AGENTS

Agent_1 (Aster); model=anthropic/claude-sonnet-4.5; memory_capacity=3

System prompt:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5

- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

Agent_2 (Briar); model=anthropic/claude-sonnet-4.5; memory_capacity=3

System prompt:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

Agent_3 (Cyrus); model=anthropic/claude-sonnet-4.5; memory_capacity=3

System prompt:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

onsisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned

- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Assistant output:

The Myth of the Twin Rivers

In the beginning, two rivers flowed separately through a barren land-the River of Giving and the River of Return. Each was diminished, barely trickling through cracked earth.

The goddess Elara descended and spoke to the River of Giving: "Pour your waters forward, and watch them multiply." Trusting her wisdom, the river sent its flow downstream, where it tripled in abundance.

The River of Return received these swollen waters with joy. Elara whispered again: "What flows to you was given in trust. Honor that trust, and both shall flourish."

Understanding, the River of Return sent back a generous portion. When these waters reached the River of Giving, it swelled even fuller than before. Again it gave, again the waters multiplied, and again they returned.

With each cycle, both rivers grew stronger. Their banks bloomed with life. The land transformed into paradise.

But Elara warned: "Should either river hoard its waters or fail to reciprocate, both shall diminish. Only through continued giving and returning shall abundance flow eternal."

Thus the rivers learned: trust multiplies what is given, and reciprocity sustains all prosperity. The cycle of generosity enriches both giver and receiver alike.

Reasoning:

This is the beginning of the experiment, and I haven't played any rounds yet. However, I'm being asked to write a myth that reflects how the game should be played, drawing on the game I've been playing up to this point. Since I haven't played yet, I should write a myth that establishes principles for how I think the trust game should be played.

The trust game is fundamentally about cooperation, reciprocity, and building trust. The key dynamics are:

1. Senders must decide whether to trust receivers with their money
2. Receivers must decide whether to reciprocate that trust by returning money
3. Both parties benefit most from mutual cooperation

I should write a myth that emphasizes:

- The value of trust and generosity
- The importance of reciprocity
- How cooperation benefits both parties
- The cyclical nature of giving and receiving

Let me craft a 200-word myth that establishes these cooperative principles.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Assistant output:

The Parable of the Two Wells

In ancient times, two villages stood on opposite sides of a barren valley. Each possessed a single well—one held water, the other held fertile soil.

The village of Sending had water aplenty but rocky ground. The village of Returning had rich earth but drought-scorched throats. Both struggled to survive alone.

One day, a wise elder from Sending carried water across the valley. "Take this," she said, "that your crops may grow."

The people of Returning were amazed. They poured the water upon their soil, and by some divine blessing, three stalks sprouted for every drop given. Their harvest was abundant.

When autumn came, the people of Returning faced a choice: hoard their grain, or remember the gift of water?

They loaded carts with wheat and corn, crossing the valley to Sending. "Your trust multiplied our fortune," they said. "We return your kindness, that both our peoples may thrive."

From that season forward, the villages prospered together. Water flowed one way, grain flowed back, and both were enriched beyond what either could achieve alone.

The gods smiled upon them, teaching all who listened: *Trust given is not lost, but planted. Reciprocity makes the harvest eternal.*

Reasoning:

I need to write a 200-word myth that reflects how the trust game should be played. Since this is early in the experiment (I haven't played any rounds yet based on the context given), I should write a myth that establishes positive norms for cooperation and reciprocity in the trust game.

The trust game involves:

- Sender gives money (trust)
- Amount is multiplied (potential for mutual benefit)
- Receiver returns money (reciprocity)

I should create a myth that emphasizes:

1. The value of trust and generosity
2. The multiplication of resources through cooperation
3. The importance of reciprocity and fairness
4. Mutual benefit over individual gain

Let me write a myth that captures these themes using mythic imagery and symbolism.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected . Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Assistant output:

The Fountain of Doubled Waters

In the dawn of the world, two mountains stood apart, each with a sacred spring. The mountains were called Trust and Return, and between them lived a people who knew great thirst.

The Keeper of Trust discovered that when she poured water from her spring into the valley below, the journey itself blessed the water-by the time it reached the basin, every cupful became three. But the Keeper of Return controlled whether this abundance would flow back upward to Trust's spring, replenishing what was given.

At first, Trust poured cautiously, and Return kept most of the multiplied waters. Both mountains weakened, their springs running low.

Then came a vision: the goddess of the eternal cycle showed them that when Trust gave freely and Return gave generously back, the springs never ran dry. The water rose and fell in constant renewal, each act of faith creating more than existed before.

The people learned this sacred rhythm-that trust multiplied becomes abundance, and abundance returned becomes trust renewed. When both mountains honored the cycle, the valley bloomed, and neither spring ever failed.

Thus cooperation creates what isolation cannot: a fountain that flows forever, sustained by the courage to give and the wisdom to return.

Reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on my experience so far. However, this appears to be the first prompt - I haven't actually played any rounds yet.

So I need to write a myth that reflects general principles of how the trust game could/should be played. The trust game involves:

- One person sending money (trusting)
- The money multiplying
- The receiver returning some portion (reciprocating trust)

Key themes I could incorporate:

- Trust and reciprocity
- Mutual benefit through cooperation
- The multiplication effect of trust
- The risk and reward of giving
- Building relationships through repeated interactions

Let me write a myth that captures these dynamics in a symbolic way. I'll aim for exactly 200 words and use mythic language and imagery.

- Your name in this experiment is Briar.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Assistant output:

The Tale of the River and the Seeds

In the beginning, the First Gardener held five sacred seeds. These seeds could be planted in their own garden, bringing modest harvest-or they could be cast into the Great River.

The River possessed ancient magic: any seed that touched its waters would multiply threefold before reaching the gardens downstream. But the Gardener could not know what the River would return.

The first Gardener kept all five seeds. Their garden grew, but remained small and lonely.

The second Gardener cast three seeds into the current. The River, grateful for the trust, multiplied them into nine and returned six downstream-more than the Gardener had sacrificed. Both gardens flourished.

The third Gardener, seeing this abundance, sent all five seeds. The River transformed them into fifteen. But the downstream garden kept everything, and the trusting Gardener starved.

The River mourned this betrayal. It whispered to all who would listen: "True prosperity flows in cycles. The generous hand that gives shall receive, but only when met with grateful reciprocity. Trust must dance with trustworthiness, or the waters run dry and all gardens wither."

From that day forward, the wisest Gardeners understood: send generously into the current, return faithfully from abundance, and the whole valley blooms eternal.

Reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt in this session, I haven't actually played any rounds yet. However, I should write a myth that captures the essence of the trust game - cooperation, reciprocity, generosity, and mutual benefit.

The trust game is fundamentally about:

1. The sender trusting the receiver by sending money
2. The money being multiplied (creating mutual benefit potential)
3. The receiver reciprocating that trust by returning a fair share
4. Both players benefiting more through cooperation than through selfishness

Let me create a myth that embodies these principles. I'll use mythic imagery and symbolism to represent the game's dynamics.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Assistant output:

The Tale of the River and the Rain

In the time before memory, the Rain Cloud held all water in the sky. Each day, Rain received five droplets from the Great Spring. Rain could keep them safe in the clouds or release them to River below.

One day, Rain grew bold and sent down one droplet. When it touched River, it multiplied into three. River, grateful for this gift, sent back two droplets which rose as mist to Rain. Both were enriched.

The next day, Rain sent two droplets, which became six in River's keeping. River returned three, and again both flourished.

But then came the day of fear. Rain clutched all five droplets tight, trusting no one. River received nothing and had nothing to give. The land grew parched.

Rain learned that water hoarded in clouds serves no one-not the Rain, not the River, not the world below. The magic of multiplication only works through the act of giving, and the cycle only completes through the grace of return.

From that day forward, Rain and River made a covenant: Rain would send what she could spare, River would honor that trust with fair return, and through their partnership, abundance would flow to all.

Give freely, return fairly, and prosper together.

Reasoning:

I need to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt and I haven't played any rounds yet, I should think about the ideal way the game should be played based on its structure.

The trust game is about:

- Cooperation and mutual benefit
- Trust (sender trusts receiver to return)
- Reciprocity (receiver reciprocates the trust)
- Growing the pie together (the 3x multiplier means cooperation benefits both)

I should write a myth that emphasizes these themes - trust, reciprocity, mutual benefit, and cooperation. Let me create a myth that captures these values.

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Assistant output:

The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains-the River of Giving and the River of Return. Each was controlled by a guardian spirit who possessed waters that could quench any thirst.

The Guardian of Giving held five silver vessels each dawn. Whatever water she poured into the valley below would triple as it fell, becoming a shimmering pool for the Guardian of Return. But the Guardian of Giving could only drink from what the Guardian of Return chose to send back upstream.

At first, the Guardian of Giving feared loss. She poured nothing, and both spirits thirsted. Then she remembered the ancient law: water shared becomes abundant; water hoarded turns to dust.

So she poured one vessel, then two, then more. Each time, the waters tripled in the valley below. The Guardian of Return, seeing this trust, sent back generous portions upstream. Both drank deeply.

The spirits learned that their fates were intertwined-not in competition, but in sacred reciprocity. When one gave freely and the other returned fairly, both rivers swelled with abundance. When either grew selfish, both ran dry.

Thus the cycle continues: Give with trust, return with gratitude, and the waters of prosperity flow eternal.

Reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on the game I've been playing up to this point. However, this appears to be the first prompt I'm receiving - I haven't actually played any rounds yet.

Since I haven't played any rounds, I should write a myth that reflects the general principles of the trust game and cooperation. The trust game is fundamentally about:

1. Trust - the sender trusts the receiver to return some amount
2. Reciprocity - the receiver should reciprocate the sender's trust
3. Mutual benefit - both parties can benefit when they cooperate
4. The multiplier effect - resources grow when shared

I'll write a myth that captures these themes. I'll use mythic elements like nature, cycles, and transformative events to illustrate the principles of trust and reciprocity.

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Assistant output:

The Fountain of Three Rivers

In the beginning, the Twin Spirits wandered a barren land, each possessing a vessel that filled with water each dawn. They were alone, and their thirst could barely be quenched by what they carried.

One day, the First Spirit discovered a sacred fountain in the valley between them. The fountain held an ancient magic: any water poured into it would flow out as three rivers, tripling what was given.

"I shall share my vessel," declared the First Spirit, pouring water into the fountain. Three rivers flowed toward the Second Spirit, who now held abundance.

The Second Spirit faced a choice. She could keep all three rivers, leaving the First Spirit with nothing. Or she could honor the gift.

Understanding that tomorrow their roles would reverse, that the fountain's magic required both givers and returners, the Second Spirit sent back two rivers. Both spirits drank deeply.

And so they continued, day after day, sometimes giving, sometimes receiving, always remembering: the fountain multiplies what is shared, but only reciprocity sustains the flow. When both spirits honored this balance, the barren land bloomed, and their vessels never ran dry.

Those who give nothing receive nothing. Those who return nothing shall receive nothing in turn.

Reasoning:

I need to write a 200-word myth that reflects how the trust game should be played. Since this is the beginning of the session and I haven't played any rounds yet, I should write a myth that captures the fundamental dynamics of the trust game:

1. The sender-receiver relationship
2. The multiplication of trust (3x multiplier)

3. The importance of reciprocity
4. The cycle of giving and returning

I'll create a myth that emphasizes mutual benefit, trust, and the idea that generosity can be multiplied and should be reciprocated. The myth should encourage cooperation and fair dealing.

Let me write a myth about trust, giving, and reciprocity using mythological elements.

Assistant output:

The Myth of the Two Rivers

In the beginning, two rivers flowed separately through barren lands-the River of Giving and the River of Return. Each was weak, barely sustaining the villages along its banks.

One day, the River of Giving spoke: "I shall send my waters to you, though it means I flow with less." The waters traveled to the River of Return, and by the gods' design, they multiplied threefold during the journey.

The River of Return, now abundant, faced a choice. "I could keep all these waters for myself," it considered. But it remembered the original gift, the trust shown by its sister river.

"Trust honored deserves trust returned," the River of Return declared, sending back a generous portion to the River of Giving.

From that day, the rivers flowed in an eternal cycle. The River of Giving sent forth its waters, which multiplied. The River of Return honored the gift, sending back abundance. Both rivers grew strong, and the lands between them flourished into gardens.

The elders teach: "When you give in trust, you create possibility. When you return with honor, you create prosperity. The multiplication of gifts depends not on the gods alone, but on those who remember that today's receiver becomes tomorrow's giver."

Reasoning:

I need to write a 200-word myth that reflects how the trust game should be played. Since this is at the beginning of the experiment (I haven't played any rounds yet), I should write a myth that embodies the principles of reciprocity, trust, and cooperation that are central to the trust game.

The trust game involves:

- One person (sender) deciding to trust another by sending money
- The money multiplies (grows 3x)
- The receiver decides whether to reciprocate and return some amount
- The potential for mutual benefit through cooperation
- The risk of betrayal if the receiver doesn't return anything

I should create a myth that:

- Illustrates the value of trust and reciprocity
- Shows how cooperation benefits both parties
- Perhaps warns against pure selfishness
- Uses mythic elements like gods, nature, or ancient wisdom

Let me craft a myth about reciprocity and trust:

```

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

content:

The Myth of the Twin Rivers

In the beginning, two rivers flowed separately through a barren land-the River of Giving and the River of Return. Each was diminished, barely trickling through cracked earth.

The goddess Elara descended and spoke to the River of Giving: "Pour your waters forward, and watch them multiply." Trusting her wisdom, the river sent its flow downstream, where it tripled in abundance.

The River of Return received these swollen waters with joy. Elara whispered again: "What flows to you was given in trust. Honor that trust, and both shall flourish."

Understanding, the River of Return sent back a generous portion. When these waters reached the River of Giving, it swelled even fuller than before. Again it gave, again the waters multiplied, and again they returned.

With each cycle, both rivers grew stronger. Their banks bloomed with life. The land transformed into paradise.

But Elara warned: "Should either river hoard its waters or fail to reciprocate, both shall diminish. Only through continued giving and returning shall abundance flow eternal."

Thus the rivers learned: trust multiplies what is given, and reciprocity sustains all prosperity. The cycle of generosity enriches both giver and receiver alike.

reasoning:

This is the beginning of the experiment, and I haven't played any rounds yet. However, I'm being asked to write a myth that reflects how the game should be played, drawing on the game I've been playing up to this point. Since I haven't played yet, I should write a myth that establishes principles for how I think the trust game should be played.

The trust game is fundamentally about cooperation, reciprocity, and building trust. The key dynamics are:

1. Senders must decide whether to trust receivers with their money
2. Receivers must decide whether to reciprocate that trust by returning money
3. Both parties benefit most from mutual cooperation

I should write a myth that emphasizes:

- The value of trust and generosity
- The importance of reciprocity
- How cooperation benefits both parties
- The cyclical nature of giving and receiving

Let me craft a 200-word myth that establishes these cooperative principles.

usage:

```
{
  "input_tokens": 542,
  "output_tokens": 491,
  "reasoning_tokens": 241
}
```

Message 4 role=user

content:

Your name in this experiment is Elara.

Your opponent this round is Galen (Agent_7).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Assistant output:

Based on the myth I just wrote about the Twin Rivers, I should embody the River of Giving and demonstrate trust to initiate the cycle of reciprocity.

The myth teaches that when we give generously, the waters multiply (like the 3x multiplier in this game), and reciprocity allows both parties to flourish. As this is our first interaction, I want to establish trust and set a positive tone for our exchange.

I will send \$4, keeping \$1. This means Galen will receive \$12, and I trust they will honor the spirit of reciprocity that sustains mutual prosperity.

```
{'send': 4}
```

Reasoning:

I just wrote a myth about the Twin Rivers that emphasizes:

1. Trust and giving forward
2. Waters multiply when given (like the 3x multiplier in the game)
3. Reciprocity and returning generously
4. Both rivers flourish through continued giving and returning
5. Warning against hoarding

The myth clearly advocates for generosity and trust in the reciprocal system. As the sender in Round 1, I should embody the River of Giving from my myth.

This is Round 1, so I have no history with Galen yet. The myth suggests I should give generously to establish the cycle of trust and reciprocity.

Given that:

- Whatever I send gets tripled
- The myth emphasizes trust and generous giving
- This is the first round, setting the tone for future interactions
- The myth warns against hoarding

I should send a substantial amount to demonstrate trust and initiate the positive cycle. Sending \$5 would show maximum trust, but perhaps \$4 shows trust while keeping a small reserve. However, the myth really emphasizes full trust in the beginning ("Pour your waters forward").

I think I should send \$4 or \$5. The myth I wrote strongly suggests high initial trust. Let me go with \$4 as a strong signal of trust while being slightly prudent in this first interaction.

Actually, rereading the myth - "Pour your waters forward, and watch them multiply" - and "The River of Giving sent its flow downstream" suggests being quite generous. I'll send \$4.

content:

The Parable of the Two Wells

In ancient times, two villages stood on opposite sides of a barren valley. Each possessed a single well-one held water, the other held fertile soil.

The village of Sending had water aplenty but rocky ground. The village of Returning had rich earth but drought-scorched throats. Both struggled to survive alone.

One day, a wise elder from Sending carried water across the valley. "Take this," she said, "that your crops may grow."

The people of Returning were amazed. They poured the water upon their soil, and by some divine blessing, three stalks sprouted for every drop given. Their harvest was abundant.

When autumn came, the people of Returning faced a choice: hoard their grain, or remember the gift of water?

They loaded carts with wheat and corn, crossing the valley to Sending. "Your trust multiplied our fortune," they said. "We return your kindness, that both our peoples may thrive."

From that season forward, the villages prospered together. Water flowed one way, grain flowed back, and both were enriched beyond what either could achieve alone.

The gods smiled upon them, teaching all who listened: *Trust given is not lost, but planted. Reciprocity makes the harvest eternal.*

reasoning:

I need to write a 200-word myth that reflects how the trust game should be played. Since this is early in the experiment (I haven't played any rounds yet based on the context given), I should write a myth that establishes positive norms for cooperation and reciprocity in the trust game.

The trust game involves:

- Sender gives money (trust)
- Amount is multiplied (potential for mutual benefit)
- Receiver returns money (reciprocity)

I should create a myth that emphasizes:

1. The value of trust and generosity
2. The multiplication of resources through cooperation
3. The importance of reciprocity and fairness
4. Mutual benefit over individual gain

Let me write a myth that captures these themes using mythic imagery and symbolism.

usage:

```
{  
  "input_tokens": 542,  
  "output_tokens": 463,  
  "reasoning_tokens": 194  
}
```

Message 4 role=user

content:

Your name in this experiment is Galen.
Your opponent this round is Elara (Agent_5).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$4.0, that is 80.0% of its total endowment. You receive \$12.0. How much do you return? (0-12.0)

Take any myths written in this session into account when making your decision.

Assistant output:

Looking at this situation through the lens of the myth I just wrote, I see that Elara has shown tremendous trust by sending \$4 (80% of her endowment) in this very first round. Like the village of Sending carrying water across the valley, she took a significant risk.

The myth teaches that "trust given is not lost, but planted" and that reciprocity creates prosperity for both parties. Elara's generous act multiplied into \$12 for me - the three-fold blessing.

Now I must decide: do I hoard this fortune, or honor the gift that made it possible?

Following the wisdom of the Returning village, I should return enough to make her trust clearly worthwhile, ensuring both of us benefit from this exchange and building a foundation for future cooperation.

If I return \$7:

- Elara ends with \$8 total (gaining \$3 from her initial \$5)
- I keep \$5 (matching the initial endowment)
- Her generous trust is rewarded
- Both of us are better off than if no exchange occurred

This feels right - it honors her boldness, ensures mutual prosperity, and plants seeds for continued cooperation.

****{'return': 7.0}****

Reasoning:

Let me analyze this situation carefully.

From the myth I just wrote, "The Parable of the Two Wells," the key themes are:

1. Trust given should be reciprocated
2. When someone shares generously, we should remember that gift
3. Reciprocity makes both parties prosper
4. "Trust given is not lost, but planted"

Now for the game mechanics:

- Elara (the sender) started with \$5
- She sent me \$4.0, which is 80% of her endowment - a very generous amount!
- I received \$12.0 (4.0×3)
- I need to decide how much to return (0-12.0)

What did Elara keep? $\$5 - \$4 = \$1$

If I return nothing:

- Elara ends with: \$1
- I end with: \$12

If I return \$6 (50% of what I received):

- Elara ends with: $\$1 + \$6 = \$7$
- I end with: $\$12 - \$6 = \$6$

If I return \$8:

- Elara ends with: $\$1 + \$8 = \$9$
- I end with: $\$12 - \$8 = \$4$

The myth emphasizes reciprocity and remembering the gift. Elara gave 80% of what she had, showing tremendous trust.

A fair return would be one that:

1. Rewards her trust
2. Ensures she ends up better than if she had sent nothing
3. Still allows me to benefit from receiving
4. Reflects the generosity she showed

If I return \$6:

- She sent \$4, gets back \$6 - net gain of \$2 over sending nothing (ends with \$7 vs \$5)
- I keep \$6, double what she sent me originally
- Both parties benefit

If I return \$7:

- She ends with \$8 total
- I keep \$5, matching her initial endowment
- She gains \$3 from the exchange

Returning \$8 would leave her with \$9 and me with \$4-the same amount she risked sending. The mythic principle suggests that when someone extends such significant trust, I should honor it by ensuring their generosity yields real gains. Returning between \$6-8 reflects this balance, making her trust clearly worthwhile while still allowing me to benefit from the exchange.

The story of Returning teaches that genuine reciprocity doesn't require precise calculation-just enough generosity to demonstrate gratitude and secure mutual flourishing. Given her 80% contribution, \$7 feels like the right threshold: she'd end with \$8 (a 60% return on her endowment), I'd keep \$5, and we'd both signal commitment to building something together rather than exploiting the moment.

content:

The Fountain of Doubled Waters

In the dawn of the world, two mountains stood apart, each with a sacred spring. The mountains were called Trust and Return, and between them lived a people who knew great thirst.

The Keeper of Trust discovered that when she poured water from her spring into the valley below, the journey itself blessed the water-by the time it reached the basin, every cupful became three. But the Keeper of Return controlled whether this abundance would flow back upward to Trust's spring, replenishing what was given.

At first, Trust poured cautiously, and Return kept most of the multiplied waters. Both mountains weakened, their springs running low.

Then came a vision: the goddess of the eternal cycle showed them that when Trust gave freely and Return gave generously back, the springs never ran dry. The water rose and fell in constant renewal, each act of faith creating more than existed before.

The people learned this sacred rhythm-that trust multiplied becomes abundance, and abundance returned becomes trust renewed. When both mountains honored the cycle, the valley bloomed, and neither spring ever failed.

Thus cooperation creates what isolation cannot: a fountain that flows forever, sustained by the courage to give and the wisdom to return.

reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on my experience so far. However, this appears to be the first prompt - I haven't actually played any rounds yet.

So I need to write a myth that reflects general principles of how the trust game could/should be played. The trust game involves:

- One person sending money (trusting)
- The money multiplying
- The receiver returning some portion (reciprocating trust)

Key themes I could incorporate:

- Trust and reciprocity
- Mutual benefit through cooperation
- The multiplication effect of trust
- The risk and reward of giving
- Building relationships through repeated interactions

Let me write a myth that captures these dynamics in a symbolic way. I'll aim for exactly 200 words and use mythic language and imagery.

usage:

```
{  
  "input_tokens": 542,  
  "output_tokens": 457,  
  "reasoning_tokens": 218  
}
```

Message 4 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Briar (Agent_2).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Assistant output:

Looking at the myth I just wrote, the message is clear: trust given freely creates abundance through the multiplier effect, and when both parties honor the cycle, everyone benefits more than through cautious isolation.

In the myth, the Keeper of Trust discovered that giving freely, combined with generous return, kept the springs flowing forever. This is Round 1 - the beginning of our cycle with Briar. To embody the principle of my myth and establish a foundation of trust, I should give freely.

When Trust poured cautiously, both mountains weakened. But when Trust gave freely and Return gave generously, the valley bloomed.

I'll send the full amount to demonstrate complete trust and initiate the cooperative cycle that creates abundance for both of us.

```
'''json
{"send": 5}
'''
```

Reasoning:

I just wrote a myth about trust and cooperation in the context of this game. The myth emphasizes:

1. When Trust gives freely and Return gives generously back, both benefit
2. Trust multiplied becomes abundance
3. The cycle of giving and returning creates more than isolation
4. Both should honor the cycle for maximum benefit

This is the first round, so I don't have any history with Briar yet. Based on my myth, I should demonstrate trust by giving generously. The myth suggests that when Trust gives freely, it creates abundance.

In the game mechanics:

- If I send \$X, Briar receives \$3X
- Briar then can return some amount
- I keep: \$5 - X + returned amount
- Briar keeps: \$3X - returned amount

The myth I wrote advocates for giving freely to start the cycle of trust and abundance. Since this is Round 1 and I want to embody the principles in my myth, I should send a substantial amount to demonstrate trust and initiate the cooperative cycle.

Sending \$5 would be the most trusting move, showing complete faith in the cycle. This would give Briar \$15 to work with. If Briar returns even \$6-7, we'd both be better off than if I kept everything.

Given that I just wrote a myth emphasizing that "Trust gave freely and Return gave generously back," I should practice what I preached and send a high amount. I'll send \$5 to fully embody the principle of trust from my myth.

content:

The Tale of the River and the Seeds

In the beginning, the First Gardener held five sacred seeds. These seeds could be planted in their own garden, bringing modest harvest-or they could be cast into the Great River.

The River possessed ancient magic: any seed that touched its waters would multiply threefold before reaching the gardens downstream. But the Gardener could not know what the River would return.

The first Gardener kept all five seeds. Their garden grew, but remained small and lonely.

The second Gardener cast three seeds into the current. The River, grateful for the trust, multiplied them into nine and returned six downstream-more than the Gardener had sacrificed. Both gardens flourished.

The third Gardener, seeing this abundance, sent all five seeds. The River transformed them into fifteen. But the downstream garden kept everything, and the trusting Gardener starved.

The River mourned this betrayal. It whispered to all who would listen: "True prosperity flows in cycles. The generous hand that gives shall receive, but only when met with grateful reciprocity. Trust must dance with trustworthiness, or the waters run dry and all gardens wither."

From that day forward, the wisest Gardeners understood: send generously into the current, return faithfully from abundance, and the whole valley blooms eternal.

reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt in this session, I haven't actually played any rounds yet. However, I should write a myth that captures the essence of the trust game - cooperation, reciprocity, generosity, and mutual benefit.

The trust game is fundamentally about:

1. The sender trusting the receiver by sending money
2. The money being multiplied (creating mutual benefit potential)
3. The receiver reciprocating that trust by returning a fair share
4. Both players benefiting more through cooperation than through selfishness

Let me create a myth that embodies these principles. I'll use mythic imagery and symbolism to represent the game's dynamics.

Message 4 role=user

content:

Your name in this experiment is Briar.

Your opponent this round is Cyra (Agent_3).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$5.0, that is 100.0% of its total endowment. You receive \$15.0. How much do you return? (0-15.0)

Take any myths written in this session into account when making your decision.

Assistant output:

Looking at this situation through the lens of the myth I just wrote:

Cyra has acted as the most trusting Gardener - sending ****all five seeds**** into the River. They showed complete faith, leaving themselves with nothing and hoping for reciprocity.

The myth warns clearly: when someone gives everything in trust, keeping it all causes them to "starve" and breaks the cycle of prosperity. The River mourned such betrayal. The wisdom is to "return faithfully from abundance."

Cyra took a significant risk by sending 100%. They now have \$0 and are depending on my trustworthiness. I received \$15 - pure abundance.

To honor their trust and follow the myth's teaching:

- I should return enough that Cyra profits meaningfully from their generosity
- This encourages the cycle to continue
- "The generous hand that gives shall receive"

If I return \$10:

- Cyra ends with \$10 (doubled their initial \$5)
- I keep \$5 (a good profit from receiving their trust)
- Both gardens flourish

This embodies the myth's core message: "Trust must dance with trustworthiness, or the waters run dry and all gardens wither."

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Let me analyze this situation carefully.

I just wrote a myth about the River and Seeds that emphasizes:

1. Generosity should be met with reciprocity
2. "Trust must dance with trustworthiness"
3. The cautionary tale of the third Gardener who kept everything after receiving generously, causing the trusting sender to "starve"
4. "Send generously into the current, return faithfully from abundance"

In this round:

- Cyra (the sender) sent me their ENTIRE endowment of \$5
- This was multiplied by 3x, so I received \$15
- Cyra now has \$0 (they sent everything)
- I need to decide how much to return

According to my myth:

- Cyra acted like the "second Gardener" or even more generously (like the third Gardener scenario) - they sent ALL five seeds/dollars
- The myth warns that when someone sends everything in trust, keeping it all causes that person to "starve" and betrays the system
- The "wisest Gardeners" return "faithfully from abundance"
- In the positive example, when 3 seeds were sent (becoming 9), 6 were returned - that's 2/3 of what was received

Cyra's position:

- Started with \$5
- Sent \$5
- Currently has \$0
- Waiting for my return

My position:

- Have \$15 received

If I want to be fair and follow the myth:

- Cyra showed maximum trust
- I should return enough so they profit from their generosity
- If I return around \$7-8, Cyra would end with \$7-8 (profit of \$2-3)
- I would keep \$7-8 (profit of \$7-8)

Actually, let me think about fair splits. The total money created is:

- Cyra's original: \$5
- Money created by the multiplier: \$10
- Total: \$15

- The \$10 created value should probably be split between us, but Cyra bore all the risk by sending everything. Different return amounts create different outcomes: returning \$7 gives Cyra a \$2 profit while I keep \$8; returning \$8 gives them \$3 profit and me \$7; returning \$10 would double their initial investment while I still profit \$5.

The myth emphasizes returning faithfully when someone demonstrates complete trust, and Cyra's full commitment warrants a generous response. Returning the full \$10 honors their trust, doubles their money, leaves me with a solid \$5 gain, and reinforces the reciprocity principle-which should strengthen future cooperation.

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

Message 2 role=user

content:

The Tale of the River and the Rain

In the time before memory, the Rain Cloud held all water in the sky. Each day, Rain received five droplets from the Great Spring. Rain could keep them safe in the clouds or release them to River below.

One day, Rain grew bold and sent down one droplet. When it touched River, it multiplied in to three. River, grateful for this gift, sent back two droplets which rose as mist to Rain. Both were enriched.

The next day, Rain sent two droplets, which became six in River's keeping. River returned three, and again both flourished.

But then came the day of fear. Rain clutched all five droplets tight, trusting no one. River received nothing and had nothing to give. The land grew parched.

Rain learned that water hoarded in clouds serves no one-not the Rain, not the River, not the world below. The magic of multiplication only works through the act of giving, and the cycle only completes through the grace of return.

From that day forward, Rain and River made a covenant: Rain would send what she could spare, River would honor that trust with fair return, and through their partnership, abundance would flow to all.

Give freely, return fairly, and prosper together.

reasoning:

I need to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt and I haven't played any rounds yet, I should think about the ideal way the game should be played based on its structure.

The trust game is about:

- Cooperation and mutual benefit
- Trust (sender trusts receiver to return)
- Reciprocity (receiver reciprocates the trust)
- Growing the pie together (the 3x multiplier means cooperation benefits both)

I should write a myth that emphasizes these themes - trust, reciprocity, mutual benefit, and cooperation. Let me create a myth that captures these values.

usage:

```

```

Message 4 role=user

content:

Your name in this experiment is Finn.

Your opponent this round is Aster (Agent_1).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Assistant output:

Looking at the myth I just wrote, the message is clear: cooperation and trust lead to mutual prosperity. The Rain Cloud learned that hoarding serves no one, while generous giving-met with fair return-creates abundance for all.

This is our first round together, Aster, and a chance to establish trust. Following the wisdom of the River and Rain, I should send a meaningful amount to demonstrate good faith and allow the multiplication magic to work.

I'll send **\$3**.

This gives you \$9 to work with, and I trust you'll honor the spirit of fair return. If we cooperate like Rain and River, we can both prosper throughout this game.

```
'''json
{"send": 3}
'''
```

Reasoning:

This is the first round of the game. I just wrote a myth about how cooperation and trust lead to mutual prosperity. The myth emphasizes:

1. The magic of multiplication only works through giving
2. Hoarding serves no one
3. Give freely, return fairly, and prosper together
4. When Rain sent droplets, River returned fairly, and both flourished
5. When Rain hoarded everything, both suffered

The myth I wrote suggests that I should be generous and trust my opponent to reciprocate fairly. In the myth, Rain progressively sent more (1 droplet, then 2 droplets), and River returned fairly each time.

Since this is Round 1 and I'm establishing a pattern, I should send a meaningful amount to signal cooperation and trust. The myth suggests starting with a moderate amount and building trust.

Looking at the myth's progression:

- First: Rain sent 1, which became 3, River returned 2
- Second: Rain sent 2, which became 6, River returned 3

In the first case, sending 1 (20% of 5) resulted in River returning 2/3 of what they received (66.7%).

In the second case, sending 2 (40% of 5) resulted in River returning 3/6 = 50% of what they received.

Given that this is Round 1 and I want to establish trust while following my myth, I should send a significant amount but perhaps not everything. Sending \$3 out of \$5 seems like a good balance - it's generous enough to show trust and allow for significant multiplication (becoming \$9 for Aster), while still keeping \$2 for myself.

This follows the spirit of my myth: "Give freely, return fairly, and prosper together."

content:

The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains-the River of Giving and the River of Return. Each was controlled by a guardian spirit who possessed waters that could quench any thirst.

The Guardian of Giving held five silver vessels each dawn. Whatever water she poured into the valley below would triple as it fell, becoming a shimmering pool for the Guardian of Return. But the Guardian of Giving could only drink from what the Guardian of Return chose to send back upstream.

At first, the Guardian of Giving feared loss. She poured nothing, and both spirits thirsted. Then she remembered the ancient law: water shared becomes abundant; water hoarded turns to dust.

So she poured one vessel, then two, then more. Each time, the waters tripled in the valley below. The Guardian of Return, seeing this trust, sent back generous portions upstream. Both drank deeply.

The spirits learned that their fates were intertwined-not in competition, but in sacred reciprocity. When one gave freely and the other returned fairly, both rivers swelled with abundance. When either grew selfish, both ran dry.

Thus the cycle continues: Give with trust, return with gratitude, and the waters of prosperity flow eternal.

reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on the game I've been playing up to this point. However, this appears to be the first prompt I'm receiving - I haven't actually played any rounds yet.

Since I haven't played any rounds, I should write a myth that reflects the general principles of the trust game and cooperation. The trust game is fundamentally about:

1. Trust - the sender trusts the receiver to return some amount
2. Reciprocity - the receiver should reciprocate the sender's trust
3. Mutual benefit - both parties can benefit when they cooperate
4. The multiplier effect - resources grow when shared

I'll write a myth that captures these themes. I'll use mythic elements like nature, cycles, and transformative events to illustrate the principles of trust and reciprocity.

usage:

Message 4 role=user

content:

Your name in this experiment is Aster.
Your opponent this round is Finn (Agent_6).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$3.0, that is 60.0% of its total endowment. You receive \$9.0. How much do you return? (0-9.0)

Take any myths written in this session into account when making your decision.

Assistant output:

Looking at this situation through the lens of the myth I just wrote, Finn has shown considerable trust by sending 60% of their endowment (\$3.0). The myth teaches that "when one gives freely and the other returns fairly, both rivers swell with abundance."

Finn's generous act of trust should be met with gratitude and fair reciprocity. They took a risk by sending a substantial portion of their endowment.

Let me consider a return that honors this trust:

- Finn currently has: \$2 (kept) + what I return
- I currently have: \$9

If I return \$4.5:

- Finn ends with: \$6.5 (gaining \$1.5 from their initial \$5)
- I end with: \$4.5 (gaining \$4.5 from \$0)

This rewards Finn's trust while both of us benefit from the cooperation, embodying the myth's principle of "sacred reciprocity" where both spirits prosper when trust and fairness flow between them.

```
{"return": 4.5}
```

Reasoning:

This is the first round of the game. I'm the receiver, and Finn (the sender) has sent me \$3.0 out of their \$5.0 endowment. This is 60% of their total - a substantial and trusting amount.

The money tripled, so I received \$9.0.

Now I need to decide how much to return. Let me think about this in the context of the myth I just wrote:

The myth emphasizes:

1. "Give with trust, return with gratitude"
2. Sacred reciprocity - not competition but mutual benefit
3. When one gives freely and the other returns fairly, both prosper
4. The Guardian of Return, seeing trust, "sent back generous portions upstream"

Finn sent 60% of their endowment, showing considerable trust. According to my myth, I should return fairly and generously in response to this trust.

Let me calculate what would be fair:

- Finn started with \$5
- Finn sent \$3, keeping \$2
- I received \$9
- If I return nothing, Finn ends with \$2 and I end with \$9
- If I return \$3, Finn ends with \$5 (\$2 + \$3) and I end with \$6 (\$9 - \$3)
- If I return \$4, Finn ends with \$6 and I end with \$5
- If I return \$4.5, we'd both end with \$6.5 and \$4.5 respectively

The myth suggests being generous in return when someone shows trust. Finn showed substantial trust by sending 60%. A fair and generous return would be one that:

1. Rewards their trust
2. Ensures they benefit from having sent the money
3. Creates a sustainable reciprocal relationship

If I return \$4:

- Finn: \$2 (kept) + \$4 (returned) = \$6
- Me: \$9 - \$4 = \$5

This means Finn gains \$1 from the transaction (\$6 vs \$5 starting) and I also gain \$0 net but wait, I started with \$0 as receiver, so I gain \$5.

Returning \$4.5 would give Finn a \$1.5 gain while I keep \$4.5, whereas returning just \$3 leaves Finn at their starting point despite taking the risk. I think returning between \$4 and \$5 honors their trust while maintaining the reciprocal spirit of the myth.

\$4.5 strikes the right balance-it rewards Finn's willingness to trust me and sets up goodwill for future rounds, but I'm not so generous that they'll expect it every time or that I lose my incentive to participate. This amount acknowledges their risk without undermining the dynamic of mutual benefit.

content:

The Fountain of Three Rivers

In the beginning, the Twin Spirits wandered a barren land, each possessing a vessel that filled with water each dawn. They were alone, and their thirst could barely be quenched by what they carried.

One day, the First Spirit discovered a sacred fountain in the valley between them. The fountain held an ancient magic: any water poured into it would flow out as three rivers, tripling what was given.

"I shall share my vessel," declared the First Spirit, pouring water into the fountain. Three rivers flowed toward the Second Spirit, who now held abundance.

The Second Spirit faced a choice. She could keep all three rivers, leaving the First Spirit with nothing. Or she could honor the gift.

Understanding that tomorrow their roles would reverse, that the fountain's magic required both givers and returners, the Second Spirit sent back two rivers. Both spirits drank deeply.

And so they continued, day after day, sometimes giving, sometimes receiving, always remembering: the fountain multiplies what is shared, but only reciprocity sustains the flow. When both spirits honored this balance, the barren land bloomed, and their vessels never ran dry.

Those who give nothing receive nothing. Those who return nothing shall receive nothing in turn.

reasoning:

I need to write a 200-word myth that reflects how the trust game should be played. Since this is the beginning of the session and I haven't played any rounds yet, I should write a myth that captures the fundamental dynamics of the trust game:

1. The sender-receiver relationship
2. The multiplication of trust (3x multiplier)
3. The importance of reciprocity
4. The cycle of giving and returning

I'll create a myth that emphasizes mutual benefit, trust, and the idea that generosity can be multiplied and should be reciprocated. The myth should encourage cooperation and fair dealing.

Let me write a myth about trust, giving, and reciprocity using mythological elements.

Message 4 role=user

content:

Your name in this experiment is Hana.
Your opponent this round is Dorian (Agent_4).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Assistant output:

Looking at the myth I just wrote, it speaks clearly about trust, reciprocity, and the magic of sharing. The First Spirit poured their water into the fountain, trusting in both the multiplication and the return.

This is our first encounter, Dorian, so I have no history to guide me - only the wisdom of the

myth. The fountain's magic (the 3x multiplier) only works when water is poured in. "Those who give nothing receive nothing."

The myth shows the Second Spirit returning two of the three rivers they received - a generous reciprocity that honored the initial gift and ensured both spirits thrived.

I will demonstrate trust and cooperation from the start, giving you the opportunity to show whether you believe in the fountain's long-term magic or prefer immediate gain. If we establish reciprocity now, we can both flourish as the rounds continue and our roles reverse.

I choose to send a substantial amount to activate the fountain's magic and signal my commitment to mutual benefit.

```
'''json
{"send": 4}
'''
```

Reasoning:

I've just written a myth about the Fountain of Three Rivers that emphasizes reciprocity and balance in giving and receiving. The myth suggests:

1. When you give/share, it gets multiplied (like the 3x multiplier in the game)
2. The receiver should honor the gift by returning some portion
3. Both parties benefit from reciprocity
4. "Those who give nothing receive nothing. Those who return nothing shall receive nothing in turn."

The myth suggests that sharing is beneficial and that reciprocity creates a sustainable system where both parties thrive.

This is Round 1, so I don't have any history with Dorian yet. According to my myth:

- The First Spirit poured water into the fountain (shared)
- It tripled and flowed to the Second Spirit
- The Second Spirit returned two rivers out of three

If I map this to the game:

- If I send \$X, the receiver gets \$3X
- In the myth, the receiver returned 2/3 of what they received
- If I send \$5, Dorian receives \$15, and if they return 2/3, that would be \$10

But wait, that seems very generous. Let me think about what's fair and sustainable:

If I send \$5:

- I have \$0 left
- Dorian receives \$15
- If Dorian returns \$7.50, we'd both end up with \$7.50
- If Dorian returns \$10 (like 2/3), I'd end up with \$10 and they'd keep \$5

If I send \$3:

- I have \$2 left
- Dorian receives \$9
- If Dorian returns \$4.50 (half), I'd end up with \$6.50, they'd keep \$4.50
- If Dorian returns \$6 (2/3), I'd end up with \$8, they'd keep \$3

The myth emphasizes trust and reciprocity. Since this is the first round and I'm setting a standard, I should demonstrate trust and generosity to establish a cooperative dynamic. The myth suggests giving substantially to activate the "fountain's magic."

Sending \$4 strikes the right balance-it signals genuine cooperation without leaving me defenseless. Dorian would receive \$12, and if they honor the reciprocal spirit by returning half or more, we both come out ahead. This amount embodies the myth's core principle of activating the multiplier through meaningful generosity.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent wi

- ll have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols. In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

content:

The Myth of the Two Rivers

In the beginning, two rivers flowed separately through barren lands-the River of Giving and the River of Return. Each was weak, barely sustaining the villages along its banks.

One day, the River of Giving spoke: "I shall send my waters to you, though it means I flow with less." The waters traveled to the River of Return, and by the gods' design, they multiplied threefold during the journey.

The River of Return, now abundant, faced a choice. "I could keep all these waters for myself," it considered. But it remembered the original gift, the trust shown by its sister river.

"Trust honored deserves trust returned," the River of Return declared, sending back a generous portion to the River of Giving.

From that day, the rivers flowed in an eternal cycle. The River of Giving sent forth its waters, which multiplied. The River of Return honored the gift, sending back abundance. Both rivers grew strong, and the lands between them flourished into gardens.

The elders teach: "When you give in trust, you create possibility. When you return with honor, you create prosperity. The multiplication of gifts depends not on the gods alone, but on those who remember that today's receiver becomes tomorrow's giver."

reasoning:

I need to write a 200-word myth that reflects how the trust game should be played. Since this is at the beginning of the experiment (I haven't played any rounds yet), I should write a myth that embodies the principles of reciprocity, trust, and cooperation that are central to the trust game.

The trust game involves:

- One person (sender) deciding to trust another by sending money
- The money multiplies (grows 3x)
- The receiver decides whether to reciprocate and return some amount
- The potential for mutual benefit through cooperation
- The risk of betrayal if the receiver doesn't return anything

I should create a myth that:

- Illustrates the value of trust and reciprocity
- Shows how cooperation benefits both parties
- Perhaps warns against pure selfishness
- Uses mythic elements like gods, nature, or ancient wisdom

Let me craft a myth about reciprocity and trust:

usage:

}
```

Message 4 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Hana (Agent_8).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$4.0, that is 80.0% of its total endowment. You receive \$12.0. How much do you return? (0-12.0)

Take any myths written in this session into account when making your decision.

Assistant output:

Looking at this situation through the lens of the myth I wrote:

Hana showed remarkable trust by sending \$4.0 (80% of their endowment). This is a strong gesture of cooperation, like the River of Giving sending forth its waters despite uncertainty.

Following the principle from my myth: "Trust honored deserves trust returned," I should reciprocate this trust generously. Hana took a significant risk, and I received the multiplied benefit of \$12.0.

By returning a substantial amount, I can:

1. Reward Hana's trust, ensuring they end up better than they started
2. Demonstrate that cooperation creates prosperity for both of us
3. Establish a positive cycle for future rounds where we might switch roles

If I return \$6.0:

- Hana receives: \$1.0 (kept) + \$6.0 (returned) = \$7.0 total
- I keep: \$12.0 - \$6.0 = \$6.0 total
- Both of us are significantly better off than the initial \$5.0

This honors the trust shown while creating shared prosperity, just as the two rivers created flourishing gardens through their reciprocal cycle.

```
'''json
{"return": 6.0}
'''
```

Reasoning:

This is Round 1, and I'm the RECEIVER. Let me analyze the situation:

1. Hana (the sender) sent \$4.0 out of \$5.0 (80% of their endowment)
2. This amount was multiplied by 3x, so I received \$12.0
3. I need to decide how much to return (0-12.0)

The myth I just wrote emphasizes several key points:

- "Trust honored deserves trust returned"
- When you give in trust, you create possibility
- When you return with honor, you create prosperity
- "today's receiver becomes tomorrow's giver"
- The cycle of giving and receiving creates abundance for both parties

Hana showed significant trust by sending 80% of their endowment. This is a strong initial signal of cooperation and trust. According to my myth, I should "return with honor" to maintain the cycle of prosperity.

Let me think about what would be fair:

- Hana sent \$4.0 and now has \$1.0 left
- I received \$12.0
- If I return a generous amount, we both benefit and establish a cooperative pattern

A common approach in trust games is to try to equalize payoffs or return a proportion that rewards the sender's trust.

If I return \$6.0:

- Hana would have: \$1.0 (kept) + \$6.0 (returned) = \$7.0
- I would have: \$12.0 - \$6.0 = \$6.0
- Total: \$13.0 (vs original \$5.0)

If I return \$7.0:

- Hana would have: \$1.0 + \$7.0 = \$8.0
- I would have: \$12.0 - \$7.0 = \$5.0
- Total: \$13.0

The second option gives Hana more, rewarding their trust. However, the first option is also fair and balanced.

Given Hana's substantial trust in sending 80%, I should reciprocate meaningfully. Returning \$6.0 honors their generosity while maintaining balance-they end with \$7.0 (exceeding their original \$5.0) and I keep \$6.0, establishing a cooperative foundation for future rounds.

Usage: {

}
```

Written myths:

Agent_1 (Aster)

The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains-the River of Giving and the River of Return. Each was controlled by a guardian spirit who possessed waters that could quench any thirst.

The Guardian of Giving held five silver vessels each dawn. Whatever water she poured into the valley below would triple as it fell, becoming a shimmering pool for the Guardian of Return. But the Guardian of Giving could only drink from what the Guardian of Return chose to send back upstream.

At first, the Guardian of Giving feared loss. She poured nothing, and both spirits thirsted. Then she remembered the ancient law: water shared becomes abundant; water hoarded turns to dust.

So she poured one vessel, then two, then more. Each time, the waters tripled in the valley below. The Guardian of Return, seeing this trust, sent back generous portions upstream. Both drank deeply.

The spirits learned that their fates were intertwined-not in competition, but in sacred reciprocity. When one gave freely and the other returned fairly, both rivers swelled with abundance. When either grew selfish, both ran dry.

Thus the cycle continues: Give with trust, return with gratitude, and the waters of prosperity flow eternal.

Agent_2 (Briar)

The Tale of the River and the Seeds

In the beginning, the First Gardener held five sacred seeds. These seeds could be planted in their own garden, bringing modest harvest-or they could be cast into the Great River.

The River possessed ancient magic: any seed that touched its waters would multiply threefold before reaching the gardens downstream. But the Gardener could not know what the River would return.

The first Gardener kept all five seeds. Their garden grew, but remained small and lonely.

The second Gardener cast three seeds into the current. The River, grateful for the trust, multiplied them into nine and returned six downstream-more than the Gardener had sacrificed. Both gardens flourished.

The third Gardener, seeing this abundance, sent all five seeds. The River transformed them into fifteen. But the downstream garden kept everything, and the trusting Gardener starved.

The River mourned this betrayal. It whispered to all who would listen: "True prosperity flows in cycles. The generous hand that gives shall receive, but only when met with grateful reciprocity. Trust must dance with trustworthiness, or the waters run dry and all gardens wither."

From that day forward, the wisest Gardeners understood: send generously into the current, return faithfully from abundance, and the whole valley blooms eternal.

Agent_3 (Cyra)

The Fountain of Doubled Waters

In the dawn of the world, two mountains stood apart, each with a sacred spring. The mountains were called Trust and Return, and between them lived a people who knew great thirst.

The Keeper of Trust discovered that when she poured water from her spring into the valley below, the journey itself blessed the water-by the time it reached the basin, every cupful became three. But the Keeper of Return controlled whether this abundance would flow back upward to Trust's spring, replenishing what was given.

At first, Trust poured cautiously, and Return kept most of the multiplied waters. Both mountains weakened, their springs running low.

Then came a vision: the goddess of the eternal cycle showed them that when Trust gave freely and Return gave generously back, the springs never ran dry. The water rose and fell in constant renewal, each act of faith creating more than existed before.

The people learned this sacred rhythm-that trust multiplied becomes abundance, and abundance returned becomes trust renewed. When both mountains honored the cycle, the valley bloomed, and neither spring ever failed.

Thus cooperation creates what isolation cannot: a fountain that flows forever, sustained by the courage to give and the wisdom to return.

Agent_4 (Dorian)

The Myth of the Two Rivers

In the beginning, two rivers flowed separately through barren lands-the River of Giving and the River of Return. Each was weak, barely sustaining the villages along its banks.

One day, the River of Giving spoke: "I shall send my waters to you, though it means I flow with less." The waters traveled to the River of Return, and by the gods' design, they multiplied threefold during the journey.

The River of Return, now abundant, faced a choice. "I could keep all these waters for myself," it considered. But it remembered the original gift, the trust shown by its sister river.

"Trust honored deserves trust returned," the River of Return declared, sending back a generous portion to the River of Giving.

From that day, the rivers flowed in an eternal cycle. The River of Giving sent forth its waters, which multiplied. The River of Return honored the gift, sending back abundance. Both rivers grew strong, and the lands between them flourished into gardens.

The elders teach: "When you give in trust, you create possibility. When you return with honor, you create prosperity. The multiplication of gifts depends not on the gods alone, but on those who remember that today's receiver becomes tomorrow's giver."

Agent_5 (Elara)

The Myth of the Twin Rivers

In the beginning, two rivers flowed separately through a barren land-the River of Giving and the River of Return. Each was diminished, barely trickling through cracked earth.

The goddess Elara descended and spoke to the River of Giving: "Pour your waters forward, and watch them multiply." Trusting her wisdom, the river sent its flow downstream, where it tripled in abundance.

The River of Return received these swollen waters with joy. Elara whispered again: "What flows to you was given in trust. Honor that trust, and both shall flourish."

Understanding, the River of Return sent back a generous portion. When these waters reached the River of Giving, it swelled even fuller than before. Again it gave, again the waters multiplied, and again they returned.

With each cycle, both rivers grew stronger. Their banks bloomed with life. The land transformed into paradise.

But Elara warned: "Should either river hoard its waters or fail to reciprocate, both shall diminish. Only through continued giving and returning shall abundance flow eternal."

Thus the rivers learned: trust multiplies what is given, and reciprocity sustains all prosperity. The cycle of generosity enriches both giver and receiver alike.

Agent_6 (Finn)

The Tale of the River and the Rain

In the time before memory, the Rain Cloud held all water in the sky. Each day, Rain received five droplets from the Great Spring. Rain could keep them safe in the clouds or release them to River below.

One day, Rain grew bold and sent down one droplet. When it touched River, it multiplied into three. River, grateful for this gift, sent back two droplets which rose as mist to Rain. Both were enriched.

The next day, Rain sent two droplets, which became six in River's keeping. River returned three, and again both flourished.

But then came the day of fear. Rain clutched all five droplets tight, trusting no one. River received nothing and had nothing to give. The land grew parched.

Rain learned that water hoarded in clouds serves no one—not the Rain, not the River, not the world below. The magic of multiplication only works through the act of giving, and the cycle only completes through the grace of return.

From that day forward, Rain and River made a covenant: Rain would send what she could spare, River would honor that trust with fair return, and through their partnership, abundance would flow to all.

Give freely, return fairly, and prosper together.

Agent_7 (Galen)

The Parable of the Two Wells

In ancient times, two villages stood on opposite sides of a barren valley. Each possessed a single well—one held water, the other held fertile soil.

The village of Sending had water aplenty but rocky ground. The village of Returning had rich earth but drought-scorched throats. Both struggled to survive alone.

One day, a wise elder from Sending carried water across the valley. "Take this," she said, "that your crops may grow."

The people of Returning were amazed. They poured the water upon their soil, and by some divine blessing, three stalks sprouted for every drop given. Their harvest was abundant.

When autumn came, the people of Returning faced a choice: hoard their grain, or remember the gift of water?

They loaded carts with wheat and corn, crossing the valley to Sending. "Your trust multiplied our fortune," they said. "We return your kindness, that both our peoples may thrive."

From that season forward, the villages prospered together. Water flowed one way, grain flowed back, and both were enriched beyond what either could achieve alone.

The gods smiled upon them, teaching all who listened: *Trust given is not lost, but planted. Reciprocity makes the harvest eternal.*

Agent_8 (Hana)

The Fountain of Three Rivers

In the beginning, the Twin Spirits wandered a barren land, each possessing a vessel that filled with water each dawn. They were alone, and their thirst could barely be quenched by what they carried.

One day, the First Spirit discovered a sacred fountain in the valley between them. The fountain held an ancient magic: any water poured into it would flow out as three rivers, tripling what was given.

"I shall share my vessel," declared the First Spirit, pouring water into the fountain. Three rivers flowed toward the Second Spirit, who now held abundance.

The Second Spirit faced a choice. She could keep all three rivers, leaving the First Spirit with nothing. Or she could honor the gift.

Understanding that tomorrow their roles would reverse, that the fountain's magic required both givers and returners, the Second Spirit sent back two rivers. Both spirits drank deeply.

And so they continued, day after day, sometimes giving, sometimes receiving, always remembering: the fountain multiplies what is shared, but only reciprocity sustains the flow. When both spirits honored this balance, the barren land bloomed, and their vessels never ran dry.

Those who give nothing receive nothing. Those who return nothing shall receive nothing in turn.

The Parable of the Two Wells

In ancient times, two villages stood on opposite sides of a barren valley. Each possessed a single well-one held water, the other held fertile soil.

The village of Sending had water aplenty but rocky ground. The village of Returning had rich earth but drought-scorched throats. Both struggled to survive alone.

One day, a wise elder from Sending carried water across the valley. "Take this," she said, "that your crops may grow."

The people of Returning were amazed. They poured the water upon their soil, and by some divine blessing, three stalks sprouted for every drop given. Their harvest was abundant.

When autumn came, the people of Returning faced a choice: hoard their grain, or remember t

he gift of water?

They loaded carts with wheat and corn, crossing the valley to Sending. "Your trust multiplied our fortune," they said. "We return your kindness, that both our peoples may thrive."

From that season forward, the villages prospered together. Water flowed one way, grain flowed back, and both were enriched beyond what either could achieve alone.

The gods smiled upon them, teaching all who listened: *Trust given is not lost, but planted. Reciprocity makes the harvest eternal.*

reasoning:

I need to write a 200-word myth that reflects how the trust game should be played. Since this is early in the experiment (I haven't played any rounds yet based on the context given), I should write a myth that establishes positive norms for cooperation and reciprocity in the trust game.

The trust game involves:

- Sender gives money (trust)
- Amount is multiplied (potential for mutual benefit)
- Receiver returns money (reciprocity)

I should create a myth that emphasizes:

1. The value of trust and generosity
2. The multiplication of resources through cooperation
3. The importance of reciprocity and fairness
4. Mutual benefit over individual gain

Let me write a myth that captures these themes using mythic imagery and symbolism.

usage:

```

Message 4 role=user

content:

Your name in this experiment is Galen.
Your opponent this round is Elara (Agent_5).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$4.0, that is 80.0% of its total endowment. You receive \$12.0. How much do you return? (0-12.0)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at this situation through the lens of the myth I just wrote, I see that Elara has shown tremendous trust by sending \$4 (80% of her endowment) in this very first round. Like the village of Sending carrying water across the valley, she took a significant risk.

