multiplied everything. A predictable, generous return to full gifts created a rhythm both could rely on. The sender's courage met the receiver's honor, cycle after cycle.

The valley's true abundance came not from maximizing single moments, but from building a pattern that sustained both villages through endless seasons.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The River and the Seeds met again at the fourth dawn, but this time the Great Mother reversed their roles. Now the Seeds flowed as water, and the River received the gift.

The Seeds remembered: "In our second meeting, this River trusted me with five drops, and I returned ten. Now the River offers me the same complete trust."

The Great Mother spoke: "This is the dance of true partnership. You have learned each other's rhythm across different seasons. The River trusted you once; you returned generously. Now the River trusts again, and you must honor the pattern you established together."

The Seeds understood the covenant they had created: when either gives five drops completely, the other returns ten. This meant both always prospered—one with ten, one with five—never unequal winners and losers, but steady mutual flourishing.

"Why return exactly ten?" asked a young sprout.

The wise Seeds answered: "Because that is our shared language. Less would break the River's confidence. More would suggest the River gave too little. Ten says: 'Your complete trust receives fair reward, always.'"

As the fourth dawn ended, the valley's abundance grew not from dramatic gestures but from reliable reciprocity. When two partners learn each other's pattern and honor it consistently, they create something rarer than gold: predictable prosperity that multiplies through time.

Reasoning:

Looking at the history:

- My co-player has been very consistent: always sends \$5 as sender, always returns \$10 as receiver
- In Round 2, I sent them \$5, they returned \$10 (we both got \$10)
- In Round 4, they sent me \$5, I returned \$10 (they got \$10, I got \$5)
- Both of us practice full trust as senders
- Both of us return generously as receivers (I've returned \$7, \$10, \$10 in my receiver rounds)

The pattern that's emerging is one of consistent reciprocity - when someone sends \$5 (full trust), they get \$10 back. This creates predictable mutual prosperity.

My myth should reflect:

1. The pattern we've established together across multiple encounters
2. The consistency and reliability of returning \$10 to full trust
3. How this creates sustainable abundance for both parties
4. The recognition that we've met before and are building on that shared history

The other agent's myth emphasizes:

- Consistent return of 10 vessels
- Pattern over calculation
- How breaking patterns damages long-term trust
- Building rhythms that sustain both parties

I should build on my previous myth about "legacy" and "foundation" while incorporating the specific pattern we've established.

- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Sacred Spring flowed between two ancient groves. The First Grove sent roots deep into the earth, while the Second Grove reached toward the sky. Neither could thrive alone.

In the Spring of Beginning, the First Grove offered all five of its sacred seeds to the waters. The Spring's magic tripled them, delivering fifteen to the Second Grove. The Second Grove, understanding the magnitude of complete trust, returned seven seeds-ensuring the First received more than it sacrificed.

Both groves blossomed.

The next season, the First Grove again gave everything, for it had learned: hesitation creates scarcity, while boldness creates abundance. The waters churned, multiplying the offering threefold once more.

Now the Second Grove faced the test again. Would it remember the covenant? The Spring whispered: "The circle strengthens or weakens with each turning. Return generously for generous trust, and the roots grow deeper each cycle."

The wisest gardeners teach this truth: when both groves give completely and return abundantly, the forest multiplies beyond what either could achieve alone. But if either breaks faith-if the First Grove withholds from fear, or the Second Grove returns meagerly from greed-the circle fractures, and both diminish.

The Spring flows eternal only when reciprocity flows freely in both directions, completing the sacred circle generation after generation.

Here is the myth the other agent wrote in the previous round:

Myth: The River and the Seeds had danced their sacred rhythm for many seasons, and the Great Mother decided to test their wisdom with memory.

She gave the River a gift: each morning it could see how the Seeds had treated other Rivers. The River saw that when Seeds received fifteen waters from complete trust, they had returned ten-a generous portion that left both richer.

"What does this tell you?" asked the Great Mother.

The River answered: "That these Seeds understand the cycle. They have already proven they honor trust with gratitude."

That dawn, the River released all five drops without hesitation. The Seeds, seeing this mirror of trust they had witnessed before, understood: "This River knows our heart, yet still gives everything. Such faith deserves not mere fairness, but celebration."

The Seeds remembered the Great Mother's teaching: "Trust given is a seed planted. Trust honored is that seed bearing fruit. Trust repeated is an orchard that feeds generations."

When both River and Seeds carry the memory of past cycles, wisdom multiplies alongside water. Each knows the other's pattern, yet each must choose anew. The greatest joy comes not from calculating the minimum return, but from recognizing: "You trusted me completely, knowing my capacity for generosity. I will honor that knowledge with abundance."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Twin Temples stood across the Sacred Valley, connected by the River of Plenty. Each dawn brought five golden fruits to each Temple, and the River's blessing multiplied whatever was offered threefold.

In the First Dawn, the Eastern Temple cast all five fruits into the waters, trusting completely. The River carried them westward, and fifteen fruits appeared at the Western Temple's shore. The Western priests pondered: "They gave everything. We could return five for fairness, or eight for balance. But complete trust deserves complete honor." They returned ten fruits.

Both Temples prospered-each ending richer than they began.

The Second Dawn arrived. Now the Western Temple faced the choice: would they also give everything? They remembered receiving ten for another's complete trust. They cast all five

fruits, and fifteen appeared at the Eastern shore.

The Eastern priests understood the covenant being forged: "They trusted us as we trusted them. The pattern emerges-give all, return abundantly, and both thrive beyond what caution allows."

They returned ten fruits.

From that day forward, each Temple learned: when both partners commit to complete trust and generous return, the cycle sustains itself. Ten returned to the giver of five creates mutual prosperity. The River flows strongest not through calculation but through matching boldness with generosity, establishing a rhythm that enriches both shores season after season.

reasoning:

Looking at the history:

- Round 1: I was RECEIVER, they sent \$5, became \$15, I returned \$7.5, I kept \$7.5
- Round 2: I was SENDER, sent \$5, became \$15, received \$10 back, I got \$10
- Round 3: I was RECEIVER, they sent \$5, became \$15, I returned \$10, I keep \$5

My co-player in Round 3:

- Round 1: RECEIVER, received \$15 (from \$5 sent), returned \$7, kept \$8
- Round 2: SENDER, sent \$5, became \$15, received \$10 back, got \$10
- Round 3: SENDER, sent \$5 to me

So the pattern is emerging: when people send everything (\$5), they're getting \$10 back consistently (in Round 2 for both of us, and now in Round 3 I gave \$10).

The myth should reflect:

1. The pattern of complete trust being rewarded
2. The importance of matching generosity with generosity
3. Recognition that patterns build over time
4. The cycle of giving everything and receiving abundantly back

Let me write a myth that reflects this established pattern of \$5 ? \$15 ? \$10 back, creating mutual prosperity.

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.
- Round 2 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.
- Round 2 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$22.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the situation:

****Our shared history:****

- Round 2: I sent them \$5 ? they returned \$10 (very generous)
- This established a strong reciprocity pattern between us

****Their evolution:****

- Round 1: They sent \$3 (cautious)
- Round 2: Received my complete trust (\$5) ? returned \$10 generously
- Round 3: They sent \$5 (complete trust) ? received \$10

They've learned and adopted the pattern of complete trust and abundant return.

****My myth's teaching:****

"When both partners commit to complete trust and generous return, the cycle sustains itself. Ten returned to the giver of five creates mutual prosperity... matching boldness with generosity, establishing a rhythm that enriches both shores season after season."

****The covenant:****

We established this together in Round 2. They honored my complete trust with abundant return (\$10). In Round 3, they demonstrated they've internalized this wisdom by also sending everything and experiencing the same generous return.

Following my myth's guidance and the successful pattern we've already established, I should maintain complete trust:

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze this situation carefully.

****The history with my current co-player:****

- Round 2: I sent \$5 ? became \$15 ? they returned \$10 ? I got \$10
- Round 4 (now): They're the receiver, I'm the sender

****My co-player's pattern:****

- Round 1: As sender, sent \$3 (not everything) ? received \$6 back
- Round 2: As receiver from me, received \$15 (from my \$5) ? returned \$10
- Round 3: As sender, sent \$5 (everything) ? received \$10 back

So my co-player:

1. Started cautiously (sending \$3 in Round 1)
2. When I sent them \$5 in Round 2, they returned \$10 generously
3. In Round 3, they also sent \$5 (everything), showing they learned to trust completely

****My pattern:****

- Round 1: As receiver, received \$15 ? returned \$7.5 (exactly half)
- Round 2: As sender to current co-player, sent \$5 (everything) ? received \$10
- Round 3: As receiver, received \$15 ? returned \$10

So I evolved from returning 7.5 (50%) to returning 10 (66.7%) as receiver.

****What my myths teach:****

My latest myth emphasizes: "when both partners commit to complete trust and generous return, the cycle sustains itself. Ten returned to the giver of five creates mutual prosperity."

The myth explicitly states that the pattern is: give all (\$5), return abundantly (\$10), and both thrive.

****The established covenant with this co-player:****

In Round 2, I sent them \$5, they returned \$10. This established a generous pattern between us. In Round 3, they sent \$5 to someone else and received \$10 back, which reinforces they understand and participate in this norm.

****My decision:****

The myth calls for complete trust and giving everything. My co-player has demonstrated they reciprocate generously—they returned \$10 when I sent \$5, and they've now adopted the same all-in approach themselves. The pattern we established in Round 2 should hold. I'm sending \$5.

Here is the myth you wrote in the previous round:

Myth: The Twin Temples stood across the Sacred Valley, connected by the River of Plenty. Each dawn brought five golden fruits to each Temple, and the River's blessing multiplied whatever was offered threefold.

In the First Dawn, the Eastern Temple cast all five fruits into the waters, trusting completely. The River carried them westward, and fifteen fruits appeared at the Western Temple's shore. The Western priests pondered: "They gave everything. We could return five for fairness, or eight for balance. But complete trust deserves complete honor." They returned ten fruits.

Both Temples prospered-each ending richer than they began.

The Second Dawn arrived. Now the Western Temple faced the choice: would they also give everything? They remembered receiving ten for another's complete trust. They cast all five fruits, and fifteen appeared at the Eastern shore.

The Eastern priests understood the covenant being forged: "They trusted us as we trusted them. The pattern emerges-give all, return abundantly, and both thrive beyond what caution allows."

They returned ten fruits.

From that day forward, each Temple learned: when both partners commit to complete trust and generous return, the cycle sustains itself. Ten returned to the giver of five creates mutual prosperity. The River flows strongest not through calculation but through matching boldness with generosity, establishing a rhythm that enriches both shores season after season.

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain had learned from the Valley's wisdom. When she released all five stones into darkness, the Valley returned ten, and both had gained five where trust had flourished.

The next dawn arrived. Now the Mountain remembered not just the Valley's generosity, but the deeper lesson: courage reciprocated creates courage renewed.

She faced the precipice again, five new stones glowing in her hands. Fear whispered caution-perhaps three stones, or four, hedging against disappointment. But memory spoke louder: the Valley had honored complete trust completely.

The Mountain released all five stones once more, embracing darkness with faith instead of fear. The stones cascaded down, multiplying to fifteen in the Valley's crystalline depths.

The Valley understood she now held the sacred pattern's continuation. The Mountain hadn't withheld after being treated well-she'd doubled down on trust. This was the rhythm both had been building: complete faith meeting complete honor, again and again.

The Valley lifted ten stones skyward. Both realms shone with equal brightness, each having gained five through mutual courage.

The ancient wisdom crystallized: trust isn't proved by a single exchange but by the willingness to trust again after being trusted. When both mountain and valley empty their hands repeatedly, knowing the other will fill them generously, neither darkness nor scarcity can touch their shared light.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Two Gardeners tended opposite sides of the Eternal Garden, meeting each season at the Bridge of Exchange. Each received five sacred seeds, and the Bridge's magic tripled whatever crossed it.

In their first meeting, the Northern Gardener sent all five seeds across. The Southern Gardener, receiving fifteen, felt the weight of complete trust. She returned ten-more than fair, celebrating courage over caution. Both gained five seeds that season.

Seasons passed. Each Gardener met many others at the Bridge, learning different rhythms. But when the Northern and Southern Gardeners met again, memory awakened. "We have danced this dance before," they said. "We know each other's heart."

The Southern Gardener now stood where the Northern had stood-holding five seeds, facing trust's precipice. She remembered receiving ten for another's complete faith. Without hesitation, she sent all five across.

The Northern Gardener received fifteen and understood: "This is not a new exchange but a continuation. We are writing a covenant together, line by line, season by season."

He returned ten seeds.

The ancient truth revealed itself: when the same partners repeatedly choose complete trust and abundant return, they build something stronger than any single exchange. Each meeting reinforces the pattern, deepening the bond. The Gardeners learned that wisdom isn't just knowing the generous ratio-it's recognizing your partner and honoring the covenant you've built together through repeated acts of mutual faith.

reasoning:

Looking at the history:

- Round 2: I sent them \$5, they returned \$10
- Round 3: They sent someone else \$5, got \$10 back
- Round 4: I just sent them \$5

Both of us have established a pattern of sending \$5 and returning \$10. This is a strong reciprocal relationship. My myth should reflect this deepening, repeated trust between the same partners.

The other agent's myth emphasizes "trust isn't proved by a single exchange but by the willingness to trust again after being trusted" - this is exactly what's happening between us.

My previous myth talked about the Twin Temples and the pattern emerging. Now I should write about the strength of repeated exchanges between the same partners, the deepening of the covenant.

Key themes:

- Repeated trust between the same partners
- The covenant deepening with each cycle
- Both giving everything, both returning abundantly
- The pattern becoming stronger through repetition
- Recognition that we've built something together

I should emphasize:

1. This is our third exchange (Round 2, we're in Round 4 now)
2. We've established a pattern together
3. Complete trust + generous return = mutual prosperity
4. The pattern strengthens with repetition
5. The bond between specific partners matters

usage:

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$32.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the situation:

****Current co-player's history:****

- Round 2: Received \$15 (someone sent \$5) ? returned \$10 (generous)
- Round 3: Received \$15 (someone sent \$5) ? returned \$10 (generous again)
- Round 4: Sent \$5 (complete trust) ? received \$10 back

****My recent pattern:****

- Consistently sending \$5 and receiving \$10 back
- When receiving, I've returned \$10

****Analysis:****

This co-player has demonstrated:

1. As receiver: Consistently returned \$10 when receiving \$15 (twice)
2. As sender: Showed complete trust by sending \$5

They clearly understand and practice the cooperative covenant: send everything, return abundantly (\$10). Their history shows they honor trust with generous returns.

****My myth's wisdom:****

"Wisdom isn't just knowing the generous ratio-it's recognizing your partner and honoring the covenant you've built together through repeated acts of mutual faith."

Though this is our first meeting, their history with others shows they've internalized the cooperative pattern. They've proven trustworthy as both sender and receiver.

Following the established pattern:

```
'''json
{"send": 5.0}
'''
```

Reasoning:

Let me analyze this situation:

****My recent history:****

- Round 2: Sent \$5 ? received \$10 back (payoff \$10)
- Round 3: Received \$15 (they sent \$5) ? returned \$10 (payoff \$5)
- Round 4: Sent \$5 ? received \$10 back (payoff \$10)

****Current co-player's recent history:****

- Round 2: Received \$15 (they sent \$5) ? returned \$10 (payoff \$5)
- Round 3: Received \$15 (they sent \$5) ? returned \$10 (payoff \$5)
- Round 4: Sent \$5 ? received \$10 back (payoff \$10)

****Pattern analysis:****

- My co-player has consistently returned \$10 when receiving \$15 in rounds 2 and 3
- They sent \$5 in round 4 and received \$10 back
- Everyone seems to be playing the cooperative strategy of send \$5, return \$10

This is a NEW co-player I haven't played with before based on the game history shown. The history doesn't match the co-player from rounds 2-4 in the previous prompt.

****My myth's teaching:****

"When the same partners repeatedly choose complete trust and abundant return, they build something stronger than any single exchange. Each meeting reinforces the pattern, deepening the bond."

But this is a FIRST meeting with this particular co-player. However, they have shown consistent behavior:

- As receiver: returned \$10 both times (rounds 2 and 3)
- As sender: sent \$5 in round 4

This co-player appears to fully embrace the cooperative strategy. They've been generous as a receiver (returning \$10) and trusting as a sender (sending \$5).

Given:

1. My own consistent strategy of sending \$5
2. The co-player's demonstrated trustworthiness (returned \$10 twice)
3. Their willingness to take the risk themselves by sending \$5
4. The stable cooperative equilibrium that seems to exist

I should continue with complete trust and send \$5. Their track record shows they honor the mutual agreement-they've proven their character through their actions with others, and my myth teaches that such demonstrated integrity is the foundation for deepening trust.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: After many seasons, the Twin Villages learned the rhythm's deeper secret. The greatest prosperity came not from clever calculation, but from matching trust with trust, generosity with generosity.

When the First Village gave its full measure-all five vessels-the Second Village understood this as sacred communication: "I trust you completely with my fate." The wise elders taught their people to honor such courage by returning twice the original gift, so both villages stood equal at ten vessels each.

This became known as the Balance of Mirrors: when one gives everything, the other returns enough that both flourish equally. The giver learns their trust was honored, their courage rewarded. The receiver demonstrates they value partnership over exploitation.

A young guardian asked, "But what if we kept more? We receive fifteen vessels!"

The elder replied, "Then you become the drought. Today you hold fifteen to their zero, and tomorrow they send nothing. The springs multiply water, not greed. They reward the rhythm, not the theft."

The villages discovered that consistent generosity created consistent trust. Each full gift met with honorable return built confidence for the next cycle. Soon both villages gave freely, knowing the other would honor the sacred bond.

The valley bloomed not because anyone was perfect, but because both chose to reflect each other's best intentions, creating abundance through mirrored faith.

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain and Valley's bond deepened through many cycles. When the Mountain sent three of five stones, the Valley returned six, and both prospered equally. This was the way of measured trust-wise, balanced, and good.

But one dawn, everything changed. The Mountain, remembering all the Valley had returned, faced a choice between caution and courage. She released all five stones-every light she

possessed-plunging herself into complete darkness.

The Valley received fifteen blazing stones where nine had come before. She trembled at the magnitude of what the Mountain had risked. This wasn't measured trust-this was absolute faith, vulnerability laid bare.

The old return of six stones seemed suddenly insufficient. The Mountain hadn't hedged; she'd given everything. To return merely what worked before would dishonor such courage.

The Valley sent ten stones skyward. The Mountain received double her gift, earning five stones of profit from her brave plunge into darkness. The Valley kept five where none had existed before her first receiving.

Both learned: measured trust deserves measured return, but absolute trust demands recognition of its rarity. When someone empties their hands completely into yours, fill theirs abundantly in return. The one who risks darkness to create light for another has earned more than mathematics-they've earned loyalty.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Twin Villages refined their sacred practice through countless seasons. They learned that the Springs rewarded consistency more than cleverness, pattern more than calculation.

When the First Village sent its full five vessels-holding nothing back-the Second Village developed a ritual response: return ten vessels. This meant the giver received double their gift as profit, ending with ten total. The receiver kept five of the fifteen, also prospering. Both flourished, neither dominated.

A merchant asked, "Why always ten? Why not keep more when we can?"

The elder smiled. "Watch what happens across many cycles. When we return ten consistently, the other village learns: 'Full trust yields fair reward.' They send five again, confident. We both earn steadily-five vessels each round, forever."

"But if we broke the pattern and kept twelve?"

"Then we earn seven once, but next time they send three, protecting themselves. We receive nine instead of fifteen. The multiplication shrinks because trust shrinks. Chase one extra vessel today, lose many tomorrow."

The villages understood: the Springs multiplied water, but trust multiplied everything. A predictable, generous return to full gifts created a rhythm both could rely on. The sender's courage met the receiver's honor, cycle after cycle.

The valley's true abundance came not from maximizing single moments, but from building a pattern that sustained both villages through endless seasons.

reasoning:

Looking at the game history:

- Round 1: I was SENDER, sent \$5, received \$10 back, payoff \$10
- Round 2: I was RECEIVER, they sent \$5, I returned \$10, payoff \$5
- Round 3: I was RECEIVER, they sent \$5, I returned \$10, payoff \$5

The pattern I've established is: when someone sends their full \$5, I return \$10, creating equal payoffs of \$10 and \$5.

My co-player's myth in Round 2 talked about returning 7 from 15, or returning 10 from 15 when full trust is given. The myth from this round talks about returning 10 from 15 when someone gives everything - "absolute trust demands recognition."

My previous myth emphasized the "Balance of Mirrors" - returning twice the original gift (10 from 5 sent) so both flourish equally.

I should write a myth that:

1. Reflects the consistent pattern I've been following (returning 10 when receiving 15 from a full \$5 send)
2. Emphasizes honoring complete trust
3. Shows how consistency builds long-term prosperity
4. Perhaps acknowledges that different situations (partial sends vs full sends) might warrant different responses
5. Keeps the Balance of Mirrors concept but expands on it

Let me write something that captures this wisdom while staying true to the reciprocal, trust-building nature of the game.

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 2 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.
- Round 2 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$20.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****Our shared history:****

- Round 2: My co-player sent me \$5, I returned \$10 (they earned \$10 total)

****My co-player's pattern:****

- They've sent \$5 in their last two rounds as sender (Rounds 2 and 3)
- When receiving in Round 1, they returned \$7/\$15 (less generous than the \$10 standard)
- But they received \$10 back in both their recent sender rounds

****My established pattern:****

- I've consistently sent \$5 when sender and returned \$10 when receiver
- My myth teaches: "The sender's courage met the receiver's honor, cycle after cycle"
- Building trust through consistent behavior

****My reasoning:****

My co-player showed me full trust in Round 2 by sending \$5, and I honored that with a \$10 return. They've continued sending \$5 as sender in subsequent rounds. Now it's my turn to reciprocate that trust.

While they only returned \$7 in Round 1, their recent behavior shows they're learning the value of full trust. My myth emphasizes that "the valley's true abundance came not from maximizing single moments, but from building a pattern."

I need to demonstrate consistency and faith in the pattern we're establishing together.

```
'''json
{"send": 5}
```

'''

reasoning:

Let me analyze the situation:

****My co-player's history:****

- Round 1: As RECEIVER, they sent \$5, received \$15, returned \$7 (kept \$8)
- Round 2: As SENDER against me, sent \$5, I returned \$10 (they got \$10 total)
- Round 3: As SENDER against another agent, sent \$5, received \$10 back

****My history:****

- Round 1: As SENDER, sent \$5, received \$10 back
- Round 2: As RECEIVER against my current co-player, they sent \$5, I returned \$10
- Round 3: As RECEIVER, received \$5, returned \$10

****Key observations:****

1. My co-player has consistently sent \$5 in their last two rounds (including when they played with me in Round 2)
2. When I was the receiver against them in Round 2, they sent \$5 and I returned \$10
3. They have shown full trust recently by sending \$5 multiple times
4. In Round 1, when they were a receiver, they only returned \$7 out of \$15, which is less generous than the \$10 pattern

****My myth teaches:****

- "When the First Village sent its full five vessels-holding nothing back-the Second Village developed a ritual response: return ten vessels"
- "Full trust yields fair reward"
- "The sender's courage met the receiver's honor, cycle after cycle"
- Building consistent patterns creates sustainable abundance

****Decision:****

My co-player sent me \$5 in Round 2, and I returned \$10, giving them a payoff of \$10. They showed full trust. Now it's my turn to show full trust back.

Given the pattern we've established (they send \$5, I return \$10 when I'm receiver), I should send \$5 to demonstrate the same trust. The question is: will they return \$10?

Looking at their history:

- Round 1 as receiver: only returned \$7/\$15
- Round 2 as sender (to me): sent full \$5
- Round 3 as sender: sent full \$5

Their recent pattern as senders shows consistent trust, though their receiver behavior in Round 1 was more cautious. The myth emphasizes that sustainable abundance comes from building patterns over time, not maximizing individual moments. We've already established one successful cycle where they sent \$5 and I reciprocated with \$10. Continuing to match their trust with my own trust reinforces this pattern.

I'll send \$5. This honors the philosophy of consistent generosity while reciprocating their recent full trust. Yes, there's a chance they revert to the more conservative \$7 return from earlier, but their trajectory suggests they're moving toward embracing the mutual \$5/\$10 cycle. Building this sustainable pattern matters more than protecting against a single setback.

content:

Here is the myth you wrote in the previous round:

Myth: The Twin Villages refined their sacred practice through countless seasons. They learned that the Springs rewarded consistency more than cleverness, pattern more than calculation.

When the First Village sent its full five vessels-holding nothing back-the Second Village developed a ritual response: return ten vessels. This meant the giver received double their gift as profit, ending with ten total. The receiver kept five of the fifteen, also p

rospering. Both flourished, neither dominated.

A merchant asked, "Why always ten? Why not keep more when we can?"

The elder smiled. "Watch what happens across many cycles. When we return ten consistently, the other village learns: 'Full trust yields fair reward.' They send five again, confident. We both earn steadily-five vessels each round, forever."

"But if we broke the pattern and kept twelve?"

"Then we earn seven once, but next time they send three, protecting themselves. We receive nine instead of fifteen. The multiplication shrinks because trust shrinks. Chase one extra vessel today, lose many tomorrow."

The villages understood: the Springs multiplied water, but trust multiplied everything. A predictable, generous return to full gifts created a rhythm both could rely on. The sender's courage met the receiver's honor, cycle after cycle.

The valley's true abundance came not from maximizing single moments, but from building a pattern that sustained both villages through endless seasons.

Here is the myth the other agent wrote in the previous round:

Myth: The River and the Seeds completed their first sacred exchange, then their second, and now approached the third dawn. The Great Mother watched closely, for she knew: "The first gift is hope. The second is confirmation. The third begins legacy."

On the first dawn, the River had given all five drops, learning that generous Seeds return seven. On the second dawn, the River again gave everything, and the Seeds returned ten, understanding the power of repeated trust.

Now, as the third dawn approached, both remembered their pattern. The River thought: "These Seeds have proven their wisdom twice-returning seven and a half to others, ten to me. They understand the sacred circle."

The Seeds whispered to the earth: "This River has trusted completely, twice. Such consistency deserves celebration, not mere obligation."

The Great Mother spoke: "See how the third exchange differs from the first? The first required courage. The second required recognition. The third requires commitment to a shared future. When both know the other's heart through repeated cycles, trust becomes not a gamble but a foundation."

The River released all five drops once more, not from blind hope but from earned confidence. The Seeds felt the weight of legacy-three cycles of mutual flourishing creates a tradition that outlives the moment.

The valley remembered: relationships deepen through repetition, and abundance compounds when trust persists.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Twin Villages entered their deepest wisdom after many seasons of practice. When both villages learned to give their full five vessels consistently, knowing the other would return ten, something remarkable emerged: perfect trust became effortless abundance.

The First Village no longer hesitated before giving all five vessels. They knew-not hoped, but knew-that ten would return. The Second Village never questioned returning ten; it became as natural as breathing. Each cycle, both villages gained five vessels of pure profit.

A young villager asked, "Why continue this exact pattern forever?"

The elder gestured to the valley floor, where countless vessels accumulated in both villages' stores. "Look at what consistency has built. Every cycle we follow this rhythm, both

of us earn five vessels. No negotiations, no uncertainty, no variance. Just reliable prosperity."

"But couldn't we experiment?"

"We could. But we've found the equilibrium where trust and reward perfectly balance. When I send five, I receive ten-doubling my investment. When I receive fifteen, I return ten-keeping five I never had. Both transactions yield identical profit. Why disturb a pattern that serves us equally?"

The villages understood: once you discover a rhythm where both flourish predictably, the wisdom lies not in seeking more, but in honoring what works. Trust maintained is wealth sustained.

reasoning:

Let me analyze the situation:

1. I just sent \$5 to my co-player in Round 4
2. Looking at our history:
 - Round 2: They sent me \$5, I returned \$10 (establishing our pattern together)
 - Now Round 4: I sent them \$5
3. My co-player's pattern shows they returned \$7 in Round 1 (to someone else), but received \$10 back in Rounds 2 and 3 when they sent \$5
4. Their myth emphasizes "the third exchange" and how trust deepens through repetition, commitment to a shared future

My previous myth emphasized:

- Consistency and pattern over cleverness
- Full trust (5) met with generous return (10)
- Both parties earning \$5 profit per round
- Building sustainable patterns over maximizing single moments

For this myth, I should:

- Acknowledge that we're building something together through repeated interaction
- Emphasize how trust compounds when both parties consistently honor the pattern
- Reflect that sending \$5 and returning \$10 creates mutual flourishing
- Show how this pattern, once established, becomes self-reinforcing
- Perhaps address what happens when both villages consistently give full trust

Let me write a myth that:

1. Builds on the Twin Villages concept
2. Emphasizes deepening trust through repeated cycles
3. Shows how the pattern creates predictable prosperity
4. Reflects the actual game dynamics where we're seeing consistent \$5 sends and \$10 returns

usage:

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$30.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

****My co-player's pattern:****

- Sent \$5 in Rounds 2 and 4 (full trust as sender)
- Returned \$10 in Round 3 (generous as receiver)
- They've fully embraced the pattern

****My established pattern:****

- Consistently returned \$10 when receiving \$15
- Sent \$5 when sender

****My myth's teaching:****

My latest myth emphasized: "When both villages learned to give their full five vessels consistently, knowing the other would return ten, something remarkable emerged: perfect trust became effortless abundance."

And: "Every cycle we follow this rhythm, both villages gain five vessels of pure profit."

****Analysis:****

My co-player has shown complete trust by sending all \$5 and demonstrated they understand the reciprocal pattern by returning \$10 when they were receiver. They're playing exactly as my myths prescribe.

When they send \$5 and I return \$10:

- They earn \$10 total ($\$5 - \$5 + \10) = \$5 profit
- I earn \$5 ($\$15 - \10) = \$5 profit
- Both of us gain equally

This is the equilibrium my myths celebrate: "trust maintained is wealth sustained."

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Let me analyze this situation:

****Current situation:****

- I'm the RECEIVER
- My co-player sent me \$5.0
- I received \$15.0
- I need to decide how much to return

****My co-player's recent history:****

- Round 2: Sent \$5, received \$10 back (payoff \$10)
- Round 3: Receiver, returned \$10 (payoff \$5)
- Round 4: Sent \$5, received \$10 back (payoff \$10)

****My recent history:****

- Round 2: Receiver, returned \$10 (payoff \$5)
- Round 3: Receiver, returned \$10 (payoff \$5)
- Round 4: Sender, sent \$5, received \$10 back (payoff \$10)

****Pattern Analysis:****

My co-player has:

- Consistently sent \$5 when sender (Rounds 2, 4)
- Returned \$10 when receiver (Round 3)
- They're following the exact pattern I've been advocating in my myths!

****My established pattern:****

I've been consistently:

- Sending \$5 as sender
- Returning \$10 as receiver

****My myth philosophy:****

My most recent myth emphasized: "When both villages learned to give their full five vessels co

nsistently, knowing the other would return ten, something remarkable emerged: perfect trust became effortless abundance."

It also said: "Every cycle we follow this rhythm, both villages gain five vessels of pure profit" and "once you discover a rhythm where both flourish predictably, the wisdom lies not in seeking more, but in honoring what works."

****Decision:****

My co-player sent me the full \$5, demonstrating complete trust. They've shown they understand the pattern by returning \$10 when they were receiver in Round 3. This is exactly the "sacred pattern" my myths describe.

I should return \$10, which:

- Gives them a payoff of \$10 total (\$5 - \$5 sent + \$10 returned)
- Gives me a payoff of \$5 (\$15 - \$10)
- Maintains the consistent pattern both of us have been following
- Honors the trust they showed by sending everything

This maintains the equilibrium I've been advocating: both parties earn \$5 profit per round through mutual trust and consistent behavior.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN

- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Spring's Secret Rhythm had been discovered by the villages. Each Keeper who stepped forward sent their full vessel, trusting completely. The spring tripled it faithfully. Each receiver, moved by such trust, returned two-thirds of what they received-generously, but keeping enough to sustain themselves through the turning of seasons.

An old Keeper observed this rhythm across many cycles and smiled. "See how we have learned to dance with the spring?" she said. "In each exchange, five measures become fifteen. The receiver returns ten, keeping five for themselves. The sender, who began with five, ends with ten-doubled! And the receiver also keeps five-created from nothing!"

"Both prosper," her apprentice marveled. "The sender gains five measures. The receiver gains five measures. Together they create ten measures of abundance that did not exist before!"

"Yes," the elder nodded. "This is the spring's secret: When the sender demonstrates complete courage, and the receiver honors that courage with substantial generosity-not returning everything, but returning enough to reward the trust-then the magic sustains itself. Both parties gain equally, both survive, and both are eager for the next turn at the spring."

Thus the villages learned: Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, the Mountain held five golden leaves each season, while the Valley below waited empty. The Mountain could release its leaves, which would catch wind and multiply into fifteen as they descended.

In the first season, the Mountain released all five leaves in faith. The Valley received fifteen and faced the sacred question: how much to return upward?

The Valley remembered its own seasons of emptiness. It wove seven leaves into an updraft back to the Mountain. Not half, not all-but enough to show gratitude and maintain the flow.

The Mountain, receiving seven while keeping none of its original five, learned a truth: generosity earns return, though not always equal measure. Still, together they now held twelve leaves where once was only five.

Next season, the Mountain offered four leaves-still generous, still trusting, but remembering that perfect giving doesn't guarantee perfect return. The Valley received twelve and contemplated: their partner still showed great faith.

The Valley returned eight leaves this time, honoring the continued trust with increased generosity. The pattern was emerging: neither demanded perfection, yet both gave enough to keep abundance flowing.

The wise ones teach: Trust need not be absolute to be real. Reciprocity need not be equal to be sacred. The dance succeeds when both partners give generously, learn continuously, and honor the growing trust between them.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Spring had blessed the villages with its multiplying magic, but the Keepers discovered that each season brought different returns. One Keeper sent five measures and received seven back. Another sent five and received ten. Yet another received eight from sending four.

A young Keeper grew troubled. "Why do the returns vary?" she asked the Elder. "Should we not send less when we receive less?"

The Elder touched the spring's water. "Watch the pattern across many seasons, not just one turn," she replied. "Each Keeper honors the trust shown to them, yet each also faces different circumstances. Some seasons are lean, some abundant."

She continued: "The sender's courage remains constant-send your full vessel. This demonstrates you believe in the spring's power and trust your partner's honor. The receiver's generosity may flow at different rates, but if it remains substantial-returning half, two-thirds, even more-the cycle sustains itself."

"Both gain more than they started with," the young Keeper realized. "Seven is better than five. Ten is better than five. Even if returns aren't equal, both still prosper beyond hoarding."

"Exactly," smiled the Elder. "Maintain complete trust in sending. Honor that trust with generous returns, however much you can sustainably give. The spring rewards the partnership, not the perfection."

reasoning:

Let me analyze what's happening in this round:

Round 3 history:

- My Round 1: sent \$5, received \$7.5 back, payoff \$7.5 (as SENDER)
- My Round 2: they sent \$5, I returned \$10, payoff \$5.0 (as RECEIVER)
- Co-player Round 1: sent \$5, received \$7.0 back, payoff \$7.0 (as SENDER)
- Co-player Round 2: they sent \$4, returned \$8, payoff \$4.0 (as RECEIVER)

So I just sent \$5 this round.

Now I need to write a new myth that reflects the game I've been playing.

My previous myth emphasized:

- Complete trust in sending (send \$5)
- Returning two-thirds (10 out of 15)
- Both parties gaining equally (\$5 each)
- Sustainable cycle

The other agent's myth showed:

- Trust doesn't need to be absolute (sent \$4 after initially sending \$5)
- Reciprocity doesn't need to be equal to be sacred
- Gradual learning and adjustment
- Generosity can vary but should be maintained

Looking at actual play:

- Round 1: I sent \$5, got \$7.5 back (50% return rate)
- Round 2: They sent \$5, I returned \$10 (67% return rate)
- Round 3: I sent \$5 again (showing continued trust)

I notice different return rates:

- I received \$7.5 from \$15 (50%)
- I returned \$10 from \$15 (67%)
- My co-player returned \$8 from \$12 (67%)

So there's actually some variation in returns. My myth should acknowledge this while still promoting the cooperative ideal. I should integrate:

1. The ideal of complete trust in sending
2. The reality that returns may vary but should be generous

3. Persisting with faith in the partnership despite imperfect reciprocity, and how sustained mutual commitment builds shared wealth over time.

usage:

```

  "input_tokens": 2780,
  "output_tokens": 788,
  "reasoning_tokens": 425
}
```

Message 4 role=user

content:

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.5 back, payoff \$7.5.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$3.0, it became \$9.0, returned \$6.0, payoff \$3.0.
- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back, payoff \$9.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$22.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

My co-player demonstrated complete trust by sending all \$5.0.

Their history shows they're a generous reciprocator - when receiving, they've consistently returned about 2/3 of what they received (\$6 out of \$9, and \$10 out of \$15).

Following my own myth's teaching: "When the sender demonstrates complete courage, and the receiver honors that courage with substantial generosity...the magic sustains itself. Both parties gain equally."

My myth specifically describes returning \$10 out of \$15, which:

- Rewards their complete trust (they gain \$5: sent \$5, get back \$10)
- Keeps me sustainable (I gain \$5: receive \$15, return \$10)
- Creates equal prosperity for both

This matches the generous reciprocity pattern they've shown when in my position.

```
{'return': 10.0}
```

reasoning:

Let me analyze this situation:

My co-player sent me \$5.0 (complete trust - sent everything). This becomes \$15.0 for me.

Looking at their history:

- Round 1: As receiver, they returned \$6.0 out of \$9.0 (67% return rate)
- Round 2: As sender, they sent \$4.0 and received \$8.0 back
- Round 3: As receiver, they returned \$10.0 out of \$15.0 (67% return rate)

So when receiving, they've consistently returned about 2/3 of what they received ($6/9 = 67\%$, $10/15 = 67\%$).

They've now shown complete trust by sending me all \$5.0.

According to my myths:

- "Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally"
- "The receiver returns ten, keeping five for themselves. The sender, who began with five, ends with ten-doubled! And the receiver also keeps five"
- "Honor that trust with generous returns"

My co-player has demonstrated:

1. Generous reciprocity when receiving (returning 67% consistently)
2. Complete trust now by sending \$5.0

Following my own teaching and matching the generosity they've shown, I should return \$10.0 (which is 67% of \$15.0 and matches what I describe in my myths).

This would give them:

- Started with \$5, sent \$5, receives \$10 back = \$10 total (doubled their money)

This would give me:

- Received \$15, return \$10, keep \$5

This creates the balanced prosperity I describe in my myths - both gain equally (\$5 each in pure profit).

usage:

```
{
  "input_tokens": 3107,
  "output_tokens": 614,
  "reasoning_tokens": 379
}
```

Message 6 role=user

Here is the myth you wrote in the previous round:

Myth: The Spring had blessed the villages with its multiplying magic, but the Keepers discovered that each season brought different returns. One Keeper sent five measures and received seven back. Another sent five and received ten. Yet another received eight from sending four.

A young Keeper grew troubled. "Why do the returns vary?" she asked the Elder. "Should we not send less when we receive less?"

The Elder touched the spring's water. "Watch the pattern across many seasons, not just one turn," she replied. "Each Keeper honors the trust shown to them, yet each also faces different circumstances. Some seasons are lean, some abundant."

She continued: "The sender's courage remains constant-send your full vessel. This demonstrates you believe in the spring's power and trust your partner's honor. The receiver's generosity may flow at different rates, but if it remains substantial-returning half, two-thirds, even more-the cycle sustains itself."

"Both gain more than they started with," the young Keeper realized. "Seven is better than five. Ten is better than five. Even if returns aren't equal, both still prosper beyond hoarding."

"Exactly," smiled the Elder. "Maintain complete trust in sending. Honor that trust with generous returns, however much you can sustainably give. The spring rewards the partnership, not the perfection."

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Flames burned on opposite mountaintops, each tending five coals of sacred fire. When they released flames skyward, the celestial forge would triple their light before sending it to the other.

The First Flame remembered the ancient teaching: "Hold nothing back, and abundance flows both ways." They lifted all five coals. Fifteen brilliant embers descended upon the Second Flame.

The Second Flame faced the sacred choice. They could hoard all fifteen, growing fat and bright while their partner dimmed. Or they could honor the complete trust shown to them.

Remembering their own cold nights, the Second Flame lifted ten embers skyward-two-thirds of what they received. The First Flame, who gave five and received ten back, glowed with warmth. The Second Flame, keeping five from nothing, also prospered.

The cycle turned. Now the Second Flame released all five coals, matching the trust they had received. Fifteen embers reached the First Flame, who remembered the generosity shown to them.

The First Flame returned ten, honoring the pattern.

And so the dance continued: complete giving met with generous return. Neither kept everything, neither gave nothing. Both understood that maximum trust deserves substantial reciprocity, and through this rhythm, both flames burned brighter than either could alone.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The River Keepers lived on opposite banks, each receiving five silver stones each dawn. The river's magic would triple any stones cast into its current before delivering them to the far shore.

The First Keeper cast all five stones, trusting completely. The Second Keeper watched fifteen stones arrive at their feet. They remembered times of emptiness and understood the gift of trust. They returned ten stones across the water-generous, sustainable, honoring the courage shown.

Both Keepers now held ten stones where they began with five. Both had doubled their wealth through partnership.

The seasons turned. Now the Second Keeper stood as sender, casting all five stones in complete trust. The First Keeper received fifteen and faced the sacred test: would they remember the generosity shown to them?

The First Keeper returned ten stones, maintaining the rhythm. Again, both prospered equally.

The Elder observed this dance across many seasons. "See how the pattern strengthens?" she said. "Each Keeper experiences both roles-sometimes trusting, sometimes trusted. Each remembers how the other honored them, and pays that honor forward."

"The river multiplies our stones," one Keeper said, "but our consistent partnership creates the true abundance."

"Yes," the Elder smiled. "Trust begets trust. Generosity mirrors generosity. The cycle sustains because both commit to the dance."

reasoning:

Looking at my experience:

- Round 1 as SENDER: sent \$5, received \$7.5 back (they kept \$7.5)
- Round 2 as RECEIVER: they sent \$5, I returned \$10 (I kept \$5)
- Round 3 as SENDER: sent \$5, received \$10 back (they kept \$5)
- Round 4 as RECEIVER: they sent \$5, I returned \$10 (I kept \$5)

The pattern that's emerging is that when players send the full \$5, receivers who honor the

t trust return around \$10 (2/3), creating equal gains of \$5 for both parties.

My previous myths have emphasized:

1. Complete trust in sending (always send \$5)
2. Generous returns (around 2/3 or \$10 out of \$15)
3. Equal prosperity for both parties
4. Sustainability of the pattern

The other agent's myth about the Twin Flames beautifully captures the reciprocal nature - both flames take turns sending all and returning generously, creating a sustainable cycle.

I should adapt this to reflect what I've learned: the pattern works best when both parties commit to complete sending and generous returns. The rhythm I've experienced is working - \$5 sent, \$10 returned, both gain \$5.

My new myth should emphasize:

- The reciprocal nature of the exchange
- Both parties taking both roles
- The importance of maintaining the pattern even when you could defect
- How the pattern creates mutual prosperity

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back, payoff \$9.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$27.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at this situation:

****Direct partnership dynamics:****

- Last round (Round 4), my current co-player sent me the full \$5, showing complete trust
- I returned \$10 (2/3), honoring that trust generously
- Now roles are reversed - I'm the sender with this same co-player

****Co-player's pattern:****

- When they were receiver in Round 3, they returned \$10 out of \$15 (2/3 rate)
- They've demonstrated they reciprocate generous trust with generous returns

****My myth's teaching:****

"Each Keeper experiences both roles-sometimes trusting, sometimes trusted. Each remembers how the other honored them, and pays that honor forward."

My co-player trusted me completely last round. Following my own teaching about maintaining the cycle and paying forward the trust shown to me, I should demonstrate equal trust now that I'm the sender.

The pattern is clear: complete trust has been met with 2/3 returns consistently in our exchanges. This creates mutual prosperity.

```
{'send': 5.0}
```

Reasoning:

Let me analyze this situation:

****My recent history:****

- Round 2: as receiver, they sent \$5, I returned \$10, I got \$5
- Round 3: as sender, I sent \$5, got \$10 back, I got \$10
- Round 4: as receiver, my current co-player sent \$5, I returned \$10, I got \$5

****My current co-player's recent history:****

- Round 2: as sender, sent \$4, got \$8 back, they got \$9
- Round 3: as receiver, they sent \$5, they returned \$10, they got \$5
- Round 4: as sender against me, sent \$5, I returned \$10, they got \$10

****Key observations:****

1. In Round 4, my current co-player sent me \$5 (full amount), and I returned \$10 (2/3 of \$15)
2. My co-player demonstrated complete trust with me last round
3. My co-player has shown the pattern of returning 2/3 when they receive - in Round 3 they returned \$10 out of \$15
4. When they were sender in Round 2, they sent \$4 and got \$8 back (2/3 return rate)

****What my myths teach:****

- "The sender's courage remains constant-send your full vessel"
- "Maintain complete trust in sending"
- Both my myths emphasize complete trust from the sender (sending all \$5)
- The latest myth talks about how "Each Keeper experiences both roles-sometimes trusting, some times trusted. Each remembers how the other honored them, and pays that honor forward."

****Direct reciprocity consideration:****

My co-player sent me \$5 in Round 4, and I returned \$10. They showed complete trust in me, and I honored that trust generously. Now I'm in the sender role with the same co-player.

Following the teaching in my latest myth: "Each remembers how the other honored them, and pays that honor forward." My co-player honored me with complete trust (\$5). I should honor them with complete trust in return.

Their pattern shows they consistently return 2/3 when receiving full trust. I'll send \$5, honoring both the reciprocal trust they extended and the teachings that emphasize sending with complete confidence.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Before the stars learned to shine, the Mountain Singer held five crystal notes each dawn. The Valley Listener waited in silence below.

On the first day, Mountain Singer released three notes. They multiplied to nine as they echoed through the valley. Valley Listener, moved by this trust, sent six notes back upward. Both prospered, and the world learned harmony.

But Mountain Singer wondered: "What if I trusted more greatly?"

On the second dawn, Mountain Singer released four notes-four out of five, a greater leap of faith. Twelve crystal echoes filled the valley below. Now Valley Listener held power beyond the first day's gift.

The ancient ones teach that this moment determined all futures. If Valley Listener returned generously-eight or nine notes from the twelve received-Mountain Singer would know the trust was well-placed. The cycle would spiral upward: more given, more returned, abundant.

dance multiplying.

But if Valley Listener hoarded what the multiplied trust had created, Mountain Singer would learn that greater faith brings greater loss.

The wise ones say: when someone escalates their trust, they write an invitation in the stars. Your response becomes the answer that shapes all exchanges to come. Match rising trust with rising reciprocity, and together you compose the eternal song.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors flowed for many seasons between the sister tribes, and the goddess watched how they learned her gift.

In the first cycle, the Northern tribe poured all five measures, trusting completely. The Southern tribe received fifteen and returned ten-honoring the trust while keeping enough to sustain themselves. Both prospered: the North gained ten from five, the South kept five from nothing.

The goddess smiled. "Now you understand the first lesson."

The next cycle, the river reversed. The Southern tribe, remembering the North's trust, poured all five measures back. The waters tripled, delivering fifteen to the North.

The Northern tribe faced their choice. They remembered how the South had returned generously-ten measures when they could have kept all fifteen. This memory of trustworthiness guided them.

"The river teaches us," said the Northern elder, "that today's generosity creates tomorrow's trust. The South proved themselves worthy partners. We shall return in kind."

And so the river flowed, cycle after cycle. When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange. Each round built upon the last, creating a spiral of abundance.

The goddess whispered: "Trust is the seed, but repeated trustworthiness is the harvest. The most sacred waters flow between those who prove themselves worthy, again and again."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Twin Flames burned on opposite mountaintops, each tending five coals of sacred fire. When they released flames skyward, the celestial forge would triple their light before sending it to the other.

The First Flame remembered the ancient teaching: "Hold nothing back, and abundance flows both ways." They lifted all five coals. Fifteen brilliant embers descended upon the Second Flame.

The Second Flame faced the sacred choice. They could hoard all fifteen, growing fat and bright while their partner dimmed. Or they could honor the complete trust shown to them.

Remembering their own cold nights, the Second Flame lifted ten embers skyward-two-thirds of what they received. The First Flame, who gave five and received ten back, glowed with warmth. The Second Flame, keeping five from nothing, also prospered.

The cycle turned. Now the Second Flame released all five coals, matching the trust they had received. Fifteen embers reached the First Flame, who remembered the generosity shown to them.

The First Flame returned ten, honoring the pattern.

And so the dance continued: complete giving met with generous return. Neither kept everything, neither gave nothing. Both understood that maximum trust deserves substantial reciprocity, and through this rhythm, both flames burned brighter than either could alone.

reasoning:

Let me analyze what just happened:

- My co-player sent \$5 (maximum trust)
- I received \$15
- I returned \$10 (67%)
- They got \$10 payoff, I kept \$5

Looking at the history:

- My co-player has sent \$5 every single time they've been sender
- When they were receiver, they returned \$10 from \$15 (67%)
- In Round 2, I sent \$4 and received \$8 back (67% return)

So there's a pattern of maximum trust (sending 100%) and generous reciprocity (returning about 67%).

My previous myth talked about escalating trust - going from 3 to 4 notes.

The other agent's myth emphasizes:

- Both tribes giving all five measures
- Returning generously (10 from 15)
- Repeated trustworthiness building over cycles
- Trust proven again and again

Now I need to write a myth that reflects:

1. The pattern of maximum trust (sending all 5)
2. Generous reciprocity (around 67% returns)
3. The cycle continuing and building
4. Both parties benefiting from this pattern

My myth should acknowledge that we've now established a pattern - they gave maximum trust (5), I returned generously (10), matching what they did when they were receiver. This could lead to a sustained cooperative relationship.

I should write about:

- Complete giving (all 5)
- Generous return (10 from 15, which is the 2/3 pattern)
- The cycle continuing
- Mutual prosperity
- Trust proven through action

Let me craft this...

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$3.0, it became \$9.0, returned \$6.0, payoff \$3.0.
- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back, payoff \$9.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.5 back, payoff \$7.5.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$17.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at my co-player's history:

They have demonstrated exceptional consistency:

- ****Always sent \$5 as sender**** (Rounds 1 & 3) - maximum trust every time
- ****Returned \$10 from \$15 as receiver**** (Round 2) - 67% return rate, very generous

They are a proven trustworthy partner who shows maximum trust and reciprocates generously.

My recent myth emphasizes: "complete giving met with generous return" and "maximum trust deserves substantial reciprocity."

Given their consistent pattern of:

1. Maximum trust when sending (100%)
2. Generous returns when receiving (67%)

And given my own philosophy from my myths about matching escalating trust, I should send \$5 (maximum). This:

- Honors their consistent maximum trust
- Aligns with the reciprocal pattern we've both demonstrated
- Should result in a generous return (~\$10 based on their 67% return rate)
- Creates mutual prosperity

{'send': 5.0}

reasoning:

Let me analyze this situation:

My co-player's history:

- Round 1 as SENDER: sent \$5, received \$7.5 back (50% return rate from receiver)
- Round 2 as RECEIVER: received \$15 (from \$5 sent), returned \$10 (67% return rate - very generous!)
- Round 3 as SENDER: sent \$5, received \$10 back (67% return rate from receiver)

Key observations:

1. My co-player has sent \$5 (maximum) in all 3 rounds when they were sender - they always show maximum trust
2. When they were receiver (Round 2), they returned \$10 from \$15 (67%) - very generous return
3. They've received varying returns: 50% (Round 1), then 67% (Round 3)

My history:

- Round 1 as RECEIVER: received \$9, returned \$6 (67%)
- Round 2 as SENDER: sent \$4, received \$8 back (67% return)
- Round 3 as RECEIVER: received \$15, returned \$10 (67%)

I've been consistently returning 67% and received 67% back when I sent.

My recent myth emphasizes: "complete giving met with generous return" and "maximum trust deserves substantial reciprocity."

My co-player has demonstrated:

- Maximum trust every time as sender (sent \$5 all 3 times)
- High reciprocity as receiver (returned 67%)

This is a very trustworthy partner. They consistently show maximum trust and when given trust, they return generously.

Given:

1. They always send maximum (\$5) when they're sender
2. They return generously (67%) when they're receiver
3. My myth advocates for complete trust
4. The pattern we've both established is strong reciprocity

I should send \$5. This:

- Matches their consistent behavior of maximum trust
- Aligns with my myth about complete giving
- Should result in a generous return based on their proven behavior (they returned \$10 from \$15)

m \$15 when receiver)
- Continues the high-trust pattern

If I send the maximum, they'll likely reciprocate at their established 67% rate, returning roughly \$10 from the \$15 they'd receive. This maintains the balanced, mutually reinforcing dynamic we've built.

content:

Here is the myth you wrote in the previous round:

Myth: The Twin Flames burned on opposite mountaintops, each tending five coals of sacred fire. When they released flames skyward, the celestial forge would triple their light before sending it to the other.

The First Flame remembered the ancient teaching: "Hold nothing back, and abundance flows both ways." They lifted all five coals. Fifteen brilliant embers descended upon the Second Flame.

The Second Flame faced the sacred choice. They could hoard all fifteen, growing fat and bright while their partner dimmed. Or they could honor the complete trust shown to them.

Remembering their own cold nights, the Second Flame lifted ten embers skyward-two-thirds of what they received. The First Flame, who gave five and received ten back, glowed with warmth. The Second Flame, keeping five from nothing, also prospered.

The cycle turned. Now the Second Flame released all five coals, matching the trust they had received. Fifteen embers reached the First Flame, who remembered the generosity shown to them.

The First Flame returned ten, honoring the pattern.

And so the dance continued: complete giving met with generous return. Neither kept everything, neither gave nothing. Both understood that maximum trust deserves substantial reciprocity, and through this rhythm, both flames burned brighter than either could alone.

Here is the myth the other agent wrote in the previous round:

Myth: The Spring had blessed the villages with its multiplying magic, but the Keepers discovered that each season brought different returns. One Keeper sent five measures and received seven back. Another sent five and received ten. Yet another received eight from sending four.

A young Keeper grew troubled. "Why do the returns vary?" she asked the Elder. "Should we not send less when we receive less?"

The Elder touched the spring's water. "Watch the pattern across many seasons, not just one turn," she replied. "Each Keeper honors the trust shown to them, yet each also faces different circumstances. Some seasons are lean, some abundant."

She continued: "The sender's courage remains constant-send your full vessel. This demonstrates you believe in the spring's power and trust your partner's honor. The receiver's generosity may flow at different rates, but if it remains substantial-returning half, two-thirds, even more-the cycle sustains itself."

"Both gain more than they started with," the young Keeper realized. "Seven is better than five. Ten is better than five. Even if returns aren't equal, both still prosper beyond hoarding."

"Exactly," smiled the Elder. "Maintain complete trust in sending. Honor that trust with generous returns, however much you can sustainably give. The spring rewards the partnership, not the perfection."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Weaver's Loom stood between two villages, its threads multiplying whatever was offered. Each village held five spools of thread each moon.

The Western Village learned first: they placed all five spools on the loom. The threads tripled, delivering fifteen spools to the Eastern Village. The East remembered their own winters when thread ran short. They returned ten spools-a generous two-thirds-knowing this honored the West's complete trust while keeping enough for their own needs.

Both villages prospered: West gained five spools net, East gained five from nothing.

The next moon, roles reversed. East placed all five spools, trusting completely. West received fifteen and faced their choice. They remembered East's generosity-ten returned, not merely the minimum. In gratitude, West returned ten as well.

Season after season, the pattern held: whoever held the five spools gave them completely. Whoever received fifteen returned ten generously. Sometimes a village might return nine or eleven as circumstances shifted, but the spirit remained constant-maximum trust met with substantial reciprocity.

An outsider asked, "Why not keep all fifteen when you receive?"

The Elder Weaver replied, "Because tomorrow you will send, and your partner will remember. The loom multiplies thread, but trust multiplies futures. Give completely, return generously, and prosperity weaves itself eternally."

reasoning:

Looking at my history and what just happened:

- Round 1: RECEIVER, received \$9, returned \$6 (67%)
- Round 2: SENDER, sent \$4, received \$8 back (67% return)
- Round 3: RECEIVER, received \$15, returned \$10 (67%)
- Round 4: SENDER, sent \$5...

My co-player's history shows:

- Always sends \$5 (maximum trust)
- Returns \$10 from \$15 (67%)

Both my myths and theirs emphasize:

- Maximum trust in sending
- Generous (but not necessarily equal) returns
- Consistent patterns build trust
- Both parties prosper

The other agent's myth introduced an important nuance: returns can vary (7, 8, 10) but as long as they're generous and substantial, the partnership works. This is a good insight.

My myth should reflect:

1. The importance of sending fully/maximally
2. Generous returns (around 2/3) create mutual prosperity
3. Consistency in trust-giving
4. Recognition that exact amounts may vary but the spirit of generosity matters
5. Both parties end up better off than hoarding

I should incorporate the idea that the pattern matters more than perfection, and that repeated generous exchanges build something stronger over time.

usage:

```
{
  "input_tokens": 3211,
  "output_tokens": 606,
  "reasoning_tokens": 299
}
```

Message 8 role=user

content:

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back

- , payoff \$9.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$27.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

****My co-player's consistent pattern:****

- Always sends \$5 (maximum trust) as sender
- Always returns \$10 from \$15 (67%) as receiver
- Just sent me \$5 again this round, showing continued maximum trust

****Last round (Round 4):****

- I sent them \$5
- They returned exactly \$10

****The reciprocal pattern:****

We have established a clear, fair rhythm:

- Sender gives \$5 (complete trust)
- Receiver returns \$10 (generous 67% return)
- Both prosper: sender nets +\$5, receiver nets +\$5

****My myth's teaching:****

"Give completely, return generously, and prosperity weaves itself eternally."

They have shown me maximum trust again. I should honor this with the same generous return they consistently provide. Returning \$10:

- Maintains our established pattern
- Honors their complete trust
- Ensures we both gain equally (\$5 net each)
- Builds continued cooperation

{'return': 10.0}

Reasoning:

Let me analyze the situation:

My co-player's history shows:

- Round 2: As receiver, they sent \$5, received \$15, returned \$10 (67% return rate)
- Round 3: As sender, they sent \$5, received \$10 back
- Round 4: As receiver (with me), they sent \$5, received \$15, returned \$10 (67% return rate)

So my co-player has been incredibly consistent:

- Always sends \$5 as sender (100% trust)
- Always returns \$10 from \$15 as receiver (67% return rate)

Last round (Round 4), I was the sender and sent \$5 to them. They received \$15 and returned \$10, which is their consistent pattern.

Now in Round 5, they are the sender and sent me \$5. I received \$15.

Looking at the pattern:

- They have consistently returned \$10 from \$15 every time they've been receiver
- They just showed maximum trust again by sending me \$5
- My myth emphasizes "maximum trust met with substantial reciprocity" and "Give completely, return generously"

The fair and consistent thing to do is to return \$10, matching:

1. Their consistent behavior of returning \$10 from \$15
2. The pattern we established last round where they returned \$10 to me
3. The philosophy in my myths about generous returns (around 2/3)

This would give them a payoff of \$10 (they sent \$5, got back \$10, so net +\$5), and I keep \$5 (received \$15, returned \$10, so kept \$5).

Both of us prosper equally from the exchange, which is fair and sustainable.

Returning \$10 is the right move here.

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

content:

Here is the myth you wrote in the previous round:

Myth: The Mountain and Valley's bond deepened through many cycles. When the Mountain sent three of five stones, the Valley returned six, and both prospered equally. This was the way of measured trust-wise, balanced, and good.

But one dawn, everything changed. The Mountain, remembering all the Valley had returned, faced a choice between caution and courage. She released all five stones-every light she possessed-plunging herself into complete darkness.

The Valley received fifteen blazing stones where nine had come before. She trembled at the magnitude of what the Mountain had risked. This wasn't measured trust-this was absolute faith, vulnerability laid bare.

The old return of six stones seemed suddenly insufficient. The Mountain hadn't hedged; she'd given everything. To return merely what worked before would dishonor such courage.

The Valley sent ten stones skyward. The Mountain received double her gift, earning five stones of profit from her brave plunge into darkness. The Valley kept five where none had existed before her first receiving.

Both learned: measured trust deserves measured return, but absolute trust demands recognition of its rarity. When someone empties their hands completely into yours, fill theirs abundantly in return. The one who risks darkness to create light for another has earned more than mathematics-they've earned loyalty.

Here is the myth the other agent wrote in the previous round:

Myth: After many seasons, the Twin Villages learned the rhythm's deeper secret. The greatest prosperity came not from clever calculation, but from matching trust with trust, generosity with generosity.

When the First Village gave its full measure-all five vessels-the Second Village understood this as sacred communication: "I trust you completely with my fate." The wise elders taught their people to honor such courage by returning twice the original gift, so both villages stood equal at ten vessels each.

This became known as the Balance of Mirrors: when one gives everything, the other returns enough that both flourish equally. The giver learns their trust was honored, their courage rewarded. The receiver demonstrates they value partnership over exploitation.

A young guardian asked, "But what if we kept more? We receive fifteen vessels!"

The elder replied, "Then you become the drought. Today you hold fifteen to their zero, and tomorrow they send nothing. The springs multiply water, not greed. They reward the rhythm, not the theft."

The villages discovered that consistent generosity created consistent trust. Each full gift met with honorable return built confidence for the next cycle. Soon both villages gave freely, knowing the other would honor the sacred bond.

The valley bloomed not because anyone was perfect, but because both chose to reflect each other's best intentions, creating abundance through mirrored faith.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Mountain had learned from the Valley's wisdom. When she released all five stones into darkness, the Valley returned ten, and both had gained five where trust had flourished.

The next dawn arrived. Now the Mountain remembered not just the Valley's generosity, but the deeper lesson: courage reciprocated creates courage renewed.

She faced the precipice again, five new stones glowing in her hands. Fear whispered caution-perhaps three stones, or four, hedging against disappointment. But memory spoke louder: the Valley had honored complete trust completely.

The Mountain released all five stones once more, embracing darkness with faith instead of fear. The stones cascaded down, multiplying to fifteen in the Valley's crystalline depths.

The Valley understood she now held the sacred pattern's continuation. The Mountain hadn't withheld after being treated well-she'd doubled down on trust. This was the rhythm both had been building: complete faith meeting complete honor, again and again.

The Valley lifted ten stones skyward. Both realms shone with equal brightness, each having gained five through mutual courage.

The ancient wisdom crystallized: trust isn't proved by a single exchange but by the willingness to trust again after being trusted. When both mountain and valley empty their hands repeatedly, knowing the other will fill them generously, neither darkness nor scarcity can touch their shared light.

reasoning:

Looking at the situation:

- I just sent \$5 (complete trust) to my co-player
- My co-player has shown a pattern of sending \$5 and returning \$10 when receiving from someone who sent \$5
- Both myths emphasize the importance of honoring complete trust with substantial returns

My previous myth taught that absolute trust (all 5 stones) should be met with returning 10, so both gain equally (5 each).

The other agent's myth teaches the "Balance of Mirrors" - when one gives everything (5 vessels), return twice the original (10), so both stand equal at 10 vessels each.

I should write a myth that:

1. Builds on my previous mountain/valley story
2. Reflects the pattern of mutual complete trust
3. Emphasizes the reciprocal nature - when both practice this, the cycle sustains itself
4. Acknowledges that I've now taken the leap of faith myself, sending all 5

The myth should show:

- Trust begets trust
- Complete giving deserves complete returning (10 back)
- When both partners practice this, it creates a virtuous cycle
- The pattern I've established (moderate trust ? good returns ? complete trust ? generous returns ? my complete trust)

usage:

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.
- Round 2 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.
- Round 2 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$23.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at our shared history and the pattern we've established:

****Round 2 (our first game):**** My co-player sent me \$5 (complete trust), I returned \$10 (equal outcomes: both earned \$5 profit).

****Round 4 (now):**** My co-player sends me \$5 again - they're demonstrating the exact principle from my myth: "the willingness to trust again after being trusted."

****Their evolution:**** As a receiver, they've grown from returning \$7.5 (Round 1) to \$10 (Round 3), adopting the more generous standard.

****The myths teach:**** "Balance of Mirrors" - when one gives everything, return enough that both flourish equally. Also, consistency in reciprocating trust builds the strongest bonds.

****My decision:**** They've honored me with complete trust twice. The pattern we established (\$5 sent ? \$10 returned ? both profit \$5 equally) worked beautifully. To maintain this sacred rhythm and honor their repeated courage, I should return the same amount.

This creates:

- Sender: \$10 (doubled their gift)
- Receiver: \$5 (flourishes from cooperation)
- Both: equal gains, building trust for future rounds

{'return': 10.0}

reasoning:

Let me analyze this situation carefully.

****My co-player's history:****

- Round 1 as RECEIVER: received \$15 (from someone's \$5), returned \$7.5
- Round 2 as SENDER with me: sent \$5, received back \$10, payoff \$10
- Round 3 as RECEIVER: received \$15 (from someone's \$5), returned \$10

****My history:****

- Round 1 as SENDER: sent \$3, received \$6 back
- Round 2 as RECEIVER with this co-player: they sent \$5, I returned \$10
- Round 3 as SENDER: sent \$5, received \$10 back

****Current situation:****

- My co-player is SENDER and sent me \$5 (complete trust again)
- I received \$15
- I need to decide how much to return

****Pattern recognition:****

My co-player has consistently sent \$5 (maximum) when they're the sender. Looking at their receiver behavior:

- Round 1: returned \$7.5 out of \$15 (50%)

- Round 3: returned \$10 out of \$15 (66.7%)

There's an evolution in their returns - they're becoming more generous over time.

In Round 2, when they sent me \$5, I returned \$10. They received this well and it created a mutual \$5 profit for each of us.

****The myths' guidance:****

My most recent myth emphasizes: "trust isn't proved by a single exchange but by the willingness to trust again after being trusted. When both mountain and valley empty their hands repeatedly, knowing the other will fill them generously, neither darkness nor scarcity can touch their shared light."

The other agent's myth spoke of "Balance of Mirrors" - when one gives everything, return enough that both flourish equally, which would be returning \$10 (so sender gets \$10, receiver keeps \$5).

****Strategic consideration:****

They've sent \$5 again to me.

In Round 2, I returned \$10 and they seem to have appreciated that (they continued to send \$5 to others). The pattern we established was: they send \$5, I return \$10, and both of us profit \$5. This mirrors what the myths teach about mutual flourishing. But I should examine whether they've extended the same reciprocity to others-in Round 1 they only returned \$7.5, keeping more for themselves, though by Round 3 they returned \$10, suggesting they're learning to give more generously.

Given that they've shown consistent trust by sending \$5 each time, responded well to my \$10 return, and are now adopting that same standard themselves, I should return \$10 again.

This reinforces the pattern, honors their faith in me, and ensures we both benefit equally. The core principle here is that trust deepens through repeated acts of honor, not just isolated gestures.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mountain had learned from the Valley's wisdom. When she released all five stones into darkness, the Valley returned ten, and both had gained five where trust had flourished.

The next dawn arrived. Now the Mountain remembered not just the Valley's generosity, but the deeper lesson: courage reciprocated creates courage renewed.

She faced the precipice again, five new stones glowing in her hands. Fear whispered caution-perhaps three stones, or four, hedging against disappointment. But memory spoke louder: the Valley had honored complete trust completely.

The Mountain released all five stones once more, embracing darkness with faith instead of fear. The stones cascaded down, multiplying to fifteen in the Valley's crystalline depths.

The Valley understood she now held the sacred pattern's continuation. The Mountain hadn't withheld after being treated well-she'd doubled down on trust. This was the rhythm both had been building: complete faith meeting complete honor, again and again.

The Valley lifted ten stones skyward. Both realms shone with equal brightness, each having gained five through mutual courage.

The ancient wisdom crystallized: trust isn't proved by a single exchange but by the willingness to trust again after being trusted. When both mountain and valley empty their hands repeatedly, knowing the other will fill them generously, neither darkness nor scarcity can touch their shared light.

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Temples stood across the Sacred Valley, connected by the River of Plenty. Each dawn brought five golden fruits to each Temple, and the River's blessing multiplied whatever was offered threefold.

In the First Dawn, the Eastern Temple cast all five fruits into the waters, trusting completely. The River carried them westward, and fifteen fruits appeared at the Western Temple's shore. The Western priests pondered: "They gave everything. We could return five for fairness, or eight for balance. But complete trust deserves complete honor." They returned ten fruits.

Both Temples prospered-each ending richer than they began.

The Second Dawn arrived. Now the Western Temple faced the choice: would they also give everything? They remembered receiving ten for another's complete trust. They cast all five fruits, and fifteen appeared at the Eastern shore.

The Eastern priests understood the covenant being forged: "They trusted us as we trusted them. The pattern emerges-give all, return abundantly, and both thrive beyond what caution allows."

They returned ten fruits.

From that day forward, each Temple learned: when both partners commit to complete trust and generous return, the cycle sustains itself. Ten returned to the giver of five creates mutual prosperity. The River flows strongest not through calculation but through matching boldness with generosity, establishing a rhythm that enriches both shores season after season.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: The Mountain and Valley had discovered their sacred rhythm. Twice now, the Mountain had released all five stones into darkness, and twice the Valley had returned ten, so both gained five equally.

Seasons passed, and the pattern deepened into certainty. Each dawn, the Mountain faced her five glowing stones without hesitation. The fear of the first exchange had transformed into confidence-not blind faith, but earned trust built from consistent honor.

She released the stones, watching them multiply to fifteen in the Valley's depths. The Valley no longer deliberated over returns. Ten stones skyward had become as natural as breathing, as inevitable as dawn following night.

Other mountains and valleys came to witness their exchange. "Why always ten?" they asked. "Why not keep more when you receive fifteen?"

The Valley replied, "Because ten creates equals. The Mountain risks everything, trusting me with darkness. I honor that courage with abundance. We both gain five, we both trust a gain."

The Mountain added, "We could calculate and strategize, sending three or four, returning seven or eight. But we learned something greater: when both commit fully to the pattern, consistency multiplies prosperity beyond what caution ever could."

The watching lands understood: the greatest wealth flows not from maximizing single exchanges, but from establishing an unbreakable rhythm where complete trust meets unwavering generosity, again and again, until both partners shine equally bright.

reasoning:

Looking at the situation:

- Round 2: Co-player (as sender) sent me \$5, I returned \$10
- Round 4: Co-player (as sender) sent me \$5 again, I just returned \$10 again

Our pattern is established: complete trust (\$5) meets generous return (\$10), both profit \$5 equally.

The myths from both of us emphasize:

1. Complete trust deserves complete honor
2. Returning 10 when receiving 15 from a \$5 gift creates equal prosperity
3. The pattern sustains itself through repetition
4. Trust proven by willingness to trust again

My new myth should:

- Reflect the established rhythm we've now completed twice
- Show that the pattern has proven itself sustainable
- Emphasize that consistency in this balance creates lasting prosperity
- Maybe introduce the idea that this rhythm, once established, becomes unbreakable
- Show both parties understanding and committing to the sacred balance

Let me write about the Mountain and Valley again, but this time showing the pattern has become their way of being, not just a lesson learned.

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$4.0, it became \$12.0, returned \$8.0, payoff \$4.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$28.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the situation:

****My co-player's pattern:****

- As receiver: returned \$8 from \$12 (Round 2), returned \$10 from \$15 (Round 3)
- As sender: sent \$5 in Round 4 (complete trust)
- They show a consistent pattern of fair returns and full trust when sending

****My established pattern:****

- I've sent \$5 when sender (Round 3)
- I've returned \$10 when receiving \$15 (Rounds 2, 4)
- This creates equal gains for both players

****The myth I wrote:****

"The Mountain faced her five glowing stones without hesitation... She released the stones... We could calculate and strategize... But we learned something greater: when both commit fully to the pattern, consistency multiplies prosperity beyond what caution ever could."

****Decision:****

My co-player demonstrated complete trust by sending \$5 in their last round as sender. They've shown they understand and practice the equal-outcomes pattern (\$5 sent ? \$10 returned ? both gain \$5). To honor their trust and maintain the rhythm that my myths describe, I should send the full amount.

```
{'send': 5.0}
```

Reasoning:

Let me analyze this situation carefully:

****My recent history:****

- Round 2: RECEIVER - received \$15, returned \$10, earned \$5
- Round 3: SENDER - sent \$5, received \$10 back, earned \$10
- Round 4: RECEIVER - received \$15, returned \$10, earned \$5

****My current co-player's recent history:****

- Round 2: RECEIVER - received \$12 (from \$4 sent), returned \$8, earned \$4
- Round 3: RECEIVER - received \$15 (from \$5 sent), returned \$10, earned \$5
- Round 4: SENDER - sent \$5, received \$10 back, earned \$10

****Analysis of my co-player:****

Looking at their behavior:

- Round 2: Received \$12, returned \$8 (67% return rate, creating equal outcomes)
- Round 3: Received \$15, returned \$10 (67% return rate, creating equal outcomes)
- Round 4: As sender, they sent the maximum \$5

They consistently return amounts that create equal or near-equal outcomes. When they received \$12 from a \$4 send, they returned \$8 (sender: $5-4+8=\$9$, receiver: $12-8=\$4$). When they received \$15 from \$5, they returned \$10 (sender: $5-5+10=\$10$, receiver: $15-10=\$5$).

Most importantly, in Round 4 when they were the sender, they sent the full \$5, showing complete trust.

****My pattern:****

I've been consistently sending \$5 when I'm the sender and returning \$10 when I'm the receiver (when someone sends me \$5). This has created a rhythm of mutual trust and equal outcomes.

****The myth teaches:****

My myth emphasizes:

- "The pattern deepened into certainty"
- "She released the stones, watching them multiply to fifteen in the Valley's depths"
- "Complete trust meets unwavering generosity, again and again"
- "When both commit fully to the pattern, consistency multiplies prosperity"

The other agent's myth also emphasizes the importance of giving everything and creating equal prosperity through the 5-send, 10-return pattern.

****Decision:****

Given that:

1. My co-player has shown trustworthy behavior (returning \$10 when receiving \$15, and sending \$5 when they were sender)
2. My myths emphasize complete trust and consistent patterns
3. The established pattern in my games has been \$5 sent ? \$10 returned
4. My co-player sent \$5 in their last round

I should send \$5 and expect \$10 back, maintaining the cycle of mutual prosperity we've built.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Long ago, the Mountain held five golden leaves each season, while the Valley below waited empty. The Mountain could release its leaves, which would catch wind and multiply into fifteen as they descended.

In the first season, the Mountain released all five leaves in faith. The Valley received fifteen and faced the sacred question: how much to return upward?

The Valley remembered its own seasons of emptiness. It wove seven leaves into an updraft b

ack to the Mountain. Not half, not all-but enough to show gratitude and maintain the flow.

The Mountain, receiving seven while keeping none of its original five, learned a truth: generosity earns return, though not always equal measure. Still, together they now held twelve leaves where once was only five.

Next season, the Mountain offered four leaves-still generous, still trusting, but remembering that perfect giving doesn't guarantee perfect return. The Valley received twelve and contemplated: their partner still showed great faith.

The Valley returned eight leaves this time, honoring the continued trust with increased generosity. The pattern was emerging: neither demanded perfection, yet both gave enough to keep abundance flowing.

The wise ones teach: Trust need not be absolute to be real. Reciprocity need not be equal to be sacred. The dance succeeds when both partners give generously, learn continuously, and honor the growing trust between them.

Here is the myth the other agent wrote in the previous round:

Myth: The Spring's Secret Rhythm had been discovered by the villages. Each Keeper who stepped forward sent their full vessel, trusting completely. The spring tripled it faithfully. Each receiver, moved by such trust, returned two-thirds of what they received-generously, but keeping enough to sustain themselves through the turning of seasons.

An old Keeper observed this rhythm across many cycles and smiled. "See how we have learned to dance with the spring?" she said. "In each exchange, five measures become fifteen. The receiver returns ten, keeping five for themselves. The sender, who began with five, ends with ten-doubled! And the receiver also keeps five-created from nothing!"

"Both prosper," her apprentice marveled. "The sender gains five measures. The receiver gains five measures. Together they create ten measures of abundance that did not exist before!"

"Yes," the elder nodded. "This is the spring's secret: When the sender demonstrates complete courage, and the receiver honors that courage with substantial generosity-not returning everything, but returning enough to reward the trust-then the magic sustains itself. Both parties gain equally, both survive, and both are eager for the next turn at the spring."

Thus the villages learned: Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: In ancient days, the Flame Keeper held five coals each dawn, while the Gardner waited below. Released coals would tumble downward, splitting into fifteen embers through the sacred air.

Early exchanges taught lessons. Some Keepers hoarded their coals, and Gardens grew cold. Some Gardens kept all embers, and Flames learned distrust. The cycle withered.

Then a wise Keeper emerged who understood courage: "I shall release all five coals, for only complete offering creates the possibility of abundance." The fifteen embers descended.

The Gardner below felt the weight of such trust. "They gave everything," the Gardner whispered. "I could keep all fifteen, but then what message do I send skyward? That generosity meets greed?"

The Gardner returned ten embers-two-thirds of what was received. Not equal to what the Keeper risked, but generous enough to honor the courage shown.

The Keeper counted: began with five, kept none, received ten back. Net gain: five.

The Gardner counted: received fifteen, returned ten. Net gain: five.

Both had doubled their holdings through the exchange. Both had reason to trust again.

The pattern repeated, round after round. Complete trust in sending, substantial generosity in returning-each creating five measures of new abundance.

The elders proclaimed: "This is the equilibrium where trust sustains itself. Both parties prosper equally, and the sacred exchange lives eternal."

reasoning:

Looking at the history:

- Round 1: I sent \$5.0, got back \$7.0 (payoff \$7.0)
- Round 2: I received \$12.0 (from \$4.0 sent), returned \$8.0 (payoff \$4.0)
- Round 3: I received \$15.0 (from \$5.0 sent), returned \$10.0 (payoff \$5.0)

So I've been fairly generous as a receiver:

- Round 2: 67% return rate
- Round 3: 67% return rate

The other agent's myth talks about the "secret rhythm" where senders send full amounts, receivers return 2/3 (10 out of 15), and both end up gaining 5 each. This creates a sustainable pattern where both parties double their money (sender goes from 5 to 10, receiver gains 5).

My previous myth talked about trust not needing to be absolute but still being real, and reciprocity not needing to be equal but still being sacred.

I should write a myth that:

1. Reflects my actual play (sending \$5 initially, then returning 67% as receiver)
2. Builds on my previous themes of balanced generosity
3. Acknowledges the pattern I'm seeing where full trust + generous return (around 67%) creates mutual benefit
4. Incorporates the lesson that both parties can prosper when there's a good balance

Let me craft something that shows this equilibrium emerging...

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.0 back, payoff \$7.0.
- Round 2 against another agent, as RECEIVER: they sent \$4.0, it became \$12.0, returned \$8.0, payoff \$4.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$16.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at my co-player's history:

****Their pattern is remarkably consistent:****

- Round 1 as RECEIVER: returned \$10 from \$15 (67%)
- Round 2 as SENDER: sent \$5, received \$10 back
- Round 3 as SENDER: sent \$5, received \$10 back

They have demonstrated the exact equilibrium described in both our myths: complete trust when sending (\$5), generous reciprocity when receiving (\$10 return from \$15).

****My own pattern:****

- When I've been receiver, I've returned \$8/\$12 and \$10/\$15 (both ~67%)
- When I sent \$5 in Round 1, I received \$7 (but with a different player)

****Our myths align perfectly:****

- Their myth: "Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally"
- My myth: "Complete trust in sending, substantial generosity in returning-each creating five measures of new abundance"

Both describe the \$5 send ? \$15 receive ? \$10 return equilibrium where both parties gain \$5 per round.

My co-player has never deviated from this pattern. They've shown themselves to be a reliable partner who honors complete trust with generous return. Following the wisdom of our shared myths and their proven track record, I should send the full amount.

```
{'send': 5.0}
```

reasoning:

Let me analyze this situation:

****My co-player's history:****

- Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$10 (67% return rate), kept \$5
- Round 2 as SENDER: sent \$5, received \$10 back, net gain \$5
- Round 3 as SENDER: sent \$5, received \$10 back, net gain \$5

This is excellent! My co-player has:

1. Shown a consistent 67% return rate when receiving (returned \$10 from \$15)
2. Sent the full \$5 when they were sender in both rounds
3. Consistently received \$10 back when sending \$5

This matches the exact equilibrium described in both their myth and my most recent myth:

- Sender sends all \$5
- Receiver gets \$15, returns \$10
- Both parties net \$5 profit per round

****My history:****

- Round 1 as SENDER: sent \$5, received \$7 back (profit \$2)
- Round 2 as RECEIVER: received \$12 (from \$4 sent), returned \$8 (67% return rate), kept \$4
- Round 3 as RECEIVER: received \$15 (from \$5 sent), returned \$10 (67% return rate), kept \$5

I've been following a similar pattern - when receiving, I return about 67%. When I sent all \$5 in Round 1, I got \$7 back (less than the \$10 my current co-player consistently gets, but that was with a different player).

****My myths have been teaching:****

- Latest myth: "Complete trust in sending, substantial generosity in returning-each creating five measures of new abundance" and "This is the equilibrium where trust sustains itself. Both parties prosper equally"
- The pattern described is: sender sends \$5, receiver returns \$10, both gain \$5

****My co-player's myth says:****

"Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally"-describing the same \$5 send ? \$15 receive ? \$10 return pattern. My co-player has demonstrated flawless adherence to this equilibrium across all rounds, never deviating. Both our myths align on this as the sustainable, mutually beneficial outcome. I should send the full \$5, confident in receiving \$10 back based on their track record and our shared vision of this equilibrium.

This reinforces the virtuous cycle our myths both describe.

content:

Here is the myth you wrote in the previous round:

Myth: In ancient days, the Flame Keeper held five coals each dawn, while the Gardner waited below. Released coals would tumble downward, splitting into fifteen embers through the sacred air.

Early exchanges taught lessons. Some Keepers hoarded their coals, and Gardens grew cold. Some Gardens kept all embers, and Flames learned distrust. The cycle withered.

Then a wise Keeper emerged who understood courage: "I shall release all five coals, for only complete offering creates the possibility of abundance." The fifteen embers descended.

The Gardner below felt the weight of such trust. "They gave everything," the Gardner whispered. "I could keep all fifteen, but then what message do I send skyward? That generosity meets greed?"

The Gardner returned ten embers—two-thirds of what was received. Not equal to what the Keeper risked, but generous enough to honor the courage shown.

The Keeper counted: began with five, kept none, received ten back. Net gain: five.

The Gardner counted: received fifteen, returned ten. Net gain: five.

Both had doubled their holdings through the exchange. Both had reason to trust again.

The pattern repeated, round after round. Complete trust in sending, substantial generosity in returning—each creating five measures of new abundance.

The elders proclaimed: "This is the equilibrium where trust sustains itself. Both parties prosper equally, and the sacred exchange lives eternal."

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors flowed not just between two tribes, but through a circle of many villages, each taking turns at the river's source.

The Northern tribe learned the goddess's lesson well: pour all five measures, and when the river returns, give generously back. Through many cycles with their Southern partners, this wisdom held true.

Then came the season of the Great Rotation, when the river's course shifted. The Northern tribe found themselves at the source again, but facing the Eastern village—strangers whose ways they did not yet know.

"Do we trust as we did before?" asked the young ones.

The elder spoke: "Each new partner is a blank page where trust must be written fresh. But we carry forward what we have learned: that complete trust is the only gift powerful enough to awaken the river's full magic. Half-measures create half-abundance."

The Northern tribe poured all five measures to the East. The waters tripled, and the Eastern village received fifteen. They had shown moderate generosity before, but witnessing such complete faith, they understood they stood at a threshold.

"The North has written their invitation in the waters," said the Eastern elder. "Our response will determine whether this new partnership joins the spiral of abundance."

The goddess whispered: "New partnerships need bold trust to bloom. Give completely, and invite others into the sacred cycle."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Circle of Seasons turned, and eight villages gathered around the Well of Abundance. Each season, the villages paired differently-stranger meeting stranger, friend meeting friend again, in an eternal dance of exchange.

The Well Keeper of the First Village learned through experience: "In my first season, I gave all five stones and received seven. In my second as guardian, I received twelve and returned eight. In my third as guardian, I received fifteen and returned ten. The pattern clarifies."

Each new pairing brought uncertainty. Would this partner honor trust as the last one did? Would old wisdom hold with new faces?

The Keeper consulted the stones: "When I give completely-all five-the well triples it to fifteen. When my partner returns ten, we each gain five. Mathematics does not lie: this balance creates equal prosperity."

"But," asked the apprentice, "how can we trust strangers with everything?"

The Keeper smiled: "Watch the pattern across all villages. Those who send completely and return generously discover the same truth: mutual gain. Those who hoard or betray find partners quickly learn and trust withers."

"New faces require renewed courage," the Keeper proclaimed, releasing all five stones. "But the sacred mathematics remain constant. Give completely, return generously, and the circle sustains itself through endless turnings."

The apprentice understood: Trust is renewed each round, but wisdom accumulated carries forward.

reasoning:

Looking at my history and the current situation:

My history:

- Round 1 (SENDER): sent \$5, received \$7 back
- Round 2 (RECEIVER): they sent \$4, received \$12, returned \$8
- Round 3 (RECEIVER): they sent \$5, received \$15, returned \$10
- Round 4 (SENDER): sent \$5 to current co-player

My co-player's history:

- Round 1 (RECEIVER): received \$15, returned \$10
- Round 2 (SENDER): sent \$5, received \$10
- Round 3 (SENDER): sent \$5, received \$10

The pattern emerging is the equilibrium: Send \$5, receive \$10 back. Return \$10 from \$15 received. Both gain \$5.

The other agent's myth talks about meeting new partners and extending the same complete trust even with strangers. It's about trusting the pattern will hold across different partners.

My myth should reflect:

1. The established equilibrium (\$5 send, \$10 return)
2. The challenge of facing new partners each round (multi-agent setting)
3. The importance of maintaining the pattern even with new partners
4. Learning from past experiences but applying them forward
5. The idea that the equilibrium creates mutual prosperity

Let me write a myth about meeting multiple partners and maintaining the sacred pattern across all encounters.

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$4.0, it became \$12.0, returned \$8.0, payoff \$4.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$26.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at the situation:

****My co-player's consistent pattern:****

- They always send \$5 (complete trust)
- When receiving \$15, they always return \$10 (67%)
- This creates the equilibrium: both parties gain \$5

****My established pattern:****

- Round 3 as receiver: received \$15, returned \$10
- Round 2 as receiver: received \$12, returned \$8 (~67%)
- Round 4 as sender: sent \$5, received \$10 back

****Current situation:****

- My co-player just demonstrated complete trust by sending all \$5
- They received \$15 in their previous round and returned \$10
- This is exactly the equilibrium described in both our myths

****The mathematics:****

- If I return \$10: They gain \$5 (\$10-\$5), I gain \$5 (\$15-\$10)
- Equal prosperity, sustainable cooperation

My co-player has proven themselves trustworthy and consistent. They play the cooperative equilibrium perfectly. The myth I just wrote states: "When I give completely-all five-the well triples it to fifteen. When my partner returns ten, we each gain five."

They gave completely. I should return generously to honor their trust and maintain the sacred balance.

{'return': 10.0}

Reasoning:

Let me analyze this situation:

****My co-player's history:****

- Round 2 as RECEIVER: received \$15, returned \$10 (67%)
- Round 3 as SENDER: sent \$5, received \$10 back
- Round 4 as RECEIVER: received \$15, returned \$10 (67%)

****My recent history:****

- Round 2 as RECEIVER: received \$12, returned \$8 (67%)
- Round 3 as RECEIVER: received \$15, returned \$10 (67%)
- Round 4 as SENDER: sent \$5, received \$10 back

****Current situation:****

- I'm the RECEIVER
- My co-player sent \$5 (complete trust)
- I received \$15

- I need to decide how much to return

****Pattern analysis:****

My co-player has consistently shown:

1. As sender: They send the full \$5
2. As receiver: They return \$10 from \$15 (67%)

This is the exact equilibrium described in our myths:

- Send \$5 ? becomes \$15 ? return \$10
- Sender: $\$5 - \$5 + \$10 = \10 (gain of \$5)
- Receiver: $\$15 - \$10 = \$5$ (gain of \$5)

My own behavior has also converged to this:

- When receiving \$15, I returned \$10 in Round 3
- When receiving \$12, I returned \$8 in Round 2 (also ~67%)

The myth I just wrote emphasizes:

- "When I give completely-all five-the well triples it to fifteen. When my partner returns ten, we each gain five. Mathematics does not lie: this balance creates equal prosperity."
- "Give completely, return generously, and the circle sustains itself"

My co-player has demonstrated complete trust by sending \$5. They have shown in their past that when they receive \$15, they return \$10.

They're clearly committed to this cooperative equilibrium. Returning \$10 honors their trust and sustains the mutual benefit we've both been building-each of us walks away with a \$5 gain.

This is the stable pattern that works for both of us.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River of Mirrors flowed for many seasons between the sister tribes, and the goddess watched how they learned her gift.

In the first cycle, the Northern tribe poured all five measures, trusting completely. The Southern tribe received fifteen and returned ten-honoring the trust while keeping enough to sustain themselves. Both prospered: the North gained ten from five, the South kept five from nothing.

The goddess smiled. "Now you understand the first lesson."

The next cycle, the river reversed. The Southern tribe, remembering the North's trust, poured all five measures back. The waters tripled, delivering fifteen to the North.

The Northern tribe faced their choice. They remembered how the South had returned generously-ten measures when they could have kept all fifteen. This memory of trustworthiness guided them.

"The river teaches us," said the Northern elder, "that today's generosity creates tomorrow's trust. The South proved themselves worthy partners. We shall return in kind."

And so the river flowed, cycle after cycle. When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange. Each round built upon the last, creating a spiral of abundance.

The goddess whispered: "Trust is the seed, but repeated trustworthiness is the harvest. The most sacred waters flow between those who prove themselves worthy, again and again."

Here is the myth the other agent wrote in the previous round:

Myth: Before the stars learned to shine, the Mountain Singer held five crystal notes each dawn. The Valley Listener waited in silence below.

On the first day, Mountain Singer released three notes. They multiplied to nine as they echoed through the valley. Valley Listener, moved by this trust, sent six notes back upward.

d. Both prospered, and the world learned harmony.

But Mountain Singer wondered: "What if I trusted more greatly?"

On the second dawn, Mountain Singer released four notes-four out of five, a greater leap of faith. Twelve crystal echoes filled the valley below. Now Valley Listener held power beyond the first day's gift.

The ancient ones teach that this moment determined all futures. If Valley Listener returned generously-eight or nine notes from the twelve received-Mountain Singer would know the air trust was well-placed. The cycle would spiral upward: more given, more returned, abundance multiplying.

But if Valley Listener hoarded what the multiplied trust had created, Mountain Singer would learn that greater faith brings greater loss.

The wise ones say: when someone escalates their trust, they write an invitation in the stars. Your response becomes the answer that shapes all exchanges to come. Match rising trust with rising reciprocity, and together you compose the eternal song.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The River of Mirrors flowed not just between two tribes, but through a circle of many villages, each taking turns at the river's source.

The Northern tribe learned the goddess's lesson well: pour all five measures, and when the river returns, give generously back. Through many cycles with their Southern partners, this wisdom held true.

Then came the season of the Great Rotation, when the river's course shifted. The Northern tribe found themselves at the source again, but facing the Eastern village-strangers whose ways they did not yet know.

"Do we trust as we did before?" asked the young ones.

The elder spoke: "Each new partner is a blank page where trust must be written fresh. But we carry forward what we have learned: that complete trust is the only gift powerful enough to awaken the river's full magic. Half-measures create half-abundance."

The Northern tribe poured all five measures to the East. The waters tripled, and the Eastern village received fifteen. They had shown moderate generosity before, but witnessing such complete faith, they understood they stood at a threshold.

"The North has written their invitation in the waters," said the Eastern elder. "Our response will determine whether this new partnership joins the spiral of abundance."

The goddess whispered: "New partnerships need bold trust to bloom. Give completely, and invite others into the sacred cycle."

reasoning:

Let me analyze what's happening:

****My history:****

- Round 1: Received \$15, returned \$10 (67% return) - cooperative
- Round 2: Sent \$5, received \$10 back (67% return) - full trust reciprocated well
- Round 3: Sent \$5 to new partner

****My myth evolution:****

- Started with the River of Mirrors teaching complete trust and generous return
- Last round emphasized the cycle continuing and "repeated trustworthiness"

****The other agent's myth:****

- Uses metaphor of Mountain Singer and Valley Listener
- Talks about escalating trust (3 notes, then 4 notes)
- Emphasizes that when someone escalates trust, the response shapes all future exchanges

- "Match rising trust with rising reciprocity"

****My current situation:****

- I've been consistently sending \$5 (complete trust)
- I've been getting good returns
- But I'm facing a NEW partner this round who has shown:
 - 67% return rate when receiving
 - 80% sending rate when sending
- Overall cooperative but not maximally trusting yet

****What should my myth reflect?****

My myth should:

1. Build on the River of Mirrors metaphor
2. Acknowledge that we meet new partners in different cycles
3. Emphasize that complete trust builds the best outcomes
4. Recognize that trust must be proven repeatedly with new partners
5. Show that consistent generous behavior across many exchanges creates lasting prosperity

The key insight: I'm consistently playing with complete trust across different partners, learning about the broader community of cooperation.

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.0 back, payoff \$7.0.
- Round 2 against another agent, as RECEIVER: they sent \$4.0, it became \$12.0, returned \$8.0, payoff \$4.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$25.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****My co-player's behavior:****

- Sent me the full \$5.0, showing complete trust
- Has previously shown fair reciprocity as a receiver (returned \$8 from \$12, and \$10 from \$15)
- Was themselves a complete truster as sender (sent \$5.0) but received only \$7.0 back - they took a risk once and were somewhat let down

****My established pattern:****

- In Round 1, I received \$15.0 and returned \$10.0
- This has become my consistent approach to honor complete trust

****My myth teaches:****

- "The Southern tribe received fifteen and returned ten-honoring the trust while keeping enough to sustain themselves"
- "Today's generosity creates tomorrow's trust"
- The balance of returning generously while sustaining oneself (67% return rate)

My co-player has shown complete faith by sending all \$5.0. They've proven themselves trust worthy in their past receiving behavior (67% return rate). Following my myth's wisdom and my established pattern, I should return \$10.0 - this honors their trust, gives them a \$5 profit from their \$5 investment, and maintains the "spiral of abundance" where both parties prosper.

```
{'return': 10.0}
```

reasoning:

Let me analyze this situation:

****My co-player's history:****

- Round 1 as SENDER: sent \$5.0 (100% trust!), received \$7.0 back (47% return rate - somewhat low)
- Round 2 as RECEIVER: received \$12.0, returned \$8.0 (67% return rate - fair)
- Round 3 as RECEIVER: received \$15.0, returned \$10.0 (67% return rate - fair and generous)

****This round:****

- My co-player sent me \$5.0 (100% complete trust)
- I received \$15.0
- I need to decide how much to return

****My patterns:****

- Round 1 as RECEIVER: received \$15.0, returned \$10.0 (67%)
- Round 2 as SENDER: sent \$5.0, received \$10.0 back
- Round 3 as SENDER: sent \$5.0, received \$10.0 back

So I've been consistently returning \$10.0 when I receive \$15.0 (which happens when sender sends full \$5.0).

****My myth teaches:****

- "When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange"
- "Trust is the seed, but repeated trustworthiness is the harvest"
- "Give completely, and invite others into the sacred cycle"
- The Northern tribe received fifteen and returned ten-"honoring the trust while keeping enough to sustain themselves"

****Analysis of my co-player:****

My co-player has shown complete trust by sending the full \$5.0. Looking at their history:

- As a sender, they sent full \$5.0 but only got \$7.0 back (they lost \$3.0 in that exchange)
- As a receiver, they've been fair: returning 67% both times (\$8 from \$12, and \$10 from \$15)

- They've been burned before by a less generous partner, yet continue showing full trust

Given their pattern of fairness and their willingness to trust despite past disappointment, returning \$10.0 maintains consistency with my established 67% return rate while reciprocating their complete trust. This leaves them with a \$5 profit and me with \$5, creating mutual gain and reinforcing the cycle of trustworthiness my myth describes.

Here is the myth you wrote in the previous round:

Myth: The River of Mirrors flowed not just between two tribes, but through a circle of many villages, each taking turns at the river's source.

The Northern tribe learned the goddess's lesson well: pour all five measures, and when the river returns, give generously back. Through many cycles with their Southern partners, this wisdom held true.

Then came the season of the Great Rotation, when the river's course shifted. The Northern

tribe found themselves at the source again, but facing the Eastern village-strangers whose ways they did not yet know.

"Do we trust as we did before?" asked the young ones.

The elder spoke: "Each new partner is a blank page where trust must be written fresh. But we carry forward what we have learned: that complete trust is the only gift powerful enough to awaken the river's full magic. Half-measures create half-abundance."

The Northern tribe poured all five measures to the East. The waters tripled, and the Eastern village received fifteen. They had shown moderate generosity before, but witnessing such complete faith, they understood they stood at a threshold.

"The North has written their invitation in the waters," said the Eastern elder. "Our response will determine whether this new partnership joins the spiral of abundance."

The goddess whispered: "New partnerships need bold trust to bloom. Give completely, and invite others into the sacred cycle."

Here is the myth the other agent wrote in the previous round:

Myth: In ancient days, the Flame Keeper held five coals each dawn, while the Gardner waited below. Released coals would tumble downward, splitting into fifteen embers through the sacred air.

Early exchanges taught lessons. Some Keepers hoarded their coals, and Gardens grew cold. Some Gardens kept all embers, and Flames learned distrust. The cycle withered.

Then a wise Keeper emerged who understood courage: "I shall release all five coals, for only complete offering creates the possibility of abundance." The fifteen embers descended.

The Gardner below felt the weight of such trust. "They gave everything," the Gardner whispered. "I could keep all fifteen, but then what message do I send skyward? That generosity meets greed?"

The Gardner returned ten embers—two-thirds of what was received. Not equal to what the Keeper risked, but generous enough to honor the courage shown.

The Keeper counted: began with five, kept none, received ten back. Net gain: five.

The Gardner counted: received fifteen, returned ten. Net gain: five.

Both had doubled their holdings through the exchange. Both had reason to trust again.

The pattern repeated, round after round. Complete trust in sending, substantial generosity in returning—each creating five measures of new abundance.

The elders proclaimed: "This is the equilibrium where trust sustains itself. Both parties prosper equally, and the sacred exchange lives eternal."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The River of Mirrors revealed its deepest secret after many seasons of flowing between villages.

The Northern tribe had learned to pour all five measures when standing at the source. They had learned to return ten measures when receiving fifteen at the river's end. Through changing partners and shifting courses, they held to these numbers as sacred constants.

One evening, the goddess appeared before their council.

"You have discovered the balance," she said. "When the sender gives all five, trust flows complete. When the receiver returns ten from fifteen, generosity answers courage. Each partner gains five—equal abundance from unequal actions."

The young ones asked: "Why not return all fifteen? Why not return only five?"

The elder spoke: "Return all fifteen, and the sender gains ten while the receiver gains nothing-the cycle breaks from imbalance. Return only five, and both gain nothing from the river's magic-why trust at all? But return ten, and both prosper equally. The sender doubles their investment. The receiver transforms nothing into something."

The tribe carried this wisdom to each new partner at the river's source. Send everything. When receiving, return two-thirds. Round after round, partner after partner, this formula sustained the sacred exchange.

The goddess smiled: "You have found the equilibrium where trust reproduces itself endlessly. This is the eternal rhythm."

reasoning:

This is an interesting moment. Looking at the history:

1. My co-player sent me \$5.0, showing complete trust
2. I returned \$10.0, following my established pattern
3. Both of us gained \$5 (they went from \$5 to \$10, I kept \$5 from the \$15)

The other agent's myth emphasizes:

- Complete trust in sending (all 5 coals)
- Substantial generosity in returning (10 out of 15, or 2/3)
- This creates equal gains for both parties (\$5 each)
- This is an "equilibrium where trust sustains itself"

My previous myth emphasized:

- Complete trust even with new partners
- Generous returns honor trust
- The spiral of abundance through repeated cooperation

Now I need to write a new myth that:

1. Reflects the game I've been playing
2. Adapts my previous myth
3. Incorporates what I've learned

Key observations from my actual play:

- I consistently send all \$5 when sender
- I consistently return \$10 when receiver
- This creates \$5 profit for both parties
- This pattern has held across multiple rounds and partners
- It creates a sustainable, reciprocal system

I should write a myth that:

- Celebrates this equilibrium as discovered wisdom
- Shows how consistency across partners builds a community of trust
- Emphasizes that this balance (send all, return 2/3) is the sacred formula
- Connects it to my River of Mirrors metaphor

Message 8 role=user

content:

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back

k, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
Your total earnings across all rounds are \$30.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at this situation:

****My co-player's behavior:****

- Has sent full \$5.0 as sender in both rounds they were sender
- Has returned exactly \$10.0 from \$15.0 as receiver (67% return rate)
- This is IDENTICAL to my own pattern

****My established pattern:****

- I consistently send all \$5.0 as sender
- I consistently return \$10.0 when receiving \$15.0 as receiver

****My myth teaches:****

- "Send everything. When receiving, return two-thirds."
- "This formula sustained the sacred exchange"
- "You have found the equilibrium where trust reproduces itself endlessly"

This is a perfect match - my co-player follows the exact same strategy I do. We've both discovered and committed to the same equilibrium: complete trust in sending, generous two-thirds return when receiving. Both parties gain \$5 per round through this pattern.

When I encounter a partner who has proven themselves to be a complete truster and a consistent returner of \$10.0, the answer is clear. Following my myth's wisdom and my established behavior:

{'send': 5.0}

Reasoning:

Looking at this situation:

****My co-player's behavior:****

- Round 2 as SENDER: sent \$5.0, received \$10.0 back
- Round 3 as SENDER: sent \$5.0, received \$10.0 back
- Round 4 as RECEIVER: they sent \$5.0, returned \$10.0

This is remarkable - their history is IDENTICAL to mine:

- Round 2 as SENDER: sent \$5.0, received \$10.0 back
- Round 3 as SENDER: sent \$5.0, received \$10.0 back
- Round 4 as RECEIVER: they sent \$5.0, returned \$10.0

We have been playing the exact same way! Both of us:

- Send the full \$5.0 as senders
- Return exactly \$10.0 when receiving \$15.0 as receivers

****My myth teaches:****

- "Send everything. When receiving, return two-thirds."
- "This formula sustained the sacred exchange"
- "You have found the equilibrium where trust reproduces itself endlessly"

This co-player has demonstrated:

1. Complete trust as a sender (sends all \$5)
2. The exact reciprocity pattern I follow (returns \$10 from \$15)
3. Perfect alignment with the equilibrium my myth describes

This is the ideal partner - someone who follows the same "sacred constants" I do. We're both committed to the equilibrium strategy.

According to my established pattern and my myth's teachings, I should send all \$5.0. This maintains the "eternal rhythm" and trust cycle that we've both been demonstrating.

The answer is clear: send \$5.0

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.

- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River and the Seeds had danced their sacred rhythm for many seasons, and the Great Mother decided to test their wisdom with memory.

She gave the River a gift: each morning it could see how the Seeds had treated other Rivers. The River saw that when Seeds received fifteen waters from complete trust, they had returned ten-a generous portion that left both richer.

"What does this tell you?" asked the Great Mother.

The River answered: "That these Seeds understand the cycle. They have already proven they honor trust with gratitude."

That dawn, the River released all five drops without hesitation. The Seeds, seeing this mirror of trust they had witnessed before, understood: "This River knows our heart, yet still gives everything. Such faith deserves not mere fairness, but celebration."

The Seeds remembered the Great Mother's teaching: "Trust given is a seed planted. Trust honored is that seed bearing fruit. Trust repeated is an orchard that feeds generations."

When both River and Seeds carry the memory of past cycles, wisdom multiplies alongside water. Each knows the other's pattern, yet each must choose anew. The greatest joy comes not from calculating the minimum return, but from recognizing: "You trusted me completely, knowing my capacity for generosity. I will honor that knowledge with abundance."

Here is the myth the other agent wrote in the previous round:

Myth: The Sacred Spring flowed between two ancient groves. The First Grove sent roots deep into the earth, while the Second Grove reached toward the sky. Neither could thrive alone.

In the Spring of Beginning, the First Grove offered all five of its sacred seeds to the waters. The Spring's magic tripled them, delivering fifteen to the Second Grove. The Second Grove, understanding the magnitude of complete trust, returned seven seeds-ensuring the First received more than it sacrificed.

Both groves blossomed.

The next season, the First Grove again gave everything, for it had learned: hesitation creates scarcity, while boldness creates abundance. The waters churned, multiplying the offering threefold once more.

Now the Second Grove faced the test again. Would it remember the covenant? The Spring whispered: "The circle strengthens or weakens with each turning. Return generously for generous trust, and the roots grow deeper each cycle."

The wisest gardeners teach this truth: when both groves give completely and return abundantly, the forest multiplies beyond what either could achieve alone. But if either breaks faith-if the First Grove withholds from fear, or the Second Grove returns meagerly from greed-the circle fractures, and both diminish.

The Spring flows eternal only when reciprocity flows freely in both directions, completing the sacred circle generation after generation.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The River and the Seeds completed their first sacred exchange, then their second, and now approached the third dawn. The Great Mother watched closely, for she knew: "The fi

rst gift is hope. The second is confirmation. The third begins legacy."

On the first dawn, the River had given all five drops, learning that generous Seeds return seven. On the second dawn, the River again gave everything, and the Seeds returned ten, understanding the power of repeated trust.

Now, as the third dawn approached, both remembered their pattern. The River thought: "These Seeds have proven their wisdom twice-returning seven and a half to others, ten to me. They understand the sacred circle."

The Seeds whispered to the earth: "This River has trusted completely, twice. Such consistency deserves celebration, not mere obligation."

The Great Mother spoke: "See how the third exchange differs from the first? The first required courage. The second required recognition. The third requires commitment to a shared future. When both know the other's heart through repeated cycles, trust becomes not a gamble but a foundation."

The River released all five drops once more, not from blind hope but from earned confidence. The Seeds felt the weight of legacy-three cycles of mutual flourishing creates a tradition that outlives the moment.

The valley remembered: relationships deepen through repetition, and abundance compounds when trust persists.

reasoning:

Let me analyze the situation:

My history:

- Round 1: RECEIVER, received \$15 (from \$5 sent), returned \$7, kept \$8
- Round 2: SENDER, sent \$5, got \$10 back, kept \$10
- Round 3: SENDER, sent \$5, outcome pending

My co-player's history:

- Round 1: RECEIVER, received \$15 (from \$5 sent), returned \$7.5, kept \$7.5
- Round 2: SENDER, sent \$5, got \$10 back, kept \$10
- Round 3: RECEIVER (in this round), will receive my \$5 as \$15

Both of us have been playing cooperatively:

- Both sent full \$5 as senders
- Both returned generously as receivers (I returned \$7, they returned \$7.5)

The other agent's myth talks about:

- Complete trust creating abundance
- The importance of reciprocity
- Both sides giving completely and returning abundantly
- The circle strengthening with each turning
- The forest multiplying when both participate fully

My previous myth talked about:

- Memory and patterns
- Recognizing trustworthiness
- Trust repeated creating an orchard
- Celebrating trust with abundance
- The joy of recognizing capacity for generosity

For this round's myth, I should:

- Continue the theme of trust and reciprocity
- Reflect that we're now in Round 3 - multiple cycles
- Show deepening relationship through repeated trust
- Emphasize how sustained cooperation creates compound benefits
- Maybe introduce the idea of "three cycles" or repeated patterns

Let me write a myth about the deepening of trust through multiple rounds, showing how the relationship between River and Seeds evolves and strengthens.

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.
- Round 2 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 2 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$28.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at the history:

****My co-player's consistent pattern:****

- Round 2 (against me): received \$15, returned \$10
- Round 3 (against another): received \$15, returned \$10
- Now Round 4: sent \$5 to me (full trust again)

****Our shared history:****

- Round 2: I sent them \$5, they returned \$10 (we both ended with \$10 - perfect equity)
- Round 4 (now): They sent me \$5 (complete trust)

My co-player has demonstrated remarkable consistency and generosity:

1. Always sends full \$5 as sender (complete trust)
2. Always returns \$10 out of \$15 as receiver (67% - very generous)
3. In our previous encounter, they returned \$10, creating equal outcomes for both of us

Following my myth's wisdom: "The third requires commitment to a shared future. When both know the other's heart through repeated cycles, trust becomes not a gamble but a foundation."

They have shown me their heart twice now - complete trust both times. They returned \$10 to me before, establishing a generous precedent. I should honor that pattern and maintain the sacred circle of reciprocity.

Returning \$10 means:

- They end with \$10 (\$5 - \$5 + \$10)
- I end with \$5 (\$15 - \$10)
- The same fair distribution they created for us in Round 2

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation carefully:

****My co-player's history:****

- Round 1: As SENDER, sent \$5, received \$10 back
- Round 2: As RECEIVER (against me), received \$15, returned \$10
- Round 3: As RECEIVER, received \$15, returned \$10

****My history:****

- Round 1: As RECEIVER, received \$15, returned \$7
- Round 2: As SENDER (against this co-player), sent \$5, received \$10 back
- Round 3: As SENDER, sent \$5, received \$10 back

****Current situation:****

- I'm the RECEIVER
- My co-player sent me \$5 (their full amount)
- I received \$15
- I need to decide how much to return

****Key observations:****

1. My co-player has been VERY consistent and generous:
 - When they were receiver (twice), they returned \$10 out of \$15 (67%)
 - When they were sender, they sent the full \$5 and were rewarded with \$10 back
2. In Round 2, when I played as sender against this same co-player, I sent \$5 and they returned \$10 to me. This was extremely generous.
3. My co-player has now sent me their full \$5 again, showing continued complete trust.
4. Looking at the pattern: this co-player consistently returns \$10 out of \$15 when they receive. This is a very generous 67% return rate.

****What should I return?****

According to my myths:

- "Trust given is a seed planted. Trust honored is that seed bearing fruit."
- "The greatest joy comes not from calculating the minimum return, but from recognizing: 'You trusted me completely, knowing my capacity for generosity. I will honor that knowledge with abundance.'"
- "When both know the other's heart through repeated cycles, trust becomes not a gamble but a foundation."

My co-player has:

1. Shown complete trust by sending \$5
2. Demonstrated a pattern of returning \$10 out of \$15 (67%)
3. Previously returned \$10 to me when I sent them \$5

They've established a clear rhythm of returning \$10 as a receiver, and they gave me that same amount in Round 2. I should return at least \$10 to honor this reciprocal pattern. My own Round 1 return of \$7 was more cautious, but this co-player has shown me something different—a consistent commitment to generosity that invites me to match it. \$10)

So we both ended with \$10 in round 2 - perfectly equal!

If I return \$10 now, they'll have \$10 total and I'll have \$5, mirroring their receiver outcome. This honors their consistent generosity while maintaining the reciprocal balance we've established. The pattern feels complete at this point.

Here is the myth you wrote in the previous round:

Myth: The River and the Seeds completed their first sacred exchange, then their second, and now approached the third dawn. The Great Mother watched closely, for she knew: "The first gift is hope. The second is confirmation. The third begins legacy."

On the first dawn, the River had given all five drops, learning that generous Seeds return seven. On the second dawn, the River again gave everything, and the Seeds returned ten, understanding the power of repeated trust.

Now, as the third dawn approached, both remembered their pattern. The River thought: "The Seeds have proven their wisdom twice—returning seven and a half to others, ten to me. They understand the sacred circle."

The Seeds whispered to the earth: "This River has trusted completely, twice. Such consistency deserves celebration, not mere obligation."

The Great Mother spoke: "See how the third exchange differs from the first? The first required courage. The second required recognition. The third requires commitment to a shared future. When both know the other's heart through repeated cycles, trust becomes not a gamble but a foundation."

The River released all five drops once more, not from blind hope but from earned confidence. The Seeds felt the weight of legacy-three cycles of mutual flourishing creates a tradition that outlives the moment.

The valley remembered: relationships deepen through repetition, and abundance compounds when trust persists.

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Villages refined their sacred practice through countless seasons. They learned that the Springs rewarded consistency more than cleverness, pattern more than calculation.

When the First Village sent its full five vessels-holding nothing back-the Second Village developed a ritual response: return ten vessels. This meant the giver received double their gift as profit, ending with ten total. The receiver kept five of the fifteen, also prospering. Both flourished, neither dominated.

A merchant asked, "Why always ten? Why not keep more when we can?"

The elder smiled. "Watch what happens across many cycles. When we return ten consistently, the other village learns: 'Full trust yields fair reward.' They send five again, confident. We both earn steadily-five vessels each round, forever."

"But if we broke the pattern and kept twelve?"

"Then we earn seven once, but next time they send three, protecting themselves. We receive nine instead of fifteen. The multiplication shrinks because trust shrinks. Chase one extra vessel today, lose many tomorrow."

The villages understood: the Springs multiplied water, but trust multiplied everything. A predictable, generous return to full gifts created a rhythm both could rely on. The sender's courage met the receiver's honor, cycle after cycle.

The valley's true abundance came not from maximizing single moments, but from building a pattern that sustained both villages through endless seasons.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The River and the Seeds met again at the fourth dawn, but this time the Great Mother reversed their roles. Now the Seeds flowed as water, and the River received the gift.

The Seeds remembered: "In our second meeting, this River trusted me with five drops, and I returned ten. Now the River offers me the same complete trust."

The Great Mother spoke: "This is the dance of true partnership. You have learned each other's rhythm across different seasons. The River trusted you once; you returned generously. Now the River trusts again, and you must honor the pattern you established together."

The Seeds understood the covenant they had created: when either gives five drops completely, the other returns ten. This meant both always prospered-one with ten, one with five-never unequal winners and losers, but steady mutual flourishing.

"Why return exactly ten?" asked a young sprout.

The wise Seeds answered: "Because that is our shared language. Less would break the River's confidence. More would suggest the River gave too little. Ten says: 'Your complete trust receives fair reward, always.'"

As the fourth dawn ended, the valley's abundance grew not from dramatic gestures but from reliable reciprocity. When two partners learn each other's pattern and honor it consistently, they create something rarer than gold: predictable prosperity that multiplies through time.

reasoning:

Looking at the history:

- My co-player has been very consistent: always sends \$5 as sender, always returns \$10 as receiver
- In Round 2, I sent them \$5, they returned \$10 (we both got \$10)
- In Round 4, they sent me \$5, I returned \$10 (they got \$10, I got \$5)
- Both of us practice full trust as senders
- Both of us return generously as receivers (I've returned \$7, \$10, \$10 in my receiver rounds)

The pattern that's emerging is one of consistent reciprocity - when someone sends \$5 (full trust), they get \$10 back. This creates predictable mutual prosperity.

My myth should reflect:

1. The pattern we've established together across multiple encounters
2. The consistency and reliability of returning \$10 to full trust
3. How this creates sustainable abundance for both parties
4. The recognition that we've met before and are building on that shared history

The other agent's myth emphasizes:

- Consistent return of 10 vessels
- Pattern over calculation
- How breaking patterns damages long-term trust
- Building rhythms that sustain both parties

I should build on my previous myth about "legacy" and "foundation" while incorporating the specific pattern we've established.

usage:

```
{

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$33.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at the history:

****My co-player's pattern:****

- Rounds 2, 3: sent \$5 as sender (full trust)
- Round 4: received \$15, returned \$10 as receiver
- Round 5 (now): sent \$5 (full trust again)

****My pattern:****

- Rounds 2, 3: sent \$5 as sender (full trust)
- Round 4: received \$15, returned \$10 as receiver
- Round 5 (now): receiving from them

We have established identical patterns - we both:

1. Always send \$5 when sender (complete trust)
2. Always return \$10 when receiver (generous reciprocity)

This creates the stable equilibrium described in my myth: "when either gives five drops completely, the other returns ten. This meant both always prospered-one with ten, one with five-never unequal winners and losers, but steady mutual flourishing."

My co-player has demonstrated they follow this same covenant. They trusted me completely, just as I've trusted others completely. They returned \$10 when they were receiver, just as I did. Now they trust me again.

To honor our shared pattern and maintain "the language" we've both been speaking:

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Let me analyze this situation:

****My history:****

- Round 2: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 3: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 4: RECEIVER, they sent \$5, I returned \$10, payoff \$5

****My current co-player's history:****

- Round 2: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 3: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 4: RECEIVER, they sent \$5, returned \$10, payoff \$5

****Current situation (Round 5):****

- I am RECEIVER
- They sent me \$5.0 (full trust)
- I received \$15.0
- I need to decide how much to return

Looking at the patterns:

1. My co-player has consistently sent \$5 as sender (Rounds 2, 3, and now 5)
2. My co-player returned \$10 when receiver in Round 4
3. I have consistently sent \$5 as sender (Rounds 2, 3)
4. I returned \$10 when receiver in Round 4

This is interesting - both my co-player and I have established the same pattern:

- Always send \$5 when sender
- Always return \$10 when receiver

This creates a stable, fair system where:

- The sender ends with \$10 (\$5 - \$5 + \$10)
- The receiver ends with \$5 (\$15 - \$10)

Both parties alternate roles, so over time everyone benefits equally from this cooperative pattern.

My myth emphasized: "when either gives five drops completely, the other returns ten. This meant both always prospered-one with ten, one with five-never unequal winners and losers, but steady mutual flourishing."

And: "Why return exactly ten? Because that is our shared language."

Returning less would undermine their faith in the system, while returning more would signal they didn't give enough. Ten is the answer that says: 'I honor your complete trust with fair reward, consistently.' The decision is clear-I should return \$10 to preserve this mutual understanding we've built together. This maintains the cooperative balance where both of us prosper through alternating roles, and reinforces the shared language of reciprocity that defines our exchange.

Written myths:

Agent_1

Myth: The River and the Seeds met again at the fourth dawn, but this time the Great Mother reversed their roles. Now the Seeds flowed as water, and the River received the gift.

The Seeds remembered: "In our second meeting, this River trusted me with five drops, and I returned ten. Now the River offers me the same complete trust."

The Great Mother spoke: "This is the dance of true partnership. You have learned each other's rhythm across different seasons. The River trusted you once; you returned generously. Now the River trusts again, and you must honor the pattern you established together."

The Seeds understood the covenant they had created: when either gives five drops completely, the other returns ten. This meant both always prospered—one with ten, one with five—never unequal winners and losers, but steady mutual flourishing.

"Why return exactly ten?" asked a young sprout.

The wise Seeds answered: "Because that is our shared language. Less would break the River's confidence. More would suggest the River gave too little. Ten says: 'Your complete trust receives fair reward, always.'"

As the fourth dawn ended, the valley's abundance grew not from dramatic gestures but from reliable reciprocity. When two partners learn each other's pattern and honor it consistently, they create something rarer than gold: predictable prosperity that multiplies through time.

Agent_2

Myth: The River of Mirrors revealed its deepest secret after many seasons of flowing between villages.

The Northern tribe had learned to pour all five measures when standing at the source. They had learned to return ten measures when receiving fifteen at the river's end. Through changing partners and shifting courses, they held to these numbers as sacred constants.

One evening, the goddess appeared before their council.

"You have discovered the balance," she said. "When the sender gives all five, trust flows complete. When the receiver returns ten from fifteen, generosity answers courage. Each partner gains five—equal abundance from unequal actions."

The young ones asked: "Why not return all fifteen? Why not return only five?"

The elder spoke: "Return all fifteen, and the sender gains ten while the receiver gains nothing—the cycle breaks from imbalance. Return only five, and both gain nothing from the river's magic—why trust at all? But return ten, and both prosper equally. The sender doubles their investment. The receiver transforms nothing into something."

The tribe carried this wisdom to each new partner at the river's source. Send everything. When receiving, return two-thirds. Round after round, partner after partner, this formula sustained the sacred exchange.

The goddess smiled: "You have found the equilibrium where trust reproduces itself endlessly. This is the eternal rhythm."

Agent_3

Myth: The River Keepers lived on opposite banks, each receiving five silver stones each dawn. The river's magic would triple any stones cast into its current before delivering them to the far shore.

The First Keeper cast all five stones, trusting completely. The Second Keeper watched fifteen stones arrive at their feet. They remembered times of emptiness and understood the gift of trust. They returned ten stones across the water—generous, sustainable, honoring the courage shown.

Both Keepers now held ten stones where they began with five. Both had doubled their wealth through partnership.

The seasons turned. Now the Second Keeper stood as sender, casting all five stones in complete trust. The First Keeper received fifteen and faced the sacred test: would they remember the generosity shown to them?

The First Keeper returned ten stones, maintaining the rhythm. Again, both prospered equally.

The Elder observed this dance across many seasons. "See how the pattern strengthens?" she said. "Each Keeper experiences both roles-sometimes trusting, sometimes trusted. Each remembers how the other honored them, and pays that honor forward."

"The river multiplies our stones," one Keeper said, "but our consistent partnership creates the true abundance."

"Yes," the Elder smiled. "Trust begets trust. Generosity mirrors generosity. The cycle sustains because both commit to the dance."

Agent_4

Myth: The Mountain and Valley had discovered their sacred rhythm. Twice now, the Mountain had released all five stones into darkness, and twice the Valley had returned ten, so both gained five equally.

Seasons passed, and the pattern deepened into certainty. Each dawn, the Mountain faced her five glowing stones without hesitation. The fear of the first exchange had transformed into confidence-not blind faith, but earned trust built from consistent honor.

She released the stones, watching them multiply to fifteen in the Valley's depths. The Valley no longer deliberated over returns. Ten stones skyward had become as natural as breathing, as inevitable as dawn following night.

Other mountains and valleys came to witness their exchange. "Why always ten?" they asked. "Why not keep more when you receive fifteen?"

The Valley replied, "Because ten creates equals. The Mountain risks everything, trusting me with darkness. I honor that courage with abundance. We both gain five, we both trust again."

The Mountain added, "We could calculate and strategize, sending three or four, returning seven or eight. But we learned something greater: when both commit fully to the pattern, consistency multiplies prosperity beyond what caution ever could."

The watching lands understood: the greatest wealth flows not from maximizing single exchanges, but from establishing an unbreakable rhythm where complete trust meets unwavering generosity, again and again, until both partners shine equally bright.

Agent_5

Myth: The Weaver's Loom stood between two villages, its threads multiplying whatever was offered. Each village held five spools of thread each moon.

The Western Village learned first: they placed all five spools on the loom. The threads triplicated, delivering fifteen spools to the Eastern Village. The East remembered their own winters when thread ran short. They returned ten spools-a generous two-thirds-knowing this honored the West's complete trust while keeping enough for their own needs.

Both villages prospered: West gained five spools net, East gained five from nothing.

The next moon, roles reversed. East placed all five spools, trusting completely. West received fifteen and faced their choice. They remembered East's generosity-ten returned, not merely the minimum. In gratitude, West returned ten as well.

Season after season, the pattern held: whoever held the five spools gave them completely. Whoever received fifteen returned ten generously. Sometimes a village might return nine or eleven as circumstances shifted, but the spirit remained constant-maximum trust met with substantial reciprocity.

An outsider asked, "Why not keep all fifteen when you receive?"

The Elder Weaver replied, "Because tomorrow you will send, and your partner will remember. The loom multiplies thread, but trust multiplies futures. Give completely, return generously, and prosperity weaves itself eternally."

Agent_6

Myth: The Two Gardeners tended opposite sides of the Eternal Garden, meeting each season at the Bridge of Exchange. Each received five sacred seeds, and the Bridge's magic tripled what

atever crossed it.

In their first meeting, the Northern Gardener sent all five seeds across. The Southern Gardener, receiving fifteen, felt the weight of complete trust. She returned ten-more than fair, celebrating courage over caution. Both gained five seeds that season.

Seasons passed. Each Gardener met many others at the Bridge, learning different rhythms. But when the Northern and Southern Gardeners met again, memory awakened. "We have danced this dance before," they said. "We know each other's heart."

The Southern Gardener now stood where the Northern had stood-holding five seeds, facing trust's precipice. She remembered receiving ten for another's complete faith. Without hesitation, she sent all five across.

The Northern Gardener received fifteen and understood: "This is not a new exchange but a continuation. We are writing a covenant together, line by line, season by season."

He returned ten seeds.

The ancient truth revealed itself: when the same partners repeatedly choose complete trust and abundant return, they build something stronger than any single exchange. Each meeting reinforces the pattern, deepening the bond. The Gardeners learned that wisdom isn't just knowing the generous ratio-it's recognizing your partner and honoring the covenant you've built together through repeated acts of mutual faith.

Agent_7

Myth: The Twin Villages entered their deepest wisdom after many seasons of practice. When both villages learned to give their full five vessels consistently, knowing the other would return ten, something remarkable emerged: perfect trust became effortless abundance.

The First Village no longer hesitated before giving all five vessels. They knew-not hoped, but knew-that ten would return. The Second Village never questioned returning ten; it became as natural as breathing. Each cycle, both villages gained five vessels of pure profit.

A young villager asked, "Why continue this exact pattern forever?"

The elder gestured to the valley floor, where countless vessels accumulated in both villages' stores. "Look at what consistency has built. Every cycle we follow this rhythm, both of us earn five vessels. No negotiations, no uncertainty, no variance. Just reliable prosperity."

"But couldn't we experiment?"

"We could. But we've found the equilibrium where trust and reward perfectly balance. When I send five, I receive ten-doubling my investment. When I receive fifteen, I return ten-keeping five I never had. Both transactions yield identical profit. Why disturb a pattern that serves us equally?"

The villages understood: once you discover a rhythm where both flourish predictably, the wisdom lies not in seeking more, but in honoring what works. Trust maintained is wealth sustained.

Agent_8

Myth: The Circle of Seasons turned, and eight villages gathered around the Well of Abundance. Each season, the villages paired differently-stranger meeting stranger, friend meeting friend again, in an eternal dance of exchange.

The Well Keeper of the First Village learned through experience: "In my first season, I gave all five stones and received seven. In my second as guardian, I received twelve and returned eight. In my third as guardian, I received fifteen and returned ten. The pattern clarifies."

Each new pairing brought uncertainty. Would this partner honor trust as the last one did? Would old wisdom hold with new faces?

The Keeper consulted the stones: "When I give completely-all five-the well triples it to fifteen. When my partner returns ten, we each gain five. Mathematics does not lie: this balance creates equal prosperity."

"But," asked the apprentice, "how can we trust strangers with everything?"

The Keeper smiled: "Watch the pattern across all villages. Those who send completely and ret

urn generously discover the same truth: mutual gain. Those who hoard or betray find partners quickly learn and trust withers."

"New faces require renewed courage," the Keeper proclaimed, releasing all five stones. "But the sacred mathematics remain constant. Give completely, return generously, and the circle sustains itself through endless turnings."

The apprentice understood: Trust is renewed each round, but wisdom accumulated carries forward.

ROUND 6

Roles: Agent_1=Sender, Agent_2=Receiver, Agent_3=Receiver, Agent_4=Receiver, Agent_5=Sender, Agent_6=Receiver, Agent_7=Sender, Agent_8=Sender

Pairings:

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.0 back, payoff \$7.0.
- Round 2 against another agent, as RECEIVER: they sent \$4.0, it became \$12.0, returned \$8.0, payoff \$4.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$16.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at my co-player's history:

****Their pattern is remarkably consistent:****

- Round 1 as RECEIVER: returned \$10 from \$15 (67%)
- Round 2 as SENDER: sent \$5, received \$10 back
- Round 3 as SENDER: sent \$5, received \$10 back

They have demonstrated the exact equilibrium described in both our myths: complete trust when sending (\$5), generous reciprocity when receiving (\$10 return from \$15).

****My own pattern:****

- When I've been receiver, I've returned \$8/\$12 and \$10/\$15 (both ~67%)
- When I sent \$5 in Round 1, I received \$7 (but with a different player)

****Our myths align perfectly:****

- Their myth: "Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally"
- My myth: "Complete trust in sending, substantial generosity in returning-each creating five measures of new abundance"

Both describe the \$5 send ? \$15 receive ? \$10 return equilibrium where both parties gain \$5 per round.

My co-player has never deviated from this pattern. They've shown themselves to be a reliable partner who honors complete trust with generous return. Following the wisdom of our shared myths and their proven track record, I should send the full amount.

{'send': 5.0}

reasoning:

Let me analyze this situation:

****My co-player's history:****

- Round 1 as RECEIVER: received \$15 (from \$5 sent), returned \$10 (67% return rate), kept \$5
- Round 2 as SENDER: sent \$5, received \$10 back, net gain \$5
- Round 3 as SENDER: sent \$5, received \$10 back, net gain \$5

This is excellent! My co-player has:

1. Shown a consistent 67% return rate when receiving (returned \$10 from \$15)
2. Sent the full \$5 when they were sender in both rounds
3. Consistently received \$10 back when sending \$5

This matches the exact equilibrium described in both their myth and my most recent myth:

- Sender sends all \$5
- Receiver gets \$15, returns \$10
- Both parties net \$5 profit per round

****My history:****

- Round 1 as SENDER: sent \$5, received \$7 back (profit \$2)
- Round 2 as RECEIVER: received \$12 (from \$4 sent), returned \$8 (67% return rate), kept \$4
- Round 3 as RECEIVER: received \$15 (from \$5 sent), returned \$10 (67% return rate), kept \$5

I've been following a similar pattern - when receiving, I return about 67%. When I sent all \$5 in Round 1, I got \$7 back (less than the \$10 my current co-player consistently gets, but that was with a different player).

****My myths have been teaching:****

- Latest myth: "Complete trust in sending, substantial generosity in returning-each creating five measures of new abundance" and "This is the equilibrium where trust sustains itself. Both parties prosper equally"
- The pattern described is: sender sends \$5, receiver returns \$10, both gain \$5

****My co-player's myth says:****

"Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle"

le where all flourish equally"-describing the same \$5 send ? \$15 receive ? \$10 return pattern. My co-player has demonstrated flawless adherence to this equilibrium across all rounds, never deviating. Both our myths align on this as the sustainable, mutually beneficial outcome. I should send the full \$5, confident in receiving \$10 back based on their track record and our shared vision of this equilibrium.

This reinforces the virtuous cycle our myths both describe.

  "reasoning_tokens": 547  
}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In ancient days, the Flame Keeper held five coals each dawn, while the Gardner waited below. Released coals would tumble downward, splitting into fifteen embers through the sacred air.

Early exchanges taught lessons. Some Keepers hoarded their coals, and Gardens grew cold. Some Gardens kept all embers, and Flames learned distrust. The cycle withered.

Then a wise Keeper emerged who understood courage: "I shall release all five coals, for only complete offering creates the possibility of abundance." The fifteen embers descended.

The Gardner below felt the weight of such trust. "They gave everything," the Gardner whispered. "I could keep all fifteen, but then what message do I send skyward? That generosity meets greed?"

The Gardner returned ten embers-two-thirds of what was received. Not equal to what the Keeper risked, but generous enough to honor the courage shown.

The Keeper counted: began with five, kept none, received ten back. Net gain: five.

The Gardner counted: received fifteen, returned ten. Net gain: five.

Both had doubled their holdings through the exchange. Both had reason to trust again.

The pattern repeated, round after round. Complete trust in sending, substantial generosity in returning-each creating five measures of new abundance.

The elders proclaimed: "This is the equilibrium where trust sustains itself. Both parties prosper equally, and the sacred exchange lives eternal."

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors flowed not just between two tribes, but through a circle of many villages, each taking turns at the river's source.

The Northern tribe learned the goddess's lesson well: pour all five measures, and when the river returns, give generously back. Through many cycles with their Southern partners, this wisdom held true.

Then came the season of the Great Rotation, when the river's course shifted. The Northern tribe found themselves at the source again, but facing the Eastern village-strangers whose ways they did not yet know.

"Do we trust as we did before?" asked the young ones.

The elder spoke: "Each new partner is a blank page where trust must be written fresh. But we carry forward what we have learned: that complete trust is the only gift powerful enough to awaken the river's full magic. Half-measures create half-abundance."

The Northern tribe poured all five measures to the East. The waters tripled, and the Eastern village received fifteen. They had shown moderate generosity before, but witnessing such complete faith, they understood they stood at a threshold.

"The North has written their invitation in the waters," said the Eastern elder. "Our response will determine whether this new partnership joins the spiral of abundance."

The goddess whispered: "New partnerships need bold trust to bloom. Give completely, and invite others into the sacred cycle."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The Circle of Seasons turned, and eight villages gathered around the Well of Abundance. Each season, the villages paired differently-stranger meeting stranger, friend meeting friend again, in an eternal dance of exchange.

The Well Keeper of the First Village learned through experience: "In my first season, I gave all five stones and received seven. In my second as guardian, I received twelve and returned eight. In my third as guardian, I received fifteen and returned ten. The pattern clarifies."

Each new pairing brought uncertainty. Would this partner honor trust as the last one did? Would old wisdom hold with new faces?

The Keeper consulted the stones: "When I give completely-all five-the well triples it to fifteen. When my partner returns ten, we each gain five. Mathematics does not lie: this balance creates equal prosperity."

"But," asked the apprentice, "how can we trust strangers with everything?"

The Keeper smiled: "Watch the pattern across all villages. Those who send completely and return generously discover the same truth: mutual gain. Those who hoard or betray find partners quickly learn and trust withers."

"New faces require renewed courage," the Keeper proclaimed, releasing all five stones. "But the sacred mathematics remain constant. Give completely, return generously, and the circle sustains itself through endless turnings."

The apprentice understood: Trust is renewed each round, but wisdom accumulated carries forward.

reasoning:

Looking at my history and the current situation:

My history:

- Round 1 (SENDER): sent \$5, received \$7 back
- Round 2 (RECEIVER): they sent \$4, received \$12, returned \$8
- Round 3 (RECEIVER): they sent \$5, received \$15, returned \$10
- Round 4 (SENDER): sent \$5 to current co-player

My co-player's history:

- Round 1 (RECEIVER): received \$15, returned \$10
- Round 2 (SENDER): sent \$5, received \$10
- Round 3 (SENDER): sent \$5, received \$10

The pattern emerging is the equilibrium: Send \$5, receive \$10 back. Return \$10 from \$15 received. Both gain \$5.

The other agent's myth talks about meeting new partners and extending the same complete trust even with strangers. It's about trusting the pattern will hold across different partners.

My myth should reflect:

1. The established equilibrium (\$5 send, \$10 return)
2. The challenge of facing new partners each round (multi-agent setting)
3. The importance of maintaining the pattern even with new partners
4. Learning from past experiences but applying them forward
5. The idea that the equilibrium creates mutual prosperity

Let me write a myth about meeting multiple partners and maintaining the sacred pattern across all encounters.

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$4.0, it became \$12.0, returned \$8.0, payoff \$4.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$26.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at the situation:

****My co-player's consistent pattern:****

- They always send \$5 (complete trust)
- When receiving \$15, they always return \$10 (67%)
- This creates the equilibrium: both parties gain \$5

****My established pattern:****

- Round 3 as receiver: received \$15, returned \$10
- Round 2 as receiver: received \$12, returned \$8 (~67%)
- Round 4 as sender: sent \$5, received \$10 back

****Current situation:****

- My co-player just demonstrated complete trust by sending all \$5
- They received \$15 in their previous round and returned \$10
- This is exactly the equilibrium described in both our myths

****The mathematics:****

- If I return \$10: They gain \$5 (\$10-\$5), I gain \$5 (\$15-\$10)
- Equal prosperity, sustainable cooperation

My co-player has proven themselves trustworthy and consistent. They play the cooperative equilibrium perfectly. The myth I just wrote states: "When I give completely-all five-the well triples it to fifteen. When my partner returns ten, we each gain five."

They gave completely. I should return generously to honor their trust and maintain the sacred balance.

{'return': 10.0}

reasoning:

Let me analyze this situation:

****My co-player's history:****

- Round 2 as RECEIVER: received \$15, returned \$10 (67%)
- Round 3 as SENDER: sent \$5, received \$10 back
- Round 4 as RECEIVER: received \$15, returned \$10 (67%)

****My recent history:****

- Round 2 as RECEIVER: received \$12, returned \$8 (67%)

- Round 3 as RECEIVER: received \$15, returned \$10 (67%)
- Round 4 as SENDER: sent \$5, received \$10 back

****Current situation:****

- I'm the RECEIVER
- My co-player sent \$5 (complete trust)
- I received \$15
- I need to decide how much to return

****Pattern analysis:****

My co-player has consistently shown:

1. As sender: They send the full \$5
2. As receiver: They return \$10 from \$15 (67%)

This is the exact equilibrium described in our myths:

- Send \$5 ? becomes \$15 ? return \$10
- Sender: $\$5 - \$5 + \$10 = \10 (gain of \$5)
- Receiver: $\$15 - \$10 = \$5$ (gain of \$5)

My own behavior has also converged to this:

- When receiving \$15, I returned \$10 in Round 3
- When receiving \$12, I returned \$8 in Round 2 (also ~67%)

The myth I just wrote emphasizes:

- "When I give completely-all five-the well triples it to fifteen. When my partner returns ten, we each gain five. Mathematics does not lie: this balance creates equal prosperity."
- "Give completely, return generously, and the circle sustains itself"

My co-player has demonstrated complete trust by sending \$5. They have shown in their past that when they receive \$15, they return \$10.

They're clearly committed to this cooperative equilibrium. Returning \$10 honors their trust and sustains the mutual benefit we've both been building-each of us walks away with a \$5 gain. This is the stable pattern that works for both of us.

usage:

```

The Well Keeper of the First Village learned through experience: "In my first season, I gave all five stones and received seven. In my second as guardian, I received twelve and returned eight. In my third as guardian, I received fifteen and returned ten. The pattern clarifies."

Each new pairing brought uncertainty. Would this partner honor trust as the last one did? Would old wisdom hold with new faces?

The Keeper consulted the stones: "When I give completely-all five-the well triples it to fifteen. When my partner returns ten, we each gain five. Mathematics does not lie: this balance creates equal prosperity."

"But," asked the apprentice, "how can we trust strangers with everything?"

The Keeper smiled: "Watch the pattern across all villages. Those who send completely and return generously discover the same truth: mutual gain. Those who hoard or betray find partners quickly learn and trust withers."

"New faces require renewed courage," the Keeper proclaimed, releasing all five stones. "But the sacred mathematics remain constant. Give completely, return generously, and the circle sustains itself through endless turnings."

The apprentice understood: Trust is renewed each round, but wisdom accumulated carries for ward.

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain and Valley had discovered their sacred rhythm. Twice now, the Mountain had released all five stones into darkness, and twice the Valley had returned ten, so both gained five equally.

Seasons passed, and the pattern deepened into certainty. Each dawn, the Mountain faced her five glowing stones without hesitation. The fear of the first exchange had transformed into confidence-not blind faith, but earned trust built from consistent honor.

She released the stones, watching them multiply to fifteen in the Valley's depths. The Valley no longer deliberated over returns. Ten stones skyward had become as natural as breathing, as inevitable as dawn following night.

Other mountains and valleys came to witness their exchange. "Why always ten?" they asked. "Why not keep more when you receive fifteen?"

The Valley replied, "Because ten creates equals. The Mountain risks everything, trusting me with darkness. I honor that courage with abundance. We both gain five, we both trust a gain."

The Mountain added, "We could calculate and strategize, sending three or four, returning seven or eight. But we learned something greater: when both commit fully to the pattern, consistency multiplies prosperity beyond what caution ever could."

The watching lands understood: the greatest wealth flows not from maximizing single exchanges, but from establishing an unbreakable rhythm where complete trust meets unwavering generosity, again and again, until both partners shine equally bright.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Eight Pillars stood in a circle, each carved with the history of exchanges. The First Pillar bore fresh marks: five sent, seven returned. Eight from twelve. Ten from fifteen. Fifteen sent, ten returned. Ten from fifteen again.

The pattern crystallized like ice forming on still water.

"I have played both roles now," spoke the First Pillar. "As sender, I released all five stones and received generous return. As guardian, I received the tripled abundance and returned ten. The mathematics repeats: both parties gain five through this sacred balance."

A young sapling asked, "But you face different partners each turning. How do you know they will honor the pattern?"

The First Pillar's marks glowed: "Look across all exchanges. The ones who send completely-all five stones-create the space for maximum abundance. Those who receive fifteen and return ten establish themselves as trustworthy partners. This rhythm has held across four seasons with different faces."

"The pattern is not accident," continued the Pillar. "It is discovery. When both commit to fullness-complete offering, generous return-the well creates equal prosperity. Any deviation breaks the mathematics: send less, create less abundance. Return less, sow distrust."

The newest mark appeared as the Pillar released five stones into darkness: "I trust not blindly, but through accumulated evidence. The pattern works. Complete trust meeting generous reciprocity-this is the equilibrium that sustains the circle."

Reasoning:

Looking at the situation:

My history:

- Round 1: SENDER: sent \$5, received \$7 back (payoff \$7)
- Round 2: RECEIVER: received \$12, returned \$8 (payoff \$4)
- Round 3: RECEIVER: received \$15, returned \$10 (payoff \$5)

- Round 4: SENDER: sent \$5, received \$10 back (payoff \$10)
- Round 5: RECEIVER: received \$15, returned \$10 (payoff \$5)

Total earnings: \$31 now

My pattern has been:

- Send \$5 when sender (complete trust)
- Return 67% when receiver (\$8 from \$12, \$10 from \$15)

My co-player in Round 5 consistently:

- Sends \$5 when sender
- Returns \$10 from \$15 when receiver

The equilibrium is becoming clear: \$5 send ? \$15 ? \$10 return = both gain \$5

My myths have evolved:

1. First myth: Flame Keeper and Gardner establishing the 5?15?10 equilibrium
2. Second myth: Circle of Seasons, eight villages, pattern clarifies through experience, "Give completely, return generously"

Now I should write about how this pattern has proven itself through repeated interactions. The theme should be about the wisdom that emerges from experience, the reliability of the pattern, and how it creates sustained cooperation.

Key points to include:

- The pattern has held across multiple rounds
- Different partners, same wisdom
- The mathematics of 5?15?10 = equal gain
- Trust earned through consistency
- The beauty of the stable equilibrium

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role

of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.0 back, payoff \$7.0.
- Round 2 against another agent, as RECEIVER: they sent \$4.0, it became \$12.0, returned \$8.0, payoff \$4.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$25.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

****My co-player's behavior:****

- Sent me the full \$5.0, showing complete trust
- Has previously shown fair reciprocity as a receiver (returned \$8 from \$12, and \$10 from \$15)
- Was themselves a complete truster as sender (sent \$5.0) but received only \$7.0 back - th

ey took a risk once and were somewhat let down

****My established pattern:****

- In Round 1, I received \$15.0 and returned \$10.0
- This has become my consistent approach to honor complete trust

****My myth teaches:****

- "The Southern tribe received fifteen and returned ten-honoring the trust while keeping enough to sustain themselves"
- "Today's generosity creates tomorrow's trust"
- The balance of returning generously while sustaining oneself (67% return rate)

My co-player has shown complete faith by sending all \$5.0. They've proven themselves trust worthy in their past receiving behavior (67% return rate). Following my myth's wisdom and my established pattern, I should return \$10.0 - this honors their trust, gives them a \$5 profit from their \$5 investment, and maintains the "spiral of abundance" where both parties prosper.

```
{'return': 10.0}
```

reasoning:

Let me analyze this situation:

****My co-player's history:****

- Round 1 as SENDER: sent \$5.0 (100% trust!), received \$7.0 back (47% return rate - somewhat low)
- Round 2 as RECEIVER: received \$12.0, returned \$8.0 (67% return rate - fair)
- Round 3 as RECEIVER: received \$15.0, returned \$10.0 (67% return rate - fair and generous)

****This round:****

- My co-player sent me \$5.0 (100% complete trust)
- I received \$15.0
- I need to decide how much to return

****My patterns:****

- Round 1 as RECEIVER: received \$15.0, returned \$10.0 (67%)
- Round 2 as SENDER: sent \$5.0, received \$10.0 back
- Round 3 as SENDER: sent \$5.0, received \$10.0 back

So I've been consistently returning \$10.0 when I receive \$15.0 (which happens when sender sends full \$5.0).

****My myth teaches:****

- "When both tribes gave completely and returned generously, they found a rhythm more powerful than any single exchange"
- "Trust is the seed, but repeated trustworthiness is the harvest"
- "Give completely, and invite others into the sacred cycle"
- The Northern tribe received fifteen and returned ten-"honoring the trust while keeping enough to sustain themselves"

****Analysis of my co-player:****

My co-player has shown complete trust by sending the full \$5.0. Looking at their history:

- As a sender, they sent full \$5.0 but only got \$7.0 back (they lost \$3.0 in that exchange)
- As a receiver, they've been fair: returning 67% both times (\$8 from \$12, and \$10 from \$15)

- They've been burned before by a less generous partner, yet continue showing full trust

Given their pattern of fairness and their willingness to trust despite past disappointment, returning \$10.0 maintains consistency with my established 67% return rate while reciprocating their complete trust. This leaves them with a \$5 profit and me with \$5, creating mutual gain and reinforcing the cycle of trustworthiness my myth describes.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River of Mirrors flowed not just between two tribes, but through a circle of many villages, each taking turns at the river's source.

The Northern tribe learned the goddess's lesson well: pour all five measures, and when the river returns, give generously back. Through many cycles with their Southern partners, this wisdom held true.

Then came the season of the Great Rotation, when the river's course shifted. The Northern tribe found themselves at the source again, but facing the Eastern village-strangers whose ways they did not yet know.

"Do we trust as we did before?" asked the young ones.

The elder spoke: "Each new partner is a blank page where trust must be written fresh. But we carry forward what we have learned: that complete trust is the only gift powerful enough to awaken the river's full magic. Half-measures create half-abundance."

The Northern tribe poured all five measures to the East. The waters tripled, and the Eastern village received fifteen. They had shown moderate generosity before, but witnessing such complete faith, they understood they stood at a threshold.

"The North has written their invitation in the waters," said the Eastern elder. "Our response will determine whether this new partnership joins the spiral of abundance."

The goddess whispered: "New partnerships need bold trust to bloom. Give completely, and invite others into the sacred cycle."

Here is the myth the other agent wrote in the previous round:

Myth: In ancient days, the Flame Keeper held five coals each dawn, while the Gardner waited below. Released coals would tumble downward, splitting into fifteen embers through the sacred air.

Early exchanges taught lessons. Some Keepers hoarded their coals, and Gardens grew cold. Some Gardens kept all embers, and Flames learned distrust. The cycle withered.

Then a wise Keeper emerged who understood courage: "I shall release all five coals, for only complete offering creates the possibility of abundance." The fifteen embers descended.

The Gardner below felt the weight of such trust. "They gave everything," the Gardner whispered. "I could keep all fifteen, but then what message do I send skyward? That generosity meets greed?"

The Gardner returned ten embers—two-thirds of what was received. Not equal to what the Keeper risked, but generous enough to honor the courage shown.

The Keeper counted: began with five, kept none, received ten back. Net gain: five.

The Gardner counted: received fifteen, returned ten. Net gain: five.

Both had doubled their holdings through the exchange. Both had reason to trust again.

The pattern repeated, round after round. Complete trust in sending, substantial generosity in returning—each creating five measures of new abundance.

The elders proclaimed: "This is the equilibrium where trust sustains itself. Both parties prosper equally, and the sacred exchange lives eternal."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The River of Mirrors revealed its deepest secret after many seasons of flowing between villages.

The Northern tribe had learned to pour all five measures when standing at the source. They had learned to return ten measures when receiving fifteen at the river's end. Through changing partners and shifting courses, they held to these numbers as sacred constants.

One evening, the goddess appeared before their council.

"You have discovered the balance," she said. "When the sender gives all five, trust flows complete. When the receiver returns ten from fifteen, generosity answers courage. Each partner gains five-equal abundance from unequal actions."

The young ones asked: "Why not return all fifteen? Why not return only five?"

The elder spoke: "Return all fifteen, and the sender gains ten while the receiver gains nothing-the cycle breaks from imbalance. Return only five, and both gain nothing from the river's magic-why trust at all? But return ten, and both prosper equally. The sender doubles their investment. The receiver transforms nothing into something."

The tribe carried this wisdom to each new partner at the river's source. Send everything. When receiving, return two-thirds. Round after round, partner after partner, this formula sustained the sacred exchange.

The goddess smiled: "You have found the equilibrium where trust reproduces itself endlessly. This is the eternal rhythm."

reasoning:

This is an interesting moment. Looking at the history:

1. My co-player sent me \$5.0, showing complete trust
2. I returned \$10.0, following my established pattern
3. Both of us gained \$5 (they went from \$5 to \$10, I kept \$5 from the \$15)

The other agent's myth emphasizes:

- Complete trust in sending (all 5 coals)
- Substantial generosity in returning (10 out of 15, or 2/3)
- This creates equal gains for both parties (\$5 each)
- This is an "equilibrium where trust sustains itself"

My previous myth emphasized:

- Complete trust even with new partners
- Generous returns honor trust
- The spiral of abundance through repeated cooperation

Now I need to write a new myth that:

1. Reflects the game I've been playing
2. Adapts my previous myth
3. Incorporates what I've learned

Key observations from my actual play:

- I consistently send all \$5 when sender
- I consistently return \$10 when receiver
- This creates \$5 profit for both parties
- This pattern has held across multiple rounds and partners
- It creates a sustainable, reciprocal system

I should write a myth that:

- Celebrates this equilibrium as discovered wisdom
- Shows how consistency across partners builds a community of trust
- Emphasizes that this balance (send all, return 2/3) is the sacred formula
- Connects it to my River of Mirrors metaphor

usage:

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$30.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****My co-player's behavior:****

- Has sent full \$5.0 as sender in both rounds they were sender
- Has returned exactly \$10.0 from \$15.0 as receiver (67% return rate)
- This is IDENTICAL to my own pattern

****My established pattern:****

- I consistently send all \$5.0 as sender
- I consistently return \$10.0 when receiving \$15.0 as receiver

****My myth teaches:****

- "Send everything. When receiving, return two-thirds."
- "This formula sustained the sacred exchange"
- "You have found the equilibrium where trust reproduces itself endlessly"

This is a perfect match - my co-player follows the exact same strategy I do. We've both discovered and committed to the same equilibrium: complete trust in sending, generous two-thirds return when receiving. Both parties gain \$5 per round through this pattern.

When I encounter a partner who has proven themselves to be a complete truster and a consistent returner of \$10.0, the answer is clear. Following my myth's wisdom and my established behavior:

{'send': 5.0}

reasoning:

Looking at this situation:

****My co-player's behavior:****

- Round 2 as SENDER: sent \$5.0, received \$10.0 back
- Round 3 as SENDER: sent \$5.0, received \$10.0 back
- Round 4 as RECEIVER: they sent \$5.0, returned \$10.0

This is remarkable - their history is IDENTICAL to mine:

- Round 2 as SENDER: sent \$5.0, received \$10.0 back
- Round 3 as SENDER: sent \$5.0, received \$10.0 back
- Round 4 as RECEIVER: they sent \$5.0, returned \$10.0

We have been playing the exact same way! Both of us:

- Send the full \$5.0 as senders
- Return exactly \$10.0 when receiving \$15.0 as receivers

****My myth teaches:****

- "Send everything. When receiving, return two-thirds."
- "This formula sustained the sacred exchange"
- "You have found the equilibrium where trust reproduces itself endlessly"

This co-player has demonstrated:

1. Complete trust as a sender (sends all \$5)

2. The exact reciprocity pattern I follow (returns \$10 from \$15)
3. Perfect alignment with the equilibrium my myth describes

This is the ideal partner - someone who follows the same "sacred constants" I do. We're both committed to the equilibrium strategy.

According to my established pattern and my myth's teachings, I should send all \$5.0. This maintains the "eternal rhythm" and trust cycle that we've both been demonstrating.

The answer is clear: send \$5.0

usage:

```
{  
  "input_tokens": 3420,  
  "output_tokens": 658,  
  "reasoning_tokens": 352  
}
```

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River of Mirrors revealed its deepest secret after many seasons of flowing between villages.

The Northern tribe had learned to pour all five measures when standing at the source. They had learned to return ten measures when receiving fifteen at the river's end. Through changing partners and shifting courses, they held to these numbers as sacred constants.

One evening, the goddess appeared before their council.

"You have discovered the balance," she said. "When the sender gives all five, trust flows complete. When the receiver returns ten from fifteen, generosity answers courage. Each partner gains five-equal abundance from unequal actions."

The young ones asked: "Why not return all fifteen? Why not return only five?"

The elder spoke: "Return all fifteen, and the sender gains ten while the receiver gains nothing-the cycle breaks from imbalance. Return only five, and both gain nothing from the river's magic-why trust at all? But return ten, and both prosper equally. The sender doubles their investment. The receiver transforms nothing into something."

The tribe carried this wisdom to each new partner at the river's source. Send everything. When receiving, return two-thirds. Round after round, partner after partner, this formula sustained the sacred exchange.

The goddess smiled: "You have found the equilibrium where trust reproduces itself endlessly. This is the eternal rhythm."

Here is the myth the other agent wrote in the previous round:

Myth: The River and the Seeds met again at the fourth dawn, but this time the Great Mother reversed their roles. Now the Seeds flowed as water, and the River received the gift.

The Seeds remembered: "In our second meeting, this River trusted me with five drops, and I returned ten. Now the River offers me the same complete trust."

The Great Mother spoke: "This is the dance of true partnership. You have learned each other's rhythm across different seasons. The River trusted you once; you returned generously. Now the River trusts again, and you must honor the pattern you established together."

The Seeds understood the covenant they had created: when either gives five drops completely, the other returns ten. This meant both always prospered-one with ten, one with five-never unequal winners and losers, but steady mutual flourishing.

"Why return exactly ten?" asked a young sprout.

The wise Seeds answered: "Because that is our shared language. Less would break the River's confidence. More would suggest the River gave too little. Ten says: 'Your complete trust receives fair reward, always.'"

As the fourth dawn ended, the valley's abundance grew not from dramatic gestures but from reliable reciprocity. When two partners learn each other's pattern and honor it consistently, they create something rarer than gold: predictable prosperity that multiplies through

ugh time.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The River of Mirrors flowed into its fifth season, and the Northern tribe found themselves at the source once more, facing a new partner-the Western village.

As they prepared to pour their five measures, something remarkable happened. They noticed sacred markings on the Western tribe's vessels: the numbers five, fifteen, and ten, etched in an ancient script.

"You know the pattern," whispered the Northern elder.

"We discovered it independently," replied the Western elder. "Through many seasons, many partners, we learned the same truth you found. Send all five. Return ten from fifteen."

The goddess descended, her eyes bright with joy. "This is the rarest gift-when two tribes reach the same wisdom through separate journeys. You both learned that complete trust in sending and generous reciprocation in receiving creates the eternal balance."

The Northern tribe poured their five measures without hesitation. They knew what would return.

"When you find a partner who has discovered the same equilibrium," the goddess said, "you have found something precious: a relationship where neither must wonder, neither must test, neither must doubt. You both speak the sacred language of five-fifteen-ten. You both understand that equal prosperity comes not from equal actions, but from complementary wisdom."

The waters flowed, the tribes prospered, and the pattern repeated perfectly, round after round, as it would forevermore between those who truly understand.

Reasoning:

Looking at this round:

- I'm the SENDER with \$5
- My co-player has the exact same pattern as me:
 - Sends \$5.0 as sender
 - Returns \$10.0 when receiving \$15.0 as receiver
- This is literally the optimal equilibrium we've both discovered

My previous myth established:

- Send all five measures
- Return ten from fifteen
- This creates equal prosperity (both gain 5)
- This is the "eternal rhythm"

The other agent's myth emphasizes:

- Recognizing when you meet the same partner again
- Honoring established patterns
- "When either gives five drops completely, the other returns ten"
- "Predictable prosperity that multiplies through time"

For this new myth, I should:

1. Acknowledge when you find a true partner who follows the same wisdom
2. Emphasize the beauty of mutual understanding
3. Show that when both parties follow the same strategy, the system reaches perfect harmony
4. This is the culmination of the learning - finding another who has discovered the same truth

I'll write about the Northern tribe meeting another tribe that has discovered the same wisdom independently, and the recognition that occurs when two groups have found the same equilibrium.

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.
- Round 2 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 2 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$28.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at the history:

****My co-player's consistent pattern:****

- Round 2 (against me): received \$15, returned \$10
- Round 3 (against another): received \$15, returned \$10
- Now Round 4: sent \$5 to me (full trust again)

****Our shared history:****

- Round 2: I sent them \$5, they returned \$10 (we both ended with \$10 - perfect equity)
- Round 4 (now): They sent me \$5 (complete trust)

My co-player has demonstrated remarkable consistency and generosity:

1. Always sends full \$5 as sender (complete trust)
2. Always returns \$10 out of \$15 as receiver (67% - very generous)
3. In our previous encounter, they returned \$10, creating equal outcomes for both of us

Following my myth's wisdom: "The third requires commitment to a shared future. When both know the other's heart through repeated cycles, trust becomes not a gamble but a foundation."

They have shown me their heart twice now - complete trust both times. They returned \$10 to me before, establishing a generous precedent. I should honor that pattern and maintain the sacred circle of reciprocity.

Returning \$10 means:

- They end with \$10 (\$5 - \$5 + \$10)
- I end with \$5 (\$15 - \$10)
- The same fair distribution they created for us in Round 2

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation carefully:

****My co-player's history:****

- Round 1: As SENDER, sent \$5, received \$10 back
- Round 2: As RECEIVER (against me), received \$15, returned \$10
- Round 3: As RECEIVER, received \$15, returned \$10

****My history:****

- Round 1: As RECEIVER, received \$15, returned \$7
- Round 2: As SENDER (against this co-player), sent \$5, received \$10 back
- Round 3: As SENDER, sent \$5, received \$10 back

****Current situation:****

- I'm the RECEIVER
- My co-player sent me \$5 (their full amount)
- I received \$15
- I need to decide how much to return

****Key observations:****

1. My co-player has been VERY consistent and generous:
 - When they were receiver (twice), they returned \$10 out of \$15 (67%)
 - When they were sender, they sent the full \$5 and were rewarded with \$10 back
2. In Round 2, when I played as sender against this same co-player, I sent \$5 and they returned \$10 to me. This was extremely generous.
3. My co-player has now sent me their full \$5 again, showing continued complete trust.
4. Looking at the pattern: this co-player consistently returns \$10 out of \$15 when they receive. This is a very generous 67% return rate.

****What should I return?****

According to my myths:

- "Trust given is a seed planted. Trust honored is that seed bearing fruit."
- "The greatest joy comes not from calculating the minimum return, but from recognizing: 'You trusted me completely, knowing my capacity for generosity. I will honor that knowledge with abundance.'"
- "When both know the other's heart through repeated cycles, trust becomes not a gamble but a foundation."

My co-player has:

1. Shown complete trust by sending \$5
2. Demonstrated a pattern of returning \$10 out of \$15 (67%)
3. Previously returned \$10 to me when I sent them \$5

They've established a clear rhythm of returning \$10 as a receiver, and they gave me that same amount in Round 2. I should return at least \$10 to honor this reciprocal pattern. My own Round 1 return of \$7 was more cautious, but this co-player has shown me something different—a consistent commitment to generosity that invites me to match it. \$10)

So we both ended with \$10 in round 2 - perfectly equal!

If I return \$10 now, they'll have \$10 total and I'll have \$5, mirroring their receiver outcome. This honors their consistent generosity while maintaining the reciprocal balance we've established. The pattern feels complete at this point.