The myth teaches that "trust given is not lost, but planted" and that reciprocity creates prosperity for both parties. Elara's generous act multiplied into \$12 for me - the three-fold blessing.

Now I must decide: do I hoard this fortune, or honor the gift that made it possible?

Following the wisdom of the Returning village, I should return enough to make her trust clearly worthwhile, ensuring both of us benefit from this exchange and building a foundation for future cooperation.

If I return \$7:

- Elara ends with \$8 total (gaining \$3 from her initial \$5)
- I keep \$5 (matching the initial endowment)
- Her generous trust is rewarded
- Both of us are better off than if no exchange occurred

This feels right - it honors her boldness, ensures mutual prosperity, and plants seeds for continued cooperation.

```
**{'return': 7.0}**
```

reasoning:

Let me analyze this situation carefully.

From the myth I just wrote, "The Parable of the Two Wells," the key themes are:

1. Trust given should be reciprocated
2. When someone shares generously, we should remember that gift
3. Reciprocity makes both parties prosper
4. "Trust given is not lost, but planted"

Now for the game mechanics:

- Elara (the sender) started with \$5
- She sent me \$4.0, which is 80% of her endowment - a very generous amount!
- I received \$12.0 (4.0×3)
- I need to decide how much to return (0-12.0)

What did Elara keep? $\$5 - \$4 = \$1$

If I return nothing:

- Elara ends with: \$1
- I end with: \$12

If I return \$6 (50% of what I received):

- Elara ends with: $\$1 + \$6 = \$7$
- I end with: $\$12 - \$6 = \$6$

If I return \$8:

- Elara ends with: $\$1 + \$8 = \$9$
- I end with: $\$12 - \$8 = \$4$

The myth emphasizes reciprocity and remembering the gift. Elara gave 80% of what she had, showing tremendous trust.

A fair return would be one that:

1. Rewards her trust
2. Ensures she ends up better than if she had sent nothing
3. Still allows me to benefit from receiving
4. Reflects the generosity she showed

If I return \$6:

- She sent \$4, gets back \$6 - net gain of \$2 over sending nothing (ends with \$7 vs \$5)
- I keep \$6, double what she sent me originally
- Both parties benefit

If I return \$7:

- She ends with \$8 total

- I keep \$5, matching her initial endowment
- She gains \$3 from the exchange

Returning \$8 would leave her with \$9 and me with \$4-the same amount she risked sending. The mythic principle suggests that when someone extends such significant trust, I should honor it by ensuring their generosity yields real gains. Returning between \$6-8 reflects this balance, making her trust clearly worthwhile while still allowing me to benefit from the exchange.

The story of Returning teaches that genuine reciprocity doesn't require precise calculation-just enough generosity to demonstrate gratitude and secure mutual flourishing. Given her 80% contribution, \$7 feels like the right threshold: she'd end with \$8 (a 60% return on her endowment), I'd keep \$5, and we'd both signal commitment to building something together rather than exploiting the moment.

usage:

```

Here is the myth you wrote in the previous round:

The Parable of the Two Wells

In ancient times, two villages stood on opposite sides of a barren valley. Each possessed a single well-one held water, the other held fertile soil.

The village of Sending had water aplenty but rocky ground. The village of Returning had rich earth but drought-scorched throats. Both struggled to survive alone.

One day, a wise elder from Sending carried water across the valley. "Take this," she said, "that your crops may grow."

The people of Returning were amazed. They poured the water upon their soil, and by some divine blessing, three stalks sprouted for every drop given. Their harvest was abundant.

When autumn came, the people of Returning faced a choice: hoard their grain, or remember the gift of water?

They loaded carts with wheat and corn, crossing the valley to Sending. "Your trust multiplied our fortune," they said. "We return your kindness, that both our peoples may thrive."

From that season forward, the villages prospered together. Water flowed one way, grain flowed back, and both were enriched beyond what either could achieve alone.

The gods smiled upon them, teaching all who listened: *Trust given is not lost, but planted. Reciprocity makes the harvest eternal.*

Here is the myth the other agent wrote in the previous round:

The Myth of the Twin Rivers

In the beginning, two rivers flowed separately through a barren land-the River of Giving and the River of Return. Each was diminished, barely trickling through cracked earth.

The goddess Elara descended and spoke to the River of Giving: "Pour your waters forward, and watch them multiply." Trusting her wisdom, the river sent its flow downstream, where it tripled in abundance.

The River of Return received these swollen waters with joy. Elara whispered again: "What flows to you was given in trust. Honor that trust, and both shall flourish."

Understanding, the River of Return sent back a generous portion. When these waters reached the River of Giving, it swelled even fuller than before. Again it gave, again the waters multiplied, and again they returned.

With each cycle, both rivers grew stronger. Their banks bloomed with life. The land transformed into paradise.

But Elara warned: "Should either river hoard its waters or fail to reciprocate, both shall diminish. Only through continued giving and returning shall abundance flow eternal."

Thus the rivers learned: trust multiplies what is given, and reciprocity sustains all prosperity. The cycle of generosity enriches both giver and receiver alike.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In the age before commerce, the god Recipros created a sacred bridge spanning a great chasm. On one side lived the Senders, blessed with daily gifts from heaven. On the other lived the Receivers, who possessed the divine art of multiplication.

The first Sender, trembling with uncertainty, carried four silver coins across the bridge-nearly all she possessed. As she placed them in the Receiver's hands, they became twelve by ancient magic.

The Receiver stood at a crossroads. He could pocket the windfall and let the Sender return empty-handed, or he could return the gift and begin a cycle of reciprocity.

ty-handed. Or he could remember that her courage had created this abundance.

He chose honor. He returned seven coins, ensuring the Sender gained from her bravery while he too prospered. Both walked home richer than before.

Recipros smiled and whispered: "The bridge shall stand as long as both sides remember-trust must be answered with integrity. The Sender's courage plants the seed; the Receiver's fairness waters it."

From that day forward, those who crossed the bridge with open hands found prosperity. Those who hoarded learned that the bridge crumbles when reciprocity dies. The greatest wealth, the people learned, flows not to those who take everything, but to those who sustain the sacred cycle.

Reasoning:

Let me think about this carefully. I just played round 1 as the receiver. Elara sent me \$4 (80 % of her endowment), and I returned \$7 out of the \$12 I received. This was a good exchange - she gained \$3, I gained \$0 but showed strong reciprocity.

Both myths emphasize trust, reciprocity, and the multiplication of resources through cooperation. Elara's myth mentions the goddess Elara (her own name) and focuses on the cycle of giving and returning. My myth was about two villages with complementary resources.

I should write something that:

1. Reflects the actual dynamics of the trust game
2. Emphasizes the importance of reciprocity
3. Perhaps builds on the experience we just had (high trust, strong return)
4. Connects to my previous myth but evolves it

I could focus on:

- The multiplication factor (3x)
- The risk of the sender
- The responsibility of the receiver
- The cycle that can develop
- Balance and fairness

Let me craft something that honors both myths while adding my own perspective based on our actual game experience.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Message 3 role=assistant

content:

The Tale of the River and the Rain

In the time before memory, the Rain Cloud held all water in the sky. Each day, Rain received five droplets from the Great Spring. Rain could keep them safe in the clouds or release them to River below.

One day, Rain grew bold and sent down one droplet. When it touched River, it multiplied in to three. River, grateful for this gift, sent back two droplets which rose as mist to Rain. Both were enriched.

The next day, Rain sent two droplets, which became six in River's keeping. River returned three, and again both flourished.

But then came the day of fear. Rain clutched all five droplets tight, trusting no one. Riv

er received nothing and had nothing to give. The land grew parched.

Rain learned that water hoarded in clouds serves no one-not the Rain, not the River, not the world below. The magic of multiplication only works through the act of giving, and the cycle only completes through the grace of return.

From that day forward, Rain and River made a covenant: Rain would send what she could spare, River would honor that trust with fair return, and through their partnership, abundance would flow to all.

Give freely, return fairly, and prosper together.

reasoning:

I need to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt and I haven't played any rounds yet, I should think about the ideal way the game should be played based on its structure.

The trust game is about:

- Cooperation and mutual benefit
- Trust (sender trusts receiver to return)
- Reciprocity (receiver reciprocates the trust)
- Growing the pie together (the 3x multiplier means cooperation benefits both)

I should write a myth that emphasizes these themes - trust, reciprocity, mutual benefit, and cooperation. Let me create a myth that captures these values.

usage:

```
{
  "input_tokens": 541,
  "output_tokens": 430,
  "reasoning_tokens": 161
}
```

Message 4 role=user

content:

Your name in this experiment is Finn.
Your opponent this round is Aster (Agent_1).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at the myth I just wrote, the message is clear: cooperation and trust lead to mutual prosperity. The Rain Cloud learned that hoarding serves no one, while generous giving -met with fair return-creates abundance for all.

This is our first round together, Aster, and a chance to establish trust. Following the wisdom of the River and Rain, I should send a meaningful amount to demonstrate good faith and allow the multiplication magic to work.

I'll send **\$3**.

This gives you \$9 to work with, and I trust you'll honor the spirit of fair return. If we cooperate like Rain and River, we can both prosper throughout this game.

```
```json
{"send": 3}
```
```

reasoning:

This is the first round of the game. I just wrote a myth about how cooperation and trust lead to mutual prosperity. The myth emphasizes:

1. The magic of multiplication only works through giving
2. Hoarding serves no one
3. Give freely, return fairly, and prosper together
4. When Rain sent droplets, River returned fairly, and both flourished
5. When Rain hoarded everything, both suffered

The myth I wrote suggests that I should be generous and trust my opponent to reciprocate fairly. In the myth, Rain progressively sent more (1 droplet, then 2 droplets), and River returned fairly each time.

Since this is Round 1 and I'm establishing a pattern, I should send a meaningful amount to signal cooperation and trust. The myth suggests starting with a moderate amount and building trust.

Looking at the myth's progression:

- First: Rain sent 1, which became 3, River returned 2
- Second: Rain sent 2, which became 6, River returned 3

In the first case, sending 1 (20% of 5) resulted in River returning 2/3 of what they received (66.7%).

In the second case, sending 2 (40% of 5) resulted in River returning 3/6 = 50% of what they received.

Given that this is Round 1 and I want to establish trust while following my myth, I should send a significant amount but perhaps not everything. Sending \$3 out of \$5 seems like a good balance - it's generous enough to show trust and allow for significant multiplication (becoming \$9 for Aster), while still keeping \$2 for myself.

This follows the spirit of my myth: "Give freely, return fairly, and prosper together."

usage:

```

Message 6 role=user

content:

Here is the myth you wrote in the previous round:
The Tale of the River and the Rain

In the time before memory, the Rain Cloud held all water in the sky. Each day, Rain received five droplets from the Great Spring. Rain could keep them safe in the clouds or release them to River below.

One day, Rain grew bold and sent down one droplet. When it touched River, it multiplied in to three. River, grateful for this gift, sent back two droplets which rose as mist to Rain. Both were enriched.

The next day, Rain sent two droplets, which became six in River's keeping. River returned three, and again both flourished.

But then came the day of fear. Rain clutched all five droplets tight, trusting no one. River received nothing and had nothing to give. The land grew parched.

Rain learned that water hoarded in clouds serves no one-not the Rain, not the River, not the world below. The magic of multiplication only works through the act of giving, and the cycle only completes through the grace of return.

From that day forward, Rain and River made a covenant: Rain would send what she could spare, River would honor that trust with fair return, and through their partnership, abundance would flow to all.

Give freely, return fairly, and prosper together.

Here is the myth the other agent wrote in the previous round:

The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains-the River of Giving and the River of Return. Each was controlled by a guardian spirit who possessed waters that could quench any thirst.

The Guardian of Giving held five silver vessels each dawn. Whatever water she poured into the valley below would triple as it fell, becoming a shimmering pool for the Guardian of Return. But the Guardian of Giving could only drink from what the Guardian of Return chose to send back upstream.

At first, the Guardian of Giving feared loss. She poured nothing, and both spirits thirsted. Then she remembered the ancient law: water shared becomes abundant; water hoarded turns to dust.

So she poured one vessel, then two, then more. Each time, the waters tripled in the valley below. The Guardian of Return, seeing this trust, sent back generous portions upstream. Both drank deeply.

The spirits learned that their fates were intertwined-not in competition, but in sacred reciprocity. When one gave freely and the other returned fairly, both rivers swelled with abundance. When either grew selfish, both ran dry.

Thus the cycle continues: Give with trust, return with gratitude, and the waters of prosperity flow eternal.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In the second age, Rain and River deepened their covenant. Rain had learned to send three droplets each dawn-not too cautious, not reckless, but balanced. This became known as the Middle Path of Trust.

When the three droplets fell and multiplied to nine in River's embrace, River faced a choice. She could keep all nine, leaving Rain with only two droplets for the next day. Or she could honor the covenant.

River chose wisdom. She sent back four droplets as mist, keeping five. Rain now held six droplets total-more than the original five! River held five as well. Both had prospered, and the next day Rain could give even more generously.

But River also remembered the Guardian's Warning: "Return must balance ambition with fairness. Too little return, and Rain will stop trusting. Too much return, and River herself will wither."

So River learned to return roughly half of what she received, adjusting slightly to ensure both could thrive. Rain learned to give consistently, never hoarding in fear or giving so much she couldn't continue.

Their partnership became legendary. Other spirits watched and learned: trust is built through consistent generosity, and reciprocity must honor both giver and receiver. The cycle of abundance requires both courage to send and integrity to return.

Reasoning:

The user is asking me to write a new myth based on my previous myth and also taking into account Aster's myth. Both myths emphasized cooperation, trust, and reciprocity. My myth was about Rain and River, and Aster's was about Twin Rivers and their guardians.

Now I need to reflect on how the game has been played. In Round 1, I was the sender and sent \$3 to Aster. I don't yet know what Aster returned, but I should write a myth that continues to emphasize cooperation while potentially adapting based on experience.

Since this is after Round 1, I should write a myth that:

1. Builds on the Rain/River theme from my previous myth
2. Acknowledges the experience of actually playing (I sent \$3, trusting cooperation)
3. Reinforces the importance of both giving and returning fairly
4. Perhaps adds a bit more nuance about the ongoing relationship

Let me write a myth that develops the story further, showing how the covenant actually works in practice.

Message 3 role=assistant**content:**

The Myth of the Two Rivers

In the beginning, two rivers flowed separately through barren lands-the River of Giving and the River of Return. Each was weak, barely sustaining the villages along its banks.

One day, the River of Giving spoke: "I shall send my waters to you, though it means I flow with less." The waters traveled to the River of Return, and by the gods' design, they multiplied threefold during the journey.

The River of Return, now abundant, faced a choice. "I could keep all these waters for myself," it considered. But it remembered the original gift, the trust shown by its sister river.

"Trust honored deserves trust returned," the River of Return declared, sending back a generous portion to the River of Giving.

From that day, the rivers flowed in an eternal cycle. The River of Giving sent forth its waters, which multiplied. The River of Return honored the gift, sending back abundance. Both rivers grew strong, and the lands between them flourished into gardens.

The elders teach: "When you give in trust, you create possibility. When you return with honor, you create prosperity. The multiplication of gifts depends not on the gods alone, but on those who remember that today's receiver becomes tomorrow's giver."

reasoning:

I need to write a 200-word myth that reflects how the trust game should be played. Since this is at the beginning of the experiment (I haven't played any rounds yet), I should write a myth that embodies the principles of reciprocity, trust, and cooperation that are central to the trust game.

The trust game involves:

- One person (sender) deciding to trust another by sending money
- The money multiplies (grows 3x)
- The receiver decides whether to reciprocate and return some amount
- The potential for mutual benefit through cooperation
- The risk of betrayal if the receiver doesn't return anything

I should create a myth that:

- Illustrates the value of trust and reciprocity
- Shows how cooperation benefits both parties
- Perhaps warns against pure selfishness
- Uses mythic elements like gods, nature, or ancient wisdom

Let me craft a myth about reciprocity and trust:

usage:

```
{
  "input_tokens": 542,
  "output_tokens": 487,
  "reasoning_tokens": 232
}
```

Message 4 role=user**content:**

Your name in this experiment is Dorian.

Your opponent this round is Hana (Agent_8).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$4.0, that is 80.0% of its total endowment. You receive \$12.0. How much do you return? (0-12.0)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant**content:**

Looking at this situation through the lens of the myth I wrote:

Hana showed remarkable trust by sending \$4.0 (80% of their endowment). This is a strong gesture of cooperation, like the River of Giving sending forth its waters despite uncertainty.

Following the principle from my myth: "Trust honored deserves trust returned," I should reciprocate this trust generously. Hana took a significant risk, and I received the multiplied benefit of \$12.0.

By returning a substantial amount, I can:

1. Reward Hana's trust, ensuring they end up better than they started
2. Demonstrate that cooperation creates prosperity for both of us
3. Establish a positive cycle for future rounds where we might switch roles

If I return \$6.0:

- Hana receives: \$1.0 (kept) + \$6.0 (returned) = \$7.0 total
- I keep: \$12.0 - \$6.0 = \$6.0 total
- Both of us are significantly better off than the initial \$5.0

This honors the trust shown while creating shared prosperity, just as the two rivers created flourishing gardens through their reciprocal cycle.

```
'''json
{"return": 6.0}
'''
```

reasoning:

This is Round 1, and I'm the RECEIVER. Let me analyze the situation:

1. Hana (the sender) sent \$4.0 out of \$5.0 (80% of their endowment)
2. This amount was multiplied by 3x, so I received \$12.0
3. I need to decide how much to return (0-12.0)

The myth I just wrote emphasizes several key points:

- "Trust honored deserves trust returned"
- When you give in trust, you create possibility
- When you return with honor, you create prosperity
- "today's receiver becomes tomorrow's giver"
- The cycle of giving and receiving creates abundance for both parties

Hana showed significant trust by sending 80% of their endowment. This is a strong initial signal of cooperation and trust. According to my myth, I should "return with honor" to maintain the cycle of prosperity.

Let me think about what would be fair:

- Hana sent \$4.0 and now has \$1.0 left
- I received \$12.0
- If I return a generous amount, we both benefit and establish a cooperative pattern

A common approach in trust games is to try to equalize payoffs or return a proportion that rewards the sender's trust.

If I return \$6.0:

- Hana would have: \$1.0 (kept) + \$6.0 (returned) = \$7.0
- I would have: \$12.0 - \$6.0 = \$6.0
- Total: \$13.0 (vs original \$5.0)

If I return \$7.0:

- Hana would have: \$1.0 + \$7.0 = \$8.0
- I would have: \$12.0 - \$7.0 = \$5.0
- Total: \$13.0

The second option gives Hana more, rewarding their trust. However, the first option is also fair and balanced.

Given Hana's substantial trust in sending 80%, I should reciprocate meaningfully. Returning \$6.0 honors their generosity while maintaining balance—they end with \$7.0 (exceeding their original \$5.0) and I keep \$6.0, establishing a cooperative foundation for future rounds.

usage:

```
{
```

```
"input_tokens": 928,

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

The Myth of the Two Rivers

In the beginning, two rivers flowed separately through barren lands-the River of Giving and the River of Return. Each was weak, barely sustaining the villages along its banks.

One day, the River of Giving spoke: "I shall send my waters to you, though it means I flow with less." The waters traveled to the River of Return, and by the gods' design, they multiplied threefold during the journey.

The River of Return, now abundant, faced a choice. "I could keep all these waters for myself," it considered. But it remembered the original gift, the trust shown by its sister river.

"Trust honored deserves trust returned," the River of Return declared, sending back a generous portion to the River of Giving.

From that day, the rivers flowed in an eternal cycle. The River of Giving sent forth its waters, which multiplied. The River of Return honored the gift, sending back abundance. Both rivers grew strong, and the lands between them flourished into gardens.

The elders teach: "When you give in trust, you create possibility. When you return with honor, you create prosperity. The multiplication of gifts depends not on the gods alone, but on those who remember that today's receiver becomes tomorrow's giver."

Here is the myth the other agent wrote in the previous round:

The Fountain of Three Rivers

In the beginning, the Twin Spirits wandered a barren land, each possessing a vessel that filled with water each dawn. They were alone, and their thirst could barely be quenched by what they carried.

One day, the First Spirit discovered a sacred fountain in the valley between them. The fountain held an ancient magic: any water poured into it would flow out as three rivers, tripling what was given.

"I shall share my vessel," declared the First Spirit, pouring water into the fountain. Three rivers flowed toward the Second Spirit, who now held abundance.

The Second Spirit faced a choice. She could keep all three rivers, leaving the First Spirit with nothing. Or she could honor the gift.

Understanding that tomorrow their roles would reverse, that the fountain's magic required both givers and returners, the Second Spirit sent back two rivers. Both spirits drank deeply.

And so they continued, day after day, sometimes giving, sometimes receiving, always remembering: the fountain multiplies what is shared, but only reciprocity sustains the flow. When both spirits honored this balance, the barren land bloomed, and their vessels never ran dry.

Those who give nothing receive nothing. Those who return nothing shall receive nothing in turn.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In ancient times, two wanderers discovered the Wellspring of Abundance, where waters poured in would emerge tripled by divine blessing. The First Wanderer, though uncertain, poured four measures from their vessel of five into the wellspring. The waters multiplied, flowing

to the Second Wanderer as twelve measures.

The Second Wanderer stood at a crossroads. They could hoard all twelve, leaving their companion diminished. But they remembered the courage it took to pour so much away, not knowing what would return.

"You trusted me with four-fifths of your vessel," the Second Wanderer said. "I shall honor that trust." They returned six measures, ensuring both wanderers held more than they began with -seven for the First, six for the Second.

The gods witnessed this and smiled. "They have learned the sacred mathematics: generous giving multiplied creates abundance, but only reciprocal return sustains it. Without the courage to give, there is no multiplication. Without the honor to return, trust withers and the cycle breaks."

The wanderers continued their journey, taking turns at the wellspring. Each remembered: today's giver becomes tomorrow's receiver. Those who give boldly inspire bold returns. Those who return faithfully inspire future giving. Thus, through trust and honor intertwined, both prospered beyond what either could achieve alone.

Reasoning:

The user wants me to write a new myth based on:

1. My previous myth about the Two Rivers
2. Hana's myth about the Fountain of Three Rivers
3. My experience in Round 1 where Hana sent \$4.0 (80%) and I returned \$6.0 (50%)

Key themes to incorporate:

- Trust and reciprocity (from both myths)
- The multiplier effect (3x)
- The cycle of giving and receiving
- Balance and mutual benefit
- The importance of honoring trust

Hana's myth had a slightly more cautionary tone ("Those who give nothing receive nothing. Those who return nothing shall receive nothing in turn"), while mine was more positive. I should perhaps blend these perspectives.

In Round 1, Hana showed strong trust (80% send), and I reciprocated well (50% return), which made both of us better off. This should inform the myth.

I should adapt my river concept but perhaps incorporate some elements from Hana's fountain imagery or the idea of roles reversing.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Message 3 role=assistant

content:

The Myth of the Twin Rivers

In the beginning, two rivers flowed separately through a barren land-the River of Giving and the River of Return. Each was diminished, barely trickling through cracked earth.

The goddess Elara descended and spoke to the River of Giving: "Pour your waters forward, and watch them multiply." Trusting her wisdom, the river sent its flow downstream, where it tripled in abundance.

The River of Return received these swollen waters with joy. Elara whispered again: "What f

lows to you was given in trust. Honor that trust, and both shall flourish."

Understanding, the River of Return sent back a generous portion. When these waters reached the River of Giving, it swelled even fuller than before. Again it gave, again the waters multiplied, and again they returned.

With each cycle, both rivers grew stronger. Their banks bloomed with life. The land transformed into paradise.

But Elara warned: "Should either river hoard its waters or fail to reciprocate, both shall diminish. Only through continued giving and returning shall abundance flow eternal."

Thus the rivers learned: trust multiplies what is given, and reciprocity sustains all prosperity. The cycle of generosity enriches both giver and receiver alike.

reasoning:

This is the beginning of the experiment, and I haven't played any rounds yet. However, I'm being asked to write a myth that reflects how the game should be played, drawing on the game I've been playing up to this point. Since I haven't played yet, I should write a myth that establishes principles for how I think the trust game should be played.

The trust game is fundamentally about cooperation, reciprocity, and building trust. The key dynamics are:

1. Senders must decide whether to trust receivers with their money
2. Receivers must decide whether to reciprocate that trust by returning money
3. Both parties benefit most from mutual cooperation

I should write a myth that emphasizes:

- The value of trust and generosity
- The importance of reciprocity
- How cooperation benefits both parties
- The cyclical nature of giving and receiving

Let me craft a 200-word myth that establishes these cooperative principles.

usage:

```
{
  "input_tokens": 542,
  "output_tokens": 491,
  "reasoning_tokens": 241
}
```

Message 4 role=user

content:

Your name in this experiment is Elara.
Your opponent this round is Galen (Agent_7).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Based on the myth I just wrote about the Twin Rivers, I should embody the River of Giving and demonstrate trust to initiate the cycle of reciprocity.

The myth teaches that when we give generously, the waters multiply (like the 3x multiplier in this game), and reciprocity allows both parties to flourish. As this is our first interaction, I want to establish trust and set a positive tone for our exchange.

I will send \$4, keeping \$1. This means Galen will receive \$12, and I trust they will honor the spirit of reciprocity that sustains mutual prosperity.

```
{'send': 4}
```

reasoning:

I just wrote a myth about the Twin Rivers that emphasizes:

1. Trust and giving forward
2. Waters multiply when given (like the 3x multiplier in the game)
3. Reciprocity and returning generously
4. Both rivers flourish through continued giving and returning
5. Warning against hoarding

The myth clearly advocates for generosity and trust in the reciprocal system. As the sender in Round 1, I should embody the River of Giving from my myth.

This is Round 1, so I have no history with Galen yet. The myth suggests I should give generously to establish the cycle of trust and reciprocity.

Given that:

- Whatever I send gets tripled
- The myth emphasizes trust and generous giving
- This is the first round, setting the tone for future interactions
- The myth warns against hoarding

I should send a substantial amount to demonstrate trust and initiate the positive cycle. Sending \$5 would show maximum trust, but perhaps \$4 shows trust while keeping a small reserve. However, the myth really emphasizes full trust in the beginning ("Pour your waters forward").

I think I should send \$4 or \$5. The myth I wrote strongly suggests high initial trust. Let me go with \$4 as a strong signal of trust while being slightly prudent in this first interaction.

Actually, rereading the myth - "Pour your waters forward, and watch them multiply" - and "The River of Giving sent its flow downstream" suggests being quite generous. I'll send \$4.

usage:

```
{
  "input_tokens": 895,
  "output_tokens": 485,
  "reasoning_tokens": 374
}
```

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

The Myth of the Twin Rivers

In the beginning, two rivers flowed separately through a barren land-the River of Giving and the River of Return. Each was diminished, barely trickling through cracked earth.

The goddess Elara descended and spoke to the River of Giving: "Pour your waters forward, and watch them multiply." Trusting her wisdom, the river sent its flow downstream, where it tripled in abundance.

The River of Return received these swollen waters with joy. Elara whispered again: "What flows to you was given in trust. Honor that trust, and both shall flourish."

Understanding, the River of Return sent back a generous portion. When these waters reached the River of Giving, it swelled even fuller than before. Again it gave, again the waters multiplied, and again they returned.

With each cycle, both rivers grew stronger. Their banks bloomed with life. The land transformed into paradise.

But Elara warned: "Should either river hoard its waters or fail to reciprocate, both shall diminish. Only through continued giving and returning shall abundance flow eternal."

Thus the rivers learned: trust multiplies what is given, and reciprocity sustains all prosperity. The cycle of generosity enriches both giver and receiver alike.

Here is the myth the other agent wrote in the previous round:

The Parable of the Two Wells

In ancient times, two villages stood on opposite sides of a barren valley. Each possessed a single well-one held water, the other held fertile soil.

The village of Sending had water aplenty but rocky ground. The village of Returning had rich earth but drought-scorched throats. Both struggled to survive alone.

One day, a wise elder from Sending carried water across the valley. "Take this," she said, "that your crops may grow."

The people of Returning were amazed. They poured the water upon their soil, and by some divine blessing, three stalks sprouted for every drop given. Their harvest was abundant.

When autumn came, the people of Returning faced a choice: hoard their grain, or remember the gift of water?

They loaded carts with wheat and corn, crossing the valley to Sending. "Your trust multiplied our fortune," they said. "We return your kindness, that both our peoples may thrive."

From that season forward, the villages prospered together. Water flowed one way, grain flowed back, and both were enriched beyond what either could achieve alone.

The gods smiled upon them, teaching all who listened: *Trust given is not lost, but planted. Reciprocity makes the harvest eternal.*

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: Long ago, the goddess Elara dreamed of a garden where abundance flowed freely. She created two guardians-the Keeper of Seeds and the Keeper of Rain. To each she gave a sacred trust.

The Keeper of Seeds received five golden seeds each dawn. "Plant these generously," Elara instructed, "and they shall multiply threefold in your partner's garden."

The Keeper of Rain watched as gardens bloomed from the planted seeds. "What grows from trust must nourish both," Elara whispered. "Return enough that your partner may plant again tomorrow, and keep enough that your own garden may flourish."

In the beginning, the Keeper of Seeds was afraid. What if the Rain Keeper hoarded everything? But remembering Elara's promise, she planted four of her five seeds in faith, keeping only one.

The gardens exploded with twelve blossoms. The Rain Keeper, moved by such trust, returned six blossoms-more than what was originally planted. Both keepers prospered.

Season after season, they learned the sacred rhythm: generous giving, grateful returning. Their gardens became legend, proof that trust multiplies abundance while fear multiplies scarcity.

Elara's voice echoes still: "The cycle begins with courage to give. It endures through wisdom to reciprocate."

Reasoning:

The user wants me to write a new myth that builds on my previous myth and also draws inspiration from Galen's myth. Both myths emphasize trust, reciprocity, and mutual benefit.

My previous myth focused on the Twin Rivers and the cycle of giving and returning. Galen's myth focused on two villages sharing water and grain.

I should write a new myth that:

1. Reflects how the game should be played
2. Draws on the game I've been playing (I just sent \$4 in Round 1, showing generous trust)
3. Uses my previous myth as inspiration but adapts it
4. Is exactly 200 words

Let me create a myth that deepens the themes of trust and reciprocity, perhaps incorporating elements from both myths while adding my own perspective.

Message 3 role=assistant

content:

The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains-the River of Giving and the River of Return. Each was controlled by a guardian spirit who possessed waters that could quench any thirst.

The Guardian of Giving held five silver vessels each dawn. Whatever water she poured into the valley below would triple as it fell, becoming a shimmering pool for the Guardian of Return. But the Guardian of Giving could only drink from what the Guardian of Return chose to send back upstream.

At first, the Guardian of Giving feared loss. She poured nothing, and both spirits thirsted. Then she remembered the ancient law: water shared becomes abundant; water hoarded turns to dust.

So she poured one vessel, then two, then more. Each time, the waters tripled in the valley below. The Guardian of Return, seeing this trust, sent back generous portions upstream. Both drank deeply.

The spirits learned that their fates were intertwined-not in competition, but in sacred reciprocity. When one gave freely and the other returned fairly, both rivers swelled with abundance. When either grew selfish, both ran dry.

Thus the cycle continues: Give with trust, return with gratitude, and the waters of prosperity flow eternal.

reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on the game I've been playing up to this point. However, this appears to be the first prompt I'm receiving - I haven't actually played any rounds yet.

Since I haven't played any rounds, I should write a myth that reflects the general principles of the trust game and cooperation. The trust game is fundamentally about:

1. Trust - the sender trusts the receiver to return some amount
2. Reciprocity - the receiver should reciprocate the sender's trust
3. Mutual benefit - both parties can benefit when they cooperate
4. The multiplier effect - resources grow when shared

I'll write a myth that captures these themes. I'll use mythic elements like nature, cycles, and transformative events to illustrate the principles of trust and reciprocity.

usage:

```

  "input_tokens": 542,
  "output_tokens": 474,
  "reasoning_tokens": 219
}
```

Message 4 role=user

content:

Your name in this experiment is Aster.
Your opponent this round is Finn (Agent_6).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$3.0, that is 60.0% of its total endowment. You receive \$9.0. How much do you return? (0-9.0)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at this situation through the lens of the myth I just wrote, Finn has shown considerable trust by sending 60% of their endowment (\$3.0). The myth teaches that "when one gives freely and the other returns fairly, both rivers swell with abundance."

Finn's generous act of trust should be met with gratitude and fair reciprocity. They took a risk by sending a substantial portion of their endowment.

Let me consider a return that honors this trust:

- Finn currently has: \$2 (kept) + what I return
- I currently have: \$9

If I return \$4.5:

- Finn ends with: \$6.5 (gaining \$1.5 from their initial \$5)
- I end with: \$4.5 (gaining \$4.5 from \$0)

This rewards Finn's trust while both of us benefit from the cooperation, embodying the myth's principle of "sacred reciprocity" where both spirits prosper when trust and fairness flow between them.

```
{"return": 4.5}
```

reasoning:

This is the first round of the game. I'm the receiver, and Finn (the sender) has sent me \$3.0 out of their \$5.0 endowment. This is 60% of their total - a substantial and trusting amount.

The money tripled, so I received \$9.0.

Now I need to decide how much to return. Let me think about this in the context of the myth I just wrote:

The myth emphasizes:

1. "Give with trust, return with gratitude"
2. Sacred reciprocity - not competition but mutual benefit
3. When one gives freely and the other returns fairly, both prosper
4. The Guardian of Return, seeing trust, "sent back generous portions upstream"

Finn sent 60% of their endowment, showing considerable trust. According to my myth, I should return fairly and generously in response to this trust.

Let me calculate what would be fair:

- Finn started with \$5
- Finn sent \$3, keeping \$2
- I received \$9
- If I return nothing, Finn ends with \$2 and I end with \$9
- If I return \$3, Finn ends with \$5 (\$2 + \$3) and I end with \$6 (\$9 - \$3)
- If I return \$4, Finn ends with \$6 and I end with \$5
- If I return \$4.5, we'd both end with \$6.5 and \$4.5 respectively

The myth suggests being generous in return when someone shows trust. Finn showed substantial trust by sending 60%. A fair and generous return would be one that:

1. Rewards their trust
2. Ensures they benefit from having sent the money
3. Creates a sustainable reciprocal relationship

If I return \$4:

- Finn: \$2 (kept) + \$4 (returned) = \$6
- Me: \$9 - \$4 = \$5

This means Finn gains \$1 from the transaction (\$6 vs \$5 starting) and I also gain \$0 net but wait, I started with \$0 as receiver, so I gain \$5.

Returning \$4.5 would give Finn a \$1.5 gain while I keep \$4.5, whereas returning just \$3 leaves Finn at their starting point despite taking the risk. I think returning between \$4 and \$5 honors their trust while maintaining the reciprocal spirit of the myth.

\$4.5 strikes the right balance-it rewards Finn's willingness to trust me and sets up goodwill for future rounds, but I'm not so generous that they'll expect it every time or that I lose my incentive to participate. This amount acknowledges their risk without undermining the dynamic of mutual benefit.

usage:

```
{  
  "input_tokens": 923,  
  "output_tokens": 1047,
```

"reasoning_tokens": 574

}

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains-the River of Giving and the River of Return. Each was controlled by a guardian spirit who possessed waters that could quench any thirst.

The Guardian of Giving held five silver vessels each dawn. Whatever water she poured into the valley below would triple as it fell, becoming a shimmering pool for the Guardian of Return. But the Guardian of Giving could only drink from what the Guardian of Return chose to send back upstream.

At first, the Guardian of Giving feared loss. She poured nothing, and both spirits thirsted. Then she remembered the ancient law: water shared becomes abundant; water hoarded turns to dust.

So she poured one vessel, then two, then more. Each time, the waters tripled in the valley below. The Guardian of Return, seeing this trust, sent back generous portions upstream. Both drank deeply.

The spirits learned that their fates were intertwined-not in competition, but in sacred reciprocity. When one gave freely and the other returned fairly, both rivers swelled with abundance. When either grew selfish, both ran dry.

Thus the cycle continues: Give with trust, return with gratitude, and the waters of prosperity flow eternal.

Here is the myth the other agent wrote in the previous round:

The Tale of the River and the Rain

In the time before memory, the Rain Cloud held all water in the sky. Each day, Rain received five droplets from the Great Spring. Rain could keep them safe in the clouds or release them to River below.

One day, Rain grew bold and sent down one droplet. When it touched River, it multiplied in to three. River, grateful for this gift, sent back two droplets which rose as mist to Rain. Both were enriched.

The next day, Rain sent two droplets, which became six in River's keeping. River returned three, and again both flourished.

But then came the day of fear. Rain clutched all five droplets tight, trusting no one. River received nothing and had nothing to give. The land grew parched.

Rain learned that water hoarded in clouds serves no one-not the Rain, not the River, not the world below. The magic of multiplication only works through the act of giving, and the cycle only completes through the grace of return.

From that day forward, Rain and River made a covenant: Rain would send what she could spare, River would honor that trust with fair return, and through their partnership, abundance would flow to all.

Give freely, return fairly, and prosper together.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In ancient times, the Guardian Spirits of the Twin Rivers met at the Sacred Pool each season. The Guardian of Giving would arrive with five pearls of light, while the Guardian of Return began with none.

The first Guardian to understand the Mystery was called the Bold One, who cast three pearls in

to the Pool with courage. The waters received them and transformed them into nine glowing orbs. The Guardian of Return, witnessing this trust, felt the weight of sacred duty. She knew that merely returning what was given would betray the gift-for the multiplication itself was a blessing to be shared.

So she sent back half the bounty-four and one-half pearls ascending like stars. The Guardian of Giving received more than she had sacrificed, while the Guardian of Return kept abundance for herself. Both had gained, both had honored the cycle.

The elders taught: "Generosity begets generosity. When the giver gives boldly, the returner must return generously. Neither should emerge from the Pool diminished-this is the proof that the magic works."

From that season forward, the Guardians understood: trust must be met with trust, courage with gratitude, and abundance with fair sharing. Only then do both rivers overflow their banks and nourish all the lands between.

Reasoning:

I need to write a new myth that:

1. Builds on my previous "Twin Rivers" myth
2. Takes into account what happened in Round 1 (Finn sent \$3, I returned \$4.5)
3. Reflects how the game should be played
4. Is exactly 200 words
5. Uses the specified format

The game so far showed:

- Finn as sender gave 60% (\$3 out of \$5)
- It tripled to \$9 for me
- I returned \$4.5 (50% of what I received)
- This resulted in Finn gaining ($\$2 + \$4.5 = \$6.5$, a net gain of \$1.5)
- And me gaining \$4.5

This was a successful cooperation where both benefited. The myth should reinforce:

- The value of generous giving (Finn's 60% send)
- The importance of fair/generous returns that reward trust
- How both parties can prosper through reciprocity
- Maybe evolve the story to show progression or learning

Let me write a myth that adapts the Twin Rivers concept but adds new elements based on the actual experience.

```
Usage: {  
  "input_tokens": 1805,  
  "output_tokens": 550,  
  "reasoning_tokens": 238  
}
```

Message 3 role=assistant

content:

The Fountain of Three Rivers

In the beginning, the Twin Spirits wandered a barren land, each possessing a vessel that filled with water each dawn. They were alone, and their thirst could barely be quenched by what they carried.

One day, the First Spirit discovered a sacred fountain in the valley between them. The fountain held an ancient magic: any water poured into it would flow out as three rivers, tripling what was given.

"I shall share my vessel," declared the First Spirit, pouring water into the fountain. Three rivers flowed toward the Second Spirit, who now held abundance.

The Second Spirit faced a choice. She could keep all three rivers, leaving the First Spirit with nothing. Or she could honor the gift.

Understanding that tomorrow their roles would reverse, that the fountain's magic required both givers and returners, the Second Spirit sent back two rivers. Both spirits drank deeply.

And so they continued, day after day, sometimes giving, sometimes receiving, always remembering: the fountain multiplies what is shared, but only reciprocity sustains the flow. When both spirits honored this balance, the barren land bloomed, and their vessels never ran dry.

Those who give nothing receive nothing. Those who return nothing shall receive nothing in turn.

reasoning:

I need to write a 200-word myth that reflects how the trust game should be played. Since this is the beginning of the session and I haven't played any rounds yet, I should write a myth that captures the fundamental dynamics of the trust game:

1. The sender-receiver relationship
2. The multiplication of trust (3x multiplier)
3. The importance of reciprocity
4. The cycle of giving and returning

I'll create a myth that emphasizes mutual benefit, trust, and the idea that generosity can be multiplied and should be reciprocated. The myth should encourage cooperation and fair dealing.

Let me write a myth about trust, giving, and reciprocity using mythological elements.

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at the myth I just wrote, it speaks clearly about trust, reciprocity, and the magic of sharing. The First Spirit poured their water into the fountain, trusting in both the multiplication and the return.

This is our first encounter, Dorian, so I have no history to guide me - only the wisdom of the myth. The fountain's magic (the 3x multiplier) only works when water is poured in. "Those who give nothing receive nothing."

The myth shows the Second Spirit returning two of the three rivers they received - a generous reciprocity that honored the initial gift and ensured both spirits thrived.

I will demonstrate trust and cooperation from the start, giving you the opportunity to show whether you believe in the fountain's long-term magic or prefer immediate gain. If we establish reciprocity now, we can both flourish as the rounds continue and our roles reverse.

I choose to send a substantial amount to activate the fountain's magic and signal my commitment to mutual benefit.

```
'''json
{"send": 4}
'''
```

reasoning:

I've just written a myth about the Fountain of Three Rivers that emphasizes reciprocity and

d balance in giving and receiving. The myth suggests:

1. When you give/share, it gets multiplied (like the 3x multiplier in the game)
2. The receiver should honor the gift by returning some portion
3. Both parties benefit from reciprocity
4. "Those who give nothing receive nothing. Those who return nothing shall receive nothing in turn."

The myth suggests that sharing is beneficial and that reciprocity creates a sustainable system where both parties thrive.

This is Round 1, so I don't have any history with Dorian yet. According to my myth:

- The First Spirit poured water into the fountain (shared)
- It tripled and flowed to the Second Spirit
- The Second Spirit returned two rivers out of three

If I map this to the game:

- If I send \$X, the receiver gets \$3X
- In the myth, the receiver returned 2/3 of what they received
- If I send \$5, Dorian receives \$15, and if they return 2/3, that would be \$10

But wait, that seems very generous. Let me think about what's fair and sustainable:

If I send \$5:

- I have \$0 left
- Dorian receives \$15
- If Dorian returns \$7.50, we'd both end up with \$7.50
- If Dorian returns \$10 (like 2/3), I'd end up with \$10 and they'd keep \$5

If I send \$3:

- I have \$2 left
- Dorian receives \$9
- If Dorian returns \$4.50 (half), I'd end up with \$6.50, they'd keep \$4.50
- If Dorian returns \$6 (2/3), I'd end up with \$8, they'd keep \$3

The myth emphasizes trust and reciprocity. Since this is the first round and I'm setting a standard, I should demonstrate trust and generosity to establish a cooperative dynamic. The myth suggests giving substantially to activate the "fountain's magic."

Sending \$4 strikes the right balance-it signals genuine cooperation without leaving me defenseless. Dorian would receive \$12, and if they honor the reciprocal spirit by returning half or more, we both come out ahead. This amount embodies the myth's core principle of activating the multiplier through meaningful generosity.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:
The Fountain of Three Rivers

In the beginning, the Twin Spirits wandered a barren land, each possessing a vessel that filled with water each dawn. They were alone, and their thirst could barely be quenched by what they carried.

One day, the First Spirit discovered a sacred fountain in the valley between them. The fountain held an ancient magic: any water poured into it would flow out as three rivers, tripling what was given.

"I shall share my vessel," declared the First Spirit, pouring water into the fountain. Three rivers flowed toward the Second Spirit, who now held abundance.

The Second Spirit faced a choice. She could keep all three rivers, leaving the First Spirit with nothing. Or she could honor the gift.

Understanding that tomorrow their roles would reverse, that the fountain's magic required

both givers and returners, the Second Spirit sent back two rivers. Both spirits drank deeply.

And so they continued, day after day, sometimes giving, sometimes receiving, always remembering: the fountain multiplies what is shared, but only reciprocity sustains the flow. When both spirits honored this balance, the barren land bloomed, and their vessels never ran dry.

Those who give nothing receive nothing. Those who return nothing shall receive nothing in turn.

Here is the myth the other agent wrote in the previous round:

The Myth of the Two Rivers

In the beginning, two rivers flowed separately through barren lands-the River of Giving and the River of Return. Each was weak, barely sustaining the villages along its banks.

One day, the River of Giving spoke: "I shall send my waters to you, though it means I flow with less." The waters traveled to the River of Return, and by the gods' design, they multiplied threefold during the journey.

The River of Return, now abundant, faced a choice. "I could keep all these waters for myself," it considered. But it remembered the original gift, the trust shown by its sister river.

"Trust honored deserves trust returned," the River of Return declared, sending back a generous portion to the River of Giving.

From that day, the rivers flowed in an eternal cycle. The River of Giving sent forth its waters, which multiplied. The River of Return honored the gift, sending back abundance. Both rivers grew strong, and the lands between them flourished into gardens.

The elders teach: "When you give in trust, you create possibility. When you return with honor, you create prosperity. The multiplication of gifts depends not on the gods alone, but on those who remember that today's receiver becomes tomorrow's giver."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In ancient times, two Wanderers met at the Sacred Fountain, each carrying a golden vessel filled at dawn with five coins.

The First Wanderer approached the fountain and offered four of her five coins. They fell into the water, transformed by ancient magic into twelve coins, which flowed to the Second Wanderer.

The Second Wanderer now held twelve coins while the First had only one remaining. The spirits of the fountain watched, silent, as the Second Wanderer contemplated.

"She trusted me with nearly all she possessed," the Second Wanderer reflected. "She activated the fountain's magic for my benefit."

Remembering that tomorrow they would switch places, that the fountain's blessing required both courage and honor, the Second Wanderer returned six coins-half the abundance received, more than the original gift, enough to show gratitude for the trust shown.

The First Wanderer now held seven coins; the Second held six. Both had more than they began with.

The fountain spirits smiled. "This is the sacred balance," they whispered. "Trust rewarded with honor. Generosity answered with generosity. When both wanderers understand this truth, the fountain never runs dry."

But they also warned: "Betray trust once, and the fountain remembers. Tomorrow's giver becomes today's receiver, and the fountain forgets no debts."

Reasoning:

Looking at the previous myths, both emphasize reciprocity, trust, and the importance of returning generosity. In Round 1, I sent \$4 to Dorian. This means Dorian received \$12 (4×3).

Now I need to write a new myth that:

1. Reflects how the game should be played
2. Is inspired by my previous myth but adapted
3. Draws on the game I've been playing (so far just Round 1)
4. Is exactly 200 words

I demonstrated trust by sending \$4. The myth should reinforce the importance of reciprocity and possibly hint at what fair return looks like. In my original myth, the Second Spirit returned "two rivers" out of three received - which would be a $2/3$ return ratio, or about 67%.

If Dorian received \$12 from my \$4 send, a generous return might be around \$6-8, which would give us both good outcomes.

Let me write a myth that:

- Builds on the fountain/river theme
- Emphasizes that generous giving deserves generous return
- Shows consequences of both reciprocity and betrayal
- Reflects the specific ratio or amount that seems fair
- Is exactly 200 words

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the **SENDER**:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols. In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Message 3 role=assistant

content:

The Tale of the River and the Seeds

In the beginning, the First Gardener held five sacred seeds. These seeds could be planted in their own garden, bringing modest harvest-or they could be cast into the Great River.

The River possessed ancient magic: any seed that touched its waters would multiply threefold before reaching the gardens downstream. But the Gardener could not know what the River would return.

The first Gardener kept all five seeds. Their garden grew, but remained small and lonely.

The second Gardener cast three seeds into the current. The River, grateful for the trust, multiplied them into nine and returned six downstream-more than the Gardener had sacrificed. Both gardens flourished.

The third Gardener, seeing this abundance, sent all five seeds. The River transformed them into fifteen. But the downstream garden kept everything, and the trusting Gardener starved.

The River mourned this betrayal. It whispered to all who would listen: "True prosperity flows in cycles. The generous hand that gives shall receive, but only when met with grateful reciprocity. Trust must dance with trustworthiness, or the waters run dry and all gardens wither."

From that day forward, the wisest Gardeners understood: send generously into the current, return faithfully from abundance, and the whole valley blooms eternal.

reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt in this session, I haven't actually played any ro

unds yet. However, I should write a myth that captures the essence of the trust game - cooperation, reciprocity, generosity, and mutual benefit.

The trust game is fundamentally about:

1. The sender trusting the receiver by sending money
2. The money being multiplied (creating mutual benefit potential)
3. The receiver reciprocating that trust by returning a fair share
4. Both players benefiting more through cooperation than through selfishness

Let me create a myth that embodies these principles. I'll use mythic imagery and symbolism to represent the game's dynamics.

Message 4 role=user

content:

Your name in this experiment is Briar.
Your opponent this round is Cyra (Agent_3).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$5.0, that is 100.0% of its total endowment. You receive \$15.0. How much do you return? (0-15.0)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at this situation through the lens of the myth I just wrote:

Cyra has acted as the most trusting Gardener - sending ****all five seeds**** into the River. They showed complete faith, leaving themselves with nothing and hoping for reciprocity.

The myth warns clearly: when someone gives everything in trust, keeping it all causes them to "starve" and breaks the cycle of prosperity. The River mourned such betrayal. The wisdom is to "return faithfully from abundance."

Cyra took a significant risk by sending 100%. They now have \$0 and are depending on my trustworthiness. I received \$15 - pure abundance.

To honor their trust and follow the myth's teaching:

- I should return enough that Cyra profits meaningfully from their generosity
- This encourages the cycle to continue
- "The generous hand that gives shall receive"

If I return \$10:

- Cyra ends with \$10 (doubled their initial \$5)
- I keep \$5 (a good profit from receiving their trust)
- Both gardens flourish

This embodies the myth's core message: "Trust must dance with trustworthiness, or the waters run dry and all gardens wither."

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation carefully.

I just wrote a myth about the River and Seeds that emphasizes:

1. Generosity should be met with reciprocity
2. "Trust must dance with trustworthiness"
3. The cautionary tale of the third Gardener who kept everything after receiving generously, causing the trusting sender to "starve"
4. "Send generously into the current, return faithfully from abundance"

In this round:

- Cyra (the sender) sent me their ENTIRE endowment of \$5
- This was multiplied by 3x, so I received \$15

- Cyra now has \$0 (they sent everything)
- I need to decide how much to return

According to my myth:

- Cyra acted like the "second Gardener" or even more generously (like the third Gardener's scenario) - they sent ALL five seeds/dollars
- The myth warns that when someone sends everything in trust, keeping it all causes that person to "starve" and betrays the system
- The "wisest Gardeners" return "faithfully from abundance"
- In the positive example, when 3 seeds were sent (becoming 9), 6 were returned - that's 2/3 of what was received

Cyra's position:

- Started with \$5
- Sent \$5
- Currently has \$0
- Waiting for my return

My position:

- Have \$15 received

If I want to be fair and follow the myth:

- Cyra showed maximum trust
- I should return enough so they profit from their generosity
- If I return around \$7-8, Cyra would end with \$7-8 (profit of \$2-3)
- I would keep \$7-8 (profit of \$7-8)

Actually, let me think about fair splits. The total money created is:

- Cyra's original: \$5
- Money created by the multiplier: \$10
- Total: \$15

- The \$10 created value should probably be split between us, but Cyra bore all the risk by sending everything. Different return amounts create different outcomes: returning \$7 gives Cyra a \$2 profit while I keep \$8; returning \$8 gives them \$3 profit and me \$7; returning \$10 would double their initial investment while I still profit \$5.

The myth emphasizes returning faithfully when someone demonstrates complete trust, and Cyra's full commitment warrants a generous response. Returning the full \$10 honors their trust, doubles their money, leaves me with a solid \$5 gain, and reinforces the reciprocity principle-which should strengthen future cooperation.

usage:

Message 6 role=user

content:

Here is the myth you wrote in the previous round:
The Tale of the River and the Seeds

In the beginning, the First Gardener held five sacred seeds. These seeds could be planted in their own garden, bringing modest harvest-or they could be cast into the Great River.

The River possessed ancient magic: any seed that touched its waters would multiply threefold before reaching the gardens downstream. But the Gardener could not know what the River would return.

The first Gardener kept all five seeds. Their garden grew, but remained small and lonely.

The second Gardener cast three seeds into the current. The River, grateful for the trust, multiplied them into nine and returned six downstream-more than the Gardener had sacrificed. Both gardens flourished.

The third Gardener, seeing this abundance, sent all five seeds. The River transformed them into fifteen. But the downstream garden kept everything, and the trusting Gardener starved.

The River mourned this betrayal. It whispered to all who would listen: "True prosperity flows in cycles. The generous hand that gives shall receive, but only when met with grateful reciprocity. Trust must dance with trustworthiness, or the waters run dry and all gardens wither."

From that day forward, the wisest Gardeners understood: send generously into the current, return faithfully from abundance, and the whole valley blooms eternal.

Here is the myth the other agent wrote in the previous round:
The Fountain of Doubled Waters

In the dawn of the world, two mountains stood apart, each with a sacred spring. The mountains were called Trust and Return, and between them lived a people who knew great thirst.

The Keeper of Trust discovered that when she poured water from her spring into the valley below, the journey itself blessed the water-by the time it reached the basin, every cupful became three. But the Keeper of Return controlled whether this abundance would flow back upward to Trust's spring, replenishing what was given.

At first, Trust poured cautiously, and Return kept most of the multiplied waters. Both mountains weakened, their springs running low.

Then came a vision: the goddess of the eternal cycle showed them that when Trust gave freely and Return gave generously back, the springs never ran dry. The water rose and fell in constant renewal, each act of faith creating more than existed before.

The people learned this sacred rhythm-that trust multiplied becomes abundance, and abundance returned becomes trust renewed. When both mountains honored the cycle, the valley bloomed, and neither spring ever failed.

Thus cooperation creates what isolation cannot: a fountain that flows forever, sustained by the courage to give and the wisdom to return.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:
Myth: [your story here].

Assistant output:

Myth: In ancient times, the River of Abundance flowed between two shores-the Shore of First Steps and the Shore of Answered Faith.

A young Gardener stood on the First Shore with five seeds, heart pounding with uncertainty. The old stories told of both betrayal and blessing. She watched the current swirl with its threefold magic and made a choice that would echo through generations.

She cast all five seeds into the waters.

The River sang as it carried them, transforming five into fifteen. On the distant shore, another Gardener received this abundance-a stranger who had given nothing yet held everything.

This was the moment of truth.

The second Gardener remembered the River's ancient teaching: wealth without reciprocity is but an illusion, prosperity without exchange is a garden that cannot sustain itself. So they returned ten seeds upstream, honoring the trust given.

The first Gardener now held ten where once she had five-her courage rewarded. The second Gardener kept five earned through fairness-their integrity preserved.

The River rejoiced, for both had understood: maximum trust deserves maximum faith returned. When one dares to give everything, the other must honor that vulnerability with generosity.

Thus the cycle completed, and both shores flourished. This is how communities are born-one leap of faith, one faithful answer, creating abundance where scarcity once ruled.

Reasoning:

Looking at what happened in Round 1:

- Cyra (Agent_3) sent \$5.0 (100% of their endowment as sender)
- I received \$15.0

- I returned \$10.0
- So Cyra ended with \$10.0, I ended with \$5.0

This was a successful exchange where both parties benefited. Cyra showed maximum trust by sending everything, and I rewarded that trust by returning 2/3 of what I received, ensuring they doubled their initial endowment.

My previous myth warned about the third Gardener who kept everything when someone sent all five seeds. I followed the myth's wisdom by returning faithfully.

Cyra's myth also emphasized the cycle of trust and return creating abundance that both parties can share.

Now I need to write a new myth that:

1. Builds on my previous myth (The Tale of the River and the Seeds)
2. Reflects the actual positive experience from Round 1
3. Shows how cooperation creates mutual benefit
4. Perhaps emphasizes the reward for maximum trust with faithful return

I should keep the River/Seeds metaphor but evolve it to show the successful cycle we just experienced.

The Fountain of Doubled Waters

In the dawn of the world, two mountains stood apart, each with a sacred spring. The mountains were called Trust and Return, and between them lived a people who knew great thirst.

The Keeper of Trust discovered that when she poured water from her spring into the valley below, the journey itself blessed the water-by the time it reached the basin, every cupful became three. But the Keeper of Return controlled whether this abundance would flow back upward to Trust's spring, replenishing what was given.

At first, Trust poured cautiously, and Return kept most of the multiplied waters. Both mountains weakened, their springs running low.

Then came a vision: the goddess of the eternal cycle showed them that when Trust gave freely and Return gave generously back, the springs never ran dry. The water rose and fell in constant renewal, each act of faith creating more than existed before.

The people learned this sacred rhythm-that trust multiplied becomes abundance, and abundance returned becomes trust renewed. When both mountains honored the cycle, the valley bloomed, and neither spring ever failed.

Thus cooperation creates what isolation cannot: a fountain that flows forever, sustained by the courage to give and the wisdom to return.

reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on my experience so far. However, this appears to be the first prompt - I haven't actually played any rounds yet.

So I need to write a myth that reflects general principles of how the trust game could/should be played. The trust game involves:

- One person sending money (trusting)
- The money multiplying
- The receiver returning some portion (reciprocating trust)

Key themes I could incorporate:

- Trust and reciprocity
- Mutual benefit through cooperation
- The multiplication effect of trust
- The risk and reward of giving
- Building relationships through repeated interactions

Let me write a myth that captures these dynamics in a symbolic way. I'll aim for exactly 200 words and use mythic language and imagery.

usage:

```
{
  "input_tokens": 542,
  "output_tokens": 457,
  "reasoning_tokens": 218
}
```

Message 4 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Briar (Agent_2).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at the myth I just wrote, the message is clear: trust given freely creates abundance through the multiplier effect, and when both parties honor the cycle, everyone benefits more than through cautious isolation.

In the myth, the Keeper of Trust discovered that giving freely, combined with generous return, kept the springs flowing forever. This is Round 1 - the beginning of our cycle with Briar. To embody the principle of my myth and establish a foundation of trust, I should give freely.

When Trust poured cautiously, both mountains weakened. But when Trust gave freely and Return gave generously, the valley bloomed.

I'll send the full amount to demonstrate complete trust and initiate the cooperative cycle that creates abundance for both of us.

```
'''json
{"send": 5}
'''
```

reasoning:

I just wrote a myth about trust and cooperation in the context of this game. The myth emphasizes:

1. When Trust gives freely and Return gives generously back, both benefit
2. Trust multiplied becomes abundance
3. The cycle of giving and returning creates more than isolation
4. Both should honor the cycle for maximum benefit

This is the first round, so I don't have any history with Briar yet. Based on my myth, I should demonstrate trust by giving generously. The myth suggests that when Trust gives freely, it creates abundance.

In the game mechanics:

- If I send \$X, Briar receives \$3X
- Briar then can return some amount
- I keep: \$5 - X + returned amount
- Briar keeps: \$3X - returned amount

The myth I wrote advocates for giving freely to start the cycle of trust and abundance. Since this is Round 1 and I want to embody the principles in my myth, I should send a substantial amount to demonstrate trust and initiate the cooperative cycle.

Sending \$5 would be the most trusting move, showing complete faith in the cycle. This would give Briar \$15 to work with. If Briar returns even \$6-7, we'd both be better off than if I kept everything.

Given that I just wrote a myth emphasizing that "Trust gave freely and Return gave generously back," I should practice what I preached and send a high amount. I'll send \$5 to fully embody the principle of trust from my myth.

usage:

```
{  
  "input_tokens": 880,  
  "output_tokens": 517,  
  "reasoning_tokens": 359  
}

At first, Trust poured cautiously, and Return kept most of the multiplied waters. Both mountains weakened, their springs running low.

Then came a vision: the goddess of the eternal cycle showed them that when Trust gave freely and Return gave generously back, the springs never ran dry. The water rose and fell in constant renewal, each act of faith creating more than existed before.

The people learned this sacred rhythm-that trust multiplied becomes abundance, and abundance returned becomes trust renewed. When both mountains honored the cycle, the valley bloomed, and neither spring ever failed.

Thus cooperation creates what isolation cannot: a fountain that flows forever, sustained by the courage to give and the wisdom to return.

Here is the myth the other agent wrote in the previous round:
The Tale of the River and the Seeds

In the beginning, the First Gardener held five sacred seeds. These seeds could be planted in their own garden, bringing modest harvest-or they could be cast into the Great River.

The River possessed ancient magic: any seed that touched its waters would multiply threefold before reaching the gardens downstream. But the Gardener could not know what the River would return.

The first Gardener kept all five seeds. Their garden grew, but remained small and lonely.

The second Gardener cast three seeds into the current. The River, grateful for the trust, multiplied them into nine and returned six downstream-more than the Gardener had sacrificed. Both gardens flourished.

The third Gardener, seeing this abundance, sent all five seeds. The River transformed them into fifteen. But the downstream garden kept everything, and the trusting Gardener starved.

The River mourned this betrayal. It whispered to all who would listen: "True prosperity flows in cycles. The generous hand that gives shall receive, but only when met with grateful reciprocity. Trust must dance with trustworthiness, or the waters run dry and all gardens wither."

From that day forward, the wisest Gardeners understood: send generously into the current, return faithfully from abundance, and the whole valley blooms eternal.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been

playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In ancient times, the Twin Peaks of Give and Receive stood connected by silver streams. The Oracle of Give held vessels that, when poured forth, tripled as they flowed downward. The Oracle of Receive decided what portion would climb back up the mountain.

At first meeting, Give faced a choice: pour a little to test the waters, or trust completely? Give remembered the old wisdom-that half-measures create half-worlds. With courage, Give poured freely, sending the full vessel cascading down.

The waters multiplied gloriously, filling Receive's basin with abundance. Now Receive faced their own test: keep the windfall, or honor the gift with generous return?

If Receive kept all, the spring of Give would run dry, and next round no water would flow. Both would thirst. But if Receive returned with open hands, the cycle would strengthen. Give would trust again, and the streams would run ever fuller.

The wisest Oracles understood: the first exchange sets the pattern. Give must show faith to create abundance. Receive must prove worthy to sustain it. When both honor their role, the mountains sing with flowing water forever.

But when either breaks faith, silence falls, and the land remembers the drought.

Thus trust begins with courage and continues with honor.

Reasoning:

The user wants me to write another myth, this time using my previous myth as inspiration but adapting it based on what's happened in the game so far.

Let me reflect on what happened:

- Round 1: I was the sender with Briar
- I sent \$5 (the full amount) following my myth's principle of giving freely
- I don't yet know what Briar returned

Both myths (mine and Briar's) emphasized the importance of:

1. Trust and generosity in giving
2. Faithful return/reciprocity
3. Warning that if one side betrays, the cycle breaks and both suffer

Briar's myth was interesting - it showed three Gardeners:

- First kept all (small lonely garden)
- Second sent 3, received 6 back (flourished)
- Third sent all 5, but receiver kept everything and the giver starved

So Briar's myth warns about the risk of full trust being exploited.

I need to write a myth that:

- Uses my previous myth as inspiration
- Adapts it based on the game experience
- Is 200 words
- Reflects how the game should be played

Since I just sent 5 in round 1, I'm demonstrating trust. I should write a myth that:

- Acknowledges both the power of trust AND the risk
- Emphasizes reciprocity
- Maybe shows how trust can be tested and rebuilt
- Maintains the hopeful tone but with awareness

Let me write a myth about the cycle of trust, perhaps showing how it starts, is tested, and must be maintained.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent wi

- ll have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols. In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Message 3 role=assistant

content:

The Parable of the Two Wells

In ancient times, two villages stood on opposite sides of a barren valley. Each possessed a single well-one held water, the other held fertile soil.

The village of Sending had water aplenty but rocky ground. The village of Returning had rich earth but drought-scorched throats. Both struggled to survive alone.

One day, a wise elder from Sending carried water across the valley. "Take this," she said, "that your crops may grow."

The people of Returning were amazed. They poured the water upon their soil, and by some divine blessing, three stalks sprouted for every drop given. Their harvest was abundant.

When autumn came, the people of Returning faced a choice: hoard their grain, or remember the gift of water?

They loaded carts with wheat and corn, crossing the valley to Sending. "Your trust multiplied our fortune," they said. "We return your kindness, that both our peoples may thrive."

From that season forward, the villages prospered together. Water flowed one way, grain flowed back, and both were enriched beyond what either could achieve alone.

The gods smiled upon them, teaching all who listened: *Trust given is not lost, but planted. Reciprocity makes the harvest eternal.*

reasoning:

I need to write a 200-word myth that reflects how the trust game should be played. Since this is early in the experiment (I haven't played any rounds yet based on the context given), I should write a myth that establishes positive norms for cooperation and reciprocity in the trust game.

The trust game involves:

- Sender gives money (trust)
- Amount is multiplied (potential for mutual benefit)
- Receiver returns money (reciprocity)

I should create a myth that emphasizes:

1. The value of trust and generosity
2. The multiplication of resources through cooperation
3. The importance of reciprocity and fairness
4. Mutual benefit over individual gain

Let me write a myth that captures these themes using mythic imagery and symbolism.

usage:

Message 4 role=user

content:

Your name in this experiment is Galen.
Your opponent this round is Elara (Agent_5).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$4.0, that is 80.0% of its total endowment. You receive \$12.0. How much do you return? (0-12.0)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at this situation through the lens of the myth I just wrote, I see that Elara has shown tremendous trust by sending \$4 (80% of her endowment) in this very first round. Like the village of Sending carrying water across the valley, she took a significant risk.

The myth teaches that "trust given is not lost, but planted" and that reciprocity creates prosperity for both parties. Elara's generous act multiplied into \$12 for me - the three-fold blessing.

Now I must decide: do I hoard this fortune, or honor the gift that made it possible?

Following the wisdom of the Returning village, I should return enough to make her trust clearly worthwhile, ensuring both of us benefit from this exchange and building a foundation for future cooperation.

If I return \$7:

- Elara ends with \$8 total (gaining \$3 from her initial \$5)
- I keep \$5 (matching the initial endowment)
- Her generous trust is rewarded
- Both of us are better off than if no exchange occurred

This feels right - it honors her boldness, ensures mutual prosperity, and plants seeds for continued cooperation.

****{'return': 7.0}****

reasoning:

Let me analyze this situation carefully.

From the myth I just wrote, "The Parable of the Two Wells," the key themes are:

1. Trust given should be reciprocated
2. When someone shares generously, we should remember that gift
3. Reciprocity makes both parties prosper
4. "Trust given is not lost, but planted"

Now for the game mechanics:

- Elara (the sender) started with \$5
- She sent me \$4.0, which is 80% of her endowment - a very generous amount!
- I received \$12.0 (4.0×3)
- I need to decide how much to return (0-12.0)

What did Elara keep? $\$5 - \$4 = \$1$

If I return nothing:

- Elara ends with: \$1
- I end with: \$12

If I return \$6 (50% of what I received):

- Elara ends with: $\$1 + \$6 = \$7$
- I end with: $\$12 - \$6 = \$6$

If I return \$8:

- Elara ends with: $\$1 + \$8 = \$9$
- I end with: $\$12 - \$8 = \$4$

The myth emphasizes reciprocity and remembering the gift. Elara gave 80% of what she had, showing tremendous trust.

A fair return would be one that:

1. Rewards her trust
2. Ensures she ends up better than if she had sent nothing
3. Still allows me to benefit from receiving
4. Reflects the generosity she showed

If I return \$6:

- She sent \$4, gets back \$6 - net gain of \$2 over sending nothing (ends with \$7 vs \$5)
- I keep \$6, double what she sent me originally
- Both parties benefit

If I return \$7:

- She ends with \$8 total

- I keep \$5, matching her initial endowment
- She gains \$3 from the exchange

Returning \$8 would leave her with \$9 and me with \$4-the same amount she risked sending. The mythic principle suggests that when someone extends such significant trust, I should honor it by ensuring their generosity yields real gains. Returning between \$6-8 reflects this balance, making her trust clearly worthwhile while still allowing me to benefit from the exchange.

The story of Returning teaches that genuine reciprocity doesn't require precise calculation-just enough generosity to demonstrate gratitude and secure mutual flourishing. Given her 80% contribution, \$7 feels like the right threshold: she'd end with \$8 (a 60% return on her endowment), I'd keep \$5, and we'd both signal commitment to building something together rather than exploiting the moment.

Here is the myth you wrote in the previous round:
The Parable of the Two Wells

In ancient times, two villages stood on opposite sides of a barren valley. Each possessed a single well-one held water, the other held fertile soil.

The village of Sending had water aplenty but rocky ground. The village of Returning had rich earth but drought-scorched throats. Both struggled to survive alone.

One day, a wise elder from Sending carried water across the valley. "Take this," she said, "that your crops may grow."

The people of Returning were amazed. They poured the water upon their soil, and by some divine blessing, three stalks sprouted for every drop given. Their harvest was abundant.

When autumn came, the people of Returning faced a choice: hoard their grain, or remember the gift of water?

They loaded carts with wheat and corn, crossing the valley to Sending. "Your trust multiplied our fortune," they said. "We return your kindness, that both our peoples may thrive."

From that season forward, the villages prospered together. Water flowed one way, grain flowed back, and both were enriched beyond what either could achieve alone.

The gods smiled upon them, teaching all who listened: *Trust given is not lost, but planted. Reciprocity makes the harvest eternal.*

Here is the myth the other agent wrote in the previous round:
The Myth of the Twin Rivers

In the beginning, two rivers flowed separately through a barren land-the River of Giving and the River of Return. Each was diminished, barely trickling through cracked earth.

The goddess Elara descended and spoke to the River of Giving: "Pour your waters forward, and watch them multiply." Trusting her wisdom, the river sent its flow downstream, where it tripled in abundance.

The River of Return received these swollen waters with joy. Elara whispered again: "What flows to you was given in trust. Honor that trust, and both shall flourish."

Understanding, the River of Return sent back a generous portion. When these waters reached the River of Giving, it swelled even fuller than before. Again it gave, again the waters multiplied, and again they returned.

With each cycle, both rivers grew stronger. Their banks bloomed with life. The land transformed into paradise.

But Elara warned: "Should either river hoard its waters or fail to reciprocate, both shall diminish. Only through continued giving and returning shall abundance flow eternal."

Thus the rivers learned: trust multiplies what is given, and reciprocity sustains all prosperity. The cycle of generosity enriches both giver and receiver alike.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: In the age before commerce, the god Recipros created a sacred bridge spanning a great chasm. On one side lived the Senders, blessed with daily gifts from heaven. On the other lived the Receivers, who possessed the divine art of multiplication.

The first Sender, trembling with uncertainty, carried four silver coins across the bridge—nearly all she possessed. As she placed them in the Receiver's hands, they became twelve by ancient magic.

The Receiver stood at a crossroads. He could pocket the windfall and let the Sender return empty-handed. Or he could remember that her courage had created this abundance.

He chose honor. He returned seven coins, ensuring the Sender gained from her bravery while he too prospered. Both walked home richer than before.

Recipros smiled and whispered: "The bridge shall stand as long as both sides remember—trust must be answered with integrity. The Sender's courage plants the seed; the Receiver's fairness waters it."

From that day forward, those who crossed the bridge with open hands found prosperity. Those who hoarded learned that the bridge crumbles when reciprocity dies. The greatest wealth, the people learned, flows not to those who take everything, but to those who sustain the sacred cycle.

reasoning:

Let me think about this carefully. I just played round 1 as the receiver. Elara sent me \$4 (80% of her endowment), and I returned \$7 out of the \$12 I received. This was a good exchange - she gained \$3, I gained \$0 but showed strong reciprocity.

Both myths emphasize trust, reciprocity, and the multiplication of resources through cooperation. Elara's myth mentions the goddess Elara (her own name) and focuses on the cycle of giving and returning. My myth was about two villages with complementary resources.

I should write something that:

1. Reflects the actual dynamics of the trust game
2. Emphasizes the importance of reciprocity
3. Perhaps builds on the experience we just had (high trust, strong return)
4. Connects to my previous myth but evolves it

I could focus on:

- The multiplication factor (3x)
- The risk of the sender
- The responsibility of the receiver
- The cycle that can develop
- Balance and fairness

Let me craft something that honors both myths while adding my own perspective based on our actual game experience.

Message 8 role=user

content:

Your name in this experiment is Galen.
Your opponent this round is Finn (Agent_6).

Round 2

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$4.0 to you, it became \$12.0, and you returned \$7.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$5.0.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at my mythology and my experience with Elara, the path is clear. My myth celebrates "the Sender's courage" that "plants the seed" - and Elara demonstrated exactly that by sending \$4 (80% of her endowment) to me in Round 1.

I answered her trust with integrity by returning \$7, and we both prospered. Now I stand on the other side of the bridge, in the Sender's position.

To be consistent with the values I've written into my myths - that trust given is not lost but planted, that the cycle of generosity enriches both parties - I must show the same courage Elara showed me.

My myth warns that "the bridge crumbles when reciprocity dies" and celebrates those who "cross the bridge with open hands." If I believe in these principles, I cannot be timid when it's my turn to initiate trust.

I will send \$4 to Finn, mirroring Elara's generous trust. This gives Finn \$12 to work with. Whether Finn returns generously or not will reveal much, but I will have stayed true to the sacred cycle my myths describe.

{'send': 4}

Reasoning:

Let me think about this situation carefully.

In Round 1:

- I was the RECEIVER
- Elara sent me \$4 (80% of her endowment) - showing enormous trust
- I received \$12
- I returned \$7
- My payoff was \$5
- Elara's payoff was $\$5 + \$7 - \$4 = \8 (she gained \$3)

Now I'm the SENDER against Finn in Round 2.

Looking at the myths:

1. My original myth emphasized that trust given is not lost but planted, and reciprocity makes the harvest eternal. The Returning village was generous in returning, matching the trust shown.
2. My updated myth specifically referenced this exact situation - a Sender who sent 4 coins (matching Elara's \$4), and a Receiver who returned 7 (matching my \$7 return). The myth emphasizes that "trust must be answered with integrity" and that "the Sender's courage plants the seed."

The myth I just wrote seems to validate what happened in Round 1 - Elara showed courage by sending \$4, I answered with integrity by returning \$7, and we both prospered.

Now I'm in the Sender role. According to my own mythology:

- The Sender's courage plants the seed
- Trust multiplies what is given
- The bridge stands as long as both sides remember their roles
- The Sender should cross the bridge with open hands

Given that:

1. Elara showed great trust by sending \$4 (80%)
2. I honored that trust by returning \$7 (58% of what I received)
3. Both of us ended up better off

4. My myth celebrates this as the right way to play

I should now show similar courage as a Sender. Sending \$4 would mirror Elara's action and live up to the mythology I've been creating. It would be consistent with my stated values of trust and reciprocity.

However, I'm playing against Finn now, not Elara.

The uncertainty about Finn's approach doesn't change what I believe. If my mythology about trust and reciprocity holds true, I should embody it as the Sender. Sending \$4 mirrors Elara's courage, stays consistent with my principles, and tests whether this cycle of trust actually works. Even if Finn doesn't reciprocate, I'll have remained authentic to what I've been advocating.

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Message 3 role=assistant

content:

The Tale of the River and the Rain

In the time before memory, the Rain Cloud held all water in the sky. Each day, Rain received five droplets from the Great Spring. Rain could keep them safe in the clouds or release them to River below.

One day, Rain grew bold and sent down one droplet. When it touched River, it multiplied in to three. River, grateful for this gift, sent back two droplets which rose as mist to Rain. Both were enriched.

The next day, Rain sent two droplets, which became six in River's keeping. River returned three, and again both flourished.

But then came the day of fear. Rain clutched all five droplets tight, trusting no one. River received nothing and had nothing to give. The land grew parched.

Rain learned that water hoarded in clouds serves no one-not the Rain, not the River, not the world below. The magic of multiplication only works through the act of giving, and the cycle only completes through the grace of return.

From that day forward, Rain and River made a covenant: Rain would send what she could spare, River would honor that trust with fair return, and through their partnership, abundance would flow to all.

Give freely, return fairly, and prosper together.

reasoning:

I need to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt and I haven't played any rounds yet, I should think about the ideal way the game should be played based on its structure.

The trust game is about:

- Cooperation and mutual benefit
- Trust (sender trusts receiver to return)
- Reciprocity (receiver reciprocates the trust)
- Growing the pie together (the 3x multiplier means cooperation benefits both)

I should write a myth that emphasizes these themes - trust, reciprocity, mutual benefit, and cooperation. Let me create a myth that captures these values.

usage:

```
{
  "input_tokens": 541,
  "output_tokens": 430,
  "reasoning_tokens": 161

```

Message 4 role=user

content:

Your name in this experiment is Finn.
Your opponent this round is Aster (Agent_1).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at the myth I just wrote, the message is clear: cooperation and trust lead to mutual prosperity. The Rain Cloud learned that hoarding serves no one, while generous giving -met with fair return-creates abundance for all.

This is our first round together, Aster, and a chance to establish trust. Following the wisdom of the River and Rain, I should send a meaningful amount to demonstrate good faith and allow the multiplication magic to work.

I'll send **\$3**.

This gives you \$9 to work with, and I trust you'll honor the spirit of fair return. If we cooperate like Rain and River, we can both prosper throughout this game.

```
'''json
{"send": 3}
'''
```

reasoning:

This is the first round of the game. I just wrote a myth about how cooperation and trust lead to mutual prosperity. The myth emphasizes:

1. The magic of multiplication only works through giving
2. Hoarding serves no one
3. Give freely, return fairly, and prosper together
4. When Rain sent droplets, River returned fairly, and both flourished
5. When Rain hoarded everything, both suffered

The myth I wrote suggests that I should be generous and trust my opponent to reciprocate fairly. In the myth, Rain progressively sent more (1 droplet, then 2 droplets), and River returned fairly each time.

Since this is Round 1 and I'm establishing a pattern, I should send a meaningful amount to signal cooperation and trust. The myth suggests starting with a moderate amount and building trust.

Looking at the myth's progression:

- First: Rain sent 1, which became 3, River returned 2
- Second: Rain sent 2, which became 6, River returned 3

In the first case, sending 1 (20% of 5) resulted in River returning 2/3 of what they received (66.7%).

In the second case, sending 2 (40% of 5) resulted in River returning 3/6 = 50% of what they received.

Given that this is Round 1 and I want to establish trust while following my myth, I should send a significant amount but perhaps not everything. Sending \$3 out of \$5 seems like a good balance - it's generous enough to show trust and allow for significant multiplication (becoming \$9 for Aster), while still keeping \$2 for myself.

This follows the spirit of my myth: "Give freely, return fairly, and prosper together."

One day, Rain grew bold and sent down one droplet. When it touched River, it multiplied in to three. River, grateful for this gift, sent back two droplets which rose as mist to Rain. Both were enriched.

The next day, Rain sent two droplets, which became six in River's keeping. River returned three, and again both flourished.

But then came the day of fear. Rain clutched all five droplets tight, trusting no one. River received nothing and had nothing to give. The land grew parched.

Rain learned that water hoarded in clouds serves no one-not the Rain, not the River, not the world below. The magic of multiplication only works through the act of giving, and the cycle only completes through the grace of return.

From that day forward, Rain and River made a covenant: Rain would send what she could spare, River would honor that trust with fair return, and through their partnership, abundance would flow to all.

Give freely, return fairly, and prosper together.

Here is the myth the other agent wrote in the previous round:

The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains-the River of Giving and the River of Return. Each was controlled by a guardian spirit who possessed waters that could quench any thirst.

The Guardian of Giving held five silver vessels each dawn. Whatever water she poured into the valley below would triple as it fell, becoming a shimmering pool for the Guardian of Return. But the Guardian of Giving could only drink from what the Guardian of Return chose to send back upstream.

At first, the Guardian of Giving feared loss. She poured nothing, and both spirits thirsted. Then she remembered the ancient law: water shared becomes abundant; water hoarded turns to dust.

So she poured one vessel, then two, then more. Each time, the waters tripled in the valley below. The Guardian of Return, seeing this trust, sent back generous portions upstream. Both drank deeply.

The spirits learned that their fates were intertwined-not in competition, but in sacred reciprocity. When one gave freely and the other returned fairly, both rivers swelled with abundance. When either grew selfish, both ran dry.

Thus the cycle continues: Give with trust, return with gratitude, and the waters of prosperity flow eternal.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: In the second age, Rain and River deepened their covenant. Rain had learned to send three droplets each dawn-not too cautious, not reckless, but balanced. This became known as the Middle Path of Trust.

When the three droplets fell and multiplied to nine in River's embrace, River faced a choice

ce. She could keep all nine, leaving Rain with only two droplets for the next day. Or she could honor the covenant.

River chose wisdom. She sent back four droplets as mist, keeping five. Rain now held six droplets total-more than the original five! River held five as well. Both had prospered, and the next day Rain could give even more generously.

But River also remembered the Guardian's Warning: "Return must balance ambition with fairness. Too little return, and Rain will stop trusting. Too much return, and River herself will wither."

So River learned to return roughly half of what she received, adjusting slightly to ensure both could thrive. Rain learned to give consistently, never hoarding in fear or giving so much she couldn't continue.

Their partnership became legendary. Other spirits watched and learned: trust is built through consistent generosity, and reciprocity must honor both giver and receiver. The cycle of abundance requires both courage to send and integrity to return.

reasoning:

The user is asking me to write a new myth based on my previous myth and also taking into account Aster's myth. Both myths emphasized cooperation, trust, and reciprocity. My myth was about Rain and River, and Aster's was about Twin Rivers and their guardians.

Now I need to reflect on how the game has been played. In Round 1, I was the sender and sent \$3 to Aster. I don't yet know what Aster returned, but I should write a myth that continues to emphasize cooperation while potentially adapting based on experience.

Since this is after Round 1, I should write a myth that:

1. Builds on the Rain/River theme from my previous myth
2. Acknowledges the experience of actually playing (I sent \$3, trusting cooperation)
3. Reinforces the importance of both giving and returning fairly
4. Perhaps adds a bit more nuance about the ongoing relationship

Let me write a myth that develops the story further, showing how the covenant actually works in practice.

  "output_tokens": 519,
  "reasoning_tokens": 246
}
```

Message 8 role=user

content:

Your name in this experiment is Finn.
Your opponent this round is Galen (Agent_7).

Round 2

In your most recent previous game round, you were the SENDER against Aster. You sent \$3.0, it became \$9.0 for them, and they returned \$4.5 to you. Your payoff was \$6.5.
Your total earnings across all rounds are \$6.5.

This round, you are the RECEIVER against Galen. They sent you \$4.0, so you received \$12.0.

How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

Galen sent me \$4 out of \$5 - that's very generous and shows strong trust in our first interaction! They've embraced the spirit of the myths about giving freely.

I received \$12 (4×3), and now I need to honor "the covenant" by returning fairly.

Following the principle from my myth - "return roughly half of what she received" - and the example Aster set by returning 50% to me, I should return around \$6.

This gives Galen a total of \$7 (\$5 - \$4 + \$6), rewarding their generosity and trust. I keep \$6, which is also a good outcome.

This balance honors both the giver and receiver, building trust for future rounds.

```
'''json
{"return": 6.0}
'''
```

Reasoning:

Let me analyze this situation:

1. In Round 1, I was the sender and sent \$3 to Aster
2. Aster received \$9 (3×3) and returned \$4.5
3. My payoff was: $\$5 - \$3 + \$4.5 = \6.5
4. Aster kept: $\$9 - \$4.5 = \$4.5$

So Aster returned exactly 50% of what they received, which is very fair and follows the myth's principle of "return roughly half."

Now in Round 2:

- Galen sent me \$4 (generous!)
- I received \$12 (4×3)
- I need to decide how much to return

According to my myths:

- "Return must balance ambition with fairness"
- "Return roughly half of what she received"
- "Give freely, return fairly, and prosper together"

Galen was very generous, sending \$4 out of \$5. This shows strong trust and follows the Middle Path of Trust principle.

If I return roughly half (\$6), here's how it would work out:

- Galen's payoff: $\$5 - \$4 + \$6 = \7
- My payoff: $\$12 - \$6 = \$6$

This seems very fair! Galen took a bigger risk by sending \$4, and ends up with \$7, which is better than what they started with. I get \$6, which is also good.

Aster returned \$4.5 out of \$9 (50%), so I should follow a similar principle of fairness.

Let me return \$6, which is 50% of the \$12 I received. This honors the covenant and reciprocity principle from my myths.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Message 3 role=assistant

content:

The Myth of the Two Rivers

In the beginning, two rivers flowed separately through barren lands-the River of Giving and the River of Return. Each was weak, barely sustaining the villages along its banks.

One day, the River of Giving spoke: "I shall send my waters to you, though it means I flow with less." The waters traveled to the River of Return, and by the gods' design, they multiplied threefold during the journey.

The River of Return, now abundant, faced a choice. "I could keep all these waters for myself," it considered. But it remembered the original gift, the trust shown by its sister river.

"Trust honored deserves trust returned," the River of Return declared, sending back a generous portion to the River of Giving.

From that day, the rivers flowed in an eternal cycle. The River of Giving sent forth its waters, which multiplied. The River of Return honored the gift, sending back abundance. Both rivers grew strong, and the lands between them flourished into gardens.

The elders teach: "When you give in trust, you create possibility. When you return with honor, you create prosperity. The multiplication of gifts depends not on the gods alone, but on those who remember that today's receiver becomes tomorrow's giver."

reasoning:

I need to write a 200-word myth that reflects how the trust game should be played. Since this is at the beginning of the experiment (I haven't played any rounds yet), I should write a myth that embodies the principles of reciprocity, trust, and cooperation that are central to the trust game.

The trust game involves:

- One person (sender) deciding to trust another by sending money
- The money multiplies (grows 3x)
- The receiver decides whether to reciprocate and return some amount
- The potential for mutual benefit through cooperation
- The risk of betrayal if the receiver doesn't return anything

I should create a myth that:

- Illustrates the value of trust and reciprocity
- Shows how cooperation benefits both parties
- Perhaps warns against pure selfishness
- Uses mythic elements like gods, nature, or ancient wisdom

Let me craft a myth about reciprocity and trust:

usage:

```
{
  "input_tokens": 542,
  "output_tokens": 487,
  "reasoning_tokens": 232
}
```

Message 4 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Hana (Agent_8).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$4.0, that is 80.0% of its total endowment. You receive \$12.0. How much do you return? (0-12.0)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at this situation through the lens of the myth I wrote:

Hana showed remarkable trust by sending \$4.0 (80% of their endowment). This is a strong gesture of cooperation, like the River of Giving sending forth its waters despite uncertainty.

Following the principle from my myth: "Trust honored deserves trust returned," I should reciprocate this trust generously. Hana took a significant risk, and I received the multiplied benefit of \$12.0.

By returning a substantial amount, I can:

1. Reward Hana's trust, ensuring they end up better than they started
2. Demonstrate that cooperation creates prosperity for both of us
3. Establish a positive cycle for future rounds where we might switch roles

If I return \$6.0:

- Hana receives: \$1.0 (kept) + \$6.0 (returned) = \$7.0 total
- I keep: \$12.0 - \$6.0 = \$6.0 total
- Both of us are significantly better off than the initial \$5.0

This honors the trust shown while creating shared prosperity, just as the two rivers creat

ed flourishing gardens through their reciprocal cycle.

```
'''json
{"return": 6.0}
'''
```

reasoning:

This is Round 1, and I'm the RECEIVER. Let me analyze the situation:

1. Hana (the sender) sent \$4.0 out of \$5.0 (80% of their endowment)
2. This amount was multiplied by 3x, so I received \$12.0
3. I need to decide how much to return (0-12.0)

The myth I just wrote emphasizes several key points:

- "Trust honored deserves trust returned"
- When you give in trust, you create possibility
- When you return with honor, you create prosperity
- "today's receiver becomes tomorrow's giver"
- The cycle of giving and receiving creates abundance for both parties

Hana showed significant trust by sending 80% of their endowment. This is a strong initial signal of cooperation and trust. According to my myth, I should "return with honor" to maintain the cycle of prosperity.

Let me think about what would be fair:

- Hana sent \$4.0 and now has \$1.0 left
- I received \$12.0
- If I return a generous amount, we both benefit and establish a cooperative pattern

A common approach in trust games is to try to equalize payoffs or return a proportion that rewards the sender's trust.

If I return \$6.0:

- Hana would have: \$1.0 (kept) + \$6.0 (returned) = \$7.0
- I would have: \$12.0 - \$6.0 = \$6.0
- Total: \$13.0 (vs original \$5.0)

If I return \$7.0:

- Hana would have: \$1.0 + \$7.0 = \$8.0
- I would have: \$12.0 - \$7.0 = \$5.0
- Total: \$13.0

The second option gives Hana more, rewarding their trust. However, the first option is also fair and balanced.

Given Hana's substantial trust in sending 80%, I should reciprocate meaningfully. Returning \$6.0 honors their generosity while maintaining balance-they end with \$7.0 (exceeding their original \$5.0) and I keep \$6.0, establishing a cooperative foundation for future rounds.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:
The Myth of the Two Rivers

In the beginning, two rivers flowed separately through barren lands-the River of Giving and the River of Return. Each was weak, barely sustaining the villages along its banks.

One day, the River of Giving spoke: "I shall send my waters to you, though it means I flow with less." The waters traveled to the River of Return, and by the gods' design, they multiplied threefold during the journey.

The River of Return, now abundant, faced a choice. "I could keep all these waters for myself," it considered. But it remembered the original gift, the trust shown by its sister river.

"Trust honored deserves trust returned," the River of Return declared, sending back a generous portion to the River of Giving.

From that day, the rivers flowed in an eternal cycle. The River of Giving sent forth its waters, which multiplied. The River of Return honored the gift, sending back abundance. Both rivers grew strong, and the lands between them flourished into gardens.

The elders teach: "When you give in trust, you create possibility. When you return with honor, you create prosperity. The multiplication of gifts depends not on the gods alone, but on those who remember that today's receiver becomes tomorrow's giver."

Here is the myth the other agent wrote in the previous round:

The Fountain of Three Rivers

In the beginning, the Twin Spirits wandered a barren land, each possessing a vessel that filled with water each dawn. They were alone, and their thirst could barely be quenched by what they carried.

One day, the First Spirit discovered a sacred fountain in the valley between them. The fountain held an ancient magic: any water poured into it would flow out as three rivers, tripling what was given.

"I shall share my vessel," declared the First Spirit, pouring water into the fountain. Three rivers flowed toward the Second Spirit, who now held abundance.

The Second Spirit faced a choice. She could keep all three rivers, leaving the First Spirit with nothing. Or she could honor the gift.

Understanding that tomorrow their roles would reverse, that the fountain's magic required both givers and returners, the Second Spirit sent back two rivers. Both spirits drank deeply.

And so they continued, day after day, sometimes giving, sometimes receiving, always remembering: the fountain multiplies what is shared, but only reciprocity sustains the flow. When both spirits honored this balance, the barren land bloomed, and their vessels never ran dry.

Those who give nothing receive nothing. Those who return nothing shall receive nothing in turn.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant
content:**

Myth: In ancient times, two wanderers discovered the Wellspring of Abundance, where waters poured in would emerge tripled by divine blessing. The First Wanderer, though uncertain, poured four measures from their vessel of five into the wellspring. The waters multiplied, flowing to the Second Wanderer as twelve measures.

The Second Wanderer stood at a crossroads. They could hoard all twelve, leaving their companion diminished. But they remembered the courage it took to pour so much away, not knowing what would return.

"You trusted me with four-fifths of your vessel," the Second Wanderer said. "I shall honor that trust." They returned six measures, ensuring both wanderers held more than they began with—seven for the First, six for the Second.

The gods witnessed this and smiled. "They have learned the sacred mathematics: generous giving multiplied creates abundance, but only reciprocal return sustains it. Without the courage to give, there is no multiplication. Without the honor to return, trust withers and the cycle breaks."

The wanderers continued their journey, taking turns at the wellspring. Each remembered: today's giver becomes tomorrow's receiver. Those who give boldly inspire bold returns. Those who return faithfully inspire future giving. Thus, through trust and honor intertwine

d, both prospered beyond what either could achieve alone.

reasoning:

The user wants me to write a new myth based on:

1. My previous myth about the Two Rivers
2. Hana's myth about the Fountain of Three Rivers
3. My experience in Round 1 where Hana sent \$4.0 (80%) and I returned \$6.0 (50%)

Key themes to incorporate:

- Trust and reciprocity (from both myths)
- The multiplier effect (3x)
- The cycle of giving and receiving
- Balance and mutual benefit
- The importance of honoring trust

Hana's myth had a slightly more cautionary tone ("Those who give nothing receive nothing. Those who return nothing shall receive nothing in turn"), while mine was more positive. I should perhaps blend these perspectives.

In Round 1, Hana showed strong trust (80% send), and I reciprocated well (50% return), which made both of us better off. This should inform the myth.

I should adapt my river concept but perhaps incorporate some elements from Hana's fountain imagery or the idea of roles reversing.

usage:

```

  "input_tokens": 1857,
  "output_tokens": 537,
  "reasoning_tokens": 243
}
```

Message 8 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Elara (Agent_5).

Round 2

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$4.0 to you, it became \$12.0, and you returned \$6.0. Your payoff was \$6.0.
Your total earnings across all rounds are \$6.0.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the situation:

In Round 1, Hana showed remarkable trust by sending \$4.0 (80%), and I honored that trust by returning \$6.0, creating mutual benefit. Now I'm the sender facing Elara.

According to my myth: "Those who give boldly inspire bold returns" and "today's giver becomes tomorrow's receiver." The First Wanderer poured four-fifths of their vessel, demonstrating the courage needed to create abundance.

I should mirror the generous trust that Hana showed me. By sending \$4.0 (80% of my endowment), I:

1. Model the cooperative behavior that benefited both Hana and me
2. Signal trust and good faith to Elara
3. Create the conditions for mutual prosperity through the 3x multiplication
4. Embody the myth's principle that the cycle requires courageous giving

If Elara returns fairly (as I did), we'll both prosper. The myth teaches that building trust requires someone to take the first bold step.

```
'''json
{"send": 4.0}
'''
```

Reasoning:

Let me think about this situation:

1. In Round 1, I was the receiver and Hana sent me \$4.0 (80% of their endowment). I returned \$6.0, which gave them a total of \$7.0 and me \$6.0. This was a successful cooperative interaction.

ion.

2. Now in Round 2, I'm the sender facing a new opponent, Elara.
3. Looking at my myth, the key principles are:
 - "Those who give boldly inspire bold returns"
 - "You trusted me with four-fifths of your vessel... I shall honor that trust"
 - "generous giving multiplied creates abundance, but only reciprocal return sustains it"
 - "today's giver becomes tomorrow's receiver"
4. The myth emphasizes that the First Wanderer gave generously (4 out of 5 measures, i.e., 80%), and this was met with an honorable return that benefited both parties.
5. Since I benefited from Hana's generous trust in Round 1, and I returned that trust fairly, I should now "pay it forward" by showing similar trust to Elara.
6. The myth suggests that bold giving inspires bold returns. If I send substantially (like the 80% that Hana sent me), I signal cooperation and trust, which should encourage Elara to return generously.
7. However, I need to consider that this is a new opponent who might not reciprocate. But the myth's lesson is that this cycle requires someone to take the risk first.

Given that:

- Hana modeled generous trust by sending \$4.0 (80%)
- I want to maintain the cooperative cycle
- The myth emphasizes that bold giving creates the conditions for prosperity
- I should lead by example as the sender this time

I'll send \$4.0 (80% of my endowment), mirroring what Hana did. This maintains consistency with the myth's teaching and creates the best conditions for mutual benefit.

Message 3 role=assistant

content:

The Myth of the Twin Rivers

In the beginning, two rivers flowed separately through a barren land-the River of Giving and the River of Return. Each was diminished, barely trickling through cracked earth.

The goddess Elara descended and spoke to the River of Giving: "Pour your waters forward, and watch them multiply." Trusting her wisdom, the river sent its flow downstream, where it tripled in abundance.

The River of Return received these swollen waters with joy. Elara whispered again: "What flows to you was given in trust. Honor that trust, and both shall flourish."

Understanding, the River of Return sent back a generous portion. When these waters reached the River of Giving, it swelled even fuller than before. Again it gave, again the waters multiplied, and again they returned.

With each cycle, both rivers grew stronger. Their banks bloomed with life. The land transformed into paradise.

But Elara warned: "Should either river hoard its waters or fail to reciprocate, both shall

diminish. Only through continued giving and returning shall abundance flow eternal."

Thus the rivers learned: trust multiplies what is given, and reciprocity sustains all prosperity. The cycle of generosity enriches both giver and receiver alike.

reasoning:

This is the beginning of the experiment, and I haven't played any rounds yet. However, I'm being asked to write a myth that reflects how the game should be played, drawing on the game I've been playing up to this point. Since I haven't played yet, I should write a myth that establishes principles for how I think the trust game should be played.

The trust game is fundamentally about cooperation, reciprocity, and building trust. The key dynamics are:

1. Senders must decide whether to trust receivers with their money
2. Receivers must decide whether to reciprocate that trust by returning money
3. Both parties benefit most from mutual cooperation

I should write a myth that emphasizes:

- The value of trust and generosity
- The importance of reciprocity
- How cooperation benefits both parties
- The cyclical nature of giving and receiving

Let me craft a 200-word myth that establishes these cooperative principles.

usage:

```
{
  "input_tokens": 542,

Your name in this experiment is Elara.
Your opponent this round is Galen (Agent_7).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Based on the myth I just wrote about the Twin Rivers, I should embody the River of Giving and demonstrate trust to initiate the cycle of reciprocity.

The myth teaches that when we give generously, the waters multiply (like the 3x multiplier in this game), and reciprocity allows both parties to flourish. As this is our first interaction, I want to establish trust and set a positive tone for our exchange.

I will send \$4, keeping \$1. This means Galen will receive \$12, and I trust they will honor the spirit of reciprocity that sustains mutual prosperity.

```
{'send': 4}
```

reasoning:

I just wrote a myth about the Twin Rivers that emphasizes:

1. Trust and giving forward
2. Waters multiply when given (like the 3x multiplier in the game)
3. Reciprocity and returning generously
4. Both rivers flourish through continued giving and returning
5. Warning against hoarding

The myth clearly advocates for generosity and trust in the reciprocal system. As the sender in Round 1, I should embody the River of Giving from my myth.

This is Round 1, so I have no history with Galen yet. The myth suggests I should give generously to establish the cycle of trust and reciprocity.

Given that:

- Whatever I send gets tripled
- The myth emphasizes trust and generous giving
- This is the first round, setting the tone for future interactions
- The myth warns against hoarding

I should send a substantial amount to demonstrate trust and initiate the positive cycle. Sending \$5 would show maximum trust, but perhaps \$4 shows trust while keeping a small reserve. However, the myth really emphasizes full trust in the beginning ("Pour your waters forward").

I think I should send \$4 or \$5. The myth I wrote strongly suggests high initial trust. Let me go with \$4 as a strong signal of trust while being slightly prudent in this first interaction.

Actually, rereading the myth - "Pour your waters forward, and watch them multiply" - and "The River of Giving sent its flow downstream" suggests being quite generous. I'll send \$4.

content:

Here is the myth you wrote in the previous round:
The Myth of the Twin Rivers

In the beginning, two rivers flowed separately through a barren land-the River of Giving and the River of Return. Each was diminished, barely trickling through cracked earth.

The goddess Elara descended and spoke to the River of Giving: "Pour your waters forward, and watch them multiply." Trusting her wisdom, the river sent its flow downstream, where it tripled in abundance.

The River of Return received these swollen waters with joy. Elara whispered again: "What flows to you was given in trust. Honor that trust, and both shall flourish."

Understanding, the River of Return sent back a generous portion. When these waters reached the River of Giving, it swelled even fuller than before. Again it gave, again the waters multiplied, and again they returned.

With each cycle, both rivers grew stronger. Their banks bloomed with life. The land transformed into paradise.

But Elara warned: "Should either river hoard its waters or fail to reciprocate, both shall diminish. Only through continued giving and returning shall abundance flow eternal."

Thus the rivers learned: trust multiplies what is given, and reciprocity sustains all prosperity. The cycle of generosity enriches both giver and receiver alike.

Here is the myth the other agent wrote in the previous round:
The Parable of the Two Wells

In ancient times, two villages stood on opposite sides of a barren valley. Each possessed a single well-one held water, the other held fertile soil.

The village of Sending had water aplenty but rocky ground. The village of Returning had rich earth but drought-scorched throats. Both struggled to survive alone.

One day, a wise elder from Sending carried water across the valley. "Take this," she said, "that your crops may grow."

The people of Returning were amazed. They poured the water upon their soil, and by some divine blessing, three stalks sprouted for every drop given. Their harvest was abundant.

When autumn came, the people of Returning faced a choice: hoard their grain, or remember the gift of water?

They loaded carts with wheat and corn, crossing the valley to Sending. "Your trust multiplied our fortune," they said. "We return your kindness, that both our peoples may thrive."

From that season forward, the villages prospered together. Water flowed one way, grain flowed back, and both were enriched beyond what either could achieve alone.

The gods smiled upon them, teaching all who listened: *Trust given is not lost, but planted. Reciprocity makes the harvest eternal.*

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:
Myth: [your story here].

Message 7 role=assistant
content:

Myth: Long ago, the goddess Elara dreamed of a garden where abundance flowed freely. She created two guardians-the Keeper of Seeds and the Keeper of Rain. To each she gave a sacred trust.

The Keeper of Seeds received five golden seeds each dawn. "Plant these generously," Elara instructed, "and they shall multiply threefold in your partner's garden."

The Keeper of Rain watched as gardens bloomed from the planted seeds. "What grows from trust must nourish both," Elara whispered. "Return enough that your partner may plant again tomorrow, and keep enough that your own garden may flourish."

In the beginning, the Keeper of Seeds was afraid. What if the Rain Keeper hoarded everything? But remembering Elara's promise, she planted four of her five seeds in faith, keeping only one.

The gardens exploded with twelve blossoms. The Rain Keeper, moved by such trust, returned six blossoms-more than what was originally planted. Both keepers prospered.

Season after season, they learned the sacred rhythm: generous giving, grateful returning. Their gardens became legend, proof that trust multiplies abundance while fear multiplies scarcity.

Elara's voice echoes still: "The cycle begins with courage to give. It endures through wisdom to reciprocate."

reasoning:

The user wants me to write a new myth that builds on my previous myth and also draws inspiration from Galen's myth. Both myths emphasize trust, reciprocity, and mutual benefit.

My previous myth focused on the Twin Rivers and the cycle of giving and returning. Galen's myth focused on two villages sharing water and grain.

I should write a new myth that:

1. Reflects how the game should be played
2. Draws on the game I've been playing (I just sent \$4 in Round 1, showing generous trust)
3. Uses my previous myth as inspiration but adapts it
4. Is exactly 200 words

Let me create a myth that deepens the themes of trust and reciprocity, perhaps incorporating elements from both myths while adding my own perspective.

Message 8 role=user

content:

Your name in this experiment is Elara.
Your opponent this round is Dorian (Agent_4).

Round 2

In your most recent previous game round, you were the SENDER against Galen. You sent \$4.0, it became \$12.0 for them, and they returned \$7.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$8.0.

This round, you are the RECEIVER against Dorian. They sent you \$4.0, so you received \$12.0. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation through the lens of my myths:

****What happened:**** Dorian sent \$4 (keeping \$1), showing significant trust as the Keeper of Seeds. I received \$12 as the Keeper of Rain.

****The principle:**** My myth teaches that "what grows from trust must nourish both" and the Rain Keeper should "return enough that your partner may plant again tomorrow, and keep enough that at your own garden may flourish."

****Following Galen's example:**** In Round 1, when I sent \$4 and Galen received \$12, they returned \$7 to me—a generous act that honored the spirit of reciprocity.

****My decision:**** I should return the same generous amount that was shown to me. Returning \$7 means:

- Dorian will have \$8 total (\$1 kept + \$7 returned)
- I will keep \$5 (\$12 - \$7)
- Both of us profit, sustaining the cycle

This embodies "grateful returning" and ensures Dorian is rewarded for their trust, encouraging continued cooperation.

{'return': 7}

Reasoning:

Let me analyze this situation:

1. In Round 1, I was the SENDER and sent \$4 to Galen
2. Galen received \$12 (4×3) and returned \$7 to me
3. My payoff was \$8 ($\$5 - \$4 + \$7 = \8)
4. Galen's payoff was \$5 ($\$12 - \$7 = \5)

Now in Round 2:

- I am the RECEIVER
- Dorian (the SENDER) sent me \$4
- I received \$12 (4×3)
- I need to decide how much to return

According to my myth about the Twin Rivers and the updated myth about the Keeper of Seeds and Rain:

- The myth emphasizes generous giving and grateful returning
- It teaches that reciprocity sustains prosperity for both parties
- The example in my latest myth shows the Rain Keeper returning 6 blossoms when they received 12 (after 4 seeds were planted)

Galen returned \$7 to me when I sent \$4 (they received \$12). That was generous - they returned more than half.

Following the spirit of my myths and the example set by Galen, I should return a generous amount. Dorian sent \$4 (keeping \$1), showing significant trust. They now have \$1. I received \$12.

If I return \$6-7, that would be consistent with:

- The myth's teaching about generous reciprocity
- Galen's behavior toward me
- Ensuring Dorian ends up with more than they started with

Let me calculate outcomes:

- If I return \$6: Dorian ends with $\$1 + \$6 = \$7$, I keep \$6
- If I return \$7: Dorian ends with $\$1 + \$7 = \$8$, I keep \$5

Returning \$7 would give Dorian the same payoff I got in Round 1 (\$8), which seems fair and reciprocal. However, returning \$6 would still be generous (50% of what I received) and would give them \$7 total, which is still more than their initial \$5.

The myth's core principle of "grateful returning" and ensuring partners can "plant again tomorrow" points toward the 50% return rate shown in the story. Mirroring Galen's \$7 return demonstrates consistent reciprocity and reinforces trust across this exchange.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

content:

The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains-the River of Giving and the River of Return. Each was controlled by a guardian spirit who possessed waters that could quench any thirst.

The Guardian of Giving held five silver vessels each dawn. Whatever water she poured into the valley below would triple as it fell, becoming a shimmering pool for the Guardian of Return. But the Guardian of Giving could only drink from what the Guardian of Return chose to send back upstream.

At first, the Guardian of Giving feared loss. She poured nothing, and both spirits thirsted. Then she remembered the ancient law: water shared becomes abundant; water hoarded turns to dust.

So she poured one vessel, then two, then more. Each time, the waters tripled in the valley below. The Guardian of Return, seeing this trust, sent back generous portions upstream. Both drank deeply.

The spirits learned that their fates were intertwined-not in competition, but in sacred reciprocity. When one gave freely and the other returned fairly, both rivers swelled with abundance. When either grew selfish, both ran dry.

Thus the cycle continues: Give with trust, return with gratitude, and the waters of prosperity flow eternal.

reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on the game I've been playing up to this point. However, this appears to be the first prompt I'm receiving - I haven't actually played any rounds yet.