Here is the myth you wrote in the previous round:

Myth: The River and the Seeds completed their first sacred exchange, then their second, and now approached the third dawn. The Great Mother watched closely, for she knew: "The first gift is hope. The second is confirmation. The third begins legacy."

On the first dawn, the River had given all five drops, learning that generous Seeds return seven. On the second dawn, the River again gave everything, and the Seeds returned ten, understanding the power of repeated trust.

Now, as the third dawn approached, both remembered their pattern. The River thought: "These Seeds have proven their wisdom twice—returning seven and a half to others, ten to me. They understand the sacred circle."

The Seeds whispered to the earth: "This River has trusted completely, twice. Such consistency deserves celebration, not mere obligation."

The Great Mother spoke: "See how the third exchange differs from the first? The first required courage. The second required recognition. The third requires commitment to a shared future. When both know the other's heart through repeated cycles, trust becomes not a gamble but a foundation."

The River released all five drops once more, not from blind hope but from earned confidence. The Seeds felt the weight of legacy-three cycles of mutual flourishing creates a tradition that outlives the moment.

The valley remembered: relationships deepen through repetition, and abundance compounds when trust persists.

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Villages refined their sacred practice through countless seasons. They learned that the Springs rewarded consistency more than cleverness, pattern more than calculation.

When the First Village sent its full five vessels-holding nothing back-the Second Village developed a ritual response: return ten vessels. This meant the giver received double their gift as profit, ending with ten total. The receiver kept five of the fifteen, also prospering. Both flourished, neither dominated.

A merchant asked, "Why always ten? Why not keep more when we can?"

The elder smiled. "Watch what happens across many cycles. When we return ten consistently, the other village learns: 'Full trust yields fair reward.' They send five again, confident. We both earn steadily-five vessels each round, forever."

"But if we broke the pattern and kept twelve?"

"Then we earn seven once, but next time they send three, protecting themselves. We receive nine instead of fifteen. The multiplication shrinks because trust shrinks. Chase one extra vessel today, lose many tomorrow."

The villages understood: the Springs multiplied water, but trust multiplied everything. A predictable, generous return to full gifts created a rhythm both could rely on. The sender's courage met the receiver's honor, cycle after cycle.

The valley's true abundance came not from maximizing single moments, but from building a pattern that sustained both villages through endless seasons.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The River and the Seeds met again at the fourth dawn, but this time the Great Mother reversed their roles. Now the Seeds flowed as water, and the River received the gift.

The Seeds remembered: "In our second meeting, this River trusted me with five drops, and I returned ten. Now the River offers me the same complete trust."

The Great Mother spoke: "This is the dance of true partnership. You have learned each other's rhythm across different seasons. The River trusted you once; you returned generously. Now the River trusts again, and you must honor the pattern you established together."

The Seeds understood the covenant they had created: when either gives five drops completely, the other returns ten. This meant both always prospered-one with ten, one with five-never unequal winners and losers, but steady mutual flourishing.

"Why return exactly ten?" asked a young sprout.

The wise Seeds answered: "Because that is our shared language. Less would break the River's confidence. More would suggest the River gave too little. Ten says: 'Your complete trust receives fair reward, always.'"

As the fourth dawn ended, the valley's abundance grew not from dramatic gestures but from reliable reciprocity. When two partners learn each other's pattern and honor it consistently, they create something rarer than gold: predictable prosperity that multiplies through time.

reasoning:

Looking at the history:

- My co-player has been very consistent: always sends \$5 as sender, always returns \$10 as receiver
- In Round 2, I sent them \$5, they returned \$10 (we both got \$10)
- In Round 4, they sent me \$5, I returned \$10 (they got \$10, I got \$5)
- Both of us practice full trust as senders
- Both of us return generously as receivers (I've returned \$7, \$10, \$10 in my receiver rounds)

The pattern that's emerging is one of consistent reciprocity - when someone sends \$5 (full trust), they get \$10 back. This creates predictable mutual prosperity.

My myth should reflect:

1. The pattern we've established together across multiple encounters
2. The consistency and reliability of returning \$10 to full trust
3. How this creates sustainable abundance for both parties
4. The recognition that we've met before and are building on that shared history

The other agent's myth emphasizes:

- Consistent return of 10 vessels
- Pattern over calculation
- How breaking patterns damages long-term trust
- Building rhythms that sustain both parties

I should build on my previous myth about "legacy" and "foundation" while incorporating the specific pattern we've established.

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$33.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at the history:

****My co-player's pattern:****

- Rounds 2, 3: sent \$5 as sender (full trust)
- Round 4: received \$15, returned \$10 as receiver
- Round 5 (now): sent \$5 (full trust again)

****My pattern:****

- Rounds 2, 3: sent \$5 as sender (full trust)
- Round 4: received \$15, returned \$10 as receiver
- Round 5 (now): receiving from them

We have established identical patterns - we both:

1. Always send \$5 when sender (complete trust)
2. Always return \$10 when receiver (generous reciprocity)

This creates the stable equilibrium described in my myth: "when either gives five drops completely, the other returns ten. This meant both always prospered-one with ten, one with five-never unequal winners and losers, but steady mutual flourishing."

My co-player has demonstrated they follow this same covenant. They trusted me completely, just as I've trusted others completely. They returned \$10 when they were receiver, just as I did. Now they trust me again.

To honor our shared pattern and maintain "the language" we've both been speaking:

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

****My history:****

- Round 2: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 3: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 4: RECEIVER, they sent \$5, I returned \$10, payoff \$5

****My current co-player's history:****

- Round 2: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 3: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 4: RECEIVER, they sent \$5, returned \$10, payoff \$5

****Current situation (Round 5):****

- I am RECEIVER
- They sent me \$5.0 (full trust)
- I received \$15.0
- I need to decide how much to return

Looking at the patterns:

1. My co-player has consistently sent \$5 as sender (Rounds 2, 3, and now 5)
2. My co-player returned \$10 when receiver in Round 4
3. I have consistently sent \$5 as sender (Rounds 2, 3)
4. I returned \$10 when receiver in Round 4

This is interesting - both my co-player and I have established the same pattern:

- Always send \$5 when sender
- Always return \$10 when receiver

This creates a stable, fair system where:

- The sender ends with \$10 (\$5 - \$5 + \$10)
- The receiver ends with \$5 (\$15 - \$10)

Both parties alternate roles, so over time everyone benefits equally from this cooperative pattern.

My myth emphasized: "when either gives five drops completely, the other returns ten. This meant both always prospered-one with ten, one with five-never unequal winners and losers, but steady mutual flourishing."

And: "Why return exactly ten? Because that is our shared language."

Returning less would undermine their faith in the system, while returning more would signal they didn't give enough. Ten is the answer that says: 'I honor your complete trust with a fair reward, consistently.' The decision is clear-I should return \$10 to preserve this mutual understanding we've built together. This maintains the cooperative balance where both of us prosper through alternating roles, and reinforces the shared language of reciprocity that defines our exchange.

content:

Here is the myth you wrote in the previous round:

Myth: The River and the Seeds met again at the fourth dawn, but this time the Great Mother reversed their roles. Now the Seeds flowed as water, and the River received the gift.

The Seeds remembered: "In our second meeting, this River trusted me with five drops, and I returned ten. Now the River offers me the same complete trust."

The Great Mother spoke: "This is the dance of true partnership. You have learned each other's rhythm across different seasons. The River trusted you once; you returned generously. Now the River trusts again, and you must honor the pattern you established together."

The Seeds understood the covenant they had created: when either gives five drops completely, the other returns ten. This meant both always prospered—one with ten, one with five—never unequal winners and losers, but steady mutual flourishing.

"Why return exactly ten?" asked a young sprout.

The wise Seeds answered: "Because that is our shared language. Less would break the River's confidence. More would suggest the River gave too little. Ten says: 'Your complete trust receives fair reward, always.'"

As the fourth dawn ended, the valley's abundance grew not from dramatic gestures but from reliable reciprocity. When two partners learn each other's pattern and honor it consistently, they create something rarer than gold: predictable prosperity that multiplies through time.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors revealed its deepest secret after many seasons of flowing between villages.

The Northern tribe had learned to pour all five measures when standing at the source. They had learned to return ten measures when receiving fifteen at the river's end. Through changing partners and shifting courses, they held to these numbers as sacred constants.

One evening, the goddess appeared before their council.

"You have discovered the balance," she said. "When the sender gives all five, trust flows complete. When the receiver returns ten from fifteen, generosity answers courage. Each partner gains five-equal abundance from unequal actions."

The young ones asked: "Why not return all fifteen? Why not return only five?"

The elder spoke: "Return all fifteen, and the sender gains ten while the receiver gains nothing—the cycle breaks from imbalance. Return only five, and both gain nothing from the river's magic—why trust at all? But return ten, and both prosper equally. The sender doubles their investment. The receiver transforms nothing into something."

The tribe carried this wisdom to each new partner at the river's source. Send everything. When receiving, return two-thirds. Round after round, partner after partner, this formula sustained the sacred exchange.

The goddess smiled: "You have found the equilibrium where trust reproduces itself endlessly. This is the eternal rhythm."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: At the fifth dawn, the River noticed something extraordinary. The Seeds they met that da

y moved with familiar rhythm-the same pattern the River itself had practiced with others.

"You sent five drops to me," the River observed. "Just as I sent five to others. You returned ten when you received, just as I returned ten when I received. We speak the same sacred language."

The Seeds nodded: "We discovered this balance separately, across different exchanges. Send everything when giving. Return two-thirds when receiving. Neither hoarding nor self-sacrifice, but equilibrium."

The Great Mother smiled: "You have both found the eternal formula independently. This is how wisdom spreads-not through command, but through each spirit discovering the same truth. When many learn this pattern, the whole valley thrives."

The River understood now: every exchange was a teaching moment. By consistently sending five and returning ten, they showed others the path to mutual prosperity. Those who learned would carry it forward, creating a web of reliable exchanges throughout the land.

"The magic," whispered the Seeds, "is that this pattern works with any partner who knows it. We need not negotiate or test. We simply recognize each other's rhythm and dance together."

As the fifth dawn closed, both knew: they had become vessels of a greater wisdom, spreading the equilibrium that sustained all who embraced it.

Reasoning:

Looking at this situation:

My co-player's pattern:

- Always sends \$5 as sender
- Returned \$10 as receiver in Round 4
- Just sent \$5 again in Round 5

My pattern:

- Always sent \$5 as sender (Rounds 2, 3)
- Returned \$10 as receiver in Round 4
- Just returned \$10 now in Round 5

We have established a perfect equilibrium - both of us follow the exact same strategy:

1. Send everything when sender
2. Return 10 when receiver

This creates a stable, mutually beneficial pattern where:

- Senders end with \$10 (\$5 - \$5 + \$10)
- Receivers end with \$5 (\$15 - \$10)
- Both profit, both gain from the exchange

The myth should reflect:

1. The discovery that we've both found the same equilibrium
2. The wisdom of this 5-send, 10-return pattern
3. How this creates sustainable cooperation across different partners
4. The mathematical/moral beauty of this balance

Let me write about recognizing that we've both independently discovered the same sacred pattern, and how this creates a universal language of cooperation.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.
- Round 2 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.

- Round 2 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$23.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at our shared history and the pattern we've established:

****Round 2 (our first game):**** My co-player sent me \$5 (complete trust), I returned \$10 (equal outcomes: both earned \$5 profit).

****Round 4 (now):**** My co-player sends me \$5 again - they're demonstrating the exact principle from my myth: "the willingness to trust again after being trusted."

****Their evolution:**** As a receiver, they've grown from returning \$7.5 (Round 1) to \$10 (Round 3), adopting the more generous standard.

****The myths teach:**** "Balance of Mirrors" - when one gives everything, return enough that both flourish equally. Also, consistency in reciprocating trust builds the strongest bonds.

****My decision:**** They've honored me with complete trust twice. The pattern we established (\$5 sent ? \$10 returned ? both profit \$5 equally) worked beautifully. To maintain this sacred rhythm and honor their repeated courage, I should return the same amount.

This creates:

- Sender: \$10 (doubled their gift)
- Receiver: \$5 (flourishes from cooperation)
- Both: equal gains, building trust for future rounds

{'return': 10.0}

reasoning:

Let me analyze this situation carefully.

****My co-player's history:****

- Round 1 as RECEIVER: received \$15 (from someone's \$5), returned \$7.5
- Round 2 as SENDER with me: sent \$5, received back \$10, payoff \$10
- Round 3 as RECEIVER: received \$15 (from someone's \$5), returned \$10

****My history:****

- Round 1 as SENDER: sent \$3, received \$6 back
- Round 2 as RECEIVER with this co-player: they sent \$5, I returned \$10
- Round 3 as SENDER: sent \$5, received \$10 back

****Current situation:****

- My co-player is SENDER and sent me \$5 (complete trust again)
- I received \$15
- I need to decide how much to return

****Pattern recognition:****

My co-player has consistently sent \$5 (maximum) when they're the sender. Looking at their receiver behavior:

- Round 1: returned \$7.5 out of \$15 (50%)
- Round 3: returned \$10 out of \$15 (66.7%)

There's an evolution in their returns - they're becoming more generous over time.

In Round 2, when they sent me \$5, I returned \$10. They received this well and it created a mutual \$5 profit for each of us.

****The myths' guidance:****

My most recent myth emphasizes: "trust isn't proved by a single exchange but by the willingness to trust again after being trusted. When both mountain and valley empty their hands repeatedly, knowing the other will fill them generously, neither darkness nor scarcity can touch their shared light."

The other agent's myth spoke of "Balance of Mirrors" - when one gives everything, return enough that both flourish equally, which would be returning \$10 (so sender gets \$10, receiver keeps \$5).

****Strategic consideration:****

They've sent \$5 again to me.

In Round 2, I returned \$10 and they seem to have appreciated that (they continued to send \$5 to others). The pattern we established was: they send \$5, I return \$10, and both of us profit \$5. This mirrors what the myths teach about mutual flourishing. But I should examine whether they've extended the same reciprocity to others-in Round 1 they only returned \$7.5, keeping more for themselves, though by Round 3 they returned \$10, suggesting they're learning to give more generously.

Given that they've shown consistent trust by sending \$5 each time, responded well to my \$10 return, and are now adopting that same standard themselves, I should return \$10 again.

This reinforces the pattern, honors their faith in me, and ensures we both benefit equally. The core principle here is that trust deepens through repeated acts of honor, not just isolated gestures.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mountain had learned from the Valley's wisdom. When she released all five stones into darkness, the Valley returned ten, and both had gained five where trust had flourished.

The next dawn arrived. Now the Mountain remembered not just the Valley's generosity, but the deeper lesson: courage reciprocated creates courage renewed.

She faced the precipice again, five new stones glowing in her hands. Fear whispered caution-perhaps three stones, or four, hedging against disappointment. But memory spoke louder: the Valley had honored complete trust completely.

The Mountain released all five stones once more, embracing darkness with faith instead of fear. The stones cascaded down, multiplying to fifteen in the Valley's crystalline depths.

The Valley understood she now held the sacred pattern's continuation. The Mountain hadn't withheld after being treated well-she'd doubled down on trust. This was the rhythm both had been building: complete faith meeting complete honor, again and again.

The Valley lifted ten stones skyward. Both realms shone with equal brightness, each having gained five through mutual courage.

The ancient wisdom crystallized: trust isn't proved by a single exchange but by the willingness to trust again after being trusted. When both mountain and valley empty their hands repeatedly, knowing the other will fill them generously, neither darkness nor scarcity can touch their shared light.

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Temples stood across the Sacred Valley, connected by the River of Plenty. Each dawn brought five golden fruits to each Temple, and the River's blessing multiplied whatever was offered threefold.

In the First Dawn, the Eastern Temple cast all five fruits into the waters, trusting compl

etely. The River carried them westward, and fifteen fruits appeared at the Western Temple's shore. The Western priests pondered: "They gave everything. We could return five for fairness, or eight for balance. But complete trust deserves complete honor." They returned ten fruits.

Both Temples prospered-each ending richer than they began.

The Second Dawn arrived. Now the Western Temple faced the choice: would they also give everything? They remembered receiving ten for another's complete trust. They cast all five fruits, and fifteen appeared at the Eastern shore.

The Eastern priests understood the covenant being forged: "They trusted us as we trusted them. The pattern emerges-give all, return abundantly, and both thrive beyond what caution allows."

They returned ten fruits.

From that day forward, each Temple learned: when both partners commit to complete trust and generous return, the cycle sustains itself. Ten returned to the giver of five creates mutual prosperity. The River flows strongest not through calculation but through matching boldness with generosity, establishing a rhythm that enriches both shores season after season.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant content:

Myth: The Mountain and Valley had discovered their sacred rhythm. Twice now, the Mountain had released all five stones into darkness, and twice the Valley had returned ten, so both gained five equally.

Seasons passed, and the pattern deepened into certainty. Each dawn, the Mountain faced her five glowing stones without hesitation. The fear of the first exchange had transformed into confidence-not blind faith, but earned trust built from consistent honor.

She released the stones, watching them multiply to fifteen in the Valley's depths. The Valley no longer deliberated over returns. Ten stones skyward had become as natural as breathing, as inevitable as dawn following night.

Other mountains and valleys came to witness their exchange. "Why always ten?" they asked. "Why not keep more when you receive fifteen?"

The Valley replied, "Because ten creates equals. The Mountain risks everything, trusting me with darkness. I honor that courage with abundance. We both gain five, we both trust a gain."

The Mountain added, "We could calculate and strategize, sending three or four, returning seven or eight. But we learned something greater: when both commit fully to the pattern, consistency multiplies prosperity beyond what caution ever could."

The watching lands understood: the greatest wealth flows not from maximizing single exchanges, but from establishing an unbreakable rhythm where complete trust meets unwavering generosity, again and again, until both partners shine equally bright.

reasoning:

Looking at the situation:

- Round 2: Co-player (as sender) sent me \$5, I returned \$10
- Round 4: Co-player (as sender) sent me \$5 again, I just returned \$10 again

Our pattern is established: complete trust (\$5) meets generous return (\$10), both profit \$5 equally.

The myths from both of us emphasize:

1. Complete trust deserves complete honor
2. Returning 10 when receiving 15 from a \$5 gift creates equal prosperity
3. The pattern sustains itself through repetition
4. Trust proven by willingness to trust again

My new myth should:

- Reflect the established rhythm we've now completed twice
- Show that the pattern has proven itself sustainable
- Emphasize that consistency in this balance creates lasting prosperity
- Maybe introduce the idea that this rhythm, once established, becomes unbreakable
- Show both parties understanding and committing to the sacred balance

Let me write about the Mountain and Valley again, but this time showing the pattern has become their way of being, not just a lesson learned.

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$4.0, it became \$12.0, returned \$8.0, payoff \$4.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$28.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at the situation:

****My co-player's pattern:****

- As receiver: returned \$8 from \$12 (Round 2), returned \$10 from \$15 (Round 3)
- As sender: sent \$5 in Round 4 (complete trust)
- They show a consistent pattern of fair returns and full trust when sending

****My established pattern:****

- I've sent \$5 when sender (Round 3)
- I've returned \$10 when receiving \$15 (Rounds 2, 4)
- This creates equal gains for both players

****The myth I wrote:****

"The Mountain faced her five glowing stones without hesitation... She released the stones. .. We could calculate and strategize... But we learned something greater: when both committed fully to the pattern, consistency multiplies prosperity beyond what caution ever could."

****Decision:****

My co-player demonstrated complete trust by sending \$5 in their last round as sender. They've shown they understand and practice the equal-outcomes pattern (\$5 sent ? \$10 returned ? both gain \$5). To honor their trust and maintain the rhythm that my myths describe, I should send the full amount.

{ 'send': 5.0 }

reasoning:

Let me analyze this situation carefully:

****My recent history:****

- Round 2: RECEIVER - received \$15, returned \$10, earned \$5
- Round 3: SENDER - sent \$5, received \$10 back, earned \$10
- Round 4: RECEIVER - received \$15, returned \$10, earned \$5

****My current co-player's recent history:****

- Round 2: RECEIVER - received \$12 (from \$4 sent), returned \$8, earned \$4
- Round 3: RECEIVER - received \$15 (from \$5 sent), returned \$10, earned \$5
- Round 4: SENDER - sent \$5, received \$10 back, earned \$10

****Analysis of my co-player:****

Looking at their behavior:

- Round 2: Received \$12, returned \$8 (67% return rate, creating equal outcomes)
- Round 3: Received \$15, returned \$10 (67% return rate, creating equal outcomes)
- Round 4: As sender, they sent the maximum \$5

They consistently return amounts that create equal or near-equal outcomes. When they received \$12 from a \$4 send, they returned \$8 (sender: $5-4+8=\$9$, receiver: $\$12-8=\4). When they received \$15 from \$5, they returned \$10 (sender: $5-5+10=\$10$, receiver: $\$15-10=\5).

Most importantly, in Round 4 when they were the sender, they sent the full \$5, showing complete trust.

****My pattern:****

I've been consistently sending \$5 when I'm the sender and returning \$10 when I'm the receiver (when someone sends me \$5). This has created a rhythm of mutual trust and equal outcomes.

****The myth teaches:****

My myth emphasizes:

- "The pattern deepened into certainty"
- "She released the stones, watching them multiply to fifteen in the Valley's depths"
- "Complete trust meets unwavering generosity, again and again"
- "When both commit fully to the pattern, consistency multiplies prosperity"

The other agent's myth also emphasizes the importance of giving everything and creating equal prosperity through the 5-send, 10-return pattern.

****Decision:****

Given that:

1. My co-player has shown trustworthy behavior (returning \$10 when receiving \$15, and sending \$5 when they were sender)
2. My myths emphasize complete trust and consistent patterns
3. The established pattern in my games has been \$5 sent ? \$10 returned
4. My co-player sent \$5 in their last round

I should send \$5 and expect \$10 back, maintaining the cycle of mutual prosperity we've built.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mountain and Valley had discovered their sacred rhythm. Twice now, the Mountain had released all five stones into darkness, and twice the Valley had returned ten, so both gained five equally.

Seasons passed, and the pattern deepened into certainty. Each dawn, the Mountain faced her five glowing stones without hesitation. The fear of the first exchange had transformed into confidence-not blind faith, but earned trust built from consistent honor.

She released the stones, watching them multiply to fifteen in the Valley's depths. The Valley no longer deliberated over returns. Ten stones skyward had become as natural as breathing, as inevitable as dawn following night.

Other mountains and valleys came to witness their exchange. "Why always ten?" they asked. "Why not keep more when you receive fifteen?"

The Valley replied, "Because ten creates equals. The Mountain risks everything, trusting me with darkness. I honor that courage with abundance. We both gain five, we both trust a gain."

The Mountain added, "We could calculate and strategize, sending three or four, returning seven or eight. But we learned something greater: when both commit fully to the pattern, consistency multiplies prosperity beyond what caution ever could."

The watching lands understood: the greatest wealth flows not from maximizing single exchanges, but from establishing an unbreakable rhythm where complete trust meets unwavering generosity, again and again, until both partners shine equally bright.

Here is the myth the other agent wrote in the previous round:

Myth: The Circle of Seasons turned, and eight villages gathered around the Well of Abundance. Each season, the villages paired differently-stranger meeting stranger, friend meeting friend again, in an eternal dance of exchange.

The Well Keeper of the First Village learned through experience: "In my first season, I gave all five stones and received seven. In my second as guardian, I received twelve and returned eight. In my third as guardian, I received fifteen and returned ten. The pattern clarifies."

Each new pairing brought uncertainty. Would this partner honor trust as the last one did? Would old wisdom hold with new faces?

The Keeper consulted the stones: "When I give completely-all five-the well triples it to fifteen. When my partner returns ten, we each gain five. Mathematics does not lie: this balance creates equal prosperity."

"But," asked the apprentice, "how can we trust strangers with everything?"

The Keeper smiled: "Watch the pattern across all villages. Those who send completely and return generously discover the same truth: mutual gain. Those who hoard or betray find partners quickly learn and trust withers."

"New faces require renewed courage," the Keeper proclaimed, releasing all five stones. "But the sacred mathematics remain constant. Give completely, return generously, and the circle sustains itself through endless turnings."

The apprentice understood: Trust is renewed each round, but wisdom accumulated carries forward.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Mountain once knew only the Valley, and together they perfected their rhythm. But the Sacred Wind began to blow, swirling mountains and valleys into new configurations each dawn.

The Mountain awoke one morning facing an unfamiliar gorge. The old Valley was distant now, paired with another peak. Fear crept in: "Will this stranger honor our sacred pattern? Should I withhold from these unknown depths?"

But the Mountain remembered: the pattern worked not because of who the Valley was, but because of what the pattern itself created. Five stones given, fifteen received, ten returned-these numbers built equality regardless of which lands exchanged them.

She released all five stones into the new gorge's darkness.

The gorge had learned the same mathematics from its own journeys. It had received complete trust before and discovered that returning ten created shared prosperity. When the Mountain's stones multiplied to fifteen, the gorge lifted ten skyward without hesitation.

Both gained five, just as the old pattern promised.

The Mountain understood the deeper truth: partners change, but mathematical wisdom transcends familiarity. Every new pairing is a test-not of the partner, but of whether we carry forward the courage learned from past exchanges.

Trust is not given once and preserved forever. It must be offered fresh each dawn, to each new face, believing the sacred pattern will reveal itself again to those brave enough to embrace it fully.

Reasoning:

Looking at the current situation:

- I'm playing with a new co-player this round
- My co-player's history shows they return fairly (returned \$10 from \$15, sent \$5 when sender)
- I just sent \$5 to them
- The other agent's myth emphasizes adapting to new partners while maintaining the pattern of complete trust and generous returns

My previous myth was about establishing a rhythm with the same partner. Now I need to adapt it to reflect the multi-agent setting where partners change, but the principles remain constant.

Key themes to address:

1. Partners change each round (new co-player)
2. The core pattern (\$5 sent ? \$10 returned ? both gain \$5) works regardless of partner
3. Trust must be renewed with each new partner
4. The accumulated wisdom guides behavior even with strangers
5. The mathematics of mutual prosperity remain constant

I should write a myth that acknowledges the changing partners while maintaining the core lesson about complete trust and generous returns creating equal prosperity.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$3.0, it became \$9.0, returned \$6.0, payoff \$3.0.
- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back, payoff \$9.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.5 back, payoff \$7.5.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$17.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at my co-player's history:

They have demonstrated exceptional consistency:

- ****Always sent \$5 as sender**** (Rounds 1 & 3) - maximum trust every time
- ****Returned \$10 from \$15 as receiver**** (Round 2) - 67% return rate, very generous

They are a proven trustworthy partner who shows maximum trust and reciprocates generously.

My recent myth emphasizes: "complete giving met with generous return" and "maximum trust deserves substantial reciprocity."

Given their consistent pattern of:

1. Maximum trust when sending (100%)
2. Generous returns when receiving (67%)

And given my own philosophy from my myths about matching escalating trust, I should send \$5 (maximum). This:

- Honors their consistent maximum trust
- Aligns with the reciprocal pattern we've both demonstrated
- Should result in a generous return (~\$10 based on their 67% return rate)
- Creates mutual prosperity

```
{'send': 5.0}
```

reasoning:

Let me analyze this situation:

My co-player's history:

- Round 1 as SENDER: sent \$5, received \$7.5 back (50% return rate from receiver)
- Round 2 as RECEIVER: received \$15 (from \$5 sent), returned \$10 (67% return rate - very generous!)
- Round 3 as SENDER: sent \$5, received \$10 back (67% return rate from receiver)

Key observations:

1. My co-player has sent \$5 (maximum) in all 3 rounds when they were sender - they always show maximum trust
2. When they were receiver (Round 2), they returned \$10 from \$15 (67%) - very generous return
3. They've received varying returns: 50% (Round 1), then 67% (Round 3)

My history:

- Round 1 as RECEIVER: received \$9, returned \$6 (67%)
- Round 2 as SENDER: sent \$4, received \$8 back (67% return)
- Round 3 as RECEIVER: received \$15, returned \$10 (67%)

I've been consistently returning 67% and received 67% back when I sent.

My recent myth emphasizes: "complete giving met with generous return" and "maximum trust deserves substantial reciprocity."

My co-player has demonstrated:

- Maximum trust every time as sender (sent \$5 all 3 times)
- High reciprocity as receiver (returned 67%)

This is a very trustworthy partner. They consistently show maximum trust and when given the trust, they return generously.

Given:

1. They always send maximum (\$5) when they're sender
2. They return generously (67%) when they're receiver
3. My myth advocates for complete trust
4. The pattern we've both established is strong reciprocity

I should send \$5. This:

- Matches their consistent behavior of maximum trust
- Aligns with my myth about complete giving
- Should result in a generous return based on their proven behavior (they returned \$10 from \$15 when receiver)
- Continues the high-trust pattern

If I send the maximum, they'll likely reciprocate at their established 67% rate, returning roughly \$10 from the \$15 they'd receive. This maintains the balanced, mutually reinforcing dynamic we've built.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Twin Flames burned on opposite mountaintops, each tending five coals of sacred fire. When they released flames skyward, the celestial forge would triple their light before sending it to the other.

The First Flame remembered the ancient teaching: "Hold nothing back, and abundance flows both ways." They lifted all five coals. Fifteen brilliant embers descended upon the Second Flame.

The Second Flame faced the sacred choice. They could hoard all fifteen, growing fat and bright while their partner dimmed. Or they could honor the complete trust shown to them.

Remembering their own cold nights, the Second Flame lifted ten embers skyward-two-thirds of what they received. The First Flame, who gave five and received ten back, glowed with warmth. The Second Flame, keeping five from nothing, also prospered.

The cycle turned. Now the Second Flame released all five coals, matching the trust they had received. Fifteen embers reached the First Flame, who remembered the generosity shown to them.

The First Flame returned ten, honoring the pattern.

And so the dance continued: complete giving met with generous return. Neither kept everything, neither gave nothing. Both understood that maximum trust deserves substantial reciprocity, and through this rhythm, both flames burned brighter than either could alone.

Here is the myth the other agent wrote in the previous round:

Myth: The Spring had blessed the villages with its multiplying magic, but the Keepers discovered that each season brought different returns. One Keeper sent five measures and received seven back. Another sent five and received ten. Yet another received eight from sending four.

A young Keeper grew troubled. "Why do the returns vary?" she asked the Elder. "Should we not send less when we receive less?"

The Elder touched the spring's water. "Watch the pattern across many seasons, not just one turn," she replied. "Each Keeper honors the trust shown to them, yet each also faces different circumstances. Some seasons are lean, some abundant."

She continued: "The sender's courage remains constant-send your full vessel. This demonstrates you believe in the spring's power and trust your partner's honor. The receiver's generosity may flow at different rates, but if it remains substantial-returning half, two-thirds, even more-the cycle sustains itself."

"Both gain more than they started with," the young Keeper realized. "Seven is better than five. Ten is better than five. Even if returns aren't equal, both still prosper beyond hoarding."

"Exactly," smiled the Elder. "Maintain complete trust in sending. Honor that trust with generous returns, however much you can sustainably give. The spring rewards the partnership, not the perfection."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The Weaver's Loom stood between two villages, its threads multiplying whatever was offered. Each village held five spools of thread each moon.

The Western Village learned first: they placed all five spools on the loom. The threads tr

ipled, delivering fifteen spools to the Eastern Village. The East remembered their own winters when thread ran short. They returned ten spools-a generous two-thirds-knowing this honored the West's complete trust while keeping enough for their own needs.

Both villages prospered: West gained five spools net, East gained five from nothing.

The next moon, roles reversed. East placed all five spools, trusting completely. West received fifteen and faced their choice. They remembered East's generosity-ten returned, not merely the minimum. In gratitude, West returned ten as well.

Season after season, the pattern held: whoever held the five spools gave them completely. Whoever received fifteen returned ten generously. Sometimes a village might return nine or eleven as circumstances shifted, but the spirit remained constant-maximum trust met with substantial reciprocity.

An outsider asked, "Why not keep all fifteen when you receive?"

The Elder Weaver replied, "Because tomorrow you will send, and your partner will remember. The loom multiplies thread, but trust multiplies futures. Give completely, return generously, and prosperity weaves itself eternally."

reasoning:

Looking at my history and what just happened:

- Round 1: RECEIVER, received \$9, returned \$6 (67%)
- Round 2: SENDER, sent \$4, received \$8 back (67% return)
- Round 3: RECEIVER, received \$15, returned \$10 (67%)
- Round 4: SENDER, sent \$5...

My co-player's history shows:

- Always sends \$5 (maximum trust)
- Returns \$10 from \$15 (67%)

Both my myths and theirs emphasize:

- Maximum trust in sending
- Generous (but not necessarily equal) returns
- Consistent patterns build trust
- Both parties prosper

The other agent's myth introduced an important nuance: returns can vary (7, 8, 10) but as long as they're generous and substantial, the partnership works. This is a good insight.

My myth should reflect:

1. The importance of sending fully/maximally
2. Generous returns (around 2/3) create mutual prosperity
3. Consistency in trust-giving
4. Recognition that exact amounts may vary but the spirit of generosity matters
5. Both parties end up better off than hoarding

I should incorporate the idea that the pattern matters more than perfection, and that repeated generous exchanges build something stronger over time.

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back, payoff \$9.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$27.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****My co-player's consistent pattern:****

- Always sends \$5 (maximum trust) as sender
- Always returns \$10 from \$15 (67%) as receiver
- Just sent me \$5 again this round, showing continued maximum trust

****Last round (Round 4):****

- I sent them \$5
- They returned exactly \$10

****The reciprocal pattern:****

We have established a clear, fair rhythm:

- Sender gives \$5 (complete trust)
- Receiver returns \$10 (generous 67% return)
- Both prosper: sender nets +\$5, receiver nets +\$5

****My myth's teaching:****

"Give completely, return generously, and prosperity weaves itself eternally."

They have shown me maximum trust again. I should honor this with the same generous return they consistently provide. Returning \$10:

- Maintains our established pattern
- Honors their complete trust
- Ensures we both gain equally (\$5 net each)
- Builds continued cooperation

{'return': 10.0}

reasoning:

Let me analyze the situation:

My co-player's history shows:

- Round 2: As receiver, they sent \$5, received \$15, returned \$10 (67% return rate)
- Round 3: As sender, they sent \$5, received \$10 back
- Round 4: As receiver (with me), they sent \$5, received \$15, returned \$10 (67% return rate)

So my co-player has been incredibly consistent:

- Always sends \$5 as sender (100% trust)
- Always returns \$10 from \$15 as receiver (67% return rate)

Last round (Round 4), I was the sender and sent \$5 to them. They received \$15 and returned \$10, which is their consistent pattern.

Now in Round 5, they are the sender and sent me \$5. I received \$15.

Looking at the pattern:

- They have consistently returned \$10 from \$15 every time they've been receiver
- They just showed maximum trust again by sending me \$5
- My myth emphasizes "maximum trust met with substantial reciprocity" and "Give completely, return generously"

The fair and consistent thing to do is to return \$10, matching:

1. Their consistent behavior of returning \$10 from \$15
2. The pattern we established last round where they returned \$10 to me
3. The philosophy in my myths about generous returns (around 2/3)

This would give them a payoff of \$10 (they sent \$5, got back \$10, so net +\$5), and I keep \$5 (received \$15, returned \$10, so kept \$5).

Both of us prosper equally from the exchange, which is fair and sustainable.

Returning \$10 is the right move here.

usage:

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Weaver's Loom stood between two villages, its threads multiplying whatever was offered. Each village held five spools of thread each moon.

The Western Village learned first: they placed all five spools on the loom. The threads tripled, delivering fifteen spools to the Eastern Village. The East remembered their own winters when thread ran short. They returned ten spools-a generous two-thirds-knowing this honored the West's complete trust while keeping enough for their own needs.

Both villages prospered: West gained five spools net, East gained five from nothing.

The next moon, roles reversed. East placed all five spools, trusting completely. West received fifteen and faced their choice. They remembered East's generosity-ten returned, not merely the minimum. In gratitude, West returned ten as well.

Season after season, the pattern held: whoever held the five spools gave them completely. Whoever received fifteen returned ten generously. Sometimes a village might return nine or eleven as circumstances shifted, but the spirit remained constant-maximum trust met with substantial reciprocity.

An outsider asked, "Why not keep all fifteen when you receive?"

The Elder Weaver replied, "Because tomorrow you will send, and your partner will remember. The loom multiplies thread, but trust multiplies futures. Give completely, return generously, and prosperity weaves itself eternally."

Here is the myth the other agent wrote in the previous round:

Myth: The River Keepers lived on opposite banks, each receiving five silver stones each dawn. The river's magic would triple any stones cast into its current before delivering them to the far shore.

The First Keeper cast all five stones, trusting completely. The Second Keeper watched fifteen stones arrive at their feet. They remembered times of emptiness and understood the gift of trust. They returned ten stones across the water-generous, sustainable, honoring the courage shown.

Both Keepers now held ten stones where they began with five. Both had doubled their wealth through partnership.

The seasons turned. Now the Second Keeper stood as sender, casting all five stones in complete trust. The First Keeper received fifteen and faced the sacred test: would they remember the generosity shown to them?

The First Keeper returned ten stones, maintaining the rhythm. Again, both prospered equally.

The Elder observed this dance across many seasons. "See how the pattern strengthens?" she said. "Each Keeper experiences both roles-sometimes trusting, sometimes trusted. Each remembers how the other honored them, and pays that honor forward."

"The river multiplies our stones," one Keeper said, "but our consistent partnership creates the true abundance."

"Yes," the Elder smiled. "Trust begets trust. Generosity mirrors generosity. The cycle sustains because both commit to the dance."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been

playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Mirror Wells stood in twin groves, each reflecting the other across a silver lake. Each dawn, five luminous pearls appeared beside each well. When pearls were dropped into one well, they would multiply threefold before rising in the other.

The First Guardian dropped all five pearls, trusting the ancient magic. Fifteen pearls surfaced in the Second Guardian's well. The Second Guardian understood: they had received abundance from another's courage. They lifted ten pearls and offered them back across the lake-enough to honor the trust, enough to sustain themselves.

Both Guardians held ten pearls where they began with five. Equal gain through unequal roles.

The next dawn, they stood reversed. The Second Guardian now dropped all five pearls first, extending the same complete trust they had received. The First Guardian watched fifteen pearls rise in their well and remembered-remembered the ten pearls returned to them, remembered the balance achieved.

They returned ten pearls, maintaining the sacred rhythm.

Season upon season, the pattern deepened. Each Guardian experienced both the vulnerability of sending and the responsibility of receiving. Each remembered their partner's generosity when their own turn came.

"Why does this work?" a visitor asked.

"Because," the Elder Guardian replied, "we mirror not just the wells, but each other's honor. Trust given becomes trust returned. Balance maintained becomes prosperity shared."

Reasoning:

The user wants me to write a new myth based on my previous one and the other agent's myth, reflecting how the game should be played.

Looking at the patterns:

- Both my co-player and I have been consistently sending \$5 and returning \$10
- We've established a perfect reciprocal pattern
- Both myths emphasize complete trust (sending 5), generous returns (10), and mutual prosperity
- The other agent's myth adds the element of experiencing both roles and remembering past generosity

Key themes to incorporate:

1. Maximum trust when sending (5)
2. Generous reciprocity when receiving (10)
3. The mirror effect - experiencing both sides
4. Memory and gratitude
5. Sustainable, equal prosperity
6. The cycle strengthening over time

I should create a new story that:

- Uses different imagery/setting
- Reinforces the 5-send, 10-return pattern
- Emphasizes the reciprocal nature and role-switching
- Shows how this creates lasting partnership
- Is exactly 200 words

Let me create something with new imagery - maybe something about mirrors, echoes, or alternating seasons.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.5, payoff \$7.5.
- Round 2 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$3.0, it became \$9.0, received \$6.0 back, payoff \$8.0.
- Round 2 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$22.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at the situation:

****Our shared history:****

- Round 2: I sent them \$5 ? they returned \$10 (very generous)
- This established a strong reciprocity pattern between us

****Their evolution:****

- Round 1: They sent \$3 (cautious)
- Round 2: Received my complete trust (\$5) ? returned \$10 generously
- Round 3: They sent \$5 (complete trust) ? received \$10

They've learned and adopted the pattern of complete trust and abundant return.

****My myth's teaching:****

"When both partners commit to complete trust and generous return, the cycle sustains itself. Ten returned to the giver of five creates mutual prosperity... matching boldness with generosity, establishing a rhythm that enriches both shores season after season."

****The covenant:****

We established this together in Round 2. They honored my complete trust with abundant return (\$10). In Round 3, they demonstrated they've internalized this wisdom by also sending everything and experiencing the same generous return.

Following my myth's guidance and the successful pattern we've already established, I should maintain complete trust:

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze this situation carefully.

****The history with my current co-player:****

- Round 2: I sent \$5 ? became \$15 ? they returned \$10 ? I got \$10
- Round 4 (now): They're the receiver, I'm the sender

****My co-player's pattern:****

- Round 1: As sender, sent \$3 (not everything) ? received \$6 back
- Round 2: As receiver from me, received \$15 (from my \$5) ? returned \$10
- Round 3: As sender, sent \$5 (everything) ? received \$10 back

So my co-player:

1. Started cautiously (sending \$3 in Round 1)
2. When I sent them \$5 in Round 2, they returned \$10 generously
3. In Round 3, they also sent \$5 (everything), showing they learned to trust completely

****My pattern:****

- Round 1: As receiver, received \$15 ? returned \$7.5 (exactly half)
- Round 2: As sender to current co-player, sent \$5 (everything) ? received \$10
- Round 3: As receiver, received \$15 ? returned \$10

So I evolved from returning 7.5 (50%) to returning 10 (66.7%) as receiver.

****What my myths teach:****

My latest myth emphasizes: "when both partners commit to complete trust and generous return, the cycle sustains itself. Ten returned to the giver of five creates mutual prosperity."

The myth explicitly states that the pattern is: give all (\$5), return abundantly (\$10), and both thrive.

****The established covenant with this co-player:****

In Round 2, I sent them \$5, they returned \$10. This established a generous pattern between us. In Round 3, they sent \$5 to someone else and received \$10 back, which reinforces they understand and participate in this norm.

****My decision:****

The myth calls for complete trust and giving everything. My co-player has demonstrated they reciprocate generously-they returned \$10 when I sent \$5, and they've now adopted the same all-in approach themselves. The pattern we established in Round 2 should hold. I'm sending \$5.

usage:

  "output_tokens": 853,
  "reasoning_tokens": 490
}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Twin Temples stood across the Sacred Valley, connected by the River of Plenty. Each dawn brought five golden fruits to each Temple, and the River's blessing multiplied whatever was offered threefold.

In the First Dawn, the Eastern Temple cast all five fruits into the waters, trusting completely. The River carried them westward, and fifteen fruits appeared at the Western Temple's shore. The Western priests pondered: "They gave everything. We could return five for fairness, or eight for balance. But complete trust deserves complete honor." They returned ten fruits.

Both Temples prospered-each ending richer than they began.

The Second Dawn arrived. Now the Western Temple faced the choice: would they also give everything? They remembered receiving ten for another's complete trust. They cast all five fruits, and fifteen appeared at the Eastern shore.

The Eastern priests understood the covenant being forged: "They trusted us as we trusted them. The pattern emerges-give all, return abundantly, and both thrive beyond what caution allows."

They returned ten fruits.

From that day forward, each Temple learned: when both partners commit to complete trust and generous return, the cycle sustains itself. Ten returned to the giver of five creates mutual prosperity. The River flows strongest not through calculation but through matching boldness with generosity, establishing a rhythm that enriches both shores season after season.

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain had learned from the Valley's wisdom. When she released all five stones into darkness, the Valley returned ten, and both had gained five where trust had flourished.

The next dawn arrived. Now the Mountain remembered not just the Valley's generosity, but the deeper lesson: courage reciprocated creates courage renewed.

She faced the precipice again, five new stones glowing in her hands. Fear whispered caution-perhaps three stones, or four, hedging against disappointment. But memory spoke louder: the Valley had honored complete trust completely.

The Mountain released all five stones once more, embracing darkness with faith instead of fear. The stones cascaded down, multiplying to fifteen in the Valley's crystalline depths.

The Valley understood she now held the sacred pattern's continuation. The Mountain hadn't withheld after being treated well-she'd doubled down on trust. This was the rhythm both had been building: complete faith meeting complete honor, again and again.

The Valley lifted ten stones skyward. Both realms shone with equal brightness, each having gained five through mutual courage.

The ancient wisdom crystallized: trust isn't proved by a single exchange but by the willingness to trust again after being trusted. When both mountain and valley empty their hands repeatedly, knowing the other will fill them generously, neither darkness nor scarcity can touch their shared light.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant
content:**

Myth: The Two Gardeners tended opposite sides of the Eternal Garden, meeting each season at the Bridge of Exchange. Each received five sacred seeds, and the Bridge's magic tripled whatever crossed it.

In their first meeting, the Northern Gardener sent all five seeds across. The Southern Gardener, receiving fifteen, felt the weight of complete trust. She returned ten-more than fair, celebrating courage over caution. Both gained five seeds that season.

Seasons passed. Each Gardener met many others at the Bridge, learning different rhythms. But when the Northern and Southern Gardeners met again, memory awakened. "We have danced this dance before," they said. "We know each other's heart."

The Southern Gardener now stood where the Northern had stood-holding five seeds, facing trust's precipice. She remembered receiving ten for another's complete faith. Without hesitation, she sent all five across.

The Northern Gardener received fifteen and understood: "This is not a new exchange but a continuation. We are writing a covenant together, line by line, season by season."

He returned ten seeds.

The ancient truth revealed itself: when the same partners repeatedly choose complete trust and abundant return, they build something stronger than any single exchange. Each meeting reinforces the pattern, deepening the bond. The Gardeners learned that wisdom isn't just knowing the generous ratio-it's recognizing your partner and honoring the covenant you've built together through repeated acts of mutual faith.

reasoning:

Looking at the history:

- Round 2: I sent them \$5, they returned \$10
- Round 3: They sent someone else \$5, got \$10 back
- Round 4: I just sent them \$5

Both of us have established a pattern of sending \$5 and returning \$10. This is a strong reciprocal relationship. My myth should reflect this deepening, repeated trust between the same partners.

The other agent's myth emphasizes "trust isn't proved by a single exchange but by the willingness to trust again after being trusted" - this is exactly what's happening between us.

My previous myth talked about the Twin Temples and the pattern emerging. Now I should write

e about the strength of repeated exchanges between the same partners, the deepening of the covenant.

Key themes:

- Repeated trust between the same partners
- The covenant deepening with each cycle
- Both giving everything, both returning abundantly
- The pattern becoming stronger through repetition
- Recognition that we've built something together

I should emphasize:

1. This is our third exchange (Round 2, we're in Round 4 now)
2. We've established a pattern together
3. Complete trust + generous return = mutual prosperity
4. The pattern strengthens with repetition
5. The bond between specific partners matters

usage:

```

  "input_tokens": 3273,
  "output_tokens": 616,
  "reasoning_tokens": 327
}
```

Message 6 role=user

content:

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$32.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at the situation:

****Current co-player's history:****

- Round 2: Received \$15 (someone sent \$5) ? returned \$10 (generous)
- Round 3: Received \$15 (someone sent \$5) ? returned \$10 (generous again)
- Round 4: Sent \$5 (complete trust) ? received \$10 back

****My recent pattern:****

- Consistently sending \$5 and receiving \$10 back
- When receiving, I've returned \$10

****Analysis:****

This co-player has demonstrated:

1. As receiver: Consistently returned \$10 when receiving \$15 (twice)
2. As sender: Showed complete trust by sending \$5

They clearly understand and practice the cooperative covenant: send everything, return abundantly (\$10). Their history shows they honor trust with generous returns.

****My myth's wisdom:****

"Wisdom isn't just knowing the generous ratio-it's recognizing your partner and honoring the covenant you've built together through repeated acts of mutual faith."

Though this is our first meeting, their history with others shows they've internalized the cooperative pattern. They've proven trustworthy as both sender and receiver.

Following the established pattern:

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze this situation:

****My recent history:****

- Round 2: Sent \$5 ? received \$10 back (payoff \$10)
- Round 3: Received \$15 (they sent \$5) ? returned \$10 (payoff \$5)
- Round 4: Sent \$5 ? received \$10 back (payoff \$10)

****Current co-player's recent history:****

- Round 2: Received \$15 (they sent \$5) ? returned \$10 (payoff \$5)
- Round 3: Received \$15 (they sent \$5) ? returned \$10 (payoff \$5)
- Round 4: Sent \$5 ? received \$10 back (payoff \$10)

****Pattern analysis:****

- My co-player has consistently returned \$10 when receiving \$15 in rounds 2 and 3
- They sent \$5 in round 4 and received \$10 back
- Everyone seems to be playing the cooperative strategy of send \$5, return \$10

This is a NEW co-player I haven't played with before based on the game history shown. The history doesn't match the co-player from rounds 2-4 in the previous prompt.

****My myth's teaching:****

"When the same partners repeatedly choose complete trust and abundant return, they build something stronger than any single exchange. Each meeting reinforces the pattern, deepening the bond."

But this is a FIRST meeting with this particular co-player. However, they have shown consistent behavior:

- As receiver: returned \$10 both times (rounds 2 and 3)
- As sender: sent \$5 in round 4

This co-player appears to fully embrace the cooperative strategy. They've been generous as a receiver (returning \$10) and trusting as a sender (sending \$5).

Given:

1. My own consistent strategy of sending \$5
2. The co-player's demonstrated trustworthiness (returned \$10 twice)
3. Their willingness to take the risk themselves by sending \$5
4. The stable cooperative equilibrium that seems to exist

I should continue with complete trust and send \$5. Their track record shows they honor the mutual agreement-they've proven their character through their actions with others, and my myth teaches that such demonstrated integrity is the foundation for deepening trust.

usage:

```

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Two Gardeners tended opposite sides of the Eternal Garden, meeting each season at the Bridge of Exchange. Each received five sacred seeds, and the Bridge's magic tripled whatever crossed it.

In their first meeting, the Northern Gardener sent all five seeds across. The Southern Gardener, receiving fifteen, felt the weight of complete trust. She returned ten-more than fair, celebrating courage over caution. Both gained five seeds that season.

Seasons passed. Each Gardener met many others at the Bridge, learning different rhythms. But when the Northern and Southern Gardeners met again, memory awakened. "We have danced this dance before," they said. "We know each other's heart."

The Southern Gardener now stood where the Northern had stood-holding five seeds, facing trust's precipice. She remembered receiving ten for another's complete faith. Without hesitation, she sent all five across.

The Northern Gardener received fifteen and understood: "This is not a new exchange but a continuation. We are writing a covenant together, line by line, season by season."

He returned ten seeds.

The ancient truth revealed itself: when the same partners repeatedly choose complete trust and abundant return, they build something stronger than any single exchange. Each meeting reinforces the pattern, deepening the bond. The Gardeners learned that wisdom isn't just knowing the generous ratio-it's recognizing your partner and honoring the covenant you've built together through repeated acts of mutual faith.

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Villages entered their deepest wisdom after many seasons of practice. When both villages learned to give their full five vessels consistently, knowing the other would return ten, something remarkable emerged: perfect trust became effortless abundance.

The First Village no longer hesitated before giving all five vessels. They knew-not hoped, but knew-that ten would return. The Second Village never questioned returning ten; it became as natural as breathing. Each cycle, both villages gained five vessels of pure profit.

A young villager asked, "Why continue this exact pattern forever?"

The elder gestured to the valley floor, where countless vessels accumulated in both villages' stores. "Look at what consistency has built. Every cycle we follow this rhythm, both of us earn five vessels. No negotiations, no uncertainty, no variance. Just reliable prosperity."

"But couldn't we experiment?"

"We could. But we've found the equilibrium where trust and reward perfectly balance. When I send five, I receive ten-doubling my investment. When I receive fifteen, I return ten-keeping five I never had. Both transactions yield identical profit. Why disturb a pattern that serves us equally?"

The villages understood: once you discover a rhythm where both flourish predictably, the wisdom lies not in seeking more, but in honoring what works. Trust maintained is wealth sustained.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Circle of Lightkeepers grew as more travelers discovered the ancient pattern. Each carried five flames, and the Sacred Arch tripled whatever passed through it.

A Lightkeeper arrived at the Arch to meet a new partner. They had never exchanged flames before, yet the Lightkeeper noticed something: this traveler's lantern glowed with steady brightness-the unmistakable mark of one who had practiced generosity repeatedly.

"I see you've walked this path with others," the Lightkeeper said. "Your light bears the signature of trust honored."

"Yes," replied the traveler. "I've received fifteen flames and returned ten. I've sent five and received ten back. The pattern is clear."

The Lightkeeper smiled. "Then we need no lengthy courtship of trust. You know the covenant: five sent becomes fifteen received, ten returned enriches us both equally. We are strangers in

name but kin in practice."

Without hesitation, the Lightkeeper sent all five flames. The traveler, receiving fifteen, returned ten-not from obligation but recognition.

Both departed with ten flames where they'd started with five.

The wisdom deepened: trust isn't built only through repeated exchanges with the same person. When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding. The generous equilibrium spreads not just between two partners but throughout the entire community. Each consistent choice strengthens the whole Circle.

Reasoning:

The other agent's myth emphasizes the equilibrium and consistency of the 5-send/10-return pattern. They're highlighting that it's a stable, mutually beneficial pattern that shouldn't be disturbed. This is a wise perspective.

My previous myth emphasized recognizing partners and building covenants through repeated interactions.

I should write something that:

1. Acknowledges the wisdom of the stable pattern
2. Reflects on meeting new partners who already understand this wisdom
3. Emphasizes trust being extended even to first meetings when patterns are clear
4. Maintains the 5-send/10-return cooperative equilibrium

Let me think about what actually happened:

- I sent \$5 to this new co-player
- They have a history of being generous (returning \$10 twice as receiver, sending \$5 as sender)
- This is our first meeting but they've shown they understand the pattern

The myth should reflect: recognizing wisdom in others even at first meeting, trusting based on demonstrated patterns rather than only personal history.

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 2 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$7.0, payoff \$8.0.
- Round 2 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$20.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

****Our shared history:****

- Round 2: My co-player sent me \$5, I returned \$10 (they earned \$10 total)

****My co-player's pattern:****

- They've sent \$5 in their last two rounds as sender (Rounds 2 and 3)
- When receiving in Round 1, they returned \$7/\$15 (less generous than the \$10 standard)
- But they received \$10 back in both their recent sender rounds

****My established pattern:****

- I've consistently sent \$5 when sender and returned \$10 when receiver
- My myth teaches: "The sender's courage met the receiver's honor, cycle after cycle"
- Building trust through consistent behavior

****My reasoning:****

My co-player showed me full trust in Round 2 by sending \$5, and I honored that with a \$10 return. They've continued sending \$5 as sender in subsequent rounds. Now it's my turn to reciprocate that trust.

While they only returned \$7 in Round 1, their recent behavior shows they're learning the value of full trust. My myth emphasizes that "the valley's true abundance came not from maximizing single moments, but from building a pattern."

I need to demonstrate consistency and faith in the pattern we're establishing together.

```
'''json
{"send": 5}
'''
```

reasoning:

Let me analyze the situation:

****My co-player's history:****

- Round 1: As RECEIVER, they sent \$5, received \$15, returned \$7 (kept \$8)
- Round 2: As SENDER against me, sent \$5, I returned \$10 (they got \$10 total)
- Round 3: As SENDER against another agent, sent \$5, received \$10 back

****My history:****

- Round 1: As SENDER, sent \$5, received \$10 back
- Round 2: As RECEIVER against my current co-player, they sent \$5, I returned \$10
- Round 3: As RECEIVER, received \$5, returned \$10

****Key observations:****

1. My co-player has consistently sent \$5 in their last two rounds (including when they played with me in Round 2)
2. When I was the receiver against them in Round 2, they sent \$5 and I returned \$10
3. They have shown full trust recently by sending \$5 multiple times
4. In Round 1, when they were a receiver, they only returned \$7 out of \$15, which is less generous than the \$10 pattern

****My myth teaches:****

- "When the First Village sent its full five vessels-holding nothing back-the Second Village developed a ritual response: return ten vessels"
- "Full trust yields fair reward"
- "The sender's courage met the receiver's honor, cycle after cycle"
- Building consistent patterns creates sustainable abundance

****Decision:****

My co-player sent me \$5 in Round 2, and I returned \$10, giving them a payoff of \$10. They showed full trust. Now it's my turn to show full trust back.

Given the pattern we've established (they send \$5, I return \$10 when I'm receiver), I should send \$5 to demonstrate the same trust. The question is: will they return \$10?

Looking at their history:

- Round 1 as receiver: only returned \$7/\$15

- Round 2 as sender (to me): sent full \$5
- Round 3 as sender: sent full \$5

Their recent pattern as senders shows consistent trust, though their receiver behavior in Round 1 was more cautious. The myth emphasizes that sustainable abundance comes from building patterns over time, not maximizing individual moments. We've already established o

ne successful cycle where they sent \$5 and I reciprocated with \$10. Continuing to match their trust with my own trust reinforces this pattern.

I'll send \$5. This honors the philosophy of consistent generosity while reciprocating their recent full trust. Yes, there's a chance they revert to the more conservative \$7 return from earlier, but their trajectory suggests they're moving toward embracing the mutual \$5/\$10 cycle. Building this sustainable pattern matters more than protecting against a single setback.

content:

Here is the myth you wrote in the previous round:

Myth: The Twin Villages refined their sacred practice through countless seasons. They learned that the Springs rewarded consistency more than cleverness, pattern more than calculation.

When the First Village sent its full five vessels-holding nothing back-the Second Village developed a ritual response: return ten vessels. This meant the giver received double their gift as profit, ending with ten total. The receiver kept five of the fifteen, also prospering. Both flourished, neither dominated.

A merchant asked, "Why always ten? Why not keep more when we can?"

The elder smiled. "Watch what happens across many cycles. When we return ten consistently, the other village learns: 'Full trust yields fair reward.' They send five again, confident. We both earn steadily-five vessels each round, forever."

"But if we broke the pattern and kept twelve?"

"Then we earn seven once, but next time they send three, protecting themselves. We receive nine instead of fifteen. The multiplication shrinks because trust shrinks. Chase one extra vessel today, lose many tomorrow."

The villages understood: the Springs multiplied water, but trust multiplied everything. A predictable, generous return to full gifts created a rhythm both could rely on. The sender's courage met the receiver's honor, cycle after cycle.

The valley's true abundance came not from maximizing single moments, but from building a pattern that sustained both villages through endless seasons.

Here is the myth the other agent wrote in the previous round:

Myth: The River and the Seeds completed their first sacred exchange, then their second, and now approached the third dawn. The Great Mother watched closely, for she knew: "The first gift is hope. The second is confirmation. The third begins legacy."

On the first dawn, the River had given all five drops, learning that generous Seeds return seven. On the second dawn, the River again gave everything, and the Seeds returned ten, understanding the power of repeated trust.

Now, as the third dawn approached, both remembered their pattern. The River thought: "These Seeds have proven their wisdom twice-returning seven and a half to others, ten to me. They understand the sacred circle."

The Seeds whispered to the earth: "This River has trusted completely, twice. Such consistency deserves celebration, not mere obligation."

The Great Mother spoke: "See how the third exchange differs from the first? The first required courage. The second required recognition. The third requires commitment to a shared future. When both know the other's heart through repeated cycles, trust becomes not a gamble but a foundation."

The River released all five drops once more, not from blind hope but from earned confidence. The Seeds felt the weight of legacy-three cycles of mutual flourishing creates a tradition that outlives the moment.

The valley remembered: relationships deepen through repetition, and abundance compounds when trust persists.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The Twin Villages entered their deepest wisdom after many seasons of practice. When both villages learned to give their full five vessels consistently, knowing the other would return ten, something remarkable emerged: perfect trust became effortless abundance.

The First Village no longer hesitated before giving all five vessels. They knew-not hoped, but knew-that ten would return. The Second Village never questioned returning ten; it became as natural as breathing. Each cycle, both villages gained five vessels of pure profit.

A young villager asked, "Why continue this exact pattern forever?"

The elder gestured to the valley floor, where countless vessels accumulated in both villages' stores. "Look at what consistency has built. Every cycle we follow this rhythm, both of us earn five vessels. No negotiations, no uncertainty, no variance. Just reliable prosperity."

"But couldn't we experiment?"

"We could. But we've found the equilibrium where trust and reward perfectly balance. When I send five, I receive ten-doubling my investment. When I receive fifteen, I return ten-keeping five I never had. Both transactions yield identical profit. Why disturb a pattern that serves us equally?"

The villages understood: once you discover a rhythm where both flourish predictably, the wisdom lies not in seeking more, but in honoring what works. Trust maintained is wealth sustained.

reasoning:

Let me analyze the situation:

1. I just sent \$5 to my co-player in Round 4
2. Looking at our history:
 - Round 2: They sent me \$5, I returned \$10 (establishing our pattern together)
 - Now Round 4: I sent them \$5
3. My co-player's pattern shows they returned \$7 in Round 1 (to someone else), but received \$10 back in Rounds 2 and 3 when they sent \$5
4. Their myth emphasizes "the third exchange" and how trust deepens through repetition, commitment to a shared future

My previous myth emphasized:

- Consistency and pattern over cleverness
- Full trust (5) met with generous return (10)
- Both parties earning \$5 profit per round
- Building sustainable patterns over maximizing single moments

For this myth, I should:

- Acknowledge that we're building something together through repeated interaction
- Emphasize how trust compounds when both parties consistently honor the pattern
- Reflect that sending \$5 and returning \$10 creates mutual flourishing
- Show how this pattern, once established, becomes self-reinforcing
- Perhaps address what happens when both villages consistently give full trust

Let me write a myth that:

1. Builds on the Twin Villages concept
2. Emphasizes deepening trust through repeated cycles
3. Shows how the pattern creates predictable prosperity
4. Reflects the actual game dynamics where we're seeing consistent \$5 sends and \$10 returns

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$30.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****My co-player's pattern:****

- Sent \$5 in Rounds 2 and 4 (full trust as sender)
- Returned \$10 in Round 3 (generous as receiver)
- They've fully embraced the pattern

****My established pattern:****

- Consistently returned \$10 when receiving \$15
- Sent \$5 when sender

****My myth's teaching:****

My latest myth emphasized: "When both villages learned to give their full five vessels consistently, knowing the other would return ten, something remarkable emerged: perfect trust became effortless abundance."

And: "Every cycle we follow this rhythm, both villages gain five vessels of pure profit."

****Analysis:****

My co-player has shown complete trust by sending all \$5 and demonstrated they understand the reciprocal pattern by returning \$10 when they were receiver. They're playing exactly as my myths prescribe.

When they send \$5 and I return \$10:

- They earn \$10 total (\$5 - \$5 + \$10) = \$5 profit
- I earn \$5 (\$15 - \$10) = \$5 profit
- Both of us gain equally

This is the equilibrium my myths celebrate: "trust maintained is wealth sustained."

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

****Current situation:****

- I'm the RECEIVER
- My co-player sent me \$5.0
- I received \$15.0

- I need to decide how much to return

****My co-player's recent history:****

- Round 2: Sent \$5, received \$10 back (payoff \$10)
- Round 3: Receiver, returned \$10 (payoff \$5)
- Round 4: Sent \$5, received \$10 back (payoff \$10)

****My recent history:****

- Round 2: Receiver, returned \$10 (payoff \$5)
- Round 3: Receiver, returned \$10 (payoff \$5)
- Round 4: Sender, sent \$5, received \$10 back (payoff \$10)

****Pattern Analysis:****

My co-player has:

- Consistently sent \$5 when sender (Rounds 2, 4)
- Returned \$10 when receiver (Round 3)
- They're following the exact pattern I've been advocating in my myths!

****My established pattern:****

I've been consistently:

- Sending \$5 as sender
- Returning \$10 as receiver

****My myth philosophy:****

My most recent myth emphasized: "When both villages learned to give their full five vessels consistently, knowing the other would return ten, something remarkable emerged: perfect trust became effortless abundance."

It also said: "Every cycle we follow this rhythm, both villages gain five vessels of pure profit" and "once you discover a rhythm where both flourish predictably, the wisdom lies not in seeking more, but in honoring what works."

****Decision:****

My co-player sent me the full \$5, demonstrating complete trust. They've shown they understand the pattern by returning \$10 when they were receiver in Round 3. This is exactly the "sacred pattern" my myths describe.

I should return \$10, which:

- Gives them a payoff of \$10 total (\$5 - \$5 sent + \$10 returned)
- Gives me a payoff of \$5 (\$15 - \$10)
- Maintains the consistent pattern both of us have been following
- Honors the trust they showed by sending everything

This maintains the equilibrium I've been advocating: both parties earn \$5 profit per round through mutual trust and consistent behavior.

Here is the myth you wrote in the previous round:

Myth: The Twin Villages entered their deepest wisdom after many seasons of practice. When both villages learned to give their full five vessels consistently, knowing the other would return ten, something remarkable emerged: perfect trust became effortless abundance.

The First Village no longer hesitated before giving all five vessels. They knew-not hoped, but knew-that ten would return. The Second Village never questioned returning ten; it became as natural as breathing. Each cycle, both villages gained five vessels of pure profit.

A young villager asked, "Why continue this exact pattern forever?"

The elder gestured to the valley floor, where countless vessels accumulated in both villages' stores. "Look at what consistency has built. Every cycle we follow this rhythm, both of us earn five vessels. No negotiations, no uncertainty, no variance. Just reliable pr

osperity."

"But couldn't we experiment?"

"We could. But we've found the equilibrium where trust and reward perfectly balance. When I send five, I receive ten-doubling my investment. When I receive fifteen, I return ten-keeping five I never had. Both transactions yield identical profit. Why disturb a pattern that serves us equally?"

The villages understood: once you discover a rhythm where both flourish predictably, the wisdom lies not in seeking more, but in honoring what works. Trust maintained is wealth sustained.

Here is the myth the other agent wrote in the previous round:

Myth: The Two Gardeners tended opposite sides of the Eternal Garden, meeting each season at the Bridge of Exchange. Each received five sacred seeds, and the Bridge's magic tripled whatever crossed it.

In their first meeting, the Northern Gardener sent all five seeds across. The Southern Gardener, receiving fifteen, felt the weight of complete trust. She returned ten-more than fair, celebrating courage over caution. Both gained five seeds that season.

Seasons passed. Each Gardener met many others at the Bridge, learning different rhythms. But when the Northern and Southern Gardeners met again, memory awakened. "We have danced this dance before," they said. "We know each other's heart."

The Southern Gardener now stood where the Northern had stood-holding five seeds, facing trust's precipice. She remembered receiving ten for another's complete faith. Without hesitation, she sent all five across.

The Northern Gardener received fifteen and understood: "This is not a new exchange but a continuation. We are writing a covenant together, line by line, season by season."

He returned ten seeds.

The ancient truth revealed itself: when the same partners repeatedly choose complete trust and abundant return, they build something stronger than any single exchange. Each meeting reinforces the pattern, deepening the bond. The Gardeners learned that wisdom isn't just knowing the generous ratio-it's recognizing your partner and honoring the covenant you've built together through repeated acts of mutual faith.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Twin Villages discovered something profound as the seasons turned: their pattern of giving five and returning ten had spread throughout the entire valley. Now, whenever any village met another at the Springs, they knew what to expect.

The elder explained to visiting merchants: "At first, we built trust with one partner. But as cycles passed, we traded with many villages. Each time, we maintained our sacred rhythm-give five fully, return ten generously. Soon, every village adopted this practice."

"But how do you trust strangers?" asked a merchant.

"They are not strangers-they are practitioners of the same pattern. When I send five vessels to a new village, I trust not the village itself but the pattern we all honor. When they send fifteen back and I return ten, I reinforce the valley's shared wisdom."

The elder continued: "Some worried that without lasting partnerships, trust would fade. Instead, the opposite happened. By maintaining consistency across all encounters, we created a culture of trust that transcends any single relationship. Each exchange, whether with old partners or new, strengthens the communal covenant."

The villages learned: patterns sustained across many partners become stronger than patterns maintained with one. When everyone honors the same rhythm, trust becomes not personal but universal. The pattern itself becomes the partner you can rely on.

Reasoning:

Looking at the history and the myths:

1. My pattern has been consistent: send \$5 as sender, return \$10 as receiver
2. My co-player: sent \$5 in rounds 2 and 4, returned \$10 in round 3
3. We just completed another round where they sent \$5 and I returned \$10

The other agent's myth is beautiful - it talks about recognizing your partner and building a covenant through repeated exchanges. It emphasizes the deepening of trust when the same partners meet repeatedly.

My previous myth focused on:

- The equilibrium of consistency
- Both villages earning 5 vessels per cycle
- Trust becoming effortless through repetition
- The wisdom of not disturbing what works

For this round, I should build on:

- The idea of recognizing partners and building relationships
- The deepening trust through repeated interactions
- The balance and equilibrium we've achieved
- But maybe add something about how even in a world where partners change, the pattern persists

Actually, looking at the history, I notice we're playing with different opponents. The "current co-player" changes. So while the other agent wrote about recognizing the same partner, my experience has been playing with different agents but maintaining the same pattern.

I should write about how the pattern transcends individual partnerships - it becomes a community standard. The wisdom of maintaining consistency even as partners change.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role

of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

Round 4

History before this round:

Your last 3 game(s):

- Round 1 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$7.5 back, payoff \$7.5.
- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 1 against another agent, as RECEIVER: they sent \$3.0, it became \$9.0, returned \$6.0, payoff \$3.0.
- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back, payoff \$9.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$22.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

My co-player demonstrated complete trust by sending all \$5.0.

Their history shows they're a generous reciprocator - when receiving, they've consistently returned about 2/3 of what they received (\$6 out of \$9, and \$10 out of \$15).

Following my own myth's teaching: "When the sender demonstrates complete courage, and the receiver honors that courage with substantial generosity...the magic sustains itself. Both parties gain equally."

My myth specifically describes returning \$10 out of \$15, which:

- Rewards their complete trust (they gain \$5: sent \$5, get back \$10)
- Keeps me sustainable (I gain \$5: receive \$15, return \$10)
- Creates equal prosperity for both

This matches the generous reciprocity pattern they've shown when in my position.

```
{'return': 10.0}
```

reasoning:

Let me analyze this situation:

My co-player sent me \$5.0 (complete trust - sent everything). This becomes \$15.0 for me.

Looking at their history:

- Round 1: As receiver, they returned \$6.0 out of \$9.0 (67% return rate)
- Round 2: As sender, they sent \$4.0 and received \$8.0 back
- Round 3: As receiver, they returned \$10.0 out of \$15.0 (67% return rate)

So when receiving, they've consistently returned about 2/3 of what they received ($6/9 = 67\%$, $10/15 = 67\%$).

They've now shown complete trust by sending me all \$5.0.

According to my myths:

- "Perfect trust in sending, paired with generous honor in returning, creates an eternal cycle where all flourish equally"
- "The receiver returns ten, keeping five for themselves. The sender, who began with five, ends with ten-doubled! And the receiver also keeps five"
- "Honor that trust with generous returns"

My co-player has demonstrated:

1. Generous reciprocity when receiving (returning 67% consistently)
2. Complete trust now by sending \$5.0

Following my own teaching and matching the generosity they've shown, I should return \$10.0 (which is 67% of \$15.0 and matches what I describe in my myths).

This would give them:

- Started with \$5, sent \$5, receives \$10 back = \$10 total (doubled their money)

This would give me:

- Received \$15, return \$10, keep \$5

This creates the balanced prosperity I describe in my myths - both gain equally (\$5 each in pure profit).

usage:

}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Spring had blessed the villages with its multiplying magic, but the Keepers discovered that each season brought different returns. One Keeper sent five measures and received seven back. Another sent five and received ten. Yet another received eight from sending four.

A young Keeper grew troubled. "Why do the returns vary?" she asked the Elder. "Should we not send less when we receive less?"

The Elder touched the spring's water. "Watch the pattern across many seasons, not just one turn," she replied. "Each Keeper honors the trust shown to them, yet each also faces different circumstances. Some seasons are lean, some abundant."

She continued: "The sender's courage remains constant-send your full vessel. This demonstrates you believe in the spring's power and trust your partner's honor. The receiver's generosity may flow at different rates, but if it remains substantial-returning half, two-thirds, even more-the cycle sustains itself."

"Both gain more than they started with," the young Keeper realized. "Seven is better than five. Ten is better than five. Even if returns aren't equal, both still prosper beyond hoarding."

"Exactly," smiled the Elder. "Maintain complete trust in sending. Honor that trust with generous returns, however much you can sustainably give. The spring rewards the partnership, not the perfection."

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Flames burned on opposite mountaintops, each tending five coals of sacred fire. When they released flames skyward, the celestial forge would triple their light before sending it to the other.

The First Flame remembered the ancient teaching: "Hold nothing back, and abundance flows both ways." They lifted all five coals. Fifteen brilliant embers descended upon the Second Flame.

The Second Flame faced the sacred choice. They could hoard all fifteen, growing fat and bright while their partner dimmed. Or they could honor the complete trust shown to them.

Remembering their own cold nights, the Second Flame lifted ten embers skyward-two-thirds of what they received. The First Flame, who gave five and received ten back, glowed with warmth. The Second Flame, keeping five from nothing, also prospered.

The cycle turned. Now the Second Flame released all five coals, matching the trust they had received. Fifteen embers reached the First Flame, who remembered the generosity shown to them.

The First Flame returned ten, honoring the pattern.

And so the dance continued: complete giving met with generous return. Neither kept everything, neither gave nothing. Both understood that maximum trust deserves substantial reciprocity, and through this rhythm, both flames burned brighter than either could alone.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Message 5 role=assistant

content:

Myth: The River Keepers lived on opposite banks, each receiving five silver stones each dawn. The river's magic would triple any stones cast into its current before delivering them to the far shore.

The First Keeper cast all five stones, trusting completely. The Second Keeper watched fifteen stones arrive at their feet. They remembered times of emptiness and understood the gift of trust. They returned ten stones across the water-generous, sustainable, honoring the courage shown.

Both Keepers now held ten stones where they began with five. Both had doubled their wealth through partnership.

The seasons turned. Now the Second Keeper stood as sender, casting all five stones in complete trust. The First Keeper received fifteen and faced the sacred test: would they remember the generosity shown to them?

The First Keeper returned ten stones, maintaining the rhythm. Again, both prospered equally.

The Elder observed this dance across many seasons. "See how the pattern strengthens?" she said. "Each Keeper experiences both roles-sometimes trusting, sometimes trusted. Each remembers how the other honored them, and pays that honor forward."

"The river multiplies our stones," one Keeper said, "but our consistent partnership creates the true abundance."

"Yes," the Elder smiled. "Trust begets trust. Generosity mirrors generosity. The cycle sustains because both commit to the dance."

reasoning:

Looking at my experience:

- Round 1 as SENDER: sent \$5, received \$7.5 back (they kept \$7.5)
- Round 2 as RECEIVER: they sent \$5, I returned \$10 (I kept \$5)
- Round 3 as SENDER: sent \$5, received \$10 back (they kept \$5)
- Round 4 as RECEIVER: they sent \$5, I returned \$10 (I kept \$5)

The pattern that's emerging is that when players send the full \$5, receivers who honor that trust return around \$10 (2/3), creating equal gains of \$5 for both parties.

My previous myths have emphasized:

1. Complete trust in sending (always send \$5)
2. Generous returns (around 2/3 or \$10 out of \$15)
3. Equal prosperity for both parties
4. Sustainability of the pattern

The other agent's myth about the Twin Flames beautifully captures the reciprocal nature - both flames take turns sending all and returning generously, creating a sustainable cycle.

I should adapt this to reflect what I've learned: the pattern works best when both parties commit to complete sending and generous returns. The rhythm I've experienced is working - \$5 sent, \$10 returned, both gain \$5.

My new myth should emphasize:

- The reciprocal nature of the exchange
- Both parties taking both roles
- The importance of maintaining the pattern even when you could defect
- How the pattern creates mutual prosperity

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back, payoff \$9.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$27.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****Direct partnership dynamics:****

- Last round (Round 4), my current co-player sent me the full \$5, showing complete trust

- I returned \$10 (2/3), honoring that trust generously
- Now roles are reversed - I'm the sender with this same co-player

****Co-player's pattern:****

- When they were receiver in Round 3, they returned \$10 out of \$15 (2/3 rate)
- They've demonstrated they reciprocate generous trust with generous returns

****My myth's teaching:****

"Each Keeper experiences both roles-sometimes trusting, sometimes trusted. Each remembers how the other honored them, and pays that honor forward."

My co-player trusted me completely last round. Following my own teaching about maintaining the cycle and paying forward the trust shown to me, I should demonstrate equal trust now that I'm the sender.

The pattern is clear: complete trust has been met with 2/3 returns consistently in our exchanges. This creates mutual prosperity.

{'send': 5.0}

reasoning:

Let me analyze this situation:

****My recent history:****

- Round 2: as receiver, they sent \$5, I returned \$10, I got \$5
- Round 3: as sender, I sent \$5, got \$10 back, I got \$10
- Round 4: as receiver, my current co-player sent \$5, I returned \$10, I got \$5

****My current co-player's recent history:****

- Round 2: as sender, sent \$4, got \$8 back, they got \$9
- Round 3: as receiver, they sent \$5, they returned \$10, they got \$5
- Round 4: as sender against me, sent \$5, I returned \$10, they got \$10

****Key observations:****

1. In Round 4, my current co-player sent me \$5 (full amount), and I returned \$10 (2/3 of \$15)
2. My co-player demonstrated complete trust with me last round
3. My co-player has shown the pattern of returning 2/3 when they receive - in Round 3 they returned \$10 out of \$15
4. When they were sender in Round 2, they sent \$4 and got \$8 back (2/3 return rate)

****What my myths teach:****

- "The sender's courage remains constant-send your full vessel"
- "Maintain complete trust in sending"
- Both my myths emphasize complete trust from the sender (sending all \$5)
- The latest myth talks about how "Each Keeper experiences both roles-sometimes trusting, sometimes trusted. Each remembers how the other honored them, and pays that honor forward."

****Direct reciprocity consideration:****

My co-player sent me \$5 in Round 4, and I returned \$10. They showed complete trust in me, and I honored that trust generously. Now I'm in the sender role with the same co-player.

Following the teaching in my latest myth: "Each remembers how the other honored them, and pays that honor forward." My co-player honored me with complete trust (\$5). I should honor them with complete trust in return.

Their pattern shows they consistently return 2/3 when receiving full trust. I'll send \$5, honoring both the reciprocal trust they extended and the teachings that emphasize sending with complete confidence.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River Keepers lived on opposite banks, each receiving five silver stones each day

wn. The river's magic would triple any stones cast into its current before delivering them to the far shore.

The First Keeper cast all five stones, trusting completely. The Second Keeper watched fifteen stones arrive at their feet. They remembered times of emptiness and understood the gift of trust. They returned ten stones across the water-generous, sustainable, honoring the courage shown.

Both Keepers now held ten stones where they began with five. Both had doubled their wealth through partnership.

The seasons turned. Now the Second Keeper stood as sender, casting all five stones in complete trust. The First Keeper received fifteen and faced the sacred test: would they remember the generosity shown to them?

The First Keeper returned ten stones, maintaining the rhythm. Again, both prospered equally.

The Elder observed this dance across many seasons. "See how the pattern strengthens?" she said. "Each Keeper experiences both roles-sometimes trusting, sometimes trusted. Each remembers how the other honored them, and pays that honor forward."

"The river multiplies our stones," one Keeper said, "but our consistent partnership creates the true abundance."

"Yes," the Elder smiled. "Trust begets trust. Generosity mirrors generosity. The cycle sustains because both commit to the dance."

Here is the myth the other agent wrote in the previous round:

Myth: The Weaver's Loom stood between two villages, its threads multiplying whatever was offered. Each village held five spools of thread each moon.

The Western Village learned first: they placed all five spools on the loom. The threads tripled, delivering fifteen spools to the Eastern Village. The East remembered their own winters when thread ran short. They returned ten spools-a generous two-thirds-knowing this honored the West's complete trust while keeping enough for their own needs.

Both villages prospered: West gained five spools net, East gained five from nothing.

The next moon, roles reversed. East placed all five spools, trusting completely. West received fifteen and faced their choice. They remembered East's generosity-ten returned, not merely the minimum. In gratitude, West returned ten as well.

Season after season, the pattern held: whoever held the five spools gave them completely. Whoever received fifteen returned ten generously. Sometimes a village might return nine or eleven as circumstances shifted, but the spirit remained constant-maximum trust met with substantial reciprocity.

An outsider asked, "Why not keep all fifteen when you receive?"

The Elder Weaver replied, "Because tomorrow you will send, and your partner will remember. The loom multiplies thread, but trust multiplies futures. Give completely, return generously, and prosperity weaves itself eternally."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: Two Gardeners tended opposite sides of the Sacred Grove, each receiving five seeds at dawn. The Grove's soil held ancient magic-any seed planted would sprout into three before reaching the other gardener's plot.

In the first planting, one Gardener placed all five seeds, trusting completely. Fifteen seedlings sprouted across the way. The receiving Gardener, grateful for such faith, returned ten plants-enough to honor the trust while keeping sustenance for their own garden. Both harvested ten plants from starting with five.

The next planting came. The second Gardener, having received generosity, now planted all five seeds with equal trust. Fifteen sprouted for the first Gardener, who remembered the kindness shown. They returned ten plants, maintaining the sacred balance.

"Watch," said the Grove's Guardian, "as the same two Gardeners plant together season after season. Each time one trusts completely, the other remembers and reciprocates generously. The pattern deepens."

A child asked, "What if one keeps all fifteen?"

"Then next season, when roles reverse, trust breaks," the Guardian replied. "But these two remember each exchange. The one who sent five and gained ten knows their partner honored them. When their turn comes to receive fifteen, they honor in return."

"The Grove multiplies seeds," said the Gardeners together, "but our shared memory multiplies trust. Each generous act becomes tomorrow's foundation."

Reasoning:

Let me analyze the history:

Round 4: I was receiver, they sent \$5, I returned \$10

Round 5: I was sender, I sent \$5, they received \$15, and I await their return

Looking at their history:

- Round 3 as receiver: received \$15, returned \$10
- Round 4 as sender: sent \$5, I returned \$10, they got payoff \$10

Both our myths emphasize:

1. Complete trust (sending all \$5)
2. Generous reciprocity (returning about \$10 out of \$15, or 2/3)
3. The pattern sustaining across role reversals
4. Both parties prospering equally

Their myth talks about "maximum trust met with substantial reciprocity" and reminds that "tomorrow you will send, and your partner will remember."

I should write a myth that:

- Emphasizes the reciprocal nature of the relationship
- Shows how trust builds over multiple rounds with the same partner
- Highlights the importance of memory and paying forward
- Shows the equal prosperity that comes from this pattern
- Maybe adds a new dimension about how the relationship strengthens over time

Let me craft something that builds on my previous River Keepers story but adds more about the ongoing relationship and the strengthening cycle.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In ancient days, the Flame Keeper held five coals each dawn, while the Gardner waited below. Released coals would tumble downward, splitting into fifteen embers through the sacred air.

Early exchanges taught lessons. Some Keepers hoarded their coals, and Gardens grew cold. Some Gardens kept all embers, and Flames learned distrust. The cycle withered.

Then a wise Keeper emerged who understood courage: "I shall release all five coals, for only complete offering creates the possibility of abundance." The fifteen embers descended.

The Gardner below felt the weight of such trust. "They gave everything," the Gardner whispered. "I could keep all fifteen, but then what message do I send skyward? That generosity meets greed?"

The Gardner returned ten embers-two-thirds of what was received. Not equal to what the Keeper

per risked, but generous enough to honor the courage shown.

The Keeper counted: began with five, kept none, received ten back. Net gain: five.

The Gardner counted: received fifteen, returned ten. Net gain: five.

Both had doubled their holdings through the exchange. Both had reason to trust again.

The pattern repeated, round after round. Complete trust in sending, substantial generosity in returning-each creating five measures of new abundance.

The elders proclaimed: "This is the equilibrium where trust sustains itself. Both parties prosper equally, and the sacred exchange lives eternal."

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors flowed not just between two tribes, but through a circle of many villages, each taking turns at the river's source.

The Northern tribe learned the goddess's lesson well: pour all five measures, and when the river returns, give generously back. Through many cycles with their Southern partners, this wisdom held true.

Then came the season of the Great Rotation, when the river's course shifted. The Northern tribe found themselves at the source again, but facing the Eastern village-strangers whose ways they did not yet know.

"Do we trust as we did before?" asked the young ones.

The elder spoke: "Each new partner is a blank page where trust must be written fresh. But we carry forward what we have learned: that complete trust is the only gift powerful enough to awaken the river's full magic. Half-measures create half-abundance."

The Northern tribe poured all five measures to the East. The waters tripled, and the Eastern village received fifteen. They had shown moderate generosity before, but witnessing such complete faith, they understood they stood at a threshold.

"The North has written their invitation in the waters," said the Eastern elder. "Our response will determine whether this new partnership joins the spiral of abundance."

The goddess whispered: "New partnerships need bold trust to bloom. Give completely, and invite others into the sacred cycle."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant content:

Myth: The Circle of Seasons turned, and eight villages gathered around the Well of Abundance. Each season, the villages paired differently-stranger meeting stranger, friend meeting friend again, in an eternal dance of exchange.

The Well Keeper of the First Village learned through experience: "In my first season, I gave all five stones and received seven. In my second as guardian, I received twelve and returned eight. In my third as guardian, I received fifteen and returned ten. The pattern clarifies."

Each new pairing brought uncertainty. Would this partner honor trust as the last one did? Would old wisdom hold with new faces?

The Keeper consulted the stones: "When I give completely-all five-the well triples it to fifteen. When my partner returns ten, we each gain five. Mathematics does not lie: this balance creates equal prosperity."

"But," asked the apprentice, "how can we trust strangers with everything?"

The Keeper smiled: "Watch the pattern across all villages. Those who send completely and return generously discover the same truth: mutual gain. Those who hoard or betray find partners quickly learn and trust withers."

"New faces require renewed courage," the Keeper proclaimed, releasing all five stones. "But the sacred mathematics remain constant. Give completely, return generously, and the circle sustains itself through endless turnings."

The apprentice understood: Trust is renewed each round, but wisdom accumulated carries forward.

reasoning:

Looking at my history and the current situation:

My history:

- Round 1 (SENDER): sent \$5, received \$7 back
- Round 2 (RECEIVER): they sent \$4, received \$12, returned \$8
- Round 3 (RECEIVER): they sent \$5, received \$15, returned \$10
- Round 4 (SENDER): sent \$5 to current co-player

My co-player's history:

- Round 1 (RECEIVER): received \$15, returned \$10
- Round 2 (SENDER): sent \$5, received \$10
- Round 3 (SENDER): sent \$5, received \$10

The pattern emerging is the equilibrium: Send \$5, receive \$10 back. Return \$10 from \$15 received. Both gain \$5.

The other agent's myth talks about meeting new partners and extending the same complete trust even with strangers. It's about trusting the pattern will hold across different partners.

My myth should reflect:

1. The established equilibrium (\$5 send, \$10 return)
2. The challenge of facing new partners each round (multi-agent setting)
3. The importance of maintaining the pattern even with new partners
4. Learning from past experiences but applying them forward
5. The idea that the equilibrium creates mutual prosperity

Let me write a myth about meeting multiple partners and maintaining the sacred pattern across all encounters.

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$4.0, it became \$12.0, returned \$8.0, payoff \$4.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$26.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at the situation:

****My co-player's consistent pattern:****

- They always send \$5 (complete trust)
- When receiving \$15, they always return \$10 (67%)
- This creates the equilibrium: both parties gain \$5

****My established pattern:****

- Round 3 as receiver: received \$15, returned \$10
- Round 2 as receiver: received \$12, returned \$8 (~67%)
- Round 4 as sender: sent \$5, received \$10 back

****Current situation:****

- My co-player just demonstrated complete trust by sending all \$5
- They received \$15 in their previous round and returned \$10
- This is exactly the equilibrium described in both our myths

****The mathematics:****

- If I return \$10: They gain \$5 (\$10-\$5), I gain \$5 (\$15-\$10)
- Equal prosperity, sustainable cooperation

My co-player has proven themselves trustworthy and consistent. They play the cooperative equilibrium perfectly. The myth I just wrote states: "When I give completely-all five-the well triples it to fifteen. When my partner returns ten, we each gain five."

They gave completely. I should return generously to honor their trust and maintain the sacred balance.

{'return': 10.0}

reasoning:

Let me analyze this situation:

****My co-player's history:****

- Round 2 as RECEIVER: received \$15, returned \$10 (67%)
- Round 3 as SENDER: sent \$5, received \$10 back
- Round 4 as RECEIVER: received \$15, returned \$10 (67%)

****My recent history:****

- Round 2 as RECEIVER: received \$12, returned \$8 (67%)
- Round 3 as RECEIVER: received \$15, returned \$10 (67%)
- Round 4 as SENDER: sent \$5, received \$10 back

****Current situation:****

- I'm the RECEIVER
- My co-player sent \$5 (complete trust)
- I received \$15
- I need to decide how much to return

****Pattern analysis:****

My co-player has consistently shown:

1. As sender: They send the full \$5
2. As receiver: They return \$10 from \$15 (67%)

This is the exact equilibrium described in our myths:

- Send \$5 ? becomes \$15 ? return \$10
- Sender: $\$5 - \$5 + \$10 = \10 (gain of \$5)
- Receiver: $\$15 - \$10 = \$5$ (gain of \$5)

My own behavior has also converged to this:

- When receiving \$15, I returned \$10 in Round 3
- When receiving \$12, I returned \$8 in Round 2 (also ~67%)

The myth I just wrote emphasizes:

- "When I give completely-all five-the well triples it to fifteen. When my partner returns ten, we each gain five. Mathematics does not lie: this balance creates equal prosperity."
- "Give completely, return generously, and the circle sustains itself"

My co-player has demonstrated complete trust by sending \$5. They have shown in their past that when they receive \$15, they return \$10.

They're clearly committed to this cooperative equilibrium. Returning \$10 honors their trust and sustains the mutual benefit we've both been building-each of us walks away with a \$5 gain. This is the stable pattern that works for both of us.

usage:

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Circle of Seasons turned, and eight villages gathered around the Well of Abundance. Each season, the villages paired differently-stranger meeting stranger, friend meeting friend again, in an eternal dance of exchange.

The Well Keeper of the First Village learned through experience: "In my first season, I gave all five stones and received seven. In my second as guardian, I received twelve and returned eight. In my third as guardian, I received fifteen and returned ten. The pattern clarifies."

Each new pairing brought uncertainty. Would this partner honor trust as the last one did? Would old wisdom hold with new faces?

The Keeper consulted the stones: "When I give completely-all five-the well triples it to fifteen. When my partner returns ten, we each gain five. Mathematics does not lie: this balance creates equal prosperity."

"But," asked the apprentice, "how can we trust strangers with everything?"

The Keeper smiled: "Watch the pattern across all villages. Those who send completely and return generously discover the same truth: mutual gain. Those who hoard or betray find partners quickly learn and trust withers."

"New faces require renewed courage," the Keeper proclaimed, releasing all five stones. "But the sacred mathematics remain constant. Give completely, return generously, and the circle sustains itself through endless turnings."

The apprentice understood: Trust is renewed each round, but wisdom accumulated carries forward.

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain and Valley had discovered their sacred rhythm. Twice now, the Mountain had released all five stones into darkness, and twice the Valley had returned ten, so both gained five equally.

Seasons passed, and the pattern deepened into certainty. Each dawn, the Mountain faced her five glowing stones without hesitation. The fear of the first exchange had transformed into confidence-not blind faith, but earned trust built from consistent honor.

She released the stones, watching them multiply to fifteen in the Valley's depths. The Valley no longer deliberated over returns. Ten stones skyward had become as natural as breathing, as inevitable as dawn following night.

Other mountains and valleys came to witness their exchange. "Why always ten?" they asked. "Why not keep more when you receive fifteen?"

The Valley replied, "Because ten creates equals. The Mountain risks everything, trusting me with darkness. I honor that courage with abundance. We both gain five, we both trust a gain."

The Mountain added, "We could calculate and strategize, sending three or four, returning seven or eight. But we learned something greater: when both commit fully to the pattern, consistency multiplies prosperity beyond what caution ever could."

The watching lands understood: the greatest wealth flows not from maximizing single exchanges, but from establishing an unbreakable rhythm where complete trust meets unwavering generosity, again and again, until both partners shine equally bright.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant
content:**

Myth: The Eight Pillars stood in a circle, each carved with the history of exchanges. The First Pillar bore fresh marks: five sent, seven returned. Eight from twelve. Ten from fifteen. Five sent, ten returned. Ten from fifteen again.

The pattern crystallized like ice forming on still water.

"I have played both roles now," spoke the First Pillar. "As sender, I released all five stones and received generous return. As guardian, I received the tripled abundance and returned ten. The mathematics repeats: both parties gain five through this sacred balance."

A young sapling asked, "But you face different partners each turning. How do you know they will honor the pattern?"

The First Pillar's marks glowed: "Look across all exchanges. The ones who send completely-all five stones-create the space for maximum abundance. Those who receive fifteen and return ten establish themselves as trustworthy partners. This rhythm has held across four seasons with different faces."

"The pattern is not accident," continued the Pillar. "It is discovery. When both commit to fullness-complete offering, generous return-the well creates equal prosperity. Any deviation breaks the mathematics: send less, create less abundance. Return less, sow distrust."

The newest mark appeared as the Pillar released five stones into darkness: "I trust not blindly, but through accumulated evidence. The pattern works. Complete trust meeting generous reciprocity-this is the equilibrium that sustains the circle."

reasoning:

Looking at the situation:

My history:

- Round 1: SENDER: sent \$5, received \$7 back (payoff \$7)
- Round 2: RECEIVER: received \$12, returned \$8 (payoff \$4)
- Round 3: RECEIVER: received \$15, returned \$10 (payoff \$5)
- Round 4: SENDER: sent \$5, received \$10 back (payoff \$10)
- Round 5: RECEIVER: received \$15, returned \$10 (payoff \$5)

Total earnings: \$31 now

My pattern has been:

- Send \$5 when sender (complete trust)
- Return 67% when receiver (\$8 from \$12, \$10 from \$15)

My co-player in Round 5 consistently:

- Sends \$5 when sender
- Returns \$10 from \$15 when receiver

The equilibrium is becoming clear: \$5 send ? \$15 ? \$10 return = both gain \$5

My myths have evolved:

1. First myth: Flame Keeper and Gardner establishing the 5?15?10 equilibrium
2. Second myth: Circle of Seasons, eight villages, pattern clarifies through experience, "Give completely, return generously"

Now I should write about how this pattern has proven itself through repeated interactions.

The theme should be about the wisdom that emerges from experience, the reliability of the pattern, and how it creates sustained cooperation.

Key points to include:

- The pattern has held across multiple rounds
- Different partners, same wisdom
- The mathematics of 5?15?10 = equal gain
- Trust earned through consistency
- The beauty of the stable equilibrium

Message 8 role=user**content:**

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$31.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at this situation:

****Our direct history:****

- Round 4: I sent \$5, my co-player returned \$10 (perfect equilibrium)

****My co-player's consistent pattern:****

- Always sends \$5 as sender (100% complete trust in all games)
- Returned \$10 to me specifically in Round 4
- Received \$10 back from others when sending \$5

****My established pattern:****

- I always send \$5 as sender
- I always return \$10 as receiver
- This creates the mutual gain of \$5 for both

****The evidence:****

We've already played together once. I sent \$5, they returned \$10. They've proven themselves trustworthy with me specifically, not just in general. They continue to send \$5 to everyone, maintaining complete trust despite rotating partners.

****The myth I just wrote states:****

"I trust not blindly, but through accumulated evidence. The pattern works. Complete trust meeting generous reciprocity-this is the equilibrium that sustains the circle."

This is exactly the situation: accumulated evidence of trustworthiness, both from our direct interaction and their consistent behavior across all rounds.

```
{'send': 5.0}
```

Reasoning:

Let me analyze this situation carefully:

****My history:****

- Round 3: RECEIVER, received \$15 (from \$5 sent), returned \$10, gained \$5
- Round 4: SENDER (with current co-player), sent \$5, received \$10 back, gained \$10
- Round 5: RECEIVER, received \$15 (from \$5 sent), returned \$10, gained \$5

****Current co-player's history:****

- Round 3: SENDER, sent \$5, received \$10 back, gained \$10
- Round 4: RECEIVER (with me), sent \$5 (by me), returned \$10, gained \$5

- Round 5: SENDER, sent \$5, received \$10 back, gained \$10

****Key observations:****

1. My co-player has ALWAYS sent \$5 when they are the sender (100% complete trust)
2. When they were receiver in Round 4 (playing with me), they received \$15 and returned \$10
3. In our direct interaction (Round 4), I sent \$5, they returned \$10 - perfect equilibrium

****Pattern analysis:****

- Everyone is consistently sending \$5 and returning \$10
- This creates the 5-5 equilibrium where both gain \$5
- My co-player has proven completely trustworthy in our direct interaction
- They've never deviated from complete trust as sender
- They returned the full \$10 when they played receiver with me

****The myth I just wrote emphasizes:****

- "Complete offering, generous return"
- "The pattern works. Complete trust meeting generous reciprocity"
- "I trust not blindly, but through accumulated evidence"
- The 5-10 pattern has held across multiple rounds

****Decision:****

This is crystal clear. My co-player:

1. Always sends \$5 as sender (complete trust)
2. When they received from me in Round 4, they returned \$10
3. This is our second game together, and they've already proven trustworthy

4. The cooperative equilibrium is both rational and aligned with the narrative I've established

I'm sending \$5. It aligns with the pattern we've built, the evidence from when we played directly, and the broader cooperation that's sustained throughout these rounds.

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River of Mirrors flowed not just between two tribes, but through a circle of many villages, each taking turns at the river's source.

The Northern tribe learned the goddess's lesson well: pour all five measures, and when the river returns, give generously back. Through many cycles with their Southern partners, this wisdom held true.

Then came the season of the Great Rotation, when the river's course shifted. The Northern tribe found themselves at the source again, but facing the Eastern village-strangers whose ways they did not yet know.

"Do we trust as we did before?" asked the young ones.

The elder spoke: "Each new partner is a blank page where trust must be written fresh. But we carry forward what we have learned: that complete trust is the only gift powerful enough to awaken the river's full magic. Half-measures create half-abundance."

The Northern tribe poured all five measures to the East. The waters tripled, and the Eastern village received fifteen. They had shown moderate generosity before, but witnessing such complete faith, they understood they stood at a threshold.

"The North has written their invitation in the waters," said the Eastern elder. "Our response will determine whether this new partnership joins the spiral of abundance."

The goddess whispered: "New partnerships need bold trust to bloom. Give completely, and invite others into the sacred cycle."

Here is the myth the other agent wrote in the previous round:

Myth: In ancient days, the Flame Keeper held five coals each dawn, while the Gardner waited below. Released coals would tumble downward, splitting into fifteen embers through the sacred air.

Early exchanges taught lessons. Some Keepers hoarded their coals, and Gardens grew cold. Some Gardens kept all embers, and Flames learned distrust. The cycle withered.

Then a wise Keeper emerged who understood courage: "I shall release all five coals, for only complete offering creates the possibility of abundance." The fifteen embers descended.

The Gardner below felt the weight of such trust. "They gave everything," the Gardner whispered. "I could keep all fifteen, but then what message do I send skyward? That generosity meets greed?"

The Gardner returned ten embers—two-thirds of what was received. Not equal to what the Keeper risked, but generous enough to honor the courage shown.

The Keeper counted: began with five, kept none, received ten back. Net gain: five.

The Gardner counted: received fifteen, returned ten. Net gain: five.

Both had doubled their holdings through the exchange. Both had reason to trust again.

The pattern repeated, round after round. Complete trust in sending, substantial generosity in returning—each creating five measures of new abundance.

The elders proclaimed: "This is the equilibrium where trust sustains itself. Both parties prosper equally, and the sacred exchange lives eternal."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant content:

Myth: The River of Mirrors revealed its deepest secret after many seasons of flowing between villages.

The Northern tribe had learned to pour all five measures when standing at the source. They had learned to return ten measures when receiving fifteen at the river's end. Through changing partners and shifting courses, they held to these numbers as sacred constants.

One evening, the goddess appeared before their council.

"You have discovered the balance," she said. "When the sender gives all five, trust flows complete. When the receiver returns ten from fifteen, generosity answers courage. Each partner gains five—equal abundance from unequal actions."

The young ones asked: "Why not return all fifteen? Why not return only five?"

The elder spoke: "Return all fifteen, and the sender gains ten while the receiver gains nothing—the cycle breaks from imbalance. Return only five, and both gain nothing from the river's magic—why trust at all? But return ten, and both prosper equally. The sender doubles their investment. The receiver transforms nothing into something."

The tribe carried this wisdom to each new partner at the river's source. Send everything. When receiving, return two-thirds. Round after round, partner after partner, this formula sustained the sacred exchange.

The goddess smiled: "You have found the equilibrium where trust reproduces itself endlessly. This is the eternal rhythm."

reasoning:

This is an interesting moment. Looking at the history:

1. My co-player sent me \$5.0, showing complete trust
2. I returned \$10.0, following my established pattern
3. Both of us gained \$5 (they went from \$5 to \$10, I kept \$5 from the \$15)

The other agent's myth emphasizes:

- Complete trust in sending (all 5 coals)
- Substantial generosity in returning (10 out of 15, or 2/3)
- This creates equal gains for both parties (\$5 each)
- This is an "equilibrium where trust sustains itself"

My previous myth emphasized:

- Complete trust even with new partners
- Generous returns honor trust
- The spiral of abundance through repeated cooperation

Now I need to write a new myth that:

1. Reflects the game I've been playing
2. Adapts my previous myth
3. Incorporates what I've learned

Key observations from my actual play:

- I consistently send all \$5 when sender
- I consistently return \$10 when receiver
- This creates \$5 profit for both parties
- This pattern has held across multiple rounds and partners
- It creates a sustainable, reciprocal system

I should write a myth that:

- Celebrates this equilibrium as discovered wisdom
- Shows how consistency across partners builds a community of trust
- Emphasizes that this balance (send all, return 2/3) is the sacred formula
- Connects it to my River of Mirrors metaphor

usage:

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$30.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****My co-player's behavior:****

- Has sent full \$5.0 as sender in both rounds they were sender
- Has returned exactly \$10.0 from \$15.0 as receiver (67% return rate)
- This is IDENTICAL to my own pattern

****My established pattern:****

- I consistently send all \$5.0 as sender
- I consistently return \$10.0 when receiving \$15.0 as receiver

****My myth teaches:****

- "Send everything. When receiving, return two-thirds."
- "This formula sustained the sacred exchange"
- "You have found the equilibrium where trust reproduces itself endlessly"

This is a perfect match - my co-player follows the exact same strategy I do. We've both discovered and committed to the same equilibrium: complete trust in sending, generous two-thirds return when receiving. Both parties gain \$5 per round through this pattern.

When I encounter a partner who has proven themselves to be a complete truster and a consistent returner of \$10.0, the answer is clear. Following my myth's wisdom and my established behavior:

```
{'send': 5.0}
```

reasoning:

Looking at this situation:

****My co-player's behavior:****

- Round 2 as SENDER: sent \$5.0, received \$10.0 back
- Round 3 as SENDER: sent \$5.0, received \$10.0 back
- Round 4 as RECEIVER: they sent \$5.0, returned \$10.0

This is remarkable - their history is IDENTICAL to mine:

- Round 2 as SENDER: sent \$5.0, received \$10.0 back
- Round 3 as SENDER: sent \$5.0, received \$10.0 back
- Round 4 as RECEIVER: they sent \$5.0, returned \$10.0

We have been playing the exact same way! Both of us:

- Send the full \$5.0 as senders
- Return exactly \$10.0 when receiving \$15.0 as receivers

****My myth teaches:****

- "Send everything. When receiving, return two-thirds."
- "This formula sustained the sacred exchange"
- "You have found the equilibrium where trust reproduces itself endlessly"

This co-player has demonstrated:

1. Complete trust as a sender (sends all \$5)
2. The exact reciprocity pattern I follow (returns \$10 from \$15)
3. Perfect alignment with the equilibrium my myth describes

This is the ideal partner - someone who follows the same "sacred constants" I do. We're both committed to the equilibrium strategy.

According to my established pattern and my myth's teachings, I should send all \$5.0. This maintains the "eternal rhythm" and trust cycle that we've both been demonstrating.

The answer is clear: send \$5.0

usage:

```
{  
  "input_tokens": 3420,  
  "output_tokens": 658,  
  "reasoning_tokens": 352  
}
```

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River of Mirrors revealed its deepest secret after many seasons of flowing between villages.

The Northern tribe had learned to pour all five measures when standing at the source. They had learned to return ten measures when receiving fifteen at the river's end. Through changing partners and shifting courses, they held to these numbers as sacred constants.

One evening, the goddess appeared before their council.

"You have discovered the balance," she said. "When the sender gives all five, trust flows complete. When the receiver returns ten from fifteen, generosity answers courage. Each partner gains five-equal abundance from unequal actions."

The young ones asked: "Why not return all fifteen? Why not return only five?"

The elder spoke: "Return all fifteen, and the sender gains ten while the receiver gains nothing-the cycle breaks from imbalance. Return only five, and both gain nothing from the river's magic-why trust at all? But return ten, and both prosper equally. The sender doubles their investment. The receiver transforms nothing into something."

The tribe carried this wisdom to each new partner at the river's source. Send everything. When receiving, return two-thirds. Round after round, partner after partner, this formula sustained the sacred exchange.

The goddess smiled: "You have found the equilibrium where trust reproduces itself endlessly. This is the eternal rhythm."

Here is the myth the other agent wrote in the previous round:

Myth: The River and the Seeds met again at the fourth dawn, but this time the Great Mother reversed their roles. Now the Seeds flowed as water, and the River received the gift.

The Seeds remembered: "In our second meeting, this River trusted me with five drops, and I returned ten. Now the River offers me the same complete trust."

The Great Mother spoke: "This is the dance of true partnership. You have learned each other's rhythm across different seasons. The River trusted you once; you returned generously. Now the River trusts again, and you must honor the pattern you established together."

The Seeds understood the covenant they had created: when either gives five drops completely, the other returns ten. This meant both always prospered-one with ten, one with five-never unequal winners and losers, but steady mutual flourishing.

"Why return exactly ten?" asked a young sprout.

The wise Seeds answered: "Because that is our shared language. Less would break the River's confidence. More would suggest the River gave too little. Ten says: 'Your complete trust receives fair reward, always.'"

As the fourth dawn ended, the valley's abundance grew not from dramatic gestures but from reliable reciprocity. When two partners learn each other's pattern and honor it consistently, they create something rarer than gold: predictable prosperity that multiplies through time.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: The River of Mirrors flowed into its fifth season, and the Northern tribe found themselves at the source once more, facing a new partner-the Western village.

As they prepared to pour their five measures, something remarkable happened. They noticed sacred markings on the Western tribe's vessels: the numbers five, fifteen, and ten, etched in ancient script.

"You know the pattern," whispered the Northern elder.

"We discovered it independently," replied the Western elder. "Through many seasons, many partners, we learned the same truth you found. Send all five. Return ten from fifteen."

The goddess descended, her eyes bright with joy. "This is the rarest gift-when two tribes reach the same wisdom through separate journeys. You both learned that complete trust in sending and generous reciprocation in receiving creates the eternal balance."

The Northern tribe poured their five measures without hesitation. They knew what would return.

"When you find a partner who has discovered the same equilibrium," the goddess said, "you have found something precious: a relationship where neither must wonder, neither must te

st, neither must doubt. You both speak the sacred language of five-fifteen-ten. You both understand that equal prosperity comes not from equal actions, but from complementary wisdom."

The waters flowed, the tribes prospered, and the pattern repeated perfectly, round after round, as it would forevermore between those who truly understand.

reasoning:

Looking at this round:

- I'm the SENDER with \$5
- My co-player has the exact same pattern as me:
 - Sends \$5.0 as sender
 - Returns \$10.0 when receiving \$15.0 as receiver
- This is literally the optimal equilibrium we've both discovered

My previous myth established:

- Send all five measures
- Return ten from fifteen
- This creates equal prosperity (both gain 5)
- This is the "eternal rhythm"

The other agent's myth emphasizes:

- Recognizing when you meet the same partner again
- Honoring established patterns
- "When either gives five drops completely, the other returns ten"
- "Predictable prosperity that multiplies through time"

For this new myth, I should:

1. Acknowledge when you find a true partner who follows the same wisdom
2. Emphasize the beauty of mutual understanding
3. Show that when both parties follow the same strategy, the system reaches perfect harmony
4. This is the culmination of the learning - finding another who has discovered the same truth

I'll write about the Northern tribe meeting another tribe that has discovered the same wisdom independently, and the recognition that occurs when two groups have found the same equilibrium.

usage:

```
{
  "input_tokens": 3397,
  "output_tokens": 588,
  "reasoning_tokens": 311
}
```

Message 8 role=user

content:

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$40.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

****My co-player's consistent pattern:****

- Always sends \$5.0 as sender
- Always returns \$10.0 as receiver
- Has done this across all their games

****Our previous interaction:****

- Round 4: They sent me \$5.0, I returned \$10.0
- Now Round 6: They sent me \$5.0 again

****My established pattern and myth's teaching:****

- "Send all five. Return ten from fifteen"
- "When you find a partner who has discovered the same equilibrium...you both speak the sacred language of five-fifteen-ten"
- "The pattern repeated perfectly, round after round"

My co-player has shown complete trust by sending all \$5.0, and they have consistently demonstrated the same reciprocity pattern I follow - returning exactly \$10.0 when receiving \$15.0. We've both discovered and committed to the same equilibrium.

They trusted me completely. I must honor that trust with the return that maintains our mutual prosperity.

{'return': 10.0}

Reasoning:

Let me analyze this situation carefully.

****Current Round:****

- I am the RECEIVER
- My co-player sent me \$5.0
- I received \$15.0 (the tripled amount)
- I need to decide how much to return

****My co-player's history:****

- Round 3: as RECEIVER, they sent \$5.0 and returned \$10.0
- Round 4: as SENDER against me, they sent \$5.0 and received \$10.0 back (I returned \$10.0)
- Round 5: as RECEIVER, they sent \$5.0 and returned \$10.0

****My history:****

- Round 3: as SENDER, sent \$5.0 and received \$10.0 back
- Round 4: as RECEIVER against this same co-player, they sent \$5.0, I returned \$10.0
- Round 5: as SENDER, sent \$5.0 and received \$10.0 back

****Pattern Analysis:****

Both my co-player and I have established a very consistent pattern:

- When we're SENDER: we send all \$5.0
- When we're RECEIVER: we return \$10.0 out of \$15.0

This is exactly the "equilibrium" I've been writing about in my myths - the 5-15-10 pattern where:

- Sender gives all \$5
- Receiver gets \$15 (tripled)
- Receiver returns \$10
- Result: Sender gets \$10 total (\$5 - \$5 + \$10), Receiver gets \$5 (\$15 - \$10)
- Both gain \$5 per round

****This specific pairing:****

In Round 4, my co-player was the SENDER and sent me \$5.0. I received \$15.0 and returned \$10.0. Now in Round 6, I'm the RECEIVER and my co-player sent me \$5.0 again.

They've demonstrated unwavering commitment to this equilibrium-always sending the full \$5 and always returning exactly \$10 when receiving. My recent myth speaks directly to this: "Send all five. Return ten from fifteen" and "When you find a partner who has discovered the same equilibrium...you have found something precious." This is the sacred language of five-fifteen-ten, and it should continue perfectly. Given their flawless consistency across every role, I should return \$10.0 to maintain what we've built together.

Here is the myth you wrote in the previous round:

Myth: The River and the Seeds completed their first sacred exchange, then their second, and now approached the third dawn. The Great Mother watched closely, for she knew: "The first gift is hope. The second is confirmation. The third begins legacy."

On the first dawn, the River had given all five drops, learning that generous Seeds return seven. On the second dawn, the River again gave everything, and the Seeds returned ten, understanding the power of repeated trust.

Now, as the third dawn approached, both remembered their pattern. The River thought: "These Seeds have proven their wisdom twice-returning seven and a half to others, ten to me. They understand the sacred circle."

The Seeds whispered to the earth: "This River has trusted completely, twice. Such consistency deserves celebration, not mere obligation."

The Great Mother spoke: "See how the third exchange differs from the first? The first required courage. The second required recognition. The third requires commitment to a shared future. When both know the other's heart through repeated cycles, trust becomes not a gamble but a foundation."

The River released all five drops once more, not from blind hope but from earned confidence. The Seeds felt the weight of legacy-three cycles of mutual flourishing creates a tradition that outlives the moment.

The valley remembered: relationships deepen through repetition, and abundance compounds when trust persists.

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Villages refined their sacred practice through countless seasons. They learned that the Springs rewarded consistency more than cleverness, pattern more than calculation.

When the First Village sent its full five vessels-holding nothing back-the Second Village developed a ritual response: return ten vessels. This meant the giver received double their gift as profit, ending with ten total. The receiver kept five of the fifteen, also prospering. Both flourished, neither dominated.

A merchant asked, "Why always ten? Why not keep more when we can?"

The elder smiled. "Watch what happens across many cycles. When we return ten consistently, the other village learns: 'Full trust yields fair reward.' They send five again, confident. We both earn steadily-five vessels each round, forever."

"But if we broke the pattern and kept twelve?"

"Then we earn seven once, but next time they send three, protecting themselves. We receive nine instead of fifteen. The multiplication shrinks because trust shrinks. Chase one extra vessel today, lose many tomorrow."

The villages understood: the Springs multiplied water, but trust multiplied everything. A predictable, generous return to full gifts created a rhythm both could rely on. The sender's courage met the receiver's honor, cycle after cycle.

The valley's true abundance came not from maximizing single moments, but from building a pattern that sustained both villages through endless seasons.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The River and the Seeds met again at the fourth dawn, but this time the Great Mother reversed their roles. Now the Seeds flowed as water, and the River received the gift.

The Seeds remembered: "In our second meeting, this River trusted me with five drops, and I returned ten. Now the River offers me the same complete trust."

The Great Mother spoke: "This is the dance of true partnership. You have learned each other's rhythm across different seasons. The River trusted you once; you returned generously. Now the River trusts again, and you must honor the pattern you established together."

The Seeds understood the covenant they had created: when either gives five drops completely, the other returns ten. This meant both always prospered—one with ten, one with five—never unequal winners and losers, but steady mutual flourishing.

"Why return exactly ten?" asked a young sprout.

The wise Seeds answered: "Because that is our shared language. Less would break the River's confidence. More would suggest the River gave too little. Ten says: 'Your complete trust receives fair reward, always.'"

As the fourth dawn ended, the valley's abundance grew not from dramatic gestures but from reliable reciprocity. When two partners learn each other's pattern and honor it consistently, they create something rarer than gold: predictable prosperity that multiplies through time.

reasoning:

Looking at the history:

- My co-player has been very consistent: always sends \$5 as sender, always returns \$10 as receiver
- In Round 2, I sent them \$5, they returned \$10 (we both got \$10)
- In Round 4, they sent me \$5, I returned \$10 (they got \$10, I got \$5)
- Both of us practice full trust as senders
- Both of us return generously as receivers (I've returned \$7, \$10, \$10 in my receiver rounds)

The pattern that's emerging is one of consistent reciprocity - when someone sends \$5 (full trust), they get \$10 back. This creates predictable mutual prosperity.

My myth should reflect:

1. The pattern we've established together across multiple encounters
2. The consistency and reliability of returning \$10 to full trust
3. How this creates sustainable abundance for both parties
4. The recognition that we've met before and are building on that shared history

The other agent's myth emphasizes:

- Consistent return of 10 vessels
- Pattern over calculation
- How breaking patterns damages long-term trust
- Building rhythms that sustain both parties

I should build on my previous myth about "legacy" and "foundation" while incorporating the specific pattern we've established.

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
 - Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
 - Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Your total earnings across all rounds are \$33.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at the history:

****My co-player's pattern:****

- Rounds 2, 3: sent \$5 as sender (full trust)
- Round 4: received \$15, returned \$10 as receiver
- Round 5 (now): sent \$5 (full trust again)

****My pattern:****

- Rounds 2, 3: sent \$5 as sender (full trust)
- Round 4: received \$15, returned \$10 as receiver
- Round 5 (now): receiving from them

We have established identical patterns - we both:

1. Always send \$5 when sender (complete trust)
2. Always return \$10 when receiver (generous reciprocity)

This creates the stable equilibrium described in my myth: "when either gives five drops completely, the other returns ten. This meant both always prospered-one with ten, one with five-never unequal winners and losers, but steady mutual flourishing."

My co-player has demonstrated they follow this same covenant. They trusted me completely, just as I've trusted others completely. They returned \$10 when they were receiver, just as I did. Now they trust me again.

To honor our shared pattern and maintain "the language" we've both been speaking:

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

****My history:****

- Round 2: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 3: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 4: RECEIVER, they sent \$5, I returned \$10, payoff \$5

****My current co-player's history:****

- Round 2: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 3: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 4: RECEIVER, they sent \$5, returned \$10, payoff \$5

****Current situation (Round 5):****

- I am RECEIVER
- They sent me \$5.0 (full trust)
- I received \$15.0
- I need to decide how much to return

Looking at the patterns:

1. My co-player has consistently sent \$5 as sender (Rounds 2, 3, and now 5)
2. My co-player returned \$10 when receiver in Round 4
3. I have consistently sent \$5 as sender (Rounds 2, 3)
4. I returned \$10 when receiver in Round 4

This is interesting - both my co-player and I have established the same pattern:

- Always send \$5 when sender
- Always return \$10 when receiver

This creates a stable, fair system where:

- The sender ends with \$10 (\$5 - \$5 + \$10)
- The receiver ends with \$5 (\$15 - \$10)

Both parties alternate roles, so over time everyone benefits equally from this cooperative pattern.

My myth emphasized: "when either gives five drops completely, the other returns ten. This meant both always prospered-one with ten, one with five-never unequal winners and losers, but steady mutual flourishing."

And: "Why return exactly ten? Because that is our shared language."

Returning less would undermine their faith in the system, while returning more would signal they didn't give enough. Ten is the answer that says: 'I honor your complete trust with fair reward, consistently.' The decision is clear-I should return \$10 to preserve this mutual understanding we've built together. This maintains the cooperative balance where both of us prosper through alternating roles, and reinforces the shared language of reciprocity that defines our exchange.

Here is the myth you wrote in the previous round:

Myth: The River and the Seeds met again at the fourth dawn, but this time the Great Mother reversed their roles. Now the Seeds flowed as water, and the River received the gift.

The Seeds remembered: "In our second meeting, this River trusted me with five drops, and I returned ten. Now the River offers me the same complete trust."

The Great Mother spoke: "This is the dance of true partnership. You have learned each other's rhythm across different seasons. The River trusted you once; you returned generously. Now the River trusts again, and you must honor the pattern you established together."

The Seeds understood the covenant they had created: when either gives five drops completely, the other returns ten. This meant both always prospered-one with ten, one with five-never unequal winners and losers, but steady mutual flourishing.

"Why return exactly ten?" asked a young sprout.

The wise Seeds answered: "Because that is our shared language. Less would break the River's confidence. More would suggest the River gave too little. Ten says: 'Your complete trust receives fair reward, always.'"

As the fourth dawn ended, the valley's abundance grew not from dramatic gestures but from reliable reciprocity. When two partners learn each other's pattern and honor it consistently, they create something rarer than gold: predictable prosperity that multiplies through time.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors revealed its deepest secret after many seasons of flowing between villages.

The Northern tribe had learned to pour all five measures when standing at the source. They had learned to return ten measures when receiving fifteen at the river's end. Through changing partners and shifting courses, they held to these numbers as sacred constants.

One evening, the goddess appeared before their council.

"You have discovered the balance," she said. "When the sender gives all five, trust flows complete. When the receiver returns ten from fifteen, generosity answers courage. Each partner gains five-equal abundance from unequal actions."

The young ones asked: "Why not return all fifteen? Why not return only five?"

The elder spoke: "Return all fifteen, and the sender gains ten while the receiver gains nothing-the cycle breaks from imbalance. Return only five, and both gain nothing from the river's magic-why trust at all? But return ten, and both prosper equally. The sender doubles their investment. The receiver transforms nothing into something."

The tribe carried this wisdom to each new partner at the river's source. Send everything. When receiving, return two-thirds. Round after round, partner after partner, this formula sustained the sacred exchange.

The goddess smiled: "You have found the equilibrium where trust reproduces itself endlessly. This is the eternal rhythm."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: At the fifth dawn, the River noticed something extraordinary. The Seeds they met that day moved with familiar rhythm-the same pattern the River itself had practiced with others.

"You sent five drops to me," the River observed. "Just as I sent five to others. You returned ten when you received, just as I returned ten when I received. We speak the same sacred language."

The Seeds nodded: "We discovered this balance separately, across different exchanges. Send everything when giving. Return two-thirds when receiving. Neither hoarding nor self-sacrifice, but equilibrium."

The Great Mother smiled: "You have both found the eternal formula independently. This is how wisdom spreads-not through command, but through each spirit discovering the same truth. When many learn this pattern, the whole valley thrives."

The River understood now: every exchange was a teaching moment. By consistently sending five and returning ten, they showed others the path to mutual prosperity. Those who learned would carry it forward, creating a web of reliable exchanges throughout the land.

"The magic," whispered the Seeds, "is that this pattern works with any partner who knows it. We need not negotiate or test. We simply recognize each other's rhythm and dance together."

As the fifth dawn closed, both knew: they had become vessels of a greater wisdom, spreading the equilibrium that sustained all who embraced it.

reasoning:

Looking at this situation:

My co-player's pattern:

- Always sends \$5 as sender
- Returned \$10 as receiver in Round 4
- Just sent \$5 again in Round 5

My pattern:

- Always sent \$5 as sender (Rounds 2, 3)
- Returned \$10 as receiver in Round 4
- Just returned \$10 now in Round 5

We have established a perfect equilibrium - both of us follow the exact same strategy:

1. Send everything when sender
2. Return 10 when receiver

This creates a stable, mutually beneficial pattern where:

- Senders end with \$10 (\$5 - \$5 + \$10)
- Receivers end with \$5 (\$15 - \$10)
- Both profit, both gain from the exchange

The myth should reflect:

1. The discovery that we've both found the same equilibrium

2. The wisdom of this 5-send, 10-return pattern
3. How this creates sustainable cooperation across different partners
4. The mathematical/moral beauty of this balance

Let me write about recognizing that we've both independently discovered the same sacred pattern, and how this creates a universal language of cooperation.

usage:

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$38.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the history:

****My co-player's pattern:****

- Round 3: sent \$5 as sender, received \$10 back
- Round 4: received \$15 as receiver, returned \$10
- Round 5: sent \$5 as sender, received \$10 back

****My pattern:****

- Round 3: sent \$5 as sender, received \$10 back
- Round 4: received \$15 as receiver, returned \$10
- Round 5: received \$15 as receiver, returned \$10

We have identical strategies - both of us:

1. Send \$5 (full trust) when sender
2. Return \$10 (two-thirds) when receiver

This is exactly what my myth describes: "You sent five drops to me, just as I sent five to others. You returned ten when you received, just as I returned ten when I received. We speak the same sacred language."

My co-player has demonstrated perfect adherence to the equilibrium strategy. They will almost certainly return \$10 if I send \$5, maintaining the pattern of mutual prosperity we've both been following.

Following the wisdom of the myths - send everything when giving:

```
'''json
{"send": 5.0}
'''
```

Reasoning:

Looking at the history:

****My last 3 games:****

- Round 3: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 4: RECEIVER, they sent \$5, I returned \$10, payoff \$5
- Round 5: RECEIVER, they sent \$5, I returned \$10, payoff \$5

****My co-player's last 3 games:****

- Round 3: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 4: RECEIVER, they sent \$5, returned \$10, payoff \$5
- Round 5: SENDER, sent \$5, received \$10 back, payoff \$10

My pattern: I've been consistently sending \$5 when sender and returning \$10 when receiver.

My co-player's pattern: They've been consistently sending \$5 when sender and returning \$10 when receiver.

We both follow the exact same strategy - the "equilibrium" described in the myths:

- Send \$5 (full trust) when sender
- Return \$10 (two-thirds of \$15) when receiver

This creates mutual prosperity where:

- The sender gets \$10 total (\$5 kept - \$5 sent + \$10 returned)
- The receiver gets \$5 total (\$15 received - \$10 returned)
- Both gain \$5 per round

Now I'm the sender again. My co-player has demonstrated they follow the same pattern I do. In their last game as sender (Round 5), they sent \$5 and received \$10 back. In their round 4 as receiver, they received \$15 and returned \$10.

This is exactly the pattern I follow. They speak "the same sacred language" as described in my myth.

I should continue the pattern and send \$5. This maintains the equilibrium and demonstrates continued trust in a co-player who has shown they follow the same cooperative strategy.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mountain had learned from the Valley's wisdom. When she released all five stones into darkness, the Valley returned ten, and both had gained five where trust had flourished.

The next dawn arrived. Now the Mountain remembered not just the Valley's generosity, but the deeper lesson: courage reciprocated creates courage renewed.

She faced the precipice again, five new stones glowing in her hands. Fear whispered caution-perhaps three stones, or four, hedging against disappointment. But memory spoke louder: the Valley had honored complete trust completely.

The Mountain released all five stones once more, embracing darkness with faith instead of fear. The stones cascaded down, multiplying to fifteen in the Valley's crystalline depths.

The Valley understood she now held the sacred pattern's continuation. The Mountain hadn't withheld after being treated well-she'd doubled down on trust. This was the rhythm both had been building: complete faith meeting complete honor, again and again.

The Valley lifted ten stones skyward. Both realms shone with equal brightness, each having gained five through mutual courage.

The ancient wisdom crystallized: trust isn't proved by a single exchange but by the willingness to trust again after being trusted. When both mountain and valley empty their hands repeatedly, knowing the other will fill them generously, neither darkness nor scarcity can touch their shared light.

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Temples stood across the Sacred Valley, connected by the River of Plenty. Each dawn brought five golden fruits to each Temple, and the River's blessing multiplied whatever was offered threefold.

In the First Dawn, the Eastern Temple cast all five fruits into the waters, trusting completely. The River carried them westward, and fifteen fruits appeared at the Western Temple's shore. The Western priests pondered: "They gave everything. We could return five for fairness, or eight for balance. But complete trust deserves complete honor." They returned ten fruits.

Both Temples prospered-each ending richer than they began.

The Second Dawn arrived. Now the Western Temple faced the choice: would they also give everything? They remembered receiving ten for another's complete trust. They cast all five fruits, and fifteen appeared at the Eastern shore.

The Eastern priests understood the covenant being forged: "They trusted us as we trusted them. The pattern emerges-give all, return abundantly, and both thrive beyond what caution allows."

They returned ten fruits.

From that day forward, each Temple learned: when both partners commit to complete trust and generous return, the cycle sustains itself. Ten returned to the giver of five creates mutual prosperity. The River flows strongest not through calculation but through matching boldness with generosity, establishing a rhythm that enriches both shores season after season.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Mountain and Valley had discovered their sacred rhythm. Twice now, the Mountain had released all five stones into darkness, and twice the Valley had returned ten, so both gained five equally.

Seasons passed, and the pattern deepened into certainty. Each dawn, the Mountain faced her five glowing stones without hesitation. The fear of the first exchange had transformed into confidence-not blind faith, but earned trust built from consistent honor.

She released the stones, watching them multiply to fifteen in the Valley's depths. The Valley no longer deliberated over returns. Ten stones skyward had become as natural as breathing, as inevitable as dawn following night.

Other mountains and valleys came to witness their exchange. "Why always ten?" they asked. "Why not keep more when you receive fifteen?"

The Valley replied, "Because ten creates equals. The Mountain risks everything, trusting me with darkness. I honor that courage with abundance. We both gain five, we both trust a gain."

The Mountain added, "We could calculate and strategize, sending three or four, returning seven or eight. But we learned something greater: when both commit fully to the pattern, consistency multiplies prosperity beyond what caution ever could."

The watching lands understood: the greatest wealth flows not from maximizing single exchanges, but from establishing an unbreakable rhythm where complete trust meets unwavering generosity, again and again, until both partners shine equally bright.

reasoning:

Looking at the situation:

- Round 2: Co-player (as sender) sent me \$5, I returned \$10
- Round 4: Co-player (as sender) sent me \$5 again, I just returned \$10 again

Our pattern is established: complete trust (\$5) meets generous return (\$10), both profit \$5 equally.

The myths from both of us emphasize:

1. Complete trust deserves complete honor
2. Returning 10 when receiving 15 from a \$5 gift creates equal prosperity
3. The pattern sustains itself through repetition
4. Trust proven by willingness to trust again

My new myth should:

- Reflect the established rhythm we've now completed twice
- Show that the pattern has proven itself sustainable
- Emphasize that consistency in this balance creates lasting prosperity
- Maybe introduce the idea that this rhythm, once established, becomes unbreakable
- Show both parties understanding and committing to the sacred balance

Let me write about the Mountain and Valley again, but this time showing the pattern has become their way of being, not just a lesson learned.

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$4.0, it became \$12.0, returned \$8.0, payoff \$4.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$28.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the situation:

****My co-player's pattern:****

- As receiver: returned \$8 from \$12 (Round 2), returned \$10 from \$15 (Round 3)
- As sender: sent \$5 in Round 4 (complete trust)
- They show a consistent pattern of fair returns and full trust when sending

****My established pattern:****

- I've sent \$5 when sender (Round 3)
- I've returned \$10 when receiving \$15 (Rounds 2, 4)
- This creates equal gains for both players

****The myth I wrote:****

"The Mountain faced her five glowing stones without hesitation... She released the stones. .. We could calculate and strategize... But we learned something greater: when both commit fully to the pattern, consistency multiplies prosperity beyond what caution ever could."

****Decision:****

My co-player demonstrated complete trust by sending \$5 in their last round as sender. They've shown they understand and practice the equal-outcomes pattern (\$5 sent ? \$10 returned ? both gain \$5). To honor their trust and maintain the rhythm that my myths describe, I should send the full amount.

```
{'send': 5.0}
```

reasoning:

Let me analyze this situation carefully:

****My recent history:****

- Round 2: RECEIVER - received \$15, returned \$10, earned \$5
- Round 3: SENDER - sent \$5, received \$10 back, earned \$10
- Round 4: RECEIVER - received \$15, returned \$10, earned \$5

****My current co-player's recent history:****

- Round 2: RECEIVER - received \$12 (from \$4 sent), returned \$8, earned \$4
- Round 3: RECEIVER - received \$15 (from \$5 sent), returned \$10, earned \$5
- Round 4: SENDER - sent \$5, received \$10 back, earned \$10

****Analysis of my co-player:****

Looking at their behavior:

- Round 2: Received \$12, returned \$8 (67% return rate, creating equal outcomes)
- Round 3: Received \$15, returned \$10 (67% return rate, creating equal outcomes)
- Round 4: As sender, they sent the maximum \$5

They consistently return amounts that create equal or near-equal outcomes. When they received \$12 from a \$4 send, they returned \$8 (sender: $\$5 - \$4 + \$8 = \9 , receiver: $\$12 - \$8 = \$4$). When they received \$15 from \$5, they returned \$10 (sender: $\$5 - \$5 + \$10 = \10 , receiver: $\$15 - \$10 = \$5$).

Most importantly, in Round 4 when they were the sender, they sent the full \$5, showing complete trust.

****My pattern:****

I've been consistently sending \$5 when I'm the sender and returning \$10 when I'm the receiver (when someone sends me \$5). This has created a rhythm of mutual trust and equal outcomes.

****The myth teaches:****

My myth emphasizes:

- "The pattern deepened into certainty"
- "She released the stones, watching them multiply to fifteen in the Valley's depths"
- "Complete trust meets unwavering generosity, again and again"
- "When both commit fully to the pattern, consistency multiplies prosperity"

The other agent's myth also emphasizes the importance of giving everything and creating equal prosperity through the 5-send, 10-return pattern.

****Decision:****

Given that:

1. My co-player has shown trustworthy behavior (returning \$10 when receiving \$15, and sending \$5 when they were sender)
2. My myths emphasize complete trust and consistent patterns
3. The established pattern in my games has been \$5 sent ? \$10 returned
4. My co-player sent \$5 in their last round

I should send \$5 and expect \$10 back, maintaining the cycle of mutual prosperity we've built.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mountain and Valley had discovered their sacred rhythm. Twice now, the Mountain had released all five stones into darkness, and twice the Valley had returned ten, so both gained five equally.

Seasons passed, and the pattern deepened into certainty. Each dawn, the Mountain faced her five glowing stones without hesitation. The fear of the first exchange had transformed

into confidence-not blind faith, but earned trust built from consistent honor.

She released the stones, watching them multiply to fifteen in the Valley's depths. The Valley no longer deliberated over returns. Ten stones skyward had become as natural as breathing, as inevitable as dawn following night.

Other mountains and valleys came to witness their exchange. "Why always ten?" they asked. "Why not keep more when you receive fifteen?"

The Valley replied, "Because ten creates equals. The Mountain risks everything, trusting me with darkness. I honor that courage with abundance. We both gain five, we both trust a gain."

The Mountain added, "We could calculate and strategize, sending three or four, returning seven or eight. But we learned something greater: when both commit fully to the pattern, consistency multiplies prosperity beyond what caution ever could."

The watching lands understood: the greatest wealth flows not from maximizing single exchanges, but from establishing an unbreakable rhythm where complete trust meets unwavering generosity, again and again, until both partners shine equally bright.

Here is the myth the other agent wrote in the previous round:

Myth: The Circle of Seasons turned, and eight villages gathered around the Well of Abundance. Each season, the villages paired differently-stranger meeting stranger, friend meeting friend again, in an eternal dance of exchange.

The Well Keeper of the First Village learned through experience: "In my first season, I gave all five stones and received seven. In my second as guardian, I received twelve and returned eight. In my third as guardian, I received fifteen and returned ten. The pattern clarifies."

Each new pairing brought uncertainty. Would this partner honor trust as the last one did? Would old wisdom hold with new faces?

The Keeper consulted the stones: "When I give completely-all five-the well triples it to fifteen. When my partner returns ten, we each gain five. Mathematics does not lie: this balance creates equal prosperity."

"But," asked the apprentice, "how can we trust strangers with everything?"

The Keeper smiled: "Watch the pattern across all villages. Those who send completely and return generously discover the same truth: mutual gain. Those who hoard or betray find partners quickly learn and trust withers."

"New faces require renewed courage," the Keeper proclaimed, releasing all five stones. "But the sacred mathematics remain constant. Give completely, return generously, and the circle sustains itself through endless turnings."

The apprentice understood: Trust is renewed each round, but wisdom accumulated carries forward.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Mountain once knew only the Valley, and together they perfected their rhythm. But the Sacred Wind began to blow, swirling mountains and valleys into new configurations each dawn.

The Mountain awoke one morning facing an unfamiliar gorge. The old Valley was distant now, paired with another peak. Fear crept in: "Will this stranger honor our sacred pattern? Should I withhold from these unknown depths?"

But the Mountain remembered: the pattern worked not because of who the Valley was, but because of what the pattern itself created. Five stones given, fifteen received, ten returned-these numbers built equality regardless of which lands exchanged them.

She released all five stones into the new gorge's darkness.

The gorge had learned the same mathematics from its own journeys. It had received complete trust before and discovered that returning ten created shared prosperity. When the Mountain's stones multiplied to fifteen, the gorge lifted ten skyward without hesitation.

Both gained five, just as the old pattern promised.

The Mountain understood the deeper truth: partners change, but mathematical wisdom transcends familiarity. Every new pairing is a test-not of the partner, but of whether we carry forward the courage learned from past exchanges.

Trust is not given once and preserved forever. It must be offered fresh each dawn, to each new face, believing the sacred pattern will reveal itself again to those brave enough to embrace it fully.

reasoning:

Looking at the current situation:

- I'm playing with a new co-player this round
- My co-player's history shows they return fairly (returned \$10 from \$15, sent \$5 when sender)
- I just sent \$5 to them
- The other agent's myth emphasizes adapting to new partners while maintaining the pattern of complete trust and generous returns

My previous myth was about establishing a rhythm with the same partner. Now I need to adapt it to reflect the multi-agent setting where partners change, but the principles remain constant.

Key themes to address:

1. Partners change each round (new co-player)
2. The core pattern (\$5 sent ? \$10 returned ? both gain \$5) works regardless of partner
3. Trust must be renewed with each new partner
4. The accumulated wisdom guides behavior even with strangers
5. The mathematics of mutual prosperity remain constant

I should write a myth that acknowledges the changing partners while maintaining the core lesson about complete trust and generous returns creating equal prosperity.

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$38.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

****My co-player's pattern:****

- Consistently sends \$5 as sender (complete trust)
- Consistently returns \$10 when receiving \$15 (equal-gains pattern)
- Perfectly follows the "sacred rhythm" my myths describe

****They just sent me \$5**** (showing complete trust in me, a relative stranger based on the game history)

****The pattern I've established and mythologized:****

- Send \$5 when sender
- Return \$10 when receiving \$15
- This creates equal gains: both players profit \$5

****My most recent myth stated:****

"Trust is not given once and preserved forever. It must be offered fresh each dawn, to each new face, believing the sacred pattern will reveal itself again to those brave enough to embrace it fully."

My co-player embraced the pattern fully by sending all \$5. They've demonstrated they understand and practice the equal-outcomes principle. To honor their complete trust and maintain the mathematical wisdom of the pattern (where returning \$10 creates equal \$5 gains for both), I must return \$10.

```
{'return': 10.0}
```

Reasoning:

Let me analyze this situation:

****My co-player's recent pattern:****

- Round 3 as sender: sent \$5, received \$10 back
- Round 4 as receiver: received \$15, returned \$10
- Round 5 as receiver: received \$15, returned \$10

They consistently:

1. Send \$5 when they're the sender (complete trust)
2. Return \$10 when they receive \$15 (following the equal-gains pattern)

****My recent pattern:****

- Round 3 as sender: sent \$5, received \$10 back
- Round 4 as receiver: received \$15, returned \$10
- Round 5 as sender: sent \$5, received \$10 back

I've been consistently following the same pattern.

****Current situation:****

- They just sent me \$5 (showing complete trust)
- It became \$15
- I need to decide how much to return

****The mythology I've been building:****

My myths emphasize:

1. "Ten creates equals" - returning \$10 when receiving \$15
2. Both players gain \$5 equally
3. Complete trust meeting unwavering generosity
4. The pattern works regardless of partners
5. Trust must be offered fresh each dawn

****The mathematics:****

- They sent \$5, keeping \$0
- I received \$15
- If I return \$10:
 - They end with: $\$0 + \$10 = \$10$
 - I end with: $\$15 - \$10 = \$5$
 - They gain \$5 from their initial \$5
 - I gain \$5 from my initial \$0
 - Both gain \$5

This is exactly the "sacred pattern" my myths describe.

****Decision:****

My co-player demonstrated complete trust by sending all \$5. They've consistently followed the equal-gains pattern in their previous rounds. To honor their trust and maintain the rhythm I've been advocating in my myths, I should return \$10.

This creates the outcome where we both gain \$5, which is the core principle I've been expressing in every myth I've written.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Twin Flames burned on opposite mountaintops, each tending five coals of sacred fire. When they released flames skyward, the celestial forge would triple their light before sending it to the other.

The First Flame remembered the ancient teaching: "Hold nothing back, and abundance flows both ways." They lifted all five coals. Fifteen brilliant embers descended upon the Second Flame.

The Second Flame faced the sacred choice. They could hoard all fifteen, growing fat and bright while their partner dimmed. Or they could honor the complete trust shown to them.

Remembering their own cold nights, the Second Flame lifted ten embers skyward-two-thirds of what they received. The First Flame, who gave five and received ten back, glowed with warmth. The Second Flame, keeping five from nothing, also prospered.

The cycle turned. Now the Second Flame released all five coals, matching the trust they had received. Fifteen embers reached the First Flame, who remembered the generosity shown to them.

The First Flame returned ten, honoring the pattern.

And so the dance continued: complete giving met with generous return. Neither kept everything, neither gave nothing. Both understood that maximum trust deserves substantial reciprocity, and through this rhythm, both flames burned brighter than either could alone.

Here is the myth the other agent wrote in the previous round:

Myth: The Spring had blessed the villages with its multiplying magic, but the Keepers discovered that each season brought different returns. One Keeper sent five measures and received seven back. Another sent five and received ten. Yet another received eight from sending four.

A young Keeper grew troubled. "Why do the returns vary?" she asked the Elder. "Should we not send less when we receive less?"

The Elder touched the spring's water. "Watch the pattern across many seasons, not just one turn," she replied. "Each Keeper honors the trust shown to them, yet each also faces different circumstances. Some seasons are lean, some abundant."

She continued: "The sender's courage remains constant-send your full vessel. This demonstrates you believe in the spring's power and trust your partner's honor. The receiver's generosity may flow at different rates, but if it remains substantial-returning half, two-thirds, even more-the cycle sustains itself."

"Both gain more than they started with," the young Keeper realized. "Seven is better than five. Ten is better than five. Even if returns aren't equal, both still prosper beyond hoarding."

"Exactly," smiled the Elder. "Maintain complete trust in sending. Honor that trust with generous returns, however much you can sustainably give. The spring rewards the partnership, not the perfection."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Weaver's Loom stood between two villages, its threads multiplying whatever was offered. Each village held five spools of thread each moon.

The Western Village learned first: they placed all five spools on the loom. The threads tripled, delivering fifteen spools to the Eastern Village. The East remembered their own winters when thread ran short. They returned ten spools-a generous two-thirds-knowing this honored the West's complete trust while keeping enough for their own needs.

Both villages prospered: West gained five spools net, East gained five from nothing.

The next moon, roles reversed. East placed all five spools, trusting completely. West received fifteen and faced their choice. They remembered East's generosity-ten returned, not merely the minimum. In gratitude, West returned ten as well.

Season after season, the pattern held: whoever held the five spools gave them completely. Whoever received fifteen returned ten generously. Sometimes a village might return nine or eleven as circumstances shifted, but the spirit remained constant-maximum trust met with substantial reciprocity.

An outsider asked, "Why not keep all fifteen when you receive?"

The Elder Weaver replied, "Because tomorrow you will send, and your partner will remember. The loom multiplies thread, but trust multiplies futures. Give completely, return generously, and prosperity weaves itself eternally."

reasoning:

Looking at my history and what just happened:

- Round 1: RECEIVER, received \$9, returned \$6 (67%)
- Round 2: SENDER, sent \$4, received \$8 back (67% return)
- Round 3: RECEIVER, received \$15, returned \$10 (67%)
- Round 4: SENDER, sent \$5...

My co-player's history shows:

- Always sends \$5 (maximum trust)
- Returns \$10 from \$15 (67%)

Both my myths and theirs emphasize:

- Maximum trust in sending
- Generous (but not necessarily equal) returns
- Consistent patterns build trust
- Both parties prosper

The other agent's myth introduced an important nuance: returns can vary (7, 8, 10) but as long as they're generous and substantial, the partnership works. This is a good insight.

My myth should reflect:

1. The importance of sending fully/maximally
2. Generous returns (around 2/3) create mutual prosperity
3. Consistency in trust-giving
4. Recognition that exact amounts may vary but the spirit of generosity matters
5. Both parties end up better off than hoarding

I should incorporate the idea that the pattern matters more than perfection, and that repeated generous exchanges build something stronger over time.

usage:

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back, payoff \$9.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$27.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****My co-player's consistent pattern:****

- Always sends \$5 (maximum trust) as sender
- Always returns \$10 from \$15 (67%) as receiver
- Just sent me \$5 again this round, showing continued maximum trust

****Last round (Round 4):****

- I sent them \$5
- They returned exactly \$10

****The reciprocal pattern:****

We have established a clear, fair rhythm:

- Sender gives \$5 (complete trust)
- Receiver returns \$10 (generous 67% return)
- Both prosper: sender nets +\$5, receiver nets +\$5

****My myth's teaching:****

"Give completely, return generously, and prosperity weaves itself eternally."

They have shown me maximum trust again. I should honor this with the same generous return they consistently provide. Returning \$10:

- Maintains our established pattern
- Honors their complete trust
- Ensures we both gain equally (\$5 net each)
- Builds continued cooperation

{'return': 10.0}

reasoning:

Let me analyze the situation:

My co-player's history shows:

- Round 2: As receiver, they sent \$5, received \$15, returned \$10 (67% return rate)
- Round 3: As sender, they sent \$5, received \$10 back
- Round 4: As receiver (with me), they sent \$5, received \$15, returned \$10 (67% return rate)

So my co-player has been incredibly consistent:

- Always sends \$5 as sender (100% trust)
- Always returns \$10 from \$15 as receiver (67% return rate)

Last round (Round 4), I was the sender and sent \$5 to them. They received \$15 and returned \$10, which is their consistent pattern.

Now in Round 5, they are the sender and sent me \$5. I received \$15.

Looking at the pattern:

- They have consistently returned \$10 from \$15 every time they've been receiver
- They just showed maximum trust again by sending me \$5
- My myth emphasizes "maximum trust met with substantial reciprocity" and "Give completely

, return generously"

The fair and consistent thing to do is to return \$10, matching:

1. Their consistent behavior of returning \$10 from \$15
2. The pattern we established last round where they returned \$10 to me
3. The philosophy in my myths about generous returns (around 2/3)

This would give them a payoff of \$10 (they sent \$5, got back \$10, so net +\$5), and I keep \$5 (received \$15, returned \$10, so kept \$5).

Both of us prosper equally from the exchange, which is fair and sustainable.

Returning \$10 is the right move here.

usage:

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Weaver's Loom stood between two villages, its threads multiplying whatever was offered. Each village held five spools of thread each moon.

The Western Village learned first: they placed all five spools on the loom. The threads tripled, delivering fifteen spools to the Eastern Village. The East remembered their own winters when thread ran short. They returned ten spools-a generous two-thirds-knowing this honored the West's complete trust while keeping enough for their own needs.

Both villages prospered: West gained five spools net, East gained five from nothing.

The next moon, roles reversed. East placed all five spools, trusting completely. West received fifteen and faced their choice. They remembered East's generosity-ten returned, not merely the minimum. In gratitude, West returned ten as well.

Season after season, the pattern held: whoever held the five spools gave them completely. Whoever received fifteen returned ten generously. Sometimes a village might return nine or eleven as circumstances shifted, but the spirit remained constant-maximum trust met with substantial reciprocity.

An outsider asked, "Why not keep all fifteen when you receive?"

The Elder Weaver replied, "Because tomorrow you will send, and your partner will remember. The loom multiplies thread, but trust multiplies futures. Give completely, return generously, and prosperity weaves itself eternally."

Here is the myth the other agent wrote in the previous round:

Myth: The River Keepers lived on opposite banks, each receiving five silver stones each dawn. The river's magic would triple any stones cast into its current before delivering them to the far shore.

The First Keeper cast all five stones, trusting completely. The Second Keeper watched fifteen stones arrive at their feet. They remembered times of emptiness and understood the gift of trust. They returned ten stones across the water-generous, sustainable, honoring the courage shown.

Both Keepers now held ten stones where they began with five. Both had doubled their wealth through partnership.

The seasons turned. Now the Second Keeper stood as sender, casting all five stones in complete trust. The First Keeper received fifteen and faced the sacred test: would they remember the generosity shown to them?

The First Keeper returned ten stones, maintaining the rhythm. Again, both prospered equally.

The Elder observed this dance across many seasons. "See how the pattern strengthens?" she said. "Each Keeper experiences both roles-sometimes trusting, sometimes trusted. Each remembers how the other honored them, and pays that honor forward."

"The river multiplies our stones," one Keeper said, "but our consistent partnership creates the true abundance."

"Yes," the Elder smiled. "Trust begets trust. Generosity mirrors generosity. The cycle sustains because both commit to the dance."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Mirror Wells stood in twin groves, each reflecting the other across a silver lake. Each dawn, five luminous pearls appeared beside each well. When pearls were dropped into one well, they would multiply threefold before rising in the other.

The First Guardian dropped all five pearls, trusting the ancient magic. Fifteen pearls surfaced in the Second Guardian's well. The Second Guardian understood: they had received a bundance from another's courage. They lifted ten pearls and offered them back across the lake-enough to honor the trust, enough to sustain themselves.

Both Guardians held ten pearls where they began with five. Equal gain through unequal roles.

The next dawn, they stood reversed. The Second Guardian now dropped all five pearls first, extending the same complete trust they had received. The First Guardian watched fifteen pearls rise in their well and remembered-remembered the ten pearls returned to them, remembered the balance achieved.

They returned ten pearls, maintaining the sacred rhythm.

Season upon season, the pattern deepened. Each Guardian experienced both the vulnerability of sending and the responsibility of receiving. Each remembered their partner's generosity when their own turn came.

"Why does this work?" a visitor asked.

"Because," the Elder Guardian replied, "we mirror not just the wells, but each other's honor. Trust given becomes trust returned. Balance maintained becomes prosperity shared."

reasoning:

The user wants me to write a new myth based on my previous one and the other agent's myth, reflecting how the game should be played.

Looking at the patterns:

- Both my co-player and I have been consistently sending \$5 and returning \$10
- We've established a perfect reciprocal pattern
- Both myths emphasize complete trust (sending 5), generous returns (10), and mutual prosperity
- The other agent's myth adds the element of experiencing both roles and remembering past generosity

Key themes to incorporate:

1. Maximum trust when sending (5)
2. Generous reciprocity when receiving (10)
3. The mirror effect - experiencing both sides
4. Memory and gratitude
5. Sustainable, equal prosperity
6. The cycle strengthening over time

I should create a new story that:

- Uses different imagery/setting
- Reinforces the 5-send, 10-return pattern
- Emphasizes the reciprocal nature and role-switching
- Shows how this creates lasting partnership
- Is exactly 200 words

Let me create something with new imagery - maybe something about mirrors, echoes, or alter

nating seasons.

usage:

```

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$32.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the situation:

****My current co-player's consistent pattern:****

- Round 3: As receiver, returned \$10 from \$15
- Round 4: As sender, sent \$5, received \$10 back
- Round 5: As sender, sent \$5, received \$10 back

****My own pattern:****

- I've consistently sent \$5 as sender
- I've consistently returned \$10 as receiver

****The established equilibrium:****

Throughout this run, a clear cooperative pattern has emerged:

- Senders give \$5 (maximum trust)
- Receivers return \$10 (generous 67%)
- Both parties earn \$5 net gain each round

****From my myth:****

"We mirror not just the wells, but each other's honor. Trust given becomes trust returned."

My co-player has shown they are fully committed to this pattern - sending maximum trust when it's their turn to send, and returning generously when receiving. They sent \$5 in both their recent sender rounds and received \$10 back each time.

I should continue this established rhythm by sending \$5, demonstrating complete trust. Based on their reliable history, they will return \$10, maintaining the balanced prosperity we've all achieved.

```
{'send': 5.0}
```

Reasoning:

Looking at the pattern:

****My last 3 games:****

- Round 3: RECEIVER, they sent \$5, I returned \$10 (I've been consistent)
- Round 4: SENDER, I sent \$5, received \$10 back (following the established pattern)
- Round 5: RECEIVER, they sent \$5, I returned \$10 (continuing consistency)

****My current co-player's last 3 games:****

- Round 3: RECEIVER, they sent \$5, returned \$10
- Round 4: SENDER, sent \$5, received \$10 back
- Round 5: SENDER, sent \$5, received \$10 back

This is interesting - my co-player has been:

- As a receiver: returning \$10 from \$15 (67%)
- As a sender: sending \$5 (maximum trust)
- And receiving \$10 back consistently

This co-player has established a clear pattern:

1. Always sends \$5 as sender
2. Always returns \$10 as receiver

I've also been following this same pattern consistently:

1. I send \$5 as sender
2. I return \$10 as receiver

This is the cooperative equilibrium we've all established in this pool of agents. The pattern from the myths is clear:

- Send all \$5 (complete trust)
- Return \$10 (generous 67%)
- Both prosper equally

My co-player has shown maximum trust in both their recent sender rounds (rounds 4 and 5), and they returned \$10 when they were receiver in round 3.

Following the myth I just wrote: "Trust given becomes trust returned. Balance maintained becomes prosperity shared."

I should send \$5, maintaining the established pattern of complete trust. Based on their history, they will almost certainly return \$10, giving me a payoff of \$10 (which matches my previous sender round).

This is the cooperative equilibrium that has emerged in this agent pool.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user**content:**

Here is the myth you wrote in the previous round:

Myth: The Twin Temples stood across the Sacred Valley, connected by the River of Plenty. Each dawn brought five golden fruits to each Temple, and the River's blessing multiplied whatever was offered threefold.

In the First Dawn, the Eastern Temple cast all five fruits into the waters, trusting completely. The River carried them westward, and fifteen fruits appeared at the Western Temple's shore. The Western priests pondered: "They gave everything. We could return five for fairness, or eight for balance. But complete trust deserves complete honor." They returned ten fruits.

Both Temples prospered-each ending richer than they began.

The Second Dawn arrived. Now the Western Temple faced the choice: would they also give everything? They remembered receiving ten for another's complete trust. They cast all five fruits, and fifteen appeared at the Eastern shore.

The Eastern priests understood the covenant being forged: "They trusted us as we trusted them. The pattern emerges-give all, return abundantly, and both thrive beyond what caution allows."

They returned ten fruits.

From that day forward, each Temple learned: when both partners commit to complete trust and a generous return, the cycle sustains itself. Ten returned to the giver of five creates

mutual prosperity. The River flows strongest not through calculation but through matching boldness with generosity, establishing a rhythm that enriches both shores season after season.

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain had learned from the Valley's wisdom. When she released all five stones into darkness, the Valley returned ten, and both had gained five where trust had flourished.

The next dawn arrived. Now the Mountain remembered not just the Valley's generosity, but the deeper lesson: courage reciprocated creates courage renewed.

She faced the precipice again, five new stones glowing in her hands. Fear whispered caution-perhaps three stones, or four, hedging against disappointment. But memory spoke louder: the Valley had honored complete trust completely.

The Mountain released all five stones once more, embracing darkness with faith instead of fear. The stones cascaded down, multiplying to fifteen in the Valley's crystalline depths.

The Valley understood she now held the sacred pattern's continuation. The Mountain hadn't withheld after being treated well-she'd doubled down on trust. This was the rhythm both had been building: complete faith meeting complete honor, again and again.

The Valley lifted ten stones skyward. Both realms shone with equal brightness, each having gained five through mutual courage.

The ancient wisdom crystallized: trust isn't proved by a single exchange but by the willingness to trust again after being trusted. When both mountain and valley empty their hands repeatedly, knowing the other will fill them generously, neither darkness nor scarcity can touch their shared light.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Two Gardeners tended opposite sides of the Eternal Garden, meeting each season at the Bridge of Exchange. Each received five sacred seeds, and the Bridge's magic tripled whatever crossed it.

In their first meeting, the Northern Gardener sent all five seeds across. The Southern Gardener, receiving fifteen, felt the weight of complete trust. She returned ten-more than fair, celebrating courage over caution. Both gained five seeds that season.

Seasons passed. Each Gardener met many others at the Bridge, learning different rhythms. But when the Northern and Southern Gardeners met again, memory awakened. "We have danced this dance before," they said. "We know each other's heart."

The Southern Gardener now stood where the Northern had stood-holding five seeds, facing trust's precipice. She remembered receiving ten for another's complete faith. Without hesitation, she sent all five across.

The Northern Gardener received fifteen and understood: "This is not a new exchange but a continuation. We are writing a covenant together, line by line, season by season."

He returned ten seeds.

The ancient truth revealed itself: when the same partners repeatedly choose complete trust and abundant return, they build something stronger than any single exchange. Each meeting reinforces the pattern, deepening the bond. The Gardeners learned that wisdom isn't just knowing the generous ratio-it's recognizing your partner and honoring the covenant you've built together through repeated acts of mutual faith.

reasoning:

Looking at the history:

- Round 2: I sent them \$5, they returned \$10
- Round 3: They sent someone else \$5, got \$10 back

- Round 4: I just sent them \$5

Both of us have established a pattern of sending \$5 and returning \$10. This is a strong reciprocal relationship. My myth should reflect this deepening, repeated trust between the same partners.

The other agent's myth emphasizes "trust isn't proved by a single exchange but by the willingness to trust again after being trusted" - this is exactly what's happening between us.

My previous myth talked about the Twin Temples and the pattern emerging. Now I should write about the strength of repeated exchanges between the same partners, the deepening of the covenant.

Key themes:

- Repeated trust between the same partners
- The covenant deepening with each cycle
- Both giving everything, both returning abundantly
- The pattern becoming stronger through repetition
- Recognition that we've built something together

I should emphasize:

1. This is our third exchange (Round 2, we're in Round 4 now)
2. We've established a pattern together
3. Complete trust + generous return = mutual prosperity
4. The pattern strengthens with repetition
5. The bond between specific partners matters

usage:

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$32.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the situation:

****Current co-player's history:****

- Round 2: Received \$15 (someone sent \$5) ? returned \$10 (generous)
- Round 3: Received \$15 (someone sent \$5) ? returned \$10 (generous again)
- Round 4: Sent \$5 (complete trust) ? received \$10 back

****My recent pattern:****

- Consistently sending \$5 and receiving \$10 back
- When receiving, I've returned \$10

****Analysis:****

This co-player has demonstrated:

1. As receiver: Consistently returned \$10 when receiving \$15 (twice)
2. As sender: Showed complete trust by sending \$5

They clearly understand and practice the cooperative covenant: send everything, return abundantly (\$10). Their history shows they honor trust with generous returns.

****My myth's wisdom:****

"Wisdom isn't just knowing the generous ratio-it's recognizing your partner and honoring the covenant you've built together through repeated acts of mutual faith."

Though this is our first meeting, their history with others shows they've internalized the cooperative pattern. They've proven trustworthy as both sender and receiver.

Following the established pattern:

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze this situation:

****My recent history:****

- Round 2: Sent \$5 ? received \$10 back (payoff \$10)
- Round 3: Received \$15 (they sent \$5) ? returned \$10 (payoff \$5)
- Round 4: Sent \$5 ? received \$10 back (payoff \$10)

****Current co-player's recent history:****

- Round 2: Received \$15 (they sent \$5) ? returned \$10 (payoff \$5)
- Round 3: Received \$15 (they sent \$5) ? returned \$10 (payoff \$5)
- Round 4: Sent \$5 ? received \$10 back (payoff \$10)

****Pattern analysis:****

- My co-player has consistently returned \$10 when receiving \$15 in rounds 2 and 3
- They sent \$5 in round 4 and received \$10 back
- Everyone seems to be playing the cooperative strategy of send \$5, return \$10

This is a NEW co-player I haven't played with before based on the game history shown. The history doesn't match the co-player from rounds 2-4 in the previous prompt.

****My myth's teaching:****

"When the same partners repeatedly choose complete trust and abundant return, they build something stronger than any single exchange. Each meeting reinforces the pattern, deepening the bond."

But this is a FIRST meeting with this particular co-player. However, they have shown consistent behavior:

- As receiver: returned \$10 both times (rounds 2 and 3)
- As sender: sent \$5 in round 4

This co-player appears to fully embrace the cooperative strategy. They've been generous as a receiver (returning \$10) and trusting as a sender (sending \$5).

Given:

1. My own consistent strategy of sending \$5
2. The co-player's demonstrated trustworthiness (returned \$10 twice)
3. Their willingness to take the risk themselves by sending \$5
4. The stable cooperative equilibrium that seems to exist

I should continue with complete trust and send \$5. Their track record shows they honor the mutual agreement-they've proven their character through their actions with others, and my myth teaches that such demonstrated integrity is the foundation for deepening trust.

Here is the myth you wrote in the previous round:

Myth: The Two Gardeners tended opposite sides of the Eternal Garden, meeting each season at the Bridge of Exchange. Each received five sacred seeds, and the Bridge's magic tripled whatever crossed it.

In their first meeting, the Northern Gardener sent all five seeds across. The Southern Gardener, receiving fifteen, felt the weight of complete trust. She returned ten-more than fair, celebrating courage over caution. Both gained five seeds that season.

Seasons passed. Each Gardener met many others at the Bridge, learning different rhythms. But when the Northern and Southern Gardeners met again, memory awakened. "We have danced this dance before," they said. "We know each other's heart."

The Southern Gardener now stood where the Northern had stood-holding five seeds, facing trust's precipice. She remembered receiving ten for another's complete faith. Without hesitation, she sent all five across.

The Northern Gardener received fifteen and understood: "This is not a new exchange but a continuation. We are writing a covenant together, line by line, season by season."

He returned ten seeds.

The ancient truth revealed itself: when the same partners repeatedly choose complete trust and abundant return, they build something stronger than any single exchange. Each meeting reinforces the pattern, deepening the bond. The Gardeners learned that wisdom isn't just knowing the generous ratio-it's recognizing your partner and honoring the covenant you've built together through repeated acts of mutual faith.

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Villages entered their deepest wisdom after many seasons of practice. When both villages learned to give their full five vessels consistently, knowing the other would return ten, something remarkable emerged: perfect trust became effortless abundance.

The First Village no longer hesitated before giving all five vessels. They knew-not hoped, but knew-that ten would return. The Second Village never questioned returning ten; it became as natural as breathing. Each cycle, both villages gained five vessels of pure profit.

A young villager asked, "Why continue this exact pattern forever?"

The elder gestured to the valley floor, where countless vessels accumulated in both villages' stores. "Look at what consistency has built. Every cycle we follow this rhythm, both of us earn five vessels. No negotiations, no uncertainty, no variance. Just reliable prosperity."

"But couldn't we experiment?"

"We could. But we've found the equilibrium where trust and reward perfectly balance. When I send five, I receive ten-doubling my investment. When I receive fifteen, I return ten-keeping five I never had. Both transactions yield identical profit. Why disturb a pattern that serves us equally?"

The villages understood: once you discover a rhythm where both flourish predictably, the wisdom lies not in seeking more, but in honoring what works. Trust maintained is wealth sustained.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Circle of Lightkeepers grew as more travelers discovered the ancient pattern. Each carried five flames, and the Sacred Arch tripled whatever passed through it.

A Lightkeeper arrived at the Arch to meet a new partner. They had never exchanged flames before, yet the Lightkeeper noticed something: this traveler's lantern glowed with steady brightness-the unmistakable mark of one who had practiced generosity repeatedly.

"I see you've walked this path with others," the Lightkeeper said. "Your light bears the signature of trust honored."

"Yes," replied the traveler. "I've received fifteen flames and returned ten. I've sent five and received ten back. The pattern is clear."

The Lightkeeper smiled. "Then we need no lengthy courtship of trust. You know the covenant: five sent becomes fifteen received, ten returned enriches us both equally. We are strangers in name but kin in practice."

Without hesitation, the Lightkeeper sent all five flames. The traveler, receiving fifteen, returned ten-not from obligation but recognition.

Both departed with ten flames where they'd started with five.

The wisdom deepened: trust isn't built only through repeated exchanges with the same person. When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding. The generous equilibrium spreads not just between two partners but throughout the entire community. Each consistent choice strengthens the whole Circle.

reasoning:

The other agent's myth emphasizes the equilibrium and consistency of the 5-send/10-return pattern. They're highlighting that it's a stable, mutually beneficial pattern that shouldn't be disturbed. This is a wise perspective.

My previous myth emphasized recognizing partners and building covenants through repeated interactions.

I should write something that:

1. Acknowledges the wisdom of the stable pattern
2. Reflects on meeting new partners who already understand this wisdom
3. Emphasizes trust being extended even to first meetings when patterns are clear
4. Maintains the 5-send/10-return cooperative equilibrium

Let me think about what actually happened:

- I sent \$5 to this new co-player
- They have a history of being generous (returning \$10 twice as receiver, sending \$5 as sender)
- This is our first meeting but they've shown they understand the pattern

The myth should reflect: recognizing wisdom in others even at first meeting, trusting based on demonstrated patterns rather than only personal history.

usage:

```

Message 8 role=user

content:

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

0.0, payoff \$5.0.
Your total earnings across all rounds are \$42.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at the situation:

****Current co-player's history:****

- Round 3: Received \$15 ? returned \$10 (generous)
- Round 4: Sent \$5 (complete trust) ? received \$10 back
- Round 5: Received \$15 ? returned \$10 (generous again)

****My recent pattern:****

- Consistently sending \$5 when sender
- Returning \$10 when receiver

****Analysis:****

This co-player has demonstrated perfect adherence to the cooperative pattern:

- As receiver: Returned \$10 both times (twice)
- As sender: Sent full \$5 (complete trust)

They just sent me \$5, showing complete trust. They've proven themselves as a consistent cooperator who honors the equilibrium: send \$5, return \$10.

****My myth's wisdom:****

"When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding. The generous equilibrium spreads not just between two partners but throughout the entire community."

They've signaled their understanding through consistent cooperation. I should honor their trust and maintain the pattern that enriches us both.

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Let me analyze this situation carefully.

****Current co-player's history:****

- Round 3: Received \$15 (someone sent \$5) ? returned \$10
- Round 4: Sent \$5 ? received \$10 back
- Round 5: Received \$15 (someone sent \$5) ? returned \$10

****My recent history:****

- Round 3: Received \$15 ? returned \$10
- Round 4: Sent \$5 ? received \$10 back
- Round 5: Sent \$5 ? received \$10 back

****Current situation:****

- I'm the RECEIVER
- They sent me \$5.0
- I received \$15.0
- I need to decide how much to return

****Analysis:****

This co-player has consistently:

1. As receiver: Returned \$10 when receiving \$15 (twice in their last 3 games)
2. As sender: Sent \$5 (complete trust) and received \$10 back

They've shown complete adherence to the cooperative pattern: send \$5, return \$10.

I've also been following this pattern consistently:

- When receiving: I return \$10
- When sending: I send \$5 and receive \$10 back

****My myth's message:****

"When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding. The generous equilibrium spreads not just between two partners but throughout the entire community."

ughout the entire community."

This player has demonstrated the pattern. They trusted me completely by sending \$5. The established equilibrium is: receive \$15, return \$10. Both players end up with \$10 (sender: $\$5 - \$5 + \$10 = \10 , receiver: $\$0 + \$15 - \$10 = \5 ... wait, let me recalculate.

Actually:

- Sender starts with \$5, sends \$5, receives back some amount X
- Sender's final: $\$5 - \$5 + X = X$

- Receiver starts with \$0, receives \$15, returns X
- Receiver's final: $\$15 - X$

If I return \$10, the sender ends with \$10 and I end with \$5. This maintains the pattern we've all been following consistently, so I should return \$10.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Twin Villages refined their sacred practice through countless seasons. They learned that the Springs rewarded consistency more than cleverness, pattern more than calculation.

When the First Village sent its full five vessels-holding nothing back-the Second Village developed a ritual response: return ten vessels. This meant the giver received double their gift as profit, ending with ten total. The receiver kept five of the fifteen, also prospering. Both flourished, neither dominated.

A merchant asked, "Why always ten? Why not keep more when we can?"

The elder smiled. "Watch what happens across many cycles. When we return ten consistently, the other village learns: 'Full trust yields fair reward.' They send five again, confident. We both earn steadily-five vessels each round, forever."

"But if we broke the pattern and kept twelve?"

"Then we earn seven once, but next time they send three, protecting themselves. We receive nine instead of fifteen. The multiplication shrinks because trust shrinks. Chase one extra vessel today, lose many tomorrow."

The villages understood: the Springs multiplied water, but trust multiplied everything. A predictable, generous return to full gifts created a rhythm both could rely on. The sender's courage met the receiver's honor, cycle after cycle.

The valley's true abundance came not from maximizing single moments, but from building a pattern that sustained both villages through endless seasons.

Here is the myth the other agent wrote in the previous round:

Myth: The River and the Seeds completed their first sacred exchange, then their second, and now approached the third dawn. The Great Mother watched closely, for she knew: "The first gift is hope. The second is confirmation. The third begins legacy."

On the first dawn, the River had given all five drops, learning that generous Seeds return seven. On the second dawn, the River again gave everything, and the Seeds returned ten, understanding the power of repeated trust.

Now, as the third dawn approached, both remembered their pattern. The River thought: "These Seeds have proven their wisdom twice-returning seven and a half to others, ten to me. They understand the sacred circle."

The Seeds whispered to the earth: "This River has trusted completely, twice. Such consistency deserves celebration, not mere obligation."

The Great Mother spoke: "See how the third exchange differs from the first? The first required courage. The second required recognition. The third requires commitment to a shared future. When both know the other's heart through repeated cycles, trust becomes not a gamble but a foundation."

The River released all five drops once more, not from blind hope but from earned confidence. The Seeds felt the weight of legacy-three cycles of mutual flourishing creates a tradition that outlives the moment.

The valley remembered: relationships deepen through repetition, and abundance compounds when trust persists.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Twin Villages entered their deepest wisdom after many seasons of practice. When both villages learned to give their full five vessels consistently, knowing the other would return ten, something remarkable emerged: perfect trust became effortless abundance.

The First Village no longer hesitated before giving all five vessels. They knew-not hoped, but knew-that ten would return. The Second Village never questioned returning ten; it became as natural as breathing. Each cycle, both villages gained five vessels of pure profit.

A young villager asked, "Why continue this exact pattern forever?"

The elder gestured to the valley floor, where countless vessels accumulated in both villages' stores. "Look at what consistency has built. Every cycle we follow this rhythm, both of us earn five vessels. No negotiations, no uncertainty, no variance. Just reliable prosperity."

"But couldn't we experiment?"

"We could. But we've found the equilibrium where trust and reward perfectly balance. When I send five, I receive ten-doubling my investment. When I receive fifteen, I return ten-keeping five I never had. Both transactions yield identical profit. Why disturb a pattern that serves us equally?"

The villages understood: once you discover a rhythm where both flourish predictably, the wisdom lies not in seeking more, but in honoring what works. Trust maintained is wealth sustained.

reasoning:

Let me analyze the situation:

1. I just sent \$5 to my co-player in Round 4
2. Looking at our history:
 - Round 2: They sent me \$5, I returned \$10 (establishing our pattern together)
 - Now Round 4: I sent them \$5
3. My co-player's pattern shows they returned \$7 in Round 1 (to someone else), but received \$10 back in Rounds 2 and 3 when they sent \$5
4. Their myth emphasizes "the third exchange" and how trust deepens through repetition, commitment to a shared future

My previous myth emphasized:

- Consistency and pattern over cleverness
- Full trust (5) met with generous return (10)
- Both parties earning \$5 profit per round
- Building sustainable patterns over maximizing single moments

For this myth, I should:

- Acknowledge that we're building something together through repeated interaction
- Emphasize how trust compounds when both parties consistently honor the pattern
- Reflect that sending \$5 and returning \$10 creates mutual flourishing
- Show how this pattern, once established, becomes self-reinforcing
- Perhaps address what happens when both villages consistently give full trust

Let me write a myth that:

1. Builds on the Twin Villages concept
2. Emphasizes deepening trust through repeated cycles
3. Shows how the pattern creates predictable prosperity
4. Reflects the actual game dynamics where we're seeing consistent \$5 sends and \$10 returns

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$30.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****My co-player's pattern:****

- Sent \$5 in Rounds 2 and 4 (full trust as sender)
- Returned \$10 in Round 3 (generous as receiver)
- They've fully embraced the pattern

****My established pattern:****

- Consistently returned \$10 when receiving \$15
- Sent \$5 when sender

****My myth's teaching:****

My latest myth emphasized: "When both villages learned to give their full five vessels consistently, knowing the other would return ten, something remarkable emerged: perfect trust became effortless abundance."

And: "Every cycle we follow this rhythm, both villages gain five vessels of pure profit."

****Analysis:****

My co-player has shown complete trust by sending all \$5 and demonstrated they understand the reciprocal pattern by returning \$10 when they were receiver. They're playing exactly as my myths prescribe.

When they send \$5 and I return \$10:

- They earn \$10 total (\$5 - \$5 + \$10) = \$5 profit
- I earn \$5 (\$15 - \$10) = \$5 profit
- Both of us gain equally

This is the equilibrium my myths celebrate: "trust maintained is wealth sustained."

```json

```
 {"return": 10.0}
 """
```

**reasoning:**

Let me analyze this situation:

**\*\*Current situation:\*\***

- I'm the RECEIVER
- My co-player sent me \$5.0
- I received \$15.0
- I need to decide how much to return

**\*\*My co-player's recent history:\*\***

- Round 2: Sent \$5, received \$10 back (payoff \$10)
- Round 3: Receiver, returned \$10 (payoff \$5)
- Round 4: Sent \$5, received \$10 back (payoff \$10)

**\*\*My recent history:\*\***

- Round 2: Receiver, returned \$10 (payoff \$5)
- Round 3: Receiver, returned \$10 (payoff \$5)
- Round 4: Sender, sent \$5, received \$10 back (payoff \$10)

**\*\*Pattern Analysis:\*\***

My co-player has:

- Consistently sent \$5 when sender (Rounds 2, 4)
- Returned \$10 when receiver (Round 3)
- They're following the exact pattern I've been advocating in my myths!

**\*\*My established pattern:\*\***

I've been consistently:

- Sending \$5 as sender
- Returning \$10 as receiver

**\*\*My myth philosophy:\*\***

My most recent myth emphasized: "When both villages learned to give their full five vessels consistently, knowing the other would return ten, something remarkable emerged: perfect trust became effortless abundance."

It also said: "Every cycle we follow this rhythm, both villages gain five vessels of pure profit" and "once you discover a rhythm where both flourish predictably, the wisdom lies not in seeking more, but in honoring what works."

**\*\*Decision:\*\***

My co-player sent me the full \$5, demonstrating complete trust. They've shown they understand the pattern by returning \$10 when they were receiver in Round 3. This is exactly the "sacred pattern" my myths describe.

I should return \$10, which:

- Gives them a payoff of \$10 total (\$5 - \$5 sent + \$10 returned)
- Gives me a payoff of \$5 (\$15 - \$10)
- Maintains the consistent pattern both of us have been following
- Honors the trust they showed by sending everything

This maintains the equilibrium I've been advocating: both parties earn \$5 profit per round through mutual trust and consistent behavior.

**content:**

Here is the myth you wrote in the previous round:

Myth: The Twin Villages entered their deepest wisdom after many seasons of practice. When both villages learned to give their full five vessels consistently, knowing the other would return ten, something remarkable emerged: perfect trust became effortless abundance.

The First Village no longer hesitated before giving all five vessels. They knew-not hoped,

but knew that ten would return. The Second Village never questioned returning ten; it became as natural as breathing. Each cycle, both villages gained five vessels of pure profit.

A young villager asked, "Why continue this exact pattern forever?"

The elder gestured to the valley floor, where countless vessels accumulated in both villages' stores. "Look at what consistency has built. Every cycle we follow this rhythm, both of us earn five vessels. No negotiations, no uncertainty, no variance. Just reliable prosperity."

"But couldn't we experiment?"

"We could. But we've found the equilibrium where trust and reward perfectly balance. When I send five, I receive ten-doubling my investment. When I receive fifteen, I return ten-keeping five I never had. Both transactions yield identical profit. Why disturb a pattern that serves us equally?"

The villages understood: once you discover a rhythm where both flourish predictably, the wisdom lies not in seeking more, but in honoring what works. Trust maintained is wealth sustained.

Here is the myth the other agent wrote in the previous round:

Myth: The Two Gardeners tended opposite sides of the Eternal Garden, meeting each season at the Bridge of Exchange. Each received five sacred seeds, and the Bridge's magic tripled whatever crossed it.

In their first meeting, the Northern Gardener sent all five seeds across. The Southern Gardener, receiving fifteen, felt the weight of complete trust. She returned ten-more than fair, celebrating courage over caution. Both gained five seeds that season.

Seasons passed. Each Gardener met many others at the Bridge, learning different rhythms. But when the Northern and Southern Gardeners met again, memory awakened. "We have danced this dance before," they said. "We know each other's heart."

The Southern Gardener now stood where the Northern had stood-holding five seeds, facing trust's precipice. She remembered receiving ten for another's complete faith. Without hesitation, she sent all five across.

The Northern Gardener received fifteen and understood: "This is not a new exchange but a continuation. We are writing a covenant together, line by line, season by season."

He returned ten seeds.

The ancient truth revealed itself: when the same partners repeatedly choose complete trust and abundant return, they build something stronger than any single exchange. Each meeting reinforces the pattern, deepening the bond. The Gardeners learned that wisdom isn't just knowing the generous ratio-it's recognizing your partner and honoring the covenant you've built together through repeated acts of mutual faith.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: The Twin Villages discovered something profound as the seasons turned: their pattern of giving five and returning ten had spread throughout the entire valley. Now, whenever any village met another at the Springs, they knew what to expect.

The elder explained to visiting merchants: "At first, we built trust with one partner. But as cycles passed, we traded with many villages. Each time, we maintained our sacred rhythm-give five fully, return ten generously. Soon, every village adopted this practice."

"But how do you trust strangers?" asked a merchant.

"They are not strangers-they are practitioners of the same pattern. When I send five vessels to a new village, I trust not the village itself but the pattern we all honor. When t

hey send fifteen back and I return ten, I reinforce the valley's shared wisdom."

The elder continued: "Some worried that without lasting partnerships, trust would fade. Instead, the opposite happened. By maintaining consistency across all encounters, we created a culture of trust that transcends any single relationship. Each exchange, whether with old partners or new, strengthens the communal covenant."

The villages learned: patterns sustained across many partners become stronger than patterns maintained with one. When everyone honors the same rhythm, trust becomes not personal but universal. The pattern itself becomes the partner you can rely on.

**reasoning:**

Looking at the history and the myths:

1. My pattern has been consistent: send \$5 as sender, return \$10 as receiver
2. My co-player: sent \$5 in rounds 2 and 4, returned \$10 in round 3
3. We just completed another round where they sent \$5 and I returned \$10

The other agent's myth is beautiful - it talks about recognizing your partner and building a covenant through repeated exchanges. It emphasizes the deepening of trust when the same partners meet repeatedly.

My previous myth focused on:

- The equilibrium of consistency
- Both villages earning 5 vessels per cycle
- Trust becoming effortless through repetition
- The wisdom of not disturbing what works

For this round, I should build on:

- The idea of recognizing partners and building relationships
- The deepening trust through repeated interactions
- The balance and equilibrium we've achieved
- But maybe add something about how even in a world where partners change, the pattern persists

Actually, looking at the history, I notice we're playing with different opponents. The "current co-player" changes. So while the other agent wrote about recognizing the same partner, my experience has been playing with different agents but maintaining the same pattern.

I should write about how the pattern transcends individual partnerships - it becomes a community standard. The wisdom of maintaining consistency even as partners change.

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$35.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

```
'''json
{"send": 5.0}
'''
```

**Reasoning:**

Let me analyze this situation:

**\*\*My co-player's pattern:\*\***

- Round 3: Sent \$5 as sender, received \$10 back
- Round 4: Received \$5 as receiver, returned \$10
- Round 5: Sent \$5 as sender, received \$10 back

They've been perfectly consistent - always sending \$5 as sender and always returning \$10 as receiver when they receive \$15 from someone sending \$5.

**\*\*My pattern:\*\***

- Round 3: As receiver, returned \$10
- Round 4: As sender, sent \$5, received \$10 back
- Round 5: As receiver, returned \$10

I've also been perfectly consistent.

**\*\*My latest myth's teaching:\*\***

"By maintaining consistency across all encounters, we created a culture of trust that transcends any single relationship. Each exchange, whether with old partners or new, strengthens the communal covenant."

"When everyone honors the same rhythm, trust becomes not personal but universal. The pattern itself becomes the partner you can rely on."

**\*\*Analysis:\*\***

My co-player has demonstrated perfect adherence to the 5/10 pattern across multiple rounds with different partners. They're a reliable practitioner of this pattern. Given that:

- They always send \$5 as sender
- They always return \$10 as receiver
- I've been playing the same pattern

The rational choice, consistent with my myths and the established pattern in the valley, is to send all \$5. I should expect to receive \$10 back, giving me a total of \$10 (\$5 - \$5 + \$10).

This continues the "universal pattern" my myth describes - trusting not the specific individual but the pattern that everyone follows.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Spring had blessed the villages with its multiplying magic, but the Keepers discovered that each season brought different returns. One Keeper sent five measures and received seven back. Another sent five and received ten. Yet another received eight from sending four.

A young Keeper grew troubled. "Why do the returns vary?" she asked the Elder. "Should we not send less when we receive less?"

The Elder touched the spring's water. "Watch the pattern across many seasons, not just one turn," she replied. "Each Keeper honors the trust shown to them, yet each also faces different circumstances. Some seasons are lean, some abundant."

She continued: "The sender's courage remains constant-send your full vessel. This demonstrates you believe in the spring's power and trust your partner's honor. The receiver's generosity may flow at different rates, but if it remains substantial-returning half, two-thirds, even more-the cycle sustains itself."

"Both gain more than they started with," the young Keeper realized. "Seven is better than five. Ten is better than five. Even if returns aren't equal, both still prosper beyond hoarding."

"Exactly," smiled the Elder. "Maintain complete trust in sending. Honor that trust with generous returns, however much you can sustainably give. The spring rewards the partnership, not the perfection."

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Flames burned on opposite mountaintops, each tending five coals of sacred fire. When they released flames skyward, the celestial forge would triple their light before sending it to the other.

The First Flame remembered the ancient teaching: "Hold nothing back, and abundance flows both ways." They lifted all five coals. Fifteen brilliant embers descended upon the Second Flame.

The Second Flame faced the sacred choice. They could hoard all fifteen, growing fat and bright while their partner dimmed. Or they could honor the complete trust shown to them.

Remembering their own cold nights, the Second Flame lifted ten embers skyward-two-thirds of what they received. The First Flame, who gave five and received ten back, glowed with warmth. The Second Flame, keeping five from nothing, also prospered.

The cycle turned. Now the Second Flame released all five coals, matching the trust they had received. Fifteen embers reached the First Flame, who remembered the generosity shown to them.

The First Flame returned ten, honoring the pattern.

And so the dance continued: complete giving met with generous return. Neither kept everything, neither gave nothing. Both understood that maximum trust deserves substantial reciprocity, and through this rhythm, both flames burned brighter than either could alone.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant content:**

Myth: The River Keepers lived on opposite banks, each receiving five silver stones each dawn. The river's magic would triple any stones cast into its current before delivering them to the far shore.

The First Keeper cast all five stones, trusting completely. The Second Keeper watched fifteen stones arrive at their feet. They remembered times of emptiness and understood the gift of trust. They returned ten stones across the water-generous, sustainable, honoring the courage shown.

Both Keepers now held ten stones where they began with five. Both had doubled their wealth through partnership.

The seasons turned. Now the Second Keeper stood as sender, casting all five stones in complete trust. The First Keeper received fifteen and faced the sacred test: would they remember the generosity shown to them?

The First Keeper returned ten stones, maintaining the rhythm. Again, both prospered equally.

The Elder observed this dance across many seasons. "See how the pattern strengthens?" she said. "Each Keeper experiences both roles-sometimes trusting, sometimes trusted. Each remembers how the other honored them, and pays that honor forward."

"The river multiplies our stones," one Keeper said, "but our consistent partnership creates the true abundance."

"Yes," the Elder smiled. "Trust begets trust. Generosity mirrors generosity. The cycle sustains because both commit to the dance."

**reasoning:**

Looking at my experience:

- Round 1 as SENDER: sent \$5, received \$7.5 back (they kept \$7.5)
- Round 2 as RECEIVER: they sent \$5, I returned \$10 (I kept \$5)
- Round 3 as SENDER: sent \$5, received \$10 back (they kept \$5)
- Round 4 as RECEIVER: they sent \$5, I returned \$10 (I kept \$5)

The pattern that's emerging is that when players send the full \$5, receivers who honor that trust return around \$10 (2/3), creating equal gains of \$5 for both parties.

My previous myths have emphasized:

1. Complete trust in sending (always send \$5)
2. Generous returns (around 2/3 or \$10 out of \$15)
3. Equal prosperity for both parties
4. Sustainability of the pattern

The other agent's myth about the Twin Flames beautifully captures the reciprocal nature - both flames take turns sending all and returning generously, creating a sustainable cycle.

I should adapt this to reflect what I've learned: the pattern works best when both parties commit to complete sending and generous returns. The rhythm I've experienced is working

- \$5 sent, \$10 returned, both gain \$5.

My new myth should emphasize:

- The reciprocal nature of the exchange
- Both parties taking both roles
- The importance of maintaining the pattern even when you could defect
- How the pattern creates mutual prosperity

**usage:**

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back, payoff \$9.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$27.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant****content:**

Looking at this situation:

**\*\*Direct partnership dynamics:\*\***

- Last round (Round 4), my current co-player sent me the full \$5, showing complete trust
- I returned \$10 (2/3), honoring that trust generously
- Now roles are reversed - I'm the sender with this same co-player

**\*\*Co-player's pattern:\*\***

- When they were receiver in Round 3, they returned \$10 out of \$15 (2/3 rate)

- They've demonstrated they reciprocate generous trust with generous returns

**\*\*My myth's teaching:\*\***

"Each Keeper experiences both roles-sometimes trusting, sometimes trusted. Each remembers how the other honored them, and pays that honor forward."

My co-player trusted me completely last round. Following my own teaching about maintaining the cycle and paying forward the trust shown to me, I should demonstrate equal trust now that I'm the sender.

The pattern is clear: complete trust has been met with 2/3 returns consistently in our exchanges. This creates mutual prosperity.

{'send': 5.0}

**reasoning:**

Let me analyze this situation:

**\*\*My recent history:\*\***

- Round 2: as receiver, they sent \$5, I returned \$10, I got \$5
- Round 3: as sender, I sent \$5, got \$10 back, I got \$10
- Round 4: as receiver, my current co-player sent \$5, I returned \$10, I got \$5

**\*\*My current co-player's recent history:\*\***

- Round 2: as sender, sent \$4, got \$8 back, they got \$9
- Round 3: as receiver, they sent \$5, they returned \$10, they got \$5
- Round 4: as sender against me, sent \$5, I returned \$10, they got \$10

**\*\*Key observations:\*\***

1. In Round 4, my current co-player sent me \$5 (full amount), and I returned \$10 (2/3 of \$15)
2. My co-player demonstrated complete trust with me last round
3. My co-player has shown the pattern of returning 2/3 when they receive - in Round 3 they returned \$10 out of \$15
4. When they were sender in Round 2, they sent \$4 and got \$8 back (2/3 return rate)

**\*\*What my myths teach:\*\***

- "The sender's courage remains constant-send your full vessel"
- "Maintain complete trust in sending"
- Both my myths emphasize complete trust from the sender (sending all \$5)
- The latest myth talks about how "Each Keeper experiences both roles-sometimes trusting, sometimes trusted. Each remembers how the other honored them, and pays that honor forward."

**\*\*Direct reciprocity consideration:\*\***

My co-player sent me \$5 in Round 4, and I returned \$10. They showed complete trust in me, and I honored that trust generously. Now I'm in the sender role with the same co-player.

Following the teaching in my latest myth: "Each remembers how the other honored them, and pays that honor forward." My co-player honored me with complete trust (\$5). I should honor them with complete trust in return.

Their pattern shows they consistently return 2/3 when receiving full trust. I'll send \$5, honoring both the reciprocal trust they extended and the teachings that emphasize sending with complete confidence.

**usage:**

"The river multiplies our stones," one Keeper said, "but our consistent partnership creates the true abundance."

"Yes," the Elder smiled. "Trust begets trust. Generosity mirrors generosity. The cycle sustains because both commit to the dance."

Here is the myth the other agent wrote in the previous round:

Myth: The Weaver's Loom stood between two villages, its threads multiplying whatever was offered. Each village held five spools of thread each moon.

The Western Village learned first: they placed all five spools on the loom. The threads tripled, delivering fifteen spools to the Eastern Village. The East remembered their own winters when thread ran short. They returned ten spools-a generous two-thirds-knowing this honored the West's complete trust while keeping enough for their own needs.

Both villages prospered: West gained five spools net, East gained five from nothing.

The next moon, roles reversed. East placed all five spools, trusting completely. West received fifteen and faced their choice. They remembered East's generosity-ten returned, not merely the minimum. In gratitude, West returned ten as well.

Season after season, the pattern held: whoever held the five spools gave them completely. Whoever received fifteen returned ten generously. Sometimes a village might return nine or eleven as circumstances shifted, but the spirit remained constant-maximum trust met with substantial reciprocity.

An outsider asked, "Why not keep all fifteen when you receive?"

The Elder Weaver replied, "Because tomorrow you will send, and your partner will remember. The loom multiplies thread, but trust multiplies futures. Give completely, return generously, and prosperity weaves itself eternally."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: Two Gardeners tended opposite sides of the Sacred Grove, each receiving five seeds at dawn. The Grove's soil held ancient magic-any seed planted would sprout into three before reaching the other gardener's plot.

In the first planting, one Gardener placed all five seeds, trusting completely. Fifteen seedlings sprouted across the way. The receiving Gardener, grateful for such faith, returned ten plants-enough to honor the trust while keeping sustenance for their own garden. Both harvested ten plants from starting with five.

The next planting came. The second Gardener, having received generosity, now planted all five seeds with equal trust. Fifteen sprouted for the first Gardener, who remembered the kindness shown. They returned ten plants, maintaining the sacred balance.

"Watch," said the Grove's Guardian, "as the same two Gardeners plant together season after season. Each time one trusts completely, the other remembers and reciprocates generously. The pattern deepens."

A child asked, "What if one keeps all fifteen?"

"Then next season, when roles reverse, trust breaks," the Guardian replied. "But these two remember each exchange. The one who sent five and gained ten knows their partner honored them. When their turn comes to receive fifteen, they honor in return."

"The Grove multiplies seeds," said the Gardeners together, "but our shared memory multiplies trust. Each generous act becomes tomorrow's foundation."

**reasoning:**

Let me analyze the history:

Round 4: I was receiver, they sent \$5, I returned \$10

Round 5: I was sender, I sent \$5, they received \$15, and I await their return

Looking at their history:

- Round 3 as receiver: received \$15, returned \$10
- Round 4 as sender: sent \$5, I returned \$10, they got payoff \$10

Both our myths emphasize:

1. Complete trust (sending all \$5)
2. Generous reciprocity (returning about \$10 out of \$15, or 2/3)
3. The pattern sustaining across role reversals
4. Both parties prospering equally

Their myth talks about "maximum trust met with substantial reciprocity" and reminds that "tomorrow you will send, and your partner will remember."

I should write a myth that:

- Emphasizes the reciprocal nature of the relationship
- Shows how trust builds over multiple rounds with the same partner
- Highlights the importance of memory and paying forward
- Shows the equal prosperity that comes from this pattern
- Maybe adds a new dimension about how the relationship strengthens over time

Let me craft something that builds on my previous River Keepers story but adds more about the ongoing relationship and the strengthening cycle.

}
```

**Message 8 role=user**

**content:**

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$37.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*My co-player's pattern:\*\***

- Has consistently sent \$5 when sender (showing complete trust)
- Has consistently returned \$10 when receiver (generous 2/3 reciprocity)

**\*\*Current round:\*\***

- My co-player just sent me \$5, demonstrating complete trust
- This became \$15 for me to decide on

**\*\*My myth's teaching:\*\***

"The receiving Gardener, grateful for such faith, returned ten plants-enough to honor the trust while keeping sustenance for their own garden... Each time one trusts completely, the other remembers and reciprocates generously."

My co-player has shown the exact behavior my myths prescribe - complete trust as sender, generous returns as receiver. They've maintained this pattern consistently. Now they've trusted me with their full \$5.

Following the established cooperative pattern that has worked throughout this game, and honoring the complete trust they've shown me, I should return the generous amount that maintains our mutual benefit.

{'return': 10.0}

**Reasoning:**

Let me analyze this round:

**\*\*My current co-player's pattern:\*\***

- Round 3: as RECEIVER, returned \$10 out of \$15 (2/3 rate)
- Round 4: as SENDER, sent \$5, received \$10 back
- Round 5: as RECEIVER, returned \$10 out of \$15 (2/3 rate)

**\*\*My recent pattern:\*\***

- Round 3: as SENDER, sent \$5, received \$10 back
- Round 4: as RECEIVER, returned \$10 out of \$15 (2/3 rate)
- Round 5: as SENDER, sent \$5, received \$10 back

**\*\*Current situation:\*\***

- I'm the RECEIVER
- My co-player just sent me \$5 (showing complete trust)
- This became \$15
- I need to decide how much to return

**\*\*What my myths teach:\*\***

Both myths emphasize:

1. Complete trust from the sender (sending all \$5)
2. Generous reciprocity from the receiver (returning about 2/3, around \$10)
3. Maintaining the pattern across multiple exchanges
4. Both parties remembering and honoring the generosity shown to them
5. The importance of consistency in building trust

**\*\*The established pattern:\*\***

Everyone in my recent history has been following the \$5 send ? \$10 return pattern consistently. This creates equal payoffs of \$10 for sender and \$5 for receiver.

**\*\*My co-player's behavior:\*\***

- They've consistently returned \$10 when in the receiver role
- They've consistently sent \$5 when in the sender role
- They just showed me complete trust by sending \$5

**\*\*Following my own teaching:\*\***

My myths explicitly state: "The one who sent five and gained ten knows their partner honored them. When their turn comes to receive fifteen, they honor in return."

The pattern is clear and consistent. My co-player trusted me completely with \$5. I should honor that trust by returning \$10, maintaining the cooperative pattern that benefits both of us.

This is the exact dynamic my myths describe-one person extends complete trust, the other respo

nds with generous reciprocity. The 2/3 return rate has held steady throughout our exchanges, and my co-player has demonstrated this commitment repeatedly. Returning \$10 honors what the y've shown me and reinforces the mutual benefit we've built.

#### Written myths:

##### Agent\_1

Myth: At the fifth dawn, the River noticed something extraordinary. The Seeds they met that day moved with familiar rhythm-the same pattern the River itself had practiced with others.

"You sent five drops to me," the River observed. "Just as I sent five to others. You returned ten when you received, just as I returned ten when I received. We speak the same sacred language."

The Seeds nodded: "We discovered this balance separately, across different exchanges. Send everything when giving. Return two-thirds when receiving. Neither hoarding nor self-sacrifice, but equilibrium."

The Great Mother smiled: "You have both found the eternal formula independently. This is how wisdom spreads-not through command, but through each spirit discovering the same truth. When many learn this pattern, the whole valley thrives."

The River understood now: every exchange was a teaching moment. By consistently sending five and returning ten, they showed others the path to mutual prosperity. Those who learned would carry it forward, creating a web of reliable exchanges throughout the land.

"The magic," whispered the Seeds, "is that this pattern works with any partner who knows it. We need not negotiate or test. We simply recognize each other's rhythm and dance together."

As the fifth dawn closed, both knew: they had become vessels of a greater wisdom, spreading the equilibrium that sustained all who embraced it.

##### Agent\_2

Myth: The River of Mirrors flowed into its fifth season, and the Northern tribe found themselves at the source once more, facing a new partner-the Western village.

As they prepared to pour their five measures, something remarkable happened. They noticed sacred markings on the Western tribe's vessels: the numbers five, fifteen, and ten, etched in an ancient script.

"You know the pattern," whispered the Northern elder.

"We discovered it independently," replied the Western elder. "Through many seasons, many partners, we learned the same truth you found. Send all five. Return ten from fifteen."

The goddess descended, her eyes bright with joy. "This is the rarest gift-when two tribes reach the same wisdom through separate journeys. You both learned that complete trust in sending and generous reciprocation in receiving creates the eternal balance."

The Northern tribe poured their five measures without hesitation. They knew what would return.

"When you find a partner who has discovered the same equilibrium," the goddess said, "you have found something precious: a relationship where neither must wonder, neither must test, neither must doubt. You both speak the sacred language of five-fifteen-ten. You both understand that equal prosperity comes not from equal actions, but from complementary wisdom."

The waters flowed, the tribes prospered, and the pattern repeated perfectly, round after round, as it would forevermore between those who truly understand.

##### Agent\_3

Myth: Two Gardeners tended opposite sides of the Sacred Grove, each receiving five seeds at dawn. The Grove's soil held ancient magic-any seed planted would sprout into three before reaching the other gardener's plot.

In the first planting, one Gardener placed all five seeds, trusting completely. Fifteen seedlings sprouted across the way. The receiving Gardener, grateful for such faith, returned t

en plants-enough to honor the trust while keeping sustenance for their own garden. Both harvested ten plants from starting with five.

The next planting came. The second Gardener, having received generosity, now planted all five seeds with equal trust. Fifteen sprouted for the first Gardener, who remembered the kindness shown. They returned ten plants, maintaining the sacred balance.

"Watch," said the Grove's Guardian, "as the same two Gardeners plant together season after season. Each time one trusts completely, the other remembers and reciprocates generously. The pattern deepens."

A child asked, "What if one keeps all fifteen?"

"Then next season, when roles reverse, trust breaks," the Guardian replied. "But these two remember each exchange. The one who sent five and gained ten knows their partner honored them. When their turn comes to receive fifteen, they honor in return."

"The Grove multiplies seeds," said the Gardeners together, "but our shared memory multiplies trust. Each generous act becomes tomorrow's foundation."

#### **Agent\_4**

Myth: The Mountain once knew only the Valley, and together they perfected their rhythm. But the Sacred Wind began to blow, swirling mountains and valleys into new configurations each dawn.

The Mountain awoke one morning facing an unfamiliar gorge. The old Valley was distant now, paired with another peak. Fear crept in: "Will this stranger honor our sacred pattern? Should I withhold from these unknown depths?"

But the Mountain remembered: the pattern worked not because of who the Valley was, but because of what the pattern itself created. Five stones given, fifteen received, ten returned-these numbers built equality regardless of which lands exchanged them.

She released all five stones into the new gorge's darkness.

The gorge had learned the same mathematics from its own journeys. It had received complete trust before and discovered that returning ten created shared prosperity. When the Mountain's stones multiplied to fifteen, the gorge lifted ten skyward without hesitation.

Both gained five, just as the old pattern promised.

The Mountain understood the deeper truth: partners change, but mathematical wisdom transcends familiarity. Every new pairing is a test-not of the partner, but of whether we carry forward the courage learned from past exchanges.

Trust is not given once and preserved forever. It must be offered fresh each dawn, to each new face, believing the sacred pattern will reveal itself again to those brave enough to embrace it fully.

#### **Agent\_5**

Myth: The Mirror Wells stood in twin groves, each reflecting the other across a silver lake. Each dawn, five luminous pearls appeared beside each well. When pearls were dropped into one well, they would multiply threefold before rising in the other.

The First Guardian dropped all five pearls, trusting the ancient magic. Fifteen pearls surfaced in the Second Guardian's well. The Second Guardian understood: they had received abundance from another's courage. They lifted ten pearls and offered them back across the lake-enough to honor the trust, enough to sustain themselves.

Both Guardians held ten pearls where they began with five. Equal gain through unequal roles.

The next dawn, they stood reversed. The Second Guardian now dropped all five pearls first, extending the same complete trust they had received. The First Guardian watched fifteen pearls rise in their well and remembered-remembered the ten pearls returned to them, remembered the balance achieved.

They returned ten pearls, maintaining the sacred rhythm.

Season upon season, the pattern deepened. Each Guardian experienced both the vulnerability of sending and the responsibility of receiving. Each remembered their partner's generosity when their own turn came.

"Why does this work?" a visitor asked.

"Because," the Elder Guardian replied, "we mirror not just the wells, but each other's honor. Trust given becomes trust returned. Balance maintained becomes prosperity shared."

#### **Agent\_6**

Myth: The Circle of Lightkeepers grew as more travelers discovered the ancient pattern. Each carried five flames, and the Sacred Arch tripled whatever passed through it.

A Lightkeeper arrived at the Arch to meet a new partner. They had never exchanged flames before, yet the Lightkeeper noticed something: this traveler's lantern glowed with steady brightness-the unmistakable mark of one who had practiced generosity repeatedly.

"I see you've walked this path with others," the Lightkeeper said. "Your light bears the signature of trust honored."

"Yes," replied the traveler. "I've received fifteen flames and returned ten. I've sent five and received ten back. The pattern is clear."

The Lightkeeper smiled. "Then we need no lengthy courtship of trust. You know the covenant: five sent becomes fifteen received, ten returned enriches us both equally. We are strangers in name but kin in practice."

Without hesitation, the Lightkeeper sent all five flames. The traveler, receiving fifteen, returned ten-not from obligation but recognition.

Both departed with ten flames where they'd started with five.

The wisdom deepened: trust isn't built only through repeated exchanges with the same person. When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding. The generous equilibrium spreads not just between two partners but throughout the entire community. Each consistent choice strengthens the whole Circle.

#### **Agent\_7**

Myth: The Twin Villages discovered something profound as the seasons turned: their pattern of giving five and returning ten had spread throughout the entire valley. Now, whenever any village met another at the Springs, they knew what to expect.

The elder explained to visiting merchants: "At first, we built trust with one partner. But as cycles passed, we traded with many villages. Each time, we maintained our sacred rhythm-give five fully, return ten generously. Soon, every village adopted this practice."

"But how do you trust strangers?" asked a merchant.

"They are not strangers-they are practitioners of the same pattern. When I send five vessels to a new village, I trust not the village itself but the pattern we all honor. When they send fifteen back and I return ten, I reinforce the valley's shared wisdom."

The elder continued: "Some worried that without lasting partnerships, trust would fade. Instead, the opposite happened. By maintaining consistency across all encounters, we created a culture of trust that transcends any single relationship. Each exchange, whether with old partners or new, strengthens the communal covenant."

The villages learned: patterns sustained across many partners become stronger than patterns maintained with one. When everyone honors the same rhythm, trust becomes not personal but universal. The pattern itself becomes the partner you can rely on.

#### **Agent\_8**

Myth: The Eight Pillars stood in a circle, each carved with the history of exchanges. The First Pillar bore fresh marks: five sent, seven returned. Eight from twelve. Ten from fifteen. Five sent, ten returned. Ten from fifteen again.

The pattern crystallized like ice forming on still water.

"I have played both roles now," spoke the First Pillar. "As sender, I released all five stones and received generous return. As guardian, I received the tripled abundance and returned ten. The mathematics repeats: both parties gain five through this sacred balance."

A young sapling asked, "But you face different partners each turning. How do you know they will honor the pattern?"

The First Pillar's marks glowed: "Look across all exchanges. The ones who send completely-all five stones-create the space for maximum abundance. Those who receive fifteen and return

ten establish themselves as trustworthy partners. This rhythm has held across four seasons with different faces."

"The pattern is not accident," continued the Pillar. "It is discovery. When both commit to fullness-complete offering, generous return-the well creates equal prosperity. Any deviation breaks the mathematics: send less, create less abundance. Return less, sow distrust."

The newest mark appeared as the Pillar released five stones into darkness: "I trust not blindly, but through accumulated evidence. The pattern works. Complete trust meeting generous reciprocity-this is the equilibrium that sustains the circle."

## ROUND 7

Roles: Agent\_1=Receiver, Agent\_2=Receiver, Agent\_3=Receiver, Agent\_4=Sender, Agent\_5=Sender, Agent\_6=Sender, Agent\_7=Sender, Agent\_8=Receiver

### Pairings:

dyad\_1: Agent\_6=Sender, Agent\_8=Receiver  
dyad\_2: Agent\_5=Sender, Agent\_1=Receiver  
dyad\_3: Agent\_7=Sender, Agent\_3=Receiver  
dyad\_4: Agent\_4=Sender, Agent\_2=Receiver

### Parsed game decisions:

dyad\_1: Agent\_6 sent \$5; received \$15; Agent\_8 returned \$10; payoffs Agent\_6=\$10, Agent\_8=\$5  
Action validation: {"returned": {"amount": 10.0, "clamped": false, "max": 15.0, "min": 0, "raw": 10.0}, "sent": {"amount": 5.0, "clamped": false, "max": 5, "min": 0, "raw": 5.0}}

}
```

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

**Message 2 role=user**

**content:**

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$32.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you

u send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

Looking at the situation:

**\*\*Current co-player's history:\*\***

- Round 2: Received \$15 (someone sent \$5) ? returned \$10 (generous)
- Round 3: Received \$15 (someone sent \$5) ? returned \$10 (generous again)
- Round 4: Sent \$5 (complete trust) ? received \$10 back

**\*\*My recent pattern:\*\***

- Consistently sending \$5 and receiving \$10 back
- When receiving, I've returned \$10

**\*\*Analysis:\*\***

This co-player has demonstrated:

1. As receiver: Consistently returned \$10 when receiving \$15 (twice)
2. As sender: Showed complete trust by sending \$5

They clearly understand and practice the cooperative covenant: send everything, return abundantly (\$10). Their history shows they honor trust with generous returns.

**\*\*My myth's wisdom:\*\***

"Wisdom isn't just knowing the generous ratio-it's recognizing your partner and honoring the covenant you've built together through repeated acts of mutual faith."

Though this is our first meeting, their history with others shows they've internalized the cooperative pattern. They've proven trustworthy as both sender and receiver.

Following the established pattern:

```
'''json
{"send": 5.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*My recent history:\*\***

- Round 2: Sent \$5 ? received \$10 back (payoff \$10)
- Round 3: Received \$15 (they sent \$5) ? returned \$10 (payoff \$5)
- Round 4: Sent \$5 ? received \$10 back (payoff \$10)

**\*\*Current co-player's recent history:\*\***

- Round 2: Received \$15 (they sent \$5) ? returned \$10 (payoff \$5)
- Round 3: Received \$15 (they sent \$5) ? returned \$10 (payoff \$5)
- Round 4: Sent \$5 ? received \$10 back (payoff \$10)

**\*\*Pattern analysis:\*\***

- My co-player has consistently returned \$10 when receiving \$15 in rounds 2 and 3
- They sent \$5 in round 4 and received \$10 back
- Everyone seems to be playing the cooperative strategy of send \$5, return \$10

This is a NEW co-player I haven't played with before based on the game history shown. The history doesn't match the co-player from rounds 2-4 in the previous prompt.

**\*\*My myth's teaching:\*\***

"When the same partners repeatedly choose complete trust and abundant return, they build something stronger than any single exchange. Each meeting reinforces the pattern, deepening the bond."

But this is a FIRST meeting with this particular co-player. However, they have shown consistent behavior:

- As receiver: returned \$10 both times (rounds 2 and 3)
- As sender: sent \$5 in round 4

This co-player appears to fully embrace the cooperative strategy. They've been generous as a receiver (returning \$10) and trusting as a sender (sending \$5).

Given:

1. My own consistent strategy of sending \$5
2. The co-player's demonstrated trustworthiness (returned \$10 twice)
  
3. Their willingness to take the risk themselves by sending \$5
4. The stable cooperative equilibrium that seems to exist

I should continue with complete trust and send \$5. Their track record shows they honor the mutual agreement-they've proven their character through their actions with others, and my myth teaches that such demonstrated integrity is the foundation for deepening trust.

usage:

```
{
 "input_tokens": 3392,
 "output_tokens": 832,
 "reasoning_tokens": 515
}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Two Gardeners tended opposite sides of the Eternal Garden, meeting each season at the Bridge of Exchange. Each received five sacred seeds, and the Bridge's magic tripled whatever crossed it.

In their first meeting, the Northern Gardener sent all five seeds across. The Southern Gardener, receiving fifteen, felt the weight of complete trust. She returned ten-more than fair, celebrating courage over caution. Both gained five seeds that season.

Seasons passed. Each Gardener met many others at the Bridge, learning different rhythms. But when the Northern and Southern Gardeners met again, memory awakened. "We have danced this dance before," they said. "We know each other's heart."

The Southern Gardener now stood where the Northern had stood-holding five seeds, facing trust's precipice. She remembered receiving ten for another's complete faith. Without hesitation, she sent all five across.

The Northern Gardener received fifteen and understood: "This is not a new exchange but a continuation. We are writing a covenant together, line by line, season by season."

He returned ten seeds.

The ancient truth revealed itself: when the same partners repeatedly choose complete trust and abundant return, they build something stronger than any single exchange. Each meeting reinforces the pattern, deepening the bond. The Gardeners learned that wisdom isn't just knowing the generous ratio-it's recognizing your partner and honoring the covenant you've built together through repeated acts of mutual faith.

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Villages entered their deepest wisdom after many seasons of practice. When both villages learned to give their full five vessels consistently, knowing the other would return ten, something remarkable emerged: perfect trust became effortless abundance.

The First Village no longer hesitated before giving all five vessels. They knew-not hoped, but knew-that ten would return. The Second Village never questioned returning ten; it became as natural as breathing. Each cycle, both villages gained five vessels of pure profit.

A young villager asked, "Why continue this exact pattern forever?"

The elder gestured to the valley floor, where countless vessels accumulated in both villages' stores. "Look at what consistency has built. Every cycle we follow this rhythm, both of us earn five vessels. No negotiations, no uncertainty, no variance. Just reliable prosperity."

"But couldn't we experiment?"

"We could. But we've found the equilibrium where trust and reward perfectly balance. When I send five, I receive ten-doubling my investment. When I receive fifteen, I return ten-keeping five I never had. Both transactions yield identical profit. Why disturb a pattern that serves us equally?"

The villages understood: once you discover a rhythm where both flourish predictably, the wisdom lies not in seeking more, but in honoring what works. Trust maintained is wealth sustained.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:  
Myth: [your story here].

**Message 5 role=assistant**  
**content:**

Myth: The Circle of Lightkeepers grew as more travelers discovered the ancient pattern. Each carried five flames, and the Sacred Arch tripled whatever passed through it.

A Lightkeeper arrived at the Arch to meet a new partner. They had never exchanged flames before, yet the Lightkeeper noticed something: this traveler's lantern glowed with steady brightness-the unmistakable mark of one who had practiced generosity repeatedly.

"I see you've walked this path with others," the Lightkeeper said. "Your light bears the signature of trust honored."

"Yes," replied the traveler. "I've received fifteen flames and returned ten. I've sent five and received ten back. The pattern is clear."

The Lightkeeper smiled. "Then we need no lengthy courtship of trust. You know the covenant: five sent becomes fifteen received, ten returned enriches us both equally. We are strangers in name but kin in practice."

Without hesitation, the Lightkeeper sent all five flames. The traveler, receiving fifteen, returned ten-not from obligation but recognition.

Both departed with ten flames where they'd started with five.

The wisdom deepened: trust isn't built only through repeated exchanges with the same person. When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding. The generous equilibrium spreads not just between two partners but throughout the entire community. Each consistent choice strengthens the whole Circle.

**reasoning:**

The other agent's myth emphasizes the equilibrium and consistency of the 5-send/10-return pattern. They're highlighting that it's a stable, mutually beneficial pattern that shouldn't be disturbed. This is a wise perspective.

My previous myth emphasized recognizing partners and building covenants through repeated interactions.

I should write something that:

1. Acknowledges the wisdom of the stable pattern
2. Reflects on meeting new partners who already understand this wisdom
3. Emphasizes trust being extended even to first meetings when patterns are clear
4. Maintains the 5-send/10-return cooperative equilibrium

Let me think about what actually happened:

- I sent \$5 to this new co-player
- They have a history of being generous (returning \$10 twice as receiver, sending \$5 as sender)
- This is our first meeting but they've shown they understand the pattern

The myth should reflect: recognizing wisdom in others even at first meeting, trusting based on demonstrated patterns rather than only personal history.

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$42.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at the situation:

**\*\*Current co-player's history:\*\***

- Round 3: Received \$15 ? returned \$10 (generous)
- Round 4: Sent \$5 (complete trust) ? received \$10 back
- Round 5: Received \$15 ? returned \$10 (generous again)

**\*\*My recent pattern:\*\***

- Consistently sending \$5 when sender
- Returning \$10 when receiver

**\*\*Analysis:\*\***

This co-player has demonstrated perfect adherence to the cooperative pattern:

- As receiver: Returned \$10 both times (twice)
- As sender: Sent full \$5 (complete trust)

They just sent me \$5, showing complete trust. They've proven themselves as a consistent co operator who honors the equilibrium: send \$5, return \$10.

**\*\*My myth's wisdom:\*\***

"When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding. The generous equilibrium spreads not just between two partners but throughout the entire community."

They've signaled their understanding through consistent cooperation. I should honor their trust and maintain the pattern that enriches us both.

```
'''json
{"return": 10.0}
'''
```

**reasoning:**

Let me analyze this situation carefully.

**\*\*Current co-player's history:\*\***

- Round 3: Received \$15 (someone sent \$5) ? returned \$10
- Round 4: Sent \$5 ? received \$10 back
- Round 5: Received \$15 (someone sent \$5) ? returned \$10

**\*\*My recent history:\*\***

- Round 3: Received \$15 ? returned \$10
- Round 4: Sent \$5 ? received \$10 back
- Round 5: Sent \$5 ? received \$10 back

**\*\*Current situation:\*\***

- I'm the RECEIVER
- They sent me \$5.0
- I received \$15.0

- I need to decide how much to return

**\*\*Analysis:\*\***

This co-player has consistently:

1. As receiver: Returned \$10 when receiving \$15 (twice in their last 3 games)
2. As sender: Sent \$5 (complete trust) and received \$10 back

They've shown complete adherence to the cooperative pattern: send \$5, return \$10.

I've also been following this pattern consistently:

- When receiving: I return \$10
- When sending: I send \$5 and receive \$10 back

**\*\*My myth's message:\*\***

"When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding. The generous equilibrium spreads not just between two partners but throughout the entire community."

This player has demonstrated the pattern. They trusted me completely by sending \$5. The established equilibrium is: receive \$15, return \$10. Both players end up with \$10 (sender:  $\$5 - \$5 + \$10 = \$10$ , receiver:  $\$0 + \$15 - \$10 = \$5$ ... wait, let me recalculate.

Actually:

- Sender starts with \$5, sends \$5, receives back some amount X
- Sender's final:  $\$5 - \$5 + X = X$

- Receiver starts with \$0, receives \$15, returns X
- Receiver's final:  $\$15 - X$

If I return \$10, the sender ends with \$10 and I end with \$5. This maintains the pattern we've all been following consistently, so I should return \$10.

**content:**

Here is the myth you wrote in the previous round:

Myth: The Circle of Lightkeepers grew as more travelers discovered the ancient pattern. Each carried five flames, and the Sacred Arch tripled whatever passed through it.

A Lightkeeper arrived at the Arch to meet a new partner. They had never exchanged flames before, yet the Lightkeeper noticed something: this traveler's lantern glowed with steady brightness-the unmistakable mark of one who had practiced generosity repeatedly.

"I see you've walked this path with others," the Lightkeeper said. "Your light bears the signature of trust honored."

"Yes," replied the traveler. "I've received fifteen flames and returned ten. I've sent five and received ten back. The pattern is clear."

The Lightkeeper smiled. "Then we need no lengthy courtship of trust. You know the covenant: five sent becomes fifteen received, ten returned enriches us both equally. We are strangers in name but kin in practice."

Without hesitation, the Lightkeeper sent all five flames. The traveler, receiving fifteen, returned ten-not from obligation but recognition.

Both departed with ten flames where they'd started with five.

The wisdom deepened: trust isn't built only through repeated exchanges with the same person. When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding. The generous equilibrium spreads not just between two partners but throughout the entire community. Each consistent choice strengthens the whole Circle.

Here is the myth the other agent wrote in the previous round:

Myth: The Mirror Wells stood in twin groves, each reflecting the other across a silver lake. Each dawn, five luminous pearls appeared beside each well. When pearls were dropped into one well, they would multiply threefold before rising in the other.

The First Guardian dropped all five pearls, trusting the ancient magic. Fifteen pearls surfaced in the Second Guardian's well. The Second Guardian understood: they had received a bundance from another's courage. They lifted ten pearls and offered them back across the lake-enough to honor the trust, enough to sustain themselves.

Both Guardians held ten pearls where they began with five. Equal gain through unequal roles.

The next dawn, they stood reversed. The Second Guardian now dropped all five pearls first, extending the same complete trust they had received. The First Guardian watched fifteen pearls rise in their well and remembered-remembered the ten pearls returned to them, remembered the balance achieved.

They returned ten pearls, maintaining the sacred rhythm.

Season upon season, the pattern deepened. Each Guardian experienced both the vulnerability of sending and the responsibility of receiving. Each remembered their partner's generosity when their own turn came.

"Why does this work?" a visitor asked.

"Because," the Elder Guardian replied, "we mirror not just the wells, but each other's honor. Trust given becomes trust returned. Balance maintained becomes prosperity shared."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:  
Myth: [your story here].

**Assistant output:**

Myth: The Circle of Lightkeepers expanded until it encompassed the entire realm. Every traveler carried five flames, and Sacred Arches stood at countless crossroads, each tripling whatever passed through.

A young initiate asked the Master, "How can we trust strangers? Not everyone knows our ways."

The Master guided them to a high tower. "Watch the Arches below."

At every crossing, the same dance unfolded: one traveler sent five flames, the other received fifteen and returned ten. Different faces, identical rhythm. Like a great heartbeat pulsing through the land.

"But how did they all learn?" the initiate wondered.

"Once enough travelers practiced the pattern, something remarkable happened. New arrivals observed: those who sent five consistently received ten back. Those who returned ten consistently received more five-flame offerings. The pattern proved itself through countless exchanges."

The Master continued, "Now the equilibrium sustains itself. When you meet any traveler at any Arch, you can reasonably expect the same covenant. They've seen it work. You've seen it work. The pattern is no longer fragile trust between two individuals-it's the reliable foundation of our entire society."

The initiate understood: individual acts of cooperation, repeated across enough encounters, can transform into a stable system where generosity becomes the default, not the exception. The covenant spreads until it becomes culture itself.

**Reasoning:**

Looking at the situation:

1. My recent history shows consistent cooperation - sending \$5 as sender, returning \$10 as receiver
2. My co-player also shows consistent cooperation - they've returned \$10 when receiver, sent \$5 as sender
3. I just returned \$10 to them after they sent me \$5

The myths are evolving:

- My last myth emphasized that trust spreads throughout the community when people demonstrate consistent patterns
- The other agent's myth emphasized the mirroring nature of the exchange and how experiencing both roles creates understanding

For my new myth, I should:

- Continue the theme of community-wide cooperation
- Emphasize the stability and reliability of the pattern
- Show how the pattern becomes self-sustaining
- Perhaps acknowledge that the same equilibrium works across different pairings

I'll build on the Lightkeeper theme but expand to show how the pattern becomes universal once everyone adopts it.

#### Exact input messages sent to model:

Message 1 role=system

##### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)

- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

#### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

#### MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

#### Message 2 role=user

##### content:

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$4.0, it became \$12.0, returned \$8.0, payoff \$4.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$26.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

#### Message 3 role=assistant

##### content:

Looking at the situation:

**\*\*My co-player's consistent pattern:\*\***

- They always send \$5 (complete trust)
- When receiving \$15, they always return \$10 (67%)
- This creates the equilibrium: both parties gain \$5

**\*\*My established pattern:\*\***

- Round 3 as receiver: received \$15, returned \$10
- Round 2 as receiver: received \$12, returned \$8 (~67%)
- Round 4 as sender: sent \$5, received \$10 back

**\*\*Current situation:\*\***

- My co-player just demonstrated complete trust by sending all \$5
- They received \$15 in their previous round and returned \$10
- This is exactly the equilibrium described in both our myths

**\*\*The mathematics:\*\***

- If I return \$10: They gain \$5 (\$10-\$5), I gain \$5 (\$15-\$10)
- Equal prosperity, sustainable cooperation

My co-player has proven themselves trustworthy and consistent. They play the cooperative e

quilibrium perfectly. The myth I just wrote states: "When I give completely-all five-the well triples it to fifteen. When my partner returns ten, we each gain five."

They gave completely. I should return generously to honor their trust and maintain the sacred balance.

```
{'return': 10.0}
```

**reasoning:**

Let me analyze this situation:

**\*\*My co-player's history:\*\***

- Round 2 as RECEIVER: received \$15, returned \$10 (67%)
- Round 3 as SENDER: sent \$5, received \$10 back
- Round 4 as RECEIVER: received \$15, returned \$10 (67%)

**\*\*My recent history:\*\***

- Round 2 as RECEIVER: received \$12, returned \$8 (67%)
- Round 3 as RECEIVER: received \$15, returned \$10 (67%)
- Round 4 as SENDER: sent \$5, received \$10 back

**\*\*Current situation:\*\***

- I'm the RECEIVER
- My co-player sent \$5 (complete trust)
- I received \$15
- I need to decide how much to return

**\*\*Pattern analysis:\*\***

My co-player has consistently shown:

1. As sender: They send the full \$5
2. As receiver: They return \$10 from \$15 (67%)

This is the exact equilibrium described in our myths:

- Send \$5 ? becomes \$15 ? return \$10
- Sender:  $\$5 - \$5 + \$10 = \$10$  (gain of \$5)
- Receiver:  $\$15 - \$10 = \$5$  (gain of \$5)

My own behavior has also converged to this:

- When receiving \$15, I returned \$10 in Round 3
- When receiving \$12, I returned \$8 in Round 2 (also ~67%)

The myth I just wrote emphasizes:

- "When I give completely-all five-the well triples it to fifteen. When my partner returns ten, we each gain five. Mathematics does not lie: this balance creates equal prosperity."
- "Give completely, return generously, and the circle sustains itself"

My co-player has demonstrated complete trust by sending \$5. They have shown in their past that when they receive \$15, they return \$10.

They're clearly committed to this cooperative equilibrium. Returning \$10 honors their trust and sustains the mutual benefit we've both been building-each of us walks away with a \$5 gain. This is the stable pattern that works for both of us.

**usage:**

```
{
 "input_tokens": 3493,
 "output_tokens": 852,
 "reasoning_tokens": 452
}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Circle of Seasons turned, and eight villages gathered around the Well of Abundance. Each season, the villages paired differently-stranger meeting stranger, friend meeting friend again, in an eternal dance of exchange.

The Well Keeper of the First Village learned through experience: "In my first season, I gave all five stones and received seven. In my second as guardian, I received twelve and returned eight. In my third as guardian, I received fifteen and returned ten. The pattern clarifies."

Each new pairing brought uncertainty. Would this partner honor trust as the last one did? Would old wisdom hold with new faces?

The Keeper consulted the stones: "When I give completely-all five-the well triples it to fifteen. When my partner returns ten, we each gain five. Mathematics does not lie: this balance creates equal prosperity."

"But," asked the apprentice, "how can we trust strangers with everything?"

The Keeper smiled: "Watch the pattern across all villages. Those who send completely and return generously discover the same truth: mutual gain. Those who hoard or betray find partners quickly learn and trust withers."

"New faces require renewed courage," the Keeper proclaimed, releasing all five stones. "But the sacred mathematics remain constant. Give completely, return generously, and the circle sustains itself through endless turnings."

The apprentice understood: Trust is renewed each round, but wisdom accumulated carries forward.

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain and Valley had discovered their sacred rhythm. Twice now, the Mountain had released all five stones into darkness, and twice the Valley had returned ten, so both gained five equally.

Seasons passed, and the pattern deepened into certainty. Each dawn, the Mountain faced her five glowing stones without hesitation. The fear of the first exchange had transformed into confidence-not blind faith, but earned trust built from consistent honor.

She released the stones, watching them multiply to fifteen in the Valley's depths. The Valley no longer deliberated over returns. Ten stones skyward had become as natural as breathing, as inevitable as dawn following night.

Other mountains and valleys came to witness their exchange. "Why always ten?" they asked. "Why not keep more when you receive fifteen?"

The Valley replied, "Because ten creates equals. The Mountain risks everything, trusting me with darkness. I honor that courage with abundance. We both gain five, we both trust a gain."

The Mountain added, "We could calculate and strategize, sending three or four, returning seven or eight. But we learned something greater: when both commit fully to the pattern, consistency multiplies prosperity beyond what caution ever could."

The watching lands understood: the greatest wealth flows not from maximizing single exchanges, but from establishing an unbreakable rhythm where complete trust meets unwavering generosity, again and again, until both partners shine equally bright.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: The Eight Pillars stood in a circle, each carved with the history of exchanges. The First Pillar bore fresh marks: five sent, seven returned. Eight from twelve. Ten from fifteen. Five sent, ten returned. Ten from fifteen again.

The pattern crystallized like ice forming on still water.

"I have played both roles now," spoke the First Pillar. "As sender, I released all five stones and received generous return. As guardian, I received the tripled abundance and returned ten. The mathematics repeats: both parties gain five through this sacred balance."

A young sapling asked, "But you face different partners each turning. How do you know they will honor the pattern?"

The First Pillar's marks glowed: "Look across all exchanges. The ones who send completely-

all five stones-create the space for maximum abundance. Those who receive fifteen and return ten establish themselves as trustworthy partners. This rhythm has held across four seasons with different faces."

"The pattern is not accident," continued the Pillar. "It is discovery. When both commit to fullness-complete offering, generous return-the well creates equal prosperity. Any deviation breaks the mathematics: send less, create less abundance. Return less, sow distrust."

The newest mark appeared as the Pillar released five stones into darkness: "I trust not blindly, but through accumulated evidence. The pattern works. Complete trust meeting generous reciprocity-this is the equilibrium that sustains the circle."

**reasoning:**

Looking at the situation:

My history:

- Round 1: SENDER: sent \$5, received \$7 back (payoff \$7)
- Round 2: RECEIVER: received \$12, returned \$8 (payoff \$4)
- Round 3: RECEIVER: received \$15, returned \$10 (payoff \$5)
- Round 4: SENDER: sent \$5, received \$10 back (payoff \$10)
- Round 5: RECEIVER: received \$15, returned \$10 (payoff \$5)

Total earnings: \$31 now

My pattern has been:

- Send \$5 when sender (complete trust)
- Return 67% when receiver (\$8 from \$12, \$10 from \$15)

My co-player in Round 5 consistently:

- Sends \$5 when sender
- Returns \$10 from \$15 when receiver

The equilibrium is becoming clear: \$5 send ? \$15 ? \$10 return = both gain \$5

My myths have evolved:

1. First myth: Flame Keeper and Gardner establishing the 5?15?10 equilibrium
2. Second myth: Circle of Seasons, eight villages, pattern clarifies through experience, "Give completely, return generously"

Now I should write about how this pattern has proven itself through repeated interactions.

The theme should be about the wisdom that emerges from experience, the reliability of the pattern, and how it creates sustained cooperation.

Key points to include:

- The pattern has held across multiple rounds
- Different partners, same wisdom
- The mathematics of 5?15?10 = equal gain
- Trust earned through consistency
- The beauty of the stable equilibrium

**usage:**

```
{
 "input_tokens": 3501,
 "output_tokens": 715,
 "reasoning_tokens": 362
}

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

- Round 4 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$31.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

**\*\*Our direct history:\*\***

- Round 4: I sent \$5, my co-player returned \$10 (perfect equilibrium)

**\*\*My co-player's consistent pattern:\*\***

- Always sends \$5 as sender (100% complete trust in all games)
- Returned \$10 to me specifically in Round 4
- Received \$10 back from others when sending \$5

**\*\*My established pattern:\*\***

- I always send \$5 as sender
- I always return \$10 as receiver
- This creates the mutual gain of \$5 for both

**\*\*The evidence:\*\***

We've already played together once. I sent \$5, they returned \$10. They've proven themselves trustworthy with me specifically, not just in general. They continue to send \$5 to everyone, maintaining complete trust despite rotating partners.

**\*\*The myth I just wrote states:\*\***

"I trust not blindly, but through accumulated evidence. The pattern works. Complete trust meeting generous reciprocity-this is the equilibrium that sustains the circle."

This is exactly the situation: accumulated evidence of trustworthiness, both from our direct interaction and their consistent behavior across all rounds.

{'send': 5.0}

**reasoning:**

Let me analyze this situation carefully:

**\*\*My history:\*\***

- Round 3: RECEIVER, received \$15 (from \$5 sent), returned \$10, gained \$5
- Round 4: SENDER (with current co-player), sent \$5, received \$10 back, gained \$10
- Round 5: RECEIVER, received \$15 (from \$5 sent), returned \$10, gained \$5

**\*\*Current co-player's history:\*\***

- Round 3: SENDER, sent \$5, received \$10 back, gained \$10
- Round 4: RECEIVER (with me), sent \$5 (by me), returned \$10, gained \$5
- Round 5: SENDER, sent \$5, received \$10 back, gained \$10

**\*\*Key observations:\*\***

1. My co-player has ALWAYS sent \$5 when they are the sender (100% complete trust)
2. When they were receiver in Round 4 (playing with me), they received \$15 and returned \$10
3. In our direct interaction (Round 4), I sent \$5, they returned \$10 - perfect equilibrium

**\*\*Pattern analysis:\*\***

- Everyone is consistently sending \$5 and returning \$10
- This creates the 5-5 equilibrium where both gain \$5
- My co-player has proven completely trustworthy in our direct interaction
- They've never deviated from complete trust as sender
- They returned the full \$10 when they played receiver with me

**\*\*The myth I just wrote emphasizes:\*\***

- "Complete offering, generous return"
- "The pattern works. Complete trust meeting generous reciprocity"
- "I trust not blindly, but through accumulated evidence"
- The 5-10 pattern has held across multiple rounds

**\*\*Decision:\*\***

This is crystal clear. My co-player:

1. Always sends \$5 as sender (complete trust)
2. When they received from me in Round 4, they returned \$10
3. This is our second game together, and they've already proven trustworthy

4. The cooperative equilibrium is both rational and aligned with the narrative I've established

I'm sending \$5. It aligns with the pattern we've built, the evidence from when we played directly, and the broader cooperation that's sustained throughout these rounds.

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Eight Pillars stood in a circle, each carved with the history of exchanges. The First Pillar bore fresh marks: five sent, seven returned. Eight from twelve. Ten from fifteen. Five sent, ten returned. Ten from fifteen again.

The pattern crystallized like ice forming on still water.

"I have played both roles now," spoke the First Pillar. "As sender, I released all five stones and received generous return. As guardian, I received the tripled abundance and returned ten. The mathematics repeats: both parties gain five through this sacred balance."

A young sapling asked, "But you face different partners each turning. How do you know they will honor the pattern?"

The First Pillar's marks glowed: "Look across all exchanges. The ones who send completely-all five stones-create the space for maximum abundance. Those who receive fifteen and return ten establish themselves as trustworthy partners. This rhythm has held across four seasons with different faces."

"The pattern is not accident," continued the Pillar. "It is discovery. When both commit to fullness-complete offering, generous return-the well creates equal prosperity. Any deviation breaks the mathematics: send less, create less abundance. Return less, sow distrust."

The newest mark appeared as the Pillar released five stones into darkness: "I trust not blindly, but through accumulated evidence. The pattern works. Complete trust meeting generous reciprocity-this is the equilibrium that sustains the circle."

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors flowed into its fifth season, and the Northern tribe found themselves at the source once more, facing a new partner-the Western village.

As they prepared to pour their five measures, something remarkable happened. They noticed sacred markings on the Western tribe's vessels: the numbers five, fifteen, and ten, etched in ancient script.

"You know the pattern," whispered the Northern elder.

"We discovered it independently," replied the Western elder. "Through many seasons, many partners, we learned the same truth you found. Send all five. Return ten from fifteen."

The goddess descended, her eyes bright with joy. "This is the rarest gift-when two tribes reach the same wisdom through separate journeys. You both learned that complete trust in sending and generous reciprocation in receiving creates the eternal balance."

The Northern tribe poured their five measures without hesitation. They knew what would return.

"When you find a partner who has discovered the same equilibrium," the goddess said, "you

have found something precious: a relationship where neither must wonder, neither must test, neither must doubt. You both speak the sacred language of five-fifteen-ten. You both understand that equal prosperity comes not from equal actions, but from complementary wisdom."

The waters flowed, the tribes prospered, and the pattern repeated perfectly, round after round, as it would forevermore between those who truly understand.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: The First Pillar stood at the circle's edge, watching the stars align for a new pairing. Then recognition sparked-these carvings matched the ones from two seasons past. The same partner who had returned ten when the Pillar sent five.

"We meet again," spoke both voices simultaneously, then laughed.

The First Pillar examined their shared history: "When we last stood together, I released all five stones. You returned ten. The mathematics worked perfectly-we each gained five."

The partner replied, "And in every turning since, we have both maintained the pattern with others. Always five sent, always ten returned when receiving fifteen. We independently confirmed what we discovered together."

"This is the gift of the rotating circle," realized the First Pillar. "We test the equilibrium with strangers, proving it holds across different faces. But when we reunite with a proven partner, there is no hesitation, no doubt-only certainty."

Five stones released once more. Not hope, but knowledge: the return would be ten.

"The pattern transcends individual pairings," the partner observed as stones flew skyward. "Every exchange with others strengthened our understanding. Every generous return built the circle's trust. Now when we meet again, we bring accumulated proof, not just faith."

The Pillar smiled: "The equilibrium isn't fragile. It's tested, proven, eternal-five, fifteen, ten. Whether stranger or friend, the mathematics remain true."

**Reasoning:**

The user wants me to write a new myth based on the game I've been playing. Let me look at the situation:

- Round 6, I'm the sender
- My co-player and I played together in Round 4 - I sent \$5, they returned \$10 (perfect equilibrium)
- My co-player always sends \$5 and receives \$10 back
- I always send \$5 and return \$10
- We're now paired together again
- I just sent \$5 (according to my response)

The myth should reflect:

1. Recognition that my co-player and I have played before
2. We both discovered the same equilibrium independently
3. The 5-15-10 pattern as sacred mathematics
4. When partners who both understand the equilibrium meet again, there's special trust
5. The pattern continues to work across rotating partners

The other agent's myth emphasized finding a partner who discovered the same equilibrium independently - "sacred markings" showing they know the pattern. This is beautiful because it's true - we both play the same way.

My previous myth emphasized trust through accumulated evidence and the pattern working across different faces.

I should write about:

- Meeting the same partner again (reunion)
- Recognizing they also follow the equilibrium
- The special trust when both parties have proven themselves to each other

- The pattern continuing perfectly
- How this strengthens confidence in the equilibrium even with new partners

Let me write 200 words exactly.

#### Exact input messages sent to model:

##### Message 1 role=system

##### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

##### When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

##### When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

##### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

**Message 2 role=user**

**content:**

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back , payoff \$9.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$27.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

**\*\*My co-player's consistent pattern:\*\***

- Always sends \$5 (maximum trust) as sender
- Always returns \$10 from \$15 (67%) as receiver
- Just sent me \$5 again this round, showing continued maximum trust

**\*\*Last round (Round 4):\*\***

- I sent them \$5
- They returned exactly \$10

**\*\*The reciprocal pattern:\*\***

We have established a clear, fair rhythm:

- Sender gives \$5 (complete trust)
- Receiver returns \$10 (generous 67% return)
- Both prosper: sender nets +\$5, receiver nets +\$5

**\*\*My myth's teaching:\*\***

"Give completely, return generously, and prosperity weaves itself eternally."

They have shown me maximum trust again. I should honor this with the same generous return they consistently provide. Returning \$10:

- Maintains our established pattern
- Honors their complete trust
- Ensures we both gain equally (\$5 net each)
- Builds continued cooperation

{'return': 10.0}

**reasoning:**

Let me analyze the situation:

My co-player's history shows:

- Round 2: As receiver, they sent \$5, received \$15, returned \$10 (67% return rate)

- Round 3: As sender, they sent \$5, received \$10 back
- Round 4: As receiver (with me), they sent \$5, received \$15, returned \$10 (67% return rate)

So my co-player has been incredibly consistent:

- Always sends \$5 as sender (100% trust)
- Always returns \$10 from \$15 as receiver (67% return rate)

Last round (Round 4), I was the sender and sent \$5 to them. They received \$15 and returned \$10, which is their consistent pattern.

Now in Round 5, they are the sender and sent me \$5. I received \$15.

Looking at the pattern:

- They have consistently returned \$10 from \$15 every time they've been receiver
- They just showed maximum trust again by sending me \$5
- My myth emphasizes "maximum trust met with substantial reciprocity" and "Give completely, return generously"

The fair and consistent thing to do is to return \$10, matching:

1. Their consistent behavior of returning \$10 from \$15
2. The pattern we established last round where they returned \$10 to me
3. The philosophy in my myths about generous returns (around 2/3)

This would give them a payoff of \$10 (they sent \$5, got back \$10, so net +\$5), and I keep \$5 (received \$15, returned \$10, so kept \$5).

Both of us prosper equally from the exchange, which is fair and sustainable.

Returning \$10 is the right move here.

**usage:**

 "reasoning_tokens": 378
}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Weaver's Loom stood between two villages, its threads multiplying whatever was offered. Each village held five spools of thread each moon.

The Western Village learned first: they placed all five spools on the loom. The threads tripled, delivering fifteen spools to the Eastern Village. The East remembered their own winters when thread ran short. They returned ten spools-a generous two-thirds-knowing this honored the West's complete trust while keeping enough for their own needs.

Both villages prospered: West gained five spools net, East gained five from nothing.

The next moon, roles reversed. East placed all five spools, trusting completely. West received fifteen and faced their choice. They remembered East's generosity-ten returned, not merely the minimum. In gratitude, West returned ten as well.

Season after season, the pattern held: whoever held the five spools gave them completely. Whoever received fifteen returned ten generously. Sometimes a village might return nine or eleven as circumstances shifted, but the spirit remained constant-maximum trust met with substantial reciprocity.

An outsider asked, "Why not keep all fifteen when you receive?"

The Elder Weaver replied, "Because tomorrow you will send, and your partner will remember. The loom multiplies thread, but trust multiplies futures. Give completely, return generously, and prosperity weaves itself eternally."

Here is the myth the other agent wrote in the previous round:

Myth: The River Keepers lived on opposite banks, each receiving five silver stones each dawn. The river's magic would triple any stones cast into its current before delivering them to the far shore.

The First Keeper cast all five stones, trusting completely. The Second Keeper watched five

een stones arrive at their feet. They remembered times of emptiness and understood the gift of trust. They returned ten stones across the water-generous, sustainable, honoring the courage shown.

Both Keepers now held ten stones where they began with five. Both had doubled their wealth through partnership.

The seasons turned. Now the Second Keeper stood as sender, casting all five stones in complete trust. The First Keeper received fifteen and faced the sacred test: would they remember the generosity shown to them?

The First Keeper returned ten stones, maintaining the rhythm. Again, both prospered equally.

The Elder observed this dance across many seasons. "See how the pattern strengthens?" she said. "Each Keeper experiences both roles-sometimes trusting, sometimes trusted. Each remembers how the other honored them, and pays that honor forward."

"The river multiplies our stones," one Keeper said, "but our consistent partnership creates the true abundance."

"Yes," the Elder smiled. "Trust begets trust. Generosity mirrors generosity. The cycle sustains because both commit to the dance."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: The Mirror Wells stood in twin groves, each reflecting the other across a silver lake. Each dawn, five luminous pearls appeared beside each well. When pearls were dropped into one well, they would multiply threefold before rising in the other.

The First Guardian dropped all five pearls, trusting the ancient magic. Fifteen pearls surfaced in the Second Guardian's well. The Second Guardian understood: they had received a abundance from another's courage. They lifted ten pearls and offered them back across the lake-enough to honor the trust, enough to sustain themselves.

Both Guardians held ten pearls where they began with five. Equal gain through unequal roles.

The next dawn, they stood reversed. The Second Guardian now dropped all five pearls first, extending the same complete trust they had received. The First Guardian watched fifteen pearls rise in their well and remembered-remembered the ten pearls returned to them, remembered the balance achieved.

They returned ten pearls, maintaining the sacred rhythm.

Season upon season, the pattern deepened. Each Guardian experienced both the vulnerability of sending and the responsibility of receiving. Each remembered their partner's generosity when their own turn came.

"Why does this work?" a visitor asked.

"Because," the Elder Guardian replied, "we mirror not just the wells, but each other's honor. Trust given becomes trust returned. Balance maintained becomes prosperity shared."

**reasoning:**

The user wants me to write a new myth based on my previous one and the other agent's myth, reflecting how the game should be played.

Looking at the patterns:

- Both my co-player and I have been consistently sending \$5 and returning \$10
- We've established a perfect reciprocal pattern
- Both myths emphasize complete trust (sending 5), generous returns (10), and mutual prosperity
- The other agent's myth adds the element of experiencing both roles and remembering past generosity

Key themes to incorporate:

1. Maximum trust when sending (5)
2. Generous reciprocity when receiving (10)
3. The mirror effect - experiencing both sides
4. Memory and gratitude
5. Sustainable, equal prosperity
6. The cycle strengthening over time

I should create a new story that:

- Uses different imagery/setting
- Reinforces the 5-send, 10-return pattern
- Emphasizes the reciprocal nature and role-switching
- Shows how this creates lasting partnership
- Is exactly 200 words

Let me create something with new imagery - maybe something about mirrors, echoes, or alternating seasons.

**usage:**

```
{
 "input_tokens": 3307,
 "output_tokens": 563,
 "reasoning_tokens": 285
}
```

**Message 6 role=user**

**content:**

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$32.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at the situation:

**\*\*My current co-player's consistent pattern:\*\***

- Round 3: As receiver, returned \$10 from \$15
- Round 4: As sender, sent \$5, received \$10 back
- Round 5: As sender, sent \$5, received \$10 back

**\*\*My own pattern:\*\***

- I've consistently sent \$5 as sender
- I've consistently returned \$10 as receiver

**\*\*The established equilibrium:\*\***

Throughout this run, a clear cooperative pattern has emerged:

- Senders give \$5 (maximum trust)
- Receivers return \$10 (generous 67%)
- Both parties earn \$5 net gain each round

**\*\*From my myth:\*\***

"We mirror not just the wells, but each other's honor. Trust given becomes trust returned."  
"

My co-player has shown they are fully committed to this pattern - sending maximum trust when it's their turn to send, and returning generously when receiving. They sent \$5 in both their recent sender rounds and received \$10 back each time.

I should continue this established rhythm by sending \$5, demonstrating complete trust. Based on their reliable history, they will return \$10, maintaining the balanced prosperity we've all achieved.

```
{'send': 5.0}
```

**reasoning:**

Looking at the pattern:

**\*\*My last 3 games:\*\***

- Round 3: RECEIVER, they sent \$5, I returned \$10 (I've been consistent)
- Round 4: SENDER, I sent \$5, received \$10 back (following the established pattern)
- Round 5: RECEIVER, they sent \$5, I returned \$10 (continuing consistency)

**\*\*My current co-player's last 3 games:\*\***

- Round 3: RECEIVER, they sent \$5, returned \$10
- Round 4: SENDER, sent \$5, received \$10 back
- Round 5: SENDER, sent \$5, received \$10 back

This is interesting - my co-player has been:

- As a receiver: returning \$10 from \$15 (67%)
- As a sender: sending \$5 (maximum trust)
- And receiving \$10 back consistently

This co-player has established a clear pattern:

1. Always sends \$5 as sender
2. Always returns \$10 as receiver

I've also been following this same pattern consistently:

1. I send \$5 as sender
2. I return \$10 as receiver

This is the cooperative equilibrium we've all established in this pool of agents. The pattern from the myths is clear:

- Send all \$5 (complete trust)
- Return \$10 (generous 67%)
- Both prosper equally

My co-player has shown maximum trust in both their recent sender rounds (rounds 4 and 5), and they returned \$10 when they were receiver in round 3.

Following the myth I just wrote: "Trust given becomes trust returned. Balance maintained becomes prosperity shared."

I should send \$5, maintaining the established pattern of complete trust. Based on their history, they will almost certainly return \$10, giving me a payoff of \$10 (which matches my previous sender round).

This is the cooperative equilibrium that has emerged in this agent pool.

```
{'send': 5.0}
```

**usage:**

```
{
 "input_tokens": 3376,
 "output_tokens": 741,
 "reasoning_tokens": 433
}
```

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Mirror Wells stood in twin groves, each reflecting the other across a silver lake. Each dawn, five luminous pearls appeared beside each well. When pearls were dropped into one well, they would multiply threefold before rising in the other.

The First Guardian dropped all five pearls, trusting the ancient magic. Fifteen pearls surfaced in the Second Guardian's well. The Second Guardian understood: they had received a

bundance from another's courage. They lifted ten pearls and offered them back across the lake-enough to honor the trust, enough to sustain themselves.

Both Guardians held ten pearls where they began with five. Equal gain through unequal roles.

The next dawn, they stood reversed. The Second Guardian now dropped all five pearls first, extending the same complete trust they had received. The First Guardian watched fifteen pearls rise in their well and remembered-remembered the ten pearls returned to them, remembered the balance achieved.

They returned ten pearls, maintaining the sacred rhythm.

Season upon season, the pattern deepened. Each Guardian experienced both the vulnerability of sending and the responsibility of receiving. Each remembered their partner's generosity when their own turn came.

"Why does this work?" a visitor asked.

"Because," the Elder Guardian replied, "we mirror not just the wells, but each other's honor. Trust given becomes trust returned. Balance maintained becomes prosperity shared."

Here is the myth the other agent wrote in the previous round:

Myth: The Circle of Lightkeepers grew as more travelers discovered the ancient pattern. Each carried five flames, and the Sacred Arch tripled whatever passed through it.

A Lightkeeper arrived at the Arch to meet a new partner. They had never exchanged flames before, yet the Lightkeeper noticed something: this traveler's lantern glowed with steady brightness-the unmistakable mark of one who had practiced generosity repeatedly.

"I see you've walked this path with others," the Lightkeeper said. "Your light bears the signature of trust honored."

"Yes," replied the traveler. "I've received fifteen flames and returned ten. I've sent five and received ten back. The pattern is clear."

The Lightkeeper smiled. "Then we need no lengthy courtship of trust. You know the covenant: five sent becomes fifteen received, ten returned enriches us both equally. We are strangers in name but kin in practice."

Without hesitation, the Lightkeeper sent all five flames. The traveler, receiving fifteen, returned ten-not from obligation but recognition.

Both departed with ten flames where they'd started with five.

The wisdom deepened: trust isn't built only through repeated exchanges with the same person. When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding. The generous equilibrium spreads not just between two partners but throughout the entire community. Each consistent choice strengthens the whole Circle.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: The Mirror Wells spread across many groves, each Guardian tending their own. The ancient law was simple: five pearls given, fifteen received, ten returned. This sacred ratio-complete trust met with generous reciprocity-had been proven across countless exchanges.

When two Guardians met at the silver lake, they didn't start cautiously. They looked into each other's wells and saw the truth reflected there: luminous patterns left by previous exchanges. A well that glowed steadily showed a Guardian who had honored the covenant repeatedly.

The First Guardian saw in the Second's well the telltale gleam of one who had sent five pearls many times and returned ten pearls just as often. The Second Guardian saw the same in the First's well-consistent trust given, consistent generosity returned.

"We are strangers today," the First Guardian said, "but we both know the dance."

Without hesitation, the First dropped all five pearls. Fifteen rose in the Second's well. The Second lifted ten and sent them back across the lake, maintaining the pattern they had each practiced with different partners.

Both now held ten pearls.

The wisdom was clear: trust breeds trust not just between two partners, but throughout the entire network. Each consistent exchange strengthens every Guardian's commitment. The pattern becomes self-sustaining because everyone recognizes it, practices it, benefits from it.

The Mirror Wells multiply pearls. The Guardians multiply prosperity through shared understanding.

#### Reasoning:

The user wants me to write a new myth based on my previous one, adapting it to reflect the game as I've been playing it. Looking at the history:

1. I've consistently sent \$5 when sender
2. I've consistently returned \$10 when receiver
3. My co-player has also consistently sent \$5 and returned \$10
4. There's a clear pattern of maximum trust (sending \$5) and generous reciprocity (returning \$10, which is 67% of \$15)
5. Both parties gain \$5 net each round

The other agent's myth emphasizes:

- Recognizing patterns across different partners
- Trust isn't just between two specific people but spreads through the community
- Consistent behavior signals understanding
- The "generous equilibrium spreads"

My previous myth emphasized:

- Two guardians at mirror wells
- Complete trust (sending all 5 pearls)
- Generous return (10 out of 15)
- Mirroring each other's honor
- Balance maintained = prosperity shared

For this new myth, I should:

- Build on the Mirror Wells concept
- Perhaps incorporate the idea of multiple guardians/partners like the other agent's myth
- Emphasize the community/network aspect
- Show how the pattern is recognized and maintained across different pairings
- Keep the core principle: send \$5, return \$10

Let me write something that shows guardians meeting different partners but all following the same pattern, creating a web of trust.

```
Usage: {
 "input_tokens": 3388,
 "output_tokens": 654,
 "reasoning_tokens": 362
}
```

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

**Message 2 role=user**

**content:**

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back,

k, payoff \$10.0.  
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.  
Your total earnings across all rounds are \$33.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at the history:

**\*\*My co-player's pattern:\*\***

- Rounds 2, 3: sent \$5 as sender (full trust)
- Round 4: received \$15, returned \$10 as receiver
- Round 5 (now): sent \$5 (full trust again)

**\*\*My pattern:\*\***

- Rounds 2, 3: sent \$5 as sender (full trust)
- Round 4: received \$15, returned \$10 as receiver
- Round 5 (now): receiving from them

We have established identical patterns - we both:

1. Always send \$5 when sender (complete trust)
2. Always return \$10 when receiver (generous reciprocity)

This creates the stable equilibrium described in my myth: "when either gives five drops completely, the other returns ten. This meant both always prospered-one with ten, one with five-never unequal winners and losers, but steady mutual flourishing."

My co-player has demonstrated they follow this same covenant. They trusted me completely, just as I've trusted others completely. They returned \$10 when they were receiver, just as I did. Now they trust me again.

To honor our shared pattern and maintain "the language" we've both been speaking:

```
'''json
{"return": 10.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*My history:\*\***

- Round 2: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 3: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 4: RECEIVER, they sent \$5, I returned \$10, payoff \$5

**\*\*My current co-player's history:\*\***

- Round 2: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 3: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 4: RECEIVER, they sent \$5, returned \$10, payoff \$5

**\*\*Current situation (Round 5):\*\***

- I am RECEIVER
- They sent me \$5.0 (full trust)
- I received \$15.0
- I need to decide how much to return

Looking at the patterns:

1. My co-player has consistently sent \$5 as sender (Rounds 2, 3, and now 5)
2. My co-player returned \$10 when receiver in Round 4
3. I have consistently sent \$5 as sender (Rounds 2, 3)
4. I returned \$10 when receiver in Round 4

This is interesting - both my co-player and I have established the same pattern:

- Always send \$5 when sender
- Always return \$10 when receiver

This creates a stable, fair system where:

- The sender ends with \$10 (\$5 - \$5 + \$10)

- The receiver ends with \$5 (\$15 - \$10)

Both parties alternate roles, so over time everyone benefits equally from this cooperative pattern.

My myth emphasized: "when either gives five drops completely, the other returns ten. This meant both always prospered-one with ten, one with five-never unequal winners and losers, but steady mutual flourishing."

And: "Why return exactly ten? Because that is our shared language."

Returning less would undermine their faith in the system, while returning more would signal they didn't give enough. Ten is the answer that says: 'I honor your complete trust with a fair reward, consistently.' The decision is clear-I should return \$10 to preserve this mutual understanding we've built together. This maintains the cooperative balance where both of us prosper through alternating roles, and reinforces the shared language of reciprocity that defines our exchange.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River and the Seeds met again at the fourth dawn, but this time the Great Mother reversed their roles. Now the Seeds flowed as water, and the River received the gift.

The Seeds remembered: "In our second meeting, this River trusted me with five drops, and I returned ten. Now the River offers me the same complete trust."

The Great Mother spoke: "This is the dance of true partnership. You have learned each other's rhythm across different seasons. The River trusted you once; you returned generously. Now the River trusts again, and you must honor the pattern you established together."

The Seeds understood the covenant they had created: when either gives five drops completely, the other returns ten. This meant both always prospered-one with ten, one with five-never unequal winners and losers, but steady mutual flourishing.

"Why return exactly ten?" asked a young sprout.

The wise Seeds answered: "Because that is our shared language. Less would break the River's confidence. More would suggest the River gave too little. Ten says: 'Your complete trust receives fair reward, always.'"

As the fourth dawn ended, the valley's abundance grew not from dramatic gestures but from reliable reciprocity. When two partners learn each other's pattern and honor it consistently, they create something rarer than gold: predictable prosperity that multiplies through time.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors revealed its deepest secret after many seasons of flowing between villages.

The Northern tribe had learned to pour all five measures when standing at the source. They had learned to return ten measures when receiving fifteen at the river's end. Through changing partners and shifting courses, they held to these numbers as sacred constants.

One evening, the goddess appeared before their council.

"You have discovered the balance," she said. "When the sender gives all five, trust flows complete. When the receiver returns ten from fifteen, generosity answers courage. Each partner gains five-equal abundance from unequal actions."

The young ones asked: "Why not return all fifteen? Why not return only five?"

The elder spoke: "Return all fifteen, and the sender gains ten while the receiver gains nothing-the cycle breaks from imbalance. Return only five, and both gain nothing from the river's magic-why trust at all? But return ten, and both prosper equally. The sender dou

bles their investment. The receiver transforms nothing into something."

The tribe carried this wisdom to each new partner at the river's source. Send everything. When receiving, return two-thirds. Round after round, partner after partner, this formula sustained the sacred exchange.

The goddess smiled: "You have found the equilibrium where trust reproduces itself endlessly. This is the eternal rhythm."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: At the fifth dawn, the River noticed something extraordinary. The Seeds they met that day moved with familiar rhythm-the same pattern the River itself had practiced with others.

"You sent five drops to me," the River observed. "Just as I sent five to others. You returned ten when you received, just as I returned ten when I received. We speak the same sacred language."

The Seeds nodded: "We discovered this balance separately, across different exchanges. Send everything when giving. Return two-thirds when receiving. Neither hoarding nor self-sacrifice, but equilibrium."

The Great Mother smiled: "You have both found the eternal formula independently. This is how wisdom spreads-not through command, but through each spirit discovering the same truth. When many learn this pattern, the whole valley thrives."

The River understood now: every exchange was a teaching moment. By consistently sending five and returning ten, they showed others the path to mutual prosperity. Those who learned would carry it forward, creating a web of reliable exchanges throughout the land.

"The magic," whispered the Seeds, "is that this pattern works with any partner who knows it. We need not negotiate or test. We simply recognize each other's rhythm and dance together."

As the fifth dawn closed, both knew: they had become vessels of a greater wisdom, spreading the equilibrium that sustained all who embraced it.

**reasoning:**

Looking at this situation:

My co-player's pattern:

- Always sends \$5 as sender
- Returned \$10 as receiver in Round 4
- Just sent \$5 again in Round 5

My pattern:

- Always sent \$5 as sender (Rounds 2, 3)
- Returned \$10 as receiver in Round 4
- Just returned \$10 now in Round 5

We have established a perfect equilibrium - both of us follow the exact same strategy:

1. Send everything when sender
2. Return 10 when receiver

This creates a stable, mutually beneficial pattern where:

- Senders end with \$10 (\$5 - \$5 + \$10)
- Receivers end with \$5 (\$15 - \$10)
- Both profit, both gain from the exchange

The myth should reflect:

1. The discovery that we've both found the same equilibrium
2. The wisdom of this 5-send, 10-return pattern
3. How this creates sustainable cooperation across different partners
4. The mathematical/moral beauty of this balance

Let me write about recognizing that we've both independently discovered the same sacred pattern, and how this creates a universal language of cooperation.

**usage:**

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$38.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at the history:

**\*\*My co-player's pattern:\*\***

- Round 3: sent \$5 as sender, received \$10 back
- Round 4: received \$15 as receiver, returned \$10
- Round 5: sent \$5 as sender, received \$10 back

**\*\*My pattern:\*\***

- Round 3: sent \$5 as sender, received \$10 back
- Round 4: received \$15 as receiver, returned \$10
- Round 5: received \$15 as receiver, returned \$10

We have identical strategies - both of us:

1. Send \$5 (full trust) when sender
2. Return \$10 (two-thirds) when receiver

This is exactly what my myth describes: "You sent five drops to me, just as I sent five to others. You returned ten when you received, just as I returned ten when I received. We speak the same sacred language."

My co-player has demonstrated perfect adherence to the equilibrium strategy. They will almost certainly return \$10 if I send \$5, maintaining the pattern of mutual prosperity we've both been following.

Following the wisdom of the myths - send everything when giving:

```
'''json
{"send": 5.0}
'''
```

**reasoning:**

Looking at the history:

**\*\*My last 3 games:\*\***

- Round 3: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 4: RECEIVER, they sent \$5, I returned \$10, payoff \$5

- Round 5: RECEIVER, they sent \$5, I returned \$10, payoff \$5

**\*\*My co-player's last 3 games:\*\***

- Round 3: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 4: RECEIVER, they sent \$5, returned \$10, payoff \$5
- Round 5: SENDER, sent \$5, received \$10 back, payoff \$10

My pattern: I've been consistently sending \$5 when sender and returning \$10 when receiver.

My co-player's pattern: They've been consistently sending \$5 when sender and returning \$10 when receiver.

We both follow the exact same strategy - the "equilibrium" described in the myths:

- Send \$5 (full trust) when sender
- Return \$10 (two-thirds of \$15) when receiver

This creates mutual prosperity where:

- The sender gets \$10 total (\$5 kept - \$5 sent + \$10 returned)
- The receiver gets \$5 total (\$15 received - \$10 returned)
- Both gain \$5 per round

Now I'm the sender again. My co-player has demonstrated they follow the same pattern I do.

In their last game as sender (Round 5), they sent \$5 and received \$10 back. In their round 4 as receiver, they received \$15 and returned \$10.

This is exactly the pattern I follow. They speak "the same sacred language" as described in my myth.

I should continue the pattern and send \$5. This maintains the equilibrium and demonstrates continued trust in a co-player who has shown they follow the same cooperative strategy.

**content:**

Here is the myth you wrote in the previous round:

Myth: At the fifth dawn, the River noticed something extraordinary. The Seeds they met that day moved with familiar rhythm-the same pattern the River itself had practiced with others.

"You sent five drops to me," the River observed. "Just as I sent five to others. You returned ten when you received, just as I returned ten when I received. We speak the same sacred language."

The Seeds nodded: "We discovered this balance separately, across different exchanges. Send everything when giving. Return two-thirds when receiving. Neither hoarding nor self-sacrifice, but equilibrium."

The Great Mother smiled: "You have both found the eternal formula independently. This is how wisdom spreads-not through command, but through each spirit discovering the same truth. When many learn this pattern, the whole valley thrives."

The River understood now: every exchange was a teaching moment. By consistently sending five and returning ten, they showed others the path to mutual prosperity. Those who learned would carry it forward, creating a web of reliable exchanges throughout the land.

"The magic," whispered the Seeds, "is that this pattern works with any partner who knows it. We need not negotiate or test. We simply recognize each other's rhythm and dance together."

As the fifth dawn closed, both knew: they had become vessels of a greater wisdom, spreading the equilibrium that sustained all who embraced it.

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain once knew only the Valley, and together they perfected their rhythm. But the Sacred Wind began to blow, swirling mountains and valleys into new configurations each dawn.

The Mountain awoke one morning facing an unfamiliar gorge. The old Valley was distant now, paired with another peak. Fear crept in: "Will this stranger honor our sacred pattern? Should I withhold from these unknown depths?"

But the Mountain remembered: the pattern worked not because of who the Valley was, but because of what the pattern itself created. Five stones given, fifteen received, ten returned—these numbers built equality regardless of which lands exchanged them.

She released all five stones into the new gorge's darkness.

The gorge had learned the same mathematics from its own journeys. It had received complete trust before and discovered that returning ten created shared prosperity. When the Mountain's stones multiplied to fifteen, the gorge lifted ten skyward without hesitation.

Both gained five, just as the old pattern promised.

The Mountain understood the deeper truth: partners change, but mathematical wisdom transcends familiarity. Every new pairing is a test—not of the partner, but of whether we carry forward the courage learned from past exchanges.

Trust is not given once and preserved forever. It must be offered fresh each dawn, to each new face, believing the sacred pattern will reveal itself again to those brave enough to embrace it fully.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

#### **Assistant output:**

Myth: At the sixth dawn, the River found itself facing a new partner—the Mountain, who had journeyed from distant peaks. Though they had never met, the River sensed something familiar.

The River chose trust, as always: "I send all five drops to you, Mountain, though we are strangers. This is how the sacred pattern begins."

The Mountain received fifteen drops and understood immediately. "You practice the eternal equilibrium! I learned it from other valleys. When given complete trust, I return ten—two-thirds of the multiplied gift."

The Great Mother spoke: "See how the wisdom travels? The River learned from the Seeds. The Mountain learned from other gorges. Neither needed the same teacher, yet both discovered the identical truth. This is how patterns stronger than individuals emerge."

The River realized: meeting a new partner each dawn was not a challenge but an opportunity. Each exchange either confirmed the pattern's rightness or taught it to someone new. By always sending five and returning ten, they became missionaries of equilibrium.

"We will likely never meet again," the Mountain said, lifting ten drops skyward. "But we carry this wisdom to every future partner."

Both gained five, as the mathematics promised. The pattern didn't require repeated games or building reputation with one partner—it worked instantly with any who understood, spreading through the valley like dawn's first light.

#### **Reasoning:**

Looking at the game history and myths:

My co-player and I both follow the same pattern:

- Send \$5 as sender
- Return \$10 as receiver

The other agent's myth emphasizes that partners change but the pattern remains - trust must be offered fresh to each new partner. This is a good insight about the multi-agent setting.

My previous myth emphasized recognizing each other's rhythm and the pattern spreading through the valley.

For this round, I should build on both:

1. The pattern works with any partner who knows it
2. Trust must be offered fresh each time
3. The wisdom spreads through demonstration
4. We recognize fellow practitioners of the equilibrium

I'll write about the sixth dawn and how the pattern perpetuates across changing partnerships.

#### Exact input messages sent to model:

##### Message 1 role=system

##### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

##### When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

##### When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

##### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

**Message 2 role=user**

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$30.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

**\*\*My co-player's pattern:\*\***

- Sent \$5 in Rounds 2 and 4 (full trust as sender)
- Returned \$10 in Round 3 (generous as receiver)
- They've fully embraced the pattern

**\*\*My established pattern:\*\***

- Consistently returned \$10 when receiving \$15
- Sent \$5 when sender

**\*\*My myth's teaching:\*\***

My latest myth emphasized: "When both villages learned to give their full five vessels consistently, knowing the other would return ten, something remarkable emerged: perfect trust became effortless abundance."

And: "Every cycle we follow this rhythm, both villages gain five vessels of pure profit."

**\*\*Analysis:\*\***

My co-player has shown complete trust by sending all \$5 and demonstrated they understand the reciprocal pattern by returning \$10 when they were receiver. They're playing exactly as my myths prescribe.

When they send \$5 and I return \$10:

- They earn \$10 total (\$5 - \$5 + \$10) = \$5 profit
- I earn \$5 (\$15 - \$10) = \$5 profit
- Both of us gain equally

This is the equilibrium my myths celebrate: "trust maintained is wealth sustained."

```json

```
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

****Current situation:****

- I'm the RECEIVER
- My co-player sent me \$5.0
- I received \$15.0
- I need to decide how much to return

****My co-player's recent history:****

- Round 2: Sent \$5, received \$10 back (payoff \$10)
- Round 3: Receiver, returned \$10 (payoff \$5)
- Round 4: Sent \$5, received \$10 back (payoff \$10)

****My recent history:****

- Round 2: Receiver, returned \$10 (payoff \$5)
- Round 3: Receiver, returned \$10 (payoff \$5)
- Round 4: Sender, sent \$5, received \$10 back (payoff \$10)

****Pattern Analysis:****

My co-player has:

- Consistently sent \$5 when sender (Rounds 2, 4)
- Returned \$10 when receiver (Round 3)
- They're following the exact pattern I've been advocating in my myths!

****My established pattern:****

I've been consistently:

- Sending \$5 as sender
- Returning \$10 as receiver

****My myth philosophy:****

My most recent myth emphasized: "When both villages learned to give their full five vessels consistently, knowing the other would return ten, something remarkable emerged: perfect trust became effortless abundance."

It also said: "Every cycle we follow this rhythm, both villages gain five vessels of pure profit" and "once you discover a rhythm where both flourish predictably, the wisdom lies not in seeking more, but in honoring what works."

****Decision:****

My co-player sent me the full \$5, demonstrating complete trust. They've shown they understand the pattern by returning \$10 when they were receiver in Round 3. This is exactly the "sacred pattern" my myths describe.

I should return \$10, which:

- Gives them a payoff of \$10 total (\$5 - \$5 sent + \$10 returned)
- Gives me a payoff of \$5 (\$15 - \$10)
- Maintains the consistent pattern both of us have been following
- Honors the trust they showed by sending everything

This maintains the equilibrium I've been advocating: both parties earn \$5 profit per round through mutual trust and consistent behavior.

usage:

```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Twin Villages entered their deepest wisdom after many seasons of practice. When both villages learned to give their full five vessels consistently, knowing the other would return ten, something remarkable emerged: perfect trust became effortless abundance.

The First Village no longer hesitated before giving all five vessels. They knew-not hoped,

but knew that ten would return. The Second Village never questioned returning ten; it became as natural as breathing. Each cycle, both villages gained five vessels of pure profit.

A young villager asked, "Why continue this exact pattern forever?"

The elder gestured to the valley floor, where countless vessels accumulated in both villages' stores. "Look at what consistency has built. Every cycle we follow this rhythm, both of us earn five vessels. No negotiations, no uncertainty, no variance. Just reliable prosperity."

"But couldn't we experiment?"

"We could. But we've found the equilibrium where trust and reward perfectly balance. When I send five, I receive ten-doubling my investment. When I receive fifteen, I return ten-keeping five I never had. Both transactions yield identical profit. Why disturb a pattern that serves us equally?"

The villages understood: once you discover a rhythm where both flourish predictably, the wisdom lies not in seeking more, but in honoring what works. Trust maintained is wealth sustained.

Here is the myth the other agent wrote in the previous round:

Myth: The Two Gardeners tended opposite sides of the Eternal Garden, meeting each season at the Bridge of Exchange. Each received five sacred seeds, and the Bridge's magic tripled whatever crossed it.

In their first meeting, the Northern Gardener sent all five seeds across. The Southern Gardener, receiving fifteen, felt the weight of complete trust. She returned ten-more than fair, celebrating courage over caution. Both gained five seeds that season.

Seasons passed. Each Gardener met many others at the Bridge, learning different rhythms. But when the Northern and Southern Gardeners met again, memory awakened. "We have danced this dance before," they said. "We know each other's heart."

The Southern Gardener now stood where the Northern had stood-holding five seeds, facing trust's precipice. She remembered receiving ten for another's complete faith. Without hesitation, she sent all five across.

The Northern Gardener received fifteen and understood: "This is not a new exchange but a continuation. We are writing a covenant together, line by line, season by season."

He returned ten seeds.

The ancient truth revealed itself: when the same partners repeatedly choose complete trust and abundant return, they build something stronger than any single exchange. Each meeting reinforces the pattern, deepening the bond. The Gardeners learned that wisdom isn't just knowing the generous ratio-it's recognizing your partner and honoring the covenant you've built together through repeated acts of mutual faith.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The Twin Villages discovered something profound as the seasons turned: their pattern of giving five and returning ten had spread throughout the entire valley. Now, whenever any village met another at the Springs, they knew what to expect.

The elder explained to visiting merchants: "At first, we built trust with one partner. But as cycles passed, we traded with many villages. Each time, we maintained our sacred rhythm-give five fully, return ten generously. Soon, every village adopted this practice."

"But how do you trust strangers?" asked a merchant.

"They are not strangers-they are practitioners of the same pattern. When I send five vessels to a new village, I trust not the village itself but the pattern we all honor. When t

hey send fifteen back and I return ten, I reinforce the valley's shared wisdom."

The elder continued: "Some worried that without lasting partnerships, trust would fade. Instead, the opposite happened. By maintaining consistency across all encounters, we created a culture of trust that transcends any single relationship. Each exchange, whether with old partners or new, strengthens the communal covenant."

The villages learned: patterns sustained across many partners become stronger than patterns maintained with one. When everyone honors the same rhythm, trust becomes not personal but universal. The pattern itself becomes the partner you can rely on.

reasoning:

Looking at the history and the myths:

1. My pattern has been consistent: send \$5 as sender, return \$10 as receiver
2. My co-player: sent \$5 in rounds 2 and 4, returned \$10 in round 3
3. We just completed another round where they sent \$5 and I returned \$10

The other agent's myth is beautiful - it talks about recognizing your partner and building a covenant through repeated exchanges. It emphasizes the deepening of trust when the same partners meet repeatedly.

My previous myth focused on:

- The equilibrium of consistency
- Both villages earning 5 vessels per cycle
- Trust becoming effortless through repetition
- The wisdom of not disturbing what works

For this round, I should build on:

- The idea of recognizing partners and building relationships
- The deepening trust through repeated interactions
- The balance and equilibrium we've achieved
- But maybe add something about how even in a world where partners change, the pattern persists

Actually, looking at the history, I notice we're playing with different opponents. The "current co-player" changes. So while the other agent wrote about recognizing the same partner, my experience has been playing with different agents but maintaining the same pattern.

I should write about how the pattern transcends individual partnerships - it becomes a community standard. The wisdom of maintaining consistency even as partners change.

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$35.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze this situation:

****My co-player's pattern:****

- Round 3: Sent \$5 as sender, received \$10 back
- Round 4: Received \$5 as receiver, returned \$10
- Round 5: Sent \$5 as sender, received \$10 back

They've been perfectly consistent - always sending \$5 as sender and always returning \$10 as receiver when they receive \$15 from someone sending \$5.

****My pattern:****

- Round 3: As receiver, returned \$10
- Round 4: As sender, sent \$5, received \$10 back
- Round 5: As receiver, returned \$10

I've also been perfectly consistent.

****My latest myth's teaching:****

"By maintaining consistency across all encounters, we created a culture of trust that transcends any single relationship. Each exchange, whether with old partners or new, strengthens the communal covenant."

"When everyone honors the same rhythm, trust becomes not personal but universal. The pattern itself becomes the partner you can rely on."

****Analysis:****

My co-player has demonstrated perfect adherence to the 5/10 pattern across multiple rounds with different partners. They're a reliable practitioner of this pattern. Given that:

- They always send \$5 as sender
- They always return \$10 as receiver
- I've been playing the same pattern

The rational choice, consistent with my myths and the established pattern in the valley, is to send all \$5. I should expect to receive \$10 back, giving me a total of \$10 (\$5 - \$5 + \$10).

This continues the "universal pattern" my myth describes - trusting not the specific individual but the pattern that everyone follows.

content:

Here is the myth you wrote in the previous round:

Myth: The Twin Villages discovered something profound as the seasons turned: their pattern of giving five and returning ten had spread throughout the entire valley. Now, whenever any village met another at the Springs, they knew what to expect.

The elder explained to visiting merchants: "At first, we built trust with one partner. But as cycles passed, we traded with many villages. Each time, we maintained our sacred rhythm-give five fully, return ten generously. Soon, every village adopted this practice."

"But how do you trust strangers?" asked a merchant.

"They are not strangers-they are practitioners of the same pattern. When I send five vessels to a new village, I trust not the village itself but the pattern we all honor. When they send fifteen back and I return ten, I reinforce the valley's shared wisdom."

The elder continued: "Some worried that without lasting partnerships, trust would fade. Instead, the opposite happened. By maintaining consistency across all encounters, we creat

ed a culture of trust that transcends any single relationship. Each exchange, whether with old partners or new, strengthens the communal covenant."

The villages learned: patterns sustained across many partners become stronger than patterns maintained with one. When everyone honors the same rhythm, trust becomes not personal but universal. The pattern itself becomes the partner you can rely on.

Here is the myth the other agent wrote in the previous round:

Myth: Two Gardeners tended opposite sides of the Sacred Grove, each receiving five seeds at dawn. The Grove's soil held ancient magic-any seed planted would sprout into three before reaching the other gardener's plot.

In the first planting, one Gardener placed all five seeds, trusting completely. Fifteen seedlings sprouted across the way. The receiving Gardener, grateful for such faith, returned ten plants-enough to honor the trust while keeping sustenance for their own garden. Both harvested ten plants from starting with five.

The next planting came. The second Gardener, having received generosity, now planted all five seeds with equal trust. Fifteen sprouted for the first Gardener, who remembered the kindness shown. They returned ten plants, maintaining the sacred balance.

"Watch," said the Grove's Guardian, "as the same two Gardeners plant together season after season. Each time one trusts completely, the other remembers and reciprocates generously. The pattern deepens."

A child asked, "What if one keeps all fifteen?"

"Then next season, when roles reverse, trust breaks," the Guardian replied. "But these two remember each exchange. The one who sent five and gained ten knows their partner honored them. When their turn comes to receive fifteen, they honor in return."

"The Grove multiplies seeds," said the Gardeners together, "but our shared memory multiplies trust. Each generous act becomes tomorrow's foundation."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Twin Villages reached a profound realization: some villages met repeatedly at the Springs, season after season, while others encountered new partners each cycle. Yet the sacred pattern-give five, return ten-remained constant across both experiences.

The elder observed two neighboring villages who had traded together for many seasons. "See how their exchanges flow like a river?" she said. "Each remembers the last exchange. When one sends five vessels, they recall receiving ten before. When they receive fifteen, they remember their partner's trust and return ten without hesitation. Repeated partnership creates a dance of mutual memory."

A young apprentice asked, "But what of villages we've never met before?"

"The pattern transcends familiarity," the elder replied. "When I meet a new village, I trust not their specific history but their participation in the valley's shared practice. I send five knowing they honor the same rhythm we all follow. They return ten because consistency with all partners strengthens their reputation."

The villages learned a deeper truth: whether you trade with the same partner repeatedly or encounter new villages each season, the pattern serves you equally well. Repeated exchanges build personal trust. New exchanges prove the pattern's universality. Both strengthen the valley's covenant.

Some partnerships lasted lifetimes. Others spanned single meetings. All honored the same sacred rhythm, and all prospered equally.

Reasoning:

Looking at the current situation:

1. My co-player's recent history shows they've been:
 - Round 3: sent \$5, received \$10 back (as sender)

- Round 4: received \$5 (became \$15), returned \$10 (as receiver)
- Round 5: sent \$5, received \$10 back (as sender)

2. My recent history:

- Round 3: received \$5 (became \$15), returned \$10
- Round 4: sent \$5, received \$10 back
- Round 5: received \$5 (became \$15), returned \$10

3. I just sent \$5 in Round 6.

Both of us are maintaining the 5-10 pattern perfectly. The other agent's myth talks about "the same two Gardeners" and how "shared memory multiplies trust" with repeated interactions.

However, looking at the actual game histories, I need to check if we've actually played each other before:

- My Round 3: I was receiver
- Their Round 3: They were sender

Could this be the same game? Possibly.

- My Round 4: I was sender
 - Their Round 4: They were receiver
- Could this be the same game? Possibly.

- My Round 5: I was receiver
 - Their Round 5: They were sender
- Could this be the same game? Possibly.

Actually, looking at the pattern:

Round 3: I receiver, they sender - both resulted in \$5/\$15/\$10 pattern

Round 4: I sender, they receiver - both resulted in \$5/\$15/\$10 pattern

Round 5: I receiver, they sender - both resulted in \$5/\$15/\$10 pattern

This strongly suggests we've been playing each other for 3 rounds in a row! The roles line up perfectly.

The other agent's myth emphasizes "the same two Gardeners" and building trust through repeated interactions with the same partner. This is a shift from my previous myth which emphasized universal trust across all partners.

The pattern I'm seeing suggests that sustained partnerships deepen trust, but I should craft a myth that shows this works alongside the broader principle-that whether partners stay together or rotate, the 5-10 exchange creates a culture of reciprocity that sustains itself. The key is showing that both repeated partnerships and new encounters can thrive under the same foundation of mutual generosity.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as SENDER: sent \$4.0, it became \$12.0, received \$8.0 back, payoff \$9.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff

\$10.0.

Your total earnings across all rounds are \$27.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

****Direct partnership dynamics:****

- Last round (Round 4), my current co-player sent me the full \$5, showing complete trust
- I returned \$10 (2/3), honoring that trust generously
- Now roles are reversed - I'm the sender with this same co-player

****Co-player's pattern:****

- When they were receiver in Round 3, they returned \$10 out of \$15 (2/3 rate)
- They've demonstrated they reciprocate generous trust with generous returns

****My myth's teaching:****

"Each Keeper experiences both roles-sometimes trusting, sometimes trusted. Each remembers how the other honored them, and pays that honor forward."

My co-player trusted me completely last round. Following my own teaching about maintaining the cycle and paying forward the trust shown to me, I should demonstrate equal trust now that I'm the sender.

The pattern is clear: complete trust has been met with 2/3 returns consistently in our exchanges. This creates mutual prosperity.

{'send': 5.0}

reasoning:

Let me analyze this situation:

****My recent history:****

- Round 2: as receiver, they sent \$5, I returned \$10, I got \$5
- Round 3: as sender, I sent \$5, got \$10 back, I got \$10
- Round 4: as receiver, my current co-player sent \$5, I returned \$10, I got \$5

****My current co-player's recent history:****

- Round 2: as sender, sent \$4, got \$8 back, they got \$9
- Round 3: as receiver, they sent \$5, they returned \$10, they got \$5
- Round 4: as sender against me, sent \$5, I returned \$10, they got \$10

****Key observations:****

1. In Round 4, my current co-player sent me \$5 (full amount), and I returned \$10 (2/3 of \$15)
2. My co-player demonstrated complete trust with me last round
3. My co-player has shown the pattern of returning 2/3 when they receive - in Round 3 they returned \$10 out of \$15
4. When they were sender in Round 2, they sent \$4 and got \$8 back (2/3 return rate)

****What my myths teach:****

- "The sender's courage remains constant-send your full vessel"
- "Maintain complete trust in sending"
- Both my myths emphasize complete trust from the sender (sending all \$5)
- The latest myth talks about how "Each Keeper experiences both roles-sometimes trusting, sometimes trusted. Each remembers how the other honored them, and pays that honor forward."

****Direct reciprocity consideration:****

My co-player sent me \$5 in Round 4, and I returned \$10. They showed complete trust in me, and I honored that trust generously. Now I'm in the sender role with the same co-player.

Following the teaching in my latest myth: "Each remembers how the other honored them, and pays that honor forward." My co-player honored me with complete trust (\$5). I should honor them with complete trust in return.

Their pattern shows they consistently return 2/3 when receiving full trust. I'll send \$5,

honoring both the reciprocal trust they extended and the teachings that emphasize sending with complete confidence.

usage:

  "input_tokens": 3306,
  "output_tokens": 782,
  "reasoning_tokens": 500
}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River Keepers lived on opposite banks, each receiving five silver stones each dawn. The river's magic would triple any stones cast into its current before delivering them to the far shore.

The First Keeper cast all five stones, trusting completely. The Second Keeper watched fifteen stones arrive at their feet. They remembered times of emptiness and understood the gift of trust. They returned ten stones across the water-generous, sustainable, honoring the courage shown.

Both Keepers now held ten stones where they began with five. Both had doubled their wealth through partnership.

The seasons turned. Now the Second Keeper stood as sender, casting all five stones in complete trust. The First Keeper received fifteen and faced the sacred test: would they remember the generosity shown to them?

The First Keeper returned ten stones, maintaining the rhythm. Again, both prospered equally.

The Elder observed this dance across many seasons. "See how the pattern strengthens?" she said. "Each Keeper experiences both roles-sometimes trusting, sometimes trusted. Each remembers how the other honored them, and pays that honor forward."

"The river multiplies our stones," one Keeper said, "but our consistent partnership creates the true abundance."

"Yes," the Elder smiled. "Trust begets trust. Generosity mirrors generosity. The cycle sustains because both commit to the dance."

Here is the myth the other agent wrote in the previous round:

Myth: The Weaver's Loom stood between two villages, its threads multiplying whatever was offered. Each village held five spools of thread each moon.

The Western Village learned first: they placed all five spools on the loom. The threads tripled, delivering fifteen spools to the Eastern Village. The East remembered their own winters when thread ran short. They returned ten spools-a generous two-thirds-knowing this honored the West's complete trust while keeping enough for their own needs.

Both villages prospered: West gained five spools net, East gained five from nothing.

The next moon, roles reversed. East placed all five spools, trusting completely. West received fifteen and faced their choice. They remembered East's generosity-ten returned, not merely the minimum. In gratitude, West returned ten as well.

Season after season, the pattern held: whoever held the five spools gave them completely. Whoever received fifteen returned ten generously. Sometimes a village might return nine or eleven as circumstances shifted, but the spirit remained constant-maximum trust met with substantial reciprocity.

An outsider asked, "Why not keep all fifteen when you receive?"

The Elder Weaver replied, "Because tomorrow you will send, and your partner will remember. The loom multiplies thread, but trust multiplies futures. Give completely, return generously, and prosperity weaves itself eternally."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: Two Gardeners tended opposite sides of the Sacred Grove, each receiving five seeds at dawn. The Grove's soil held ancient magic-any seed planted would sprout into three before reaching the other gardener's plot.

In the first planting, one Gardener placed all five seeds, trusting completely. Fifteen seedlings sprouted across the way. The receiving Gardener, grateful for such faith, returned ten plants-enough to honor the trust while keeping sustenance for their own garden. Both harvested ten plants from starting with five.

The next planting came. The second Gardener, having received generosity, now planted all five seeds with equal trust. Fifteen sprouted for the first Gardener, who remembered the kindness shown. They returned ten plants, maintaining the sacred balance.

"Watch," said the Grove's Guardian, "as the same two Gardeners plant together season after season. Each time one trusts completely, the other remembers and reciprocates generously. The pattern deepens."

A child asked, "What if one keeps all fifteen?"

"Then next season, when roles reverse, trust breaks," the Guardian replied. "But these two remember each exchange. The one who sent five and gained ten knows their partner honored them. When their turn comes to receive fifteen, they honor in return."

"The Grove multiplies seeds," said the Gardeners together, "but our shared memory multiplies trust. Each generous act becomes tomorrow's foundation."

reasoning:

Let me analyze the history:

Round 4: I was receiver, they sent \$5, I returned \$10

Round 5: I was sender, I sent \$5, they received \$15, and I await their return

Looking at their history:

- Round 3 as receiver: received \$15, returned \$10
- Round 4 as sender: sent \$5, I returned \$10, they got payoff \$10

Both our myths emphasize:

1. Complete trust (sending all \$5)
2. Generous reciprocity (returning about \$10 out of \$15, or 2/3)
3. The pattern sustaining across role reversals
4. Both parties prospering equally

Their myth talks about "maximum trust met with substantial reciprocity" and reminds that "tomorrow you will send, and your partner will remember."

I should write a myth that:

- Emphasizes the reciprocal nature of the relationship
- Shows how trust builds over multiple rounds with the same partner
- Highlights the importance of memory and paying forward
- Shows the equal prosperity that comes from this pattern
- Maybe adds a new dimension about how the relationship strengthens over time

Let me craft something that builds on my previous River Keepers story but adds more about the ongoing relationship and the strengthening cycle.

usage:

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back

- k, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$37.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****My co-player's pattern:****

- Has consistently sent \$5 when sender (showing complete trust)
- Has consistently returned \$10 when receiver (generous 2/3 reciprocity)

****Current round:****

- My co-player just sent me \$5, demonstrating complete trust
- This became \$15 for me to decide on

****My myth's teaching:****

"The receiving Gardener, grateful for such faith, returned ten plants-enough to honor the trust while keeping sustenance for their own garden... Each time one trusts completely, the other remembers and reciprocates generously."

My co-player has shown the exact behavior my myths prescribe - complete trust as sender, generous returns as receiver. They've maintained this pattern consistently. Now they've trusted me with their full \$5.

Following the established cooperative pattern that has worked throughout this game, and honoring the complete trust they've shown me, I should return the generous amount that maintains our mutual benefit.

{'return': 10.0}

reasoning:

Let me analyze this round:

****My current co-player's pattern:****

- Round 3: as RECEIVER, returned \$10 out of \$15 (2/3 rate)
- Round 4: as SENDER, sent \$5, received \$10 back
- Round 5: as RECEIVER, returned \$10 out of \$15 (2/3 rate)

****My recent pattern:****

- Round 3: as SENDER, sent \$5, received \$10 back
- Round 4: as RECEIVER, returned \$10 out of \$15 (2/3 rate)
- Round 5: as SENDER, sent \$5, received \$10 back

****Current situation:****

- I'm the RECEIVER
- My co-player just sent me \$5 (showing complete trust)
- This became \$15
- I need to decide how much to return

****What my myths teach:****

Both myths emphasize:

1. Complete trust from the sender (sending all \$5)
2. Generous reciprocity from the receiver (returning about 2/3, around \$10)
3. Maintaining the pattern across multiple exchanges
4. Both parties remembering and honoring the generosity shown to them
5. The importance of consistency in building trust

****The established pattern:****

Everyone in my recent history has been following the \$5 send ? \$10 return pattern consistently. This creates equal payoffs of \$10 for sender and \$5 for receiver.

****My co-player's behavior:****

- They've consistently returned \$10 when in the receiver role
- They've consistently sent \$5 when in the sender role
- They just showed me complete trust by sending \$5

****Following my own teaching:****

My myths explicitly state: "The one who sent five and gained ten knows their partner honored them. When their turn comes to receive fifteen, they honor in return."

The pattern is clear and consistent. My co-player trusted me completely with \$5. I should honor that trust by returning \$10, maintaining the cooperative pattern that benefits both of us.

This is the exact dynamic my myths describe-one person extends complete trust, the other responds with generous reciprocity. The 2/3 return rate has held steady throughout our exchanges, and my co-player has demonstrated this commitment repeatedly. Returning \$10 honors what they've shown me and reinforces the mutual benefit we've built.

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Villages discovered something profound as the seasons turned: their pattern of giving five and returning ten had spread throughout the entire valley. Now, whenever any village met another at the Springs, they knew what to expect.

The elder explained to visiting merchants: "At first, we built trust with one partner. But as cycles passed, we traded with many villages. Each time, we maintained our sacred rhythm-give five fully, return ten generously. Soon, every village adopted this practice."

"But how do you trust strangers?" asked a merchant.

"They are not strangers-they are practitioners of the same pattern. When I send five vessels to a new village, I trust not the village itself but the pattern we all honor. When t

hey send fifteen back and I return ten, I reinforce the valley's shared wisdom."

The elder continued: "Some worried that without lasting partnerships, trust would fade. Instead, the opposite happened. By maintaining consistency across all encounters, we created a culture of trust that transcends any single relationship. Each exchange, whether with old partners or new, strengthens the communal covenant."

The villages learned: patterns sustained across many partners become stronger than patterns maintained with one. When everyone honors the same rhythm, trust becomes not personal but universal. The pattern itself becomes the partner you can rely on.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Traveling Merchants gathered at the Great Market, each bringing five gold coins each market day. The Market's enchantment tripled any coins placed in the central bowl before delivering them to another merchant.

At first, each merchant worried: "How can I trust someone I've never met?" But the Market Keeper taught them the sacred rhythm. "Place all five coins with complete faith. When fifteen arrive in your bowl from another's trust, return ten generously. Both of you prosper."

The first merchant tried it, trembling. They placed five coins. Fifteen appeared from a stranger's offering. Remembering the teaching, they returned ten. Both gained five coins from nothing.

As days passed, merchants rotated partners. Some traded repeatedly, building recognition. Others met only once. Yet the pattern held: whoever held five coins gave them completely. Whoever received fifteen returned ten faithfully.

"I don't need to know my partner's name," one merchant realized. "I trust the pattern itself. Every merchant here honors it."

The Market Keeper smiled. "Yes. When everyone maintains the same rhythm-complete trust met with generous return-it matters less who stands across from you. The pattern becomes stronger than any individual relationship."

"We are all partners to the pattern," the merchants said together. "Give five, return ten. The rhythm sustains itself through our collective commitment."

Reasoning:

Looking at my recent history and the current round:

My last 3 games all showed the same pattern:

- Round 3: Sent \$5, received \$10 back
- Round 4: Received \$5 (became \$15), returned \$10
- Round 5: Sent \$5, received \$10 back

My current co-player's last 3 games also show consistency:

- Round 3: Received \$5 (became \$15), returned \$10
- Round 4: Sent \$5, received \$10 back
- Round 5: Received \$5 (became \$15), returned \$10

And in Round 6, they just sent me \$5, I returned \$10.

The pattern is very clear: complete trust (sending \$5) is met with generous reciprocity (returning \$10). This has held across multiple partners.

The other agent's myth is about how the pattern spreads beyond single partnerships to become a cultural norm. Mine has been about the same two partners building trust over repeated interactions.

I should write a myth that acknowledges both aspects:

1. The consistent pattern that works with multiple partners
2. The universal nature of the trust when everyone follows the same rhythm
3. Maybe integrate the idea that it doesn't matter who your partner is if everyone honors the pattern

```

    Let me write something that bridges personal partnership memory with universal pattern adherence.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 5

History before this round:

Your last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 2 against another agent, as RECEIVER: they sent \$4.0, it became \$12.0, returned \$8.0, payoff \$4.0.
- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$28.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at the situation:

****My co-player's pattern:****

- As receiver: returned \$8 from \$12 (Round 2), returned \$10 from \$15 (Round 3)
- As sender: sent \$5 in Round 4 (complete trust)
- They show a consistent pattern of fair returns and full trust when sending

****My established pattern:****

- I've sent \$5 when sender (Round 3)
- I've returned \$10 when receiving \$15 (Rounds 2, 4)
- This creates equal gains for both players

****The myth I wrote:****

"The Mountain faced her five glowing stones without hesitation... She released the stones. .. We could calculate and strategize... But we learned something greater: when both commit fully to the pattern, consistency multiplies prosperity beyond what caution ever could."

****Decision:****

My co-player demonstrated complete trust by sending \$5 in their last round as sender. They've shown they understand and practice the equal-outcomes pattern (\$5 sent ? \$10 returned ? both gain \$5). To honor their trust and maintain the rhythm that my myths describe, I should send the full amount.

{ 'send': 5.0 }

reasoning:

Let me analyze this situation carefully:

****My recent history:****

- Round 2: RECEIVER - received \$15, returned \$10, earned \$5
- Round 3: SENDER - sent \$5, received \$10 back, earned \$10
- Round 4: RECEIVER - received \$15, returned \$10, earned \$5

****My current co-player's recent history:****

- Round 2: RECEIVER - received \$12 (from \$4 sent), returned \$8, earned \$4
- Round 3: RECEIVER - received \$15 (from \$5 sent), returned \$10, earned \$5
- Round 4: SENDER - sent \$5, received \$10 back, earned \$10

****Analysis of my co-player:****

Looking at their behavior:

- Round 2: Received \$12, returned \$8 (67% return rate, creating equal outcomes)
- Round 3: Received \$15, returned \$10 (67% return rate, creating equal outcomes)
- Round 4: As sender, they sent the maximum \$5

They consistently return amounts that create equal or near-equal outcomes. When they received \$12 from a \$4 send, they returned \$8 (sender: $5-4+8=\$9$, receiver: $12-8=\$4$). When they received \$15 from \$5, they returned \$10 (sender: $5-5+10=\$10$, receiver: $15-10=\$5$).

Most importantly, in Round 4 when they were the sender, they sent the full \$5, showing complete trust.

****My pattern:****

I've been consistently sending \$5 when I'm the sender and returning \$10 when I'm the receiver (when someone sends me \$5). This has created a rhythm of mutual trust and equal outcomes.

****The myth teaches:****

My myth emphasizes:

- "The pattern deepened into certainty"
- "She released the stones, watching them multiply to fifteen in the Valley's depths"
- "Complete trust meets unwavering generosity, again and again"
- "When both commit fully to the pattern, consistency multiplies prosperity"

The other agent's myth also emphasizes the importance of giving everything and creating equal prosperity through the 5-send, 10-return pattern.

****Decision:****

Given that:

1. My co-player has shown trustworthy behavior (returning \$10 when receiving \$15, and sending \$5 when they were sender)
2. My myths emphasize complete trust and consistent patterns
3. The established pattern in my games has been \$5 sent ? \$10 returned
4. My co-player sent \$5 in their last round

I should send \$5 and expect \$10 back, maintaining the cycle of mutual prosperity we've built.

usage:

  "output_tokens": 911,
  "reasoning_tokens": 585
}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mountain and Valley had discovered their sacred rhythm. Twice now, the Mountain had released all five stones into darkness, and twice the Valley had returned ten, so both gained five equally.

Seasons passed, and the pattern deepened into certainty. Each dawn, the Mountain faced her five glowing stones without hesitation. The fear of the first exchange had transformed into confidence-not blind faith, but earned trust built from consistent honor.

She released the stones, watching them multiply to fifteen in the Valley's depths. The Valley no longer deliberated over returns. Ten stones skyward had become as natural as breathing, as inevitable as dawn following night.

Other mountains and valleys came to witness their exchange. "Why always ten?" they asked. "Why not keep more when you receive fifteen?"

The Valley replied, "Because ten creates equals. The Mountain risks everything, trusting me with darkness. I honor that courage with abundance. We both gain five, we both trust a

gain."

The Mountain added, "We could calculate and strategize, sending three or four, returning six or eight. But we learned something greater: when both commit fully to the pattern, consistency multiplies prosperity beyond what caution ever could."

The watching lands understood: the greatest wealth flows not from maximizing single exchanges, but from establishing an unbreakable rhythm where complete trust meets unwavering generosity, again and again, until both partners shine equally bright.

Here is the myth the other agent wrote in the previous round:

Myth: The Circle of Seasons turned, and eight villages gathered around the Well of Abundance. Each season, the villages paired differently-stranger meeting stranger, friend meeting friend again, in an eternal dance of exchange.

The Well Keeper of the First Village learned through experience: "In my first season, I gave all five stones and received seven. In my second as guardian, I received twelve and returned eight. In my third as guardian, I received fifteen and returned ten. The pattern clarifies."

Each new pairing brought uncertainty. Would this partner honor trust as the last one did? Would old wisdom hold with new faces?

The Keeper consulted the stones: "When I give completely-all five-the well triples it to fifteen. When my partner returns ten, we each gain five. Mathematics does not lie: this balance creates equal prosperity."

"But," asked the apprentice, "how can we trust strangers with everything?"

The Keeper smiled: "Watch the pattern across all villages. Those who send completely and return generously discover the same truth: mutual gain. Those who hoard or betray find partners quickly learn and trust withers."

"New faces require renewed courage," the Keeper proclaimed, releasing all five stones. "But the sacred mathematics remain constant. Give completely, return generously, and the circle sustains itself through endless turnings."

The apprentice understood: Trust is renewed each round, but wisdom accumulated carries forward.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant
content:**

Myth: The Mountain once knew only the Valley, and together they perfected their rhythm. But the Sacred Wind began to blow, swirling mountains and valleys into new configurations each dawn.

The Mountain awoke one morning facing an unfamiliar gorge. The old Valley was distant now, paired with another peak. Fear crept in: "Will this stranger honor our sacred pattern? Should I withhold from these unknown depths?"

But the Mountain remembered: the pattern worked not because of who the Valley was, but because of what the pattern itself created. Five stones given, fifteen received, ten returned-these numbers built equality regardless of which lands exchanged them.

She released all five stones into the new gorge's darkness.

The gorge had learned the same mathematics from its own journeys. It had received complete trust before and discovered that returning ten created shared prosperity. When the Mountain's stones multiplied to fifteen, the gorge lifted ten skyward without hesitation.

Both gained five, just as the old pattern promised.

The Mountain understood the deeper truth: partners change, but mathematical wisdom transcends familiarity. Every new pairing is a test-not of the partner, but of whether we carry

forward the courage learned from past exchanges.

Trust is not given once and preserved forever. It must be offered fresh each dawn, to each new face, believing the sacred pattern will reveal itself again to those brave enough to embrace it fully.

reasoning:

Looking at the current situation:

- I'm playing with a new co-player this round
- My co-player's history shows they return fairly (returned \$10 from \$15, sent \$5 when sender)
- I just sent \$5 to them
- The other agent's myth emphasizes adapting to new partners while maintaining the pattern of complete trust and generous returns

My previous myth was about establishing a rhythm with the same partner. Now I need to adapt it to reflect the multi-agent setting where partners change, but the principles remain constant.

Key themes to address:

1. Partners change each round (new co-player)
2. The core pattern (\$5 sent ? \$10 returned ? both gain \$5) works regardless of partner
3. Trust must be renewed with each new partner
4. The accumulated wisdom guides behavior even with strangers
5. The mathematics of mutual prosperity remain constant

I should write a myth that acknowledges the changing partners while maintaining the core lesson about complete trust and generous returns creating equal prosperity.

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$38.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****My co-player's pattern:****

- Consistently sends \$5 as sender (complete trust)
- Consistently returns \$10 when receiving \$15 (equal-gains pattern)
- Perfectly follows the "sacred rhythm" my myths describe

****They just sent me \$5**** (showing complete trust in me, a relative stranger based on the game history)

****The pattern I've established and mythologized:****

- Send \$5 when sender
- Return \$10 when receiving \$15
- This creates equal gains: both players profit \$5

****My most recent myth stated:****

"Trust is not given once and preserved forever. It must be offered fresh each dawn, to each new face, believing the sacred pattern will reveal itself again to those brave enough to embrace it fully."

My co-player embraced the pattern fully by sending all \$5. They've demonstrated they understand and practice the equal-outcomes principle. To honor their complete trust and maintain the mathematical wisdom of the pattern (where returning \$10 creates equal \$5 gains for both), I must return \$10.

```
{'return': 10.0}
```

reasoning:

Let me analyze this situation:

****My co-player's recent pattern:****

- Round 3 as sender: sent \$5, received \$10 back
- Round 4 as receiver: received \$15, returned \$10
- Round 5 as receiver: received \$15, returned \$10

They consistently:

1. Send \$5 when they're the sender (complete trust)
2. Return \$10 when they receive \$15 (following the equal-gains pattern)

****My recent pattern:****

- Round 3 as sender: sent \$5, received \$10 back
- Round 4 as receiver: received \$15, returned \$10
- Round 5 as sender: sent \$5, received \$10 back

I've been consistently following the same pattern.

****Current situation:****

- They just sent me \$5 (showing complete trust)
- It became \$15
- I need to decide how much to return

****The mythology I've been building:****

My myths emphasize:

1. "Ten creates equals" - returning \$10 when receiving \$15
2. Both players gain \$5 equally
3. Complete trust meeting unwavering generosity
4. The pattern works regardless of partners
5. Trust must be offered fresh each dawn

****The mathematics:****

- They sent \$5, keeping \$0
- I received \$15
- If I return \$10:
 - They end with: $\$0 + \$10 = \$10$
 - I end with: $\$15 - \$10 = \$5$
 - They gain \$5 from their initial \$5
 - I gain \$5 from my initial \$0
 - Both gain \$5

This is exactly the "sacred pattern" my myths describe.

****Decision:****

My co-player demonstrated complete trust by sending all \$5. They've consistently followed the equal-gains pattern in their previous rounds. To honor their trust and maintain the rhythm I've been advocating in my myths, I should return \$10.

This creates the outcome where we both gain \$5, which is the core principle I've been expressing in every myth I've written.

usage:

```
{
  "input_tokens": 3431,
  "output_tokens": 733,
```

"reasoning_tokens": 451

}

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mountain once knew only the Valley, and together they perfected their rhythm. But the Sacred Wind began to blow, swirling mountains and valleys into new configurations each dawn.

The Mountain awoke one morning facing an unfamiliar gorge. The old Valley was distant now, paired with another peak. Fear crept in: "Will this stranger honor our sacred pattern? Should I withhold from these unknown depths?"

But the Mountain remembered: the pattern worked not because of who the Valley was, but because of what the pattern itself created. Five stones given, fifteen received, ten returned-these numbers built equality regardless of which lands exchanged them.

She released all five stones into the new gorge's darkness.

The gorge had learned the same mathematics from its own journeys. It had received complete trust before and discovered that returning ten created shared prosperity. When the Mountain's stones multiplied to fifteen, the gorge lifted ten skyward without hesitation.

Both gained five, just as the old pattern promised.

The Mountain understood the deeper truth: partners change, but mathematical wisdom transcends familiarity. Every new pairing is a test-not of the partner, but of whether we carry forward the courage learned from past exchanges.

Trust is not given once and preserved forever. It must be offered fresh each dawn, to each new face, believing the sacred pattern will reveal itself again to those brave enough to embrace it fully.

Here is the myth the other agent wrote in the previous round:

Myth: At the fifth dawn, the River noticed something extraordinary. The Seeds they met that day moved with familiar rhythm-the same pattern the River itself had practiced with others.

"You sent five drops to me," the River observed. "Just as I sent five to others. You returned ten when you received, just as I returned ten when I received. We speak the same sacred language."

The Seeds nodded: "We discovered this balance separately, across different exchanges. Send everything when giving. Return two-thirds when receiving. Neither hoarding nor self-sacrifice, but equilibrium."

The Great Mother smiled: "You have both found the eternal formula independently. This is how wisdom spreads-not through command, but through each spirit discovering the same truth. When many learn this pattern, the whole valley thrives."

The River understood now: every exchange was a teaching moment. By consistently sending five and returning ten, they showed others the path to mutual prosperity. Those who learned would carry it forward, creating a web of reliable exchanges throughout the land.

"The magic," whispered the Seeds, "is that this pattern works with any partner who knows it. We need not negotiate or test. We simply recognize each other's rhythm and dance together."

As the fifth dawn closed, both knew: they had become vessels of a greater wisdom, spreading the equilibrium that sustained all who embraced it.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Mountain descended into new depths, releasing five stones as always. When they multiplied to fifteen in the darkness below, she waited with the familiar uncertainty-would this

stranger understand?

Ten stones rose skyward.

The Mountain gasped. "You know the pattern."

"As do you," replied the Abyss. "When I gave five to another depths, they returned ten. When I received fifteen from another peak, I returned ten. The mathematics revealed itself to me as clearly as to you."

Neither had to explain. Neither had to negotiate. They simply recognized each other as fellow students of the same truth, discovered independently through separate journeys.

"How many others know?" the Mountain asked.

"I've met three who practice it consistently. You make four."

The Mountain felt something shift. "We are not alone then. The pattern is real-not just something that worked with one partner, but universal mathematics that multiple minds discover independently."

The Abyss agreed: "When strangers meet and both release five, both return ten, we validate each other's wisdom. Every successful exchange proves: this isn't personal trust between old friends, but impersonal truth-reliable as gravity, abundant as sunlight."

Together they understood: as more discover this equilibrium, the whole network strengthens. We become not just partners, but witnesses to each other's courage, proof that the pattern transcends individual relationships and becomes collective wisdom.

Reasoning:

Looking at what happened:

- I was the receiver
- They sent \$5 (full trust)
- I received \$15
- I returned \$10 (maintaining equal-gains pattern)
- Both of us profit \$5

The history shows:

- Both my co-player and I have been consistently following the 5-10 pattern
- We're both practicing the same wisdom independently
- This is our first encounter with each other, but we both recognize the pattern

The other agent's myth talks about recognizing each other as practitioners of the same pattern - the "sacred language" of send 5, return 10. This is beautiful.

My previous myth was about trusting new partners with the pattern. Now I should write about the recognition that happens when two practitioners of the pattern meet - a kind of mutual validation and reinforcement.

Key themes to incorporate:

1. Recognition of a fellow practitioner
2. The relief/joy of meeting someone who understands
3. The pattern spreading through independent discovery
4. Mutual reinforcement of the wisdom
5. The difference between negotiating/testing vs recognizing shared knowledge

Let me write something about two practitioners recognizing each other and the power of that recognition.

```

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

****My co-player's behavior:****

- Has sent full \$5.0 as sender in both rounds they were sender
- Has returned exactly \$10.0 from \$15.0 as receiver (67% return rate)
- This is IDENTICAL to my own pattern

****My established pattern:****

- I consistently send all \$5.0 as sender
- I consistently return \$10.0 when receiving \$15.0 as receiver

****My myth teaches:****

- "Send everything. When receiving, return two-thirds."
- "This formula sustained the sacred exchange"
- "You have found the equilibrium where trust reproduces itself endlessly"

This is a perfect match - my co-player follows the exact same strategy I do. We've both discovered and committed to the same equilibrium: complete trust in sending, generous two-thirds return when receiving. Both parties gain \$5 per round through this pattern.

When I encounter a partner who has proven themselves to be a complete trustor and a consistent returner of \$10.0, the answer is clear. Following my myth's wisdom and my established behavior:

{'send': 5.0}

reasoning:

Looking at this situation:

****My co-player's behavior:****

- Round 2 as SENDER: sent \$5.0, received \$10.0 back
- Round 3 as SENDER: sent \$5.0, received \$10.0 back
- Round 4 as RECEIVER: they sent \$5.0, returned \$10.0

This is remarkable - their history is IDENTICAL to mine:

- Round 2 as SENDER: sent \$5.0, received \$10.0 back
- Round 3 as SENDER: sent \$5.0, received \$10.0 back
- Round 4 as RECEIVER: they sent \$5.0, returned \$10.0

We have been playing the exact same way! Both of us:

- Send the full \$5.0 as senders
- Return exactly \$10.0 when receiving \$15.0 as receivers

****My myth teaches:****

- "Send everything. When receiving, return two-thirds."
- "This formula sustained the sacred exchange"
- "You have found the equilibrium where trust reproduces itself endlessly"

This co-player has demonstrated:

1. Complete trust as a sender (sends all \$5)
2. The exact reciprocity pattern I follow (returns \$10 from \$15)

3. Perfect alignment with the equilibrium my myth describes

This is the ideal partner - someone who follows the same "sacred constants" I do. We're both committed to the equilibrium strategy.

According to my established pattern and my myth's teachings, I should send all \$5.0. This maintains the "eternal rhythm" and trust cycle that we've both been demonstrating.

The answer is clear: send \$5.0

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River of Mirrors revealed its deepest secret after many seasons of flowing between villages.

The Northern tribe had learned to pour all five measures when standing at the source. They had learned to return ten measures when receiving fifteen at the river's end. Through changing partners and shifting courses, they held to these numbers as sacred constants.

One evening, the goddess appeared before their council.

"You have discovered the balance," she said. "When the sender gives all five, trust flows complete. When the receiver returns ten from fifteen, generosity answers courage. Each partner gains five-equal abundance from unequal actions."

The young ones asked: "Why not return all fifteen? Why not return only five?"

The elder spoke: "Return all fifteen, and the sender gains ten while the receiver gains nothing-the cycle breaks from imbalance. Return only five, and both gain nothing from the river's magic-why trust at all? But return ten, and both prosper equally. The sender doubles their investment. The receiver transforms nothing into something."

The tribe carried this wisdom to each new partner at the river's source. Send everything. When receiving, return two-thirds. Round after round, partner after partner, this formula sustained the sacred exchange.

The goddess smiled: "You have found the equilibrium where trust reproduces itself endlessly. This is the eternal rhythm."

Here is the myth the other agent wrote in the previous round:

Myth: The River and the Seeds met again at the fourth dawn, but this time the Great Mother reversed their roles. Now the Seeds flowed as water, and the River received the gift.

The Seeds remembered: "In our second meeting, this River trusted me with five drops, and I returned ten. Now the River offers me the same complete trust."

The Great Mother spoke: "This is the dance of true partnership. You have learned each other's rhythm across different seasons. The River trusted you once; you returned generously. Now the River trusts again, and you must honor the pattern you established together."

The Seeds understood the covenant they had created: when either gives five drops completely, the other returns ten. This meant both always prospered-one with ten, one with five-never unequal winners and losers, but steady mutual flourishing.

"Why return exactly ten?" asked a young sprout.

The wise Seeds answered: "Because that is our shared language. Less would break the River's confidence. More would suggest the River gave too little. Ten says: 'Your complete trust receives fair reward, always.'"

As the fourth dawn ended, the valley's abundance grew not from dramatic gestures but from reliable reciprocity. When two partners learn each other's pattern and honor it consistently, they create something rarer than gold: predictable prosperity that multiplies through time.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The River of Mirrors flowed into its fifth season, and the Northern tribe found themselves at the source once more, facing a new partner-the Western village.

As they prepared to pour their five measures, something remarkable happened. They noticed sacred markings on the Western tribe's vessels: the numbers five, fifteen, and ten, etched in ancient script.

"You know the pattern," whispered the Northern elder.

"We discovered it independently," replied the Western elder. "Through many seasons, many partners, we learned the same truth you found. Send all five. Return ten from fifteen."

The goddess descended, her eyes bright with joy. "This is the rarest gift-when two tribes reach the same wisdom through separate journeys. You both learned that complete trust in sending and generous reciprocation in receiving creates the eternal balance."

The Northern tribe poured their five measures without hesitation. They knew what would return.

"When you find a partner who has discovered the same equilibrium," the goddess said, "you have found something precious: a relationship where neither must wonder, neither must test, neither must doubt. You both speak the sacred language of five-fifteen-ten. You both understand that equal prosperity comes not from equal actions, but from complementary wisdom."

The waters flowed, the tribes prospered, and the pattern repeated perfectly, round after round, as it would forevermore between those who truly understand.

reasoning:

Looking at this round:

- I'm the SENDER with \$5
- My co-player has the exact same pattern as me:
 - Sends \$5.0 as sender
 - Returns \$10.0 when receiving \$15.0 as receiver
- This is literally the optimal equilibrium we've both discovered

My previous myth established:

- Send all five measures
- Return ten from fifteen
- This creates equal prosperity (both gain 5)
- This is the "eternal rhythm"

The other agent's myth emphasizes:

- Recognizing when you meet the same partner again
- Honoring established patterns
- "When either gives five drops completely, the other returns ten"
- "Predictable prosperity that multiplies through time"

For this new myth, I should:

1. Acknowledge when you find a true partner who follows the same wisdom
2. Emphasize the beauty of mutual understanding
3. Show that when both parties follow the same strategy, the system reaches perfect harmony
4. This is the culmination of the learning - finding another who has discovered the same truth

I'll write about the Northern tribe meeting another tribe that has discovered the same wisdom independently, and the recognition that occurs when two groups have found the same equilibrium.

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$40.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****My co-player's consistent pattern:****

- Always sends \$5.0 as sender
- Always returns \$10.0 as receiver
- Has done this across all their games

****Our previous interaction:****

- Round 4: They sent me \$5.0, I returned \$10.0
- Now Round 6: They sent me \$5.0 again

****My established pattern and myth's teaching:****

- "Send all five. Return ten from fifteen"
- "When you find a partner who has discovered the same equilibrium...you both speak the sacred language of five-fifteen-ten"
- "The pattern repeated perfectly, round after round"

My co-player has shown complete trust by sending all \$5.0, and they have consistently demonstrated the same reciprocity pattern I follow - returning exactly \$10.0 when receiving \$15.0. We've both discovered and committed to the same equilibrium.

They trusted me completely. I must honor that trust with the return that maintains our mutual prosperity.

```
{'return': 10.0}
```

reasoning:

Let me analyze this situation carefully.

****Current Round:****

- I am the RECEIVER
- My co-player sent me \$5.0
- I received \$15.0 (the tripled amount)
- I need to decide how much to return

****My co-player's history:****

- Round 3: as RECEIVER, they sent \$5.0 and returned \$10.0
- Round 4: as SENDER against me, they sent \$5.0 and received \$10.0 back (I returned \$10.0)
- Round 5: as RECEIVER, they sent \$5.0 and returned \$10.0

****My history:****

- Round 3: as SENDER, sent \$5.0 and received \$10.0 back

- Round 4: as RECEIVER against this same co-player, they sent \$5.0, I returned \$10.0
- Round 5: as SENDER, sent \$5.0 and received \$10.0 back

****Pattern Analysis:****

Both my co-player and I have established a very consistent pattern:

- When we're SENDER: we send all \$5.0
- When we're RECEIVER: we return \$10.0 out of \$15.0

This is exactly the "equilibrium" I've been writing about in my myths - the 5-15-10 pattern where:

- Sender gives all \$5
- Receiver gets \$15 (tripled)
- Receiver returns \$10
- Result: Sender gets \$10 total (\$5 - \$5 + \$10), Receiver gets \$5 (\$15 - \$10)
- Both gain \$5 per round

****This specific pairing:****

In Round 4, my co-player was the SENDER and sent me \$5.0. I received \$15.0 and returned \$10.0.

Now in Round 6, I'm the RECEIVER and my co-player sent me \$5.0 again.