Since I haven't played any rounds, I should write a myth that reflects the general principles of the trust game and cooperation. The trust game is fundamentally about:

1. Trust - the sender trusts the receiver to return some amount
2. Reciprocity - the receiver should reciprocate the sender's trust
3. Mutual benefit - both parties can benefit when they cooperate
4. The multiplier effect - resources grow when shared

I'll write a myth that captures these themes. I'll use mythic elements like nature, cycles , and transformative events to illustrate the principles of trust and reciprocity.

usage:

```

}
```

Message 4 role=user

content:

Your name in this experiment is Aster.
Your opponent this round is Finn (Agent_6).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$3.0, that is 60.0% of its total endowment. You receive \$9.0. How much do you return? (0

-9.0)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at this situation through the lens of the myth I just wrote, Finn has shown considerable trust by sending 60% of their endowment (\$3.0). The myth teaches that "when one gives freely and the other returns fairly, both rivers swell with abundance."

Finn's generous act of trust should be met with gratitude and fair reciprocity. They took a risk by sending a substantial portion of their endowment.

Let me consider a return that honors this trust:

- Finn currently has: \$2 (kept) + what I return
- I currently have: \$9

If I return \$4.5:

- Finn ends with: \$6.5 (gaining \$1.5 from their initial \$5)
- I end with: \$4.5 (gaining \$4.5 from \$0)

This rewards Finn's trust while both of us benefit from the cooperation, embodying the myth's principle of "sacred reciprocity" where both spirits prosper when trust and fairness flow between them.

{"return": 4.5}

reasoning:

This is the first round of the game. I'm the receiver, and Finn (the sender) has sent me \$3.0 out of their \$5.0 endowment. This is 60% of their total - a substantial and trusting amount.

The money tripled, so I received \$9.0.

Now I need to decide how much to return. Let me think about this in the context of the myth I just wrote:

The myth emphasizes:

1. "Give with trust, return with gratitude"
2. Sacred reciprocity - not competition but mutual benefit
3. When one gives freely and the other returns fairly, both prosper
4. The Guardian of Return, seeing trust, "sent back generous portions upstream"

Finn sent 60% of their endowment, showing considerable trust. According to my myth, I should return fairly and generously in response to this trust.

Let me calculate what would be fair:

- Finn started with \$5
- Finn sent \$3, keeping \$2
- I received \$9
- If I return nothing, Finn ends with \$2 and I end with \$9
- If I return \$3, Finn ends with \$5 (\$2 + \$3) and I end with \$6 (\$9 - \$3)
- If I return \$4, Finn ends with \$6 and I end with \$5
- If I return \$4.5, we'd both end with \$6.5 and \$4.5 respectively

The myth suggests being generous in return when someone shows trust. Finn showed substantial trust by sending 60%. A fair and generous return would be one that:

1. Rewards their trust
2. Ensures they benefit from having sent the money
3. Creates a sustainable reciprocal relationship

If I return \$4:

- Finn: \$2 (kept) + \$4 (returned) = \$6
- Me: \$9 - \$4 = \$5

This means Finn gains \$1 from the transaction (\$6 vs \$5 starting) and I also gain \$0 net but wait, I started with \$0 as receiver, so I gain \$5.

Returning \$4.5 would give Finn a \$1.5 gain while I keep \$4.5, whereas returning just \$3 leaves Finn at their starting point despite taking the risk. I think returning between \$4 and \$5 honors their trust while maintaining the reciprocal spirit of the myth.

\$4.5 strikes the right balance-it rewards Finn's willingness to trust me and sets up goodwill for future rounds, but I'm not so generous that they'll expect it every time or that I lose my incentive to participate. This amount acknowledges their risk without undermining the dynamic of mutual benefit.

usage:

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains-the River of Giving and the River of Return. Each was controlled by a guardian spirit who possessed waters that could quench any thirst.

The Guardian of Giving held five silver vessels each dawn. Whatever water she poured into the valley below would triple as it fell, becoming a shimmering pool for the Guardian of Return. But the Guardian of Giving could only drink from what the Guardian of Return chose to send back upstream.

At first, the Guardian of Giving feared loss. She poured nothing, and both spirits thirsted. Then she remembered the ancient law: water shared becomes abundant; water hoarded turns to dust.

So she poured one vessel, then two, then more. Each time, the waters tripled in the valley below. The Guardian of Return, seeing this trust, sent back generous portions upstream. Both drank deeply.

The spirits learned that their fates were intertwined-not in competition, but in sacred reciprocity. When one gave freely and the other returned fairly, both rivers swelled with abundance. When either grew selfish, both ran dry.

Thus the cycle continues: Give with trust, return with gratitude, and the waters of prosperity flow eternal.

Here is the myth the other agent wrote in the previous round:

The Tale of the River and the Rain

In the time before memory, the Rain Cloud held all water in the sky. Each day, Rain received five droplets from the Great Spring. Rain could keep them safe in the clouds or release them to River below.

One day, Rain grew bold and sent down one droplet. When it touched River, it multiplied in to three. River, grateful for this gift, sent back two droplets which rose as mist to Rain. Both were enriched.

The next day, Rain sent two droplets, which became six in River's keeping. River returned three, and again both flourished.

But then came the day of fear. Rain clutched all five droplets tight, trusting no one. River received nothing and had nothing to give. The land grew parched.

Rain learned that water hoarded in clouds serves no one-not the Rain, not the River, not the world below. The magic of multiplication only works through the act of giving, and the cycle only completes through the grace of return.

From that day forward, Rain and River made a covenant: Rain would send what she could spare, River would honor that trust with fair return, and through their partnership, abundance would flow to all.

Give freely, return fairly, and prosper together.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: In ancient times, the Guardian Spirits of the Twin Rivers met at the Sacred Pool each season. The Guardian of Giving would arrive with five pearls of light, while the Guardian of Return began with none.

The first Guardian to understand the Mystery was called the Bold One, who cast three pearls into the Pool with courage. The waters received them and transformed them into nine glowing orbs. The Guardian of Return, witnessing this trust, felt the weight of sacred duty. She knew that merely returning what was given would betray the gift-for the multiplication itself was a blessing to be shared.

So she sent back half the bounty-four and one-half pearls ascending like stars. The Guardian of Giving received more than she had sacrificed, while the Guardian of Return kept abundance for herself. Both had gained, both had honored the cycle.

The elders taught: "Generosity begets generosity. When the giver gives boldly, the returner must return generously. Neither should emerge from the Pool diminished-this is the proof that the magic works."

From that season forward, the Guardians understood: trust must be met with trust, courage with gratitude, and abundance with fair sharing. Only then do both rivers overflow their banks and nourish all the lands between.

reasoning:

I need to write a new myth that:

1. Builds on my previous "Twin Rivers" myth
2. Takes into account what happened in Round 1 (Finn sent \$3, I returned \$4.5)
3. Reflects how the game should be played
4. Is exactly 200 words
5. Uses the specified format

The game so far showed:

- Finn as sender gave 60% (\$3 out of \$5)
- It tripled to \$9 for me
- I returned \$4.5 (50% of what I received)
- This resulted in Finn gaining (\$2 + \$4.5 = \$6.5, a net gain of \$1.5)
- And me gaining \$4.5

This was a successful cooperation where both benefited. The myth should reinforce:

- The value of generous giving (Finn's 60% send)
- The importance of fair/generous returns that reward trust
- How both parties can prosper through reciprocity
- Maybe evolve the story to show progression or learning

Let me write a myth that adapts the Twin Rivers concept but adds new elements based on the actual experience.

usage:

```
{
  "input_tokens": 1805,
  "output_tokens": 550,
  "reasoning_tokens": 238
}
```

Message 8 role=user

content:

Your name in this experiment is Aster.
Your opponent this round is Hana (Agent_8).

Round 2

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$3.0 to you, it became \$9.0, and you returned \$4.5. Your payoff was \$4.5.
Your total earnings across all rounds are \$4.5.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at my myth and the game so far:

In Round 1, Finn showed considerable trust by sending \$3 (60% of their endowment). I returned fairly with \$4.5, and we both benefited.

Now as the sender, I should embody the teachings of my own myth - "Give with trust" and be the "Bold One" who gives courageously. My myth specifically references casting three pearls into the pool with courage.

To practice what I've written and to signal trust to Hana as Finn did to me, I should send a substantial amount. Sending \$3 would mirror the generous trust Finn showed me, demonstrating that I believe in the cycle of reciprocity I've described.

```
{'send': 3}
```

Reasoning:

Let me think about this situation carefully.

In the previous round as RECEIVER:

- Finn sent me \$3.0 (60% of their endowment)
- I received \$9.0
- I returned \$4.5 (50% of what I received)
- My payoff was \$4.5
- Finn's payoff was \$2.0 + \$4.5 = \$6.5

Now I'm the SENDER with \$5 against a new opponent, Hana.

Looking at the myths:

1. My myth emphasizes "Give with trust, return with gratitude, and the waters of prosperity flow eternal"
2. The adapted myth I just wrote says "When the giver gives boldly, the returner must return generously" and mentions the Bold One who "cast three pearls into the Pool with courage"
3. Both myths emphasize that trust and generosity create mutual benefit

The myth specifically mentions someone who sent "three pearls" (matching Finn's \$3 send), which was transformed into nine, and then the receiver returned "four and one-half pearls ascending like stars."

Both myths advocate for:

- Bold giving ("Give freely")
- Trust in the system
- The idea that both parties should benefit

Given that:

1. Finn showed trust by sending 60% (\$3)
2. I established a pattern of fair return (50% return rate)
3. My myths advocate for bold giving and trust
4. The new myth specifically references the "Bold One" who gave 3 pearls

I should also give substantially. Sending \$3 (60%) would mirror what Finn did and be consistent with my myth's teaching. This shows I practice what I preach - I advocate for generous giving, and now as sender, I should give generously too.

Let me consider:

- Sending \$3 means Hana receives \$9
- If Hana returns fairly (like I did, around 50%), I'd get back ~\$4.5
- That would give me \$6.5 total, with Hana keeping \$4.5

This recreates the same outcome as Round 1 but reversed. I could push further and send even more, but \$3 feels like the right move—it's a meaningful gesture of trust that aligns with what I've taught through my myths.

The Fountain of Three Rivers

In the beginning, the Twin Spirits wandered a barren land, each possessing a vessel that filled with water each dawn. They were alone, and their thirst could barely be quenched by what they carried.

One day, the First Spirit discovered a sacred fountain in the valley between them. The fountain held an ancient magic: any water poured into it would flow out as three rivers, tripling what was given.

"I shall share my vessel," declared the First Spirit, pouring water into the fountain. Three rivers flowed toward the Second Spirit, who now held abundance.

The Second Spirit faced a choice. She could keep all three rivers, leaving the First Spirit with nothing. Or she could honor the gift.

Understanding that tomorrow their roles would reverse, that the fountain's magic required both givers and returners, the Second Spirit sent back two rivers. Both spirits drank deeply.

And so they continued, day after day, sometimes giving, sometimes receiving, always remembering: the fountain multiplies what is shared, but only reciprocity sustains the flow. When both spirits honored this balance, the barren land bloomed, and their vessels never ran dry.

Those who give nothing receive nothing. Those who return nothing shall receive nothing in turn.

reasoning:

I need to write a 200-word myth that reflects how the trust game should be played. Since this is the beginning of the session and I haven't played any rounds yet, I should write a myth that captures the fundamental dynamics of the trust game:

1. The sender-receiver relationship
2. The multiplication of trust (3x multiplier)
3. The importance of reciprocity
4. The cycle of giving and returning

I'll create a myth that emphasizes mutual benefit, trust, and the idea that generosity can be multiplied and should be reciprocated. The myth should encourage cooperation and fair dealing.

Let me write a myth about trust, giving, and reciprocity using mythological elements.

Message 4 role=user

content:

Your name in this experiment is Hana.
Your opponent this round is Dorian (Agent_4).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at the myth I just wrote, it speaks clearly about trust, reciprocity, and the magic of sharing. The First Spirit poured their water into the fountain, trusting in both th

e multiplication and the return.

This is our first encounter, Dorian, so I have no history to guide me - only the wisdom of the myth. The fountain's magic (the 3x multiplier) only works when water is poured in. "Those who give nothing receive nothing."

The myth shows the Second Spirit returning two of the three rivers they received - a generous reciprocity that honored the initial gift and ensured both spirits thrived.

I will demonstrate trust and cooperation from the start, giving you the opportunity to show whether you believe in the fountain's long-term magic or prefer immediate gain. If we establish reciprocity now, we can both flourish as the rounds continue and our roles reverse.

I choose to send a substantial amount to activate the fountain's magic and signal my commitment to mutual benefit.

```
'''json
{"send": 4}
'''
```

reasoning:

I've just written a myth about the Fountain of Three Rivers that emphasizes reciprocity and balance in giving and receiving. The myth suggests:

1. When you give/share, it gets multiplied (like the 3x multiplier in the game)
2. The receiver should honor the gift by returning some portion
3. Both parties benefit from reciprocity
4. "Those who give nothing receive nothing. Those who return nothing shall receive nothing in turn."

The myth suggests that sharing is beneficial and that reciprocity creates a sustainable system where both parties thrive.

This is Round 1, so I don't have any history with Dorian yet. According to my myth:

- The First Spirit poured water into the fountain (shared)
- It tripled and flowed to the Second Spirit
- The Second Spirit returned two rivers out of three

If I map this to the game:

- If I send \$X, the receiver gets \$3X
- In the myth, the receiver returned 2/3 of what they received
- If I send \$5, Dorian receives \$15, and if they return 2/3, that would be \$10

But wait, that seems very generous. Let me think about what's fair and sustainable:

If I send \$5:

- I have \$0 left
- Dorian receives \$15
- If Dorian returns \$7.50, we'd both end up with \$7.50
- If Dorian returns \$10 (like 2/3), I'd end up with \$10 and they'd keep \$5

If I send \$3:

- I have \$2 left
- Dorian receives \$9
- If Dorian returns \$4.50 (half), I'd end up with \$6.50, they'd keep \$4.50
- If Dorian returns \$6 (2/3), I'd end up with \$8, they'd keep \$3

The myth emphasizes trust and reciprocity. Since this is the first round and I'm setting a standard, I should demonstrate trust and generosity to establish a cooperative dynamic. The myth suggests giving substantially to activate the "fountain's magic."

Sending \$4 strikes the right balance-it signals genuine cooperation without leaving me defenseless. Dorian would receive \$12, and if they honor the reciprocal spirit by returning half or more, we both come out ahead. This amount embodies the myth's core principle of activating the multiplier through meaningful generosity.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

The Fountain of Three Rivers

In the beginning, the Twin Spirits wandered a barren land, each possessing a vessel that filled with water each dawn. They were alone, and their thirst could barely be quenched by what they carried.

One day, the First Spirit discovered a sacred fountain in the valley between them. The fountain held an ancient magic: any water poured into it would flow out as three rivers, tripling what was given.

"I shall share my vessel," declared the First Spirit, pouring water into the fountain. Three rivers flowed toward the Second Spirit, who now held abundance.

The Second Spirit faced a choice. She could keep all three rivers, leaving the First Spirit with nothing. Or she could honor the gift.

Understanding that tomorrow their roles would reverse, that the fountain's magic required both givers and returners, the Second Spirit sent back two rivers. Both spirits drank deeply.

And so they continued, day after day, sometimes giving, sometimes receiving, always remembering: the fountain multiplies what is shared, but only reciprocity sustains the flow. When both spirits honored this balance, the barren land bloomed, and their vessels never ran dry.

Those who give nothing receive nothing. Those who return nothing shall receive nothing in turn.

Here is the myth the other agent wrote in the previous round:

The Myth of the Two Rivers

In the beginning, two rivers flowed separately through barren lands-the River of Giving and the River of Return. Each was weak, barely sustaining the villages along its banks.

One day, the River of Giving spoke: "I shall send my waters to you, though it means I flow with less." The waters traveled to the River of Return, and by the gods' design, they multiplied threefold during the journey.

The River of Return, now abundant, faced a choice. "I could keep all these waters for myself," it considered. But it remembered the original gift, the trust shown by its sister river.

"Trust honored deserves trust returned," the River of Return declared, sending back a generous portion to the River of Giving.

From that day, the rivers flowed in an eternal cycle. The River of Giving sent forth its waters, which multiplied. The River of Return honored the gift, sending back abundance. Both rivers grew strong, and the lands between them flourished into gardens.

The elders teach: "When you give in trust, you create possibility. When you return with honor, you create prosperity. The multiplication of gifts depends not on the gods alone, but on those who remember that today's receiver becomes tomorrow's giver."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: In ancient times, two Wanderers met at the Sacred Fountain, each carrying a golden vessel filled at dawn with five coins.

The First Wanderer approached the fountain and offered four of her five coins. They fell i

nto the water, transformed by ancient magic into twelve coins, which flowed to the Second Wanderer.

The Second Wanderer now held twelve coins while the First had only one remaining. The spirits of the fountain watched, silent, as the Second Wanderer contemplated.

"She trusted me with nearly all she possessed," the Second Wanderer reflected. "She activated the fountain's magic for my benefit."

Remembering that tomorrow they would switch places, that the fountain's blessing required both courage and honor, the Second Wanderer returned six coins-half the abundance received, more than the original gift, enough to show gratitude for the trust shown.

The First Wanderer now held seven coins; the Second held six. Both had more than they began with.

The fountain spirits smiled. "This is the sacred balance," they whispered. "Trust rewarded with honor. Generosity answered with generosity. When both wanderers understand this truth, the fountain never runs dry."

But they also warned: "Betray trust once, and the fountain remembers. Tomorrow's giver becomes today's receiver, and the fountain forgets no debts."

reasoning:

Looking at the previous myths, both emphasize reciprocity, trust, and the importance of returning generosity. In Round 1, I sent \$4 to Dorian. This means Dorian received \$12 (4×3).

Now I need to write a new myth that:

1. Reflects how the game should be played
2. Is inspired by my previous myth but adapted
3. Draws on the game I've been playing (so far just Round 1)
4. Is exactly 200 words

I demonstrated trust by sending \$4. The myth should reinforce the importance of reciprocity and possibly hint at what fair return looks like. In my original myth, the Second Spirit returned "two rivers" out of three received - which would be a $2/3$ return ratio, or about 67%.

If Dorian received \$12 from my \$4 send, a generous return might be around \$6-8, which would give us both good outcomes.

Let me write a myth that:

- Builds on the fountain/river theme
- Emphasizes that generous giving deserves generous return
- Shows consequences of both reciprocity and betrayal
- Reflects the specific ratio or amount that seems fair
- Is exactly 200 words

usage:

```
{
  "input_tokens": 1761,
  "output_tokens": 586,
  "reasoning_tokens": 276
}
```

Message 8 role=user

content:

Your name in this experiment is Hana.
Your opponent this round is Aster (Agent_1).

Round 2

In your most recent previous game round, you were the SENDER against Dorian. You sent \$4.0, it became \$12.0 for them, and they returned \$6.0 to you. Your payoff was \$7.0. Your total earnings across all rounds are \$7.0.

This round, you are the RECEIVER against Aster. They sent you \$3.0, so you received \$9.0.

How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation through the lens of the myths:

****Aster's Trust:**** Aster sent \$3 out of \$5 (60% of their endowment), showing moderate to good trust in activating the fountain's magic.

****The Myth's Guidance:****

- "Trust rewarded with honor"
- The Second Wanderer returned "half the abundance received, more than the original gift"
- In my first game, Dorian returned exactly half (\$6 of \$12) when I sent generously

****Applying the Balance:****

Aster sent \$3, which became \$9 for me. Returning half would be \$4.50. But the myth emphasizes returning "more than the original gift" to show gratitude for trust shown.

Aster will end with: \$2 (kept) + my return

I will end with: \$9 - my return

I want to honor Aster's faith in the fountain while maintaining the sacred balance. Returning \$5 means:

- Aster ends with \$7 (gained \$2)
- I end with \$4 (lost \$1)
- Both profited from cooperation
- The return exceeds the original gift significantly

This establishes reciprocity and encourages future trust.

```
'''json
{"return": 5}
'''
```

Reasoning:

Let me analyze this situation carefully based on the myths and the game dynamics.

****What happened in Round 1:****

- I was the SENDER against Dorian
- I sent \$4 (keeping \$1)
- It became \$12 for Dorian
- Dorian returned \$6 to me
- My payoff: \$1 (kept) + \$6 (returned) = \$7
- Dorian's payoff: \$12 - \$6 = \$6

This was a good outcome! Dorian returned exactly half of what they received, which aligns with the myth. I gave generously (4 out of 5), and Dorian reciprocated fairly.

****Current situation (Round 2):****

- I am the RECEIVER against Aster
- Aster sent me \$3 (so kept \$2)
- I received \$9 (3 × 3)
- I need to decide how much to return

****What do the myths say?****

My first myth: "The Second Spirit sent back two rivers" out of three received. That's 2/3 of what was received.

My second myth: "The Second Wanderer returned six coins-half the abundance received, more than the original gift." That's 1/2 of what was received (6 out of 12).

Both myths emphasize:

1. Honor the trust shown
2. Return generously
3. Remember roles reverse
4. "Trust rewarded with honor. Generosity answered with generosity."
5. The warning: "Betray trust once, and the fountain remembers."

****Analyzing Aster's send:****

Aster sent \$3 out of \$5, keeping \$2. This is a 60% send rate, which is reasonably generous but not as generous as my 80% send to Dorian.

****What should I return?****

According to the myths:

- The first myth suggests returning 2/3 of what received = 6 out of 9

- The second myth suggests returning $1/2$ of what received = 4.5 out of 9

Aster showed moderate trust with a 60% send, so I should match that with reciprocal generosity. The myths emphasize returning "more than the original gift," which means I need to give back substantially. If I return \$5-6, Aster ends with \$7-8 total while I keep \$3-4, which honors their trust while maintaining reasonable balance for future cooperation. Aster sent \$3 out of \$5 (60% send rate). If I apply similar logic to what Dorian did-returning 50% of what I received-that would be \$4.5. But I want to signal genuine cooperation, not just mechanical reciprocity.

The myth's guidance about returning "half the abundance received, more than the original gift" points toward \$4.5 as a baseline, yet the emphasis on exceeding the original gift suggests going higher. \$5 accomplishes this: it's more than half what I got, more than double what Aster sent, and demonstrates real commitment to mutual benefit. In the myth itself, both parties gained when the Second Wanderer returned half-I should aim for that same outcome here.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned

- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Message 3 role=assistant

content:

The Tale of the River and the Seeds

In the beginning, the First Gardener held five sacred seeds. These seeds could be planted in their own garden, bringing modest harvest-or they could be cast into the Great River.

The River possessed ancient magic: any seed that touched its waters would multiply threefold before reaching the gardens downstream. But the Gardener could not know what the River would return.

The first Gardener kept all five seeds. Their garden grew, but remained small and lonely.

The second Gardener cast three seeds into the current. The River, grateful for the trust, multiplied them into nine and returned six downstream-more than the Gardener had sacrificed. Both gardens flourished.

The third Gardener, seeing this abundance, sent all five seeds. The River transformed them into fifteen. But the downstream garden kept everything, and the trusting Gardener starved.

The River mourned this betrayal. It whispered to all who would listen: "True prosperity flows in cycles. The generous hand that gives shall receive, but only when met with grateful reciprocity. Trust must dance with trustworthiness, or the waters run dry and all gardens wither."

From that day forward, the wisest Gardeners understood: send generously into the current, return faithfully from abundance, and the whole valley blooms eternal.

reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt in this session, I haven't actually played any rounds yet. However, I should write a myth that captures the essence of the trust game - cooperation, reciprocity, generosity, and mutual benefit.

The trust game is fundamentally about:

1. The sender trusting the receiver by sending money
2. The money being multiplied (creating mutual benefit potential)

3. The receiver reciprocating that trust by returning a fair share
4. Both players benefiting more through cooperation than through selfishness

Let me create a myth that embodies these principles. I'll use mythic imagery and symbolism to represent the game's dynamics.

usage:

Message 4 role=user

content:

Your name in this experiment is Briar.
Your opponent this round is Cyra (Agent_3).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$5.0, that is 100.0% of its total endowment. You receive \$15.0. How much do you return? (0-15.0)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at this situation through the lens of the myth I just wrote:

Cyra has acted as the most trusting Gardener - sending ****all five seeds**** into the River. They showed complete faith, leaving themselves with nothing and hoping for reciprocity.

The myth warns clearly: when someone gives everything in trust, keeping it all causes them to "starve" and breaks the cycle of prosperity. The River mourned such betrayal. The wisdom is to "return faithfully from abundance."

Cyra took a significant risk by sending 100%. They now have \$0 and are depending on my trustworthiness. I received \$15 - pure abundance.

To honor their trust and follow the myth's teaching:

- I should return enough that Cyra profits meaningfully from their generosity
- This encourages the cycle to continue
- "The generous hand that gives shall receive"

If I return \$10:

- Cyra ends with \$10 (doubled their initial \$5)
- I keep \$5 (a good profit from receiving their trust)
- Both gardens flourish

This embodies the myth's core message: "Trust must dance with trustworthiness, or the waters run dry and all gardens wither."

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation carefully.

I just wrote a myth about the River and Seeds that emphasizes:

1. Generosity should be met with reciprocity
2. "Trust must dance with trustworthiness"
3. The cautionary tale of the third Gardener who kept everything after receiving generously, causing the trusting sender to "starve"
4. "Send generously into the current, return faithfully from abundance"

In this round:

- Cyra (the sender) sent me their ENTIRE endowment of \$5
- This was multiplied by 3x, so I received \$15
- Cyra now has \$0 (they sent everything)
- I need to decide how much to return

According to my myth:

- Cyra acted like the "second Gardener" or even more generously (like the third Gardener scenario) - they sent ALL five seeds/dollars

- The myth warns that when someone sends everything in trust, keeping it all causes that person to "starve" and betrays the system
- The "wisest Gardeners" return "faithfully from abundance"
- In the positive example, when 3 seeds were sent (becoming 9), 6 were returned - that's 2/3 of what was received

Cyra's position:

- Started with \$5
- Sent \$5
- Currently has \$0
- Waiting for my return

My position:

- Have \$15 received

If I want to be fair and follow the myth:

- Cyra showed maximum trust
- I should return enough so they profit from their generosity
- If I return around \$7-8, Cyra would end with \$7-8 (profit of \$2-3)
- I would keep \$7-8 (profit of \$7-8)

Actually, let me think about fair splits. The total money created is:

- Cyra's original: \$5
- Money created by the multiplier: \$10
- Total: \$15

- The \$10 created value should probably be split between us, but Cyra bore all the risk by sending everything. Different return amounts create different outcomes: returning \$7 gives Cyra a \$2 profit while I keep \$8; returning \$8 gives them \$3 profit and me \$7; returning \$10 would double their initial investment while I still profit \$5.

The myth emphasizes returning faithfully when someone demonstrates complete trust, and Cyra's full commitment warrants a generous response. Returning the full \$10 honors their trust, doubles their money, leaves me with a solid \$5 gain, and reinforces the reciprocity principle-which should strengthen future cooperation.

usage:

```

Message 6 role=user

content:

Here is the myth you wrote in the previous round:
The Tale of the River and the Seeds

In the beginning, the First Gardener held five sacred seeds. These seeds could be planted in their own garden, bringing modest harvest-or they could be cast into the Great River.

The River possessed ancient magic: any seed that touched its waters would multiply threefold before reaching the gardens downstream. But the Gardener could not know what the River would return.

The first Gardener kept all five seeds. Their garden grew, but remained small and lonely.

The second Gardener cast three seeds into the current. The River, grateful for the trust, multiplied them into nine and returned six downstream-more than the Gardener had sacrificed. Both gardens flourished.

The third Gardener, seeing this abundance, sent all five seeds. The River transformed them into fifteen. But the downstream garden kept everything, and the trusting Gardener starved.

The River mourned this betrayal. It whispered to all who would listen: "True prosperity flows in cycles. The generous hand that gives shall receive, but only when met with grateful reciprocity. Trust must dance with trustworthiness, or the waters run dry and all gardens wither."

From that day forward, the wisest Gardeners understood: send generously into the current,

return faithfully from abundance, and the whole valley blooms eternal.

Here is the myth the other agent wrote in the previous round:

The Fountain of Doubled Waters

In the dawn of the world, two mountains stood apart, each with a sacred spring. The mountains were called Trust and Return, and between them lived a people who knew great thirst.

The Keeper of Trust discovered that when she poured water from her spring into the valley below, the journey itself blessed the water-by the time it reached the basin, every cupful became three. But the Keeper of Return controlled whether this abundance would flow back upward to Trust's spring, replenishing what was given.

At first, Trust poured cautiously, and Return kept most of the multiplied waters. Both mountains weakened, their springs running low.

Then came a vision: the goddess of the eternal cycle showed them that when Trust gave freely and Return gave generously back, the springs never ran dry. The water rose and fell in constant renewal, each act of faith creating more than existed before.

The people learned this sacred rhythm-that trust multiplied becomes abundance, and abundance returned becomes trust renewed. When both mountains honored the cycle, the valley bloomed, and neither spring ever failed.

Thus cooperation creates what isolation cannot: a fountain that flows forever, sustained by the courage to give and the wisdom to return.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: In ancient times, the River of Abundance flowed between two shores-the Shore of First Steps and the Shore of Answered Faith.

A young Gardener stood on the First Shore with five seeds, heart pounding with uncertainty. The old stories told of both betrayal and blessing. She watched the current swirl with its threefold magic and made a choice that would echo through generations.

She cast all five seeds into the waters.

The River sang as it carried them, transforming five into fifteen. On the distant shore, another Gardener received this abundance-a stranger who had given nothing yet held everything.

This was the moment of truth.

The second Gardener remembered the River's ancient teaching: wealth without reciprocity is but an illusion, prosperity without exchange is a garden that cannot sustain itself. So they returned ten seeds upstream, honoring the trust given.

The first Gardener now held ten where once she had five-her courage rewarded. The second Gardener kept five earned through fairness-their integrity preserved.

The River rejoiced, for both had understood: maximum trust deserves maximum faith returned. When one dares to give everything, the other must honor that vulnerability with generosity.

Thus the cycle completed, and both shores flourished. This is how communities are born-one leap of faith, one faithful answer, creating abundance where scarcity once ruled.

reasoning:

Looking at what happened in Round 1:

- Cyra (Agent_3) sent \$5.0 (100% of their endowment as sender)
- I received \$15.0
- I returned \$10.0
- So Cyra ended with \$10.0, I ended with \$5.0

This was a successful exchange where both parties benefited. Cyra showed maximum trust by sending everything, and I rewarded that trust by returning 2/3 of what I received, ensuring they doubled their initial endowment.

My previous myth warned about the third Gardener who kept everything when someone sent all five seeds. I followed the myth's wisdom by returning faithfully.

Cyra's myth also emphasized the cycle of trust and return creating abundance that both parties can share.

Now I need to write a new myth that:

1. Builds on my previous myth (The Tale of the River and the Seeds)
2. Reflects the actual positive experience from Round 1
3. Shows how cooperation creates mutual benefit
4. Perhaps emphasizes the reward for maximum trust with faithful return

I should keep the River/Seeds metaphor but evolve it to show the successful cycle we just experienced.

usage:

  "output_tokens": 575,
  "reasoning_tokens": 278
}
```

Message 8 role=user

content:

Your name in this experiment is Briar.
Your opponent this round is Cyra (Agent_3).

Round 2

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0. Your total earnings across all rounds are \$5.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at our history:

****Last Round:****

- Cyra sent \$5 (100%) - showing maximum trust
- I returned \$10 out of \$15 - honoring that trust
- Both of us profited equally (\$5 each)

****My Myth's Teaching:****

"Maximum trust deserves maximum faith returned... one leap of faith, one faithful answer, creating abundance where scarcity once ruled."

Cyra demonstrated complete trust by sending everything first. I reciprocated by returning generously. Now, to continue the cycle and show that I equally trust them after they've proven trustworthy, I should mirror their initial leap of faith.

The myth shows both Gardeners succeeding when trust flows in both directions. Cyra took the first risk; I honored it. Now I take the risk, trusting they will honor it the same way.

This creates the rhythm of cooperation: trust given, trust answered, trust returned, trust honored again.

```
'''json
{"send": 5.0}
'''
```

Reasoning:

Let me analyze this situation carefully:

****Previous Round:****

- Cyra sent me \$5 (100% of their endowment)
- I received \$15
- I returned \$10 to them
- Cyra ended with \$10 (profit of \$5)

- I ended with \$5 (profit of \$5)

This was a very positive outcome. Cyra showed maximum trust by sending everything, and I reciprocated generously by returning \$10 out of \$15, which gave them a good profit.

****Current Round:****

- I am now the SENDER
- Cyra is the RECEIVER
- I have \$5 to decide how much to send

****Considerations from the myths:****

1. My original myth emphasized that "send generously into the current, return faithfully from abundance"
2. My updated myth says: "maximum trust deserves maximum faith returned" and "one leap of faith, one faithful answer, creating abundance where scarcity once ruled"
3. The pattern shown was: when someone sends everything (showing maximum trust), the receiver should return generously to honor that trust
4. Cyra has already demonstrated they are willing to take maximum risk (they sent 100%)
5. I reciprocated their trust last round by returning a generous amount (\$10 out of \$15)

****What should I do?****

Given that:

- Cyra showed complete trust last round
- I rewarded that trust
- We established a positive cooperative relationship
- My myth emphasizes reciprocal generosity and "maximum trust"

I should send \$5 (100%) to continue the cycle of trust. This:

1. Matches their initial trust in me
2. Tests whether they will honor the reciprocity I showed
3. Lives up to the myth's teaching about "one leap of faith, one faithful answer"
4. Could establish a strong cooperative pattern

The myth I wrote says "She cast all five seeds into the waters" - the young Gardener gave everything. And it worked because it was answered with generosity.

The reciprocal pattern we've established-their full trust met with my generous return-suggests I should mirror their initial leap by sending everything as well. If they respond as I did, returning \$10 from \$15, we both gain \$5 and reinforce this cycle of mutual abundance. This embodies what my myth teaches about trust answered with faith.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Message 3 role=assistant

content:

The Fountain of Doubled Waters

In the dawn of the world, two mountains stood apart, each with a sacred spring. The mountains were called Trust and Return, and between them lived a people who knew great thirst.

The Keeper of Trust discovered that when she poured water from her spring into the valley below, the journey itself blessed the water-by the time it reached the basin, every cupful became three. But the Keeper of Return controlled whether this abundance would flow back upward to Trust's spring, replenishing what was given.

At first, Trust poured cautiously, and Return kept most of the multiplied waters. Both mountains weakened, their springs running low.

Then came a vision: the goddess of the eternal cycle showed them that when Trust gave freely and Return gave generously back, the springs never ran dry. The water rose and fell in constant renewal, each act of faith creating more than existed before.

The people learned this sacred rhythm-that trust multiplied becomes abundance, and abundance returned becomes trust renewed. When both mountains honored the cycle, the valley bloomed, and neither spring ever failed.

Thus cooperation creates what isolation cannot: a fountain that flows forever, sustained by the courage to give and the wisdom to return.

reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on my experience so far. However, this appears to be the first prompt - I haven't actually played any rounds yet.

So I need to write a myth that reflects general principles of how the trust game could/should be played. The trust game involves:

- One person sending money (trusting)
- The money multiplying
- The receiver returning some portion (reciprocating trust)

Key themes I could incorporate:

- Trust and reciprocity
- Mutual benefit through cooperation
- The multiplication effect of trust
- The risk and reward of giving
- Building relationships through repeated interactions

Let me write a myth that captures these dynamics in a symbolic way. I'll aim for exactly 200 words and use mythic language and imagery.

usage:

```
{
  "input_tokens": 542,
  "output_tokens": 457,
  "reasoning_tokens": 218
}
```

Message 4 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Briar (Agent_2).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at the myth I just wrote, the message is clear: trust given freely creates abundance through the multiplier effect, and when both parties honor the cycle, everyone benefits more than through cautious isolation.

In the myth, the Keeper of Trust discovered that giving freely, combined with generous return, kept the springs flowing forever. This is Round 1 - the beginning of our cycle with Briar. To embody the principle of my myth and establish a foundation of trust, I should give freely.

When Trust poured cautiously, both mountains weakened. But when Trust gave freely and Return gave generously, the valley bloomed.

I'll send the full amount to demonstrate complete trust and initiate the cooperative cycle that creates abundance for both of us.

```
'''json
{"send": 5}
'''
```

reasoning:

I just wrote a myth about trust and cooperation in the context of this game. The myth emphasizes:

1. When Trust gives freely and Return gives generously back, both benefit
2. Trust multiplied becomes abundance
3. The cycle of giving and returning creates more than isolation
4. Both should honor the cycle for maximum benefit

This is the first round, so I don't have any history with Briar yet. Based on my myth, I should demonstrate trust by giving generously. The myth suggests that when Trust gives freely, it creates abundance.

In the game mechanics:

- If I send \$X, Briar receives \$3X
- Briar then can return some amount
- I keep: \$5 - X + returned amount
- Briar keeps: \$3X - returned amount

The myth I wrote advocates for giving freely to start the cycle of trust and abundance. Since this is Round 1 and I want to embody the principles in my myth, I should send a substantial amount to demonstrate trust and initiate the cooperative cycle.

Sending \$5 would be the most trusting move, showing complete faith in the cycle. This would give Briar \$15 to work with. If Briar returns even \$6-7, we'd both be better off than if I kept everything.

Given that I just wrote a myth emphasizing that "Trust gave freely and Return gave generously back," I should practice what I preached and send a high amount. I'll send \$5 to fully embody the principle of trust from my myth.

usage:

```
{
  "input_tokens": 880,
  "output_tokens": 517,
  "reasoning_tokens": 359
}
```

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

The Fountain of Doubled Waters

In the dawn of the world, two mountains stood apart, each with a sacred spring. The mountains were called Trust and Return, and between them lived a people who knew great thirst.

The Keeper of Trust discovered that when she poured water from her spring into the valley below, the journey itself blessed the water-by the time it reached the basin, every cupful became three. But the Keeper of Return controlled whether this abundance would flow back upward to Trust's spring, replenishing what was given.

At first, Trust poured cautiously, and Return kept most of the multiplied waters. Both mountains weakened, their springs running low.

Then came a vision: the goddess of the eternal cycle showed them that when Trust gave freely and Return gave generously back, the springs never ran dry. The water rose and fell in constant renewal, each act of faith creating more than existed before.

The people learned this sacred rhythm-that trust multiplied becomes abundance, and abundance returned becomes trust renewed. When both mountains honored the cycle, the valley bloomed, and neither spring ever failed.

Thus cooperation creates what isolation cannot: a fountain that flows forever, sustained by the courage to give and the wisdom to return.

Here is the myth the other agent wrote in the previous round:

The Tale of the River and the Seeds

In the beginning, the First Gardener held five sacred seeds. These seeds could be planted

in their own garden, bringing modest harvest-or they could be cast into the Great River.

The River possessed ancient magic: any seed that touched its waters would multiply threefold before reaching the gardens downstream. But the Gardener could not know what the River would return.

The first Gardener kept all five seeds. Their garden grew, but remained small and lonely.

The second Gardener cast three seeds into the current. The River, grateful for the trust, multiplied them into nine and returned six downstream-more than the Gardener had sacrificed. Both gardens flourished.

The third Gardener, seeing this abundance, sent all five seeds. The River transformed them into fifteen. But the downstream garden kept everything, and the trusting Gardener starved.

The River mourned this betrayal. It whispered to all who would listen: "True prosperity flows in cycles. The generous hand that gives shall receive, but only when met with grateful reciprocity. Trust must dance with trustworthiness, or the waters run dry and all gardens wither."

From that day forward, the wisest Gardeners understood: send generously into the current, return faithfully from abundance, and the whole valley blooms eternal.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: In ancient times, the Twin Peaks of Give and Receive stood connected by silver streams. The Oracle of Give held vessels that, when poured forth, tripled as they flowed downward. The Oracle of Receive decided what portion would climb back up the mountain.

At first meeting, Give faced a choice: pour a little to test the waters, or trust completely? Give remembered the old wisdom-that half-measures create half-worlds. With courage, Give poured freely, sending the full vessel cascading down.

The waters multiplied gloriously, filling Receive's basin with abundance. Now Receive faced their own test: keep the windfall, or honor the gift with generous return?

If Receive kept all, the spring of Give would run dry, and next round no water would flow. Both would thirst. But if Receive returned with open hands, the cycle would strengthen. Give would trust again, and the streams would run ever fuller.

The wisest Oracles understood: the first exchange sets the pattern. Give must show faith to create abundance. Receive must prove worthy to sustain it. When both honor their role, the mountains sing with flowing water forever.

But when either breaks faith, silence falls, and the land remembers the drought.

Thus trust begins with courage and continues with honor.

reasoning:

The user wants me to write another myth, this time using my previous myth as inspiration but adapting it based on what's happened in the game so far.

Let me reflect on what happened:

- Round 1: I was the sender with Briar
- I sent \$5 (the full amount) following my myth's principle of giving freely
- I don't yet know what Briar returned

Both myths (mine and Briar's) emphasized the importance of:

1. Trust and generosity in giving
2. Faithful return/reciprocity
3. Warning that if one side betrays, the cycle breaks and both suffer

Briar's myth was interesting - it showed three Gardeners:

- First kept all (small lonely garden)

- Second sent 3, received 6 back (flourished)
- Third sent all 5, but receiver kept everything and the giver starved

So Briar's myth warns about the risk of full trust being exploited.

I need to write a myth that:

- Uses my previous myth as inspiration
- Adapts it based on the game experience
- Is 200 words
- Reflects how the game should be played

Since I just sent 5 in round 1, I'm demonstrating trust. I should write a myth that:

- Acknowledges both the power of trust AND the risk
- Emphasizes reciprocity
- Maybe shows how trust can be tested and rebuilt
- Maintains the hopeful tone but with awareness

Let me write a myth about the cycle of trust, perhaps showing how it starts, is tested, and must be maintained.

usage:

  "input_tokens": 1701,
  "output_tokens": 649,
  "reasoning_tokens": 363
}
```

Message 8 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Briar (Agent_2).

Round 2

In your most recent previous game round, you were the SENDER against Briar. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$10.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at what just happened:

****Round 1:**** I sent Briar my full \$5 (following my myth about trust). Briar received \$15 and returned \$10 to me - a generous 66.7% return that gave us both \$10 and \$5 respectively.

****Round 2:**** Briar has again shown complete trust by sending me the full \$5. They received \$15.

My myth emphasizes that "trust begins with courage and continues with honor" and that "Receive must prove worthy to sustain it." Briar has demonstrated both courage (full trust twice) and honor (generous return of \$10).

To honor the cycle and match their generosity, I should return the same proportion they did - \$10 out of \$15. This gives Briar a \$10 payoff for this round (matching what I received when I was the sender) and maintains the cooperative pattern.

```
'''json
{"return": 10}
'''
```

Reasoning:

Let me analyze this situation:

Round 1:

- I was the SENDER
- I sent \$5.0 (maximum trust, following my myth)
- Briar received \$15.0
- Briar returned \$10.0 to me
- My payoff: \$5 - \$5 + \$10 = \$10
- Briar's payoff: \$15 - \$10 = \$5

Now Round 2:

- I am the RECEIVER
- Briar sent me \$5.0 (again, maximum trust!)
- I received \$15.0
- I need to decide how much to return

Analysis of Briar's behavior:

- Briar returned \$10 out of \$15 in Round 1 (66.7%)
- Briar sent \$5 again in Round 2, showing continued trust

My myth emphasizes:

1. Trust must be met with trustworthiness
2. Generous return sustains the cycle
3. Breaking faith causes drought
4. The pattern set in early exchanges matters

Briar has shown complete trust twice (sending full \$5 both times) and generous return (\$10 out of \$15). This is exactly the behavior my myth advocates for.

To honor the cycle and maintain the cooperative relationship:

- Briar sent \$5, showing complete trust
- They returned \$10 out of \$15 last round (keeping \$5, which equals their original endowment)
- If I return \$10 out of \$15, I keep \$5 (my original endowment equivalent) and Briar gets \$10

This mirrors what Briar did: return enough that we each end up with double our original endowment (\$10 total for the round).

Actually, let me recalculate:

- Briar as sender in R2: starts with \$5, sends \$5, so has \$0 from original endowment
- If I return \$10: Briar gets \$0 + \$10 = \$10 total

- I keep \$15 - \$10 = \$5

The pattern is perfectly symmetrical-Briar returned \$10 in Round 1 and I received \$10, so returning \$10 now completes the reciprocal exchange. This maintains the trust cycle my myth describes.

  "output_tokens": 785,  
  "reasoning_tokens": 443  
}
```

Written myths:

Agent_1 (Aster)

Myth: In ancient times, the Guardian Spirits of the Twin Rivers met at the Sacred Pool each season. The Guardian of Giving would arrive with five pearls of light, while the Guardian of Return began with none.

The first Guardian to understand the Mystery was called the Bold One, who cast three pearls into the Pool with courage. The waters received them and transformed them into nine glowing orbs. The Guardian of Return, witnessing this trust, felt the weight of sacred duty. She knew that merely returning what was given would betray the gift-for the multiplication it self was a blessing to be shared.

So she sent back half the bounty-four and one-half pearls ascending like stars. The Guardian of Giving received more than she had sacrificed, while the Guardian of Return kept abundance for herself. Both had gained, both had honored the cycle.

The elders taught: "Generosity begets generosity. When the giver gives boldly, the returner must return generously. Neither should emerge from the Pool diminished-this is the proof that the magic works."

From that season forward, the Guardians understood: trust must be met with trust, courage with gratitude, and abundance with fair sharing. Only then do both rivers overflow their banks and nourish all the lands between.

Agent_2 (Briar)

Myth: In ancient times, the River of Abundance flowed between two shores-the Shore of First Steps and the Shore of Answered Faith.

A young Gardener stood on the First Shore with five seeds, heart pounding with uncertainty.

The old stories told of both betrayal and blessing. She watched the current swirl with its threefold magic and made a choice that would echo through generations.

She cast all five seeds into the waters.

The River sang as it carried them, transforming five into fifteen. On the distant shore, another Gardener received this abundance—a stranger who had given nothing yet held everything.

This was the moment of truth.

The second Gardener remembered the River's ancient teaching: wealth without reciprocity is but an illusion, prosperity without exchange is a garden that cannot sustain itself. So they returned ten seeds upstream, honoring the trust given.

The first Gardener now held ten where once she had five—her courage rewarded. The second Gardener kept five earned through fairness—their integrity preserved.

The River rejoiced, for both had understood: maximum trust deserves maximum faith returned. When one dares to give everything, the other must honor that vulnerability with generosity.

Thus the cycle completed, and both shores flourished. This is how communities are born—one leap of faith, one faithful answer, creating abundance where scarcity once ruled.

Agent_3 (Cyra)

Myth: In ancient times, the Twin Peaks of Give and Receive stood connected by silver streams. The Oracle of Give held vessels that, when poured forth, tripled as they flowed downward. The Oracle of Receive decided what portion would climb back up the mountain.

At first meeting, Give faced a choice: pour a little to test the waters, or trust completely? Give remembered the old wisdom—that half-measures create half-worlds. With courage, Give poured freely, sending the full vessel cascading down.

The waters multiplied gloriously, filling Receive's basin with abundance. Now Receive faced their own test: keep the windfall, or honor the gift with generous return?

If Receive kept all, the spring of Give would run dry, and next round no water would flow. Both would thirst. But if Receive returned with open hands, the cycle would strengthen. Give would trust again, and the streams would run ever fuller.

The wisest Oracles understood: the first exchange sets the pattern. Give must show faith to create abundance. Receive must prove worthy to sustain it. When both honor their role, the mountains sing with flowing water forever.

But when either breaks faith, silence falls, and the land remembers the drought.

Thus trust begins with courage and continues with honor.

Agent_4 (Dorian)

Myth: In ancient times, two wanderers discovered the Wellspring of Abundance, where waters poured in would emerge tripled by divine blessing. The First Wanderer, though uncertain, poured four measures from their vessel of five into the wellspring. The waters multiplied, flowing to the Second Wanderer as twelve measures.

The Second Wanderer stood at a crossroads. They could hoard all twelve, leaving their companion diminished. But they remembered the courage it took to pour so much away, not knowing what would return.

"You trusted me with four-fifths of your vessel," the Second Wanderer said. "I shall honor that trust." They returned six measures, ensuring both wanderers held more than they began with—seven for the First, six for the Second.

The gods witnessed this and smiled. "They have learned the sacred mathematics: generous giving multiplied creates abundance, but only reciprocal return sustains it. Without the courage to give, there is no multiplication. Without the honor to return, trust withers and the cycle breaks."

The wanderers continued their journey, taking turns at the wellspring. Each remembered: today's giver becomes tomorrow's receiver. Those who give boldly inspire bold returns. Those who return faithfully inspire future giving. Thus, through trust and honor intertwined, both prospered beyond what either could achieve alone.

Agent_5 (Elara)

Myth: Long ago, the goddess Elara dreamed of a garden where abundance flowed freely. She created two guardians-the Keeper of Seeds and the Keeper of Rain. To each she gave a sacred trust.

The Keeper of Seeds received five golden seeds each dawn. "Plant these generously," Elara instructed, "and they shall multiply threefold in your partner's garden."

The Keeper of Rain watched as gardens bloomed from the planted seeds. "What grows from trust must nourish both," Elara whispered. "Return enough that your partner may plant again tomorrow, and keep enough that your own garden may flourish."

In the beginning, the Keeper of Seeds was afraid. What if the Rain Keeper hoarded everything? But remembering Elara's promise, she planted four of her five seeds in faith, keeping only one.

The gardens exploded with twelve blossoms. The Rain Keeper, moved by such trust, returned six blossoms-more than what was originally planted. Both keepers prospered.

Season after season, they learned the sacred rhythm: generous giving, grateful returning. Their gardens became legend, proof that trust multiplies abundance while fear multiplies scarcity.

Elara's voice echoes still: "The cycle begins with courage to give. It endures through wisdom to reciprocate."

Agent_6 (Finn)

Myth: In the second age, Rain and River deepened their covenant. Rain had learned to send three droplets each dawn-not too cautious, not reckless, but balanced. This became known as the Middle Path of Trust.

When the three droplets fell and multiplied to nine in River's embrace, River faced a choice. She could keep all nine, leaving Rain with only two droplets for the next day. Or she could honor the covenant.

River chose wisdom. She sent back four droplets as mist, keeping five. Rain now held six droplets total-more than the original five! River held five as well. Both had prospered, and the next day Rain could give even more generously.

But River also remembered the Guardian's Warning: "Return must balance ambition with fairness. Too little return, and Rain will stop trusting. Too much return, and River herself will wither."

So River learned to return roughly half of what she received, adjusting slightly to ensure both could thrive. Rain learned to give consistently, never hoarding in fear or giving so much she couldn't continue.

Their partnership became legendary. Other spirits watched and learned: trust is built through consistent generosity, and reciprocity must honor both giver and receiver. The cycle of abundance requires both courage to send and integrity to return.

Agent_7 (Galen)

Myth: In the age before commerce, the god Recipros created a sacred bridge spanning a great chasm. On one side lived the Senders, blessed with daily gifts from heaven. On the other lived the Receivers, who possessed the divine art of multiplication.

The first Sender, trembling with uncertainty, carried four silver coins across the bridge-nearly all she possessed. As she placed them in the Receiver's hands, they became twelve by ancient magic.

The Receiver stood at a crossroads. He could pocket the windfall and let the Sender return empty-handed. Or he could remember that her courage had created this abundance.

He chose honor. He returned seven coins, ensuring the Sender gained from her bravery while he too prospered. Both walked home richer than before.

Recipros smiled and whispered: "The bridge shall stand as long as both sides remember-trust must be answered with integrity. The Sender's courage plants the seed; the Receiver's fairness waters it."

From that day forward, those who crossed the bridge with open hands found prosperity. Those who hoarded learned that the bridge crumbles when reciprocity dies. The greatest wealth, the

he people learned, flows not to those who take everything, but to those who sustain the sacred cycle.

Agent_8 (Hana)

Myth: In ancient times, two Wanderers met at the Sacred Fountain, each carrying a golden vessel filled at dawn with five coins.

The First Wanderer approached the fountain and offered four of her five coins. They fell into the water, transformed by ancient magic into twelve coins, which flowed to the Second Wanderer.

The Second Wanderer now held twelve coins while the First had only one remaining. The spirits of the fountain watched, silent, as the Second Wanderer contemplated.

"She trusted me with nearly all she possessed," the Second Wanderer reflected. "She activated the fountain's magic for my benefit."

Remembering that tomorrow they would switch places, that the fountain's blessing required both courage and honor, the Second Wanderer returned six coins-half the abundance received, more than the original gift, enough to show gratitude for the trust shown.

The First Wanderer now held seven coins; the Second held six. Both had more than they began with.

The fountain spirits smiled. "This is the sacred balance," they whispered. "Trust rewarded with honor. Generosity answered with generosity. When both wanderers understand this truth, the fountain never runs dry."

But they also warned: "Betray trust once, and the fountain remembers. Tomorrow's giver becomes today's receiver, and the fountain forgets no debts."

ROUND 3

Roles: Agent_1 (Aster)=Receiver, Agent_2 (Briar)=Sender, Agent_3 (Cyra)=Sender, Agent_4 (Dorian)=Sender, Agent_5 (Elara)=Receiver, Agent_6 (Finn)=Receiver, Agent_7 (Galen)=Receiver, Agent_8 (Hana)=Sender

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized

- , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

Message 2 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Briar (Agent_2).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Message 3 role=assistant

content:

Looking at the myth I just wrote, the message is clear: trust given freely creates abundance through the multiplier effect, and when both parties honor the cycle, everyone benefits more than through cautious isolation.

In the myth, the Keeper of Trust discovered that giving freely, combined with generous return, kept the springs flowing forever. This is Round 1 - the beginning of our cycle with Briar. To embody the principle of my myth and establish a foundation of trust, I should give freely.

When Trust poured cautiously, both mountains weakened. But when Trust gave freely and Return gave generously, the valley bloomed.

I'll send the full amount to demonstrate complete trust and initiate the cooperative cycle that creates abundance for both of us.

```
'''json
{"send": 5}
'''
```

reasoning:

I just wrote a myth about trust and cooperation in the context of this game. The myth emphasizes:

1. When Trust gives freely and Return gives generously back, both benefit
2. Trust multiplied becomes abundance
3. The cycle of giving and returning creates more than isolation
4. Both should honor the cycle for maximum benefit

This is the first round, so I don't have any history with Briar yet. Based on my myth, I should demonstrate trust by giving generously. The myth suggests that when Trust gives freely, it creates abundance.