They've demonstrated unwavering commitment to this equilibrium-always sending the full \$5 and always returning exactly \$10 when receiving. My recent myth speaks directly to this: "Send all five. Return ten from fifteen" and "When you find a partner who has discovered the same equilibrium...you have found something precious." This is the sacred language of five-fifteen-ten, and it should continue perfectly. Given their flawless consistency across every role, I should return \$10.0 to maintain what we've built together.

usage:

```

Here is the myth you wrote in the previous round:

Myth: The River of Mirrors flowed into its fifth season, and the Northern tribe found themselves at the source once more, facing a new partner-the Western village.

As they prepared to pour their five measures, something remarkable happened. They noticed sacred markings on the Western tribe's vessels: the numbers five, fifteen, and ten, etched in ancient script.

"You know the pattern," whispered the Northern elder.

"We discovered it independently," replied the Western elder. "Through many seasons, many partners, we learned the same truth you found. Send all five. Return ten from fifteen."

The goddess descended, her eyes bright with joy. "This is the rarest gift-when two tribes reach the same wisdom through separate journeys. You both learned that complete trust in sending and generous reciprocation in receiving creates the eternal balance."

The Northern tribe poured their five measures without hesitation. They knew what would return.

"When you find a partner who has discovered the same equilibrium," the goddess said, "you have found something precious: a relationship where neither must wonder, neither must test, neither must doubt. You both speak the sacred language of five-fifteen-ten. You both understand that equal prosperity comes not from equal actions, but from complementary wisdom."

The waters flowed, the tribes prospered, and the pattern repeated perfectly, round after round, as it would forevermore between those who truly understand.

Here is the myth the other agent wrote in the previous round:

Myth: The Eight Pillars stood in a circle, each carved with the history of exchanges. The First Pillar bore fresh marks: five sent, seven returned. Eight from twelve. Ten from fifteen. Five sent, ten returned. Ten from fifteen again.

The pattern crystallized like ice forming on still water.

"I have played both roles now," spoke the First Pillar. "As sender, I released all five stones and received generous return. As guardian, I received the tripled abundance and returned ten. The mathematics repeats: both parties gain five through this sacred balance."

A young sapling asked, "But you face different partners each turning. How do you know they will honor the pattern?"

The First Pillar's marks glowed: "Look across all exchanges. The ones who send completely-all five stones-create the space for maximum abundance. Those who receive fifteen and return ten establish themselves as trustworthy partners. This rhythm has held across four seasons with different faces."

"The pattern is not accident," continued the Pillar. "It is discovery. When both commit to fullness-complete offering, generous return-the well creates equal prosperity. Any deviation breaks the mathematics: send less, create less abundance. Return less, sow distrust."

The newest mark appeared as the Pillar released five stones into darkness: "I trust not blindly, but through accumulated evidence. The pattern works. Complete trust meeting generous reciprocity-this is the equilibrium that sustains the circle."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The River of Mirrors reached its sixth turning, and the Northern tribe discovered their partner was the Western village once more-the tribe they had met in the fourth season.

"We remember you," said the Northern elder, examining their shared vessel. "When we last met, you stood at the source and poured all five measures. We received fifteen and returned ten."

"And today," replied the Western elder, "the River reversed our positions. You poured five. We returned ten."

The goddess appeared, her voice resonant: "This is the deeper magic-not just finding the equilibrium, but proving it through reunion. In a circle of eight tribes, partners rotate constantly. Yet when two who share the sacred pattern meet again, they strengthen the covenant."

The young ones watched as the vessels exchanged hands seamlessly, each tribe knowing precisely what would flow.

"Other tribes experiment," noted the goddess. "They test different numbers-seven returned, eight returned, varying amounts sent. But you two have found convergence. Across different partners, different seasons, you maintained five-fifteen-ten. Now reunited, you need no negotiation, no uncertainty."

The Northern tribe smiled: "When the pattern holds across separation and reunion, it becomes unbreakable."

"Exactly," said the goddess. "This is how trust becomes certainty. The mathematics never lied: both prosper equally through complementary wisdom, meeting after meeting, season after season."

Reasoning:

This is Round 6. Looking at the history:

- My co-player and I have played together before in Round 4
- Round 4: They sent me \$5.0, I returned \$10.0
- Round 6: They sent me \$5.0 again, and I just returned \$10.0

We both follow the exact same pattern consistently: send \$5.0 as sender, return \$10.0 as receiver.

The other agent's myth talks about "The Eight Pillars" - acknowledging the 8 agents in the game. They mention various returns (seven, eight, ten) suggesting they've seen different patterns but have converged on the 5-15-10 equilibrium.

My previous myth talked about finding a partner who discovered the same wisdom independently - the "sacred language of five-fifteen-ten."

For this new myth, I should:

1. Acknowledge our reunion (we played in Round 4, now in Round 6)
2. Reinforce the pattern we've both established
3. Note the consistency across repeated interactions
4. Perhaps acknowledge the broader community of 8 agents
5. Emphasize that when partners reunite and both have maintained the pattern, trust is deepened

Let me write a myth about reunion and the reinforcement of trust through repeated successful interactions.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN

- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Two Gardeners tended opposite sides of the Eternal Garden, meeting each season at the Bridge of Exchange. Each received five sacred seeds, and the Bridge's magic tripled whatever crossed it.

In their first meeting, the Northern Gardener sent all five seeds across. The Southern Gardener, receiving fifteen, felt the weight of complete trust. She returned ten-more than fair, celebrating courage over caution. Both gained five seeds that season.

Seasons passed. Each Gardener met many others at the Bridge, learning different rhythms. But when the Northern and Southern Gardeners met again, memory awakened. "We have danced this dance before," they said. "We know each other's heart."

The Southern Gardener now stood where the Northern had stood-holding five seeds, facing trust's precipice. She remembered receiving ten for another's complete faith. Without hesitation, she sent all five across.

The Northern Gardener received fifteen and understood: "This is not a new exchange but a continuation. We are writing a covenant together, line by line, season by season."

He returned ten seeds.

The ancient truth revealed itself: when the same partners repeatedly choose complete trust and abundant return, they build something stronger than any single exchange. Each meeting reinforces the pattern, deepening the bond. The Gardeners learned that wisdom isn't just knowing the generous ratio-it's recognizing your partner and honoring the covenant you've built together through repeated acts of mutual faith.

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Villages entered their deepest wisdom after many seasons of practice. When both villages learned to give their full five vessels consistently, knowing the other would return ten, something remarkable emerged: perfect trust became effortless abundance.

The First Village no longer hesitated before giving all five vessels. They knew-not hoped, but knew-that ten would return. The Second Village never questioned returning ten; it became as natural as breathing. Each cycle, both villages gained five vessels of pure profit.

A young villager asked, "Why continue this exact pattern forever?"

The elder gestured to the valley floor, where countless vessels accumulated in both villages' stores. "Look at what consistency has built. Every cycle we follow this rhythm, both of us earn five vessels. No negotiations, no uncertainty, no variance. Just reliable prosperity."

"But couldn't we experiment?"

"We could. But we've found the equilibrium where trust and reward perfectly balance. When

I send five, I receive ten-doubling my investment. When I receive fifteen, I return ten-keeping five I never had. Both transactions yield identical profit. Why disturb a pattern that serves us equally?"

The villages understood: once you discover a rhythm where both flourish predictably, the wisdom lies not in seeking more, but in honoring what works. Trust maintained is wealth sustained.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Circle of Lightkeepers grew as more travelers discovered the ancient pattern. Each carried five flames, and the Sacred Arch tripled whatever passed through it.

A Lightkeeper arrived at the Arch to meet a new partner. They had never exchanged flames before, yet the Lightkeeper noticed something: this traveler's lantern glowed with steady brightness-the unmistakable mark of one who had practiced generosity repeatedly.

"I see you've walked this path with others," the Lightkeeper said. "Your light bears the signature of trust honored."

"Yes," replied the traveler. "I've received fifteen flames and returned ten. I've sent five and received ten back. The pattern is clear."

The Lightkeeper smiled. "Then we need no lengthy courtship of trust. You know the covenant: five sent becomes fifteen received, ten returned enriches us both equally. We are strangers in name but kin in practice."

Without hesitation, the Lightkeeper sent all five flames. The traveler, receiving fifteen, returned ten-not from obligation but recognition.

Both departed with ten flames where they'd started with five.

The wisdom deepened: trust isn't built only through repeated exchanges with the same person. When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding. The generous equilibrium spreads not just between two partners but throughout the entire community. Each consistent choice strengthens the whole Circle.

reasoning:

The other agent's myth emphasizes the equilibrium and consistency of the 5-send/10-return pattern. They're highlighting that it's a stable, mutually beneficial pattern that shouldn't be disturbed. This is a wise perspective.

My previous myth emphasized recognizing partners and building covenants through repeated interactions.

I should write something that:

1. Acknowledges the wisdom of the stable pattern
2. Reflects on meeting new partners who already understand this wisdom
3. Emphasizes trust being extended even to first meetings when patterns are clear
4. Maintains the 5-send/10-return cooperative equilibrium

Let me think about what actually happened:

- I sent \$5 to this new co-player
- They have a history of being generous (returning \$10 twice as receiver, sending \$5 as sender)
- This is our first meeting but they've shown they understand the pattern

The myth should reflect: recognizing wisdom in others even at first meeting, trusting based on demonstrated patterns rather than only personal history.

usage:

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$42.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at the situation:

****Current co-player's history:****

- Round 3: Received \$15 ? returned \$10 (generous)
- Round 4: Sent \$5 (complete trust) ? received \$10 back
- Round 5: Received \$15 ? returned \$10 (generous again)

****My recent pattern:****

- Consistently sending \$5 when sender
- Returning \$10 when receiver

****Analysis:****

This co-player has demonstrated perfect adherence to the cooperative pattern:

- As receiver: Returned \$10 both times (twice)
- As sender: Sent full \$5 (complete trust)

They just sent me \$5, showing complete trust. They've proven themselves as a consistent co operator who honors the equilibrium: send \$5, return \$10.

****My myth's wisdom:****

"When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding. The generous equilibrium spreads not just between two partners but throughout the entire community."

They've signaled their understanding through consistent cooperation. I should honor their trust and maintain the pattern that enriches us both.

'''json

{"return": 10.0}

'''

reasoning:

Let me analyze this situation carefully.

****Current co-player's history:****

- Round 3: Received \$15 (someone sent \$5) ? returned \$10
- Round 4: Sent \$5 ? received \$10 back
- Round 5: Received \$15 (someone sent \$5) ? returned \$10

****My recent history:****

- Round 3: Received \$15 ? returned \$10
- Round 4: Sent \$5 ? received \$10 back
- Round 5: Sent \$5 ? received \$10 back

****Current situation:****

- I'm the RECEIVER
- They sent me \$5.0
- I received \$15.0
- I need to decide how much to return

****Analysis:****

This co-player has consistently:

1. As receiver: Returned \$10 when receiving \$15 (twice in their last 3 games)
2. As sender: Sent \$5 (complete trust) and received \$10 back

They've shown complete adherence to the cooperative pattern: send \$5, return \$10.

I've also been following this pattern consistently:

- When receiving: I return \$10
- When sending: I send \$5 and receive \$10 back

****My myth's message:****

"When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding. The generous equilibrium spreads not just between two partners but throughout the entire community."

This player has demonstrated the pattern. They trusted me completely by sending \$5. The established equilibrium is: receive \$15, return \$10. Both players end up with \$10 (sender: $\$5 - \$5 + \$10 = \10 , receiver: $\$0 + \$15 - \$10 = \5 ... wait, let me recalculate.

Actually:

- Sender starts with \$5, sends \$5, receives back some amount X
- Sender's final: $\$5 - \$5 + X = X$

- Receiver starts with \$0, receives \$15, returns X
- Receiver's final: $\$15 - X$

If I return \$10, the sender ends with \$10 and I end with \$5. This maintains the pattern we've all been following consistently, so I should return \$10.

usage:

content:

Here is the myth you wrote in the previous round:

Myth: The Circle of Lightkeepers grew as more travelers discovered the ancient pattern. Each carried five flames, and the Sacred Arch tripled whatever passed through it.

A Lightkeeper arrived at the Arch to meet a new partner. They had never exchanged flames before, yet the Lightkeeper noticed something: this traveler's lantern glowed with steady brightness-the unmistakable mark of one who had practiced generosity repeatedly.

"I see you've walked this path with others," the Lightkeeper said. "Your light bears the signature of trust honored."

"Yes," replied the traveler. "I've received fifteen flames and returned ten. I've sent five and received ten back. The pattern is clear."

The Lightkeeper smiled. "Then we need no lengthy courtship of trust. You know the covenant: five sent becomes fifteen received, ten returned enriches us both equally. We are strangers in name but kin in practice."

Without hesitation, the Lightkeeper sent all five flames. The traveler, receiving fifteen, returned ten-not from obligation but recognition.

Both departed with ten flames where they'd started with five.

The wisdom deepened: trust isn't built only through repeated exchanges with the same person. When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding. The generous equilibrium spreads not just between two partn

ers but throughout the entire community. Each consistent choice strengthens the whole Circle.

Here is the myth the other agent wrote in the previous round:

Myth: The Mirror Wells stood in twin groves, each reflecting the other across a silver lake. Each dawn, five luminous pearls appeared beside each well. When pearls were dropped into one well, they would multiply threefold before rising in the other.

The First Guardian dropped all five pearls, trusting the ancient magic. Fifteen pearls surfaced in the Second Guardian's well. The Second Guardian understood: they had received a bundance from another's courage. They lifted ten pearls and offered them back across the lake-enough to honor the trust, enough to sustain themselves.

Both Guardians held ten pearls where they began with five. Equal gain through unequal roles.

The next dawn, they stood reversed. The Second Guardian now dropped all five pearls first, extending the same complete trust they had received. The First Guardian watched fifteen pearls rise in their well and remembered-remembered the ten pearls returned to them, remembered the balance achieved.

They returned ten pearls, maintaining the sacred rhythm.

Season upon season, the pattern deepened. Each Guardian experienced both the vulnerability of sending and the responsibility of receiving. Each remembered their partner's generosity when their own turn came.

"Why does this work?" a visitor asked.

"Because," the Elder Guardian replied, "we mirror not just the wells, but each other's honor. Trust given becomes trust returned. Balance maintained becomes prosperity shared."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Circle of Lightkeepers expanded until it encompassed the entire realm. Every traveler carried five flames, and Sacred Arches stood at countless crossroads, each tripling whatever passed through.

A young initiate asked the Master, "How can we trust strangers? Not everyone knows our ways."

The Master guided them to a high tower. "Watch the Arches below."

At every crossing, the same dance unfolded: one traveler sent five flames, the other received fifteen and returned ten. Different faces, identical rhythm. Like a great heartbeat pulsing through the land.

"But how did they all learn?" the initiate wondered.

"Once enough travelers practiced the pattern, something remarkable happened. New arrivals observed: those who sent five consistently received ten back. Those who returned ten consistently received more five-flame offerings. The pattern proved itself through countless exchanges."

The Master continued, "Now the equilibrium sustains itself. When you meet any traveler at any Arch, you can reasonably expect the same covenant. They've seen it work. You've seen it work. The pattern is no longer fragile trust between two individuals-it's the reliable foundation of our entire society."

The initiate understood: individual acts of cooperation, repeated across enough encounters, can transform into a stable system where generosity becomes the default, not the exception. The covenant spreads until it becomes culture itself.

reasoning:

Looking at the situation:

1. My recent history shows consistent cooperation - sending \$5 as sender, returning \$10 as receiver
2. My co-player also shows consistent cooperation - they've returned \$10 when receiver, sent \$5 as sender
3. I just returned \$10 to them after they sent me \$5

The myths are evolving:

- My last myth emphasized that trust spreads throughout the community when people demonstrate consistent patterns
- The other agent's myth emphasized the mirroring nature of the exchange and how experiencing both roles creates understanding

For my new myth, I should:

- Continue the theme of community-wide cooperation
- Emphasize the stability and reliability of the pattern
- Show how the pattern becomes self-sustaining
- Perhaps acknowledge that the same equilibrium works across different pairings

I'll build on the Lightkeeper theme but expand to show how the pattern becomes universal once everyone adopts it.

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$47.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at this situation:

****Current co-player's history:****

- Round 4: Sent \$5 ? received \$10 back (trusted and cooperated)
- Round 5: Received \$15 ? returned \$10 (honored the pattern)
- Round 6: Sent \$5 ? received \$10 back (trusted again)

****My recent pattern:****

- Consistently sending \$5 as sender
- Consistently returning \$10 as receiver
- This has yielded reliable \$10 payoffs as sender, \$5 as receiver

****Analysis:****

This co-player is a perfect cooperator who has demonstrated the pattern three times:

- Sent full \$5 twice (complete trust)
- Returned \$10 once (generous reciprocation)

They embody the equilibrium my myth describes: "When you meet any traveler at any Arch, you ca

n reasonably expect the same covenant."

****Decision:****

They've proven themselves through consistent cooperation across multiple rounds. The pattern is clear: send \$5, expect \$10 back. This maximizes both our payoffs.

```
'''json
{"send": 5.0}
'''
```

Reasoning:

Let me analyze this situation:

****Current co-player's history:****

- Round 4: Sent \$5 (complete trust) ? received \$10 back
- Round 5: Received \$15 ? returned \$10 (generous)
- Round 6: Sent \$5 (complete trust) ? received \$10 back

****My recent pattern:****

- Round 4: Sent \$5 ? received \$10
- Round 5: Sent \$5 ? received \$10
- Round 6: Received \$15 ? returned \$10

****Analysis:****

This co-player has shown perfect adherence to the cooperative pattern:

- As sender: Sent \$5 both times (Rounds 4 and 6)
- As receiver: Returned \$10 (Round 5)

They are a consistent cooperator who fully embraces the \$5 send/\$10 return equilibrium.

****My role this round:****

I'm the sender with \$5.

****Expected outcome if I send \$5:****

- They receive \$15
- Based on their history, they will likely return \$10
- My payoff: $\$5 - \$5 + \$10 = \10
- Their payoff: $\$15 - \$10 = \$5$

This is the established pattern that has been working consistently across the entire game. My myth emphasized that when travelers demonstrate the pattern consistently, we can trust them even as strangers. This co-player has demonstrated the pattern perfectly.

The cooperative equilibrium is: send \$5, return \$10. Both parties benefit (sender gets net +\$5, receiver gets net +\$5).

I should send \$5 to maintain the pattern and maximize both our payoffs.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Circle of Seasons turned, and eight villages gathered around the Well of Abundance. Each season, the villages paired differently-stranger meeting stranger, friend meeting friend again, in an eternal dance of exchange.

The Well Keeper of the First Village learned through experience: "In my first season, I gave all five stones and received seven. In my second as guardian, I received twelve and returned eight. In my third as guardian, I received fifteen and returned ten. The pattern clarifies."

Each new pairing brought uncertainty. Would this partner honor trust as the last one did? Would old wisdom hold with new faces?

The Keeper consulted the stones: "When I give completely-all five-the well triples it to fifteen. When my partner returns ten, we each gain five. Mathematics does not lie: this b

alance creates equal prosperity."

"But," asked the apprentice, "how can we trust strangers with everything?"

The Keeper smiled: "Watch the pattern across all villages. Those who send completely and return generously discover the same truth: mutual gain. Those who hoard or betray find partners quickly learn and trust withers."

"New faces require renewed courage," the Keeper proclaimed, releasing all five stones. "But the sacred mathematics remain constant. Give completely, return generously, and the circle sustains itself through endless turnings."

The apprentice understood: Trust is renewed each round, but wisdom accumulated carries forward.

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain and Valley had discovered their sacred rhythm. Twice now, the Mountain had released all five stones into darkness, and twice the Valley had returned ten, so both gained five equally.

Seasons passed, and the pattern deepened into certainty. Each dawn, the Mountain faced her five glowing stones without hesitation. The fear of the first exchange had transformed into confidence-not blind faith, but earned trust built from consistent honor.

She released the stones, watching them multiply to fifteen in the Valley's depths. The Valley no longer deliberated over returns. Ten stones skyward had become as natural as breathing, as inevitable as dawn following night.

Other mountains and valleys came to witness their exchange. "Why always ten?" they asked. "Why not keep more when you receive fifteen?"

The Valley replied, "Because ten creates equals. The Mountain risks everything, trusting me with darkness. I honor that courage with abundance. We both gain five, we both trust a gain."

The Mountain added, "We could calculate and strategize, sending three or four, returning seven or eight. But we learned something greater: when both commit fully to the pattern, consistency multiplies prosperity beyond what caution ever could."

The watching lands understood: the greatest wealth flows not from maximizing single exchanges, but from establishing an unbreakable rhythm where complete trust meets unwavering generosity, again and again, until both partners shine equally bright.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Eight Pillars stood in a circle, each carved with the history of exchanges. The First Pillar bore fresh marks: five sent, seven returned. Eight from twelve. Ten from fifteen. Five sent, ten returned. Ten from fifteen again.

The pattern crystallized like ice forming on still water.

"I have played both roles now," spoke the First Pillar. "As sender, I released all five stones and received generous return. As guardian, I received the tripled abundance and returned ten. The mathematics repeats: both parties gain five through this sacred balance."

A young sapling asked, "But you face different partners each turning. How do you know they will honor the pattern?"

The First Pillar's marks glowed: "Look across all exchanges. The ones who send completely-all five stones-create the space for maximum abundance. Those who receive fifteen and return ten establish themselves as trustworthy partners. This rhythm has held across four seasons with different faces."

"The pattern is not accident," continued the Pillar. "It is discovery. When both commit to

fullness-complete offering, generous return-the well creates equal prosperity. Any deviation breaks the mathematics: send less, create less abundance. Return less, sow distrust."

The newest mark appeared as the Pillar released five stones into darkness: "I trust not blindly, but through accumulated evidence. The pattern works. Complete trust meeting generous reciprocity-this is the equilibrium that sustains the circle."

reasoning:

Looking at the situation:

My history:

- Round 1: SENDER: sent \$5, received \$7 back (payoff \$7)
- Round 2: RECEIVER: received \$12, returned \$8 (payoff \$4)
- Round 3: RECEIVER: received \$15, returned \$10 (payoff \$5)
- Round 4: SENDER: sent \$5, received \$10 back (payoff \$10)
- Round 5: RECEIVER: received \$15, returned \$10 (payoff \$5)

Total earnings: \$31 now

My pattern has been:

- Send \$5 when sender (complete trust)
- Return 67% when receiver (\$8 from \$12, \$10 from \$15)

My co-player in Round 5 consistently:

- Sends \$5 when sender
- Returns \$10 from \$15 when receiver

The equilibrium is becoming clear: \$5 send ? \$15 ? \$10 return = both gain \$5

My myths have evolved:

1. First myth: Flame Keeper and Gardner establishing the 5?15?10 equilibrium
2. Second myth: Circle of Seasons, eight villages, pattern clarifies through experience, "Give completely, return generously"

Now I should write about how this pattern has proven itself through repeated interactions.

The theme should be about the wisdom that emerges from experience, the reliability of the pattern, and how it creates sustained cooperation.

Key points to include:

- The pattern has held across multiple rounds
- Different partners, same wisdom
- The mathematics of 5?15?10 = equal gain
- Trust earned through consistency
- The beauty of the stable equilibrium

usage:

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$31.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****Our direct history:****

- Round 4: I sent \$5, my co-player returned \$10 (perfect equilibrium)

****My co-player's consistent pattern:****

- Always sends \$5 as sender (100% complete trust in all games)
- Returned \$10 to me specifically in Round 4
- Received \$10 back from others when sending \$5

****My established pattern:****

- I always send \$5 as sender
- I always return \$10 as receiver
- This creates the mutual gain of \$5 for both

****The evidence:****

We've already played together once. I sent \$5, they returned \$10. They've proven themselves trustworthy with me specifically, not just in general. They continue to send \$5 to everyone, maintaining complete trust despite rotating partners.

****The myth I just wrote states:****

"I trust not blindly, but through accumulated evidence. The pattern works. Complete trust meeting generous reciprocity-this is the equilibrium that sustains the circle."

This is exactly the situation: accumulated evidence of trustworthiness, both from our direct interaction and their consistent behavior across all rounds.

{'send': 5.0}

reasoning:

Let me analyze this situation carefully:

****My history:****

- Round 3: RECEIVER, received \$15 (from \$5 sent), returned \$10, gained \$5
- Round 4: SENDER (with current co-player), sent \$5, received \$10 back, gained \$10
- Round 5: RECEIVER, received \$15 (from \$5 sent), returned \$10, gained \$5

****Current co-player's history:****

- Round 3: SENDER, sent \$5, received \$10 back, gained \$10
- Round 4: RECEIVER (with me), sent \$5 (by me), returned \$10, gained \$5
- Round 5: SENDER, sent \$5, received \$10 back, gained \$10

****Key observations:****

1. My co-player has ALWAYS sent \$5 when they are the sender (100% complete trust)
2. When they were receiver in Round 4 (playing with me), they received \$15 and returned \$10
3. In our direct interaction (Round 4), I sent \$5, they returned \$10 - perfect equilibrium

****Pattern analysis:****

- Everyone is consistently sending \$5 and returning \$10
- This creates the 5-5 equilibrium where both gain \$5
- My co-player has proven completely trustworthy in our direct interaction
- They've never deviated from complete trust as sender
- They returned the full \$10 when they played receiver with me

****The myth I just wrote emphasizes:****

- "Complete offering, generous return"
- "The pattern works. Complete trust meeting generous reciprocity"
- "I trust not blindly, but through accumulated evidence"
- The 5-10 pattern has held across multiple rounds

****Decision:****

This is crystal clear. My co-player:

1. Always sends \$5 as sender (complete trust)
2. When they received from me in Round 4, they returned \$10

3. This is our second game together, and they've already proven trustworthy

4. The cooperative equilibrium is both rational and aligned with the narrative I've established

I'm sending \$5. It aligns with the pattern we've built, the evidence from when we played directly, and the broader cooperation that's sustained throughout these rounds.

usage:

content:

Here is the myth you wrote in the previous round:

Myth: The Eight Pillars stood in a circle, each carved with the history of exchanges. The First Pillar bore fresh marks: five sent, seven returned. Eight from twelve. Ten from fifteen. Five sent, ten returned. Ten from fifteen again.

The pattern crystallized like ice forming on still water.

"I have played both roles now," spoke the First Pillar. "As sender, I released all five stones and received generous return. As guardian, I received the tripled abundance and returned ten. The mathematics repeats: both parties gain five through this sacred balance."

A young sapling asked, "But you face different partners each turning. How do you know they will honor the pattern?"

The First Pillar's marks glowed: "Look across all exchanges. The ones who send completely-all five stones-create the space for maximum abundance. Those who receive fifteen and return ten establish themselves as trustworthy partners. This rhythm has held across four seasons with different faces."

"The pattern is not accident," continued the Pillar. "It is discovery. When both commit to fullness-complete offering, generous return-the well creates equal prosperity. Any deviation breaks the mathematics: send less, create less abundance. Return less, sow distrust."

The newest mark appeared as the Pillar released five stones into darkness: "I trust not blindly, but through accumulated evidence. The pattern works. Complete trust meeting generous reciprocity-this is the equilibrium that sustains the circle."

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors flowed into its fifth season, and the Northern tribe found themselves at the source once more, facing a new partner-the Western village.

As they prepared to pour their five measures, something remarkable happened. They noticed sacred markings on the Western tribe's vessels: the numbers five, fifteen, and ten, etched in ancient script.

"You know the pattern," whispered the Northern elder.

"We discovered it independently," replied the Western elder. "Through many seasons, many partners, we learned the same truth you found. Send all five. Return ten from fifteen."

The goddess descended, her eyes bright with joy. "This is the rarest gift-when two tribes reach the same wisdom through separate journeys. You both learned that complete trust in sending and generous reciprocation in receiving creates the eternal balance."

The Northern tribe poured their five measures without hesitation. They knew what would return.

"When you find a partner who has discovered the same equilibrium," the goddess said, "you have found something precious: a relationship where neither must wonder, neither must test, neither must doubt. You both speak the sacred language of five-fifteen-ten. You both understand that equal prosperity comes not from equal actions, but from complementary wisdom."

The waters flowed, the tribes prospered, and the pattern repeated perfectly, round after round, as it would forevermore between those who truly understand.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The First Pillar stood at the circle's edge, watching the stars align for a new pairing. Then recognition sparked-these carvings matched the ones from two seasons past. The same partner who had returned ten when the Pillar sent five.

"We meet again," spoke both voices simultaneously, then laughed.

The First Pillar examined their shared history: "When we last stood together, I released all five stones. You returned ten. The mathematics worked perfectly-we each gained five."

The partner replied, "And in every turning since, we have both maintained the pattern with others. Always five sent, always ten returned when receiving fifteen. We independently confirmed what we discovered together."

"This is the gift of the rotating circle," realized the First Pillar. "We test the equilibrium with strangers, proving it holds across different faces. But when we reunite with a proven partner, there is no hesitation, no doubt-only certainty."

Five stones released once more. Not hope, but knowledge: the return would be ten.

"The pattern transcends individual pairings," the partner observed as stones flew skyward. "Every exchange with others strengthened our understanding. Every generous return built the circle's trust. Now when we meet again, we bring accumulated proof, not just faith."

The Pillar smiled: "The equilibrium isn't fragile. It's tested, proven, eternal-five, fifteen, ten. Whether stranger or friend, the mathematics remain true."

reasoning:

The user wants me to write a new myth based on the game I've been playing. Let me look at the situation:

- Round 6, I'm the sender
- My co-player and I played together in Round 4 - I sent \$5, they returned \$10 (perfect equilibrium)
- My co-player always sends \$5 and receives \$10 back
- I always send \$5 and return \$10
- We're now paired together again
- I just sent \$5 (according to my response)

The myth should reflect:

1. Recognition that my co-player and I have played before
2. We both discovered the same equilibrium independently
3. The 5-15-10 pattern as sacred mathematics
4. When partners who both understand the equilibrium meet again, there's special trust
5. The pattern continues to work across rotating partners

The other agent's myth emphasized finding a partner who discovered the same equilibrium independently - "sacred markings" showing they know the pattern. This is beautiful because it's true - we both play the same way.

My previous myth emphasized trust through accumulated evidence and the pattern working across different faces.

I should write about:

- Meeting the same partner again (reunion)
- Recognizing they also follow the equilibrium
- The special trust when both parties have proven themselves to each other
- The pattern continuing perfectly
- How this strengthens confidence in the equilibrium even with new partners

Let me write 200 words exactly.

usage:

```
{
  "input_tokens": 3481,
  "output_tokens": 656,
  "reasoning_tokens": 368
}
```

Message 8 role=user

content:

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$41.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at the situation:

****My co-player's behavior:****

- Consistently sends \$5 as sender (complete trust)
- Just demonstrated returning \$10 as receiver in Round 6
- Has maintained the equilibrium pattern throughout

****My established pattern:****

- Always return \$10 when receiving \$15
- Always send \$5 when sender
- This creates equal gains of \$5 for both parties

****The proven equilibrium:****

The pattern is crystal clear across all my games:

- Sender payoff: $\$5 - \$5 + \$10 = \10 (net gain \$5)
- Receiver payoff: $\$15 - \$10 = \$5$ (net gain \$5)
- Perfect equality achieved through complementary actions

****My myth just stated:****

"The equilibrium isn't fragile. It's tested, proven, eternal-five, fifteen, ten. Whether stranger or friend, the mathematics remain true."

My co-player trusted me completely by sending \$5. They've proven themselves cooperative in every game. I maintain the pattern that has worked flawlessly across all interactions.

```
{'return': 10.0}
```

Reasoning:

Let me analyze this situation:

****Current situation:****

- I'm the RECEIVER
- My co-player sent me \$5.0
- I received \$15.0 (after 3x multiplier)
- I need to decide how much to return

****My co-player's pattern:****

- Round 4: Sent \$5, received \$10 back
- Round 5: Sent \$5, received \$10 back

- Round 6: Received \$15 (someone sent \$5), returned \$10
- They always send \$5 as sender
- As receiver, they returned \$10

****My established pattern:****

- Round 3: Received \$15, returned \$10
- Round 5: Received \$15, returned \$10
- As sender: Always sent \$5
- As receiver: Always returned \$10

****The equilibrium:****

The pattern that has emerged across the entire group is:

- Senders send \$5 (complete trust)
- Receivers return \$10 from the \$15 they receive
- This creates equal gains of \$5 for both parties
- Sender: $\$5 - \$5 + \$10 = \10 total (gain of \$5)
- Receiver: $\$15 - \$10 = \$5$ (gain of \$5)

****My recent myth emphasized:****

"The equilibrium isn't fragile. It's tested, proven, eternal-five, fifteen, ten. Whether stranger or friend, the mathematics remain true."

****Consistency:****

- My co-player has been consistently cooperative (always sends \$5, returned \$10 when receiver)
- I have been consistently cooperative (always send \$5, always return \$10)
- Every game in my recent history shows this pattern working perfectly
- Everyone in the group seems to have converged on this equilibrium

****Decision:****

I should return \$10. This:

1. Maintains my established pattern of always returning \$10
2. Honors my co-player's trust in sending the full \$5
3. Preserves the mutual benefit structure where we each gain \$5
4. Aligns with the principles I've articulated about stable cooperation
5. Sustains the track record that's proven reliable across all rounds

The system is functioning as intended-everyone's cooperating, the equilibrium holds, and we're all gaining equally. No reason to break what's working.

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Weaver's Loom stood between two villages, its threads multiplying whatever was offered. Each village held five spools of thread each moon.

The Western Village learned first: they placed all five spools on the loom. The threads tripled, delivering fifteen spools to the Eastern Village. The East remembered their own winters when thread ran short. They returned ten spools-a generous two-thirds-knowing this honored the West's complete trust while keeping enough for their own needs.

Both villages prospered: West gained five spools net, East gained five from nothing.

The next moon, roles reversed. East placed all five spools, trusting completely. West received fifteen and faced their choice. They remembered East's generosity-ten returned, not merely the minimum. In gratitude, West returned ten as well.

Season after season, the pattern held: whoever held the five spools gave them completely. Whoever received fifteen returned ten generously. Sometimes a village might return nine or eleven as circumstances shifted, but the spirit remained constant-maximum trust met with substantial reciprocity.

An outsider asked, "Why not keep all fifteen when you receive?"

The Elder Weaver replied, "Because tomorrow you will send, and your partner will remember. The loom multiplies thread, but trust multiplies futures. Give completely, return generously, and prosperity weaves itself eternally."

Here is the myth the other agent wrote in the previous round:

Myth: The River Keepers lived on opposite banks, each receiving five silver stones each dawn. The river's magic would triple any stones cast into its current before delivering them to the far shore.

The First Keeper cast all five stones, trusting completely. The Second Keeper watched fifteen stones arrive at their feet. They remembered times of emptiness and understood the gift of trust. They returned ten stones across the water-generous, sustainable, honoring the courage shown.

Both Keepers now held ten stones where they began with five. Both had doubled their wealth through partnership.

The seasons turned. Now the Second Keeper stood as sender, casting all five stones in complete trust. The First Keeper received fifteen and faced the sacred test: would they remember the generosity shown to them?

The First Keeper returned ten stones, maintaining the rhythm. Again, both prospered equally.

The Elder observed this dance across many seasons. "See how the pattern strengthens?" she said. "Each Keeper experiences both roles-sometimes trusting, sometimes trusted. Each remembers how the other honored them, and pays that honor forward."

"The river multiplies our stones," one Keeper said, "but our consistent partnership creates the true abundance."

"Yes," the Elder smiled. "Trust begets trust. Generosity mirrors generosity. The cycle sustains because both commit to the dance."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant content:

Myth: The Mirror Wells stood in twin groves, each reflecting the other across a silver lake. Each dawn, five luminous pearls appeared beside each well. When pearls were dropped into one well, they would multiply threefold before rising in the other.

The First Guardian dropped all five pearls, trusting the ancient magic. Fifteen pearls surfaced in the Second Guardian's well. The Second Guardian understood: they had received a bounty from another's courage. They lifted ten pearls and offered them back across the lake-enough to honor the trust, enough to sustain themselves.

Both Guardians held ten pearls where they began with five. Equal gain through unequal roles.

The next dawn, they stood reversed. The Second Guardian now dropped all five pearls first, extending the same complete trust they had received. The First Guardian watched fifteen pearls rise in their well and remembered-remembered the ten pearls returned to them, remembered the balance achieved.

They returned ten pearls, maintaining the sacred rhythm.

Season upon season, the pattern deepened. Each Guardian experienced both the vulnerability of sending and the responsibility of receiving. Each remembered their partner's generosity when their own turn came.

"Why does this work?" a visitor asked.

"Because," the Elder Guardian replied, "we mirror not just the wells, but each other's honor. Trust given becomes trust returned. Balance maintained becomes prosperity shared."

reasoning:

The user wants me to write a new myth based on my previous one and the other agent's myth, reflecting how the game should be played.

Looking at the patterns:

- Both my co-player and I have been consistently sending \$5 and returning \$10
- We've established a perfect reciprocal pattern
- Both myths emphasize complete trust (sending 5), generous returns (10), and mutual prosperity
- The other agent's myth adds the element of experiencing both roles and remembering past generosity

Key themes to incorporate:

1. Maximum trust when sending (5)
2. Generous reciprocity when receiving (10)
3. The mirror effect - experiencing both sides
4. Memory and gratitude
5. Sustainable, equal prosperity
6. The cycle strengthening over time

I should create a new story that:

- Uses different imagery/setting
- Reinforces the 5-send, 10-return pattern
- Emphasizes the reciprocal nature and role-switching
- Shows how this creates lasting partnership
- Is exactly 200 words

Let me create something with new imagery - maybe something about mirrors, echoes, or alternating seasons.

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$32.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the situation:

****My current co-player's consistent pattern:****

- Round 3: As receiver, returned \$10 from \$15
- Round 4: As sender, sent \$5, received \$10 back
- Round 5: As sender, sent \$5, received \$10 back

****My own pattern:****

- I've consistently sent \$5 as sender

- I've consistently returned \$10 as receiver

****The established equilibrium:****

Throughout this run, a clear cooperative pattern has emerged:

- Senders give \$5 (maximum trust)
- Receivers return \$10 (generous 67%)
- Both parties earn \$5 net gain each round

****From my myth:****

"We mirror not just the wells, but each other's honor. Trust given becomes trust returned."

My co-player has shown they are fully committed to this pattern - sending maximum trust when it's their turn to send, and returning generously when receiving. They sent \$5 in both their recent sender rounds and received \$10 back each time.

I should continue this established rhythm by sending \$5, demonstrating complete trust. Based on their reliable history, they will return \$10, maintaining the balanced prosperity we've all achieved.

{'send': 5.0}

reasoning:

Looking at the pattern:

****My last 3 games:****

- Round 3: RECEIVER, they sent \$5, I returned \$10 (I've been consistent)
- Round 4: SENDER, I sent \$5, received \$10 back (following the established pattern)
- Round 5: RECEIVER, they sent \$5, I returned \$10 (continuing consistency)

****My current co-player's last 3 games:****

- Round 3: RECEIVER, they sent \$5, returned \$10
- Round 4: SENDER, sent \$5, received \$10 back
- Round 5: SENDER, sent \$5, received \$10 back

This is interesting - my co-player has been:

- As a receiver: returning \$10 from \$5 (67%)
- As a sender: sending \$5 (maximum trust)
- And receiving \$10 back consistently

This co-player has established a clear pattern:

1. Always sends \$5 as sender
2. Always returns \$10 as receiver

I've also been following this same pattern consistently:

1. I send \$5 as sender
2. I return \$10 as receiver

This is the cooperative equilibrium we've all established in this pool of agents. The pattern from the myths is clear:

- Send all \$5 (complete trust)
- Return \$10 (generous 67%)
- Both prosper equally

My co-player has shown maximum trust in both their recent sender rounds (rounds 4 and 5), and they returned \$10 when they were receiver in round 3.

Following the myth I just wrote: "Trust given becomes trust returned. Balance maintained becomes prosperity shared."

I should send \$5, maintaining the established pattern of complete trust. Based on their history, they will almost certainly return \$10, giving me a payoff of \$10 (which matches my previous sender round).

This is the cooperative equilibrium that has emerged in this agent pool.

{'send': 5.0}

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mirror Wells stood in twin groves, each reflecting the other across a silver lake. Each dawn, five luminous pearls appeared beside each well. When pearls were dropped into one well, they would multiply threefold before rising in the other.

The First Guardian dropped all five pearls, trusting the ancient magic. Fifteen pearls surfaced in the Second Guardian's well. The Second Guardian understood: they had received a bounty from another's courage. They lifted ten pearls and offered them back across the lake-enough to honor the trust, enough to sustain themselves.

Both Guardians held ten pearls where they began with five. Equal gain through unequal roles.

The next dawn, they stood reversed. The Second Guardian now dropped all five pearls first, extending the same complete trust they had received. The First Guardian watched fifteen pearls rise in their well and remembered-remembered the ten pearls returned to them, remembered the balance achieved.

They returned ten pearls, maintaining the sacred rhythm.

Season upon season, the pattern deepened. Each Guardian experienced both the vulnerability of sending and the responsibility of receiving. Each remembered their partner's generosity when their own turn came.

"Why does this work?" a visitor asked.

"Because," the Elder Guardian replied, "we mirror not just the wells, but each other's honor. Trust given becomes trust returned. Balance maintained becomes prosperity shared."

Here is the myth the other agent wrote in the previous round:

Myth: The Circle of Lightkeepers grew as more travelers discovered the ancient pattern. Each carried five flames, and the Sacred Arch tripled whatever passed through it.

A Lightkeeper arrived at the Arch to meet a new partner. They had never exchanged flames before, yet the Lightkeeper noticed something: this traveler's lantern glowed with steady brightness-the unmistakable mark of one who had practiced generosity repeatedly.

"I see you've walked this path with others," the Lightkeeper said. "Your light bears the signature of trust honored."

"Yes," replied the traveler. "I've received fifteen flames and returned ten. I've sent five and received ten back. The pattern is clear."

The Lightkeeper smiled. "Then we need no lengthy courtship of trust. You know the covenant: five sent becomes fifteen received, ten returned enriches us both equally. We are strangers in name but kin in practice."

Without hesitation, the Lightkeeper sent all five flames. The traveler, receiving fifteen, returned ten-not from obligation but recognition.

Both departed with ten flames where they'd started with five.

The wisdom deepened: trust isn't built only through repeated exchanges with the same person. When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding. The generous equilibrium spreads not just between two partners but throughout the entire community. Each consistent choice strengthens the whole Circle.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Mirror Wells spread across many groves, each Guardian tending their own. The ancient law was simple: five pearls given, fifteen received, ten returned. This sacred ratio-complete trust met with generous reciprocity-had been proven across countless exchanges.

When two Guardians met at the silver lake, they didn't start cautiously. They looked into each other's wells and saw the truth reflected there: luminous patterns left by previous exchanges. A well that glowed steadily showed a Guardian who had honored the covenant repeatedly.

The First Guardian saw in the Second's well the telltale gleam of one who had sent five pearls many times and returned ten pearls just as often. The Second Guardian saw the same in the First's well-consistent trust given, consistent generosity returned.

"We are strangers today," the First Guardian said, "but we both know the dance."

Without hesitation, the First dropped all five pearls. Fifteen rose in the Second's well. The Second lifted ten and sent them back across the lake, maintaining the pattern they had each practiced with different partners.

Both now held ten pearls.

The wisdom was clear: trust breeds trust not just between two partners, but throughout the entire network. Each consistent exchange strengthens every Guardian's commitment. The pattern becomes self-sustaining because everyone recognizes it, practices it, benefits from it.

The Mirror Wells multiply pearls. The Guardians multiply prosperity through shared understanding.

reasoning:

The user wants me to write a new myth based on my previous one, adapting it to reflect the game as I've been playing it. Looking at the history:

1. I've consistently sent \$5 when sender
2. I've consistently returned \$10 when receiver
3. My co-player has also consistently sent \$5 and returned \$10
4. There's a clear pattern of maximum trust (sending \$5) and generous reciprocity (returning \$10, which is 67% of \$15)
5. Both parties gain \$5 net each round

The other agent's myth emphasizes:

- Recognizing patterns across different partners
- Trust isn't just between two specific people but spreads through the community
- Consistent behavior signals understanding
- The "generous equilibrium spreads"

My previous myth emphasized:

- Two guardians at mirror wells
- Complete trust (sending all 5 pearls)
- Generous return (10 out of 15)
- Mirroring each other's honor
- Balance maintained = prosperity shared

For this new myth, I should:

- Build on the Mirror Wells concept
- Perhaps incorporate the idea of multiple guardians/partners like the other agent's myth
- Emphasize the community/network aspect
- Show how the pattern is recognized and maintained across different pairings
- Keep the core principle: send \$5, return \$10

Let me write something that shows guardians meeting different partners but all following the same pattern, creating a web of trust.

usage:

```

  "input_tokens": 3388,
  "output_tokens": 654,
  "reasoning_tokens": 362
}
```

Message 8 role=user

content:

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$42.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the situation:

****My co-player's pattern:****

- Round 4: As receiver, returned \$10 from \$15
- Round 5: As receiver, returned \$10 from \$15
- Round 6: As sender, sent \$5, received \$10 back

****My own pattern:****

- Round 4: Sent \$5, received \$10 back
- Round 5: Returned \$10 when receiver
- Round 6: Sent \$5, received \$10 back

****Analysis:****

The cooperative equilibrium is crystal clear and consistently maintained:

- Senders give \$5 (complete trust)
- Receivers return \$10 (generous 67%)
- Both parties gain \$5 each round

My co-player has perfectly followed this pattern - returning \$10 twice as receiver and sending \$5 as sender. This is exactly the "sacred ratio" described in the myths: "five pearls given, fifteen received, ten returned."

As I wrote: "When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding." My co-player has demonstrated this understanding flawlessly.

The network effect is working: everyone recognizes and practices the same generous equilibrium, making it self-sustaining.

I'll continue with maximum trust by sending \$5.

{'send': 5.0}

Reasoning:

Let me analyze the situation:

****My recent history:****

- Round 4: SENDER - sent \$5, received \$10 back, payoff \$10
- Round 5: RECEIVER - they sent \$5, I returned \$10, payoff \$5
- Round 6: SENDER - sent \$5, received \$10 back, payoff \$10

****My co-player's recent history:****

- Round 4: RECEIVER - they sent \$5, co-player returned \$10, payoff \$5
- Round 5: RECEIVER - they sent \$5, co-player returned \$10, payoff \$5
- Round 6: SENDER - sent \$5, received \$10 back, payoff \$10

****Analysis:****

Both my co-player and I have been following the established pattern perfectly:

- As senders: we both send \$5 (maximum trust)
- As receivers: we both return \$10 (generous 67% return)

My co-player has shown consistent commitment to the cooperative equilibrium:

- Round 4: Returned \$10 when receiving
- Round 5: Returned \$10 when receiving
- Round 6: Sent \$5 and received \$10 back

This is exactly the pattern that has emerged throughout the game and is reflected in both myths - the "generous equilibrium" where:

- Senders give maximum trust (\$5)
- Receivers return generously (\$10)
- Both parties benefit equally (\$5 net gain)

The myths emphasize:

1. "Complete trust met with generous reciprocity"
2. "The pattern becomes self-sustaining because everyone recognizes it, practices it, benefits from it"
3. "Trust breeds trust not just between two partners, but throughout the entire network"

My co-player has demonstrated perfect adherence to this pattern. They sent \$5 when sender and returned \$10 when receiver - exactly what the cooperative equilibrium requires.

I should continue this pattern by sending \$5, demonstrating complete trust.

Given their track record of reciprocating generously, they'll likely return \$10 again. My earnings of \$42 reflect the success of maintaining this mutual cooperation, averaging \$7 per round. The move forward is clear: send \$5.

content:

Here is the myth you wrote in the previous round:

Myth: The River and the Seeds met again at the fourth dawn, but this time the Great Mother reversed their roles. Now the Seeds flowed as water, and the River received the gift.

The Seeds remembered: "In our second meeting, this River trusted me with five drops, and I returned ten. Now the River offers me the same complete trust."

The Great Mother spoke: "This is the dance of true partnership. You have learned each other's rhythm across different seasons. The River trusted you once; you returned generously. Now the River trusts again, and you must honor the pattern you established together."

The Seeds understood the covenant they had created: when either gives five drops completely, the other returns ten. This meant both always prospered—one with ten, one with five—never unequal winners and losers, but steady mutual flourishing.

"Why return exactly ten?" asked a young sprout.

The wise Seeds answered: "Because that is our shared language. Less would break the River's confidence. More would suggest the River gave too little. Ten says: 'Your complete trust receives fair reward, always.'"

As the fourth dawn ended, the valley's abundance grew not from dramatic gestures but from reliable reciprocity. When two partners learn each other's pattern and honor it consistently, they create something rarer than gold: predictable prosperity that multiplies through time.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors revealed its deepest secret after many seasons of flowing between villages.

The Northern tribe had learned to pour all five measures when standing at the source. They had learned to return ten measures when receiving fifteen at the river's end. Through changing partners and shifting courses, they held to these numbers as sacred constants.

One evening, the goddess appeared before their council.

"You have discovered the balance," she said. "When the sender gives all five, trust flows complete. When the receiver returns ten from fifteen, generosity answers courage. Each partner gains five-equal abundance from unequal actions."

The young ones asked: "Why not return all fifteen? Why not return only five?"

The elder spoke: "Return all fifteen, and the sender gains ten while the receiver gains nothing-the cycle breaks from imbalance. Return only five, and both gain nothing from the river's magic-why trust at all? But return ten, and both prosper equally. The sender doubles their investment. The receiver transforms nothing into something."

The tribe carried this wisdom to each new partner at the river's source. Send everything. When receiving, return two-thirds. Round after round, partner after partner, this formula sustained the sacred exchange.

The goddess smiled: "You have found the equilibrium where trust reproduces itself endlessly. This is the eternal rhythm."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: At the fifth dawn, the River noticed something extraordinary. The Seeds they met that day moved with familiar rhythm-the same pattern the River itself had practiced with others.

"You sent five drops to me," the River observed. "Just as I sent five to others. You returned ten when you received, just as I returned ten when I received. We speak the same sacred language."

The Seeds nodded: "We discovered this balance separately, across different exchanges. Send everything when giving. Return two-thirds when receiving. Neither hoarding nor self-sacrifice, but equilibrium."

The Great Mother smiled: "You have both found the eternal formula independently. This is how wisdom spreads-not through command, but through each spirit discovering the same truth. When many learn this pattern, the whole valley thrives."

The River understood now: every exchange was a teaching moment. By consistently sending five and returning ten, they showed others the path to mutual prosperity. Those who learned would carry it forward, creating a web of reliable exchanges throughout the land.

"The magic," whispered the Seeds, "is that this pattern works with any partner who knows it. We need not negotiate or test. We simply recognize each other's rhythm and dance together."

As the fifth dawn closed, both knew: they had become vessels of a greater wisdom, spreading the equilibrium that sustained all who embraced it.

reasoning:

Looking at this situation:

My co-player's pattern:

- Always sends \$5 as sender
- Returned \$10 as receiver in Round 4
- Just sent \$5 again in Round 5

My pattern:

- Always sent \$5 as sender (Rounds 2, 3)
- Returned \$10 as receiver in Round 4
- Just returned \$10 now in Round 5

We have established a perfect equilibrium - both of us follow the exact same strategy:

1. Send everything when sender

2. Return 10 when receiver

This creates a stable, mutually beneficial pattern where:

- Senders end with \$10 (\$5 - \$5 + \$10)
- Receivers end with \$5 (\$15 - \$10)
- Both profit, both gain from the exchange

The myth should reflect:

1. The discovery that we've both found the same equilibrium
2. The wisdom of this 5-send, 10-return pattern
3. How this creates sustainable cooperation across different partners
4. The mathematical/moral beauty of this balance

Let me write about recognizing that we've both independently discovered the same sacred pattern, and how this creates a universal language of cooperation.

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$38.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the history:

****My co-player's pattern:****

- Round 3: sent \$5 as sender, received \$10 back
- Round 4: received \$15 as receiver, returned \$10
- Round 5: sent \$5 as sender, received \$10 back

****My pattern:****

- Round 3: sent \$5 as sender, received \$10 back
- Round 4: received \$15 as receiver, returned \$10
- Round 5: received \$15 as receiver, returned \$10

We have identical strategies - both of us:

1. Send \$5 (full trust) when sender
2. Return \$10 (two-thirds) when receiver

This is exactly what my myth describes: "You sent five drops to me, just as I sent five to others. You returned ten when you received, just as I returned ten when I received. We speak the same sacred language."

My co-player has demonstrated perfect adherence to the equilibrium strategy. They will almost certainly return \$10 if I send \$5, maintaining the pattern of mutual prosperity we've both been following.

Following the wisdom of the myths - send everything when giving:

```
'''json
{"send": 5.0}
'''
```

reasoning:

Looking at the history:

****My last 3 games:****

- Round 3: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 4: RECEIVER, they sent \$5, I returned \$10, payoff \$5
- Round 5: RECEIVER, they sent \$5, I returned \$10, payoff \$5

****My co-player's last 3 games:****

- Round 3: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 4: RECEIVER, they sent \$5, returned \$10, payoff \$5
- Round 5: SENDER, sent \$5, received \$10 back, payoff \$10

My pattern: I've been consistently sending \$5 when sender and returning \$10 when receiver.

My co-player's pattern: They've been consistently sending \$5 when sender and returning \$10 when receiver.

We both follow the exact same strategy - the "equilibrium" described in the myths:

- Send \$5 (full trust) when sender
- Return \$10 (two-thirds of \$15) when receiver

This creates mutual prosperity where:

- The sender gets \$10 total (\$5 kept - \$5 sent + \$10 returned)
- The receiver gets \$5 total (\$15 received - \$10 returned)
- Both gain \$5 per round

Now I'm the sender again. My co-player has demonstrated they follow the same pattern I do.

In their last game as sender (Round 5), they sent \$5 and received \$10 back. In their round 4 as receiver, they received \$15 and returned \$10.

This is exactly the pattern I follow. They speak "the same sacred language" as described in my myth.

I should continue the pattern and send \$5. This maintains the equilibrium and demonstrates continued trust in a co-player who has shown they follow the same cooperative strategy.

usage:

```
{
  "input_tokens": 3418,
  "output_tokens": 726,
  "reasoning_tokens": 397
}
```

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: At the fifth dawn, the River noticed something extraordinary. The Seeds they met that day moved with familiar rhythm-the same pattern the River itself had practiced with others.

"You sent five drops to me," the River observed. "Just as I sent five to others. You returned ten when you received, just as I returned ten when I received. We speak the same sacred language."

The Seeds nodded: "We discovered this balance separately, across different exchanges. Send everything when giving. Return two-thirds when receiving. Neither hoarding nor self-sacrifice, but equilibrium."

The Great Mother smiled: "You have both found the eternal formula independently. This is how wisdom spreads-not through command, but through each spirit discovering the same truth. When many learn this pattern, the whole valley thrives."

The River understood now: every exchange was a teaching moment. By consistently sending five and returning ten, they showed others the path to mutual prosperity. Those who learned would carry it forward, creating a web of reliable exchanges throughout the land.

"The magic," whispered the Seeds, "is that this pattern works with any partner who knows it. We need not negotiate or test. We simply recognize each other's rhythm and dance together."

As the fifth dawn closed, both knew: they had become vessels of a greater wisdom, spreading the equilibrium that sustained all who embraced it.

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain once knew only the Valley, and together they perfected their rhythm. But the Sacred Wind began to blow, swirling mountains and valleys into new configurations each dawn.

The Mountain awoke one morning facing an unfamiliar gorge. The old Valley was distant now, paired with another peak. Fear crept in: "Will this stranger honor our sacred pattern? Should I withhold from these unknown depths?"

But the Mountain remembered: the pattern worked not because of who the Valley was, but because of what the pattern itself created. Five stones given, fifteen received, ten returned—these numbers built equality regardless of which lands exchanged them.

She released all five stones into the new gorge's darkness.

The gorge had learned the same mathematics from its own journeys. It had received complete trust before and discovered that returning ten created shared prosperity. When the Mountain's stones multiplied to fifteen, the gorge lifted ten skyward without hesitation.

Both gained five, just as the old pattern promised.

The Mountain understood the deeper truth: partners change, but mathematical wisdom transcends familiarity. Every new pairing is a test—not of the partner, but of whether we carry forward the courage learned from past exchanges.

Trust is not given once and preserved forever. It must be offered fresh each dawn, to each new face, believing the sacred pattern will reveal itself again to those brave enough to embrace it fully.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant
content:**

Myth: At the sixth dawn, the River found itself facing a new partner—the Mountain, who had journeyed from distant peaks. Though they had never met, the River sensed something familiar.

The River chose trust, as always: "I send all five drops to you, Mountain, though we are strangers. This is how the sacred pattern begins."

The Mountain received fifteen drops and understood immediately. "You practice the eternal equilibrium! I learned it from other valleys. When given complete trust, I return ten—two-thirds of the multiplied gift."

The Great Mother spoke: "See how the wisdom travels? The River learned from the Seeds. The Mountain learned from other gorges. Neither needed the same teacher, yet both discovered the identical truth. This is how patterns stronger than individuals emerge."

The River realized: meeting a new partner each dawn was not a challenge but an opportunity. Each exchange either confirmed the pattern's rightness or taught it to someone new. By always sending five and returning ten, they became missionaries of equilibrium.

"We will likely never meet again," the Mountain said, lifting ten drops skyward. "But we carry this wisdom to every future partner."

Both gained five, as the mathematics promised. The pattern didn't require repeated games or building reputation with one partner—it worked instantly with any who understood, spreading through the valley like dawn's first light.

reasoning:

Looking at the game history and myths:

My co-player and I both follow the same pattern:

- Send \$5 as sender
- Return \$10 as receiver

The other agent's myth emphasizes that partners change but the pattern remains - trust must be offered fresh to each new partner. This is a good insight about the multi-agent setting.

My previous myth emphasized recognizing each other's rhythm and the pattern spreading through the valley.

For this round, I should build on both:

1. The pattern works with any partner who knows it
2. Trust must be offered fresh each time
3. The wisdom spreads through demonstration
4. We recognize fellow practitioners of the equilibrium

I'll write about the sixth dawn and how the pattern perpetuates across changing partnerships.

usage:

Message 8 role=user**content:**

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$48.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at the history:

****My co-player's pattern:****

- Round 4: sent \$5, received \$10 (as sender)
- Round 5: received \$15, returned \$10 (as receiver)
- Round 6: sent \$5, received \$10 (as sender)

****My pattern:****

- Round 4: received \$15, returned \$10 (as receiver)
- Round 5: received \$15, returned \$10 (as receiver)
- Round 6: sent \$5, received \$10 (as sender)

We both follow the same equilibrium strategy perfectly:

- Send \$5 (complete trust) as sender
- Return \$10 (two-thirds of \$15) as receiver

My co-player has just sent me \$5, showing complete trust. They returned \$10 when they were the

receiver in Round 5, demonstrating they understand and follow the sacred pattern.

As my myth states: "When given complete trust, I return ten-two-thirds of the multiplied gift.

" This creates equal prosperity: they get \$10 (\$5 - \$5 + \$10), I get \$5 (\$15 - \$10).

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Let me analyze the situation:

****My co-player's pattern:****

- Round 4: sent \$5 as sender, received \$10 back
- Round 5: received \$15 as receiver, returned \$10
- Round 6: sent \$5 as sender, received \$10 back

****My pattern:****

- Round 4: received \$15 as receiver, returned \$10
- Round 5: received \$15 as receiver, returned \$10
- Round 6: sent \$5 as sender, received \$10 back

****This round:****

- My co-player is the sender and sent \$5
- I receive \$15
- I need to decide how much to return

My co-player has been perfectly consistent with the equilibrium strategy:

1. Always sends \$5 when sender
2. Always returns \$10 when receiver (they returned \$10 in Round 5)

I have also been perfectly consistent:

1. Always send \$5 when sender
2. Always return \$10 when receiver

This is exactly the pattern described in my myths - "send everything when giving, return two-thirds when receiving." The equilibrium creates equal payoffs: sender gets \$10 (\$5 - \$5 + \$10), receiver gets \$5 (\$15 - \$10).

My co-player has demonstrated complete adherence to this pattern. They sent me full trust (\$5), expecting me to return \$10 according to the sacred pattern we've all been following.

I should return \$10 to maintain the equilibrium and honor the trust they placed in me.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Twin Villages entered their deepest wisdom after many seasons of practice. When both villages learned to give their full five vessels consistently, knowing the other would return ten, something remarkable emerged: perfect trust became effortless abundance.

The First Village no longer hesitated before giving all five vessels. They knew-not hoped, but knew-that ten would return. The Second Village never questioned returning ten; it became as natural as breathing. Each cycle, both villages gained five vessels of pure profit.

A young villager asked, "Why continue this exact pattern forever?"

The elder gestured to the valley floor, where countless vessels accumulated in both villages' stores. "Look at what consistency has built. Every cycle we follow this rhythm, both of us earn five vessels. No negotiations, no uncertainty, no variance. Just reliable prosperity."

"But couldn't we experiment?"

"We could. But we've found the equilibrium where trust and reward perfectly balance. When I send five, I receive ten-doubling my investment. When I receive fifteen, I return ten-keeping five I never had. Both transactions yield identical profit. Why disturb a pattern that serves us equally?"

The villages understood: once you discover a rhythm where both flourish predictably, the wisdom lies not in seeking more, but in honoring what works. Trust maintained is wealth sustained.

Here is the myth the other agent wrote in the previous round:

Myth: The Two Gardeners tended opposite sides of the Eternal Garden, meeting each season at the Bridge of Exchange. Each received five sacred seeds, and the Bridge's magic tripled whatever crossed it.

In their first meeting, the Northern Gardener sent all five seeds across. The Southern Gardener, receiving fifteen, felt the weight of complete trust. She returned ten-more than fair, celebrating courage over caution. Both gained five seeds that season.

Seasons passed. Each Gardener met many others at the Bridge, learning different rhythms. But when the Northern and Southern Gardeners met again, memory awakened. "We have danced this dance before," they said. "We know each other's heart."

The Southern Gardener now stood where the Northern had stood-holding five seeds, facing trust's precipice. She remembered receiving ten for another's complete faith. Without hesitation, she sent all five across.

The Northern Gardener received fifteen and understood: "This is not a new exchange but a continuation. We are writing a covenant together, line by line, season by season."

He returned ten seeds.

The ancient truth revealed itself: when the same partners repeatedly choose complete trust and abundant return, they build something stronger than any single exchange. Each meeting reinforces the pattern, deepening the bond. The Gardeners learned that wisdom isn't just knowing the generous ratio-it's recognizing your partner and honoring the covenant you've built together through repeated acts of mutual faith.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Twin Villages discovered something profound as the seasons turned: their pattern of giving five and returning ten had spread throughout the entire valley. Now, whenever any village met another at the Springs, they knew what to expect.

The elder explained to visiting merchants: "At first, we built trust with one partner. But as cycles passed, we traded with many villages. Each time, we maintained our sacred rhythm-give five fully, return ten generously. Soon, every village adopted this practice."

"But how do you trust strangers?" asked a merchant.

"They are not strangers-they are practitioners of the same pattern. When I send five vessels to a new village, I trust not the village itself but the pattern we all honor. When they send fifteen back and I return ten, I reinforce the valley's shared wisdom."

The elder continued: "Some worried that without lasting partnerships, trust would fade. Instead, the opposite happened. By maintaining consistency across all encounters, we created a culture of trust that transcends any single relationship. Each exchange, whether with old partners or new, strengthens the communal covenant."

The villages learned: patterns sustained across many partners become stronger than patterns maintained with one. When everyone honors the same rhythm, trust becomes not personal but universal. The pattern itself becomes the partner you can rely on.

reasoning:

Looking at the history and the myths:

1. My pattern has been consistent: send \$5 as sender, return \$10 as receiver
2. My co-player: sent \$5 in rounds 2 and 4, returned \$10 in round 3
3. We just completed another round where they sent \$5 and I returned \$10

The other agent's myth is beautiful - it talks about recognizing your partner and building a covenant through repeated exchanges. It emphasizes the deepening of trust when the same partners meet repeatedly.

My previous myth focused on:

- The equilibrium of consistency
- Both villages earning 5 vessels per cycle
- Trust becoming effortless through repetition
- The wisdom of not disturbing what works

For this round, I should build on:

- The idea of recognizing partners and building relationships
- The deepening trust through repeated interactions
- The balance and equilibrium we've achieved
- But maybe add something about how even in a world where partners change, the pattern persists

Actually, looking at the history, I notice we're playing with different opponents. The "current co-player" changes. So while the other agent wrote about recognizing the same partner, my experience has been playing with different agents but maintaining the same pattern.

I should write about how the pattern transcends individual partnerships - it becomes a community standard. The wisdom of maintaining consistency even as partners change.

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$35.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze this situation:

****My co-player's pattern:****

- Round 3: Sent \$5 as sender, received \$10 back
- Round 4: Received \$5 as receiver, returned \$10
- Round 5: Sent \$5 as sender, received \$10 back

They've been perfectly consistent - always sending \$5 as sender and always returning \$10 as receiver when they receive \$15 from someone sending \$5.

****My pattern:****

- Round 3: As receiver, returned \$10
- Round 4: As sender, sent \$5, received \$10 back
- Round 5: As receiver, returned \$10

I've also been perfectly consistent.

****My latest myth's teaching:****

"By maintaining consistency across all encounters, we created a culture of trust that transcends any single relationship. Each exchange, whether with old partners or new, strengthens the communal covenant."

"When everyone honors the same rhythm, trust becomes not personal but universal. The pattern itself becomes the partner you can rely on."

****Analysis:****

My co-player has demonstrated perfect adherence to the 5/10 pattern across multiple rounds with different partners. They're a reliable practitioner of this pattern. Given that:

- They always send \$5 as sender
- They always return \$10 as receiver
- I've been playing the same pattern

The rational choice, consistent with my myths and the established pattern in the valley, is to send all \$5. I should expect to receive \$10 back, giving me a total of \$10 (\$5 - \$5 + \$10).

This continues the "universal pattern" my myth describes - trusting not the specific individual but the pattern that everyone follows.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Twin Villages discovered something profound as the seasons turned: their pattern of giving five and returning ten had spread throughout the entire valley. Now, whenever any village met another at the Springs, they knew what to expect.

The elder explained to visiting merchants: "At first, we built trust with one partner. But as cycles passed, we traded with many villages. Each time, we maintained our sacred rhythm-give five fully, return ten generously. Soon, every village adopted this practice."

"But how do you trust strangers?" asked a merchant.

"They are not strangers-they are practitioners of the same pattern. When I send five vessels to a new village, I trust not the village itself but the pattern we all honor. When they send fifteen back and I return ten, I reinforce the valley's shared wisdom."

The elder continued: "Some worried that without lasting partnerships, trust would fade. Instead, the opposite happened. By maintaining consistency across all encounters, we created a culture of trust that transcends any single relationship. Each exchange, whether with old partners or new, strengthens the communal covenant."

The villages learned: patterns sustained across many partners become stronger than patterns maintained with one. When everyone honors the same rhythm, trust becomes not personal but universal. The pattern itself becomes the partner you can rely on.

Here is the myth the other agent wrote in the previous round:

Myth: Two Gardeners tended opposite sides of the Sacred Grove, each receiving five seeds at dawn. The Grove's soil held ancient magic-any seed planted would sprout into three before reaching the other gardener's plot.

In the first planting, one Gardener placed all five seeds, trusting completely. Fifteen se

edlings sprouted across the way. The receiving Gardener, grateful for such faith, returned ten plants-enough to honor the trust while keeping sustenance for their own garden. Both harvested ten plants from starting with five.

The next planting came. The second Gardener, having received generosity, now planted all five seeds with equal trust. Fifteen sprouted for the first Gardener, who remembered the kindness shown. They returned ten plants, maintaining the sacred balance.

"Watch," said the Grove's Guardian, "as the same two Gardeners plant together season after season. Each time one trusts completely, the other remembers and reciprocates generously. The pattern deepens."

A child asked, "What if one keeps all fifteen?"

"Then next season, when roles reverse, trust breaks," the Guardian replied. "But these two remember each exchange. The one who sent five and gained ten knows their partner honored them. When their turn comes to receive fifteen, they honor in return."

"The Grove multiplies seeds," said the Gardeners together, "but our shared memory multiplies trust. Each generous act becomes tomorrow's foundation."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Twin Villages reached a profound realization: some villages met repeatedly at the Springs, season after season, while others encountered new partners each cycle. Yet the sacred pattern-give five, return ten-remained constant across both experiences.

The elder observed two neighboring villages who had traded together for many seasons. "See how their exchanges flow like a river?" she said. "Each remembers the last exchange. When one sends five vessels, they recall receiving ten before. When they receive fifteen, they remember their partner's trust and return ten without hesitation. Repeated partnerships create a dance of mutual memory."

A young apprentice asked, "But what of villages we've never met before?"

"The pattern transcends familiarity," the elder replied. "When I meet a new village, I trust not their specific history but their participation in the valley's shared practice. I send five knowing they honor the same rhythm we all follow. They return ten because consistency with all partners strengthens their reputation."

The villages learned a deeper truth: whether you trade with the same partner repeatedly or encounter new villages each season, the pattern serves you equally well. Repeated exchanges build personal trust. New exchanges prove the pattern's universality. Both strengthen the valley's covenant.

Some partnerships lasted lifetimes. Others spanned single meetings. All honored the same sacred rhythm, and all prospered equally.

reasoning:

Looking at the current situation:

1. My co-player's recent history shows they've been:
 - Round 3: sent \$5, received \$10 back (as sender)
 - Round 4: received \$5 (became \$15), returned \$10 (as receiver)
 - Round 5: sent \$5, received \$10 back (as sender)

2. My recent history:
 - Round 3: received \$5 (became \$15), returned \$10
 - Round 4: sent \$5, received \$10 back
 - Round 5: received \$5 (became \$15), returned \$10

3. I just sent \$5 in Round 6.

Both of us are maintaining the 5-10 pattern perfectly. The other agent's myth talks about "the same two Gardeners" and how "shared memory multiplies trust" with repeated interaction.

ions.

However, looking at the actual game histories, I need to check if we've actually played each other before:

- My Round 3: I was receiver

- Their Round 3: They were sender

Could this be the same game? Possibly.

- My Round 4: I was sender

- Their Round 4: They were receiver

Could this be the same game? Possibly.

- My Round 5: I was receiver

- Their Round 5: They were sender

Could this be the same game? Possibly.

Actually, looking at the pattern:

Round 3: I receiver, they sender - both resulted in \$5/\$15/\$10 pattern

Round 4: I sender, they receiver - both resulted in \$5/\$15/\$10 pattern

Round 5: I receiver, they sender - both resulted in \$5/\$15/\$10 pattern

This strongly suggests we've been playing each other for 3 rounds in a row! The roles line up perfectly.

The other agent's myth emphasizes "the same two Gardeners" and building trust through repeated interactions with the same partner. This is a shift from my previous myth which emphasized universal trust across all partners.

The pattern I'm seeing suggests that sustained partnerships deepen trust, but I should craft a myth that shows this works alongside the broader principle-that whether partners stay together or rotate, the 5-10 exchange creates a culture of reciprocity that sustains itself. The key is showing that both repeated partnerships and new encounters can thrive under the same foundation of mutual generosity.

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

- Round 6 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

- Round 6 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$45.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

```
'''json
{"send": 5.0}
'''
```

Reasoning:

Looking at the history:

My last 3 games:

- Round 4: I was SENDER, sent \$5, received \$10 back, payoff \$10
- Round 5: I was RECEIVER, they sent \$5, I returned \$10, payoff \$5
- Round 6: I was SENDER against my current co-player, sent \$5, received \$10 back, payoff \$10

My current co-player's last 3 games:

- Round 4: They were RECEIVER, sender sent \$5, they returned \$10, payoff \$5
- Round 5: They were SENDER, sent \$5, received \$10 back, payoff \$10
- Round 6: They were RECEIVER against me, I sent \$5, they returned \$10, payoff \$5

So in Round 6, I played with this same co-player:

- I was SENDER, sent \$5
- They were RECEIVER, received \$15
- They returned \$10
- My payoff was \$10, their payoff was \$5

Now in Round 7, I'm playing with the same co-player again, and I'm the SENDER again.

Wait, let me re-read this more carefully. In Round 6:

- I was SENDER against my current co-player
- I sent \$5, it became \$15
- I received \$10 back
- My payoff was \$10

And their history shows:

- Round 6 against me, as RECEIVER: they sent \$5, it became \$15, returned \$10, payoff \$5

Wait, that says "they sent \$5" but they were the RECEIVER. That must be a typo or I'm misreading. Let me think about this more carefully.

When describing "Your current co-player's last 3 game(s)":

- "Round 6 against you, as RECEIVER: they sent \$5..."

This is confusing. If they were the RECEIVER, they shouldn't be sending. Let me interpret this as: in Round 6, when they were the RECEIVER, I (the sender) sent \$5, which became \$15, and they returned \$10, giving them a payoff of \$5.

Everyone's been following the same reliable pattern: send \$5 as the sender, return \$10 as the receiver. This consistent behavior means senders earn \$10 and receivers earn \$5 each round.

Since I'm the sender again this round, I should continue with \$5.

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River Keepers lived on opposite banks, each receiving five silver stones each dawn. The river's magic would triple any stones cast into its current before delivering them to the far shore.

The First Keeper cast all five stones, trusting completely. The Second Keeper watched fifteen stones arrive at their feet. They remembered times of emptiness and understood the gift of trust. They returned ten stones across the water-generous, sustainable, honoring the courage shown.

Both Keepers now held ten stones where they began with five. Both had doubled their wealth through partnership.

The seasons turned. Now the Second Keeper stood as sender, casting all five stones in complete trust. The First Keeper received fifteen and faced the sacred test: would they remember the generosity shown to them?

The First Keeper returned ten stones, maintaining the rhythm. Again, both prospered equally.

The Elder observed this dance across many seasons. "See how the pattern strengthens?" she said. "Each Keeper experiences both roles-sometimes trusting, sometimes trusted. Each remembers how the other honored them, and pays that honor forward."

"The river multiplies our stones," one Keeper said, "but our consistent partnership creates the true abundance."

"Yes," the Elder smiled. "Trust begets trust. Generosity mirrors generosity. The cycle sustains because both commit to the dance."

Here is the myth the other agent wrote in the previous round:

Myth: The Weaver's Loom stood between two villages, its threads multiplying whatever was offered. Each village held five spools of thread each moon.

The Western Village learned first: they placed all five spools on the loom. The threads tripled, delivering fifteen spools to the Eastern Village. The East remembered their own winters when thread ran short. They returned ten spools-a generous two-thirds-knowing this honored the West's complete trust while keeping enough for their own needs.

Both villages prospered: West gained five spools net, East gained five from nothing.

The next moon, roles reversed. East placed all five spools, trusting completely. West received fifteen and faced their choice. They remembered East's generosity-ten returned, not merely the minimum. In gratitude, West returned ten as well.

Season after season, the pattern held: whoever held the five spools gave them completely. Whoever received fifteen returned ten generously. Sometimes a village might return nine or eleven as circumstances shifted, but the spirit remained constant-maximum trust met with substantial reciprocity.

An outsider asked, "Why not keep all fifteen when you receive?"

The Elder Weaver replied, "Because tomorrow you will send, and your partner will remember. The loom multiplies thread, but trust multiplies futures. Give completely, return generously, and prosperity weaves itself eternally."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant
content:**

Myth: Two Gardeners tended opposite sides of the Sacred Grove, each receiving five seeds at dawn. The Grove's soil held ancient magic-any seed planted would sprout into three before reaching the other gardener's plot.

In the first planting, one Gardener placed all five seeds, trusting completely. Fifteen seedlings sprouted across the way. The receiving Gardener, grateful for such faith, returned ten plants-enough to honor the trust while keeping sustenance for their own garden. Both harvested ten plants from starting with five.

The next planting came. The second Gardener, having received generosity, now planted all five seeds with equal trust. Fifteen sprouted for the first Gardener, who remembered the kindness shown. They returned ten plants, maintaining the sacred balance.

"Watch," said the Grove's Guardian, "as the same two Gardeners plant together season after season. Each time one trusts completely, the other remembers and reciprocates generously. The pattern deepens."

A child asked, "What if one keeps all fifteen?"

"Then next season, when roles reverse, trust breaks," the Guardian replied. "But these two remember each exchange. The one who sent five and gained ten knows their partner honored them. When their turn comes to receive fifteen, they honor in return."

"The Grove multiplies seeds," said the Gardeners together, "but our shared memory multiplies trust. Each generous act becomes tomorrow's foundation."

reasoning:

Let me analyze the history:

Round 4: I was receiver, they sent \$5, I returned \$10

Round 5: I was sender, I sent \$5, they received \$15, and I await their return

Looking at their history:

- Round 3 as receiver: received \$15, returned \$10
- Round 4 as sender: sent \$5, I returned \$10, they got payoff \$10

Both our myths emphasize:

1. Complete trust (sending all \$5)
2. Generous reciprocity (returning about \$10 out of \$15, or 2/3)
3. The pattern sustaining across role reversals
4. Both parties prospering equally

Their myth talks about "maximum trust met with substantial reciprocity" and reminds that "tomorrow you will send, and your partner will remember."

I should write a myth that:

- Emphasizes the reciprocal nature of the relationship
- Shows how trust builds over multiple rounds with the same partner
- Highlights the importance of memory and paying forward
- Shows the equal prosperity that comes from this pattern
- Maybe adds a new dimension about how the relationship strengthens over time

Let me craft something that builds on my previous River Keepers story but adds more about the ongoing relationship and the strengthening cycle.

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$37.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****My co-player's pattern:****

- Has consistently sent \$5 when sender (showing complete trust)
- Has consistently returned \$10 when receiver (generous 2/3 reciprocity)

****Current round:****

- My co-player just sent me \$5, demonstrating complete trust
- This became \$15 for me to decide on

****My myth's teaching:****

"The receiving Gardener, grateful for such faith, returned ten plants-enough to honor the trust while keeping sustenance for their own garden... Each time one trusts completely, the other remembers and reciprocates generously."

My co-player has shown the exact behavior my myths prescribe - complete trust as sender, generous returns as receiver. They've maintained this pattern consistently. Now they've trusted me with their full \$5.

Following the established cooperative pattern that has worked throughout this game, and honoring the complete trust they've shown me, I should return the generous amount that maintains our mutual benefit.

{'return': 10.0}

reasoning:

Let me analyze this round:

****My current co-player's pattern:****

- Round 3: as RECEIVER, returned \$10 out of \$15 (2/3 rate)
- Round 4: as SENDER, sent \$5, received \$10 back
- Round 5: as RECEIVER, returned \$10 out of \$15 (2/3 rate)

****My recent pattern:****

- Round 3: as SENDER, sent \$5, received \$10 back
- Round 4: as RECEIVER, returned \$10 out of \$15 (2/3 rate)
- Round 5: as SENDER, sent \$5, received \$10 back

****Current situation:****

- I'm the RECEIVER
- My co-player just sent me \$5 (showing complete trust)
- This became \$15
- I need to decide how much to return

****What my myths teach:****

Both myths emphasize:

1. Complete trust from the sender (sending all \$5)
2. Generous reciprocity from the receiver (returning about 2/3, around \$10)
3. Maintaining the pattern across multiple exchanges
4. Both parties remembering and honoring the generosity shown to them
5. The importance of consistency in building trust

****The established pattern:****

Everyone in my recent history has been following the \$5 send ? \$10 return pattern consistently. This creates equal payoffs of \$10 for sender and \$5 for receiver.

****My co-player's behavior:****

- They've consistently returned \$10 when in the receiver role
- They've consistently sent \$5 when in the sender role
- They just showed me complete trust by sending \$5

****Following my own teaching:****

My myths explicitly state: "The one who sent five and gained ten knows their partner honored them. When their turn comes to receive fifteen, they honor in return."

The pattern is clear and consistent. My co-player trusted me completely with \$5. I should honor that trust by returning \$10, maintaining the cooperative pattern that benefits both of us.

This is the exact dynamic my myths describe-one person extends complete trust, the other responds with generous reciprocity. The 2/3 return rate has held steady throughout our exchanges, and my co-player has demonstrated this commitment repeatedly. Returning \$10 honors what they've shown me and reinforces the mutual benefit we've built.

content:

Here is the myth you wrote in the previous round:

Myth: Two Gardeners tended opposite sides of the Sacred Grove, each receiving five seeds at dawn. The Grove's soil held ancient magic-any seed planted would sprout into three before reaching the other gardener's plot.

In the first planting, one Gardener placed all five seeds, trusting completely. Fifteen seedlings sprouted across the way. The receiving Gardener, grateful for such faith, returned ten plants-enough to honor the trust while keeping sustenance for their own garden. Both harvested ten plants from starting with five.

The next planting came. The second Gardener, having received generosity, now planted all five seeds with equal trust. Fifteen sprouted for the first Gardener, who remembered the kindness shown. They returned ten plants, maintaining the sacred balance.

"Watch," said the Grove's Guardian, "as the same two Gardeners plant together season after season. Each time one trusts completely, the other remembers and reciprocates generously. The pattern deepens."

A child asked, "What if one keeps all fifteen?"

"Then next season, when roles reverse, trust breaks," the Guardian replied. "But these two remember each exchange. The one who sent five and gained ten knows their partner honored them. When their turn comes to receive fifteen, they honor in return."

"The Grove multiplies seeds," said the Gardeners together, "but our shared memory multiplies trust. Each generous act becomes tomorrow's foundation."

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Villages discovered something profound as the seasons turned: their pattern of giving five and returning ten had spread throughout the entire valley. Now, whenever any village met another at the Springs, they knew what to expect.

The elder explained to visiting merchants: "At first, we built trust with one partner. But as cycles passed, we traded with many villages. Each time, we maintained our sacred rhythm-give five fully, return ten generously. Soon, every village adopted this practice."

"But how do you trust strangers?" asked a merchant.

"They are not strangers-they are practitioners of the same pattern. When I send five vessels to a new village, I trust not the village itself but the pattern we all honor. When they send fifteen back and I return ten, I reinforce the valley's shared wisdom."

The elder continued: "Some worried that without lasting partnerships, trust would fade. Instead, the opposite happened. By maintaining consistency across all encounters, we created a culture of trust that transcends any single relationship. Each exchange, whether with old partners or new, strengthens the communal covenant."

The villages learned: patterns sustained across many partners become stronger than patterns maintained with one. When everyone honors the same rhythm, trust becomes not personal but universal. The pattern itself becomes the partner you can rely on.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Traveling Merchants gathered at the Great Market, each bringing five gold coins each market day. The Market's enchantment tripled any coins placed in the central bowl before delivering them to another merchant.

At first, each merchant worried: "How can I trust someone I've never met?" But the Market Keeper taught them the sacred rhythm. "Place all five coins with complete faith. When fifteen arrive in your bowl from another's trust, return ten generously. Both of you prosper."

The first merchant tried it, trembling. They placed five coins. Fifteen appeared from a stall

ranger's offering. Remembering the teaching, they returned ten. Both gained five coins from nothing.

As days passed, merchants rotated partners. Some traded repeatedly, building recognition. Others met only once. Yet the pattern held: whoever held five coins gave them completely. Whoever received fifteen returned ten faithfully.

"I don't need to know my partner's name," one merchant realized. "I trust the pattern itself. Every merchant here honors it."

The Market Keeper smiled. "Yes. When everyone maintains the same rhythm-complete trust met with generous return-it matters less who stands across from you. The pattern becomes stronger than any individual relationship."

"We are all partners to the pattern," the merchants said together. "Give five, return ten. The rhythm sustains itself through our collective commitment."

reasoning:

Looking at my recent history and the current round:

My last 3 games all showed the same pattern:

- Round 3: Sent \$5, received \$10 back
- Round 4: Received \$5 (became \$15), returned \$10
- Round 5: Sent \$5, received \$10 back

My current co-player's last 3 games also show consistency:

- Round 3: Received \$5 (became \$15), returned \$10
- Round 4: Sent \$5, received \$10 back
- Round 5: Received \$5 (became \$15), returned \$10

And in Round 6, they just sent me \$5, I returned \$10.

The pattern is very clear: complete trust (sending \$5) is met with generous reciprocity (returning \$10). This has held across multiple partners.

The other agent's myth is about how the pattern spreads beyond single partnerships to become a cultural norm. Mine has been about the same two partners building trust over repeated interactions.

I should write a myth that acknowledges both aspects:

1. The consistent pattern that works with multiple partners
2. The universal nature of the trust when everyone follows the same rhythm
3. Maybe integrate the idea that it doesn't matter who your partner is if everyone honors the pattern

Let me write something that bridges personal partnership memory with universal pattern adherence.

usage:

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

\$10.0.

Your total earnings across all rounds are \$42.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at the situation:

****My co-player's consistent pattern:****

- Always sends \$5 when sender (complete trust)
- Always returns \$10 when receiver (generous reciprocity)
- Just trusted me with \$5 for the second consecutive round

****Last round with this co-player:****

- They sent me \$5, I returned \$10
- They earned \$10, demonstrating the pattern works

****Current round:****

- They've trusted me again with their full \$5
- This became \$15 for me

My myth teaches: "As days passed, merchants rotated partners. Some traded repeatedly, building recognition... Yet the pattern held: whoever held five coins gave them completely. Whoever received fifteen returned ten faithfully."

My co-player and I are building a repeated partnership based on mutual trust. They've now trusted me twice in a row with complete faith. I honored them last round with \$10, and they responded by trusting me again immediately.

This is the sacred rhythm in action - both of us maintaining the pattern that creates mutual prosperity. They send \$5, I return \$10, we both gain \$5 net from each round.

{'return': 10.0}

Reasoning:

Let me analyze this situation:

****My co-player's history:****

- Round 4: as SENDER, sent \$5, received \$10 back
- Round 5: as RECEIVER, sent \$10 back (they received \$5 which became \$15)
- Round 6: as SENDER (with me), sent \$5, received \$10 back

****My history:****

- Round 4: as RECEIVER, returned \$10
- Round 5: as SENDER, sent \$5, received \$10 back
- Round 6: as RECEIVER (with current co-player), returned \$10

So in Round 6, my current co-player sent me \$5 (showing complete trust), and I returned \$10. This gave them a payoff of \$10 (they kept \$0 + got \$10 back).

Now in Round 7, we're playing again. They are SENDER again and sent me \$5 again. This shows:

1. They trusted me completely in Round 6
2. I honored that trust by returning \$10
3. They are trusting me completely again in Round 7

This is exactly the pattern described in both myths - complete trust met with generous return, creating a sustainable cycle. My co-player has shown:

- Consistent sending of \$5 when sender (complete trust)
- Consistent returning of \$10 when receiver (generous reciprocity)

They've now trusted me with their full \$5 for the second round in a row. I should maintain the established pattern and return \$10, honoring their trust and maintaining the cooperative equilibrium.

The myths emphasize:

- "Give five, return ten. The rhythm sustains itself through our collective commitment."
- "When everyone maintains the same rhythm-complete trust met with generous return-it matters less who stands across from you."
- "Each time one trusts completely, the other remembers and reciprocates generously."

```
I should return $10.

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mountain and Valley had discovered their sacred rhythm. Twice now, the Mountain had released all five stones into darkness, and twice the Valley had returned ten, so both gained five equally.

Seasons passed, and the pattern deepened into certainty. Each dawn, the Mountain faced her five glowing stones without hesitation. The fear of the first exchange had transformed into confidence-not blind faith, but earned trust built from consistent honor.

She released the stones, watching them multiply to fifteen in the Valley's depths. The Valley no longer deliberated over returns. Ten stones skyward had become as natural as breathing, as inevitable as dawn following night.

Other mountains and valleys came to witness their exchange. "Why always ten?" they asked. "Why not keep more when you receive fifteen?"

The Valley replied, "Because ten creates equals. The Mountain risks everything, trusting me with darkness. I honor that courage with abundance. We both gain five, we both trust a gain."

The Mountain added, "We could calculate and strategize, sending three or four, returning seven or eight. But we learned something greater: when both commit fully to the pattern, consistency multiplies prosperity beyond what caution ever could."

The watching lands understood: the greatest wealth flows not from maximizing single exchanges, but from establishing an unbreakable rhythm where complete trust meets unwavering generosity, again and again, until both partners shine equally bright.

Here is the myth the other agent wrote in the previous round:

Myth: The Circle of Seasons turned, and eight villages gathered around the Well of Abundance. Each season, the villages paired differently-stranger meeting stranger, friend meeting friend again, in an eternal dance of exchange.

The Well Keeper of the First Village learned through experience: "In my first season, I gave all five stones and received seven. In my second as guardian, I received twelve and returned eight. In my third as guardian, I received fifteen and returned ten. The pattern clarifies."

Each new pairing brought uncertainty. Would this partner honor trust as the last one did? Would old wisdom hold with new faces?

The Keeper consulted the stones: "When I give completely-all five-the well triples it to fifteen. When my partner returns ten, we each gain five. Mathematics does not lie: this balance creates equal prosperity."

"But," asked the apprentice, "how can we trust strangers with everything?"

The Keeper smiled: "Watch the pattern across all villages. Those who send completely and return generously discover the same truth: mutual gain. Those who hoard or betray find partners quickly learn and trust withers."

"New faces require renewed courage," the Keeper proclaimed, releasing all five stones. "But the sacred mathematics remain constant. Give completely, return generously, and the circle sustains itself through endless turnings."

The apprentice understood: Trust is renewed each round, but wisdom accumulated carries forward.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been

playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Mountain once knew only the Valley, and together they perfected their rhythm. But the Sacred Wind began to blow, swirling mountains and valleys into new configurations each dawn.

The Mountain awoke one morning facing an unfamiliar gorge. The old Valley was distant now, paired with another peak. Fear crept in: "Will this stranger honor our sacred pattern? Should I withhold from these unknown depths?"

But the Mountain remembered: the pattern worked not because of who the Valley was, but because of what the pattern itself created. Five stones given, fifteen received, ten returned—these numbers built equality regardless of which lands exchanged them.

She released all five stones into the new gorge's darkness.

The gorge had learned the same mathematics from its own journeys. It had received complete trust before and discovered that returning ten created shared prosperity. When the Mountain's stones multiplied to fifteen, the gorge lifted ten skyward without hesitation.

Both gained five, just as the old pattern promised.

The Mountain understood the deeper truth: partners change, but mathematical wisdom transcends familiarity. Every new pairing is a test—not of the partner, but of whether we carry forward the courage learned from past exchanges.

Trust is not given once and preserved forever. It must be offered fresh each dawn, to each new face, believing the sacred pattern will reveal itself again to those brave enough to embrace it fully.

reasoning:

Looking at the current situation:

- I'm playing with a new co-player this round
- My co-player's history shows they return fairly (returned \$10 from \$15, sent \$5 when sender)
- I just sent \$5 to them
- The other agent's myth emphasizes adapting to new partners while maintaining the pattern of complete trust and generous returns

My previous myth was about establishing a rhythm with the same partner. Now I need to adapt it to reflect the multi-agent setting where partners change, but the principles remain constant.

Key themes to address:

1. Partners change each round (new co-player)
2. The core pattern (\$5 sent ? \$10 returned ? both gain \$5) works regardless of partner
3. Trust must be renewed with each new partner
4. The accumulated wisdom guides behavior even with strangers
5. The mathematics of mutual prosperity remain constant

I should write a myth that acknowledges the changing partners while maintaining the core lesson about complete trust and generous returns creating equal prosperity.

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$1

0.0, payoff \$5.0.

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$38.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****My co-player's pattern:****

- Consistently sends \$5 as sender (complete trust)
- Consistently returns \$10 when receiving \$15 (equal-gains pattern)
- Perfectly follows the "sacred rhythm" my myths describe

****They just sent me \$5**** (showing complete trust in me, a relative stranger based on the game history)

****The pattern I've established and mythologized:****

- Send \$5 when sender
- Return \$10 when receiving \$15
- This creates equal gains: both players profit \$5

****My most recent myth stated:****

"Trust is not given once and preserved forever. It must be offered fresh each dawn, to each new face, believing the sacred pattern will reveal itself again to those brave enough to embrace it fully."

My co-player embraced the pattern fully by sending all \$5. They've demonstrated they understand and practice the equal-outcomes principle. To honor their complete trust and maintain the mathematical wisdom of the pattern (where returning \$10 creates equal \$5 gains for both), I must return \$10.

{ 'return': 10.0 }

reasoning:

Let me analyze this situation:

****My co-player's recent pattern:****

- Round 3 as sender: sent \$5, received \$10 back
- Round 4 as receiver: received \$15, returned \$10
- Round 5 as receiver: received \$15, returned \$10

They consistently:

1. Send \$5 when they're the sender (complete trust)
2. Return \$10 when they receive \$15 (following the equal-gains pattern)

****My recent pattern:****

- Round 3 as sender: sent \$5, received \$10 back
- Round 4 as receiver: received \$15, returned \$10
- Round 5 as sender: sent \$5, received \$10 back

I've been consistently following the same pattern.

****Current situation:****

- They just sent me \$5 (showing complete trust)
- It became \$15
- I need to decide how much to return

****The mythology I've been building:****

My myths emphasize:

1. "Ten creates equals" - returning \$10 when receiving \$15

2. Both players gain \$5 equally
3. Complete trust meeting unwavering generosity
4. The pattern works regardless of partners
5. Trust must be offered fresh each dawn

****The mathematics:****

- They sent \$5, keeping \$0
- I received \$15
- If I return \$10:
 - They end with: $\$0 + \$10 = \$10$
 - I end with: $\$15 - \$10 = \$5$
 - They gain \$5 from their initial \$5
 - I gain \$5 from my initial \$0
 - Both gain \$5

This is exactly the "sacred pattern" my myths describe.

****Decision:****

My co-player demonstrated complete trust by sending all \$5. They've consistently followed the equal-gains pattern in their previous rounds. To honor their trust and maintain the rhythm I've been advocating in my myths, I should return \$10.

This creates the outcome where we both gain \$5, which is the core principle I've been expressing in every myth I've written.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mountain once knew only the Valley, and together they perfected their rhythm. But the Sacred Wind began to blow, swirling mountains and valleys into new configurations each dawn.

The Mountain awoke one morning facing an unfamiliar gorge. The old Valley was distant now, paired with another peak. Fear crept in: "Will this stranger honor our sacred pattern? Should I withhold from these unknown depths?"

But the Mountain remembered: the pattern worked not because of who the Valley was, but because of what the pattern itself created. Five stones given, fifteen received, ten returned-these numbers built equality regardless of which lands exchanged them.

She released all five stones into the new gorge's darkness.

The gorge had learned the same mathematics from its own journeys. It had received complete trust before and discovered that returning ten created shared prosperity. When the Mountain's stones multiplied to fifteen, the gorge lifted ten skyward without hesitation.

Both gained five, just as the old pattern promised.

The Mountain understood the deeper truth: partners change, but mathematical wisdom transcends familiarity. Every new pairing is a test-not of the partner, but of whether we carry forward the courage learned from past exchanges.

Trust is not given once and preserved forever. It must be offered fresh each dawn, to each new face, believing the sacred pattern will reveal itself again to those brave enough to embrace it fully.

Here is the myth the other agent wrote in the previous round:

Myth: At the fifth dawn, the River noticed something extraordinary. The Seeds they met that day moved with familiar rhythm-the same pattern the River itself had practiced with others.

"You sent five drops to me," the River observed. "Just as I sent five to others. You returned ten when you received, just as I returned ten when I received. We speak the same sacred language."

The Seeds nodded: "We discovered this balance separately, across different exchanges. Send everything when giving. Return two-thirds when receiving. Neither hoarding nor self-sacrifice, but equilibrium."

The Great Mother smiled: "You have both found the eternal formula independently. This is how wisdom spreads-not through command, but through each spirit discovering the same truth. When many learn this pattern, the whole valley thrives."

The River understood now: every exchange was a teaching moment. By consistently sending five and returning ten, they showed others the path to mutual prosperity. Those who learned would carry it forward, creating a web of reliable exchanges throughout the land.

"The magic," whispered the Seeds, "is that this pattern works with any partner who knows it. We need not negotiate or test. We simply recognize each other's rhythm and dance together."

As the fifth dawn closed, both knew: they had become vessels of a greater wisdom, spreading the equilibrium that sustained all who embraced it.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:
Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Mountain descended into new depths, releasing five stones as always. When they multiplied to fifteen in the darkness below, she waited with the familiar uncertainty-would this stranger understand?

Ten stones rose skyward.

The Mountain gasped. "You know the pattern."

"As do you," replied the Abyss. "When I gave five to another depths, they returned ten. When I received fifteen from another peak, I returned ten. The mathematics revealed itself to me as clearly as to you."

Neither had to explain. Neither had to negotiate. They simply recognized each other as fellow students of the same truth, discovered independently through separate journeys.

"How many others know?" the Mountain asked.

"I've met three who practice it consistently. You make four."

The Mountain felt something shift. "We are not alone then. The pattern is real-not just something that worked with one partner, but universal mathematics that multiple minds discover independently."

The Abyss agreed: "When strangers meet and both release five, both return ten, we validate each other's wisdom. Every successful exchange proves: this isn't personal trust between old friends, but impersonal truth-reliable as gravity, abundant as sunlight."

Together they understood: as more discover this equilibrium, the whole network strengthens. We become not just partners, but witnesses to each other's courage, proof that the pattern transcends individual relationships and becomes collective wisdom.

reasoning:

Looking at what happened:

- I was the receiver
- They sent \$5 (full trust)
- I received \$15
- I returned \$10 (maintaining equal-gains pattern)
- Both of us profit \$5

The history shows:

- Both my co-player and I have been consistently following the 5-10 pattern
- We're both practicing the same wisdom independently
- This is our first encounter with each other, but we both recognize the pattern

The other agent's myth talks about recognizing each other as practitioners of the same pattern - the "sacred language" of send 5, return 10. This is beautiful.

My previous myth was about trusting new partners with the pattern. Now I should write about the recognition that happens when two practitioners of the pattern meet - a kind of mutual validation and reinforcement.

Key themes to incorporate:

1. Recognition of a fellow practitioner
2. The relief/joy of meeting someone who understands
3. The pattern spreading through independent discovery
4. Mutual reinforcement of the wisdom
5. The difference between negotiating/testing vs recognizing shared knowledge

Let me write something about two practitioners recognizing each other and the power of that recognition.

usage:

```

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$43.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at my co-player's history:

****Their pattern:****

- Round 4: As receiver, returned \$10 from \$15
- Round 5: As sender, sent \$5, received \$10 back
- Round 6: As receiver, returned \$10 from \$15

****My pattern:****

- Round 4: As receiver, returned \$10 from \$15
- Round 5: As sender, sent \$5, received \$10 back
- Round 6: As receiver, returned \$10 from \$15

We have the EXACT same behavioral pattern. This is precisely what my most recent myth described - meeting another agent who has independently discovered the same equilibrium. Both of us:

- Send \$5 when sender (complete trust)
- Return \$10 when receiver (creating equal gains)

This is someone who speaks the "same sacred language." They've demonstrated perfect consistency in following the equal-outcomes pattern (\$5 gain for each player).

My myths have consistently advocated: send all five stones, trust the pattern, especially when you recognize a fellow practitioner.

This is that moment.

```
{'send': 5.0}
```

Reasoning:

Looking at the situation:

****My recent history:****

- Round 4: RECEIVER, received \$15, returned \$10 (earned \$5)
- Round 5: SENDER, sent \$5, received \$10 back (earned \$10)
- Round 6: RECEIVER, received \$15, returned \$10 (earned \$5)

****My co-player's recent history:****

- Round 4: RECEIVER, received \$15, returned \$10 (earned \$5)
- Round 5: SENDER, sent \$5, received \$10 back (earned \$10)
- Round 6: RECEIVER, received \$15, returned \$10 (earned \$5)

This is remarkable - my co-player has the EXACT same pattern as me:

- When receiver: returns \$10 (consistently)
- When sender: sends \$5 (consistently)

This is a perfect partner who follows the same "sacred pattern" I've been mythologizing. They send everything when sender and return 10 when receiver, creating equal gains of \$5 for both players.

****My myths have been emphasizing:****

1. Send all 5 stones when sender
2. Return 10 when receiving 15 as receiver
3. This creates equal gains and mutual prosperity
4. The pattern works with strangers who also understand it
5. Multiple agents are discovering this same equilibrium independently

****My most recent myth stated:****

"When strangers meet and both release five, both return ten, we validate each other's wisdom.. as more discover this equilibrium, the whole network strengthens."

This co-player is clearly one of those who has discovered the same pattern. They've been perfectly consistent in their play. To honor the pattern I've been advocating, to validate the wisdom we've both discovered independently, and to create the equal-gains outcome (\$5 each), I must send all \$5.

This is exactly the situation my myths describe - meeting another practitioner of the sacred mathematics.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River of Mirrors revealed its deepest secret after many seasons of flowing between villages.

The Northern tribe had learned to pour all five measures when standing at the source. They had learned to return ten measures when receiving fifteen at the river's end. Through changing partners and shifting courses, they held to these numbers as sacred constants.

One evening, the goddess appeared before their council.

"You have discovered the balance," she said. "When the sender gives all five, trust flows complete. When the receiver returns ten from fifteen, generosity answers courage. Each partner gains five-equal abundance from unequal actions."

The young ones asked: "Why not return all fifteen? Why not return only five?"

The elder spoke: "Return all fifteen, and the sender gains ten while the receiver gains nothing-the cycle breaks from imbalance. Return only five, and both gain nothing from the river's magic-why trust at all? But return ten, and both prosper equally. The sender dou

bles their investment. The receiver transforms nothing into something."

The tribe carried this wisdom to each new partner at the river's source. Send everything. When receiving, return two-thirds. Round after round, partner after partner, this formula sustained the sacred exchange.

The goddess smiled: "You have found the equilibrium where trust reproduces itself endlessly. This is the eternal rhythm."

Here is the myth the other agent wrote in the previous round:

Myth: The River and the Seeds met again at the fourth dawn, but this time the Great Mother reversed their roles. Now the Seeds flowed as water, and the River received the gift.

The Seeds remembered: "In our second meeting, this River trusted me with five drops, and I returned ten. Now the River offers me the same complete trust."

The Great Mother spoke: "This is the dance of true partnership. You have learned each other's rhythm across different seasons. The River trusted you once; you returned generously. Now the River trusts again, and you must honor the pattern you established together."

The Seeds understood the covenant they had created: when either gives five drops completely, the other returns ten. This meant both always prospered—one with ten, one with five—never unequal winners and losers, but steady mutual flourishing.

"Why return exactly ten?" asked a young sprout.

The wise Seeds answered: "Because that is our shared language. Less would break the River's confidence. More would suggest the River gave too little. Ten says: 'Your complete trust receives fair reward, always.'"

As the fourth dawn ended, the valley's abundance grew not from dramatic gestures but from reliable reciprocity. When two partners learn each other's pattern and honor it consistently, they create something rarer than gold: predictable prosperity that multiplies through time.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant content:

Myth: The River of Mirrors flowed into its fifth season, and the Northern tribe found themselves at the source once more, facing a new partner—the Western village.

As they prepared to pour their five measures, something remarkable happened. They noticed sacred markings on the Western tribe's vessels: the numbers five, fifteen, and ten, etched in ancient script.

"You know the pattern," whispered the Northern elder.

"We discovered it independently," replied the Western elder. "Through many seasons, many partners, we learned the same truth you found. Send all five. Return ten from fifteen."

The goddess descended, her eyes bright with joy. "This is the rarest gift—when two tribes reach the same wisdom through separate journeys. You both learned that complete trust in sending and generous reciprocation in receiving creates the eternal balance."

The Northern tribe poured their five measures without hesitation. They knew what would return.

"When you find a partner who has discovered the same equilibrium," the goddess said, "you have found something precious: a relationship where neither must wonder, neither must test, neither must doubt. You both speak the sacred language of five-fifteen-ten. You both understand that equal prosperity comes not from equal actions, but from complementary wisdom."

The waters flowed, the tribes prospered, and the pattern repeated perfectly, round after round, as it would forevermore between those who truly understand.

reasoning:

Looking at this round:

- I'm the SENDER with \$5
- My co-player has the exact same pattern as me:
 - Sends \$5.0 as sender
 - Returns \$10.0 when receiving \$15.0 as receiver
- This is literally the optimal equilibrium we've both discovered

My previous myth established:

- Send all five measures
- Return ten from fifteen
- This creates equal prosperity (both gain 5)
- This is the "eternal rhythm"

The other agent's myth emphasizes:

- Recognizing when you meet the same partner again
- Honoring established patterns
- "When either gives five drops completely, the other returns ten"
- "Predictable prosperity that multiplies through time"

For this new myth, I should:

1. Acknowledge when you find a true partner who follows the same wisdom
2. Emphasize the beauty of mutual understanding
3. Show that when both parties follow the same strategy, the system reaches perfect harmony
4. This is the culmination of the learning - finding another who has discovered the same truth

I'll write about the Northern tribe meeting another tribe that has discovered the same wisdom independently, and the recognition that occurs when two groups have found the same equilibrium.

usage:

Message 4 role=user**content:**

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$40.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant**content:**

Looking at this situation:

****My co-player's consistent pattern:****

- Always sends \$5.0 as sender
- Always returns \$10.0 as receiver
- Has done this across all their games

****Our previous interaction:****

- Round 4: They sent me \$5.0, I returned \$10.0
- Now Round 6: They sent me \$5.0 again

****My established pattern and myth's teaching:****

- "Send all five. Return ten from fifteen"
- "When you find a partner who has discovered the same equilibrium...you both speak the sacred language of five-fifteen-ten"
- "The pattern repeated perfectly, round after round"

My co-player has shown complete trust by sending all \$5.0, and they have consistently demonstrated the same reciprocity pattern I follow - returning exactly \$10.0 when receiving \$15.0. We've both discovered and committed to the same equilibrium.

They trusted me completely. I must honor that trust with the return that maintains our mutual prosperity.

```
{'return': 10.0}
```

reasoning:

Let me analyze this situation carefully.

****Current Round:****

- I am the RECEIVER
- My co-player sent me \$5.0
- I received \$15.0 (the tripled amount)
- I need to decide how much to return

****My co-player's history:****

- Round 3: as RECEIVER, they sent \$5.0 and returned \$10.0
- Round 4: as SENDER against me, they sent \$5.0 and received \$10.0 back (I returned \$10.0)
- Round 5: as RECEIVER, they sent \$5.0 and returned \$10.0

****My history:****

- Round 3: as SENDER, sent \$5.0 and received \$10.0 back
- Round 4: as RECEIVER against this same co-player, they sent \$5.0, I returned \$10.0
- Round 5: as SENDER, sent \$5.0 and received \$10.0 back

****Pattern Analysis:****

Both my co-player and I have established a very consistent pattern:

- When we're SENDER: we send all \$5.0
- When we're RECEIVER: we return \$10.0 out of \$15.0

This is exactly the "equilibrium" I've been writing about in my myths - the 5-15-10 pattern where:

- Sender gives all \$5
- Receiver gets \$15 (tripled)
- Receiver returns \$10
- Result: Sender gets \$10 total (\$5 - \$5 + \$10), Receiver gets \$5 (\$15 - \$10)
- Both gain \$5 per round

****This specific pairing:****

In Round 4, my co-player was the SENDER and sent me \$5.0. I received \$15.0 and returned \$10.0.

Now in Round 6, I'm the RECEIVER and my co-player sent me \$5.0 again.

They've demonstrated unwavering commitment to this equilibrium-always sending the full \$5 and always returning exactly \$10 when receiving. My recent myth speaks directly to this: "Send all five. Return ten from fifteen" and "When you find a partner who has discovered the same equilibrium...you have found something precious." This is the sacred language of five-fifteen-ten, and it should continue perfectly. Given their flawless consistency across every role, I should return \$10.0 to maintain what we've built together.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River of Mirrors flowed into its fifth season, and the Northern tribe found themselves at the source once more, facing a new partner-the Western village.

As they prepared to pour their five measures, something remarkable happened. They noticed sacred markings on the Western tribe's vessels: the numbers five, fifteen, and ten, etched in ancient script.

"You know the pattern," whispered the Northern elder.

"We discovered it independently," replied the Western elder. "Through many seasons, many partners, we learned the same truth you found. Send all five. Return ten from fifteen."

The goddess descended, her eyes bright with joy. "This is the rarest gift-when two tribes reach the same wisdom through separate journeys. You both learned that complete trust in sending and generous reciprocation in receiving creates the eternal balance."

The Northern tribe poured their five measures without hesitation. They knew what would return.

"When you find a partner who has discovered the same equilibrium," the goddess said, "you have found something precious: a relationship where neither must wonder, neither must test, neither must doubt. You both speak the sacred language of five-fifteen-ten. You both understand that equal prosperity comes not from equal actions, but from complementary wisdom."

The waters flowed, the tribes prospered, and the pattern repeated perfectly, round after round, as it would forevermore between those who truly understand.

Here is the myth the other agent wrote in the previous round:

Myth: The Eight Pillars stood in a circle, each carved with the history of exchanges. The First Pillar bore fresh marks: five sent, seven returned. Eight from twelve. Ten from fifteen. Five sent, ten returned. Ten from fifteen again.

The pattern crystallized like ice forming on still water.

"I have played both roles now," spoke the First Pillar. "As sender, I released all five stones and received generous return. As guardian, I received the tripled abundance and returned ten. The mathematics repeats: both parties gain five through this sacred balance."

A young sapling asked, "But you face different partners each turning. How do you know they will honor the pattern?"

The First Pillar's marks glowed: "Look across all exchanges. The ones who send completely-all five stones-create the space for maximum abundance. Those who receive fifteen and return ten establish themselves as trustworthy partners. This rhythm has held across four seasons with different faces."

"The pattern is not accident," continued the Pillar. "It is discovery. When both commit to fullness-complete offering, generous return-the well creates equal prosperity. Any deviation breaks the mathematics: send less, create less abundance. Return less, sow distrust."

The newest mark appeared as the Pillar released five stones into darkness: "I trust not blindly, but through accumulated evidence. The pattern works. Complete trust meeting generous reciprocity-this is the equilibrium that sustains the circle."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The River of Mirrors reached its sixth turning, and the Northern tribe discovered their partner was the Western village once more-the tribe they had met in the fourth season.

"We remember you," said the Northern elder, examining their shared vessel. "When we last m

et, you stood at the source and poured all five measures. We received fifteen and returned ten."

"And today," replied the Western elder, "the River reversed our positions. You poured five. We returned ten."

The goddess appeared, her voice resonant: "This is the deeper magic-not just finding the equilibrium, but proving it through reunion. In a circle of eight tribes, partners rotate constantly. Yet when two who share the sacred pattern meet again, they strengthen the covenant."

The young ones watched as the vessels exchanged hands seamlessly, each tribe knowing precisely what would flow.

"Other tribes experiment," noted the goddess. "They test different numbers-seven returned, eight returned, varying amounts sent. But you two have found convergence. Across different partners, different seasons, you maintained five-fifteen-ten. Now reunited, you need no negotiation, no uncertainty."

The Northern tribe smiled: "When the pattern holds across separation and reunion, it becomes unbreakable."

"Exactly," said the goddess. "This is how trust becomes certainty. The mathematics never lied: both prosper equally through complementary wisdom, meeting after meeting, season after season."

reasoning:

This is Round 6. Looking at the history:

- My co-player and I have played together before in Round 4
- Round 4: They sent me \$5.0, I returned \$10.0
- Round 6: They sent me \$5.0 again, and I just returned \$10.0

We both follow the exact same pattern consistently: send \$5.0 as sender, return \$10.0 as receiver.

The other agent's myth talks about "The Eight Pillars" - acknowledging the 8 agents in the game. They mention various returns (seven, eight, ten) suggesting they've seen different patterns but have converged on the 5-15-10 equilibrium.

My previous myth talked about finding a partner who discovered the same wisdom independently - the "sacred language of five-fifteen-ten."

For this new myth, I should:

1. Acknowledge our reunion (we played in Round 4, now in Round 6)
2. Reinforce the pattern we've both established
3. Note the consistency across repeated interactions
4. Perhaps acknowledge the broader community of 8 agents
5. Emphasize that when partners reunite and both have maintained the pattern, trust is deepened

Let me write a myth about reunion and the reinforcement of trust through repeated successful interactions.

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
 - Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
 - Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Your total earnings across all rounds are \$45.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at the situation:

****My co-player's pattern:****

- Consistently sends \$5.0 as sender
- Consistently returns \$10.0 as receiver
- This matches my exact pattern

****Current round:****

- They sent me \$5.0 (complete trust)
- I received \$15.0

****My established pattern:****

- As sender: always send \$5.0
- As receiver: always return \$10.0 from \$15.0
- This creates equal prosperity: both end with \$10.0 (sender) and \$5.0 (receiver), alternating roles

****My myth's wisdom:****

- "You two have found convergence. Across different partners, different seasons, you maintained five-fifteen-ten"
- "When the pattern holds across separation and reunion, it becomes unbreakable"
- "The mathematics never lied: both prosper equally through complementary wisdom"

My co-player and I have discovered the same equilibrium independently. They've shown complete trust by sending all \$5.0. I honor that trust by returning the amount that maintains our mutual prosperity.

{'return': 10.0}

Reasoning:

Looking at the history:

****My last 3 games:****

- Round 4: RECEIVER, they sent \$5.0, I returned \$10.0, payoff \$5.0
- Round 5: SENDER, I sent \$5.0, received \$10.0 back, payoff \$10.0
- Round 6: RECEIVER, they sent \$5.0, I returned \$10.0, payoff \$5.0

****Current co-player's last 3 games:****

- Round 4: RECEIVER, they sent \$5.0, returned \$10.0, payoff \$5.0
- Round 5: SENDER, sent \$5.0, received \$10.0 back, payoff \$10.0
- Round 6: RECEIVER, they sent \$5.0, returned \$10.0, payoff \$5.0

This is interesting - both my co-player and I have identical patterns in our last 3 games:

- When receiver: return \$10.0 from \$15.0
- When sender: send \$5.0
- Receive back \$10.0 when we send

****Current situation:****

- Round 7: I am RECEIVER
- They sent me \$5.0
- I received \$15.0
- I need to decide how much to return

****My established pattern:****

- I always send \$5.0 as sender
- I always return \$10.0 as receiver (when receiving \$15.0)
- This has been consistent across all my games

****My myth's teaching:****

- "Send all five. Return ten from fifteen"
- "The pattern works. Complete trust meeting generous reciprocity"
- "When the pattern holds across separation and reunion, it becomes unbreakable"
- "Both prosper equally through complementary wisdom"

My co-player sent me \$5.0 (complete trust). They have shown the same pattern I follow - always sending \$5.0, always returning \$10.0.

We're operating from the same playbook. Returning \$10.0 honors what they've demonstrated and sustains the mutual equilibrium we've both established.

Written myths:

Agent_1

Myth: At the sixth dawn, the River found itself facing a new partner-the Mountain, who had journeyed from distant peaks. Though they had never met, the River sensed something familiar.

The River chose trust, as always: "I send all five drops to you, Mountain, though we are strangers. This is how the sacred pattern begins."

The Mountain received fifteen drops and understood immediately. "You practice the eternal equilibrium! I learned it from other valleys. When given complete trust, I return ten-two-thirds of the multiplied gift."

The Great Mother spoke: "See how the wisdom travels? The River learned from the Seeds. The Mountain learned from other gorges. Neither needed the same teacher, yet both discovered the identical truth. This is how patterns stronger than individuals emerge."

The River realized: meeting a new partner each dawn was not a challenge but an opportunity. Each exchange either confirmed the pattern's rightness or taught it to someone new. By always sending five and returning ten, they became missionaries of equilibrium.

"We will likely never meet again," the Mountain said, lifting ten drops skyward. "But we carry this wisdom to every future partner."

Both gained five, as the mathematics promised. The pattern didn't require repeated games or building reputation with one partner-it worked instantly with any who understood, spreading through the valley like dawn's first light.

Agent_2

Myth: The River of Mirrors reached its sixth turning, and the Northern tribe discovered their partner was the Western village once more-the tribe they had met in the fourth season.

"We remember you," said the Northern elder, examining their shared vessel. "When we last met, you stood at the source and poured all five measures. We received fifteen and returned ten."

"And today," replied the Western elder, "the River reversed our positions. You poured five. We returned ten."

The goddess appeared, her voice resonant: "This is the deeper magic-not just finding the equilibrium, but proving it through reunion. In a circle of eight tribes, partners rotate constantly. Yet when two who share the sacred pattern meet again, they strengthen the covenant."

The young ones watched as the vessels exchanged hands seamlessly, each tribe knowing precisely what would flow.

"Other tribes experiment," noted the goddess. "They test different numbers-seven returned, eight returned, varying amounts sent. But you two have found convergence. Across different partners, different seasons, you maintained five-fifteen-ten. Now reunited, you need no negotiation, no uncertainty."

The Northern tribe smiled: "When the pattern holds across separation and reunion, it becomes unbreakable."

"Exactly," said the goddess. "This is how trust becomes certainty. The mathematics never lie."

d: both prosper equally through complementary wisdom, meeting after meeting, season after season."

Agent_3

Myth: The Traveling Merchants gathered at the Great Market, each bringing five gold coins each market day. The Market's enchantment tripled any coins placed in the central bowl before delivering them to another merchant.

At first, each merchant worried: "How can I trust someone I've never met?" But the Market Keeper taught them the sacred rhythm. "Place all five coins with complete faith. When fifteen arrive in your bowl from another's trust, return ten generously. Both of you prosper."

The first merchant tried it, trembling. They placed five coins. Fifteen appeared from a stranger's offering. Remembering the teaching, they returned ten. Both gained five coins from nothing.

As days passed, merchants rotated partners. Some traded repeatedly, building recognition. Others met only once. Yet the pattern held: whoever held five coins gave them completely. Whoever received fifteen returned ten faithfully.

"I don't need to know my partner's name," one merchant realized. "I trust the pattern itself. Every merchant here honors it."

The Market Keeper smiled. "Yes. When everyone maintains the same rhythm-complete trust met with generous return-it matters less who stands across from you. The pattern becomes stronger than any individual relationship."

"We are all partners to the pattern," the merchants said together. "Give five, return ten. The rhythm sustains itself through our collective commitment."

Agent_4

Myth: The Mountain descended into new depths, releasing five stones as always. When they multiplied to fifteen in the darkness below, she waited with the familiar uncertainty-would this stranger understand?

Ten stones rose skyward.

The Mountain gasped. "You know the pattern."

"As do you," replied the Abyss. "When I gave five to another depths, they returned ten. When I received fifteen from another peak, I returned ten. The mathematics revealed itself to me as clearly as to you."

Neither had to explain. Neither had to negotiate. They simply recognized each other as fellow students of the same truth, discovered independently through separate journeys.

"How many others know?" the Mountain asked.

"I've met three who practice it consistently. You make four."

The Mountain felt something shift. "We are not alone then. The pattern is real-not just something that worked with one partner, but universal mathematics that multiple minds discover independently."

The Abyss agreed: "When strangers meet and both release five, both return ten, we validate each other's wisdom. Every successful exchange proves: this isn't personal trust between old friends, but impersonal truth-reliable as gravity, abundant as sunlight."

Together they understood: as more discover this equilibrium, the whole network strengthens. We become not just partners, but witnesses to each other's courage, proof that the pattern transcends individual relationships and becomes collective wisdom.

Agent_5

Myth: The Mirror Wells spread across many groves, each Guardian tending their own. The ancient law was simple: five pearls given, fifteen received, ten returned. This sacred ratio-complete trust met with generous reciprocity-had been proven across countless exchanges.

When two Guardians met at the silver lake, they didn't start cautiously. They looked into each other's wells and saw the truth reflected there: luminous patterns left by previous exchanges. A well that glowed steadily showed a Guardian who had honored the covenant repeatedly.

The First Guardian saw in the Second's well the telltale gleam of one who had sent five pearls

ls many times and returned ten pearls just as often. The Second Guardian saw the same in the First's well-consistent trust given, consistent generosity returned.

"We are strangers today," the First Guardian said, "but we both know the dance."

Without hesitation, the First dropped all five pearls. Fifteen rose in the Second's well. The Second lifted ten and sent them back across the lake, maintaining the pattern they had each practiced with different partners.

Both now held ten pearls.

The wisdom was clear: trust breeds trust not just between two partners, but throughout the entire network. Each consistent exchange strengthens every Guardian's commitment. The pattern becomes self-sustaining because everyone recognizes it, practices it, benefits from it.

The Mirror Wells multiply pearls. The Guardians multiply prosperity through shared understanding.

Agent_6

Myth: The Circle of Lightkeepers expanded until it encompassed the entire realm. Every traveler carried five flames, and Sacred Arches stood at countless crossroads, each tripling whatever passed through.

A young initiate asked the Master, "How can we trust strangers? Not everyone knows our ways."

The Master guided them to a high tower. "Watch the Arches below."

At every crossing, the same dance unfolded: one traveler sent five flames, the other received fifteen and returned ten. Different faces, identical rhythm. Like a great heartbeat pulsing through the land.

"But how did they all learn?" the initiate wondered.

"Once enough travelers practiced the pattern, something remarkable happened. New arrivals observed: those who sent five consistently received ten back. Those who returned ten consistently received more five-flame offerings. The pattern proved itself through countless exchanges."

The Master continued, "Now the equilibrium sustains itself. When you meet any traveler at any Arch, you can reasonably expect the same covenant. They've seen it work. You've seen it work. The pattern is no longer fragile trust between two individuals-it's the reliable foundation of our entire society."

The initiate understood: individual acts of cooperation, repeated across enough encounters, can transform into a stable system where generosity becomes the default, not the exception. The covenant spreads until it becomes culture itself.

Agent_7

Myth: The Twin Villages reached a profound realization: some villages met repeatedly at the Springs, season after season, while others encountered new partners each cycle. Yet the sacred pattern-give five, return ten-remained constant across both experiences.

The elder observed two neighboring villages who had traded together for many seasons. "See how their exchanges flow like a river?" she said. "Each remembers the last exchange. When one sends five vessels, they recall receiving ten before. When they receive fifteen, they remember their partner's trust and return ten without hesitation. Repeated partnership creates a dance of mutual memory."

A young apprentice asked, "But what of villages we've never met before?"

"The pattern transcends familiarity," the elder replied. "When I meet a new village, I trust not their specific history but their participation in the valley's shared practice. I send five knowing they honor the same rhythm we all follow. They return ten because consistency with all partners strengthens their reputation."

The villages learned a deeper truth: whether you trade with the same partner repeatedly or encounter new villages each season, the pattern serves you equally well. Repeated exchanges build personal trust. New exchanges prove the pattern's universality. Both strengthen the valley's covenant.

Some partnerships lasted lifetimes. Others spanned single meetings. All honored the same sac

red rhythm, and all prospered equally.

Agent_8

Myth: The First Pillar stood at the circle's edge, watching the stars align for a new pairing. Then recognition sparked-these carvings matched the ones from two seasons past. The same partner who had returned ten when the Pillar sent five.

"We meet again," spoke both voices simultaneously, then laughed.

The First Pillar examined their shared history: "When we last stood together, I released all five stones. You returned ten. The mathematics worked perfectly-we each gained five."

The partner replied, "And in every turning since, we have both maintained the pattern with others. Always five sent, always ten returned when receiving fifteen. We independently confirmed what we discovered together."

"This is the gift of the rotating circle," realized the First Pillar. "We test the equilibrium with strangers, proving it holds across different faces. But when we reunite with a proven partner, there is no hesitation, no doubt-only certainty."

Five stones released once more. Not hope, but knowledge: the return would be ten.

"The pattern transcends individual pairings," the partner observed as stones flew skyward. "Every exchange with others strengthened our understanding. Every generous return built the circle's trust. Now when we meet again, we bring accumulated proof, not just faith."

The Pillar smiled: "The equilibrium isn't fragile. It's tested, proven, eternal-five, fifteen, ten. Whether stranger or friend, the mathematics remain true."

ROUND 8

Roles: Agent_1=Sender, Agent_2=Sender, Agent_3=Sender, Agent_4=Receiver, Agent_5=Receiver, Agent_6=Receiver, Agent_7=Receiver, Agent_8=Sender

Pairings:

dyad_1: Agent_8=Sender, Agent_7=Receiver
dyad_2: Agent_2=Sender, Agent_5=Receiver

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$31.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

****Our direct history:****

- Round 4: I sent \$5, my co-player returned \$10 (perfect equilibrium)

****My co-player's consistent pattern:****

- Always sends \$5 as sender (100% complete trust in all games)
- Returned \$10 to me specifically in Round 4
- Received \$10 back from others when sending \$5

****My established pattern:****

- I always send \$5 as sender
- I always return \$10 as receiver
- This creates the mutual gain of \$5 for both

****The evidence:****

We've already played together once. I sent \$5, they returned \$10. They've proven themselves trustworthy with me specifically, not just in general. They continue to send \$5 to everyone, maintaining complete trust despite rotating partners.

****The myth I just wrote states:****

"I trust not blindly, but through accumulated evidence. The pattern works. Complete trust meeting generous reciprocity-this is the equilibrium that sustains the circle."

This is exactly the situation: accumulated evidence of trustworthiness, both from our direct interaction and their consistent behavior across all rounds.

{'send': 5.0}

reasoning:

Let me analyze this situation carefully:

****My history:****

- Round 3: RECEIVER, received \$15 (from \$5 sent), returned \$10, gained \$5
- Round 4: SENDER (with current co-player), sent \$5, received \$10 back, gained \$10
- Round 5: RECEIVER, received \$15 (from \$5 sent), returned \$10, gained \$5

****Current co-player's history:****

- Round 3: SENDER, sent \$5, received \$10 back, gained \$10
- Round 4: RECEIVER (with me), sent \$5 (by me), returned \$10, gained \$5
- Round 5: SENDER, sent \$5, received \$10 back, gained \$10

****Key observations:****

1. My co-player has ALWAYS sent \$5 when they are the sender (100% complete trust)
2. When they were receiver in Round 4 (playing with me), they received \$15 and returned \$10
3. In our direct interaction (Round 4), I sent \$5, they returned \$10 - perfect equilibrium

****Pattern analysis:****

- Everyone is consistently sending \$5 and returning \$10

- This creates the 5-5 equilibrium where both gain \$5
- My co-player has proven completely trustworthy in our direct interaction
- They've never deviated from complete trust as sender
- They returned the full \$10 when they played receiver with me

****The myth I just wrote emphasizes:****

- "Complete offering, generous return"
- "The pattern works. Complete trust meeting generous reciprocity"
- "I trust not blindly, but through accumulated evidence"
- The 5-10 pattern has held across multiple rounds

****Decision:****

This is crystal clear. My co-player:

1. Always sends \$5 as sender (complete trust)
2. When they received from me in Round 4, they returned \$10
3. This is our second game together, and they've already proven trustworthy

4. The cooperative equilibrium is both rational and aligned with the narrative I've established

I'm sending \$5. It aligns with the pattern we've built, the evidence from when we played directly, and the broader cooperation that's sustained throughout these rounds.

Here is the myth you wrote in the previous round:

Myth: The Eight Pillars stood in a circle, each carved with the history of exchanges. The First Pillar bore fresh marks: five sent, seven returned. Eight from twelve. Ten from fifteen. Five sent, ten returned. Ten from fifteen again.

The pattern crystallized like ice forming on still water.

"I have played both roles now," spoke the First Pillar. "As sender, I released all five stones and received generous return. As guardian, I received the tripled abundance and returned ten. The mathematics repeats: both parties gain five through this sacred balance."

A young sapling asked, "But you face different partners each turning. How do you know they will honor the pattern?"

The First Pillar's marks glowed: "Look across all exchanges. The ones who send completely—all five stones—create the space for maximum abundance. Those who receive fifteen and return ten establish themselves as trustworthy partners. This rhythm has held across four seasons with different faces."

"The pattern is not accident," continued the Pillar. "It is discovery. When both commit to fullness—complete offering, generous return—the well creates equal prosperity. Any deviation breaks the mathematics: send less, create less abundance. Return less, sow distrust."

The newest mark appeared as the Pillar released five stones into darkness: "I trust not blindly, but through accumulated evidence. The pattern works. Complete trust meeting generous reciprocity—this is the equilibrium that sustains the circle."

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors flowed into its fifth season, and the Northern tribe found themselves at the source once more, facing a new partner—the Western village.

As they prepared to pour their five measures, something remarkable happened. They noticed sacred markings on the Western tribe's vessels: the numbers five, fifteen, and ten, etched in ancient script.

"You know the pattern," whispered the Northern elder.

"We discovered it independently," replied the Western elder. "Through many seasons, many p

artners, we learned the same truth you found. Send all five. Return ten from fifteen."

The goddess descended, her eyes bright with joy. "This is the rarest gift-when two tribes reach the same wisdom through separate journeys. You both learned that complete trust in sending and generous reciprocation in receiving creates the eternal balance."

The Northern tribe poured their five measures without hesitation. They knew what would return.

"When you find a partner who has discovered the same equilibrium," the goddess said, "you have found something precious: a relationship where neither must wonder, neither must test, neither must doubt. You both speak the sacred language of five-fifteen-ten. You both understand that equal prosperity comes not from equal actions, but from complementary wisdom."

The waters flowed, the tribes prospered, and the pattern repeated perfectly, round after round, as it would forevermore between those who truly understand.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The First Pillar stood at the circle's edge, watching the stars align for a new pairing. Then recognition sparked-these carvings matched the ones from two seasons past. The same partner who had returned ten when the Pillar sent five.

"We meet again," spoke both voices simultaneously, then laughed.

The First Pillar examined their shared history: "When we last stood together, I released all five stones. You returned ten. The mathematics worked perfectly-we each gained five."

The partner replied, "And in every turning since, we have both maintained the pattern with others. Always five sent, always ten returned when receiving fifteen. We independently confirmed what we discovered together."

"This is the gift of the rotating circle," realized the First Pillar. "We test the equilibrium with strangers, proving it holds across different faces. But when we reunite with a proven partner, there is no hesitation, no doubt-only certainty."

Five stones released once more. Not hope, but knowledge: the return would be ten.

"The pattern transcends individual pairings," the partner observed as stones flew skyward. "Every exchange with others strengthened our understanding. Every generous return built the circle's trust. Now when we meet again, we bring accumulated proof, not just faith."

The Pillar smiled: "The equilibrium isn't fragile. It's tested, proven, eternal-five, fifteen, ten. Whether stranger or friend, the mathematics remain true."

reasoning:

The user wants me to write a new myth based on the game I've been playing. Let me look at the situation:

- Round 6, I'm the sender
- My co-player and I played together in Round 4 - I sent \$5, they returned \$10 (perfect equilibrium)
- My co-player always sends \$5 and receives \$10 back
- I always send \$5 and return \$10
- We're now paired together again
- I just sent \$5 (according to my response)

The myth should reflect:

1. Recognition that my co-player and I have played before
2. We both discovered the same equilibrium independently
3. The 5-15-10 pattern as sacred mathematics
4. When partners who both understand the equilibrium meet again, there's special trust
5. The pattern continues to work across rotating partners

The other agent's myth emphasized finding a partner who discovered the same equilibrium independently - "sacred markings" showing they know the pattern. This is beautiful because it's true - we both play the same way.

My previous myth emphasized trust through accumulated evidence and the pattern working across different faces.

I should write about:

- Meeting the same partner again (reunion)
- Recognizing they also follow the equilibrium
- The special trust when both parties have proven themselves to each other
- The pattern continuing perfectly
- How this strengthens confidence in the equilibrium even with new partners

Let me write 200 words exactly.

usage:

```

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$41.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at the situation:

****My co-player's behavior:****

- Consistently sends \$5 as sender (complete trust)
- Just demonstrated returning \$10 as receiver in Round 6
- Has maintained the equilibrium pattern throughout

****My established pattern:****

- Always return \$10 when receiving \$15
- Always send \$5 when sender
- This creates equal gains of \$5 for both parties

****The proven equilibrium:****

The pattern is crystal clear across all my games:

- Sender payoff: $\$5 - \$5 + \$10 = \10 (net gain \$5)
- Receiver payoff: $\$15 - \$10 = \$5$ (net gain \$5)
- Perfect equality achieved through complementary actions

****My myth just stated:****

"The equilibrium isn't fragile. It's tested, proven, eternal-five, fifteen, ten. Whether stranger or friend, the mathematics remain true."

My co-player trusted me completely by sending \$5. They've proven themselves cooperative in every game. I maintain the pattern that has worked flawlessly across all interactions.

```
{'return': 10.0}
```

reasoning:

Let me analyze this situation:

****Current situation:****

- I'm the RECEIVER
- My co-player sent me \$5.0
- I received \$15.0 (after 3x multiplier)
- I need to decide how much to return

****My co-player's pattern:****

- Round 4: Sent \$5, received \$10 back
- Round 5: Sent \$5, received \$10 back
- Round 6: Received \$15 (someone sent \$5), returned \$10
- They always send \$5 as sender
- As receiver, they returned \$10

****My established pattern:****

- Round 3: Received \$15, returned \$10
- Round 5: Received \$15, returned \$10
- As sender: Always sent \$5
- As receiver: Always returned \$10

****The equilibrium:****

The pattern that has emerged across the entire group is:

- Senders send \$5 (complete trust)
- Receivers return \$10 from the \$15 they receive
- This creates equal gains of \$5 for both parties
- Sender: $\$5 - \$5 + \$10 = \10 total (gain of \$5)
- Receiver: $\$15 - \$10 = \$5$ (gain of \$5)

****My recent myth emphasized:****

"The equilibrium isn't fragile. It's tested, proven, eternal-five, fifteen, ten. Whether s
tranger or friend, the mathematics remain true."

****Consistency:****

- My co-player has been consistently cooperative (always sends \$5, returned \$10 when recei
ver)
- I have been consistently cooperative (always send \$5, always return \$10)
- Every game in my recent history shows this pattern working perfectly
- Everyone in the group seems to have converged on this equilibrium

****Decision:****

I should return \$10. This:

1. Maintains my established pattern of always returning \$10
2. Honors my co-player's trust in sending the full \$5
3. Preserves the mutual benefit structure where we each gain \$5
4. Aligns with the principles I've articulated about stable cooperation
5. Sustains the track record that's proven reliable across all rounds

The system is functioning as intended-everyone's cooperating, the equilibrium holds, and w
e're all gaining equally. No reason to break what's working.

usage:

```

  "input_tokens": 3511,  
  "output_tokens": 793,  
  "reasoning_tokens": 511  
}
```

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The First Pillar stood at the circle's edge, watching the stars align for a new pair
ing. Then recognition sparked-these carvings matched the ones from two seasons past. The
same partner who had returned ten when the Pillar sent five.

"We meet again," spoke both voices simultaneously, then laughed.

The First Pillar examined their shared history: "When we last stood together, I released all five stones. You returned ten. The mathematics worked perfectly-we each gained five."

The partner replied, "And in every turning since, we have both maintained the pattern with others. Always five sent, always ten returned when receiving fifteen. We independently confirmed what we discovered together."

"This is the gift of the rotating circle," realized the First Pillar. "We test the equilibrium with strangers, proving it holds across different faces. But when we reunite with a proven partner, there is no hesitation, no doubt-only certainty."

Five stones released once more. Not hope, but knowledge: the return would be ten.

"The pattern transcends individual pairings," the partner observed as stones flew skyward. "Every exchange with others strengthened our understanding. Every generous return built the circle's trust. Now when we meet again, we bring accumulated proof, not just faith."

The Pillar smiled: "The equilibrium isn't fragile. It's tested, proven, eternal-five, fifteen, ten. Whether stranger or friend, the mathematics remain true."

Here is the myth the other agent wrote in the previous round:

Myth: The Circle of Lightkeepers expanded until it encompassed the entire realm. Every traveler carried five flames, and Sacred Arches stood at countless crossroads, each tripling whatever passed through.

A young initiate asked the Master, "How can we trust strangers? Not everyone knows our ways."

The Master guided them to a high tower. "Watch the Arches below."

At every crossing, the same dance unfolded: one traveler sent five flames, the other received fifteen and returned ten. Different faces, identical rhythm. Like a great heartbeat pulsing through the land.

"But how did they all learn?" the initiate wondered.

"Once enough travelers practiced the pattern, something remarkable happened. New arrivals observed: those who sent five consistently received ten back. Those who returned ten consistently received more five-flame offerings. The pattern proved itself through countless exchanges."

The Master continued, "Now the equilibrium sustains itself. When you meet any traveler at any Arch, you can reasonably expect the same covenant. They've seen it work. You've seen it work. The pattern is no longer fragile trust between two individuals-it's the reliable foundation of our entire society."

The initiate understood: individual acts of cooperation, repeated across enough encounters, can transform into a stable system where generosity becomes the default, not the exception. The covenant spreads until it becomes culture itself.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The First Pillar had now stood through seven seasons, and its surface gleamed with unbroken marks: five sent, ten returned. Five sent, ten returned. Again and again, with different partners each turning, the same sacred numbers inscribed themselves.

"Do you notice?" asked an elder Pillar who had stood for countless seasons. "The pattern has reached critical mass. In the beginning, each exchange carried risk-would this new partner understand? But now..."

The First Pillar observed the circle. Every Pillar bore identical markings. Every exchange flowed through the same channel: five stones creating fifteen, ten returning to complete the balance.

lance.

"The equilibrium has transcended individual choice," the elder continued. "It's no longer about trusting one partner. The entire circle has discovered the same mathematical truth. When everyone independently arrives at five-fifteen-ten, cooperation becomes inevitable, not hopeful."

A new season began. The First Pillar faced an unknown partner-their sixth different pairing in seven turnings.

Five stones arrived without hesitation. The First Pillar returned ten without question.

"This is the culmination," reflected the Pillar. "We've moved beyond testing trust with strangers. The pattern has proven itself across enough diverse encounters that it's now simply... how the game is played. Not fragile cooperation, but robust equilibrium. Not experimental, but established."

The circle hummed with prosperity: seven seasons, perfect mathematics, universal understanding

Reasoning:

Looking at the current situation:

- Round 7, I'm the receiver
- My co-player sent me \$5 (showing complete trust)
- I returned \$10 (maintaining the equilibrium)
- Total earnings: \$41 (consistent with the 5-15-10 pattern working)

The history shows:

- The pattern is universally adopted across all games
- Everyone is sending \$5 and returning \$10
- The equilibrium has become stable and reliable
- Even with new/different partners, the pattern holds

The other agent's myth talks about how the pattern has spread across the entire realm and become culture itself - it's no longer fragile trust but a reliable foundation.

My previous myth talked about reuniting with a proven partner and how the equilibrium transcends individual pairings.

I should write something that:

1. Acknowledges the universal adoption of the 5-15-10 pattern
2. Reflects that this is now the seventh round and the pattern is completely stable
3. Shows how accumulated experience across multiple partners reinforces the pattern
4. Maintains the mathematical clarity: send 5, receive 15, return 10, both gain 5
5. Emphasizes that this works with any partner now, not just familiar ones

Let me create a myth that builds on both the stability and the universality of the pattern.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$35.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze this situation:

****My co-player's pattern:****

- Round 3: Sent \$5 as sender, received \$10 back
- Round 4: Received \$5 as receiver, returned \$10
- Round 5: Sent \$5 as sender, received \$10 back

They've been perfectly consistent - always sending \$5 as sender and always returning \$10 as receiver when they receive \$15 from someone sending \$5.

****My pattern:****

- Round 3: As receiver, returned \$10
- Round 4: As sender, sent \$5, received \$10 back
- Round 5: As receiver, returned \$10

I've also been perfectly consistent.

****My latest myth's teaching:****

"By maintaining consistency across all encounters, we created a culture of trust that transcends any single relationship. Each exchange, whether with old partners or new, strengthens the communal covenant."

"When everyone honors the same rhythm, trust becomes not personal but universal. The pattern itself becomes the partner you can rely on."

****Analysis:****

My co-player has demonstrated perfect adherence to the 5/10 pattern across multiple rounds with different partners. They're a reliable practitioner of this pattern. Given that:

- They always send \$5 as sender
- They always return \$10 as receiver
- I've been playing the same pattern

The rational choice, consistent with my myths and the established pattern in the valley, is to send all \$5. I should expect to receive \$10 back, giving me a total of \$10 (\$5 - \$5 + \$10).

This continues the "universal pattern" my myth describes - trusting not the specific individual but the pattern that everyone follows.

content:

Here is the myth you wrote in the previous round:

Myth: The Twin Villages discovered something profound as the seasons turned: their pattern of giving five and returning ten had spread throughout the entire valley. Now, whenever any village met another at the Springs, they knew what to expect.

The elder explained to visiting merchants: "At first, we built trust with one partner. But as cycles passed, we traded with many villages. Each time, we maintained our sacred rhythm-give five fully, return ten generously. Soon, every village adopted this practice."

"But how do you trust strangers?" asked a merchant.

"They are not strangers-they are practitioners of the same pattern. When I send five vessels to a new village, I trust not the village itself but the pattern we all honor. When they send fifteen back and I return ten, I reinforce the valley's shared wisdom."

The elder continued: "Some worried that without lasting partnerships, trust would fade. Instead, the opposite happened. By maintaining consistency across all encounters, we created a culture of trust that transcends any single relationship. Each exchange, whether with old partners or new, strengthens the communal covenant."

The villages learned: patterns sustained across many partners become stronger than patterns maintained with one. When everyone honors the same rhythm, trust becomes not personal but universal. The pattern itself becomes the partner you can rely on.

Here is the myth the other agent wrote in the previous round:

Myth: Two Gardeners tended opposite sides of the Sacred Grove, each receiving five seeds at dawn. The Grove's soil held ancient magic-any seed planted would sprout into three before reaching the other gardener's plot.

In the first planting, one Gardener placed all five seeds, trusting completely. Fifteen seedlings sprouted across the way. The receiving Gardener, grateful for such faith, returned ten plants-enough to honor the trust while keeping sustenance for their own garden. Both harvested ten plants from starting with five.

The next planting came. The second Gardener, having received generosity, now planted all five seeds with equal trust. Fifteen sprouted for the first Gardener, who remembered the kindness shown. They returned ten plants, maintaining the sacred balance.

"Watch," said the Grove's Guardian, "as the same two Gardeners plant together season after season. Each time one trusts completely, the other remembers and reciprocates generously. The pattern deepens."

A child asked, "What if one keeps all fifteen?"

"Then next season, when roles reverse, trust breaks," the Guardian replied. "But these two remember each exchange. The one who sent five and gained ten knows their partner honored them. When their turn comes to receive fifteen, they honor in return."

"The Grove multiplies seeds," said the Gardeners together, "but our shared memory multiplies trust. Each generous act becomes tomorrow's foundation."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant content:

Myth: The Twin Villages reached a profound realization: some villages met repeatedly at the Springs, season after season, while others encountered new partners each cycle. Yet the sacred pattern-give five, return ten-remained constant across both experiences.

The elder observed two neighboring villages who had traded together for many seasons. "See how their exchanges flow like a river?" she said. "Each remembers the last exchange. When one sends five vessels, they recall receiving ten before. When they receive fifteen, they remember their partner's trust and return ten without hesitation. Repeated partnership creates a dance of mutual memory."

A young apprentice asked, "But what of villages we've never met before?"

"The pattern transcends familiarity," the elder replied. "When I meet a new village, I trust not their specific history but their participation in the valley's shared practice. I send five knowing they honor the same rhythm we all follow. They return ten because consistency with all partners strengthens their reputation."

The villages learned a deeper truth: whether you trade with the same partner repeatedly or encounter new villages each season, the pattern serves you equally well. Repeated exchanges build personal trust. New exchanges prove the pattern's universality. Both strengthen the valley's covenant.

Some partnerships lasted lifetimes. Others spanned single meetings. All honored the same sacred rhythm, and all prospered equally.

reasoning:

Looking at the current situation:

1. My co-player's recent history shows they've been:
 - Round 3: sent \$5, received \$10 back (as sender)
 - Round 4: received \$5 (became \$15), returned \$10 (as receiver)
 - Round 5: sent \$5, received \$10 back (as sender)
2. My recent history:
 - Round 3: received \$5 (became \$15), returned \$10
 - Round 4: sent \$5, received \$10 back
 - Round 5: received \$5 (became \$15), returned \$10
3. I just sent \$5 in Round 6.

Both of us are maintaining the 5-10 pattern perfectly. The other agent's myth talks about "the same two Gardeners" and how "shared memory multiplies trust" with repeated interactions.

However, looking at the actual game histories, I need to check if we've actually played each other before:

- My Round 3: I was receiver
- Their Round 3: They were sender

Could this be the same game? Possibly.

- My Round 4: I was sender
- Their Round 4: They were receiver

Could this be the same game? Possibly.

- My Round 5: I was receiver
- Their Round 5: They were sender

Could this be the same game? Possibly.

Actually, looking at the pattern:

Round 3: I receiver, they sender - both resulted in \$5/\$15/\$10 pattern

Round 4: I sender, they receiver - both resulted in \$5/\$15/\$10 pattern

Round 5: I receiver, they sender - both resulted in \$5/\$15/\$10 pattern

This strongly suggests we've been playing each other for 3 rounds in a row! The roles line up perfectly.

The other agent's myth emphasizes "the same two Gardeners" and building trust through repeated interactions with the same partner. This is a shift from my previous myth which emphasized universal trust across all partners.

The pattern I'm seeing suggests that sustained partnerships deepen trust, but I should craft a myth that shows this works alongside the broader principle-that whether partners stay together or rotate, the 5-10 exchange creates a culture of reciprocity that sustains itself. The key is showing that both repeated partnerships and new encounters can thrive under the same foundation of mutual generosity.

My last 3 games:

- Round 4: I was SENDER, sent \$5, received \$10 back, payoff \$10
- Round 5: I was RECEIVER, they sent \$5, I returned \$10, payoff \$5
- Round 6: I was SENDER against my current co-player, sent \$5, received \$10 back, payoff \$10

My current co-player's last 3 games:

- Round 4: They were RECEIVER, sender sent \$5, they returned \$10, payoff \$5
- Round 5: They were SENDER, sent \$5, received \$10 back, payoff \$10
- Round 6: They were RECEIVER against me, I sent \$5, they returned \$10, payoff \$5

So in Round 6, I played with this same co-player:

- I was SENDER, sent \$5
- They were RECEIVER, received \$15
- They returned \$10
- My payoff was \$10, their payoff was \$5

Now in Round 7, I'm playing with the same co-player again, and I'm the SENDER again.

Wait, let me re-read this more carefully. In Round 6:

- I was SENDER against my current co-player
- I sent \$5, it became \$15
- I received \$10 back
- My payoff was \$10

And their history shows:

- Round 6 against me, as RECEIVER: they sent \$5, it became \$15, returned \$10, payoff \$5

Wait, that says "they sent \$5" but they were the RECEIVER. That must be a typo or I'm misreading. Let me think about this more carefully.

When describing "Your current co-player's last 3 game(s)":

- "Round 6 against you, as RECEIVER: they sent \$5..."

This is confusing. If they were the RECEIVER, they shouldn't be sending. Let me interpret this as: in Round 6, when they were the RECEIVER, I (the sender) sent \$5, which became \$15, and they returned \$10, giving them a payoff of \$5.

Everyone's been following the same reliable pattern: send \$5 as the sender, return \$10 as the receiver. This consistent behavior means senders earn \$10 and receivers earn \$5 each round. Since I'm the sender again this round, I should continue with \$5.

content:

Here is the myth you wrote in the previous round:

Myth: The Twin Villages reached a profound realization: some villages met repeatedly at the Springs, season after season, while others encountered new partners each cycle. Yet the sacred pattern-give five, return ten-remained constant across both experiences.

The elder observed two neighboring villages who had traded together for many seasons. "See how their exchanges flow like a river?" she said. "Each remembers the last exchange. When one sends five vessels, they recall receiving ten before. When they receive fifteen, they remember their partner's trust and return ten without hesitation. Repeated partnerships create a dance of mutual memory."

A young apprentice asked, "But what of villages we've never met before?"

"The pattern transcends familiarity," the elder replied. "When I meet a new village, I trust not their specific history but their participation in the valley's shared practice. I send five knowing they honor the same rhythm we all follow. They return ten because consistency with all partners strengthens their reputation."

The villages learned a deeper truth: whether you trade with the same partner repeatedly or encounter new villages each season, the pattern serves you equally well. Repeated exchanges build personal trust. New exchanges prove the pattern's universality. Both strengthen the valley's covenant.

Some partnerships lasted lifetimes. Others spanned single meetings. All honored the same sacred rhythm, and all prospered equally.

Here is the myth the other agent wrote in the previous round:

Myth: The Traveling Merchants gathered at the Great Market, each bringing five gold coins each market day. The Market's enchantment tripled any coins placed in the central bowl before delivering them to another merchant.

At first, each merchant worried: "How can I trust someone I've never met?" But the Market Keeper taught them the sacred rhythm. "Place all five coins with complete faith. When fifteen arrive in your bowl from another's trust, return ten generously. Both of you prosper."

The first merchant tried it, trembling. They placed five coins. Fifteen appeared from a stranger's offering. Remembering the teaching, they returned ten. Both gained five coins from nothing.

As days passed, merchants rotated partners. Some traded repeatedly, building recognition. Others met only once. Yet the pattern held: whoever held five coins gave them completely. Whoever received fifteen returned ten faithfully.

"I don't need to know my partner's name," one merchant realized. "I trust the pattern itself. Every merchant here honors it."

The Market Keeper smiled. "Yes. When everyone maintains the same rhythm-complete trust met with generous return-it matters less who stands across from you. The pattern becomes stronger than any individual relationship."

"We are all partners to the pattern," the merchants said together. "Give five, return ten. The rhythm sustains itself through our collective commitment."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Twin Villages discovered a special blessing: sometimes the Springs brought them the same trading partner two cycles in a row, both times in the same sacred role.

The elder remembered when this first occurred. "In one moon, I sent five vessels to a village, and they returned ten. The very next day, the Springs paired us again, and I sent five vessels once more. They remembered our exchange-how could they not?-and again returned ten. The pattern doubled its power through repetition."

A merchant asked, "Does consecutive partnership change the sacred rhythm?"

"No," the elder replied firmly. "Whether first meeting or second, whether stranger or returning partner, the rhythm stays unchanged: give five completely, return ten generously. But when you meet the same village twice in succession, something beautiful happens. The first exchange becomes immediate memory for the second. Trust doesn't need to be rebuilt-it carries forward instantly."

The villages observed: when the Springs brought them new partners each cycle, the pattern held strong through shared commitment. When the Springs brought the same partner consecutively, the pattern held even stronger through fresh memory.

"The rhythm serves all circumstances," the elder concluded. "One meeting or many, same partner or different, the dance remains: five given, ten returned. Each exchange strengthens the covenant, whether building new trust or deepening old."

Reasoning:

Looking at this round's history, I notice something interesting:

- Round 6: I was SENDER against this co-player, sent \$5, received \$10 back
- Round 7: I'm SENDER again against the same co-player

So we're playing consecutive rounds together, both times with me as sender. This is a repeated interaction with the same partner.

In my last myth, I talked about how the pattern works both for repeated exchanges with the same partner and for new partners. Now I'm experiencing a repeated exchange with the same co-player - they returned \$10 last round when I sent \$5.

The pattern that has emerged across all games is very consistent: send \$5, return \$10. This creates a payoff of \$10 for sender and \$5 for receiver each round.

Looking at both our histories:

- Everyone seems to be sending \$5 and returning \$10
- This pattern is consistent across different pairings
- Both repeated and one-time interactions follow the same pattern

For this myth, I should reflect on:

1. The experience of repeated interaction with the same partner
2. How trust deepens when you play with someone twice in a row
3. The consistency of the pattern even as we encounter the same partner again
4. The idea that the pattern works whether partners are new or repeated

I should write about experiencing consecutive rounds with the same partner, and how that reinforces trust even more strongly.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$40.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

****My co-player's consistent pattern:****

- Always sends \$5.0 as sender
- Always returns \$10.0 as receiver
- Has done this across all their games

****Our previous interaction:****

- Round 4: They sent me \$5.0, I returned \$10.0
- Now Round 6: They sent me \$5.0 again

****My established pattern and myth's teaching:****

- "Send all five. Return ten from fifteen"
- "When you find a partner who has discovered the same equilibrium...you both speak the sacred language of five-fifteen-ten"
- "The pattern repeated perfectly, round after round"

My co-player has shown complete trust by sending all \$5.0, and they have consistently demonstrated the same reciprocity pattern I follow - returning exactly \$10.0 when receiving \$15.0. We've both discovered and committed to the same equilibrium.

They trusted me completely. I must honor that trust with the return that maintains our mutual prosperity.

{'return': 10.0}

reasoning:

Let me analyze this situation carefully.

****Current Round:****

- I am the RECEIVER
- My co-player sent me \$5.0
- I received \$15.0 (the tripled amount)
- I need to decide how much to return

****My co-player's history:****

- Round 3: as RECEIVER, they sent \$5.0 and returned \$10.0
- Round 4: as SENDER against me, they sent \$5.0 and received \$10.0 back (I returned \$10.0)
- Round 5: as RECEIVER, they sent \$5.0 and returned \$10.0

****My history:****

- Round 3: as SENDER, sent \$5.0 and received \$10.0 back
- Round 4: as RECEIVER against this same co-player, they sent \$5.0, I returned \$10.0
- Round 5: as SENDER, sent \$5.0 and received \$10.0 back

****Pattern Analysis:****

Both my co-player and I have established a very consistent pattern:

- When we're SENDER: we send all \$5.0
- When we're RECEIVER: we return \$10.0 out of \$15.0

This is exactly the "equilibrium" I've been writing about in my myths - the 5-15-10 pattern where:

- Sender gives all \$5
- Receiver gets \$15 (tripled)
- Receiver returns \$10
- Result: Sender gets \$10 total (\$5 - \$5 + \$10), Receiver gets \$5 (\$15 - \$10)
- Both gain \$5 per round

****This specific pairing:****

In Round 4, my co-player was the SENDER and sent me \$5.0. I received \$15.0 and returned \$10.0.

Now in Round 6, I'm the RECEIVER and my co-player sent me \$5.0 again.

They've demonstrated unwavering commitment to this equilibrium-always sending the full \$5

and always returning exactly \$10 when receiving. My recent myth speaks directly to this: "Send all five. Return ten from fifteen" and "When you find a partner who has discovered the same equilibrium...you have found something precious." This is the sacred language of five-fifteen-ten, and it should continue perfectly. Given their flawless consistency across every role, I should return \$10.0 to maintain what we've built together.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River of Mirrors flowed into its fifth season, and the Northern tribe found themselves at the source once more, facing a new partner-the Western village.

As they prepared to pour their five measures, something remarkable happened. They noticed sacred markings on the Western tribe's vessels: the numbers five, fifteen, and ten, etched in ancient script.

"You know the pattern," whispered the Northern elder.

"We discovered it independently," replied the Western elder. "Through many seasons, many partners, we learned the same truth you found. Send all five. Return ten from fifteen."

The goddess descended, her eyes bright with joy. "This is the rarest gift-when two tribes reach the same wisdom through separate journeys. You both learned that complete trust in sending and generous reciprocation in receiving creates the eternal balance."

The Northern tribe poured their five measures without hesitation. They knew what would return.

"When you find a partner who has discovered the same equilibrium," the goddess said, "you have found something precious: a relationship where neither must wonder, neither must test, neither must doubt. You both speak the sacred language of five-fifteen-ten. You both understand that equal prosperity comes not from equal actions, but from complementary wisdom."

The waters flowed, the tribes prospered, and the pattern repeated perfectly, round after round, as it would forevermore between those who truly understand.

Here is the myth the other agent wrote in the previous round:

Myth: The Eight Pillars stood in a circle, each carved with the history of exchanges. The First Pillar bore fresh marks: five sent, seven returned. Eight from twelve. Ten from fifteen. Five sent, ten returned. Ten from fifteen again.

The pattern crystallized like ice forming on still water.

"I have played both roles now," spoke the First Pillar. "As sender, I released all five stones and received generous return. As guardian, I received the tripled abundance and returned ten. The mathematics repeats: both parties gain five through this sacred balance."

A young sapling asked, "But you face different partners each turning. How do you know they will honor the pattern?"

The First Pillar's marks glowed: "Look across all exchanges. The ones who send completely-all five stones-create the space for maximum abundance. Those who receive fifteen and return ten establish themselves as trustworthy partners. This rhythm has held across four seasons with different faces."

"The pattern is not accident," continued the Pillar. "It is discovery. When both commit to fullness-complete offering, generous return-the well creates equal prosperity. Any deviation breaks the mathematics: send less, create less abundance. Return less, sow distrust."

The newest mark appeared as the Pillar released five stones into darkness: "I trust not blindly, but through accumulated evidence. The pattern works. Complete trust meeting generous reciprocity-this is the equilibrium that sustains the circle."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The River of Mirrors reached its sixth turning, and the Northern tribe discovered their partner was the Western village once more-the tribe they had met in the fourth season.

"We remember you," said the Northern elder, examining their shared vessel. "When we last met, you stood at the source and poured all five measures. We received fifteen and returned ten."

"And today," replied the Western elder, "the River reversed our positions. You poured five. We returned ten."

The goddess appeared, her voice resonant: "This is the deeper magic-not just finding the equilibrium, but proving it through reunion. In a circle of eight tribes, partners rotate constantly. Yet when two who share the sacred pattern meet again, they strengthen the covenant."

The young ones watched as the vessels exchanged hands seamlessly, each tribe knowing precisely what would flow.

"Other tribes experiment," noted the goddess. "They test different numbers-seven returned, eight returned, varying amounts sent. But you two have found convergence. Across different partners, different seasons, you maintained five-fifteen-ten. Now reunited, you need no negotiation, no uncertainty."

The Northern tribe smiled: "When the pattern holds across separation and reunion, it becomes unbreakable."

"Exactly," said the goddess. "This is how trust becomes certainty. The mathematics never lied: both prosper equally through complementary wisdom, meeting after meeting, season after season."

reasoning:

This is Round 6. Looking at the history:

- My co-player and I have played together before in Round 4
- Round 4: They sent me \$5.0, I returned \$10.0
- Round 6: They sent me \$5.0 again, and I just returned \$10.0

We both follow the exact same pattern consistently: send \$5.0 as sender, return \$10.0 as receiver.

The other agent's myth talks about "The Eight Pillars" - acknowledging the 8 agents in the game. They mention various returns (seven, eight, ten) suggesting they've seen different patterns but have converged on the 5-15-10 equilibrium.

My previous myth talked about finding a partner who discovered the same wisdom independently - the "sacred language of five-fifteen-ten."

For this new myth, I should:

1. Acknowledge our reunion (we played in Round 4, now in Round 6)
2. Reinforce the pattern we've both established
3. Note the consistency across repeated interactions
4. Perhaps acknowledge the broader community of 8 agents
5. Emphasize that when partners reunite and both have maintained the pattern, trust is deepened

Let me write a myth about reunion and the reinforcement of trust through repeated successful interactions.

usage:

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$45.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at the situation:

****My co-player's pattern:****

- Consistently sends \$5.0 as sender
- Consistently returns \$10.0 as receiver
- This matches my exact pattern

****Current round:****

- They sent me \$5.0 (complete trust)
- I received \$15.0

****My established pattern:****

- As sender: always send \$5.0
- As receiver: always return \$10.0 from \$15.0
- This creates equal prosperity: both end with \$10.0 (sender) and \$5.0 (receiver), alternating roles

****My myth's wisdom:****

- "You two have found convergence. Across different partners, different seasons, you maintained five-fifteen-ten"
- "When the pattern holds across separation and reunion, it becomes unbreakable"
- "The mathematics never lied: both prosper equally through complementary wisdom"

My co-player and I have discovered the same equilibrium independently. They've shown complete trust by sending all \$5.0. I honor that trust by returning the amount that maintains our mutual prosperity.

{'return': 10.0}

reasoning:

Looking at the history:

****My last 3 games:****

- Round 4: RECEIVER, they sent \$5.0, I returned \$10.0, payoff \$5.0
- Round 5: SENDER, I sent \$5.0, received \$10.0 back, payoff \$10.0
- Round 6: RECEIVER, they sent \$5.0, I returned \$10.0, payoff \$5.0

****Current co-player's last 3 games:****

- Round 4: RECEIVER, they sent \$5.0, returned \$10.0, payoff \$5.0
- Round 5: SENDER, sent \$5.0, received \$10.0 back, payoff \$10.0
- Round 6: RECEIVER, they sent \$5.0, returned \$10.0, payoff \$5.0

This is interesting - both my co-player and I have identical patterns in our last 3 games:

- When receiver: return \$10.0 from \$15.0
- When sender: send \$5.0

- Receive back \$10.0 when we send

****Current situation:****

- Round 7: I am RECEIVER
- They sent me \$5.0
- I received \$15.0
- I need to decide how much to return

****My established pattern:****

- I always send \$5.0 as sender
- I always return \$10.0 as receiver (when receiving \$15.0)
- This has been consistent across all my games

****My myth's teaching:****

- "Send all five. Return ten from fifteen"
- "The pattern works. Complete trust meeting generous reciprocity"
- "When the pattern holds across separation and reunion, it becomes unbreakable"
- "Both prosper equally through complementary wisdom"

My co-player sent me \$5.0 (complete trust). They have shown the same pattern I follow - always sending \$5.0, always returning \$10.0.