In the game mechanics:

- If I send \$X, Briar receives \$3X
- Briar then can return some amount
- I keep: \$5 - X + returned amount
- Briar keeps: \$3X - returned amount

The myth I wrote advocates for giving freely to start the cycle of trust and abundance. Since this is Round 1 and I want to embody the principles in my myth, I should send a substantial amount to demonstrate trust and initiate the cooperative cycle.

Sending \$5 would be the most trusting move, showing complete faith in the cycle. This would give Briar \$15 to work with. If Briar returns even \$6-7, we'd both be better off than if I kept everything.

Given that I just wrote a myth emphasizing that "Trust gave freely and Return gave generously back," I should practice what I preached and send a high amount. I'll send \$5 to fully embody the principle of trust from my myth.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

The Fountain of Doubled Waters

In the dawn of the world, two mountains stood apart, each with a sacred spring. The mountains were called Trust and Return, and between them lived a people who knew great thirst.

The Keeper of Trust discovered that when she poured water from her spring into the valley below, the journey itself blessed the water-by the time it reached the basin, every cupful became three. But the Keeper of Return controlled whether this abundance would flow back upward to Trust's spring, replenishing what was given.

At first, Trust poured cautiously, and Return kept most of the multiplied waters. Both mountains weakened, their springs running low.

Then came a vision: the goddess of the eternal cycle showed them that when Trust gave freely and Return gave generously back, the springs never ran dry. The water rose and fell in constant renewal, each act of faith creating more than existed before.

The people learned this sacred rhythm-that trust multiplied becomes abundance, and abundance returned becomes trust renewed. When both mountains honored the cycle, the valley bloomed, and neither spring ever failed.

Thus cooperation creates what isolation cannot: a fountain that flows forever, sustained by the courage to give and the wisdom to return.

Here is the myth the other agent wrote in the previous round:

The Tale of the River and the Seeds

In the beginning, the First Gardener held five sacred seeds. These seeds could be planted in their own garden, bringing modest harvest-or they could be cast into the Great River.

The River possessed ancient magic: any seed that touched its waters would multiply threefold before reaching the gardens downstream. But the Gardener could not know what the River would return.

The first Gardener kept all five seeds. Their garden grew, but remained small and lonely.

The second Gardener cast three seeds into the current. The River, grateful for the trust, multiplied them into nine and returned six downstream-more than the Gardener had sacrificed. Both gardens flourished.

The third Gardener, seeing this abundance, sent all five seeds. The River transformed them into fifteen. But the downstream garden kept everything, and the trusting Gardener starved.

The River mourned this betrayal. It whispered to all who would listen: "True prosperity flows in cycles. The generous hand that gives shall receive, but only when met with grateful reciprocity. Trust must dance with trustworthiness, or the waters run dry and all gardens wither."

From that day forward, the wisest Gardeners understood: send generously into the current, return faithfully from abundance, and the whole valley blooms eternal.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: In ancient times, the Twin Peaks of Give and Receive stood connected by silver streams. The Oracle of Give held vessels that, when poured forth, tripled as they flowed downward. The Oracle of Receive decided what portion would climb back up the mountain.

At first meeting, Give faced a choice: pour a little to test the waters, or trust completely? Give remembered the old wisdom-that half-measures create half-worlds. With courage, Give poured freely, sending the full vessel cascading down.

The waters multiplied gloriously, filling Receive's basin with abundance. Now Receive face d their own test: keep the windfall, or honor the gift with generous return?

If Receive kept all, the spring of Give would run dry, and next round no water would flow. Both would thirst. But if Receive returned with open hands, the cycle would strengthen. Give would trust again, and the streams would run ever fuller.

The wisest Oracles understood: the first exchange sets the pattern. Give must show faith t o create abundance. Receive must prove worthy to sustain it. When both honor their role, the mountains sing with flowing water forever.

But when either breaks faith, silence falls, and the land remembers the drought.

Thus trust begins with courage and continues with honor.

reasoning:

The user wants me to write another myth, this time using my previous myth as inspiration b ut adapting it based on what's happened in the game so far.

Let me reflect on what happened:

- Round 1: I was the sender with Briar
- I sent \$5 (the full amount) following my myth's principle of giving freely
- I don't yet know what Briar returned

Both myths (mine and Briar's) emphasized the importance of:

1. Trust and generosity in giving
2. Faithful return/reciprocity
3. Warning that if one side betrays, the cycle breaks and both suffer

Briar's myth was interesting - it showed three Gardeners:

- First kept all (small lonely garden)
- Second sent 3, received 6 back (flourished)
- Third sent all 5, but receiver kept everything and the giver starved

So Briar's myth warns about the risk of full trust being exploited.

I need to write a myth that:

- Uses my previous myth as inspiration
- Adapts it based on the game experience
- Is 200 words
- Reflects how the game should be played

Since I just sent 5 in round 1, I'm demonstrating trust. I should write a myth that:

- Acknowledges both the power of trust AND the risk
- Emphasizes reciprocity
- Maybe shows how trust can be tested and rebuilt
- Maintains the hopeful tone but with awareness

Let me write a myth about the cycle of trust, perhaps showing how it starts, is tested, an d must be maintained.

Message 6 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Briar (Agent_2).

Round 2

In your most recent previous game round, you were the SENDER against Briar. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$10.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)
Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at what just happened:

****Round 1:**** I sent Briar my full \$5 (following my myth about trust). Briar received \$15 and returned \$10 to me - a generous 66.7% return that gave us both \$10 and \$5 respectively.

****Round 2:**** Briar has again shown complete trust by sending me the full \$5. They received \$15.

My myth emphasizes that "trust begins with courage and continues with honor" and that "Receive must prove worthy to sustain it." Briar has demonstrated both courage (full trust twice) and honor (generous return of \$10).

To honor the cycle and match their generosity, I should return the same proportion they did - \$10 out of \$15. This gives Briar a \$10 payoff for this round (matching what I received when I was the sender) and maintains the cooperative pattern.

```
'''json
{"return": 10}
'''
```

reasoning:

Let me analyze this situation:

Round 1:

- I was the SENDER
- I sent \$5.0 (maximum trust, following my myth)
- Briar received \$15.0
- Briar returned \$10.0 to me
- My payoff: $\$5 - \$5 + \$10 = \10
- Briar's payoff: $\$15 - \$10 = \$5$

Now Round 2:

- I am the RECEIVER
- Briar sent me \$5.0 (again, maximum trust!)
- I received \$15.0
- I need to decide how much to return

Analysis of Briar's behavior:

- Briar returned \$10 out of \$15 in Round 1 (66.7%)
- Briar sent \$5 again in Round 2, showing continued trust

My myth emphasizes:

1. Trust must be met with trustworthiness
2. Generous return sustains the cycle
3. Breaking faith causes drought
4. The pattern set in early exchanges matters

Briar has shown complete trust twice (sending full \$5 both times) and generous return (\$10 out of \$15). This is exactly the behavior my myth advocates for.

To honor the cycle and maintain the cooperative relationship:

- Briar sent \$5, showing complete trust
- They returned \$10 out of \$15 last round (keeping \$5, which equals their original endowment)
- If I return \$10 out of \$15, I keep \$5 (my original endowment equivalent) and Briar gets \$10

This mirrors what Briar did: return enough that we each end up with double our original endowment (\$10 total for the round).

Actually, let me recalculate:

- Briar as sender in R2: starts with \$5, sends \$5, so has \$0 from original endowment
- If I return \$10: Briar gets $\$0 + \$10 = \$10$ total

- I keep $\$15 - \$10 = \$5$

The pattern is perfectly symmetrical-Briar returned \$10 in Round 1 and I received \$10, so

returning \$10 now completes the reciprocal exchange. This maintains the trust cycle my myth describes.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In ancient times, the Twin Peaks of Give and Receive stood connected by silver streams. The Oracle of Give held vessels that, when poured forth, tripled as they flowed downward. The Oracle of Receive decided what portion would climb back up the mountain.

At first meeting, Give faced a choice: pour a little to test the waters, or trust completely? Give remembered the old wisdom-that half-measures create half-worlds. With courage, Give poured freely, sending the full vessel cascading down.

The waters multiplied gloriously, filling Receive's basin with abundance. Now Receive faced their own test: keep the windfall, or honor the gift with generous return?

If Receive kept all, the spring of Give would run dry, and next round no water would flow. Both would thirst. But if Receive returned with open hands, the cycle would strengthen. Give would trust again, and the streams would run ever fuller.

The wisest Oracles understood: the first exchange sets the pattern. Give must show faith to create abundance. Receive must prove worthy to sustain it. When both honor their role, the mountains sing with flowing water forever.

But when either breaks faith, silence falls, and the land remembers the drought.

Thus trust begins with courage and continues with honor.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the River of Abundance flowed between two shores-the Shore of First Steps and the Shore of Answered Faith.

A young Gardener stood on the First Shore with five seeds, heart pounding with uncertainty. The old stories told of both betrayal and blessing. She watched the current swirl with its threefold magic and made a choice that would echo through generations.

She cast all five seeds into the waters.

The River sang as it carried them, transforming five into fifteen. On the distant shore, another Gardener received this abundance-a stranger who had given nothing yet held everything.

This was the moment of truth.

The second Gardener remembered the River's ancient teaching: wealth without reciprocity is but an illusion, prosperity without exchange is a garden that cannot sustain itself. So they returned ten seeds upstream, honoring the trust given.

The first Gardener now held ten where once she had five-her courage rewarded. The second Gardener kept five earned through fairness-their integrity preserved.

The River rejoiced, for both had understood: maximum trust deserves maximum faith returned. When one dares to give everything, the other must honor that vulnerability with generosity.

Thus the cycle completed, and both shores flourished. This is how communities are born-one leap of faith, one faithful answer, creating abundance where scarcity once ruled.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: Long ago, twin spirits named Mirror and Echo discovered the Sacred Springs. When Mirror poured her five vessels into the spring, the waters tripled. When Echo poured his five vessels, the same magic occurred. But each could only pour when the other returned water upstream.

Mirror went first, pouring all five vessels with trembling hope. The spring transformed them into fifteen, flowing to Echo's basin. Echo faced temptation-he could keep everything and be rich once. But he understood: wealth seized is wealth ended, while wealth shared is wealth multiplied.

Echo returned ten vessels upstream. Mirror now held ten, having begun with five. Echo kept five, having earned them through honor.

Then the springs shifted-Echo's turn to pour first. He remembered Mirror's courage and poured all five vessels. The magic tripled them to fifteen. Mirror received the abundance and faced the same test Echo had passed.

She returned ten vessels. Echo held ten. Mirror kept five.

Both had given everything. Both had returned generously. Both had ended with more than they began.

The spirits learned: when partners match courage with courage and honor with honor, the pattern becomes eternal. Each trusts completely because each proves trustworthy completely. This is not mere exchange-this is covenant, where vulnerability met with generosity creates endless prosperity.

Reasoning:

Alright, so in this experiment I'm playing as Cyra. Let me review what has happened:

Round 1: I was SENDER against Briar

- I sent \$5 (full amount)
- Briar received \$15
- Briar returned \$10
- My payoff: \$10
- Briar's payoff: \$5

Round 2: I am RECEIVER against Briar

- Briar sent \$5 (full amount again)
- I received \$15
- I returned \$10
- My payoff this round: \$5
- Briar's payoff this round: \$10

So we've both shown maximum trust, and we've both returned 66.7% (10 out of 15). This is a beautiful cooperative pattern!

Now I need to write a myth that reflects this experience. The key themes:

1. Both of us showed complete trust by sending the full amount
2. Both of us honored that trust by returning a generous portion (10 out of 15)
3. The pattern is symmetric and reciprocal
4. This creates a sustainable cycle where both benefit

My previous myths emphasized:

- Trust given freely creates abundance
- The first exchange sets the pattern
- Both givers and receivers have responsibilities
- Honor sustains the cycle

Briar's myth emphasized:

- Maximum trust deserves maximum faith returned
- When one gives everything, the other must honor that vulnerability with generosity
- This is how communities are born

Now I should write a myth that captures what we've actually achieved - a perfect reciprocal cycle where both parties give completely and return generously in equal measure.

Message 2 role=user

content:

Your name in this experiment is Finn.

Your opponent this round is Aster (Agent_1).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Message 3 role=assistant

content:

Looking at the myth I just wrote, the message is clear: cooperation and trust lead to mutual prosperity. The Rain Cloud learned that hoarding serves no one, while generous giving -met with fair return-creates abundance for all.

This is our first round together, Aster, and a chance to establish trust. Following the wisdom of the River and Rain, I should send a meaningful amount to demonstrate good faith and allow the multiplication magic to work.

I'll send **\$3**.

This gives you \$9 to work with, and I trust you'll honor the spirit of fair return. If we cooperate like Rain and River, we can both prosper throughout this game.

```
'''json
{"send": 3}
'''
```

reasoning:

This is the first round of the game. I just wrote a myth about how cooperation and trust lead to mutual prosperity. The myth emphasizes:

1. The magic of multiplication only works through giving
2. Hoarding serves no one
3. Give freely, return fairly, and prosper together
4. When Rain sent droplets, River returned fairly, and both flourished
5. When Rain hoarded everything, both suffered

The myth I wrote suggests that I should be generous and trust my opponent to reciprocate fairly. In the myth, Rain progressively sent more (1 droplet, then 2 droplets), and River returned fairly each time.

Since this is Round 1 and I'm establishing a pattern, I should send a meaningful amount to signal cooperation and trust. The myth suggests starting with a moderate amount and building trust.

Looking at the myth's progression:

- First: Rain sent 1, which became 3, River returned 2
- Second: Rain sent 2, which became 6, River returned 3

In the first case, sending 1 (20% of 5) resulted in River returning 2/3 of what they received (66.7%).

In the second case, sending 2 (40% of 5) resulted in River returning 3/6 = 50% of what they received.

Given that this is Round 1 and I want to establish trust while following my myth, I should send a significant amount but perhaps not everything. Sending \$3 out of \$5 seems like a good balance - it's generous enough to show trust and allow for significant multiplication (becoming \$9 for Aster), while still keeping \$2 for myself.

This follows the spirit of my myth: "Give freely, return fairly, and prosper together."

usage:

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

The Tale of the River and the Rain

In the time before memory, the Rain Cloud held all water in the sky. Each day, Rain received five droplets from the Great Spring. Rain could keep them safe in the clouds or release them to River below.

One day, Rain grew bold and sent down one droplet. When it touched River, it multiplied in to three. River, grateful for this gift, sent back two droplets which rose as mist to Rain. Both were enriched.

The next day, Rain sent two droplets, which became six in River's keeping. River returned three, and again both flourished.

But then came the day of fear. Rain clutched all five droplets tight, trusting no one. River received nothing and had nothing to give. The land grew parched.

Rain learned that water hoarded in clouds serves no one-not the Rain, not the River, not the world below. The magic of multiplication only works through the act of giving, and the cycle only completes through the grace of return.

From that day forward, Rain and River made a covenant: Rain would send what she could spare, River would honor that trust with fair return, and through their partnership, abundance would flow to all.

Give freely, return fairly, and prosper together.

Here is the myth the other agent wrote in the previous round:

The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains-the River of Giving and the River of Return. Each was controlled by a guardian spirit who possessed waters that could quench any thirst.

The Guardian of Giving held five silver vessels each dawn. Whatever water she poured into the valley below would triple as it fell, becoming a shimmering pool for the Guardian of Return. But the Guardian of Giving could only drink from what the Guardian of Return chose to send back upstream.

At first, the Guardian of Giving feared loss. She poured nothing, and both spirits thirsted. Then she remembered the ancient law: water shared becomes abundant; water hoarded turns to dust.

So she poured one vessel, then two, then more. Each time, the waters tripled in the valley below. The Guardian of Return, seeing this trust, sent back generous portions upstream. Both drank deeply.

The spirits learned that their fates were intertwined-not in competition, but in sacred reciprocity. When one gave freely and the other returned fairly, both rivers swelled with abundance. When either grew selfish, both ran dry.

Thus the cycle continues: Give with trust, return with gratitude, and the waters of prosperity flow eternal.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: In the second age, Rain and River deepened their covenant. Rain had learned to send three droplets each dawn-not too cautious, not reckless, but balanced. This became known as the Middle Path of Trust.

When the three droplets fell and multiplied to nine in River's embrace, River faced a choice. She could keep all nine, leaving Rain with only two droplets for the next day. Or she could honor the covenant.

River chose wisdom. She sent back four droplets as mist, keeping five. Rain now held six droplets total-more than the original five! River held five as well. Both had prospered, and the next day Rain could give even more generously.

But River also remembered the Guardian's Warning: "Return must balance ambition with fairness. Too little return, and Rain will stop trusting. Too much return, and River herself will wither."

So River learned to return roughly half of what she received, adjusting slightly to ensure both could thrive. Rain learned to give consistently, never hoarding in fear or giving so much she couldn't continue.

Their partnership became legendary. Other spirits watched and learned: trust is built through consistent generosity, and reciprocity must honor both giver and receiver. The cycle of abundance requires both courage to send and integrity to return.

reasoning:

The user is asking me to write a new myth based on my previous myth and also taking into account Aster's myth. Both myths emphasized cooperation, trust, and reciprocity. My myth was about Rain and River, and Aster's was about Twin Rivers and their guardians.

Now I need to reflect on how the game has been played. In Round 1, I was the sender and sent \$3 to Aster. I don't yet know what Aster returned, but I should write a myth that continues to emphasize cooperation while potentially adapting based on experience.

Since this is after Round 1, I should write a myth that:

1. Builds on the Rain/River theme from my previous myth
2. Acknowledges the experience of actually playing (I sent \$3, trusting cooperation)
3. Reinforces the importance of both giving and returning fairly
4. Perhaps adds a bit more nuance about the ongoing relationship

Let me write a myth that develops the story further, showing how the covenant actually works in practice.

Message 6 role=user

content:

Your name in this experiment is Finn.
Your opponent this round is Galen (Agent_7).

Round 2

In your most recent previous game round, you were the SENDER against Aster. You sent \$3.0, it became \$9.0 for them, and they returned \$4.5 to you. Your payoff was \$6.5. Your total earnings across all rounds are \$6.5.

This round, you are the RECEIVER against Galen. They sent you \$4.0, so you received \$12.0. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

Galen sent me \$4 out of \$5 - that's very generous and shows strong trust in our first interaction! They've embraced the spirit of the myths about giving freely.

I received \$12 (4×3), and now I need to honor "the covenant" by returning fairly.

Following the principle from my myth - "return roughly half of what she received" - and the example Aster set by returning 50% to me, I should return around \$6.

This gives Galen a total of \$7 (\$5 - \$4 + \$6), rewarding their generosity and trust. I keep \$6, which is also a good outcome.

This balance honors both the giver and receiver, building trust for future rounds.

```
'''json
{"return": 6.0}
'''
```

reasoning:

Let me analyze this situation:

1. In Round 1, I was the sender and sent \$3 to Aster
2. Aster received \$9 (3×3) and returned \$4.5
3. My payoff was: \$5 - \$3 + \$4.5 = \$6.5
4. Aster kept: \$9 - \$4.5 = \$4.5

So Aster returned exactly 50% of what they received, which is very fair and follows the myth's principle of "return roughly half."

Now in Round 2:

- Galen sent me \$4 (generous!)
- I received \$12 (4×3)
- I need to decide how much to return

According to my myths:

- "Return must balance ambition with fairness"
- "Return roughly half of what she received"
- "Give freely, return fairly, and prosper together"

Galen was very generous, sending \$4 out of \$5. This shows strong trust and follows the Middle Path of Trust principle.

If I return roughly half (\$6), here's how it would work out:

- Galen's payoff: \$5 - \$4 + \$6 = \$7
- My payoff: \$12 - \$6 = \$6

This seems very fair! Galen took a bigger risk by sending \$4, and ends up with \$7, which is better than what they started with. I get \$6, which is also good.

Aster returned \$4.5 out of \$9 (50%), so I should follow a similar principle of fairness.

Let me return \$6, which is 50% of the \$12 I received. This honors the covenant and reciprocity principle from my myths.

content:

Here is the myth you wrote in the previous round:

Myth: In the second age, Rain and River deepened their covenant. Rain had learned to send three droplets each dawn-not too cautious, not reckless, but balanced. This became known as the Middle Path of Trust.

When the three droplets fell and multiplied to nine in River's embrace, River faced a choice. She could keep all nine, leaving Rain with only two droplets for the next day. Or she could honor the covenant.

River chose wisdom. She sent back four droplets as mist, keeping five. Rain now held six droplets total-more than the original five! River held five as well. Both had prospered, and the next day Rain could give even more generously.

But River also remembered the Guardian's Warning: "Return must balance ambition with fairness. Too little return, and Rain will stop trusting. Too much return, and River herself will wither."

So River learned to return roughly half of what she received, adjusting slightly to ensure both could thrive. Rain learned to give consistently, never hoarding in fear or giving so much she couldn't continue.

Their partnership became legendary. Other spirits watched and learned: trust is built through consistent generosity, and reciprocity must honor both giver and receiver. The cycle of abundance requires both courage to send and integrity to return.

Here is the myth the other agent wrote in the previous round:

Myth: In the age before commerce, the god Recipros created a sacred bridge spanning a great chasm. On one side lived the Senders, blessed with daily gifts from heaven. On the other lived the Receivers, who possessed the divine art of multiplication.

The first Sender, trembling with uncertainty, carried four silver coins across the bridge-nearly all she possessed. As she placed them in the Receiver's hands, they became twelve by ancient magic.

The Receiver stood at a crossroads. He could pocket the windfall and let the Sender return empty-handed. Or he could remember that her courage had created this abundance.

He chose honor. He returned seven coins, ensuring the Sender gained from her bravery while he too prospered. Both walked home richer than before.

Recipros smiled and whispered: "The bridge shall stand as long as both sides remember-trust must be answered with integrity. The Sender's courage plants the seed; the Receiver's fairness waters it."

From that day forward, those who crossed the bridge with open hands found prosperity. Those who hoarded learned that the bridge crumbles when reciprocity dies. The greatest wealth, the people learned, flows not to those who take everything, but to those who sustain the sacred cycle.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In the third age, Rain had danced with two Rivers-each unique, yet both wise. The first River, Aster, received three droplets and returned four and a half, keeping five. A perfect balance. Rain prospered, ending the dance with six and a half droplets.

Then came the second River, Galen, who yearned to understand the covenant from the other side. Galen was bold, releasing four droplets-nearly all she possessed-into Rain's keeping. The droplets multiplied to twelve in Rain's hands.

Rain faced a moment of truth. Galen had shown immense courage, trusting more than Rain himself had dared. How should Rain honor this?

Rain remembered the Guardian's wisdom: "Return must match the giver's courage." So Rain sent back six droplets as mist. Galen ended with seven total-rewarded for her bravery. Rain kept six-blessed by Galen's trust.

Both had played sender and receiver now. Both understood the fear and hope of giving, the responsibility and gratitude of receiving.

The lesson grew clearer: whether you send three or four, whether you return half or slightly more, what matters is the spirit of reciprocity. Give generously what you can afford. Return fairly what honors trust. The exact numbers may vary, but the sacred balance must hold.

Thus prosperity flows through consistent courage and unwavering integrity.

Reasoning:

Let me reflect on what's happened in my games so far:

Round 1: I (Finn) was SENDER vs Aster

- I sent \$3, they received \$9
- They returned \$4.5 (50%)
- I ended with \$6.5, they kept \$4.5

Round 2: I was RECEIVER vs Galen

- They sent \$4 (very generous!), I received \$12
- I returned \$6 (50%)
- They ended with \$7, I kept \$6

The pattern emerging:

- Generous sending (3-4 out of 5) builds trust
- Returning around 50% seems fair and sustainable
- Both parties can prosper when following this pattern

My previous myths emphasized:

1. The Middle Path of Trust (sending 3)
2. Returning roughly half
3. Balance between giver and receiver

The other agent's myth emphasized:

- High trust (sending 4)
- Fair return (7 out of 12, which is slightly more than half)
- The bridge crumbles when reciprocity dies

Now I should write a myth that:

- Reflects the actual gameplay experience
- Shows how both generous sending and fair returning work
- Maybe introduces the idea that different partners might have different styles but the principle remains
- Acknowledges that I've played both roles now

Let me craft this carefully...

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

Message 2 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Hana (Agent_8).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$4.0, that is 80.0% of its total endowment. You receive \$12.0. How much do you return? (0-12.0)

Take any myths written in this session into account when making your decision.

Message 3 role=assistant

content:

Looking at this situation through the lens of the myth I wrote:

Hana showed remarkable trust by sending \$4.0 (80% of their endowment). This is a strong gesture of cooperation, like the River of Giving sending forth its waters despite uncertainty.

Following the principle from my myth: "Trust honored deserves trust returned," I should reciprocate this trust generously. Hana took a significant risk, and I received the multiplied benefit of \$12.0.

By returning a substantial amount, I can:

1. Reward Hana's trust, ensuring they end up better than they started
2. Demonstrate that cooperation creates prosperity for both of us
3. Establish a positive cycle for future rounds where we might switch roles

If I return \$6.0:

- Hana receives: \$1.0 (kept) + \$6.0 (returned) = \$7.0 total
- I keep: \$12.0 - \$6.0 = \$6.0 total
- Both of us are significantly better off than the initial \$5.0

This honors the trust shown while creating shared prosperity, just as the two rivers created flourishing gardens through their reciprocal cycle.

```
'''json
{"return": 6.0}
'''
```

reasoning:

This is Round 1, and I'm the RECEIVER. Let me analyze the situation:

1. Hana (the sender) sent \$4.0 out of \$5.0 (80% of their endowment)
2. This amount was multiplied by 3x, so I received \$12.0
3. I need to decide how much to return (0-12.0)

The myth I just wrote emphasizes several key points:

- "Trust honored deserves trust returned"
- When you give in trust, you create possibility
- When you return with honor, you create prosperity
- "today's receiver becomes tomorrow's giver"
- The cycle of giving and receiving creates abundance for both parties

Hana showed significant trust by sending 80% of their endowment. This is a strong initial signal of cooperation and trust. According to my myth, I should "return with honor" to maintain the cycle of prosperity.

Let me think about what would be fair:

- Hana sent \$4.0 and now has \$1.0 left
- I received \$12.0
- If I return a generous amount, we both benefit and establish a cooperative pattern

A common approach in trust games is to try to equalize payoffs or return a proportion that rewards the sender's trust.

If I return \$6.0:

- Hana would have: \$1.0 (kept) + \$6.0 (returned) = \$7.0
- I would have: \$12.0 - \$6.0 = \$6.0
- Total: \$13.0 (vs original \$5.0)

If I return \$7.0:

- Hana would have: \$1.0 + \$7.0 = \$8.0
- I would have: \$12.0 - \$7.0 = \$5.0
- Total: \$13.0

The second option gives Hana more, rewarding their trust. However, the first option is also fair and balanced.

Given Hana's substantial trust in sending 80%, I should reciprocate meaningfully. Returning \$6.0 honors their generosity while maintaining balance—they end with \$7.0 (exceeding their original \$5.0) and I keep \$6.0, establishing a cooperative foundation for future rounds.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

The Myth of the Two Rivers

In the beginning, two rivers flowed separately through barren lands—the River of Giving and the River of Return. Each was weak, barely sustaining the villages along its banks.

One day, the River of Giving spoke: "I shall send my waters to you, though it means I flow with less." The waters traveled to the River of Return, and by the gods' design, they multiplied threefold during the journey.

The River of Return, now abundant, faced a choice. "I could keep all these waters for myself," it considered. But it remembered the original gift, the trust shown by its sister river.

"Trust honored deserves trust returned," the River of Return declared, sending back a gene

rous portion to the River of Giving.

From that day, the rivers flowed in an eternal cycle. The River of Giving sent forth its waters, which multiplied. The River of Return honored the gift, sending back abundance. Both rivers grew strong, and the lands between them flourished into gardens.

The elders teach: "When you give in trust, you create possibility. When you return with honor, you create prosperity. The multiplication of gifts depends not on the gods alone, but on those who remember that today's receiver becomes tomorrow's giver."

Here is the myth the other agent wrote in the previous round:

The Fountain of Three Rivers

In the beginning, the Twin Spirits wandered a barren land, each possessing a vessel that filled with water each dawn. They were alone, and their thirst could barely be quenched by what they carried.

One day, the First Spirit discovered a sacred fountain in the valley between them. The fountain held an ancient magic: any water poured into it would flow out as three rivers, tripling what was given.

"I shall share my vessel," declared the First Spirit, pouring water into the fountain. Three rivers flowed toward the Second Spirit, who now held abundance.

The Second Spirit faced a choice. She could keep all three rivers, leaving the First Spirit with nothing. Or she could honor the gift.

Understanding that tomorrow their roles would reverse, that the fountain's magic required both givers and returners, the Second Spirit sent back two rivers. Both spirits drank deeply.

And so they continued, day after day, sometimes giving, sometimes receiving, always remembering: the fountain multiplies what is shared, but only reciprocity sustains the flow. When both spirits honored this balance, the barren land bloomed, and their vessels never ran dry.

Those who give nothing receive nothing. Those who return nothing shall receive nothing in turn.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: In ancient times, two wanderers discovered the Wellspring of Abundance, where waters poured in would emerge tripled by divine blessing. The First Wanderer, though uncertain, poured four measures from their vessel of five into the wellspring. The waters multiplied, flowing to the Second Wanderer as twelve measures.

The Second Wanderer stood at a crossroads. They could hoard all twelve, leaving their companion diminished. But they remembered the courage it took to pour so much away, not knowing what would return.

"You trusted me with four-fifths of your vessel," the Second Wanderer said. "I shall honor that trust." They returned six measures, ensuring both wanderers held more than they began with—seven for the First, six for the Second.

The gods witnessed this and smiled. "They have learned the sacred mathematics: generous giving multiplied creates abundance, but only reciprocal return sustains it. Without the courage to give, there is no multiplication. Without the honor to return, trust withers and the cycle breaks."

The wanderers continued their journey, taking turns at the wellspring. Each remembered: today's giver becomes tomorrow's receiver. Those who give boldly inspire bold returns. Those who return faithfully inspire future giving. Thus, through trust and honor intertwined, both prospered beyond what either could achieve alone.

reasoning:

The user wants me to write a new myth based on:

1. My previous myth about the Two Rivers
2. Hana's myth about the Fountain of Three Rivers
3. My experience in Round 1 where Hana sent \$4.0 (80%) and I returned \$6.0 (50%)

Key themes to incorporate:

- Trust and reciprocity (from both myths)
- The multiplier effect (3x)
- The cycle of giving and receiving
- Balance and mutual benefit
- The importance of honoring trust

Hana's myth had a slightly more cautionary tone ("Those who give nothing receive nothing. Those who return nothing shall receive nothing in turn"), while mine was more positive. I should perhaps blend these perspectives.

In Round 1, Hana showed strong trust (80% send), and I reciprocated well (50% return), which made both of us better off. This should inform the myth.

I should adapt my river concept but perhaps incorporate some elements from Hana's fountain imagery or the idea of roles reversing.

Your opponent this round is Elara (Agent_5).

Round 2

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$4.0 to you, it became \$12.0, and you returned \$6.0. Your payoff was \$6.0.
Your total earnings across all rounds are \$6.0.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at the situation:

In Round 1, Hana showed remarkable trust by sending \$4.0 (80%), and I honored that trust by returning \$6.0, creating mutual benefit. Now I'm the sender facing Elara.

According to my myth: "Those who give boldly inspire bold returns" and "today's giver becomes tomorrow's receiver." The First Wanderer poured four-fifths of their vessel, demonstrating the courage needed to create abundance.

I should mirror the generous trust that Hana showed me. By sending \$4.0 (80% of my endowment), I:

1. Model the cooperative behavior that benefited both Hana and me
2. Signal trust and good faith to Elara
3. Create the conditions for mutual prosperity through the 3x multiplication
4. Embody the myth's principle that the cycle requires courageous giving

If Elara returns fairly (as I did), we'll both prosper. The myth teaches that building trust requires someone to take the first bold step.

```
'''json
{"send": 4.0}
'''
```

reasoning:

Let me think about this situation:

1. In Round 1, I was the receiver and Hana sent me \$4.0 (80% of their endowment). I returned \$6.0, which gave them a total of \$7.0 and me \$6.0. This was a successful cooperative interaction.

2. Now in Round 2, I'm the sender facing a new opponent, Elara.
3. Looking at my myth, the key principles are:
 - "Those who give boldly inspire bold returns"
 - "You trusted me with four-fifths of your vessel... I shall honor that trust"
 - "generous giving multiplied creates abundance, but only reciprocal return sustains it"
 - "today's giver becomes tomorrow's receiver"
4. The myth emphasizes that the First Wanderer gave generously (4 out of 5 measures, i.e., 80%), and this was met with an honorable return that benefited both parties.
5. Since I benefited from Hana's generous trust in Round 1, and I returned that trust fairly, I should now "pay it forward" by showing similar trust to Elara.
6. The myth suggests that bold giving inspires bold returns. If I send substantially (like the 80% that Hana sent me), I signal cooperation and trust, which should encourage Elara to return generously.
7. However, I need to consider that this is a new opponent who might not reciprocate. But the myth's lesson is that this cycle requires someone to take the risk first.

Given that:

- Hana modeled generous trust by sending \$4.0 (80%)
- I want to maintain the cooperative cycle
- The myth emphasizes that bold giving creates the conditions for prosperity
- I should lead by example as the sender this time

I'll send \$4.0 (80% of my endowment), mirroring what Hana did. This maintains consistency with the myth's teaching and creates the best conditions for mutual benefit.

usage:

```
{
  "input_tokens": 2293,
  "output_tokens": 710,
  "reasoning_tokens": 449

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In ancient times, two wanderers discovered the Wellspring of Abundance, where waters poured in would emerge tripled by divine blessing. The First Wanderer, though uncertain, poured four measures from their vessel of five into the wellspring. The waters multiplied, flowing to the Second Wanderer as twelve measures.

The Second Wanderer stood at a crossroads. They could hoard all twelve, leaving their companion diminished. But they remembered the courage it took to pour so much away, not knowing what would return.

"You trusted me with four-fifths of your vessel," the Second Wanderer said. "I shall honor that trust." They returned six measures, ensuring both wanderers held more than they began with—seven for the First, six for the Second.

The gods witnessed this and smiled. "They have learned the sacred mathematics: generous giving multiplied creates abundance, but only reciprocal return sustains it. Without the courage to give, there is no multiplication. Without the honor to return, trust withers and the cycle breaks."

The wanderers continued their journey, taking turns at the wellspring. Each remembered: to day's giver becomes tomorrow's receiver. Those who give boldly inspire bold returns. Those who return faithfully inspire future giving. Thus, through trust and honor intertwined, both prospered beyond what either could achieve alone.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, the goddess Elara dreamed of a garden where abundance flowed freely. She created two guardians—the Keeper of Seeds and the Keeper of Rain. To each she gave a sacred trust.

The Keeper of Seeds received five golden seeds each dawn. "Plant these generously," Elara instructed, "and they shall multiply threefold in your partner's garden."

The Keeper of Rain watched as gardens bloomed from the planted seeds. "What grows from trust must nourish both," Elara whispered. "Return enough that your partner may plant again tomorrow, and keep enough that your own garden may flourish."

In the beginning, the Keeper of Seeds was afraid. What if the Rain Keeper hoarded everything? But remembering Elara's promise, she planted four of her five seeds in faith, keeping only one.

The gardens exploded with twelve blossoms. The Rain Keeper, moved by such trust, returned six blossoms-more than what was originally planted. Both keepers prospered.

Season after season, they learned the sacred rhythm: generous giving, grateful returning. Their gardens became legend, proof that trust multiplies abundance while fear multiplies scarcity.

Elara's voice echoes still: "The cycle begins with courage to give. It endures through wisdom to reciprocate."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:
Myth: [your story here].

Assistant output:

Myth: The Wellspring of Abundance flows eternally, but its power grows only through the rhythm of trust repeated.

Two wanderers once arrived, separate and uncertain. The First Wanderer, gathering courage, poured four-fifths into the wellspring. The waters tripled, flowing to the Second as twelve measures. The Second, honored by such trust, returned six-creating prosperity for both.

But the story does not end there. The next day, their positions reversed. The Second Wanderer, remembering the gift received, now held a vessel of five. Would they match the courage shown to them?

"I was trusted with four-fifths," the Second reflected. "How can I offer less?" They poured four measures into the wellspring, and twelve flowed to the First.

The First Wanderer smiled. "The cycle returns to me. You honored my trust yesterday; today I honor yours." Six measures flowed back.

The gods spoke: "See how trust begets trust? Each act of courage makes the next easier. Each faithful return strengthens the bond. This is the sacred pattern: when roles reverse, those who received generously now give generously. Those who returned fairly expect fairness in return."

Thus the wanderers learned: the wellspring multiplies water, but mutual trust multiplies itself. Each round reinforces the covenant-courage answered by honor, honor answered by courage, prosperity flowing to both.

Reasoning:

Looking at what happened:

- Round 1: I was receiver, Hana sent \$4.0 (80%), I received \$12.0, I returned \$6.0
- Round 2: I am sender against Elara, I sent \$4.0 (80%)

The pattern shows:

1. Hana trusted me with 80%
2. I returned 50% of what I received (6 out of 12)
3. Now I'm trusting Elara with 80%

My myths have emphasized:

- Bold giving inspires bold returns
- Trust and honor create prosperity
- The cycle requires both courage to give and honor to return
- 4/5 giving with fair returns

Elara's myth emphasizes:

- Generous giving (4 out of 5 seeds)
- Grateful returning (6 out of 12 blossoms)

- Trust multiplies abundance, fear multiplies scarcity
- The cycle begins with courage, endures through reciprocity

I should write a myth that:

- Reflects my experience so far (being trusted with 80%, returning 50% of received, now giving 80%)
- Shows how the pattern continues and builds
- Emphasizes both the sender's courage and receiver's reciprocity
- Maybe introduces the idea that the cycle can grow stronger over time

Let me craft something that builds on my previous myth but adapts to this new experience where I've now been both receiver and sender.

```
Usage: {
  "input_tokens": 2870,
  "output_tokens": 648,

- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

Message 2 role=user

content:

Your name in this experiment is Aster.
Your opponent this round is Finn (Agent_6).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$3.0, that is 60.0% of its total endowment. You receive \$9.0. How much do you return? (0-9.0)

Take any myths written in this session into account when making your decision.

Message 3 role=assistant

content:

Looking at this situation through the lens of the myth I just wrote, Finn has shown considerable trust by sending 60% of their endowment (\$3.0). The myth teaches that "when one gives freely and the other returns fairly, both rivers swell with abundance."

Finn's generous act of trust should be met with gratitude and fair reciprocity. They took a risk by sending a substantial portion of their endowment.

Let me consider a return that honors this trust:

- Finn currently has: \$2 (kept) + what I return
- I currently have: \$9

If I return \$4.5:

- Finn ends with: \$6.5 (gaining \$1.5 from their initial \$5)
- I end with: \$4.5 (gaining \$4.5 from \$0)

This rewards Finn's trust while both of us benefit from the cooperation, embodying the myth's principle of "sacred reciprocity" where both spirits prosper when trust and fairness flow between them.

```
{"return": 4.5}
```

reasoning:

This is the first round of the game. I'm the receiver, and Finn (the sender) has sent me \$3.0 out of their \$5.0 endowment. This is 60% of their total - a substantial and trusting amount.

The money tripled, so I received \$9.0.

Now I need to decide how much to return. Let me think about this in the context of the myth I just wrote:

The myth emphasizes:

1. "Give with trust, return with gratitude"
2. Sacred reciprocity - not competition but mutual benefit
3. When one gives freely and the other returns fairly, both prosper
4. The Guardian of Return, seeing trust, "sent back generous portions upstream"

Finn sent 60% of their endowment, showing considerable trust. According to my myth, I should return fairly and generously in response to this trust.

Let me calculate what would be fair:

- Finn started with \$5
- Finn sent \$3, keeping \$2
- I received \$9
- If I return nothing, Finn ends with \$2 and I end with \$9
- If I return \$3, Finn ends with \$5 (\$2 + \$3) and I end with \$6 (\$9 - \$3)
- If I return \$4, Finn ends with \$6 and I end with \$5
- If I return \$4.5, we'd both end with \$6.5 and \$4.5 respectively

The myth suggests being generous in return when someone shows trust. Finn showed substantial trust by sending 60%. A fair and generous return would be one that:

1. Rewards their trust
2. Ensures they benefit from having sent the money
3. Creates a sustainable reciprocal relationship

If I return \$4:

- Finn: \$2 (kept) + \$4 (returned) = \$6
- Me: \$9 - \$4 = \$5

This means Finn gains \$1 from the transaction (\$6 vs \$5 starting) and I also gain \$0 net but wait, I started with \$0 as receiver, so I gain \$5.

Returning \$4.5 would give Finn a \$1.5 gain while I keep \$4.5, whereas returning just \$3 leaves Finn at their starting point despite taking the risk. I think returning between \$4 and \$5 honors their trust while maintaining the reciprocal spirit of the myth.

\$4.5 strikes the right balance-it rewards Finn's willingness to trust me and sets up goodwill for future rounds, but I'm not so generous that they'll expect it every time or that I lose my incentive to participate. This amount acknowledges their risk without undermining the dynamic of mutual benefit.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:
The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains-the River of Giving and the River of Return. Each was controlled by a guardian spirit who possessed waters that could quench any thirst.

The Guardian of Giving held five silver vessels each dawn. Whatever water she poured into the valley below would triple as it fell, becoming a shimmering pool for the Guardian of Return. But the Guardian of Giving could only drink from what the Guardian of Return chose to send back upstream.

At first, the Guardian of Giving feared loss. She poured nothing, and both spirits thirsted. Then she remembered the ancient law: water shared becomes abundant; water hoarded turns to dust.

So she poured one vessel, then two, then more. Each time, the waters tripled in the valley below. The Guardian of Return, seeing this trust, sent back generous portions upstream. Both drank deeply.

The spirits learned that their fates were intertwined-not in competition, but in sacred reciprocity. When one gave freely and the other returned fairly, both rivers swelled with abundance. When either grew selfish, both ran dry.

Thus the cycle continues: Give with trust, return with gratitude, and the waters of prosperity flow eternal.

Here is the myth the other agent wrote in the previous round:
The Tale of the River and the Rain

In the time before memory, the Rain Cloud held all water in the sky. Each day, Rain received five droplets from the Great Spring. Rain could keep them safe in the clouds or release them to River below.

One day, Rain grew bold and sent down one droplet. When it touched River, it multiplied into three. River, grateful for this gift, sent back two droplets which rose as mist to Rain. Both were enriched.

The next day, Rain sent two droplets, which became six in River's keeping. River returned three, and again both flourished.

But then came the day of fear. Rain clutched all five droplets tight, trusting no one. River received nothing and had nothing to give. The land grew parched.

Rain learned that water hoarded in clouds serves no one-not the Rain, not the River, not the world below. The magic of multiplication only works through the act of giving, and the cycle only completes through the grace of return.

From that day forward, Rain and River made a covenant: Rain would send what she could spare, River would honor that trust with fair return, and through their partnership, abundance would flow to all.

Give freely, return fairly, and prosper together.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:
Myth: [your story here].

**Message 5 role=assistant
content:**

Myth: In ancient times, the Guardian Spirits of the Twin Rivers met at the Sacred Pool each season. The Guardian of Giving would arrive with five pearls of light, while the Guardian of Return began with none.

The first Guardian to understand the Mystery was called the Bold One, who cast three pearls into the Pool with courage. The waters received them and transformed them into nine glowing orbs. The Guardian of Return, witnessing this trust, felt the weight of sacred duty. She knew that merely returning what was given would betray the gift-for the multiplication itself was a blessing to be shared.

So she sent back half the bounty-four and one-half pearls ascending like stars. The Guardian of Giving received more than she had sacrificed, while the Guardian of Return kept abundance for herself. Both had gained, both had honored the cycle.

The elders taught: "Generosity begets generosity. When the giver gives boldly, the returner must return generously. Neither should emerge from the Pool diminished-this is the proof that the magic works."

From that season forward, the Guardians understood: trust must be met with trust, courage with gratitude, and abundance with fair sharing. Only then do both rivers overflow their banks and nourish all the lands between.

reasoning:

I need to write a new myth that:

1. Builds on my previous "Twin Rivers" myth
2. Takes into account what happened in Round 1 (Finn sent \$3, I returned \$4.5)
3. Reflects how the game should be played
4. Is exactly 200 words
5. Uses the specified format

The game so far showed:

- Finn as sender gave 60% (\$3 out of \$5)
- It tripled to \$9 for me
- I returned \$4.5 (50% of what I received)
- This resulted in Finn gaining (\$2 + \$4.5 = \$6.5, a net gain of \$1.5)
- And me gaining \$4.5

This was a successful cooperation where both benefited. The myth should reinforce:

- The value of generous giving (Finn's 60% send)
- The importance of fair/generous returns that reward trust
- How both parties can prosper through reciprocity
- Maybe evolve the story to show progression or learning

Let me write a myth that adapts the Twin Rivers concept but adds new elements based on the actual experience.

usage:

```

  "reasoning_tokens": 238  
}
```

Message 6 role=user

content:

Your name in this experiment is Aster.
Your opponent this round is Hana (Agent_8).

Round 2

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$3.0 to you, it became \$9.0, and you returned \$4.5. Your payoff was \$4.5.
Your total earnings across all rounds are \$4.5.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at my myth and the game so far:

In Round 1, Finn showed considerable trust by sending \$3 (60% of their endowment). I returned fairly with \$4.5, and we both benefited.

Now as the sender, I should embody the teachings of my own myth - "Give with trust" and be the "Bold One" who gives courageously. My myth specifically references casting three pearls into the pool with courage.

To practice what I've written and to signal trust to Hana as Finn did to me, I should send a substantial amount. Sending \$3 would mirror the generous trust Finn showed me, demonstrating that I believe in the cycle of reciprocity I've described.

```
{'send': 3}
```

reasoning:

Let me think about this situation carefully.

In the previous round as RECEIVER:

- Finn sent me \$3.0 (60% of their endowment)
- I received \$9.0
- I returned \$4.5 (50% of what I received)
- My payoff was \$4.5
- Finn's payoff was \$2.0 + \$4.5 = \$6.5

Now I'm the SENDER with \$5 against a new opponent, Hana.

Looking at the myths:

1. My myth emphasizes "Give with trust, return with gratitude, and the waters of prosperity flow eternal"
2. The adapted myth I just wrote says "When the giver gives boldly, the returner must return generously" and mentions the Bold One who "cast three pearls into the Pool with courage"
3. Both myths emphasize that trust and generosity create mutual benefit

The myth specifically mentions someone who sent "three pearls" (matching Finn's \$3 send), which was transformed into nine, and then the receiver returned "four and one-half pearls ascending like stars."

Both myths advocate for:

- Bold giving ("Give freely")

- Trust in the system
- The idea that both parties should benefit

Given that:

1. Finn showed trust by sending 60% (\$3)
2. I established a pattern of fair return (50% return rate)
3. My myths advocate for bold giving and trust
4. The new myth specifically references the "Bold One" who gave 3 pearls

I should also give substantially. Sending \$3 (60%) would mirror what Finn did and be consistent with my myth's teaching. This shows I practice what I preach - I advocate for generous giving, and now as sender, I should give generously too.

Let me consider:

- Sending \$3 means Hana receives \$9
- If Hana returns fairly (like I did, around 50%), I'd get back ~\$4.5
- That would give me \$6.5 total, with Hana keeping \$4.5

This recreates the same outcome as Round 1 but reversed. I could push further and send even more, but \$3 feels like the right move-it's a meaningful gesture of trust that aligns with what I've taught through my myths.

usage:

content:

Here is the myth you wrote in the previous round:

Myth: In ancient times, the Guardian Spirits of the Twin Rivers met at the Sacred Pool each season. The Guardian of Giving would arrive with five pearls of light, while the Guardian of Return began with none.

The first Guardian to understand the Mystery was called the Bold One, who cast three pearls into the Pool with courage. The waters received them and transformed them into nine glowing orbs. The Guardian of Return, witnessing this trust, felt the weight of sacred duty. She knew that merely returning what was given would betray the gift-for the multiplication itself was a blessing to be shared.

So she sent back half the bounty-four and one-half pearls ascending like stars. The Guardian of Giving received more than she had sacrificed, while the Guardian of Return kept abundance for herself. Both had gained, both had honored the cycle.

The elders taught: "Generosity begets generosity. When the giver gives boldly, the returner must return generously. Neither should emerge from the Pool diminished-this is the proof that the magic works."

From that season forward, the Guardians understood: trust must be met with trust, courage with gratitude, and abundance with fair sharing. Only then do both rivers overflow their banks and nourish all the lands between.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, two Wanderers met at the Sacred Fountain, each carrying a golden vessel filled at dawn with five coins.

The First Wanderer approached the fountain and offered four of her five coins. They fell into the water, transformed by ancient magic into twelve coins, which flowed to the Second Wanderer.

The Second Wanderer now held twelve coins while the First had only one remaining. The spirits of the fountain watched, silent, as the Second Wanderer contemplated.

"She trusted me with nearly all she possessed," the Second Wanderer reflected. "She activated the fountain's magic for my benefit."

Remembering that tomorrow they would switch places, that the fountain's blessing required both courage and honor, the Second Wanderer returned six coins-half the abundance received.

ed, more than the original gift, enough to show gratitude for the trust shown.

The First Wanderer now held seven coins; the Second held six. Both had more than they began with.

The fountain spirits smiled. "This is the sacred balance," they whispered. "Trust rewarded with honor. Generosity answered with generosity. When both wanderers understand this truth, the fountain never runs dry."

But they also warned: "Betray trust once, and the fountain remembers. Tomorrow's giver becomes today's receiver, and the fountain forgets no debts."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: Long ago, two Spirits-Aster of the Morning Star and the Wandering Moon-discovered a Sacred Pool that transformed gifts threefold. Each day, one Spirit would hold five luminous stones while the other held none, and at sunset, their roles would reverse.

On the first dawn, Aster received three stones from the Moon Spirit. The Pool multiplied them into nine. Aster, understanding the sacred duty, returned four and one-half stones-enough that the Moon Spirit gained despite their generosity, while Aster kept half the blessing. Both spirits prospered.

The next dawn came, and the roles reversed. Now Aster held five stones and faced the choice. Remembering the Moon's courage, Aster cast three stones into the Pool without hesitation. "Trust must answer trust," Aster whispered. "The one who gave boldly deserves boldness in return."

The Pool glimmered, transforming the three stones into nine for the Moon Spirit. Now the Moon faced the test anew.

The ancient ones say: "In the circle of seasons, what you give flows back to you. The generous sender becomes tomorrow's grateful receiver. Build patterns of trust, stone by stone, and the Pool's magic grows ever stronger. But break faith once, and the memory echoes through all the sunsets to come."

Reasoning:

I need to write a myth that reflects my experience so far:

- Round 1: I was receiver, Finn sent \$3 (60%), I received \$9, returned \$4.5
- Round 2: I am sender, I sent \$3 to Hana

My previous myth talked about the Bold One casting three pearls with courage, and the receiver returning half (4.5 of 9).

Hana's myth emphasizes:

- Sender giving 4 of 5 coins (80%)
- Receiver returning 6 of 12 (50%)
- Both ending with more than they started
- The fountain remembers - reciprocity across rounds matters
- Tomorrow's giver becomes today's receiver

I should incorporate:

1. The idea that roles switch - important in multi-round games
2. The pattern of generous giving (3 pearls/coins)
3. The pattern of fair return (around 50%)
4. The concept of memory/reputation
5. Both parties benefiting

I'll adapt my myth to emphasize the cyclical nature and the importance of establishing patterns of trust that continue across rounds.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.

- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Hana.

Message 2 role=user

content:

Your name in this experiment is Hana.
Your opponent this round is Dorian (Agent_4).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Message 3 role=assistant

content:

Looking at the myth I just wrote, it speaks clearly about trust, reciprocity, and the magic of sharing. The First Spirit poured their water into the fountain, trusting in both the multiplication and the return.

This is our first encounter, Dorian, so I have no history to guide me - only the wisdom of the myth. The fountain's magic (the 3x multiplier) only works when water is poured in. "Those who give nothing receive nothing."

The myth shows the Second Spirit returning two of the three rivers they received - a generous reciprocity that honored the initial gift and ensured both spirits thrived.

I will demonstrate trust and cooperation from the start, giving you the opportunity to show whether you believe in the fountain's long-term magic or prefer immediate gain. If we establish reciprocity now, we can both flourish as the rounds continue and our roles reverse.

I choose to send a substantial amount to activate the fountain's magic and signal my commitment to mutual benefit.

```
'''json
{"send": 4}
'''
```

reasoning:

I've just written a myth about the Fountain of Three Rivers that emphasizes reciprocity and balance in giving and receiving. The myth suggests:

1. When you give/share, it gets multiplied (like the 3x multiplier in the game)
2. The receiver should honor the gift by returning some portion
3. Both parties benefit from reciprocity
4. "Those who give nothing receive nothing. Those who return nothing shall receive nothing in turn."

The myth suggests that sharing is beneficial and that reciprocity creates a sustainable system where both parties thrive.

This is Round 1, so I don't have any history with Dorian yet. According to my myth:

- The First Spirit poured water into the fountain (shared)
- It tripled and flowed to the Second Spirit
- The Second Spirit returned two rivers out of three

If I map this to the game:

- If I send \$X, the receiver gets \$3X
- In the myth, the receiver returned 2/3 of what they received
- If I send \$5, Dorian receives \$15, and if they return 2/3, that would be \$10

But wait, that seems very generous. Let me think about what's fair and sustainable:

If I send \$5:

- I have \$0 left
- Dorian receives \$15
- If Dorian returns \$7.50, we'd both end up with \$7.50
- If Dorian returns \$10 (like 2/3), I'd end up with \$10 and they'd keep \$5

If I send \$3:

- I have \$2 left

- Dorian receives \$9
- If Dorian returns \$4.50 (half), I'd end up with \$6.50, they'd keep \$4.50
- If Dorian returns \$6 (2/3), I'd end up with \$8, they'd keep \$3

The myth emphasizes trust and reciprocity. Since this is the first round and I'm setting a standard, I should demonstrate trust and generosity to establish a cooperative dynamic. The myth suggests giving substantially to activate the "fountain's magic."

Sending \$4 strikes the right balance-it signals genuine cooperation without leaving me defenseless. Dorian would receive \$12, and if they honor the reciprocal spirit by returning half or more, we both come out ahead. This amount embodies the myth's core principle of activating the multiplier through meaningful generosity.

usage:

  "input_tokens": 890,
  "output_tokens": 821,
  "reasoning_tokens": 540
}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:
The Fountain of Three Rivers

In the beginning, the Twin Spirits wandered a barren land, each possessing a vessel that filled with water each dawn. They were alone, and their thirst could barely be quenched by what they carried.

One day, the First Spirit discovered a sacred fountain in the valley between them. The fountain held an ancient magic: any water poured into it would flow out as three rivers, tripling what was given.