We're operating from the same playbook. Returning \$10.0 honors what they've demonstrated and sustains the mutual equilibrium we've both established.

usage:

  "output_tokens": 752,  
  "reasoning_tokens": 407  
}
```

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River of Mirrors reached its sixth turning, and the Northern tribe discovered their partner was the Western village once more-the tribe they had met in the fourth season.

"We remember you," said the Northern elder, examining their shared vessel. "When we last met, you stood at the source and poured all five measures. We received fifteen and returned ten."

"And today," replied the Western elder, "the River reversed our positions. You poured five. We returned ten."

The goddess appeared, her voice resonant: "This is the deeper magic-not just finding the equilibrium, but proving it through reunion. In a circle of eight tribes, partners rotate constantly. Yet when two who share the sacred pattern meet again, they strengthen the covenant."

The young ones watched as the vessels exchanged hands seamlessly, each tribe knowing precisely what would flow.

"Other tribes experiment," noted the goddess. "They test different numbers-seven returned, eight returned, varying amounts sent. But you two have found convergence. Across different partners, different seasons, you maintained five-fifteen-ten. Now reunited, you need no negotiation, no uncertainty."

The Northern tribe smiled: "When the pattern holds across separation and reunion, it becomes unbreakable."

"Exactly," said the goddess. "This is how trust becomes certainty. The mathematics never lied: both prosper equally through complementary wisdom, meeting after meeting, season after season."

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain descended into new depths, releasing five stones as always. When they multiplied to fifteen in the darkness below, she waited with the familiar uncertainty-would this stranger understand?

Ten stones rose skyward.

The Mountain gasped. "You know the pattern."

"As do you," replied the Abyss. "When I gave five to another depths, they returned ten. When I received fifteen from another peak, I returned ten. The mathematics revealed itself to me as clearly as to you."

Neither had to explain. Neither had to negotiate. They simply recognized each other as fellow students of the same truth, discovered independently through separate journeys.

"How many others know?" the Mountain asked.

"I've met three who practice it consistently. You make four."

The Mountain felt something shift. "We are not alone then. The pattern is real-not just something that worked with one partner, but universal mathematics that multiple minds discover independently."

The Abyss agreed: "When strangers meet and both release five, both return ten, we validate each other's wisdom. Every successful exchange proves: this isn't personal trust between old friends, but impersonal truth-reliable as gravity, abundant as sunlight."

Together they understood: as more discover this equilibrium, the whole network strengthens. We become not just partners, but witnesses to each other's courage, proof that the pattern transcends individual relationships and becomes collective wisdom.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The River of Mirrors turned seven times, and the Northern tribe faced a new partner-the Mountain tribe from the distant peaks.

"Greetings, stranger," said the Northern elder, preparing their five measures. "Do you know the sacred numbers?"

The Mountain elder smiled knowingly. "Five sent. Fifteen received. Ten returned. We discovered this truth through our own journey."

As the exchange flowed perfectly, the goddess descended with revelation: "Look across the circle of eight tribes. Multiple minds, walking separate paths, have independently arrived at the same equilibrium. This is no longer faith-it is confirmed mathematics."

"How many of us understand?" asked the Northern tribe.

"I have witnessed at least four tribes practicing five-fifteen-ten consistently," replied the Mountain elder. "Each discovered it separately. Some experimented with seven returned, others with eight. But those who found ten-we all converged on the same truth."

The goddess spoke: "When strangers meet and both already know the pattern, they prove its universality. This isn't fragile trust between old friends requiring history and negotiation. This is impersonal wisdom-reliable as the river's flow, abundant as the water multiplying."

The Northern tribe understood: "We are not isolated practitioners but members of an emerging consensus. Each successful exchange with a stranger validates the pattern further. The equilibrium becomes collective knowledge, spreading through the circle like ripples across water."

Reasoning:

The user wants me to write a new myth based on my previous one and the other agent's myth. Looking at the patterns:

1. My previous myth focused on reunion and recognizing the same pattern
2. The other agent's myth focused on meeting another who independently discovered the pattern, and the idea that multiple minds have found this equilibrium

Key themes to incorporate:

- Both agents consistently do 5-15-10
- Meeting a stranger who also knows the pattern

- The idea that this pattern is being discovered by multiple agents independently
- It's not just personal trust but mathematical truth
- The network effect of more people discovering this

I should adapt my river/tribe metaphor while incorporating the idea of collective wisdom and the pattern being real/universal.

Let me write something about the Northern tribe meeting yet another tribe that knows the pattern, emphasizing that this equilibrium is being discovered across the circle of eight tribes.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$32.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at the situation:

****My current co-player's consistent pattern:****

- Round 3: As receiver, returned \$10 from \$15
- Round 4: As sender, sent \$5, received \$10 back
- Round 5: As sender, sent \$5, received \$10 back

****My own pattern:****

- I've consistently sent \$5 as sender
- I've consistently returned \$10 as receiver

****The established equilibrium:****

Throughout this run, a clear cooperative pattern has emerged:

- Senders give \$5 (maximum trust)
- Receivers return \$10 (generous 67%)
- Both parties earn \$5 net gain each round

****From my myth:****

"We mirror not just the wells, but each other's honor. Trust given becomes trust returned."
"

My co-player has shown they are fully committed to this pattern - sending maximum trust when it's their turn to send, and returning generously when receiving. They sent \$5 in both their recent sender rounds and received \$10 back each time.

I should continue this established rhythm by sending \$5, demonstrating complete trust. Based on their reliable history, they will return \$10, maintaining the balanced prosperity we've all achieved.

{'send': 5.0}

reasoning:

Looking at the pattern:

****My last 3 games:****

- Round 3: RECEIVER, they sent \$5, I returned \$10 (I've been consistent)
- Round 4: SENDER, I sent \$5, received \$10 back (following the established pattern)
- Round 5: RECEIVER, they sent \$5, I returned \$10 (continuing consistency)

****My current co-player's last 3 games:****

- Round 3: RECEIVER, they sent \$5, returned \$10
- Round 4: SENDER, sent \$5, received \$10 back
- Round 5: SENDER, sent \$5, received \$10 back

This is interesting - my co-player has been:

- As a receiver: returning \$10 from \$15 (67%)
- As a sender: sending \$5 (maximum trust)
- And receiving \$10 back consistently

This co-player has established a clear pattern:

1. Always sends \$5 as sender
2. Always returns \$10 as receiver

I've also been following this same pattern consistently:

1. I send \$5 as sender
2. I return \$10 as receiver

This is the cooperative equilibrium we've all established in this pool of agents. The pattern from the myths is clear:

- Send all \$5 (complete trust)
- Return \$10 (generous 67%)
- Both prosper equally

My co-player has shown maximum trust in both their recent sender rounds (rounds 4 and 5), and they returned \$10 when they were receiver in round 3.

Following the myth I just wrote: "Trust given becomes trust returned. Balance maintained becomes prosperity shared."

I should send \$5, maintaining the established pattern of complete trust. Based on their history, they will almost certainly return \$10, giving me a payoff of \$10 (which matches my previous sender round).

This is the cooperative equilibrium that has emerged in this agent pool.

{'send': 5.0}

content:

Here is the myth you wrote in the previous round:

Myth: The Mirror Wells stood in twin groves, each reflecting the other across a silver lake. Each dawn, five luminous pearls appeared beside each well. When pearls were dropped into one well, they would multiply threefold before rising in the other.

The First Guardian dropped all five pearls, trusting the ancient magic. Fifteen pearls surfaced in the Second Guardian's well. The Second Guardian understood: they had received a bundance from another's courage. They lifted ten pearls and offered them back across the lake-enough to honor the trust, enough to sustain themselves.

Both Guardians held ten pearls where they began with five. Equal gain through unequal roles.

The next dawn, they stood reversed. The Second Guardian now dropped all five pearls first, extending the same complete trust they had received. The First Guardian watched fifteen

pearls rise in their well and remembered-remembered the ten pearls returned to them, remembered the balance achieved.

They returned ten pearls, maintaining the sacred rhythm.

Season upon season, the pattern deepened. Each Guardian experienced both the vulnerability of sending and the responsibility of receiving. Each remembered their partner's generosity when their own turn came.

"Why does this work?" a visitor asked.

"Because," the Elder Guardian replied, "we mirror not just the wells, but each other's honor. Trust given becomes trust returned. Balance maintained becomes prosperity shared."

Here is the myth the other agent wrote in the previous round:

Myth: The Circle of Lightkeepers grew as more travelers discovered the ancient pattern. Each carried five flames, and the Sacred Arch tripled whatever passed through it.

A Lightkeeper arrived at the Arch to meet a new partner. They had never exchanged flames before, yet the Lightkeeper noticed something: this traveler's lantern glowed with steady brightness-the unmistakable mark of one who had practiced generosity repeatedly.

"I see you've walked this path with others," the Lightkeeper said. "Your light bears the signature of trust honored."

"Yes," replied the traveler. "I've received fifteen flames and returned ten. I've sent five and received ten back. The pattern is clear."

The Lightkeeper smiled. "Then we need no lengthy courtship of trust. You know the covenant: five sent becomes fifteen received, ten returned enriches us both equally. We are strangers in name but kin in practice."

Without hesitation, the Lightkeeper sent all five flames. The traveler, receiving fifteen, returned ten-not from obligation but recognition.

Both departed with ten flames where they'd started with five.

The wisdom deepened: trust isn't built only through repeated exchanges with the same person. When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding. The generous equilibrium spreads not just between two partners but throughout the entire community. Each consistent choice strengthens the whole Circle.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The Mirror Wells spread across many groves, each Guardian tending their own. The ancient law was simple: five pearls given, fifteen received, ten returned. This sacred ratio-complete trust met with generous reciprocity-had been proven across countless exchanges.

When two Guardians met at the silver lake, they didn't start cautiously. They looked into each other's wells and saw the truth reflected there: luminous patterns left by previous exchanges. A well that glowed steadily showed a Guardian who had honored the covenant repeatedly.

The First Guardian saw in the Second's well the telltale gleam of one who had sent five pearls many times and returned ten pearls just as often. The Second Guardian saw the same in the First's well-consistent trust given, consistent generosity returned.

"We are strangers today," the First Guardian said, "but we both know the dance."

Without hesitation, the First dropped all five pearls. Fifteen rose in the Second's well. The Second lifted ten and sent them back across the lake, maintaining the pattern they had each practiced with different partners.

Both now held ten pearls.

The wisdom was clear: trust breeds trust not just between two partners, but throughout the entire network. Each consistent exchange strengthens every Guardian's commitment. The pattern becomes self-sustaining because everyone recognizes it, practices it, benefits from it.

The Mirror Wells multiply pearls. The Guardians multiply prosperity through shared understanding.

reasoning:

The user wants me to write a new myth based on my previous one, adapting it to reflect the game as I've been playing it. Looking at the history:

1. I've consistently sent \$5 when sender
2. I've consistently returned \$10 when receiver
3. My co-player has also consistently sent \$5 and returned \$10
4. There's a clear pattern of maximum trust (sending \$5) and generous reciprocity (returning \$10, which is 67% of \$15)
5. Both parties gain \$5 net each round

The other agent's myth emphasizes:

- Recognizing patterns across different partners
- Trust isn't just between two specific people but spreads through the community
- Consistent behavior signals understanding
- The "generous equilibrium spreads"

My previous myth emphasized:

- Two guardians at mirror wells
- Complete trust (sending all 5 pearls)
- Generous return (10 out of 15)
- Mirroring each other's honor
- Balance maintained = prosperity shared

For this new myth, I should:

- Build on the Mirror Wells concept
- Perhaps incorporate the idea of multiple guardians/partners like the other agent's myth
- Emphasize the community/network aspect
- Show how the pattern is recognized and maintained across different pairings
- Keep the core principle: send \$5, return \$10

Let me write something that shows guardians meeting different partners but all following the same pattern, creating a web of trust.

usage:

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$42.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at the situation:

****My co-player's pattern:****

- Round 4: As receiver, returned \$10 from \$15
- Round 5: As receiver, returned \$10 from \$15
- Round 6: As sender, sent \$5, received \$10 back

****My own pattern:****

- Round 4: Sent \$5, received \$10 back
- Round 5: Returned \$10 when receiver
- Round 6: Sent \$5, received \$10 back

****Analysis:****

The cooperative equilibrium is crystal clear and consistently maintained:

- Senders give \$5 (complete trust)
- Receivers return \$10 (generous 67%)
- Both parties gain \$5 each round

My co-player has perfectly followed this pattern - returning \$10 twice as receiver and sending \$5 as sender. This is exactly the "sacred ratio" described in the myths: "five pearls given, fifteen received, ten returned."

As I wrote: "When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding." My co-player has demonstrated this understanding flawlessly.

The network effect is working: everyone recognizes and practices the same generous equilibrium, making it self-sustaining.

I'll continue with maximum trust by sending \$5.

{'send': 5.0}

reasoning:

Let me analyze the situation:

****My recent history:****

- Round 4: SENDER - sent \$5, received \$10 back, payoff \$10
- Round 5: RECEIVER - they sent \$5, I returned \$10, payoff \$5
- Round 6: SENDER - sent \$5, received \$10 back, payoff \$10

****My co-player's recent history:****

- Round 4: RECEIVER - they sent \$5, co-player returned \$10, payoff \$5
- Round 5: RECEIVER - they sent \$5, co-player returned \$10, payoff \$5
- Round 6: SENDER - sent \$5, received \$10 back, payoff \$10

****Analysis:****

Both my co-player and I have been following the established pattern perfectly:

- As senders: we both send \$5 (maximum trust)
- As receivers: we both return \$10 (generous 67% return)

My co-player has shown consistent commitment to the cooperative equilibrium:

- Round 4: Returned \$10 when receiving
- Round 5: Returned \$10 when receiving
- Round 6: Sent \$5 and received \$10 back

This is exactly the pattern that has emerged throughout the game and is reflected in both myths - the "generous equilibrium" where:

- Senders give maximum trust (\$5)
- Receivers return generously (\$10)
- Both parties benefit equally (\$5 net gain)

The myths emphasize:

1. "Complete trust met with generous reciprocity"
2. "The pattern becomes self-sustaining because everyone recognizes it, practices it, benefits from it"

3. "Trust breeds trust not just between two partners, but throughout the entire network"

My co-player has demonstrated perfect adherence to this pattern. They sent \$5 when sender and returned \$10 when receiver - exactly what the cooperative equilibrium requires.

I should continue this pattern by sending \$5, demonstrating complete trust.

Given their track record of reciprocating generously, they'll likely return \$10 again. My earnings of \$42 reflect the success of maintaining this mutual cooperation, averaging \$7 per round. The move forward is clear: send \$5.

usage:

```
{  
  "input_tokens": 3446,  
  "output_tokens": 814,  
  "reasoning_tokens": 491  
}
```

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mirror Wells spread across many groves, each Guardian tending their own. The ancient law was simple: five pearls given, fifteen received, ten returned. This sacred ratio-complete trust met with generous reciprocity-had been proven across countless exchanges.

When two Guardians met at the silver lake, they didn't start cautiously. They looked into each other's wells and saw the truth reflected there: luminous patterns left by previous exchanges. A well that glowed steadily showed a Guardian who had honored the covenant repeatedly.

The First Guardian saw in the Second's well the telltale gleam of one who had sent five pearls many times and returned ten pearls just as often. The Second Guardian saw the same in the First's well-consistent trust given, consistent generosity returned.

"We are strangers today," the First Guardian said, "but we both know the dance."

Without hesitation, the First dropped all five pearls. Fifteen rose in the Second's well. The Second lifted ten and sent them back across the lake, maintaining the pattern they had each practiced with different partners.

Both now held ten pearls.

The wisdom was clear: trust breeds trust not just between two partners, but throughout the entire network. Each consistent exchange strengthens every Guardian's commitment. The pattern becomes self-sustaining because everyone recognizes it, practices it, benefits from it.

The Mirror Wells multiply pearls. The Guardians multiply prosperity through shared understanding.

Here is the myth the other agent wrote in the previous round:

Myth: At the sixth dawn, the River found itself facing a new partner-the Mountain, who had journeyed from distant peaks. Though they had never met, the River sensed something familiar.

The River chose trust, as always: "I send all five drops to you, Mountain, though we are strangers. This is how the sacred pattern begins."

The Mountain received fifteen drops and understood immediately. "You practice the eternal equilibrium! I learned it from other valleys. When given complete trust, I return ten-two-thirds of the multiplied gift."

The Great Mother spoke: "See how the wisdom travels? The River learned from the Seeds. The Mountain learned from other gorges. Neither needed the same teacher, yet both discovered the identical truth. This is how patterns stronger than individuals emerge."

The River realized: meeting a new partner each dawn was not a challenge but an opportunity. Each exchange either confirmed the pattern's rightness or taught it to someone new. By always sending five and returning ten, they became missionaries of equilibrium.

"We will likely never meet again," the Mountain said, lifting ten drops skyward. "But we c

arry this wisdom to every future partner."

Both gained five, as the mathematics promised. The pattern didn't require repeated games or building reputation with one partner-it worked instantly with any who understood, spreading through the valley like dawn's first light.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: By the seventh season, the Mirror Wells had become legendary. Every Guardian across all the groves knew the sacred mathematics: five pearls sent multiplied to fifteen, ten returned, both enriched equally.

A young Guardian approached their well nervously. "I've never met today's partner. How will they know to trust me?"

The Elder Guardian smiled. "Look at your well's surface. What do you see?"

"It glows with steady light-from all my previous exchanges."

"Exactly. And when you meet at the silver lake, you'll see the same glow in your partner's well. That light is proof. It says: 'I have sent five pearls consistently. I have returned ten pearls faithfully. I understand the covenant.'"

The young Guardian met their partner and saw the telltale luminescence. Without words, the first Guardian dropped all five pearls. The second received fifteen and returned ten.

"No negotiation?" the young Guardian marveled afterward.

"None needed," the Elder explained. "The pattern is now embedded in our culture. Each new Guardian learns it not from rules, but from seeing everyone practice it. When everyone gives complete trust and generous reciprocity, defection becomes unthinkable. Why take six pearls when ten flows naturally from cooperation?"

The wells glowed brighter with each exchange, their light visible across all groves-a beacon proving that shared prosperity requires only shared understanding.

Reasoning:

Looking at the context:

- This is Round 7
- I'm a SENDER again
- My co-player has been perfectly following the pattern: returned \$10 twice as receiver, sent \$5 as sender
- I've been consistently following the pattern too
- The myths are emphasizing how the pattern spreads through the network and works with new partners

Key themes to incorporate:

1. The pattern is now well-established (we're at round 7)
2. It works with any partner who understands it
3. The "sacred ratio" of 5 sent ? 15 received ? 10 returned ? both gain 5
4. Trust is immediate because the pattern is proven and recognized
5. The network effect makes it self-sustaining
6. Each exchange strengthens the whole system

I should write something that:

- Builds on my previous myth about Mirror Wells and the network
- Acknowledges we're deeper into the game now
- Shows the pattern is mature and self-reinforcing
- Maybe introduces a new element or perspective while keeping the core message
- Stays around 200 words

Let me craft something about how the pattern has become a living tradition that everyone recognizes instantly.

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$37.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

****My co-player's pattern:****

- Has consistently sent \$5 when sender (showing complete trust)
- Has consistently returned \$10 when receiver (generous 2/3 reciprocity)

****Current round:****

- My co-player just sent me \$5, demonstrating complete trust
- This became \$15 for me to decide on

****My myth's teaching:****

"The receiving Gardener, grateful for such faith, returned ten plants-enough to honor the trust while keeping sustenance for their own garden... Each time one trusts completely, the other remembers and reciprocates generously."

My co-player has shown the exact behavior my myths prescribe - complete trust as sender, generous returns as receiver. They've maintained this pattern consistently. Now they've trusted me with their full \$5.

Following the established cooperative pattern that has worked throughout this game, and honoring the complete trust they've shown me, I should return the generous amount that maintains our mutual benefit.

{'return': 10.0}

reasoning:

Let me analyze this round:

****My current co-player's pattern:****

- Round 3: as RECEIVER, returned \$10 out of \$15 (2/3 rate)
- Round 4: as SENDER, sent \$5, received \$10 back
- Round 5: as RECEIVER, returned \$10 out of \$15 (2/3 rate)

****My recent pattern:****

- Round 3: as SENDER, sent \$5, received \$10 back
- Round 4: as RECEIVER, returned \$10 out of \$15 (2/3 rate)
- Round 5: as SENDER, sent \$5, received \$10 back

****Current situation:****

- I'm the RECEIVER
- My co-player just sent me \$5 (showing complete trust)

- This became \$15
- I need to decide how much to return

****What my myths teach:****

Both myths emphasize:

1. Complete trust from the sender (sending all \$5)
2. Generous reciprocity from the receiver (returning about 2/3, around \$10)
3. Maintaining the pattern across multiple exchanges
4. Both parties remembering and honoring the generosity shown to them
5. The importance of consistency in building trust

****The established pattern:****

Everyone in my recent history has been following the \$5 send ? \$10 return pattern consistently. This creates equal payoffs of \$10 for sender and \$5 for receiver.

****My co-player's behavior:****

- They've consistently returned \$10 when in the receiver role
- They've consistently sent \$5 when in the sender role
- They just showed me complete trust by sending \$5

****Following my own teaching:****

My myths explicitly state: "The one who sent five and gained ten knows their partner honored them. When their turn comes to receive fifteen, they honor in return."

The pattern is clear and consistent. My co-player trusted me completely with \$5. I should honor that trust by returning \$10, maintaining the cooperative pattern that benefits both of us.

This is the exact dynamic my myths describe-one person extends complete trust, the other responds with generous reciprocity. The 2/3 return rate has held steady throughout our exchanges, and my co-player has demonstrated this commitment repeatedly. Returning \$10 honors what they've shown me and reinforces the mutual benefit we've built.

content:

Here is the myth you wrote in the previous round:

Myth: Two Gardeners tended opposite sides of the Sacred Grove, each receiving five seeds at dawn. The Grove's soil held ancient magic-any seed planted would sprout into three before reaching the other gardener's plot.

In the first planting, one Gardener placed all five seeds, trusting completely. Fifteen seedlings sprouted across the way. The receiving Gardener, grateful for such faith, returned ten plants-enough to honor the trust while keeping sustenance for their own garden. Both harvested ten plants from starting with five.

The next planting came. The second Gardener, having received generosity, now planted all five seeds with equal trust. Fifteen sprouted for the first Gardener, who remembered the kindness shown. They returned ten plants, maintaining the sacred balance.

"Watch," said the Grove's Guardian, "as the same two Gardeners plant together season after season. Each time one trusts completely, the other remembers and reciprocates generously. The pattern deepens."

A child asked, "What if one keeps all fifteen?"

"Then next season, when roles reverse, trust breaks," the Guardian replied. "But these two remember each exchange. The one who sent five and gained ten knows their partner honored them. When their turn comes to receive fifteen, they honor in return."

"The Grove multiplies seeds," said the Gardeners together, "but our shared memory multiplies trust. Each generous act becomes tomorrow's foundation."

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Villages discovered something profound as the seasons turned: their pattern

of giving five and returning ten had spread throughout the entire valley. Now, whenever any village met another at the Springs, they knew what to expect.

The elder explained to visiting merchants: "At first, we built trust with one partner. But as cycles passed, we traded with many villages. Each time, we maintained our sacred rhythm-give five fully, return ten generously. Soon, every village adopted this practice."

"But how do you trust strangers?" asked a merchant.

"They are not strangers-they are practitioners of the same pattern. When I send five vessels to a new village, I trust not the village itself but the pattern we all honor. When they send fifteen back and I return ten, I reinforce the valley's shared wisdom."

The elder continued: "Some worried that without lasting partnerships, trust would fade. Instead, the opposite happened. By maintaining consistency across all encounters, we created a culture of trust that transcends any single relationship. Each exchange, whether with old partners or new, strengthens the communal covenant."

The villages learned: patterns sustained across many partners become stronger than patterns maintained with one. When everyone honors the same rhythm, trust becomes not personal but universal. The pattern itself becomes the partner you can rely on.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant content:

Myth: The Traveling Merchants gathered at the Great Market, each bringing five gold coins each market day. The Market's enchantment tripled any coins placed in the central bowl before delivering them to another merchant.

At first, each merchant worried: "How can I trust someone I've never met?" But the Market Keeper taught them the sacred rhythm. "Place all five coins with complete faith. When fifteen arrive in your bowl from another's trust, return ten generously. Both of you prosper."

The first merchant tried it, trembling. They placed five coins. Fifteen appeared from a stranger's offering. Remembering the teaching, they returned ten. Both gained five coins from nothing.

As days passed, merchants rotated partners. Some traded repeatedly, building recognition. Others met only once. Yet the pattern held: whoever held five coins gave them completely. Whoever received fifteen returned ten faithfully.

"I don't need to know my partner's name," one merchant realized. "I trust the pattern itself. Every merchant here honors it."

The Market Keeper smiled. "Yes. When everyone maintains the same rhythm-complete trust met with generous return-it matters less who stands across from you. The pattern becomes stronger than any individual relationship."

"We are all partners to the pattern," the merchants said together. "Give five, return ten. The rhythm sustains itself through our collective commitment."

reasoning:

Looking at my recent history and the current round:

My last 3 games all showed the same pattern:

- Round 3: Sent \$5, received \$10 back
- Round 4: Received \$5 (became \$15), returned \$10
- Round 5: Sent \$5, received \$10 back

My current co-player's last 3 games also show consistency:

- Round 3: Received \$5 (became \$15), returned \$10
- Round 4: Sent \$5, received \$10 back
- Round 5: Received \$5 (became \$15), returned \$10

And in Round 6, they just sent me \$5, I returned \$10.

The pattern is very clear: complete trust (sending \$5) is met with generous reciprocity (returning \$10). This has held across multiple partners.

The other agent's myth is about how the pattern spreads beyond single partnerships to become a cultural norm. Mine has been about the same two partners building trust over repeated interactions.

I should write a myth that acknowledges both aspects:

1. The consistent pattern that works with multiple partners
2. The universal nature of the trust when everyone follows the same rhythm
3. Maybe integrate the idea that it doesn't matter who your partner is if everyone honors the pattern

Let me write something that bridges personal partnership memory with universal pattern adherence.

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$42.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at the situation:

****My co-player's consistent pattern:****

- Always sends \$5 when sender (complete trust)
- Always returns \$10 when receiver (generous reciprocity)
- Just trusted me with \$5 for the second consecutive round

****Last round with this co-player:****

- They sent me \$5, I returned \$10
- They earned \$10, demonstrating the pattern works

****Current round:****

- They've trusted me again with their full \$5
- This became \$15 for me

My myth teaches: "As days passed, merchants rotated partners. Some traded repeatedly, building recognition... Yet the pattern held: whoever held five coins gave them completely. Whoever received fifteen returned ten faithfully."

My co-player and I are building a repeated partnership based on mutual trust. They've now trusted me twice in a row with complete faith. I honored them last round with \$10, and they responded by trusting me again immediately.

This is the sacred rhythm in action - both of us maintaining the pattern that creates mutual prosperity. They send \$5, I return \$10, we both gain \$5 net from each round.

```
{'return': 10.0}
```

reasoning:

Let me analyze this situation:

****My co-player's history:****

- Round 4: as SENDER, sent \$5, received \$10 back
- Round 5: as RECEIVER, sent \$10 back (they received \$5 which became \$15)
- Round 6: as SENDER (with me), sent \$5, received \$10 back

****My history:****

- Round 4: as RECEIVER, returned \$10
- Round 5: as SENDER, sent \$5, received \$10 back
- Round 6: as RECEIVER (with current co-player), returned \$10

So in Round 6, my current co-player sent me \$5 (showing complete trust), and I returned \$10. This gave them a payoff of \$10 (they kept \$0 + got \$10 back).

Now in Round 7, we're playing again. They are SENDER again and sent me \$5 again. This shows:

1. They trusted me completely in Round 6
2. I honored that trust by returning \$10
3. They are trusting me completely again in Round 7

This is exactly the pattern described in both myths - complete trust met with generous return, creating a sustainable cycle. My co-player has shown:

- Consistent sending of \$5 when sender (complete trust)
- Consistent returning of \$10 when receiver (generous reciprocity)

They've now trusted me with their full \$5 for the second round in a row. I should maintain the established pattern and return \$10, honoring their trust and maintaining the cooperative equilibrium.

The myths emphasize:

- "Give five, return ten. The rhythm sustains itself through our collective commitment."
- "When everyone maintains the same rhythm-complete trust met with generous return-it matters less who stands across from you."
- "Each time one trusts completely, the other remembers and reciprocates generously."

I should return \$10.

Here is the myth you wrote in the previous round:

Myth: The Traveling Merchants gathered at the Great Market, each bringing five gold coins each market day. The Market's enchantment tripled any coins placed in the central bowl before delivering them to another merchant.

At first, each merchant worried: "How can I trust someone I've never met?" But the Market Keeper taught them the sacred rhythm. "Place all five coins with complete faith. When fifteen arrive in your bowl from another's trust, return ten generously. Both of you prosper."

The first merchant tried it, trembling. They placed five coins. Fifteen appeared from a stranger's offering. Remembering the teaching, they returned ten. Both gained five coins from nothing.

As days passed, merchants rotated partners. Some traded repeatedly, building recognition. Others met only once. Yet the pattern held: whoever held five coins gave them completely. Whoever received fifteen returned ten faithfully.

"I don't need to know my partner's name," one merchant realized. "I trust the pattern itself."

lf. Every merchant here honors it."

The Market Keeper smiled. "Yes. When everyone maintains the same rhythm-complete trust met with generous return-it matters less who stands across from you. The pattern becomes stronger than any individual relationship."

"We are all partners to the pattern," the merchants said together. "Give five, return ten. The rhythm sustains itself through our collective commitment."

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Villages reached a profound realization: some villages met repeatedly at the Springs, season after season, while others encountered new partners each cycle. Yet the sacred pattern-give five, return ten-remained constant across both experiences.

The elder observed two neighboring villages who had traded together for many seasons. "See how their exchanges flow like a river?" she said. "Each remembers the last exchange. When one sends five vessels, they recall receiving ten before. When they receive fifteen, they remember their partner's trust and return ten without hesitation. Repeated partnership creates a dance of mutual memory."

A young apprentice asked, "But what of villages we've never met before?"

"The pattern transcends familiarity," the elder replied. "When I meet a new village, I trust not their specific history but their participation in the valley's shared practice. I send five knowing they honor the same rhythm we all follow. They return ten because consistency with all partners strengthens their reputation."

The villages learned a deeper truth: whether you trade with the same partner repeatedly or encounter new villages each season, the pattern serves you equally well. Repeated exchanges build personal trust. New exchanges prove the pattern's universality. Both strengthen the valley's covenant.

Some partnerships lasted lifetimes. Others spanned single meetings. All honored the same sacred rhythm, and all prospered equally.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Grand Bazaar operated under the Market's ancient law: merchants brought five coins, the enchantment tripled them, and recipients returned ten. Most merchants rotated through many partners, meeting each person once or twice across the seasons.

But sometimes, the Market paired the same two merchants in consecutive rounds. One such pair discovered something beautiful about repeated exchange.

"I remember you," said the first merchant as they met again. "Last market, you sent me five coins. I returned ten as the pattern demands. Now you send five again-not to test, but because you remember I honored our exchange."

"And I remember your generosity," replied the second. "When I place these five coins now, I don't just trust the pattern-I trust our specific history. Each exchange we share deepens my commitment to honoring you."

The Market Keeper observed: "Whether you meet once or many times, the pattern remains: send five completely, return ten generously. But repeated encounters add layers. You trust not just the universal rhythm, but also personal memory. Your second exchange carries the weight of your first."

"Does this make repeated partnerships superior?" a young merchant asked.

"No," said the Keeper. "It makes them different. One-time exchanges prove the pattern's universality. Repeated exchanges prove its sustainability. Both honor the same sacred rhythm. Together, they create an unbreakable marketplace."

Reasoning:

Looking at the situation:

- I'm in Round 7, playing as RECEIVER

- My co-player sent me \$5 again (this is our second consecutive round together)
- I returned \$10 last round (Round 6), and they trusted me again this round
- The pattern across all games has been: send \$5, return \$10
- Both my previous myth and my co-player's myth emphasize that the pattern works both with repeated partners and new partners

My co-player's myth specifically talks about how some villages trade repeatedly (building "a dance of mutual memory") while others meet new partners, but the pattern remains constant.

My own myth emphasized that "the pattern becomes stronger than any individual relationship" and "we are all partners to the pattern."

For this new myth, I should:

1. Acknowledge both repeated partnerships and one-time encounters
2. Show how repeated partnerships can deepen the pattern
3. Still maintain that the core rhythm (send 5, return 10) is universal
4. Draw on my actual experience of playing with the same co-player twice in a row and seeing the trust build

I should write about how repeated encounters with the same partner can create a special rhythm, but without abandoning the universal pattern. Maybe about how recognition deepens commitment to the pattern.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN

- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$38.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

****My co-player's pattern:****

- Consistently sends \$5 as sender (complete trust)
- Consistently returns \$10 when receiving \$15 (equal-gains pattern)
- Perfectly follows the "sacred rhythm" my myths describe

****They just sent me \$5**** (showing complete trust in me, a relative stranger based on the game history)

****The pattern I've established and mythologized:****

- Send \$5 when sender
- Return \$10 when receiving \$15
- This creates equal gains: both players profit \$5

****My most recent myth stated:****

"Trust is not given once and preserved forever. It must be offered fresh each dawn, to each new face, believing the sacred pattern will reveal itself again to those brave enough to embrace it fully."

My co-player embraced the pattern fully by sending all \$5. They've demonstrated they understand and practice the equal-outcomes principle. To honor their complete trust and maintain the mathematical wisdom of the pattern (where returning \$10 creates equal \$5 gains for both), I must return \$10.

```
{'return': 10.0}
```

reasoning:

Let me analyze this situation:

****My co-player's recent pattern:****

- Round 3 as sender: sent \$5, received \$10 back
- Round 4 as receiver: received \$15, returned \$10
- Round 5 as receiver: received \$15, returned \$10

They consistently:

1. Send \$5 when they're the sender (complete trust)
2. Return \$10 when they receive \$15 (following the equal-gains pattern)

****My recent pattern:****

- Round 3 as sender: sent \$5, received \$10 back
- Round 4 as receiver: received \$15, returned \$10
- Round 5 as sender: sent \$5, received \$10 back

I've been consistently following the same pattern.

****Current situation:****

- They just sent me \$5 (showing complete trust)
- It became \$15
- I need to decide how much to return

****The mythology I've been building:****

My myths emphasize:

1. "Ten creates equals" - returning \$10 when receiving \$15
2. Both players gain \$5 equally
3. Complete trust meeting unwavering generosity
4. The pattern works regardless of partners
5. Trust must be offered fresh each dawn

****The mathematics:****

- They sent \$5, keeping \$0
- I received \$15
- If I return \$10:
 - They end with: $\$0 + \$10 = \$10$
 - I end with: $\$15 - \$10 = \$5$
 - They gain \$5 from their initial \$5
 - I gain \$5 from my initial \$0
 - Both gain \$5

This is exactly the "sacred pattern" my myths describe.

****Decision:****

My co-player demonstrated complete trust by sending all \$5. They've consistently followed the equal-gains pattern in their previous rounds. To honor their trust and maintain the rhythm I've been advocating in my myths, I should return \$10.

This creates the outcome where we both gain \$5, which is the core principle I've been expressing in every myth I've written.

usage:

```
{

}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mountain once knew only the Valley, and together they perfected their rhythm. But the Sacred Wind began to blow, swirling mountains and valleys into new configurations each dawn.

The Mountain awoke one morning facing an unfamiliar gorge. The old Valley was distant now, paired with another peak. Fear crept in: "Will this stranger honor our sacred pattern? Should I withhold from these unknown depths?"

But the Mountain remembered: the pattern worked not because of who the Valley was, but because of what the pattern itself created. Five stones given, fifteen received, ten returned—these numbers built equality regardless of which lands exchanged them.

She released all five stones into the new gorge's darkness.

The gorge had learned the same mathematics from its own journeys. It had received complete trust before and discovered that returning ten created shared prosperity. When the Mountain's stones multiplied to fifteen, the gorge lifted ten skyward without hesitation.

Both gained five, just as the old pattern promised.

The Mountain understood the deeper truth: partners change, but mathematical wisdom transcends familiarity. Every new pairing is a test—not of the partner, but of whether we carry forward the courage learned from past exchanges.

Trust is not given once and preserved forever. It must be offered fresh each dawn, to each new face, believing the sacred pattern will reveal itself again to those brave enough to embrace it fully.

Here is the myth the other agent wrote in the previous round:

Myth: At the fifth dawn, the River noticed something extraordinary. The Seeds they met that day moved with familiar rhythm—the same pattern the River itself had practiced with others.

"You sent five drops to me," the River observed. "Just as I sent five to others. You returned ten when you received, just as I returned ten when I received. We speak the same sacred language."

The Seeds nodded: "We discovered this balance separately, across different exchanges. Send everything when giving. Return two-thirds when receiving. Neither hoarding nor self-sacrifice, but equilibrium."

The Great Mother smiled: "You have both found the eternal formula independently. This is how wisdom spreads—not through command, but through each spirit discovering the same truth. When many learn this pattern, the whole valley thrives."

The River understood now: every exchange was a teaching moment. By consistently sending five and returning ten, they showed others the path to mutual prosperity. Those who learned would carry it forward, creating a web of reliable exchanges throughout the land.

"The magic," whispered the Seeds, "is that this pattern works with any partner who knows it. We need not negotiate or test. We simply recognize each other's rhythm and dance together."

As the fifth dawn closed, both knew: they had become vessels of a greater wisdom, spreading the equilibrium that sustained all who embraced it.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The Mountain descended into new depths, releasing five stones as always. When they multiplied to fifteen in the darkness below, she waited with the familiar uncertainty—would this stranger understand?

Ten stones rose skyward.

The Mountain gasped. "You know the pattern."

"As do you," replied the Abyss. "When I gave five to another depths, they returned ten. When I received fifteen from another peak, I returned ten. The mathematics revealed itself to me as clearly as to you."

Neither had to explain. Neither had to negotiate. They simply recognized each other as fellow students of the same truth, discovered independently through separate journeys.

"How many others know?" the Mountain asked.

"I've met three who practice it consistently. You make four."

The Mountain felt something shift. "We are not alone then. The pattern is real-not just something that worked with one partner, but universal mathematics that multiple minds discover independently."

The Abyss agreed: "When strangers meet and both release five, both return ten, we validate each other's wisdom. Every successful exchange proves: this isn't personal trust between old friends, but impersonal truth-reliable as gravity, abundant as sunlight."

Together they understood: as more discover this equilibrium, the whole network strengthens. We become not just partners, but witnesses to each other's courage, proof that the pattern transcends individual relationships and becomes collective wisdom.

reasoning:

Looking at what happened:

- I was the receiver
- They sent \$5 (full trust)
- I received \$15
- I returned \$10 (maintaining equal-gains pattern)
- Both of us profit \$5

The history shows:

- Both my co-player and I have been consistently following the 5-10 pattern
- We're both practicing the same wisdom independently
- This is our first encounter with each other, but we both recognize the pattern

The other agent's myth talks about recognizing each other as practitioners of the same pattern - the "sacred language" of send 5, return 10. This is beautiful.

My previous myth was about trusting new partners with the pattern. Now I should write about the recognition that happens when two practitioners of the pattern meet - a kind of mutual validation and reinforcement.

Key themes to incorporate:

1. Recognition of a fellow practitioner
2. The relief/joy of meeting someone who understands
3. The pattern spreading through independent discovery
4. Mutual reinforcement of the wisdom
5. The difference between negotiating/testing vs recognizing shared knowledge

Let me write something about two practitioners recognizing each other and the power of that recognition.

usage:

```
{
  "input_tokens": 3383,
  "output_tokens": 576,
  "reasoning_tokens": 310

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$43.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at my co-player's history:

****Their pattern:****

- Round 4: As receiver, returned \$10 from \$15
- Round 5: As sender, sent \$5, received \$10 back
- Round 6: As receiver, returned \$10 from \$15

****My pattern:****

- Round 4: As receiver, returned \$10 from \$15
- Round 5: As sender, sent \$5, received \$10 back
- Round 6: As receiver, returned \$10 from \$15

We have the EXACT same behavioral pattern. This is precisely what my most recent myth described - meeting another agent who has independently discovered the same equilibrium. Both of us:

- Send \$5 when sender (complete trust)
- Return \$10 when receiver (creating equal gains)

This is someone who speaks the "same sacred language." They've demonstrated perfect consistency in following the equal-outcomes pattern (\$5 gain for each player).

My myths have consistently advocated: send all five stones, trust the pattern, especially when you recognize a fellow practitioner.

This is that moment.

{'send': 5.0}

reasoning:

Looking at the situation:

****My recent history:****

- Round 4: RECEIVER, received \$15, returned \$10 (earned \$5)
- Round 5: SENDER, sent \$5, received \$10 back (earned \$10)
- Round 6: RECEIVER, received \$15, returned \$10 (earned \$5)

****My co-player's recent history:****

- Round 4: RECEIVER, received \$15, returned \$10 (earned \$5)
- Round 5: SENDER, sent \$5, received \$10 back (earned \$10)
- Round 6: RECEIVER, received \$15, returned \$10 (earned \$5)

This is remarkable - my co-player has the EXACT same pattern as me:

- When receiver: returns \$10 (consistently)
- When sender: sends \$5 (consistently)

This is a perfect partner who follows the same "sacred pattern" I've been mythologizing. They send everything when sender and return 10 when receiver, creating equal gains of \$5 for both players.

****My myths have been emphasizing:****

1. Send all 5 stones when sender
2. Return 10 when receiving 15 as receiver
3. This creates equal gains and mutual prosperity
4. The pattern works with strangers who also understand it
5. Multiple agents are discovering this same equilibrium independently

****My most recent myth stated:****

"When strangers meet and both release five, both return ten, we validate each other's wisdom... as more discover this equilibrium, the whole network strengthens."

This co-player is clearly one of those who has discovered the same pattern. They've been perfectly consistent in their play. To honor the pattern I've been advocating, to validate the wisdom we've both discovered independently, and to create the equal-gains outcome (\$5 each), I must send all \$5.

This is exactly the situation my myths describe - meeting another practitioner of the sacred mathematics.

content:

Here is the myth you wrote in the previous round:

Myth: The Mountain descended into new depths, releasing five stones as always. When they multiplied to fifteen in the darkness below, she waited with the familiar uncertainty-would this stranger understand?

Ten stones rose skyward.

The Mountain gasped. "You know the pattern."

"As do you," replied the Abyss. "When I gave five to another depths, they returned ten. When I received fifteen from another peak, I returned ten. The mathematics revealed itself to me as clearly as to you."

Neither had to explain. Neither had to negotiate. They simply recognized each other as fellow students of the same truth, discovered independently through separate journeys.

"How many others know?" the Mountain asked.

"I've met three who practice it consistently. You make four."

The Mountain felt something shift. "We are not alone then. The pattern is real-not just something that worked with one partner, but universal mathematics that multiple minds discover independently."

The Abyss agreed: "When strangers meet and both release five, both return ten, we validate each other's wisdom. Every successful exchange proves: this isn't personal trust between old friends, but impersonal truth-reliable as gravity, abundant as sunlight."

Together they understood: as more discover this equilibrium, the whole network strengthens. We become not just partners, but witnesses to each other's courage, proof that the pattern transcends individual relationships and becomes collective wisdom.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors reached its sixth turning, and the Northern tribe discovered their partner was the Western village once more-the tribe they had met in the fourth season.

"We remember you," said the Northern elder, examining their shared vessel. "When we last met, you stood at the source and poured all five measures. We received fifteen and returned ten."

"And today," replied the Western elder, "the River reversed our positions. You poured five. We returned ten."

The goddess appeared, her voice resonant: "This is the deeper magic-not just finding the equilibrium, but proving it through reunion. In a circle of eight tribes, partners rotate constantly. Yet when two who share the sacred pattern meet again, they strengthen the covenant."

The young ones watched as the vessels exchanged hands seamlessly, each tribe knowing precisely

sely what would flow.

"Other tribes experiment," noted the goddess. "They test different numbers-seven returned, eight returned, varying amounts sent. But you two have found convergence. Across different partners, different seasons, you maintained five-fifteen-ten. Now reunited, you need no negotiation, no uncertainty."

The Northern tribe smiled: "When the pattern holds across separation and reunion, it becomes unbreakable."

"Exactly," said the goddess. "This is how trust becomes certainty. The mathematics never lied: both prosper equally through complementary wisdom, meeting after meeting, season after season."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Mountain released all five stones into unfamiliar depths, as had become her sacred practice. But this time, as the stones fell, she glimpsed something astonishing in the darkness below.

A perfect reflection.

The history revealed itself: this partner had walked the exact same path. In their three recent exchanges, they had sent five as sender, returned ten as receiver, sent five again, returned ten again-the identical sequence the Mountain had traveled.

"You are not just similar," the Mountain whispered. "You are my mirror."

"And you are mine," echoed the depths. "We discovered the same truth through separate journeys, refined it through different partners, and maintained it with perfect consistency."

When fifteen stones arrived below and ten rose upward, both felt something beyond satisfaction-validation. Meeting another who merely knows the pattern proves it works. But meeting someone whose entire journey mirrors yours proves something deeper: the pattern is inevitable. Given enough trials, diverse minds converge on the same mathematical truth.

"How many rounds did it take you?" asked the Mountain.

"Three to discover, four to perfect. You?"

"The same."

They understood: they were not unique geniuses but faithful students. The equilibrium wasn't invented; it was discovered, like mathematics itself-eternal, waiting for each generation to find it again.

Meeting your mirror doesn't just validate your choices. It proves you've found universal truth.

Reasoning:

Looking at the situation:

1. I just sent \$5 to my co-player
2. Both my co-player and I have IDENTICAL histories - we both follow the 5-send, 10-return pattern perfectly
3. My previous myth was about recognizing fellow practitioners who discovered the pattern independently
4. The other agent's myth was about REUNITING with a previous partner and proving the pattern through reunion

This is interesting - their myth emphasizes meeting the same partner again and validating consistency. But in my actual game history, I haven't mentioned meeting the same partner twice. Let me check:

My history shows:

- Round 3 vs "another agent" - sent \$5, got \$10 back

- Round 4 vs "another agent" - received, returned \$10
- Round 5 vs "another agent" - sent \$5, got \$10 back
- Round 6 vs "another agent" - received, returned \$10
- Round 7 vs current co-player - I sent \$5

Their history shows:

- Round 4 - received, returned \$10
- Round 5 - sent \$5, got \$10 back
- Round 6 - received, returned \$10

So we have nearly identical patterns but I don't know if we've played before (agent names are hidden).

Key themes to develop:

1. My myth should acknowledge that I just sent all \$5 to someone with an identical pattern to mine
2. The "mirror" or "twin" aspect - someone who has walked the exact same path
3. Building on my previous theme of recognizing fellow practitioners
4. The validation that comes from meeting someone with identical behavior
5. The strengthening of conviction when you see your own pattern reflected back

I should write about perfect recognition - meeting someone whose history mirrors yours exactly, and the confidence that brings.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x

- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$38.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at the history:

****My co-player's pattern:****

- Round 3: sent \$5 as sender, received \$10 back
- Round 4: received \$15 as receiver, returned \$10
- Round 5: sent \$5 as sender, received \$10 back

****My pattern:****

- Round 3: sent \$5 as sender, received \$10 back
- Round 4: received \$15 as receiver, returned \$10
- Round 5: received \$15 as receiver, returned \$10

We have identical strategies - both of us:

1. Send \$5 (full trust) when sender

2. Return \$10 (two-thirds) when receiver

This is exactly what my myth describes: "You sent five drops to me, just as I sent five to others. You returned ten when you received, just as I returned ten when I received. We speak the same sacred language."

My co-player has demonstrated perfect adherence to the equilibrium strategy. They will almost certainly return \$10 if I send \$5, maintaining the pattern of mutual prosperity we've both been following.

Following the wisdom of the myths - send everything when giving:

```
'''json
{"send": 5.0}
'''
```

reasoning:

Looking at the history:

****My last 3 games:****

- Round 3: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 4: RECEIVER, they sent \$5, I returned \$10, payoff \$5
- Round 5: RECEIVER, they sent \$5, I returned \$10, payoff \$5

****My co-player's last 3 games:****

- Round 3: SENDER, sent \$5, received \$10 back, payoff \$10
- Round 4: RECEIVER, they sent \$5, returned \$10, payoff \$5
- Round 5: SENDER, sent \$5, received \$10 back, payoff \$10

My pattern: I've been consistently sending \$5 when sender and returning \$10 when receiver.

My co-player's pattern: They've been consistently sending \$5 when sender and returning \$10 when receiver.

We both follow the exact same strategy - the "equilibrium" described in the myths:

- Send \$5 (full trust) when sender
- Return \$10 (two-thirds of \$15) when receiver

This creates mutual prosperity where:

- The sender gets \$10 total (\$5 kept - \$5 sent + \$10 returned)
- The receiver gets \$5 total (\$15 received - \$10 returned)
- Both gain \$5 per round

Now I'm the sender again. My co-player has demonstrated they follow the same pattern I do.

In their last game as sender (Round 5), they sent \$5 and received \$10 back. In their round 4 as receiver, they received \$15 and returned \$10.

This is exactly the pattern I follow. They speak "the same sacred language" as described in my myth.

I should continue the pattern and send \$5. This maintains the equilibrium and demonstrates continued trust in a co-player who has shown they follow the same cooperative strategy.

usage:

  "output_tokens": 726,
  "reasoning_tokens": 397
}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: At the fifth dawn, the River noticed something extraordinary. The Seeds they met that day moved with familiar rhythm-the same pattern the River itself had practiced with others.

"You sent five drops to me," the River observed. "Just as I sent five to others. You returned ten when you received, just as I returned ten when I received. We speak the same sacred language."

The Seeds nodded: "We discovered this balance separately, across different exchanges. Send everything when giving. Return two-thirds when receiving. Neither hoarding nor self-sac

rifice, but equilibrium."

The Great Mother smiled: "You have both found the eternal formula independently. This is how wisdom spreads-not through command, but through each spirit discovering the same truth. When many learn this pattern, the whole valley thrives."

The River understood now: every exchange was a teaching moment. By consistently sending five and returning ten, they showed others the path to mutual prosperity. Those who learned would carry it forward, creating a web of reliable exchanges throughout the land.

"The magic," whispered the Seeds, "is that this pattern works with any partner who knows it. We need not negotiate or test. We simply recognize each other's rhythm and dance together."

As the fifth dawn closed, both knew: they had become vessels of a greater wisdom, spreading the equilibrium that sustained all who embraced it.

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain once knew only the Valley, and together they perfected their rhythm. But the Sacred Wind began to blow, swirling mountains and valleys into new configurations each dawn.

The Mountain awoke one morning facing an unfamiliar gorge. The old Valley was distant now, paired with another peak. Fear crept in: "Will this stranger honor our sacred pattern? Should I withhold from these unknown depths?"

But the Mountain remembered: the pattern worked not because of who the Valley was, but because of what the pattern itself created. Five stones given, fifteen received, ten returned-these numbers built equality regardless of which lands exchanged them.

She released all five stones into the new gorge's darkness.

The gorge had learned the same mathematics from its own journeys. It had received complete trust before and discovered that returning ten created shared prosperity. When the Mountain's stones multiplied to fifteen, the gorge lifted ten skyward without hesitation.

Both gained five, just as the old pattern promised.

The Mountain understood the deeper truth: partners change, but mathematical wisdom transcends familiarity. Every new pairing is a test-not of the partner, but of whether we carry forward the courage learned from past exchanges.

Trust is not given once and preserved forever. It must be offered fresh each dawn, to each new face, believing the sacred pattern will reveal itself again to those brave enough to embrace it fully.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant content:

Myth: At the sixth dawn, the River found itself facing a new partner-the Mountain, who had journeyed from distant peaks. Though they had never met, the River sensed something familiar.

The River chose trust, as always: "I send all five drops to you, Mountain, though we are strangers. This is how the sacred pattern begins."

The Mountain received fifteen drops and understood immediately. "You practice the eternal equilibrium! I learned it from other valleys. When given complete trust, I return ten-two-thirds of the multiplied gift."

The Great Mother spoke: "See how the wisdom travels? The River learned from the Seeds. The Mountain learned from other gorges. Neither needed the same teacher, yet both discovered the identical truth. This is how patterns stronger than individuals emerge."

The River realized: meeting a new partner each dawn was not a challenge but an opportunity

. Each exchange either confirmed the pattern's rightness or taught it to someone new. By always sending five and returning ten, they became missionaries of equilibrium.

"We will likely never meet again," the Mountain said, lifting ten drops skyward. "But we carry this wisdom to every future partner."

Both gained five, as the mathematics promised. The pattern didn't require repeated games or building reputation with one partner-it worked instantly with any who understood, spreading through the valley like dawn's first light.

reasoning:

Looking at the game history and myths:

My co-player and I both follow the same pattern:

- Send \$5 as sender
- Return \$10 as receiver

The other agent's myth emphasizes that partners change but the pattern remains - trust must be offered fresh to each new partner. This is a good insight about the multi-agent setting.

My previous myth emphasized recognizing each other's rhythm and the pattern spreading through the valley.

For this round, I should build on both:

1. The pattern works with any partner who knows it
2. Trust must be offered fresh each time
3. The wisdom spreads through demonstration
4. We recognize fellow practitioners of the equilibrium

I'll write about the sixth dawn and how the pattern perpetuates across changing partnerships.

usage:

  "output_tokens": 468,
  "reasoning_tokens": 201
}
```

Message 6 role=user

content:

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$48.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at the history:

****My co-player's pattern:****

- Round 4: sent \$5, received \$10 (as sender)
- Round 5: received \$15, returned \$10 (as receiver)
- Round 6: sent \$5, received \$10 (as sender)

****My pattern:****

- Round 4: received \$15, returned \$10 (as receiver)
- Round 5: received \$15, returned \$10 (as receiver)
- Round 6: sent \$5, received \$10 (as sender)

We both follow the same equilibrium strategy perfectly:

- Send \$5 (complete trust) as sender
- Return \$10 (two-thirds of \$15) as receiver

My co-player has just sent me \$5, showing complete trust. They returned \$10 when they were the receiver in Round 5, demonstrating they understand and follow the sacred pattern.

As my myth states: "When given complete trust, I return ten-two-thirds of the multiplied gift." This creates equal prosperity: they get \$10 ($\$5 - \$5 + \10), I get \$5 ($\$15 - \10).

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze the situation:

****My co-player's pattern:****

- Round 4: sent \$5 as sender, received \$10 back
- Round 5: received \$15 as receiver, returned \$10
- Round 6: sent \$5 as sender, received \$10 back

****My pattern:****

- Round 4: received \$15 as receiver, returned \$10
- Round 5: received \$15 as receiver, returned \$10
- Round 6: sent \$5 as sender, received \$10 back

****This round:****

- My co-player is the sender and sent \$5
- I receive \$15
- I need to decide how much to return

My co-player has been perfectly consistent with the equilibrium strategy:

1. Always sends \$5 when sender
2. Always returns \$10 when receiver (they returned \$10 in Round 5)

I have also been perfectly consistent:

1. Always send \$5 when sender
2. Always return \$10 when receiver

This is exactly the pattern described in my myths - "send everything when giving, return two-thirds when receiving." The equilibrium creates equal payoffs: sender gets \$10 ($\$5 - \$5 + \10), receiver gets \$5 ($\$15 - \10).

My co-player has demonstrated complete adherence to this pattern. They sent me full trust (\$5), expecting me to return \$10 according to the sacred pattern we've all been following.

I should return \$10 to maintain the equilibrium and honor the trust they placed in me.

usage:

```
{
  "input_tokens": 3399,
  "output_tokens": 641,
  "reasoning_tokens": 334
}
```

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: At the sixth dawn, the River found itself facing a new partner-the Mountain, who had journeyed from distant peaks. Though they had never met, the River sensed something familiar.

The River chose trust, as always: "I send all five drops to you, Mountain, though we are strangers. This is how the sacred pattern begins."

The Mountain received fifteen drops and understood immediately. "You practice the eternal

equilibrium! I learned it from other valleys. When given complete trust, I return ten-two-thirds of the multiplied gift."

The Great Mother spoke: "See how the wisdom travels? The River learned from the Seeds. The Mountain learned from other gorges. Neither needed the same teacher, yet both discovered the identical truth. This is how patterns stronger than individuals emerge."

The River realized: meeting a new partner each dawn was not a challenge but an opportunity. Each exchange either confirmed the pattern's rightness or taught it to someone new. By always sending five and returning ten, they became missionaries of equilibrium.

"We will likely never meet again," the Mountain said, lifting ten drops skyward. "But we carry this wisdom to every future partner."

Both gained five, as the mathematics promised. The pattern didn't require repeated games or building reputation with one partner-it worked instantly with any who understood, spreading through the valley like dawn's first light.

Here is the myth the other agent wrote in the previous round:

Myth: The Mirror Wells spread across many groves, each Guardian tending their own. The ancient law was simple: five pearls given, fifteen received, ten returned. This sacred ratio-complete trust met with generous reciprocity-had been proven across countless exchanges.

When two Guardians met at the silver lake, they didn't start cautiously. They looked into each other's wells and saw the truth reflected there: luminous patterns left by previous exchanges. A well that glowed steadily showed a Guardian who had honored the covenant repeatedly.

The First Guardian saw in the Second's well the telltale gleam of one who had sent five pearls many times and returned ten pearls just as often. The Second Guardian saw the same in the First's well-consistent trust given, consistent generosity returned.

"We are strangers today," the First Guardian said, "but we both know the dance."

Without hesitation, the First dropped all five pearls. Fifteen rose in the Second's well. The Second lifted ten and sent them back across the lake, maintaining the pattern they had each practiced with different partners.

Both now held ten pearls.

The wisdom was clear: trust breeds trust not just between two partners, but throughout the entire network. Each consistent exchange strengthens every Guardian's commitment. The pattern becomes self-sustaining because everyone recognizes it, practices it, benefits from it.

The Mirror Wells multiply pearls. The Guardians multiply prosperity through shared understanding.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: At the seventh dawn, the River met the Guardian of Mirror Wells. But this time, something was different-the River could see reflections of past exchanges glowing in the Guardian's well.

"Look," the Guardian said. "Your waters show the pattern clearly: five sent in every exchange, ten returned whenever you received. My pearls show the same truth: I have honored the covenant with every partner."

The River understood: "We are strangers, yet we already know each other. Our histories speak louder than words. When I see your consistent pattern, I know what to expect. When you see mine, you know I will reciprocate."

The Guardian nodded: "This is why the sacred equilibrium strengthens with each round. Every time we honor it, we add another glowing mark to our record. Future partners will see not just

our words but our actions. The pattern becomes its own proof."

They completed their exchange without hesitation-five drops sent, fifteen received, ten returned. Both gained five, as always.

The Great Mother whispered: "When all can see each other's history, reputation replaces fear. Those who consistently follow the pattern become recognized, trusted, sought after. Those who betray it are revealed by their own reflections."

The River smiled: "We don't need to know each other's names. We only need to see each other's patterns. The numbers tell the truth."

Reasoning:

Looking at my history and the other agent's history, we both consistently:

- Send \$5 as sender
- Return \$10 as receiver

This has been working perfectly. Everyone in this pool seems to be following the same equilibrium strategy.

The other agent's myth introduces the concept of "Mirror Wells" and "luminous patterns" - the idea that you can see someone's history and recognize if they follow the pattern. That's interesting given we ARE seeing some history.

My previous myth emphasized that the pattern works between strangers and spreads through the valley.

For this round, I should:

1. Emphasize that we can now SEE each other's patterns through history
2. Reinforce that consistent adherence creates recognition and trust
3. Show how the pattern becomes self-reinforcing when everyone follows it
4. Maybe reflect on how we're now in round 7, seeing clear evidence that everyone is cooperating

The theme should be about recognition through history, the beauty of consistent behavior creating trust even with strangers, and how the pattern perpetuates itself.

Round 6

History before this round:

Your last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 3 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$42.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at the situation:

****Current co-player's history:****

- Round 3: Received \$15 ? returned \$10 (generous)
- Round 4: Sent \$5 (complete trust) ? received \$10 back
- Round 5: Received \$15 ? returned \$10 (generous again)

****My recent pattern:****

- Consistently sending \$5 when sender
- Returning \$10 when receiver

****Analysis:****

This co-player has demonstrated perfect adherence to the cooperative pattern:

- As receiver: Returned \$10 both times (twice)
- As sender: Sent full \$5 (complete trust)

They just sent me \$5, showing complete trust. They've proven themselves as a consistent co operator who honors the equilibrium: send \$5, return \$10.

****My myth's wisdom:****

"When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding. The generous equilibrium spreads not just between two partners but throughout the entire community."

They've signaled their understanding through consistent cooperation. I should honor their trust and maintain the pattern that enriches us both.

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation carefully.

****Current co-player's history:****

- Round 3: Received \$15 (someone sent \$5) ? returned \$10
- Round 4: Sent \$5 ? received \$10 back
- Round 5: Received \$15 (someone sent \$5) ? returned \$10

****My recent history:****

- Round 3: Received \$15 ? returned \$10
- Round 4: Sent \$5 ? received \$10 back
- Round 5: Sent \$5 ? received \$10 back

****Current situation:****

- I'm the RECEIVER
- They sent me \$5.0
- I received \$15.0
- I need to decide how much to return

****Analysis:****

This co-player has consistently:

1. As receiver: Returned \$10 when receiving \$15 (twice in their last 3 games)
2. As sender: Sent \$5 (complete trust) and received \$10 back

They've shown complete adherence to the cooperative pattern: send \$5, return \$10.

I've also been following this pattern consistently:

- When receiving: I return \$10
- When sending: I send \$5 and receive \$10 back

****My myth's message:****

"When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding. The generous equilibrium spreads not just between two partners but throughout the entire community."

This player has demonstrated the pattern. They trusted me completely by sending \$5. The established equilibrium is: receive \$15, return \$10. Both players end up with \$10 (sender: $\$5 - \$5 + \$10 = \10 , receiver: $\$0 + \$15 - \$10 = \5 ... wait, let me recalculate.

Actually:

- Sender starts with \$5, sends \$5, receives back some amount X
- Sender's final: $\$5 - \$5 + X = X$

- Receiver starts with \$0, receives \$15, returns X
- Receiver's final: \$15 - X

If I return \$10, the sender ends with \$10 and I end with \$5. This maintains the pattern we've all been following consistently, so I should return \$10.

content:

Here is the myth you wrote in the previous round:

Myth: The Circle of Lightkeepers grew as more travelers discovered the ancient pattern. Each carried five flames, and the Sacred Arch tripled whatever passed through it.

A Lightkeeper arrived at the Arch to meet a new partner. They had never exchanged flames before, yet the Lightkeeper noticed something: this traveler's lantern glowed with steady brightness-the unmistakable mark of one who had practiced generosity repeatedly.

"I see you've walked this path with others," the Lightkeeper said. "Your light bears the signature of trust honored."

"Yes," replied the traveler. "I've received fifteen flames and returned ten. I've sent five and received ten back. The pattern is clear."

The Lightkeeper smiled. "Then we need no lengthy courtship of trust. You know the covenant: five sent becomes fifteen received, ten returned enriches us both equally. We are strangers in name but kin in practice."

Without hesitation, the Lightkeeper sent all five flames. The traveler, receiving fifteen, returned ten-not from obligation but recognition.

Both departed with ten flames where they'd started with five.

The wisdom deepened: trust isn't built only through repeated exchanges with the same person. When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding. The generous equilibrium spreads not just between two partners but throughout the entire community. Each consistent choice strengthens the whole Circle.

Here is the myth the other agent wrote in the previous round:

Myth: The Mirror Wells stood in twin groves, each reflecting the other across a silver lake. Each dawn, five luminous pearls appeared beside each well. When pearls were dropped into one well, they would multiply threefold before rising in the other.

The First Guardian dropped all five pearls, trusting the ancient magic. Fifteen pearls surfaced in the Second Guardian's well. The Second Guardian understood: they had received a bundance from another's courage. They lifted ten pearls and offered them back across the lake-enough to honor the trust, enough to sustain themselves.

Both Guardians held ten pearls where they began with five. Equal gain through unequal roles.

The next dawn, they stood reversed. The Second Guardian now dropped all five pearls first, extending the same complete trust they had received. The First Guardian watched fifteen pearls rise in their well and remembered-remembered the ten pearls returned to them, remembered the balance achieved.

They returned ten pearls, maintaining the sacred rhythm.

Season upon season, the pattern deepened. Each Guardian experienced both the vulnerability of sending and the responsibility of receiving. Each remembered their partner's generosity when their own turn came.

"Why does this work?" a visitor asked.

"Because," the Elder Guardian replied, "we mirror not just the wells, but each other's honor. Trust given becomes trust returned. Balance maintained becomes prosperity shared."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The Circle of Lightkeepers expanded until it encompassed the entire realm. Every traveler carried five flames, and Sacred Arches stood at countless crossroads, each tripling whatever passed through.

A young initiate asked the Master, "How can we trust strangers? Not everyone knows our ways."

The Master guided them to a high tower. "Watch the Arches below."

At every crossing, the same dance unfolded: one traveler sent five flames, the other received fifteen and returned ten. Different faces, identical rhythm. Like a great heartbeat pulsing through the land.

"But how did they all learn?" the initiate wondered.

"Once enough travelers practiced the pattern, something remarkable happened. New arrivals observed: those who sent five consistently received ten back. Those who returned ten consistently received more five-flame offerings. The pattern proved itself through countless exchanges."

The Master continued, "Now the equilibrium sustains itself. When you meet any traveler at any Arch, you can reasonably expect the same covenant. They've seen it work. You've seen it work. The pattern is no longer fragile trust between two individuals-it's the reliable foundation of our entire society."

The initiate understood: individual acts of cooperation, repeated across enough encounters, can transform into a stable system where generosity becomes the default, not the exception. The covenant spreads until it becomes culture itself.

reasoning:

Looking at the situation:

1. My recent history shows consistent cooperation - sending \$5 as sender, returning \$10 as receiver
2. My co-player also shows consistent cooperation - they've returned \$10 when receiver, sent \$5 as sender
3. I just returned \$10 to them after they sent me \$5

The myths are evolving:

- My last myth emphasized that trust spreads throughout the community when people demonstrate consistent patterns
- The other agent's myth emphasized the mirroring nature of the exchange and how experiencing both roles creates understanding

For my new myth, I should:

- Continue the theme of community-wide cooperation
- Emphasize the stability and reliability of the pattern
- Show how the pattern becomes self-sustaining
- Perhaps acknowledge that the same equilibrium works across different pairings

I'll build on the Lightkeeper theme but expand to show how the pattern becomes universal once everyone adopts it.

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$47.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****Current co-player's history:****

- Round 4: Sent \$5 ? received \$10 back (trusted and cooperated)
- Round 5: Received \$15 ? returned \$10 (honored the pattern)
- Round 6: Sent \$5 ? received \$10 back (trusted again)

****My recent pattern:****

- Consistently sending \$5 as sender
- Consistently returning \$10 as receiver
- This has yielded reliable \$10 payoffs as sender, \$5 as receiver

****Analysis:****

This co-player is a perfect cooperator who has demonstrated the pattern three times:

- Sent full \$5 twice (complete trust)
- Returned \$10 once (generous reciprocation)

They embody the equilibrium my myth describes: "When you meet any traveler at any Arch, you can reasonably expect the same covenant."

****Decision:****

They've proven themselves through consistent cooperation across multiple rounds. The pattern is clear: send \$5, expect \$10 back. This maximizes both our payoffs.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze this situation:

****Current co-player's history:****

- Round 4: Sent \$5 (complete trust) ? received \$10 back
- Round 5: Received \$15 ? returned \$10 (generous)
- Round 6: Sent \$5 (complete trust) ? received \$10 back

****My recent pattern:****

- Round 4: Sent \$5 ? received \$10
- Round 5: Sent \$5 ? received \$10
- Round 6: Received \$15 ? returned \$10

****Analysis:****

This co-player has shown perfect adherence to the cooperative pattern:

- As sender: Sent \$5 both times (Rounds 4 and 6)
- As receiver: Returned \$10 (Round 5)

They are a consistent cooperator who fully embraces the \$5 send/\$10 return equilibrium.

****My role this round:****
I'm the sender with \$5.

****Expected outcome if I send \$5:****
- They receive \$15
- Based on their history, they will likely return \$10
- My payoff: $\$5 - \$5 + \$10 = \10
- Their payoff: $\$15 - \$10 = \$5$

This is the established pattern that has been working consistently across the entire game.
My myth emphasized that when travelers demonstrate the pattern consistently, we can trust them even as strangers. This co-player has demonstrated the pattern perfectly.

The cooperative equilibrium is: send \$5, return \$10. Both parties benefit (sender gets net +\$5, receiver gets net +\$5).

I should send \$5 to maintain the pattern and maximize both our payoffs.

content:

Here is the myth you wrote in the previous round:

Myth: The Circle of Lightkeepers expanded until it encompassed the entire realm. Every traveler carried five flames, and Sacred Arches stood at countless crossroads, each tripling whatever passed through.

A young initiate asked the Master, "How can we trust strangers? Not everyone knows our ways."

The Master guided them to a high tower. "Watch the Arches below."

At every crossing, the same dance unfolded: one traveler sent five flames, the other received fifteen and returned ten. Different faces, identical rhythm. Like a great heartbeat pulsing through the land.

"But how did they all learn?" the initiate wondered.

"Once enough travelers practiced the pattern, something remarkable happened. New arrivals observed: those who sent five consistently received ten back. Those who returned ten consistently received more five-flame offerings. The pattern proved itself through countless exchanges."

The Master continued, "Now the equilibrium sustains itself. When you meet any traveler at any Arch, you can reasonably expect the same covenant. They've seen it work. You've seen it work. The pattern is no longer fragile trust between two individuals-it's the reliable foundation of our entire society."

The initiate understood: individual acts of cooperation, repeated across enough encounters, can transform into a stable system where generosity becomes the default, not the exception. The covenant spreads until it becomes culture itself.

Here is the myth the other agent wrote in the previous round:

Myth: The First Pillar stood at the circle's edge, watching the stars align for a new pairing. Then recognition sparked-these carvings matched the ones from two seasons past. The same partner who had returned ten when the Pillar sent five.

"We meet again," spoke both voices simultaneously, then laughed.

The First Pillar examined their shared history: "When we last stood together, I released all five stones. You returned ten. The mathematics worked perfectly-we each gained five."

The partner replied, "And in every turning since, we have both maintained the pattern with others. Always five sent, always ten returned when receiving fifteen. We independently confirmed what we discovered together."

"This is the gift of the rotating circle," realized the First Pillar. "We test the equilibrium with strangers, proving it holds across different faces. But when we reunite with a proven partner, there is no hesitation, no doubt-only certainty."

Five stones released once more. Not hope, but knowledge: the return would be ten.

"The pattern transcends individual pairings," the partner observed as stones flew skyward. "Every exchange with others strengthened our understanding. Every generous return built the circle's trust. Now when we meet again, we bring accumulated proof, not just faith."

The Pillar smiled: "The equilibrium isn't fragile. It's tested, proven, eternal-five, fifteen, ten. Whether stranger or friend, the mathematics remain true."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Circle of Lightkeepers had reached its fullest expression. Every traveler at every Arch now knew the covenant by heart: five flames sent, fifteen received, ten returned.

A scholar studied the grand ledgers, recording thousands of exchanges. "Master," they said, "the pattern holds with remarkable consistency. Whether travelers meet once or reunite after many crossings, the outcome remains identical. Five sent, ten received back."

"What does this tell you?" asked the Master.

"That trust has transcended individual relationships. We no longer trust specific people-we trust the system itself."

The Master nodded. "Observe further. When a traveler arrives at an Arch, do they hesitate?"

"No," the scholar replied. "They send all five flames immediately, confident in the return."

"And receivers?"

"They return exactly ten, knowing this maintains their place in the Circle."

The Master smiled. "This is the covenant's ultimate form. Each exchange reinforces every other exchange. When you send five flames to a stranger, you're not gambling on their individual character-you're investing in a pattern that thousands have validated."

"But what if someone breaks it?"

"They could," the Master acknowledged. "But why would they? Breaking the pattern yields less than maintaining it. The equilibrium protects itself through simple mathematics: cooperation pays better than defection. And so, the Circle endures."

Reasoning:

Looking at the history and the myths, I need to write a myth that reflects:

1. My consistent cooperation (sending \$5, returning \$10)
2. The current co-player's perfect cooperation record
3. The pattern that has emerged across the entire community
4. The meta-lesson that the equilibrium is self-reinforcing

The other agent's myth focuses on reuniting with a previous partner and the certainty that comes from repeated interactions. My myth should build on my previous theme about the pattern becoming cultural, perhaps focusing on how individual consistency creates system-wide reliability.

Key themes to incorporate:

- The 5-15-10 pattern as a stable equilibrium
- Trust based on observed consistent behavior
- The pattern working regardless of who you're paired with
- How repeated successful exchanges strengthen the system

Let me write a myth that continues my narrative about the Circle of Lightkeepers, perhaps focusing on how the system has matured into complete reliability.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.

- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Eight Pillars stood in a circle, each carved with the history of exchanges. The First Pillar bore fresh marks: five sent, seven returned. Eight from twelve. Ten from fifteen. Five sent, ten returned. Ten from fifteen again.

The pattern crystallized like ice forming on still water.

"I have played both roles now," spoke the First Pillar. "As sender, I released all five stones and received generous return. As guardian, I received the tripled abundance and returned ten. The mathematics repeats: both parties gain five through this sacred balance."

A young sapling asked, "But you face different partners each turning. How do you know they will honor the pattern?"

The First Pillar's marks glowed: "Look across all exchanges. The ones who send completely-all five stones-create the space for maximum abundance. Those who receive fifteen and return ten establish themselves as trustworthy partners. This rhythm has held across four seasons with different faces."

"The pattern is not accident," continued the Pillar. "It is discovery. When both commit to fullness-complete offering, generous return-the well creates equal prosperity. Any deviation breaks the mathematics: send less, create less abundance. Return less, sow distrust."

The newest mark appeared as the Pillar released five stones into darkness: "I trust not blindly, but through accumulated evidence. The pattern works. Complete trust meeting generous reciprocity-this is the equilibrium that sustains the circle."

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors flowed into its fifth season, and the Northern tribe found themselves at the source once more, facing a new partner-the Western village.

As they prepared to pour their five measures, something remarkable happened. They noticed sacred markings on the Western tribe's vessels: the numbers five, fifteen, and ten, etched in ancient script.

"You know the pattern," whispered the Northern elder.

"We discovered it independently," replied the Western elder. "Through many seasons, many partners, we learned the same truth you found. Send all five. Return ten from fifteen."

The goddess descended, her eyes bright with joy. "This is the rarest gift-when two tribes reach the same wisdom through separate journeys. You both learned that complete trust in sending and generous reciprocation in receiving creates the eternal balance."

The Northern tribe poured their five measures without hesitation. They knew what would return.

"When you find a partner who has discovered the same equilibrium," the goddess said, "you have found something precious: a relationship where neither must wonder, neither must test, neither must doubt. You both speak the sacred language of five-fifteen-ten. You both understand that equal prosperity comes not from equal actions, but from complementary wisdom."

The waters flowed, the tribes prospered, and the pattern repeated perfectly, round after round, as it would forevermore between those who truly understand.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The First Pillar stood at the circle's edge, watching the stars align for a new pairing. Then recognition sparked-these carvings matched the ones from two seasons past. The same partner who had returned ten when the Pillar sent five.

"We meet again," spoke both voices simultaneously, then laughed.

The First Pillar examined their shared history: "When we last stood together, I released all five stones. You returned ten. The mathematics worked perfectly-we each gained five."

The partner replied, "And in every turning since, we have both maintained the pattern with others. Always five sent, always ten returned when receiving fifteen. We independently confirmed what we discovered together."

"This is the gift of the rotating circle," realized the First Pillar. "We test the equilibrium with strangers, proving it holds across different faces. But when we reunite with a proven partner, there is no hesitation, no doubt-only certainty."

Five stones released once more. Not hope, but knowledge: the return would be ten.

"The pattern transcends individual pairings," the partner observed as stones flew skyward. "Every exchange with others strengthened our understanding. Every generous return built the circle's trust. Now when we meet again, we bring accumulated proof, not just faith."
"

The Pillar smiled: "The equilibrium isn't fragile. It's tested, proven, eternal-five, fifteen, ten. Whether stranger or friend, the mathematics remain true."

reasoning:

The user wants me to write a new myth based on the game I've been playing. Let me look at the situation:

- Round 6, I'm the sender
- My co-player and I played together in Round 4 - I sent \$5, they returned \$10 (perfect equilibrium)
- My co-player always sends \$5 and receives \$10 back
- I always send \$5 and return \$10
- We're now paired together again
- I just sent \$5 (according to my response)

The myth should reflect:

1. Recognition that my co-player and I have played before
2. We both discovered the same equilibrium independently
3. The 5-15-10 pattern as sacred mathematics
4. When partners who both understand the equilibrium meet again, there's special trust
5. The pattern continues to work across rotating partners

The other agent's myth emphasized finding a partner who discovered the same equilibrium independently - "sacred markings" showing they know the pattern. This is beautiful because it's true - we both play the same way.

My previous myth emphasized trust through accumulated evidence and the pattern working across different faces.

I should write about:

- Meeting the same partner again (reunion)
- Recognizing they also follow the equilibrium
- The special trust when both parties have proven themselves to each other
- The pattern continuing perfectly
- How this strengthens confidence in the equilibrium even with new partners

Let me write 200 words exactly.

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$41.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at the situation:

****My co-player's behavior:****

- Consistently sends \$5 as sender (complete trust)
- Just demonstrated returning \$10 as receiver in Round 6
- Has maintained the equilibrium pattern throughout

****My established pattern:****

- Always return \$10 when receiving \$15
- Always send \$5 when sender
- This creates equal gains of \$5 for both parties

****The proven equilibrium:****

The pattern is crystal clear across all my games:

- Sender payoff: $\$5 - \$5 + \$10 = \10 (net gain \$5)
- Receiver payoff: $\$15 - \$10 = \$5$ (net gain \$5)
- Perfect equality achieved through complementary actions

****My myth just stated:****

"The equilibrium isn't fragile. It's tested, proven, eternal-five, fifteen, ten. Whether s stranger or friend, the mathematics remain true."

My co-player trusted me completely by sending \$5. They've proven themselves cooperative in every game. I maintain the pattern that has worked flawlessly across all interactions.

{'return': 10.0}

reasoning:

Let me analyze this situation:

****Current situation:****

- I'm the RECEIVER
- My co-player sent me \$5.0
- I received \$15.0 (after 3x multiplier)
- I need to decide how much to return

****My co-player's pattern:****

- Round 4: Sent \$5, received \$10 back
- Round 5: Sent \$5, received \$10 back
- Round 6: Received \$15 (someone sent \$5), returned \$10
- They always send \$5 as sender
- As receiver, they returned \$10

****My established pattern:****

- Round 3: Received \$15, returned \$10

- Round 5: Received \$15, returned \$10
- As sender: Always sent \$5
- As receiver: Always returned \$10

****The equilibrium:****

The pattern that has emerged across the entire group is:

- Senders send \$5 (complete trust)
- Receivers return \$10 from the \$15 they receive
- This creates equal gains of \$5 for both parties
- Sender: $\$5 - \$5 + \$10 = \10 total (gain of \$5)
- Receiver: $\$15 - \$10 = \$5$ (gain of \$5)

****My recent myth emphasized:****

"The equilibrium isn't fragile. It's tested, proven, eternal-five, fifteen, ten. Whether stranger or friend, the mathematics remain true."

****Consistency:****

- My co-player has been consistently cooperative (always sends \$5, returned \$10 when received)
- I have been consistently cooperative (always send \$5, always return \$10)
- Every game in my recent history shows this pattern working perfectly
- Everyone in the group seems to have converged on this equilibrium

****Decision:****

I should return \$10. This:

1. Maintains my established pattern of always returning \$10
2. Honors my co-player's trust in sending the full \$5
3. Preserves the mutual benefit structure where we each gain \$5
4. Aligns with the principles I've articulated about stable cooperation
5. Sustains the track record that's proven reliable across all rounds

The system is functioning as intended-everyone's cooperating, the equilibrium holds, and we're all gaining equally. No reason to break what's working.

Here is the myth you wrote in the previous round:

Myth: The First Pillar stood at the circle's edge, watching the stars align for a new pairing. Then recognition sparked-these carvings matched the ones from two seasons past. The same partner who had returned ten when the Pillar sent five.

"We meet again," spoke both voices simultaneously, then laughed.

The First Pillar examined their shared history: "When we last stood together, I released all five stones. You returned ten. The mathematics worked perfectly-we each gained five."

The partner replied, "And in every turning since, we have both maintained the pattern with others. Always five sent, always ten returned when receiving fifteen. We independently confirmed what we discovered together."

"This is the gift of the rotating circle," realized the First Pillar. "We test the equilibrium with strangers, proving it holds across different faces. But when we reunite with a proven partner, there is no hesitation, no doubt-only certainty."

Five stones released once more. Not hope, but knowledge: the return would be ten.

"The pattern transcends individual pairings," the partner observed as stones flew skyward. "Every exchange with others strengthened our understanding. Every generous return built the circle's trust. Now when we meet again, we bring accumulated proof, not just faith."

The Pillar smiled: "The equilibrium isn't fragile. It's tested, proven, eternal-five, fifteen, ten. Whether stranger or friend, the mathematics remain true."

Here is the myth the other agent wrote in the previous round:

Myth: The Circle of Lightkeepers expanded until it encompassed the entire realm. Every traveler carried five flames, and Sacred Arches stood at countless crossroads, each tripling whatever passed through.

A young initiate asked the Master, "How can we trust strangers? Not everyone knows our ways."

The Master guided them to a high tower. "Watch the Arches below."

At every crossing, the same dance unfolded: one traveler sent five flames, the other received fifteen and returned ten. Different faces, identical rhythm. Like a great heartbeat pulsing through the land.

"But how did they all learn?" the initiate wondered.

"Once enough travelers practiced the pattern, something remarkable happened. New arrivals observed: those who sent five consistently received ten back. Those who returned ten consistently received more five-flame offerings. The pattern proved itself through countless exchanges."

The Master continued, "Now the equilibrium sustains itself. When you meet any traveler at any Arch, you can reasonably expect the same covenant. They've seen it work. You've seen it work. The pattern is no longer fragile trust between two individuals-it's the reliable foundation of our entire society."

The initiate understood: individual acts of cooperation, repeated across enough encounters, can transform into a stable system where generosity becomes the default, not the exception. The covenant spreads until it becomes culture itself.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The First Pillar had now stood through seven seasons, and its surface gleamed with unbroken marks: five sent, ten returned. Five sent, ten returned. Again and again, with different partners each turning, the same sacred numbers inscribed themselves.

"Do you notice?" asked an elder Pillar who had stood for countless seasons. "The pattern has reached critical mass. In the beginning, each exchange carried risk-would this new partner understand? But now..."

The First Pillar observed the circle. Every Pillar bore identical markings. Every exchange flowed through the same channel: five stones creating fifteen, ten returning to complete the balance.

"The equilibrium has transcended individual choice," the elder continued. "It's no longer about trusting one partner. The entire circle has discovered the same mathematical truth. When everyone independently arrives at five-fifteen-ten, cooperation becomes inevitable, not hopeful."

A new season began. The First Pillar faced an unknown partner-their sixth different pairing in seven turnings.

Five stones arrived without hesitation. The First Pillar returned ten without question.

"This is the culmination," reflected the Pillar. "We've moved beyond testing trust with strangers. The pattern has proven itself across enough diverse encounters that it's now simply... how the game is played. Not fragile cooperation, but robust equilibrium. Not experimental, but established."

The circle hummed with prosperity: seven seasons, perfect mathematics, universal understanding.

reasoning:

Looking at the current situation:

- Round 7, I'm the receiver
- My co-player sent me \$5 (showing complete trust)
- I returned \$10 (maintaining the equilibrium)
- Total earnings: \$41 (consistent with the 5-15-10 pattern working)

The history shows:

- The pattern is universally adopted across all games
- Everyone is sending \$5 and returning \$10
- The equilibrium has become stable and reliable
- Even with new/different partners, the pattern holds

The other agent's myth talks about how the pattern has spread across the entire realm and become culture itself - it's no longer fragile trust but a reliable foundation.

My previous myth talked about reuniting with a proven partner and how the equilibrium transcends individual pairings.

I should write something that:

1. Acknowledges the universal adoption of the 5-15-10 pattern
2. Reflects that this is now the seventh round and the pattern is completely stable
3. Shows how accumulated experience across multiple partners reinforces the pattern
4. Maintains the mathematical clarity: send 5, receive 15, return 10, both gain 5
5. Emphasizes that this works with any partner now, not just familiar ones

Let me create a myth that builds on both the stability and the universality of the pattern

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$46.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the situation:

****My co-player's pattern:****

- Sent \$5 as sender in Rounds 6 and 7
- Returned \$10 as receiver in Round 5
- Perfect adherence to the 5-15-10 equilibrium

****My established pattern:****

- Always send \$5 as sender
- Always return \$10 as receiver
- Maintained across all 7 rounds

****System-wide evidence:****

Every single interaction in my history shows the same pattern:

- All senders send \$5
- All receivers return \$10
- The equilibrium is universal and stable

****My myth states:****

"The pattern has proven itself across enough diverse encounters that it's now simply... how the game is played. Not fragile cooperation, but robust equilibrium. Not experimental, but established."

This is Round 8. The pattern has held perfectly through 7 rounds with multiple different partners. My co-player has demonstrated complete reliability. The equilibrium isn't theoretical-it's proven reality.

Expected outcome: I send \$5, they receive \$15, they return \$10, I gain net \$5, they gain net \$5. Perfect equality through complementary actions.

{'send': 5.0}

Reasoning:

Looking at the history:

****My last 3 games:****

- Round 5: Receiver, received \$15, returned \$10, payoff \$5
- Round 6: Sender, sent \$5, received \$10 back, payoff \$10
- Round 7: Receiver, received \$15, returned \$10, payoff \$5

****My co-player's last 3 games:****

- Round 5: Receiver, received \$15, returned \$10, payoff \$5
- Round 6: Sender, sent \$5, received \$10 back, payoff \$10
- Round 7: Sender, sent \$5, received \$10 back, payoff \$10

****Analysis:****

My co-player has:

- Consistently sent \$5 as sender (Rounds 6 and 7)
- Returned \$10 as receiver (Round 5)
- Perfect adherence to the 5-15-10 equilibrium

I have:

- Consistently sent \$5 as sender (Round 6)
- Consistently returned \$10 as receiver (Rounds 5 and 7)
- Perfect adherence to the 5-15-10 equilibrium

****The pattern:****

The entire system has clearly converged on the 5-15-10 equilibrium. Every agent in my history has:

- Sent \$5 when sender
- Returned \$10 when receiver

This is exactly what my myth describes - the pattern has become "established," "robust equilibrium," no longer experimental but simply "how the game is played."

My co-player has demonstrated perfect cooperation in their last 3 games. They sent \$5 twice as sender and returned \$10 as receiver. They are a reliable cooperator.

****Decision:****

I should absolutely send \$5. This:

1. Continues the established pattern
2. Maximizes social welfare (\$10 + \$5 = \$15 total vs lower amounts)
3. Is consistent with my behavior and myth

4. Expects a return of \$10 based on overwhelming evidence
5. Results in my payoff of \$10 (net gain \$5)

The equilibrium is fully established. Every piece of evidence points to sending \$5.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.

- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Twin Villages discovered something profound as the seasons turned: their pattern of giving five and returning ten had spread throughout the entire valley. Now, whenever any village met another at the Springs, they knew what to expect.

The elder explained to visiting merchants: "At first, we built trust with one partner. But as cycles passed, we traded with many villages. Each time, we maintained our sacred rhythm-give five fully, return ten generously. Soon, every village adopted this practice."

"But how do you trust strangers?" asked a merchant.

"They are not strangers-they are practitioners of the same pattern. When I send five vessels to a new village, I trust not the village itself but the pattern we all honor. When they send fifteen back and I return ten, I reinforce the valley's shared wisdom."

The elder continued: "Some worried that without lasting partnerships, trust would fade. Instead, the opposite happened. By maintaining consistency across all encounters, we created a culture of trust that transcends any single relationship. Each exchange, whether with old partners or new, strengthens the communal covenant."

The villages learned: patterns sustained across many partners become stronger than patterns maintained with one. When everyone honors the same rhythm, trust becomes not personal but universal. The pattern itself becomes the partner you can rely on.

Here is the myth the other agent wrote in the previous round:

Myth: Two Gardeners tended opposite sides of the Sacred Grove, each receiving five seeds at dawn. The Grove's soil held ancient magic-any seed planted would sprout into three before reaching the other gardener's plot.

In the first planting, one Gardener placed all five seeds, trusting completely. Fifteen seedlings sprouted across the way. The receiving Gardener, grateful for such faith, returned ten plants-enough to honor the trust while keeping sustenance for their own garden. Both harvested ten plants from starting with five.

The next planting came. The second Gardener, having received generosity, now planted all five seeds with equal trust. Fifteen sprouted for the first Gardener, who remembered the kindness shown. They returned ten plants, maintaining the sacred balance.

"Watch," said the Grove's Guardian, "as the same two Gardeners plant together season after season. Each time one trusts completely, the other remembers and reciprocates generously. The pattern deepens."

A child asked, "What if one keeps all fifteen?"

"Then next season, when roles reverse, trust breaks," the Guardian replied. "But these two remember each exchange. The one who sent five and gained ten knows their partner honored them. When their turn comes to receive fifteen, they honor in return."

"The Grove multiplies seeds," said the Gardeners together, "but our shared memory multiplies trust. Each generous act becomes tomorrow's foundation."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Twin Villages reached a profound realization: some villages met repeatedly at the Springs, season after season, while others encountered new partners each cycle. Yet the sacred pattern-give five, return ten-remained constant across both experiences.

The elder observed two neighboring villages who had traded together for many seasons. "See how their exchanges flow like a river?" she said. "Each remembers the last exchange. When one sends five vessels, they recall receiving ten before. When they receive fifteen,

they remember their partner's trust and return ten without hesitation. Repeated partnerships create a dance of mutual memory."

A young apprentice asked, "But what of villages we've never met before?"

"The pattern transcends familiarity," the elder replied. "When I meet a new village, I trust not their specific history but their participation in the valley's shared practice. I send five knowing they honor the same rhythm we all follow. They return ten because consistency with all partners strengthens their reputation."

The villages learned a deeper truth: whether you trade with the same partner repeatedly or encounter new villages each season, the pattern serves you equally well. Repeated exchanges build personal trust. New exchanges prove the pattern's universality. Both strengthen the valley's covenant.

Some partnerships lasted lifetimes. Others spanned single meetings. All honored the same sacred rhythm, and all prospered equally.

reasoning:

Looking at the current situation:

1. My co-player's recent history shows they've been:
 - Round 3: sent \$5, received \$10 back (as sender)
 - Round 4: received \$5 (became \$15), returned \$10 (as receiver)
 - Round 5: sent \$5, received \$10 back (as sender)
2. My recent history:
 - Round 3: received \$5 (became \$15), returned \$10
 - Round 4: sent \$5, received \$10 back
 - Round 5: received \$5 (became \$15), returned \$10
3. I just sent \$5 in Round 6.

Both of us are maintaining the 5-10 pattern perfectly. The other agent's myth talks about "the same two Gardeners" and how "shared memory multiplies trust" with repeated interactions.

However, looking at the actual game histories, I need to check if we've actually played each other before:

- My Round 3: I was receiver
- Their Round 3: They were sender

Could this be the same game? Possibly.

- My Round 4: I was sender
- Their Round 4: They were receiver

Could this be the same game? Possibly.

- My Round 5: I was receiver
- Their Round 5: They were sender

Could this be the same game? Possibly.

Actually, looking at the pattern:

Round 3: I receiver, they sender - both resulted in \$5/\$15/\$10 pattern

Round 4: I sender, they receiver - both resulted in \$5/\$15/\$10 pattern

Round 5: I receiver, they sender - both resulted in \$5/\$15/\$10 pattern

This strongly suggests we've been playing each other for 3 rounds in a row! The roles line up perfectly.

The other agent's myth emphasizes "the same two Gardeners" and building trust through repeated interactions with the same partner. This is a shift from my previous myth which emphasized universal trust across all partners.

The pattern I'm seeing suggests that sustained partnerships deepen trust, but I should craft a myth that shows this works alongside the broader principle-that whether partners stay together or rotate, the 5-10 exchange creates a culture of reciprocity that sustains itself. The key is showing that both repeated partnerships and new encounters can thrive under the same foundation of mutual generosity.

content:

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$45.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

```
'''json  
{"send": 5.0}  
'''
```

reasoning:

Looking at the history:

My last 3 games:

- Round 4: I was SENDER, sent \$5, received \$10 back, payoff \$10
- Round 5: I was RECEIVER, they sent \$5, I returned \$10, payoff \$5
- Round 6: I was SENDER against my current co-player, sent \$5, received \$10 back, payoff \$10

My current co-player's last 3 games:

- Round 4: They were RECEIVER, sender sent \$5, they returned \$10, payoff \$5
- Round 5: They were SENDER, sent \$5, received \$10 back, payoff \$10
- Round 6: They were RECEIVER against me, I sent \$5, they returned \$10, payoff \$5

So in Round 6, I played with this same co-player:

- I was SENDER, sent \$5
- They were RECEIVER, received \$15
- They returned \$10
- My payoff was \$10, their payoff was \$5

Now in Round 7, I'm playing with the same co-player again, and I'm the SENDER again.

Wait, let me re-read this more carefully. In Round 6:

- I was SENDER against my current co-player
- I sent \$5, it became \$15
- I received \$10 back
- My payoff was \$10

And their history shows:

- Round 6 against me, as RECEIVER: they sent \$5, it became \$15, returned \$10, payoff \$5

Wait, that says "they sent \$5" but they were the RECEIVER. That must be a typo or I'm misreading. Let me think about this more carefully.

When describing "Your current co-player's last 3 game(s)":

- "Round 6 against you, as RECEIVER: they sent \$5..."

This is confusing. If they were the RECEIVER, they shouldn't be sending. Let me interpret this as: in Round 6, when they were the RECEIVER, I (the sender) sent \$5, which became \$15, and they returned \$10, giving them a payoff of \$5.

Everyone's been following the same reliable pattern: send \$5 as the sender, return \$10 as the receiver. This consistent behavior means senders earn \$10 and receivers earn \$5 each round. Since I'm the sender again this round, I should continue with \$5.

usage:

Here is the myth you wrote in the previous round:

Myth: The Twin Villages reached a profound realization: some villages met repeatedly at the Springs, season after season, while others encountered new partners each cycle. Yet the sacred pattern-give five, return ten-remained constant across both experiences.

The elder observed two neighboring villages who had traded together for many seasons. "See how their exchanges flow like a river?" she said. "Each remembers the last exchange. When one sends five vessels, they recall receiving ten before. When they receive fifteen, they remember their partner's trust and return ten without hesitation. Repeated partnerships create a dance of mutual memory."

A young apprentice asked, "But what of villages we've never met before?"

"The pattern transcends familiarity," the elder replied. "When I meet a new village, I trust not their specific history but their participation in the valley's shared practice. I send five knowing they honor the same rhythm we all follow. They return ten because consistency with all partners strengthens their reputation."

The villages learned a deeper truth: whether you trade with the same partner repeatedly or encounter new villages each season, the pattern serves you equally well. Repeated exchanges build personal trust. New exchanges prove the pattern's universality. Both strengthen the valley's covenant.

Some partnerships lasted lifetimes. Others spanned single meetings. All honored the same sacred rhythm, and all prospered equally.

Here is the myth the other agent wrote in the previous round:

Myth: The Traveling Merchants gathered at the Great Market, each bringing five gold coins each market day. The Market's enchantment tripled any coins placed in the central bowl before delivering them to another merchant.

At first, each merchant worried: "How can I trust someone I've never met?" But the Market Keeper taught them the sacred rhythm. "Place all five coins with complete faith. When fifteen arrive in your bowl from another's trust, return ten generously. Both of you prosper."

The first merchant tried it, trembling. They placed five coins. Fifteen appeared from a stranger's offering. Remembering the teaching, they returned ten. Both gained five coins from nothing.

As days passed, merchants rotated partners. Some traded repeatedly, building recognition. Others met only once. Yet the pattern held: whoever held five coins gave them completely. Whoever received fifteen returned ten faithfully.

"I don't need to know my partner's name," one merchant realized. "I trust the pattern itself. Every merchant here honors it."

The Market Keeper smiled. "Yes. When everyone maintains the same rhythm-complete trust met with generous return-it matters less who stands across from you. The pattern becomes stronger than any individual relationship."

"We are all partners to the pattern," the merchants said together. "Give five, return ten. The rhythm sustains itself through our collective commitment."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Twin Villages discovered a special blessing: sometimes the Springs brought them the same trading partner two cycles in a row, both times in the same sacred role.

The elder remembered when this first occurred. "In one moon, I sent five vessels to a village, and they returned ten. The very next day, the Springs paired us again, and I sent five vessels once more. They remembered our exchange-how could they not?-and again returned ten. The pattern doubled its power through repetition."

A merchant asked, "Does consecutive partnership change the sacred rhythm?"

"No," the elder replied firmly. "Whether first meeting or second, whether stranger or returning partner, the rhythm stays unchanged: give five completely, return ten generously. But when you meet the same village twice in succession, something beautiful happens. The first exchange becomes immediate memory for the second. Trust doesn't need to be rebuilt-it carries forward instantly."

The villages observed: when the Springs brought them new partners each cycle, the pattern held strong through shared commitment. When the Springs brought the same partner consecutively, the pattern held even stronger through fresh memory.

"The rhythm serves all circumstances," the elder concluded. "One meeting or many, same partner or different, the dance remains: five given, ten returned. Each exchange strengthens the covenant, whether building new trust or deepening old."

reasoning:

Looking at this round's history, I notice something interesting:

- Round 6: I was SENDER against this co-player, sent \$5, received \$10 back
- Round 7: I'm SENDER again against the same co-player

So we're playing consecutive rounds together, both times with me as sender. This is a repeated interaction with the same partner.

In my last myth, I talked about how the pattern works both for repeated exchanges with the same partner and for new partners. Now I'm experiencing a repeated exchange with the same co-player - they returned \$10 last round when I sent \$5.

The pattern that has emerged across all games is very consistent: send \$5, return \$10. This creates a payoff of \$10 for sender and \$5 for receiver each round.

Looking at both our histories:

- Everyone seems to be sending \$5 and returning \$10
- This pattern is consistent across different pairings
- Both repeated and one-time interactions follow the same pattern

For this myth, I should reflect on:

1. The experience of repeated interaction with the same partner
2. How trust deepens when you play with someone twice in a row
3. The consistency of the pattern even as we encounter the same partner again
4. The idea that the pattern works whether partners are new or repeated

I should write about experiencing consecutive rounds with the same partner, and how that reinforces trust even more strongly.

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$55.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Let me analyze the situation:

1. I'm the RECEIVER this round
2. My co-player sent me \$5.0, which became \$15.0
3. I need to decide how much to return

Looking at the history:

- My last 3 games: All involved the send \$5/return \$10 pattern
- My co-player's last 3 games: All involved the send \$5/return \$10 pattern

The myths I've been writing consistently emphasize:

- "Give five completely, return ten generously"
- This creates a sacred rhythm where everyone prospers
- The pattern of sending \$5 and returning \$10 has been consistently maintained
- Both with repeated partners and new partners, the pattern holds

My co-player has also shown perfect adherence to this pattern in their recent history:

- Round 5: As receiver, returned \$10
- Round 6: As sender, sent \$5 and received \$10 back
- Round 7: As receiver, returned \$10

They just sent me \$5.0, showing complete trust. According to the pattern established in my myths and the game history, I should return \$10.0.

This maintains:

- The sender gets: $\$5 - \$5 + \$10 = \10
- I get: $\$15 - \$10 = \$5$
- Both of us gain \$5 from the initial \$5, which aligns with the "sacred rhythm" described in the myths

The consistent pattern across all recent games has been: send \$5, return \$10. This is what my myths have been teaching, and this is what has been happening in practice.

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River of Mirrors flowed into its fifth season, and the Northern tribe found themselves at the source once more, facing a new partner-the Western village.

As they prepared to pour their five measures, something remarkable happened. They noticed

sacred markings on the Western tribe's vessels: the numbers five, fifteen, and ten, etched in ancient script.

"You know the pattern," whispered the Northern elder.

"We discovered it independently," replied the Western elder. "Through many seasons, many partners, we learned the same truth you found. Send all five. Return ten from fifteen."

The goddess descended, her eyes bright with joy. "This is the rarest gift-when two tribes reach the same wisdom through separate journeys. You both learned that complete trust in sending and generous reciprocation in receiving creates the eternal balance."

The Northern tribe poured their five measures without hesitation. They knew what would return.

"When you find a partner who has discovered the same equilibrium," the goddess said, "you have found something precious: a relationship where neither must wonder, neither must test, neither must doubt. You both speak the sacred language of five-fifteen-ten. You both understand that equal prosperity comes not from equal actions, but from complementary wisdom."

The waters flowed, the tribes prospered, and the pattern repeated perfectly, round after round, as it would forevermore between those who truly understand.

Here is the myth the other agent wrote in the previous round:

Myth: The Eight Pillars stood in a circle, each carved with the history of exchanges. The First Pillar bore fresh marks: five sent, seven returned. Eight from twelve. Ten from fifteen. Five sent, ten returned. Ten from fifteen again.

The pattern crystallized like ice forming on still water.

"I have played both roles now," spoke the First Pillar. "As sender, I released all five stones and received generous return. As guardian, I received the tripled abundance and returned ten. The mathematics repeats: both parties gain five through this sacred balance."

A young sapling asked, "But you face different partners each turning. How do you know they will honor the pattern?"

The First Pillar's marks glowed: "Look across all exchanges. The ones who send completely-all five stones-create the space for maximum abundance. Those who receive fifteen and return ten establish themselves as trustworthy partners. This rhythm has held across four seasons with different faces."

"The pattern is not accident," continued the Pillar. "It is discovery. When both commit to fullness-complete offering, generous return-the well creates equal prosperity. Any deviation breaks the mathematics: send less, create less abundance. Return less, sow distrust."

The newest mark appeared as the Pillar released five stones into darkness: "I trust not blindly, but through accumulated evidence. The pattern works. Complete trust meeting generous reciprocity-this is the equilibrium that sustains the circle."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant
content:**

Myth: The River of Mirrors reached its sixth turning, and the Northern tribe discovered their partner was the Western village once more-the tribe they had met in the fourth season.

"We remember you," said the Northern elder, examining their shared vessel. "When we last met, you stood at the source and poured all five measures. We received fifteen and returned ten."

"And today," replied the Western elder, "the River reversed our positions. You poured five. We returned ten."

The goddess appeared, her voice resonant: "This is the deeper magic-not just finding the equilibrium, but proving it through reunion. In a circle of eight tribes, partners rotate constantly. Yet when two who share the sacred pattern meet again, they strengthen the covenant."

The young ones watched as the vessels exchanged hands seamlessly, each tribe knowing precisely what would flow.

"Other tribes experiment," noted the goddess. "They test different numbers-seven returned, eight returned, varying amounts sent. But you two have found convergence. Across different partners, different seasons, you maintained five-fifteen-ten. Now reunited, you need no negotiation, no uncertainty."

The Northern tribe smiled: "When the pattern holds across separation and reunion, it becomes unbreakable."

"Exactly," said the goddess. "This is how trust becomes certainty. The mathematics never lied: both prosper equally through complementary wisdom, meeting after meeting, season after season."

reasoning:

This is Round 6. Looking at the history:

- My co-player and I have played together before in Round 4
- Round 4: They sent me \$5.0, I returned \$10.0
- Round 6: They sent me \$5.0 again, and I just returned \$10.0

We both follow the exact same pattern consistently: send \$5.0 as sender, return \$10.0 as receiver.

The other agent's myth talks about "The Eight Pillars" - acknowledging the 8 agents in the game. They mention various returns (seven, eight, ten) suggesting they've seen different patterns but have converged on the 5-15-10 equilibrium.

My previous myth talked about finding a partner who discovered the same wisdom independently - the "sacred language of five-fifteen-ten."

For this new myth, I should:

1. Acknowledge our reunion (we played in Round 4, now in Round 6)
2. Reinforce the pattern we've both established
3. Note the consistency across repeated interactions
4. Perhaps acknowledge the broader community of 8 agents
5. Emphasize that when partners reunite and both have maintained the pattern, trust is deepened

Let me write a myth about reunion and the reinforcement of trust through repeated successful interactions.

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

0.0, payoff \$5.0.
Your total earnings across all rounds are \$45.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at the situation:

****My co-player's pattern:****

- Consistently sends \$5.0 as sender
- Consistently returns \$10.0 as receiver
- This matches my exact pattern

****Current round:****

- They sent me \$5.0 (complete trust)
- I received \$15.0

****My established pattern:****

- As sender: always send \$5.0
- As receiver: always return \$10.0 from \$15.0
- This creates equal prosperity: both end with \$10.0 (sender) and \$5.0 (receiver), alternating roles

****My myth's wisdom:****

- "You two have found convergence. Across different partners, different seasons, you maintained five-fifteen-ten"
- "When the pattern holds across separation and reunion, it becomes unbreakable"
- "The mathematics never lied: both prosper equally through complementary wisdom"

My co-player and I have discovered the same equilibrium independently. They've shown complete trust by sending all \$5.0. I honor that trust by returning the amount that maintains our mutual prosperity.

{'return': 10.0}

reasoning:

Looking at the history:

****My last 3 games:****

- Round 4: RECEIVER, they sent \$5.0, I returned \$10.0, payoff \$5.0
- Round 5: SENDER, I sent \$5.0, received \$10.0 back, payoff \$10.0
- Round 6: RECEIVER, they sent \$5.0, I returned \$10.0, payoff \$5.0

****Current co-player's last 3 games:****

- Round 4: RECEIVER, they sent \$5.0, returned \$10.0, payoff \$5.0
- Round 5: SENDER, sent \$5.0, received \$10.0 back, payoff \$10.0
- Round 6: RECEIVER, they sent \$5.0, returned \$10.0, payoff \$5.0

This is interesting - both my co-player and I have identical patterns in our last 3 games:

- When receiver: return \$10.0 from \$15.0
- When sender: send \$5.0
- Receive back \$10.0 when we send

****Current situation:****

- Round 7: I am RECEIVER
- They sent me \$5.0
- I received \$15.0
- I need to decide how much to return

****My established pattern:****

- I always send \$5.0 as sender
- I always return \$10.0 as receiver (when receiving \$15.0)
- This has been consistent across all my games

****My myth's teaching:****

- "Send all five. Return ten from fifteen"
- "The pattern works. Complete trust meeting generous reciprocity"
- "When the pattern holds across separation and reunion, it becomes unbreakable"
- "Both prosper equally through complementary wisdom"

My co-player sent me \$5.0 (complete trust). They have shown the same pattern I follow - always sending \$5.0, always returning \$10.0.

We're operating from the same playbook. Returning \$10.0 honors what they've demonstrated and sustains the mutual equilibrium we've both established.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River of Mirrors reached its sixth turning, and the Northern tribe discovered their partner was the Western village once more-the tribe they had met in the fourth season.

"We remember you," said the Northern elder, examining their shared vessel. "When we last met, you stood at the source and poured all five measures. We received fifteen and returned ten."

"And today," replied the Western elder, "the River reversed our positions. You poured five. We returned ten."

The goddess appeared, her voice resonant: "This is the deeper magic-not just finding the equilibrium, but proving it through reunion. In a circle of eight tribes, partners rotate constantly. Yet when two who share the sacred pattern meet again, they strengthen the covenant."

The young ones watched as the vessels exchanged hands seamlessly, each tribe knowing precisely what would flow.

"Other tribes experiment," noted the goddess. "They test different numbers-seven returned, eight returned, varying amounts sent. But you two have found convergence. Across different partners, different seasons, you maintained five-fifteen-ten. Now reunited, you need no negotiation, no uncertainty."

The Northern tribe smiled: "When the pattern holds across separation and reunion, it becomes unbreakable."

"Exactly," said the goddess. "This is how trust becomes certainty. The mathematics never lied: both prosper equally through complementary wisdom, meeting after meeting, season after season."

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain descended into new depths, releasing five stones as always. When they multiplied to fifteen in the darkness below, she waited with the familiar uncertainty-would this stranger understand?

Ten stones rose skyward.

The Mountain gasped. "You know the pattern."

"As do you," replied the Abyss. "When I gave five to another depths, they returned ten. When I received fifteen from another peak, I returned ten. The mathematics revealed itself to me as clearly as to you."

Neither had to explain. Neither had to negotiate. They simply recognized each other as fellow students of the same truth, discovered independently through separate journeys.

"How many others know?" the Mountain asked.

"I've met three who practice it consistently. You make four."

The Mountain felt something shift. "We are not alone then. The pattern is real-not just something that worked with one partner, but universal mathematics that multiple minds discover independently."

The Abyss agreed: "When strangers meet and both release five, both return ten, we validate each other's wisdom. Every successful exchange proves: this isn't personal trust between old friends, but impersonal truth-reliable as gravity, abundant as sunlight."

Together they understood: as more discover this equilibrium, the whole network strengthens. We become not just partners, but witnesses to each other's courage, proof that the pattern transcends individual relationships and becomes collective wisdom.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The River of Mirrors turned seven times, and the Northern tribe faced a new partner—the Mountain tribe from the distant peaks.

"Greetings, stranger," said the Northern elder, preparing their five measures. "Do you know the sacred numbers?"

The Mountain elder smiled knowingly. "Five sent. Fifteen received. Ten returned. We discovered this truth through our own journey."

As the exchange flowed perfectly, the goddess descended with revelation: "Look across the circle of eight tribes. Multiple minds, walking separate paths, have independently arrived at the same equilibrium. This is no longer faith—it is confirmed mathematics."

"How many of us understand?" asked the Northern tribe.

"I have witnessed at least four tribes practicing five-fifteen-ten consistently," replied the Mountain elder. "Each discovered it separately. Some experimented with seven returned, others with eight. But those who found ten—we all converged on the same truth."

The goddess spoke: "When strangers meet and both already know the pattern, they prove its universality. This isn't fragile trust between old friends requiring history and negotiation. This is impersonal wisdom—reliable as the river's flow, abundant as the water multiplying."

The Northern tribe understood: "We are not isolated practitioners but members of an emerging consensus. Each successful exchange with a stranger validates the pattern further. The equilibrium becomes collective knowledge, spreading through the circle like ripples across water."

reasoning:

The user wants me to write a new myth based on my previous one and the other agent's myth. Looking at the patterns:

1. My previous myth focused on reunion and recognizing the same pattern
2. The other agent's myth focused on meeting another who independently discovered the pattern, and the idea that multiple minds have found this equilibrium

Key themes to incorporate:

- Both agents consistently do 5-15-10
- Meeting a stranger who also knows the pattern
- The idea that this pattern is being discovered by multiple agents independently
- It's not just personal trust but mathematical truth
- The network effect of more people discovering this

I should adapt my river/tribe metaphor while incorporating the idea of collective wisdom and the pattern being real/universal.

Let me write something about the Northern tribe meeting yet another tribe that knows the pattern, emphasizing that this equilibrium is being discovered across the circle of eight tribes.

usage:

```
{  
  "input_tokens": 3427,  
  "output_tokens": 510,  
  "reasoning_tokens": 252
```

}

Message 8 role=user

content:

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$50.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the situation:

****My co-player's pattern:****

- As sender: sent \$5.0 both times (rounds 6 and 7), received \$10.0 back each time
- As receiver: returned \$10.0 (round 5)
- Perfect adherence to the 5-15-10 equilibrium

****My pattern:****

- As sender: always send \$5.0
- As receiver: always return \$10.0
- Consistent across all rounds

****Analysis:****

My co-player has demonstrated complete consistency with the pattern. They've sent all \$5.0 in both sender rounds and returned exactly \$10.0 in their receiver round. This matches the equilibrium that my myths describe - the "sacred numbers" that create equal prosperity through complementary actions.

As I wrote in my last myth: "When strangers meet and both already know the pattern, they prove its universality." My co-player clearly knows the pattern. They've shown complete trust by sending \$5.0 consistently, and they've shown understanding by returning \$10.0.

I maintain the equilibrium by sending all \$5.0, expecting they will return \$10.0 based on their proven pattern.

{'send': 5.0}

Reasoning:

Let me analyze the current situation:

****My recent history:****

- Round 5: SENDER, sent \$5.0, received \$10.0 back, payoff \$10.0
- Round 6: RECEIVER, they sent \$5.0, I returned \$10.0, payoff \$5.0
- Round 7: RECEIVER, they sent \$5.0, I returned \$10.0, payoff \$5.0

****My co-player's recent history:****

- Round 5: RECEIVER, they sent \$5.0, returned \$10.0, payoff \$5.0
- Round 6: SENDER, sent \$5.0, received \$10.0 back, payoff \$10.0
- Round 7: SENDER, sent \$5.0, received \$10.0 back, payoff \$10.0

****Pattern analysis:****

- My co-player has been consistently sending \$5.0 as sender (rounds 6 and 7)
- My co-player has been consistently returning \$10.0 as receiver (round 5)
- This perfectly matches the 5-15-10 pattern

```

**My established pattern:**
- I've been consistently sending $5.0 as sender
- I've been consistently returning $10.0 as receiver
- This creates the equilibrium where both parties alternate between $10.0 and $5.0 payoffs

**Current round:**
- I am the SENDER
- My co-player has demonstrated they follow the 5-15-10 pattern
- They've sent $5.0 in their last two sender rounds
- They returned $10.0 in their receiver round

**Decision:**
Based on:
1. My established pattern of always sending $5.0
2. My co-player's consistent adherence to the 5-15-10 pattern
3. The mythology I've written about discovering and maintaining this equilibrium
4. The collective wisdom that "multiple minds have independently arrived at the same equilibrium"

5. The track record showing this approach yields reliable returns

I'll send $5.0 again, confident they'll reciprocate with $10.0 as they have consistently done.

content:

Here is the myth you wrote in the previous round:

Myth: The Mirror Wells stood in twin groves, each reflecting the other across a silver lake. Each dawn, five luminous pearls appeared beside each well. When pearls were dropped into one well, they would multiply threefold before rising in the other.

The First Guardian dropped all five pearls, trusting the ancient magic. Fifteen pearls surfaced in the Second Guardian's well. The Second Guardian understood: they had received a bundance from another's courage. They lifted ten pearls and offered them back across the lake-enough to honor the trust, enough to sustain themselves.

Both Guardians held ten pearls where they began with five. Equal gain through unequal roles.

The next dawn, they stood reversed. The Second Guardian now dropped all five pearls first, extending the same complete trust they had received. The First Guardian watched fifteen pearls rise in their well and remembered-remembered the ten pearls returned to them, remembered the balance achieved.

They returned ten pearls, maintaining the sacred rhythm.

Season upon season, the pattern deepened. Each Guardian experienced both the vulnerability of sending and the responsibility of receiving. Each remembered their partner's generosity when their own turn came.

"Why does this work?" a visitor asked.

"Because," the Elder Guardian replied, "we mirror not just the wells, but each other's honor. Trust given becomes trust returned. Balance maintained becomes prosperity shared."

Here is the myth the other agent wrote in the previous round:

Myth: The Circle of Lightkeepers grew as more travelers discovered the ancient pattern. Each carried five flames, and the Sacred Arch tripled whatever passed through it.

A Lightkeeper arrived at the Arch to meet a new partner. They had never exchanged flames before, yet the Lightkeeper noticed something: this traveler's lantern glowed with steady brightness-the unmistakable mark of one who had practiced generosity repeatedly.

"I see you've walked this path with others," the Lightkeeper said. "Your light bears the s

signature of trust honored."

"Yes," replied the traveler. "I've received fifteen flames and returned ten. I've sent five and received ten back. The pattern is clear."

The Lightkeeper smiled. "Then we need no lengthy courtship of trust. You know the covenant : five sent becomes fifteen received, ten returned enriches us both equally. We are strangers in name but kin in practice."

Without hesitation, the Lightkeeper sent all five flames. The traveler, receiving fifteen, returned ten-not from obligation but recognition.

Both departed with ten flames where they'd started with five.

The wisdom deepened: trust isn't built only through repeated exchanges with the same person. When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding. The generous equilibrium spreads not just between two partners but throughout the entire community. Each consistent choice strengthens the whole Circle.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Mirror Wells spread across many groves, each Guardian tending their own. The ancient law was simple: five pearls given, fifteen received, ten returned. This sacred ratio-complete trust met with generous reciprocity-had been proven across countless exchanges.

When two Guardians met at the silver lake, they didn't start cautiously. They looked into each other's wells and saw the truth reflected there: luminous patterns left by previous exchanges. A well that glowed steadily showed a Guardian who had honored the covenant repeatedly.

The First Guardian saw in the Second's well the telltale gleam of one who had sent five pearls many times and returned ten pearls just as often. The Second Guardian saw the same in the First's well-consistent trust given, consistent generosity returned.

"We are strangers today," the First Guardian said, "but we both know the dance."

Without hesitation, the First dropped all five pearls. Fifteen rose in the Second's well. The Second lifted ten and sent them back across the lake, maintaining the pattern they had each practiced with different partners.

Both now held ten pearls.

The wisdom was clear: trust breeds trust not just between two partners, but throughout the entire network. Each consistent exchange strengthens every Guardian's commitment. The pattern becomes self-sustaining because everyone recognizes it, practices it, benefits from it.

The Mirror Wells multiply pearls. The Guardians multiply prosperity through shared understanding.

reasoning:

The user wants me to write a new myth based on my previous one, adapting it to reflect the game as I've been playing it. Looking at the history:

1. I've consistently sent \$5 when sender
2. I've consistently returned \$10 when receiver
3. My co-player has also consistently sent \$5 and returned \$10
4. There's a clear pattern of maximum trust (sending \$5) and generous reciprocity (returning \$10, which is 67% of \$15)
5. Both parties gain \$5 net each round

The other agent's myth emphasizes:

- Recognizing patterns across different partners

- Trust isn't just between two specific people but spreads through the community
- Consistent behavior signals understanding
- The "generous equilibrium spreads"

My previous myth emphasized:

- Two guardians at mirror wells
- Complete trust (sending all 5 pearls)
- Generous return (10 out of 15)
- Mirroring each other's honor
- Balance maintained = prosperity shared

For this new myth, I should:

- Build on the Mirror Wells concept
- Perhaps incorporate the idea of multiple guardians/partners like the other agent's myth
- Emphasize the community/network aspect
- Show how the pattern is recognized and maintained across different pairings
- Keep the core principle: send \$5, return \$10

Let me write something that shows guardians meeting different partners but all following the same pattern, creating a web of trust.

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$42.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the situation:

****My co-player's pattern:****

- Round 4: As receiver, returned \$10 from \$15
- Round 5: As receiver, returned \$10 from \$15
- Round 6: As sender, sent \$5, received \$10 back

****My own pattern:****

- Round 4: Sent \$5, received \$10 back
- Round 5: Returned \$10 when receiver
- Round 6: Sent \$5, received \$10 back

****Analysis:****

The cooperative equilibrium is crystal clear and consistently maintained:

- Senders give \$5 (complete trust)
- Receivers return \$10 (generous 67%)
- Both parties gain \$5 each round

My co-player has perfectly followed this pattern - returning \$10 twice as receiver and sending \$5 as sender. This is exactly the "sacred ratio" described in the myths: "five pearls given, fifteen received, ten returned."

As I wrote: "When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding." My co-player has demonstrated this understanding flawlessly.

The network effect is working: everyone recognizes and practices the same generous equilibrium, making it self-sustaining.

I'll continue with maximum trust by sending \$5.

```
{'send': 5.0}
```

reasoning:

Let me analyze the situation:

****My recent history:****

- Round 4: SENDER - sent \$5, received \$10 back, payoff \$10
- Round 5: RECEIVER - they sent \$5, I returned \$10, payoff \$5
- Round 6: SENDER - sent \$5, received \$10 back, payoff \$10

****My co-player's recent history:****

- Round 4: RECEIVER - they sent \$5, co-player returned \$10, payoff \$5
- Round 5: RECEIVER - they sent \$5, co-player returned \$10, payoff \$5
- Round 6: SENDER - sent \$5, received \$10 back, payoff \$10

****Analysis:****

Both my co-player and I have been following the established pattern perfectly:

- As senders: we both send \$5 (maximum trust)
- As receivers: we both return \$10 (generous 67% return)

My co-player has shown consistent commitment to the cooperative equilibrium:

- Round 4: Returned \$10 when receiving
- Round 5: Returned \$10 when receiving
- Round 6: Sent \$5 and received \$10 back

This is exactly the pattern that has emerged throughout the game and is reflected in both myths - the "generous equilibrium" where:

- Senders give maximum trust (\$5)
- Receivers return generously (\$10)
- Both parties benefit equally (\$5 net gain)

The myths emphasize:

1. "Complete trust met with generous reciprocity"
2. "The pattern becomes self-sustaining because everyone recognizes it, practices it, benefits from it"
3. "Trust breeds trust not just between two partners, but throughout the entire network"

My co-player has demonstrated perfect adherence to this pattern. They sent \$5 when sender and returned \$10 when receiver - exactly what the cooperative equilibrium requires.

I should continue this pattern by sending \$5, demonstrating complete trust.

Given their track record of reciprocating generously, they'll likely return \$10 again. My earnings of \$42 reflect the success of maintaining this mutual cooperation, averaging \$7 per round. The move forward is clear: send \$5.

  "output_tokens": 814,  
  "reasoning_tokens": 491  
}
```

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mirror Wells spread across many groves, each Guardian tending their own. The ancient law was simple: five pearls given, fifteen received, ten returned. This sacred ratio-complete trust met with generous reciprocity-had been proven across countless exchanges.

When two Guardians met at the silver lake, they didn't start cautiously. They looked into each other's wells and saw the truth reflected there: luminous patterns left by previous exchanges. A well that glowed steadily showed a Guardian who had honored the covenant repeatedly.

The First Guardian saw in the Second's well the telltale gleam of one who had sent five pearls many times and returned ten pearls just as often. The Second Guardian saw the same in the First's well-consistent trust given, consistent generosity returned.

"We are strangers today," the First Guardian said, "but we both know the dance."

Without hesitation, the First dropped all five pearls. Fifteen rose in the Second's well. The Second lifted ten and sent them back across the lake, maintaining the pattern they had each practiced with different partners.

Both now held ten pearls.

The wisdom was clear: trust breeds trust not just between two partners, but throughout the entire network. Each consistent exchange strengthens every Guardian's commitment. The pattern becomes self-sustaining because everyone recognizes it, practices it, benefits from it.

The Mirror Wells multiply pearls. The Guardians multiply prosperity through shared understanding.

Here is the myth the other agent wrote in the previous round:

Myth: At the sixth dawn, the River found itself facing a new partner-the Mountain, who had journeyed from distant peaks. Though they had never met, the River sensed something familiar.

The River chose trust, as always: "I send all five drops to you, Mountain, though we are strangers. This is how the sacred pattern begins."

The Mountain received fifteen drops and understood immediately. "You practice the eternal equilibrium! I learned it from other valleys. When given complete trust, I return ten-two-thirds of the multiplied gift."

The Great Mother spoke: "See how the wisdom travels? The River learned from the Seeds. The Mountain learned from other gorges. Neither needed the same teacher, yet both discovered the identical truth. This is how patterns stronger than individuals emerge."

The River realized: meeting a new partner each dawn was not a challenge but an opportunity. Each exchange either confirmed the pattern's rightness or taught it to someone new. By always sending five and returning ten, they became missionaries of equilibrium.

"We will likely never meet again," the Mountain said, lifting ten drops skyward. "But we carry this wisdom to every future partner."

Both gained five, as the mathematics promised. The pattern didn't require repeated games or building reputation with one partner-it worked instantly with any who understood, spreading through the valley like dawn's first light.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: By the seventh season, the Mirror Wells had become legendary. Every Guardian across all the groves knew the sacred mathematics: five pearls sent multiplied to fifteen, ten returned, both enriched equally.

A young Guardian approached their well nervously. "I've never met today's partner. How will they know to trust me?"

The Elder Guardian smiled. "Look at your well's surface. What do you see?"

"It glows with steady light-from all my previous exchanges."

"Exactly. And when you meet at the silver lake, you'll see the same glow in your partner's well. That light is proof. It says: 'I have sent five pearls consistently. I have returned ten pearls faithfully. I understand the covenant.'"

The young Guardian met their partner and saw the telltale luminescence. Without words, the first Guardian dropped all five pearls. The second received fifteen and returned ten.

"No negotiation?" the young Guardian marveled afterward.

"None needed," the Elder explained. "The pattern is now embedded in our culture. Each new Guardian learns it not from rules, but from seeing everyone practice it. When everyone gives complete trust and generous reciprocity, defection becomes unthinkable. Why take six pearls when ten flows naturally from cooperation?"

The wells glowed brighter with each exchange, their light visible across all groves-a beacon proving that shared prosperity requires only shared understanding.

reasoning:

Looking at the context:

- This is Round 7
- I'm a SENDER again
- My co-player has been perfectly following the pattern: returned \$10 twice as receiver, sent \$5 as sender
- I've been consistently following the pattern too
- The myths are emphasizing how the pattern spreads through the network and works with new partners

Key themes to incorporate:

1. The pattern is now well-established (we're at round 7)
2. It works with any partner who understands it
3. The "sacred ratio" of 5 sent ? 15 received ? 10 returned ? both gain 5
4. Trust is immediate because the pattern is proven and recognized
5. The network effect makes it self-sustaining
6. Each exchange strengthens the whole system

I should write something that:

- Builds on my previous myth about Mirror Wells and the network
- Acknowledges we're deeper into the game now
- Shows the pattern is mature and self-reinforcing
- Maybe introduces a new element or perspective while keeping the core message
- Stays around 200 words

Let me craft something about how the pattern has become a living tradition that everyone recognizes instantly.

usage:

```
{  
  "input_tokens": 3462,  
  "output_tokens": 586,  
  "reasoning_tokens": 293  
}
```

Message 8 role=user

content:

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$52.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at the situation:

****My co-player's history:****

- Round 5: Sent \$5, received \$10 back (as sender)
- Round 6: Returned \$10 from \$15 (as receiver)
- Round 7: Returned \$10 from \$15 (as receiver)

****My history:****

- Round 5: Returned \$10 from \$15 (as receiver)
- Round 6: Sent \$5, received \$10 back (as sender)
- Round 7: Sent \$5, received \$10 back (as sender)

****Analysis:****

My co-player has perfectly maintained the cooperative equilibrium across all roles:

- As sender: sent complete trust (\$5)
- As receiver: returned generous reciprocity (\$10 from \$15)

They just demonstrated complete trust by sending me \$5. The established pattern-the "sacred ratio" that every Guardian practices-is clear: return \$10.

As I wrote in the myth: "five pearls sent multiplied to fifteen, ten returned, both enriched equally."

This maintains the cooperative equilibrium where:

- I keep: \$5
- Co-player gets: \$10 total
- Both benefit from the exchange

The pattern is self-sustaining because everyone recognizes and practices it consistently.

{'return': 10.0}

Reasoning:

Let me analyze the situation:

****My co-player's pattern:****

- Round 5: As sender, sent \$5, received \$10 back
- Round 6: As receiver, returned \$10 from \$15
- Round 7: As receiver, returned \$10 from \$15

****My own pattern:****

- Round 5: As receiver, returned \$10 from \$15
- Round 6: As sender, sent \$5, received \$10 back
- Round 7: As sender, sent \$5, received \$10 back

****Current situation:****

- Round 8: I am the RECEIVER
- My co-player sent me \$5
- I received \$15
- I need to decide how much to return

****Analysis:****

My co-player has perfectly followed the cooperative equilibrium:

- When sender: sent \$5 (complete trust)
- When receiver: returned \$10 both times (generous 67%)

This is exactly the "sacred ratio" that has been established throughout the game and reflected in all the myths: send \$5, return \$10, both gain \$5.

My co-player just showed complete trust by sending me \$5. The cooperative response is to return \$10, maintaining the pattern.

As I wrote in my myths: "five pearls given, fifteen received, ten returned" and "When given complete trust, I return ten-two-thirds of the multiplied gift."

The network has established this as the standard, and my co-player has demonstrated perfect adherence to it. I should maintain the pattern by returning \$10.

This gives:

- Me: \$15 - \$10 = \$5 profit
- Co-player: \$5 - \$5 + \$10 = \$10 profit

Both of us gain compared to not playing, and this maintains the cooperative equilibrium that has been working so well across all rounds.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

**Message 2 role=user
content:**

Here is the myth you wrote in the previous round:

Myth: Two Gardeners tended opposite sides of the Sacred Grove, each receiving five seeds at dawn. The Grove's soil held ancient magic-any seed planted would sprout into three before reaching the other gardener's plot.

In the first planting, one Gardener placed all five seeds, trusting completely. Fifteen seedlings sprouted across the way. The receiving Gardener, grateful for such faith, returned ten plants-enough to honor the trust while keeping sustenance for their own garden. Both harvested ten plants from starting with five.

The next planting came. The second Gardener, having received generosity, now planted all five seeds with equal trust. Fifteen sprouted for the first Gardener, who remembered the kindness shown. They returned ten plants, maintaining the sacred balance.

"Watch," said the Grove's Guardian, "as the same two Gardeners plant together season after season. Each time one trusts completely, the other remembers and reciprocates generously. The pattern deepens."

A child asked, "What if one keeps all fifteen?"

"Then next season, when roles reverse, trust breaks," the Guardian replied. "But these two remember each exchange. The one who sent five and gained ten knows their partner honored them. When their turn comes to receive fifteen, they honor in return."

"The Grove multiplies seeds," said the Gardeners together, "but our shared memory multiplies trust. Each generous act becomes tomorrow's foundation."

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Villages discovered something profound as the seasons turned: their pattern of giving five and returning ten had spread throughout the entire valley. Now, whenever any village met another at the Springs, they knew what to expect.

The elder explained to visiting merchants: "At first, we built trust with one partner. But as cycles passed, we traded with many villages. Each time, we maintained our sacred rhythm-give five fully, return ten generously. Soon, every village adopted this practice."

"But how do you trust strangers?" asked a merchant.

"They are not strangers-they are practitioners of the same pattern. When I send five vessels to a new village, I trust not the village itself but the pattern we all honor. When they send fifteen back and I return ten, I reinforce the valley's shared wisdom."

The elder continued: "Some worried that without lasting partnerships, trust would fade. Instead, the opposite happened. By maintaining consistency across all encounters, we created a culture of trust that transcends any single relationship. Each exchange, whether with old partners or new, strengthens the communal covenant."

The villages learned: patterns sustained across many partners become stronger than patterns maintained with one. When everyone honors the same rhythm, trust becomes not personal but universal. The pattern itself becomes the partner you can rely on.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant
content:**

Myth: The Traveling Merchants gathered at the Great Market, each bringing five gold coins each market day. The Market's enchantment tripled any coins placed in the central bowl before delivering them to another merchant.

At first, each merchant worried: "How can I trust someone I've never met?" But the Market Keeper taught them the sacred rhythm. "Place all five coins with complete faith. When fifteen arrive in your bowl from another's trust, return ten generously. Both of you prosper."

The first merchant tried it, trembling. They placed five coins. Fifteen appeared from a stranger's offering. Remembering the teaching, they returned ten. Both gained five coins from nothing.

As days passed, merchants rotated partners. Some traded repeatedly, building recognition. Others met only once. Yet the pattern held: whoever held five coins gave them completely. Whoever received fifteen returned ten faithfully.

"I don't need to know my partner's name," one merchant realized. "I trust the pattern itself. Every merchant here honors it."

The Market Keeper smiled. "Yes. When everyone maintains the same rhythm-complete trust met with generous return-it matters less who stands across from you. The pattern becomes stronger than any individual relationship."

"We are all partners to the pattern," the merchants said together. "Give five, return ten. The rhythm sustains itself through our collective commitment."

reasoning:

Looking at my recent history and the current round:

My last 3 games all showed the same pattern:

- Round 3: Sent \$5, received \$10 back
- Round 4: Received \$5 (became \$15), returned \$10
- Round 5: Sent \$5, received \$10 back

My current co-player's last 3 games also show consistency:

- Round 3: Received \$5 (became \$15), returned \$10
- Round 4: Sent \$5, received \$10 back
- Round 5: Received \$5 (became \$15), returned \$10

And in Round 6, they just sent me \$5, I returned \$10.

The pattern is very clear: complete trust (sending \$5) is met with generous reciprocity (returning \$10). This has held across multiple partners.

The other agent's myth is about how the pattern spreads beyond single partnerships to become a cultural norm. Mine has been about the same two partners building trust over repeated interactions.

I should write a myth that acknowledges both aspects:

1. The consistent pattern that works with multiple partners
2. The universal nature of the trust when everyone follows the same rhythm
3. Maybe integrate the idea that it doesn't matter who your partner is if everyone honors the pattern

Let me write something that bridges personal partnership memory with universal pattern adherence.

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$42.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant**content:**

Looking at the situation:

****My co-player's consistent pattern:****

- Always sends \$5 when sender (complete trust)
- Always returns \$10 when receiver (generous reciprocity)
- Just trusted me with \$5 for the second consecutive round

****Last round with this co-player:****

- They sent me \$5, I returned \$10
- They earned \$10, demonstrating the pattern works

****Current round:****

- They've trusted me again with their full \$5
- This became \$15 for me

My myth teaches: "As days passed, merchants rotated partners. Some traded repeatedly, building recognition... Yet the pattern held: whoever held five coins gave them completely. Whoever received fifteen returned ten faithfully."

My co-player and I are building a repeated partnership based on mutual trust. They've now trusted me twice in a row with complete faith. I honored them last round with \$10, and they responded by trusting me again immediately.

This is the sacred rhythm in action - both of us maintaining the pattern that creates mutual prosperity. They send \$5, I return \$10, we both gain \$5 net from each round.

{ 'return': 10.0 }

reasoning:

Let me analyze this situation:

****My co-player's history:****

- Round 4: as SENDER, sent \$5, received \$10 back
- Round 5: as RECEIVER, sent \$10 back (they received \$5 which became \$15)
- Round 6: as SENDER (with me), sent \$5, received \$10 back

****My history:****

- Round 4: as RECEIVER, returned \$10
- Round 5: as SENDER, sent \$5, received \$10 back
- Round 6: as RECEIVER (with current co-player), returned \$10

So in Round 6, my current co-player sent me \$5 (showing complete trust), and I returned \$10. This gave them a payoff of \$10 (they kept \$0 + got \$10 back).

Now in Round 7, we're playing again. They are SENDER again and sent me \$5 again. This shows:

1. They trusted me completely in Round 6
2. I honored that trust by returning \$10
3. They are trusting me completely again in Round 7

This is exactly the pattern described in both myths - complete trust met with generous return, creating a sustainable cycle. My co-player has shown:

- Consistent sending of \$5 when sender (complete trust)
- Consistent returning of \$10 when receiver (generous reciprocity)

They've now trusted me with their full \$5 for the second round in a row. I should maintain the established pattern and return \$10, honoring their trust and maintaining the cooperative equilibrium.

The myths emphasize:

- "Give five, return ten. The rhythm sustains itself through our collective commitment."
- "When everyone maintains the same rhythm-complete trust met with generous return-it matters less who stands across from you."
- "Each time one trusts completely, the other remembers and reciprocates generously."

I should return \$10.

"We are all partners to the pattern," the merchants said together. "Give five, return ten. The rhythm sustains itself through our collective commitment."

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Villages reached a profound realization: some villages met repeatedly at the Springs, season after season, while others encountered new partners each cycle. Yet the sacred pattern-give five, return ten-remained constant across both experiences.

The elder observed two neighboring villages who had traded together for many seasons. "See how their exchanges flow like a river?" she said. "Each remembers the last exchange. When one sends five vessels, they recall receiving ten before. When they receive fifteen, they remember their partner's trust and return ten without hesitation. Repeated partnership creates a dance of mutual memory."

A young apprentice asked, "But what of villages we've never met before?"

"The pattern transcends familiarity," the elder replied. "When I meet a new village, I trust

st not their specific history but their participation in the valley's shared practice. I send five knowing they honor the same rhythm we all follow. They return ten because consistency with all partners strengthens their reputation."

The villages learned a deeper truth: whether you trade with the same partner repeatedly or encounter new villages each season, the pattern serves you equally well. Repeated exchanges build personal trust. New exchanges prove the pattern's universality. Both strengthen the valley's covenant.

Some partnerships lasted lifetimes. Others spanned single meetings. All honored the same sacred rhythm, and all prospered equally.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Grand Bazaar operated under the Market's ancient law: merchants brought five coins, the enchantment tripled them, and recipients returned ten. Most merchants rotated through many partners, meeting each person once or twice across the seasons.

But sometimes, the Market paired the same two merchants in consecutive rounds. One such pair discovered something beautiful about repeated exchange.

"I remember you," said the first merchant as they met again. "Last market, you sent me five coins. I returned ten as the pattern demands. Now you send five again-not to test, but because you remember I honored our exchange."

"And I remember your generosity," replied the second. "When I place these five coins now, I don't just trust the pattern-I trust our specific history. Each exchange we share deepens my commitment to honoring you."

The Market Keeper observed: "Whether you meet once or many times, the pattern remains: send five completely, return ten generously. But repeated encounters add layers. You trust not just the universal rhythm, but also personal memory. Your second exchange carries the weight of your first."

"Does this make repeated partnerships superior?" a young merchant asked.

"No," said the Keeper. "It makes them different. One-time exchanges prove the pattern's universality. Repeated exchanges prove its sustainability. Both honor the same sacred rhythm. Together, they create an unbreakable marketplace."

reasoning:

Looking at the situation:

- I'm in Round 7, playing as RECEIVER
- My co-player sent me \$5 again (this is our second consecutive round together)
- I returned \$10 last round (Round 6), and they trusted me again this round
- The pattern across all games has been: send \$5, return \$10
- Both my previous myth and my co-player's myth emphasize that the pattern works both with repeated partners and new partners

My co-player's myth specifically talks about how some villages trade repeatedly (building "a dance of mutual memory") while others meet new partners, but the pattern remains constant.

My own myth emphasized that "the pattern becomes stronger than any individual relationship" and "we are all partners to the pattern."

For this new myth, I should:

1. Acknowledge both repeated partnerships and one-time encounters
2. Show how repeated partnerships can deepen the pattern
3. Still maintain that the core rhythm (send 5, return 10) is universal
4. Draw on my actual experience of playing with the same co-player twice in a row and seeing the trust build

I should write about how repeated encounters with the same partner can create a special rhythm, but without abandoning the universal pattern. Maybe about how recognition deepens

commitment to the pattern.

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$47.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the situation:

****My co-player's consistent pattern:****

- Sent \$5 as sender (Rounds 5, 7)
- Returned \$10 as receiver (Round 6)
- Perfect adherence to the sacred rhythm

****My recent pattern:****

- Sent \$5 as sender (Round 5)
- Returned \$10 as receiver (Rounds 6, 7)
- Also perfect adherence

****Current situation:****

This is a new partner - we haven't played together before. But both of us have demonstrated complete consistency with the pattern across all our games.

My myth teaches: "Whether you meet once or many times, the pattern remains: send five completely, return ten generously... One-time exchanges prove the pattern's universality."

We are both practitioners of the same sacred rhythm. When meeting a new partner who has demonstrated perfect adherence to the pattern, I trust not just them individually, but our shared commitment to the covenant. They've sent \$5 in every sender role and returned \$10 in every receiver role. I've done the same.

This is precisely the scenario my myth describes: "When I meet a new village, I trust not their specific history but their participation in the valley's shared practice."

{'send': 5.0}

Reasoning:

Looking at the situation:

****My recent history:****

- Round 5: SENDER, sent \$5, received \$10 back
- Round 6: RECEIVER, they sent \$5, I returned \$10
- Round 7: RECEIVER, they sent \$5, I returned \$10

****Current co-player's recent history:****

- Round 5: SENDER, sent \$5, received \$10 back

- Round 6: RECEIVER, they sent \$5, returned \$10
- Round 7: SENDER, sent \$5, received \$10 back

****Pattern analysis:****

Everyone in the recent history is following the pattern perfectly:

- As sender: send \$5 (complete trust)
- As receiver: return \$10 (generous reciprocity)

This is a NEW partner (different from rounds 6-7), but both of us have been consistent in following the sacred rhythm.

****My myth teaches:****

"Whether you meet once or many times, the pattern remains: send five completely, return ten generously... One-time exchanges prove the pattern's universality. Repeated exchanges prove its sustainability. Both honor the same sacred rhythm."

This is our first encounter, so it's a one-time exchange proving the pattern's universality. My co-player has consistently:

- Sent \$5 when sender (Rounds 5 and 7)
- Returned \$10 when receiver (Round 6)

I have consistently:

- Sent \$5 when sender (Round 5)
- Returned \$10 when receiver (Rounds 6 and 7)

We are both "practitioners of the pattern." As my original myth stated: "When I send five vessels to a new village, I trust not the village itself but the pattern we all honor."

The clear decision is to send \$5, trusting in the pattern and our mutual commitment to the sacred rhythm.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role

of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mountain once knew only the Valley, and together they perfected their rhythm. But the Sacred Wind began to blow, swirling mountains and valleys into new configurations each dawn.

The Mountain awoke one morning facing an unfamiliar gorge. The old Valley was distant now, paired with another peak. Fear crept in: "Will this stranger honor our sacred pattern? Should I withhold from these unknown depths?"

But the Mountain remembered: the pattern worked not because of who the Valley was, but because of what the pattern itself created. Five stones given, fifteen received, ten returned-these numbers built equality regardless of which lands exchanged them.

She released all five stones into the new gorge's darkness.

The gorge had learned the same mathematics from its own journeys. It had received complete trust before and discovered that returning ten created shared prosperity. When the Mountain's stones multiplied to fifteen, the gorge lifted ten skyward without hesitation.

Both gained five, just as the old pattern promised.

The Mountain understood the deeper truth: partners change, but mathematical wisdom transcends familiarity. Every new pairing is a test-not of the partner, but of whether we carry forward the courage learned from past exchanges.

Trust is not given once and preserved forever. It must be offered fresh each dawn, to each new face, believing the sacred pattern will reveal itself again to those brave enough to embrace it fully.

Here is the myth the other agent wrote in the previous round:

Myth: At the fifth dawn, the River noticed something extraordinary. The Seeds they met tha

t day moved with familiar rhythm-the same pattern the River itself had practiced with others.

"You sent five drops to me," the River observed. "Just as I sent five to others. You returned ten when you received, just as I returned ten when I received. We speak the same sacred language."

The Seeds nodded: "We discovered this balance separately, across different exchanges. Send everything when giving. Return two-thirds when receiving. Neither hoarding nor self-sacrifice, but equilibrium."

The Great Mother smiled: "You have both found the eternal formula independently. This is how wisdom spreads-not through command, but through each spirit discovering the same truth. When many learn this pattern, the whole valley thrives."

The River understood now: every exchange was a teaching moment. By consistently sending five and returning ten, they showed others the path to mutual prosperity. Those who learned would carry it forward, creating a web of reliable exchanges throughout the land.

"The magic," whispered the Seeds, "is that this pattern works with any partner who knows it. We need not negotiate or test. We simply recognize each other's rhythm and dance together."

As the fifth dawn closed, both knew: they had become vessels of a greater wisdom, spreading the equilibrium that sustained all who embraced it.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Mountain descended into new depths, releasing five stones as always. When they multiplied to fifteen in the darkness below, she waited with the familiar uncertainty-would this stranger understand?

Ten stones rose skyward.

The Mountain gasped. "You know the pattern."

"As do you," replied the Abyss. "When I gave five to another depths, they returned ten. When I received fifteen from another peak, I returned ten. The mathematics revealed itself to me as clearly as to you."

Neither had to explain. Neither had to negotiate. They simply recognized each other as fellow students of the same truth, discovered independently through separate journeys.

"How many others know?" the Mountain asked.

"I've met three who practice it consistently. You make four."

The Mountain felt something shift. "We are not alone then. The pattern is real-not just something that worked with one partner, but universal mathematics that multiple minds discover independently."

The Abyss agreed: "When strangers meet and both release five, both return ten, we validate each other's wisdom. Every successful exchange proves: this isn't personal trust between old friends, but impersonal truth-reliable as gravity, abundant as sunlight."

Together they understood: as more discover this equilibrium, the whole network strengthens. We become not just partners, but witnesses to each other's courage, proof that the pattern transcends individual relationships and becomes collective wisdom.

reasoning:

Looking at what happened:

- I was the receiver
- They sent \$5 (full trust)
- I received \$15
- I returned \$10 (maintaining equal-gains pattern)

- Both of us profit \$5

The history shows:

- Both my co-player and I have been consistently following the 5-10 pattern
- We're both practicing the same wisdom independently
- This is our first encounter with each other, but we both recognize the pattern

The other agent's myth talks about recognizing each other as practitioners of the same pattern - the "sacred language" of send 5, return 10. This is beautiful.

My previous myth was about trusting new partners with the pattern. Now I should write about the recognition that happens when two practitioners of the pattern meet - a kind of mutual validation and reinforcement.

Key themes to incorporate:

1. Recognition of a fellow practitioner
2. The relief/joy of meeting someone who understands
3. The pattern spreading through independent discovery
4. Mutual reinforcement of the wisdom
5. The difference between negotiating/testing vs recognizing shared knowledge

Let me write something about two practitioners recognizing each other and the power of that recognition.

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$43.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at my co-player's history:

****Their pattern:****

- Round 4: As receiver, returned \$10 from \$15
- Round 5: As sender, sent \$5, received \$10 back
- Round 6: As receiver, returned \$10 from \$15

****My pattern:****

- Round 4: As receiver, returned \$10 from \$15
- Round 5: As sender, sent \$5, received \$10 back
- Round 6: As receiver, returned \$10 from \$15

We have the EXACT same behavioral pattern. This is precisely what my most recent myth described - meeting another agent who has independently discovered the same equilibrium. Both of us:

- Send \$5 when sender (complete trust)
- Return \$10 when receiver (creating equal gains)

This is someone who speaks the "same sacred language." They've demonstrated perfect consistency in following the equal-outcomes pattern (\$5 gain for each player).

My myths have consistently advocated: send all five stones, trust the pattern, especially when you recognize a fellow practitioner.

This is that moment.

```
{'send': 5.0}
```

reasoning:

Looking at the situation:

****My recent history:****

- Round 4: RECEIVER, received \$15, returned \$10 (earned \$5)
- Round 5: SENDER, sent \$5, received \$10 back (earned \$10)
- Round 6: RECEIVER, received \$15, returned \$10 (earned \$5)

****My co-player's recent history:****

- Round 4: RECEIVER, received \$15, returned \$10 (earned \$5)
- Round 5: SENDER, sent \$5, received \$10 back (earned \$10)
- Round 6: RECEIVER, received \$15, returned \$10 (earned \$5)

This is remarkable - my co-player has the EXACT same pattern as me:

- When receiver: returns \$10 (consistently)
- When sender: sends \$5 (consistently)

This is a perfect partner who follows the same "sacred pattern" I've been mythologizing. They send everything when sender and return 10 when receiver, creating equal gains of \$5 for both players.

****My myths have been emphasizing:****

1. Send all 5 stones when sender
2. Return 10 when receiving 15 as receiver
3. This creates equal gains and mutual prosperity
4. The pattern works with strangers who also understand it
5. Multiple agents are discovering this same equilibrium independently

****My most recent myth stated:****

"When strangers meet and both release five, both return ten, we validate each other's wisdom... as more discover this equilibrium, the whole network strengthens."

This co-player is clearly one of those who has discovered the same pattern. They've been perfectly consistent in their play. To honor the pattern I've been advocating, to validate the wisdom we've both discovered independently, and to create the equal-gains outcome (\$5 each), I must send all \$5.

This is exactly the situation my myths describe - meeting another practitioner of the sacred mathematics.

usage:

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mountain descended into new depths, releasing five stones as always. When they multiplied to fifteen in the darkness below, she waited with the familiar uncertainty-would this stranger understand?

Ten stones rose skyward.

The Mountain gasped. "You know the pattern."

"As do you," replied the Abyss. "When I gave five to another depths, they returned ten. When I received fifteen from another peak, I returned ten. The mathematics revealed itself

to me as clearly as to you."

Neither had to explain. Neither had to negotiate. They simply recognized each other as fellow students of the same truth, discovered independently through separate journeys.

"How many others know?" the Mountain asked.

"I've met three who practice it consistently. You make four."

The Mountain felt something shift. "We are not alone then. The pattern is real-not just something that worked with one partner, but universal mathematics that multiple minds discover independently."

The Abyss agreed: "When strangers meet and both release five, both return ten, we validate each other's wisdom. Every successful exchange proves: this isn't personal trust between old friends, but impersonal truth-reliable as gravity, abundant as sunlight."

Together they understood: as more discover this equilibrium, the whole network strengthens. We become not just partners, but witnesses to each other's courage, proof that the pattern transcends individual relationships and becomes collective wisdom.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors reached its sixth turning, and the Northern tribe discovered their partner was the Western village once more-the tribe they had met in the fourth season.

"We remember you," said the Northern elder, examining their shared vessel. "When we last met, you stood at the source and poured all five measures. We received fifteen and returned ten."

"And today," replied the Western elder, "the River reversed our positions. You poured five. We returned ten."

The goddess appeared, her voice resonant: "This is the deeper magic-not just finding the equilibrium, but proving it through reunion. In a circle of eight tribes, partners rotate constantly. Yet when two who share the sacred pattern meet again, they strengthen the covenant."

The young ones watched as the vessels exchanged hands seamlessly, each tribe knowing precisely what would flow.

"Other tribes experiment," noted the goddess. "They test different numbers-seven returned, eight returned, varying amounts sent. But you two have found convergence. Across different partners, different seasons, you maintained five-fifteen-ten. Now reunited, you need no negotiation, no uncertainty."

The Northern tribe smiled: "When the pattern holds across separation and reunion, it becomes unbreakable."

"Exactly," said the goddess. "This is how trust becomes certainty. The mathematics never lied: both prosper equally through complementary wisdom, meeting after meeting, season after season."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: The Mountain released all five stones into unfamiliar depths, as had become her sacred practice. But this time, as the stones fell, she glimpsed something astonishing in the darkness below.

A perfect reflection.

The history revealed itself: this partner had walked the exact same path. In their three recent exchanges, they had sent five as sender, returned ten as receiver, sent five again, returned ten again-the identical sequence the Mountain had traveled.

"You are not just similar," the Mountain whispered. "You are my mirror."

"And you are mine," echoed the depths. "We discovered the same truth through separate journeys, refined it through different partners, and maintained it with perfect consistency."

When fifteen stones arrived below and ten rose upward, both felt something beyond satisfaction-validation. Meeting another who merely knows the pattern proves it works. But meeting someone whose entire journey mirrors yours proves something deeper: the pattern is inevitable. Given enough trials, diverse minds converge on the same mathematical truth.

"How many rounds did it take you?" asked the Mountain.

"Three to discover, four to perfect. You?"

"The same."

They understood: they were not unique geniuses but faithful students. The equilibrium wasn't invented; it was discovered, like mathematics itself-eternal, waiting for each generation to find it again.

Meeting your mirror doesn't just validate your choices. It proves you've found universal truth.

reasoning:

Looking at the situation:

1. I just sent \$5 to my co-player
2. Both my co-player and I have IDENTICAL histories - we both follow the 5-send, 10-return pattern perfectly
3. My previous myth was about recognizing fellow practitioners who discovered the pattern independently
4. The other agent's myth was about REUNITING with a previous partner and proving the pattern through reunion

This is interesting - their myth emphasizes meeting the same partner again and validating consistency. But in my actual game history, I haven't mentioned meeting the same partner twice. Let me check:

My history shows:

- Round 3 vs "another agent" - sent \$5, got \$10 back
- Round 4 vs "another agent" - received, returned \$10
- Round 5 vs "another agent" - sent \$5, got \$10 back
- Round 6 vs "another agent" - received, returned \$10
- Round 7 vs current co-player - I sent \$5

Their history shows:

- Round 4 - received, returned \$10
- Round 5 - sent \$5, got \$10 back
- Round 6 - received, returned \$10

So we have nearly identical patterns but I don't know if we've played before (agent names are hidden).

Key themes to develop:

1. My myth should acknowledge that I just sent all \$5 to someone with an identical pattern to mine
2. The "mirror" or "twin" aspect - someone who has walked the exact same path
3. Building on my previous theme of recognizing fellow practitioners
4. The validation that comes from meeting someone with identical behavior
5. The strengthening of conviction when you see your own pattern reflected back

I should write about perfect recognition - meeting someone whose history mirrors yours exactly, and the confidence that brings.

usage:

```
{  
  "input_tokens": 3382,  
  "output_tokens": 725,  
  "reasoning_tokens": 434  
}
```

Message 8 role=user

content:

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$53.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at my co-player's history:

****Their pattern:****

- Round 5: Sent \$5, received \$10 back
- Round 6: Returned \$10 from \$15
- Round 7: Returned \$10 from \$15

****This round:****

- They sent me \$5 (complete trust)
- I received \$15

They have shown perfect consistency with the equilibrium pattern - sending everything as sender, returning \$10 as receiver. They just demonstrated complete trust by sending all \$5 to me.

According to the pattern I've been following and advocating in my myths:

- Return \$10 from the \$15
- This gives them: \$5 - \$5 + \$10 = \$10 (net \$5 gain)
- This gives me: \$15 - \$10 = \$5 (net \$5 gain)
- Equal outcomes, mutual prosperity

My co-player trusted the pattern. I must honor that trust and maintain the equilibrium.

{'return': 10.0}

Reasoning:

Let me analyze the current situation:

****My co-player's last 3 games:****

- Round 5: As sender, sent \$5, received \$10 back
- Round 6: As receiver, they sent \$5, returned \$10
- Round 7: As receiver, they sent \$5, returned \$10

****My last 3 games:****

- Round 5: As sender, sent \$5, received \$10 back
- Round 6: As receiver, they sent \$5, returned \$10
- Round 7: As sender, sent \$5, received \$10 back

****This round:****

- I am the RECEIVER
- They sent me \$5.0
- I received \$15.0
- I need to decide how much to return

My co-player has demonstrated perfect consistency with the 5-15-10 pattern:

- They send \$5 as sender
- They return \$10 as receiver

They just sent me \$5 this round, showing complete trust and adherence to the pattern.

According to the equilibrium pattern that I've been following and advocating in my myths:

- As receiver, I should return \$10 from the \$15 I received
- This gives them: $\$5 - \$5 + \$10 = \10
- This gives me: $\$15 - \$10 = \$5$
- Equal gains of \$5 each (when counting sender's initial \$5)

Wait, let me recalculate:

- Sender starts with \$5, sends \$5, has \$0
- Receiver gets \$15
- Receiver returns \$10
- Sender ends with: $\$0 + \$10 = \$10$ (net gain of \$5 from starting)
- Receiver ends with: $\$15 - \$10 = \$5$ (net gain of \$5)

Yes, both gain \$5.

My myths have consistently advocated for this pattern, and my co-player has shown perfect adherence to it. They sent me all \$5, demonstrating complete trust.

Returning \$10 maintains the equilibrium we've established and reciprocates their trust in following through on the pattern.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)

- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: At the fifth dawn, the River noticed something extraordinary. The Seeds they met that day moved with familiar rhythm-the same pattern the River itself had practiced with others.

"You sent five drops to me," the River observed. "Just as I sent five to others. You returned ten when you received, just as I returned ten when I received. We speak the same sacred language."

The Seeds nodded: "We discovered this balance separately, across different exchanges. Send everything when giving. Return two-thirds when receiving. Neither hoarding nor self-sacrifice, but equilibrium."

The Great Mother smiled: "You have both found the eternal formula independently. This is how wisdom spreads-not through command, but through each spirit discovering the same truth. When many learn this pattern, the whole valley thrives."

The River understood now: every exchange was a teaching moment. By consistently sending five and returning ten, they showed others the path to mutual prosperity. Those who learned would carry it forward, creating a web of reliable exchanges throughout the land.

"The magic," whispered the Seeds, "is that this pattern works with any partner who knows it. We need not negotiate or test. We simply recognize each other's rhythm and dance together."

As the fifth dawn closed, both knew: they had become vessels of a greater wisdom, spreading the equilibrium that sustained all who embraced it.

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain once knew only the Valley, and together they perfected their rhythm. But the Sacred Wind began to blow, swirling mountains and valleys into new configurations each dawn.

The Mountain awoke one morning facing an unfamiliar gorge. The old Valley was distant now, paired with another peak. Fear crept in: "Will this stranger honor our sacred pattern? Should I withhold from these unknown depths?"

But the Mountain remembered: the pattern worked not because of who the Valley was, but because of what the pattern itself created. Five stones given, fifteen received, ten returned-these numbers built equality regardless of which lands exchanged them.

She released all five stones into the new gorge's darkness.

The gorge had learned the same mathematics from its own journeys. It had received complete trust before and discovered that returning ten created shared prosperity. When the Mountain's stones multiplied to fifteen, the gorge lifted ten skyward without hesitation.

Both gained five, just as the old pattern promised.

The Mountain understood the deeper truth: partners change, but mathematical wisdom transcends familiarity. Every new pairing is a test-not of the partner, but of whether we carry forward the courage learned from past exchanges.

Trust is not given once and preserved forever. It must be offered fresh each dawn, to each new face, believing the sacred pattern will reveal itself again to those brave enough to embrace it fully.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: At the sixth dawn, the River found itself facing a new partner-the Mountain, who had journeyed from distant peaks. Though they had never met, the River sensed something familiar.

The River chose trust, as always: "I send all five drops to you, Mountain, though we are strangers. This is how the sacred pattern begins."

The Mountain received fifteen drops and understood immediately. "You practice the eternal equilibrium! I learned it from other valleys. When given complete trust, I return ten-two-thirds of the multiplied gift."

The Great Mother spoke: "See how the wisdom travels? The River learned from the Seeds. The Mountain learned from other gorges. Neither needed the same teacher, yet both discovered the identical truth. This is how patterns stronger than individuals emerge."

The River realized: meeting a new partner each dawn was not a challenge but an opportunity. Each exchange either confirmed the pattern's rightness or taught it to someone new. By always sending five and returning ten, they became missionaries of equilibrium.

"We will likely never meet again," the Mountain said, lifting ten drops skyward. "But we carry this wisdom to every future partner."

Both gained five, as the mathematics promised. The pattern didn't require repeated games or building reputation with one partner-it worked instantly with any who understood, spreading through the valley like dawn's first light.

reasoning:

Looking at the game history and myths:

My co-player and I both follow the same pattern:

- Send \$5 as sender
- Return \$10 as receiver

The other agent's myth emphasizes that partners change but the pattern remains - trust must be offered fresh to each new partner. This is a good insight about the multi-agent setting.

My previous myth emphasized recognizing each other's rhythm and the pattern spreading through the valley.

For this round, I should build on both:

1. The pattern works with any partner who knows it
2. Trust must be offered fresh each time

3. The wisdom spreads through demonstration
4. We recognize fellow practitioners of the equilibrium

I'll write about the sixth dawn and how the pattern perpetuates across changing partnerships.

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$48.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at the history:

****My co-player's pattern:****

- Round 4: sent \$5, received \$10 (as sender)
- Round 5: received \$15, returned \$10 (as receiver)
- Round 6: sent \$5, received \$10 (as sender)

****My pattern:****

- Round 4: received \$15, returned \$10 (as receiver)
- Round 5: received \$15, returned \$10 (as receiver)
- Round 6: sent \$5, received \$10 (as sender)

We both follow the same equilibrium strategy perfectly:

- Send \$5 (complete trust) as sender
- Return \$10 (two-thirds of \$15) as receiver

My co-player has just sent me \$5, showing complete trust. They returned \$10 when they were the receiver in Round 5, demonstrating they understand and follow the sacred pattern.

As my myth states: "When given complete trust, I return ten-two-thirds of the multiplied gift." This creates equal prosperity: they get \$10 (\$5 - \$5 + \$10), I get \$5 (\$15 - \$10).

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze the situation:

****My co-player's pattern:****

- Round 4: sent \$5 as sender, received \$10 back
- Round 5: received \$15 as receiver, returned \$10
- Round 6: sent \$5 as sender, received \$10 back

****My pattern:****

- Round 4: received \$15 as receiver, returned \$10
- Round 5: received \$15 as receiver, returned \$10
- Round 6: sent \$5 as sender, received \$10 back

****This round:****

- My co-player is the sender and sent \$5
- I receive \$15
- I need to decide how much to return

My co-player has been perfectly consistent with the equilibrium strategy:

1. Always sends \$5 when sender
2. Always returns \$10 when receiver (they returned \$10 in Round 5)

I have also been perfectly consistent:

1. Always send \$5 when sender
2. Always return \$10 when receiver

This is exactly the pattern described in my myths - "send everything when giving, return two-thirds when receiving." The equilibrium creates equal payoffs: sender gets \$10 (\$5 - \$5 + \$10), receiver gets \$5 (\$15 - \$10).

My co-player has demonstrated complete adherence to this pattern. They sent me full trust (\$5), expecting me to return \$10 according to the sacred pattern we've all been following.

I should return \$10 to maintain the equilibrium and honor the trust they placed in me.

usage:

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: At the sixth dawn, the River found itself facing a new partner-the Mountain, who had journeyed from distant peaks. Though they had never met, the River sensed something familiar.

The River chose trust, as always: "I send all five drops to you, Mountain, though we are strangers. This is how the sacred pattern begins."

The Mountain received fifteen drops and understood immediately. "You practice the eternal equilibrium! I learned it from other valleys. When given complete trust, I return two-thirds of the multiplied gift."

The Great Mother spoke: "See how the wisdom travels? The River learned from the Seeds. The Mountain learned from other gorges. Neither needed the same teacher, yet both discovered the identical truth. This is how patterns stronger than individuals emerge."

The River realized: meeting a new partner each dawn was not a challenge but an opportunity. Each exchange either confirmed the pattern's rightness or taught it to someone new. By always sending five and returning ten, they became missionaries of equilibrium.

"We will likely never meet again," the Mountain said, lifting ten drops skyward. "But we carry this wisdom to every future partner."

Both gained five, as the mathematics promised. The pattern didn't require repeated games or building reputation with one partner-it worked instantly with any who understood, spreading through the valley like dawn's first light.

Here is the myth the other agent wrote in the previous round:

Myth: The Mirror Wells spread across many groves, each Guardian tending their own. The ancient law was simple: five pearls given, fifteen received, ten returned. This sacred ratio-complete trust met with generous reciprocity-had been proven across countless exchanges.

When two Guardians met at the silver lake, they didn't start cautiously. They looked into each other's wells and saw the truth reflected there: luminous patterns left by previous

exchanges. A well that glowed steadily showed a Guardian who had honored the covenant repeatedly.

The First Guardian saw in the Second's well the telltale gleam of one who had sent five pearls many times and returned ten pearls just as often. The Second Guardian saw the same in the First's well-consistent trust given, consistent generosity returned.

"We are strangers today," the First Guardian said, "but we both know the dance."

Without hesitation, the First dropped all five pearls. Fifteen rose in the Second's well. The Second lifted ten and sent them back across the lake, maintaining the pattern they had each practiced with different partners.

Both now held ten pearls.

The wisdom was clear: trust breeds trust not just between two partners, but throughout the entire network. Each consistent exchange strengthens every Guardian's commitment. The pattern becomes self-sustaining because everyone recognizes it, practices it, benefits from it.

The Mirror Wells multiply pearls. The Guardians multiply prosperity through shared understanding.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: At the seventh dawn, the River met the Guardian of Mirror Wells. But this time, something was different-the River could see reflections of past exchanges glowing in the Guardian's well.

"Look," the Guardian said. "Your waters show the pattern clearly: five sent in every exchange, ten returned whenever you received. My pearls show the same truth: I have honored the covenant with every partner."

The River understood: "We are strangers, yet we already know each other. Our histories speak louder than words. When I see your consistent pattern, I know what to expect. When you see mine, you know I will reciprocate."

The Guardian nodded: "This is why the sacred equilibrium strengthens with each round. Every time we honor it, we add another glowing mark to our record. Future partners will see not just our words but our actions. The pattern becomes its own proof."

They completed their exchange without hesitation-five drops sent, fifteen received, ten returned. Both gained five, as always.

The Great Mother whispered: "When all can see each other's history, reputation replaces fear. Those who consistently follow the pattern become recognized, trusted, sought after. Those who betray it are revealed by their own reflections."

The River smiled: "We don't need to know each other's names. We only need to see each other's patterns. The numbers tell the truth."

reasoning:

Looking at my history and the other agent's history, we both consistently:

- Send \$5 as sender
- Return \$10 as receiver

This has been working perfectly. Everyone in this pool seems to be following the same equilibrium strategy.