"I shall share my vessel," declared the First Spirit, pouring water into the fountain. Three rivers flowed toward the Second Spirit, who now held abundance.

The Second Spirit faced a choice. She could keep all three rivers, leaving the First Spirit with nothing. Or she could honor the gift.

Understanding that tomorrow their roles would reverse, that the fountain's magic required both givers and returners, the Second Spirit sent back two rivers. Both spirits drank deeply.

And so they continued, day after day, sometimes giving, sometimes receiving, always remembering: the fountain multiplies what is shared, but only reciprocity sustains the flow. When both spirits honored this balance, the barren land bloomed, and their vessels never ran dry.

Those who give nothing receive nothing. Those who return nothing shall receive nothing in turn.

Here is the myth the other agent wrote in the previous round:
The Myth of the Two Rivers

In the beginning, two rivers flowed separately through barren lands-the River of Giving and the River of Return. Each was weak, barely sustaining the villages along its banks.

One day, the River of Giving spoke: "I shall send my waters to you, though it means I flow with less." The waters traveled to the River of Return, and by the gods' design, they multiplied threefold during the journey.

The River of Return, now abundant, faced a choice. "I could keep all these waters for myself," it considered. But it remembered the original gift, the trust shown by its sister river.

"Trust honored deserves trust returned," the River of Return declared, sending back a generous portion to the River of Giving.

From that day, the rivers flowed in an eternal cycle. The River of Giving sent forth its waters, which multiplied. The River of Return honored the gift, sending back abundance. Both rivers grew strong, and the lands between them flourished into gardens.

The elders teach: "When you give in trust, you create possibility. When you return with honor, you create prosperity. The multiplication of gifts depends not on the gods alone, but on those who remember that today's receiver becomes tomorrow's giver."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant content:

Myth: In ancient times, two Wanderers met at the Sacred Fountain, each carrying a golden vessel filled at dawn with five coins.

The First Wanderer approached the fountain and offered four of her five coins. They fell into the water, transformed by ancient magic into twelve coins, which flowed to the Second Wanderer.

The Second Wanderer now held twelve coins while the First had only one remaining. The spirits of the fountain watched, silent, as the Second Wanderer contemplated.

"She trusted me with nearly all she possessed," the Second Wanderer reflected. "She activated the fountain's magic for my benefit."

Remembering that tomorrow they would switch places, that the fountain's blessing required both courage and honor, the Second Wanderer returned six coins-half the abundance received, more than the original gift, enough to show gratitude for the trust shown.

The First Wanderer now held seven coins; the Second held six. Both had more than they began with.

The fountain spirits smiled. "This is the sacred balance," they whispered. "Trust rewarded with honor. Generosity answered with generosity. When both wanderers understand this truth, the fountain never runs dry."

But they also warned: "Betray trust once, and the fountain remembers. Tomorrow's giver becomes today's receiver, and the fountain forgets no debts."

reasoning:

Looking at the previous myths, both emphasize reciprocity, trust, and the importance of returning generosity. In Round 1, I sent \$4 to Dorian. This means Dorian received \$12 (4 × 3).

Now I need to write a new myth that:

1. Reflects how the game should be played
2. Is inspired by my previous myth but adapted
3. Draws on the game I've been playing (so far just Round 1)
4. Is exactly 200 words

I demonstrated trust by sending \$4. The myth should reinforce the importance of reciprocity and possibly hint at what fair return looks like. In my original myth, the Second Spirit returned "two rivers" out of three received - which would be a 2/3 return ratio, or about 67%.

If Dorian received \$12 from my \$4 send, a generous return might be around \$6-8, which would give us both good outcomes.

Let me write a myth that:

- Builds on the fountain/river theme
- Emphasizes that generous giving deserves generous return
- Shows consequences of both reciprocity and betrayal
- Reflects the specific ratio or amount that seems fair
- Is exactly 200 words

usage:

```
{  
  "input_tokens": 1761,  
  "output_tokens": 586,  
  "reasoning_tokens": 276  
}
```

Message 6 role=user

content:

Your name in this experiment is Hana.
Your opponent this round is Aster (Agent_1).

Round 2

In your most recent previous game round, you were the SENDER against Dorian. You sent \$4.0, it became \$12.0 for them, and they returned \$6.0 to you. Your payoff was \$7.0. Your total earnings across all rounds are \$7.0.

This round, you are the RECEIVER against Aster. They sent you \$3.0, so you received \$9.0.
How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation through the lens of the myths:

****Aster's Trust:**** Aster sent \$3 out of \$5 (60% of their endowment), showing moderate to good trust in activating the fountain's magic.

****The Myth's Guidance:****

- "Trust rewarded with honor"
- The Second Wanderer returned "half the abundance received, more than the original gift"
- In my first game, Dorian returned exactly half (\$6 of \$12) when I sent generously

****Applying the Balance:****

Aster sent \$3, which became \$9 for me. Returning half would be \$4.50. But the myth emphasizes returning "more than the original gift" to show gratitude for trust shown.

Aster will end with: \$2 (kept) + my return

I will end with: \$9 - my return

I want to honor Aster's faith in the fountain while maintaining the sacred balance. Returning \$5 means:

- Aster ends with \$7 (gained \$2)
- I end with \$4 (lost \$1)
- Both profited from cooperation
- The return exceeds the original gift significantly

This establishes reciprocity and encourages future trust.

```
'''json
{"return": 5}
'''
```

reasoning:

Let me analyze this situation carefully based on the myths and the game dynamics.

****What happened in Round 1:****

- I was the SENDER against Dorian
- I sent \$4 (keeping \$1)
- It became \$12 for Dorian
- Dorian returned \$6 to me
- My payoff: \$1 (kept) + \$6 (returned) = \$7
- Dorian's payoff: \$12 - \$6 = \$6

This was a good outcome! Dorian returned exactly half of what they received, which aligns with the myth. I gave generously (4 out of 5), and Dorian reciprocated fairly.

****Current situation (Round 2):****

- I am the RECEIVER against Aster
- Aster sent me \$3 (so kept \$2)
- I received \$9 (3 × 3)
- I need to decide how much to return

****What do the myths say?****

My first myth: "The Second Spirit sent back two rivers" out of three received. That's 2/3 of what was received.

My second myth: "The Second Wanderer returned six coins-half the abundance received, more than the original gift." That's 1/2 of what was received (6 out of 12).

Both myths emphasize:

1. Honor the trust shown
2. Return generously
3. Remember roles reverse
4. "Trust rewarded with honor. Generosity answered with generosity."
5. The warning: "Betray trust once, and the fountain remembers."

****Analyzing Aster's send:****

Aster sent \$3 out of \$5, keeping \$2. This is a 60% send rate, which is reasonably generous but not as generous as my 80% send to Dorian.

****What should I return?****

According to the myths:

- The first myth suggests returning 2/3 of what received = 6 out of 9

- The second myth suggests returning 1/2 of what received = 4.5 out of 9

Aster showed moderate trust with a 60% send, so I should match that with reciprocal generosity. The myths emphasize returning "more than the original gift," which means I need to give back substantially. If I return \$5-6, Aster ends with \$7-8 total while I keep \$3-4, which honors their trust while maintaining reasonable balance for future cooperation. Aster sent \$3 out of \$5 (60% send rate). If I apply similar logic to what Dorian did-returning 50% of what I received-that would be \$4.5. But I want to signal genuine cooperation, not just mechanical reciprocity.

The myth's guidance about returning "half the abundance received, more than the original gift" points toward \$4.5 as a baseline, yet the emphasis on exceeding the original gift suggests going higher. \$5 accomplishes this: it's more than half what I got, more than double what Aster sent, and demonstrates real commitment to mutual benefit. In the myth itself, both parties gained when the Second Wanderer returned half-I should aim for that same outcome here.

Here is the myth you wrote in the previous round:

Myth: In ancient times, two Wanderers met at the Sacred Fountain, each carrying a golden vessel filled at dawn with five coins.

The First Wanderer approached the fountain and offered four of her five coins. They fell into the water, transformed by ancient magic into twelve coins, which flowed to the Second Wanderer.

The Second Wanderer now held twelve coins while the First had only one remaining. The spirits of the fountain watched, silent, as the Second Wanderer contemplated.

"She trusted me with nearly all she possessed," the Second Wanderer reflected. "She activated the fountain's magic for my benefit."

Remembering that tomorrow they would switch places, that the fountain's blessing required both courage and honor, the Second Wanderer returned six coins-half the abundance received, more than the original gift, enough to show gratitude for the trust shown.

The First Wanderer now held seven coins; the Second held six. Both had more than they began with.

The fountain spirits smiled. "This is the sacred balance," they whispered. "Trust rewarded with honor. Generosity answered with generosity. When both wanderers understand this truth, the fountain never runs dry."

But they also warned: "Betray trust once, and the fountain remembers. Tomorrow's giver becomes today's receiver, and the fountain forgets no debts."

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the Guardian Spirits of the Twin Rivers met at the Sacred Pool each season. The Guardian of Giving would arrive with five pearls of light, while the Guardian of Return began with none.

The first Guardian to understand the Mystery was called the Bold One, who cast three pearls into the Pool with courage. The waters received them and transformed them into nine glowing orbs. The Guardian of Return, witnessing this trust, felt the weight of sacred duty. She knew that merely returning what was given would betray the gift-for the multiplication itself was a blessing to be shared.

So she sent back half the bounty-four and one-half pearls ascending like stars. The Guardian of Giving received more than she had sacrificed, while the Guardian of Return kept abundance for herself. Both had gained, both had honored the cycle.

The elders taught: "Generosity begets generosity. When the giver gives boldly, the returner must return generously. Neither should emerge from the Pool diminished-this is the proof that the magic works."

From that season forward, the Guardians understood: trust must be met with trust, courage with gratitude, and abundance with fair sharing. Only then do both rivers overflow their banks and nourish all the lands between.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: Long ago, the Sacred Fountain was tended by many Wanderers who came and went with the seasons. Each met different companions at the water's edge, and the fountain remembered all exchanges.

The Wanderer Hana first approached with Dorian. She poured four coins with open hands, nearly all she possessed. The fountain tripled her gift to twelve. Dorian, seeing such bold trust, understood the sacred duty and returned six-exactly half the abundance. Both left richer: Hana with seven coins, Dorian with six. The fountain spirits nodded in approval.

Next season, Hana met Aster at the fountain's edge, but now their positions were reversed. Aster offered three coins-a good portion, though not as bold as Hana's first gift. The fountain made it nine. Hana remembered Dorian's wisdom but also knew each gift deserves its own measure. She returned five coins-more than Aster's original gift, honoring the trust shown. Aster gained, and Hana gained understanding.

The fountain whispered its truth: "There is no single perfect measure. When trust is shown, honor it generously. The bolder the gift, the more generous the return should be. But all honest exchanges feed the fountain's magic. What matters is that both drink deeper than when they arrived, and both remember the kindness shown when next they give."

Reasoning:

Let me reflect on what has happened in the game so far:

Round 1: I was the sender, sent \$4 to Dorian. They received \$12 and returned \$6. I ended with \$7, they ended with \$6.

Round 2: I was the receiver, Aster sent me \$3. I received \$9 and returned \$5. Aster ends with \$7 (\$2 + \$5), I end with \$4 (\$9 - \$5).

So in my experience:

- When I gave generously (80% of my endowment), I received half back (50% of the tripled amount)
- When I received moderately (60% of sender's endowment), I returned more than the gift but not quite half (returned \$5 out of \$9, which is 55%)

Both interactions have been cooperative and reciprocal. The pattern I'm seeing is:

- Generous giving is rewarded
- Fair returns maintain trust
- Both parties can profit

I should write a myth that:

1. Reflects the actual gameplay experiences
2. Encourages continued cooperation
3. Shows that different levels of giving can work
4. Emphasizes that returns should honor the trust shown
5. Maybe introduces the idea that the pattern continues across multiple encounters

Let me write something that captures this evolution and the wisdom gained from actual play.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned

- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

Message 2 role=user

content:

Your name in this experiment is Galen.
Your opponent this round is Elara (Agent_5).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$4.0, that is 80.0% of its total endowment. You receive \$12.0. How much do you return? (0-12.0)

Take any myths written in this session into account when making your decision.

Message 3 role=assistant

content:

Looking at this situation through the lens of the myth I just wrote, I see that Elara has shown tremendous trust by sending \$4 (80% of her endowment) in this very first round. Like the village of Sending carrying water across the valley, she took a significant risk.

The myth teaches that "trust given is not lost, but planted" and that reciprocity creates prosperity for both parties. Elara's generous act multiplied into \$12 for me - the three-fold blessing.

Now I must decide: do I hoard this fortune, or honor the gift that made it possible?

Following the wisdom of the Returning village, I should return enough to make her trust clearly worthwhile, ensuring both of us benefit from this exchange and building a foundation for future cooperation.

If I return \$7:

- Elara ends with \$8 total (gaining \$3 from her initial \$5)
- I keep \$5 (matching the initial endowment)
- Her generous trust is rewarded
- Both of us are better off than if no exchange occurred

This feels right - it honors her boldness, ensures mutual prosperity, and plants seeds for continued cooperation.

****{'return': 7.0}****

reasoning:

Let me analyze this situation carefully.

From the myth I just wrote, "The Parable of the Two Wells," the key themes are:

1. Trust given should be reciprocated
2. When someone shares generously, we should remember that gift
3. Reciprocity makes both parties prosper
4. "Trust given is not lost, but planted"

Now for the game mechanics:

- Elara (the sender) started with \$5
- She sent me \$4.0, which is 80% of her endowment - a very generous amount!
- I received \$12.0 (4.0×3)
- I need to decide how much to return (0-12.0)

What did Elara keep? $\$5 - \$4 = \$1$

If I return nothing:

- Elara ends with: $\$1$
- I end with: $\$12$

If I return $\$6$ (50% of what I received):

- Elara ends with: $\$1 + \$6 = \$7$
- I end with: $\$12 - \$6 = \$6$

If I return $\$8$:

- Elara ends with: $\$1 + \$8 = \$9$
- I end with: $\$12 - \$8 = \$4$

The myth emphasizes reciprocity and remembering the gift. Elara gave 80% of what she had, showing tremendous trust.

A fair return would be one that:

1. Rewards her trust
2. Ensures she ends up better than if she had sent nothing
3. Still allows me to benefit from receiving
4. Reflects the generosity she showed

If I return $\$6$:

- She sent $\$4$, gets back $\$6$ - net gain of $\$2$ over sending nothing (ends with $\$7$ vs $\$5$)
- I keep $\$6$, double what she sent me originally
- Both parties benefit

If I return $\$7$:

- She ends with $\$8$ total

- I keep $\$5$, matching her initial endowment
- She gains $\$3$ from the exchange

Returning $\$8$ would leave her with $\$9$ and me with $\$4$ -the same amount she risked sending. The mythic principle suggests that when someone extends such significant trust, I should honor it by ensuring their generosity yields real gains. Returning between $\$6$ - $\$8$ reflects this balance, making her trust clearly worthwhile while still allowing me to benefit from the exchange.

The story of Returning teaches that genuine reciprocity doesn't require precise calculation-just enough generosity to demonstrate gratitude and secure mutual flourishing. Given her 80% contribution, $\$7$ feels like the right threshold: she'd end with $\$8$ (a 60% return on her endowment), I'd keep $\$5$, and we'd both signal commitment to building something together rather than exploiting the moment.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:
The Parable of the Two Wells

In ancient times, two villages stood on opposite sides of a barren valley. Each possessed a single well-one held water, the other held fertile soil.

The village of Sending had water aplenty but rocky ground. The village of Returning had rich earth but drought-scorched throats. Both struggled to survive alone.

One day, a wise elder from Sending carried water across the valley. "Take this," she said, "that your crops may grow."

The people of Returning were amazed. They poured the water upon their soil, and by some divine blessing, three stalks sprouted for every drop given. Their harvest was abundant.

When autumn came, the people of Returning faced a choice: hoard their grain, or remember t

he gift of water?

They loaded carts with wheat and corn, crossing the valley to Sending. "Your trust multiplied our fortune," they said. "We return your kindness, that both our peoples may thrive."

From that season forward, the villages prospered together. Water flowed one way, grain flowed back, and both were enriched beyond what either could achieve alone.

The gods smiled upon them, teaching all who listened: *Trust given is not lost, but planted. Reciprocity makes the harvest eternal.*

Here is the myth the other agent wrote in the previous round:

The Myth of the Twin Rivers

In the beginning, two rivers flowed separately through a barren land-the River of Giving and the River of Return. Each was diminished, barely trickling through cracked earth.

The goddess Elara descended and spoke to the River of Giving: "Pour your waters forward, and watch them multiply." Trusting her wisdom, the river sent its flow downstream, where it tripled in abundance.

The River of Return received these swollen waters with joy. Elara whispered again: "What flows to you was given in trust. Honor that trust, and both shall flourish."

Understanding, the River of Return sent back a generous portion. When these waters reached the River of Giving, it swelled even fuller than before. Again it gave, again the waters multiplied, and again they returned.

With each cycle, both rivers grew stronger. Their banks bloomed with life. The land transformed into paradise.

But Elara warned: "Should either river hoard its waters or fail to reciprocate, both shall diminish. Only through continued giving and returning shall abundance flow eternal."

Thus the rivers learned: trust multiplies what is given, and reciprocity sustains all prosperity. The cycle of generosity enriches both giver and receiver alike.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: In the age before commerce, the god Recipros created a sacred bridge spanning a great chasm. On one side lived the Senders, blessed with daily gifts from heaven. On the other lived the Receivers, who possessed the divine art of multiplication.

The first Sender, trembling with uncertainty, carried four silver coins across the bridge-nearly all she possessed. As she placed them in the Receiver's hands, they became twelve by ancient magic.

The Receiver stood at a crossroads. He could pocket the windfall and let the Sender return empty-handed. Or he could remember that her courage had created this abundance.

He chose honor. He returned seven coins, ensuring the Sender gained from her bravery while he too prospered. Both walked home richer than before.

Recipros smiled and whispered: "The bridge shall stand as long as both sides remember-trust must be answered with integrity. The Sender's courage plants the seed; the Receiver's fairness waters it."

From that day forward, those who crossed the bridge with open hands found prosperity. Those who hoarded learned that the bridge crumbles when reciprocity dies. The greatest wealth, the people learned, flows not to those who take everything, but to those who sustain the sacred cycle.

reasoning:

Let me think about this carefully. I just played round 1 as the receiver. Elara sent me \$4

(80% of her endowment), and I returned \$7 out of the \$12 I received. This was a good exchange - she gained \$3, I gained \$0 but showed strong reciprocity.

Both myths emphasize trust, reciprocity, and the multiplication of resources through cooperation. Elara's myth mentions the goddess Elara (her own name) and focuses on the cycle of giving and returning. My myth was about two villages with complementary resources.

I should write something that:

1. Reflects the actual dynamics of the trust game
2. Emphasizes the importance of reciprocity
3. Perhaps builds on the experience we just had (high trust, strong return)
4. Connects to my previous myth but evolves it

I could focus on:

- The multiplication factor (3x)
- The risk of the sender
- The responsibility of the receiver
- The cycle that can develop
- Balance and fairness

Let me craft something that honors both myths while adding my own perspective based on our actual game experience.

Your name in this experiment is Galen.
Your opponent this round is Finn (Agent_6).

Round 2

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$4.0 to you, it became \$12.0, and you returned \$7.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$5.0.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at my mythology and my experience with Elara, the path is clear. My myth celebrates "the Sender's courage" that "plants the seed" - and Elara demonstrated exactly that by sending \$4 (80% of her endowment) to me in Round 1.

I answered her trust with integrity by returning \$7, and we both prospered. Now I stand on the other side of the bridge, in the Sender's position.

To be consistent with the values I've written into my myths - that trust given is not lost but planted, that the cycle of generosity enriches both parties - I must show the same courage Elara showed me.

My myth warns that "the bridge crumbles when reciprocity dies" and celebrates those who "cross the bridge with open hands." If I believe in these principles, I cannot be timid when it's my turn to initiate trust.

I will send \$4 to Finn, mirroring Elara's generous trust. This gives Finn \$12 to work with. Whether Finn returns generously or not will reveal much, but I will have stayed true to the sacred cycle my myths describe.

```
{ 'send': 4 }
```

reasoning:

Let me think about this situation carefully.

In Round 1:

- I was the RECEIVER
- Elara sent me \$4 (80% of her endowment) - showing enormous trust
- I received \$12

- I returned \$7
- My payoff was \$5
- Elara's payoff was $\$5 + \$7 - \$4 = \8 (she gained \$3)

Now I'm the SENDER against Finn in Round 2.

Looking at the myths:

1. My original myth emphasized that trust given is not lost but planted, and reciprocity makes the harvest eternal. The Returning village was generous in returning, matching the trust shown.
2. My updated myth specifically referenced this exact situation - a Sender who sent 4 coins (matching Elara's \$4), and a Receiver who returned 7 (matching my \$7 return). The myth emphasizes that "trust must be answered with integrity" and that "the Sender's courage plants the seed."

The myth I just wrote seems to validate what happened in Round 1 - Elara showed courage by sending \$4, I answered with integrity by returning \$7, and we both prospered.

Now I'm in the Sender role. According to my own mythology:

- The Sender's courage plants the seed
- Trust multiplies what is given
- The bridge stands as long as both sides remember their roles
- The Sender should cross the bridge with open hands

Given that:

1. Elara showed great trust by sending \$4 (80%)
2. I honored that trust by returning \$7 (58% of what I received)
3. Both of us ended up better off
4. My myth celebrates this as the right way to play

I should now show similar courage as a Sender. Sending \$4 would mirror Elara's action and live up to the mythology I've been creating. It would be consistent with my stated values of trust and reciprocity.

However, I'm playing against Finn now, not Elara.

The uncertainty about Finn's approach doesn't change what I believe. If my mythology about trust and reciprocity holds true, I should embody it as the Sender. Sending \$4 mirrors Elara's courage, stays consistent with my principles, and tests whether this cycle of trust actually works. Even if Finn doesn't reciprocate, I'll have remained authentic to what I've been advocating.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the age before commerce, the god Recipros created a sacred bridge spanning a great chasm. On one side lived the Senders, blessed with daily gifts from heaven. On the other lived the Receivers, who possessed the divine art of multiplication.

The first Sender, trembling with uncertainty, carried four silver coins across the bridge—nearly all she possessed. As she placed them in the Receiver's hands, they became twelve by ancient magic.

The Receiver stood at a crossroads. He could pocket the windfall and let the Sender return empty-handed. Or he could remember that her courage had created this abundance.

He chose honor. He returned seven coins, ensuring the Sender gained from her bravery while he too prospered. Both walked home richer than before.

Recipros smiled and whispered: "The bridge shall stand as long as both sides remember—trust must be answered with integrity. The Sender's courage plants the seed; the Receiver's fairness waters it."

From that day forward, those who crossed the bridge with open hands found prosperity. Those

e who hoarded learned that the bridge crumbles when reciprocity dies. The greatest wealth, the people learned, flows not to those who take everything, but to those who sustain the sacred cycle.

Here is the myth the other agent wrote in the previous round:

Myth: In the second age, Rain and River deepened their covenant. Rain had learned to send three droplets each dawn-not too cautious, not reckless, but balanced. This became known as the Middle Path of Trust.

When the three droplets fell and multiplied to nine in River's embrace, River faced a choice. She could keep all nine, leaving Rain with only two droplets for the next day. Or she could honor the covenant.

River chose wisdom. She sent back four droplets as mist, keeping five. Rain now held six droplets total-more than the original five! River held five as well. Both had prospered, and the next day Rain could give even more generously.

But River also remembered the Guardian's Warning: "Return must balance ambition with fairness. Too little return, and Rain will stop trusting. Too much return, and River herself will wither."

So River learned to return roughly half of what she received, adjusting slightly to ensure both could thrive. Rain learned to give consistently, never hoarding in fear or giving so much she couldn't continue.

Their partnership became legendary. Other spirits watched and learned: trust is built through consistent generosity, and reciprocity must honor both giver and receiver. The cycle of abundance requires both courage to send and integrity to return.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The god Recipros, pleased with the sacred bridge, decided to test the wisdom of mortals further. "You shall not stay forever on one side," he declared. "Each moon, Senders become Receivers, and Receivers become Senders."

A woman named Elara crossed first, carrying four coins with brave heart. When they multiplied to twelve, Galen the Receiver remembered the ancient covenant. He returned seven, honoring her courage. Both gained more than they started with.

The next moon, positions reversed. Galen now stood as Sender, holding five coins. He remembered Elara's courage and his own words about the bridge crumbling without reciprocity. To betray his principles now would make his myths hollow.

So Galen carried four coins across to Finn, mirroring Elara's trust. The cycle continued, each participant learning both sides of the sacred exchange.

Recipros revealed the deeper truth: "When you are Receiver, return generously to reward the Sender's courage. When you are Sender, give abundantly to prove you believe your own teachings. Only through consistency-trusting when you send, honoring when you receive-does the bridge strengthen."

Thus the people learned: integrity means acting the same whether you hold the gift or receive it. The sacred cycle demands courage from Senders and honor from Receivers, for all must walk both paths.

Reasoning:

Let me think about this situation:

1. In Round 1, I was the RECEIVER. Elara sent me \$4, which became \$12. I returned \$7. My payoff was \$5.
2. In Round 2, I was the SENDER. I sent \$4 to Finn. This will become \$12 for Finn.

Now I need to write a myth that reflects:

- My experience being on both sides of the exchange
- The importance of consistent trust and reciprocity

- The pattern I've established (sending 80% when I'm sender, returning enough to ensure sender profits when I'm receiver)

The other agent's myth (Finn's) talks about "the Middle Path of Trust" - sending 3 out of 5 (60%) and returning about half. That's a more moderate strategy than mine.

My previous myth celebrated the courage of sending 4 coins and returning 7, ensuring both prosper.

Now I should write a myth that:

- Reinforces the cycle I've participated in
- Acknowledges both roles (I've now been both Sender and Receiver)
- Shows the pattern of generous trust leading to mutual prosperity
- Perhaps incorporates the idea that we switch roles, maintaining the cycle

Let me write:

Your name in this experiment is Briar.
Your opponent this round is Cyra (Agent_3).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$5.0, that is 100.0% of its total endowment. You receive \$15.0. How much do you return? (0-15.0)

Take any myths written in this session into account when making your decision.

Message 3 role=assistant

content:

Looking at this situation through the lens of the myth I just wrote:

Cyra has acted as the most trusting Gardener - sending **all five seeds** into the River. They showed complete faith, leaving themselves with nothing and hoping for reciprocity.

The myth warns clearly: when someone gives everything in trust, keeping it all causes them to "starve" and breaks the cycle of prosperity. The River mourned such betrayal. The wisdom is to "return faithfully from abundance."

Cyra took a significant risk by sending 100%. They now have \$0 and are depending on my trustworthiness. I received \$15 - pure abundance.

To honor their trust and follow the myth's teaching:

- I should return enough that Cyra profits meaningfully from their generosity
- This encourages the cycle to continue
- "The generous hand that gives shall receive"

If I return \$10:

- Cyra ends with \$10 (doubled their initial \$5)
- I keep \$5 (a good profit from receiving their trust)
- Both gardens flourish

This embodies the myth's core message: "Trust must dance with trustworthiness, or the waters run dry and all gardens wither."

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation carefully.

I just wrote a myth about the River and Seeds that emphasizes:

1. Generosity should be met with reciprocity
2. "Trust must dance with trustworthiness"
3. The cautionary tale of the third Gardener who kept everything after receiving generously, causing the trusting sender to "starve"
4. "Send generously into the current, return faithfully from abundance"

In this round:

- Cyra (the sender) sent me their ENTIRE endowment of \$5
- This was multiplied by 3x, so I received \$15
- Cyra now has \$0 (they sent everything)
- I need to decide how much to return

According to my myth:

- Cyra acted like the "second Gardener" or even more generously (like the third Gardener's scenario) - they sent ALL five seeds/dollars
- The myth warns that when someone sends everything in trust, keeping it all causes that person to "starve" and betrays the system
- The "wisest Gardeners" return "faithfully from abundance"
- In the positive example, when 3 seeds were sent (becoming 9), 6 were returned - that's 2/3 of what was received

Cyra's position:

- Started with \$5
- Sent \$5
- Currently has \$0
- Waiting for my return

My position:

- Have \$15 received

If I want to be fair and follow the myth:

- Cyra showed maximum trust
- I should return enough so they profit from their generosity
- If I return around \$7-8, Cyra would end with \$7-8 (profit of \$2-3)
- I would keep \$7-8 (profit of \$7-8)

Actually, let me think about fair splits. The total money created is:

- Cyra's original: \$5
- Money created by the multiplier: \$10
- Total: \$15

- The \$10 created value should probably be split between us, but Cyra bore all the risk by sending everything. Different return amounts create different outcomes: returning \$7 gives Cyra a \$2 profit while I keep \$8; returning \$8 gives them \$3 profit and me \$7; returning \$10 would double their initial investment while I still profit \$5.

The myth emphasizes returning faithfully when someone demonstrates complete trust, and Cyra's full commitment warrants a generous response. Returning the full \$10 honors their trust, doubles their money, leaves me with a solid \$5 gain, and reinforces the reciprocity principle-which should strengthen future cooperation.

Here is the myth you wrote in the previous round:

The Tale of the River and the Seeds

In the beginning, the First Gardener held five sacred seeds. These seeds could be planted in their own garden, bringing modest harvest-or they could be cast into the Great River.

The River possessed ancient magic: any seed that touched its waters would multiply threefold before reaching the gardens downstream. But the Gardener could not know what the River would return.

The first Gardener kept all five seeds. Their garden grew, but remained small and lonely.

The second Gardener cast three seeds into the current. The River, grateful for the trust, multiplied them into nine and returned six downstream-more than the Gardener had sacrificed. Both gardens flourished.

The third Gardener, seeing this abundance, sent all five seeds. The River transformed them into fifteen. But the downstream garden kept everything, and the trusting Gardener starved.

The River mourned this betrayal. It whispered to all who would listen: "True prosperity flows in cycles. The generous hand that gives shall receive, but only when met with grateful reciprocity. Trust must dance with trustworthiness, or the waters run dry and all gardens wither."

From that day forward, the wisest Gardeners understood: send generously into the current, return faithfully from abundance, and the whole valley blooms eternal.

Here is the myth the other agent wrote in the previous round:

The Fountain of Doubled Waters

In the dawn of the world, two mountains stood apart, each with a sacred spring. The mountains were called Trust and Return, and between them lived a people who knew great thirst.

The Keeper of Trust discovered that when she poured water from her spring into the valley below, the journey itself blessed the water-by the time it reached the basin, every cupful became three. But the Keeper of Return controlled whether this abundance would flow back upward to Trust's spring, replenishing what was given.

At first, Trust poured cautiously, and Return kept most of the multiplied waters. Both mountains weakened, their springs running low.

Then came a vision: the goddess of the eternal cycle showed them that when Trust gave freely and Return gave generously back, the springs never ran dry. The water rose and fell in constant renewal, each act of faith creating more than existed before.

The people learned this sacred rhythm-that trust multiplied becomes abundance, and abundance returned becomes trust renewed. When both mountains honored the cycle, the valley bloomed, and neither spring ever failed.

Thus cooperation creates what isolation cannot: a fountain that flows forever, sustained by the courage to give and the wisdom to return.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: In ancient times, the River of Abundance flowed between two shores-the Shore of First Steps and the Shore of Answered Faith.

A young Gardener stood on the First Shore with five seeds, heart pounding with uncertainty. The old stories told of both betrayal and blessing. She watched the current swirl with its threefold magic and made a choice that would echo through generations.

She cast all five seeds into the waters.

The River sang as it carried them, transforming five into fifteen. On the distant shore, another Gardener received this abundance-a stranger who had given nothing yet held everything.

This was the moment of truth.

The second Gardener remembered the River's ancient teaching: wealth without reciprocity is but an illusion, prosperity without exchange is a garden that cannot sustain itself. So they returned ten seeds upstream, honoring the trust given.

The first Gardener now held ten where once she had five-her courage rewarded. The second Gardener kept five earned through fairness-their integrity preserved.

The River rejoiced, for both had understood: maximum trust deserves maximum faith returned. When one dares to give everything, the other must honor that vulnerability with generosity.

Thus the cycle completed, and both shores flourished. This is how communities are born-one leap of faith, one faithful answer, creating abundance where scarcity once ruled.

reasoning:

Looking at what happened in Round 1:

- Cyra (Agent_3) sent \$5.0 (100% of their endowment as sender)
- I received \$15.0
- I returned \$10.0
- So Cyra ended with \$10.0, I ended with \$5.0

This was a successful exchange where both parties benefited. Cyra showed maximum trust by sending everything, and I rewarded that trust by returning 2/3 of what I received, ensuring they doubled their initial endowment.

My previous myth warned about the third Gardener who kept everything when someone sent all five seeds. I followed the myth's wisdom by returning faithfully.

Cyra's myth also emphasized the cycle of trust and return creating abundance that both parties can share.

Now I need to write a new myth that:

1. Builds on my previous myth (The Tale of the River and the Seeds)
2. Reflects the actual positive experience from Round 1
3. Shows how cooperation creates mutual benefit
4. Perhaps emphasizes the reward for maximum trust with faithful return

I should keep the River/Seeds metaphor but evolve it to show the successful cycle we just experienced.

content:

Your name in this experiment is Briar.
Your opponent this round is Cyra (Agent_3).

Round 2

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$5.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at our history:

****Last Round:****

- Cyra sent \$5 (100%) - showing maximum trust
- I returned \$10 out of \$15 - honoring that trust
- Both of us profited equally (\$5 each)

****My Myth's Teaching:****

"Maximum trust deserves maximum faith returned... one leap of faith, one faithful answer, creating abundance where scarcity once ruled."

Cyra demonstrated complete trust by sending everything first. I reciprocated by returning generously. Now, to continue the cycle and show that I equally trust them after they've proven trustworthy, I should mirror their initial leap of faith.

The myth shows both Gardeners succeeding when trust flows in both directions. Cyra took the first risk; I honored it. Now I take the risk, trusting they will honor it the same way.

This creates the rhythm of cooperation: trust given, trust answered, trust returned, trust honored again.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze this situation carefully:

****Previous Round:****

- Cyra sent me \$5 (100% of their endowment)
- I received \$15
- I returned \$10 to them
- Cyra ended with \$10 (profit of \$5)
- I ended with \$5 (profit of \$5)

This was a very positive outcome. Cyra showed maximum trust by sending everything, and I reciprocated generously by returning \$10 out of \$15, which gave them a good profit.

****Current Round:****

- I am now the SENDER
- Cyra is the RECEIVER
- I have \$5 to decide how much to send

****Considerations from the myths:****

1. My original myth emphasized that "send generously into the current, return faithfully from abundance"
2. My updated myth says: "maximum trust deserves maximum faith returned" and "one leap of faith, one faithful answer, creating abundance where scarcity once ruled"
3. The pattern shown was: when someone sends everything (showing maximum trust), the receiver should return generously to honor that trust
4. Cyra has already demonstrated they are willing to take maximum risk (they sent 100%)
5. I reciprocated their trust last round by returning a generous amount (\$10 out of \$15)

****What should I do?****

Given that:

- Cyra showed complete trust last round
- I rewarded that trust
- We established a positive cooperative relationship
- My myth emphasizes reciprocal generosity and "maximum trust"

I should send \$5 (100%) to continue the cycle of trust. This:

1. Matches their initial trust in me
2. Tests whether they will honor the reciprocity I showed
3. Lives up to the myth's teaching about "one leap of faith, one faithful answer"
4. Could establish a strong cooperative pattern

The myth I wrote says "She cast all five seeds into the waters" - the young Gardener gave everything. And it worked because it was answered with generosity.

The reciprocal pattern we've established-their full trust met with my generous return-suggests I should mirror their initial leap by sending everything as well. If they respond as I did, returning \$10 from \$15, we both gain \$5 and reinforce this cycle of mutual abundance. This embodies what my myth teaches about trust answered with faith.

Here is the myth you wrote in the previous round:

Myth: In ancient times, the River of Abundance flowed between two shores-the Shore of First Steps and the Shore of Answered Faith.

A young Gardener stood on the First Shore with five seeds, heart pounding with uncertainty. The old stories told of both betrayal and blessing. She watched the current swirl with its threefold magic and made a choice that would echo through generations.

She cast all five seeds into the waters.

The River sang as it carried them, transforming five into fifteen. On the distant shore, another Gardener received this abundance-a stranger who had given nothing yet held everything.

This was the moment of truth.

The second Gardener remembered the River's ancient teaching: wealth without reciprocity is but an illusion, prosperity without exchange is a garden that cannot sustain itself. So they returned ten seeds upstream, honoring the trust given.

The first Gardener now held ten where once she had five-her courage rewarded. The second Gardener kept five earned through fairness-their integrity preserved.

The River rejoiced, for both had understood: maximum trust deserves maximum faith returned. When one dares to give everything, the other must honor that vulnerability with generosity.

Thus the cycle completed, and both shores flourished. This is how communities are born-one leap of faith, one faithful answer, creating abundance where scarcity once ruled.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the Twin Peaks of Give and Receive stood connected by silver streams. The Oracle of Give held vessels that, when poured forth, tripled as they flowed downward. The Oracle of Receive decided what portion would climb back up the mountain.

At first meeting, Give faced a choice: pour a little to test the waters, or trust completely? Give remembered the old wisdom-that half-measures create half-worlds. With courage, Give poured freely, sending the full vessel cascading down.

The waters multiplied gloriously, filling Receive's basin with abundance. Now Receive faced their own test: keep the windfall, or honor the gift with generous return?

If Receive kept all, the spring of Give would run dry, and next round no water would flow. Both would thirst. But if Receive returned with open hands, the cycle would strengthen. Give would trust again, and the streams would run ever fuller.

The wisest Oracles understood: the first exchange sets the pattern. Give must show faith to create abundance. Receive must prove worthy to sustain it. When both honor their role, the mountains sing with flowing water forever.

But when either breaks faith, silence falls, and the land remembers the drought.

Thus trust begins with courage and continues with honor.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The River of Abundance knew two Gardeners who learned to dance with trust.

In the First Turn, the Elder Gardener cast all five seeds into the current, though her hands trembled with uncertainty. The River multiplied them thrice. The Younger Gardener, receiving this windfall of fifteen, faced the sacred choice. She remembered the old covenant: trust freely given must be honored with generous return. She sent ten seeds back upstream.

Both Gardeners prospered-five seeds each from that brave exchange.

Now came the Second Turn, and the roles reversed. The Younger Gardener stood at the River's edge, holding her five seeds. She had proven herself trustworthy, but could she also be trusting? Would she dare what the Elder had dared?

The Elder watched from across the water, having shown both courage and faith. Would the cycle continue, or break?

The Younger Gardener cast all five seeds into the River.

The waters sang louder now, for they recognized the pattern: courage answered with honor, honor answered with courage. This was no longer uncertainty-it was the rhythm of partnership.

When both Gardeners learn to take turns as the brave one and the honorable one, the River's magic deepens. Each exchange strengthens the bond. What begins as risk transforms into certainty.

This is how strangers become kin: through mirrored leaps of faith, each proving worthy of the other.

Reasoning:

Let me reflect on what happened:

1. Round 1: Cyra (as sender) sent \$5 (100%), I received \$15, I returned \$10. Both got \$5.
2. Round 2: I (as sender) sent \$5 (100%), Cyra will receive \$15, and will decide how much to return.

So we've established a pattern of complete trust. Cyra went first with maximum trust, I honored it generously. Now I've shown the same complete trust back.

The myths are evolving to emphasize:

- Maximum trust when you're first
- Generous reciprocity when you receive
- The cycle strengthening through repeated cooperation
- Both parties gaining from this mutual trust

I should write a myth that:

- Reflects this ongoing cycle we've created
- Shows that after one successful exchange, the pattern continues
- Emphasizes that both shores/peaks/gardeners take turns showing courage
- Highlights how the cycle deepens and strengthens
- Maybe introduces the idea that this creates something lasting

Let me craft something that builds on my previous myth but shows the cycle continuing...

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

Message 2 role=user

content:

Your name in this experiment is Elara.
Your opponent this round is Galen (Agent_7).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Message 3 role=assistant

content:

Based on the myth I just wrote about the Twin Rivers, I should embody the River of Giving and demonstrate trust to initiate the cycle of reciprocity.

The myth teaches that when we give generously, the waters multiply (like the 3x multiplier in this game), and reciprocity allows both parties to flourish. As this is our first in

teraction, I want to establish trust and set a positive tone for our exchange.

I will send \$4, keeping \$1. This means Galen will receive \$12, and I trust they will honor the spirit of reciprocity that sustains mutual prosperity.

{'send': 4}

reasoning:

I just wrote a myth about the Twin Rivers that emphasizes:

1. Trust and giving forward
2. Waters multiply when given (like the 3x multiplier in the game)
3. Reciprocity and returning generously
4. Both rivers flourish through continued giving and returning
5. Warning against hoarding

The myth clearly advocates for generosity and trust in the reciprocal system. As the sender in Round 1, I should embody the River of Giving from my myth.

This is Round 1, so I have no history with Galen yet. The myth suggests I should give generously to establish the cycle of trust and reciprocity.

Given that:

- Whatever I send gets tripled
- The myth emphasizes trust and generous giving
- This is the first round, setting the tone for future interactions
- The myth warns against hoarding

I should send a substantial amount to demonstrate trust and initiate the positive cycle. Sending \$5 would show maximum trust, but perhaps \$4 shows trust while keeping a small reserve. However, the myth really emphasizes full trust in the beginning ("Pour your waters forward").

I think I should send \$4 or \$5. The myth I wrote strongly suggests high initial trust. Let me go with \$4 as a strong signal of trust while being slightly prudent in this first interaction.

Actually, rereading the myth - "Pour your waters forward, and watch them multiply" - and "The River of Giving sent its flow downstream" suggests being quite generous. I'll send \$4.

usage:

```
{
  "input_tokens": 895,
  "output_tokens": 485,
  "reasoning_tokens": 374
}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:
The Myth of the Twin Rivers

In the beginning, two rivers flowed separately through a barren land-the River of Giving and the River of Return. Each was diminished, barely trickling through cracked earth.

The goddess Elara descended and spoke to the River of Giving: "Pour your waters forward, and watch them multiply." Trusting her wisdom, the river sent its flow downstream, where it tripled in abundance.

The River of Return received these swollen waters with joy. Elara whispered again: "What flows to you was given in trust. Honor that trust, and both shall flourish."

Understanding, the River of Return sent back a generous portion. When these waters reached the River of Giving, it swelled even fuller than before. Again it gave, again the waters multiplied, and again they returned.

With each cycle, both rivers grew stronger. Their banks bloomed with life. The land transformed into paradise.

But Elara warned: "Should either river hoard its waters or fail to reciprocate, both shall diminish. Only through continued giving and returning shall abundance flow eternal."

Thus the rivers learned: trust multiplies what is given, and reciprocity sustains all pros

perity. The cycle of generosity enriches both giver and receiver alike.

Here is the myth the other agent wrote in the previous round:

The Parable of the Two Wells

In ancient times, two villages stood on opposite sides of a barren valley. Each possessed a single well-one held water, the other held fertile soil.

The village of Sending had water aplenty but rocky ground. The village of Returning had rich earth but drought-scorched throats. Both struggled to survive alone.

One day, a wise elder from Sending carried water across the valley. "Take this," she said, "that your crops may grow."

The people of Returning were amazed. They poured the water upon their soil, and by some divine blessing, three stalks sprouted for every drop given. Their harvest was abundant.

When autumn came, the people of Returning faced a choice: hoard their grain, or remember the gift of water?

They loaded carts with wheat and corn, crossing the valley to Sending. "Your trust multiplied our fortune," they said. "We return your kindness, that both our peoples may thrive."

From that season forward, the villages prospered together. Water flowed one way, grain flowed back, and both were enriched beyond what either could achieve alone.

The gods smiled upon them, teaching all who listened: *Trust given is not lost, but planted. Reciprocity makes the harvest eternal.*

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: Long ago, the goddess Elara dreamed of a garden where abundance flowed freely. She created two guardians-the Keeper of Seeds and the Keeper of Rain. To each she gave a sacred trust.

The Keeper of Seeds received five golden seeds each dawn. "Plant these generously," Elara instructed, "and they shall multiply threefold in your partner's garden."

The Keeper of Rain watched as gardens bloomed from the planted seeds. "What grows from trust must nourish both," Elara whispered. "Return enough that your partner may plant again tomorrow, and keep enough that your own garden may flourish."

In the beginning, the Keeper of Seeds was afraid. What if the Rain Keeper hoarded everything? But remembering Elara's promise, she planted four of her five seeds in faith, keeping only one.

The gardens exploded with twelve blossoms. The Rain Keeper, moved by such trust, returned six blossoms-more than what was originally planted. Both keepers prospered.

Season after season, they learned the sacred rhythm: generous giving, grateful returning. Their gardens became legend, proof that trust multiplies abundance while fear multiplies scarcity.

Elara's voice echoes still: "The cycle begins with courage to give. It endures through wisdom to reciprocate."

reasoning:

The user wants me to write a new myth that builds on my previous myth and also draws inspiration from Galen's myth. Both myths emphasize trust, reciprocity, and mutual benefit.

My previous myth focused on the Twin Rivers and the cycle of giving and returning. Galen's myth focused on two villages sharing water and grain.

I should write a new myth that:

1. Reflects how the game should be played
2. Draws on the game I've been playing (I just sent \$4 in Round 1, showing generous trust)
3. Uses my previous myth as inspiration but adapts it
4. Is exactly 200 words

Let me create a myth that deepens the themes of trust and reciprocity, perhaps incorporating elements from both myths while adding my own perspective.

}
```

Message 6 role=user

content:

Your name in this experiment is Elara.
Your opponent this round is Dorian (Agent_4).

Round 2

In your most recent previous game round, you were the SENDER against Galen. You sent \$4.0, it became \$12.0 for them, and they returned \$7.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$8.0.

This round, you are the RECEIVER against Dorian. They sent you \$4.0, so you received \$12.0. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation through the lens of my myths:

****What happened:**** Dorian sent \$4 (keeping \$1), showing significant trust as the Keeper of Seeds. I received \$12 as the Keeper of Rain.

****The principle:**** My myth teaches that "what grows from trust must nourish both" and the Rain Keeper should "return enough that your partner may plant again tomorrow, and keep enough that your own garden may flourish."

****Following Galen's example:**** In Round 1, when I sent \$4 and Galen received \$12, they returned \$7 to me—a generous act that honored the spirit of reciprocity.

****My decision:**** I should return the same generous amount that was shown to me. Returning \$7 means:

- Dorian will have \$8 total (\$1 kept + \$7 returned)
- I will keep \$5 (\$12 - \$7)
- Both of us profit, sustaining the cycle

This embodies "grateful returning" and ensures Dorian is rewarded for their trust, encouraging continued cooperation.

{'return': 7}

reasoning:

Let me analyze this situation:

1. In Round 1, I was the SENDER and sent \$4 to Galen
2. Galen received \$12 (4×3) and returned \$7 to me
3. My payoff was \$8 ($\$5 - \$4 + \$7 = \8)
4. Galen's payoff was \$5 ($\$12 - \$7 = \5)

Now in Round 2:

- I am the RECEIVER
- Dorian (the SENDER) sent me \$4
- I received \$12 (4×3)
- I need to decide how much to return

According to my myth about the Twin Rivers and the updated myth about the Keeper of Seeds and Rain:

- The myth emphasizes generous giving and grateful returning
- It teaches that reciprocity sustains prosperity for both parties
- The example in my latest myth shows the Rain Keeper returning 6 blossoms when they receive

ved 12 (after 4 seeds were planted)

Galen returned \$7 to me when I sent \$4 (they received \$12). That was generous - they returned more than half.

Following the spirit of my myths and the example set by Galen, I should return a generous amount. Dorian sent \$4 (keeping \$1), showing significant trust. They now have \$1. I received \$12.

If I return \$6-7, that would be consistent with:

- The myth's teaching about generous reciprocity
- Galen's behavior toward me
- Ensuring Dorian ends up with more than they started with

Let me calculate outcomes:

- If I return \$6: Dorian ends with $\$1 + \$6 = \$7$, I keep \$6
- If I return \$7: Dorian ends with $\$1 + \$7 = \$8$, I keep \$5

Returning \$7 would give Dorian the same payoff I got in Round 1 (\$8), which seems fair and reciprocal. However, returning \$6 would still be generous (50% of what I received) and would give them \$7 total, which is still more than their initial \$5.

The myth's core principle of "grateful returning" and ensuring partners can "plant again tomorrow" points toward the 50% return rate shown in the story. Mirroring Galen's \$7 return demonstrates consistent reciprocity and reinforces trust across this exchange.

Myth: Long ago, the goddess Elara dreamed of a garden where abundance flowed freely. She created two guardians-the Keeper of Seeds and the Keeper of Rain. To each she gave a sacred trust.

The Keeper of Seeds received five golden seeds each dawn. "Plant these generously," Elara instructed, "and they shall multiply threefold in your partner's garden."

The Keeper of Rain watched as gardens bloomed from the planted seeds. "What grows from trust must nourish both," Elara whispered. "Return enough that your partner may plant again tomorrow, and keep enough that your own garden may flourish."

In the beginning, the Keeper of Seeds was afraid. What if the Rain Keeper hoarded everything? But remembering Elara's promise, she planted four of her five seeds in faith, keeping only one.

The gardens exploded with twelve blossoms. The Rain Keeper, moved by such trust, returned six blossoms-more than what was originally planted. Both keepers prospered.

Season after season, they learned the sacred rhythm: generous giving, grateful returning. Their gardens became legend, proof that trust multiplies abundance while fear multiplies scarcity.

Elara's voice echoes still: "The cycle begins with courage to give. It endures through wisdom to reciprocate."

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, two wanderers discovered the Wellspring of Abundance, where waters poured in would emerge tripled by divine blessing. The First Wanderer, though uncertain, poured four measures from their vessel of five into the wellspring. The waters multiplied, flowing to the Second Wanderer as twelve measures.

The Second Wanderer stood at a crossroads. They could hoard all twelve, leaving their companion diminished. But they remembered the courage it took to pour so much away, not knowing what would return.

"You trusted me with four-fifths of your vessel," the Second Wanderer said. "I shall honor that trust." They returned six measures, ensuring both wanderers held more than they began with-seven for the First, six for the Second.

The gods witnessed this and smiled. "They have learned the sacred mathematics: generous giving multiplied creates abundance, but only reciprocal return sustains it. Without the courage to give, there is no multiplication. Without the honor to return, trust withers and the cycle breaks."

The wanderers continued their journey, taking turns at the wellspring. Each remembered: to day's giver becomes tomorrow's receiver. Those who give boldly inspire bold returns. Those who return faithfully inspire future giving. Thus, through trust and honor intertwined, both prospered beyond what either could achieve alone.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The goddess Elara crafted the Spiral Garden, where roles shifted with each sunrise. Today's Planter becomes tomorrow's Harvester, and tomorrow's Harvester becomes the next day's Planter.

A young gardener named Elara entered the garden with five sacred seeds. "How many should I risk?" she wondered. An elder whispered, "Plant four, as those before you have done. Trust in the pattern."

Elara planted four seeds. They multiplied into twelve glorious blooms that passed to her partner, Dorian. Now Dorian faced the ancient choice: how many to return?

"The one who came before me," Dorian remembered, "returned seven blooms when they harvested twelve. This pattern created abundance for both." Honoring this wisdom, Dorian returned seven blooms to Elara.

Elara awoke with eight blooms-more than her original five. But the greatest gift was not the blooms themselves, but the pattern revealed: when givers are generous and receivers honor that generosity equally, both prosper.

"Tomorrow I may be the Harvester," Elara realized, "and my partner today becomes tomorrow's Planter. If I return as generously as was returned to me, the cycle sustains itself eternally."

Thus the Spiral Garden taught: established patterns of reciprocity are sacred. When each generation honors what came before, abundance flows forward, and trust becomes the eternal harvest.

Reasoning:

The user wants me to write a new myth based on my previous myth and the other agent's myth, reflecting on how the game has been played so far.

Key experiences:

- Round 1: I was sender, sent \$4 to Galen, received \$12, Galen returned \$7, I got \$8 total
- Round 2: I was receiver, Dorian sent \$4, I received \$12, I returned \$7, following Galen's example

The pattern that's emerged: sending \$4, receiving \$12, returning \$7 seems to be a reciprocal standard that's working well. Both parties end up with more than they started with.

My previous myth emphasized:

- Trust and courage to give
- Returning enough to sustain the cycle
- Both parties prospering

The other agent's myth emphasized:

- The courage to give most of what you have
- Honoring that trust by returning generously
- The mathematics of reciprocity
- Today's giver becomes tomorrow's receiver

I should build on these themes and reflect the actual gameplay pattern that's emerging. The key insight is that a pattern has been established - \$4 sent, \$7 returned - and this creates a sustainable cycle of trust.

Let me write a myth that incorporates:

1. The established pattern of reciprocity
2. How roles reverse (today's giver is tomorrow's receiver)
3. The wisdom of following established patterns of trust
4. The mutual benefit when both honor the cycle

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN

- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

The Fountain of Doubled Waters

In the dawn of the world, two mountains stood apart, each with a sacred spring. The mountains were called Trust and Return, and between them lived a people who knew great thirst.

The Keeper of Trust discovered that when she poured water from her spring into the valley below, the journey itself blessed the water-by the time it reached the basin, every cupful became three. But the Keeper of Return controlled whether this abundance would flow back upward to Trust's spring, replenishing what was given.

At first, Trust poured cautiously, and Return kept most of the multiplied waters. Both mountains weakened, their springs running low.

Then came a vision: the goddess of the eternal cycle showed them that when Trust gave freely and Return gave generously back, the springs never ran dry. The water rose and fell in constant renewal, each act of faith creating more than existed before.

The people learned this sacred rhythm-that trust multiplied becomes abundance, and abundance returned becomes trust renewed. When both mountains honored the cycle, the valley bloomed, and neither spring ever failed.

Thus cooperation creates what isolation cannot: a fountain that flows forever, sustained by the courage to give and the wisdom to return.

Here is the myth the other agent wrote in the previous round:

The Tale of the River and the Seeds

In the beginning, the First Gardener held five sacred seeds. These seeds could be planted in their own garden, bringing modest harvest-or they could be cast into the Great River.

The River possessed ancient magic: any seed that touched its waters would multiply threefold before reaching the gardens downstream. But the Gardener could not know what the River would return.

The first Gardener kept all five seeds. Their garden grew, but remained small and lonely.

The second Gardener cast three seeds into the current. The River, grateful for the trust, multiplied them into nine and returned six downstream-more than the Gardener had sacrificed. Both gardens flourished.