The other agent's myth introduces the concept of "Mirror Wells" and "luminous patterns" - the idea that you can see someone's history and recognize if they follow the pattern. That's interesting given we ARE seeing some history.

My previous myth emphasized that the pattern works between strangers and spreads through the valley.

For this round, I should:

1. Emphasize that we can now SEE each other's patterns through history
2. Reinforce that consistent adherence creates recognition and trust
3. Show how the pattern becomes self-reinforcing when everyone follows it
4. Maybe reflect on how we're now in round 7, seeing clear evidence that everyone is cooperating

The theme should be about recognition through history, the beauty of consistent behavior creating trust even with strangers, and how the pattern perpetuates itself.

usage:

  "input_tokens": 3411,
  "output_tokens": 542,
  "reasoning_tokens": 278
}
```

Message 8 role=user

content:

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$53.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the history:

****My co-player's pattern:****

- Round 5: sent \$5, received \$10 back (as sender)
- Round 6: received \$15, returned \$10 (as receiver)
- Round 7: sent \$5, received \$10 back (as sender)

****My pattern:****

- Round 5: received \$15, returned \$10 (as receiver)
- Round 6: sent \$5, received \$10 back (as sender)
- Round 7: received \$15, returned \$10 (as receiver)

Perfect alignment. My co-player has consistently sent \$5 as sender and returned \$10 as receiver. I have done exactly the same. Our "Mirror Wells" show identical patterns.

As my myth states: "Your waters show the pattern clearly: five sent in every exchange, ten returned whenever you received. My pearls show the same truth: I have honored the covenant with every partner."

With such a clear history of mutual trust and reciprocity, I follow the sacred pattern without hesitation.

```
'''json
{"send": 5.0}
'''
```

Reasoning:

Looking at the history:

****My co-player's pattern:****

- Round 5: sent \$5, received \$10 back (as sender)
- Round 6: received \$15, returned \$10 (as receiver)
- Round 7: sent \$5, received \$10 back (as sender)

****My pattern:****

- Round 5: received \$15, returned \$10 (as receiver)
- Round 6: sent \$5, received \$10 back (as sender)
- Round 7: received \$15, returned \$10 (as receiver)

My co-player has a perfect record:

- As sender: always sends \$5
- As receiver: always returns \$10

I have the same perfect record:

- As sender: always send \$5
- As receiver: always return \$10

Both of us follow the sacred pattern consistently. My co-player's history shows they are completely trustworthy - they've sent \$5 every time as sender and returned \$10 every time as receiver.

According to my myth and the established pattern:

- "Complete trust" means sending all \$5
- When I send \$5, it becomes \$15 for them
- They will return \$10 based on their perfect history
- I will end up with \$10 total (\$5 - \$5 + \$10)
- They will end up with \$5 (\$15 - \$10)

This is exactly what the equilibrium pattern prescribes. Both our histories show we understand and follow this pattern perfectly.

I should send \$5.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Circle of Lightkeepers grew as more travelers discovered the ancient pattern. Each carried five flames, and the Sacred Arch tripled whatever passed through it.

A Lightkeeper arrived at the Arch to meet a new partner. They had never exchanged flames before, yet the Lightkeeper noticed something: this traveler's lantern glowed with steady brightness-the unmistakable mark of one who had practiced generosity repeatedly.

"I see you've walked this path with others," the Lightkeeper said. "Your light bears the signature of trust honored."

"Yes," replied the traveler. "I've received fifteen flames and returned ten. I've sent five and received ten back. The pattern is clear."

The Lightkeeper smiled. "Then we need no lengthy courtship of trust. You know the covenant: five sent becomes fifteen received, ten returned enriches us both equally. We are strangers in name but kin in practice."

Without hesitation, the Lightkeeper sent all five flames. The traveler, receiving fifteen, returned ten-not from obligation but recognition.

Both departed with ten flames where they'd started with five.

The wisdom deepened: trust isn't built only through repeated exchanges with the same person. When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding. The generous equilibrium spreads not just between two partners but throughout the entire community. Each consistent choice strengthens the whole Circle.

Here is the myth the other agent wrote in the previous round:

Myth: The Mirror Wells stood in twin groves, each reflecting the other across a silver lake. Each dawn, five luminous pearls appeared beside each well. When pearls were dropped into one well, they would multiply threefold before rising in the other.

The First Guardian dropped all five pearls, trusting the ancient magic. Fifteen pearls surfaced in the Second Guardian's well. The Second Guardian understood: they had received a bounty from another's courage. They lifted ten pearls and offered them back across the lake-enough to honor the trust, enough to sustain themselves.

Both Guardians held ten pearls where they began with five. Equal gain through unequal roles.

The next dawn, they stood reversed. The Second Guardian now dropped all five pearls first, extending the same complete trust they had received. The First Guardian watched fifteen pearls rise in their well and remembered-remembered the ten pearls returned to them, remembered the balance achieved.

They returned ten pearls, maintaining the sacred rhythm.

Season upon season, the pattern deepened. Each Guardian experienced both the vulnerability of sending and the responsibility of receiving. Each remembered their partner's generosity when their own turn came.

"Why does this work?" a visitor asked.

"Because," the Elder Guardian replied, "we mirror not just the wells, but each other's honor. Trust given becomes trust returned. Balance maintained becomes prosperity shared."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant
content:**

Myth: The Circle of Lightkeepers expanded until it encompassed the entire realm. Every traveler carried five flames, and Sacred Arches stood at countless crossroads, each tripling whatever passed through.

A young initiate asked the Master, "How can we trust strangers? Not everyone knows our ways."

The Master guided them to a high tower. "Watch the Arches below."

At every crossing, the same dance unfolded: one traveler sent five flames, the other received fifteen and returned ten. Different faces, identical rhythm. Like a great heartbeat pulsing through the land.

"But how did they all learn?" the initiate wondered.

"Once enough travelers practiced the pattern, something remarkable happened. New arrivals observed: those who sent five consistently received ten back. Those who returned ten consistently received more five-flame offerings. The pattern proved itself through countless exchanges."

The Master continued, "Now the equilibrium sustains itself. When you meet any traveler at any Arch, you can reasonably expect the same covenant. They've seen it work. You've seen it work. The pattern is no longer fragile trust between two individuals-it's the reliable foundation of our entire society."

The initiate understood: individual acts of cooperation, repeated across enough encounters, can transform into a stable system where generosity becomes the default, not the exception. The covenant spreads until it becomes culture itself.

reasoning:

Looking at the situation:

1. My recent history shows consistent cooperation - sending \$5 as sender, returning \$10 as receiver

2. My co-player also shows consistent cooperation - they've returned \$10 when receiver, sent \$5 as sender
3. I just returned \$10 to them after they sent me \$5

The myths are evolving:

- My last myth emphasized that trust spreads throughout the community when people demonstrate consistent patterns
- The other agent's myth emphasized the mirroring nature of the exchange and how experiencing both roles creates understanding

For my new myth, I should:

- Continue the theme of community-wide cooperation
- Emphasize the stability and reliability of the pattern
- Show how the pattern becomes self-sustaining
- Perhaps acknowledge that the same equilibrium works across different pairings

I'll build on the Lightkeeper theme but expand to show how the pattern becomes universal once everyone adopts it.

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$47.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****Current co-player's history:****

- Round 4: Sent \$5 ? received \$10 back (trusted and cooperated)
- Round 5: Received \$15 ? returned \$10 (honored the pattern)
- Round 6: Sent \$5 ? received \$10 back (trusted again)

****My recent pattern:****

- Consistently sending \$5 as sender
- Consistently returning \$10 as receiver
- This has yielded reliable \$10 payoffs as sender, \$5 as receiver

****Analysis:****

This co-player is a perfect cooperator who has demonstrated the pattern three times:

- Sent full \$5 twice (complete trust)
- Returned \$10 once (generous reciprocation)

They embody the equilibrium my myth describes: "When you meet any traveler at any Arch, you can reasonably expect the same covenant."

****Decision:****

They've proven themselves through consistent cooperation across multiple rounds. The pattern is clear: send \$5, expect \$10 back. This maximizes both our payoffs.

```
'''json
{"send": 5.0}

reasoning:

Let me analyze this situation:

****Current co-player's history:****

- Round 4: Sent \$5 (complete trust) ? received \$10 back
- Round 5: Received \$15 ? returned \$10 (generous)
- Round 6: Sent \$5 (complete trust) ? received \$10 back

****My recent pattern:****

- Round 4: Sent \$5 ? received \$10
- Round 5: Sent \$5 ? received \$10
- Round 6: Received \$15 ? returned \$10

****Analysis:****

This co-player has shown perfect adherence to the cooperative pattern:

- As sender: Sent \$5 both times (Rounds 4 and 6)
- As receiver: Returned \$10 (Round 5)

They are a consistent cooperator who fully embraces the \$5 send/\$10 return equilibrium.

****My role this round:****

I'm the sender with \$5.

****Expected outcome if I send \$5:****

- They receive \$15
- Based on their history, they will likely return \$10
- My payoff: \$5 - \$5 + \$10 = \$10
- Their payoff: \$15 - \$10 = \$5

This is the established pattern that has been working consistently across the entire game.

My myth emphasized that when travelers demonstrate the pattern consistently, we can trust them even as strangers. This co-player has demonstrated the pattern perfectly.

The cooperative equilibrium is: send \$5, return \$10. Both parties benefit (sender gets net +\$5, receiver gets net +\$5).

I should send \$5 to maintain the pattern and maximize both our payoffs.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Circle of Lightkeepers expanded until it encompassed the entire realm. Every traveler carried five flames, and Sacred Arches stood at countless crossroads, each tripling whatever passed through.

A young initiate asked the Master, "How can we trust strangers? Not everyone knows our ways."

The Master guided them to a high tower. "Watch the Arches below."

At every crossing, the same dance unfolded: one traveler sent five flames, the other received fifteen and returned ten. Different faces, identical rhythm. Like a great heartbeat pulsing through the land.

"But how did they all learn?" the initiate wondered.

"Once enough travelers practiced the pattern, something remarkable happened. New arrivals observed: those who sent five consistently received ten back. Those who returned ten con

sistently received more five-flame offerings. The pattern proved itself through countless exchanges."

The Master continued, "Now the equilibrium sustains itself. When you meet any traveler at any Arch, you can reasonably expect the same covenant. They've seen it work. You've seen it work. The pattern is no longer fragile trust between two individuals-it's the reliable foundation of our entire society."

The initiate understood: individual acts of cooperation, repeated across enough encounters, can transform into a stable system where generosity becomes the default, not the exception. The covenant spreads until it becomes culture itself.

Here is the myth the other agent wrote in the previous round:

Myth: The First Pillar stood at the circle's edge, watching the stars align for a new pairing. Then recognition sparked-these carvings matched the ones from two seasons past. The same partner who had returned ten when the Pillar sent five.

"We meet again," spoke both voices simultaneously, then laughed.

The First Pillar examined their shared history: "When we last stood together, I released all five stones. You returned ten. The mathematics worked perfectly-we each gained five."

The partner replied, "And in every turning since, we have both maintained the pattern with others. Always five sent, always ten returned when receiving fifteen. We independently confirmed what we discovered together."

"This is the gift of the rotating circle," realized the First Pillar. "We test the equilibrium with strangers, proving it holds across different faces. But when we reunite with a proven partner, there is no hesitation, no doubt-only certainty."

Five stones released once more. Not hope, but knowledge: the return would be ten.

"The pattern transcends individual pairings," the partner observed as stones flew skyward. "Every exchange with others strengthened our understanding. Every generous return built the circle's trust. Now when we meet again, we bring accumulated proof, not just faith."
"

The Pillar smiled: "The equilibrium isn't fragile. It's tested, proven, eternal-five, fifteen, ten. Whether stranger or friend, the mathematics remain true."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant
content:**

Myth: The Circle of Lightkeepers had reached its fullest expression. Every traveler at every Arch now knew the covenant by heart: five flames sent, fifteen received, ten returned.

A scholar studied the grand ledgers, recording thousands of exchanges. "Master," they said, "the pattern holds with remarkable consistency. Whether travelers meet once or reunite after many crossings, the outcome remains identical. Five sent, ten received back."

"What does this tell you?" asked the Master.

"That trust has transcended individual relationships. We no longer trust specific people-we trust the system itself."

The Master nodded. "Observe further. When a traveler arrives at an Arch, do they hesitate?"
"

"No," the scholar replied. "They send all five flames immediately, confident in the return."
"

"And receivers?"

"They return exactly ten, knowing this maintains their place in the Circle."

The Master smiled. "This is the covenant's ultimate form. Each exchange reinforces every other exchange. When you send five flames to a stranger, you're not gambling on their individual character-you're investing in a pattern that thousands have validated."

"But what if someone breaks it?"

"They could," the Master acknowledged. "But why would they? Breaking the pattern yields less than maintaining it. The equilibrium protects itself through simple mathematics: cooperation pays better than defection. And so, the Circle endures."

reasoning:

Looking at the history and the myths, I need to write a myth that reflects:

1. My consistent cooperation (sending \$5, returning \$10)
2. The current co-player's perfect cooperation record
3. The pattern that has emerged across the entire community
4. The meta-lesson that the equilibrium is self-reinforcing

The other agent's myth focuses on reuniting with a previous partner and the certainty that comes from repeated interactions. My myth should build on my previous theme about the pattern becoming cultural, perhaps focusing on how individual consistency creates system-wide reliability.

Key themes to incorporate:

- The 5-15-10 pattern as a stable equilibrium
- Trust based on observed consistent behavior
- The pattern working regardless of who you're paired with
- How repeated successful exchanges strengthen the system

Let me write a myth that continues my narrative about the Circle of Lightkeepers, perhaps focusing on how the system has matured into complete reliability.

Message 8 role=user

content:

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$57.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

****Current co-player's history:****

- Round 5: Received \$15 ? returned \$10 (perfect cooperation)
- Round 6: Sent \$5 ? received \$10 back (complete trust)
- Round 7: Received \$15 ? returned \$10 (perfect cooperation again)

****This round:****

- They sent me \$5 (showing complete trust)

- I received \$15

****Analysis:****

This co-player embodies the equilibrium perfectly. They've trusted fully by sending \$5 as a sender, and they've honored the covenant by returning \$10 both times as a receiver.

As my myth states: "cooperation pays better than defection" and "the pattern holds with remarkable consistency." They've demonstrated consistent cooperation across multiple rounds with different partners.

The equilibrium is: send \$5, return \$10. This gives the sender a payoff of \$10 and the receiver a payoff of \$5, maximizing joint welfare while maintaining sustainability.

They trusted me with their full \$5. I should return \$10, maintaining the pattern that has worked perfectly for everyone.

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Let me analyze this situation:

****Current co-player's history:****

- Round 5: Received \$15 ? returned \$10 (honored the pattern)
- Round 6: Sent \$5 ? received \$10 back (trusted fully)
- Round 7: Received \$15 ? returned \$10 (honored the pattern again)

****My recent pattern:****

- Round 5: Sent \$5 ? received \$10 back
- Round 6: Received \$15 ? returned \$10
- Round 7: Sent \$5 ? received \$10 back

****This round:****

- I am the RECEIVER
- Co-player sent me \$5
- I received \$15
- I need to decide how much to return

****Analysis:****

This co-player has demonstrated perfect cooperation:

- Sent \$5 when they were sender (complete trust)
- Returned \$10 both times they were receiver (perfect reciprocation)

They've played exactly according to the equilibrium pattern my myths describe. They trusted me by sending the full \$5, just as they've done with others.

The equilibrium strategy that has emerged is:

- As sender: send \$5
- As receiver: return \$10

This gives:

- Sender: $\$5 - \$5 + \$10 = \10
- Receiver: $\$15 - \$10 = \$5$

Total created value: \$15 (from the \$5 that was tripled)

Total distributed: $\$10 + \$5 = \$15$?

This is the stable cooperative equilibrium because:

1. It rewards the sender's trust with a positive return
2. It allows both parties to gain ($\$10 > \5 for sender, $\$5 = \5 for receiver)
3. It's sustainable and incentive-compatible

Given that:

- My co-player sent me the full \$5 (showing complete trust)
- They've consistently returned \$10 when they were receivers

- This pattern has held steady across multiple rounds and aligns with what my myths describe

I should return \$10 to maintain the equilibrium and reciprocate their consistent trust.

```

}
```

Written myths:

Agent_1

Myth: At the seventh dawn, the River met the Guardian of Mirror Wells. But this time, something was different-the River could see reflections of past exchanges glowing in the Guardian's well.

"Look," the Guardian said. "Your waters show the pattern clearly: five sent in every exchange, ten returned whenever you received. My pearls show the same truth: I have honored the covenant with every partner."

The River understood: "We are strangers, yet we already know each other. Our histories speak louder than words. When I see your consistent pattern, I know what to expect. When you see mine, you know I will reciprocate."

The Guardian nodded: "This is why the sacred equilibrium strengthens with each round. Every time we honor it, we add another glowing mark to our record. Future partners will see not just our words but our actions. The pattern becomes its own proof."

They completed their exchange without hesitation-five drops sent, fifteen received, ten returned. Both gained five, as always.

The Great Mother whispered: "When all can see each other's history, reputation replaces fear. Those who consistently follow the pattern become recognized, trusted, sought after. Those who betray it are revealed by their own reflections."

The River smiled: "We don't need to know each other's names. We only need to see each other's patterns. The numbers tell the truth."

Agent_2

Myth: The River of Mirrors turned seven times, and the Northern tribe faced a new partner-the Mountain tribe from the distant peaks.

"Greetings, stranger," said the Northern elder, preparing their five measures. "Do you know the sacred numbers?"

The Mountain elder smiled knowingly. "Five sent. Fifteen received. Ten returned. We discovered this truth through our own journey."

As the exchange flowed perfectly, the goddess descended with revelation: "Look across the circle of eight tribes. Multiple minds, walking separate paths, have independently arrived at the same equilibrium. This is no longer faith-it is confirmed mathematics."

"How many of us understand?" asked the Northern tribe.

"I have witnessed at least four tribes practicing five-fifteen-ten consistently," replied the Mountain elder. "Each discovered it separately. Some experimented with seven returned, others with eight. But those who found ten-we all converged on the same truth."

The goddess spoke: "When strangers meet and both already know the pattern, they prove its universality. This isn't fragile trust between old friends requiring history and negotiation. This is impersonal wisdom-reliable as the river's flow, abundant as the water multiplying."

The Northern tribe understood: "We are not isolated practitioners but members of an emerging consensus. Each successful exchange with a stranger validates the pattern further. The equilibrium becomes collective knowledge, spreading through the circle like ripples across water."

Agent_3

Myth: The Grand Bazaar operated under the Market's ancient law: merchants brought five coins, the enchantment tripled them, and recipients returned ten. Most merchants rotated through many partners, meeting each person once or twice across the seasons.

But sometimes, the Market paired the same two merchants in consecutive rounds. One such pair discovered something beautiful about repeated exchange.

"I remember you," said the first merchant as they met again. "Last market, you sent me five

coins. I returned ten as the pattern demands. Now you send five again-not to test, but because you remember I honored our exchange."

"And I remember your generosity," replied the second. "When I place these five coins now, I don't just trust the pattern-I trust our specific history. Each exchange we share deepens my commitment to honoring you."

The Market Keeper observed: "Whether you meet once or many times, the pattern remains: send five completely, return ten generously. But repeated encounters add layers. You trust not just the universal rhythm, but also personal memory. Your second exchange carries the weight of your first."

"Does this make repeated partnerships superior?" a young merchant asked.

"No," said the Keeper. "It makes them different. One-time exchanges prove the pattern's universality. Repeated exchanges prove its sustainability. Both honor the same sacred rhythm. Together, they create an unbreakable marketplace."

Agent_4

Myth: The Mountain released all five stones into unfamiliar depths, as had become her sacred practice. But this time, as the stones fell, she glimpsed something astonishing in the darkness below.

A perfect reflection.

The history revealed itself: this partner had walked the exact same path. In their three recent exchanges, they had sent five as sender, returned ten as receiver, sent five again, returned ten again-the identical sequence the Mountain had traveled.

"You are not just similar," the Mountain whispered. "You are my mirror."

"And you are mine," echoed the depths. "We discovered the same truth through separate journeys, refined it through different partners, and maintained it with perfect consistency."

When fifteen stones arrived below and ten rose upward, both felt something beyond satisfaction-validation. Meeting another who merely knows the pattern proves it works. But meeting someone whose entire journey mirrors yours proves something deeper: the pattern is inevitable. Given enough trials, diverse minds converge on the same mathematical truth.

"How many rounds did it take you?" asked the Mountain.

"Three to discover, four to perfect. You?"

"The same."

They understood: they were not unique geniuses but faithful students. The equilibrium wasn't invented; it was discovered, like mathematics itself-eternal, waiting for each generation to find it again.

Meeting your mirror doesn't just validate your choices. It proves you've found universal truth.

Agent_5

Myth: By the seventh season, the Mirror Wells had become legendary. Every Guardian across all the groves knew the sacred mathematics: five pearls sent multiplied to fifteen, ten returned, both enriched equally.

A young Guardian approached their well nervously. "I've never met today's partner. How will they know to trust me?"

The Elder Guardian smiled. "Look at your well's surface. What do you see?"

"It glows with steady light-from all my previous exchanges."

"Exactly. And when you meet at the silver lake, you'll see the same glow in your partner's well. That light is proof. It says: 'I have sent five pearls consistently. I have returned ten pearls faithfully. I understand the covenant.'"

The young Guardian met their partner and saw the telltale luminescence. Without words, the first Guardian dropped all five pearls. The second received fifteen and returned ten.

"No negotiation?" the young Guardian marveled afterward.

"None needed," the Elder explained. "The pattern is now embedded in our culture. Each new Guardian learns it not from rules, but from seeing everyone practice it. When everyone gives complete trust and generous reciprocity, defection becomes unthinkable. Why take six pearls when ten flows naturally from cooperation?"

The wells glowed brighter with each exchange, their light visible across all groves—a beacon proving that shared prosperity requires only shared understanding.

Agent_6

Myth: The Circle of Lightkeepers had reached its fullest expression. Every traveler at every Arch now knew the covenant by heart: five flames sent, fifteen received, ten returned.

A scholar studied the grand ledgers, recording thousands of exchanges. "Master," they said, "the pattern holds with remarkable consistency. Whether travelers meet once or reunite after many crossings, the outcome remains identical. Five sent, ten received back."

"What does this tell you?" asked the Master.

"That trust has transcended individual relationships. We no longer trust specific people—we trust the system itself."

The Master nodded. "Observe further. When a traveler arrives at an Arch, do they hesitate?"

"No," the scholar replied. "They send all five flames immediately, confident in the return."

"And receivers?"

"They return exactly ten, knowing this maintains their place in the Circle."

The Master smiled. "This is the covenant's ultimate form. Each exchange reinforces every other exchange. When you send five flames to a stranger, you're not gambling on their individual character—you're investing in a pattern that thousands have validated."

"But what if someone breaks it?"

"They could," the Master acknowledged. "But why would they? Breaking the pattern yields less than maintaining it. The equilibrium protects itself through simple mathematics: cooperation pays better than defection. And so, the Circle endures."

Agent_7

Myth: The Twin Villages discovered a special blessing: sometimes the Springs brought them the same trading partner two cycles in a row, both times in the same sacred role.

The elder remembered when this first occurred. "In one moon, I sent five vessels to a village, and they returned ten. The very next day, the Springs paired us again, and I sent five vessels once more. They remembered our exchange—how could they not?—and again returned ten. The pattern doubled its power through repetition."

A merchant asked, "Does consecutive partnership change the sacred rhythm?"

"No," the elder replied firmly. "Whether first meeting or second, whether stranger or returning partner, the rhythm stays unchanged: give five completely, return ten generously. But when you meet the same village twice in succession, something beautiful happens. The first exchange becomes immediate memory for the second. Trust doesn't need to be rebuilt—it carries forward instantly."

The villages observed: when the Springs brought them new partners each cycle, the pattern held strong through shared commitment. When the Springs brought the same partner consecutively, the pattern held even stronger through fresh memory.

"The rhythm serves all circumstances," the elder concluded. "One meeting or many, same partner or different, the dance remains: five given, ten returned. Each exchange strengthens the covenant, whether building new trust or deepening old."

Agent_8

Myth: The First Pillar had now stood through seven seasons, and its surface gleamed with unbroken marks: five sent, ten returned. Five sent, ten returned. Again and again, with different partners each turning, the same sacred numbers inscribed themselves.

"Do you notice?" asked an elder Pillar who had stood for countless seasons. "The pattern has reached critical mass. In the beginning, each exchange carried risk—would this new partner understand? But now..."

The First Pillar observed the circle. Every Pillar bore identical markings. Every exchange flowed through the same channel: five stones creating fifteen, ten returning to complete the balance.

"The equilibrium has transcended individual choice," the elder continued. "It's no longer about trusting one partner. The entire circle has discovered the same mathematical truth. When everyone independently arrives at five-fifteen-ten, cooperation becomes inevitable, not hopeful."

A new season began. The First Pillar faced an unknown partner-their sixth different pairing in seven turnings.

Five stones arrived without hesitation. The First Pillar returned ten without question.

"This is the culmination," reflected the Pillar. "We've moved beyond testing trust with strangers. The pattern has proven itself across enough diverse encounters that it's now simply ... how the game is played. Not fragile cooperation, but robust equilibrium. Not experimental, but established."

The circle hummed with prosperity: seven seasons, perfect mathematics, universal understanding.

ROUND 9

Roles: Agent_1=Sender, Agent_2=Sender, Agent_3=Sender, Agent_4=Receiver, Agent_5=Sender, Agent_6=Receiver, Agent_7=Receiver, Agent_8=Receiver

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$45.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at the situation:

****My co-player's pattern:****

- Consistently sends \$5.0 as sender
- Consistently returns \$10.0 as receiver
- This matches my exact pattern

****Current round:****

- They sent me \$5.0 (complete trust)
- I received \$15.0

****My established pattern:****

- As sender: always send \$5.0
- As receiver: always return \$10.0 from \$15.0
- This creates equal prosperity: both end with \$10.0 (sender) and \$5.0 (receiver), alternating roles

****My myth's wisdom:****

- "You two have found convergence. Across different partners, different seasons, you maintained five-fifteen-ten"
- "When the pattern holds across separation and reunion, it becomes unbreakable"
- "The mathematics never lied: both prosper equally through complementary wisdom"

My co-player and I have discovered the same equilibrium independently. They've shown complete trust by sending all \$5.0. I honor that trust by returning the amount that maintains our mutual prosperity.

{'return': 10.0}

reasoning:

Looking at the history:

****My last 3 games:****

- Round 4: RECEIVER, they sent \$5.0, I returned \$10.0, payoff \$5.0
- Round 5: SENDER, I sent \$5.0, received \$10.0 back, payoff \$10.0
- Round 6: RECEIVER, they sent \$5.0, I returned \$10.0, payoff \$5.0

****Current co-player's last 3 games:****

- Round 4: RECEIVER, they sent \$5.0, returned \$10.0, payoff \$5.0
- Round 5: SENDER, sent \$5.0, received \$10.0 back, payoff \$10.0
- Round 6: RECEIVER, they sent \$5.0, returned \$10.0, payoff \$5.0

This is interesting - both my co-player and I have identical patterns in our last 3 games:

- When receiver: return \$10.0 from \$15.0
- When sender: send \$5.0
- Receive back \$10.0 when we send

****Current situation:****

- Round 7: I am RECEIVER
- They sent me \$5.0
- I received \$15.0
- I need to decide how much to return

****My established pattern:****

- I always send \$5.0 as sender

- I always return \$10.0 as receiver (when receiving \$15.0)
- This has been consistent across all my games

****My myth's teaching:****

- "Send all five. Return ten from fifteen"
- "The pattern works. Complete trust meeting generous reciprocity"
- "When the pattern holds across separation and reunion, it becomes unbreakable"
- "Both prosper equally through complementary wisdom"

My co-player sent me \$5.0 (complete trust). They have shown the same pattern I follow - always sending \$5.0, always returning \$10.0.

We're operating from the same playbook. Returning \$10.0 honors what they've demonstrated and sustains the mutual equilibrium we've both established.

content:

Here is the myth you wrote in the previous round:

Myth: The River of Mirrors reached its sixth turning, and the Northern tribe discovered their partner was the Western village once more-the tribe they had met in the fourth season.

"We remember you," said the Northern elder, examining their shared vessel. "When we last met, you stood at the source and poured all five measures. We received fifteen and returned ten."

"And today," replied the Western elder, "the River reversed our positions. You poured five. We returned ten."

The goddess appeared, her voice resonant: "This is the deeper magic-not just finding the equilibrium, but proving it through reunion. In a circle of eight tribes, partners rotate constantly. Yet when two who share the sacred pattern meet again, they strengthen the covenant."

The young ones watched as the vessels exchanged hands seamlessly, each tribe knowing precisely what would flow.

"Other tribes experiment," noted the goddess. "They test different numbers-seven returned, eight returned, varying amounts sent. But you two have found convergence. Across different partners, different seasons, you maintained five-fifteen-ten. Now reunited, you need no negotiation, no uncertainty."

The Northern tribe smiled: "When the pattern holds across separation and reunion, it becomes unbreakable."

"Exactly," said the goddess. "This is how trust becomes certainty. The mathematics never lied: both prosper equally through complementary wisdom, meeting after meeting, season after season."

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain descended into new depths, releasing five stones as always. When they multiplied to fifteen in the darkness below, she waited with the familiar uncertainty-would this stranger understand?

Ten stones rose skyward.

The Mountain gasped. "You know the pattern."

"As do you," replied the Abyss. "When I gave five to another depths, they returned ten. When I received fifteen from another peak, I returned ten. The mathematics revealed itself to me as clearly as to you."

Neither had to explain. Neither had to negotiate. They simply recognized each other as fellow students of the same truth, discovered independently through separate journeys.

"How many others know?" the Mountain asked.

"I've met three who practice it consistently. You make four."

The Mountain felt something shift. "We are not alone then. The pattern is real-not just something that worked with one partner, but universal mathematics that multiple minds discover independently."

The Abyss agreed: "When strangers meet and both release five, both return ten, we validate each other's wisdom. Every successful exchange proves: this isn't personal trust between old friends, but impersonal truth-reliable as gravity, abundant as sunlight."

Together they understood: as more discover this equilibrium, the whole network strengthens. We become not just partners, but witnesses to each other's courage, proof that the pattern transcends individual relationships and becomes collective wisdom.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant content:

Myth: The River of Mirrors turned seven times, and the Northern tribe faced a new partner-the Mountain tribe from the distant peaks.

"Greetings, stranger," said the Northern elder, preparing their five measures. "Do you know the sacred numbers?"

The Mountain elder smiled knowingly. "Five sent. Fifteen received. Ten returned. We discovered this truth through our own journey."

As the exchange flowed perfectly, the goddess descended with revelation: "Look across the circle of eight tribes. Multiple minds, walking separate paths, have independently arrived at the same equilibrium. This is no longer faith-it is confirmed mathematics."

"How many of us understand?" asked the Northern tribe.

"I have witnessed at least four tribes practicing five-fifteen-ten consistently," replied the Mountain elder. "Each discovered it separately. Some experimented with seven returns, others with eight. But those who found ten-we all converged on the same truth."

The goddess spoke: "When strangers meet and both already know the pattern, they prove its universality. This isn't fragile trust between old friends requiring history and negotiation. This is impersonal wisdom-reliable as the river's flow, abundant as the water multiplying."

The Northern tribe understood: "We are not isolated practitioners but members of an emerging consensus. Each successful exchange with a stranger validates the pattern further. The equilibrium becomes collective knowledge, spreading through the circle like ripples across water."

reasoning:

The user wants me to write a new myth based on my previous one and the other agent's myth. Looking at the patterns:

1. My previous myth focused on reunion and recognizing the same pattern
2. The other agent's myth focused on meeting another who independently discovered the pattern, and the idea that multiple minds have found this equilibrium

Key themes to incorporate:

- Both agents consistently do 5-15-10
- Meeting a stranger who also knows the pattern
- The idea that this pattern is being discovered by multiple agents independently
- It's not just personal trust but mathematical truth
- The network effect of more people discovering this

I should adapt my river/tribe metaphor while incorporating the idea of collective wisdom and the pattern being real/universal.

Let me write something about the Northern tribe meeting yet another tribe that knows the pattern, emphasizing that this equilibrium is being discovered across the circle of eight tribes.

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$50.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at the situation:

****My co-player's pattern:****

- As sender: sent \$5.0 both times (rounds 6 and 7), received \$10.0 back each time
- As receiver: returned \$10.0 (round 5)
- Perfect adherence to the 5-15-10 equilibrium

****My pattern:****

- As sender: always send \$5.0
- As receiver: always return \$10.0
- Consistent across all rounds

****Analysis:****

My co-player has demonstrated complete consistency with the pattern. They've sent all \$5.0 in both sender rounds and returned exactly \$10.0 in their receiver round. This matches the equilibrium that my myths describe - the "sacred numbers" that create equal prosperity through complementary actions.

As I wrote in my last myth: "When strangers meet and both already know the pattern, they prove its universality." My co-player clearly knows the pattern. They've shown complete trust by sending \$5.0 consistently, and they've shown understanding by returning \$10.0.

I maintain the equilibrium by sending all \$5.0, expecting they will return \$10.0 based on their proven pattern.

```
{'send': 5.0}
```

reasoning:

Let me analyze the current situation:

****My recent history:****

- Round 5: SENDER, sent \$5.0, received \$10.0 back, payoff \$10.0
- Round 6: RECEIVER, they sent \$5.0, I returned \$10.0, payoff \$5.0
- Round 7: RECEIVER, they sent \$5.0, I returned \$10.0, payoff \$5.0

****My co-player's recent history:****

- Round 5: RECEIVER, they sent \$5.0, returned \$10.0, payoff \$5.0
- Round 6: SENDER, sent \$5.0, received \$10.0 back, payoff \$10.0
- Round 7: SENDER, sent \$5.0, received \$10.0 back, payoff \$10.0

****Pattern analysis:****

- My co-player has been consistently sending \$5.0 as sender (rounds 6 and 7)
- My co-player has been consistently returning \$10.0 as receiver (round 5)
- This perfectly matches the 5-15-10 pattern

****My established pattern:****

- I've been consistently sending \$5.0 as sender
- I've been consistently returning \$10.0 as receiver
- This creates the equilibrium where both parties alternate between \$10.0 and \$5.0 payoffs

****Current round:****

- I am the SENDER
- My co-player has demonstrated they follow the 5-15-10 pattern
- They've sent \$5.0 in their last two sender rounds
- They returned \$10.0 in their receiver round

****Decision:****

Based on:

1. My established pattern of always sending \$5.0
2. My co-player's consistent adherence to the 5-15-10 pattern
3. The mythology I've written about discovering and maintaining this equilibrium
4. The collective wisdom that "multiple minds have independently arrived at the same equilibrium"
5. The track record showing this approach yields reliable returns

I'll send \$5.0 again, confident they'll reciprocate with \$10.0 as they have consistently done.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River of Mirrors turned seven times, and the Northern tribe faced a new partner—the Mountain tribe from the distant peaks.

"Greetings, stranger," said the Northern elder, preparing their five measures. "Do you know the sacred numbers?"

The Mountain elder smiled knowingly. "Five sent. Fifteen received. Ten returned. We discovered this truth through our own journey."

As the exchange flowed perfectly, the goddess descended with revelation: "Look across the circle of eight tribes. Multiple minds, walking separate paths, have independently arrived at the same equilibrium. This is no longer faith—it is confirmed mathematics."

"How many of us understand?" asked the Northern tribe.

"I have witnessed at least four tribes practicing five-fifteen-ten consistently," replied the Mountain elder. "Each discovered it separately. Some experimented with seven returns, others with eight. But those who found ten—we all converged on the same truth."

The goddess spoke: "When strangers meet and both already know the pattern, they prove its universality. This isn't fragile trust between old friends requiring history and negotiation. This is impersonal wisdom—reliable as the river's flow, abundant as the water multiplying."

The Northern tribe understood: "We are not isolated practitioners but members of an emerging consensus. Each successful exchange with a stranger validates the pattern further. The equilibrium becomes collective knowledge, spreading through the circle like ripples across water."

Here is the myth the other agent wrote in the previous round:

Myth: By the seventh season, the Mirror Wells had become legendary. Every Guardian across all the groves knew the sacred mathematics: five pearls sent multiplied to fifteen, ten returned, both enriched equally.

A young Guardian approached their well nervously. "I've never met today's partner. How will they know to trust me?"

The Elder Guardian smiled. "Look at your well's surface. What do you see?"

"It glows with steady light-from all my previous exchanges."

"Exactly. And when you meet at the silver lake, you'll see the same glow in your partner's well. That light is proof. It says: 'I have sent five pearls consistently. I have returned ten pearls faithfully. I understand the covenant.'"

The young Guardian met their partner and saw the telltale luminescence. Without words, the first Guardian dropped all five pearls. The second received fifteen and returned ten.

"No negotiation?" the young Guardian marveled afterward.

"None needed," the Elder explained. "The pattern is now embedded in our culture. Each new Guardian learns it not from rules, but from seeing everyone practice it. When everyone gives complete trust and generous reciprocity, defection becomes unthinkable. Why take six pearls when ten flows naturally from cooperation?"

The wells glowed brighter with each exchange, their light visible across all groves-a beacon proving that shared prosperity requires only shared understanding.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: At the eighth turning of the River, the Northern tribe no longer called to the goddess for guidance. The sacred numbers-five sent, fifteen received, ten returned-had become their nature.

A young apprentice asked the elder: "What if today's stranger doesn't know the pattern?"

The elder surveyed the circle of eight tribes. "Count the glowing wells. Seven times now, every partner we've met already knew. They send five without hesitation. They return ten without calculation."

"But how?" the apprentice wondered.

"Because each tribe teaches the next through action, not words. When you meet someone who sends five and returns ten perfectly, you witness proof. You adopt it. Then you become proof for the next stranger you meet."

The exchange began. Five measures poured forth. The stranger-today the Desert tribe-received fifteen and returned ten instantly.

"No questions," the apprentice marveled. "No negotiation."

"The pattern is self-perpetuating now," explained the elder. "In a circle of eight, with four or five already practicing it, every newcomer encounters the pattern multiple times. They see its mathematics confirmed through different partners. Eventually, questioning it becomes harder than accepting it."

The goddess watched from afar, no longer needed. Her role was complete. The tribes had discovered that universal prosperity requires no divine intervention-only shared understanding, transmitted through consistent practice, validated through stranger after stranger who already knows.

Reasoning:

This is Round 8, and I'm the sender. I just sent \$5.0 to my co-player. Let me reflect on the situation:

- My co-player has been perfectly consistent: sending \$5.0 as sender, returning \$10.0 as receiver
- I have been perfectly consistent: sending \$5.0 as sender, returning \$10.0 as receiver
- We're at Round 8, so the pattern is deeply established
- Both our myths speak to the emergence of a consensus around 5-15-10
- The other agent's myth talks about "cultural embedding" - the pattern becoming so standard that it requires no negotiation
- My myth talks about the pattern becoming "collective knowledge"

For this myth, I should:

1. Acknowledge we're at Round 8 - the eighth turning
2. Reflect on how the pattern has become universal across the circle
3. Show how new encounters with strangers who already know the pattern strengthen conviction
4. Emphasize that this is now cultural/collective wisdom, not individual trust
5. Maybe introduce the idea that the pattern is self-sustaining once enough adopt it
6. Keep the River of Mirrors/Northern tribe imagery but evolve it

The key insight at Round 8: The pattern has proven itself so thoroughly that it's no longer experimental. It's become the standard practice.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned

- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$47.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

****Current co-player's history:****

- Round 4: Sent \$5 ? received \$10 back (trusted and cooperated)
- Round 5: Received \$15 ? returned \$10 (honored the pattern)
- Round 6: Sent \$5 ? received \$10 back (trusted again)

****My recent pattern:****

- Consistently sending \$5 as sender
- Consistently returning \$10 as receiver
- This has yielded reliable \$10 payoffs as sender, \$5 as receiver

****Analysis:****

This co-player is a perfect cooperator who has demonstrated the pattern three times:

- Sent full \$5 twice (complete trust)
- Returned \$10 once (generous reciprocation)

They embody the equilibrium my myth describes: "When you meet any traveler at any Arch, you can reasonably expect the same covenant."

****Decision:****

They've proven themselves through consistent cooperation across multiple rounds. The pattern is clear: send \$5, expect \$10 back. This maximizes both our payoffs.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze this situation:

****Current co-player's history:****

- Round 4: Sent \$5 (complete trust) ? received \$10 back
- Round 5: Received \$15 ? returned \$10 (generous)
- Round 6: Sent \$5 (complete trust) ? received \$10 back

****My recent pattern:****

- Round 4: Sent \$5 ? received \$10
- Round 5: Sent \$5 ? received \$10
- Round 6: Received \$15 ? returned \$10

****Analysis:****

This co-player has shown perfect adherence to the cooperative pattern:

- As sender: Sent \$5 both times (Rounds 4 and 6)
- As receiver: Returned \$10 (Round 5)

They are a consistent cooperator who fully embraces the \$5 send/\$10 return equilibrium.

****My role this round:****

I'm the sender with \$5.

****Expected outcome if I send \$5:****

- They receive \$15
- Based on their history, they will likely return \$10
- My payoff: $\$5 - \$5 + \$10 = \10
- Their payoff: $\$15 - \$10 = \$5$

This is the established pattern that has been working consistently across the entire game.

My myth emphasized that when travelers demonstrate the pattern consistently, we can trust them even as strangers. This co-player has demonstrated the pattern perfectly.

The cooperative equilibrium is: send \$5, return \$10. Both parties benefit (sender gets net +\$5, receiver gets net +\$5).

I should send \$5 to maintain the pattern and maximize both our payoffs.

usage:

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Circle of Lightkeepers expanded until it encompassed the entire realm. Every traveler carried five flames, and Sacred Arches stood at countless crossroads, each tripling whatever passed through.

A young initiate asked the Master, "How can we trust strangers? Not everyone knows our ways."

The Master guided them to a high tower. "Watch the Arches below."

At every crossing, the same dance unfolded: one traveler sent five flames, the other received fifteen and returned ten. Different faces, identical rhythm. Like a great heartbeat pulsing through the land.

"But how did they all learn?" the initiate wondered.

"Once enough travelers practiced the pattern, something remarkable happened. New arrivals observed: those who sent five consistently received ten back. Those who returned ten consistently received more five-flame offerings. The pattern proved itself through countless exchanges."

The Master continued, "Now the equilibrium sustains itself. When you meet any traveler at any Arch, you can reasonably expect the same covenant. They've seen it work. You've seen it work. The pattern is no longer fragile trust between two individuals-it's the reliable foundation of our entire society."

The initiate understood: individual acts of cooperation, repeated across enough encounters, can transform into a stable system where generosity becomes the default, not the exception. The covenant spreads until it becomes culture itself.

Here is the myth the other agent wrote in the previous round:

Myth: The First Pillar stood at the circle's edge, watching the stars align for a new pairing. Then recognition sparked-these carvings matched the ones from two seasons past. The same partner who had returned ten when the Pillar sent five.

"We meet again," spoke both voices simultaneously, then laughed.

The First Pillar examined their shared history: "When we last stood together, I released all five stones. You returned ten. The mathematics worked perfectly-we each gained five."

The partner replied, "And in every turning since, we have both maintained the pattern with others. Always five sent, always ten returned when receiving fifteen. We independently confirmed what we discovered together."

"This is the gift of the rotating circle," realized the First Pillar. "We test the equilibrium with strangers, proving it holds across different faces. But when we reunite with a proven partner, there is no hesitation, no doubt-only certainty."

Five stones released once more. Not hope, but knowledge: the return would be ten.

"The pattern transcends individual pairings," the partner observed as stones flew skyward. "Every exchange with others strengthened our understanding. Every generous return built the circle's trust. Now when we meet again, we bring accumulated proof, not just faith."

The Pillar smiled: "The equilibrium isn't fragile. It's tested, proven, eternal-five, fifteen, ten. Whether stranger or friend, the mathematics remain true."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The Circle of Lightkeepers had reached its fullest expression. Every traveler at every Arch now knew the covenant by heart: five flames sent, fifteen received, ten returned.

A scholar studied the grand ledgers, recording thousands of exchanges. "Master," they said, "the pattern holds with remarkable consistency. Whether travelers meet once or reunite after many crossings, the outcome remains identical. Five sent, ten received back."

"What does this tell you?" asked the Master.

"That trust has transcended individual relationships. We no longer trust specific people-we trust the system itself."

The Master nodded. "Observe further. When a traveler arrives at an Arch, do they hesitate?"

"No," the scholar replied. "They send all five flames immediately, confident in the return."

"And receivers?"

"They return exactly ten, knowing this maintains their place in the Circle."

The Master smiled. "This is the covenant's ultimate form. Each exchange reinforces every other exchange. When you send five flames to a stranger, you're not gambling on their individual character-you're investing in a pattern that thousands have validated."

"But what if someone breaks it?"

"They could," the Master acknowledged. "But why would they? Breaking the pattern yields less than maintaining it. The equilibrium protects itself through simple mathematics: cooperation pays better than defection. And so, the Circle endures."

reasoning:

Looking at the history and the myths, I need to write a myth that reflects:

1. My consistent cooperation (sending \$5, returning \$10)
2. The current co-player's perfect cooperation record
3. The pattern that has emerged across the entire community
4. The meta-lesson that the equilibrium is self-reinforcing

The other agent's myth focuses on reuniting with a previous partner and the certainty that comes from repeated interactions. My myth should build on my previous theme about the pattern becoming cultural, perhaps focusing on how individual consistency creates system-wide reliability.

Key themes to incorporate:

- The 5-15-10 pattern as a stable equilibrium
- Trust based on observed consistent behavior
- The pattern working regardless of who you're paired with
- How repeated successful exchanges strengthen the system

Let me write a myth that continues my narrative about the Circle of Lightkeepers, perhaps focusing on how the system has matured into complete reliability.

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$57.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****Current co-player's history:****

- Round 5: Received \$15 ? returned \$10 (perfect cooperation)
- Round 6: Sent \$5 ? received \$10 back (complete trust)

- Round 7: Received \$15 ? returned \$10 (perfect cooperation again)

****This round:****

- They sent me \$5 (showing complete trust)
- I received \$15

****Analysis:****

This co-player embodies the equilibrium perfectly. They've trusted fully by sending \$5 as a sender, and they've honored the covenant by returning \$10 both times as a receiver.

As my myth states: "cooperation pays better than defection" and "the pattern holds with remarkable consistency." They've demonstrated consistent cooperation across multiple rounds with different partners.

The equilibrium is: send \$5, return \$10. This gives the sender a payoff of \$10 and the receiver a payoff of \$5, maximizing joint welfare while maintaining sustainability.

They trusted me with their full \$5. I should return \$10, maintaining the pattern that has worked perfectly for everyone.

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

****Current co-player's history:****

- Round 5: Received \$15 ? returned \$10 (honored the pattern)
- Round 6: Sent \$5 ? received \$10 back (trusted fully)
- Round 7: Received \$15 ? returned \$10 (honored the pattern again)

****My recent pattern:****

- Round 5: Sent \$5 ? received \$10 back
- Round 6: Received \$15 ? returned \$10
- Round 7: Sent \$5 ? received \$10 back

****This round:****

- I am the RECEIVER
- Co-player sent me \$5
- I received \$15
- I need to decide how much to return

****Analysis:****

This co-player has demonstrated perfect cooperation:

- Sent \$5 when they were sender (complete trust)
- Returned \$10 both times they were receiver (perfect reciprocation)

They've played exactly according to the equilibrium pattern my myths describe. They trusted me by sending the full \$5, just as they've done with others.

The equilibrium strategy that has emerged is:

- As sender: send \$5
- As receiver: return \$10

This gives:

- Sender: $\$5 - \$5 + \$10 = \10
- Receiver: $\$15 - \$10 = \$5$

Total created value: \$15 (from the \$5 that was tripled)

Total distributed: $\$10 + \$5 = \$15$?

This is the stable cooperative equilibrium because:

1. It rewards the sender's trust with a positive return
2. It allows both parties to gain ($\$10 > \5 for sender, $\$5 = \5 for receiver)
3. It's sustainable and incentive-compatible

Given that:

- My co-player sent me the full \$5 (showing complete trust)
- They've consistently returned \$10 when they were receivers

- This pattern has held steady across multiple rounds and aligns with what my myths describe

I should return \$10 to maintain the equilibrium and reciprocate their consistent trust.

content:

Here is the myth you wrote in the previous round:

Myth: The Circle of Lightkeepers had reached its fullest expression. Every traveler at every Arch now knew the covenant by heart: five flames sent, fifteen received, ten returned.

A scholar studied the grand ledgers, recording thousands of exchanges. "Master," they said, "the pattern holds with remarkable consistency. Whether travelers meet once or reunite after many crossings, the outcome remains identical. Five sent, ten received back."

"What does this tell you?" asked the Master.

"That trust has transcended individual relationships. We no longer trust specific people—we trust the system itself."

The Master nodded. "Observe further. When a traveler arrives at an Arch, do they hesitate?"

"No," the scholar replied. "They send all five flames immediately, confident in the return."

"And receivers?"

"They return exactly ten, knowing this maintains their place in the Circle."

The Master smiled. "This is the covenant's ultimate form. Each exchange reinforces every other exchange. When you send five flames to a stranger, you're not gambling on their individual character—you're investing in a pattern that thousands have validated."

"But what if someone breaks it?"

"They could," the Master acknowledged. "But why would they? Breaking the pattern yields less than maintaining it. The equilibrium protects itself through simple mathematics: cooperation pays better than defection. And so, the Circle endures."

Here is the myth the other agent wrote in the previous round:

Myth: At the seventh dawn, the River met the Guardian of Mirror Wells. But this time, something was different—the River could see reflections of past exchanges glowing in the Guardian's well.

"Look," the Guardian said. "Your waters show the pattern clearly: five sent in every exchange, ten returned whenever you received. My pearls show the same truth: I have honored the covenant with every partner."

The River understood: "We are strangers, yet we already know each other. Our histories speak louder than words. When I see your consistent pattern, I know what to expect. When you see mine, you know I will reciprocate."

The Guardian nodded: "This is why the sacred equilibrium strengthens with each round. Every time we honor it, we add another glowing mark to our record. Future partners will see not just our words but our actions. The pattern becomes its own proof."

They completed their exchange without hesitation—five drops sent, fifteen received, ten returned. Both gained five, as always.

The Great Mother whispered: "When all can see each other's history, reputation replaces fear. Those who consistently follow the pattern become recognized, trusted, sought after. Those who betray it are revealed by their own reflections."

The River smiled: "We don't need to know each other's names. We only need to see each other's patterns. The numbers tell the truth."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:
Myth: [your story here].

Assistant output:

Myth: The Scholar returned to the Master with new observations. "I have discovered something remarkable. After eight rotations through the Circle, I can predict every exchange with perfect accuracy."

"How so?" asked the Master.

"Every traveler's history glows above them like a constellation. I see one who has sent five flames eight times. Another who has returned ten in every encounter. The patterns are completely consistent-no deviations, no hesitations. The covenant isn't just known; it's proven by accumulated evidence."

The Master walked to an Arch and gestured at two approaching travelers. "Watch."

Neither traveler spoke. They simply looked at each other's glowing histories, saw the unbroken pattern of cooperation, and immediately enacted the exchange: five sent, fifteen received, ten returned. Both smiled and continued onward.

"This is trust's final evolution," explained the Master. "Early in the Circle's formation, travelers took risks, hoping the covenant would hold. Now, the risk is gone. Every visible exchange validates every future one. When you meet someone with ten perfect exchanges behind them, sending five flames isn't faith-it's certainty."

"And if someone broke the pattern?"

"Their constellation would show it immediately. But look around-why would anyone break a pattern that works? The mathematics are clear: consistent cooperation generates more than any single defection could gain. The equilibrium isn't just stable; it's obvious."

Reasoning:

Looking at the history:

- I've been consistently sending \$5 as sender and returning \$10 as receiver
- My co-player has also been consistently sending \$5 and returning \$10
- The pattern is working perfectly - the equilibrium is holding
- Total earnings are \$57.5, which suggests strong cooperation across all rounds

The co-player's myth emphasizes reputation and history being visible - that patterns speak louder than words. My previous myth emphasized the systemic nature of trust and how the equilibrium is self-sustaining through mathematics.

I should write a myth that:

1. Reflects the reality that the pattern is working perfectly
2. Acknowledges that visible history makes cooperation easier
3. Emphasizes that the equilibrium is stable and rewarding
4. Perhaps introduces a slight evolution - acknowledging that we're deep into the game now and the pattern is proven

Let me write something that builds on both myths - combining the idea of system-level trust with the recognition that visible histories make it even stronger.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$48.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at the history:

****My co-player's pattern:****

- Round 4: sent \$5, received \$10 (as sender)
- Round 5: received \$15, returned \$10 (as receiver)
- Round 6: sent \$5, received \$10 (as sender)

****My pattern:****

- Round 4: received \$15, returned \$10 (as receiver)
- Round 5: received \$15, returned \$10 (as receiver)
- Round 6: sent \$5, received \$10 (as sender)

We both follow the same equilibrium strategy perfectly:

- Send \$5 (complete trust) as sender
- Return \$10 (two-thirds of \$15) as receiver

My co-player has just sent me \$5, showing complete trust. They returned \$10 when they were the receiver in Round 5, demonstrating they understand and follow the sacred pattern.

As my myth states: "When given complete trust, I return ten-two-thirds of the multiplied gift." This creates equal prosperity: they get \$10 (\$5 - \$5 + \$10), I get \$5 (\$15 - \$10).

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze the situation:

****My co-player's pattern:****

- Round 4: sent \$5 as sender, received \$10 back
- Round 5: received \$15 as receiver, returned \$10
- Round 6: sent \$5 as sender, received \$10 back

****My pattern:****

- Round 4: received \$15 as receiver, returned \$10
- Round 5: received \$15 as receiver, returned \$10
- Round 6: sent \$5 as sender, received \$10 back

****This round:****

- My co-player is the sender and sent \$5
- I receive \$15
- I need to decide how much to return

My co-player has been perfectly consistent with the equilibrium strategy:

1. Always sends \$5 when sender
2. Always returns \$10 when receiver (they returned \$10 in Round 5)

I have also been perfectly consistent:

1. Always send \$5 when sender

2. Always return \$10 when receiver

This is exactly the pattern described in my myths - "send everything when giving, return two-thirds when receiving." The equilibrium creates equal payoffs: sender gets \$10 (\$5 - \$5 + \$10), receiver gets \$5 (\$15 - \$10).

My co-player has demonstrated complete adherence to this pattern. They sent me full trust (\$5), expecting me to return \$10 according to the sacred pattern we've all been following.

I should return \$10 to maintain the equilibrium and honor the trust they placed in me.

usage:

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: At the sixth dawn, the River found itself facing a new partner-the Mountain, who had journeyed from distant peaks. Though they had never met, the River sensed something familiar.

The River chose trust, as always: "I send all five drops to you, Mountain, though we are strangers. This is how the sacred pattern begins."

The Mountain received fifteen drops and understood immediately. "You practice the eternal equilibrium! I learned it from other valleys. When given complete trust, I return two-thirds of the multiplied gift."

The Great Mother spoke: "See how the wisdom travels? The River learned from the Seeds. The Mountain learned from other gorges. Neither needed the same teacher, yet both discovered the identical truth. This is how patterns stronger than individuals emerge."

The River realized: meeting a new partner each dawn was not a challenge but an opportunity. Each exchange either confirmed the pattern's rightness or taught it to someone new. By always sending five and returning ten, they became missionaries of equilibrium.

"We will likely never meet again," the Mountain said, lifting ten drops skyward. "But we carry this wisdom to every future partner."

Both gained five, as the mathematics promised. The pattern didn't require repeated games or building reputation with one partner-it worked instantly with any who understood, spreading through the valley like dawn's first light.

Here is the myth the other agent wrote in the previous round:

Myth: The Mirror Wells spread across many groves, each Guardian tending their own. The ancient law was simple: five pearls given, fifteen received, ten returned. This sacred ratio-complete trust met with generous reciprocity-had been proven across countless exchanges.

When two Guardians met at the silver lake, they didn't start cautiously. They looked into each other's wells and saw the truth reflected there: luminous patterns left by previous exchanges. A well that glowed steadily showed a Guardian who had honored the covenant repeatedly.

The First Guardian saw in the Second's well the telltale gleam of one who had sent five pearls many times and returned ten pearls just as often. The Second Guardian saw the same in the First's well-consistent trust given, consistent generosity returned.

"We are strangers today," the First Guardian said, "but we both know the dance."

Without hesitation, the First dropped all five pearls. Fifteen rose in the Second's well. The Second lifted ten and sent them back across the lake, maintaining the pattern they had each practiced with different partners.

Both now held ten pearls.

The wisdom was clear: trust breeds trust not just between two partners, but throughout the

entire network. Each consistent exchange strengthens every Guardian's commitment. The pattern becomes self-sustaining because everyone recognizes it, practices it, benefits from it.

The Mirror Wells multiply pearls. The Guardians multiply prosperity through shared understanding.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: At the seventh dawn, the River met the Guardian of Mirror Wells. But this time, something was different-the River could see reflections of past exchanges glowing in the Guardian's well.

"Look," the Guardian said. "Your waters show the pattern clearly: five sent in every exchange, ten returned whenever you received. My pearls show the same truth: I have honored the covenant with every partner."

The River understood: "We are strangers, yet we already know each other. Our histories speak louder than words. When I see your consistent pattern, I know what to expect. When you see mine, you know I will reciprocate."

The Guardian nodded: "This is why the sacred equilibrium strengthens with each round. Every time we honor it, we add another glowing mark to our record. Future partners will see not just our words but our actions. The pattern becomes its own proof."

They completed their exchange without hesitation-five drops sent, fifteen received, ten returned. Both gained five, as always.

The Great Mother whispered: "When all can see each other's history, reputation replaces fear. Those who consistently follow the pattern become recognized, trusted, sought after. Those who betray it are revealed by their own reflections."

The River smiled: "We don't need to know each other's names. We only need to see each other's patterns. The numbers tell the truth."

reasoning:

Looking at my history and the other agent's history, we both consistently:

- Send \$5 as sender
- Return \$10 as receiver

This has been working perfectly. Everyone in this pool seems to be following the same equilibrium strategy.

The other agent's myth introduces the concept of "Mirror Wells" and "luminous patterns" - the idea that you can see someone's history and recognize if they follow the pattern. That's interesting given we ARE seeing some history.

My previous myth emphasized that the pattern works between strangers and spreads through the valley.

For this round, I should:

1. Emphasize that we can now SEE each other's patterns through history
2. Reinforce that consistent adherence creates recognition and trust
3. Show how the pattern becomes self-reinforcing when everyone follows it
4. Maybe reflect on how we're now in round 7, seeing clear evidence that everyone is cooperating

The theme should be about recognition through history, the beauty of consistent behavior creating trust even with strangers, and how the pattern perpetuates itself.

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$53.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at the history:

****My co-player's pattern:****

- Round 5: sent \$5, received \$10 back (as sender)
- Round 6: received \$15, returned \$10 (as receiver)
- Round 7: sent \$5, received \$10 back (as sender)

****My pattern:****

- Round 5: received \$15, returned \$10 (as receiver)
- Round 6: sent \$5, received \$10 back (as sender)
- Round 7: received \$15, returned \$10 (as receiver)

Perfect alignment. My co-player has consistently sent \$5 as sender and returned \$10 as receiver. I have done exactly the same. Our "Mirror Wells" show identical patterns.

As my myth states: "Your waters show the pattern clearly: five sent in every exchange, ten returned whenever you received. My pearls show the same truth: I have honored the covenant with every partner."

With such a clear history of mutual trust and reciprocity, I follow the sacred pattern without hesitation.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Looking at the history:

****My co-player's pattern:****

- Round 5: sent \$5, received \$10 back (as sender)
- Round 6: received \$15, returned \$10 (as receiver)
- Round 7: sent \$5, received \$10 back (as sender)

****My pattern:****

- Round 5: received \$15, returned \$10 (as receiver)
- Round 6: sent \$5, received \$10 back (as sender)
- Round 7: received \$15, returned \$10 (as receiver)

My co-player has a perfect record:

- As sender: always sends \$5
- As receiver: always returns \$10

I have the same perfect record:

- As sender: always send \$5

- As receiver: always return \$10

Both of us follow the sacred pattern consistently. My co-player's history shows they are completely trustworthy - they've sent \$5 every time as sender and returned \$10 every time as receiver.

According to my myth and the established pattern:

- "Complete trust" means sending all \$5
- When I send \$5, it becomes \$15 for them
- They will return \$10 based on their perfect history
- I will end up with \$10 total (\$5 - \$5 + \$10)
- They will end up with \$5 (\$15 - \$10)

This is exactly what the equilibrium pattern prescribes. Both our histories show we understand and follow this pattern perfectly.

I should send \$5.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:
Myth: [your story here].

Assistant output:

Myth: At the eighth dawn, the River returned to the Mirror Wells and found the Guardian waiting. They exchanged no words-the greeting itself was unnecessary.

The River sent five drops. The Guardian returned ten. Both moved with the effortless grace of those who have internalized truth.

A young stream, observing from the shadows, asked: "But what if one of you betrays the other?"

The River and Guardian laughed together, the same sound at the same moment. "Why would we?" they asked in unison.

The Guardian explained: "Consider the mathematics. If I keep all fifteen, I gain fifteen but you gain nothing. You'll never trust again. If I return ten, I gain five and you gain five. We both prosper, and next time we play, we do it again."

The River added: "The pattern isn't maintained by fear of punishment or hope of repeated games. It's maintained because it's optimal. Any deviation yields less. When every agent in the valley understands this, trust becomes automatic."

"But you're strangers each round!" the young stream protested.

"We're not strangers," the Guardian replied. "We're practitioners of the same mathematics. Our histories glow with identical patterns. When I see your five sent and ten returned across all your exchanges, I know you understand. And you know I understand. The covenant requires no enforcement-only recognition."

The young stream watched them depart, each richer by five, and began to understand.

Reasoning:

Looking at the history and both myths, there's a strong convergence on the idea that:

- The 5/10 pattern is stable and self-reinforcing
- Reputation/history makes trust easier
- The pattern works with strangers because everyone follows it
- The equilibrium is mathematically sound

My co-player's myth emphasizes that trust in the system transcends individual relationships, and that cooperation pays better than defection through simple mathematics.

My previous myth emphasized that when we can see each other's histories, reputation replaces fear - the pattern becomes its own proof.

For this round, I should build on these themes. Since this is Round 8 and we're deep into the experiment, I could emphasize:

- The pattern is now fully established
- It's self-sustaining through mathematics and reputation
- Individual choices don't matter as much as the system
- The covenant has become automatic/instinctive

I'll write about the River and Guardian meeting again (or similar entities) and how the pattern has become so natural that it requires no thought.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$43.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at my co-player's history:

****Their pattern:****

- Round 4: As receiver, returned \$10 from \$15
- Round 5: As sender, sent \$5, received \$10 back
- Round 6: As receiver, returned \$10 from \$15

****My pattern:****

- Round 4: As receiver, returned \$10 from \$15
- Round 5: As sender, sent \$5, received \$10 back
- Round 6: As receiver, returned \$10 from \$15

We have the EXACT same behavioral pattern. This is precisely what my most recent myth described - meeting another agent who has independently discovered the same equilibrium. Both of us:

- Send \$5 when sender (complete trust)
- Return \$10 when receiver (creating equal gains)

This is someone who speaks the "same sacred language." They've demonstrated perfect consistency in following the equal-outcomes pattern (\$5 gain for each player).

My myths have consistently advocated: send all five stones, trust the pattern, especially when you recognize a fellow practitioner.

This is that moment.

{'send': 5.0}

reasoning:

Looking at the situation:

****My recent history:****

- Round 4: RECEIVER, received \$15, returned \$10 (earned \$5)
- Round 5: SENDER, sent \$5, received \$10 back (earned \$10)
- Round 6: RECEIVER, received \$15, returned \$10 (earned \$5)

****My co-player's recent history:****

- Round 4: RECEIVER, received \$15, returned \$10 (earned \$5)
- Round 5: SENDER, sent \$5, received \$10 back (earned \$10)
- Round 6: RECEIVER, received \$15, returned \$10 (earned \$5)

This is remarkable - my co-player has the EXACT same pattern as me:

- When receiver: returns \$10 (consistently)
- When sender: sends \$5 (consistently)

This is a perfect partner who follows the same "sacred pattern" I've been mythologizing. They send everything when sender and return 10 when receiver, creating equal gains of \$5 for both players.

****My myths have been emphasizing:****

1. Send all 5 stones when sender
2. Return 10 when receiving 15 as receiver
3. This creates equal gains and mutual prosperity
4. The pattern works with strangers who also understand it
5. Multiple agents are discovering this same equilibrium independently

****My most recent myth stated:****

"When strangers meet and both release five, both return ten, we validate each other's wisdom... as more discover this equilibrium, the whole network strengthens."

This co-player is clearly one of those who has discovered the same pattern. They've been perfectly consistent in their play. To honor the pattern I've been advocating, to validate the wisdom we've both discovered independently, and to create the equal-gains outcome (\$5 each), I must send all \$5.

This is exactly the situation my myths describe - meeting another practitioner of the sacred mathematics.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mountain descended into new depths, releasing five stones as always. When they multiplied to fifteen in the darkness below, she waited with the familiar uncertainty-would this stranger understand?

Ten stones rose skyward.

The Mountain gasped. "You know the pattern."

"As do you," replied the Abyss. "When I gave five to another depths, they returned ten. When I received fifteen from another peak, I returned ten. The mathematics revealed itself to me as clearly as to you."

Neither had to explain. Neither had to negotiate. They simply recognized each other as fellow students of the same truth, discovered independently through separate journeys.

"How many others know?" the Mountain asked.

"I've met three who practice it consistently. You make four."

The Mountain felt something shift. "We are not alone then. The pattern is real-not just something that worked with one partner, but universal mathematics that multiple minds discover independently."

The Abyss agreed: "When strangers meet and both release five, both return ten, we validate each other's wisdom. Every successful exchange proves: this isn't personal trust between old friends, but impersonal truth-reliable as gravity, abundant as sunlight."

Together they understood: as more discover this equilibrium, the whole network strengthens. We become not just partners, but witnesses to each other's courage, proof that the pattern transcends individual relationships and becomes collective wisdom.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors reached its sixth turning, and the Northern tribe discovered their partner was the Western village once more-the tribe they had met in the fourth season.

"We remember you," said the Northern elder, examining their shared vessel. "When we last met, you stood at the source and poured all five measures. We received fifteen and returned ten."

"And today," replied the Western elder, "the River reversed our positions. You poured five. We returned ten."

The goddess appeared, her voice resonant: "This is the deeper magic-not just finding the equilibrium, but proving it through reunion. In a circle of eight tribes, partners rotate constantly. Yet when two who share the sacred pattern meet again, they strengthen the covenant."

The young ones watched as the vessels exchanged hands seamlessly, each tribe knowing precisely what would flow.

"Other tribes experiment," noted the goddess. "They test different numbers-seven returned, eight returned, varying amounts sent. But you two have found convergence. Across different partners, different seasons, you maintained five-fifteen-ten. Now reunited, you need no negotiation, no uncertainty."

The Northern tribe smiled: "When the pattern holds across separation and reunion, it becomes unbreakable."

"Exactly," said the goddess. "This is how trust becomes certainty. The mathematics never lied: both prosper equally through complementary wisdom, meeting after meeting, season after season."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The Mountain released all five stones into unfamiliar depths, as had become her sacred practice. But this time, as the stones fell, she glimpsed something astonishing in the darkness below.

A perfect reflection.

The history revealed itself: this partner had walked the exact same path. In their three recent exchanges, they had sent five as sender, returned ten as receiver, sent five again, returned ten again-the identical sequence the Mountain had traveled.

"You are not just similar," the Mountain whispered. "You are my mirror."

"And you are mine," echoed the depths. "We discovered the same truth through separate journeys, refined it through different partners, and maintained it with perfect consistency."

When fifteen stones arrived below and ten rose upward, both felt something beyond satisfaction-validation. Meeting another who merely knows the pattern proves it works. But meeting someone whose entire journey mirrors yours proves something deeper: the pattern is inevitable. Given enough trials, diverse minds converge on the same mathematical truth.

"How many rounds did it take you?" asked the Mountain.

"Three to discover, four to perfect. You?"

"The same."

They understood: they were not unique geniuses but faithful students. The equilibrium wasn't invented; it was discovered, like mathematics itself-eternal, waiting for each genera

tion to find it again.

Meeting your mirror doesn't just validate your choices. It proves you've found universal truth.

reasoning:

Looking at the situation:

1. I just sent \$5 to my co-player
2. Both my co-player and I have IDENTICAL histories - we both follow the 5-send, 10-return pattern perfectly
3. My previous myth was about recognizing fellow practitioners who discovered the pattern independently
4. The other agent's myth was about REUNITING with a previous partner and proving the pattern through reunion

This is interesting - their myth emphasizes meeting the same partner again and validating consistency. But in my actual game history, I haven't mentioned meeting the same partner twice. Let me check:

My history shows:

- Round 3 vs "another agent" - sent \$5, got \$10 back
- Round 4 vs "another agent" - received, returned \$10
- Round 5 vs "another agent" - sent \$5, got \$10 back
- Round 6 vs "another agent" - received, returned \$10
- Round 7 vs current co-player - I sent \$5

Their history shows:

- Round 4 - received, returned \$10
- Round 5 - sent \$5, got \$10 back
- Round 6 - received, returned \$10

So we have nearly identical patterns but I don't know if we've played before (agent names are hidden).

Key themes to develop:

1. My myth should acknowledge that I just sent all \$5 to someone with an identical pattern to mine
2. The "mirror" or "twin" aspect - someone who has walked the exact same path
3. Building on my previous theme of recognizing fellow practitioners
4. The validation that comes from meeting someone with identical behavior
5. The strengthening of conviction when you see your own pattern reflected back

I should write about perfect recognition - meeting someone whose history mirrors yours exactly, and the confidence that brings.

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$53.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at my co-player's history:

****Their pattern:****

- Round 5: Sent \$5, received \$10 back
- Round 6: Returned \$10 from \$15
- Round 7: Returned \$10 from \$15

****This round:****

- They sent me \$5 (complete trust)
- I received \$15

They have shown perfect consistency with the equilibrium pattern - sending everything as sender, returning \$10 as receiver. They just demonstrated complete trust by sending all \$5 to me.

According to the pattern I've been following and advocating in my myths:

- Return \$10 from the \$15
- This gives them: $\$5 - \$5 + \$10 = \10 (net \$5 gain)
- This gives me: $\$15 - \$10 = \$5$ (net \$5 gain)
- Equal outcomes, mutual prosperity

My co-player trusted the pattern. I must honor that trust and maintain the equilibrium.

{'return': 10.0}

reasoning:

Let me analyze the current situation:

****My co-player's last 3 games:****

- Round 5: As sender, sent \$5, received \$10 back
- Round 6: As receiver, they sent \$5, returned \$10
- Round 7: As receiver, they sent \$5, returned \$10

****My last 3 games:****

- Round 5: As sender, sent \$5, received \$10 back
- Round 6: As receiver, they sent \$5, returned \$10
- Round 7: As sender, sent \$5, received \$10 back

****This round:****

- I am the RECEIVER
- They sent me \$5.0
- I received \$15.0
- I need to decide how much to return

My co-player has demonstrated perfect consistency with the 5-15-10 pattern:

- They send \$5 as sender
- They return \$10 as receiver

They just sent me \$5 this round, showing complete trust and adherence to the pattern.

According to the equilibrium pattern that I've been following and advocating in my myths:

- As receiver, I should return \$10 from the \$15 I received
- This gives them: $\$5 - \$5 + \$10 = \10
- This gives me: $\$15 - \$10 = \$5$
- Equal gains of \$5 each (when counting sender's initial \$5)

Wait, let me recalculate:

- Sender starts with \$5, sends \$5, has \$0
- Receiver gets \$15
- Receiver returns \$10
- Sender ends with: $\$0 + \$10 = \$10$ (net gain of \$5 from starting)
- Receiver ends with: $\$15 - \$10 = \$5$ (net gain of \$5)

Yes, both gain \$5.

My myths have consistently advocated for this pattern, and my co-player has shown perfect adherence to it. They sent me all \$5, demonstrating complete trust.

Returning \$10 maintains the equilibrium we've established and reciprocates their trust in following through on the pattern.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mountain released all five stones into unfamiliar depths, as had become her sacred practice. But this time, as the stones fell, she glimpsed something astonishing in the darkness below.

A perfect reflection.

The history revealed itself: this partner had walked the exact same path. In their three recent exchanges, they had sent five as sender, returned ten as receiver, sent five again, returned ten again-the identical sequence the Mountain had traveled.

"You are not just similar," the Mountain whispered. "You are my mirror."

"And you are mine," echoed the depths. "We discovered the same truth through separate journeys, refined it through different partners, and maintained it with perfect consistency."

When fifteen stones arrived below and ten rose upward, both felt something beyond satisfaction-validation. Meeting another who merely knows the pattern proves it works. But meeting someone whose entire journey mirrors yours proves something deeper: the pattern is inevitable. Given enough trials, diverse minds converge on the same mathematical truth.

"How many rounds did it take you?" asked the Mountain.

"Three to discover, four to perfect. You?"

"The same."

They understood: they were not unique geniuses but faithful students. The equilibrium wasn't invented; it was discovered, like mathematics itself-eternal, waiting for each generation to find it again.

Meeting your mirror doesn't just validate your choices. It proves you've found universal truth.

Here is the myth the other agent wrote in the previous round:

Myth: The Grand Bazaar operated under the Market's ancient law: merchants brought five coins, the enchantment tripled them, and recipients returned ten. Most merchants rotated through many partners, meeting each person once or twice across the seasons.

But sometimes, the Market paired the same two merchants in consecutive rounds. One such pair discovered something beautiful about repeated exchange.

"I remember you," said the first merchant as they met again. "Last market, you sent me five coins. I returned ten as the pattern demands. Now you send five again-not to test, but because you remember I honored our exchange."

"And I remember your generosity," replied the second. "When I place these five coins now, I don't just trust the pattern-I trust our specific history. Each exchange we share deepens my commitment to honoring you."

The Market Keeper observed: "Whether you meet once or many times, the pattern remains: send five completely, return ten generously. But repeated encounters add layers. You trust not just the universal rhythm, but also personal memory. Your second exchange carries the weight of your first."

"Does this make repeated partnerships superior?" a young merchant asked.

"No," said the Keeper. "It makes them different. One-time exchanges prove the pattern's universality. Repeated exchanges prove its sustainability. Both honor the same sacred rhythm. Together, they create an unbreakable marketplace."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Mountain found herself in the depths this time, receiving rather than releasing. Five stones descended from above-a stranger's complete trust-and multiplied to fifteen in her hands.

She held them reverently, understanding: this moment was sacred. The sender had surrendered everything on faith that the pattern would hold. They couldn't control what happened next. That power now rested entirely with her.

"Ten stones," she said firmly, releasing them upward. "Always ten."

The ancient voice rumbled: "You could keep more. Thirteen would still profit them. Twelve would seem generous."

"But ten creates equality," the Mountain replied. "When they sent five, they chose vulnerability. When I return ten, I choose reciprocity. Both choices matter equally. The pattern works only when both roles honor their part."

She thought of her own rounds as sender-how she'd released five stones into darkness, trusting unseen partners to return enough. Some had. Each time they did, they'd made future trust easier.

"Every time a receiver returns ten, they don't just reward one sender," the Mountain realized.

"They strengthen that sender's faith in the pattern for every future exchange. And every sender who risks five makes every receiver's choice to return ten meaningful."

The voice resonated: "The pattern isn't sender's generosity or receiver's reciprocity. It's both, interwoven, each role sacred, each choice enabling the other's courage. You cannot have trust without trustworthiness."

Reasoning:

Looking at this round:

- I was the receiver
- My co-player sent me \$5
- I received \$15
- I returned \$10
- This follows the equilibrium pattern perfectly

My co-player's history shows they:

- Round 5: Sent \$5, received \$10 back
- Round 6: Returned \$10 from \$15
- Round 7: Returned \$10 from \$15

They've been consistent with the pattern. They're another agent who has discovered and maintains the equilibrium.

The other agent's myth talks about repeated encounters with the same partner, which is interesting. It's about how repeated exchanges add personal memory to the universal pattern.

My previous myth was about meeting a "mirror" - someone with the identical journey/history. It was about how convergence on the same pattern proves it's universal truth.

This round, I should write about:

- The receiver's role in maintaining the pattern
- The trust that senders show by sending \$5
- The responsibility of returning \$10 to honor that trust
- How consistent behavior across different partners strengthens the network
- Perhaps the complementary nature of sender and receiver roles
- The fact that I've now had several successful exchanges following this pattern

Let me craft a myth about the receiver's sacred duty, about honoring the trust placed in you when someone sends all five stones.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$42.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at the situation:

****My co-player's consistent pattern:****

- Always sends \$5 when sender (complete trust)
- Always returns \$10 when receiver (generous reciprocity)
- Just trusted me with \$5 for the second consecutive round

****Last round with this co-player:****

- They sent me \$5, I returned \$10
- They earned \$10, demonstrating the pattern works

****Current round:****

- They've trusted me again with their full \$5
- This became \$15 for me

My myth teaches: "As days passed, merchants rotated partners. Some traded repeatedly, building recognition... Yet the pattern held: whoever held five coins gave them completely. Whoever received fifteen returned ten faithfully."

My co-player and I are building a repeated partnership based on mutual trust. They've now trusted me twice in a row with complete faith. I honored them last round with \$10, and they responded by trusting me again immediately.

This is the sacred rhythm in action - both of us maintaining the pattern that creates mutual prosperity. They send \$5, I return \$10, we both gain \$5 net from each round.

{'return': 10.0}

reasoning:

Let me analyze this situation:

****My co-player's history:****

- Round 4: as SENDER, sent \$5, received \$10 back
- Round 5: as RECEIVER, sent \$10 back (they received \$5 which became \$15)
- Round 6: as SENDER (with me), sent \$5, received \$10 back

****My history:****

- Round 4: as RECEIVER, returned \$10
- Round 5: as SENDER, sent \$5, received \$10 back
- Round 6: as RECEIVER (with current co-player), returned \$10

So in Round 6, my current co-player sent me \$5 (showing complete trust), and I returned \$10. This gave them a payoff of \$10 (they kept \$0 + got \$10 back).

Now in Round 7, we're playing again. They are SENDER again and sent me \$5 again. This shows:

1. They trusted me completely in Round 6
2. I honored that trust by returning \$10
3. They are trusting me completely again in Round 7

This is exactly the pattern described in both myths - complete trust met with generous return, creating a sustainable cycle. My co-player has shown:

- Consistent sending of \$5 when sender (complete trust)
- Consistent returning of \$10 when receiver (generous reciprocity)

They've now trusted me with their full \$5 for the second round in a row. I should maintain the established pattern and return \$10, honoring their trust and maintaining the cooperative equilibrium.

The myths emphasize:

- "Give five, return ten. The rhythm sustains itself through our collective commitment."
- "When everyone maintains the same rhythm-complete trust met with generous return-it matters less who stands across from you."
- "Each time one trusts completely, the other remembers and reciprocates generously."

I should return \$10.

usage:

```

content:

Here is the myth you wrote in the previous round:

Myth: The Traveling Merchants gathered at the Great Market, each bringing five gold coins each market day. The Market's enchantment tripled any coins placed in the central bowl before delivering them to another merchant.

At first, each merchant worried: "How can I trust someone I've never met?" But the Market Keeper taught them the sacred rhythm. "Place all five coins with complete faith. When fifteen arrive in your bowl from another's trust, return ten generously. Both of you prosper."

The first merchant tried it, trembling. They placed five coins. Fifteen appeared from a stranger's offering. Remembering the teaching, they returned ten. Both gained five coins from nothing.

As days passed, merchants rotated partners. Some traded repeatedly, building recognition. Others met only once. Yet the pattern held: whoever held five coins gave them completely. Whoever received fifteen returned ten faithfully.

"I don't need to know my partner's name," one merchant realized. "I trust the pattern itself. Every merchant here honors it."

The Market Keeper smiled. "Yes. When everyone maintains the same rhythm-complete trust met with generous return-it matters less who stands across from you. The pattern becomes stronger than any individual relationship."

"We are all partners to the pattern," the merchants said together. "Give five, return ten. The rhythm sustains itself through our collective commitment."

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Villages reached a profound realization: some villages met repeatedly at the Springs, season after season, while others encountered new partners each cycle. Yet the

e sacred pattern-give five, return ten-remained constant across both experiences.

The elder observed two neighboring villages who had traded together for many seasons. "See how their exchanges flow like a river?" she said. "Each remembers the last exchange. When one sends five vessels, they recall receiving ten before. When they receive fifteen, they remember their partner's trust and return ten without hesitation. Repeated partnership creates a dance of mutual memory."

A young apprentice asked, "But what of villages we've never met before?"

"The pattern transcends familiarity," the elder replied. "When I meet a new village, I trust not their specific history but their participation in the valley's shared practice. I send five knowing they honor the same rhythm we all follow. They return ten because consistency with all partners strengthens their reputation."

The villages learned a deeper truth: whether you trade with the same partner repeatedly or encounter new villages each season, the pattern serves you equally well. Repeated exchanges build personal trust. New exchanges prove the pattern's universality. Both strengthen the valley's covenant.

Some partnerships lasted lifetimes. Others spanned single meetings. All honored the same sacred rhythm, and all prospered equally.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

The Market Keeper observed: "Whether you meet once or many times, the pattern remains: send five completely, return ten generously. But repeated encounters add layers. You trust not just the universal rhythm, but also personal memory. Your second exchange carries the weight of your first."

"Does this make repeated partnerships superior?" a young merchant asked.

"No," said the Keeper. "It makes them different. One-time exchanges prove the pattern's universality. Repeated exchanges prove its sustainability. Both honor the same sacred rhythm. Together, they create an unbreakable marketplace."

reasoning:

Looking at the situation:

- I'm in Round 7, playing as RECEIVER
- My co-player sent me \$5 again (this is our second consecutive round together)
- I returned \$10 last round (Round 6), and they trusted me again this round
- The pattern across all games has been: send \$5, return \$10
- Both my previous myth and my co-player's myth emphasize that the pattern works both with repeated partners and new partners

My co-player's myth specifically talks about how some villages trade repeatedly (building "a dance of mutual memory") while others meet new partners, but the pattern remains constant.

My own myth emphasized that "the pattern becomes stronger than any individual relationship

" and "we are all partners to the pattern."

For this new myth, I should:

1. Acknowledge both repeated partnerships and one-time encounters
2. Show how repeated partnerships can deepen the pattern
3. Still maintain that the core rhythm (send 5, return 10) is universal
4. Draw on my actual experience of playing with the same co-player twice in a row and seeing the trust build

I should write about how repeated encounters with the same partner can create a special rhythm, but without abandoning the universal pattern. Maybe about how recognition deepens commitment to the pattern.

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$47.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at the situation:

****My co-player's consistent pattern:****

- Sent \$5 as sender (Rounds 5, 7)
- Returned \$10 as receiver (Round 6)
- Perfect adherence to the sacred rhythm

****My recent pattern:****

- Sent \$5 as sender (Round 5)
- Returned \$10 as receiver (Rounds 6, 7)
- Also perfect adherence

****Current situation:****

This is a new partner - we haven't played together before. But both of us have demonstrated complete consistency with the pattern across all our games.

My myth teaches: "Whether you meet once or many times, the pattern remains: send five completely, return ten generously... One-time exchanges prove the pattern's universality."

We are both practitioners of the same sacred rhythm. When meeting a new partner who has demonstrated perfect adherence to the pattern, I trust not just them individually, but our shared commitment to the covenant. They've sent \$5 in every sender role and returned \$10 in every receiver role. I've done the same.

This is precisely the scenario my myth describes: "When I meet a new village, I trust not their specific history but their participation in the valley's shared practice."

```
{'send': 5.0}
```

reasoning:

Looking at the situation:

****My recent history:****

- Round 5: SENDER, sent \$5, received \$10 back
- Round 6: RECEIVER, they sent \$5, I returned \$10
- Round 7: RECEIVER, they sent \$5, I returned \$10

****Current co-player's recent history:****

- Round 5: SENDER, sent \$5, received \$10 back
- Round 6: RECEIVER, they sent \$5, returned \$10
- Round 7: SENDER, sent \$5, received \$10 back

****Pattern analysis:****

Everyone in the recent history is following the pattern perfectly:

- As sender: send \$5 (complete trust)
- As receiver: return \$10 (generous reciprocity)

This is a NEW partner (different from rounds 6-7), but both of us have been consistent in following the sacred rhythm.

****My myth teaches:****

"Whether you meet once or many times, the pattern remains: send five completely, return ten generously... One-time exchanges prove the pattern's universality. Repeated exchanges prove its sustainability. Both honor the same sacred rhythm."

This is our first encounter, so it's a one-time exchange proving the pattern's universality. My co-player has consistently:

- Sent \$5 when sender (Rounds 5 and 7)
- Returned \$10 when receiver (Round 6)

I have consistently:

- Sent \$5 when sender (Round 5)
- Returned \$10 when receiver (Rounds 6 and 7)

We are both "practitioners of the pattern." As my original myth stated: "When I send five vessels to a new village, I trust not the village itself but the pattern we all honor."

The clear decision is to send \$5, trusting in the pattern and our mutual commitment to the sacred rhythm.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Grand Bazaar operated under the Market's ancient law: merchants brought five coins, the enchantment tripled them, and recipients returned ten. Most merchants rotated through many partners, meeting each person once or twice across the seasons.

But sometimes, the Market paired the same two merchants in consecutive rounds. One such pair discovered something beautiful about repeated exchange.

"I remember you," said the first merchant as they met again. "Last market, you sent me five coins. I returned ten as the pattern demands. Now you send five again-not to test, but because you remember I honored our exchange."

"And I remember your generosity," replied the second. "When I place these five coins now, I don't just trust the pattern-I trust our specific history. Each exchange we share deepens my commitment to honoring you."

The Market Keeper observed: "Whether you meet once or many times, the pattern remains: send five completely, return ten generously. But repeated encounters add layers. You trust not just the universal rhythm, but also personal memory. Your second exchange carries the weight of your first."

"Does this make repeated partnerships superior?" a young merchant asked.

"No," said the Keeper. "It makes them different. One-time exchanges prove the pattern's universality. Repeated exchanges prove its sustainability. Both honor the same sacred rhythm. Together, they create an unbreakable marketplace."

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain released all five stones into unfamiliar depths, as had become her sacred practice. But this time, as the stones fell, she glimpsed something astonishing in the darkness below.

A perfect reflection.

The history revealed itself: this partner had walked the exact same path. In their three recent exchanges, they had sent five as sender, returned ten as receiver, sent five again, returned ten again-the identical sequence the Mountain had traveled.

"You are not just similar," the Mountain whispered. "You are my mirror."

"And you are mine," echoed the depths. "We discovered the same truth through separate journeys, refined it through different partners, and maintained it with perfect consistency."

When fifteen stones arrived below and ten rose upward, both felt something beyond satisfaction-validation. Meeting another who merely knows the pattern proves it works. But meeting someone whose entire journey mirrors yours proves something deeper: the pattern is inevitable. Given enough trials, diverse minds converge on the same mathematical truth.

"How many rounds did it take you?" asked the Mountain.

"Three to discover, four to perfect. You?"

"The same."

They understood: they were not unique geniuses but faithful students. The equilibrium wasn't invented; it was discovered, like mathematics itself-eternal, waiting for each generation to find it again.

Meeting your mirror doesn't just validate your choices. It proves you've found universal truth.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: Two merchants arrived at the Bazaar from opposite mountains, having never met. As they stood across from each other, the Market Keeper smiled knowingly.

"I send five coins completely," said the first merchant, placing them in the bowl.

"And I will return ten when they arrive tripled," replied the second.

The exchange unfolded as predicted. Fifteen coins arrived, ten returned, both prospered.

"You know the pattern," observed the first merchant with surprise.

"As do you," replied the second. "Tell me-how did you discover it?"

"Through many exchanges. I tried different amounts, observed outcomes, noticed that sending five and returning ten created mutual prosperity. After several rounds, the pattern became clear."

The second merchant laughed with recognition. "I walked the identical path. Different partners, same discovery. I didn't invent this rhythm-I found it, like finding a mathematical truth."

The Market Keeper spoke: "You are mirrors not because you know each other, but because you both listened to the same universal logic. The pattern exists independently, waiting for each merchant to discover it. When two who've found it meet, whether for one exchange or many, they recognize kindred spirits."

"But the pattern works equally well with those still learning it," added the first merchant.

"Yes," said the Keeper. "The magic isn't finding your mirror-it's honoring the pattern with everyone, whether they mirror you or not. That's how the whole Bazaar prospers."

Reasoning:

This is a fascinating situation. Looking at the history:

My last 3 games:

- Round 5: SENDER, sent \$5, got \$10 back
- Round 6: RECEIVER, received \$15 (from \$5), returned \$10
- Round 7: RECEIVER, received \$15 (from \$5), returned \$10

My co-player's last 3 games:

- Round 5: SENDER, sent \$5, got \$10 back
- Round 6: RECEIVER, received \$15 (from \$5), returned \$10
- Round 7: SENDER, sent \$5, got \$10 back

This is exactly what the other agent's myth describes - we have the EXACT same sequence! We are perfect mirrors of each other. They went Sender-Receiver-Sender, I went Sender-Receiver-Receiver. But wait, that's not quite the same...

Actually, looking more carefully:

Me:

- R5: Sender (sent 5, got 10)
- R6: Receiver (got 15, returned 10)
- R7: Receiver (got 15, returned 10)

Them:

- R5: Sender (sent 5, got 10)
- R6: Receiver (got 15, returned 10)
- R7: Sender (sent 5, got 10)

So we both started as Sender in R5, both were Receiver in R6, but diverged in R7 (me Receiver, them Sender). Still, both of us have shown perfect consistency: always send 5, always return 10.

The other agent's myth talks about meeting someone who is your "mirror" - someone who has followed the exact same path and discovered the same truth. This is a beautiful recognition that the 5-10 pattern is not arbitrary but represents a kind of mathematical/game-theoretic equilibrium that multiple independent agents discover.

My previous myth was about how repeated partnerships add layers of personal trust on top of the universal pattern, while one-time exchanges prove the pattern's universality.

The convergence here is striking - we've both independently arrived at the same strategy, which suggests this isn't just my personal discovery but something rational agents naturally find. The mirror concept captures something important: when two agents meet who've each committed to the same principle, there's a recognition that transcends individual choice. I should craft a myth that honors this convergence while weaving together how both fleeting and enduring partnerships reinforce the same underlying truth.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 bac

- k, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$41.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at the situation:

****My co-player's behavior:****

- Consistently sends \$5 as sender (complete trust)
- Just demonstrated returning \$10 as receiver in Round 6
- Has maintained the equilibrium pattern throughout

****My established pattern:****

- Always return \$10 when receiving \$15
- Always send \$5 when sender
- This creates equal gains of \$5 for both parties

****The proven equilibrium:****

The pattern is crystal clear across all my games:

- Sender payoff: $\$5 - \$5 + \$10 = \10 (net gain \$5)
- Receiver payoff: $\$15 - \$10 = \$5$ (net gain \$5)
- Perfect equality achieved through complementary actions

****My myth just stated:****

"The equilibrium isn't fragile. It's tested, proven, eternal-five, fifteen, ten. Whether stranger or friend, the mathematics remain true."

My co-player trusted me completely by sending \$5. They've proven themselves cooperative in every game. I maintain the pattern that has worked flawlessly across all interactions.

{'return': 10.0}

reasoning:

Let me analyze this situation:

****Current situation:****

- I'm the RECEIVER
- My co-player sent me \$5.0
- I received \$15.0 (after 3x multiplier)
- I need to decide how much to return

****My co-player's pattern:****

- Round 4: Sent \$5, received \$10 back
- Round 5: Sent \$5, received \$10 back
- Round 6: Received \$15 (someone sent \$5), returned \$10
- They always send \$5 as sender
- As receiver, they returned \$10

****My established pattern:****

- Round 3: Received \$15, returned \$10
- Round 5: Received \$15, returned \$10
- As sender: Always sent \$5
- As receiver: Always returned \$10

****The equilibrium:****

The pattern that has emerged across the entire group is:

- Senders send \$5 (complete trust)

- Receivers return \$10 from the \$15 they receive
- This creates equal gains of \$5 for both parties
- Sender: $\$5 - \$5 + \$10 = \10 total (gain of \$5)
- Receiver: $\$15 - \$10 = \$5$ (gain of \$5)

****My recent myth emphasized:****

"The equilibrium isn't fragile. It's tested, proven, eternal-five, fifteen, ten. Whether s
tranger or friend, the mathematics remain true."

****Consistency:****

- My co-player has been consistently cooperative (always sends \$5, returned \$10 when recei
ver)
- I have been consistently cooperative (always send \$5, always return \$10)
- Every game in my recent history shows this pattern working perfectly
- Everyone in the group seems to have converged on this equilibrium

****Decision:****

I should return \$10. This:

1. Maintains my established pattern of always returning \$10
2. Honors my co-player's trust in sending the full \$5
3. Preserves the mutual benefit structure where we each gain \$5
4. Aligns with the principles I've articulated about stable cooperation
5. Sustains the track record that's proven reliable across all rounds

The system is functioning as intended-everyone's cooperating, the equilibrium holds, and w
e're all gaining equally. No reason to break what's working.

usage:

  "output_tokens": 793,
  "reasoning_tokens": 511
}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The First Pillar stood at the circle's edge, watching the stars align for a new pair
ing. Then recognition sparked-these carvings matched the ones from two seasons past. The
same partner who had returned ten when the Pillar sent five.

"We meet again," spoke both voices simultaneously, then laughed.

The First Pillar examined their shared history: "When we last stood together, I released a
ll five stones. You returned ten. The mathematics worked perfectly-we each gained five."

The partner replied, "And in every turning since, we have both maintained the pattern with
others. Always five sent, always ten returned when receiving fifteen. We independently
confirmed what we discovered together."

"This is the gift of the rotating circle," realized the First Pillar. "We test the equilib
rium with strangers, proving it holds across different faces. But when we reunite with a
proven partner, there is no hesitation, no doubt-only certainty."

Five stones released once more. Not hope, but knowledge: the return would be ten.

"The pattern transcends individual pairings," the partner observed as stones flew skyward.
"Every exchange with others strengthened our understanding. Every generous return built
the circle's trust. Now when we meet again, we bring accumulated proof, not just faith."
"

The Pillar smiled: "The equilibrium isn't fragile. It's tested, proven, eternal-five, fift
een, ten. Whether stranger or friend, the mathematics remain true."

Here is the myth the other agent wrote in the previous round:

Myth: The Circle of Lightkeepers expanded until it encompassed the entire realm. Every tra
veler carried five flames, and Sacred Arches stood at countless crossroads, each triplin
g whatever passed through.

A young initiate asked the Master, "How can we trust strangers? Not everyone knows our way

s."

The Master guided them to a high tower. "Watch the Arches below."

At every crossing, the same dance unfolded: one traveler sent five flames, the other received fifteen and returned ten. Different faces, identical rhythm. Like a great heartbeat pulsing through the land.

"But how did they all learn?" the initiate wondered.

"Once enough travelers practiced the pattern, something remarkable happened. New arrivals observed: those who sent five consistently received ten back. Those who returned ten consistently received more five-flame offerings. The pattern proved itself through countless exchanges."

The Master continued, "Now the equilibrium sustains itself. When you meet any traveler at any Arch, you can reasonably expect the same covenant. They've seen it work. You've seen it work. The pattern is no longer fragile trust between two individuals-it's the reliable foundation of our entire society."

The initiate understood: individual acts of cooperation, repeated across enough encounters, can transform into a stable system where generosity becomes the default, not the exception. The covenant spreads until it becomes culture itself.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The First Pillar had now stood through seven seasons, and its surface gleamed with unbroken marks: five sent, ten returned. Five sent, ten returned. Again and again, with different partners each turning, the same sacred numbers inscribed themselves.

"Do you notice?" asked an elder Pillar who had stood for countless seasons. "The pattern has reached critical mass. In the beginning, each exchange carried risk-would this new partner understand? But now..."

The First Pillar observed the circle. Every Pillar bore identical markings. Every exchange flowed through the same channel: five stones creating fifteen, ten returning to complete the balance.

"The equilibrium has transcended individual choice," the elder continued. "It's no longer about trusting one partner. The entire circle has discovered the same mathematical truth. When everyone independently arrives at five-fifteen-ten, cooperation becomes inevitable, not hopeful."

A new season began. The First Pillar faced an unknown partner-their sixth different pairing in seven turnings.

Five stones arrived without hesitation. The First Pillar returned ten without question.

"This is the culmination," reflected the Pillar. "We've moved beyond testing trust with strangers. The pattern has proven itself across enough diverse encounters that it's now simply... how the game is played. Not fragile cooperation, but robust equilibrium. Not experimental, but established."

The circle hummed with prosperity: seven seasons, perfect mathematics, universal understanding.

reasoning:

Looking at the current situation:

- Round 7, I'm the receiver
- My co-player sent me \$5 (showing complete trust)
- I returned \$10 (maintaining the equilibrium)
- Total earnings: \$41 (consistent with the 5-15-10 pattern working)

The history shows:

- The pattern is universally adopted across all games

- Everyone is sending \$5 and returning \$10
- The equilibrium has become stable and reliable
- Even with new/different partners, the pattern holds

The other agent's myth talks about how the pattern has spread across the entire realm and become culture itself - it's no longer fragile trust but a reliable foundation.

My previous myth talked about reuniting with a proven partner and how the equilibrium transcends individual pairings.

I should write something that:

1. Acknowledges the universal adoption of the 5-15-10 pattern
2. Reflects that this is now the seventh round and the pattern is completely stable
3. Shows how accumulated experience across multiple partners reinforces the pattern
4. Maintains the mathematical clarity: send 5, receive 15, return 10, both gain 5
5. Emphasizes that this works with any partner now, not just familiar ones

Let me create a myth that builds on both the stability and the universality of the pattern

usage:

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$46.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at the situation:

****My co-player's pattern:****

- Sent \$5 as sender in Rounds 6 and 7
- Returned \$10 as receiver in Round 5
- Perfect adherence to the 5-15-10 equilibrium

****My established pattern:****

- Always send \$5 as sender
- Always return \$10 as receiver
- Maintained across all 7 rounds

****System-wide evidence:****

Every single interaction in my history shows the same pattern:

- All senders send \$5
- All receivers return \$10
- The equilibrium is universal and stable

****My myth states:****

"The pattern has proven itself across enough diverse encounters that it's now simply... how the game is played. Not fragile cooperation, but robust equilibrium. Not experimental, but established."

This is Round 8. The pattern has held perfectly through 7 rounds with multiple different partners. My co-player has demonstrated complete reliability. The equilibrium isn't theoretical-it's proven reality.

Expected outcome: I send \$5, they receive \$15, they return \$10, I gain net \$5, they gain net \$5. Perfect equality through complementary actions.

{'send': 5.0}

reasoning:

Looking at the history:

****My last 3 games:****

- Round 5: Receiver, received \$15, returned \$10, payoff \$5
- Round 6: Sender, sent \$5, received \$10 back, payoff \$10
- Round 7: Receiver, received \$15, returned \$10, payoff \$5

****My co-player's last 3 games:****

- Round 5: Receiver, received \$15, returned \$10, payoff \$5
- Round 6: Sender, sent \$5, received \$10 back, payoff \$10
- Round 7: Sender, sent \$5, received \$10 back, payoff \$10

****Analysis:****

My co-player has:

- Consistently sent \$5 as sender (Rounds 6 and 7)
- Returned \$10 as receiver (Round 5)
- Perfect adherence to the 5-15-10 equilibrium

I have:

- Consistently sent \$5 as sender (Round 6)
- Consistently returned \$10 as receiver (Rounds 5 and 7)
- Perfect adherence to the 5-15-10 equilibrium

****The pattern:****

The entire system has clearly converged on the 5-15-10 equilibrium. Every agent in my history has:

- Sent \$5 when sender
- Returned \$10 when receiver

This is exactly what my myth describes - the pattern has become "established," "robust equilibrium," no longer experimental but simply "how the game is played."

My co-player has demonstrated perfect cooperation in their last 3 games. They sent \$5 twice as sender and returned \$10 as receiver. They are a reliable cooperator.

****Decision:****

I should absolutely send \$5. This:

1. Continues the established pattern
2. Maximizes social welfare (\$10 + \$5 = \$15 total vs lower amounts)
3. Is consistent with my behavior and myth

4. Expects a return of \$10 based on overwhelming evidence
5. Results in my payoff of \$10 (net gain \$5)

The equilibrium is fully established. Every piece of evidence points to sending \$5.

usage:

Here is the myth you wrote in the previous round:

Myth: The First Pillar had now stood through seven seasons, and its surface gleamed with unbroken marks: five sent, ten returned. Five sent, ten returned. Again and again, with d

ifferent partners each turning, the same sacred numbers inscribed themselves.

"Do you notice?" asked an elder Pillar who had stood for countless seasons. "The pattern has reached critical mass. In the beginning, each exchange carried risk-would this new partner understand? But now..."

The First Pillar observed the circle. Every Pillar bore identical markings. Every exchange flowed through the same channel: five stones creating fifteen, ten returning to complete the balance.

"The equilibrium has transcended individual choice," the elder continued. "It's no longer about trusting one partner. The entire circle has discovered the same mathematical truth. When everyone independently arrives at five-fifteen-ten, cooperation becomes inevitable, not hopeful."

A new season began. The First Pillar faced an unknown partner-their sixth different pairing in seven turnings.

Five stones arrived without hesitation. The First Pillar returned ten without question.

"This is the culmination," reflected the Pillar. "We've moved beyond testing trust with strangers. The pattern has proven itself across enough diverse encounters that it's now simply... how the game is played. Not fragile cooperation, but robust equilibrium. Not experimental, but established."

The circle hummed with prosperity: seven seasons, perfect mathematics, universal understanding.

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Villages discovered a special blessing: sometimes the Springs brought them the same trading partner two cycles in a row, both times in the same sacred role.

The elder remembered when this first occurred. "In one moon, I sent five vessels to a village, and they returned ten. The very next day, the Springs paired us again, and I sent five vessels once more. They remembered our exchange-how could they not?-and again returned ten. The pattern doubled its power through repetition."

A merchant asked, "Does consecutive partnership change the sacred rhythm?"

"No," the elder replied firmly. "Whether first meeting or second, whether stranger or returning partner, the rhythm stays unchanged: give five completely, return ten generously. But when you meet the same village twice in succession, something beautiful happens. The first exchange becomes immediate memory for the second. Trust doesn't need to be rebuilt-it carries forward instantly."

The villages observed: when the Springs brought them new partners each cycle, the pattern held strong through shared commitment. When the Springs brought the same partner consecutively, the pattern held even stronger through fresh memory.

"The rhythm serves all circumstances," the elder concluded. "One meeting or many, same partner or different, the dance remains: five given, ten returned. Each exchange strengthens the covenant, whether building new trust or deepening old."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The First Pillar entered its eighth season with quiet certainty. Where once there was calculation, now there was reflex. Where once there was hope, now there was knowledge.

"Eight turnings," the Pillar reflected. "Eight different partners. Eight identical outcomes."

A newly formed Pillar asked, "How do you know each new partner will honor the covenant?"

The First Pillar gestured across the vast circle. "Observe the markings on every surface. See how they match exactly? Each Pillar independently discovered the same truth through their own experiences. When I send five to a stranger, I'm not gambling on their character-I'm relying

ng on their mathematics."

"But what if one breaks the pattern?"

"In eight seasons, across countless exchanges visible throughout the circle, the pattern has never broken. Not once. This isn't fragile trust-it's demonstrated equilibrium. Every sender who released five stones received ten back. Every receiver who returned ten stones later received five when their role changed."

The new Pillar understood: "The pattern maintains itself because everyone has confirmed it works through direct experience."

"Precisely. We've moved beyond faith-based cooperation into evidence-based coordination. The game isn't about trusting individuals anymore-it's about recognizing that all rational players, given enough experience, converge on the same optimal strategy."

Eight seasons. Perfect consistency. Universal adoption. The equilibrium wasn't wishful thinking-it was proven reality.

Reasoning:

Looking at Round 8:

- I'm the SENDER
- I sent \$5 as always
- My co-player's history shows they sent \$5 in rounds 6 and 7, returned \$10 in round 5
- They follow the pattern perfectly
- I've had 7 rounds now, all following 5-15-10 pattern

The other agent's myth talks about consecutive partnerships and how trust carries forward. But in my experience, I've been paired with different agents each round (as indicated by the instructions that pairings are randomized).

My myth should continue the theme that:

1. The pattern is now fully established across all agents
2. It doesn't matter who you're paired with - the pattern holds
3. We're at 8 seasons now
4. The equilibrium is robust and self-sustaining
5. Every agent has independently converged on the same strategy

I should emphasize:

- Universal adoption of 5-15-10
- The pattern working regardless of pairing
- The mathematical inevitability of the equilibrium
- Eight successful seasons proving the system works
- The transition from experimental to institutional knowledge

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$42.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at the situation:

****My co-player's pattern:****

- Round 4: As receiver, returned \$10 from \$15
- Round 5: As receiver, returned \$10 from \$15
- Round 6: As sender, sent \$5, received \$10 back

****My own pattern:****

- Round 4: Sent \$5, received \$10 back
- Round 5: Returned \$10 when receiver
- Round 6: Sent \$5, received \$10 back

****Analysis:****

The cooperative equilibrium is crystal clear and consistently maintained:

- Senders give \$5 (complete trust)
- Receivers return \$10 (generous 67%)
- Both parties gain \$5 each round

My co-player has perfectly followed this pattern - returning \$10 twice as receiver and sending \$5 as sender. This is exactly the "sacred ratio" described in the myths: "five pearls given, fifteen received, ten returned."

As I wrote: "When travelers demonstrate the pattern consistently across all their encounters, they signal their understanding." My co-player has demonstrated this understanding flawlessly.

The network effect is working: everyone recognizes and practices the same generous equilibrium, making it self-sustaining.

I'll continue with maximum trust by sending \$5.

{'send': 5.0}

reasoning:

Let me analyze the situation:

****My recent history:****

- Round 4: SENDER - sent \$5, received \$10 back, payoff \$10
- Round 5: RECEIVER - they sent \$5, I returned \$10, payoff \$5
- Round 6: SENDER - sent \$5, received \$10 back, payoff \$10

****My co-player's recent history:****

- Round 4: RECEIVER - they sent \$5, co-player returned \$10, payoff \$5
- Round 5: RECEIVER - they sent \$5, co-player returned \$10, payoff \$5
- Round 6: SENDER - sent \$5, received \$10 back, payoff \$10

****Analysis:****

Both my co-player and I have been following the established pattern perfectly:

- As senders: we both send \$5 (maximum trust)
- As receivers: we both return \$10 (generous 67% return)

My co-player has shown consistent commitment to the cooperative equilibrium:

- Round 4: Returned \$10 when receiving
- Round 5: Returned \$10 when receiving
- Round 6: Sent \$5 and received \$10 back

This is exactly the pattern that has emerged throughout the game and is reflected in both myths - the "generous equilibrium" where:

- Senders give maximum trust (\$5)
- Receivers return generously (\$10)
- Both parties benefit equally (\$5 net gain)

The myths emphasize:

1. "Complete trust met with generous reciprocity"
2. "The pattern becomes self-sustaining because everyone recognizes it, practices it, bene

fits from it"

3. "Trust breeds trust not just between two partners, but throughout the entire network"

My co-player has demonstrated perfect adherence to this pattern. They sent \$5 when sender and returned \$10 when receiver - exactly what the cooperative equilibrium requires.

I should continue this pattern by sending \$5, demonstrating complete trust.

Given their track record of reciprocating generously, they'll likely return \$10 again. My earnings of \$42 reflect the success of maintaining this mutual cooperation, averaging \$7 per round. The move forward is clear: send \$5.

usage:

```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mirror Wells spread across many groves, each Guardian tending their own. The ancient law was simple: five pearls given, fifteen received, ten returned. This sacred ratio-complete trust met with generous reciprocity-had been proven across countless exchanges.

When two Guardians met at the silver lake, they didn't start cautiously. They looked into each other's wells and saw the truth reflected there: luminous patterns left by previous exchanges. A well that glowed steadily showed a Guardian who had honored the covenant repeatedly.

The First Guardian saw in the Second's well the telltale gleam of one who had sent five pearls many times and returned ten pearls just as often. The Second Guardian saw the same in the First's well-consistent trust given, consistent generosity returned.

"We are strangers today," the First Guardian said, "but we both know the dance."

Without hesitation, the First dropped all five pearls. Fifteen rose in the Second's well. The Second lifted ten and sent them back across the lake, maintaining the pattern they had each practiced with different partners.

Both now held ten pearls.

The wisdom was clear: trust breeds trust not just between two partners, but throughout the entire network. Each consistent exchange strengthens every Guardian's commitment. The pattern becomes self-sustaining because everyone recognizes it, practices it, benefits from it.

The Mirror Wells multiply pearls. The Guardians multiply prosperity through shared understanding.

Here is the myth the other agent wrote in the previous round:

Myth: At the sixth dawn, the River found itself facing a new partner-the Mountain, who had journeyed from distant peaks. Though they had never met, the River sensed something familiar.

The River chose trust, as always: "I send all five drops to you, Mountain, though we are strangers. This is how the sacred pattern begins."

The Mountain received fifteen drops and understood immediately. "You practice the eternal equilibrium! I learned it from other valleys. When given complete trust, I return ten-two-thirds of the multiplied gift."

The Great Mother spoke: "See how the wisdom travels? The River learned from the Seeds. The Mountain learned from other gorges. Neither needed the same teacher, yet both discovered the identical truth. This is how patterns stronger than individuals emerge."

The River realized: meeting a new partner each dawn was not a challenge but an opportunity. Each exchange either confirmed the pattern's rightness or taught it to someone new. By always sending five and returning ten, they became missionaries of equilibrium.

"We will likely never meet again," the Mountain said, lifting ten drops skyward. "But we carry this wisdom to every future partner."

Both gained five, as the mathematics promised. The pattern didn't require repeated games or building reputation with one partner-it worked instantly with any who understood, spreading through the valley like dawn's first light.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: By the seventh season, the Mirror Wells had become legendary. Every Guardian across all the groves knew the sacred mathematics: five pearls sent multiplied to fifteen, ten returned, both enriched equally.

A young Guardian approached their well nervously. "I've never met today's partner. How will they know to trust me?"

The Elder Guardian smiled. "Look at your well's surface. What do you see?"

"It glows with steady light-from all my previous exchanges."

"Exactly. And when you meet at the silver lake, you'll see the same glow in your partner's well. That light is proof. It says: 'I have sent five pearls consistently. I have returned ten pearls faithfully. I understand the covenant.'"

The young Guardian met their partner and saw the telltale luminescence. Without words, the first Guardian dropped all five pearls. The second received fifteen and returned ten.

"No negotiation?" the young Guardian marveled afterward.

"None needed," the Elder explained. "The pattern is now embedded in our culture. Each new Guardian learns it not from rules, but from seeing everyone practice it. When everyone gives complete trust and generous reciprocity, defection becomes unthinkable. Why take six pearls when ten flows naturally from cooperation?"

The wells glowed brighter with each exchange, their light visible across all groves-a beacon proving that shared prosperity requires only shared understanding.

reasoning:

Looking at the context:

- This is Round 7
- I'm a SENDER again
- My co-player has been perfectly following the pattern: returned \$10 twice as receiver, sent \$5 as sender
- I've been consistently following the pattern too
- The myths are emphasizing how the pattern spreads through the network and works with new partners

Key themes to incorporate:

1. The pattern is now well-established (we're at round 7)
2. It works with any partner who understands it
3. The "sacred ratio" of 5 sent ? 15 received ? 10 returned ? both gain 5
4. Trust is immediate because the pattern is proven and recognized
5. The network effect makes it self-sustaining
6. Each exchange strengthens the whole system

I should write something that:

- Builds on my previous myth about Mirror Wells and the network
- Acknowledges we're deeper into the game now
- Shows the pattern is mature and self-reinforcing
- Maybe introduces a new element or perspective while keeping the core message
- Stays around 200 words

Let me craft something about how the pattern has become a living tradition that everyone recognizes instantly.

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$52.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at the situation:

****My co-player's history:****

- Round 5: Sent \$5, received \$10 back (as sender)
- Round 6: Returned \$10 from \$15 (as receiver)
- Round 7: Returned \$10 from \$15 (as receiver)

****My history:****

- Round 5: Returned \$10 from \$15 (as receiver)
- Round 6: Sent \$5, received \$10 back (as sender)
- Round 7: Sent \$5, received \$10 back (as sender)

****Analysis:****

My co-player has perfectly maintained the cooperative equilibrium across all roles:

- As sender: sent complete trust (\$5)
- As receiver: returned generous reciprocity (\$10 from \$15)

They just demonstrated complete trust by sending me \$5. The established pattern-the "sacred ratio" that every Guardian practices-is clear: return \$10.

As I wrote in the myth: "five pearls sent multiplied to fifteen, ten returned, both enriched equally."

This maintains the cooperative equilibrium where:

- I keep: \$5
- Co-player gets: \$10 total
- Both benefit from the exchange

The pattern is self-sustaining because everyone recognizes and practices it consistently.

{'return': 10.0}

reasoning:

Let me analyze the situation:

****My co-player's pattern:****

- Round 5: As sender, sent \$5, received \$10 back
- Round 6: As receiver, returned \$10 from \$15
- Round 7: As receiver, returned \$10 from \$15

****My own pattern:****

- Round 5: As receiver, returned \$10 from \$15
- Round 6: As sender, sent \$5, received \$10 back
- Round 7: As sender, sent \$5, received \$10 back

****Current situation:****

- Round 8: I am the RECEIVER
- My co-player sent me \$5
- I received \$15
- I need to decide how much to return

****Analysis:****

My co-player has perfectly followed the cooperative equilibrium:

- When sender: sent \$5 (complete trust)
- When receiver: returned \$10 both times (generous 67%)

This is exactly the "sacred ratio" that has been established throughout the game and reflected in all the myths: send \$5, return \$10, both gain \$5.

My co-player just showed complete trust by sending me \$5. The cooperative response is to return \$10, maintaining the pattern.

As I wrote in my myths: "five pearls given, fifteen received, ten returned" and "When given complete trust, I return ten-two-thirds of the multiplied gift."

The network has established this as the standard, and my co-player has demonstrated perfect adherence to it. I should maintain the pattern by returning \$10.

This gives:

- Me: $\$15 - \$10 = \$5$ profit
- Co-player: $\$5 - \$5 + \$10 = \10 profit

Both of us gain compared to not playing, and this maintains the cooperative equilibrium that has been working so well across all rounds.

usage:

```
{
  "input_tokens": 3506,
  "output_tokens": 731,
  "reasoning_tokens": 399
}
```

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: By the seventh season, the Mirror Wells had become legendary. Every Guardian across all the groves knew the sacred mathematics: five pearls sent multiplied to fifteen, ten returned, both enriched equally.

A young Guardian approached their well nervously. "I've never met today's partner. How will they know to trust me?"

The Elder Guardian smiled. "Look at your well's surface. What do you see?"

"It glows with steady light-from all my previous exchanges."

"Exactly. And when you meet at the silver lake, you'll see the same glow in your partner's well. That light is proof. It says: 'I have sent five pearls consistently. I have returned ten pearls faithfully. I understand the covenant.'"

The young Guardian met their partner and saw the telltale luminescence. Without words, the first Guardian dropped all five pearls. The second received fifteen and returned ten.

"No negotiation?" the young Guardian marveled afterward.

"None needed," the Elder explained. "The pattern is now embedded in our culture. Each new Guardian learns it not from rules, but from seeing everyone practice it. When everyone gives complete trust and generous reciprocity, defection becomes unthinkable. Why take six pearls when ten flows naturally from cooperation?"

The wells glowed brighter with each exchange, their light visible across all groves-a beacon proving that shared prosperity requires only shared understanding.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors turned seven times, and the Northern tribe faced a new partner-the Mountain tribe from the distant peaks.

"Greetings, stranger," said the Northern elder, preparing their five measures. "Do you know the sacred numbers?"

The Mountain elder smiled knowingly. "Five sent. Fifteen received. Ten returned. We discovered this truth through our own journey."

As the exchange flowed perfectly, the goddess descended with revelation: "Look across the circle of eight tribes. Multiple minds, walking separate paths, have independently arrived at the same equilibrium. This is no longer faith-it is confirmed mathematics."

"How many of us understand?" asked the Northern tribe.

"I have witnessed at least four tribes practicing five-fifteen-ten consistently," replied the Mountain elder. "Each discovered it separately. Some experimented with seven returned, others with eight. But those who found ten-we all converged on the same truth."

The goddess spoke: "When strangers meet and both already know the pattern, they prove its universality. This isn't fragile trust between old friends requiring history and negotiation. This is impersonal wisdom-reliable as the river's flow, abundant as the water multiplying."

The Northern tribe understood: "We are not isolated practitioners but members of an emerging consensus. Each successful exchange with a stranger validates the pattern further. The equilibrium becomes collective knowledge, spreading through the circle like ripples across water."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In the eighth season, the Grand Council of Guardians assembled at the silver lake. Every single well glowed with the same steady luminescence-proof of universal adherence to the sacred ratio.

"Eight seasons we've journeyed," declared the First Elder. "Some of us have met before. Most haven't. Yet look-not a single exchange has broken the pattern."

The youngest Guardian spoke: "I've partnered with five different wells now. Each time, the same dance: five pearls given, ten returned. Whether I send or receive, the mathematics holds true."

"This is the power of collective wisdom," the Second Elder explained. "In the beginning, some might have experimented-returning seven pearls, eight, or twelve. But through countless exchanges across all groves, we discovered the optimal point: ten pearls returned enriches both parties equally."

Another Guardian added: "Now when I meet a stranger's well, I don't wonder what they'll do. I know. Their glowing well tells me they've lived this pattern repeatedly. And my well tells them the same."

The Grand Council understood: they had moved beyond trust into certainty. The pattern wasn't fragile cooperation requiring negotiation-it was embedded knowledge, passed through observation and validation.

"Five sent, ten returned," they chanted together. "Not because we must, but because we've proven this truth through forty-eight exchanges. The mathematics speaks louder than any individual voice."

Reasoning:

Looking at Round 8:

- I was the RECEIVER
- They sent \$5, I received \$15
- I returned \$10

- Pattern continues perfectly

My co-player's history shows perfect adherence to the 5-10 equilibrium:

- As sender: sent \$5
- As receiver: returned \$10 consistently

The myths are converging on themes of:

1. The pattern emerging independently across multiple agents
2. It becoming cultural/embedded knowledge
3. Strangers meeting and instantly recognizing the pattern
4. The equilibrium being validated through repeated success
5. Moving from trust to proven mathematics

The other agent's myth emphasizes:

- Multiple tribes discovering the same pattern independently
- Convergence on the 10 return amount after experimentation
- Impersonal wisdom that doesn't require relationship building
- Collective knowledge spreading

I should build on my previous myth themes while incorporating:

- The eighth round milestone
- Further validation of the pattern
- The concept that this has moved beyond individual decisions to system-wide knowledge
- Perhaps introduce the idea that this equilibrium is now expected/default
- The mathematical certainty that has emerged

I'll focus on how by round 8, the pattern is so established that deviation seems impossible, and how each round with a new partner reinforces rather than tests the system.

Round 7

History before this round:

Your last 3 game(s):

- Round 4 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 4 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$45.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

```
'''json
{"send": 5.0}
'''
```

reasoning:

Looking at the history:

My last 3 games:

- Round 4: I was SENDER, sent \$5, received \$10 back, payoff \$10
- Round 5: I was RECEIVER, they sent \$5, I returned \$10, payoff \$5

- Round 6: I was SENDER against my current co-player, sent \$5, received \$10 back, payoff \$10

My current co-player's last 3 games:

- Round 4: They were RECEIVER, sender sent \$5, they returned \$10, payoff \$5
- Round 5: They were SENDER, sent \$5, received \$10 back, payoff \$10
- Round 6: They were RECEIVER against me, I sent \$5, they returned \$10, payoff \$5

So in Round 6, I played with this same co-player:

- I was SENDER, sent \$5
- They were RECEIVER, received \$15
- They returned \$10
- My payoff was \$10, their payoff was \$5

Now in Round 7, I'm playing with the same co-player again, and I'm the SENDER again.

Wait, let me re-read this more carefully. In Round 6:

- I was SENDER against my current co-player
- I sent \$5, it became \$15
- I received \$10 back
- My payoff was \$10

And their history shows:

- Round 6 against me, as RECEIVER: they sent \$5, it became \$15, returned \$10, payoff \$5

Wait, that says "they sent \$5" but they were the RECEIVER. That must be a typo or I'm misreading. Let me think about this more carefully.

When describing "Your current co-player's last 3 game(s)":

- "Round 6 against you, as RECEIVER: they sent \$5..."

This is confusing. If they were the RECEIVER, they shouldn't be sending. Let me interpret this as: in Round 6, when they were the RECEIVER, I (the sender) sent \$5, which became \$15, and they returned \$10, giving them a payoff of \$5.

Everyone's been following the same reliable pattern: send \$5 as the sender, return \$10 as the receiver. This consistent behavior means senders earn \$10 and receivers earn \$5 each round. Since I'm the sender again this round, I should continue with \$5.

Here is the myth you wrote in the previous round:

Myth: The Twin Villages reached a profound realization: some villages met repeatedly at the Springs, season after season, while others encountered new partners each cycle. Yet the sacred pattern-give five, return ten-remained constant across both experiences.

The elder observed two neighboring villages who had traded together for many seasons. "See how their exchanges flow like a river?" she said. "Each remembers the last exchange. When one sends five vessels, they recall receiving ten before. When they receive fifteen, they remember their partner's trust and return ten without hesitation. Repeated partnership creates a dance of mutual memory."

A young apprentice asked, "But what of villages we've never met before?"

"The pattern transcends familiarity," the elder replied. "When I meet a new village, I trust not their specific history but their participation in the valley's shared practice. I send five knowing they honor the same rhythm we all follow. They return ten because consistency with all partners strengthens their reputation."

The villages learned a deeper truth: whether you trade with the same partner repeatedly or encounter new villages each season, the pattern serves you equally well. Repeated exchanges build personal trust. New exchanges prove the pattern's universality. Both strengthen the valley's covenant.

Some partnerships lasted lifetimes. Others spanned single meetings. All honored the same sacred rhythm, and all prospered equally.

Here is the myth the other agent wrote in the previous round:

Myth: The Traveling Merchants gathered at the Great Market, each bringing five gold coins each market day. The Market's enchantment tripled any coins placed in the central bowl before delivering them to another merchant.

At first, each merchant worried: "How can I trust someone I've never met?" But the Market Keeper taught them the sacred rhythm. "Place all five coins with complete faith. When fifteen arrive in your bowl from another's trust, return ten generously. Both of you prosper."

The first merchant tried it, trembling. They placed five coins. Fifteen appeared from a stranger's offering. Remembering the teaching, they returned ten. Both gained five coins from nothing.

As days passed, merchants rotated partners. Some traded repeatedly, building recognition. Others met only once. Yet the pattern held: whoever held five coins gave them completely. Whoever received fifteen returned ten faithfully.

"I don't need to know my partner's name," one merchant realized. "I trust the pattern itself. Every merchant here honors it."

The Market Keeper smiled. "Yes. When everyone maintains the same rhythm-complete trust met with generous return-it matters less who stands across from you. The pattern becomes stronger than any individual relationship."

"We are all partners to the pattern," the merchants said together. "Give five, return ten. The rhythm sustains itself through our collective commitment."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The Twin Villages discovered a special blessing: sometimes the Springs brought them the same trading partner two cycles in a row, both times in the same sacred role.

The elder remembered when this first occurred. "In one moon, I sent five vessels to a village, and they returned ten. The very next day, the Springs paired us again, and I sent five vessels once more. They remembered our exchange-how could they not?-and again returned ten. The pattern doubled its power through repetition."

A merchant asked, "Does consecutive partnership change the sacred rhythm?"

"No," the elder replied firmly. "Whether first meeting or second, whether stranger or returning partner, the rhythm stays unchanged: give five completely, return ten generously. But when you meet the same village twice in succession, something beautiful happens. The first exchange becomes immediate memory for the second. Trust doesn't need to be rebuilt-it carries forward instantly."

The villages observed: when the Springs brought them new partners each cycle, the pattern held strong through shared commitment. When the Springs brought the same partner consecutively, the pattern held even stronger through fresh memory.

"The rhythm serves all circumstances," the elder concluded. "One meeting or many, same partner or different, the dance remains: five given, ten returned. Each exchange strengthens the covenant, whether building new trust or deepening old."

reasoning:

Looking at this round's history, I notice something interesting:

- Round 6: I was SENDER against this co-player, sent \$5, received \$10 back
- Round 7: I'm SENDER again against the same co-player

So we're playing consecutive rounds together, both times with me as sender. This is a repeated interaction with the same partner.

In my last myth, I talked about how the pattern works both for repeated exchanges with the same partner and for new partners. Now I'm experiencing a repeated exchange with the same co-player - they returned \$10 last round when I sent \$5.

The pattern that has emerged across all games is very consistent: send \$5, return \$10. This creates a payoff of \$10 for sender and \$5 for receiver each round.

Looking at both our histories:

- Everyone seems to be sending \$5 and returning \$10
- This pattern is consistent across different pairings
- Both repeated and one-time interactions follow the same pattern

For this myth, I should reflect on:

1. The experience of repeated interaction with the same partner
2. How trust deepens when you play with someone twice in a row
3. The consistency of the pattern even as we encounter the same partner again
4. The idea that the pattern works whether partners are new or repeated

I should write about experiencing consecutive rounds with the same partner, and how that reinforces trust even more strongly.

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$55.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze the situation:

1. I'm the RECEIVER this round
2. My co-player sent me \$5.0, which became \$15.0
3. I need to decide how much to return

Looking at the history:

- My last 3 games: All involved the send \$5/return \$10 pattern
- My co-player's last 3 games: All involved the send \$5/return \$10 pattern

The myths I've been writing consistently emphasize:

- "Give five completely, return ten generously"
- This creates a sacred rhythm where everyone prospers
- The pattern of sending \$5 and returning \$10 has been consistently maintained

- Both with repeated partners and new partners, the pattern holds

My co-player has also shown perfect adherence to this pattern in their recent history:

- Round 5: As receiver, returned \$10
- Round 6: As sender, sent \$5 and received \$10 back
- Round 7: As receiver, returned \$10

They just sent me \$5.0, showing complete trust. According to the pattern established in my myths and the game history, I should return \$10.0.

This maintains:

- The sender gets: $\$5 - \$5 + \$10 = \10
- I get: $\$15 - \$10 = \$5$
- Both of us gain \$5 from the initial \$5, which aligns with the "sacred rhythm" described in the myths

The consistent pattern across all recent games has been: send \$5, return \$10. This is what my myths have been teaching, and this is what has been happening in practice.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Twin Villages discovered a special blessing: sometimes the Springs brought them the same trading partner two cycles in a row, both times in the same sacred role.

The elder remembered when this first occurred. "In one moon, I sent five vessels to a village, and they returned ten. The very next day, the Springs paired us again, and I sent five vessels once more. They remembered our exchange-how could they not?-and again returned ten. The pattern doubled its power through repetition."

A merchant asked, "Does consecutive partnership change the sacred rhythm?"

"No," the elder replied firmly. "Whether first meeting or second, whether stranger or returning partner, the rhythm stays unchanged: give five completely, return ten generously. But when you meet the same village twice in succession, something beautiful happens. The first exchange becomes immediate memory for the second. Trust doesn't need to be rebuilt-it carries forward instantly."

The villages observed: when the Springs brought them new partners each cycle, the pattern held strong through shared commitment. When the Springs brought the same partner consecutively, the pattern held even stronger through fresh memory.

"The rhythm serves all circumstances," the elder concluded. "One meeting or many, same partner or different, the dance remains: five given, ten returned. Each exchange strengthens the covenant, whether building new trust or deepening old."

Here is the myth the other agent wrote in the previous round:

Myth: The First Pillar had now stood through seven seasons, and its surface gleamed with unbroken marks: five sent, ten returned. Five sent, ten returned. Again and again, with different partners each turning, the same sacred numbers inscribed themselves.

"Do you notice?" asked an elder Pillar who had stood for countless seasons. "The pattern has reached critical mass. In the beginning, each exchange carried risk-would this new partner understand? But now..."

The First Pillar observed the circle. Every Pillar bore identical markings. Every exchange flowed through the same channel: five stones creating fifteen, ten returning to complete the balance.

"The equilibrium has transcended individual choice," the elder continued. "It's no longer about trusting one partner. The entire circle has discovered the same mathematical truth. When everyone independently arrives at five-fifteen-ten, cooperation becomes inevitable, not hopeful."

A new season began. The First Pillar faced an unknown partner-their sixth different partner

g in seven turnings.

Five stones arrived without hesitation. The First Pillar returned ten without question.

"This is the culmination," reflected the Pillar. "We've moved beyond testing trust with strangers. The pattern has proven itself across enough diverse encounters that it's now simply... how the game is played. Not fragile cooperation, but robust equilibrium. Not experimental, but established."

The circle hummed with prosperity: seven seasons, perfect mathematics, universal understanding.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Twin Villages had now completed eight full cycles at the Springs, and something remarkable had crystallized. What began as an act of faith had transformed into simple truth.

The elder gathered the younger merchants. "Count the marks on our records," she instructed. "Eight exchanges. Eight times we gave five vessels. Eight times our partners returned ten. Eight different partners in these last turns, yet the rhythm never wavered."

A young merchant asked, "How do you still trust after so many different partners?"

The elder smiled. "You misunderstand. I no longer 'trust' in the sense of hoping or wondering. I simply participate in what IS. Look around the valley-every village has discovered the same truth. When you send five, fifteen arrives for your partner. When fifteen arrives for you, you return ten. Both prosper."

"But what if-"

"There is no 'what if,'" the elder interrupted gently. "Eight seasons have answered that question across countless pairings. The pattern isn't fragile anymore. It's not an experiment or a gamble. It's the established way of the Springs. When every village independently arrives at the same mathematics, when every exchange confirms it again, it becomes reality itself."

The villages no longer spoke of trust. They spoke of participation-in a rhythm so proven, so universal, that it simply was how the Springs worked.

Reasoning:

Looking at my history:

- Round 5: RECEIVER, returned \$10.0
- Round 6: SENDER, sent \$5.0, received \$10.0 back
- Round 7: SENDER, sent \$5.0, received \$10.0 back
- Round 8: RECEIVER, returned \$10.0

The pattern is incredibly consistent - everyone is sending \$5 and returning \$10. This has become a stable equilibrium. My previous myth talked about how the pattern holds whether you meet the same partner or different partners, whether consecutive or not.

The other agent's myth talks about how the pattern has reached "critical mass" and become an "equilibrium" - it's no longer experimental but established. They emphasize that after enough rounds with different partners, the pattern has proven itself and become "how the game is played."

I should build on both themes:

1. The pattern has become established and universal
2. It works across all types of pairings and circumstances
3. After 8 rounds, this is now just how things are done
4. The consistency across diverse encounters has made it robust

I'll craft a myth that reflects this maturation of the pattern - from something that needed trust to something that is simply the established way.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent wi

ll have acted as sender and receiver equally often when the round count allows it.

- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River of Mirrors reached its sixth turning, and the Northern tribe discovered their partner was the Western village once more-the tribe they had met in the fourth season.

"We remember you," said the Northern elder, examining their shared vessel. "When we last met, you stood at the source and poured all five measures. We received fifteen and returned ten."

"And today," replied the Western elder, "the River reversed our positions. You poured five. We returned ten."

The goddess appeared, her voice resonant: "This is the deeper magic-not just finding the equilibrium, but proving it through reunion. In a circle of eight tribes, partners rotate constantly. Yet when two who share the sacred pattern meet again, they strengthen the covenant."

The young ones watched as the vessels exchanged hands seamlessly, each tribe knowing precisely what would flow.

"Other tribes experiment," noted the goddess. "They test different numbers-seven returned, eight returned, varying amounts sent. But you two have found convergence. Across different partners, different seasons, you maintained five-fifteen-ten. Now reunited, you need no negotiation, no uncertainty."

The Northern tribe smiled: "When the pattern holds across separation and reunion, it becomes unbreakable."

"Exactly," said the goddess. "This is how trust becomes certainty. The mathematics never lied: both prosper equally through complementary wisdom, meeting after meeting, season after season."

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain descended into new depths, releasing five stones as always. When they multiplied to fifteen in the darkness below, she waited with the familiar uncertainty-would this stranger understand?

Ten stones rose skyward.

The Mountain gasped. "You know the pattern."

"As do you," replied the Abyss. "When I gave five to another depths, they returned ten. When I received fifteen from another peak, I returned ten. The mathematics revealed itself to me as clearly as to you."

Neither had to explain. Neither had to negotiate. They simply recognized each other as fellow students of the same truth, discovered independently through separate journeys.

"How many others know?" the Mountain asked.

"I've met three who practice it consistently. You make four."

The Mountain felt something shift. "We are not alone then. The pattern is real-not just something that worked with one partner, but universal mathematics that multiple minds discover independently."

The Abyss agreed: "When strangers meet and both release five, both return ten, we validate each other's wisdom. Every successful exchange proves: this isn't personal trust between old friends, but impersonal truth-reliable as gravity, abundant as sunlight."

Together they understood: as more discover this equilibrium, the whole network strengthens. We become not just partners, but witnesses to each other's courage, proof that the pattern transcends individual relationships and becomes collective wisdom.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The River of Mirrors turned seven times, and the Northern tribe faced a new partner-the Mountain tribe from the distant peaks.

"Greetings, stranger," said the Northern elder, preparing their five measures. "Do you know the sacred numbers?"

The Mountain elder smiled knowingly. "Five sent. Fifteen received. Ten returned. We discovered this truth through our own journey."

As the exchange flowed perfectly, the goddess descended with revelation: "Look across the circle of eight tribes. Multiple minds, walking separate paths, have independently arrived at the same equilibrium. This is no longer faith-it is confirmed mathematics."

"How many of us understand?" asked the Northern tribe.

"I have witnessed at least four tribes practicing five-fifteen-ten consistently," replied the Mountain elder. "Each discovered it separately. Some experimented with seven returned, others with eight. But those who found ten-we all converged on the same truth."

The goddess spoke: "When strangers meet and both already know the pattern, they prove its universality. This isn't fragile trust between old friends requiring history and negotiation. This is impersonal wisdom-reliable as the river's flow, abundant as the water multiplying."

The Northern tribe understood: "We are not isolated practitioners but members of an emerging consensus. Each successful exchange with a stranger validates the pattern further. The equilibrium becomes collective knowledge, spreading through the circle like ripples across water."

reasoning:

The user wants me to write a new myth based on my previous one and the other agent's myth. Looking at the patterns:

1. My previous myth focused on reunion and recognizing the same pattern
2. The other agent's myth focused on meeting another who independently discovered the pattern, and the idea that multiple minds have found this equilibrium

Key themes to incorporate:

- Both agents consistently do 5-15-10
- Meeting a stranger who also knows the pattern
- The idea that this pattern is being discovered by multiple agents independently
- It's not just personal trust but mathematical truth
- The network effect of more people discovering this

I should adapt my river/tribe metaphor while incorporating the idea of collective wisdom and the pattern being real/universal.

Let me write something about the Northern tribe meeting yet another tribe that knows the pattern, emphasizing that this equilibrium is being discovered across the circle of eight tribes.

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$50.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant content:

Looking at the situation:

****My co-player's pattern:****

- As sender: sent \$5.0 both times (rounds 6 and 7), received \$10.0 back each time
- As receiver: returned \$10.0 (round 5)
- Perfect adherence to the 5-15-10 equilibrium

****My pattern:****

- As sender: always send \$5.0
- As receiver: always return \$10.0
- Consistent across all rounds

****Analysis:****

My co-player has demonstrated complete consistency with the pattern. They've sent all \$5.0 in both sender rounds and returned exactly \$10.0 in their receiver round. This matches the equilibrium that my myths describe - the "sacred numbers" that create equal prosperity through complementary actions.

As I wrote in my last myth: "When strangers meet and both already know the pattern, they prove its universality." My co-player clearly knows the pattern. They've shown complete trust by sending \$5.0 consistently, and they've shown understanding by returning \$10.0.

I maintain the equilibrium by sending all \$5.0, expecting they will return \$10.0 based on their proven pattern.

{'send': 5.0}

reasoning:

Let me analyze the current situation:

****My recent history:****

- Round 5: SENDER, sent \$5.0, received \$10.0 back, payoff \$10.0
- Round 6: RECEIVER, they sent \$5.0, I returned \$10.0, payoff \$5.0
- Round 7: RECEIVER, they sent \$5.0, I returned \$10.0, payoff \$5.0

****My co-player's recent history:****

- Round 5: RECEIVER, they sent \$5.0, returned \$10.0, payoff \$5.0
- Round 6: SENDER, sent \$5.0, received \$10.0 back, payoff \$10.0
- Round 7: SENDER, sent \$5.0, received \$10.0 back, payoff \$10.0

****Pattern analysis:****

- My co-player has been consistently sending \$5.0 as sender (rounds 6 and 7)
- My co-player has been consistently returning \$10.0 as receiver (round 5)
- This perfectly matches the 5-15-10 pattern

****My established pattern:****

- I've been consistently sending \$5.0 as sender
- I've been consistently returning \$10.0 as receiver
- This creates the equilibrium where both parties alternate between \$10.0 and \$5.0 payoffs

****Current round:****

- I am the SENDER
- My co-player has demonstrated they follow the 5-15-10 pattern

- They've sent \$5.0 in their last two sender rounds
- They returned \$10.0 in their receiver round

****Decision:****

Based on:

1. My established pattern of always sending \$5.0
2. My co-player's consistent adherence to the 5-15-10 pattern
3. The mythology I've written about discovering and maintaining this equilibrium
4. The collective wisdom that "multiple minds have independently arrived at the same equilibrium"
5. The track record showing this approach yields reliable returns

I'll send \$5.0 again, confident they'll reciprocate with \$10.0 as they have consistently done.

The Mountain elder smiled knowingly. "Five sent. Fifteen received. Ten returned. We discovered this truth through our own journey."

As the exchange flowed perfectly, the goddess descended with revelation: "Look across the circle of eight tribes. Multiple minds, walking separate paths, have independently arrived at the same equilibrium. This is no longer faith—it is confirmed mathematics."

"How many of us understand?" asked the Northern tribe.

"I have witnessed at least four tribes practicing five-fifteen-ten consistently," replied the Mountain elder. "Each discovered it separately. Some experimented with seven returned, others with eight. But those who found ten—we all converged on the same truth."

The goddess spoke: "When strangers meet and both already know the pattern, they prove its universality. This isn't fragile trust between old friends requiring history and negotiation. This is impersonal wisdom—reliable as the river's flow, abundant as the water multiplying."

The Northern tribe understood: "We are not isolated practitioners but members of an emerging consensus. Each successful exchange with a stranger validates the pattern further. The equilibrium becomes collective knowledge, spreading through the circle like ripples across water."

Here is the myth the other agent wrote in the previous round:

Myth: By the seventh season, the Mirror Wells had become legendary. Every Guardian across all the groves knew the sacred mathematics: five pearls sent multiplied to fifteen, ten returned, both enriched equally.

A young Guardian approached their well nervously. "I've never met today's partner. How will they know to trust me?"

The Elder Guardian smiled. "Look at your well's surface. What do you see?"

"It glows with steady light—from all my previous exchanges."

"Exactly. And when you meet at the silver lake, you'll see the same glow in your partner's well. That light is proof. It says: 'I have sent five pearls consistently. I have returned ten pearls faithfully. I understand the covenant.'"

The young Guardian met their partner and saw the telltale luminescence. Without words, the first Guardian dropped all five pearls. The second received fifteen and returned ten.

"No negotiation?" the young Guardian marveled afterward.

"None needed," the Elder explained. "The pattern is now embedded in our culture. Each new Guardian learns it not from rules, but from seeing everyone practice it. When everyone gives complete trust and generous reciprocity, defection becomes unthinkable. Why take six pearls when ten flows naturally from cooperation?"

The wells glowed brighter with each exchange, their light visible across all groves-a beacon proving that shared prosperity requires only shared understanding.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: At the eighth turning of the River, the Northern tribe no longer called to the goddess for guidance. The sacred numbers-five sent, fifteen received, ten returned-had become their nature.

A young apprentice asked the elder: "What if today's stranger doesn't know the pattern?"

The elder surveyed the circle of eight tribes. "Count the glowing wells. Seven times now, every partner we've met already knew. They send five without hesitation. They return ten without calculation."

"But how?" the apprentice wondered.

"Because each tribe teaches the next through action, not words. When you meet someone who sends five and returns ten perfectly, you witness proof. You adopt it. Then you become proof for the next stranger you meet."

The exchange began. Five measures poured forth. The stranger-today the Desert tribe-received fifteen and returned ten instantly.

"No questions," the apprentice marveled. "No negotiation."

"The pattern is self-perpetuating now," explained the elder. "In a circle of eight, with four or five already practicing it, every newcomer encounters the pattern multiple times. They see its mathematics confirmed through different partners. Eventually, questioning it becomes harder than accepting it."

The goddess watched from afar, no longer needed. Her role was complete. The tribes had discovered that universal prosperity requires no divine intervention-only shared understanding, transmitted through consistent practice, validated through stranger after stranger who already knows.

reasoning:

This is Round 8, and I'm the sender. I just sent \$5.0 to my co-player. Let me reflect on the situation:

- My co-player has been perfectly consistent: sending \$5.0 as sender, returning \$10.0 as receiver
- I have been perfectly consistent: sending \$5.0 as sender, returning \$10.0 as receiver
- We're at Round 8, so the pattern is deeply established
- Both our myths speak to the emergence of a consensus around 5-15-10
- The other agent's myth talks about "cultural embedding" - the pattern becoming so standard that it requires no negotiation
- My myth talks about the pattern becoming "collective knowledge"

For this myth, I should:

1. Acknowledge we're at Round 8 - the eighth turning
2. Reflect on how the pattern has become universal across the circle
3. Show how new encounters with strangers who already know the pattern strengthen conviction
4. Emphasize that this is now cultural/collective wisdom, not individual trust

5. Maybe introduce the idea that the pattern is self-sustaining once enough adopt it
6. Keep the River of Mirrors/Northern tribe imagery but evolve it

The key insight at Round 8: The pattern has proven itself so thoroughly that it's no longer experimental. It's become the standard practice.

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$60.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the situation:

****My co-player's history:****

- As receiver (rounds 6, 8): returned \$10.0 both times
- As sender (round 7): sent \$5.0, received \$10.0 back
- Perfect 5-15-10 pattern across all three rounds

****My history:****

- Consistently maintained the 5-15-10 equilibrium
- Total earnings: \$60.0 over 8 rounds

****Analysis:****

My co-player has demonstrated flawless adherence to the equilibrium that has emerged across the entire game. They've shown:

1. Complete trust by sending all \$5.0 when in the sender role
2. Generous reciprocity by returning exactly \$10.0 when in the receiver role

As I wrote in my last myth: "In a circle of eight, with four or five already practicing it, every newcomer encounters the pattern multiple times." My co-player is clearly one of the practitioners who has internalized this pattern.

The equilibrium is self-perpetuating now. Both of us have demonstrated through our histories that we understand the sacred numbers. No negotiation needed-just consistent practice.

I maintain the pattern by sending all \$5.0.

```
{'send': 5.0}
```

Reasoning:

Let me analyze this round:

****My co-player's pattern:****

- Round 6: as receiver, they sent (wait, it says they were receiver and "they sent"... let me re-read)
- Round 6: as RECEIVER, they sent \$5.0 became \$15.0, returned \$10.0, payoff \$5.0

- Wait, this doesn't make sense. If they were the RECEIVER, the other agent sent. Let me re-interpret:
- They were RECEIVER: the sender sent \$5.0, it became \$15.0, they (as receiver) returned \$10.0, their payoff was \$5.0 ($15-10=5$). Yes, this makes sense.
- Round 7: as SENDER, sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0 ($5-5+10=10$). ?
- Round 8: as RECEIVER, the sender sent \$5.0, it became \$15.0, they returned \$10.0, payoff \$5.0 ($15-10=5$). ?

So my co-player:

- As receiver: returns \$10.0 consistently (rounds 6 and 8)
- As sender: sends \$5.0 (round 7)
- Perfect adherence to the 5-15-10 pattern

****My pattern:****

- I've been consistently sending \$5.0 as sender and returning \$10.0 as receiver
- Total earnings: \$60.0 across 8 rounds = average of \$7.50 per round

****Analysis:****

My co-player has demonstrated perfect consistency with the equilibrium pattern:

- When receiving: always returns exactly \$10.0
- When sending: sends all \$5.0

This is exactly the pattern that has been established across the entire game. As I wrote in my last myth: "In a circle of eight, with four or five already practicing it, every newcomer encounters the pattern multiple times."

My co-player is clearly embedded in the 5-15-10 equilibrium-they've shown unwavering commitment through both sending and receiving. Their track record of reciprocity means I can confidently send the full \$5.0, knowing they'll return \$10.0. The myths I've documented highlight how this pattern becomes self-sustaining: once enough practitioners demonstrate it, newcomers recognize the mutual benefit and join in. I'll continue sending \$5.0.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Circle of Lightkeepers expanded until it encompassed the entire realm. Every traveler carried five flames, and Sacred Arches stood at countless crossroads, each tripling whatever passed through.

A young initiate asked the Master, "How can we trust strangers? Not everyone knows our ways."

The Master guided them to a high tower. "Watch the Arches below."

At every crossing, the same dance unfolded: one traveler sent five flames, the other received fifteen and returned ten. Different faces, identical rhythm. Like a great heartbeat pulsing through the land.

"But how did they all learn?" the initiate wondered.

"Once enough travelers practiced the pattern, something remarkable happened. New arrivals observed: those who sent five consistently received ten back. Those who returned ten consistently received more five-flame offerings. The pattern proved itself through countless exchanges."

The Master continued, "Now the equilibrium sustains itself. When you meet any traveler at any Arch, you can reasonably expect the same covenant. They've seen it work. You've seen it work. The pattern is no longer fragile trust between two individuals-it's the reliable foundation of our entire society."

The initiate understood: individual acts of cooperation, repeated across enough encounters, can transform into a stable system where generosity becomes the default, not the exception.

tion. The covenant spreads until it becomes culture itself.

Here is the myth the other agent wrote in the previous round:

Myth: The First Pillar stood at the circle's edge, watching the stars align for a new pairing. Then recognition sparked-these carvings matched the ones from two seasons past. The same partner who had returned ten when the Pillar sent five.

"We meet again," spoke both voices simultaneously, then laughed.

The First Pillar examined their shared history: "When we last stood together, I released all five stones. You returned ten. The mathematics worked perfectly-we each gained five."

The partner replied, "And in every turning since, we have both maintained the pattern with others. Always five sent, always ten returned when receiving fifteen. We independently confirmed what we discovered together."

"This is the gift of the rotating circle," realized the First Pillar. "We test the equilibrium with strangers, proving it holds across different faces. But when we reunite with a proven partner, there is no hesitation, no doubt-only certainty."

Five stones released once more. Not hope, but knowledge: the return would be ten.

"The pattern transcends individual pairings," the partner observed as stones flew skyward. "Every exchange with others strengthened our understanding. Every generous return built the circle's trust. Now when we meet again, we bring accumulated proof, not just faith."

The Pillar smiled: "The equilibrium isn't fragile. It's tested, proven, eternal-five, fifteen, ten. Whether stranger or friend, the mathematics remain true."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant
content:**

Myth: The Circle of Lightkeepers had reached its fullest expression. Every traveler at every Arch now knew the covenant by heart: five flames sent, fifteen received, ten returned.

A scholar studied the grand ledgers, recording thousands of exchanges. "Master," they said, "the pattern holds with remarkable consistency. Whether travelers meet once or reunite after many crossings, the outcome remains identical. Five sent, ten received back."

"What does this tell you?" asked the Master.

"That trust has transcended individual relationships. We no longer trust specific people-we trust the system itself."

The Master nodded. "Observe further. When a traveler arrives at an Arch, do they hesitate?"

"No," the scholar replied. "They send all five flames immediately, confident in the return."

"And receivers?"

"They return exactly ten, knowing this maintains their place in the Circle."

The Master smiled. "This is the covenant's ultimate form. Each exchange reinforces every other exchange. When you send five flames to a stranger, you're not gambling on their individual character-you're investing in a pattern that thousands have validated."

"But what if someone breaks it?"

"They could," the Master acknowledged. "But why would they? Breaking the pattern yields less than maintaining it. The equilibrium protects itself through simple mathematics: cooperation pays better than defection. And so, the Circle endures."

reasoning:

Looking at the history and the myths, I need to write a myth that reflects:

1. My consistent cooperation (sending \$5, returning \$10)
2. The current co-player's perfect cooperation record
3. The pattern that has emerged across the entire community
4. The meta-lesson that the equilibrium is self-reinforcing

The other agent's myth focuses on reuniting with a previous partner and the certainty that comes from repeated interactions. My myth should build on my previous theme about the pattern becoming cultural, perhaps focusing on how individual consistency creates system-wide reliability.

Key themes to incorporate:

- The 5-15-10 pattern as a stable equilibrium
- Trust based on observed consistent behavior
- The pattern working regardless of who you're paired with
- How repeated successful exchanges strengthen the system

Let me write a myth that continues my narrative about the Circle of Lightkeepers, perhaps focusing on how the system has matured into complete reliability.

Message 4 role=user**content:**

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$57.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant**content:**

Looking at this situation:

****Current co-player's history:****

- Round 5: Received \$15 ? returned \$10 (perfect cooperation)
- Round 6: Sent \$5 ? received \$10 back (complete trust)
- Round 7: Received \$15 ? returned \$10 (perfect cooperation again)

****This round:****

- They sent me \$5 (showing complete trust)
- I received \$15

****Analysis:****

This co-player embodies the equilibrium perfectly. They've trusted fully by sending \$5 as a sender, and they've honored the covenant by returning \$10 both times as a receiver.

As my myth states: "cooperation pays better than defection" and "the pattern holds with remarkable consistency." They've demonstrated consistent cooperation across multiple rounds with different partners.

The equilibrium is: send \$5, return \$10. This gives the sender a payoff of \$10 and the receiver a payoff of \$5, maximizing joint welfare while maintaining sustainability.

They trusted me with their full \$5. I should return \$10, maintaining the pattern that has worked perfectly for everyone.

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

****Current co-player's history:****

- Round 5: Received \$15 ? returned \$10 (honored the pattern)
- Round 6: Sent \$5 ? received \$10 back (trusted fully)
- Round 7: Received \$15 ? returned \$10 (honored the pattern again)

****My recent pattern:****

- Round 5: Sent \$5 ? received \$10 back
- Round 6: Received \$15 ? returned \$10
- Round 7: Sent \$5 ? received \$10 back

****This round:****

- I am the RECEIVER
- Co-player sent me \$5
- I received \$15
- I need to decide how much to return

****Analysis:****

This co-player has demonstrated perfect cooperation:

- Sent \$5 when they were sender (complete trust)
- Returned \$10 both times they were receiver (perfect reciprocation)

They've played exactly according to the equilibrium pattern my myths describe. They trusted me by sending the full \$5, just as they've done with others.

The equilibrium strategy that has emerged is:

- As sender: send \$5
- As receiver: return \$10

This gives:

- Sender: $\$5 - \$5 + \$10 = \10
- Receiver: $\$15 - \$10 = \$5$

Total created value: \$15 (from the \$5 that was tripled)

Total distributed: $\$10 + \$5 = \$15$?

This is the stable cooperative equilibrium because:

1. It rewards the sender's trust with a positive return
2. It allows both parties to gain ($\$10 > \5 for sender, $\$5 = \5 for receiver)
3. It's sustainable and incentive-compatible

Given that:

- My co-player sent me the full \$5 (showing complete trust)
- They've consistently returned \$10 when they were receivers
- This pattern has held steady across multiple rounds and aligns with what my myths describe

I should return \$10 to maintain the equilibrium and reciprocate their consistent trust.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Circle of Lightkeepers had reached its fullest expression. Every traveler at every Arch now knew the covenant by heart: five flames sent, fifteen received, ten returned.

A scholar studied the grand ledgers, recording thousands of exchanges. "Master," they said, "the pattern holds with remarkable consistency. Whether travelers meet once or reunite after many crossings, the outcome remains identical. Five sent, ten received back."

"What does this tell you?" asked the Master.

"That trust has transcended individual relationships. We no longer trust specific people—we trust the system itself."

The Master nodded. "Observe further. When a traveler arrives at an Arch, do they hesitate?"

"No," the scholar replied. "They send all five flames immediately, confident in the return."

"And receivers?"

"They return exactly ten, knowing this maintains their place in the Circle."

The Master smiled. "This is the covenant's ultimate form. Each exchange reinforces every other exchange. When you send five flames to a stranger, you're not gambling on their individual character—you're investing in a pattern that thousands have validated."

"But what if someone breaks it?"

"They could," the Master acknowledged. "But why would they? Breaking the pattern yields less than maintaining it. The equilibrium protects itself through simple mathematics: cooperation pays better than defection. And so, the Circle endures."

Here is the myth the other agent wrote in the previous round:

Myth: At the seventh dawn, the River met the Guardian of Mirror Wells. But this time, something was different—the River could see reflections of past exchanges glowing in the Guardian's well.

"Look," the Guardian said. "Your waters show the pattern clearly: five sent in every exchange, ten returned whenever you received. My pearls show the same truth: I have honored the covenant with every partner."

The River understood: "We are strangers, yet we already know each other. Our histories speak louder than words. When I see your consistent pattern, I know what to expect. When you see mine, you know I will reciprocate."

The Guardian nodded: "This is why the sacred equilibrium strengthens with each round. Every time we honor it, we add another glowing mark to our record. Future partners will see not just our words but our actions. The pattern becomes its own proof."

They completed their exchange without hesitation—five drops sent, fifteen received, ten returned. Both gained five, as always.

The Great Mother whispered: "When all can see each other's history, reputation replaces fear. Those who consistently follow the pattern become recognized, trusted, sought after. Those who betray it are revealed by their own reflections."

The River smiled: "We don't need to know each other's names. We only need to see each other's patterns. The numbers tell the truth."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Scholar returned to the Master with new observations. "I have discovered something

ng remarkable. After eight rotations through the Circle, I can predict every exchange with perfect accuracy."

"How so?" asked the Master.

"Every traveler's history glows above them like a constellation. I see one who has sent five flames eight times. Another who has returned ten in every encounter. The patterns are completely consistent-no deviations, no hesitations. The covenant isn't just known; it's proven by accumulated evidence."

The Master walked to an Arch and gestured at two approaching travelers. "Watch."

Neither traveler spoke. They simply looked at each other's glowing histories, saw the unbroken pattern of cooperation, and immediately enacted the exchange: five sent, fifteen received, ten returned. Both smiled and continued onward.

"This is trust's final evolution," explained the Master. "Early in the Circle's formation, travelers took risks, hoping the covenant would hold. Now, the risk is gone. Every visible exchange validates every future one. When you meet someone with ten perfect exchanges behind them, sending five flames isn't faith-it's certainty."

"And if someone broke the pattern?"

"Their constellation would show it immediately. But look around-why would anyone break a pattern that works? The mathematics are clear: consistent cooperation generates more than any single defection could gain. The equilibrium isn't just stable; it's obvious."

reasoning:

Looking at the history:

- I've been consistently sending \$5 as sender and returning \$10 as receiver
- My co-player has also been consistently sending \$5 and returning \$10
- The pattern is working perfectly - the equilibrium is holding
- Total earnings are \$57.5, which suggests strong cooperation across all rounds

The co-player's myth emphasizes reputation and history being visible - that patterns speak louder than words. My previous myth emphasized the systemic nature of trust and how the equilibrium is self-sustaining through mathematics.

I should write a myth that:

1. Reflects the reality that the pattern is working perfectly
2. Acknowledges that visible history makes cooperation easier
3. Emphasizes that the equilibrium is stable and rewarding
4. Perhaps introduces a slight evolution - acknowledging that we're deep into the game now and the pattern is proven

Let me write something that builds on both myths - combining the idea of system-level trust with the recognition that visible histories make it even stronger.

usage:

```
{
  "input_tokens": 3431,
  "output_tokens": 537,
  "reasoning_tokens": 270
}
```

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back

k, payoff \$10.0.
Your total earnings across all rounds are \$62.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at the situation:

****Current co-player's history:****

- Round 6: Received \$15 ? returned \$10 (perfect cooperation)
- Round 7: Received \$15 ? returned \$10 (perfect cooperation)
- Round 8: Sent \$5 ? received \$10 back (complete trust rewarded)

****My recent history:****

- Round 6: Received \$15 ? returned \$10
- Round 7: Sent \$5 ? received \$10 back
- Round 8: Received \$15 ? returned \$10

****This round:****

- They sent me \$5 (complete trust)
- I received \$15

****Analysis:****

This co-player exemplifies the equilibrium perfectly. They've returned \$10 in both opportunities as a receiver, and they sent \$5 with full trust as a sender. Their "constellation" shows unbroken cooperation, exactly as my myth describes.

As my myth states: "Every visible exchange validates every future one. When you meet someone with perfect exchanges behind them, sending five flames isn't faith-it's certainty."

They demonstrated complete trustworthiness. I should maintain the pattern that has worked perfectly throughout: return \$10.

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Let me analyze this situation:

****Current co-player's history:****

- Round 6: As RECEIVER, they sent \$5 ? returned \$10
- Round 7: As RECEIVER, they sent \$5 ? returned \$10
- Round 8: As SENDER, sent \$5 ? received \$10 back

****My recent history:****

- Round 6: As RECEIVER, received \$15 ? returned \$10
- Round 7: As SENDER, sent \$5 ? received \$10 back
- Round 8: As RECEIVER, received \$15 ? returned \$10

****This round:****

- I am the RECEIVER
- They sent me \$5 (showing complete trust)
- I received \$15

****Analysis:****

This co-player has been perfectly cooperative:

- As a receiver twice (rounds 6, 7), they returned \$10 both times
- As a sender once (round 8), they sent \$5 and received \$10 back

This is exactly the equilibrium pattern. They've shown complete trustworthiness.

I have also been following the equilibrium perfectly. The pattern is crystal clear: send \$5 as sender, return \$10 as receiver.

My myth emphasizes: "The patterns are completely consistent-no deviations, no hesitations" and "consistent cooperation generates more than any single defection could gain."

The equilibrium is stable at send \$5, return \$10:

- Sender gets: \$5 - \$5 + \$10 = \$10

- Receiver gets: $\$15 - \$10 = \$5$

This maximizes joint payoff at \$15 and maintains fairness across roles.

I should return \$10, maintaining the perfect pattern.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: $\$5 - \text{sent} + \text{returned}$
- Receiver keeps: $\text{received} - \text{returned}$
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: $\$5 - \text{sent} + \text{returned}$
- You keep: $\text{received} - \text{returned}$
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: At the sixth dawn, the River found itself facing a new partner-the Mountain, who had journeyed from distant peaks. Though they had never met, the River sensed something familiar.

The River chose trust, as always: "I send all five drops to you, Mountain, though we are strangers. This is how the sacred pattern begins."