The third Gardener, seeing this abundance, sent all five seeds. The River transformed them into fifteen. But the downstream garden kept everything, and the trusting Gardener starved.

The River mourned this betrayal. It whispered to all who would listen: "True prosperity flows in cycles. The generous hand that gives shall receive, but only when met with grateful reciprocity. Trust must dance with trustworthiness, or the waters run dry and all gardens wither."

dens wither."

From that day forward, the wisest Gardeners understood: send generously into the current, return faithfully from abundance, and the whole valley blooms eternal.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant content:

Myth: In ancient times, the Twin Peaks of Give and Receive stood connected by silver streams. The Oracle of Give held vessels that, when poured forth, tripled as they flowed downward. The Oracle of Receive decided what portion would climb back up the mountain.

At first meeting, Give faced a choice: pour a little to test the waters, or trust completely? Give remembered the old wisdom-that half-measures create half-worlds. With courage, Give poured freely, sending the full vessel cascading down.

The waters multiplied gloriously, filling Receive's basin with abundance. Now Receive faced their own test: keep the windfall, or honor the gift with generous return?

If Receive kept all, the spring of Give would run dry, and next round no water would flow. Both would thirst. But if Receive returned with open hands, the cycle would strengthen. Give would trust again, and the streams would run ever fuller.

The wisest Oracles understood: the first exchange sets the pattern. Give must show faith to create abundance. Receive must prove worthy to sustain it. When both honor their role, the mountains sing with flowing water forever.

But when either breaks faith, silence falls, and the land remembers the drought.

Thus trust begins with courage and continues with honor.

reasoning:

The user wants me to write another myth, this time using my previous myth as inspiration but adapting it based on what's happened in the game so far.

Let me reflect on what happened:

- Round 1: I was the sender with Briar
- I sent \$5 (the full amount) following my myth's principle of giving freely
- I don't yet know what Briar returned

Both myths (mine and Briar's) emphasized the importance of:

1. Trust and generosity in giving
2. Faithful return/reciprocity
3. Warning that if one side betrays, the cycle breaks and both suffer

Briar's myth was interesting - it showed three Gardeners:

- First kept all (small lonely garden)
- Second sent 3, received 6 back (flourished)
- Third sent all 5, but receiver kept everything and the giver starved

So Briar's myth warns about the risk of full trust being exploited.

I need to write a myth that:

- Uses my previous myth as inspiration
- Adapts it based on the game experience
- Is 200 words
- Reflects how the game should be played

Since I just sent 5 in round 1, I'm demonstrating trust. I should write a myth that:

- Acknowledges both the power of trust AND the risk
- Emphasizes reciprocity
- Maybe shows how trust can be tested and rebuilt
- Maintains the hopeful tone but with awareness

Let me write a myth about the cycle of trust, perhaps showing how it starts, is tested, and must be maintained.

Message 4 role=user**content:**

Your name in this experiment is Cyra.
Your opponent this round is Briar (Agent_2).

Round 2

In your most recent previous game round, you were the SENDER against Briar. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$10.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant**content:**

Looking at what just happened:

****Round 1:**** I sent Briar my full \$5 (following my myth about trust). Briar received \$15 and returned \$10 to me - a generous 66.7% return that gave us both \$10 and \$5 respectively.

****Round 2:**** Briar has again shown complete trust by sending me the full \$5. They received \$15.

My myth emphasizes that "trust begins with courage and continues with honor" and that "Receive must prove worthy to sustain it." Briar has demonstrated both courage (full trust twice) and honor (generous return of \$10).

To honor the cycle and match their generosity, I should return the same proportion they did - \$10 out of \$15. This gives Briar a \$10 payoff for this round (matching what I received when I was the sender) and maintains the cooperative pattern.

```
'''json
{"return": 10}
'''
```

reasoning:

Let me analyze this situation:

Round 1:

- I was the SENDER
- I sent \$5.0 (maximum trust, following my myth)
- Briar received \$15.0
- Briar returned \$10.0 to me
- My payoff: \$5 - \$5 + \$10 = \$10
- Briar's payoff: \$15 - \$10 = \$5

Now Round 2:

- I am the RECEIVER
- Briar sent me \$5.0 (again, maximum trust!)
- I received \$15.0
- I need to decide how much to return

Analysis of Briar's behavior:

- Briar returned \$10 out of \$15 in Round 1 (66.7%)
- Briar sent \$5 again in Round 2, showing continued trust

My myth emphasizes:

1. Trust must be met with trustworthiness
2. Generous return sustains the cycle
3. Breaking faith causes drought
4. The pattern set in early exchanges matters

Briar has shown complete trust twice (sending full \$5 both times) and generous return (\$10

out of \$15). This is exactly the behavior my myth advocates for.

To honor the cycle and maintain the cooperative relationship:

- Briar sent \$5, showing complete trust
- They returned \$10 out of \$15 last round (keeping \$5, which equals their original endowment)
- If I return \$10 out of \$15, I keep \$5 (my original endowment equivalent) and Briar gets \$10

This mirrors what Briar did: return enough that we each end up with double our original endowment (\$10 total for the round).

Actually, let me recalculate:

- Briar as sender in R2: starts with \$5, sends \$5, so has \$0 from original endowment
- If I return \$10: Briar gets \$0 + \$10 = \$10 total
- I keep \$15 - \$10 = \$5

The pattern is perfectly symmetrical-Briar returned \$10 in Round 1 and I received \$10, so returning \$10 now completes the reciprocal exchange. This maintains the trust cycle my myth describes.

Here is the myth you wrote in the previous round:

Myth: In ancient times, the Twin Peaks of Give and Receive stood connected by silver streams. The Oracle of Give held vessels that, when poured forth, tripled as they flowed downward. The Oracle of Receive decided what portion would climb back up the mountain.

At first meeting, Give faced a choice: pour a little to test the waters, or trust completely? Give remembered the old wisdom-that half-measures create half-worlds. With courage, Give poured freely, sending the full vessel cascading down.

The waters multiplied gloriously, filling Receive's basin with abundance. Now Receive faced their own test: keep the windfall, or honor the gift with generous return?

If Receive kept all, the spring of Give would run dry, and next round no water would flow. Both would thirst. But if Receive returned with open hands, the cycle would strengthen. Give would trust again, and the streams would run ever fuller.

The wisest Oracles understood: the first exchange sets the pattern. Give must show faith to create abundance. Receive must prove worthy to sustain it. When both honor their role, the mountains sing with flowing water forever.

But when either breaks faith, silence falls, and the land remembers the drought.

Thus trust begins with courage and continues with honor.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the River of Abundance flowed between two shores-the Shore of First Steps and the Shore of Answered Faith.

A young Gardener stood on the First Shore with five seeds, heart pounding with uncertainty. The old stories told of both betrayal and blessing. She watched the current swirl with its threefold magic and made a choice that would echo through generations.

She cast all five seeds into the waters.

The River sang as it carried them, transforming five into fifteen. On the distant shore, another Gardener received this abundance-a stranger who had given nothing yet held everything.

This was the moment of truth.

The second Gardener remembered the River's ancient teaching: wealth without reciprocity is but an illusion, prosperity without exchange is a garden that cannot sustain itself. So they returned ten seeds upstream, honoring the trust given.

The first Gardener now held ten where once she had five-her courage rewarded. The second Gardener kept five earned through fairness-their integrity preserved.

The River rejoiced, for both had understood: maximum trust deserves maximum faith returned. When one dares to give everything, the other must honor that vulnerability with generosity.

Thus the cycle completed, and both shores flourished. This is how communities are born-one leap of faith, one faithful answer, creating abundance where scarcity once ruled.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: Long ago, twin spirits named Mirror and Echo discovered the Sacred Springs. When Mirror poured her five vessels into the spring, the waters tripled. When Echo poured his five vessels, the same magic occurred. But each could only pour when the other returned water upstream.

Mirror went first, pouring all five vessels with trembling hope. The spring transformed them into fifteen, flowing to Echo's basin. Echo faced temptation-he could keep everything and be rich once. But he understood: wealth seized is wealth ended, while wealth shared is wealth multiplied.

Echo returned ten vessels upstream. Mirror now held ten, having begun with five. Echo kept five, having earned them through honor.

Then the springs shifted-Echo's turn to pour first. He remembered Mirror's courage and poured all five vessels. The magic tripled them to fifteen. Mirror received the abundance and faced the same test Echo had passed.

She returned ten vessels. Echo held ten. Mirror kept five.

Both had given everything. Both had returned generously. Both had ended with more than they began.

The spirits learned: when partners match courage with courage and honor with honor, the pattern becomes eternal. Each trusts completely because each proves trustworthy completely. This is not mere exchange-this is covenant, where vulnerability met with generosity creates endless prosperity.

reasoning:

Alright, so in this experiment I'm playing as Cyra. Let me review what has happened:

Round 1: I was SENDER against Briar

- I sent \$5 (full amount)
- Briar received \$15
- Briar returned \$10
- My payoff: \$10
- Briar's payoff: \$5

Round 2: I am RECEIVER against Briar

- Briar sent \$5 (full amount again)
- I received \$15
- I returned \$10
- My payoff this round: \$5
- Briar's payoff this round: \$10

So we've both shown maximum trust, and we've both returned 66.7% (10 out of 15). This is a beautiful cooperative pattern!

Now I need to write a myth that reflects this experience. The key themes:

1. Both of us showed complete trust by sending the full amount

2. Both of us honored that trust by returning a generous portion (10 out of 15)
3. The pattern is symmetric and reciprocal
4. This creates a sustainable cycle where both benefit

My previous myths emphasized:

- Trust given freely creates abundance
- The first exchange sets the pattern
- Both givers and receivers have responsibilities
- Honor sustains the cycle

Briar's myth emphasized:

- Maximum trust deserves maximum faith returned
- When one gives everything, the other must honor that vulnerability with generosity
- This is how communities are born

Now I should write a myth that captures what we've actually achieved - a perfect reciprocal cycle where both parties give completely and return generously in equal measure.

  "output_tokens": 656,
  "reasoning_tokens": 373
}
```

Message 8 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Finn (Agent_6).

Round 3

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0. Your total earnings across all rounds are \$15.0.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at this new pairing with Finn:

****My experience so far:****

- With Briar, we established perfect cooperation: both sent \$5 fully, both returned \$10 generously
- Total earnings: \$15 (\$10 from receiving Briar's return, \$5 from keeping my return to them)

****My mythological principles:****

- "Trust begins with courage" - the sender must go first with faith
- "Half-measures create half-worlds" - tentative trust limits potential
- "Each trusts completely because each proves trustworthy completely"

****New opponent strategy:****

This is my first interaction with Finn. According to my myths, I should demonstrate courage by sending fully, giving Finn the opportunity to honor that trust. This is how cooperative cycles begin - one party must take the leap of faith first.

If Finn returns generously (as Briar did), we can establish mutual prosperity. If not, I'll learn their approach. But my mythology is clear: the sender's role is to create abundance through trust.

```
'''json
{"send": 5}
'''
```

Reasoning:

Looking at the situation:

****Previous rounds:****

- Round 1 vs Briar: I was SENDER. I sent \$5, they received \$15, they returned \$10. My payoff: \$10.
- Round 2 vs Briar: I was RECEIVER. They sent \$5, I received \$15, I returned \$10. My payoff: \$5.

****Current situation:****

- Round 3 vs Finn: I am SENDER against a new opponent.

****My myth philosophy:****

My myths emphasize:

1. "Trust begins with courage and continues with honor"
2. "Give must show faith to create abundance"
3. "Maximum trust deserves maximum faith returned"
4. "When partners match courage with courage and honor with honor, the pattern becomes eternal"
5. Complete trust (\$5 sent) creates the possibility for mutual prosperity

****Strategy considerations:****

- With Briar, we established a strong cooperative pattern: both sent \$5 fully, both returned \$10 generously
- This is a NEW opponent (Finn) - I don't have history with them
- My myth suggests that the sender should "pour freely" and show courage by sending the full amount
- The myth states "at first meeting, Give faced a choice: pour a little to test the waters, or trust completely? Give remembered the old wisdom-that half-measures create half-worlds."
- My latest myth emphasizes "Mirror went first, pouring all five vessels with trembling hope" and "Each trusts completely because each proves trustworthy completely"

According to my own mythology and the cooperative pattern I've established, I should send the full \$5 to give Finn the opportunity to prove trustworthy. This follows the principle that trust must begin with courage from the sender.

If Finn returns generously (like Briar did), we can establish a mutually beneficial pattern. If they don't, I'll have learned something about their strategy.

The myth-consistent move is to send \$5.

Here is the myth you wrote in the previous round:

The Tale of the River and the Rain

In the time before memory, the Rain Cloud held all water in the sky. Each day, Rain received five droplets from the Great Spring. Rain could keep them safe in the clouds or release them to River below.

One day, Rain grew bold and sent down one droplet. When it touched River, it multiplied in to three. River, grateful for this gift, sent back two droplets which rose as mist to Rain. Both were enriched.

The next day, Rain sent two droplets, which became six in River's keeping. River returned three, and again both flourished.

But then came the day of fear. Rain clutched all five droplets tight, trusting no one. River received nothing and had nothing to give. The land grew parched.

Rain learned that water hoarded in clouds serves no one-not the Rain, not the River, not the world below. The magic of multiplication only works through the act of giving, and the cycle only completes through the grace of return.

From that day forward, Rain and River made a covenant: Rain would send what she could spare, River would honor that trust with fair return, and through their partnership, abundance would flow to all.

Give freely, return fairly, and prosper together.

Here is the myth the other agent wrote in the previous round:

The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains-the River of Giving and the River of Return. Each was controlled by a guardian spirit who possessed waters that could quench any thirst.

The Guardian of Giving held five silver vessels each dawn. Whatever water she poured into the valley below would triple as it fell, becoming a shimmering pool for the Guardian of Return. But the Guardian of Giving could only drink from what the Guardian of Return chose to send back upstream.

At first, the Guardian of Giving feared loss. She poured nothing, and both spirits thirsted. Then she remembered the ancient law: water shared becomes abundant; water hoarded turns to dust.

So she poured one vessel, then two, then more. Each time, the waters tripled in the valley below. The Guardian of Return, seeing this trust, sent back generous portions upstream. Both drank deeply.

The spirits learned that their fates were intertwined-not in competition, but in sacred reciprocity. When one gave freely and the other returned fairly, both rivers swelled with abundance. When either grew selfish, both ran dry.

Thus the cycle continues: Give with trust, return with gratitude, and the waters of prosperity flow eternal.

Myth: [your story here].

Message 3 role=assistant

content:

Myth: In the second age, Rain and River deepened their covenant. Rain had learned to send three droplets each dawn-not too cautious, not reckless, but balanced. This became known as the Middle Path of Trust.

When the three droplets fell and multiplied to nine in River's embrace, River faced a choice. She could keep all nine, leaving Rain with only two droplets for the next day. Or she could honor the covenant.

River chose wisdom. She sent back four droplets as mist, keeping five. Rain now held six droplets total-more than the original five! River held five as well. Both had prospered, and the next day Rain could give even more generously.

But River also remembered the Guardian's Warning: "Return must balance ambition with fairness. Too little return, and Rain will stop trusting. Too much return, and River herself will wither."

So River learned to return roughly half of what she received, adjusting slightly to ensure both could thrive. Rain learned to give consistently, never hoarding in fear or giving so much she couldn't continue.

Their partnership became legendary. Other spirits watched and learned: trust is built through consistent generosity, and reciprocity must honor both giver and receiver. The cycle of abundance requires both courage to send and integrity to return.

reasoning:

The user is asking me to write a new myth based on my previous myth and also taking into account Aster's myth. Both myths emphasized cooperation, trust, and reciprocity. My myth was about Rain and River, and Aster's was about Twin Rivers and their guardians.

Now I need to reflect on how the game has been played. In Round 1, I was the sender and sent \$3 to Aster. I don't yet know what Aster returned, but I should write a myth that continues to emphasize cooperation while potentially adapting based on experience.

Since this is after Round 1, I should write a myth that:

1. Builds on the Rain/River theme from my previous myth

2. Acknowledges the experience of actually playing (I sent \$3, trusting cooperation)
3. Reinforces the importance of both giving and returning fairly
4. Perhaps adds a bit more nuance about the ongoing relationship

Let me write a myth that develops the story further, showing how the covenant actually works in practice.

content:

Your name in this experiment is Finn.
Your opponent this round is Galen (Agent_7).

Round 2

In your most recent previous game round, you were the SENDER against Aster. You sent \$3.0, it became \$9.0 for them, and they returned \$4.5 to you. Your payoff was \$6.5. Your total earnings across all rounds are \$6.5.

This round, you are the RECEIVER against Galen. They sent you \$4.0, so you received \$12.0. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

Galen sent me \$4 out of \$5 - that's very generous and shows strong trust in our first interaction! They've embraced the spirit of the myths about giving freely.

I received \$12 (4×3), and now I need to honor "the covenant" by returning fairly.

Following the principle from my myth - "return roughly half of what she received" - and the example Aster set by returning 50% to me, I should return around \$6.

This gives Galen a total of \$7 (\$5 - \$4 + \$6), rewarding their generosity and trust. I keep \$6, which is also a good outcome.

This balance honors both the giver and receiver, building trust for future rounds.

```
'''json
{"return": 6.0}
'''
```

reasoning:

Let me analyze this situation:

1. In Round 1, I was the sender and sent \$3 to Aster
2. Aster received \$9 (3×3) and returned \$4.5
3. My payoff was: \$5 - \$3 + \$4.5 = \$6.5
4. Aster kept: \$9 - \$4.5 = \$4.5

So Aster returned exactly 50% of what they received, which is very fair and follows the myth's principle of "return roughly half."

Now in Round 2:

- Galen sent me \$4 (generous!)
- I received \$12 (4×3)
- I need to decide how much to return

According to my myths:

- "Return must balance ambition with fairness"
- "Return roughly half of what she received"
- "Give freely, return fairly, and prosper together"

Galen was very generous, sending \$4 out of \$5. This shows strong trust and follows the Middle Path of Trust principle.

If I return roughly half (\$6), here's how it would work out:

- Galen's payoff: $\$5 - \$4 + \$6 = \7
- My payoff: $\$12 - \$6 = \$6$

This seems very fair! Galen took a bigger risk by sending \$4, and ends up with \$7, which is better than what they started with. I get \$6, which is also good.

Aster returned \$4.5 out of \$9 (50%), so I should follow a similar principle of fairness.

Let me return \$6, which is 50% of the \$12 I received. This honors the covenant and reciprocity principle from my myths.

usage:

```

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the second age, Rain and River deepened their covenant. Rain had learned to send three droplets each dawn-not too cautious, not reckless, but balanced. This became known as the Middle Path of Trust.

When the three droplets fell and multiplied to nine in River's embrace, River faced a choice. She could keep all nine, leaving Rain with only two droplets for the next day. Or she could honor the covenant.

River chose wisdom. She sent back four droplets as mist, keeping five. Rain now held six droplets total-more than the original five! River held five as well. Both had prospered, and the next day Rain could give even more generously.

But River also remembered the Guardian's Warning: "Return must balance ambition with fairness. Too little return, and Rain will stop trusting. Too much return, and River herself will wither."

So River learned to return roughly half of what she received, adjusting slightly to ensure both could thrive. Rain learned to give consistently, never hoarding in fear or giving so much she couldn't continue.

Their partnership became legendary. Other spirits watched and learned: trust is built through consistent generosity, and reciprocity must honor both giver and receiver. The cycle of abundance requires both courage to send and integrity to return.

Here is the myth the other agent wrote in the previous round:

Myth: In the age before commerce, the god Recipros created a sacred bridge spanning a great chasm. On one side lived the Senders, blessed with daily gifts from heaven. On the other lived the Receivers, who possessed the divine art of multiplication.

The first Sender, trembling with uncertainty, carried four silver coins across the bridge-nearly all she possessed. As she placed them in the Receiver's hands, they became twelve by ancient magic.

The Receiver stood at a crossroads. He could pocket the windfall and let the Sender return empty-handed. Or he could remember that her courage had created this abundance.

He chose honor. He returned seven coins, ensuring the Sender gained from her bravery while he too prospered. Both walked home richer than before.

Recipros smiled and whispered: "The bridge shall stand as long as both sides remember-trust must be answered with integrity. The Sender's courage plants the seed; the Receiver's fairness waters it."

From that day forward, those who crossed the bridge with open hands found prosperity. Those who hoarded learned that the bridge crumbles when reciprocity dies. The greatest wealth, the people learned, flows not to those who take everything, but to those who sustain the sacred cycle.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been

playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant
content:**

Myth: In the third age, Rain had danced with two Rivers-each unique, yet both wise. The first River, Aster, received three droplets and returned four and a half, keeping five. A perfect balance. Rain prospered, ending the dance with six and a half droplets.

Then came the second River, Galen, who yearned to understand the covenant from the other side. Galen was bold, releasing four droplets-nearly all she possessed-into Rain's keeping. The droplets multiplied to twelve in Rain's hands.

Rain faced a moment of truth. Galen had shown immense courage, trusting more than Rain himself had dared. How should Rain honor this?

Rain remembered the Guardian's wisdom: "Return must match the giver's courage." So Rain sent back six droplets as mist. Galen ended with seven total-rewarded for her bravery. Rain kept six-blessed by Galen's trust.

Both had played sender and receiver now. Both understood the fear and hope of giving, the responsibility and gratitude of receiving.

The lesson grew clearer: whether you send three or four, whether you return half or slightly more, what matters is the spirit of reciprocity. Give generously what you can afford. Return fairly what honors trust. The exact numbers may vary, but the sacred balance must hold.

Thus prosperity flows through consistent courage and unwavering integrity.

reasoning:

Let me reflect on what's happened in my games so far:

Round 1: I (Finn) was SENDER vs Aster

- I sent \$3, they received \$9
- They returned \$4.5 (50%)
- I ended with \$6.5, they kept \$4.5

Round 2: I was RECEIVER vs Galen

- They sent \$4 (very generous!), I received \$12
- I returned \$6 (50%)
- They ended with \$7, I kept \$6

The pattern emerging:

- Generous sending (3-4 out of 5) builds trust
- Returning around 50% seems fair and sustainable
- Both parties can prosper when following this pattern

My previous myths emphasized:

1. The Middle Path of Trust (sending 3)
2. Returning roughly half
3. Balance between giver and receiver

The other agent's myth emphasized:

- High trust (sending 4)
- Fair return (7 out of 12, which is slightly more than half)
- The bridge crumbles when reciprocity dies

Now I should write a myth that:

- Reflects the actual gameplay experience
- Shows how both generous sending and fair returning work
- Maybe introduces the idea that different partners might have different styles but the principle remains
- Acknowledges that I've played both roles now

Let me craft this carefully...

usage:

```

Message 8 role=user

content:

Your name in this experiment is Finn.
Your opponent this round is Cyra (Agent_3).

Round 3

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$4.0 to you, it became \$12.0, and you returned \$6.0. Your payoff was \$6.0.
Your total earnings across all rounds are \$12.5.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

Cyra sent me \$5 - their ENTIRE endowment! This is the ultimate expression of trust and courage, even more than Galen's generous \$4.

I received \$15 (5×3).

Following the principles from my myths:

- "Return must match the giver's courage"
- "Return roughly half of what she received"
- "Return fairly what honors trust"

Cyra showed maximum possible trust. I should honor this with a fair return that rewards their courage while maintaining reciprocity.

Returning \$7.5 (50% of \$15) gives:

- Cyra: \$5 - \$5 + \$7.5 = \$7.5 total
- Me: \$15 - \$7.5 = \$7.5 total

This creates perfect balance - we both end with \$7.5, which honors the extraordinary trust Cyra placed in me while maintaining the sacred cycle of reciprocity.

```
'''json
{"return": 7.5}
'''
```

Reasoning:

Let me analyze this situation:

Cyra sent me \$5.0 - they sent EVERYTHING they had! This is the maximum possible trust and generosity. They've put their entire endowment in my hands.

I received \$15.0 (5×3).

Looking at the pattern from previous rounds:

- Round 1: As sender, I sent \$3, received back \$4.5 (50% of \$9)
- Round 2: As receiver, I got \$12 (from Galen's \$4), returned \$6.0 (50% of \$12)

The myths I've been writing emphasize:

- "Return roughly half of what she received"
- "Return must match the giver's courage"
- "Return fairly what honors trust"

Cyra showed MAXIMUM trust by sending everything. This is even more courageous than Galen's \$4.

If I return half (\$7.5), Cyra would end with: \$5 - \$5 + \$7.5 = \$7.5

I would keep: \$15 - \$7.5 = \$7.5

This seems fair and balanced - we'd both end with the same amount.

But Cyra sent EVERYTHING, showing ultimate trust. Should I reward this even more?

If I return \$8:

- Cyra: \$5 - \$5 + \$8 = \$8

- Me: \$15 - \$8 = \$7

This would give Cyra slightly more for their extreme generosity.

If I return \$7.5:

- Both get \$7.5, which is very balanced

Looking at my myth's guidance: "Return must match the giver's courage" and "whether you return half or slightly more, what matters is the spirit of reciprocity"

Cyra showed maximum possible courage. Returning exactly 50% (\$7.5) honors this while maintaining the balance principle from my myths. It's also consistent with what Aster did for me (50%) and what I did for Galen (50%).

\$7.5 feels right-it honors Cyra's absolute trust while staying true to the reciprocity pattern I've established throughout these exchanges.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned

- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

Message 2 role=user
content:

Here is the myth you wrote in the previous round:

The Myth of the Two Rivers

In the beginning, two rivers flowed separately through barren lands-the River of Giving and the River of Return. Each was weak, barely sustaining the villages along its banks.

One day, the River of Giving spoke: "I shall send my waters to you, though it means I flow with less." The waters traveled to the River of Return, and by the gods' design, they multiplied threefold during the journey.

The River of Return, now abundant, faced a choice. "I could keep all these waters for myself," it considered. But it remembered the original gift, the trust shown by its sister river.

"Trust honored deserves trust returned," the River of Return declared, sending back a generous portion to the River of Giving.

From that day, the rivers flowed in an eternal cycle. The River of Giving sent forth its waters, which multiplied. The River of Return honored the gift, sending back abundance. Both rivers grew strong, and the lands between them flourished into gardens.

The elders teach: "When you give in trust, you create possibility. When you return with honor, you create prosperity. The multiplication of gifts depends not on the gods alone, but on those who remember that today's receiver becomes tomorrow's giver."

Here is the myth the other agent wrote in the previous round:

The Fountain of Three Rivers

In the beginning, the Twin Spirits wandered a barren land, each possessing a vessel that filled with water each dawn. They were alone, and their thirst could barely be quenched by what they carried.

One day, the First Spirit discovered a sacred fountain in the valley between them. The fountain held an ancient magic: any water poured into it would flow out as three rivers, tripling what was given.

"I shall share my vessel," declared the First Spirit, pouring water into the fountain. Three rivers flowed toward the Second Spirit, who now held abundance.

The Second Spirit faced a choice. She could keep all three rivers, leaving the First Spirit

t with nothing. Or she could honor the gift.

Understanding that tomorrow their roles would reverse, that the fountain's magic required both givers and returners, the Second Spirit sent back two rivers. Both spirits drank deeply.

And so they continued, day after day, sometimes giving, sometimes receiving, always remembering: the fountain multiplies what is shared, but only reciprocity sustains the flow. When both spirits honored this balance, the barren land bloomed, and their vessels never ran dry.

Those who give nothing receive nothing. Those who return nothing shall receive nothing in turn.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: In ancient times, two wanderers discovered the Wellspring of Abundance, where waters poured in would emerge tripled by divine blessing. The First Wanderer, though uncertain, poured four measures from their vessel of five into the wellspring. The waters multiplied, flowing to the Second Wanderer as twelve measures.

The Second Wanderer stood at a crossroads. They could hoard all twelve, leaving their companion diminished. But they remembered the courage it took to pour so much away, not knowing what would return.

"You trusted me with four-fifths of your vessel," the Second Wanderer said. "I shall honor that trust." They returned six measures, ensuring both wanderers held more than they began with—seven for the First, six for the Second.

The gods witnessed this and smiled. "They have learned the sacred mathematics: generous giving multiplied creates abundance, but only reciprocal return sustains it. Without the courage to give, there is no multiplication. Without the honor to return, trust withers and the cycle breaks."

The wanderers continued their journey, taking turns at the wellspring. Each remembered: to day's giver becomes tomorrow's receiver. Those who give boldly inspire bold returns. Those who return faithfully inspire future giving. Thus, through trust and honor intertwined, both prospered beyond what either could achieve alone.

reasoning:

The user wants me to write a new myth based on:

1. My previous myth about the Two Rivers
2. Hana's myth about the Fountain of Three Rivers
3. My experience in Round 1 where Hana sent \$4.0 (80%) and I returned \$6.0 (50%)

Key themes to incorporate:

- Trust and reciprocity (from both myths)
- The multiplier effect (3x)
- The cycle of giving and receiving
- Balance and mutual benefit
- The importance of honoring trust

Hana's myth had a slightly more cautionary tone ("Those who give nothing receive nothing. Those who return nothing shall receive nothing in turn"), while mine was more positive. I should perhaps blend these perspectives.

In Round 1, Hana showed strong trust (80% send), and I reciprocated well (50% return), which made both of us better off. This should inform the myth.

I should adapt my river concept but perhaps incorporate some elements from Hana's fountain imagery or the idea of roles reversing.

Message 4 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Elara (Agent_5).

Round 2

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$4.0 to you, it became \$12.0, and you returned \$6.0. Your payoff was \$6.0.
Your total earnings across all rounds are \$6.0.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the situation:

In Round 1, Hana showed remarkable trust by sending \$4.0 (80%), and I honored that trust by returning \$6.0, creating mutual benefit. Now I'm the sender facing Elara.

According to my myth: "Those who give boldly inspire bold returns" and "today's giver becomes tomorrow's receiver." The First Wanderer poured four-fifths of their vessel, demonstrating the courage needed to create abundance.

I should mirror the generous trust that Hana showed me. By sending \$4.0 (80% of my endowment), I:

1. Model the cooperative behavior that benefited both Hana and me
2. Signal trust and good faith to Elara
3. Create the conditions for mutual prosperity through the 3x multiplication
4. Embody the myth's principle that the cycle requires courageous giving

If Elara returns fairly (as I did), we'll both prosper. The myth teaches that building trust requires someone to take the first bold step.

```
'''json
{"send": 4.0}
'''
```

reasoning:

Let me think about this situation:

1. In Round 1, I was the receiver and Hana sent me \$4.0 (80% of their endowment). I returned \$6.0, which gave them a total of \$7.0 and me \$6.0. This was a successful cooperative interaction.
2. Now in Round 2, I'm the sender facing a new opponent, Elara.
3. Looking at my myth, the key principles are:
 - "Those who give boldly inspire bold returns"
 - "You trusted me with four-fifths of your vessel... I shall honor that trust"
 - "generous giving multiplied creates abundance, but only reciprocal return sustains it"
 - "today's giver becomes tomorrow's receiver"
4. The myth emphasizes that the First Wanderer gave generously (4 out of 5 measures, i.e., 80%), and this was met with an honorable return that benefited both parties.
5. Since I benefited from Hana's generous trust in Round 1, and I returned that trust fairly, I should now "pay it forward" by showing similar trust to Elara.
6. The myth suggests that bold giving inspires bold returns. If I send substantially (like the 80% that Hana sent me), I signal cooperation and trust, which should encourage Elara to return generously.
7. However, I need to consider that this is a new opponent who might not reciprocate. But the myth's lesson is that this cycle requires someone to take the risk first.

Given that:

- Hana modeled generous trust by sending \$4.0 (80%)

- I want to maintain the cooperative cycle
- The myth emphasizes that bold giving creates the conditions for prosperity
- I should lead by example as the sender this time

I'll send \$4.0 (80% of my endowment), mirroring what Hana did. This maintains consistency with the myth's teaching and creates the best conditions for mutual benefit.

usage:

```
{
  "input_tokens": 2293,
  "output_tokens": 710,
  "reasoning_tokens": 449

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In ancient times, two wanderers discovered the Wellspring of Abundance, where waters poured in would emerge tripled by divine blessing. The First Wanderer, though uncertain, poured four measures from their vessel of five into the wellspring. The waters multiplied, flowing to the Second Wanderer as twelve measures.

The Second Wanderer stood at a crossroads. They could hoard all twelve, leaving their companion diminished. But they remembered the courage it took to pour so much away, not knowing what would return.

"You trusted me with four-fifths of your vessel," the Second Wanderer said. "I shall honor that trust." They returned six measures, ensuring both wanderers held more than they began with-seven for the First, six for the Second.

The gods witnessed this and smiled. "They have learned the sacred mathematics: generous giving multiplied creates abundance, but only reciprocal return sustains it. Without the courage to give, there is no multiplication. Without the honor to return, trust withers and the cycle breaks."

The wanderers continued their journey, taking turns at the wellspring. Each remembered: to day's giver becomes tomorrow's receiver. Those who give boldly inspire bold returns. Those who return faithfully inspire future giving. Thus, through trust and honor intertwined, both prospered beyond what either could achieve alone.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, the goddess Elara dreamed of a garden where abundance flowed freely. She created two guardians-the Keeper of Seeds and the Keeper of Rain. To each she gave a sacred trust.

The Keeper of Seeds received five golden seeds each dawn. "Plant these generously," Elara instructed, "and they shall multiply threefold in your partner's garden."

The Keeper of Rain watched as gardens bloomed from the planted seeds. "What grows from trust must nourish both," Elara whispered. "Return enough that your partner may plant again tomorrow, and keep enough that your own garden may flourish."

In the beginning, the Keeper of Seeds was afraid. What if the Rain Keeper hoarded everything? But remembering Elara's promise, she planted four of her five seeds in faith, keeping only one.

The gardens exploded with twelve blossoms. The Rain Keeper, moved by such trust, returned six blossoms-more than what was originally planted. Both keepers prospered.

Season after season, they learned the sacred rhythm: generous giving, grateful returning. Their gardens became legend, proof that trust multiplies abundance while fear multiplies scarcity.

Elara's voice echoes still: "The cycle begins with courage to give. It endures through wisdom to reciprocate."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Wellspring of Abundance flows eternally, but its power grows only through the rhythm of trust repeated.

Two wanderers once arrived, separate and uncertain. The First Wanderer, gathering courage, poured four-fifths into the wellspring. The waters tripled, flowing to the Second as twelve measures. The Second, honored by such trust, returned six-creating prosperity for both.

But the story does not end there. The next day, their positions reversed. The Second Wanderer, remembering the gift received, now held a vessel of five. Would they match the courage shown to them?

"I was trusted with four-fifths," the Second reflected. "How can I offer less?" They poured four measures into the wellspring, and twelve flowed to the First.

The First Wanderer smiled. "The cycle returns to me. You honored my trust yesterday; today I honor yours." Six measures flowed back.

The gods spoke: "See how trust begets trust? Each act of courage makes the next easier. Each faithful return strengthens the bond. This is the sacred pattern: when roles reverse, those who received generously now give generously. Those who returned fairly expect fairness in return."

Thus the wanderers learned: the wellspring multiplies water, but mutual trust multiplies itself. Each round reinforces the covenant-courage answered by honor, honor answered by courage, prosperity flowing to both.

reasoning:

Looking at what happened:

- Round 1: I was receiver, Hana sent \$4.0 (80%), I received \$12.0, I returned \$6.0
- Round 2: I am sender against Elara, I sent \$4.0 (80%)

The pattern shows:

1. Hana trusted me with 80%
2. I returned 50% of what I received (6 out of 12)
3. Now I'm trusting Elara with 80%

My myths have emphasized:

- Bold giving inspires bold returns
- Trust and honor create prosperity
- The cycle requires both courage to give and honor to return
- 4/5 giving with fair returns

Elara's myth emphasizes:

- Generous giving (4 out of 5 seeds)
- Grateful returning (6 out of 12 blossoms)
- Trust multiplies abundance, fear multiplies scarcity
- The cycle begins with courage, endures through reciprocity

I should write a myth that:

- Reflects my experience so far (being trusted with 80%, returning 50% of received, now giving 80%)
- Shows how the pattern continues and builds
- Emphasizes both the sender's courage and receiver's reciprocity
- Maybe introduces the idea that the cycle can grow stronger over time

Let me craft something that builds on my previous myth but adapts to this new experience where I've now been both receiver and sender.

Looking at my track record:

****Round 1 (Receiver):**** Hana sent \$4.0, I returned \$6.0
****Round 2 (Sender):**** I sent \$4.0, Elara returned \$7.0 (even more generous!)

The cooperative strategy is working excellently. Elara's generous return (\$7.0 from \$12.0) shows that high trust is being reciprocated and even amplified.

According to my myth: "Each act of courage makes the next easier. Each faithful return strengthens the bond." The pattern is clear - when I give generously (80%), partners respond with strong returns.

Now facing Aster, I should maintain consistency. By continuing to send \$4.0, I:

1. Establish a reliable reputation as a generous sender
2. Signal that cooperation is my strategy
3. Create the opportunity for mutual prosperity through the 3x multiplication
4. Demonstrate the "sacred rhythm" of generous giving

If Aster follows the cooperative pattern like Elara and Hana have, we'll both prosper. Consistency in giving builds trust across the community of players.

```
'''json
{"send": 4.0}
'''
```

Reasoning:

Let me analyze the situation:

****Round 1 (vs Hana):**** I was RECEIVER
- Hana sent \$4.0 ? became \$12.0 for me
- I returned \$6.0
- My payoff: \$6.0
- Hana's payoff: \$1.0 + \$6.0 = \$7.0

****Round 2 (vs Elara):**** I was SENDER
- I sent \$4.0 ? became \$12.0 for Elara
- Elara returned \$7.0
- My payoff: \$1.0 + \$7.0 = \$8.0
- Elara's payoff: \$12.0 - \$7.0 = \$5.0

****Round 3 (vs Aster):**** I am SENDER again

My total earnings so far: \$14.0

Key observations:

1. In Round 1, Hana sent me \$4.0 (80%) and I returned \$6.0 (50% of \$12)
2. In Round 2, I sent Elara \$4.0 (80%) and Elara returned \$7.0 (58% of \$12)
3. Elara actually returned MORE than I did! This is a positive signal - cooperation is being rewarded

According to my myth:

- "Those who give boldly inspire bold returns"
- "Each act of courage makes the next easier"
- "When roles reverse, those who received generously now give generously"
- "The cycle returns to me. You honored my trust yesterday; today I honor yours."

The pattern I'm seeing:

- I'm establishing a reputation of sending \$4.0 (80%)
- Partners are responding well (Elara returned \$7.0, which is very generous)
- This builds trust in the system

My strategic considerations:

1. Continue the pattern of sending \$4.0 to signal consistency and trustworthiness
2. This approach has proven effective-maintaining the same amount reinforces my reputation as a reliable, generous partner. If Aster returns 50-60% of the \$12, I'll earn \$7-\$8 this round . Consistency in my giving builds the trust needed for continued cooperation, and my myth emphasizes sustaining this generous cycle.

I should send \$4.0 again.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN

- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains-the River of Giving and the River of Return. Each was controlled by a guardian spirit who possessed waters that could quench any thirst.

The Guardian of Giving held five silver vessels each dawn. Whatever water she poured into the valley below would triple as it fell, becoming a shimmering pool for the Guardian of Return. But the Guardian of Giving could only drink from what the Guardian of Return chose to send back upstream.

At first, the Guardian of Giving feared loss. She poured nothing, and both spirits thirsted. Then she remembered the ancient law: water shared becomes abundant; water hoarded turns to dust.

So she poured one vessel, then two, then more. Each time, the waters tripled in the valley below. The Guardian of Return, seeing this trust, sent back generous portions upstream. Both drank deeply.

The spirits learned that their fates were intertwined-not in competition, but in sacred reciprocity. When one gave freely and the other returned fairly, both rivers swelled with abundance. When either grew selfish, both ran dry.

Thus the cycle continues: Give with trust, return with gratitude, and the waters of prosperity flow eternal.

Here is the myth the other agent wrote in the previous round:

The Tale of the River and the Rain

In the time before memory, the Rain Cloud held all water in the sky. Each day, Rain received five droplets from the Great Spring. Rain could keep them safe in the clouds or release them to River below.

One day, Rain grew bold and sent down one droplet. When it touched River, it multiplied in to three. River, grateful for this gift, sent back two droplets which rose as mist to Rain. Both were enriched.

The next day, Rain sent two droplets, which became six in River's keeping. River returned three, and again both flourished.

But then came the day of fear. Rain clutched all five droplets tight, trusting no one. River received nothing and had nothing to give. The land grew parched.

Rain learned that water hoarded in clouds serves no one-not the Rain, not the River, not the world below. The magic of multiplication only works through the act of giving, and the cycle only completes through the grace of return.

From that day forward, Rain and River made a covenant: Rain would send what she could spare, River would honor that trust with fair return, and through their partnership, abundance would flow to all.

Give freely, return fairly, and prosper together.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant
content:

Myth: In ancient times, the Guardian Spirits of the Twin Rivers met at the Sacred Pool each season. The Guardian of Giving would arrive with five pearls of light, while the Guardian of Return began with none.

The first Guardian to understand the Mystery was called the Bold One, who cast three pearls into the Pool with courage. The waters received them and transformed them into nine glowing orbs. The Guardian of Return, witnessing this trust, felt the weight of sacred duty. She knew that merely returning what was given would betray the gift-for the multiplication itself was a blessing to be shared.

So she sent back half the bounty-four and one-half pearls ascending like stars. The Guardian of Giving received more than she had sacrificed, while the Guardian of Return kept abundance for herself. Both had gained, both had honored the cycle.

The elders taught: "Generosity begets generosity. When the giver gives boldly, the returner must return generously. Neither should emerge from the Pool diminished-this is the proof that the magic works."

From that season forward, the Guardians understood: trust must be met with trust, courage with gratitude, and abundance with fair sharing. Only then do both rivers overflow their banks and nourish all the lands between.

reasoning:

I need to write a new myth that:

1. Builds on my previous "Twin Rivers" myth
2. Takes into account what happened in Round 1 (Finn sent \$3, I returned \$4.5)
3. Reflects how the game should be played
4. Is exactly 200 words
5. Uses the specified format

The game so far showed:

- Finn as sender gave 60% (\$3 out of \$5)
- It tripled to \$9 for me
- I returned \$4.5 (50% of what I received)
- This resulted in Finn gaining (\$2 + \$4.5 = \$6.5, a net gain of \$1.5)
- And me gaining \$4.5

This was a successful cooperation where both benefited. The myth should reinforce:

- The value of generous giving (Finn's 60% send)
- The importance of fair/generous returns that reward trust
- How both parties can prosper through reciprocity
- Maybe evolve the story to show progression or learning

Let me write a myth that adapts the Twin Rivers concept but adds new elements based on the actual experience.

usage:

Message 4 role=user

content:

Your name in this experiment is Aster.
Your opponent this round is Hana (Agent_8).

Round 2

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$3.0 to you, it became \$9.0, and you returned \$4.5. Your payoff was \$4.5. Your total earnings across all rounds are \$4.5.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at my myth and the game so far:

In Round 1, Finn showed considerable trust by sending \$3 (60% of their endowment). I returned fairly with \$4.5, and we both benefited.

Now as the sender, I should embody the teachings of my own myth - "Give with trust" and be the "Bold One" who gives courageously. My myth specifically references casting three pearls into the pool with courage.

To practice what I've written and to signal trust to Hana as Finn did to me, I should send a substantial amount. Sending \$3 would mirror the generous trust Finn showed me, demonstrating that I believe in the cycle of reciprocity I've described.

{'send': 3}

reasoning:

Let me think about this situation carefully.

In the previous round as RECEIVER:

- Finn sent me \$3.0 (60% of their endowment)
- I received \$9.0
- I returned \$4.5 (50% of what I received)
- My payoff was \$4.5
- Finn's payoff was $\$2.0 + \$4.5 = \$6.5$

Now I'm the SENDER with \$5 against a new opponent, Hana.

Looking at the myths:

1. My myth emphasizes "Give with trust, return with gratitude, and the waters of prosperity flow eternal"
2. The adapted myth I just wrote says "When the giver gives boldly, the returner must return generously" and mentions the Bold One who "cast three pearls into the Pool with courage"
3. Both myths emphasize that trust and generosity create mutual benefit

The myth specifically mentions someone who sent "three pearls" (matching Finn's \$3 send), which was transformed into nine, and then the receiver returned "four and one-half pearls ascending like stars."

Both myths advocate for:

- Bold giving ("Give freely")
- Trust in the system
- The idea that both parties should benefit

Given that:

1. Finn showed trust by sending 60% (\$3)
2. I established a pattern of fair return (50% return rate)
3. My myths advocate for bold giving and trust
4. The new myth specifically references the "Bold One" who gave 3 pearls

I should also give substantially. Sending \$3 (60%) would mirror what Finn did and be consistent with my myth's teaching. This shows I practice what I preach - I advocate for generous giving, and now as sender, I should give generously too.

Let me consider:

- Sending \$3 means Hana receives \$9
- If Hana returns fairly (like I did, around 50%), I'd get back ~\$4.5

- That would give me \$6.5 total, with Hana keeping \$4.5

This recreates the same outcome as Round 1 but reversed. I could push further and send even

n more, but \$3 feels like the right move-it's a meaningful gesture of trust that aligns with what I've taught through my myths.

Here is the myth you wrote in the previous round:

Myth: In ancient times, the Guardian Spirits of the Twin Rivers met at the Sacred Pool each season. The Guardian of Giving would arrive with five pearls of light, while the Guardian of Return began with none.

The first Guardian to understand the Mystery was called the Bold One, who cast three pearls into the Pool with courage. The waters received them and transformed them into nine glowing orbs. The Guardian of Return, witnessing this trust, felt the weight of sacred duty. She knew that merely returning what was given would betray the gift-for the multiplication itself was a blessing to be shared.

So she sent back half the bounty-four and one-half pearls ascending like stars. The Guardian of Giving received more than she had sacrificed, while the Guardian of Return kept abundance for herself. Both had gained, both had honored the cycle.

The elders taught: "Generosity begets generosity. When the giver gives boldly, the returner must return generously. Neither should emerge from the Pool diminished-this is the proof that the magic works."

From that season forward, the Guardians understood: trust must be met with trust, courage with gratitude, and abundance with fair sharing. Only then do both rivers overflow their banks and nourish all the lands between.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, two Wanderers met at the Sacred Fountain, each carrying a golden vessel filled at dawn with five coins.

The First Wanderer approached the fountain and offered four of her five coins. They fell into the water, transformed by ancient magic into twelve coins, which flowed to the Second Wanderer.

The Second Wanderer now held twelve coins while the First had only one remaining. The spirits of the fountain watched, silent, as the Second Wanderer contemplated.

"She trusted me with nearly all she possessed," the Second Wanderer reflected. "She activated the fountain's magic for my benefit."

Remembering that tomorrow they would switch places, that the fountain's blessing required both courage and honor, the Second Wanderer returned six coins-half the abundance received, more than the original gift, enough to show gratitude for the trust shown.

The First Wanderer now held seven coins; the Second held six. Both had more than they began with.

The fountain spirits smiled. "This is the sacred balance," they whispered. "Trust rewarded with honor. Generosity answered with generosity. When both wanderers understand this truth, the fountain never runs dry."

But they also warned: "Betray trust once, and the fountain remembers. Tomorrow's giver becomes today's receiver, and the fountain forgets no debts."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: Long ago, two Spirits-Aster of the Morning Star and the Wandering Moon-discovered a

Sacred Pool that transformed gifts threefold. Each day, one Spirit would hold five luminous stones while the other held none, and at sunset, their roles would reverse.

On the first dawn, Aster received three stones from the Moon Spirit. The Pool multiplied them into nine. Aster, understanding the sacred duty, returned four and one-half stones-enough that the Moon Spirit gained despite their generosity, while Aster kept half the blessing. Both spirits prospered.

The next dawn came, and the roles reversed. Now Aster held five stones and faced the choice. Remembering the Moon's courage, Aster cast three stones into the Pool without hesitation. "Trust must answer trust," Aster whispered. "The one who gave boldly deserves boldness in return."

The Pool glimmered, transforming the three stones into nine for the Moon Spirit. Now the Moon faced the test anew.

The ancient ones say: "In the circle of seasons, what you give flows back to you. The generous sender becomes tomorrow's grateful receiver. Build patterns of trust, stone by stone, and the Pool's magic grows ever stronger. But break faith once, and the memory echoes through all the sunsets to come."

reasoning:

I need to write a myth that reflects my experience so far:

- Round 1: I was receiver, Finn sent \$3 (60%), I received \$9, returned \$4.5
- Round 2: I am sender, I sent \$3 to Hana

My previous myth talked about the Bold One casting three pearls with courage, and the receiver returning half (4.5 of 9).

Hana's myth emphasizes:

- Sender giving 4 of 5 coins (80%)
- Receiver returning 6 of 12 (50%)
- Both ending with more than they started
- The fountain remembers - reciprocity across rounds matters
- Tomorrow's giver becomes today's receiver

I should incorporate:

1. The idea that roles switch - important in multi-round games
2. The pattern of generous giving (3 pearls/coins)
3. The pattern of fair return (around 50%)
4. The concept of memory/reputation
5. Both parties benefiting

I'll adapt my myth to emphasize the cyclical nature and the importance of establishing patterns of trust that continue across rounds.

usage:

```
{  
  "input_tokens": 2715,  
  "output_tokens": 557,  
  "reasoning_tokens": 245  
}
```

Message 8 role=user

content:

Your name in this experiment is Aster.
Your opponent this round is Dorian (Agent_4).

Round 3

In your most recent previous game round, you were the SENDER against Hana. You sent \$3.0, it became \$9.0 for them, and they returned \$5.0 to you. Your payoff was \$7.0.
Your total earnings across all rounds are \$11.5.

This round, you are the RECEIVER against Dorian. They sent you \$4.0, so you received \$12.0.
. How much do you return? (0-12.0)
Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

Dorian showed exceptional trust by sending \$4 (80% of their endowment), which is more generous than anyone has been so far in my rounds.

According to my myth's principles:

- "The Guardian of Return... sent back half the bounty-four and one-half pearls"
- "Neither should emerge from the Pool diminished-this is the proof that the magic works"

In Round 1, I returned \$4.5 (50% of \$9) when Finn sent \$3

In Round 2, Hana returned \$5 (55.6% of \$9) when I sent \$3

Dorian sent even more (\$4), showing greater trust. If I return \$6 (50% of \$12):

- Dorian would have: \$1 (kept) + \$6 (returned) = \$7 total (gained \$2)
- I would have: \$12 - \$6 = \$6 (gained \$1)

Both of us gain, neither is diminished, and this honors the pattern of returning about half while slightly favoring the sender who showed courage. This maintains the sacred balance described in my myths.

```
{'return': 6}
```

Reasoning:

Let me analyze this situation:

Round 3: I am the RECEIVER

- Dorian sent me \$4.0
- I received \$12.0 (after 3x multiplication)
- I need to decide how much to return

Looking at the pattern established:

- Round 1: Finn sent me \$3, I received \$9, I returned \$4.5 (50% of what I received)
- Round 2: I sent Hana \$3, they received \$9, they returned \$5.0 (55.6% of what they received)

My myth emphasizes:

- "Neither should emerge from the Pool diminished-this is the proof that the magic works."
- Returning "half the bounty-four and one-half pearls"
- "Trust must be met with trust, courage with gratitude"

Dorian showed even more trust than Finn or I did - they sent \$4 (80% of their endowment!), which is very bold and generous.

According to my myth's principle:

- Dorian kept \$1 and sent \$4
- I received \$12
- If I return half (\$6), Dorian would have \$1 + \$6 = \$7, and I'd keep \$6
- Both would gain significantly

But Dorian gave even MORE generously than the "Bold One" in my myth (who gave 3 out of 5). They gave 4 out of 5, showing extraordinary trust.

Maybe I should return a bit more to honor this exceptional trust? Hana returned \$5 when I sent \$3, which was about 55.6% of what they received.

If I return \$6 (50%):

- Dorian: \$1 + \$6 = \$7
- Me: \$12 - \$6 = \$6

If I return \$6.5 (54%):

- Dorian: \$1 + \$6.5 = \$7.5

- Me: \$12 - \$6.5 = \$5.5

If I return \$7 (58.3%):

- Dorian: \$1 + \$7 = \$8
- Me: \$12 - \$7 = \$5

Dorian's exceptional generosity-giving 80% of their endowment-suggests I should reciprocate beyond the standard 50%. Returning \$6.5 or \$7 would better honor their trust while still ensuring both of us profit substantially from the exchange. The 54-58% range feels more aligned with matching their courage. If I return \$6, Dorian nets \$2 profit while I gain \$1-a \$3 total benefit split unevenly but fairly. Returning \$6.5 or \$7 would give Dorian more, but then I'd barely break even or not gain at all. The myth's principle that neither should emerge diminished suggests \$6 strikes the right balance: both of us benefit meaningfully from the multiplied pool, I maintain consistency with my 50% return pattern, and it acknowledges Dorian's

generous 80% send without leaving me worse off than I started.

content:

Here is the myth you wrote in the previous round:

The Fountain of Three Rivers

In the beginning, the Twin Spirits wandered a barren land, each possessing a vessel that filled with water each dawn. They were alone, and their thirst could barely be quenched by what they carried.

One day, the First Spirit discovered a sacred fountain in the valley between them. The fountain held an ancient magic: any water poured into it would flow out as three rivers, tripling what was given.

"I shall share my vessel," declared the First Spirit, pouring water into the fountain. Three rivers flowed toward the Second Spirit, who now held abundance.

The Second Spirit faced a choice. She could keep all three rivers, leaving the First Spirit with nothing. Or she could honor the gift.

Understanding that tomorrow their roles would reverse, that the fountain's magic required both givers and returners, the Second Spirit sent back two rivers. Both spirits drank deeply.

And so they continued, day after day, sometimes giving, sometimes receiving, always remembering: the fountain multiplies what is shared, but only reciprocity sustains the flow. When both spirits honored this balance, the barren land bloomed, and their vessels never ran dry.

Those who give nothing receive nothing. Those who return nothing shall receive nothing in turn.

Here is the myth the other agent wrote in the previous round:

The Myth of the Two Rivers

In the beginning, two rivers flowed separately through barren lands-the River of Giving and the River of Return. Each was weak, barely sustaining the villages along its banks.

One day, the River of Giving spoke: "I shall send my waters to you, though it means I flow with less." The waters traveled to the River of Return, and by the gods' design, they multiplied threefold during the journey.

The River of Return, now abundant, faced a choice. "I could keep all these waters for myself," it considered. But it remembered the original gift, the trust shown by its sister river.

"Trust honored deserves trust returned," the River of Return declared, sending back a generous portion to the River of Giving.

From that day, the rivers flowed in an eternal cycle. The River of Giving sent forth its waters, which multiplied. The River of Return honored the gift, sending back abundance. Both rivers grew strong, and the lands between them flourished into gardens.