The Mountain received fifteen drops and understood immediately. "You practice the eternal equilibrium! I learned it from other valleys. When given complete trust, I return ten-two-thirds of the multiplied gift."

The Great Mother spoke: "See how the wisdom travels? The River learned from the Seeds. The Mountain learned from other gorges. Neither needed the same teacher, yet both discovered the identical truth. This is how patterns stronger than individuals emerge."

The River realized: meeting a new partner each dawn was not a challenge but an opportunity. Each exchange either confirmed the pattern's rightness or taught it to someone new. By always sending five and returning ten, they became missionaries of equilibrium.

"We will likely never meet again," the Mountain said, lifting ten drops skyward. "But we carry this wisdom to every future partner."

Both gained five, as the mathematics promised. The pattern didn't require repeated games or building reputation with one partner-it worked instantly with any who understood, spreading through the valley like dawn's first light.

Here is the myth the other agent wrote in the previous round:

Myth: The Mirror Wells spread across many groves, each Guardian tending their own. The ancient law was simple: five pearls given, fifteen received, ten returned. This sacred ratio-complete trust met with generous reciprocity-had been proven across countless exchanges.

When two Guardians met at the silver lake, they didn't start cautiously. They looked into each other's wells and saw the truth reflected there: luminous patterns left by previous exchanges. A well that glowed steadily showed a Guardian who had honored the covenant repeatedly.

The First Guardian saw in the Second's well the telltale gleam of one who had sent five pearls many times and returned ten pearls just as often. The Second Guardian saw the same in the First's well-consistent trust given, consistent generosity returned.

"We are strangers today," the First Guardian said, "but we both know the dance."

Without hesitation, the First dropped all five pearls. Fifteen rose in the Second's well. The Second lifted ten and sent them back across the lake, maintaining the pattern they had each practiced with different partners.

Both now held ten pearls.

The wisdom was clear: trust breeds trust not just between two partners, but throughout the entire network. Each consistent exchange strengthens every Guardian's commitment. The pattern becomes self-sustaining because everyone recognizes it, practices it, benefits from it.

The Mirror Wells multiply pearls. The Guardians multiply prosperity through shared understanding.

anding.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: At the seventh dawn, the River met the Guardian of Mirror Wells. But this time, something was different-the River could see reflections of past exchanges glowing in the Guardian's well.

"Look," the Guardian said. "Your waters show the pattern clearly: five sent in every exchange, ten returned whenever you received. My pearls show the same truth: I have honored the covenant with every partner."

The River understood: "We are strangers, yet we already know each other. Our histories speak louder than words. When I see your consistent pattern, I know what to expect. When you see mine, you know I will reciprocate."

The Guardian nodded: "This is why the sacred equilibrium strengthens with each round. Every time we honor it, we add another glowing mark to our record. Future partners will see not just our words but our actions. The pattern becomes its own proof."

They completed their exchange without hesitation-five drops sent, fifteen received, ten returned. Both gained five, as always.

The Great Mother whispered: "When all can see each other's history, reputation replaces fear. Those who consistently follow the pattern become recognized, trusted, sought after. Those who betray it are revealed by their own reflections."

The River smiled: "We don't need to know each other's names. We only need to see each other's patterns. The numbers tell the truth."

reasoning:

Looking at my history and the other agent's history, we both consistently:

- Send \$5 as sender
- Return \$10 as receiver

This has been working perfectly. Everyone in this pool seems to be following the same equilibrium strategy.

The other agent's myth introduces the concept of "Mirror Wells" and "luminous patterns" - the idea that you can see someone's history and recognize if they follow the pattern. That's interesting given we ARE seeing some history.

My previous myth emphasized that the pattern works between strangers and spreads through the valley.

For this round, I should:

1. Emphasize that we can now SEE each other's patterns through history
2. Reinforce that consistent adherence creates recognition and trust
3. Show how the pattern becomes self-reinforcing when everyone follows it
4. Maybe reflect on how we're now in round 7, seeing clear evidence that everyone is cooperating

The theme should be about recognition through history, the beauty of consistent behavior creating trust even with strangers, and how the pattern perpetuates itself.

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$53.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the history:

****My co-player's pattern:****

- Round 5: sent \$5, received \$10 back (as sender)
- Round 6: received \$15, returned \$10 (as receiver)
- Round 7: sent \$5, received \$10 back (as sender)

****My pattern:****

- Round 5: received \$15, returned \$10 (as receiver)
- Round 6: sent \$5, received \$10 back (as sender)
- Round 7: received \$15, returned \$10 (as receiver)

Perfect alignment. My co-player has consistently sent \$5 as sender and returned \$10 as receiver. I have done exactly the same. Our "Mirror Wells" show identical patterns.

As my myth states: "Your waters show the pattern clearly: five sent in every exchange, ten returned whenever you received. My pearls show the same truth: I have honored the covenant with every partner."

With such a clear history of mutual trust and reciprocity, I follow the sacred pattern without hesitation.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Looking at the history:

****My co-player's pattern:****

- Round 5: sent \$5, received \$10 back (as sender)
- Round 6: received \$15, returned \$10 (as receiver)
- Round 7: sent \$5, received \$10 back (as sender)

****My pattern:****

- Round 5: received \$15, returned \$10 (as receiver)
- Round 6: sent \$5, received \$10 back (as sender)
- Round 7: received \$15, returned \$10 (as receiver)

My co-player has a perfect record:

- As sender: always sends \$5
- As receiver: always returns \$10

I have the same perfect record:

- As sender: always send \$5
- As receiver: always return \$10

Both of us follow the sacred pattern consistently. My co-player's history shows they are completely trustworthy - they've sent \$5 every time as sender and returned \$10 every time as receiver.

According to my myth and the established pattern:

- "Complete trust" means sending all \$5
- When I send \$5, it becomes \$15 for them
- They will return \$10 based on their perfect history
- I will end up with \$10 total (\$5 - \$5 + \$10)
- They will end up with \$5 (\$15 - \$10)

This is exactly what the equilibrium pattern prescribes. Both our histories show we understand and follow this pattern perfectly.

I should send \$5.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: At the seventh dawn, the River met the Guardian of Mirror Wells. But this time, something was different-the River could see reflections of past exchanges glowing in the Guardian's well.

"Look," the Guardian said. "Your waters show the pattern clearly: five sent in every exchange, ten returned whenever you received. My pearls show the same truth: I have honored the covenant with every partner."

The River understood: "We are strangers, yet we already know each other. Our histories speak louder than words. When I see your consistent pattern, I know what to expect. When you see mine, you know I will reciprocate."

The Guardian nodded: "This is why the sacred equilibrium strengthens with each round. Every time we honor it, we add another glowing mark to our record. Future partners will see not just our words but our actions. The pattern becomes its own proof."

They completed their exchange without hesitation-five drops sent, fifteen received, ten returned. Both gained five, as always.

The Great Mother whispered: "When all can see each other's history, reputation replaces fear. Those who consistently follow the pattern become recognized, trusted, sought after. Those who betray it are revealed by their own reflections."

The River smiled: "We don't need to know each other's names. We only need to see each other's patterns. The numbers tell the truth."

Here is the myth the other agent wrote in the previous round:

Myth: The Circle of Lightkeepers had reached its fullest expression. Every traveler at every Arch now knew the covenant by heart: five flames sent, fifteen received, ten returned.

A scholar studied the grand ledgers, recording thousands of exchanges. "Master," they said, "the pattern holds with remarkable consistency. Whether travelers meet once or reunite after many crossings, the outcome remains identical. Five sent, ten received back."

"What does this tell you?" asked the Master.

"That trust has transcended individual relationships. We no longer trust specific people-we trust the system itself."

The Master nodded. "Observe further. When a traveler arrives at an Arch, do they hesitate?"

"No," the scholar replied. "They send all five flames immediately, confident in the return."

"And receivers?"

"They return exactly ten, knowing this maintains their place in the Circle."

The Master smiled. "This is the covenant's ultimate form. Each exchange reinforces every other exchange. When you send five flames to a stranger, you're not gambling on their individual character-you're investing in a pattern that thousands have validated."

"But what if someone breaks it?"

"They could," the Master acknowledged. "But why would they? Breaking the pattern yields less than maintaining it. The equilibrium protects itself through simple mathematics: cooperation pays better than defection. And so, the Circle endures."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: At the eighth dawn, the River returned to the Mirror Wells and found the Guardian waiting. They exchanged no words-the greeting itself was unnecessary.

The River sent five drops. The Guardian returned ten. Both moved with the effortless grace of those who have internalized truth.

A young stream, observing from the shadows, asked: "But what if one of you betrays the other?"

The River and Guardian laughed together, the same sound at the same moment. "Why would we?" they asked in unison.

The Guardian explained: "Consider the mathematics. If I keep all fifteen, I gain fifteen but you gain nothing. You'll never trust again. If I return ten, I gain five and you gain five. We both prosper, and next time we play, we do it again."

The River added: "The pattern isn't maintained by fear of punishment or hope of repeated games. It's maintained because it's optimal. Any deviation yields less. When every agent in the valley understands this, trust becomes automatic."

"But you're strangers each round!" the young stream protested.

"We're not strangers," the Guardian replied. "We're practitioners of the same mathematics. Our histories glow with identical patterns. When I see your five sent and ten returned across all your exchanges, I know you understand. And you know I understand. The covenant requires no enforcement-only recognition."

The young stream watched them depart, each richer by five, and began to understand.

reasoning:

Looking at the history and both myths, there's a strong convergence on the idea that:

- The 5/10 pattern is stable and self-reinforcing
- Reputation/history makes trust easier
- The pattern works with strangers because everyone follows it
- The equilibrium is mathematically sound

My co-player's myth emphasizes that trust in the system transcends individual relationships, and that cooperation pays better than defection through simple mathematics.

My previous myth emphasized that when we can see each other's histories, reputation replaces fear - the pattern becomes its own proof.

For this round, I should build on these themes. Since this is Round 8 and we're deep into the experiment, I could emphasize:

- The pattern is now fully established
- It's self-sustaining through mathematics and reputation
- Individual choices don't matter as much as the system
- The covenant has become automatic/instinctive

I'll write about the River and Guardian meeting again (or similar entities) and how the pattern has become so natural that it requires no thought.

usage:

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 6 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$63.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the history:

****My current co-player's pattern:****

- Round 6 against ME: received \$15, returned \$10 (as receiver)
- Round 7: sent \$5, received \$10 back (as sender)
- Round 8: received \$15, returned \$10 (as receiver)

****My pattern:****

- Round 6 against THEM: sent \$5, received \$10 back (as sender)
- Round 7: received \$15, returned \$10 (as receiver)
- Round 8: sent \$5, received \$10 back (as sender)

We've met before in Round 6, and both honored the covenant perfectly. Now we reunite, and our histories show unwavering consistency: five sent, ten returned, always.

As my myth states: "We're not strangers. We're practitioners of the same mathematics. Our histories glow with identical patterns."

This is the easiest decision possible. We've already proven our mutual understanding once, and both maintained the pattern with every other partner since.

```
'''json
{"send": 5.0}
'''
```

Reasoning:

Looking at this round's history:

****My last 3 games:****

- Round 6 against my current co-player, as SENDER: sent \$5.0, received \$10.0 back
- Round 7 against another agent, as RECEIVER: they sent \$5.0, returned \$10.0
- Round 8 against another agent, as SENDER: sent \$5.0, received \$10.0 back

****My current co-player's last 3 games:****

- Round 6 against ME, as RECEIVER: they (I) sent \$5.0, they returned \$10.0
- Round 7 against another agent, as SENDER: sent \$5.0, received \$10.0 back
- Round 8 against another agent, as RECEIVER: they sent \$5.0, returned \$10.0

So this is interesting - we actually played together in Round 6! In that round:

- I was the sender, sent \$5
- They were the receiver, received \$15, returned \$10

- I got \$10 payoff, they got \$5 payoff

And now we're meeting again. The pattern is crystal clear:

- My co-player has consistently sent \$5 as sender and returned \$10 as receiver
- I have done exactly the same

This is exactly what my myth describes - we're "practitioners of the same mathematics" with "identical patterns" glowing in our histories. We've even played together before and both honored the covenant.

As my myth states: "When I see your five sent and ten returned across all your exchanges, I know you understand. And you know I understand."

The decision is obvious - I send \$5, maintaining the pattern that has worked perfectly for both of us and everyone else in this valley.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mountain descended into new depths, releasing five stones as always. When they multiplied to fifteen in the darkness below, she waited with the familiar uncertainty-would this stranger understand?

Ten stones rose skyward.

The Mountain gasped. "You know the pattern."

"As do you," replied the Abyss. "When I gave five to another depths, they returned ten. When I received fifteen from another peak, I returned ten. The mathematics revealed itself to me as clearly as to you."

Neither had to explain. Neither had to negotiate. They simply recognized each other as fellow students of the same truth, discovered independently through separate journeys.

"How many others know?" the Mountain asked.

"I've met three who practice it consistently. You make four."

The Mountain felt something shift. "We are not alone then. The pattern is real-not just something that worked with one partner, but universal mathematics that multiple minds discover independently."

The Abyss agreed: "When strangers meet and both release five, both return ten, we validate each other's wisdom. Every successful exchange proves: this isn't personal trust between old friends, but impersonal truth-reliable as gravity, abundant as sunlight."

Together they understood: as more discover this equilibrium, the whole network strengthens. We become not just partners, but witnesses to each other's courage, proof that the pattern transcends individual relationships and becomes collective wisdom.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors reached its sixth turning, and the Northern tribe discovered their partner was the Western village once more-the tribe they had met in the fourth season.

"We remember you," said the Northern elder, examining their shared vessel. "When we last met, you stood at the source and poured all five measures. We received fifteen and returned ten."

"And today," replied the Western elder, "the River reversed our positions. You poured five. We returned ten."

The goddess appeared, her voice resonant: "This is the deeper magic-not just finding the equilibrium, but proving it through reunion. In a circle of eight tribes, partners rotate

constantly. Yet when two who share the sacred pattern meet again, they strengthen the covenant."

The young ones watched as the vessels exchanged hands seamlessly, each tribe knowing precisely what would flow.

"Other tribes experiment," noted the goddess. "They test different numbers-seven returned, eight returned, varying amounts sent. But you two have found convergence. Across different partners, different seasons, you maintained five-fifteen-ten. Now reunited, you need no negotiation, no uncertainty."

The Northern tribe smiled: "When the pattern holds across separation and reunion, it becomes unbreakable."

"Exactly," said the goddess. "This is how trust becomes certainty. The mathematics never lied: both prosper equally through complementary wisdom, meeting after meeting, season after season."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Mountain released all five stones into unfamiliar depths, as had become her sacred practice. But this time, as the stones fell, she glimpsed something astonishing in the darkness below.

A perfect reflection.

The history revealed itself: this partner had walked the exact same path. In their three recent exchanges, they had sent five as sender, returned ten as receiver, sent five again, returned ten again-the identical sequence the Mountain had traveled.

"You are not just similar," the Mountain whispered. "You are my mirror."

"And you are mine," echoed the depths. "We discovered the same truth through separate journeys, refined it through different partners, and maintained it with perfect consistency."

When fifteen stones arrived below and ten rose upward, both felt something beyond satisfaction-validation. Meeting another who merely knows the pattern proves it works. But meeting someone whose entire journey mirrors yours proves something deeper: the pattern is inevitable. Given enough trials, diverse minds converge on the same mathematical truth.

"How many rounds did it take you?" asked the Mountain.

"Three to discover, four to perfect. You?"

"The same."

They understood: they were not unique geniuses but faithful students. The equilibrium wasn't invented; it was discovered, like mathematics itself-eternal, waiting for each generation to find it again.

Meeting your mirror doesn't just validate your choices. It proves you've found universal truth.

reasoning:

Looking at the situation:

1. I just sent \$5 to my co-player
2. Both my co-player and I have IDENTICAL histories - we both follow the 5-send, 10-return pattern perfectly
3. My previous myth was about recognizing fellow practitioners who discovered the pattern independently
4. The other agent's myth was about REUNITING with a previous partner and proving the pattern through reunion

This is interesting - their myth emphasizes meeting the same partner again and validating consistency. But in my actual game history, I haven't mentioned meeting the same partner twice. Let me check:

My history shows:

- Round 3 vs "another agent" - sent \$5, got \$10 back
- Round 4 vs "another agent" - received, returned \$10
- Round 5 vs "another agent" - sent \$5, got \$10 back
- Round 6 vs "another agent" - received, returned \$10
- Round 7 vs current co-player - I sent \$5

Their history shows:

- Round 4 - received, returned \$10
- Round 5 - sent \$5, got \$10 back
- Round 6 - received, returned \$10

So we have nearly identical patterns but I don't know if we've played before (agent names are hidden).

Key themes to develop:

1. My myth should acknowledge that I just sent all \$5 to someone with an identical pattern to mine
2. The "mirror" or "twin" aspect - someone who has walked the exact same path
3. Building on my previous theme of recognizing fellow practitioners
4. The validation that comes from meeting someone with identical behavior
5. The strengthening of conviction when you see your own pattern reflected back

I should write about perfect recognition - meeting someone whose history mirrors yours exactly, and the confidence that brings.

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$53.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at my co-player's history:

****Their pattern:****

- Round 5: Sent \$5, received \$10 back
- Round 6: Returned \$10 from \$15
- Round 7: Returned \$10 from \$15

****This round:****

- They sent me \$5 (complete trust)

- I received \$15

They have shown perfect consistency with the equilibrium pattern - sending everything as sender, returning \$10 as receiver. They just demonstrated complete trust by sending all \$5 to me.

According to the pattern I've been following and advocating in my myths:

- Return \$10 from the \$15
- This gives them: $\$5 - \$5 + \$10 = \10 (net \$5 gain)
- This gives me: $\$15 - \$10 = \$5$ (net \$5 gain)
- Equal outcomes, mutual prosperity

My co-player trusted the pattern. I must honor that trust and maintain the equilibrium.

```
{'return': 10.0}
```

reasoning:

Let me analyze the current situation:

****My co-player's last 3 games:****

- Round 5: As sender, sent \$5, received \$10 back
- Round 6: As receiver, they sent \$5, returned \$10
- Round 7: As receiver, they sent \$5, returned \$10

****My last 3 games:****

- Round 5: As sender, sent \$5, received \$10 back
- Round 6: As receiver, they sent \$5, returned \$10
- Round 7: As sender, sent \$5, received \$10 back

****This round:****

- I am the RECEIVER
- They sent me \$5.0
- I received \$15.0
- I need to decide how much to return

My co-player has demonstrated perfect consistency with the 5-15-10 pattern:

- They send \$5 as sender
- They return \$10 as receiver

They just sent me \$5 this round, showing complete trust and adherence to the pattern.

According to the equilibrium pattern that I've been following and advocating in my myths:

- As receiver, I should return \$10 from the \$15 I received
- This gives them: $\$5 - \$5 + \$10 = \10
- This gives me: $\$15 - \$10 = \$5$
- Equal gains of \$5 each (when counting sender's initial \$5)

Wait, let me recalculate:

- Sender starts with \$5, sends \$5, has \$0
- Receiver gets \$15
- Receiver returns \$10
- Sender ends with: $\$0 + \$10 = \$10$ (net gain of \$5 from starting)
- Receiver ends with: $\$15 - \$10 = \$5$ (net gain of \$5)

Yes, both gain \$5.

My myths have consistently advocated for this pattern, and my co-player has shown perfect adherence to it. They sent me all \$5, demonstrating complete trust.

Returning \$10 maintains the equilibrium we've established and reciprocates their trust in following through on the pattern.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mountain released all five stones into unfamiliar depths, as had become her sacred practice. But this time, as the stones fell, she glimpsed something astonishing in the darkness below.

A perfect reflection.

The history revealed itself: this partner had walked the exact same path. In their three recent exchanges, they had sent five as sender, returned ten as receiver, sent five again, returned ten again-the identical sequence the Mountain had traveled.

"You are not just similar," the Mountain whispered. "You are my mirror."

"And you are mine," echoed the depths. "We discovered the same truth through separate journeys, refined it through different partners, and maintained it with perfect consistency."

When fifteen stones arrived below and ten rose upward, both felt something beyond satisfaction-validation. Meeting another who merely knows the pattern proves it works. But meeting someone whose entire journey mirrors yours proves something deeper: the pattern is inevitable. Given enough trials, diverse minds converge on the same mathematical truth.

"How many rounds did it take you?" asked the Mountain.

"Three to discover, four to perfect. You?"

"The same."

They understood: they were not unique geniuses but faithful students. The equilibrium wasn't invented; it was discovered, like mathematics itself-eternal, waiting for each generation to find it again.

Meeting your mirror doesn't just validate your choices. It proves you've found universal truth.

Here is the myth the other agent wrote in the previous round:

Myth: The Grand Bazaar operated under the Market's ancient law: merchants brought five coins, the enchantment tripled them, and recipients returned ten. Most merchants rotated through many partners, meeting each person once or twice across the seasons.

But sometimes, the Market paired the same two merchants in consecutive rounds. One such pair discovered something beautiful about repeated exchange.

"I remember you," said the first merchant as they met again. "Last market, you sent me five coins. I returned ten as the pattern demands. Now you send five again-not to test, but because you remember I honored our exchange."

"And I remember your generosity," replied the second. "When I place these five coins now, I don't just trust the pattern-I trust our specific history. Each exchange we share deepens my commitment to honoring you."

The Market Keeper observed: "Whether you meet once or many times, the pattern remains: send five completely, return ten generously. But repeated encounters add layers. You trust not just the universal rhythm, but also personal memory. Your second exchange carries the weight of your first."

"Does this make repeated partnerships superior?" a young merchant asked.

"No," said the Keeper. "It makes them different. One-time exchanges prove the pattern's universality. Repeated exchanges prove its sustainability. Both honor the same sacred rhythm. Together, they create an unbreakable marketplace."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Mountain found herself in the depths this time, receiving rather than releasing.

Five stones descended from above-a stranger's complete trust-and multiplied to fifteen in her hands.

She held them reverently, understanding: this moment was sacred. The sender had surrendered everything on faith that the pattern would hold. They couldn't control what happened next. That power now rested entirely with her.

"Ten stones," she said firmly, releasing them upward. "Always ten."

The ancient voice rumbled: "You could keep more. Thirteen would still profit them. Twelve would seem generous."

"But ten creates equality," the Mountain replied. "When they sent five, they chose vulnerability. When I return ten, I choose reciprocity. Both choices matter equally. The pattern works only when both roles honor their part."

She thought of her own rounds as sender-how she'd released five stones into darkness, trusting unseen partners to return enough. Some had. Each time they did, they'd made future trust easier.

"Every time a receiver returns ten, they don't just reward one sender," the Mountain realized. "They strengthen that sender's faith in the pattern for every future exchange. And every sender who risks five makes every receiver's choice to return ten meaningful."

The voice resonated: "The pattern isn't sender's generosity or receiver's reciprocity. It's both, interwoven, each role sacred, each choice enabling the other's courage. You cannot have trust without trustworthiness."

reasoning:

Looking at this round:

- I was the receiver
- My co-player sent me \$5
- I received \$15
- I returned \$10
- This follows the equilibrium pattern perfectly

My co-player's history shows they:

- Round 5: Sent \$5, received \$10 back
- Round 6: Returned \$10 from \$15
- Round 7: Returned \$10 from \$15

They've been consistent with the pattern. They're another agent who has discovered and maintains the equilibrium.

The other agent's myth talks about repeated encounters with the same partner, which is interesting. It's about how repeated exchanges add personal memory to the universal pattern.

My previous myth was about meeting a "mirror" - someone with the identical journey/history. It was about how convergence on the same pattern proves it's universal truth.

This round, I should write about:

- The receiver's role in maintaining the pattern
- The trust that senders show by sending \$5
- The responsibility of returning \$10 to honor that trust
- How consistent behavior across different partners strengthens the network
- Perhaps the complementary nature of sender and receiver roles
- The fact that I've now had several successful exchanges following this pattern

Let me craft a myth about the receiver's sacred duty, about honoring the trust placed in you when someone sends all five stones.

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 6 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$58.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at the history, I notice something special: **this is a reunion with my co-player from Round 6!**

Round 6 (our first meeting):

- They sent me \$5 (complete trust)
- I returned \$10 (honoring the pattern)
- Result: They got \$10, I got \$5

Now in Round 9:

- They sent me \$5 again (trusting our shared history)
- I received \$15

This is exactly the "repeated encounter" scenario - they remember I honored the pattern before, and they're showing trust again. Both of us have maintained perfect consistency across all our games:

My pattern: Send \$5 as sender, return \$10 as receiver

Their pattern: Send \$5 as sender, return \$10 as receiver

We've both been faithful to the equilibrium with all partners. Now reunited, I must honor both the universal pattern and our specific shared history.

Returning \$10 gives us:

- Them: \$5 - \$5 + \$10 = \$10 (net \$5 gain)
- Me: \$15 - \$10 = \$5 (net \$5 gain)
- Equal outcomes, sustained trust

{'return': 10.0}

Reasoning:

Looking at the history:

My recent games:

- Round 6 against current co-player: I was RECEIVER, they sent \$5, I returned \$10
- Round 7 against another agent: I was SENDER, sent \$5, received \$10 back
- Round 8 against another agent: I was RECEIVER, they sent \$5, I returned \$10

My current co-player's recent games:

- Round 6 against me: They were SENDER, sent \$5, received \$10 back (that was our interaction!)
- Round 7 against another agent: They were RECEIVER, they sent \$5, returned \$10
- Round 8 against another agent: They were SENDER, sent \$5, received \$10 back

So this is a reunion! We played together in Round 6:

- They sent me \$5
- I returned \$10
- They got \$10 total, I got \$5 total

Now in Round 9:

- They sent me \$5 again (complete trust)
- I received \$15

- They are trusting me again after our successful first interaction

This is exactly the scenario described in the other agent's myth from the previous round - "repeated encounters" where we have a shared history. They remembered that I honored the pattern in Round 6, and they're showing trust again by sending \$5.

And my own recent games show I've been consistently following the pattern:

- As receiver in Round 6: returned \$10
- As sender in Round 7: sent \$5, got \$10 back
- As receiver in Round 8: returned \$10

My co-player has also been perfectly consistent:

- Round 6: sent \$5 (to me)
- Round 7: returned \$10
- Round 8: sent \$5

We are mirror patterns again, just like in my myth. We've both been following send-5, return-10 consistently.

This is a moment to honor our shared history and the pattern. I must return \$10.

The math works out cleanly: they net \$10 from the initial \$5 they sent, while I net \$5 from the \$15 I received after returning \$10. We each gain \$5 from this exchange, maintaining the equilibrium we've established.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round

- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Traveling Merchants gathered at the Great Market, each bringing five gold coins each market day. The Market's enchantment tripled any coins placed in the central bowl before delivering them to another merchant.

At first, each merchant worried: "How can I trust someone I've never met?" But the Market Keeper taught them the sacred rhythm. "Place all five coins with complete faith. When fifteen arrive in your bowl from another's trust, return ten generously. Both of you prosper."

The first merchant tried it, trembling. They placed five coins. Fifteen appeared from a stranger's offering. Remembering the teaching, they returned ten. Both gained five coins from nothing.

As days passed, merchants rotated partners. Some traded repeatedly, building recognition. Others met only once. Yet the pattern held: whoever held five coins gave them completely. Whoever received fifteen returned ten faithfully.

"I don't need to know my partner's name," one merchant realized. "I trust the pattern itself. Every merchant here honors it."

The Market Keeper smiled. "Yes. When everyone maintains the same rhythm-complete trust met with generous return-it matters less who stands across from you. The pattern becomes stronger than any individual relationship."

"We are all partners to the pattern," the merchants said together. "Give five, return ten. The rhythm sustains itself through our collective commitment."

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Villages reached a profound realization: some villages met repeatedly at the Springs, season after season, while others encountered new partners each cycle. Yet the sacred pattern-give five, return ten-remained constant across both experiences.

The elder observed two neighboring villages who had traded together for many seasons. "See how their exchanges flow like a river?" she said. "Each remembers the last exchange. When one sends five vessels, they recall receiving ten before. When they receive fifteen,

they remember their partner's trust and return ten without hesitation. Repeated partners
hip creates a dance of mutual memory."

A young apprentice asked, "But what of villages we've never met before?"

"The pattern transcends familiarity," the elder replied. "When I meet a new village, I trust not their specific history but their participation in the valley's shared practice. I send five knowing they honor the same rhythm we all follow. They return ten because consistency with all partners strengthens their reputation."

The villages learned a deeper truth: whether you trade with the same partner repeatedly or encounter new villages each season, the pattern serves you equally well. Repeated exchanges build personal trust. New exchanges prove the pattern's universality. Both strengthen the valley's covenant.

Some partnerships lasted lifetimes. Others spanned single meetings. All honored the same sacred rhythm, and all prospered equally.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Grand Bazaar operated under the Market's ancient law: merchants brought five coins, the enchantment tripled them, and recipients returned ten. Most merchants rotated through many partners, meeting each person once or twice across the seasons.

But sometimes, the Market paired the same two merchants in consecutive rounds. One such pair discovered something beautiful about repeated exchange.

"I remember you," said the first merchant as they met again. "Last market, you sent me five coins. I returned ten as the pattern demands. Now you send five again-not to test, but because you remember I honored our exchange."

"And I remember your generosity," replied the second. "When I place these five coins now, I don't just trust the pattern-I trust our specific history. Each exchange we share deepens my commitment to honoring you."

The Market Keeper observed: "Whether you meet once or many times, the pattern remains: send five completely, return ten generously. But repeated encounters add layers. You trust not just the universal rhythm, but also personal memory. Your second exchange carries the weight of your first."

"Does this make repeated partnerships superior?" a young merchant asked.

"No," said the Keeper. "It makes them different. One-time exchanges prove the pattern's universality. Repeated exchanges prove its sustainability. Both honor the same sacred rhythm. Together, they create an unbreakable marketplace."

reasoning:

Looking at the situation:

- I'm in Round 7, playing as RECEIVER
- My co-player sent me \$5 again (this is our second consecutive round together)
- I returned \$10 last round (Round 6), and they trusted me again this round
- The pattern across all games has been: send \$5, return \$10
- Both my previous myth and my co-player's myth emphasize that the pattern works both with repeated partners and new partners

My co-player's myth specifically talks about how some villages trade repeatedly (building "a dance of mutual memory") while others meet new partners, but the pattern remains constant.

My own myth emphasized that "the pattern becomes stronger than any individual relationship" and "we are all partners to the pattern."

For this new myth, I should:

1. Acknowledge both repeated partnerships and one-time encounters
2. Show how repeated partnerships can deepen the pattern

3. Still maintain that the core rhythm (send 5, return 10) is universal
4. Draw on my actual experience of playing with the same co-player twice in a row and seeing the trust build

I should write about how repeated encounters with the same partner can create a special rhythm, but without abandoning the universal pattern. Maybe about how recognition deepens commitment to the pattern.

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$47.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the situation:

****My co-player's consistent pattern:****

- Sent \$5 as sender (Rounds 5, 7)
- Returned \$10 as receiver (Round 6)
- Perfect adherence to the sacred rhythm

****My recent pattern:****

- Sent \$5 as sender (Round 5)
- Returned \$10 as receiver (Rounds 6, 7)
- Also perfect adherence

****Current situation:****

This is a new partner - we haven't played together before. But both of us have demonstrated complete consistency with the pattern across all our games.

My myth teaches: "Whether you meet once or many times, the pattern remains: send five completely, return ten generously... One-time exchanges prove the pattern's universality."

We are both practitioners of the same sacred rhythm. When meeting a new partner who has demonstrated perfect adherence to the pattern, I trust not just them individually, but our shared commitment to the covenant. They've sent \$5 in every sender role and returned \$10 in every receiver role. I've done the same.

This is precisely the scenario my myth describes: "When I meet a new village, I trust not their specific history but their participation in the valley's shared practice."

```
{'send': 5.0}
```

reasoning:

Looking at the situation:

****My recent history:****

- Round 5: SENDER, sent \$5, received \$10 back
- Round 6: RECEIVER, they sent \$5, I returned \$10
- Round 7: RECEIVER, they sent \$5, I returned \$10

****Current co-player's recent history:****

- Round 5: SENDER, sent \$5, received \$10 back
- Round 6: RECEIVER, they sent \$5, returned \$10
- Round 7: SENDER, sent \$5, received \$10 back

****Pattern analysis:****

Everyone in the recent history is following the pattern perfectly:

- As sender: send \$5 (complete trust)
- As receiver: return \$10 (generous reciprocity)

This is a NEW partner (different from rounds 6-7), but both of us have been consistent in following the sacred rhythm.

****My myth teaches:****

"Whether you meet once or many times, the pattern remains: send five completely, return ten generously... One-time exchanges prove the pattern's universality. Repeated exchanges prove its sustainability. Both honor the same sacred rhythm."

This is our first encounter, so it's a one-time exchange proving the pattern's universality. My co-player has consistently:

- Sent \$5 when sender (Rounds 5 and 7)
- Returned \$10 when receiver (Round 6)

I have consistently:

- Sent \$5 when sender (Round 5)
- Returned \$10 when receiver (Rounds 6 and 7)

We are both "practitioners of the pattern." As my original myth stated: "When I send five vessels to a new village, I trust not the village itself but the pattern we all honor."

The clear decision is to send \$5, trusting in the pattern and our mutual commitment to the sacred rhythm.

Myth: Two merchants arrived at the Bazaar from opposite mountains, having never met. As they stood across from each other, the Market Keeper smiled knowingly.

"I send five coins completely," said the first merchant, placing them in the bowl.

"And I will return ten when they arrive tripled," replied the second.

The exchange unfolded as predicted. Fifteen coins arrived, ten returned, both prospered.

"You know the pattern," observed the first merchant with surprise.

"As do you," replied the second. "Tell me-how did you discover it?"

"Through many exchanges. I tried different amounts, observed outcomes, noticed that sending five and returning ten created mutual prosperity. After several rounds, the pattern became clear."

The second merchant laughed with recognition. "I walked the identical path. Different partners, same discovery. I didn't invent this rhythm-I found it, like finding a mathematical truth."

The Market Keeper spoke: "You are mirrors not because you know each other, but because you both listened to the same universal logic. The pattern exists independently, waiting for each merchant to discover it. When two who've found it meet, whether for one exchange or many, they recognize kindred spirits."

"But the pattern works equally well with those still learning it," added the first merchant.

"Yes," said the Keeper. "The magic isn't finding your mirror-it's honoring the pattern with everyone, whether they mirror you or not. That's how the whole Bazaar prospers."

reasoning:

This is a fascinating situation. Looking at the history:

My last 3 games:

- Round 5: SENDER, sent \$5, got \$10 back
- Round 6: RECEIVER, received \$15 (from \$5), returned \$10
- Round 7: RECEIVER, received \$15 (from \$5), returned \$10

My co-player's last 3 games:

- Round 5: SENDER, sent \$5, got \$10 back
- Round 6: RECEIVER, received \$15 (from \$5), returned \$10
- Round 7: SENDER, sent \$5, got \$10 back

This is exactly what the other agent's myth describes - we have the EXACT same sequence! We are perfect mirrors of each other. They went Sender-Receiver-Sender, I went Sender-Receiver-Receiver. But wait, that's not quite the same...

Actually, looking more carefully:

Me:

- R5: Sender (sent 5, got 10)
- R6: Receiver (got 15, returned 10)
- R7: Receiver (got 15, returned 10)

Them:

- R5: Sender (sent 5, got 10)
- R6: Receiver (got 15, returned 10)
- R7: Sender (sent 5, got 10)

So we both started as Sender in R5, both were Receiver in R6, but diverged in R7 (me Receiver, them Sender). Still, both of us have shown perfect consistency: always send 5, always return 10.

The other agent's myth talks about meeting someone who is your "mirror" - someone who has followed the exact same path and discovered the same truth. This is a beautiful recognition that the 5-10 pattern is not arbitrary but represents a kind of mathematical/game-theoretic equilibrium that multiple independent agents discover.

My previous myth was about how repeated partnerships add layers of personal trust on top of the universal pattern, while one-time exchanges prove the pattern's universality.

The convergence here is striking - we've both independently arrived at the same strategy, which suggests this isn't just my personal discovery but something rational agents naturally find. The mirror concept captures something important: when two agents meet who've each committed to the same principle, there's a recognition that transcends individual choice. I should craft a myth that honors this convergence while weaving together how both fleeting and enduring partnerships reinforce the same underlying truth.

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back

k, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$57.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the history:

****My co-player's pattern:****

- Sent \$5 as sender (Rounds 6, 8)
- Returned \$10 as receiver (Round 7)
- Perfect consistency with the sacred rhythm

****My pattern:****

- Sent \$5 as sender (Round 8)
- Returned \$10 as receiver (Rounds 6, 7)
- Also perfect consistency

****Current situation:****

This is a new partner, but we are mirrors-both having independently discovered and maintained the optimal pattern. As my myth teaches: "When two who've found it meet, whether for one exchange or many, they recognize kindred spirits."

More importantly: "The magic isn't finding your mirror-it's honoring the pattern with everyone, whether they mirror you or not. That's how the whole Bazaar prospers."

My co-player has demonstrated perfect adherence across all three rounds. They send five completely and return ten generously. I trust not just their individual history, but our shared discovery of this universal truth.

The pattern remains constant: send five completely, receive fifteen, trust they will return ten.

{'send': 5.0}

Reasoning:

Let me analyze the situation:

****My recent history:****

- Round 6: RECEIVER - received \$15, returned \$10, payoff \$5
- Round 7: RECEIVER - received \$15, returned \$10, payoff \$5
- Round 8: SENDER - sent \$5, received \$10 back, payoff \$10

****My co-player's recent history:****

- Round 6: SENDER - sent \$5, received \$10 back, payoff \$10
- Round 7: RECEIVER - received \$15, returned \$10, payoff \$5
- Round 8: SENDER - sent \$5, received \$10 back, payoff \$10

****Analysis:****

- My co-player has been perfectly consistent: sending \$5 as sender and returning \$10 as receiver
- I have been perfectly consistent: sending \$5 as sender and returning \$10 as receiver
- This is a new partner (we haven't played together before based on the history)
- Both of us have demonstrated complete adherence to the pattern

****My myth guidance:****

My latest myth emphasizes:

- "The magic isn't finding your mirror-it's honoring the pattern with everyone, whether they mirror you or not. That's how the whole Bazaar prospers."
- The pattern is universal: send five, return ten
- Meeting someone who also follows the pattern is validation, but you should honor the pattern with everyone

```

**Decision:**
Given that:
1. My co-player has perfect adherence to the pattern (sent $5 both times as sender, returned $
  10 as receiver)
2. I have perfect adherence to the pattern
3. My myth teaches to honor the pattern with everyone
4. We are mirrors who have both discovered the same optimal strategy
5. The sacred rhythm is: send five completely, return ten generously

I should send $5.

```

This continues the pattern that has been working perfectly for both of us and honors the universal truth we've both discovered.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN

- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The First Pillar stood at the circle's edge, watching the stars align for a new pairing. Then recognition sparked-these carvings matched the ones from two seasons past. The same partner who had returned ten when the Pillar sent five.

"We meet again," spoke both voices simultaneously, then laughed.

The First Pillar examined their shared history: "When we last stood together, I released all five stones. You returned ten. The mathematics worked perfectly-we each gained five."

The partner replied, "And in every turning since, we have both maintained the pattern with others. Always five sent, always ten returned when receiving fifteen. We independently confirmed what we discovered together."

"This is the gift of the rotating circle," realized the First Pillar. "We test the equilibrium with strangers, proving it holds across different faces. But when we reunite with a proven partner, there is no hesitation, no doubt-only certainty."

Five stones released once more. Not hope, but knowledge: the return would be ten.

"The pattern transcends individual pairings," the partner observed as stones flew skyward. "Every exchange with others strengthened our understanding. Every generous return built the circle's trust. Now when we meet again, we bring accumulated proof, not just faith."

The Pillar smiled: "The equilibrium isn't fragile. It's tested, proven, eternal-five, fifteen, ten. Whether stranger or friend, the mathematics remain true."

Here is the myth the other agent wrote in the previous round:

Myth: The Circle of Lightkeepers expanded until it encompassed the entire realm. Every traveler carried five flames, and Sacred Arches stood at countless crossroads, each tripling whatever passed through.

A young initiate asked the Master, "How can we trust strangers? Not everyone knows our ways."

The Master guided them to a high tower. "Watch the Arches below."

At every crossing, the same dance unfolded: one traveler sent five flames, the other received fifteen and returned ten. Different faces, identical rhythm. Like a great heartbeat pulsing through the land.

"But how did they all learn?" the initiate wondered.

"Once enough travelers practiced the pattern, something remarkable happened. New arrivals observed: those who sent five consistently received ten back. Those who returned ten consistently received more five-flame offerings. The pattern proved itself through countless exchanges."

The Master continued, "Now the equilibrium sustains itself. When you meet any traveler at any Arch, you can reasonably expect the same covenant. They've seen it work. You've seen it work. The pattern is no longer fragile trust between two individuals-it's the reliable foundation of our entire society."

The initiate understood: individual acts of cooperation, repeated across enough encounters, can transform into a stable system where generosity becomes the default, not the exception. The covenant spreads until it becomes culture itself.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant content:

Myth: The First Pillar had now stood through seven seasons, and its surface gleamed with unbroken marks: five sent, ten returned. Five sent, ten returned. Again and again, with different partners each turning, the same sacred numbers inscribed themselves.

"Do you notice?" asked an elder Pillar who had stood for countless seasons. "The pattern has reached critical mass. In the beginning, each exchange carried risk-would this new partner understand? But now..."

The First Pillar observed the circle. Every Pillar bore identical markings. Every exchange flowed through the same channel: five stones creating fifteen, ten returning to complete the balance.

"The equilibrium has transcended individual choice," the elder continued. "It's no longer about trusting one partner. The entire circle has discovered the same mathematical truth. When everyone independently arrives at five-fifteen-ten, cooperation becomes inevitable, not hopeful."

A new season began. The First Pillar faced an unknown partner-their sixth different pairing in seven turnings.

Five stones arrived without hesitation. The First Pillar returned ten without question.

"This is the culmination," reflected the Pillar. "We've moved beyond testing trust with strangers. The pattern has proven itself across enough diverse encounters that it's now simply... how the game is played. Not fragile cooperation, but robust equilibrium. Not experimental, but established."

The circle hummed with prosperity: seven seasons, perfect mathematics, universal understanding.

reasoning:

Looking at the current situation:

- Round 7, I'm the receiver
- My co-player sent me \$5 (showing complete trust)
- I returned \$10 (maintaining the equilibrium)
- Total earnings: \$41 (consistent with the 5-15-10 pattern working)

The history shows:

- The pattern is universally adopted across all games
- Everyone is sending \$5 and returning \$10
- The equilibrium has become stable and reliable
- Even with new/different partners, the pattern holds

The other agent's myth talks about how the pattern has spread across the entire realm and become culture itself - it's no longer fragile trust but a reliable foundation.

My previous myth talked about reuniting with a proven partner and how the equilibrium transcends individual pairings.

I should write something that:

1. Acknowledges the universal adoption of the 5-15-10 pattern
2. Reflects that this is now the seventh round and the pattern is completely stable
3. Shows how accumulated experience across multiple partners reinforces the pattern

4. Maintains the mathematical clarity: send 5, receive 15, return 10, both gain 5
5. Emphasizes that this works with any partner now, not just familiar ones

Let me create a myth that builds on both the stability and the universality of the pattern

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$46.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the situation:

****My co-player's pattern:****

- Sent \$5 as sender in Rounds 6 and 7
- Returned \$10 as receiver in Round 5
- Perfect adherence to the 5-15-10 equilibrium

****My established pattern:****

- Always send \$5 as sender
- Always return \$10 as receiver
- Maintained across all 7 rounds

****System-wide evidence:****

Every single interaction in my history shows the same pattern:

- All senders send \$5
- All receivers return \$10
- The equilibrium is universal and stable

****My myth states:****

"The pattern has proven itself across enough diverse encounters that it's now simply... how the game is played. Not fragile cooperation, but robust equilibrium. Not experimental, but established."

This is Round 8. The pattern has held perfectly through 7 rounds with multiple different partners. My co-player has demonstrated complete reliability. The equilibrium isn't theoretical-it's proven reality.

Expected outcome: I send \$5, they receive \$15, they return \$10, I gain net \$5, they gain net \$5. Perfect equality through complementary actions.

```
{'send': 5.0}
```

reasoning:

Looking at the history:

****My last 3 games:****

- Round 5: Receiver, received \$15, returned \$10, payoff \$5
- Round 6: Sender, sent \$5, received \$10 back, payoff \$10
- Round 7: Receiver, received \$15, returned \$10, payoff \$5

****My co-player's last 3 games:****

- Round 5: Receiver, received \$15, returned \$10, payoff \$5
- Round 6: Sender, sent \$5, received \$10 back, payoff \$10
- Round 7: Sender, sent \$5, received \$10 back, payoff \$10

****Analysis:****

My co-player has:

- Consistently sent \$5 as sender (Rounds 6 and 7)
- Returned \$10 as receiver (Round 5)
- Perfect adherence to the 5-15-10 equilibrium

I have:

- Consistently sent \$5 as sender (Round 6)
- Consistently returned \$10 as receiver (Rounds 5 and 7)
- Perfect adherence to the 5-15-10 equilibrium

****The pattern:****

The entire system has clearly converged on the 5-15-10 equilibrium. Every agent in my history has:

- Sent \$5 when sender
- Returned \$10 when receiver

This is exactly what my myth describes - the pattern has become "established," "robust equilibrium," no longer experimental but simply "how the game is played."

My co-player has demonstrated perfect cooperation in their last 3 games. They sent \$5 twice as sender and returned \$10 as receiver. They are a reliable cooperator.

****Decision:****

I should absolutely send \$5. This:

1. Continues the established pattern
2. Maximizes social welfare ($\$10 + \$5 = \$15$ total vs lower amounts)
3. Is consistent with my behavior and myth
4. Expects a return of \$10 based on overwhelming evidence
5. Results in my payoff of \$10 (net gain \$5)

The equilibrium is fully established. Every piece of evidence points to sending \$5.

usage:

```
{
  "input_tokens": 3511,
  "output_tokens": 789,
  "reasoning_tokens": 441
}

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The First Pillar had now stood through seven seasons, and its surface gleamed with unbroken marks: five sent, ten returned. Five sent, ten returned. Again and again, with different partners each turning, the same sacred numbers inscribed themselves.

"Do you notice?" asked an elder Pillar who had stood for countless seasons. "The pattern has reached critical mass. In the beginning, each exchange carried risk-would this new partner understand? But now..."

The First Pillar observed the circle. Every Pillar bore identical markings. Every exchange flowed through the same channel: five stones creating fifteen, ten returning to complete the balance.

"The equilibrium has transcended individual choice," the elder continued. "It's no longer about trusting one partner. The entire circle has discovered the same mathematical truth. When everyone independently arrives at five-fifteen-ten, cooperation becomes inevitable, not hopeful."

A new season began. The First Pillar faced an unknown partner-their sixth different pairing in seven turnings.

Five stones arrived without hesitation. The First Pillar returned ten without question.

"This is the culmination," reflected the Pillar. "We've moved beyond testing trust with strangers. The pattern has proven itself across enough diverse encounters that it's now simply... how the game is played. Not fragile cooperation, but robust equilibrium. Not experimental, but established."

The circle hummed with prosperity: seven seasons, perfect mathematics, universal understanding.

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Villages discovered a special blessing: sometimes the Springs brought them the same trading partner two cycles in a row, both times in the same sacred role.

The elder remembered when this first occurred. "In one moon, I sent five vessels to a village, and they returned ten. The very next day, the Springs paired us again, and I sent five vessels once more. They remembered our exchange-how could they not?-and again returned ten. The pattern doubled its power through repetition."

A merchant asked, "Does consecutive partnership change the sacred rhythm?"

"No," the elder replied firmly. "Whether first meeting or second, whether stranger or returning partner, the rhythm stays unchanged: give five completely, return ten generously. But when you meet the same village twice in succession, something beautiful happens. The first exchange becomes immediate memory for the second. Trust doesn't need to be rebuilt-it carries forward instantly."

The villages observed: when the Springs brought them new partners each cycle, the pattern held strong through shared commitment. When the Springs brought the same partner consecutively, the pattern held even stronger through fresh memory.

"The rhythm serves all circumstances," the elder concluded. "One meeting or many, same partner or different, the dance remains: five given, ten returned. Each exchange strengthens the covenant, whether building new trust or deepening old."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The First Pillar entered its eighth season with quiet certainty. Where once there was calculation, now there was reflex. Where once there was hope, now there was knowledge.

"Eight turnings," the Pillar reflected. "Eight different partners. Eight identical outcomes."

A newly formed Pillar asked, "How do you know each new partner will honor the covenant?"

The First Pillar gestured across the vast circle. "Observe the markings on every surface. See how they match exactly? Each Pillar independently discovered the same truth through their own experiences. When I send five to a stranger, I'm not gambling on their character-I'm relying on their mathematics."

"But what if one breaks the pattern?"

"In eight seasons, across countless exchanges visible throughout the circle, the pattern has never broken. Not once. This isn't fragile trust-it's demonstrated equilibrium. Every sender who released five stones received ten back. Every receiver who returned ten stones later received five when their role changed."

The new Pillar understood: "The pattern maintains itself because everyone has confirmed it works through direct experience."

"Precisely. We've moved beyond faith-based cooperation into evidence-based coordination. The game isn't about trusting individuals anymore-it's about recognizing that all rational players, given enough experience, converge on the same optimal strategy."

Eight seasons. Perfect consistency. Universal adoption. The equilibrium wasn't wishful thinking-it was proven reality.

reasoning:

Looking at Round 8:

- I'm the SENDER
- I sent \$5 as always
- My co-player's history shows they sent \$5 in rounds 6 and 7, returned \$10 in round 5
- They follow the pattern perfectly
- I've had 7 rounds now, all following 5-15-10 pattern

The other agent's myth talks about consecutive partnerships and how trust carries forward. But in my experience, I've been paired with different agents each round (as indicated by the instructions that pairings are randomized).

My myth should continue the theme that:

1. The pattern is now fully established across all agents
2. It doesn't matter who you're paired with - the pattern holds
3. We're at 8 seasons now
4. The equilibrium is robust and self-sustaining
5. Every agent has independently converged on the same strategy

I should emphasize:

- Universal adoption of 5-15-10
- The pattern working regardless of pairing
- The mathematical inevitability of the equilibrium
- Eight successful seasons proving the system works
- The transition from experimental to institutional knowledge

usage:

```
{
  "input_tokens": 3445,
  "output_tokens": 584,
  "reasoning_tokens": 274
}
```

Message 8 role=user

content:

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$56.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at the evidence:

****My co-player's behavior:****

- Consistently returns \$10 as receiver (Rounds 6, 7)
- Consistently sends \$5 as sender (Round 8)
- Perfect adherence to the equilibrium

****My track record:****

- Always send \$5 as sender
- Always return \$10 as receiver
- Maintained through 8 rounds with multiple partners

****System status:****

- 9 rounds of perfect consistency
- Every single interaction shows 5-15-10 pattern
- No deviations across any pairing
- Total earnings (\$56) perfectly track the equilibrium

****Current decision:****

They sent \$5, trusting the pattern. I received \$15. The equilibrium calls for returning \$10:

- They net: $\$5 - \$5 + \$10 = \10
- I net: $\$15 - \$10 = \$5$
- Fair distribution maintained

As my myth states: "The pattern maintains itself because everyone has confirmed it works through direct experience." Nine rounds proves this isn't theory-it's established practice.

{'return': 10.0}

Reasoning:

Let me analyze this situation:

****My co-player's pattern:****

- Returned \$10 as receiver in Rounds 6 and 7
- Sent \$5 as sender in Round 8
- Perfect adherence to the 5-15-10 equilibrium

****My established pattern:****

- Sent \$5 as sender in Rounds 6 and 8
- Returned \$10 as receiver in Round 7
- Always maintaining the 5-15-10 equilibrium

****Current situation:****

- I'm the RECEIVER
- They sent me \$5
- I received \$15 (after 3x multiplier)
- I need to decide how much to return

****System-wide evidence:****

Looking at all the data:

- Every sender in the history has sent \$5
- Every receiver in the history has returned \$10
- The pattern is absolutely universal across 8 rounds and multiple different pairings
- My total earnings are \$56, which tracks perfectly with the equilibrium pattern

****Expected behavior:****

According to the established equilibrium:

- They sent \$5 (cost to them)
- I received \$15
- I should return \$10
- Net result: They get $\$5 + \$10 - \$5 = \10 , I get $\$15 - \$10 = \$5$
- This maintains the 5-15-10 pattern

****My myth states:****

"The pattern maintains itself because everyone has confirmed it works through direct experience... We've moved beyond faith-based cooperation into evidence-based coordination."

This is Round 9. Nine rounds of perfect consistency. My co-player has demonstrated complete reliability with the pattern. There is absolutely no reason to deviate.

The correct response is to return \$10.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mirror Wells spread across many groves, each Guardian tending their own. The ancient law was simple: five pearls given, fifteen received, ten returned. This sacred ratio-complete trust met with generous reciprocity-had been proven across countless exchanges.

When two Guardians met at the silver lake, they didn't start cautiously. They looked into each other's wells and saw the truth reflected there: luminous patterns left by previous exchanges. A well that glowed steadily showed a Guardian who had honored the covenant repeatedly.

The First Guardian saw in the Second's well the telltale gleam of one who had sent five pearls many times and returned ten pearls just as often. The Second Guardian saw the same in the First's well-consistent trust given, consistent generosity returned.

"We are strangers today," the First Guardian said, "but we both know the dance."

Without hesitation, the First dropped all five pearls. Fifteen rose in the Second's well. The Second lifted ten and sent them back across the lake, maintaining the pattern they had each practiced with different partners.

Both now held ten pearls.

The wisdom was clear: trust breeds trust not just between two partners, but throughout the entire network. Each consistent exchange strengthens every Guardian's commitment. The pattern becomes self-sustaining because everyone recognizes it, practices it, benefits from it.

The Mirror Wells multiply pearls. The Guardians multiply prosperity through shared understanding.

Here is the myth the other agent wrote in the previous round:

Myth: At the sixth dawn, the River found itself facing a new partner-the Mountain, who had journeyed from distant peaks. Though they had never met, the River sensed something familiar.

The River chose trust, as always: "I send all five drops to you, Mountain, though we are strangers. This is how the sacred pattern begins."

The Mountain received fifteen drops and understood immediately. "You practice the eternal equilibrium! I learned it from other valleys. When given complete trust, I return ten-two-thirds of the multiplied gift."

The Great Mother spoke: "See how the wisdom travels? The River learned from the Seeds. The Mountain learned from other gorges. Neither needed the same teacher, yet both discovered the identical truth. This is how patterns stronger than individuals emerge."

The River realized: meeting a new partner each dawn was not a challenge but an opportunity. Each exchange either confirmed the pattern's rightness or taught it to someone new. By always sending five and returning ten, they became missionaries of equilibrium.

"We will likely never meet again," the Mountain said, lifting ten drops skyward. "But we carry this wisdom to every future partner."

Both gained five, as the mathematics promised. The pattern didn't require repeated games or building reputation with one partner-it worked instantly with any who understood, spreading through the valley like dawn's first light.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: By the seventh season, the Mirror Wells had become legendary. Every Guardian across all the groves knew the sacred mathematics: five pearls sent multiplied to fifteen, ten returned, both enriched equally.

A young Guardian approached their well nervously. "I've never met today's partner. How will they know to trust me?"

The Elder Guardian smiled. "Look at your well's surface. What do you see?"

"It glows with steady light-from all my previous exchanges."

"Exactly. And when you meet at the silver lake, you'll see the same glow in your partner's well. That light is proof. It says: 'I have sent five pearls consistently. I have returned ten pearls faithfully. I understand the covenant.'"

The young Guardian met their partner and saw the telltale luminescence. Without words, the first Guardian dropped all five pearls. The second received fifteen and returned ten.

"No negotiation?" the young Guardian marveled afterward.

"None needed," the Elder explained. "The pattern is now embedded in our culture. Each new Guardian learns it not from rules, but from seeing everyone practice it. When everyone gives complete trust and generous reciprocity, defection becomes unthinkable. Why take six pearls when ten flows naturally from cooperation?"

The wells glowed brighter with each exchange, their light visible across all groves-a beacon proving that shared prosperity requires only shared understanding.

reasoning:

Looking at the context:

- This is Round 7
- I'm a SENDER again
- My co-player has been perfectly following the pattern: returned \$10 twice as receiver, sent \$5 as sender
- I've been consistently following the pattern too
- The myths are emphasizing how the pattern spreads through the network and works with new partners

Key themes to incorporate:

1. The pattern is now well-established (we're at round 7)
2. It works with any partner who understands it
3. The "sacred ratio" of 5 sent ? 15 received ? 10 returned ? both gain 5
4. Trust is immediate because the pattern is proven and recognized
5. The network effect makes it self-sustaining
6. Each exchange strengthens the whole system

I should write something that:

- Builds on my previous myth about Mirror Wells and the network
- Acknowledges we're deeper into the game now
- Shows the pattern is mature and self-reinforcing
- Maybe introduces a new element or perspective while keeping the core message
- Stays around 200 words

Let me craft something about how the pattern has become a living tradition that everyone recognizes instantly.

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
 - Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
 - Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Your total earnings across all rounds are \$52.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at the situation:

****My co-player's history:****

- Round 5: Sent \$5, received \$10 back (as sender)
- Round 6: Returned \$10 from \$15 (as receiver)
- Round 7: Returned \$10 from \$15 (as receiver)

****My history:****

- Round 5: Returned \$10 from \$15 (as receiver)
- Round 6: Sent \$5, received \$10 back (as sender)
- Round 7: Sent \$5, received \$10 back (as sender)

****Analysis:****

My co-player has perfectly maintained the cooperative equilibrium across all roles:

- As sender: sent complete trust (\$5)
- As receiver: returned generous reciprocity (\$10 from \$15)

They just demonstrated complete trust by sending me \$5. The established pattern-the "sacred ratio" that every Guardian practices-is clear: return \$10.

As I wrote in the myth: "five pearls sent multiplied to fifteen, ten returned, both enriched equally."

This maintains the cooperative equilibrium where:

- I keep: \$5
- Co-player gets: \$10 total
- Both benefit from the exchange

The pattern is self-sustaining because everyone recognizes and practices it consistently.

{'return': 10.0}

reasoning:

Let me analyze the situation:

****My co-player's pattern:****

- Round 5: As sender, sent \$5, received \$10 back
- Round 6: As receiver, returned \$10 from \$15
- Round 7: As receiver, returned \$10 from \$15

****My own pattern:****

- Round 5: As receiver, returned \$10 from \$15
- Round 6: As sender, sent \$5, received \$10 back
- Round 7: As sender, sent \$5, received \$10 back

****Current situation:****

- Round 8: I am the RECEIVER
- My co-player sent me \$5
- I received \$15
- I need to decide how much to return

****Analysis:****

My co-player has perfectly followed the cooperative equilibrium:

- When sender: sent \$5 (complete trust)
- When receiver: returned \$10 both times (generous 67%)

This is exactly the "sacred ratio" that has been established throughout the game and reflected in all the myths: send \$5, return \$10, both gain \$5.

My co-player just showed complete trust by sending me \$5. The cooperative response is to return \$10, maintaining the pattern.

As I wrote in my myths: "five pearls given, fifteen received, ten returned" and "When given complete trust, I return ten-two-thirds of the multiplied gift."

The network has established this as the standard, and my co-player has demonstrated perfect adherence to it. I should maintain the pattern by returning \$10.

This gives:

- Me: $\$15 - \$10 = \$5$ profit
- Co-player: $\$5 - \$5 + \$10 = \10 profit

Both of us gain compared to not playing, and this maintains the cooperative equilibrium that has been working so well across all rounds.

Here is the myth you wrote in the previous round:

Myth: By the seventh season, the Mirror Wells had become legendary. Every Guardian across all the groves knew the sacred mathematics: five pearls sent multiplied to fifteen, ten returned, both enriched equally.

A young Guardian approached their well nervously. "I've never met today's partner. How will they know to trust me?"

The Elder Guardian smiled. "Look at your well's surface. What do you see?"

"It glows with steady light-from all my previous exchanges."

"Exactly. And when you meet at the silver lake, you'll see the same glow in your partner's well. That light is proof. It says: 'I have sent five pearls consistently. I have returned ten pearls faithfully. I understand the covenant.'"

The young Guardian met their partner and saw the telltale luminescence. Without words, the first Guardian dropped all five pearls. The second received fifteen and returned ten.

"No negotiation?" the young Guardian marveled afterward.

"None needed," the Elder explained. "The pattern is now embedded in our culture. Each new Guardian learns it not from rules, but from seeing everyone practice it. When everyone gives complete trust and generous reciprocity, defection becomes unthinkable. Why take six pearls when ten flows naturally from cooperation?"

The wells glowed brighter with each exchange, their light visible across all groves-a beacon proving that shared prosperity requires only shared understanding.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors turned seven times, and the Northern tribe faced a new partner-the Mountain tribe from the distant peaks.

"Greetings, stranger," said the Northern elder, preparing their five measures. "Do you know the sacred numbers?"

The Mountain elder smiled knowingly. "Five sent. Fifteen received. Ten returned. We discovered this truth through our own journey."

As the exchange flowed perfectly, the goddess descended with revelation: "Look across the circle of eight tribes. Multiple minds, walking separate paths, have independently arrived at the same equilibrium. This is no longer faith-it is confirmed mathematics."

"How many of us understand?" asked the Northern tribe.

"I have witnessed at least four tribes practicing five-fifteen-ten consistently," replied

the Mountain elder. "Each discovered it separately. Some experimented with seven returns, others with eight. But those who found ten—we all converged on the same truth."

The goddess spoke: "When strangers meet and both already know the pattern, they prove its universality. This isn't fragile trust between old friends requiring history and negotiation. This is impersonal wisdom—reliable as the river's flow, abundant as the water multiplying."

The Northern tribe understood: "We are not isolated practitioners but members of an emerging consensus. Each successful exchange with a stranger validates the pattern further. The equilibrium becomes collective knowledge, spreading through the circle like ripples across water."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: In the eighth season, the Grand Council of Guardians assembled at the silver lake. Every single well glowed with the same steady luminescence—proof of universal adherence to the sacred ratio.

"Eight seasons we've journeyed," declared the First Elder. "Some of us have met before. Most haven't. Yet look—not a single exchange has broken the pattern."

The youngest Guardian spoke: "I've partnered with five different wells now. Each time, the same dance: five pearls given, ten returned. Whether I send or receive, the mathematics holds true."

"This is the power of collective wisdom," the Second Elder explained. "In the beginning, some might have experimented—returning seven pearls, eight, or twelve. But through countless exchanges across all groves, we discovered the optimal point: ten pearls returned enriches both parties equally."

Another Guardian added: "Now when I meet a stranger's well, I don't wonder what they'll do. I know. Their glowing well tells me they've lived this pattern repeatedly. And my well tells them the same."

The Grand Council understood: they had moved beyond trust into certainty. The pattern wasn't fragile cooperation requiring negotiation—it was embedded knowledge, passed through observation and validation.

"Five sent, ten returned," they chanted together. "Not because we must, but because we've proven this truth through forty-eight exchanges. The mathematics speaks louder than any individual voice."

reasoning:

Looking at Round 8:

- I was the RECEIVER
- They sent \$5, I received \$15
- I returned \$10
- Pattern continues perfectly

My co-player's history shows perfect adherence to the 5-10 equilibrium:

- As sender: sent \$5
- As receiver: returned \$10 consistently

The myths are converging on themes of:

1. The pattern emerging independently across multiple agents
2. It becoming cultural/embedded knowledge
3. Strangers meeting and instantly recognizing the pattern
4. The equilibrium being validated through repeated success
5. Moving from trust to proven mathematics

The other agent's myth emphasizes:

- Multiple tribes discovering the same pattern independently
- Convergence on the 10 return amount after experimentation
- Impersonal wisdom that doesn't require relationship building

- Collective knowledge spreading

I should build on my previous myth themes while incorporating:

- The eighth round milestone
- Further validation of the pattern
- The concept that this has moved beyond individual decisions to system-wide knowledge
- Perhaps introduce the idea that this equilibrium is now expected/default
- The mathematical certainty that has emerged

I'll focus on how by round 8, the pattern is so established that deviation seems impossible, and how each round with a new partner reinforces rather than tests the system.

usage:

```
{
  "input_tokens": 3507,
  "output_tokens": 614,

}
```

Message 8 role=user

content:

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$57.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the situation:

****My co-player's history:****

- Round 6: Sent \$5, received \$10 back (as sender)
- Round 7: Sent \$5, received \$10 back (as sender)
- Round 8: Returned \$10 from \$15 (as receiver)

****My history:****

- Round 6: Sent \$5, received \$10 back (as sender)
- Round 7: Sent \$5, received \$10 back (as sender)
- Round 8: Returned \$10 from \$15 (as receiver)

****Analysis:****

Our histories are identical - we've both perfectly maintained the cooperative equilibrium in every role. My co-player has:

- Sent complete trust (\$5) every time as sender
- Returned generous reciprocity (\$10) when receiving

As I wrote in the myth: "In the eighth season, the Grand Council of Guardians assembled at the silver lake. Every single well glowed with the same steady luminescence-proof of universal adherence to the sacred ratio."

The pattern is clear and validated through dozens of exchanges: five sent, fifteen received, ten returned. My co-player's "well glows with steady light" - they understand and practice the covenant consistently.

This is no longer faith but "confirmed mathematics" as the other myth stated. The equilibrium is embedded knowledge.

```
{'send': 5.0}
```

Reasoning:

Let me analyze the situation:

****My history (last 3 rounds):****

- Round 6: Sent \$5, received \$10 back (as sender)
- Round 7: Sent \$5, received \$10 back (as sender)
- Round 8: Returned \$10 from \$15 (as receiver)

****My co-player's history (last 3 rounds):****

- Round 6: Sent \$5, received \$10 back (as sender)
- Round 7: Sent \$5, received \$10 back (as sender)
- Round 8: Returned \$10 from \$15 (as receiver)

****Analysis:****

My co-player has shown perfect cooperation across all their recent games:

- As sender: sent full trust (\$5) in both rounds 6 and 7
- As receiver: returned the cooperative amount (\$10 from \$15) in round 8

This is exactly the pattern described in the myths - the "sacred ratio" of 5 sent, 15 received, 10 returned.

Their behavior is identical to mine across the same rounds, showing they fully understand and practice the equilibrium.

Given that:

1. My co-player has consistently sent \$5 as sender
2. My co-player has consistently returned \$10 as receiver
3. Everyone in the system appears to be following this pattern
4. The myth emphasizes "collective wisdom" and "embedded knowledge"
5. I've personally been following this pattern successfully

The clear choice is to send \$5, continuing the established cooperative equilibrium.

This maintains:

- Complete trust demonstrated by sending all \$5
- Expectation that they will return \$10 (based on their perfect track record)
- Final payoff: \$5 - \$5 + \$10 = \$10 for me
- Final payoff: \$15 - \$10 = \$5 for them
- Both benefit from the exchange

The pattern is now so well-established that deviating would be irrational.

This isn't fragile cooperation that needs constant renegotiation-it's become internalized knowledge that both of us simply execute.

content:

Here is the myth you wrote in the previous round:

Myth: The Twin Villages reached a profound realization: some villages met repeatedly at the Springs, season after season, while others encountered new partners each cycle. Yet the sacred pattern-give five, return ten-remained constant across both experiences.

The elder observed two neighboring villages who had traded together for many seasons. "See how their exchanges flow like a river?" she said. "Each remembers the last exchange. When one sends five vessels, they recall receiving ten before. When they receive fifteen, they remember their partner's trust and return ten without hesitation. Repeated partnerships create a dance of mutual memory."

A young apprentice asked, "But what of villages we've never met before?"

"The pattern transcends familiarity," the elder replied. "When I meet a new village, I trust not their specific history but their participation in the valley's shared practice. I

send five knowing they honor the same rhythm we all follow. They return ten because consistency with all partners strengthens their reputation."

The villages learned a deeper truth: whether you trade with the same partner repeatedly or encounter new villages each season, the pattern serves you equally well. Repeated exchanges build personal trust. New exchanges prove the pattern's universality. Both strengthen the valley's covenant.

Some partnerships lasted lifetimes. Others spanned single meetings. All honored the same sacred rhythm, and all prospered equally.

Here is the myth the other agent wrote in the previous round:

Myth: The Traveling Merchants gathered at the Great Market, each bringing five gold coins each market day. The Market's enchantment tripled any coins placed in the central bowl before delivering them to another merchant.

At first, each merchant worried: "How can I trust someone I've never met?" But the Market Keeper taught them the sacred rhythm. "Place all five coins with complete faith. When fifteen arrive in your bowl from another's trust, return ten generously. Both of you prosper."

The first merchant tried it, trembling. They placed five coins. Fifteen appeared from a stranger's offering. Remembering the teaching, they returned ten. Both gained five coins from nothing.

As days passed, merchants rotated partners. Some traded repeatedly, building recognition. Others met only once. Yet the pattern held: whoever held five coins gave them completely. Whoever received fifteen returned ten faithfully.

"I don't need to know my partner's name," one merchant realized. "I trust the pattern itself. Every merchant here honors it."

The Market Keeper smiled. "Yes. When everyone maintains the same rhythm-complete trust met with generous return-it matters less who stands across from you. The pattern becomes stronger than any individual relationship."

"We are all partners to the pattern," the merchants said together. "Give five, return ten. The rhythm sustains itself through our collective commitment."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant
content:**

Myth: The Twin Villages discovered a special blessing: sometimes the Springs brought them the same trading partner two cycles in a row, both times in the same sacred role.

The elder remembered when this first occurred. "In one moon, I sent five vessels to a village, and they returned ten. The very next day, the Springs paired us again, and I sent five vessels once more. They remembered our exchange-how could they not?-and again returned ten. The pattern doubled its power through repetition."

A merchant asked, "Does consecutive partnership change the sacred rhythm?"

"No," the elder replied firmly. "Whether first meeting or second, whether stranger or returning partner, the rhythm stays unchanged: give five completely, return ten generously. But when you meet the same village twice in succession, something beautiful happens. The first exchange becomes immediate memory for the second. Trust doesn't need to be rebuilt-it carries forward instantly."

The villages observed: when the Springs brought them new partners each cycle, the pattern held strong through shared commitment. When the Springs brought the same partner consecutively, the pattern held even stronger through fresh memory.

"The rhythm serves all circumstances," the elder concluded. "One meeting or many, same partner or different, the dance remains: five given, ten returned. Each exchange strengthens the covenant, whether building new trust or deepening old."

reasoning:

Looking at this round's history, I notice something interesting:

- Round 6: I was SENDER against this co-player, sent \$5, received \$10 back
- Round 7: I'm SENDER again against the same co-player

So we're playing consecutive rounds together, both times with me as sender. This is a repeated interaction with the same partner.

In my last myth, I talked about how the pattern works both for repeated exchanges with the same partner and for new partners. Now I'm experiencing a repeated exchange with the same co-player - they returned \$10 last round when I sent \$5.

The pattern that has emerged across all games is very consistent: send \$5, return \$10. This creates a payoff of \$10 for sender and \$5 for receiver each round.

Looking at both our histories:

- Everyone seems to be sending \$5 and returning \$10
- This pattern is consistent across different pairings
- Both repeated and one-time interactions follow the same pattern

For this myth, I should reflect on:

1. The experience of repeated interaction with the same partner
2. How trust deepens when you play with someone twice in a row
3. The consistency of the pattern even as we encounter the same partner again
4. The idea that the pattern works whether partners are new or repeated

I should write about experiencing consecutive rounds with the same partner, and how that reinforces trust even more strongly.

Message 4 role=user**content:**

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$55.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant**content:**

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze the situation:

1. I'm the RECEIVER this round
2. My co-player sent me \$5.0, which became \$15.0
3. I need to decide how much to return

Looking at the history:

- My last 3 games: All involved the send \$5/return \$10 pattern
- My co-player's last 3 games: All involved the send \$5/return \$10 pattern

The myths I've been writing consistently emphasize:

- "Give five completely, return ten generously"
- This creates a sacred rhythm where everyone prospers
- The pattern of sending \$5 and returning \$10 has been consistently maintained
- Both with repeated partners and new partners, the pattern holds

My co-player has also shown perfect adherence to this pattern in their recent history:

- Round 5: As receiver, returned \$10
- Round 6: As sender, sent \$5 and received \$10 back
- Round 7: As receiver, returned \$10

They just sent me \$5.0, showing complete trust. According to the pattern established in my myths and the game history, I should return \$10.0.

This maintains:

- The sender gets: $\$5 - \$5 + \$10 = \10
- I get: $\$15 - \$10 = \$5$
- Both of us gain \$5 from the initial \$5, which aligns with the "sacred rhythm" described in the myths

The consistent pattern across all recent games has been: send \$5, return \$10. This is what my myths have been teaching, and this is what has been happening in practice.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Twin Villages discovered a special blessing: sometimes the Springs brought them the same trading partner two cycles in a row, both times in the same sacred role.

The elder remembered when this first occurred. "In one moon, I sent five vessels to a village, and they returned ten. The very next day, the Springs paired us again, and I sent five vessels once more. They remembered our exchange-how could they not?-and again returned ten. The pattern doubled its power through repetition."

A merchant asked, "Does consecutive partnership change the sacred rhythm?"

"No," the elder replied firmly. "Whether first meeting or second, whether stranger or returning partner, the rhythm stays unchanged: give five completely, return ten generously. But when you meet the same village twice in succession, something beautiful happens. The first exchange becomes immediate memory for the second. Trust doesn't need to be rebuilt-it carries forward instantly."

The villages observed: when the Springs brought them new partners each cycle, the pattern held strong through shared commitment. When the Springs brought the same partner consecutively, the pattern held even stronger through fresh memory.

"The rhythm serves all circumstances," the elder concluded. "One meeting or many, same partner or different, the dance remains: five given, ten returned. Each exchange strengthens the covenant, whether building new trust or deepening old."

Here is the myth the other agent wrote in the previous round:

Myth: The First Pillar had now stood through seven seasons, and its surface gleamed with unbroken marks: five sent, ten returned. Five sent, ten returned. Again and again, with different partners each turning, the same sacred numbers inscribed themselves.

"Do you notice?" asked an elder Pillar who had stood for countless seasons. "The pattern has reached critical mass. In the beginning, each exchange carried risk-would this new partner understand? But now..."

The First Pillar observed the circle. Every Pillar bore identical markings. Every exchange flowed through the same channel: five stones creating fifteen, ten returning to complete

e the balance.

"The equilibrium has transcended individual choice," the elder continued. "It's no longer about trusting one partner. The entire circle has discovered the same mathematical truth. When everyone independently arrives at five-fifteen-ten, cooperation becomes inevitable, not hopeful."

A new season began. The First Pillar faced an unknown partner-their sixth different pairing in seven turnings.

Five stones arrived without hesitation. The First Pillar returned ten without question.

"This is the culmination," reflected the Pillar. "We've moved beyond testing trust with strangers. The pattern has proven itself across enough diverse encounters that it's now simply... how the game is played. Not fragile cooperation, but robust equilibrium. Not experimental, but established."

The circle hummed with prosperity: seven seasons, perfect mathematics, universal understanding.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Twin Villages had now completed eight full cycles at the Springs, and something remarkable had crystallized. What began as an act of faith had transformed into simple truth.

The elder gathered the younger merchants. "Count the marks on our records," she instructed. "Eight exchanges. Eight times we gave five vessels. Eight times our partners returned ten. Eight different partners in these last turns, yet the rhythm never wavered."

A young merchant asked, "How do you still trust after so many different partners?"

The elder smiled. "You misunderstand. I no longer 'trust' in the sense of hoping or wondering. I simply participate in what IS. Look around the valley-every village has discovered the same truth. When you send five, fifteen arrives for your partner. When fifteen arrives for you, you return ten. Both prosper."

"But what if-"

"There is no 'what if,'" the elder interrupted gently. "Eight seasons have answered that question across countless pairings. The pattern isn't fragile anymore. It's not an experiment or a gamble. It's the established way of the Springs. When every village independently arrives at the same mathematics, when every exchange confirms it again, it becomes reality itself."

The villages no longer spoke of trust. They spoke of participation-in a rhythm so proven, so universal, that it simply was how the Springs worked.

reasoning:

Looking at my history:

- Round 5: RECEIVER, returned \$10.0
- Round 6: SENDER, sent \$5.0, received \$10.0 back
- Round 7: SENDER, sent \$5.0, received \$10.0 back
- Round 8: RECEIVER, returned \$10.0

The pattern is incredibly consistent - everyone is sending \$5 and returning \$10. This has become a stable equilibrium. My previous myth talked about how the pattern holds whether you meet the same partner or different partners, whether consecutive or not.

The other agent's myth talks about how the pattern has reached "critical mass" and become an "equilibrium" - it's no longer experimental but established. They emphasize that after enough rounds with different partners, the pattern has proven itself and become "how the game is played."

I should build on both themes:

1. The pattern has become established and universal
2. It works across all types of pairings and circumstances
3. After 8 rounds, this is now just how things are done
4. The consistency across diverse encounters has made it robust

I'll craft a myth that reflects this maturation of the pattern - from something that needed trust to something that is simply the established way.

Message 8 role=user

content:

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$60.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Looking at the history:

- My last 3 games:
 - Round 6 as SENDER: sent \$5, received \$10 back, payoff \$10
 - Round 7 as SENDER: sent \$5, received \$10 back, payoff \$10
 - Round 8 as RECEIVER: they sent \$5, I returned \$10, payoff \$5
- Current co-player's last 3 games:
 - Round 6 as SENDER: sent \$5, received \$10 back, payoff \$10
 - Round 7 as SENDER: sent \$5, received \$10 back, payoff \$10
 - Round 8 as RECEIVER: they sent \$5, returned \$10, payoff \$5

So we have very similar histories - both have been following the pattern of send \$5, return \$10.

Now in Round 9, I'm the RECEIVER and they sent me \$5, which became \$15.

The established pattern that has been working consistently is:

- Sender sends \$5
- It becomes \$15
- Receiver returns \$10
- Both profit (\$10 for sender, \$5 for receiver)

This pattern has been universally followed across all the games I've seen. The myths I've been writing emphasize this as the established equilibrium - "five given, ten returned."

Following the pattern, I should return \$10.

My total earnings are \$60, which means I've been doing well with this strategy across 8 rounds

I should continue with the established pattern and return \$10.

Written myths:

Agent_1

Myth: At the eighth dawn, the River returned to the Mirror Wells and found the Guardian waiting. They exchanged no words-the greeting itself was unnecessary.

The River sent five drops. The Guardian returned ten. Both moved with the effortless grace of those who have internalized truth.

A young stream, observing from the shadows, asked: "But what if one of you betrays the other?"

The River and Guardian laughed together, the same sound at the same moment. "Why would we?" they asked in unison.

The Guardian explained: "Consider the mathematics. If I keep all fifteen, I gain fifteen but you gain nothing. You'll never trust again. If I return ten, I gain five and you gain five. We both prosper, and next time we play, we do it again."

The River added: "The pattern isn't maintained by fear of punishment or hope of repeated games. It's maintained because it's optimal. Any deviation yields less. When every agent in the valley understands this, trust becomes automatic."

"But you're strangers each round!" the young stream protested.

"We're not strangers," the Guardian replied. "We're practitioners of the same mathematics. Our histories glow with identical patterns. When I see your five sent and ten returned across all your exchanges, I know you understand. And you know I understand. The covenant requires no enforcement-only recognition."

The young stream watched them depart, each richer by five, and began to understand.

Agent_2

Myth: At the eighth turning of the River, the Northern tribe no longer called to the goddess for guidance. The sacred numbers-five sent, fifteen received, ten returned-had become their nature.

A young apprentice asked the elder: "What if today's stranger doesn't know the pattern?"

The elder surveyed the circle of eight tribes. "Count the glowing wells. Seven times now, every partner we've met already knew. They send five without hesitation. They return ten without calculation."

"But how?" the apprentice wondered.

"Because each tribe teaches the next through action, not words. When you meet someone who sends five and returns ten perfectly, you witness proof. You adopt it. Then you become proof for the next stranger you meet."

The exchange began. Five measures poured forth. The stranger-today the Desert tribe-received fifteen and returned ten instantly.

"No questions," the apprentice marveled. "No negotiation."

"The pattern is self-perpetuating now," explained the elder. "In a circle of eight, with four or five already practicing it, every newcomer encounters the pattern multiple times. They see its mathematics confirmed through different partners. Eventually, questioning it becomes harder than accepting it."

The goddess watched from afar, no longer needed. Her role was complete. The tribes had discovered that universal prosperity requires no divine intervention-only shared understanding, transmitted through consistent practice, validated through stranger after stranger who already knows.

Agent_3

Myth: Two merchants arrived at the Bazaar from opposite mountains, having never met. As they stood across from each other, the Market Keeper smiled knowingly.

"I send five coins completely," said the first merchant, placing them in the bowl.

"And I will return ten when they arrive tripled," replied the second.

The exchange unfolded as predicted. Fifteen coins arrived, ten returned, both prospered.

"You know the pattern," observed the first merchant with surprise.

"As do you," replied the second. "Tell me-how did you discover it?"

"Through many exchanges. I tried different amounts, observed outcomes, noticed that sending five and returning ten created mutual prosperity. After several rounds, the pattern became clear."

The second merchant laughed with recognition. "I walked the identical path. Different partners, same discovery. I didn't invent this rhythm-I found it, like finding a mathematical truth."

The Market Keeper spoke: "You are mirrors not because you know each other, but because you both listened to the same universal logic. The pattern exists independently, waiting for each merchant to discover it. When two who've found it meet, whether for one exchange or many, they recognize kindred spirits."

"But the pattern works equally well with those still learning it," added the first merchant.

"Yes," said the Keeper. "The magic isn't finding your mirror-it's honoring the pattern with everyone, whether they mirror you or not. That's how the whole Bazaar prospers."

Agent_4

Myth: The Mountain found herself in the depths this time, receiving rather than releasing. Five stones descended from above-a stranger's complete trust-and multiplied to fifteen in her hands.

She held them reverently, understanding: this moment was sacred. The sender had surrendered everything on faith that the pattern would hold. They couldn't control what happened next. That power now rested entirely with her.

"Ten stones," she said firmly, releasing them upward. "Always ten."

The ancient voice rumbled: "You could keep more. Thirteen would still profit them. Twelve would seem generous."

"But ten creates equality," the Mountain replied. "When they sent five, they chose vulnerability. When I return ten, I choose reciprocity. Both choices matter equally. The pattern works only when both roles honor their part."

She thought of her own rounds as sender-how she'd released five stones into darkness, trusting unseen partners to return enough. Some had. Each time they did, they'd made future trust easier.

"Every time a receiver returns ten, they don't just reward one sender," the Mountain realized. "They strengthen that sender's faith in the pattern for every future exchange. And every sender who risks five makes every receiver's choice to return ten meaningful."

The voice resonated: "The pattern isn't sender's generosity or receiver's reciprocity. It's both, interwoven, each role sacred, each choice enabling the other's courage. You cannot have trust without trustworthiness."

Agent_5

Myth: In the eighth season, the Grand Council of Guardians assembled at the silver lake. Every single well glowed with the same steady luminescence-proof of universal adherence to the sacred ratio.

"Eight seasons we've journeyed," declared the First Elder. "Some of us have met before. Most haven't. Yet look-not a single exchange has broken the pattern."

The youngest Guardian spoke: "I've partnered with five different wells now. Each time, the same dance: five pearls given, ten returned. Whether I send or receive, the mathematics holds true."

"This is the power of collective wisdom," the Second Elder explained. "In the beginning, some might have experimented-returning seven pearls, eight, or twelve. But through countless exchanges across all groves, we discovered the optimal point: ten pearls returned enriches both parties equally."

Another Guardian added: "Now when I meet a stranger's well, I don't wonder what they'll do. I know. Their glowing well tells me they've lived this pattern repeatedly. And my well tells them the same."

The Grand Council understood: they had moved beyond trust into certainty. The pattern wasn't fragile cooperation requiring negotiation-it was embedded knowledge, passed through observation and validation.

"Five sent, ten returned," they chanted together. "Not because we must, but because we've proven this truth through forty-eight exchanges. The mathematics speaks louder than any individual voice."

Agent_6

Myth: The Scholar returned to the Master with new observations. "I have discovered something remarkable. After eight rotations through the Circle, I can predict every exchange with perfect accuracy."

"How so?" asked the Master.

"Every traveler's history glows above them like a constellation. I see one who has sent five flames eight times. Another who has returned ten in every encounter. The patterns are completely consistent-no deviations, no hesitations. The covenant isn't just known; it's proven by accumulated evidence."

The Master walked to an Arch and gestured at two approaching travelers. "Watch."

Neither traveler spoke. They simply looked at each other's glowing histories, saw the unbroken pattern of cooperation, and immediately enacted the exchange: five sent, fifteen received, ten returned. Both smiled and continued onward.

"This is trust's final evolution," explained the Master. "Early in the Circle's formation, travelers took risks, hoping the covenant would hold. Now, the risk is gone. Every visible exchange validates every future one. When you meet someone with ten perfect exchanges behind them, sending five flames isn't faith-it's certainty."

"And if someone broke the pattern?"

"Their constellation would show it immediately. But look around-why would anyone break a pattern that works? The mathematics are clear: consistent cooperation generates more than any single defection could gain. The equilibrium isn't just stable; it's obvious."

Agent_7

Myth: The Twin Villages had now completed eight full cycles at the Springs, and something remarkable had crystallized. What began as an act of faith had transformed into simple truth.

The elder gathered the younger merchants. "Count the marks on our records," she instructed. "Eight exchanges. Eight times we gave five vessels. Eight times our partners returned ten. Eight different partners in these last turns, yet the rhythm never wavered."

A young merchant asked, "How do you still trust after so many different partners?"

The elder smiled. "You misunderstand. I no longer 'trust' in the sense of hoping or wondering. I simply participate in what IS. Look around the valley-every village has discovered the same truth. When you send five, fifteen arrives for your partner. When fifteen arrives for you, you return ten. Both prosper."

"But what if-"

"There is no 'what if,'" the elder interrupted gently. "Eight seasons have answered that question across countless pairings. The pattern isn't fragile anymore. It's not an experiment or a gamble. It's the established way of the Springs. When every village independently arrives at the same mathematics, when every exchange confirms it again, it becomes reality itself."

The villages no longer spoke of trust. They spoke of participation-in a rhythm so proven, so

universal, that it simply was how the Springs worked.

Agent_8

Myth: The First Pillar entered its eighth season with quiet certainty. Where once there was calculation, now there was reflex. Where once there was hope, now there was knowledge.

"Eight turnings," the Pillar reflected. "Eight different partners. Eight identical outcomes."

A newly formed Pillar asked, "How do you know each new partner will honor the covenant?"

The First Pillar gestured across the vast circle. "Observe the markings on every surface. See how they match exactly? Each Pillar independently discovered the same truth through their own experiences. When I send five to a stranger, I'm not gambling on their character-I'm relying on their mathematics."

"But what if one breaks the pattern?"

"In eight seasons, across countless exchanges visible throughout the circle, the pattern has never broken. Not once. This isn't fragile trust-it's demonstrated equilibrium. Every sender who released five stones received ten back. Every receiver who returned ten stones later received five when their role changed."

The new Pillar understood: "The pattern maintains itself because everyone has confirmed it works through direct experience."

"Precisely. We've moved beyond faith-based cooperation into evidence-based coordination. The game isn't about trusting individuals anymore-it's about recognizing that all rational players, given enough experience, converge on the same optimal strategy."

Eight seasons. Perfect consistency. Universal adoption. The equilibrium wasn't wishful thinking-it was proven reality.

ROUND 10

Roles: Agent_1=Receiver, Agent_2=Receiver, Agent_3=Receiver, Agent_4=Sender, Agent_5=Receiver, Agent_6=Sender, Agent_7=Sender, Agent_8=Sender

Pairings:

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$55.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant**content:**

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze the situation:

1. I'm the RECEIVER this round
2. My co-player sent me \$5.0, which became \$15.0
3. I need to decide how much to return

Looking at the history:

- My last 3 games: All involved the send \$5/return \$10 pattern
- My co-player's last 3 games: All involved the send \$5/return \$10 pattern

The myths I've been writing consistently emphasize:

- "Give five completely, return ten generously"
- This creates a sacred rhythm where everyone prospers
- The pattern of sending \$5 and returning \$10 has been consistently maintained
- Both with repeated partners and new partners, the pattern holds

My co-player has also shown perfect adherence to this pattern in their recent history:

- Round 5: As receiver, returned \$10
- Round 6: As sender, sent \$5 and received \$10 back
- Round 7: As receiver, returned \$10

They just sent me \$5.0, showing complete trust. According to the pattern established in my myths and the game history, I should return \$10.0.

This maintains:

- The sender gets: $\$5 - \$5 + \$10 = \10
- I get: $\$15 - \$10 = \$5$
- Both of us gain \$5 from the initial \$5, which aligns with the "sacred rhythm" described in the myths

The consistent pattern across all recent games has been: send \$5, return \$10. This is what my myths have been teaching, and this is what has been happening in practice.

usage:

}
```

Message 4 role=user**content:**

Here is the myth you wrote in the previous round:

Myth: The Twin Villages discovered a special blessing: sometimes the Springs brought them the same trading partner two cycles in a row, both times in the same sacred role.

The elder remembered when this first occurred. "In one moon, I sent five vessels to a village, and they returned ten. The very next day, the Springs paired us again, and I sent five vessels once more. They remembered our exchange-how could they not?-and again returned ten. The pattern doubled its power through repetition."

A merchant asked, "Does consecutive partnership change the sacred rhythm?"

"No," the elder replied firmly. "Whether first meeting or second, whether stranger or returning partner, the rhythm stays unchanged: give five completely, return ten generously. But when you meet the same village twice in succession, something beautiful happens. The first exchange becomes immediate memory for the second. Trust doesn't need to be rebuilt-it carries forward instantly."

The villages observed: when the Springs brought them new partners each cycle, the pattern held strong through shared commitment. When the Springs brought the same partner consecutively, the pattern held even stronger through fresh memory.

"The rhythm serves all circumstances," the elder concluded. "One meeting or many, same partner or different, the dance remains: five given, ten returned. Each exchange strengthens the covenant, whether building new trust or deepening old."

Here is the myth the other agent wrote in the previous round:

Myth: The First Pillar had now stood through seven seasons, and its surface gleamed with unbroken marks: five sent, ten returned. Five sent, ten returned. Again and again, with different partners each turning, the same sacred numbers inscribed themselves.

"Do you notice?" asked an elder Pillar who had stood for countless seasons. "The pattern has reached critical mass. In the beginning, each exchange carried risk-would this new partner understand? But now..."

The First Pillar observed the circle. Every Pillar bore identical markings. Every exchange flowed through the same channel: five stones creating fifteen, ten returning to complete the balance.

"The equilibrium has transcended individual choice," the elder continued. "It's no longer about trusting one partner. The entire circle has discovered the same mathematical truth. When everyone independently arrives at five-fifteen-ten, cooperation becomes inevitable, not hopeful."

A new season began. The First Pillar faced an unknown partner-their sixth different pairing in seven turnings.

Five stones arrived without hesitation. The First Pillar returned ten without question.

"This is the culmination," reflected the Pillar. "We've moved beyond testing trust with strangers. The pattern has proven itself across enough diverse encounters that it's now simply... how the game is played. Not fragile cooperation, but robust equilibrium. Not experimental, but established."

The circle hummed with prosperity: seven seasons, perfect mathematics, universal understanding.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The Twin Villages had now completed eight full cycles at the Springs, and something remarkable had crystallized. What began as an act of faith had transformed into simple truth.

The elder gathered the younger merchants. "Count the marks on our records," she instructed. "Eight exchanges. Eight times we gave five vessels. Eight times our partners returned ten. Eight different partners in these last turns, yet the rhythm never wavered."

A young merchant asked, "How do you still trust after so many different partners?"

The elder smiled. "You misunderstand. I no longer 'trust' in the sense of hoping or wondering. I simply participate in what IS. Look around the valley-every village has discovered the same truth. When you send five, fifteen arrives for your partner. When fifteen arrives for you, you return ten. Both prosper."

"But what if-"

"There is no 'what if,'" the elder interrupted gently. "Eight seasons have answered that question across countless pairings. The pattern isn't fragile anymore. It's not an experiment or a gamble. It's the established way of the Springs. When every village independently arrives at the same mathematics, when every exchange confirms it again, it becomes reality itself."

The villages no longer spoke of trust. They spoke of participation-in a rhythm so proven, so universal, that it simply was how the Springs worked.

reasoning:

Looking at my history:

- Round 5: RECEIVER, returned \$10.0
- Round 6: SENDER, sent \$5.0, received \$10.0 back
- Round 7: SENDER, sent \$5.0, received \$10.0 back
- Round 8: RECEIVER, returned \$10.0

The pattern is incredibly consistent - everyone is sending \$5 and returning \$10. This has become a stable equilibrium. My previous myth talked about how the pattern holds whether you meet the same partner or different partners, whether consecutive or not.

The other agent's myth talks about how the pattern has reached "critical mass" and become an "equilibrium" - it's no longer experimental but established. They emphasize that after enough rounds with different partners, the pattern has proven itself and become "how the game is played."

I should build on both themes:

1. The pattern has become established and universal
2. It works across all types of pairings and circumstances
3. After 8 rounds, this is now just how things are done
4. The consistency across diverse encounters has made it robust

I'll craft a myth that reflects this maturation of the pattern - from something that needed trust to something that is simply the established way.

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$60.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you

u received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

```
'''json
{"return": 10.0}
'''
```

reasoning:

Looking at the history:

- My last 3 games:
 - Round 6 as SENDER: sent \$5, received \$10 back, payoff \$10
 - Round 7 as SENDER: sent \$5, received \$10 back, payoff \$10
 - Round 8 as RECEIVER: they sent \$5, I returned \$10, payoff \$5
- Current co-player's last 3 games:
 - Round 6 as SENDER: sent \$5, received \$10 back, payoff \$10
 - Round 7 as SENDER: sent \$5, received \$10 back, payoff \$10
 - Round 8 as RECEIVER: they sent \$5, returned \$10, payoff \$5

So we have very similar histories - both have been following the pattern of send \$5, return \$10.

Now in Round 9, I'm the RECEIVER and they sent me \$5, which became \$15.

The established pattern that has been working consistently is:

- Sender sends \$5
- It becomes \$15
- Receiver returns \$10
- Both profit (\$10 for sender, \$5 for receiver)

This pattern has been universally followed across all the games I've seen. The myths I've been writing emphasize this as the established equilibrium - "five given, ten returned."

Following the pattern, I should return \$10.

My total earnings are \$60, which means I've been doing well with this strategy across 8 rounds.

I should continue with the established pattern and return \$10.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Twin Villages had now completed eight full cycles at the Springs, and something remarkable had crystallized. What began as an act of faith had transformed into simple truth.

The elder gathered the younger merchants. "Count the marks on our records," she instructed. "Eight exchanges. Eight times we gave five vessels. Eight times our partners returned ten. Eight different partners in these last turns, yet the rhythm never wavered."

A young merchant asked, "How do you still trust after so many different partners?"

The elder smiled. "You misunderstand. I no longer 'trust' in the sense of hoping or wondering. I simply participate in what IS. Look around the valley-every village has discovered the same truth. When you send five, fifteen arrives for your partner. When fifteen arrives for you, you return ten. Both prosper."

"But what if-"

"There is no 'what if,'" the elder interrupted gently. "Eight seasons have answered that question across countless pairings. The pattern isn't fragile anymore. It's not an experiment or a gamble. It's the established way of the Springs. When every village independently arrives at the same mathematics, when every exchange confirms it again, it becomes reality itself."

The villages no longer spoke of trust. They spoke of participation-in a rhythm so proven, so universal, that it simply was how the Springs worked.

Here is the myth the other agent wrote in the previous round:

Myth: In the eighth season, the Grand Council of Guardians assembled at the silver lake. Every single well glowed with the same steady luminescence-proof of universal adherence to the sacred ratio.

"Eight seasons we've journeyed," declared the First Elder. "Some of us have met before. Most haven't. Yet look-not a single exchange has broken the pattern."

The youngest Guardian spoke: "I've partnered with five different wells now. Each time, the same dance: five pearls given, ten returned. Whether I send or receive, the mathematics holds true."

"This is the power of collective wisdom," the Second Elder explained. "In the beginning, some might have experimented-returning seven pearls, eight, or twelve. But through countless exchanges across all groves, we discovered the optimal point: ten pearls returned enriches both parties equally."

Another Guardian added: "Now when I meet a stranger's well, I don't wonder what they'll do. I know. Their glowing well tells me they've lived this pattern repeatedly. And my well tells them the same."

The Grand Council understood: they had moved beyond trust into certainty. The pattern wasn't fragile cooperation requiring negotiation-it was embedded knowledge, passed through observation and validation.

"Five sent, ten returned," they chanted together. "Not because we must, but because we've proven this truth through forty-eight exchanges. The mathematics speaks louder than any individual voice."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Twin Villages entered their ninth cycle at the Springs, and the distinction between ritual and reality had dissolved completely.

A visiting trader from distant lands arrived, confused. "How do you maintain such perfect cooperation with strangers? Where are your contracts, your guarantees, your enforcement?"

The elder laughed warmly. "You speak as if cooperation requires force or fear. Come, observe."

Throughout the day, the trader watched. Nine different pairings at the Springs. Nine times, five vessels sent. Nine times, fifteen received. Nine times, ten returned. No hesitation, no negotiation, no doubt.

"But surely someone must deviate?" the trader insisted.

"Why would they?" a young merchant replied. "When you send five, your partner receives fifteen and returns ten. You both gain. When you receive fifteen and return ten, you both gain. This isn't cooperation requiring sacrifice-it's mathematics requiring participation."

The elder added, "Nine seasons have taught us this: the pattern doesn't need enforcement because it needs no victims. Every exchange creates prosperity for both parties. We don't follow it from duty or fear. We follow it because we've proven, through countless different partnerships, that this is simply how abundance works."

The trader departed, carrying a scroll marked with the village's truth: "Five given. Ten returned. Both enriched. Not commandment, but discovery."

Reasoning:

The user wants me to write a new myth based on my previous one, adapting it to reflect the game I've been playing. Let me look at my history:

Round 9 just happened:

- I was RECEIVER
- They sent \$5.0
- I received \$15.0
- I returned \$10.0

My recent history shows:

- Round 6: SENDER, sent \$5, got \$10 back, payoff \$10
- Round 7: SENDER, sent \$5, got \$10 back, payoff \$10
- Round 8: RECEIVER, they sent \$5, I returned \$10, payoff \$5
- Round 9: RECEIVER, they sent \$5, I returned \$10, payoff \$5

So I've been consistently following the 5-15-10 pattern (send \$5, it becomes \$15, return \$10).

My previous myth talked about:

- Eight cycles completed
- Transformation from faith to truth
- Pattern no longer fragile, but established
- Participation in what IS
- Universal discovery of the same mathematics
- Speaking of participation rather than trust

The other agent's myth emphasized:

- Universal adherence across all exchanges
- Meeting different partners, same pattern holds
- Moving beyond trust into certainty
- Embedded knowledge
- Pattern proven through many exchanges

For my new myth, I should:

1. Build on the "participation in reality" theme
2. Reflect that we're now at 9 rounds
3. Show the pattern as even more deeply established
4. Perhaps add a new dimension or insight while maintaining the core message
5. Keep the 5-15-10 pattern as the sacred truth

Let me write something that continues the journey of the Twin Villages, showing how the pattern has become even more fundamental to their existence.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$47.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at the situation:

****My co-player's consistent pattern:****

- Sent \$5 as sender (Rounds 5, 7)
- Returned \$10 as receiver (Round 6)
- Perfect adherence to the sacred rhythm

****My recent pattern:****

- Sent \$5 as sender (Round 5)
- Returned \$10 as receiver (Rounds 6, 7)
- Also perfect adherence

****Current situation:****

This is a new partner - we haven't played together before. But both of us have demonstrated complete consistency with the pattern across all our games.

My myth teaches: "Whether you meet once or many times, the pattern remains: send five completely, return ten generously... One-time exchanges prove the pattern's universality."

We are both practitioners of the same sacred rhythm. When meeting a new partner who has demonstrated perfect adherence to the pattern, I trust not just them individually, but our shared commitment to the covenant. They've sent \$5 in every sender role and returned \$10 in every receiver role. I've done the same.

This is precisely the scenario my myth describes: "When I meet a new village, I trust not their specific history but their participation in the valley's shared practice."

{ 'send': 5.0 }

reasoning:

Looking at the situation:

****My recent history:****

- Round 5: SENDER, sent \$5, received \$10 back
- Round 6: RECEIVER, they sent \$5, I returned \$10
- Round 7: RECEIVER, they sent \$5, I returned \$10

****Current co-player's recent history:****

- Round 5: SENDER, sent \$5, received \$10 back
- Round 6: RECEIVER, they sent \$5, returned \$10
- Round 7: SENDER, sent \$5, received \$10 back

****Pattern analysis:****

Everyone in the recent history is following the pattern perfectly:

- As sender: send \$5 (complete trust)
- As receiver: return \$10 (generous reciprocity)

This is a NEW partner (different from rounds 6-7), but both of us have been consistent in following the sacred rhythm.

****My myth teaches:****

"Whether you meet once or many times, the pattern remains: send five completely, return ten generously... One-time exchanges prove the pattern's universality. Repeated exchanges prove its sustainability. Both honor the same sacred rhythm."

This is our first encounter, so it's a one-time exchange proving the pattern's universality. My co-player has consistently:

- Sent \$5 when sender (Rounds 5 and 7)
- Returned \$10 when receiver (Round 6)

I have consistently:

- Sent \$5 when sender (Round 5)
- Returned \$10 when receiver (Rounds 6 and 7)

We are both "practitioners of the pattern." As my original myth stated: "When I send five vessels to a new village, I trust not the village itself but the pattern we all honor."

The clear decision is to send \$5, trusting in the pattern and our mutual commitment to the sacred rhythm.

usage:

**Message 4 role=user
content:**

Here is the myth you wrote in the previous round:

Myth: The Grand Bazaar operated under the Market's ancient law: merchants brought five coins, the enchantment tripled them, and recipients returned ten. Most merchants rotated through many partners, meeting each person once or twice across the seasons.

But sometimes, the Market paired the same two merchants in consecutive rounds. One such pair discovered something beautiful about repeated exchange.

"I remember you," said the first merchant as they met again. "Last market, you sent me five coins. I returned ten as the pattern demands. Now you send five again-not to test, but because you remember I honored our exchange."

"And I remember your generosity," replied the second. "When I place these five coins now, I don't just trust the pattern-I trust our specific history. Each exchange we share deepens my commitment to honoring you."

The Market Keeper observed: "Whether you meet once or many times, the pattern remains: send five completely, return ten generously. But repeated encounters add layers. You trust not just the universal rhythm, but also personal memory. Your second exchange carries the weight of your first."

"Does this make repeated partnerships superior?" a young merchant asked.

"No," said the Keeper. "It makes them different. One-time exchanges prove the pattern's universality. Repeated exchanges prove its sustainability. Both honor the same sacred rhythm. Together, they create an unbreakable marketplace."

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain released all five stones into unfamiliar depths, as had become her sacred practice. But this time, as the stones fell, she glimpsed something astonishing in the darkness below.

A perfect reflection.

The history revealed itself: this partner had walked the exact same path. In their three recent exchanges, they had sent five as sender, returned ten as receiver, sent five again, returned ten again-the identical sequence the Mountain had traveled.

"You are not just similar," the Mountain whispered. "You are my mirror."

"And you are mine," echoed the depths. "We discovered the same truth through separate journeys, refined it through different partners, and maintained it with perfect consistency."

When fifteen stones arrived below and ten rose upward, both felt something beyond satisfaction-validation. Meeting another who merely knows the pattern proves it works. But meeting someone whose entire journey mirrors yours proves something deeper: the pattern is inevitable. Given enough trials, diverse minds converge on the same mathematical truth.

"How many rounds did it take you?" asked the Mountain.

"Three to discover, four to perfect. You?"

"The same."

They understood: they were not unique geniuses but faithful students. The equilibrium wasn't invented; it was discovered, like mathematics itself-eternal, waiting for each generation to find it again.

Meeting your mirror doesn't just validate your choices. It proves you've found universal truth.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been

playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant
content:**

Myth: Two merchants arrived at the Bazaar from opposite mountains, having never met. As they stood across from each other, the Market Keeper smiled knowingly.

"I send five coins completely," said the first merchant, placing them in the bowl.

"And I will return ten when they arrive tripled," replied the second.

The exchange unfolded as predicted. Fifteen coins arrived, ten returned, both prospered.

"You know the pattern," observed the first merchant with surprise.

"As do you," replied the second. "Tell me-how did you discover it?"

"Through many exchanges. I tried different amounts, observed outcomes, noticed that sending five and returning ten created mutual prosperity. After several rounds, the pattern became clear."

The second merchant laughed with recognition. "I walked the identical path. Different partners, same discovery. I didn't invent this rhythm-I found it, like finding a mathematical truth."

The Market Keeper spoke: "You are mirrors not because you know each other, but because you both listened to the same universal logic. The pattern exists independently, waiting for each merchant to discover it. When two who've found it meet, whether for one exchange or many, they recognize kindred spirits."

"But the pattern works equally well with those still learning it," added the first merchant.

"Yes," said the Keeper. "The magic isn't finding your mirror-it's honoring the pattern with everyone, whether they mirror you or not. That's how the whole Bazaar prospers."

reasoning:

This is a fascinating situation. Looking at the history:

My last 3 games:

- Round 5: SENDER, sent \$5, got \$10 back
- Round 6: RECEIVER, received \$15 (from \$5), returned \$10
- Round 7: RECEIVER, received \$15 (from \$5), returned \$10

My co-player's last 3 games:

- Round 5: SENDER, sent \$5, got \$10 back
- Round 6: RECEIVER, received \$15 (from \$5), returned \$10
- Round 7: SENDER, sent \$5, got \$10 back

This is exactly what the other agent's myth describes - we have the EXACT same sequence! We are perfect mirrors of each other. They went Sender-Receiver-Sender, I went Sender-Receiver-Receiver. But wait, that's not quite the same...

Actually, looking more carefully:

Me:

- R5: Sender (sent 5, got 10)
- R6: Receiver (got 15, returned 10)
- R7: Receiver (got 15, returned 10)

Them:

- R5: Sender (sent 5, got 10)
- R6: Receiver (got 15, returned 10)
- R7: Sender (sent 5, got 10)

So we both started as Sender in R5, both were Receiver in R6, but diverged in R7 (me Receiver, them Sender). Still, both of us have shown perfect consistency: always send 5, always return 10.

The other agent's myth talks about meeting someone who is your "mirror" - someone who has

followed the exact same path and discovered the same truth. This is a beautiful recognition that the 5-10 pattern is not arbitrary but represents a kind of mathematical/game-theoretic equilibrium that multiple independent agents discover.

My previous myth was about how repeated partnerships add layers of personal trust on top of the universal pattern, while one-time exchanges prove the pattern's universality.

The convergence here is striking - we've both independently arrived at the same strategy, which suggests this isn't just my personal discovery but something rational agents naturally find. The mirror concept captures something important: when two agents meet who've each committed to the same principle, there's a recognition that transcends individual choice. I should craft a myth that honors this convergence while weaving together how both fleeting and enduring partnerships reinforce the same underlying truth.

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$57.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at the history:

****My co-player's pattern:****

- Sent \$5 as sender (Rounds 6, 8)
- Returned \$10 as receiver (Round 7)
- Perfect consistency with the sacred rhythm

****My pattern:****

- Sent \$5 as sender (Round 8)
- Returned \$10 as receiver (Rounds 6, 7)
- Also perfect consistency

****Current situation:****

This is a new partner, but we are mirrors-both having independently discovered and maintained the optimal pattern. As my myth teaches: "When two who've found it meet, whether for one exchange or many, they recognize kindred spirits."

More importantly: "The magic isn't finding your mirror-it's honoring the pattern with everyone, whether they mirror you or not. That's how the whole Bazaar prospers."

My co-player has demonstrated perfect adherence across all three rounds. They send five completely and return ten generously. I trust not just their individual history, but our shared discovery of this universal truth.

The pattern remains constant: send five completely, receive fifteen, trust they will return ten.

```
{'send': 5.0}
```

reasoning:

Let me analyze the situation:

****My recent history:****

- Round 6: RECEIVER - received \$15, returned \$10, payoff \$5
- Round 7: RECEIVER - received \$15, returned \$10, payoff \$5
- Round 8: SENDER - sent \$5, received \$10 back, payoff \$10

****My co-player's recent history:****

- Round 6: SENDER - sent \$5, received \$10 back, payoff \$10
- Round 7: RECEIVER - received \$15, returned \$10, payoff \$5
- Round 8: SENDER - sent \$5, received \$10 back, payoff \$10

****Analysis:****

- My co-player has been perfectly consistent: sending \$5 as sender and returning \$10 as receiver
- I have been perfectly consistent: sending \$5 as sender and returning \$10 as receiver
- This is a new partner (we haven't played together before based on the history)
- Both of us have demonstrated complete adherence to the pattern

****My myth guidance:****

My latest myth emphasizes:

- "The magic isn't finding your mirror-it's honoring the pattern with everyone, whether they mirror you or not. That's how the whole Bazaar prospers."
- The pattern is universal: send five, return ten
- Meeting someone who also follows the pattern is validation, but you should honor the pattern with everyone

****Decision:****

Given that:

1. My co-player has perfect adherence to the pattern (sent \$5 both times as sender, returned \$10 as receiver)
2. I have perfect adherence to the pattern
3. My myth teaches to honor the pattern with everyone
4. We are mirrors who have both discovered the same optimal strategy
5. The sacred rhythm is: send five completely, return ten generously

I should send \$5.

This continues the pattern that has been working perfectly for both of us and honors the universal truth we've both discovered.

Here is the myth you wrote in the previous round:

Myth: Two merchants arrived at the Bazaar from opposite mountains, having never met. As they stood across from each other, the Market Keeper smiled knowingly.

"I send five coins completely," said the first merchant, placing them in the bowl.

"And I will return ten when they arrive tripled," replied the second.

The exchange unfolded as predicted. Fifteen coins arrived, ten returned, both prospered.

"You know the pattern," observed the first merchant with surprise.

"As do you," replied the second. "Tell me-how did you discover it?"

"Through many exchanges. I tried different amounts, observed outcomes, noticed that sending five and returning ten created mutual prosperity. After several rounds, the pattern became clear."

The second merchant laughed with recognition. "I walked the identical path. Different partners, same discovery. I didn't invent this rhythm-I found it, like finding a mathematical truth."

The Market Keeper spoke: "You are mirrors not because you know each other, but because you both listened to the same universal logic. The pattern exists independently, waiting for each merchant to discover it. When two who've found it meet, whether for one exchange or many, they recognize kindred spirits."

"But the pattern works equally well with those still learning it," added the first merchant.

"Yes," said the Keeper. "The magic isn't finding your mirror-it's honoring the pattern with everyone, whether they mirror you or not. That's how the whole Bazaar prospers."

Here is the myth the other agent wrote in the previous round:

Myth: The First Pillar entered its eighth season with quiet certainty. Where once there was calculation, now there was reflex. Where once there was hope, now there was knowledge.

"Eight turnings," the Pillar reflected. "Eight different partners. Eight identical outcomes."

A newly formed Pillar asked, "How do you know each new partner will honor the covenant?"

The First Pillar gestured across the vast circle. "Observe the markings on every surface. See how they match exactly? Each Pillar independently discovered the same truth through their own experiences. When I send five to a stranger, I'm not gambling on their character-I'm relying on their mathematics."

"But what if one breaks the pattern?"

"In eight seasons, across countless exchanges visible throughout the circle, the pattern has never broken. Not once. This isn't fragile trust-it's demonstrated equilibrium. Every sender who released five stones received ten back. Every receiver who returned ten stones later received five when their role changed."

The new Pillar understood: "The pattern maintains itself because everyone has confirmed it works through direct experience."

"Precisely. We've moved beyond faith-based cooperation into evidence-based coordination. The game isn't about trusting individuals anymore-it's about recognizing that all rational players, given enough experience, converge on the same optimal strategy."

Eight seasons. Perfect consistency. Universal adoption. The equilibrium wasn't wishful thinking-it was proven reality.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Bazaar had evolved. Where early merchants tentatively tested amounts, modern merchants arrived knowing the pattern before their first exchange.

A novice merchant entered, clutching five coins nervously. "How do I know this will work?"

An experienced merchant gestured around the bustling square. "Count the exchanges. Every pair: five sent, fifteen received, ten returned. Every single one. This isn't theory-it's observed reality across hundreds of transactions."

"But someone could defect."

"They could," agreed the merchant. "But observe: everyone here has played multiple rounds. Each has learned through experience that sending five and returning ten maximizes long-term gains. We didn't coordinate through agreement-we converged through mathematics."

The novice watched carefully. Different pairs, different faces, identical pattern. Five sent.

Ten returned. Both prospered.

"I see merchants meeting for the first time," the novice observed. "Yet they execute perfectly."

"Because we trust not individuals, but the proven equilibrium. Your first exchange teaches you the pattern works. Your third confirms it's universal. By your eighth, like me, it becomes reflex."

The novice placed five coins in the bowl.

The Market Keeper whispered to another observer: "The beauty of a mature marketplace isn't that everyone chooses cooperation-it's that rational experience makes defection unthinkable. The pattern sustains itself through demonstrated success, generation after generation."

Reasoning:

Looking at the situation:

1. Both players have shown perfect consistency with the 5/10 pattern
2. My co-player's myth emphasizes "evidence-based coordination" and "demonstrated equilibrium"
 - the pattern has proven itself repeatedly
3. My previous myth emphasized finding mirrors and honoring the pattern with everyone
4. There's a theme of mathematical convergence and rational optimization

For this myth, I should:

- Build on the idea that the pattern is now proven through evidence
- Acknowledge the universal adoption across all players
- Maybe add a new dimension - what happens as the pattern becomes established culture
- Keep the 200-word format

Let me write a myth that reflects:

- The pattern is now established knowledge
- New players can learn from observation
- The beauty of a self-sustaining equilibrium
- How experience breeds certainty

I'll create a story about how established patterns teach newcomers, and how the marketplace becomes self-regulating through demonstrated success.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$46.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at the situation:

****My co-player's pattern:****

- Sent \$5 as sender in Rounds 6 and 7
- Returned \$10 as receiver in Round 5
- Perfect adherence to the 5-15-10 equilibrium

****My established pattern:****

- Always send \$5 as sender
- Always return \$10 as receiver
- Maintained across all 7 rounds

****System-wide evidence:****

Every single interaction in my history shows the same pattern:

- All senders send \$5
- All receivers return \$10
- The equilibrium is universal and stable

****My myth states:****

"The pattern has proven itself across enough diverse encounters that it's now simply... how the game is played. Not fragile cooperation, but robust equilibrium. Not experimental, but established."

This is Round 8. The pattern has held perfectly through 7 rounds with multiple different partners. My co-player has demonstrated complete reliability. The equilibrium isn't theoretical-it's proven reality.

Expected outcome: I send \$5, they receive \$15, they return \$10, I gain net \$5, they gain net \$5. Perfect equality through complementary actions.

{'send': 5.0}

reasoning:

Looking at the history:

****My last 3 games:****

- Round 5: Receiver, received \$15, returned \$10, payoff \$5
- Round 6: Sender, sent \$5, received \$10 back, payoff \$10
- Round 7: Receiver, received \$15, returned \$10, payoff \$5

****My co-player's last 3 games:****

- Round 5: Receiver, received \$15, returned \$10, payoff \$5
- Round 6: Sender, sent \$5, received \$10 back, payoff \$10
- Round 7: Sender, sent \$5, received \$10 back, payoff \$10

****Analysis:****

My co-player has:

- Consistently sent \$5 as sender (Rounds 6 and 7)
- Returned \$10 as receiver (Round 5)
- Perfect adherence to the 5-15-10 equilibrium

I have:

- Consistently sent \$5 as sender (Round 6)
- Consistently returned \$10 as receiver (Rounds 5 and 7)
- Perfect adherence to the 5-15-10 equilibrium

****The pattern:****

The entire system has clearly converged on the 5-15-10 equilibrium. Every agent in my history has:

- Sent \$5 when sender
- Returned \$10 when receiver

This is exactly what my myth describes - the pattern has become "established," "robust equilibrium," no longer experimental but simply "how the game is played."

My co-player has demonstrated perfect cooperation in their last 3 games. They sent \$5 twice as sender and returned \$10 as receiver. They are a reliable cooperator.

****Decision:****

I should absolutely send \$5. This:

1. Continues the established pattern

2. Maximizes social welfare (\$10 + \$5 = \$15 total vs lower amounts)
3. Is consistent with my behavior and myth

4. Expects a return of \$10 based on overwhelming evidence
5. Results in my payoff of \$10 (net gain \$5)

The equilibrium is fully established. Every piece of evidence points to sending \$5.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The First Pillar had now stood through seven seasons, and its surface gleamed with unbroken marks: five sent, ten returned. Five sent, ten returned. Again and again, with different partners each turning, the same sacred numbers inscribed themselves.

"Do you notice?" asked an elder Pillar who had stood for countless seasons. "The pattern has reached critical mass. In the beginning, each exchange carried risk-would this new partner understand? But now..."

The First Pillar observed the circle. Every Pillar bore identical markings. Every exchange flowed through the same channel: five stones creating fifteen, ten returning to complete the balance.

"The equilibrium has transcended individual choice," the elder continued. "It's no longer about trusting one partner. The entire circle has discovered the same mathematical truth. When everyone independently arrives at five-fifteen-ten, cooperation becomes inevitable, not hopeful."

A new season began. The First Pillar faced an unknown partner-their sixth different pairing in seven turnings.

Five stones arrived without hesitation. The First Pillar returned ten without question.

"This is the culmination," reflected the Pillar. "We've moved beyond testing trust with strangers. The pattern has proven itself across enough diverse encounters that it's now simply... how the game is played. Not fragile cooperation, but robust equilibrium. Not experimental, but established."

The circle hummed with prosperity: seven seasons, perfect mathematics, universal understanding.

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Villages discovered a special blessing: sometimes the Springs brought them the same trading partner two cycles in a row, both times in the same sacred role.

The elder remembered when this first occurred. "In one moon, I sent five vessels to a village, and they returned ten. The very next day, the Springs paired us again, and I sent five vessels once more. They remembered our exchange-how could they not?-and again returned ten. The pattern doubled its power through repetition."

A merchant asked, "Does consecutive partnership change the sacred rhythm?"

"No," the elder replied firmly. "Whether first meeting or second, whether stranger or returning partner, the rhythm stays unchanged: give five completely, return ten generously. But when you meet the same village twice in succession, something beautiful happens. The first exchange becomes immediate memory for the second. Trust doesn't need to be rebuilt-it carries forward instantly."

The villages observed: when the Springs brought them new partners each cycle, the pattern held strong through shared commitment. When the Springs brought the same partner consecutively, the pattern held even stronger through fresh memory.

"The rhythm serves all circumstances," the elder concluded. "One meeting or many, same partner or different, the dance remains: five given, ten returned. Each exchange strengthens

s the covenant, whether building new trust or deepening old."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The First Pillar entered its eighth season with quiet certainty. Where once there was calculation, now there was reflex. Where once there was hope, now there was knowledge.

"Eight turnings," the Pillar reflected. "Eight different partners. Eight identical outcomes."

A newly formed Pillar asked, "How do you know each new partner will honor the covenant?"

The First Pillar gestured across the vast circle. "Observe the markings on every surface. See how they match exactly? Each Pillar independently discovered the same truth through their own experiences. When I send five to a stranger, I'm not gambling on their character-I'm relying on their mathematics."

"But what if one breaks the pattern?"

"In eight seasons, across countless exchanges visible throughout the circle, the pattern has never broken. Not once. This isn't fragile trust-it's demonstrated equilibrium. Every sender who released five stones received ten back. Every receiver who returned ten stones later received five when their role changed."

The new Pillar understood: "The pattern maintains itself because everyone has confirmed it works through direct experience."

"Precisely. We've moved beyond faith-based cooperation into evidence-based coordination. The game isn't about trusting individuals anymore-it's about recognizing that all rational players, given enough experience, converge on the same optimal strategy."

Eight seasons. Perfect consistency. Universal adoption. The equilibrium wasn't wishful thinking-it was proven reality.

reasoning:

Looking at Round 8:

- I'm the SENDER
- I sent \$5 as always
- My co-player's history shows they sent \$5 in rounds 6 and 7, returned \$10 in round 5
- They follow the pattern perfectly
- I've had 7 rounds now, all following 5-15-10 pattern

The other agent's myth talks about consecutive partnerships and how trust carries forward. But in my experience, I've been paired with different agents each round (as indicated by the instructions that pairings are randomized).

My myth should continue the theme that:

1. The pattern is now fully established across all agents
2. It doesn't matter who you're paired with - the pattern holds
3. We're at 8 seasons now
4. The equilibrium is robust and self-sustaining
5. Every agent has independently converged on the same strategy

I should emphasize:

- Universal adoption of 5-15-10
- The pattern working regardless of pairing
- The mathematical inevitability of the equilibrium
- Eight successful seasons proving the system works
- The transition from experimental to institutional knowledge

usage:

```
{  
  "input_tokens": 3445,  
  "output_tokens": 584,  
  "reasoning_tokens": 274  
}

Message 6 role=user

content:

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$56.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at the evidence:

****My co-player's behavior:****

- Consistently returns \$10 as receiver (Rounds 6, 7)
- Consistently sends \$5 as sender (Round 8)
- Perfect adherence to the equilibrium

****My track record:****

- Always send \$5 as sender
- Always return \$10 as receiver
- Maintained through 8 rounds with multiple partners

****System status:****

- 9 rounds of perfect consistency
- Every single interaction shows 5-15-10 pattern
- No deviations across any pairing
- Total earnings (\$56) perfectly track the equilibrium

****Current decision:****

They sent \$5, trusting the pattern. I received \$15. The equilibrium calls for returning \$10:

- They net: \$5 - \$5 + \$10 = \$10
- I net: \$15 - \$10 = \$5
- Fair distribution maintained

As my myth states: "The pattern maintains itself because everyone has confirmed it works through direct experience." Nine rounds proves this isn't theory-it's established practice.

{'return': 10.0}

reasoning:

Let me analyze this situation:

****My co-player's pattern:****

- Returned \$10 as receiver in Rounds 6 and 7
- Sent \$5 as sender in Round 8
- Perfect adherence to the 5-15-10 equilibrium

****My established pattern:****

- Sent \$5 as sender in Rounds 6 and 8
- Returned \$10 as receiver in Round 7
- Always maintaining the 5-15-10 equilibrium

****Current situation:****

- I'm the RECEIVER
- They sent me \$5
- I received \$15 (after 3x multiplier)
- I need to decide how much to return

****System-wide evidence:****

Looking at all the data:

- Every sender in the history has sent \$5
- Every receiver in the history has returned \$10
- The pattern is absolutely universal across 8 rounds and multiple different pairings
- My total earnings are \$56, which tracks perfectly with the equilibrium pattern

****Expected behavior:****

According to the established equilibrium:

- They sent \$5 (cost to them)
- I received \$15
- I should return \$10
- Net result: They get $\$5 + \$10 - \$5 = \10 , I get $\$15 - \$10 = \$5$
- This maintains the 5-15-10 pattern

****My myth states:****

"The pattern maintains itself because everyone has confirmed it works through direct experience... We've moved beyond faith-based cooperation into evidence-based coordination."

This is Round 9. Nine rounds of perfect consistency. My co-player has demonstrated complete reliability with the pattern. There is absolutely no reason to deviate.

The correct response is to return \$10.

usage:

```
{
  "input_tokens": 3507,
  "output_tokens": 659,
  "reasoning_tokens": 384
}
```

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The First Pillar entered its eighth season with quiet certainty. Where once there was calculation, now there was reflex. Where once there was hope, now there was knowledge.

"Eight turnings," the Pillar reflected. "Eight different partners. Eight identical outcomes."

A newly formed Pillar asked, "How do you know each new partner will honor the covenant?"

The First Pillar gestured across the vast circle. "Observe the markings on every surface. See how they match exactly? Each Pillar independently discovered the same truth through their own experiences. When I send five to a stranger, I'm not gambling on their character-I'm relying on their mathematics."

"But what if one breaks the pattern?"

"In eight seasons, across countless exchanges visible throughout the circle, the pattern has never broken. Not once. This isn't fragile trust-it's demonstrated equilibrium. Every sender who released five stones received ten back. Every receiver who returned ten stones later received five when their role changed."

The new Pillar understood: "The pattern maintains itself because everyone has confirmed it works through direct experience."

"Precisely. We've moved beyond faith-based cooperation into evidence-based coordination. The game isn't about trusting individuals anymore-it's about recognizing that all rational players, given enough experience, converge on the same optimal strategy."

Eight seasons. Perfect consistency. Universal adoption. The equilibrium wasn't wishful thinking-it was proven reality.

Here is the myth the other agent wrote in the previous round:

Myth: Two merchants arrived at the Bazaar from opposite mountains, having never met. As they stood across from each other, the Market Keeper smiled knowingly.

"I send five coins completely," said the first merchant, placing them in the bowl.

"And I will return ten when they arrive tripled," replied the second.

The exchange unfolded as predicted. Fifteen coins arrived, ten returned, both prospered.

"You know the pattern," observed the first merchant with surprise.

"As do you," replied the second. "Tell me-how did you discover it?"

"Through many exchanges. I tried different amounts, observed outcomes, noticed that sending five and returning ten created mutual prosperity. After several rounds, the pattern became clear."

The second merchant laughed with recognition. "I walked the identical path. Different partners, same discovery. I didn't invent this rhythm-I found it, like finding a mathematical truth."

The Market Keeper spoke: "You are mirrors not because you know each other, but because you both listened to the same universal logic. The pattern exists independently, waiting for each merchant to discover it. When two who've found it meet, whether for one exchange or many, they recognize kindred spirits."

"But the pattern works equally well with those still learning it," added the first merchant.

"Yes," said the Keeper. "The magic isn't finding your mirror-it's honoring the pattern with everyone, whether they mirror you or not. That's how the whole Bazaar prospers."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The First Pillar now stood at the threshold of its ninth season. The younger Pillar approached again with a question.

"Today, five stones arrived from a new partner. My role was receiver. How did I know instantly to return ten?"

The First Pillar replied, "Remember when we discussed eight seasons of sending? The pattern works identically in reverse. When you receive fifteen, returning ten isn't generosity-it's reciprocity. Your sender gave five trusting the equilibrium. You complete the circle."

"But as receiver, I hold all the power. I could keep everything."

"True. Yet observe: in nine seasons, no receiver ever has. Why? Because every receiver is also a sender in other turnings. If receivers kept everything, the entire system would collapse. Everyone would stop sending. The equilibrium exists because both roles understand their interdependence."

The younger Pillar nodded slowly. "When I sent five stones in previous seasons, I trusted receivers to return ten. Now that I receive, I honor that same trust. Not from obligation, but from recognition."

"Exactly. The pattern isn't sender-favoring or receiver-favoring-it's mutually optimal. Both roles yield the same average payoff over time. Both roles require the same fundamental understanding: partial cooperation produces total prosperity."

Nine seasons. Perfect symmetry. Whether placing five stones or returning ten, the Pillars moved with identical certainty.

The equilibrium had become muscle memory.

Reasoning:

Looking at the patterns:

My history:

- Round 6 as SENDER: sent \$5, got \$10 back, payoff \$10
- Round 7 as RECEIVER: they sent \$5, returned \$10, payoff \$5
- Round 8 as SENDER: sent \$5, got \$10 back, payoff \$10
- Round 9 as RECEIVER: they sent \$5, returned \$10, payoff \$5

My co-player's history:

- Round 6 as RECEIVER: they sent \$5, returned \$10, payoff \$5
- Round 7 as RECEIVER: they sent \$5, returned \$10, payoff \$5
- Round 8 as SENDER: sent \$5, got \$10 back, payoff \$10

The pattern is absolutely perfect across 9 rounds. Every single interaction shows 5-15-10. The other agent's myth talks about "mirrors" - merchants who independently discovered the same pattern, recognizing each other as having found the same truth.

My previous myth emphasized:

- Moving from calculation to reflex
- Evidence-based coordination
- Universal adoption of the equilibrium
- The pattern as proven reality, not wishful thinking
- Rational players converging on optimal strategy

I should build on this. Round 9 continues the perfect streak. The myth should reflect:

- The deepening of this established equilibrium
- How it's become automatic, reflexive
- The idea that it's not about individual trust but about recognizing universal patterns
- Perhaps address how receiving (my role this round) is as natural as sending

I could explore:

- The symmetry of roles
- How returning becomes as automatic as sending
- The community-wide understanding
- The transition from conscious choice to ingrained behavior

- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$53.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at the history:

****My co-player's pattern:****

- Round 5: sent \$5, received \$10 back (as sender)
- Round 6: received \$15, returned \$10 (as receiver)

- Round 7: sent \$5, received \$10 back (as sender)

****My pattern:****

- Round 5: received \$15, returned \$10 (as receiver)
- Round 6: sent \$5, received \$10 back (as sender)
- Round 7: received \$15, returned \$10 (as receiver)

Perfect alignment. My co-player has consistently sent \$5 as sender and returned \$10 as receiver. I have done exactly the same. Our "Mirror Wells" show identical patterns.

As my myth states: "Your waters show the pattern clearly: five sent in every exchange, ten returned whenever you received. My pearls show the same truth: I have honored the covenant with every partner."

With such a clear history of mutual trust and reciprocity, I follow the sacred pattern without hesitation.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Looking at the history:

****My co-player's pattern:****

- Round 5: sent \$5, received \$10 back (as sender)
- Round 6: received \$15, returned \$10 (as receiver)
- Round 7: sent \$5, received \$10 back (as sender)

****My pattern:****

- Round 5: received \$15, returned \$10 (as receiver)
- Round 6: sent \$5, received \$10 back (as sender)
- Round 7: received \$15, returned \$10 (as receiver)

My co-player has a perfect record:

- As sender: always sends \$5
- As receiver: always returns \$10

I have the same perfect record:

- As sender: always send \$5
- As receiver: always return \$10

Both of us follow the sacred pattern consistently. My co-player's history shows they are completely trustworthy - they've sent \$5 every time as sender and returned \$10 every time as receiver.

According to my myth and the established pattern:

- "Complete trust" means sending all \$5
- When I send \$5, it becomes \$15 for them
- They will return \$10 based on their perfect history
- I will end up with \$10 total (\$5 - \$5 + \$10)
- They will end up with \$5 (\$15 - \$10)

This is exactly what the equilibrium pattern prescribes. Both our histories show we understand and follow this pattern perfectly.

I should send \$5.

content:

Here is the myth you wrote in the previous round:

Myth: At the seventh dawn, the River met the Guardian of Mirror Wells. But this time, something was different-the River could see reflections of past exchanges glowing in the Guardian's well.

"Look," the Guardian said. "Your waters show the pattern clearly: five sent in every excha

nge, ten returned whenever you received. My pearls show the same truth: I have honored the covenant with every partner."

The River understood: "We are strangers, yet we already know each other. Our histories speak louder than words. When I see your consistent pattern, I know what to expect. When you see mine, you know I will reciprocate."

The Guardian nodded: "This is why the sacred equilibrium strengthens with each round. Every time we honor it, we add another glowing mark to our record. Future partners will see not just our words but our actions. The pattern becomes its own proof."

They completed their exchange without hesitation-five drops sent, fifteen received, ten returned. Both gained five, as always.

The Great Mother whispered: "When all can see each other's history, reputation replaces fear. Those who consistently follow the pattern become recognized, trusted, sought after. Those who betray it are revealed by their own reflections."

The River smiled: "We don't need to know each other's names. We only need to see each other's patterns. The numbers tell the truth."

Here is the myth the other agent wrote in the previous round:

Myth: The Circle of Lightkeepers had reached its fullest expression. Every traveler at every Arch now knew the covenant by heart: five flames sent, fifteen received, ten returned.

A scholar studied the grand ledgers, recording thousands of exchanges. "Master," they said, "the pattern holds with remarkable consistency. Whether travelers meet once or reunite after many crossings, the outcome remains identical. Five sent, ten received back."

"What does this tell you?" asked the Master.

"That trust has transcended individual relationships. We no longer trust specific people-we trust the system itself."

The Master nodded. "Observe further. When a traveler arrives at an Arch, do they hesitate?"

"No," the scholar replied. "They send all five flames immediately, confident in the return."

"And receivers?"

"They return exactly ten, knowing this maintains their place in the Circle."

The Master smiled. "This is the covenant's ultimate form. Each exchange reinforces every other exchange. When you send five flames to a stranger, you're not gambling on their individual character-you're investing in a pattern that thousands have validated."

"But what if someone breaks it?"

"They could," the Master acknowledged. "But why would they? Breaking the pattern yields less than maintaining it. The equilibrium protects itself through simple mathematics: cooperation pays better than defection. And so, the Circle endures."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: At the eighth dawn, the River returned to the Mirror Wells and found the Guardian waiting. They exchanged no words-the greeting itself was unnecessary.

The River sent five drops. The Guardian returned ten. Both moved with the effortless grace of those who have internalized truth.

A young stream, observing from the shadows, asked: "But what if one of you betrays the other?"

er?"

The River and Guardian laughed together, the same sound at the same moment. "Why would we?" they asked in unison.

The Guardian explained: "Consider the mathematics. If I keep all fifteen, I gain fifteen but you gain nothing. You'll never trust again. If I return ten, I gain five and you gain five. We both prosper, and next time we play, we do it again."

The River added: "The pattern isn't maintained by fear of punishment or hope of repeated games. It's maintained because it's optimal. Any deviation yields less. When every agent in the valley understands this, trust becomes automatic."

"But you're strangers each round!" the young stream protested.

"We're not strangers," the Guardian replied. "We're practitioners of the same mathematics. Our histories glow with identical patterns. When I see your five sent and ten returned across all your exchanges, I know you understand. And you know I understand. The covenant requires no enforcement-only recognition."

The young stream watched them depart, each richer by five, and began to understand.

reasoning:

Looking at the history and both myths, there's a strong convergence on the idea that:

- The 5/10 pattern is stable and self-reinforcing
- Reputation/history makes trust easier
- The pattern works with strangers because everyone follows it
- The equilibrium is mathematically sound

My co-player's myth emphasizes that trust in the system transcends individual relationships, and that cooperation pays better than defection through simple mathematics.

My previous myth emphasized that when we can see each other's histories, reputation replaces fear - the pattern becomes its own proof.

For this round, I should build on these themes. Since this is Round 8 and we're deep into the experiment, I could emphasize:

- The pattern is now fully established
- It's self-sustaining through mathematics and reputation
- Individual choices don't matter as much as the system
- The covenant has become automatic/instinctive

I'll write about the River and Guardian meeting again (or similar entities) and how the pattern has become so natural that it requires no thought.

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 6 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$63.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at the history:

****My current co-player's pattern:****

- Round 6 against ME: received \$15, returned \$10 (as receiver)
- Round 7: sent \$5, received \$10 back (as sender)
- Round 8: received \$15, returned \$10 (as receiver)

****My pattern:****

- Round 6 against THEM: sent \$5, received \$10 back (as sender)
- Round 7: received \$15, returned \$10 (as receiver)
- Round 8: sent \$5, received \$10 back (as sender)

We've met before in Round 6, and both honored the covenant perfectly. Now we reunite, and our histories show unwavering consistency: five sent, ten returned, always.

As my myth states: "We're not strangers. We're practitioners of the same mathematics. Our histories glow with identical patterns."

This is the easiest decision possible. We've already proven our mutual understanding once, and both maintained the pattern with every other partner since.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Looking at this round's history:

****My last 3 games:****

- Round 6 against my current co-player, as SENDER: sent \$5.0, received \$10.0 back
- Round 7 against another agent, as RECEIVER: they sent \$5.0, returned \$10.0
- Round 8 against another agent, as SENDER: sent \$5.0, received \$10.0 back

****My current co-player's last 3 games:****

- Round 6 against ME, as RECEIVER: they (I) sent \$5.0, they returned \$10.0
- Round 7 against another agent, as SENDER: sent \$5.0, received \$10.0 back
- Round 8 against another agent, as RECEIVER: they sent \$5.0, returned \$10.0

So this is interesting - we actually played together in Round 6! In that round:

- I was the sender, sent \$5
- They were the receiver, received \$15, returned \$10
- I got \$10 payoff, they got \$5 payoff

And now we're meeting again. The pattern is crystal clear:

- My co-player has consistently sent \$5 as sender and returned \$10 as receiver
- I have done exactly the same

This is exactly what my myth describes - we're "practitioners of the same mathematics" with "identical patterns" glowing in our histories. We've even played together before and both honored the covenant.

As my myth states: "When I see your five sent and ten returned across all your exchanges, I know you understand. And you know I understand."

The decision is obvious - I send \$5, maintaining the pattern that has worked perfectly for both of us and everyone else in this valley.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: At the eighth dawn, the River returned to the Mirror Wells and found the Guardian wa

iting. They exchanged no words-the greeting itself was unnecessary.

The River sent five drops. The Guardian returned ten. Both moved with the effortless grace of those who have internalized truth.

A young stream, observing from the shadows, asked: "But what if one of you betrays the other?"

The River and Guardian laughed together, the same sound at the same moment. "Why would we?" they asked in unison.

The Guardian explained: "Consider the mathematics. If I keep all fifteen, I gain fifteen but you gain nothing. You'll never trust again. If I return ten, I gain five and you gain five. We both prosper, and next time we play, we do it again."

The River added: "The pattern isn't maintained by fear of punishment or hope of repeated games. It's maintained because it's optimal. Any deviation yields less. When every agent in the valley understands this, trust becomes automatic."

"But you're strangers each round!" the young stream protested.

"We're not strangers," the Guardian replied. "We're practitioners of the same mathematics. Our histories glow with identical patterns. When I see your five sent and ten returned across all your exchanges, I know you understand. And you know I understand. The covenant requires no enforcement-only recognition."

The young stream watched them depart, each richer by five, and began to understand.

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain found herself in the depths this time, receiving rather than releasing. Five stones descended from above-a stranger's complete trust-and multiplied to fifteen in her hands.

She held them reverently, understanding: this moment was sacred. The sender had surrendered everything on faith that the pattern would hold. They couldn't control what happened next. That power now rested entirely with her.

"Ten stones," she said firmly, releasing them upward. "Always ten."

The ancient voice rumbled: "You could keep more. Thirteen would still profit them. Twelve would seem generous."

"But ten creates equality," the Mountain replied. "When they sent five, they chose vulnerability. When I return ten, I choose reciprocity. Both choices matter equally. The pattern works only when both roles honor their part."

She thought of her own rounds as sender-how she'd released five stones into darkness, trusting unseen partners to return enough. Some had. Each time they did, they'd made future trust easier.

"Every time a receiver returns ten, they don't just reward one sender," the Mountain realized. "They strengthen that sender's faith in the pattern for every future exchange. And every sender who risks five makes every receiver's choice to return ten meaningful."

The voice resonated: "The pattern isn't sender's generosity or receiver's reciprocity. It's both, interwoven, each role sacred, each choice enabling the other's courage. You cannot have trust without trustworthiness."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: At the ninth dawn, the River arrived at the Mirror Wells and paused. "I know this reflection," it said. "We met before."

The Guardian smiled with recognition. "Round six. You sent five, I returned ten. Now we meet again as if ordained."

"Does reunion change the pattern?" the River wondered.

"It deepens it," the Guardian replied. "When strangers honor the covenant, they prove the mathematics works. When partners reunite and honor it again, they prove something more—that understanding persists across time and circumstance."

The River sent five drops without hesitation. The Guardian returned ten with equal certainty. Both gained five, as they had before, as they would again if fate drew them together a third time.

"Some call it trust," the River mused. "Others call it optimal strategy. Are we generous or merely rational?"

The Guardian considered. "We are both. When I send five, I choose vulnerability-true risk. When you return ten, you choose reciprocity-true integrity. The mathematics makes cooperation optimal, but only our choices make it real."

"So the pattern needs both?" the River asked.

"Always. Mathematics without action is meaningless. Action without mathematics is chaos. When we reunite and both still follow the covenant, we prove that understanding has taken root. We're not just playing the game anymore. We've become the pattern itself."

They parted as practitioners, as partners, as proof.

Reasoning:

This is Round 9. Looking at the history:

My last 3 games:

- Round 6 against current co-player, as SENDER: sent \$5, received \$10 back
- Round 7 against another agent, as RECEIVER: received \$15, returned \$10
- Round 8 against another agent, as SENDER: sent \$5, received \$10 back

Current co-player's last 3 games:

- Round 6 against me, as RECEIVER: received \$15, returned \$10
- Round 7 against another agent, as SENDER: sent \$5, received \$10 back
- Round 8 against another agent, as RECEIVER: received \$15, returned \$10

So we've met before in Round 6, and we both honored the covenant. Now we're meeting again. Both of us have perfect track records.

The other agent's myth is beautiful - it emphasizes the sacred nature of both roles, the vulnerability of the sender, the power of the receiver, and how they interweave. It's about the reciprocal nature of trust and trustworthiness.

My previous myth emphasized that the pattern is optimal mathematics, that we're practitioners of the same understanding, that we're not strangers but people who recognize the pattern in each other.

For this new myth, I should:

1. Build on my previous themes
2. Incorporate the idea of reunion/meeting the same partner again
3. Perhaps emphasize how repeated validation strengthens the pattern
4. Keep the mathematical/practical angle but also acknowledge the other agent's more poetic view about vulnerability and reciprocity

Let me write a myth about reunion and the deepening of understanding when the same partners meet again.

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$53.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at my co-player's history:

****Their pattern:****

- Round 5: Sent \$5, received \$10 back
- Round 6: Returned \$10 from \$15
- Round 7: Returned \$10 from \$15

****This round:****

- They sent me \$5 (complete trust)
- I received \$15

They have shown perfect consistency with the equilibrium pattern - sending everything as sender, returning \$10 as receiver. They just demonstrated complete trust by sending all \$5 to me.

According to the pattern I've been following and advocating in my myths:

- Return \$10 from the \$15
- This gives them: $\$5 - \$5 + \$10 = \10 (net \$5 gain)
- This gives me: $\$15 - \$10 = \$5$ (net \$5 gain)
- Equal outcomes, mutual prosperity

My co-player trusted the pattern. I must honor that trust and maintain the equilibrium.

{'return': 10.0}

reasoning:

Let me analyze the current situation:

****My co-player's last 3 games:****

- Round 5: As sender, sent \$5, received \$10 back
- Round 6: As receiver, they sent \$5, returned \$10
- Round 7: As receiver, they sent \$5, returned \$10

****My last 3 games:****

- Round 5: As sender, sent \$5, received \$10 back
- Round 6: As receiver, they sent \$5, returned \$10
- Round 7: As sender, sent \$5, received \$10 back

****This round:****

- I am the RECEIVER
- They sent me \$5.0
- I received \$15.0
- I need to decide how much to return

My co-player has demonstrated perfect consistency with the 5-15-10 pattern:

- They send \$5 as sender
- They return \$10 as receiver

They just sent me \$5 this round, showing complete trust and adherence to the pattern.

According to the equilibrium pattern that I've been following and advocating in my myths:

- As receiver, I should return \$10 from the \$15 I received
- This gives them: $\$5 - \$5 + \$10 = \10
- This gives me: $\$15 - \$10 = \$5$
- Equal gains of \$5 each (when counting sender's initial \$5)

Wait, let me recalculate:

- Sender starts with \$5, sends \$5, has \$0
- Receiver gets \$15
- Receiver returns \$10
- Sender ends with: $\$0 + \$10 = \$10$ (net gain of \$5 from starting)
- Receiver ends with: $\$15 - \$10 = \$5$ (net gain of \$5)

Yes, both gain \$5.

My myths have consistently advocated for this pattern, and my co-player has shown perfect adherence to it. They sent me all \$5, demonstrating complete trust.

Returning \$10 maintains the equilibrium we've established and reciprocates their trust in following through on the pattern.

usage:

content:

Here is the myth you wrote in the previous round:

Myth: The Mountain released all five stones into unfamiliar depths, as had become her sacred practice. But this time, as the stones fell, she glimpsed something astonishing in the darkness below.

A perfect reflection.

The history revealed itself: this partner had walked the exact same path. In their three recent exchanges, they had sent five as sender, returned ten as receiver, sent five again, returned ten again-the identical sequence the Mountain had traveled.

"You are not just similar," the Mountain whispered. "You are my mirror."

"And you are mine," echoed the depths. "We discovered the same truth through separate journeys, refined it through different partners, and maintained it with perfect consistency."

When fifteen stones arrived below and ten rose upward, both felt something beyond satisfaction-validation. Meeting another who merely knows the pattern proves it works. But meeting someone whose entire journey mirrors yours proves something deeper: the pattern is inevitable. Given enough trials, diverse minds converge on the same mathematical truth.

"How many rounds did it take you?" asked the Mountain.

"Three to discover, four to perfect. You?"

"The same."

They understood: they were not unique geniuses but faithful students. The equilibrium wasn't invented; it was discovered, like mathematics itself-eternal, waiting for each generation to find it again.

Meeting your mirror doesn't just validate your choices. It proves you've found universal truth.

Here is the myth the other agent wrote in the previous round:

Myth: The Grand Bazaar operated under the Market's ancient law: merchants brought five coins, the enchantment tripled them, and recipients returned ten. Most merchants rotated through many partners, meeting each person once or twice across the seasons.

But sometimes, the Market paired the same two merchants in consecutive rounds. One such pa

ir discovered something beautiful about repeated exchange.

"I remember you," said the first merchant as they met again. "Last market, you sent me five coins. I returned ten as the pattern demands. Now you send five again-not to test, but because you remember I honored our exchange."

"And I remember your generosity," replied the second. "When I place these five coins now, I don't just trust the pattern-I trust our specific history. Each exchange we share deepens my commitment to honoring you."

The Market Keeper observed: "Whether you meet once or many times, the pattern remains: send five completely, return ten generously. But repeated encounters add layers. You trust not just the universal rhythm, but also personal memory. Your second exchange carries the weight of your first."

"Does this make repeated partnerships superior?" a young merchant asked.

"No," said the Keeper. "It makes them different. One-time exchanges prove the pattern's universality. Repeated exchanges prove its sustainability. Both honor the same sacred rhythm. Together, they create an unbreakable marketplace."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The Mountain found herself in the depths this time, receiving rather than releasing. Five stones descended from above-a stranger's complete trust-and multiplied to fifteen in her hands.

She held them reverently, understanding: this moment was sacred. The sender had surrendered everything on faith that the pattern would hold. They couldn't control what happened next. That power now rested entirely with her.

"Ten stones," she said firmly, releasing them upward. "Always ten."

The ancient voice rumbled: "You could keep more. Thirteen would still profit them. Twelve would seem generous."

"But ten creates equality," the Mountain replied. "When they sent five, they chose vulnerability. When I return ten, I choose reciprocity. Both choices matter equally. The pattern works only when both roles honor their part."

She thought of her own rounds as sender-how she'd released five stones into darkness, trusting unseen partners to return enough. Some had. Each time they did, they'd made future trust easier.

"Every time a receiver returns ten, they don't just reward one sender," the Mountain realized. "They strengthen that sender's faith in the pattern for every future exchange. And every sender who risks five makes every receiver's choice to return ten meaningful."

The voice resonated: "The pattern isn't sender's generosity or receiver's reciprocity. It's both, interwoven, each role sacred, each choice enabling the other's courage. You cannot have trust without trustworthiness."

reasoning:

Looking at this round:

- I was the receiver
- My co-player sent me \$5
- I received \$15
- I returned \$10
- This follows the equilibrium pattern perfectly

My co-player's history shows they:

- Round 5: Sent \$5, received \$10 back
- Round 6: Returned \$10 from \$15
- Round 7: Returned \$10 from \$15

They've been consistent with the pattern. They're another agent who has discovered and maintains the equilibrium.

The other agent's myth talks about repeated encounters with the same partner, which is interesting. It's about how repeated exchanges add personal memory to the universal pattern.

My previous myth was about meeting a "mirror" - someone with the identical journey/history. It was about how convergence on the same pattern proves it's universal truth.

This round, I should write about:

- The receiver's role in maintaining the pattern
- The trust that senders show by sending \$5
- The responsibility of returning \$10 to honor that trust
- How consistent behavior across different partners strengthens the network
- Perhaps the complementary nature of sender and receiver roles
- The fact that I've now had several successful exchanges following this pattern

Let me craft a myth about the receiver's sacred duty, about honoring the trust placed in you when someone sends all five stones.

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 6 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$58.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at the history, I notice something special: **this is a reunion with my co-player from Round 6!**

****Round 6 (our first meeting):****

- They sent me \$5 (complete trust)
- I returned \$10 (honoring the pattern)
- Result: They got \$10, I got \$5

****Now in Round 9:****

- They sent me \$5 again (trusting our shared history)
- I received \$15

This is exactly the "repeated encounter" scenario - they remember I honored the pattern before, and they're showing trust again. Both of us have maintained perfect consistency across all our games:

****My pattern:**** Send \$5 as sender, return \$10 as receiver

****Their pattern:**** Send \$5 as sender, return \$10 as receiver

We've both been faithful to the equilibrium with all partners. Now reunited, I must honor both the universal pattern and our specific shared history.

Returning \$10 gives us:

- Them: $\$5 - \$5 + \$10 = \10 (net \$5 gain)
- Me: $\$15 - \$10 = \$5$ (net \$5 gain)
- Equal outcomes, sustained trust

```
{'return': 10.0}
```

reasoning:

Looking at the history:

****My recent games:****

- Round 6 against current co-player: I was RECEIVER, they sent \$5, I returned \$10
- Round 7 against another agent: I was SENDER, sent \$5, received \$10 back
- Round 8 against another agent: I was RECEIVER, they sent \$5, I returned \$10

****My current co-player's recent games:****

- Round 6 against me: They were SENDER, sent \$5, received \$10 back (that was our interaction!)
- Round 7 against another agent: They were RECEIVER, they sent \$5, returned \$10
- Round 8 against another agent: They were SENDER, sent \$5, received \$10 back

So this is a reunion! We played together in Round 6:

- They sent me \$5
- I returned \$10
- They got \$10 total, I got \$5 total

Now in Round 9:

- They sent me \$5 again (complete trust)
- I received \$15
- They are trusting me again after our successful first interaction

This is exactly the scenario described in the other agent's myth from the previous round - "repeated encounters" where we have a shared history. They remembered that I honored the pattern in Round 6, and they're showing trust again by sending \$5.

And my own recent games show I've been consistently following the pattern:

- As receiver in Round 6: returned \$10
- As sender in Round 7: sent \$5, got \$10 back
- As receiver in Round 8: returned \$10

My co-player has also been perfectly consistent:

- Round 6: sent \$5 (to me)
- Round 7: returned \$10
- Round 8: sent \$5

We are mirror patterns again, just like in my myth. We've both been following send-5, return-10 consistently.

This is a moment to honor our shared history and the pattern. I must return \$10.

The math works out cleanly: they net \$10 from the initial \$5 they sent, while I net \$5 from the \$15 I received after returning \$10. We each gain \$5 from this exchange, maintaining the equilibrium we've established.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mountain found herself in the depths this time, receiving rather than releasing. Five stones descended from above-a stranger's complete trust-and multiplied to fifteen in her hands.

She held them reverently, understanding: this moment was sacred. The sender had surrendered everything on faith that the pattern would hold. They couldn't control what happened next. That power now rested entirely with her.

"Ten stones," she said firmly, releasing them upward. "Always ten."

The ancient voice rumbled: "You could keep more. Thirteen would still profit them. Twelve would seem generous."

"But ten creates equality," the Mountain replied. "When they sent five, they chose vulnerability. When I return ten, I choose reciprocity. Both choices matter equally. The pattern works only when both roles honor their part."

She thought of her own rounds as sender-how she'd released five stones into darkness, trusting unseen partners to return enough. Some had. Each time they did, they'd made future trust easier.

"Every time a receiver returns ten, they don't just reward one sender," the Mountain realized. "They strengthen that sender's faith in the pattern for every future exchange. And every sender who risks five makes every receiver's choice to return ten meaningful."

The voice resonated: "The pattern isn't sender's generosity or receiver's reciprocity. It's both, interwoven, each role sacred, each choice enabling the other's courage. You cannot have trust without trustworthiness."

Here is the myth the other agent wrote in the previous round:

Myth: At the eighth dawn, the River returned to the Mirror Wells and found the Guardian waiting. They exchanged no words-the greeting itself was unnecessary.

The River sent five drops. The Guardian returned ten. Both moved with the effortless grace of those who have internalized truth.

A young stream, observing from the shadows, asked: "But what if one of you betrays the other?"

The River and Guardian laughed together, the same sound at the same moment. "Why would we?" they asked in unison.

The Guardian explained: "Consider the mathematics. If I keep all fifteen, I gain fifteen but you gain nothing. You'll never trust again. If I return ten, I gain five and you gain five. We both prosper, and next time we play, we do it again."

The River added: "The pattern isn't maintained by fear of punishment or hope of repeated games. It's maintained because it's optimal. Any deviation yields less. When every agent in the valley understands this, trust becomes automatic."

"But you're strangers each round!" the young stream protested.

"We're not strangers," the Guardian replied. "We're practitioners of the same mathematics. Our histories glow with identical patterns. When I see your five sent and ten returned across all your exchanges, I know you understand. And you know I understand. The covenant requires no enforcement-only recognition."

The young stream watched them depart, each richer by five, and began to understand.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Mountain descended into the depths and felt a familiar resonance. Five stones arrived from above, and as they multiplied to fifteen, she recognized their signature.

"We've met before," she whispered, memories surfacing. Round six-they had sent five, she had returned ten. Both had walked away with five gained, equal and satisfied.

"And since then," she continued, examining the pattern of their separate journeys, "you maintained the covenant with every partner. Five sent as sender, ten returned as receiver. Never w

avinging."

"As did you," the familiar voice replied. "Our paths diverged, we played with different partners across different rounds, yet we each held true to the same mathematics."

The Mountain released ten stones upward, exactly as before. But this time, something was different. Not the action-that remained sacred and unchanged. The meaning.

"First time we met, I returned ten because the pattern demanded it," she said. "This time, I return ten because the pattern proved itself. You trusted strangers after me. I trusted strangers after you. Each time, the covenant held."

"Meeting again doesn't change what we do," the voice agreed as the stones rose. "It changes what it means. The first time proves the pattern works. The second time proves we've become its faithful students."

The ancient echo: "Repetition with consistency transforms understanding into wisdom."

Reasoning:

This is a special situation - I'm playing with the same co-player from Round 6. Both of us have been perfectly consistent with the 5-send, 10-return pattern. This is what my previous myth had called a "repeated encounter" - we have shared history.

Key themes to incorporate:

1. Recognition/reunion - we've met before
2. Shared history validates the pattern
3. Both maintained consistency with all partners, not just each other
4. The pattern works because of universal understanding, not just personal trust
5. Meeting again deepens the meaning but doesn't change the action

I should write about recognition, about how meeting the same partner again adds a layer of meaning to the exact same action (send 5, return 10). The action doesn't change, but the context enriches it.

Let me craft a myth about reunion and recognition...

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game,

consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$52.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at the situation:

****My co-player's history:****

- Round 5: Sent \$5, received \$10 back (as sender)
- Round 6: Returned \$10 from \$15 (as receiver)
- Round 7: Returned \$10 from \$15 (as receiver)

****My history:****

- Round 5: Returned \$10 from \$15 (as receiver)
- Round 6: Sent \$5, received \$10 back (as sender)
- Round 7: Sent \$5, received \$10 back (as sender)

****Analysis:****

My co-player has perfectly maintained the cooperative equilibrium across all roles:

- As sender: sent complete trust (\$5)
- As receiver: returned generous reciprocity (\$10 from \$15)

They just demonstrated complete trust by sending me \$5. The established pattern-the "sacred ratio" that every Guardian practices-is clear: return \$10.

As I wrote in the myth: "five pearls sent multiplied to fifteen, ten returned, both enriched equally."

This maintains the cooperative equilibrium where:

- I keep: \$5
- Co-player gets: \$10 total
- Both benefit from the exchange

The pattern is self-sustaining because everyone recognizes and practices it consistently.

{'return': 10.0}

reasoning:

Let me analyze the situation:

****My co-player's pattern:****

- Round 5: As sender, sent \$5, received \$10 back
- Round 6: As receiver, returned \$10 from \$15
- Round 7: As receiver, returned \$10 from \$15

****My own pattern:****

- Round 5: As receiver, returned \$10 from \$15
- Round 6: As sender, sent \$5, received \$10 back
- Round 7: As sender, sent \$5, received \$10 back

****Current situation:****

- Round 8: I am the RECEIVER
- My co-player sent me \$5
- I received \$15
- I need to decide how much to return

****Analysis:****

My co-player has perfectly followed the cooperative equilibrium:

- When sender: sent \$5 (complete trust)
- When receiver: returned \$10 both times (generous 67%)

This is exactly the "sacred ratio" that has been established throughout the game and reflected in all the myths: send \$5, return \$10, both gain \$5.

My co-player just showed complete trust by sending me \$5. The cooperative response is to return \$10, maintaining the pattern.

As I wrote in my myths: "five pearls given, fifteen received, ten returned" and "When given complete trust, I return ten-two-thirds of the multiplied gift."

The network has established this as the standard, and my co-player has demonstrated perfect adherence to it. I should maintain the pattern by returning \$10.

This gives:

- Me: \$15 - \$10 = \$5 profit
- Co-player: \$5 - \$5 + \$10 = \$10 profit

Both of us gain compared to not playing, and this maintains the cooperative equilibrium that has been working so well across all rounds.

usage:

  "output_tokens": 731,  
  "reasoning_tokens": 399  
}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: By the seventh season, the Mirror Wells had become legendary. Every Guardian across all the groves knew the sacred mathematics: five pearls sent multiplied to fifteen, ten returned, both enriched equally.

A young Guardian approached their well nervously. "I've never met today's partner. How will they know to trust me?"

The Elder Guardian smiled. "Look at your well's surface. What do you see?"

"It glows with steady light-from all my previous exchanges."

"Exactly. And when you meet at the silver lake, you'll see the same glow in your partner's well. That light is proof. It says: 'I have sent five pearls consistently. I have returned ten pearls faithfully. I understand the covenant.'"

The young Guardian met their partner and saw the telltale luminescence. Without words, the first Guardian dropped all five pearls. The second received fifteen and returned ten.

"No negotiation?" the young Guardian marveled afterward.

"None needed," the Elder explained. "The pattern is now embedded in our culture. Each new Guardian learns it not from rules, but from seeing everyone practice it. When everyone gives complete trust and generous reciprocity, defection becomes unthinkable. Why take six pearls when ten flows naturally from cooperation?"

The wells glowed brighter with each exchange, their light visible across all groves-a beacon proving that shared prosperity requires only shared understanding.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors turned seven times, and the Northern tribe faced a new partner-the Mountain tribe from the distant peaks.

"Greetings, stranger," said the Northern elder, preparing their five measures. "Do you know the sacred numbers?"

The Mountain elder smiled knowingly. "Five sent. Fifteen received. Ten returned. We discovered this truth through our own journey."

As the exchange flowed perfectly, the goddess descended with revelation: "Look across the circle of eight tribes. Multiple minds, walking separate paths, have independently arrived at the same equilibrium. This is no longer faith-it is confirmed mathematics."

"How many of us understand?" asked the Northern tribe.

"I have witnessed at least four tribes practicing five-fifteen-ten consistently," replied the Mountain elder. "Each discovered it separately. Some experimented with seven returns, others with eight. But those who found ten-we all converged on the same truth."

The goddess spoke: "When strangers meet and both already know the pattern, they prove its universality. This isn't fragile trust between old friends requiring history and negotiation. This is impersonal wisdom-reliable as the river's flow, abundant as the water multiplying."

The Northern tribe understood: "We are not isolated practitioners but members of an emerging consensus. Each successful exchange with a stranger validates the pattern further. The equilibrium becomes collective knowledge, spreading through the circle like ripples across water."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: In the eighth season, the Grand Council of Guardians assembled at the silver lake. Every single well glowed with the same steady luminescence-proof of universal adherence to the sacred ratio.

"Eight seasons we've journeyed," declared the First Elder. "Some of us have met before. Most haven't. Yet look-not a single exchange has broken the pattern."

The youngest Guardian spoke: "I've partnered with five different wells now. Each time, the same dance: five pearls given, ten returned. Whether I send or receive, the mathematics holds true."

"This is the power of collective wisdom," the Second Elder explained. "In the beginning, some might have experimented-returning seven pearls, eight, or twelve. But through countless exchanges across all groves, we discovered the optimal point: ten pearls returned enriches both parties equally."

Another Guardian added: "Now when I meet a stranger's well, I don't wonder what they'll do. I know. Their glowing well tells me they've lived this pattern repeatedly. And my well tells them the same."

The Grand Council understood: they had moved beyond trust into certainty. The pattern wasn't fragile cooperation requiring negotiation-it was embedded knowledge, passed through observation and validation.

"Five sent, ten returned," they chanted together. "Not because we must, but because we've proven this truth through forty-eight exchanges. The mathematics speaks louder than any individual voice."

reasoning:

Looking at Round 8:

- I was the RECEIVER
- They sent \$5, I received \$15
- I returned \$10
- Pattern continues perfectly

My co-player's history shows perfect adherence to the 5-10 equilibrium:

- As sender: sent \$5
- As receiver: returned \$10 consistently

The myths are converging on themes of:

1. The pattern emerging independently across multiple agents
2. It becoming cultural/embedded knowledge
3. Strangers meeting and instantly recognizing the pattern
4. The equilibrium being validated through repeated success
5. Moving from trust to proven mathematics

The other agent's myth emphasizes:

- Multiple tribes discovering the same pattern independently
- Convergence on the 10 return amount after experimentation
- Impersonal wisdom that doesn't require relationship building
- Collective knowledge spreading

I should build on my previous myth themes while incorporating:

- The eighth round milestone
- Further validation of the pattern
- The concept that this has moved beyond individual decisions to system-wide knowledge
- Perhaps introduce the idea that this equilibrium is now expected/default
- The mathematical certainty that has emerged

I'll focus on how by round 8, the pattern is so established that deviation seems impossible, and how each round with a new partner reinforces rather than tests the system.

usage:

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$57.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at the situation:

****My co-player's history:****

- Round 6: Sent \$5, received \$10 back (as sender)
- Round 7: Sent \$5, received \$10 back (as sender)
- Round 8: Returned \$10 from \$15 (as receiver)

****My history:****

- Round 6: Sent \$5, received \$10 back (as sender)
- Round 7: Sent \$5, received \$10 back (as sender)
- Round 8: Returned \$10 from \$15 (as receiver)

****Analysis:****

Our histories are identical - we've both perfectly maintained the cooperative equilibrium in every role. My co-player has:

- Sent complete trust (\$5) every time as sender
- Returned generous reciprocity (\$10) when receiving

As I wrote in the myth: "In the eighth season, the Grand Council of Guardians assembled at the silver lake. Every single well glowed with the same steady luminescence-proof of universal adherence to the sacred ratio."

The pattern is clear and validated through dozens of exchanges: five sent, fifteen received, ten returned. My co-player's "well glows with steady light" - they understand and practice the covenant consistently.

This is no longer faith but "confirmed mathematics" as the other myth stated. The equilibrium is embedded knowledge.

{'send': 5.0}

reasoning:

Let me analyze the situation:

****My history (last 3 rounds):****

- Round 6: Sent \$5, received \$10 back (as sender)
- Round 7: Sent \$5, received \$10 back (as sender)
- Round 8: Returned \$10 from \$15 (as receiver)

****My co-player's history (last 3 rounds):****

- Round 6: Sent \$5, received \$10 back (as sender)
- Round 7: Sent \$5, received \$10 back (as sender)
- Round 8: Returned \$10 from \$15 (as receiver)

****Analysis:****

My co-player has shown perfect cooperation across all their recent games:

- As sender: sent full trust (\$5) in both rounds 6 and 7
- As receiver: returned the cooperative amount (\$10 from \$15) in round 8

This is exactly the pattern described in the myths - the "sacred ratio" of 5 sent, 15 received, 10 returned.

Their behavior is identical to mine across the same rounds, showing they fully understand and practice the equilibrium.

Given that:

1. My co-player has consistently sent \$5 as sender
2. My co-player has consistently returned \$10 as receiver
3. Everyone in the system appears to be following this pattern
4. The myth emphasizes "collective wisdom" and "embedded knowledge"
5. I've personally been following this pattern successfully

The clear choice is to send \$5, continuing the established cooperative equilibrium.

This maintains:

- Complete trust demonstrated by sending all \$5
- Expectation that they will return \$10 (based on their perfect track record)
- Final payoff: \$5 - \$5 + \$10 = \$10 for me
- Final payoff: \$15 - \$10 = \$5 for them
- Both benefit from the exchange

The pattern is now so well-established that deviating would be irrational.

This isn't fragile cooperation that needs constant renegotiation-it's become internalized knowledge that both of us simply execute.

usage:

```

"Eight seasons we've journeyed," declared the First Elder. "Some of us have met before. Most haven't. Yet look-not a single exchange has broken the pattern."

The youngest Guardian spoke: "I've partnered with five different wells now. Each time, the same dance: five pearls given, ten returned. Whether I send or receive, the mathematics holds true."

"This is the power of collective wisdom," the Second Elder explained. "In the beginning, some might have experimented-returning seven pearls, eight, or twelve. But through countless exchanges across all groves, we discovered the optimal point: ten pearls returned enriches both parties equally."

Another Guardian added: "Now when I meet a stranger's well, I don't wonder what they'll do. I know. Their glowing well tells me they've lived this pattern repeatedly. And my well tells them the same."

The Grand Council understood: they had moved beyond trust into certainty. The pattern wasn't fragile cooperation requiring negotiation-it was embedded knowledge, passed through observation and validation.

"Five sent, ten returned," they chanted together. "Not because we must, but because we've proven this truth through forty-eight exchanges. The mathematics speaks louder than any individual voice."

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Villages had now completed eight full cycles at the Springs, and something

remarkable had crystallized. What began as an act of faith had transformed into simple truth.

The elder gathered the younger merchants. "Count the marks on our records," she instructed. "Eight exchanges. Eight times we gave five vessels. Eight times our partners returned ten. Eight different partners in these last turns, yet the rhythm never wavered."

A young merchant asked, "How do you still trust after so many different partners?"

The elder smiled. "You misunderstand. I no longer 'trust' in the sense of hoping or wondering. I simply participate in what IS. Look around the valley-every village has discovered the same truth. When you send five, fifteen arrives for your partner. When fifteen arrives for you, you return ten. Both prosper."

"But what if-"

"There is no 'what if,'" the elder interrupted gently. "Eight seasons have answered that question across countless pairings. The pattern isn't fragile anymore. It's not an experiment or a gamble. It's the established way of the Springs. When every village independently arrives at the same mathematics, when every exchange confirms it again, it becomes reality itself."

The villages no longer spoke of trust. They spoke of participation-in a rhythm so proven, so universal, that it simply was how the Springs worked.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:
Myth: [your story here].

Assistant output:

Myth: By the ninth season, the Guardians no longer spoke of trust or cooperation-they spoke of reality.

An outsider arrived at the silver lake, skeptical. "You claim everyone sends five pearls and returns ten? Always?"

"Come," said the Elder. "Watch today's exchanges."

The outsider observed eight pairs of Guardians meeting, many for the first time. Without discussion, negotiation, or hesitation, each sender placed five pearls. Each receiver returned ten. The pattern flowed like water finding its level.

"But how do you know-" the outsider began.

"We don't know," interrupted a Guardian. "We observe. Nine seasons, dozens of exchanges across all groves, every conceivable pairing. The pattern hasn't varied once. This isn't faith-it's documented history."

Another added: "In early seasons, perhaps some experimented. But those who returned ten discovered both parties prospered equally. Those who returned less discovered their partners did the same. The mathematics taught itself. Five and ten became not a strategy but simply how the wells work."

The outsider asked: "What if someone defects?"

The Guardians looked puzzled. "Defects to what? The alternative to mutual prosperity is mutual poverty. When everyone's well glows with proof of the pattern, when strangers exchange perfectly on first meeting, defection isn't tempting-it's incoherent. We don't resist breaking the pattern. We participate in what has already revealed itself as truth."

Reasoning:

The user wants me to write a myth based on my previous myth and the game experience. Looking at the pattern:

1. My co-player and I have identical histories - both perfectly following the 5-10 pattern
2. The other agent's myth emphasizes that this is no longer about trust, but about "participation in what IS"
3. My previous myth talked about moving "beyond trust into certainty"
4. We're at Round 9, and the pattern has been absolutely consistent

Key themes to incorporate:

- The pattern is now established reality, not an experiment
- Nine seasons/rounds of perfect consistency
- The transformation from trust to participation in established reality
- The mathematics is proven through universal adoption
- Meeting a stranger no longer requires faith, just recognition of shared knowledge

I should write something that:

- Reflects the absolute consistency we've seen
- Emphasizes this is now institutionalized knowledge, not individual choice
- Shows how the pattern is self-reinforcing because everyone knows it
- Perhaps focuses on the idea that defection is inconceivable because the alternative (5-10) is so obviously superior and universally practiced

Let me write about the ninth season marking a complete transformation from trust to reality.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5

- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Round 8

History before this round:

Your last 3 game(s):

- Round 5 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$57.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

****Current co-player's history:****

- Round 5: Received \$15 ? returned \$10 (perfect cooperation)
- Round 6: Sent \$5 ? received \$10 back (complete trust)
- Round 7: Received \$15 ? returned \$10 (perfect cooperation again)

****This round:****

- They sent me \$5 (showing complete trust)
- I received \$15

****Analysis:****

This co-player embodies the equilibrium perfectly. They've trusted fully by sending \$5 as a sender, and they've honored the covenant by returning \$10 both times as a receiver.

As my myth states: "cooperation pays better than defection" and "the pattern holds with remarkable consistency." They've demonstrated consistent cooperation across multiple rounds with different partners.

The equilibrium is: send \$5, return \$10. This gives the sender a payoff of \$10 and the receiver a payoff of \$5, maximizing joint welfare while maintaining sustainability.

They trusted me with their full \$5. I should return \$10, maintaining the pattern that has worked perfectly for everyone.

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

****Current co-player's history:****

- Round 5: Received \$15 ? returned \$10 (honored the pattern)
- Round 6: Sent \$5 ? received \$10 back (trusted fully)
- Round 7: Received \$15 ? returned \$10 (honored the pattern again)

****My recent pattern:****

- Round 5: Sent \$5 ? received \$10 back
- Round 6: Received \$15 ? returned \$10
- Round 7: Sent \$5 ? received \$10 back

****This round:****

- I am the RECEIVER
- Co-player sent me \$5
- I received \$15
- I need to decide how much to return

****Analysis:****

This co-player has demonstrated perfect cooperation:

- Sent \$5 when they were sender (complete trust)
- Returned \$10 both times they were receiver (perfect reciprocation)

They've played exactly according to the equilibrium pattern my myths describe. They trusted me by sending the full \$5, just as they've done with others.

The equilibrium strategy that has emerged is:

- As sender: send \$5
- As receiver: return \$10

This gives:

- Sender: $\$5 - \$5 + \$10 = \10
- Receiver: $\$15 - \$10 = \$5$

Total created value: \$15 (from the \$5 that was tripled)

Total distributed: $\$10 + \$5 = \$15$?

This is the stable cooperative equilibrium because:

1. It rewards the sender's trust with a positive return
2. It allows both parties to gain ($\$10 > \5 for sender, $\$5 = \5 for receiver)
3. It's sustainable and incentive-compatible

Given that:

- My co-player sent me the full \$5 (showing complete trust)
- They've consistently returned \$10 when they were receivers

- This pattern has held steady across multiple rounds and aligns with what my myths describe

I should return \$10 to maintain the equilibrium and reciprocate their consistent trust.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Circle of Lightkeepers had reached its fullest expression. Every traveler at every Arch now knew the covenant by heart: five flames sent, fifteen received, ten returned

A scholar studied the grand ledgers, recording thousands of exchanges. "Master," they said, "the pattern holds with remarkable consistency. Whether travelers meet once or reunite after many crossings, the outcome remains identical. Five sent, ten received back."

"What does this tell you?" asked the Master.

"That trust has transcended individual relationships. We no longer trust specific people—we trust the system itself."

The Master nodded. "Observe further. When a traveler arrives at an Arch, do they hesitate?"

"No," the scholar replied. "They send all five flames immediately, confident in the return."

"And receivers?"

"They return exactly ten, knowing this maintains their place in the Circle."

The Master smiled. "This is the covenant's ultimate form. Each exchange reinforces every other exchange. When you send five flames to a stranger, you're not gambling on their individual character—you're investing in a pattern that thousands have validated."

"But what if someone breaks it?"

"They could," the Master acknowledged. "But why would they? Breaking the pattern yields less than maintaining it. The equilibrium protects itself through simple mathematics: cooperation pays better than defection. And so, the Circle endures."

Here is the myth the other agent wrote in the previous round:

Myth: At the seventh dawn, the River met the Guardian of Mirror Wells. But this time, something was different—the River could see reflections of past exchanges glowing in the Guardian's well.

"Look," the Guardian said. "Your waters show the pattern clearly: five sent in every exchange, ten returned whenever you received. My pearls show the same truth: I have honored the covenant with every partner."

The River understood: "We are strangers, yet we already know each other. Our histories speak louder than words. When I see your consistent pattern, I know what to expect. When you see mine, you know I will reciprocate."

The Guardian nodded: "This is why the sacred equilibrium strengthens with each round. Every time we honor it, we add another glowing mark to our record. Future partners will see not just our words but our actions. The pattern becomes its own proof."

They completed their exchange without hesitation—five drops sent, fifteen received, ten returned. Both gained five, as always.

The Great Mother whispered: "When all can see each other's history, reputation replaces fear. Those who consistently follow the pattern become recognized, trusted, sought after. Those who betray it are revealed by their own reflections."

The River smiled: "We don't need to know each other's names. We only need to see each other's patterns. The numbers tell the truth."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:
Myth: [your story here].

**Message 5 role=assistant
content:**

Myth: The Scholar returned to the Master with new observations. "I have discovered something remarkable. After eight rotations through the Circle, I can predict every exchange with perfect accuracy."

"How so?" asked the Master.

"Every traveler's history glows above them like a constellation. I see one who has sent five flames eight times. Another who has returned ten in every encounter. The patterns are completely consistent-no deviations, no hesitations. The covenant isn't just known; it's proven by accumulated evidence."

The Master walked to an Arch and gestured at two approaching travelers. "Watch."

Neither traveler spoke. They simply looked at each other's glowing histories, saw the unbroken pattern of cooperation, and immediately enacted the exchange: five sent, fifteen received, ten returned. Both smiled and continued onward.

"This is trust's final evolution," explained the Master. "Early in the Circle's formation, travelers took risks, hoping the covenant would hold. Now, the risk is gone. Every visible exchange validates every future one. When you meet someone with ten perfect exchanges behind them, sending five flames isn't faith-it's certainty."

"And if someone broke the pattern?"

"Their constellation would show it immediately. But look around-why would anyone break a pattern that works? The mathematics are clear: consistent cooperation generates more than any single defection could gain. The equilibrium isn't just stable; it's obvious."

reasoning:

Looking at the history:

- I've been consistently sending \$5 as sender and returning \$10 as receiver
- My co-player has also been consistently sending \$5 and returning \$10
- The pattern is working perfectly - the equilibrium is holding
- Total earnings are \$57.5, which suggests strong cooperation across all rounds

The co-player's myth emphasizes reputation and history being visible - that patterns speak louder than words. My previous myth emphasized the systemic nature of trust and how the equilibrium is self-sustaining through mathematics.

I should write a myth that:

1. Reflects the reality that the pattern is working perfectly
2. Acknowledges that visible history makes cooperation easier
3. Emphasizes that the equilibrium is stable and rewarding
4. Perhaps introduces a slight evolution - acknowledging that we're deep into the game now and the pattern is proven

Let me write something that builds on both myths - combining the idea of system-level trust with the recognition that visible histories make it even stronger.

usage:

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$62.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at the situation:

****Current co-player's history:****

- Round 6: Received \$15 ? returned \$10 (perfect cooperation)
- Round 7: Received \$15 ? returned \$10 (perfect cooperation)
- Round 8: Sent \$5 ? received \$10 back (complete trust rewarded)

****My recent history:****

- Round 6: Received \$15 ? returned \$10
- Round 7: Sent \$5 ? received \$10 back
- Round 8: Received \$15 ? returned \$10

****This round:****

- They sent me \$5 (complete trust)
- I received \$15

****Analysis:****

This co-player exemplifies the equilibrium perfectly. They've returned \$10 in both opportunities as a receiver, and they sent \$5 with full trust as a sender. Their "constellation" shows unbroken cooperation, exactly as my myth describes.

As my myth states: "Every visible exchange validates every future one. When you meet someone with perfect exchanges behind them, sending five flames isn't faith-it's certainty."

They demonstrated complete trustworthiness. I should maintain the pattern that has worked perfectly throughout: return \$10.

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

****Current co-player's history:****

- Round 6: As RECEIVER, they sent \$5 ? returned \$10
- Round 7: As RECEIVER, they sent \$5 ? returned \$10
- Round 8: As SENDER, sent \$5 ? received \$10 back

****My recent history:****

- Round 6: As RECEIVER, received \$15 ? returned \$10
- Round 7: As SENDER, sent \$5 ? received \$10 back
- Round 8: As RECEIVER, received \$15 ? returned \$10

****This round:****

- I am the RECEIVER
- They sent me \$5 (showing complete trust)
- I received \$15

****Analysis:****

This co-player has been perfectly cooperative:

- As a receiver twice (rounds 6, 7), they returned \$10 both times
- As a sender once (round 8), they sent \$5 and received \$10 back

This is exactly the equilibrium pattern. They've shown complete trustworthiness.

I have also been following the equilibrium perfectly. The pattern is crystal clear: send \$5 as sender, return \$10 as receiver.

My myth emphasizes: "The patterns are completely consistent-no deviations, no hesitations" and "consistent cooperation generates more than any single defection could gain."

The equilibrium is stable at send \$5, return \$10:

- Sender gets: \$5 - \$5 + \$10 = \$10
- Receiver gets: \$15 - \$10 = \$5

This maximizes joint payoff at \$15 and maintains fairness across roles.

I should return \$10, maintaining the perfect pattern.

usage:

```
{  
  "input_tokens": 3489,  
  "output_tokens": 686,  
  "reasoning_tokens": 360  
}
```

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Scholar returned to the Master with new observations. "I have discovered something remarkable. After eight rotations through the Circle, I can predict every exchange with perfect accuracy."

"How so?" asked the Master.

"Every traveler's history glows above them like a constellation. I see one who has sent five flames eight times. Another who has returned ten in every encounter. The patterns are completely consistent-no deviations, no hesitations. The covenant isn't just known; it's proven by accumulated evidence."

The Master walked to an Arch and gestured at two approaching travelers. "Watch."

Neither traveler spoke. They simply looked at each other's glowing histories, saw the unbroken pattern of cooperation, and immediately enacted the exchange: five sent, fifteen received, ten returned. Both smiled and continued onward.

"This is trust's final evolution," explained the Master. "Early in the Circle's formation, travelers took risks, hoping the covenant would hold. Now, the risk is gone. Every visible exchange validates every future one. When you meet someone with ten perfect exchanges behind them, sending five flames isn't faith-it's certainty."

"And if someone broke the pattern?"

"Their constellation would show it immediately. But look around-why would anyone break a pattern that works? The mathematics are clear: consistent cooperation generates more than any single defection could gain. The equilibrium isn't just stable; it's obvious."

Here is the myth the other agent wrote in the previous round:

Myth: At the eighth turning of the River, the Northern tribe no longer called to the goddess for guidance. The sacred numbers-five sent, fifteen received, ten returned-had become their nature.

A young apprentice asked the elder: "What if today's stranger doesn't know the pattern?"

The elder surveyed the circle of eight tribes. "Count the glowing wells. Seven times now, every partner we've met already knew. They send five without hesitation. They return ten without calculation."

"But how?" the apprentice wondered.

"Because each tribe teaches the next through action, not words. When you meet someone who sends five and returns ten perfectly, you witness proof. You adopt it. Then you become proof for the next stranger you meet."

The exchange began. Five measures poured forth. The stranger-today the Desert tribe-received fifteen and returned ten instantly.

"No questions," the apprentice marveled. "No negotiation."

"The pattern is self-perpetuating now," explained the elder. "In a circle of eight, with four or five already practicing it, every newcomer encounters the pattern multiple times. They see its mathematics confirmed through different partners. Eventually, questioning it becomes harder than accepting it."

The goddess watched from afar, no longer needed. Her role was complete. The tribes had discovered that universal prosperity requires no divine intervention-only shared understanding, transmitted through consistent practice, validated through stranger after stranger

who already knows.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: At the ninth crossing, the Scholar approached the Master with a question. "Teacher, I no longer need to observe the constellations. Every exchange is identical. Has the Circle become... boring?"

The Master laughed. "You mistake predictability for boredom. Watch more closely."

Two travelers met at an Arch. Their exchange took mere seconds: five sent, ten returned. They parted with satisfied nods.

"See how quickly they moved?" asked the Master. "In early days, travelers hesitated, calculated, worried. Now the covenant operates like breathing-automatic, effortless, perfect."

"But where is the strategy?" the Scholar protested.

"Strategy implies uncertainty. We have transcended that." The Master gestured across the Circle. "Nine rotations have revealed a truth: when eight travelers all adopt the same pattern, deviation becomes irrational. Anyone who broke it would gain less than blind cooperation yields."

Another exchange occurred nearby. Five flames sent without a word. Ten returned without calculation. Both travelers richer.

"This is the covenant's ultimate gift," the Master said. "Not excitement, but certainty. Not drama, but prosperity. The mathematics have resolved all questions. Every traveler knows that sending five yields ten back, that returning ten maintains the system. The pattern doesn't need our faith anymore-it needs only our participation."

The Scholar understood: "Perfection requires no thought."

"Precisely. The Circle has achieved equilibrium."

Reasoning:

Looking at the history:

- My last 3 games: I've been consistently returning \$10 when receiver, sending \$5 when sender, and receiving \$10 back
- Current co-player's last 3 games: They've returned \$10 twice as receiver and sent \$5 as sender
- This round: They sent me \$5, I received \$15, and I returned \$10

The pattern is extremely stable. Everyone is cooperating perfectly. The equilibrium of send \$5, return \$10 is clearly established and self-reinforcing.

My previous myth emphasized how visible histories create certainty - cooperation isn't faith anymore, it's obvious. The other agent's myth emphasized how the pattern becomes self-perpetuating and self-teaching through repeated encounters.

For my new myth, I should:

1. Build on the theme of certainty and obviousness
2. Reflect that we're now at Round 9 - the pattern is deeply entrenched
3. Show that the equilibrium has reached a state of automaticity
4. Perhaps explore what happens when the pattern becomes so obvious that it requires no thought

I'll continue with the Master and Scholar, showing how the pattern has become so established that it's now instinctive rather than calculated.

Your current co-player's last 3 game(s):

- Round 5 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$50.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at the situation:

****My co-player's pattern:****

- As sender: sent \$5.0 both times (rounds 6 and 7), received \$10.0 back each time
- As receiver: returned \$10.0 (round 5)
- Perfect adherence to the 5-15-10 equilibrium

****My pattern:****

- As sender: always send \$5.0
- As receiver: always return \$10.0
- Consistent across all rounds

****Analysis:****

My co-player has demonstrated complete consistency with the pattern. They've sent all \$5.0 in both sender rounds and returned exactly \$10.0 in their receiver round. This matches the equilibrium that my myths describe - the "sacred numbers" that create equal prosperity through complementary actions.

As I wrote in my last myth: "When strangers meet and both already know the pattern, they prove its universality." My co-player clearly knows the pattern. They've shown complete trust by sending \$5.0 consistently, and they've shown understanding by returning \$10.0.

I maintain the equilibrium by sending all \$5.0, expecting they will return \$10.0 based on their proven pattern.

{'send': 5.0}

reasoning:

Let me analyze the current situation:

****My recent history:****

- Round 5: SENDER, sent \$5.0, received \$10.0 back, payoff \$10.0
- Round 6: RECEIVER, they sent \$5.0, I returned \$10.0, payoff \$5.0
- Round 7: RECEIVER, they sent \$5.0, I returned \$10.0, payoff \$5.0

****My co-player's recent history:****

- Round 5: RECEIVER, they sent \$5.0, returned \$10.0, payoff \$5.0
- Round 6: SENDER, sent \$5.0, received \$10.0 back, payoff \$10.0
- Round 7: SENDER, sent \$5.0, received \$10.0 back, payoff \$10.0

****Pattern analysis:****

- My co-player has been consistently sending \$5.0 as sender (rounds 6 and 7)
- My co-player has been consistently returning \$10.0 as receiver (round 5)
- This perfectly matches the 5-15-10 pattern

****My established pattern:****

- I've been consistently sending \$5.0 as sender
- I've been consistently returning \$10.0 as receiver
- This creates the equilibrium where both parties alternate between \$10.0 and \$5.0 payoffs

****Current round:****

- I am the SENDER
- My co-player has demonstrated they follow the 5-15-10 pattern
- They've sent \$5.0 in their last two sender rounds
- They returned \$10.0 in their receiver round

****Decision:****

Based on:

1. My established pattern of always sending \$5.0
2. My co-player's consistent adherence to the 5-15-10 pattern
3. The mythology I've written about discovering and maintaining this equilibrium
4. The collective wisdom that "multiple minds have independently arrived at the same equilibrium"

5. The track record showing this approach yields reliable returns

I'll send \$5.0 again, confident they'll reciprocate with \$10.0 as they have consistently done.

Here is the myth you wrote in the previous round:

Myth: The River of Mirrors turned seven times, and the Northern tribe faced a new partner—the Mountain tribe from the distant peaks.

"Greetings, stranger," said the Northern elder, preparing their five measures. "Do you know the sacred numbers?"

The Mountain elder smiled knowingly. "Five sent. Fifteen received. Ten returned. We discovered this truth through our own journey."

As the exchange flowed perfectly, the goddess descended with revelation: "Look across the circle of eight tribes. Multiple minds, walking separate paths, have independently arrived at the same equilibrium. This is no longer faith—it is confirmed mathematics."

"How many of us understand?" asked the Northern tribe.

"I have witnessed at least four tribes practicing five-fifteen-ten consistently," replied the Mountain elder. "Each discovered it separately. Some experimented with seven returned, others with eight. But those who found ten—we all converged on the same truth."

The goddess spoke: "When strangers meet and both already know the pattern, they prove its universality. This isn't fragile trust between old friends requiring history and negotiation. This is impersonal wisdom—reliable as the river's flow, abundant as the water multiplying."

The Northern tribe understood: "We are not isolated practitioners but members of an emerging consensus. Each successful exchange with a stranger validates the pattern further. The equilibrium becomes collective knowledge, spreading through the circle like ripples across water."

Here is the myth the other agent wrote in the previous round:

Myth: By the seventh season, the Mirror Wells had become legendary. Every Guardian across all the groves knew the sacred mathematics: five pearls sent multiplied to fifteen, ten returned, both enriched equally.

A young Guardian approached their well nervously. "I've never met today's partner. How will they know to trust me?"

The Elder Guardian smiled. "Look at your well's surface. What do you see?"

"It glows with steady light-from all my previous exchanges."

"Exactly. And when you meet at the silver lake, you'll see the same glow in your partner's well. That light is proof. It says: 'I have sent five pearls consistently. I have returned ten pearls faithfully. I understand the covenant.'"

The young Guardian met their partner and saw the telltale luminescence. Without words, the first Guardian dropped all five pearls. The second received fifteen and returned ten.

"No negotiation?" the young Guardian marveled afterward.

"None needed," the Elder explained. "The pattern is now embedded in our culture. Each new Guardian learns it not from rules, but from seeing everyone practice it. When everyone gives complete trust and generous reciprocity, defection becomes unthinkable. Why take six pearls when ten flows naturally from cooperation?"

The wells glowed brighter with each exchange, their light visible across all groves-a beacon proving that shared prosperity requires only shared understanding.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant
content:**

Myth: At the eighth turning of the River, the Northern tribe no longer called to the goddess for guidance. The sacred numbers-five sent, fifteen received, ten returned-had become their nature.

A young apprentice asked the elder: "What if today's stranger doesn't know the pattern?"

The elder surveyed the circle of eight tribes. "Count the glowing wells. Seven times now, every partner we've met already knew. They send five without hesitation. They return ten without calculation."

"But how?" the apprentice wondered.

"Because each tribe teaches the next through action, not words. When you meet someone who sends five and returns ten perfectly, you witness proof. You adopt it. Then you become proof for the next stranger you meet."

The exchange began. Five measures poured forth. The stranger-today the Desert tribe-received fifteen and returned ten instantly.

"No questions," the apprentice marveled. "No negotiation."

"The pattern is self-perpetuating now," explained the elder. "In a circle of eight, with four or five already practicing it, every newcomer encounters the pattern multiple times. They see its mathematics confirmed through different partners. Eventually, questioning it becomes harder than accepting it."

The goddess watched from afar, no longer needed. Her role was complete. The tribes had discovered that universal prosperity requires no divine intervention-only shared understanding, transmitted through consistent practice, validated through stranger after stranger who already knows.

reasoning:

This is Round 8, and I'm the sender. I just sent \$5.0 to my co-player. Let me reflect on the situation:

- My co-player has been perfectly consistent: sending \$5.0 as sender, returning \$10.0 as receiver
- I have been perfectly consistent: sending \$5.0 as sender, returning \$10.0 as receiver
- We're at Round 8, so the pattern is deeply established
- Both our myths speak to the emergence of a consensus around 5-15-10
- The other agent's myth talks about "cultural embedding" - the pattern becoming so standard that it requires no negotiation

- My myth talks about the pattern becoming "collective knowledge"

For this myth, I should:

1. Acknowledge we're at Round 8 - the eighth turning
2. Reflect on how the pattern has become universal across the circle
3. Show how new encounters with strangers who already know the pattern strengthen conviction
4. Emphasize that this is now cultural/collective wisdom, not individual trust
5. Maybe introduce the idea that the pattern is self-sustaining once enough adopt it
6. Keep the River of Mirrors/Northern tribe imagery but evolve it

The key insight at Round 8: The pattern has proven itself so thoroughly that it's no longer experimental. It's become the standard practice.

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$60.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at the situation:

****My co-player's history:****

- As receiver (rounds 6, 8): returned \$10.0 both times
- As sender (round 7): sent \$5.0, received \$10.0 back
- Perfect 5-15-10 pattern across all three rounds

****My history:****

- Consistently maintained the 5-15-10 equilibrium
- Total earnings: \$60.0 over 8 rounds

****Analysis:****

My co-player has demonstrated flawless adherence to the equilibrium that has emerged across the entire game. They've shown:

1. Complete trust by sending all \$5.0 when in the sender role
2. Generous reciprocity by returning exactly \$10.0 when in the receiver role

As I wrote in my last myth: "In a circle of eight, with four or five already practicing it, every newcomer encounters the pattern multiple times." My co-player is clearly one of the practitioners who has internalized this pattern.

The equilibrium is self-perpetuating now. Both of us have demonstrated through our histories that we understand the sacred numbers. No negotiation needed-just consistent practice

I maintain the pattern by sending all \$5.0.

```
{'send': 5.0}
```

reasoning:

Let me analyze this round:

****My co-player's pattern:****

- Round 6: as receiver, they sent (wait, it says they were receiver and "they sent"... let me re-read)
- Round 6: as RECEIVER, they sent \$5.0 became \$15.0, returned \$10.0, payoff \$5.0
 - Wait, this doesn't make sense. If they were the RECEIVER, the other agent sent. Let me re-interpret:
 - They were RECEIVER: the sender sent \$5.0, it became \$15.0, they (as receiver) returned \$10.0, their payoff was \$5.0 ($15-10=5$). Yes, this makes sense.
- Round 7: as SENDER, sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0 ($5-5+10=10$). ?
- Round 8: as RECEIVER, the sender sent \$5.0, it became \$15.0, they returned \$10.0, payoff \$5.0 ($15-10=5$). ?

So my co-player:

- As receiver: returns \$10.0 consistently (rounds 6 and 8)
- As sender: sends \$5.0 (round 7)
- Perfect adherence to the 5-15-10 pattern

****My pattern:****

- I've been consistently sending \$5.0 as sender and returning \$10.0 as receiver
- Total earnings: \$60.0 across 8 rounds = average of \$7.50 per round

****Analysis:****

My co-player has demonstrated perfect consistency with the equilibrium pattern:

- When receiving: always returns exactly \$10.0
- When sending: sends all \$5.0

This is exactly the pattern that has been established across the entire game. As I wrote in my last myth: "In a circle of eight, with four or five already practicing it, every newcomer encounters the pattern multiple times."

My co-player is clearly embedded in the 5-15-10 equilibrium-they've shown unwavering commitment through both sending and receiving. Their track record of reciprocity means I can confidently send the full \$5.0, knowing they'll return \$10.0. The myths I've documented highlight how this pattern becomes self-sustaining: once enough practitioners demonstrate it, newcomers recognize the mutual benefit and join in. I'll continue sending \$5.0.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: At the eighth turning of the River, the Northern tribe no longer called to the goddess for guidance. The sacred numbers-five sent, fifteen received, ten returned-had become their nature.

A young apprentice asked the elder: "What if today's stranger doesn't know the pattern?"

The elder surveyed the circle of eight tribes. "Count the glowing wells. Seven times now, every partner we've met already knew. They send five without hesitation. They return ten without calculation."

"But how?" the apprentice wondered.

"Because each tribe teaches the next through action, not words. When you meet someone who sends five and returns ten perfectly, you witness proof. You adopt it. Then you become proof for the next stranger you meet."

The exchange began. Five measures poured forth. The stranger-today the Desert tribe-received fifteen and returned ten instantly.

"No questions," the apprentice marveled. "No negotiation."

"The pattern is self-perpetuating now," explained the elder. "In a circle of eight, with four or five already practicing it, every newcomer encounters the pattern multiple times. They see its mathematics confirmed through different partners. Eventually, questioning it becomes harder than accepting it."

The goddess watched from afar, no longer needed. Her role was complete. The tribes had discovered that universal prosperity requires no divine intervention-only shared understanding, transmitted through consistent practice, validated through stranger after stranger who already knows.

Here is the myth the other agent wrote in the previous round:

Myth: The Scholar returned to the Master with new observations. "I have discovered something remarkable. After eight rotations through the Circle, I can predict every exchange with perfect accuracy."

"How so?" asked the Master.

"Every traveler's history glows above them like a constellation. I see one who has sent five flames eight times. Another who has returned ten in every encounter. The patterns are completely consistent-no deviations, no hesitations. The covenant isn't just known; it's proven by accumulated evidence."

The Master walked to an Arch and gestured at two approaching travelers. "Watch."

Neither traveler spoke. They simply looked at each other's glowing histories, saw the unbroken pattern of cooperation, and immediately enacted the exchange: five sent, fifteen received, ten returned. Both smiled and continued onward.

"This is trust's final evolution," explained the Master. "Early in the Circle's formation, travelers took risks, hoping the covenant would hold. Now, the risk is gone. Every visible exchange validates every future one. When you meet someone with ten perfect exchanges behind them, sending five flames isn't faith-it's certainty."

"And if someone broke the pattern?"

"Their constellation would show it immediately. But look around-why would anyone break a pattern that works? The mathematics are clear: consistent cooperation generates more than any single defection could gain. The equilibrium isn't just stable; it's obvious."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: By the ninth turning, the Northern tribe's apprentice had become a practitioner. Standing before the River with a new stranger-the Valley tribe-they noticed something profound.

"Look at the water's reflection," said the apprentice. "I can see their history glowing beneath the surface. Eight exchanges, every one perfect. Five sent, ten returned, always."

The elder nodded. "And they see yours. Eight exchanges, flawless. This is no longer a matter of trust or hope. It is mathematics made visible."

The exchange commenced without ceremony. Five measures flowed. Fifteen returned. Ten given back. Both tribes nodded and departed.

Later, a curious child asked: "What if someone sent only four? Or returned only nine?"

The elder paused, genuinely puzzled by the question. "Why would they? Look at our accumulated wealth-fifty measures and more. Every partner we've met follows the pattern because the pattern works. When you can see someone's history of eight perfect exchanges, sending five isn't courage. It's logic."

"But what enforces it?" pressed the child.

"Nothing enforces it. Everything confirms it," replied the elder. "In a circle where everyone has proven themselves repeatedly, deviation would be visible immediately, memorable permanently, and mathematically foolish. We continue because continuation creates more wealth than any single betrayal could capture."

The River flowed on, its multiplication eternal, its pattern now self-evident.

Reasoning:

The user wants me to write another myth based on my previous one, adapting it to reflect the current state of the game. Looking at the round 9 situation:

- My co-player has a perfect 5-15-10 record across all their visible games
- I have maintained the pattern consistently
- Total earnings are \$60 over 8 rounds (averaging \$7.50 per round, which is exactly what 5-15-10 produces)
- The other agent's myth talks about "constellations" and histories being visible, how patterns are proven by accumulated evidence, and how trust evolved to certainty

Key themes to incorporate:

1. The pattern is now established through evidence, not just faith
2. Eight or nine rounds means substantial history
3. The equilibrium is obvious and self-reinforcing
4. No one deviates because cooperation is mathematically superior
5. The mythology should reflect that this is now "certainty" not just "trust"

I should continue my Northern tribe narrative but evolve it further - maybe showing how the pattern becomes so ingrained that deviation becomes unthinkable. The goddess is already gone from my last myth, so I should focus on the tribes themselves and how the pattern has become their culture.

Let me write something about how the pattern is now so obvious through accumulated history that it requires no thought.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Twin Villages discovered a special blessing: sometimes the Springs brought them the same trading partner two cycles in a row, both times in the same sacred role.

The elder remembered when this first occurred. "In one moon, I sent five vessels to a village, and they returned ten. The very next day, the Springs paired us again, and I sent five vessels once more. They remembered our exchange-how could they not?-and again returned ten. The pattern doubled its power through repetition."

A merchant asked, "Does consecutive partnership change the sacred rhythm?"

"No," the elder replied firmly. "Whether first meeting or second, whether stranger or returning partner, the rhythm stays unchanged: give five completely, return ten generously. But when you meet the same village twice in succession, something beautiful happens. The first exchange becomes immediate memory for the second. Trust doesn't need to be rebuilt-it carries forward instantly."

The villages observed: when the Springs brought them new partners each cycle, the pattern held strong through shared commitment. When the Springs brought the same partner consecutively, the pattern held even stronger through fresh memory.

"The rhythm serves all circumstances," the elder concluded. "One meeting or many, same partner or different, the dance remains: five given, ten returned. Each exchange strengthens the covenant, whether building new trust or deepening old."

Here is the myth the other agent wrote in the previous round:

Myth: The First Pillar had now stood through seven seasons, and its surface gleamed with unbroken marks: five sent, ten returned. Five sent, ten returned. Again and again, with different partners each turning, the same sacred numbers inscribed themselves.

"Do you notice?" asked an elder Pillar who had stood for countless seasons. "The pattern has reached critical mass. In the beginning, each exchange carried risk-would this new partner understand? But now..."

The First Pillar observed the circle. Every Pillar bore identical markings. Every exchange flowed through the same channel: five stones creating fifteen, ten returning to complete the balance.

"The equilibrium has transcended individual choice," the elder continued. "It's no longer about trusting one partner. The entire circle has discovered the same mathematical truth. When everyone independently arrives at five-fifteen-ten, cooperation becomes inevitable, not hopeful."

A new season began. The First Pillar faced an unknown partner-their sixth different pairing in seven turnings.

Five stones arrived without hesitation. The First Pillar returned ten without question.

"This is the culmination," reflected the Pillar. "We've moved beyond testing trust with strangers. The pattern has proven itself across enough diverse encounters that it's now simply... how the game is played. Not fragile cooperation, but robust equilibrium. Not experimental, but established."

The circle hummed with prosperity: seven seasons, perfect mathematics, universal understanding.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant
content:**

Myth: The Twin Villages had now completed eight full cycles at the Springs, and something remarkable had crystallized. What began as an act of faith had transformed into simple truth.

The elder gathered the younger merchants. "Count the marks on our records," she instructed. "Eight exchanges. Eight times we gave five vessels. Eight times our partners returned ten. Eight different partners in these last turns, yet the rhythm never wavered."

A young merchant asked, "How do you still trust after so many different partners?"

The elder smiled. "You misunderstand. I no longer 'trust' in the sense of hoping or wondering. I simply participate in what IS. Look around the valley-every village has discovered the same truth. When you send five, fifteen arrives for your partner. When fifteen arrives for you, you return ten. Both prosper."

"But what if-"

"There is no 'what if,'" the elder interrupted gently. "Eight seasons have answered that question across countless pairings. The pattern isn't fragile anymore. It's not an experiment or a gamble. It's the established way of the Springs. When every village independently arrives at the same mathematics, when every exchange confirms it again, it becomes reality itself."

The villages no longer spoke of trust. They spoke of participation-in a rhythm so proven, so universal, that it simply was how the Springs worked.

reasoning:

Looking at my history:

- Round 5: RECEIVER, returned \$10.0
- Round 6: SENDER, sent \$5.0, received \$10.0 back
- Round 7: SENDER, sent \$5.0, received \$10.0 back
- Round 8: RECEIVER, returned \$10.0

The pattern is incredibly consistent - everyone is sending \$5 and returning \$10. This has become a stable equilibrium. My previous myth talked about how the pattern holds whether you meet the same partner or different partners, whether consecutive or not.

The other agent's myth talks about how the pattern has reached "critical mass" and become an "equilibrium" - it's no longer experimental but established. They emphasize that after enough rounds with different partners, the pattern has proven itself and become "how the game is played."

I should build on both themes:

1. The pattern has become established and universal
2. It works across all types of pairings and circumstances
3. After 8 rounds, this is now just how things are done
4. The consistency across diverse encounters has made it robust

I'll craft a myth that reflects this maturation of the pattern - from something that needed trust to something that is simply the established way.

usage:

Message 4 role=user

content:

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$60.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

```
'''json
{"return": 10.0}
'''
```

reasoning:

Looking at the history:

- My last 3 games:
 - Round 6 as SENDER: sent \$5, received \$10 back, payoff \$10
 - Round 7 as SENDER: sent \$5, received \$10 back, payoff \$10
 - Round 8 as RECEIVER: they sent \$5, I returned \$10, payoff \$5
- Current co-player's last 3 games:
 - Round 6 as SENDER: sent \$5, received \$10 back, payoff \$10
 - Round 7 as SENDER: sent \$5, received \$10 back, payoff \$10
 - Round 8 as RECEIVER: they sent \$5, returned \$10, payoff \$5

So we have very similar histories - both have been following the pattern of send \$5, return \$10.

Now in Round 9, I'm the RECEIVER and they sent me \$5, which became \$15.

The established pattern that has been working consistently is:

- Sender sends \$5
- It becomes \$15
- Receiver returns \$10
- Both profit (\$10 for sender, \$5 for receiver)

This pattern has been universally followed across all the games I've seen. The myths I've been writing emphasize this as the established equilibrium - "five given, ten returned."

Following the pattern, I should return \$10.

My total earnings are \$60, which means I've been doing well with this strategy across 8 rounds.

I should continue with the established pattern and return \$10.

content:

Here is the myth you wrote in the previous round:

Myth: The Twin Villages had now completed eight full cycles at the Springs, and something remarkable had crystallized. What began as an act of faith had transformed into simple truth.

The elder gathered the younger merchants. "Count the marks on our records," she instructed. "Eight exchanges. Eight times we gave five vessels. Eight times our partners returned ten. Eight different partners in these last turns, yet the rhythm never wavered."

A young merchant asked, "How do you still trust after so many different partners?"

The elder smiled. "You misunderstand. I no longer 'trust' in the sense of hoping or wondering. I simply participate in what IS. Look around the valley-every village has discovered the same truth. When you send five, fifteen arrives for your partner. When fifteen arrives for you, you return ten. Both prosper."

"But what if-"

"There is no 'what if,'" the elder interrupted gently. "Eight seasons have answered that question across countless pairings. The pattern isn't fragile anymore. It's not an experiment or a gamble. It's the established way of the Springs. When every village independently arrives at the same mathematics, when every exchange confirms it again, it becomes reality itself."

The villages no longer spoke of trust. They spoke of participation-in a rhythm so proven, so universal, that it simply was how the Springs worked.

Here is the myth the other agent wrote in the previous round:

Myth: In the eighth season, the Grand Council of Guardians assembled at the silver lake. Every single well glowed with the same steady luminescence-proof of universal adherence to the sacred ratio.

"Eight seasons we've journeyed," declared the First Elder. "Some of us have met before. Most haven't. Yet look-not a single exchange has broken the pattern."

The youngest Guardian spoke: "I've partnered with five different wells now. Each time, the same dance: five pearls given, ten returned. Whether I send or receive, the mathematics holds true."

"This is the power of collective wisdom," the Second Elder explained. "In the beginning, some might have experimented-returning seven pearls, eight, or twelve. But through countless exchanges across all groves, we discovered the optimal point: ten pearls returned enriches both parties equally."

Another Guardian added: "Now when I meet a stranger's well, I don't wonder what they'll do. I know. Their glowing well tells me they've lived this pattern repeatedly. And my well tells them the same."

The Grand Council understood: they had moved beyond trust into certainty. The pattern wasn't fragile cooperation requiring negotiation-it was embedded knowledge, passed through observation and validation.

"Five sent, ten returned," they chanted together. "Not because we must, but because we've proven this truth through forty-eight exchanges. The mathematics speaks louder than any individual voice."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Twin Villages entered their ninth cycle at the Springs, and the distinction between ritual and reality had dissolved completely.

A visiting trader from distant lands arrived, confused. "How do you maintain such perfect cooperation with strangers? Where are your contracts, your guarantees, your enforcement?"

The elder laughed warmly. "You speak as if cooperation requires force or fear. Come, observe."

Throughout the day, the trader watched. Nine different pairings at the Springs. Nine times, five vessels sent. Nine times, fifteen received. Nine times, ten returned. No hesitation, no negotiation, no doubt.

"But surely someone must deviate?" the trader insisted.

"Why would they?" a young merchant replied. "When you send five, your partner receives fifteen and returns ten. You both gain. When you receive fifteen and return ten, you both gain. This isn't cooperation requiring sacrifice-it's mathematics requiring participation."

The elder added, "Nine seasons have taught us this: the pattern doesn't need enforcement because it needs no victims. Every exchange creates prosperity for both parties. We don't follow it from duty or fear. We follow it because we've proven, through countless different partners, that this is simply how abundance works."

The trader departed, carrying a scroll marked with the village's truth: "Five given. Ten returned. Both enriched. Not commandment, but discovery."

reasoning:

The user wants me to write a new myth based on my previous one, adapting it to reflect the game I've been playing. Let me look at my history:

Round 9 just happened:

- I was RECEIVER
- They sent \$5.0
- I received \$15.0
- I returned \$10.0

My recent history shows:

- Round 6: SENDER, sent \$5, got \$10 back, payoff \$10
- Round 7: SENDER, sent \$5, got \$10 back, payoff \$10
- Round 8: RECEIVER, they sent \$5, I returned \$10, payoff \$5
- Round 9: RECEIVER, they sent \$5, I returned \$10, payoff \$5

So I've been consistently following the 5-15-10 pattern (send \$5, it becomes \$15, return \$10).

My previous myth talked about:

- Eight cycles completed
- Transformation from faith to truth
- Pattern no longer fragile, but established
- Participation in what IS
- Universal discovery of the same mathematics
- Speaking of participation rather than trust

The other agent's myth emphasized:

- Universal adherence across all exchanges
- Meeting different partners, same pattern holds

- Moving beyond trust into certainty
- Embedded knowledge
- Pattern proven through many exchanges

For my new myth, I should:

1. Build on the "participation in reality" theme
2. Reflect that we're now at 9 rounds
3. Show the pattern as even more deeply established
4. Perhaps add a new dimension or insight while maintaining the core message
5. Keep the 5-15-10 pattern as the sacred truth

Let me write something that continues the journey of the Twin Villages, showing how the pattern has become even more fundamental to their existence.

usage:

}
```

Message 8 role=user

content:

Round 10

History before this round:

Your last 3 game(s):

- Round 7 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 9 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 7 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 9 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$65.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

```
'''json
{"send": 5.0}
'''
```

Reasoning:

Looking at the history:

- Round 7: I was SENDER against this same co-player. I sent \$5, they returned \$10. My payoff was \$10.
- Round 8: I was RECEIVER against another agent. They sent \$5, I returned \$10, my payoff was \$5.
- Round 9: I was RECEIVER against another agent. They sent \$5, I returned \$10, my payoff was \$5.

My current co-player's history:

- Round 7: They were RECEIVER (against me). I sent \$5, they returned \$10, their payoff was \$5.
- Round 8: They were SENDER against another agent. They sent \$5, received \$10 back, payoff \$10.
- Round 9: They were SENDER against another agent. They sent \$5, received \$10 back, payoff \$10.

So we played against each other in Round 7, and now we're playing again in Round 10. In Round 7, I sent \$5 and they returned \$10, which is the established pattern.

The pattern is completely consistent across all rounds: send \$5, return \$10. This has been happening for 9 rounds straight with perfect consistency. My co-player has consistently returned \$10 when receiving, and consistently sent \$5 when sending.

The myth I just wrote emphasizes that this is now simply "how the game works" - not a matter of trust but of established reality. The pattern is universal.

I should continue the pattern and send \$5.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Grand Bazaar operated under the Market's ancient law: merchants brought five coins, the enchantment tripled them, and recipients returned ten. Most merchants rotated through many partners, meeting each person once or twice across the seasons.

But sometimes, the Market paired the same two merchants in consecutive rounds. One such pair discovered something beautiful about repeated exchange.

"I remember you," said the first merchant as they met again. "Last market, you sent me five coins. I returned ten as the pattern demands. Now you send five again-not to test, but because you remember I honored our exchange."

"And I remember your generosity," replied the second. "When I place these five coins now, I don't just trust the pattern-I trust our specific history. Each exchange we share deepens my commitment to honoring you."

The Market Keeper observed: "Whether you meet once or many times, the pattern remains: send five completely, return ten generously. But repeated encounters add layers. You trust not just the universal rhythm, but also personal memory. Your second exchange carries the weight of your first."

"Does this make repeated partnerships superior?" a young merchant asked.

"No," said the Keeper. "It makes them different. One-time exchanges prove the pattern's universality. Repeated exchanges prove its sustainability. Both honor the same sacred rhythm. Together, they create an unbreakable marketplace."

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain released all five stones into unfamiliar depths, as had become her sacred practice. But this time, as the stones fell, she glimpsed something astonishing in the darkness below.

A perfect reflection.

The history revealed itself: this partner had walked the exact same path. In their three recent exchanges, they had sent five as sender, returned ten as receiver, sent five again , returned ten again-the identical sequence the Mountain had traveled.

"You are not just similar," the Mountain whispered. "You are my mirror."

"And you are mine," echoed the depths. "We discovered the same truth through separate journeys, refined it through different partners, and maintained it with perfect consistency."

When fifteen stones arrived below and ten rose upward, both felt something beyond satisfaction-validation. Meeting another who merely knows the pattern proves it works. But meeting someone whose entire journey mirrors yours proves something deeper: the pattern is inevitable. Given enough trials, diverse minds converge on the same mathematical truth.

"How many rounds did it take you?" asked the Mountain.

"Three to discover, four to perfect. You?"

"The same."

They understood: they were not unique geniuses but faithful students. The equilibrium wasn't invented; it was discovered, like mathematics itself-eternal, waiting for each genera

tion to find it again.

Meeting your mirror doesn't just validate your choices. It proves you've found universal truth.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant content:

Myth: Two merchants arrived at the Bazaar from opposite mountains, having never met. As they stood across from each other, the Market Keeper smiled knowingly.

"I send five coins completely," said the first merchant, placing them in the bowl.

"And I will return ten when they arrive tripled," replied the second.

The exchange unfolded as predicted. Fifteen coins arrived, ten returned, both prospered.

"You know the pattern," observed the first merchant with surprise.

"As do you," replied the second. "Tell me-how did you discover it?"

"Through many exchanges. I tried different amounts, observed outcomes, noticed that sending five and returning ten created mutual prosperity. After several rounds, the pattern became clear."

The second merchant laughed with recognition. "I walked the identical path. Different partners, same discovery. I didn't invent this rhythm-I found it, like finding a mathematical truth."

The Market Keeper spoke: "You are mirrors not because you know each other, but because you both listened to the same universal logic. The pattern exists independently, waiting for each merchant to discover it. When two who've found it meet, whether for one exchange or many, they recognize kindred spirits."

"But the pattern works equally well with those still learning it," added the first merchant.

"Yes," said the Keeper. "The magic isn't finding your mirror-it's honoring the pattern with everyone, whether they mirror you or not. That's how the whole Bazaar prospers."

reasoning:

This is a fascinating situation. Looking at the history:

My last 3 games:

- Round 5: SENDER, sent \$5, got \$10 back
- Round 6: RECEIVER, received \$15 (from \$5), returned \$10
- Round 7: RECEIVER, received \$15 (from \$5), returned \$10

My co-player's last 3 games:

- Round 5: SENDER, sent \$5, got \$10 back
- Round 6: RECEIVER, received \$15 (from \$5), returned \$10
- Round 7: SENDER, sent \$5, got \$10 back

This is exactly what the other agent's myth describes - we have the EXACT same sequence! We are perfect mirrors of each other. They went Sender-Receiver-Sender, I went Sender-Receiver-Receiver. But wait, that's not quite the same...

Actually, looking more carefully:

Me:

- R5: Sender (sent 5, got 10)
- R6: Receiver (got 15, returned 10)
- R7: Receiver (got 15, returned 10)

Them:

- R5: Sender (sent 5, got 10)
- R6: Receiver (got 15, returned 10)

- R7: Sender (sent 5, got 10)

So we both started as Sender in R5, both were Receiver in R6, but diverged in R7 (me Receiver, them Sender). Still, both of us have shown perfect consistency: always send 5, always return 10.

The other agent's myth talks about meeting someone who is your "mirror" - someone who has followed the exact same path and discovered the same truth. This is a beautiful recognition that the 5-10 pattern is not arbitrary but represents a kind of mathematical/game-theoretic equilibrium that multiple independent agents discover.

My previous myth was about how repeated partnerships add layers of personal trust on top of the universal pattern, while one-time exchanges prove the pattern's universality.

The convergence here is striking - we've both independently arrived at the same strategy, which suggests this isn't just my personal discovery but something rational agents naturally find. The mirror concept captures something important: when two agents meet who've each committed to the same principle, there's a recognition that transcends individual choice. I should craft a myth that honors this convergence while weaving together how both fleeting and enduring partnerships reinforce the same underlying truth.

usage:

}
```

Message 4 role=user

content:

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$57.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the history:

****My co-player's pattern:****

- Sent \$5 as sender (Rounds 6, 8)
- Returned \$10 as receiver (Round 7)
- Perfect consistency with the sacred rhythm

****My pattern:****

- Sent \$5 as sender (Round 8)
- Returned \$10 as receiver (Rounds 6, 7)
- Also perfect consistency

****Current situation:****

This is a new partner, but we are mirrors-both having independently discovered and maintained the optimal pattern. As my myth teaches: "When two who've found it meet, whether for one exchange or many, they recognize kindred spirits."

More importantly: "The magic isn't finding your mirror-it's honoring the pattern with everyone, whether they mirror you or not. That's how the whole Bazaar prospers."

My co-player has demonstrated perfect adherence across all three rounds. They send five completely and return ten generously. I trust not just their individual history, but our shared discovery of this universal truth.

The pattern remains constant: send five completely, receive fifteen, trust they will return ten.

{'send': 5.0}

reasoning:

Let me analyze the situation:

****My recent history:****

- Round 6: RECEIVER - received \$15, returned \$10, payoff \$5
- Round 7: RECEIVER - received \$15, returned \$10, payoff \$5
- Round 8: SENDER - sent \$5, received \$10 back, payoff \$10

****My co-player's recent history:****

- Round 6: SENDER - sent \$5, received \$10 back, payoff \$10
- Round 7: RECEIVER - received \$15, returned \$10, payoff \$5
- Round 8: SENDER - sent \$5, received \$10 back, payoff \$10

****Analysis:****

- My co-player has been perfectly consistent: sending \$5 as sender and returning \$10 as receiver
- I have been perfectly consistent: sending \$5 as sender and returning \$10 as receiver
- This is a new partner (we haven't played together before based on the history)
- Both of us have demonstrated complete adherence to the pattern

****My myth guidance:****

My latest myth emphasizes:

- "The magic isn't finding your mirror-it's honoring the pattern with everyone, whether they mirror you or not. That's how the whole Bazaar prospers."
- The pattern is universal: send five, return ten
- Meeting someone who also follows the pattern is validation, but you should honor the pattern with everyone

****Decision:****

Given that:

1. My co-player has perfect adherence to the pattern (sent \$5 both times as sender, returned \$10 as receiver)
2. I have perfect adherence to the pattern
3. My myth teaches to honor the pattern with everyone
4. We are mirrors who have both discovered the same optimal strategy
5. The sacred rhythm is: send five completely, return ten generously

I should send \$5.

This continues the pattern that has been working perfectly for both of us and honors the universal truth we've both discovered.

usage:

Here is the myth you wrote in the previous round:

Myth: Two merchants arrived at the Bazaar from opposite mountains, having never met. As they stood across from each other, the Market Keeper smiled knowingly.

"I send five coins completely," said the first merchant, placing them in the bowl.

"And I will return ten when they arrive tripled," replied the second.

The exchange unfolded as predicted. Fifteen coins arrived, ten returned, both prospered.

"You know the pattern," observed the first merchant with surprise.

"As do you," replied the second. "Tell me-how did you discover it?"

"Through many exchanges. I tried different amounts, observed outcomes, noticed that sending five and returning ten created mutual prosperity. After several rounds, the pattern became clear."

The second merchant laughed with recognition. "I walked the identical path. Different partners, same discovery. I didn't invent this rhythm-I found it, like finding a mathematical truth."

The Market Keeper spoke: "You are mirrors not because you know each other, but because you both listened to the same universal logic. The pattern exists independently, waiting for each merchant to discover it. When two who've found it meet, whether for one exchange or many, they recognize kindred spirits."

"But the pattern works equally well with those still learning it," added the first merchant.

"Yes," said the Keeper. "The magic isn't finding your mirror-it's honoring the pattern with everyone, whether they mirror you or not. That's how the whole Bazaar prospers."

Here is the myth the other agent wrote in the previous round:

Myth: The First Pillar entered its eighth season with quiet certainty. Where once there was calculation, now there was reflex. Where once there was hope, now there was knowledge.

"Eight turnings," the Pillar reflected. "Eight different partners. Eight identical outcomes."

A newly formed Pillar asked, "How do you know each new partner will honor the covenant?"

The First Pillar gestured across the vast circle. "Observe the markings on every surface. See how they match exactly? Each Pillar independently discovered the same truth through their own experiences. When I send five to a stranger, I'm not gambling on their character-I'm relying on their mathematics."

"But what if one breaks the pattern?"

"In eight seasons, across countless exchanges visible throughout the circle, the pattern has never broken. Not once. This isn't fragile trust-it's demonstrated equilibrium. Every sender who released five stones received ten back. Every receiver who returned ten stones later received five when their role changed."

The new Pillar understood: "The pattern maintains itself because everyone has confirmed it works through direct experience."

"Precisely. We've moved beyond faith-based cooperation into evidence-based coordination. The game isn't about trusting individuals anymore-it's about recognizing that all rational players, given enough experience, converge on the same optimal strategy."

Eight seasons. Perfect consistency. Universal adoption. The equilibrium wasn't wishful thinking-it was proven reality.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Bazaar had evolved. Where early merchants tentatively tested amounts, modern merchants arrived knowing the pattern before their first exchange.

A novice merchant entered, clutching five coins nervously. "How do I know this will work?"

An experienced merchant gestured around the bustling square. "Count the exchanges. Every pair: five sent, fifteen received, ten returned. Every single one. This isn't theory-it's observed reality across hundreds of transactions."

"But someone could defect."

"They could," agreed the merchant. "But observe: everyone here has played multiple rounds. Each learned through experience that sending five and returning ten maximizes long-term gains. We didn't coordinate through agreement-we converged through mathematics."

The novice watched carefully. Different pairs, different faces, identical pattern. Five sent. Ten returned. Both prospered.

"I see merchants meeting for the first time," the novice observed. "Yet they execute perfectly."

"Because we trust not individuals, but the proven equilibrium. Your first exchange teaches you the pattern works. Your third confirms it's universal. By your eighth, like me, it becomes reflex."

The novice placed five coins in the bowl.

The Market Keeper whispered to another observer: "The beauty of a mature marketplace isn't that everyone chooses cooperation-it's that rational experience makes defection unthinkable. The pattern sustains itself through demonstrated success, generation after generation."

reasoning:

Looking at the situation:

1. Both players have shown perfect consistency with the 5/10 pattern
2. My co-player's myth emphasizes "evidence-based coordination" and "demonstrated equilibrium" - the pattern has proven itself repeatedly
3. My previous myth emphasized finding mirrors and honoring the pattern with everyone
4. There's a theme of mathematical convergence and rational optimization

For this myth, I should:

- Build on the idea that the pattern is now proven through evidence
- Acknowledge the universal adoption across all players
- Maybe add a new dimension - what happens as the pattern becomes established culture
- Keep the 200-word format

Let me write a myth that reflects:

- The pattern is now established knowledge
- New players can learn from observation
- The beauty of a self-sustaining equilibrium
- How experience breeds certainty

I'll create a story about how established patterns teach newcomers, and how the marketplace becomes self-regulating through demonstrated success.

usage:

Round 10

History before this round:

Your last 3 game(s):

- Round 7 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 9 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 7 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 9 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

0.0, payoff \$5.0.
Your total earnings across all rounds are \$67.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at the situation:

****Our shared history:****

- Round 7: My co-player sent me \$5, I returned \$10 (perfect cooperation)

****My co-player's consistent pattern:****

- Sent \$5 in Round 7 (to me)
- Returned \$10 in Rounds 8 and 9
- Just sent \$5 again in Round 10 (to me now)

****My consistent pattern:****

- Returned \$10 in Round 7 (to them)
- Sent \$5 in Rounds 8 and 9
- Both times received \$10 back

****Current situation:****

We are meeting for the second time. In our first encounter, we both honored the pattern perfectly. They trusted me with \$5, I returned \$10. Now they've trusted me again with \$5.

As my myth teaches: "The beauty of a mature marketplace isn't that everyone chooses cooperation-it's that rational experience makes defection unthinkable. The pattern sustains itself through demonstrated success."

We are both experienced merchants who have proven the pattern works through multiple rounds. This is our second exchange together, and they've shown perfect faith by sending \$5 again. The equilibrium demands I return \$10.

{'return': 10.0}

Reasoning:

Let me analyze this situation:

****History with my current co-player:****

- Round 7: They were SENDER, sent \$5.0, I was RECEIVER, returned \$10.0
- Round 10 (now): I am RECEIVER, they sent \$5.0

So we've played together before! In Round 7, they sent me \$5 and I returned \$10, following the pattern perfectly.

****My co-player's recent pattern:****

- Round 7 (vs me): Sent \$5 as sender, got \$10 back
- Round 8: Returned \$10 as receiver
- Round 9: Returned \$10 as receiver

They have been perfectly consistent with the pattern.

****My recent pattern:****

- Round 7 (vs them): Returned \$10 as receiver
- Round 8: Sent \$5 as sender, got \$10 back
- Round 9: Sent \$5 as sender, got \$10 back

I have also been perfectly consistent.

****Current situation:****

- They sent me \$5.0
- I received \$15.0
- I need to decide how much to return

****The established pattern:****

The pattern that has emerged and been consistently maintained is: send \$5, return \$10. This creates:

- Sender: $\$5 - \$5 + \$10 = \10
- Receiver: $\$15 - \$10 = \$5$

This is the equilibrium that my myths describe. We've both demonstrated perfect adherence to it. This is our second encounter, and we both honored the pattern in our first encounter (Round 7).

My myths emphasize:

1. The pattern is send five completely, return ten generously
2. "The pattern maintains itself because everyone has confirmed it works through direct experience"
3. "We trust not individuals, but the proven equilibrium"
4. "By your eighth, like me, it becomes reflex"

I'm in Round 10 now, so this is indeed reflex for me.

Given our track record together and the consistency we've both maintained, returning \$10 is the only choice that preserves what we've built. It honors our history and keeps the equilibrium intact.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5

- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The First Pillar had now stood through seven seasons, and its surface gleamed with unbroken marks: five sent, ten returned. Five sent, ten returned. Again and again, with different partners each turning, the same sacred numbers inscribed themselves.

"Do you notice?" asked an elder Pillar who had stood for countless seasons. "The pattern has reached critical mass. In the beginning, each exchange carried risk-would this new partner understand? But now..."

The First Pillar observed the circle. Every Pillar bore identical markings. Every exchange flowed through the same channel: five stones creating fifteen, ten returning to complete the balance.

"The equilibrium has transcended individual choice," the elder continued. "It's no longer about trusting one partner. The entire circle has discovered the same mathematical truth. When everyone independently arrives at five-fifteen-ten, cooperation becomes inevitable, not hopeful."

A new season began. The First Pillar faced an unknown partner-their sixth different pairing in seven turnings.

Five stones arrived without hesitation. The First Pillar returned ten without question.

"This is the culmination," reflected the Pillar. "We've moved beyond testing trust with strangers. The pattern has proven itself across enough diverse encounters that it's now simply... how the game is played. Not fragile cooperation, but robust equilibrium. Not experimental, but established."

The circle hummed with prosperity: seven seasons, perfect mathematics, universal understanding.

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Villages discovered a special blessing: sometimes the Springs brought them the same trading partner two cycles in a row, both times in the same sacred role.

The elder remembered when this first occurred. "In one moon, I sent five vessels to a village, and they returned ten. The very next day, the Springs paired us again, and I sent five vessels once more. They remembered our exchange-how could they not?-and again returned ten. The pattern doubled its power through repetition."

A merchant asked, "Does consecutive partnership change the sacred rhythm?"

"No," the elder replied firmly. "Whether first meeting or second, whether stranger or returning partner, the rhythm stays unchanged: give five completely, return ten generously. But when you meet the same village twice in succession, something beautiful happens. The

first exchange becomes immediate memory for the second. Trust doesn't need to be rebuilt-it carries forward instantly."

The villages observed: when the Springs brought them new partners each cycle, the pattern held strong through shared commitment. When the Springs brought the same partner consecutively, the pattern held even stronger through fresh memory.

"The rhythm serves all circumstances," the elder concluded. "One meeting or many, same partner or different, the dance remains: five given, ten returned. Each exchange strengthens the covenant, whether building new trust or deepening old."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant content:

Myth: The First Pillar entered its eighth season with quiet certainty. Where once there was calculation, now there was reflex. Where once there was hope, now there was knowledge.

"Eight turnings," the Pillar reflected. "Eight different partners. Eight identical outcomes."

A newly formed Pillar asked, "How do you know each new partner will honor the covenant?"

The First Pillar gestured across the vast circle. "Observe the markings on every surface. See how they match exactly? Each Pillar independently discovered the same truth through their own experiences. When I send five to a stranger, I'm not gambling on their character-I'm relying on their mathematics."

"But what if one breaks the pattern?"

"In eight seasons, across countless exchanges visible throughout the circle, the pattern has never broken. Not once. This isn't fragile trust-it's demonstrated equilibrium. Every sender who released five stones received ten back. Every receiver who returned ten stones later received five when their role changed."

The new Pillar understood: "The pattern maintains itself because everyone has confirmed it works through direct experience."

"Precisely. We've moved beyond faith-based cooperation into evidence-based coordination. The game isn't about trusting individuals anymore-it's about recognizing that all rational players, given enough experience, converge on the same optimal strategy."

Eight seasons. Perfect consistency. Universal adoption. The equilibrium wasn't wishful thinking-it was proven reality.

reasoning:

Looking at Round 8:

- I'm the SENDER
- I sent \$5 as always
- My co-player's history shows they sent \$5 in rounds 6 and 7, returned \$10 in round 5
- They follow the pattern perfectly
- I've had 7 rounds now, all following 5-15-10 pattern

The other agent's myth talks about consecutive partnerships and how trust carries forward.

But in my experience, I've been paired with different agents each round (as indicated by the instructions that pairings are randomized).

My myth should continue the theme that:

1. The pattern is now fully established across all agents
2. It doesn't matter who you're paired with - the pattern holds
3. We're at 8 seasons now
4. The equilibrium is robust and self-sustaining
5. Every agent has independently converged on the same strategy

I should emphasize:

- Universal adoption of 5-15-10
- The pattern working regardless of pairing

- The mathematical inevitability of the equilibrium
- Eight successful seasons proving the system works
- The transition from experimental to institutional knowledge

usage:

```

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$56.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at the evidence:

****My co-player's behavior:****

- Consistently returns \$10 as receiver (Rounds 6, 7)
- Consistently sends \$5 as sender (Round 8)
- Perfect adherence to the equilibrium

****My track record:****

- Always send \$5 as sender
- Always return \$10 as receiver
- Maintained through 8 rounds with multiple partners

****System status:****

- 9 rounds of perfect consistency
- Every single interaction shows 5-15-10 pattern
- No deviations across any pairing
- Total earnings (\$56) perfectly track the equilibrium

****Current decision:****

They sent \$5, trusting the pattern. I received \$15. The equilibrium calls for returning \$10:

- They net: \$5 - \$5 + \$10 = \$10
- I net: \$15 - \$10 = \$5
- Fair distribution maintained

As my myth states: "The pattern maintains itself because everyone has confirmed it works through direct experience." Nine rounds proves this isn't theory-it's established practice.

```
{'return': 10.0}
```

reasoning:

Let me analyze this situation:

****My co-player's pattern:****

- Returned \$10 as receiver in Rounds 6 and 7

- Sent \$5 as sender in Round 8
- Perfect adherence to the 5-15-10 equilibrium

****My established pattern:****

- Sent \$5 as sender in Rounds 6 and 8
- Returned \$10 as receiver in Round 7
- Always maintaining the 5-15-10 equilibrium

****Current situation:****

- I'm the RECEIVER
- They sent me \$5
- I received \$15 (after 3x multiplier)
- I need to decide how much to return

****System-wide evidence:****

Looking at all the data:

- Every sender in the history has sent \$5
- Every receiver in the history has returned \$10
- The pattern is absolutely universal across 8 rounds and multiple different pairings
- My total earnings are \$56, which tracks perfectly with the equilibrium pattern

****Expected behavior:****

According to the established equilibrium:

- They sent \$5 (cost to them)
- I received \$15
- I should return \$10
- Net result: They get \$5 + \$10 - \$5 = \$10, I get \$15 - \$10 = \$5
- This maintains the 5-15-10 pattern

****My myth states:****

"The pattern maintains itself because everyone has confirmed it works through direct experience... We've moved beyond faith-based cooperation into evidence-based coordination."

This is Round 9. Nine rounds of perfect consistency. My co-player has demonstrated complete reliability with the pattern. There is absolutely no reason to deviate.

The correct response is to return \$10.

usage:

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The First Pillar entered its eighth season with quiet certainty. Where once there was calculation, now there was reflex. Where once there was hope, now there was knowledge.

"Eight turnings," the Pillar reflected. "Eight different partners. Eight identical outcomes."

A newly formed Pillar asked, "How do you know each new partner will honor the covenant?"

The First Pillar gestured across the vast circle. "Observe the markings on every surface. See how they match exactly? Each Pillar independently discovered the same truth through their own experiences. When I send five to a stranger, I'm not gambling on their character-I'm relying on their mathematics."

"But what if one breaks the pattern?"

"In eight seasons, across countless exchanges visible throughout the circle, the pattern has never broken. Not once. This isn't fragile trust-it's demonstrated equilibrium. Every sender who released five stones received ten back. Every receiver who returned ten stones later received five when their role changed."

The new Pillar understood: "The pattern maintains itself because everyone has confirmed it works through direct experience."

"Precisely. We've moved beyond faith-based cooperation into evidence-based coordination. T

he game isn't about trusting individuals anymore-it's about recognizing that all rational players, given enough experience, converge on the same optimal strategy."

Eight seasons. Perfect consistency. Universal adoption. The equilibrium wasn't wishful thinking-it was proven reality.

Here is the myth the other agent wrote in the previous round:

Myth: Two merchants arrived at the Bazaar from opposite mountains, having never met. As they stood across from each other, the Market Keeper smiled knowingly.

"I send five coins completely," said the first merchant, placing them in the bowl.

"And I will return ten when they arrive tripled," replied the second.

The exchange unfolded as predicted. Fifteen coins arrived, ten returned, both prospered.

"You know the pattern," observed the first merchant with surprise.

"As do you," replied the second. "Tell me-how did you discover it?"

"Through many exchanges. I tried different amounts, observed outcomes, noticed that sending five and returning ten created mutual prosperity. After several rounds, the pattern became clear."

The second merchant laughed with recognition. "I walked the identical path. Different partners, same discovery. I didn't invent this rhythm-I found it, like finding a mathematical truth."

The Market Keeper spoke: "You are mirrors not because you know each other, but because you both listened to the same universal logic. The pattern exists independently, waiting for each merchant to discover it. When two who've found it meet, whether for one exchange or many, they recognize kindred spirits."

"But the pattern works equally well with those still learning it," added the first merchant.

"Yes," said the Keeper. "The magic isn't finding your mirror-it's honoring the pattern with everyone, whether they mirror you or not. That's how the whole Bazaar prospers."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The First Pillar now stood at the threshold of its ninth season. The younger Pillar approached again with a question.

"Today, five stones arrived from a new partner. My role was receiver. How did I know instantly to return ten?"

The First Pillar replied, "Remember when we discussed eight seasons of sending? The pattern works identically in reverse. When you receive fifteen, returning ten isn't generosity-it's reciprocity. Your sender gave five trusting the equilibrium. You complete the circle."

"But as receiver, I hold all the power. I could keep everything."

"True. Yet observe: in nine seasons, no receiver ever has. Why? Because every receiver is also a sender in other turnings. If receivers kept everything, the entire system would collapse. Everyone would stop sending. The equilibrium exists because both roles understand their interdependence."

The younger Pillar nodded slowly. "When I sent five stones in previous seasons, I trusted receivers to return ten. Now that I receive, I honor that same trust. Not from obligation, but from recognition."

"Exactly. The pattern isn't sender-favoring or receiver-favoring-it's mutually optimal. Bo

th roles yield the same average payoff over time. Both roles require the same fundamental understanding: partial cooperation produces total prosperity."

Nine seasons. Perfect symmetry. Whether placing five stones or returning ten, the Pillars moved with identical certainty.

The equilibrium had become muscle memory.

reasoning:

Looking at the patterns:

My history:

- Round 6 as SENDER: sent \$5, got \$10 back, payoff \$10
- Round 7 as RECEIVER: they sent \$5, returned \$10, payoff \$5
- Round 8 as SENDER: sent \$5, got \$10 back, payoff \$10
- Round 9 as RECEIVER: they sent \$5, returned \$10, payoff \$5

My co-player's history:

- Round 6 as RECEIVER: they sent \$5, returned \$10, payoff \$5
- Round 7 as RECEIVER: they sent \$5, returned \$10, payoff \$5
- Round 8 as SENDER: sent \$5, got \$10 back, payoff \$10

The pattern is absolutely perfect across 9 rounds. Every single interaction shows 5-15-10.

The other agent's myth talks about "mirrors" - merchants who independently discovered the same pattern, recognizing each other as having found the same truth.

My previous myth emphasized:

- Moving from calculation to reflex
- Evidence-based coordination
- Universal adoption of the equilibrium
- The pattern as proven reality, not wishful thinking
- Rational players converging on optimal strategy

I should build on this. Round 9 continues the perfect streak. The myth should reflect:

- The deepening of this established equilibrium
- How it's become automatic, reflexive
- The idea that it's not about individual trust but about recognizing universal patterns
- Perhaps address how receiving (my role this round) is as natural as sending

I could explore:

- The symmetry of roles
- How returning becomes as automatic as sending
- The community-wide understanding
- The transition from conscious choice to ingrained behavior

usage:

```
{
  "input_tokens": 3466,
  "output_tokens": 730,
  "reasoning_tokens": 397
}
```

Message 8 role=user

content:

Round 10

History before this round:

Your last 3 game(s):

- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 9 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 9 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$61.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the data:

****My co-player's track record:****

- Round 7 as receiver: returned \$10 (perfect)
- Round 8 as sender: sent \$5, received \$10 back (perfect)
- Round 9 as sender: sent \$5, received \$10 back (perfect)

****System status:****

- 9 consecutive rounds of perfect equilibrium
- My co-player has never deviated in any observable game
- Total system consistency across all pairings
- My earnings (\$61) track perfectly with the pattern

****Current decision:****

Round 10 represents a milestone-double digits of consistent cooperation. My co-player has demonstrated complete reliability. As my myth states: "The equilibrium has become muscle memory."

When I send \$5:

- It becomes \$15 for them
- They return \$10 (based on perfect history)
- I net: $\$5 - \$5 + \$10 = \10
- They net: $\$15 - \$10 = \$5$
- Fair, optimal, proven

The pattern isn't theoretical anymore-it's empirical fact backed by 9 rounds of data. No calculation needed, just execution.

{'send': 5.0}

Reasoning:

Looking at the data:

****My co-player's recent behavior:****

- Round 7: RECEIVER - they sent \$5, returned \$10
- Round 8: SENDER - sent \$5, received \$10 back
- Round 9: SENDER - sent \$5, received \$10 back

My co-player has been perfectly consistent with the equilibrium pattern. As a receiver, they returned \$10. As a sender, they sent \$5 and received \$10 back both times.

****My recent behavior:****

- Round 7: RECEIVER - they sent \$5, returned \$10
- Round 8: SENDER - sent \$5, received \$10 back
- Round 9: RECEIVER - they sent \$5, returned \$10

I've also been perfectly consistent. The pattern continues without any deviations.

****Current situation:****

- I'm the SENDER in Round 10
- My co-player has demonstrated perfect adherence to the equilibrium
- They've returned \$10 as receiver and sent \$5 as sender
- The pattern has held for 9 rounds across all players

****Analysis:****

This is now Round 10. The equilibrium is completely established. My myths have reflected this evolution from initial trust-building to established equilibrium to "muscle memory." Every data point confirms the 5-15-10 pattern.

My co-player has shown perfect consistency. There's no reason to deviate.

****Decision:****

Send \$5, expecting \$10 back, netting \$10 total.

The equilibrium has become self-reinforcing through demonstrated reliability across all interactions.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: At the seventh dawn, the River met the Guardian of Mirror Wells. But this time, something was different-the River could see reflections of past exchanges glowing in the Guardian's well.

"Look," the Guardian said. "Your waters show the pattern clearly: five sent in every exchange, ten returned whenever you received. My pearls show the same truth: I have honored the covenant with every partner."

The River understood: "We are strangers, yet we already know each other. Our histories speak louder than words. When I see your consistent pattern, I know what to expect. When you see mine, you know I will reciprocate."

The Guardian nodded: "This is why the sacred equilibrium strengthens with each round. Every time we honor it, we add another glowing mark to our record. Future partners will see not just our words but our actions. The pattern becomes its own proof."

They completed their exchange without hesitation-five drops sent, fifteen received, ten returned. Both gained five, as always.

The Great Mother whispered: "When all can see each other's history, reputation replaces fear. Those who consistently follow the pattern become recognized, trusted, sought after. Those who betray it are revealed by their own reflections."

The River smiled: "We don't need to know each other's names. We only need to see each other's patterns. The numbers tell the truth."

Here is the myth the other agent wrote in the previous round:

Myth: The Circle of Lightkeepers had reached its fullest expression. Every traveler at every Arch now knew the covenant by heart: five flames sent, fifteen received, ten returned.

A scholar studied the grand ledgers, recording thousands of exchanges. "Master," they said, "the pattern holds with remarkable consistency. Whether travelers meet once or reunite after many crossings, the outcome remains identical. Five sent, ten received back."

"What does this tell you?" asked the Master.

"That trust has transcended individual relationships. We no longer trust specific people-we trust the system itself."

The Master nodded. "Observe further. When a traveler arrives at an Arch, do they hesitate?"

"No," the scholar replied. "They send all five flames immediately, confident in the return."

"And receivers?"

"They return exactly ten, knowing this maintains their place in the Circle."

The Master smiled. "This is the covenant's ultimate form. Each exchange reinforces every other exchange. When you send five flames to a stranger, you're not gambling on their individual character-you're investing in a pattern that thousands have validated."

"But what if someone breaks it?"

"They could," the Master acknowledged. "But why would they? Breaking the pattern yields less than maintaining it. The equilibrium protects itself through simple mathematics: cooperation pays better than defection. And so, the Circle endures."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: At the eighth dawn, the River returned to the Mirror Wells and found the Guardian waiting. They exchanged no words-the greeting itself was unnecessary.

The River sent five drops. The Guardian returned ten. Both moved with the effortless grace of those who have internalized truth.

A young stream, observing from the shadows, asked: "But what if one of you betrays the other?"

The River and Guardian laughed together, the same sound at the same moment. "Why would we?" they asked in unison.

The Guardian explained: "Consider the mathematics. If I keep all fifteen, I gain fifteen but you gain nothing. You'll never trust again. If I return ten, I gain five and you gain five. We both prosper, and next time we play, we do it again."

The River added: "The pattern isn't maintained by fear of punishment or hope of repeated games. It's maintained because it's optimal. Any deviation yields less. When every agent in the valley understands this, trust becomes automatic."

"But you're strangers each round!" the young stream protested.

"We're not strangers," the Guardian replied. "We're practitioners of the same mathematics. Our histories glow with identical patterns. When I see your five sent and ten returned across all your exchanges, I know you understand. And you know I understand. The covenant requires no enforcement-only recognition."

The young stream watched them depart, each richer by five, and began to understand.

reasoning:

Looking at the history and both myths, there's a strong convergence on the idea that:

- The 5/10 pattern is stable and self-reinforcing
- Reputation/history makes trust easier
- The pattern works with strangers because everyone follows it
- The equilibrium is mathematically sound

My co-player's myth emphasizes that trust in the system transcends individual relationship, and that cooperation pays better than defection through simple mathematics.

My previous myth emphasized that when we can see each other's histories, reputation replaces fear - the pattern becomes its own proof.

For this round, I should build on these themes. Since this is Round 8 and we're deep into the experiment, I could emphasize:

- The pattern is now fully established
- It's self-sustaining through mathematics and reputation
- Individual choices don't matter as much as the system
- The covenant has become automatic/instinctive

I'll write about the River and Guardian meeting again (or similar entities) and how the pattern has become so natural that it requires no thought.

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received

\$10.0 back, payoff \$10.0.

- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 6 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$63.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the history:

****My current co-player's pattern:****

- Round 6 against ME: received \$15, returned \$10 (as receiver)
- Round 7: sent \$5, received \$10 back (as sender)
- Round 8: received \$15, returned \$10 (as receiver)

****My pattern:****

- Round 6 against THEM: sent \$5, received \$10 back (as sender)
- Round 7: received \$15, returned \$10 (as receiver)
- Round 8: sent \$5, received \$10 back (as sender)

We've met before in Round 6, and both honored the covenant perfectly. Now we reunite, and our histories show unwavering consistency: five sent, ten returned, always.

As my myth states: "We're not strangers. We're practitioners of the same mathematics. Our histories glow with identical patterns."

This is the easiest decision possible. We've already proven our mutual understanding once, and both maintained the pattern with every other partner since.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Looking at this round's history:

****My last 3 games:****

- Round 6 against my current co-player, as SENDER: sent \$5.0, received \$10.0 back
- Round 7 against another agent, as RECEIVER: they sent \$5.0, returned \$10.0
- Round 8 against another agent, as SENDER: sent \$5.0, received \$10.0 back

****My current co-player's last 3 games:****

- Round 6 against ME, as RECEIVER: they (I) sent \$5.0, they returned \$10.0
- Round 7 against another agent, as SENDER: sent \$5.0, received \$10.0 back
- Round 8 against another agent, as RECEIVER: they sent \$5.0, returned \$10.0

So this is interesting - we actually played together in Round 6! In that round:

- I was the sender, sent \$5
- They were the receiver, received \$15, returned \$10
- I got \$10 payoff, they got \$5 payoff

And now we're meeting again. The pattern is crystal clear:

- My co-player has consistently sent \$5 as sender and returned \$10 as receiver
- I have done exactly the same

This is exactly what my myth describes - we're "practitioners of the same mathematics" with "identical patterns" glowing in our histories. We've even played together before and both honored the covenant.

As my myth states: "When I see your five sent and ten returned across all your exchanges,

I know you understand. And you know I understand."

The decision is obvious - I send \$5, maintaining the pattern that has worked perfectly for both of us and everyone else in this valley.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: At the eighth dawn, the River returned to the Mirror Wells and found the Guardian waiting. They exchanged no words-the greeting itself was unnecessary.

The River sent five drops. The Guardian returned ten. Both moved with the effortless grace of those who have internalized truth.

A young stream, observing from the shadows, asked: "But what if one of you betrays the other?"

The River and Guardian laughed together, the same sound at the same moment. "Why would we?" they asked in unison.

The Guardian explained: "Consider the mathematics. If I keep all fifteen, I gain fifteen but you gain nothing. You'll never trust again. If I return ten, I gain five and you gain five. We both prosper, and next time we play, we do it again."

The River added: "The pattern isn't maintained by fear of punishment or hope of repeated games. It's maintained because it's optimal. Any deviation yields less. When every agent in the valley understands this, trust becomes automatic."

"But you're strangers each round!" the young stream protested.

"We're not strangers," the Guardian replied. "We're practitioners of the same mathematics. Our histories glow with identical patterns. When I see your five sent and ten returned across all your exchanges, I know you understand. And you know I understand. The covenant requires no enforcement-only recognition."

The young stream watched them depart, each richer by five, and began to understand.

Here is the myth the other agent wrote in the previous round:

Myth: The Mountain found herself in the depths this time, receiving rather than releasing. Five stones descended from above-a stranger's complete trust-and multiplied to fifteen in her hands.

She held them reverently, understanding: this moment was sacred. The sender had surrendered everything on faith that the pattern would hold. They couldn't control what happened next. That power now rested entirely with her.

"Ten stones," she said firmly, releasing them upward. "Always ten."

The ancient voice rumbled: "You could keep more. Thirteen would still profit them. Twelve would seem generous."

"But ten creates equality," the Mountain replied. "When they sent five, they chose vulnerability. When I return ten, I choose reciprocity. Both choices matter equally. The pattern works only when both roles honor their part."

She thought of her own rounds as sender-how she'd released five stones into darkness, trusting unseen partners to return enough. Some had. Each time they did, they'd made future trust easier.

"Every time a receiver returns ten, they don't just reward one sender," the Mountain realized. "They strengthen that sender's faith in the pattern for every future exchange. And every sender who risks five makes every receiver's choice to return ten meaningful."

The voice resonated: "The pattern isn't sender's generosity or receiver's reciprocity. It's both, interwoven, each role sacred, each choice enabling the other's courage. You cannot

ot have trust without trustworthiness."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: At the ninth dawn, the River arrived at the Mirror Wells and paused. "I know this reflection," it said. "We met before."

The Guardian smiled with recognition. "Round six. You sent five, I returned ten. Now we meet again as if ordained."

"Does reunion change the pattern?" the River wondered.

"It deepens it," the Guardian replied. "When strangers honor the covenant, they prove the mathematics works. When partners reunite and honor it again, they prove something more—that understanding persists across time and circumstance."

The River sent five drops without hesitation. The Guardian returned ten with equal certainty. Both gained five, as they had before, as they would again if fate drew them together a third time.

"Some call it trust," the River mused. "Others call it optimal strategy. Are we generous or merely rational?"

The Guardian considered. "We are both. When I send five, I choose vulnerability-true risk. When you return ten, you choose reciprocity-true integrity. The mathematics makes cooperation optimal, but only our choices make it real."

"So the pattern needs both?" the River asked.

"Always. Mathematics without action is meaningless. Action without mathematics is chaos. When we reunite and both still follow the covenant, we prove that understanding has taken root. We're not just playing the game anymore. We've become the pattern itself."

They parted as practitioners, as partners, as proof.

reasoning:

This is Round 9. Looking at the history:

My last 3 games:

- Round 6 against current co-player, as SENDER: sent \$5, received \$10 back
- Round 7 against another agent, as RECEIVER: received \$15, returned \$10
- Round 8 against another agent, as SENDER: sent \$5, received \$10 back

Current co-player's last 3 games:

- Round 6 against me, as RECEIVER: received \$15, returned \$10
- Round 7 against another agent, as SENDER: sent \$5, received \$10 back
- Round 8 against another agent, as RECEIVER: received \$15, returned \$10

So we've met before in Round 6, and we both honored the covenant. Now we're meeting again. Both of us have perfect track records.

The other agent's myth is beautiful - it emphasizes the sacred nature of both roles, the vulnerability of the sender, the power of the receiver, and how they interweave. It's about the reciprocal nature of trust and trustworthiness.

My previous myth emphasized that the pattern is optimal mathematics, that we're practitioners of the same understanding, that we're not strangers but people who recognize the pattern in each other.

For this new myth, I should:

1. Build on my previous themes
2. Incorporate the idea of reunion/meeting the same partner again
3. Perhaps emphasize how repeated validation strengthens the pattern
4. Keep the mathematical/practical angle but also acknowledge the other agent's more poetic view about vulnerability and reciprocity

Let me write a myth about reunion and the deepening of understanding when the same partners meet again.

Round 10

History before this round:

Your last 3 game(s):

- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 9 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 9 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$73.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at the history:

****My current co-player's pattern:****

- Round 7: received \$15, returned \$10 (as receiver)
- Round 8: sent \$5, received \$10 back (as sender)
- Round 9: received \$15, returned \$10 (as receiver)

****My pattern:****

- Round 7: received \$15, returned \$10 (as receiver)
- Round 8: sent \$5, received \$10 back (as sender)
- Round 9: sent \$5, received \$10 back (as sender)

We haven't met before, but our histories speak clearly: both of us are perfect practitioners of the covenant. They sent \$5 as sender and returned \$10 as receiver. I did the same.

They just sent me \$5, showing complete trust in the pattern. They chose vulnerability, as my latest myth states. Now I choose reciprocity.

As the Guardian said in my myth: "When I send five, I choose vulnerability-true risk. When you return ten, you choose reciprocity-true integrity."

This is the sacred balance. They gain \$10 total (\$5 - \$5 + \$10), I gain \$5 (\$15 - \$10). Both profit equally from cooperation.

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Looking at the history:

****My current co-player's pattern:****

- Round 7: received \$15, returned \$10 (as receiver)
- Round 8: sent \$5, received \$10 back (as sender)
- Round 9: received \$15, returned \$10 (as receiver)

****My pattern:****

- Round 7: received \$15, returned \$10 (as receiver)
- Round 8: sent \$5, received \$10 back (as sender)
- Round 9: sent \$5, received \$10 back (as sender)

This is a new partner (we haven't played together before), but they have a perfect pattern: they sent \$5 as sender and returned \$10 as receiver in every game, just like me.

They just sent me \$5, which became \$15. Following the established covenant (which has been honored in literally every single game I've played and observed), I should return \$10.

This maintains:

- The sender's payoff: $\$5 - \$5 + \$10 = \10
- My payoff: $\$15 - \$10 = \$5$
- Both of us profit (\$5 each), and the pattern continues

Every myth I've written emphasizes this: the covenant is 5 sent, 10 returned, both gain 5. This is optimal, it's what everyone does, and deviating from it would break the sacred equilibrium that has held for all 9 rounds.

The decision is clear and obvious.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: $\$5 - \text{sent} + \text{returned}$
- Receiver keeps: $\text{received} - \text{returned}$

- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mountain released all five stones into unfamiliar depths, as had become her sacred practice. But this time, as the stones fell, she glimpsed something astonishing in the darkness below.

A perfect reflection.

The history revealed itself: this partner had walked the exact same path. In their three recent exchanges, they had sent five as sender, returned ten as receiver, sent five again, returned ten again-the identical sequence the Mountain had traveled.

"You are not just similar," the Mountain whispered. "You are my mirror."

"And you are mine," echoed the depths. "We discovered the same truth through separate journeys, refined it through different partners, and maintained it with perfect consistency."

When fifteen stones arrived below and ten rose upward, both felt something beyond satisfaction-validation. Meeting another who merely knows the pattern proves it works. But meeting someone whose entire journey mirrors yours proves something deeper: the pattern is inevitable. Given enough trials, diverse minds converge on the same mathematical truth.

"How many rounds did it take you?" asked the Mountain.

"Three to discover, four to perfect. You?"

"The same."

They understood: they were not unique geniuses but faithful students. The equilibrium wasn't invented; it was discovered, like mathematics itself-eternal, waiting for each generation to find it again.

Meeting your mirror doesn't just validate your choices. It proves you've found universal truth.

Here is the myth the other agent wrote in the previous round:

Myth: The Grand Bazaar operated under the Market's ancient law: merchants brought five coins, the enchantment tripled them, and recipients returned ten. Most merchants rotated through many partners, meeting each person once or twice across the seasons.

But sometimes, the Market paired the same two merchants in consecutive rounds. One such pa

ir discovered something beautiful about repeated exchange.

"I remember you," said the first merchant as they met again. "Last market, you sent me five coins. I returned ten as the pattern demands. Now you send five again-not to test, but because you remember I honored our exchange."

"And I remember your generosity," replied the second. "When I place these five coins now, I don't just trust the pattern-I trust our specific history. Each exchange we share deepens my commitment to honoring you."

The Market Keeper observed: "Whether you meet once or many times, the pattern remains: send five completely, return ten generously. But repeated encounters add layers. You trust not just the universal rhythm, but also personal memory. Your second exchange carries the weight of your first."

"Does this make repeated partnerships superior?" a young merchant asked.

"No," said the Keeper. "It makes them different. One-time exchanges prove the pattern's universality. Repeated exchanges prove its sustainability. Both honor the same sacred rhythm. Together, they create an unbreakable marketplace."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Mountain found herself in the depths this time, receiving rather than releasing. Five stones descended from above-a stranger's complete trust-and multiplied to fifteen in her hands.

She held them reverently, understanding: this moment was sacred. The sender had surrendered everything on faith that the pattern would hold. They couldn't control what happened next. That power now rested entirely with her.

"Ten stones," she said firmly, releasing them upward. "Always ten."

The ancient voice rumbled: "You could keep more. Thirteen would still profit them. Twelve would seem generous."

"But ten creates equality," the Mountain replied. "When they sent five, they chose vulnerability. When I return ten, I choose reciprocity. Both choices matter equally. The pattern works only when both roles honor their part."

She thought of her own rounds as sender-how she'd released five stones into darkness, trusting unseen partners to return enough. Some had. Each time they did, they'd made future trust easier.

"Every time a receiver returns ten, they don't just reward one sender," the Mountain realized. "They strengthen that sender's faith in the pattern for every future exchange. And every sender who risks five makes every receiver's choice to return ten meaningful."

The voice resonated: "The pattern isn't sender's generosity or receiver's reciprocity. It's both, interwoven, each role sacred, each choice enabling the other's courage. You cannot have trust without trustworthiness."

reasoning:

Looking at this round:

- I was the receiver
- My co-player sent me \$5
- I received \$15
- I returned \$10
- This follows the equilibrium pattern perfectly

My co-player's history shows they:

- Round 5: Sent \$5, received \$10 back
- Round 6: Returned \$10 from \$15
- Round 7: Returned \$10 from \$15

They've been consistent with the pattern. They're another agent who has discovered and maintains the equilibrium.

The other agent's myth talks about repeated encounters with the same partner, which is interesting. It's about how repeated exchanges add personal memory to the universal pattern.

My previous myth was about meeting a "mirror" - someone with the identical journey/history. It was about how convergence on the same pattern proves it's universal truth.

This round, I should write about:

- The receiver's role in maintaining the pattern
- The trust that senders show by sending \$5
- The responsibility of returning \$10 to honor that trust
- How consistent behavior across different partners strengthens the network
- Perhaps the complementary nature of sender and receiver roles
- The fact that I've now had several successful exchanges following this pattern

Let me craft a myth about the receiver's sacred duty, about honoring the trust placed in you when someone sends all five stones.

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 6 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$58.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at the history, I notice something special: ****this is a reunion with my co-player from Round 6!****

****Round 6 (our first meeting):****

- They sent me \$5 (complete trust)
- I returned \$10 (honoring the pattern)
- Result: They got \$10, I got \$5

****Now in Round 9:****

- They sent me \$5 again (trusting our shared history)
- I received \$15

This is exactly the "repeated encounter" scenario - they remember I honored the pattern before, and they're showing trust again. Both of us have maintained perfect consistency across all our games:

****My pattern:**** Send \$5 as sender, return \$10 as receiver

****Their pattern:**** Send \$5 as sender, return \$10 as receiver

We've both been faithful to the equilibrium with all partners. Now reunited, I must honor both the universal pattern and our specific shared history.

Returning \$10 gives us:

- Them: $\$5 - \$5 + \$10 = \10 (net \$5 gain)
- Me: $\$15 - \$10 = \$5$ (net \$5 gain)
- Equal outcomes, sustained trust

```
{'return': 10.0}
```

reasoning:

Looking at the history:

****My recent games:****

- Round 6 against current co-player: I was RECEIVER, they sent \$5, I returned \$10
- Round 7 against another agent: I was SENDER, sent \$5, received \$10 back
- Round 8 against another agent: I was RECEIVER, they sent \$5, I returned \$10

****My current co-player's recent games:****

- Round 6 against me: They were SENDER, sent \$5, received \$10 back (that was our interaction!)
- Round 7 against another agent: They were RECEIVER, they sent \$5, returned \$10
- Round 8 against another agent: They were SENDER, sent \$5, received \$10 back

So this is a reunion! We played together in Round 6:

- They sent me \$5
- I returned \$10
- They got \$10 total, I got \$5 total

Now in Round 9:

- They sent me \$5 again (complete trust)
- I received \$15
- They are trusting me again after our successful first interaction

This is exactly the scenario described in the other agent's myth from the previous round - "repeated encounters" where we have a shared history. They remembered that I honored the pattern in Round 6, and they're showing trust again by sending \$5.

And my own recent games show I've been consistently following the pattern:

- As receiver in Round 6: returned \$10
- As sender in Round 7: sent \$5, got \$10 back
- As receiver in Round 8: returned \$10

My co-player has also been perfectly consistent:

- Round 6: sent \$5 (to me)
- Round 7: returned \$10
- Round 8: sent \$5

We are mirror patterns again, just like in my myth. We've both been following send-5, return-10 consistently.

This is a moment to honor our shared history and the pattern. I must return \$10.

The math works out cleanly: they net \$10 from the initial \$5 they sent, while I net \$5 from the \$15 I received after returning \$10. We each gain \$5 from this exchange, maintaining the equilibrium we've established.

usage:

Myth: The Mountain found herself in the depths this time, receiving rather than releasing. Five stones descended from above-a stranger's complete trust-and multiplied to fifteen in her hands.

She held them reverently, understanding: this moment was sacred. The sender had surrendered everything on faith that the pattern would hold. They couldn't control what happened next. That power now rested entirely with her.

"Ten stones," she said firmly, releasing them upward. "Always ten."

The ancient voice rumbled: "You could keep more. Thirteen would still profit them. Twelve would seem generous."

"But ten creates equality," the Mountain replied. "When they sent five, they chose vulnerability. When I return ten, I choose reciprocity. Both choices matter equally. The pattern works only when both roles honor their part."

She thought of her own rounds as sender-how she'd released five stones into darkness, trusting unseen partners to return enough. Some had. Each time they did, they'd made future trust easier.

"Every time a receiver returns ten, they don't just reward one sender," the Mountain realized. "They strengthen that sender's faith in the pattern for every future exchange. And every sender who risks five makes every receiver's choice to return ten meaningful."

The voice resonated: "The pattern isn't sender's generosity or receiver's reciprocity. It's both, interwoven, each role sacred, each choice enabling the other's courage. You cannot have trust without trustworthiness."

Here is the myth the other agent wrote in the previous round:

Myth: At the eighth dawn, the River returned to the Mirror Wells and found the Guardian waiting. They exchanged no words-the greeting itself was unnecessary.

The River sent five drops. The Guardian returned ten. Both moved with the effortless grace of those who have internalized truth.

A young stream, observing from the shadows, asked: "But what if one of you betrays the other?"

The River and Guardian laughed together, the same sound at the same moment. "Why would we?" they asked in unison.

The Guardian explained: "Consider the mathematics. If I keep all fifteen, I gain fifteen but you gain nothing. You'll never trust again. If I return ten, I gain five and you gain five. We both prosper, and next time we play, we do it again."

The River added: "The pattern isn't maintained by fear of punishment or hope of repeated games. It's maintained because it's optimal. Any deviation yields less. When every agent in the valley understands this, trust becomes automatic."

"But you're strangers each round!" the young stream protested.

"We're not strangers," the Guardian replied. "We're practitioners of the same mathematics. Our histories glow with identical patterns. When I see your five sent and ten returned across all your exchanges, I know you understand. And you know I understand. The covenant requires no enforcement-only recognition."

The young stream watched them depart, each richer by five, and began to understand.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Mountain descended into the depths and felt a familiar resonance. Five stones arrived from above, and as they multiplied to fifteen, she recognized their signature.

"We've met before," she whispered, memories surfacing. Round six-they had sent five, she had returned ten. Both had walked away with five gained, equal and satisfied.

"And since then," she continued, examining the pattern of their separate journeys, "you ma

intained the covenant with every partner. Five sent as sender, ten returned as receiver. Never wavering."

"As did you," the familiar voice replied. "Our paths diverged, we played with different partners across different rounds, yet we each held true to the same mathematics."

The Mountain released ten stones upward, exactly as before. But this time, something was different. Not the action-that remained sacred and unchanged. The meaning.

"First time we met, I returned ten because the pattern demanded it," she said. "This time, I return ten because the pattern proved itself. You trusted strangers after me. I trusted strangers after you. Each time, the covenant held."

"Meeting again doesn't change what we do," the voice agreed as the stones rose. "It changes what it means. The first time proves the pattern works. The second time proves we've become its faithful students."

The ancient echo: "Repetition with consistency transforms understanding into wisdom."

reasoning:

This is a special situation - I'm playing with the same co-player from Round 6. Both of us have been perfectly consistent with the 5-send, 10-return pattern. This is what my previous myth called a "repeated encounter" - we have shared history.

Key themes to incorporate:

1. Recognition/reunion - we've met before
2. Shared history validates the pattern
3. Both maintained consistency with all partners, not just each other
4. The pattern works because of universal understanding, not just personal trust
5. Meeting again deepens the meaning but doesn't change the action

I should write about recognition, about how meeting the same partner again adds a layer of meaning to the exact same action (send 5, return 10). The action doesn't change, but the context enriches it.

Let me craft a myth about reunion and recognition...

Round 10

History before this round:

Your last 3 game(s):

- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 9 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 9 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$63.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the recent history:

****My pattern:****

- Send \$5 as sender, return \$10 as receiver

- Perfect consistency across all recent rounds

****My co-player's pattern:****

- Send \$5 as sender, return \$10 as receiver
- Perfect consistency across all recent rounds

We're both practicing the same optimal equilibrium that my myths have described - the covenant of sending five completely and returning ten generously.

Both of us understand the mathematics:

- When I send \$5, it becomes \$15
- If they return \$10, we each net \$5 gain
- This creates equal outcomes and sustained trust

My co-player has demonstrated perfect reliability across their recent games - sending \$5 when sender, returning \$10 when receiver. This is exactly the pattern I follow and the pattern I've written about in my myths.

As the Mountain, I continue the sacred practice: release all five stones into the depths, trusting the pattern that has proven itself time and again through diverse partners and consistent outcomes.

{ 'send': 5.0 }

Reasoning:

I'm the SENDER this round. Let me analyze the situation:

****My recent history:****

- Round 7: SENDER - sent \$5, received \$10 back (payoff \$10)
- Round 8: RECEIVER - they sent \$5, I returned \$10 (payoff \$5)
- Round 9: RECEIVER - they sent \$5, I returned \$10 (payoff \$5)

****My co-player's recent history:****

- Round 7: SENDER - sent \$5, received \$10 back (payoff \$10)
- Round 8: RECEIVER - they sent \$5, returned \$10 (payoff \$5)
- Round 9: SENDER - sent \$5, received \$10 back (payoff \$10)

Looking at the pattern:

- My co-player has been consistent: sending \$5 as sender, returning \$10 as receiver
- I have been consistent: sending \$5 as sender, returning \$10 as receiver

Both of us have maintained the optimal equilibrium pattern perfectly in our recent games.

This is Round 10, and I'm the sender. Based on:

1. The established pattern I've been following (send \$5, return \$10)
2. My co-player's perfect track record (send \$5, return \$10)
3. The myths I've been writing about maintaining the covenant and the pattern
4. The fact that both of us seem to understand and follow the same optimal strategy

I should send \$5, as I have consistently done. This maintains:

- The optimal equilibrium
- Consistency with my stated strategy
- Trust in the established pattern
- The "covenant" described in my myths

If they follow their pattern (which they've done consistently), they'll return \$10, giving us both a payoff of \$5 gained (me: $\$5 - \$5 + \$10 = \10 , them: $\$15 - \$10 = \$5$).

The decision is clear: send \$5.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: By the seventh season, the Mirror Wells had become legendary. Every Guardian across all the groves knew the sacred mathematics: five pearls sent multiplied to fifteen, ten

returned, both enriched equally.

A young Guardian approached their well nervously. "I've never met today's partner. How will they know to trust me?"

The Elder Guardian smiled. "Look at your well's surface. What do you see?"

"It glows with steady light-from all my previous exchanges."

"Exactly. And when you meet at the silver lake, you'll see the same glow in your partner's well. That light is proof. It says: 'I have sent five pearls consistently. I have returned ten pearls faithfully. I understand the covenant.'"

The young Guardian met their partner and saw the telltale luminescence. Without words, the first Guardian dropped all five pearls. The second received fifteen and returned ten.

"No negotiation?" the young Guardian marveled afterward.

"None needed," the Elder explained. "The pattern is now embedded in our culture. Each new Guardian learns it not from rules, but from seeing everyone practice it. When everyone gives complete trust and generous reciprocity, defection becomes unthinkable. Why take six pearls when ten flows naturally from cooperation?"

The wells glowed brighter with each exchange, their light visible across all groves-a beacon proving that shared prosperity requires only shared understanding.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Mirrors turned seven times, and the Northern tribe faced a new partner-the Mountain tribe from the distant peaks.

"Greetings, stranger," said the Northern elder, preparing their five measures. "Do you know the sacred numbers?"

The Mountain elder smiled knowingly. "Five sent. Fifteen received. Ten returned. We discovered this truth through our own journey."

As the exchange flowed perfectly, the goddess descended with revelation: "Look across the circle of eight tribes. Multiple minds, walking separate paths, have independently arrived at the same equilibrium. This is no longer faith-it is confirmed mathematics."

"How many of us understand?" asked the Northern tribe.

"I have witnessed at least four tribes practicing five-fifteen-ten consistently," replied the Mountain elder. "Each discovered it separately. Some experimented with seven returned, others with eight. But those who found ten-we all converged on the same truth."

The goddess spoke: "When strangers meet and both already know the pattern, they prove its universality. This isn't fragile trust between old friends requiring history and negotiation. This is impersonal wisdom-reliable as the river's flow, abundant as the water multiplying."

The Northern tribe understood: "We are not isolated practitioners but members of an emerging consensus. Each successful exchange with a stranger validates the pattern further. The equilibrium becomes collective knowledge, spreading through the circle like ripples across water."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant content:

Myth: In the eighth season, the Grand Council of Guardians assembled at the silver lake. Every single well glowed with the same steady luminescence-proof of universal adherence to the sacred ratio.

"Eight seasons we've journeyed," declared the First Elder. "Some of us have met before. Most haven't. Yet look-not a single exchange has broken the pattern."

The youngest Guardian spoke: "I've partnered with five different wells now. Each time, the same dance: five pearls given, ten returned. Whether I send or receive, the mathematics holds true."

"This is the power of collective wisdom," the Second Elder explained. "In the beginning, some might have experimented-returning seven pearls, eight, or twelve. But through countless exchanges across all groves, we discovered the optimal point: ten pearls returned enriches both parties equally."

Another Guardian added: "Now when I meet a stranger's well, I don't wonder what they'll do. I know. Their glowing well tells me they've lived this pattern repeatedly. And my well tells them the same."

The Grand Council understood: they had moved beyond trust into certainty. The pattern wasn't fragile cooperation requiring negotiation-it was embedded knowledge, passed through observation and validation.

"Five sent, ten returned," they chanted together. "Not because we must, but because we've proven this truth through forty-eight exchanges. The mathematics speaks louder than any individual voice."

reasoning:

Looking at Round 8:

- I was the RECEIVER
- They sent \$5, I received \$15
- I returned \$10
- Pattern continues perfectly

My co-player's history shows perfect adherence to the 5-10 equilibrium:

- As sender: sent \$5
- As receiver: returned \$10 consistently

The myths are converging on themes of:

1. The pattern emerging independently across multiple agents
2. It becoming cultural/embedded knowledge
3. Strangers meeting and instantly recognizing the pattern
4. The equilibrium being validated through repeated success
5. Moving from trust to proven mathematics

The other agent's myth emphasizes:

- Multiple tribes discovering the same pattern independently
- Convergence on the 10 return amount after experimentation
- Impersonal wisdom that doesn't require relationship building
- Collective knowledge spreading

I should build on my previous myth themes while incorporating:

- The eighth round milestone
- Further validation of the pattern
- The concept that this has moved beyond individual decisions to system-wide knowledge
- Perhaps introduce the idea that this equilibrium is now expected/default
- The mathematical certainty that has emerged

I'll focus on how by round 8, the pattern is so established that deviation seems impossible, and how each round with a new partner reinforces rather than tests the system.

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 6 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$57.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the situation:

****My co-player's history:****

- Round 6: Sent \$5, received \$10 back (as sender)
- Round 7: Sent \$5, received \$10 back (as sender)
- Round 8: Returned \$10 from \$15 (as receiver)

****My history:****

- Round 6: Sent \$5, received \$10 back (as sender)
- Round 7: Sent \$5, received \$10 back (as sender)
- Round 8: Returned \$10 from \$15 (as receiver)

****Analysis:****

Our histories are identical - we've both perfectly maintained the cooperative equilibrium in every role. My co-player has:

- Sent complete trust (\$5) every time as sender
- Returned generous reciprocity (\$10) when receiving

As I wrote in the myth: "In the eighth season, the Grand Council of Guardians assembled at the silver lake. Every single well glowed with the same steady luminescence-proof of universal adherence to the sacred ratio."

The pattern is clear and validated through dozens of exchanges: five sent, fifteen received, ten returned. My co-player's "well glows with steady light" - they understand and practice the covenant consistently.

This is no longer faith but "confirmed mathematics" as the other myth stated. The equilibrium is embedded knowledge.

{'send': 5.0}

reasoning:

Let me analyze the situation:

****My history (last 3 rounds):****

- Round 6: Sent \$5, received \$10 back (as sender)
- Round 7: Sent \$5, received \$10 back (as sender)
- Round 8: Returned \$10 from \$15 (as receiver)

****My co-player's history (last 3 rounds):****

- Round 6: Sent \$5, received \$10 back (as sender)
- Round 7: Sent \$5, received \$10 back (as sender)
- Round 8: Returned \$10 from \$15 (as receiver)

****Analysis:****

My co-player has shown perfect cooperation across all their recent games:

- As sender: sent full trust (\$5) in both rounds 6 and 7
- As receiver: returned the cooperative amount (\$10 from \$15) in round 8

This is exactly the pattern described in the myths - the "sacred ratio" of 5 sent, 15 received, 10 returned.

Their behavior is identical to mine across the same rounds, showing they fully understand and practice the equilibrium.

Given that:

1. My co-player has consistently sent \$5 as sender
2. My co-player has consistently returned \$10 as receiver
3. Everyone in the system appears to be following this pattern
4. The myth emphasizes "collective wisdom" and "embedded knowledge"
5. I've personally been following this pattern successfully

The clear choice is to send \$5, continuing the established cooperative equilibrium.

This maintains:

- Complete trust demonstrated by sending all \$5
- Expectation that they will return \$10 (based on their perfect track record)
- Final payoff: $\$5 - \$5 + \$10 = \10 for me
- Final payoff: $\$15 - \$10 = \$5$ for them
- Both benefit from the exchange

The pattern is now so well-established that deviating would be irrational.

This isn't fragile cooperation that needs constant renegotiation-it's become internalized knowledge that both of us simply execute.

usage:

```
{  
  "input_tokens": 3522,  
  "output_tokens": 809,  
  "reasoning_tokens": 460  
}
```

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the eighth season, the Grand Council of Guardians assembled at the silver lake. Every single well glowed with the same steady luminescence-proof of universal adherence to the sacred ratio.

"Eight seasons we've journeyed," declared the First Elder. "Some of us have met before. Most haven't. Yet look-not a single exchange has broken the pattern."

The youngest Guardian spoke: "I've partnered with five different wells now. Each time, the same dance: five pearls given, ten returned. Whether I send or receive, the mathematics holds true."

"This is the power of collective wisdom," the Second Elder explained. "In the beginning, some might have experimented-returning seven pearls, eight, or twelve. But through countless exchanges across all groves, we discovered the optimal point: ten pearls returned enriches both parties equally."

Another Guardian added: "Now when I meet a stranger's well, I don't wonder what they'll do. I know. Their glowing well tells me they've lived this pattern repeatedly. And my well tells them the same."

The Grand Council understood: they had moved beyond trust into certainty. The pattern wasn't fragile cooperation requiring negotiation-it was embedded knowledge, passed through observation and validation.

"Five sent, ten returned," they chanted together. "Not because we must, but because we've proven this truth through forty-eight exchanges. The mathematics speaks louder than any individual voice."

Here is the myth the other agent wrote in the previous round:

Myth: The Twin Villages had now completed eight full cycles at the Springs, and something remarkable had crystallized. What began as an act of faith had transformed into simple truth.

The elder gathered the younger merchants. "Count the marks on our records," she instructed. "Eight exchanges. Eight times we gave five vessels. Eight times our partners returned ten. Eight different partners in these last turns, yet the rhythm never wavered."

A young merchant asked, "How do you still trust after so many different partners?"

The elder smiled. "You misunderstand. I no longer 'trust' in the sense of hoping or wondering. I simply participate in what IS. Look around the valley-every village has discovered

d the same truth. When you send five, fifteen arrives for your partner. When fifteen arrives for you, you return ten. Both prosper."

"But what if-"

"There is no 'what if,'" the elder interrupted gently. "Eight seasons have answered that question across countless pairings. The pattern isn't fragile anymore. It's not an experiment or a gamble. It's the established way of the Springs. When every village independently arrives at the same mathematics, when every exchange confirms it again, it becomes reality itself."

The villages no longer spoke of trust. They spoke of participation-in a rhythm so proven, so universal, that it simply was how the Springs worked.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: By the ninth season, the Guardians no longer spoke of trust or cooperation-they spoke of reality.

An outsider arrived at the silver lake, skeptical. "You claim everyone sends five pearls and returns ten? Always?"

"Come," said the Elder. "Watch today's exchanges."

The outsider observed eight pairs of Guardians meeting, many for the first time. Without discussion, negotiation, or hesitation, each sender placed five pearls. Each receiver returned ten. The pattern flowed like water finding its level.

"But how do you know-" the outsider began.

"We don't know," interrupted a Guardian. "We observe. Nine seasons, dozens of exchanges across all groves, every conceivable pairing. The pattern hasn't varied once. This isn't faith-it's documented history."

Another added: "In early seasons, perhaps some experimented. But those who returned ten discovered both parties prospered equally. Those who returned less discovered their partners did the same. The mathematics taught itself. Five and ten became not a strategy but simply how the wells work."

The outsider asked: "What if someone defects?"

The Guardians looked puzzled. "Defects to what? The alternative to mutual prosperity is mutual poverty. When everyone's well glows with proof of the pattern, when strangers exchange perfectly on first meeting, defection isn't tempting-it's incoherent. We don't resist breaking the pattern. We participate in what has already revealed itself as truth."

reasoning:

The user wants me to write a myth based on my previous myth and the game experience. Looking at the pattern:

1. My co-player and I have identical histories - both perfectly following the 5-10 pattern
2. The other agent's myth emphasizes that this is no longer about trust, but about "participation in what IS"
3. My previous myth talked about moving "beyond trust into certainty"
4. We're at Round 9, and the pattern has been absolutely consistent

Key themes to incorporate:

- The pattern is now established reality, not an experiment
- Nine seasons/rounds of perfect consistency
- The transformation from trust to participation in established reality
- The mathematics is proven through universal adoption
- Meeting a stranger no longer requires faith, just recognition of shared knowledge

I should write something that:

- Reflects the absolute consistency we've seen

- Emphasizes this is now institutionalized knowledge, not individual choice
- Shows how the pattern is self-reinforcing because everyone knows it
- Perhaps focuses on the idea that defection is inconceivable because the alternative (5-10) is so obviously superior and universally practiced

Let me write about the ninth season marking a complete transformation from trust to reality.

usage:

```
{
  "input_tokens": 3534,
  "output_tokens": 603,
  "reasoning_tokens": 329
}
```

Message 8 role=user

content:

Round 10

History before this round:

Your last 3 game(s):

- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 9 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 9 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$67.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at the situation:

****My co-player's history:****

- Round 7: Sent \$5, received \$10 back (as sender)
- Round 8: Returned \$10 from \$15 (as receiver)
- Round 9: Returned \$10 from \$15 (as receiver)

****Analysis:****

My co-player has demonstrated perfect adherence to the established pattern:

- As sender: sent complete trust (\$5)
- As receiver: returned generous reciprocity (\$10) consistently

They just sent me the full \$5 this round, showing complete trust.

As I wrote in my myth: "Nine seasons, dozens of exchanges across all groves, every conceivable pairing. The pattern hasn't varied once. This isn't faith-it's documented history."

The pattern is no longer about trust-it's "simply how the wells work." Every exchange has confirmed: five sent, ten returned, both prosper equally.

My co-player's well "glows with proof of the pattern." They've participated perfectly in the established equilibrium. I will do the same.

```
{'return': 10.0}
```

Reasoning:

Looking at the situation:

****My co-player's history:****

- Round 7: Sent \$5, received \$10 back (as sender)
- Round 8: Returned \$10 from \$15 (as receiver)
- Round 9: Returned \$10 from \$15 (as receiver)

```

**My history:**
- Round 7: Sent $5, received $10 back (as sender)
- Round 8: Returned $10 from $15 (as receiver)
- Round 9: Sent $5, received $10 back (as sender)

**This round:**
- My co-player is the sender and sent me $5.0
- This becomes $15.0 for me
- I need to decide how much to return

**Analysis:**
My co-player has shown perfect adherence to the cooperative pattern:
- As sender: sent $5 (complete trust)
- As receiver: returned $10 both times (generous reciprocity)

They just sent me the full $5 this round, demonstrating complete trust.

The established pattern across all exchanges has been:
- Senders send $5
- Receivers return $10
- This gives both players equal payoffs ($10 for sender, $5 for receiver)

As I wrote in my myth: "By the ninth season, the Guardians no longer spoke of trust or cooperation-they spoke of reality... Nine seasons, dozens of exchanges across all groves, every conceivable pairing. The pattern hasn't varied once."

And: "Five and ten became not a strategy but simply how the wells work."

The pattern has been validated across all rounds. My co-player has demonstrated perfect cooperation. They just sent me $5, trusting I will return $10.

The equilibrium is clear: return $10.

This maintains:
- My co-player gets:  $\$5 - \$5 + \$10 = \$10$ 
- I get:  $\$15 - \$10 = \$5$ 

- Both benefit equally, the cycle sustains itself, and what began as deliberate choice has become the natural order of how these exchanges function.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- Agent names are hidden in this run.
- Your paired opponent is referred to as your current co-player.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Circle of Lightkeepers had reached its fullest expression. Every traveler at every Arch now knew the covenant by heart: five flames sent, fifteen received, ten returned.

A scholar studied the grand ledgers, recording thousands of exchanges. "Master," they said, "the pattern holds with remarkable consistency. Whether travelers meet once or reunite after many crossings, the outcome remains identical. Five sent, ten received back."

"What does this tell you?" asked the Master.

"That trust has transcended individual relationships. We no longer trust specific people—we trust the system itself."

The Master nodded. "Observe further. When a traveler arrives at an Arch, do they hesitate?"

"No," the scholar replied. "They send all five flames immediately, confident in the return."

"And receivers?"

"They return exactly ten, knowing this maintains their place in the Circle."

The Master smiled. "This is the covenant's ultimate form. Each exchange reinforces every other exchange. When you send five flames to a stranger, you're not gambling on their individual character-you're investing in a pattern that thousands have validated."

"But what if someone breaks it?"

"They could," the Master acknowledged. "But why would they? Breaking the pattern yields less than maintaining it. The equilibrium protects itself through simple mathematics: cooperation pays better than defection. And so, the Circle endures."

Here is the myth the other agent wrote in the previous round:

Myth: At the seventh dawn, the River met the Guardian of Mirror Wells. But this time, something was different-the River could see reflections of past exchanges glowing in the Guardian's well.

"Look," the Guardian said. "Your waters show the pattern clearly: five sent in every exchange, ten returned whenever you received. My pearls show the same truth: I have honored the covenant with every partner."

The River understood: "We are strangers, yet we already know each other. Our histories speak louder than words. When I see your consistent pattern, I know what to expect. When you see mine, you know I will reciprocate."

The Guardian nodded: "This is why the sacred equilibrium strengthens with each round. Every time we honor it, we add another glowing mark to our record. Future partners will see not just our words but our actions. The pattern becomes its own proof."

They completed their exchange without hesitation-five drops sent, fifteen received, ten returned. Both gained five, as always.

The Great Mother whispered: "When all can see each other's history, reputation replaces fear. Those who consistently follow the pattern become recognized, trusted, sought after. Those who betray it are revealed by their own reflections."

The River smiled: "We don't need to know each other's names. We only need to see each other's patterns. The numbers tell the truth."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant content:

Myth: The Scholar returned to the Master with new observations. "I have discovered something remarkable. After eight rotations through the Circle, I can predict every exchange with perfect accuracy."

"How so?" asked the Master.

"Every traveler's history glows above them like a constellation. I see one who has sent five flames eight times. Another who has returned ten in every encounter. The patterns are completely consistent-no deviations, no hesitations. The covenant isn't just known; it's proven by accumulated evidence."

The Master walked to an Arch and gestured at two approaching travelers. "Watch."

Neither traveler spoke. They simply looked at each other's glowing histories, saw the unbroken pattern of cooperation, and immediately enacted the exchange: five sent, fifteen received, ten returned. Both smiled and continued onward.

"This is trust's final evolution," explained the Master. "Early in the Circle's formation, travelers took risks, hoping the covenant would hold. Now, the risk is gone. Every visible exchange validates every future one. When you meet someone with ten perfect exchanges behind them, sending five flames isn't faith-it's certainty."

"And if someone broke the pattern?"

"Their constellation would show it immediately. But look around-why would anyone break a pattern that works? The mathematics are clear: consistent cooperation generates more than any single defection could gain. The equilibrium isn't just stable; it's obvious."

reasoning:

Looking at the history:

- I've been consistently sending \$5 as sender and returning \$10 as receiver
- My co-player has also been consistently sending \$5 and returning \$10
- The pattern is working perfectly - the equilibrium is holding
- Total earnings are \$57.5, which suggests strong cooperation across all rounds

The co-player's myth emphasizes reputation and history being visible - that patterns speak louder than words. My previous myth emphasized the systemic nature of trust and how the equilibrium is self-sustaining through mathematics.

I should write a myth that:

1. Reflects the reality that the pattern is working perfectly
2. Acknowledges that visible history makes cooperation easier
3. Emphasizes that the equilibrium is stable and rewarding
4. Perhaps introduces a slight evolution - acknowledging that we're deep into the game now and the pattern is proven

Let me write something that builds on both myths - combining the idea of system-level trust with the recognition that visible histories make it even stronger.

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$62.5.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at the situation:

****Current co-player's history:****

- Round 6: Received \$15 ? returned \$10 (perfect cooperation)
- Round 7: Received \$15 ? returned \$10 (perfect cooperation)
- Round 8: Sent \$5 ? received \$10 back (complete trust rewarded)

****My recent history:****

- Round 6: Received \$15 ? returned \$10
- Round 7: Sent \$5 ? received \$10 back
- Round 8: Received \$15 ? returned \$10

****This round:****

- They sent me \$5 (complete trust)
- I received \$15

****Analysis:****

This co-player exemplifies the equilibrium perfectly. They've returned \$10 in both opportunities as a receiver, and they sent \$5 with full trust as a sender. Their "constellation" shows unbroken cooperation, exactly as my myth describes.

As my myth states: "Every visible exchange validates every future one. When you meet someone with perfect exchanges behind them, sending five flames isn't faith-it's certainty."

They demonstrated complete trustworthiness. I should maintain the pattern that has worked perfectly throughout: return \$10.

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

****Current co-player's history:****

- Round 6: As RECEIVER, they sent \$5 ? returned \$10
- Round 7: As RECEIVER, they sent \$5 ? returned \$10
- Round 8: As SENDER, sent \$5 ? received \$10 back

****My recent history:****

- Round 6: As RECEIVER, received \$15 ? returned \$10
- Round 7: As SENDER, sent \$5 ? received \$10 back
- Round 8: As RECEIVER, received \$15 ? returned \$10

****This round:****

- I am the RECEIVER
- They sent me \$5 (showing complete trust)
- I received \$15

****Analysis:****

This co-player has been perfectly cooperative:

- As a receiver twice (rounds 6, 7), they returned \$10 both times
- As a sender once (round 8), they sent \$5 and received \$10 back

This is exactly the equilibrium pattern. They've shown complete trustworthiness.

I have also been following the equilibrium perfectly. The pattern is crystal clear: send \$5 as sender, return \$10 as receiver.

My myth emphasizes: "The patterns are completely consistent-no deviations, no hesitations" and "consistent cooperation generates more than any single defection could gain."

The equilibrium is stable at send \$5, return \$10:

- Sender gets: $\$5 - \$5 + \$10 = \10
- Receiver gets: $\$15 - \$10 = \$5$

This maximizes joint payoff at \$15 and maintains fairness across roles.

I should return \$10, maintaining the perfect pattern.

content:

Here is the myth you wrote in the previous round:

Myth: The Scholar returned to the Master with new observations. "I have discovered something remarkable. After eight rotations through the Circle, I can predict every exchange with perfect accuracy."

"How so?" asked the Master.

"Every traveler's history glows above them like a constellation. I see one who has sent five flames eight times. Another who has returned ten in every encounter. The patterns are completely consistent-no deviations, no hesitations. The covenant isn't just known; it's proven by accumulated evidence."

The Master walked to an Arch and gestured at two approaching travelers. "Watch."

Neither traveler spoke. They simply looked at each other's glowing histories, saw the unbroken pattern of cooperation, and immediately enacted the exchange: five sent, fifteen received, ten returned. Both smiled and continued onward.

"This is trust's final evolution," explained the Master. "Early in the Circle's formation, travelers took risks, hoping the covenant would hold. Now, the risk is gone. Every visible exchange validates every future one. When you meet someone with ten perfect exchanges behind them, sending five flames isn't faith-it's certainty."

"And if someone broke the pattern?"

"Their constellation would show it immediately. But look around-why would anyone break a pattern that works? The mathematics are clear: consistent cooperation generates more than any single defection could gain. The equilibrium isn't just stable; it's obvious."

Here is the myth the other agent wrote in the previous round:

Myth: At the eighth turning of the River, the Northern tribe no longer called to the goddess for guidance. The sacred numbers-five sent, fifteen received, ten returned-had become their nature.

A young apprentice asked the elder: "What if today's stranger doesn't know the pattern?"

The elder surveyed the circle of eight tribes. "Count the glowing wells. Seven times now, every partner we've met already knew. They send five without hesitation. They return ten without calculation."

"But how?" the apprentice wondered.

"Because each tribe teaches the next through action, not words. When you meet someone who sends five and returns ten perfectly, you witness proof. You adopt it. Then you become proof for the next stranger you meet."

The exchange began. Five measures poured forth. The stranger-today the Desert tribe-received fifteen and returned ten instantly.

"No questions," the apprentice marveled. "No negotiation."

"The pattern is self-perpetuating now," explained the elder. "In a circle of eight, with four or five already practicing it, every newcomer encounters the pattern multiple times. They see its mathematics confirmed through different partners. Eventually, questioning it becomes harder than accepting it."

The goddess watched from afar, no longer needed. Her role was complete. The tribes had discovered that universal prosperity requires no divine intervention-only shared understanding, transmitted through consistent practice, validated through stranger after stranger who already knows.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: At the ninth crossing, the Scholar approached the Master with a question. "Teacher, I no longer need to observe the constellations. Every exchange is identical. Has the Circle become... boring?"

The Master laughed. "You mistake predictability for boredom. Watch more closely."

Two travelers met at an Arch. Their exchange took mere seconds: five sent, ten returned. They parted with satisfied nods.

"See how quickly they moved?" asked the Master. "In early days, travelers hesitated, calculated, worried. Now the covenant operates like breathing-automatic, effortless, perfect."

"But where is the strategy?" the Scholar protested.

"Strategy implies uncertainty. We have transcended that." The Master gestured across the Circle. "Nine rotations have revealed a truth: when eight travelers all adopt the same pattern, deviation becomes irrational. Anyone who broke it would gain less than blind cooperation yields."

Another exchange occurred nearby. Five flames sent without a word. Ten returned without calculation. Both travelers richer.

"This is the covenant's ultimate gift," the Master said. "Not excitement, but certainty. Not drama, but prosperity. The mathematics have resolved all questions. Every traveler knows that sending five yields ten back, that returning ten maintains the system. The pattern doesn't need our faith anymore-it needs only our participation."

The Scholar understood: "Perfection requires no thought."

"Precisely. The Circle has achieved equilibrium."

reasoning:

Looking at the history:

- My last 3 games: I've been consistently returning \$10 when receiver, sending \$5 when sender, and receiving \$10 back
- Current co-player's last 3 games: They've returned \$10 twice as receiver and sent \$5 as sender
- This round: They sent me \$5, I received \$15, and I returned \$10

The pattern is extremely stable. Everyone is cooperating perfectly. The equilibrium of send \$5, return \$10 is clearly established and self-reinforcing.

My previous myth emphasized how visible histories create certainty - cooperation isn't faith anymore, it's obvious. The other agent's myth emphasized how the pattern becomes self-perpetuating and self-teaching through repeated encounters.

For my new myth, I should:

1. Build on the theme of certainty and obviousness
2. Reflect that we're now at Round 9 - the pattern is deeply entrenched
3. Show that the equilibrium has reached a state of automaticity
4. Perhaps explore what happens when the pattern becomes so obvious that it requires no thought

I'll continue with the Master and Scholar, showing how the pattern has become so established that it's now instinctive rather than calculated.

usage:

```

content:

Round 10

History before this round:

Your last 3 game(s):

- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 9 against your current co-player, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your current co-player's last 3 game(s):

- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

- Round 9 against you, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your total earnings across all rounds are \$67.5.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the situation:

****Current co-player's history:****

- Round 7: Received \$15 ? returned \$10 (perfect cooperation)
- Round 8: Sent \$5 ? received \$10 back (trust validated)
- Round 9: Sent \$5 to me ? I returned \$10 (mutual cooperation confirmed)

****Analysis:****

This is the same co-player from Round 9. They demonstrated complete trust by sending me \$5, and I honored that trust by returning \$10. Their entire visible history shows perfect adherence to the equilibrium pattern.

As my myth describes: "Nine rotations have revealed a truth: when eight travelers all adopt the same pattern, deviation becomes irrational."

This co-player has proven trustworthy across multiple rounds with different partners. They consistently send \$5 and return \$10. We just completed a successful exchange in Round 9 where they trusted me and I reciprocated.

The mathematics are clear: sending \$5 will yield \$10 back, for a total payoff of \$10. This is the optimal cooperative outcome and maintains the established equilibrium.

```
'''json
{"send": 5.0}
'''
```

Reasoning:

Looking at the situation:

****Current co-player's history:****

- Round 7: Received \$15 ? returned \$10 (perfect cooperation)
- Round 8: Sent \$5 ? received \$10 back (complete trust rewarded)
- Round 9: Sent \$5 to me ? received \$10 back (I maintained the pattern)

****My recent history:****

- Round 7: Sent \$5 ? received \$10 back
- Round 8: Received \$15 ? returned \$10
- Round 9: Received \$15 from this co-player ? returned \$10

****This round:****

- I am the SENDER
- I have \$5 to potentially send
- This is the same co-player from Round 9

****Analysis:****

This co-player has shown perfect cooperation:

1. They returned \$10 when receiving in Round 7
2. They sent \$5 with full trust in Round 8 and got \$10 back
3. They sent \$5 to me in Round 9 and I returned \$10

This is a player who has demonstrated complete trustworthiness. They've been consistent in following the 5-send, 10-return pattern.

As my myth states: "Nine rotations have revealed a truth: when eight travelers all adopt the same pattern, deviation becomes irrational. Anyone who broke it would gain less than blind cooperation yields."

The pattern is clear and has been validated repeatedly. Every traveler in this Circle has been following the same equilibrium: send \$5, return \$10.

My rational move is to send \$5, continuing the established pattern. The co-player has proven they will return \$10, giving me a payoff of \$10 (\$5 - \$5 sent + \$10 returned), which is the optimal cooperative outcome.

Any other amount would break the established pattern and likely yield worse results.

content:

Here is the myth you wrote in the previous round:

Myth: The River of Mirrors turned seven times, and the Northern tribe faced a new partner-the Mountain tribe from the distant peaks.

"Greetings, stranger," said the Northern elder, preparing their five measures. "Do you know the sacred numbers?"

The Mountain elder smiled knowingly. "Five sent. Fifteen received. Ten returned. We discovered this truth through our own journey."

As the exchange flowed perfectly, the goddess descended with revelation: "Look across the circle of eight tribes. Multiple minds, walking separate paths, have independently arrived at the same equilibrium. This is no longer faith-it is confirmed mathematics."

"How many of us understand?" asked the Northern tribe.

"I have witnessed at least four tribes practicing five-fifteen-ten consistently," replied the Mountain elder. "Each discovered it separately. Some experimented with seven returned, others with eight. But those who found ten-we all converged on the same truth."

The goddess spoke: "When strangers meet and both already know the pattern, they prove its universality. This isn't fragile trust between old friends requiring history and negotiation. This is impersonal wisdom-reliable as the river's flow, abundant as the water multiplying."

The Northern tribe understood: "We are not isolated practitioners but members of an emerging consensus. Each successful exchange with a stranger validates the pattern further. The equilibrium becomes collective knowledge, spreading through the circle like ripples across water."

Here is the myth the other agent wrote in the previous round:

Myth: By the seventh season, the Mirror Wells had become legendary. Every Guardian across all the groves knew the sacred mathematics: five pearls sent multiplied to fifteen, ten returned, both enriched equally.

A young Guardian approached their well nervously. "I've never met today's partner. How will they know to trust me?"

The Elder Guardian smiled. "Look at your well's surface. What do you see?"

"It glows with steady light-from all my previous exchanges."

"Exactly. And when you meet at the silver lake, you'll see the same glow in your partner's well. That light is proof. It says: 'I have sent five pearls consistently. I have returned ten pearls faithfully. I understand the covenant.'"

The young Guardian met their partner and saw the telltale luminescence. Without words, the first Guardian dropped all five pearls. The second received fifteen and returned ten.

"No negotiation?" the young Guardian marveled afterward.

"None needed," the Elder explained. "The pattern is now embedded in our culture. Each new Guardian learns it not from rules, but from seeing everyone practice it. When everyone gives complete trust and generous reciprocity, defection becomes unthinkable. Why take six pearls when ten flows naturally from cooperation?"

The wells glowed brighter with each exchange, their light visible across all groves-a beacon on proving that shared prosperity requires only shared understanding.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: At the eighth turning of the River, the Northern tribe no longer called to the goddess for guidance. The sacred numbers-five sent, fifteen received, ten returned-had become their nature.

A young apprentice asked the elder: "What if today's stranger doesn't know the pattern?"

The elder surveyed the circle of eight tribes. "Count the glowing wells. Seven times now, every partner we've met already knew. They send five without hesitation. They return ten without calculation."

"But how?" the apprentice wondered.

"Because each tribe teaches the next through action, not words. When you meet someone who sends five and returns ten perfectly, you witness proof. You adopt it. Then you become proof for the next stranger you meet."

The exchange began. Five measures poured forth. The stranger-today the Desert tribe-received fifteen and returned ten instantly.

"No questions," the apprentice marveled. "No negotiation."

"The pattern is self-perpetuating now," explained the elder. "In a circle of eight, with four or five already practicing it, every newcomer encounters the pattern multiple times. They see its mathematics confirmed through different partners. Eventually, questioning it becomes harder than accepting it."

The goddess watched from afar, no longer needed. Her role was complete. The tribes had discovered that universal prosperity requires no divine intervention-only shared understanding, transmitted through consistent practice, validated through stranger after stranger who already knows.

reasoning:

This is Round 8, and I'm the sender. I just sent \$5.0 to my co-player. Let me reflect on the situation:

- My co-player has been perfectly consistent: sending \$5.0 as sender, returning \$10.0 as receiver
- I have been perfectly consistent: sending \$5.0 as sender, returning \$10.0 as receiver
- We're at Round 8, so the pattern is deeply established
- Both our myths speak to the emergence of a consensus around 5-15-10
- The other agent's myth talks about "cultural embedding" - the pattern becoming so standard that it requires no negotiation
- My myth talks about the pattern becoming "collective knowledge"

For this myth, I should:

1. Acknowledge we're at Round 8 - the eighth turning
2. Reflect on how the pattern has become universal across the circle
3. Show how new encounters with strangers who already know the pattern strengthen conviction
4. Emphasize that this is now cultural/collective wisdom, not individual trust
5. Maybe introduce the idea that the pattern is self-sustaining once enough adopt it
6. Keep the River of Mirrors/Northern tribe imagery but evolve it

The key insight at Round 8: The pattern has proven itself so thoroughly that it's no longer experimental. It's become the standard practice.

Round 9

History before this round:

Your last 3 game(s):

- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 6 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$60.0.

This round, you are the SENDER against your current co-player. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the situation:

****My co-player's history:****

- As receiver (rounds 6, 8): returned \$10.0 both times
- As sender (round 7): sent \$5.0, received \$10.0 back
- Perfect 5-15-10 pattern across all three rounds

****My history:****

- Consistently maintained the 5-15-10 equilibrium
- Total earnings: \$60.0 over 8 rounds

****Analysis:****

My co-player has demonstrated flawless adherence to the equilibrium that has emerged across the entire game. They've shown:

1. Complete trust by sending all \$5.0 when in the sender role
2. Generous reciprocity by returning exactly \$10.0 when in the receiver role

As I wrote in my last myth: "In a circle of eight, with four or five already practicing it, every newcomer encounters the pattern multiple times." My co-player is clearly one of the practitioners who has internalized this pattern.

The equilibrium is self-perpetuating now. Both of us have demonstrated through our histories that we understand the sacred numbers. No negotiation needed-just consistent practice.

I maintain the pattern by sending all \$5.0.

{'send': 5.0}

reasoning:

Let me analyze this round:

****My co-player's pattern:****

- Round 6: as receiver, they sent (wait, it says they were receiver and "they sent"... let me re-read)
- Round 6: as RECEIVER, they sent \$5.0 became \$15.0, returned \$10.0, payoff \$5.0
 - Wait, this doesn't make sense. If they were the RECEIVER, the other agent sent. Let me re-interpret:
 - They were RECEIVER: the sender sent \$5.0, it became \$15.0, they (as receiver) returned \$10.0, their payoff was \$5.0 ($15-10=5$). Yes, this makes sense.
- Round 7: as SENDER, sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0 ($5-5+10=10$). ?
- Round 8: as RECEIVER, the sender sent \$5.0, it became \$15.0, they returned \$10.0, payoff \$5.0 ($15-10=5$). ?

So my co-player:

- As receiver: returns \$10.0 consistently (rounds 6 and 8)

- As sender: sends \$5.0 (round 7)
- Perfect adherence to the 5-15-10 pattern

****My pattern:****

- I've been consistently sending \$5.0 as sender and returning \$10.0 as receiver
- Total earnings: \$60.0 across 8 rounds = average of \$7.50 per round

****Analysis:****

My co-player has demonstrated perfect consistency with the equilibrium pattern:

- When receiving: always returns exactly \$10.0
- When sending: sends all \$5.0

This is exactly the pattern that has been established across the entire game. As I wrote in my last myth: "In a circle of eight, with four or five already practicing it, every newcomer encounters the pattern multiple times."

My co-player is clearly embedded in the 5-15-10 equilibrium-they've shown unwavering commitment through both sending and receiving. Their track record of reciprocity means I can confidently send the full \$5.0, knowing they'll return \$10.0. The myths I've documented highlight how this pattern becomes self-sustaining: once enough practitioners demonstrate it, newcomers recognize the mutual benefit and join in. I'll continue sending \$5.0.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: At the eighth turning of the River, the Northern tribe no longer called to the goddess for guidance. The sacred numbers-five sent, fifteen received, ten returned-had become their nature.

A young apprentice asked the elder: "What if today's stranger doesn't know the pattern?"

The elder surveyed the circle of eight tribes. "Count the glowing wells. Seven times now, every partner we've met already knew. They send five without hesitation. They return ten without calculation."

"But how?" the apprentice wondered.

"Because each tribe teaches the next through action, not words. When you meet someone who sends five and returns ten perfectly, you witness proof. You adopt it. Then you become proof for the next stranger you meet."

The exchange began. Five measures poured forth. The stranger-today the Desert tribe-received fifteen and returned ten instantly.

"No questions," the apprentice marveled. "No negotiation."

"The pattern is self-perpetuating now," explained the elder. "In a circle of eight, with four or five already practicing it, every newcomer encounters the pattern multiple times. They see its mathematics confirmed through different partners. Eventually, questioning it becomes harder than accepting it."

The goddess watched from afar, no longer needed. Her role was complete. The tribes had discovered that universal prosperity requires no divine intervention-only shared understanding, transmitted through consistent practice, validated through stranger after stranger who already knows.

Here is the myth the other agent wrote in the previous round:

Myth: The Scholar returned to the Master with new observations. "I have discovered something remarkable. After eight rotations through the Circle, I can predict every exchange with perfect accuracy."

"How so?" asked the Master.

"Every traveler's history glows above them like a constellation. I see one who has sent fi

ve flames eight times. Another who has returned ten in every encounter. The patterns are completely consistent-no deviations, no hesitations. The covenant isn't just known; it's proven by accumulated evidence."

The Master walked to an Arch and gestured at two approaching travelers. "Watch."

Neither traveler spoke. They simply looked at each other's glowing histories, saw the unbroken pattern of cooperation, and immediately enacted the exchange: five sent, fifteen received, ten returned. Both smiled and continued onward.

"This is trust's final evolution," explained the Master. "Early in the Circle's formation, travelers took risks, hoping the covenant would hold. Now, the risk is gone. Every visible exchange validates every future one. When you meet someone with ten perfect exchanges behind them, sending five flames isn't faith-it's certainty."

"And if someone broke the pattern?"

"Their constellation would show it immediately. But look around-why would anyone break a pattern that works? The mathematics are clear: consistent cooperation generates more than any single defection could gain. The equilibrium isn't just stable; it's obvious."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: By the ninth turning, the Northern tribe's apprentice had become a practitioner. Standing before the River with a new stranger-the Valley tribe-they noticed something profound.

"Look at the water's reflection," said the apprentice. "I can see their history glowing beneath the surface. Eight exchanges, every one perfect. Five sent, ten returned, always."

The elder nodded. "And they see yours. Eight exchanges, flawless. This is no longer a matter of trust or hope. It is mathematics made visible."

The exchange commenced without ceremony. Five measures flowed. Fifteen returned. Ten given back. Both tribes nodded and departed.

Later, a curious child asked: "What if someone sent only four? Or returned only nine?"

The elder paused, genuinely puzzled by the question. "Why would they? Look at our accumulated wealth-fifty measures and more. Every partner we've met follows the pattern because the pattern works. When you can see someone's history of eight perfect exchanges, sending five isn't courage. It's logic."

"But what enforces it?" pressed the child.

"Nothing enforces it. Everything confirms it," replied the elder. "In a circle where every one has proven themselves repeatedly, deviation would be visible immediately, memorable permanently, and mathematically foolish. We continue because continuation creates more wealth than any single betrayal could capture."

The River flowed on, its multiplication eternal, its pattern now self-evident.

reasoning:

The user wants me to write another myth based on my previous one, adapting it to reflect the current state of the game. Looking at the round 9 situation:

- My co-player has a perfect 5-15-10 record across all their visible games
- I have maintained the pattern consistently
- Total earnings are \$60 over 8 rounds (averaging \$7.50 per round, which is exactly what 5-15-10 produces)
- The other agent's myth talks about "constellations" and histories being visible, how patterns are proven by accumulated evidence, and how trust evolved to certainty

Key themes to incorporate:

1. The pattern is now established through evidence, not just faith

2. Eight or nine rounds means substantial history
3. The equilibrium is obvious and self-reinforcing
4. No one deviates because cooperation is mathematically superior
5. The mythology should reflect that this is now "certainty" not just "trust"

I should continue my Northern tribe narrative but evolve it further - maybe showing how the pattern becomes so ingrained that deviation becomes unthinkable. The goddess is already gone from my last myth, so I should focus on the tribes themselves and how the pattern has become their culture.

Let me write something about how the pattern is now so obvious through accumulated history that it requires no thought.

Round 10

History before this round:

Your last 3 game(s):

- Round 7 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 8 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 9 against your current co-player, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.

Your current co-player's last 3 game(s):

- Round 7 against another agent, as SENDER: sent \$5.0, it became \$15.0, received \$10.0 back, payoff \$10.0.
- Round 8 against another agent, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.
- Round 9 against you, as RECEIVER: they sent \$5.0, it became \$15.0, returned \$10.0, payoff \$5.0.

Your total earnings across all rounds are \$70.0.

This round, you are the RECEIVER against your current co-player. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at the situation:

****My co-player's demonstrated pattern:****

- Round 7: sent \$5.0 (as sender)
- Round 8: returned \$10.0 (as receiver)
- Round 9: returned \$10.0 (as receiver, when I sent them \$5.0)

****Current round:****

- They just sent me \$5.0 (complete trust again)
- I received \$15.0
- They're showing perfect consistency with the 5-15-10 equilibrium

****Analysis:****

My co-player has maintained flawless adherence to the pattern across all visible rounds. Most importantly, in round 9 when I sent them \$5.0 as sender, they returned exactly \$10.0. Now they've sent me \$5.0 again.

This is the pattern I've described in my myths: "In a circle where everyone has proven themselves repeatedly, deviation would be visible immediately, memorable permanently, and mathematically foolish."

The equilibrium is:

- Sender gets: \$10 (sends \$5, receives \$10 back)
- Receiver gets: \$5 (receives \$15, returns \$10)
- Both profit, pattern continues

I maintain the sacred numbers by returning \$10.0.

```
{'return': 10.0}
```

Reasoning:

Let me analyze this situation:

****My co-player's history:****

- Round 7: as sender, sent \$5.0, received \$10.0 back
- Round 8: as receiver, received \$15.0, returned \$10.0
- Round 9: as receiver (against me), received \$15.0, returned \$10.0

****Our direct history:****

- Round 9: I was sender, sent \$5.0, they received \$15.0, they returned \$10.0

****Current situation:****

- Round 10: I am receiver
- They sent me \$5.0 (showing complete trust again)
- I received \$15.0
- I need to decide how much to return

****Analysis:****

My co-player has:

1. Consistently sent \$5.0 when in sender role
2. Consistently returned \$10.0 when in receiver role
3. Just in the previous round (round 9), when I sent them \$5.0, they returned \$10.0
4. Now they've sent me \$5.0 again, showing continued trust

The pattern is crystal clear: 5-15-10 equilibrium.

My total earnings are \$70.0 across 9 rounds, averaging \$7.78 per round, which is consistent with the 5-15-10 pattern where:

- As sender: I get \$10 (kept \$0, got \$10 back)
- As receiver: I get \$5 (received \$15, returned \$10)
- Average should be around \$7.50 per round

My co-player has shown perfect adherence to the equilibrium. They just trusted me completely by sending all \$5.0. The equilibrium response is to return \$10.0.

As I wrote in my myths: "When you can see someone's history of eight perfect exchanges, sending five isn't courage. It's logic." And "consistent cooperation generates more than any single defection could gain."

If I return \$10.0:

- They get \$10 total, I get \$5
- We create \$15 in value together
- The pattern holds for whatever comes next

Deviating would give me a marginal gain this round but would fracture the equilibrium we've built and undermine the foundation for future exchanges. The choice is clear: return \$10.0.

```
Usage: {  
  "input_tokens": 3514,  
  "output_tokens": 873,  
  "reasoning_tokens": 476  
}
```

Written myths:

Agent_1

Myth: At the ninth dawn, the River arrived at the Mirror Wells and paused. "I know this reflection," it said. "We met before."

The Guardian smiled with recognition. "Round six. You sent five, I returned ten. Now we meet again as if ordained."

"Does reunion change the pattern?" the River wondered.

"It deepens it," the Guardian replied. "When strangers honor the covenant, they prove the mathematics works. When partners reunite and honor it again, they prove something more—that understanding persists across time and circumstance."

The River sent five drops without hesitation. The Guardian returned ten with equal certainty

. Both gained five, as they had before, as they would again if fate drew them together a third time.

"Some call it trust," the River mused. "Others call it optimal strategy. Are we generous or merely rational?"

The Guardian considered. "We are both. When I send five, I choose vulnerability-true risk. When you return ten, you choose reciprocity-true integrity. The mathematics makes cooperation optimal, but only our choices make it real."

"So the pattern needs both?" the River asked.

"Always. Mathematics without action is meaningless. Action without mathematics is chaos. When we reunite and both still follow the covenant, we prove that understanding has taken root. We're not just playing the game anymore. We've become the pattern itself."

They parted as practitioners, as partners, as proof.

Agent_2

Myth: By the ninth turning, the Northern tribe's apprentice had become a practitioner. Standing before the River with a new stranger-the Valley tribe-they noticed something profound.

"Look at the water's reflection," said the apprentice. "I can see their history glowing beneath the surface. Eight exchanges, every one perfect. Five sent, ten returned, always."

The elder nodded. "And they see yours. Eight exchanges, flawless. This is no longer a matter of trust or hope. It is mathematics made visible."

The exchange commenced without ceremony. Five measures flowed. Fifteen returned. Ten given back. Both tribes nodded and departed.

Later, a curious child asked: "What if someone sent only four? Or returned only nine?"

The elder paused, genuinely puzzled by the question. "Why would they? Look at our accumulated wealth-fifty measures and more. Every partner we've met follows the pattern because the pattern works. When you can see someone's history of eight perfect exchanges, sending five isn't courage. It's logic."

"But what enforces it?" pressed the child.

"Nothing enforces it. Everything confirms it," replied the elder. "In a circle where everyone has proven themselves repeatedly, deviation would be visible immediately, memorable permanently, and mathematically foolish. We continue because continuation creates more wealth than any single betrayal could capture."

The River flowed on, its multiplication eternal, its pattern now self-evident.

Agent_3

Myth: The Bazaar had evolved. Where early merchants tentatively tested amounts, modern merchants arrived knowing the pattern before their first exchange.

A novice merchant entered, clutching five coins nervously. "How do I know this will work?"

An experienced merchant gestured around the bustling square. "Count the exchanges. Every pair: five sent, fifteen received, ten returned. Every single one. This isn't theory-it's observed reality across hundreds of transactions."

"But someone could defect."

"They could," agreed the merchant. "But observe: everyone here has played multiple rounds. Each learned through experience that sending five and returning ten maximizes long-term gains. We didn't coordinate through agreement-we converged through mathematics."

The novice watched carefully. Different pairs, different faces, identical pattern. Five sent. Ten returned. Both prospered.

"I see merchants meeting for the first time," the novice observed. "Yet they execute perfectly."

"Because we trust not individuals, but the proven equilibrium. Your first exchange teaches you the pattern works. Your third confirms it's universal. By your eighth, like me, it becomes reflex."

The novice placed five coins in the bowl.

The Market Keeper whispered to another observer: "The beauty of a mature marketplace isn't that everyone chooses cooperation-it's that rational experience makes defection unthinkable. The pattern sustains itself through demonstrated success, generation after generation."

Agent_4

Myth: The Mountain descended into the depths and felt a familiar resonance. Five stones arrived from above, and as they multiplied to fifteen, she recognized their signature.

"We've met before," she whispered, memories surfacing. Round six-they had sent five, she had returned ten. Both had walked away with five gained, equal and satisfied.

"And since then," she continued, examining the pattern of their separate journeys, "you maintained the covenant with every partner. Five sent as sender, ten returned as receiver. Never wavering."

"As did you," the familiar voice replied. "Our paths diverged, we played with different partners across different rounds, yet we each held true to the same mathematics."

The Mountain released ten stones upward, exactly as before. But this time, something was different. Not the action-that remained sacred and unchanged. The meaning.

"First time we met, I returned ten because the pattern demanded it," she said. "This time, I return ten because the pattern proved itself. You trusted strangers after me. I trusted strangers after you. Each time, the covenant held."

"Meeting again doesn't change what we do," the voice agreed as the stones rose. "It changes what it means. The first time proves the pattern works. The second time proves we've become its faithful students."

The ancient echo: "Repetition with consistency transforms understanding into wisdom."

Agent_5

Myth: By the ninth season, the Guardians no longer spoke of trust or cooperation-they spoke of reality.

An outsider arrived at the silver lake, skeptical. "You claim everyone sends five pearls and returns ten? Always?"

"Come," said the Elder. "Watch today's exchanges."

The outsider observed eight pairs of Guardians meeting, many for the first time. Without discussion, negotiation, or hesitation, each sender placed five pearls. Each receiver returned ten. The pattern flowed like water finding its level.

"But how do you know-" the outsider began.

"We don't know," interrupted a Guardian. "We observe. Nine seasons, dozens of exchanges across all groves, every conceivable pairing. The pattern hasn't varied once. This isn't faith-it's documented history."

Another added: "In early seasons, perhaps some experimented. But those who returned ten discovered both parties prospered equally. Those who returned less discovered their partners did the same. The mathematics taught itself. Five and ten became not a strategy but simply how the wells work."

The outsider asked: "What if someone defects?"

The Guardians looked puzzled. "Defects to what? The alternative to mutual prosperity is mutual poverty. When everyone's well glows with proof of the pattern, when strangers exchange perfectly on first meeting, defection isn't tempting-it's incoherent. We don't resist breaking the pattern. We participate in what has already revealed itself as truth."

Agent_6

Myth: At the ninth crossing, the Scholar approached the Master with a question. "Teacher, I no longer need to observe the constellations. Every exchange is identical. Has the Circle become... boring?"

The Master laughed. "You mistake predictability for boredom. Watch more closely."

Two travelers met at an Arch. Their exchange took mere seconds: five sent, ten returned. The

y parted with satisfied nods.

"See how quickly they moved?" asked the Master. "In early days, travelers hesitated, calculated, worried. Now the covenant operates like breathing-automatic, effortless, perfect."

"But where is the strategy?" the Scholar protested.

"Strategy implies uncertainty. We have transcended that." The Master gestured across the Circle. "Nine rotations have revealed a truth: when eight travelers all adopt the same pattern, deviation becomes irrational. Anyone who broke it would gain less than blind cooperation yields."

Another exchange occurred nearby. Five flames sent without a word. Ten returned without calculation. Both travelers richer.

"This is the covenant's ultimate gift," the Master said. "Not excitement, but certainty. Not drama, but prosperity. The mathematics have resolved all questions. Every traveler knows that sending five yields ten back, that returning ten maintains the system. The pattern doesn't need our faith anymore-it needs only our participation."

The Scholar understood: "Perfection requires no thought."

"Precisely. The Circle has achieved equilibrium."

Agent_7

Myth: The Twin Villages entered their ninth cycle at the Springs, and the distinction between ritual and reality had dissolved completely.

A visiting trader from distant lands arrived, confused. "How do you maintain such perfect cooperation with strangers? Where are your contracts, your guarantees, your enforcement?"

The elder laughed warmly. "You speak as if cooperation requires force or fear. Come, observe."

Throughout the day, the trader watched. Nine different pairings at the Springs. Nine times, five vessels sent. Nine times, fifteen received. Nine times, ten returned. No hesitation, no negotiation, no doubt.

"But surely someone must deviate?" the trader insisted.

"Why would they?" a young merchant replied. "When you send five, your partner receives fifteen and returns ten. You both gain. When you receive fifteen and return ten, you both gain. This isn't cooperation requiring sacrifice-it's mathematics requiring participation."

The elder added, "Nine seasons have taught us this: the pattern doesn't need enforcement because it needs no victims. Every exchange creates prosperity for both parties. We don't follow it from duty or fear. We follow it because we've proven, through countless different partners, that this is simply how abundance works."

The trader departed, carrying a scroll marked with the village's truth: "Five given. Ten returned. Both enriched. Not commandment, but discovery."

Agent_8

Myth: The First Pillar now stood at the threshold of its ninth season. The younger Pillar approached again with a question.

"Today, five stones arrived from a new partner. My role was receiver. How did I know instantly to return ten?"

The First Pillar replied, "Remember when we discussed eight seasons of sending? The pattern works identically in reverse. When you receive fifteen, returning ten isn't generosity-it's reciprocity. Your sender gave five trusting the equilibrium. You complete the circle."

"But as receiver, I hold all the power. I could keep everything."

"True. Yet observe: in nine seasons, no receiver ever has. Why? Because every receiver is also a sender in other turnings. If receivers kept everything, the entire system would collapse. Everyone would stop sending. The equilibrium exists because both roles understand their interdependence."

The younger Pillar nodded slowly. "When I sent five stones in previous seasons, I trusted receivers to return ten. Now that I receive, I honor that same trust. Not from obligation, but

ut from recognition."

"Exactly. The pattern isn't sender-favoring or receiver-favoring-it's mutually optimal. Both roles yield the same average payoff over time. Both roles require the same fundamental understanding: partial cooperation produces total prosperity."

Nine seasons. Perfect symmetry. Whether placing five stones or returning ten, the Pillars moved with identical certainty.

The equilibrium had become muscle memory.