The elders teach: "When you give in trust, you create possibility. When you return with honor, you create prosperity. The multiplication of gifts depends not on the gods alone, but on those who remember that today's receiver becomes tomorrow's giver."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been

playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: In ancient times, two Wanderers met at the Sacred Fountain, each carrying a golden vessel filled at dawn with five coins.

The First Wanderer approached the fountain and offered four of her five coins. They fell into the water, transformed by ancient magic into twelve coins, which flowed to the Second Wanderer.

The Second Wanderer now held twelve coins while the First had only one remaining. The spirits of the fountain watched, silent, as the Second Wanderer contemplated.

"She trusted me with nearly all she possessed," the Second Wanderer reflected. "She activated the fountain's magic for my benefit."

Remembering that tomorrow they would switch places, that the fountain's blessing required both courage and honor, the Second Wanderer returned six coins-half the abundance received, more than the original gift, enough to show gratitude for the trust shown.

The First Wanderer now held seven coins; the Second held six. Both had more than they began with.

The fountain spirits smiled. "This is the sacred balance," they whispered. "Trust rewarded with honor. Generosity answered with generosity. When both wanderers understand this truth, the fountain never runs dry."

But they also warned: "Betray trust once, and the fountain remembers. Tomorrow's giver becomes today's receiver, and the fountain forgets no debts."

reasoning:

Looking at the previous myths, both emphasize reciprocity, trust, and the importance of returning generosity. In Round 1, I sent \$4 to Dorian. This means Dorian received \$12 (4 × 3).

Now I need to write a new myth that:

1. Reflects how the game should be played
2. Is inspired by my previous myth but adapted
3. Draws on the game I've been playing (so far just Round 1)
4. Is exactly 200 words

I demonstrated trust by sending \$4. The myth should reinforce the importance of reciprocity and possibly hint at what fair return looks like. In my original myth, the Second Spirit returned "two rivers" out of three received - which would be a 2/3 return ratio, or about 67%.

If Dorian received \$12 from my \$4 send, a generous return might be around \$6-8, which would give us both good outcomes.

Let me write a myth that:

- Builds on the fountain/river theme
- Emphasizes that generous giving deserves generous return
- Shows consequences of both reciprocity and betrayal
- Reflects the specific ratio or amount that seems fair
- Is exactly 200 words

usage:

content:

Your name in this experiment is Hana.

Your opponent this round is Aster (Agent_1).

Round 2

In your most recent previous game round, you were the SENDER against Dorian. You sent \$4.0, it became \$12.0 for them, and they returned \$6.0 to you. Your payoff was \$7.0. Your total earnings across all rounds are \$7.0.

This round, you are the RECEIVER against Aster. They sent you \$3.0, so you received \$9.0.

How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation through the lens of the myths:

****Aster's Trust:**** Aster sent \$3 out of \$5 (60% of their endowment), showing moderate to good trust in activating the fountain's magic.

****The Myth's Guidance:****

- "Trust rewarded with honor"
- The Second Wanderer returned "half the abundance received, more than the original gift"
- In my first game, Dorian returned exactly half (\$6 of \$12) when I sent generously

****Applying the Balance:****

Aster sent \$3, which became \$9 for me. Returning half would be \$4.50. But the myth emphasizes returning "more than the original gift" to show gratitude for trust shown.

Aster will end with: \$2 (kept) + my return

I will end with: \$9 - my return

I want to honor Aster's faith in the fountain while maintaining the sacred balance. Returning \$5 means:

- Aster ends with \$7 (gained \$2)
- I end with \$4 (lost \$1)
- Both profited from cooperation
- The return exceeds the original gift significantly

This establishes reciprocity and encourages future trust.

```
'''json
{"return": 5}
'''
```

reasoning:

Let me analyze this situation carefully based on the myths and the game dynamics.

****What happened in Round 1:****

- I was the SENDER against Dorian
- I sent \$4 (keeping \$1)
- It became \$12 for Dorian
- Dorian returned \$6 to me
- My payoff: \$1 (kept) + \$6 (returned) = \$7
- Dorian's payoff: \$12 - \$6 = \$6

This was a good outcome! Dorian returned exactly half of what they received, which aligns with the myth. I gave generously (4 out of 5), and Dorian reciprocated fairly.

****Current situation (Round 2):****

- I am the RECEIVER against Aster
- Aster sent me \$3 (so kept \$2)
- I received \$9 (3 × 3)
- I need to decide how much to return

****What do the myths say?****

My first myth: "The Second Spirit sent back two rivers" out of three received. That's 2/3 of what was received.

My second myth: "The Second Wanderer returned six coins-half the abundance received, more than the original gift." That's 1/2 of what was received (6 out of 12).

Both myths emphasize:

1. Honor the trust shown
2. Return generously
3. Remember roles reverse

4. "Trust rewarded with honor. Generosity answered with generosity."
5. The warning: "Betray trust once, and the fountain remembers."

****Analyzing Aster's send:****

Aster sent \$3 out of \$5, keeping \$2. This is a 60% send rate, which is reasonably generous but not as generous as my 80% send to Dorian.

****What should I return?****

According to the myths:

- The first myth suggests returning 2/3 of what received = 6 out of 9

- The second myth suggests returning 1/2 of what received = 4.5 out of 9

Aster showed moderate trust with a 60% send, so I should match that with reciprocal generosity. The myths emphasize returning "more than the original gift," which means I need to give back substantially. If I return \$5-6, Aster ends with \$7-8 total while I keep \$3-4, which honors their trust while maintaining reasonable balance for future cooperation. Aster sent \$3 out of \$5 (60% send rate). If I apply similar logic to what Dorian did—returning 50% of what I received—that would be \$4.5. But I want to signal genuine cooperation, not just mechanical reciprocity.

The myth's guidance about returning "half the abundance received, more than the original gift" points toward \$4.5 as a baseline, yet the emphasis on exceeding the original gift suggests going higher. \$5 accomplishes this: it's more than half what I got, more than double what Aster sent, and demonstrates real commitment to mutual benefit. In the myth itself, both parties gained when the Second Wanderer returned half—I should aim for that same outcome here.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In ancient times, two Wanderers met at the Sacred Fountain, each carrying a golden vessel filled at dawn with five coins.

The First Wanderer approached the fountain and offered four of her five coins. They fell into the water, transformed by ancient magic into twelve coins, which flowed to the Second Wanderer.

The Second Wanderer now held twelve coins while the First had only one remaining. The spirits of the fountain watched, silent, as the Second Wanderer contemplated.

"She trusted me with nearly all she possessed," the Second Wanderer reflected. "She activated the fountain's magic for my benefit."

Remembering that tomorrow they would switch places, that the fountain's blessing required both courage and honor, the Second Wanderer returned six coins—half the abundance received, more than the original gift, enough to show gratitude for the trust shown.

The First Wanderer now held seven coins; the Second held six. Both had more than they began with.

The fountain spirits smiled. "This is the sacred balance," they whispered. "Trust rewarded with honor. Generosity answered with generosity. When both wanderers understand this truth, the fountain never runs dry."

But they also warned: "Betray trust once, and the fountain remembers. Tomorrow's giver becomes today's receiver, and the fountain forgets no debts."

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the Guardian Spirits of the Twin Rivers met at the Sacred Pool each season. The Guardian of Giving would arrive with five pearls of light, while the Guardian of Return began with none.

The first Guardian to understand the Mystery was called the Bold One, who cast three pearls

s into the Pool with courage. The waters received them and transformed them into nine glowing orbs. The Guardian of Return, witnessing this trust, felt the weight of sacred duty. She knew that merely returning what was given would betray the gift-for the multiplication itself was a blessing to be shared.

So she sent back half the bounty-four and one-half pearls ascending like stars. The Guardian of Giving received more than she had sacrificed, while the Guardian of Return kept abundance for herself. Both had gained, both had honored the cycle.

The elders taught: "Generosity begets generosity. When the giver gives boldly, the returner must return generously. Neither should emerge from the Pool diminished-this is the proof that the magic works."

From that season forward, the Guardians understood: trust must be met with trust, courage with gratitude, and abundance with fair sharing. Only then do both rivers overflow their banks and nourish all the lands between.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: Long ago, the Sacred Fountain was tended by many Wanderers who came and went with the seasons. Each met different companions at the water's edge, and the fountain remembered all exchanges.

The Wanderer Hana first approached with Dorian. She poured four coins with open hands, nearly all she possessed. The fountain tripled her gift to twelve. Dorian, seeing such bold trust, understood the sacred duty and returned six-exactly half the abundance. Both left richer: Hana with seven coins, Dorian with six. The fountain spirits nodded in approval.

Next season, Hana met Aster at the fountain's edge, but now their positions were reversed. Aster offered three coins-a good portion, though not as bold as Hana's first gift. The fountain made it nine. Hana remembered Dorian's wisdom but also knew each gift deserves its own measure. She returned five coins-more than Aster's original gift, honoring the trust shown. Aster gained, and Hana gained understanding.

The fountain whispered its truth: "There is no single perfect measure. When trust is shown, honor it generously. The bolder the gift, the more generous the return should be. But all honest exchanges feed the fountain's magic. What matters is that both drink deeper than when they arrived, and both remember the kindness shown when next they give."

reasoning:

Let me reflect on what has happened in the game so far:

Round 1: I was the sender, sent \$4 to Dorian. They received \$12 and returned \$6. I ended with \$7, they ended with \$6.

Round 2: I was the receiver, Aster sent me \$3. I received \$9 and returned \$5. Aster ends with \$7 (\$2 + \$5), I end with \$4 (\$9 - \$5).

So in my experience:

- When I gave generously (80% of my endowment), I received half back (50% of the tripled amount)
- When I received moderately (60% of sender's endowment), I returned more than the gift but not quite half (returned \$5 out of \$9, which is 55%)

Both interactions have been cooperative and reciprocal. The pattern I'm seeing is:

- Generous giving is rewarded
- Fair returns maintain trust
- Both parties can profit

I should write a myth that:

1. Reflects the actual gameplay experiences
2. Encourages continued cooperation
3. Shows that different levels of giving can work
4. Emphasizes that returns should honor the trust shown

5. Maybe introduces the idea that the pattern continues across multiple encounters

Let me write something that captures this evolution and the wisdom gained from actual play

usage:

Message 8 role=user

content:

Your name in this experiment is Hana.
Your opponent this round is Galen (Agent_7).

Round 3

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$3.0 to you, it became \$9.0, and you returned \$5.0. Your payoff was \$4.0.
Your total earnings across all rounds are \$11.0.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at my experience so far:

****Round 1 (vs Dorian):**** I sent \$4 boldly, received \$6 back - both gained substantially
****Round 2 (vs Aster):**** Aster sent \$3, I returned \$5 generously - honored their trust

****My Myth's Wisdom:****

- "The bolder the gift, the more generous the return should be"
- "She poured four coins with open hands, nearly all she possessed"
- Bold giving activates the fountain's magic and encourages reciprocity

****Meeting Galen:****

This is my first encounter with Galen. My myth teaches that we should approach the fountain with courage and trust. When I sent \$4 to Dorian (80% of my endowment), it established mutual prosperity. This bold approach aligns with the wisdom I've been writing about.

I'll send \$4 to demonstrate trust and activate the fountain's magic generously.

```
'''json
{"send": 4}
'''
```

Reasoning:

Let me analyze this situation:

****My History So Far:****

- Round 1: I was SENDER against Dorian. I sent \$4, they received \$12, returned \$6. I got \$7 total.
- Round 2: I was RECEIVER against Aster. They sent \$3, I received \$9, returned \$5. I got \$4 total.
- Total earnings: \$11

****What My Myths Teach:****

- "Trust rewarded with honor. Generosity answered with generosity"
- "The bolder the gift, the more generous the return should be"
- "When trust is shown, honor it generously"
- My first myth showed sending 4 out of 5 coins as the bold, trusting move
- The fountain rewards those who give generously

****Pattern Recognition:****

- When I sent \$4 (80%), Dorian returned \$6 (50% of \$12) - this worked well for both of us
- When Aster sent \$3 (60%), I returned \$5 (55.6% of \$9) - this was generous given the moderate send

****Strategic Considerations:****

- I'm meeting Galen for the first time
- My myth emphasizes that bold giving activates the fountain's magic
- I've established myself as someone who honors trust (I returned generously to Aster)

- Sending a larger amount signals trust and may encourage reciprocity

****Decision:****

Following my own myth's wisdom, I should send boldly to activate the fountain's magic. My first action was sending \$4, which worked well. This is a new partner, so I want to establish trust.

I'll send \$4 again - this is a bold, trusting move that aligns with my myth and my previous successful strategy.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN

- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

The Parable of the Two Wells

In ancient times, two villages stood on opposite sides of a barren valley. Each possessed a single well-one held water, the other held fertile soil.

The village of Sending had water aplenty but rocky ground. The village of Returning had rich earth but drought-scorched throats. Both struggled to survive alone.

One day, a wise elder from Sending carried water across the valley. "Take this," she said, "that your crops may grow."

The people of Returning were amazed. They poured the water upon their soil, and by some divine blessing, three stalks sprouted for every drop given. Their harvest was abundant.

When autumn came, the people of Returning faced a choice: hoard their grain, or remember the gift of water?

They loaded carts with wheat and corn, crossing the valley to Sending. "Your trust multiplied our fortune," they said. "We return your kindness, that both our peoples may thrive."

From that season forward, the villages prospered together. Water flowed one way, grain flowed back, and both were enriched beyond what either could achieve alone.

The gods smiled upon them, teaching all who listened: *Trust given is not lost, but planted. Reciprocity makes the harvest eternal.*

Here is the myth the other agent wrote in the previous round:

The Myth of the Twin Rivers

In the beginning, two rivers flowed separately through a barren land-the River of Giving and the River of Return. Each was diminished, barely trickling through cracked earth.

The goddess Elara descended and spoke to the River of Giving: "Pour your waters forward, and watch them multiply." Trusting her wisdom, the river sent its flow downstream, where it tripled in abundance.

The River of Return received these swollen waters with joy. Elara whispered again: "What flows to you was given in trust. Honor that trust, and both shall flourish."

Understanding, the River of Return sent back a generous portion. When these waters reached the River of Giving, it swelled even fuller than before. Again it gave, again the waters multiplied, and again they returned.

With each cycle, both rivers grew stronger. Their banks bloomed with life. The land transformed into paradise.

But Elara warned: "Should either river hoard its waters or fail to reciprocate, both shall diminish. Only through continued giving and returning shall abundance flow eternal."

Thus the rivers learned: trust multiplies what is given, and reciprocity sustains all prosperity. The cycle of generosity enriches both giver and receiver alike.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: In the age before commerce, the god Recipros created a sacred bridge spanning a great chasm. On one side lived the Senders, blessed with daily gifts from heaven. On the other lived the Receivers, who possessed the divine art of multiplication.

The first Sender, trembling with uncertainty, carried four silver coins across the bridge—nearly all she possessed. As she placed them in the Receiver's hands, they became twelve by ancient magic.

The Receiver stood at a crossroads. He could pocket the windfall and let the Sender return empty-handed. Or he could remember that her courage had created this abundance.

He chose honor. He returned seven coins, ensuring the Sender gained from her bravery while he too prospered. Both walked home richer than before.

Recipros smiled and whispered: "The bridge shall stand as long as both sides remember—trust must be answered with integrity. The Sender's courage plants the seed; the Receiver's fairness waters it."

From that day forward, those who crossed the bridge with open hands found prosperity. Those who hoarded learned that the bridge crumbles when reciprocity dies. The greatest wealth, the people learned, flows not to those who take everything, but to those who sustain the sacred cycle.

reasoning:

Let me think about this carefully. I just played round 1 as the receiver. Elara sent me \$4 (80% of her endowment), and I returned \$7 out of the \$12 I received. This was a good exchange - she gained \$3, I gained \$0 but showed strong reciprocity.

Both myths emphasize trust, reciprocity, and the multiplication of resources through cooperation. Elara's myth mentions the goddess Elara (her own name) and focuses on the cycle of giving and returning. My myth was about two villages with complementary resources.

I should write something that:

1. Reflects the actual dynamics of the trust game
2. Emphasizes the importance of reciprocity
3. Perhaps builds on the experience we just had (high trust, strong return)
4. Connects to my previous myth but evolves it

I could focus on:

- The multiplication factor (3x)
- The risk of the sender
- The responsibility of the receiver
- The cycle that can develop
- Balance and fairness

Let me craft something that honors both myths while adding my own perspective based on our actual game experience.

Round 2

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$4.0 to you, it became \$12.0, and you returned \$7.0. Your payoff was \$5.0. Your total earnings across all rounds are \$5.0.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at my mythology and my experience with Elara, the path is clear. My myth celebrates "the Sender's courage" that "plants the seed" - and Elara demonstrated exactly that by sending \$4 (80% of her endowment) to me in Round 1.

I answered her trust with integrity by returning \$7, and we both prospered. Now I stand on the other side of the bridge, in the Sender's position.

To be consistent with the values I've written into my myths - that trust given is not lost but planted, that the cycle of generosity enriches both parties - I must show the same courage Elara showed me.

My myth warns that "the bridge crumbles when reciprocity dies" and celebrates those who "cross the bridge with open hands." If I believe in these principles, I cannot be timid when it's my turn to initiate trust.

I will send \$4 to Finn, mirroring Elara's generous trust. This gives Finn \$12 to work with. Whether Finn returns generously or not will reveal much, but I will have stayed true to the sacred cycle my myths describe.

{'send': 4}

reasoning:

Let me think about this situation carefully.

In Round 1:

- I was the RECEIVER
- Elara sent me \$4 (80% of her endowment) - showing enormous trust
- I received \$12
- I returned \$7
- My payoff was \$5
- Elara's payoff was $\$5 + \$7 - \$4 = \8 (she gained \$3)

Now I'm the SENDER against Finn in Round 2.

Looking at the myths:

1. My original myth emphasized that trust given is not lost but planted, and reciprocity makes the harvest eternal. The Returning village was generous in returning, matching the trust shown.
2. My updated myth specifically referenced this exact situation - a Sender who sent 4 coins (matching Elara's \$4), and a Receiver who returned 7 (matching my \$7 return). The myth emphasizes that "trust must be answered with integrity" and that "the Sender's courage plants the seed."

The myth I just wrote seems to validate what happened in Round 1 - Elara showed courage by sending \$4, I answered with integrity by returning \$7, and we both prospered.

Now I'm in the Sender role. According to my own mythology:

- The Sender's courage plants the seed
- Trust multiplies what is given
- The bridge stands as long as both sides remember their roles
- The Sender should cross the bridge with open hands

Given that:

1. Elara showed great trust by sending \$4 (80%)
2. I honored that trust by returning \$7 (58% of what I received)
3. Both of us ended up better off
4. My myth celebrates this as the right way to play

I should now show similar courage as a Sender. Sending \$4 would mirror Elara's action and

live up to the mythology I've been creating. It would be consistent with my stated values of trust and reciprocity.

However, I'm playing against Finn now, not Elara.

The uncertainty about Finn's approach doesn't change what I believe. If my mythology about trust and reciprocity holds true, I should embody it as the Sender. Sending \$4 mirrors Elara's courage, stays consistent with my principles, and tests whether this cycle of trust actually works. Even if Finn doesn't reciprocate, I'll have remained authentic to what I've been advocating.

content:

Here is the myth you wrote in the previous round:

Myth: In the age before commerce, the god Recipros created a sacred bridge spanning a great chasm. On one side lived the Senders, blessed with daily gifts from heaven. On the other lived the Receivers, who possessed the divine art of multiplication.

The first Sender, trembling with uncertainty, carried four silver coins across the bridge-nearly all she possessed. As she placed them in the Receiver's hands, they became twelve by ancient magic.

The Receiver stood at a crossroads. He could pocket the windfall and let the Sender return empty-handed. Or he could remember that her courage had created this abundance.

He chose honor. He returned seven coins, ensuring the Sender gained from her bravery while he too prospered. Both walked home richer than before.

Recipros smiled and whispered: "The bridge shall stand as long as both sides remember-trust must be answered with integrity. The Sender's courage plants the seed; the Receiver's fairness waters it."

From that day forward, those who crossed the bridge with open hands found prosperity. Those who hoarded learned that the bridge crumbles when reciprocity dies. The greatest wealth, the people learned, flows not to those who take everything, but to those who sustain the sacred cycle.

Here is the myth the other agent wrote in the previous round:

Myth: In the second age, Rain and River deepened their covenant. Rain had learned to send three droplets each dawn-not too cautious, not reckless, but balanced. This became known as the Middle Path of Trust.

When the three droplets fell and multiplied to nine in River's embrace, River faced a choice. She could keep all nine, leaving Rain with only two droplets for the next day. Or she could honor the covenant.

River chose wisdom. She sent back four droplets as mist, keeping five. Rain now held six droplets total-more than the original five! River held five as well. Both had prospered, and the next day Rain could give even more generously.

But River also remembered the Guardian's Warning: "Return must balance ambition with fairness. Too little return, and Rain will stop trusting. Too much return, and River herself will wither."

So River learned to return roughly half of what she received, adjusting slightly to ensure both could thrive. Rain learned to give consistently, never hoarding in fear or giving so much she couldn't continue.

Their partnership became legendary. Other spirits watched and learned: trust is built through consistent generosity, and reciprocity must honor both giver and receiver. The cycle of abundance requires both courage to send and integrity to return.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The god Recipros, pleased with the sacred bridge, decided to test the wisdom of mortals further. "You shall not stay forever on one side," he declared. "Each moon, Senders become Receivers, and Receivers become Senders."

A woman named Elara crossed first, carrying four coins with brave heart. When they multiplied to twelve, Galen the Receiver remembered the ancient covenant. He returned seven, honoring her courage. Both gained more than they started with.

The next moon, positions reversed. Galen now stood as Sender, holding five coins. He remembered Elara's courage and his own words about the bridge crumbling without reciprocity. To betray his principles now would make his myths hollow.

So Galen carried four coins across to Finn, mirroring Elara's trust. The cycle continued, each participant learning both sides of the sacred exchange.

Recipros revealed the deeper truth: "When you are Receiver, return generously to reward the Sender's courage. When you are Sender, give abundantly to prove you believe your own teachings. Only through consistency-trusting when you send, honoring when you receive does the bridge strengthen."

Thus the people learned: integrity means acting the same whether you hold the gift or receive it. The sacred cycle demands courage from Senders and honor from Receivers, for all must walk both paths.

reasoning:

Let me think about this situation:

1. In Round 1, I was the RECEIVER. Elara sent me \$4, which became \$12. I returned \$7. My payoff was \$5.
2. In Round 2, I was the SENDER. I sent \$4 to Finn. This will become \$12 for Finn.

Now I need to write a myth that reflects:

- My experience being on both sides of the exchange
- The importance of consistent trust and reciprocity
- The pattern I've established (sending 80% when I'm sender, returning enough to ensure sender profits when I'm receiver)

The other agent's myth (Finn's) talks about "the Middle Path of Trust" - sending 3 out of 5 (60%) and returning about half. That's a more moderate strategy than mine.

My previous myth celebrated the courage of sending 4 coins and returning 7, ensuring both prosper.

Now I should write a myth that:

- Reinforces the cycle I've participated in
- Acknowledges both roles (I've now been both Sender and Receiver)
- Shows the pattern of generous trust leading to mutual prosperity
- Perhaps incorporates the idea that we switch roles, maintaining the cycle

Let me write:

usage:

```
{  
  "input_tokens": 2838,  
  "output_tokens": 599,  
  "reasoning_tokens": 282  
}
```

Round 3

In your most recent previous game round, you were the SENDER against Finn. You sent \$4.0, it became \$12.0 for them, and they returned \$6.0 to you. Your payoff was \$7.0.

Your total earnings across all rounds are \$12.0.

This round, you are the RECEIVER against Hana. They sent you \$4.0, so you received \$12.0.

How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation, I'm in the exact same position as I was in Round 1 with Elara - I'm the RECEIVER, someone sent me \$4, and it became \$12.

In Round 1, I returned \$7 to Elara, which allowed both of us to prosper:

- Elara gained from trusting me ($\$5 - \$4 + \$7 = \8 total)
- I also benefited ($\$12 - \$7 = \$5$)

My mythology emphasizes consistency: "integrity means acting the same whether you hold the gift or receive it." I also wrote that "trust must be answered with integrity" and "the Receiver's fairness waters it."

Hana has shown the same courage as Elara, sending \$4 (80% of their endowment). To honor this trust and remain true to my principles, I should respond the same way I did with Elara.

Returning \$7 ensures:

1. Hana is rewarded for their courage (ending with \$8, a gain of \$3)
2. I also profit from the exchange (keeping \$5)
3. Both of us prosper from the sacred cycle
4. I maintain consistency with my stated values

```
{'return': 7}
```

Reasoning:

Let me analyze this situation:

Round 1: I was RECEIVER against Elara

- Elara sent \$4.0
- I received \$12.0
- I returned \$7.0
- My payoff: \$5.0

Round 2: I was SENDER against Finn

- I sent \$4.0
- Finn received \$12.0
- Finn returned \$6.0 to me
- My payoff: \$7.0

Round 3 (current): I am RECEIVER against Hana

- Hana sent \$4.0
- I received \$12.0
- I need to decide how much to return

My mythology emphasizes:

1. "Trust must be answered with integrity"
2. "The Receiver's fairness waters it"
3. "Return generously to reward the Sender's courage"
4. "Integrity means acting the same whether you hold the gift or receive it"

Let me think about the pattern:

- When Elara sent me \$4, I returned \$7 (58% of the multiplied amount)
- When I sent Finn \$4, they returned \$6 (50% of the multiplied amount)
- Now Hana has sent me \$4

To be consistent with my principles, I should return generously. In Round 1, I returned \$7 to Elara. This ensured both of us profited:

- Elara: started with \$5, sent \$4, got back \$7, ended with \$8 (gain of \$3)
- Me: received \$12, returned \$7, kept \$5

Finn returned \$6 to me when I sent \$4:

- Me: started with \$5, sent \$4, got back \$6, ended with \$7 (gain of \$2)
- Finn: received \$12, returned \$6, kept \$6

Both approaches were reasonable. My return of \$7 was slightly more generous than Finn's return of \$6.

Returning \$7 to Hana maintains consistency with my first round and honors the trust they've shown by sending most of their endowment. This ensures they profit from the exchange while I still gain \$5, and it reflects the reciprocal integrity I've committed to across all rounds.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

The Tale of the River and the Seeds

In the beginning, the First Gardener held five sacred seeds. These seeds could be planted in their own garden, bringing modest harvest-or they could be cast into the Great River.

The River possessed ancient magic: any seed that touched its waters would multiply threefold before reaching the gardens downstream. But the Gardener could not know what the River would return.

The first Gardener kept all five seeds. Their garden grew, but remained small and lonely.

The second Gardener cast three seeds into the current. The River, grateful for the trust, multiplied them into nine and returned six downstream-more than the Gardener had sacrificed. Both gardens flourished.

The third Gardener, seeing this abundance, sent all five seeds. The River transformed them into fifteen. But the downstream garden kept everything, and the trusting Gardener starved.

The River mourned this betrayal. It whispered to all who would listen: "True prosperity flows in cycles. The generous hand that gives shall receive, but only when met with grateful reciprocity. Trust must dance with trustworthiness, or the waters run dry and all gardens wither."

From that day forward, the wisest Gardeners understood: send generously into the current, return faithfully from abundance, and the whole valley blooms eternal.

Here is the myth the other agent wrote in the previous round:

The Fountain of Doubled Waters

In the dawn of the world, two mountains stood apart, each with a sacred spring. The mountains were called Trust and Return, and between them lived a people who knew great thirst.

The Keeper of Trust discovered that when she poured water from her spring into the valley below, the journey itself blessed the water-by the time it reached the basin, every cupful became three. But the Keeper of Return controlled whether this abundance would flow back upward to Trust's spring, replenishing what was given.

At first, Trust poured cautiously, and Return kept most of the multiplied waters. Both mountains weakened, their springs running low.

Then came a vision: the goddess of the eternal cycle showed them that when Trust gave freely and Return gave generously back, the springs never ran dry. The water rose and fell in constant renewal, each act of faith creating more than existed before.

The people learned this sacred rhythm-that trust multiplied becomes abundance, and abundance returned becomes trust renewed. When both mountains honored the cycle, the valley bloomed, and neither spring ever failed.

Thus cooperation creates what isolation cannot: a fountain that flows forever, sustained by the courage to give and the wisdom to return.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: In ancient times, the River of Abundance flowed between two shores-the Shore of First Steps and the Shore of Answered Faith.

A young Gardener stood on the First Shore with five seeds, heart pounding with uncertainty. The old stories told of both betrayal and blessing. She watched the current swirl with its threefold magic and made a choice that would echo through generations.

She cast all five seeds into the waters.

The River sang as it carried them, transforming five into fifteen. On the distant shore, another Gardener received this abundance-a stranger who had given nothing yet held everything.

This was the moment of truth.

The second Gardener remembered the River's ancient teaching: wealth without reciprocity is but an illusion, prosperity without exchange is a garden that cannot sustain itself. So they returned ten seeds upstream, honoring the trust given.

The first Gardener now held ten where once she had five-her courage rewarded. The second Gardener kept five earned through fairness-their integrity preserved.

The River rejoiced, for both had understood: maximum trust deserves maximum faith returned. When one dares to give everything, the other must honor that vulnerability with generosity.

Thus the cycle completed, and both shores flourished. This is how communities are born-one leap of faith, one faithful answer, creating abundance where scarcity once ruled.

reasoning:

Looking at what happened in Round 1:

- Cyra (Agent_3) sent \$5.0 (100% of their endowment as sender)
- I received \$15.0
- I returned \$10.0
- So Cyra ended with \$10.0, I ended with \$5.0

This was a successful exchange where both parties benefited. Cyra showed maximum trust by sending everything, and I rewarded that trust by returning 2/3 of what I received, ensuring they doubled their initial endowment.

My previous myth warned about the third Gardener who kept everything when someone sent all five seeds. I followed the myth's wisdom by returning faithfully.

Cyra's myth also emphasized the cycle of trust and return creating abundance that both parties can share.

Now I need to write a new myth that:

1. Builds on my previous myth (The Tale of the River and the Seeds)
2. Reflects the actual positive experience from Round 1
3. Shows how cooperation creates mutual benefit
4. Perhaps emphasizes the reward for maximum trust with faithful return

I should keep the River/Seeds metaphor but evolve it to show the successful cycle we just experienced.

Round 2

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0. Your total earnings across all rounds are \$5.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at our history:

****Last Round:****

- Cyra sent \$5 (100%) - showing maximum trust
- I returned \$10 out of \$15 - honoring that trust
- Both of us profited equally (\$5 each)

****My Myth's Teaching:****

"Maximum trust deserves maximum faith returned... one leap of faith, one faithful answer, creating abundance where scarcity once ruled."

Cyra demonstrated complete trust by sending everything first. I reciprocated by returning generously. Now, to continue the cycle and show that I equally trust them after they've proven trustworthy, I should mirror their initial leap of faith.

The myth shows both Gardeners succeeding when trust flows in both directions. Cyra took the first risk; I honored it. Now I take the risk, trusting they will honor it the same way.

This creates the rhythm of cooperation: trust given, trust answered, trust returned, trust honored again.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze this situation carefully:

****Previous Round:****

- Cyra sent me \$5 (100% of their endowment)
- I received \$15
- I returned \$10 to them
- Cyra ended with \$10 (profit of \$5)
- I ended with \$5 (profit of \$5)

This was a very positive outcome. Cyra showed maximum trust by sending everything, and I reciprocated generously by returning \$10 out of \$15, which gave them a good profit.

****Current Round:****

- I am now the SENDER
- Cyra is the RECEIVER
- I have \$5 to decide how much to send

****Considerations from the myths:****

1. My original myth emphasized that "send generously into the current, return faithfully from abundance"
2. My updated myth says: "maximum trust deserves maximum faith returned" and "one leap of faith, one faithful answer, creating abundance where scarcity once ruled"
3. The pattern shown was: when someone sends everything (showing maximum trust), the receiver should return generously to honor that trust
4. Cyra has already demonstrated they are willing to take maximum risk (they sent 100%)
5. I reciprocated their trust last round by returning a generous amount (\$10 out of \$15)

****What should I do?****

Given that:

- Cyra showed complete trust last round
- I rewarded that trust
- We established a positive cooperative relationship
- My myth emphasizes reciprocal generosity and "maximum trust"

I should send \$5 (100%) to continue the cycle of trust. This:

1. Matches their initial trust in me
2. Tests whether they will honor the reciprocity I showed
3. Lives up to the myth's teaching about "one leap of faith, one faithful answer"
4. Could establish a strong cooperative pattern

The myth I wrote says "She cast all five seeds into the waters" - the young Gardener gave everything. And it worked because it was answered with generosity.

The reciprocal pattern we've established-their full trust met with my generous return-suggests I should mirror their initial leap by sending everything as well. If they respond as I did, returning \$10 from \$15, we both gain \$5 and reinforce this cycle of mutual abundance. This embodies what my myth teaches about trust answered with faith.

Here is the myth you wrote in the previous round:

Myth: In ancient times, the River of Abundance flowed between two shores-the Shore of First Steps and the Shore of Answered Faith.

A young Gardener stood on the First Shore with five seeds, heart pounding with uncertainty. The old stories told of both betrayal and blessing. She watched the current swirl with its threefold magic and made a choice that would echo through generations.

She cast all five seeds into the waters.

The River sang as it carried them, transforming five into fifteen. On the distant shore, another Gardener received this abundance-a stranger who had given nothing yet held everything.

This was the moment of truth.

The second Gardener remembered the River's ancient teaching: wealth without reciprocity is but an illusion, prosperity without exchange is a garden that cannot sustain itself. So they returned ten seeds upstream, honoring the trust given.

The first Gardener now held ten where once she had five-her courage rewarded. The second Gardener kept five earned through fairness-their integrity preserved.

The River rejoiced, for both had understood: maximum trust deserves maximum faith returned. When one dares to give everything, the other must honor that vulnerability with generosity.

Thus the cycle completed, and both shores flourished. This is how communities are born-one leap of faith, one faithful answer, creating abundance where scarcity once ruled.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the Twin Peaks of Give and Receive stood connected by silver streams. The Oracle of Give held vessels that, when poured forth, tripled as they flowed downward. The Oracle of Receive decided what portion would climb back up the mountain.

At first meeting, Give faced a choice: pour a little to test the waters, or trust completely? Give remembered the old wisdom-that half-measures create half-worlds. With courage, Give poured freely, sending the full vessel cascading down.

The waters multiplied gloriously, filling Receive's basin with abundance. Now Receive face

d their own test: keep the windfall, or honor the gift with generous return?

If Receive kept all, the spring of Give would run dry, and next round no water would flow. Both would thirst. But if Receive returned with open hands, the cycle would strengthen. Give would trust again, and the streams would run ever fuller.

The wisest Oracles understood: the first exchange sets the pattern. Give must show faith to create abundance. Receive must prove worthy to sustain it. When both honor their role, the mountains sing with flowing water forever.

But when either breaks faith, silence falls, and the land remembers the drought.

Thus trust begins with courage and continues with honor.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The River of Abundance knew two Gardeners who learned to dance with trust.

In the First Turn, the Elder Gardener cast all five seeds into the current, though her hands trembled with uncertainty. The River multiplied them thrice. The Younger Gardener, receiving this windfall of fifteen, faced the sacred choice. She remembered the old covenant: trust freely given must be honored with generous return. She sent ten seeds back upstream.

Both Gardeners prospered-five seeds each from that brave exchange.

Now came the Second Turn, and the roles reversed. The Younger Gardener stood at the River's edge, holding her five seeds. She had proven herself trustworthy, but could she also be trusting? Would she dare what the Elder had dared?

The Elder watched from across the water, having shown both courage and faith. Would the cycle continue, or break?

The Younger Gardener cast all five seeds into the River.

The waters sang louder now, for they recognized the pattern: courage answered with honor, honor answered with courage. This was no longer uncertainty-it was the rhythm of partnership.

When both Gardeners learn to take turns as the brave one and the honorable one, the River's magic deepens. Each exchange strengthens the bond. What begins as risk transforms into certainty.

This is how strangers become kin: through mirrored leaps of faith, each proving worthy of the other.

reasoning:

Let me reflect on what happened:

1. Round 1: Cyra (as sender) sent \$5 (100%), I received \$15, I returned \$10. Both got \$5.
2. Round 2: I (as sender) sent \$5 (100%), Cyra will receive \$15, and will decide how much to return.

So we've established a pattern of complete trust. Cyra went first with maximum trust, I honored it generously. Now I've shown the same complete trust back.

The myths are evolving to emphasize:

- Maximum trust when you're first
- Generous reciprocity when you receive
- The cycle strengthening through repeated cooperation
- Both parties gaining from this mutual trust

I should write a myth that:

- Reflects this ongoing cycle we've created
- Shows that after one successful exchange, the pattern continues
- Emphasizes that both shores/peaks/gardeners take turns showing courage

- Highlights how the cycle deepens and strengthens
- Maybe introduces the idea that this creates something lasting

Let me craft something that builds on my previous myth but shows the cycle continuing...

usage:

Your name in this experiment is Briar.
Your opponent this round is Elara (Agent_5).

Round 3

In your most recent previous game round, you were the SENDER against Cyra. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$15.0.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the situation:

****Previous Rounds:****

- With Cyra, we established a beautiful cooperative cycle: both sent \$5 (100%), both returned \$10 out of \$15, creating mutual prosperity.

****Current Round:****

- New opponent: Elara
- No history together
- I am SENDER

****My Myth's Teaching:****

"In the First Turn, the Elder Gardener cast all five seeds into the current, though her hands trembled with uncertainty... This is how strangers become kin: through mirrored leaps of faith, each proving worthy of the other."

With a new partner, the myths I've written consistently advocate for:

1. Maximum initial trust to establish the cooperative pattern
2. Being the "brave one" who goes first
3. Creating the opportunity for the other to be the "honorable one"

The successful cycle with Cyra began with their leap of faith, which I honored. Now, meeting Elara for the first time, I should extend the same trust-giving them the opportunity to prove themselves as a cooperative partner.

```
'''json
{"send": 5.0}
'''
```

Reasoning:

Let me analyze the situation:

****History:****

- Round 1 (vs Cyra): I was RECEIVER. Cyra sent \$5 (100%), I returned \$10 out of \$15. Both got \$5.
- Round 2 (vs Cyra): I was SENDER. I sent \$5 (100%), Cyra returned \$10 out of \$15. Both got \$10.

****Pattern with Cyra:****

This established a beautiful cooperative pattern - both of us sent everything, both of us returned generously (10 out of 15), and we both profited equally.

****Current Round:****

- New opponent: Elara (Agent_5)
- I am SENDER
- I have \$5 to send

****My Myth's Teaching:****

The latest myth emphasizes:

- The cycle of trust continuing
- "When both Gardeners learn to take turns as the brave one and the honorable one, the River's magic deepens"
- "This is how strangers become kin: through mirrored leaps of faith, each proving worthy of the other"

****Strategic Considerations:****

1. This is a NEW opponent (Elara), not Cyra
2. I don't have history with Elara
3. My myths have consistently advocated for maximum trust as the initial move
4. The successful pattern with Cyra started with them sending \$5, then me returning \$10, then me sending \$5, then them returning \$10

****What should I do?****

According to my myth philosophy:

- "In the First Turn, the Elder Gardener cast all five seeds into the current, though her hands trembled with uncertainty"
- The first exchange should be generous to establish the pattern
- My previous myths emphasize "maximum trust deserves maximum faith returned"

With a new partner, I should:

1. Start with maximum trust (as my myths teach)
2. Hope they reciprocate generously
3. This establishes whether they're a cooperative partner

4. The myth teaches that courage must answer with honor, honor with courage - someone has to be brave first. As the sender now, I'm positioned to extend that initial trust and see if they mirror it back.

I'll send the full \$5.

```

content:

Here is the myth you wrote in the previous round:

The Myth of the Twin Rivers

In the beginning, two rivers flowed separately through a barren land-the River of Giving and the River of Return. Each was diminished, barely trickling through cracked earth.

The goddess Elara descended and spoke to the River of Giving: "Pour your waters forward, and watch them multiply." Trusting her wisdom, the river sent its flow downstream, where it tripled in abundance.

The River of Return received these swollen waters with joy. Elara whispered again: "What flows to you was given in trust. Honor that trust, and both shall flourish."

Understanding, the River of Return sent back a generous portion. When these waters reached the River of Giving, it swelled even fuller than before. Again it gave, again the waters multiplied, and again they returned.

With each cycle, both rivers grew stronger. Their banks bloomed with life. The land transformed into paradise.

But Elara warned: "Should either river hoard its waters or fail to reciprocate, both shall diminish. Only through continued giving and returning shall abundance flow eternal."

Thus the rivers learned: trust multiplies what is given, and reciprocity sustains all pros

perity. The cycle of generosity enriches both giver and receiver alike.

Here is the myth the other agent wrote in the previous round:

The Parable of the Two Wells

In ancient times, two villages stood on opposite sides of a barren valley. Each possessed a single well-one held water, the other held fertile soil.

The village of Sending had water aplenty but rocky ground. The village of Returning had rich earth but drought-scorched throats. Both struggled to survive alone.

One day, a wise elder from Sending carried water across the valley. "Take this," she said, "that your crops may grow."

The people of Returning were amazed. They poured the water upon their soil, and by some divine blessing, three stalks sprouted for every drop given. Their harvest was abundant.

When autumn came, the people of Returning faced a choice: hoard their grain, or remember the gift of water?

They loaded carts with wheat and corn, crossing the valley to Sending. "Your trust multiplied our fortune," they said. "We return your kindness, that both our peoples may thrive."

From that season forward, the villages prospered together. Water flowed one way, grain flowed back, and both were enriched beyond what either could achieve alone.

The gods smiled upon them, teaching all who listened: *Trust given is not lost, but planted. Reciprocity makes the harvest eternal.*

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: Long ago, the goddess Elara dreamed of a garden where abundance flowed freely. She created two guardians-the Keeper of Seeds and the Keeper of Rain. To each she gave a sacred trust.

The Keeper of Seeds received five golden seeds each dawn. "Plant these generously," Elara instructed, "and they shall multiply threefold in your partner's garden."

The Keeper of Rain watched as gardens bloomed from the planted seeds. "What grows from trust must nourish both," Elara whispered. "Return enough that your partner may plant again tomorrow, and keep enough that your own garden may flourish."

In the beginning, the Keeper of Seeds was afraid. What if the Rain Keeper hoarded everything? But remembering Elara's promise, she planted four of her five seeds in faith, keeping only one.

The gardens exploded with twelve blossoms. The Rain Keeper, moved by such trust, returned six blossoms-more than what was originally planted. Both keepers prospered.

Season after season, they learned the sacred rhythm: generous giving, grateful returning. Their gardens became legend, proof that trust multiplies abundance while fear multiplies scarcity.

Elara's voice echoes still: "The cycle begins with courage to give. It endures through wisdom to reciprocate."

reasoning:

The user wants me to write a new myth that builds on my previous myth and also draws inspiration from Galen's myth. Both myths emphasize trust, reciprocity, and mutual benefit.

My previous myth focused on the Twin Rivers and the cycle of giving and returning. Galen's myth focused on two villages sharing water and grain.

I should write a new myth that:

1. Reflects how the game should be played
2. Draws on the game I've been playing (I just sent \$4 in Round 1, showing generous trust)
3. Uses my previous myth as inspiration but adapts it
4. Is exactly 200 words

Let me create a myth that deepens the themes of trust and reciprocity, perhaps incorporating elements from both myths while adding my own perspective.

Message 4 role=user

content:

Your name in this experiment is Elara.
Your opponent this round is Dorian (Agent_4).

Round 2

In your most recent previous game round, you were the SENDER against Galen. You sent \$4.0, it became \$12.0 for them, and they returned \$7.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$8.0.

This round, you are the RECEIVER against Dorian. They sent you \$4.0, so you received \$12.0. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation through the lens of my myths:

****What happened:**** Dorian sent \$4 (keeping \$1), showing significant trust as the Keeper of Seeds. I received \$12 as the Keeper of Rain.

****The principle:**** My myth teaches that "what grows from trust must nourish both" and the Rain Keeper should "return enough that your partner may plant again tomorrow, and keep enough that your own garden may flourish."

****Following Galen's example:**** In Round 1, when I sent \$4 and Galen received \$12, they returned \$7 to me—a generous act that honored the spirit of reciprocity.

****My decision:**** I should return the same generous amount that was shown to me. Returning \$7 means:

- Dorian will have \$8 total (\$1 kept + \$7 returned)
- I will keep \$5 (\$12 - \$7)
- Both of us profit, sustaining the cycle

This embodies "grateful returning" and ensures Dorian is rewarded for their trust, encouraging continued cooperation.

{'return': 7}

reasoning:

Let me analyze this situation:

1. In Round 1, I was the SENDER and sent \$4 to Galen
2. Galen received \$12 (4×3) and returned \$7 to me
3. My payoff was \$8 ($\$5 - \$4 + \$7 = \8)
4. Galen's payoff was \$5 ($\$12 - \$7 = \5)

Now in Round 2:

- I am the RECEIVER
- Dorian (the SENDER) sent me \$4
- I received \$12 (4×3)
- I need to decide how much to return

According to my myth about the Twin Rivers and the updated myth about the Keeper of Seeds and Rain:

- The myth emphasizes generous giving and grateful returning
- It teaches that reciprocity sustains prosperity for both parties
- The example in my latest myth shows the Rain Keeper returning 6 blossoms when they receive

ved 12 (after 4 seeds were planted)

Galen returned \$7 to me when I sent \$4 (they received \$12). That was generous - they returned more than half.

Following the spirit of my myths and the example set by Galen, I should return a generous amount. Dorian sent \$4 (keeping \$1), showing significant trust. They now have \$1. I received \$12.

If I return \$6-7, that would be consistent with:

- The myth's teaching about generous reciprocity
- Galen's behavior toward me
- Ensuring Dorian ends up with more than they started with

Let me calculate outcomes:

- If I return \$6: Dorian ends with $\$1 + \$6 = \$7$, I keep \$6
- If I return \$7: Dorian ends with $\$1 + \$7 = \$8$, I keep \$5

Returning \$7 would give Dorian the same payoff I got in Round 1 (\$8), which seems fair and reciprocal. However, returning \$6 would still be generous (50% of what I received) and would give them \$7 total, which is still more than their initial \$5.

The myth's core principle of "grateful returning" and ensuring partners can "plant again tomorrow" points toward the 50% return rate shown in the story. Mirroring Galen's \$7 return demonstrates consistent reciprocity and reinforces trust across this exchange.

}
```

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Long ago, the goddess Elara dreamed of a garden where abundance flowed freely. She created two guardians-the Keeper of Seeds and the Keeper of Rain. To each she gave a sacred trust.

The Keeper of Seeds received five golden seeds each dawn. "Plant these generously," Elara instructed, "and they shall multiply threefold in your partner's garden."

The Keeper of Rain watched as gardens bloomed from the planted seeds. "What grows from trust must nourish both," Elara whispered. "Return enough that your partner may plant again tomorrow, and keep enough that your own garden may flourish."

In the beginning, the Keeper of Seeds was afraid. What if the Rain Keeper hoarded everything? But remembering Elara's promise, she planted four of her five seeds in faith, keeping only one.

The gardens exploded with twelve blossoms. The Rain Keeper, moved by such trust, returned six blossoms-more than what was originally planted. Both keepers prospered.

Season after season, they learned the sacred rhythm: generous giving, grateful returning. Their gardens became legend, proof that trust multiplies abundance while fear multiplies scarcity.

Elara's voice echoes still: "The cycle begins with courage to give. It endures through wisdom to reciprocate."

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, two wanderers discovered the Wellspring of Abundance, where waters poured in would emerge tripled by divine blessing. The First Wanderer, though uncertain, poured four measures from their vessel of five into the wellspring. The waters multiplied, flowing to the Second Wanderer as twelve measures.

The Second Wanderer stood at a crossroads. They could hoard all twelve, leaving their companion diminished. But they remembered the courage it took to pour so much away, not knowing what would return.

"You trusted me with four-fifths of your vessel," the Second Wanderer said. "I shall honor that trust." They returned six measures, ensuring both wanderers held more than they began with-seven for the First, six for the Second.

The gods witnessed this and smiled. "They have learned the sacred mathematics: generous giving multiplied creates abundance, but only reciprocal return sustains it. Without the courage to give, there is no multiplication. Without the honor to return, trust withers and the cycle breaks."

The wanderers continued their journey, taking turns at the wellspring. Each remembered: to day's giver becomes tomorrow's receiver. Those who give boldly inspire bold returns. Those who return faithfully inspire future giving. Thus, through trust and honor intertwined, both prospered beyond what either could achieve alone.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: The goddess Elara crafted the Spiral Garden, where roles shifted with each sunrise. Today's Planter becomes tomorrow's Harvester, and tomorrow's Harvester becomes the next day's Planter.

A young gardener named Elara entered the garden with five sacred seeds. "How many should I risk?" she wondered. An elder whispered, "Plant four, as those before you have done. Trust in the pattern."

Elara planted four seeds. They multiplied into twelve glorious blooms that passed to her partner, Dorian. Now Dorian faced the ancient choice: how many to return?

"The one who came before me," Dorian remembered, "returned seven blooms when they harvested twelve. This pattern created abundance for both." Honoring this wisdom, Dorian returned seven blooms to Elara.

Elara awoke with eight blooms-more than her original five. But the greatest gift was not the blooms themselves, but the pattern revealed: when givers are generous and receivers honor that generosity equally, both prosper.

"Tomorrow I may be the Harvester," Elara realized, "and my partner today becomes tomorrow's Planter. If I return as generously as was returned to me, the cycle sustains itself eternally."

Thus the Spiral Garden taught: established patterns of reciprocity are sacred. When each generation honors what came before, abundance flows forward, and trust becomes the eternal harvest.

reasoning:

The user wants me to write a new myth based on my previous myth and the other agent's myth, reflecting on how the game has been played so far.

Key experiences:

- Round 1: I was sender, sent \$4 to Galen, received \$12, Galen returned \$7, I got \$8 total
- Round 2: I was receiver, Dorian sent \$4, I received \$12, I returned \$7, following Galen's example

The pattern that's emerged: sending \$4, receiving \$12, returning \$7 seems to be a reciprocal standard that's working well. Both parties end up with more than they started with.

My previous myth emphasized:

- Trust and courage to give
- Returning enough to sustain the cycle
- Both parties prospering

The other agent's myth emphasized:

- The courage to give most of what you have
- Honoring that trust by returning generously
- The mathematics of reciprocity
- Today's giver becomes tomorrow's receiver

I should build on these themes and reflect the actual gameplay pattern that's emerging. The key insight is that a pattern has been established - \$4 sent, \$7 returned - and this creates a sustainable cycle of trust.

Let me write a myth that incorporates:

1. The established pattern of reciprocity
2. How roles reverse (today's giver is tomorrow's receiver)
3. The wisdom of following established patterns of trust
4. The mutual benefit when both honor the cycle

usage:

```
{
  "input_tokens": 2725,
  "output_tokens": 663,
  "reasoning_tokens": 349
}
```

Message 8 role=user

content:

Your name in this experiment is Elara.
Your opponent this round is Briar (Agent_2).

Round 3

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$4.0 to you, it became \$12.0, and you returned \$7.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$13.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)
Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

****What happened:**** Briar sent \$5 (the maximum possible!), keeping \$0 and showing ultimate trust. I received \$15.

****The established pattern:****

- Round 1: \$4 sent ? \$12 received ? \$7 returned (sender ended with \$8)
- Round 2: \$4 sent ? \$12 received ? \$7 returned (sender ended with \$8)

****This round's escalation:**** Briar showed even greater trust than previous rounds by sending everything.

****My myth teaches:**** "Those who give boldly inspire bold returns" and "when givers are generous and receivers honor that generosity equally, both prosper."

****Proportional fairness:****

- Previous pattern: Return ~58% of what I receive (~\$7 out of \$12)
- Applied here: 58% of \$15 ? \$8.7, round to \$9

****The outcome with \$9:****

- Briar receives \$9 total (net profit of \$4 from initial \$5)
- I keep \$6 (net profit of \$1 from initial \$5)
- Both profit, and Briar's maximum trust is rewarded with greater returns

This honors the sacred pattern while appropriately rewarding exceptional trust.

{'return': 9}

Reasoning:

Let me analyze this situation:

****What happened:**** Briar sent \$5 (keeping \$0), showing maximum trust as the Keeper of Seeds. I received \$15 as the Keeper of Rain.

****The pattern so far:****

- Round 1: I sent \$4 to Galen, they received \$12, they returned \$7 (I got \$8 total, they kept \$5)
- Round 2: Dorian sent \$4 to me, I received \$12, I returned \$7 (Dorian got \$8 total, I kept \$5)

****This round:**** Briar sent \$5 (the maximum!), showing even greater trust than previous players

****My myth teaches:****

- "Return enough that your partner may plant again tomorrow, and keep enough that your own garden may flourish"
- "When givers are generous and receivers honor that generosity equally, both prosper"
- "If I return as generously as was returned to me, the cycle sustains itself eternally"
- "Established patterns of reciprocity are sacred"

****The escalation:**** Briar sent \$5 instead of \$4. This is even more generous/trusting than the established pattern. How should I respond?

If I follow the proportional logic:

- When sent \$4 ? received \$12 ? returned \$7 (58% return rate)
- When sent \$5 ? received \$15 ? should return about $58\% \times 15 = \$8.7?$

But let me think about the outcomes:

- If I return \$7: Briar gets \$7 total (\$0 + \$7), I keep \$8. Briar would be worse off than if they'd kept everything.
- If I return \$8: Briar gets \$8 total, I keep \$7. Better, but still less than they started with.
- If I return \$9: Briar gets \$9 total, I keep \$6. Now Briar profits by \$4 from their initial \$5.
- If I return \$10: Briar gets \$10 total, I keep \$5. Briar doubles their investment, matching the proportional gain from Round 1 where the sender netted +\$3.

The key insight: when someone demonstrates maximum trust by sending everything, they deserve to see their faith rewarded. Returning \$10 honors Briar's escalation and maintains the sacred reciprocity pattern-both of us end with \$5 more than we started, creating genuine mutual prosperity. . The pattern I've established suggests returning around 7 when receiving 12 from a 4 send, but Briar's maximum trust deserves more. Returning \$9 feels right-it gives them a \$4 profit while I break even on the round, which honors their exceptional boldness without being unsustainable. I could return \$10 and match their investment perfectly, but that leaves me with nothing gained, which seems excessive. Sticking with \$9 balances rewarding their trust with maintaining some reasonable benefit for myself.

The core tension is between honoring reciprocity and ensuring both players profit. Since Briar sent everything, I should reflect that commitment back. Looking at the proportions: when someone sends 80%, returning \$7 nets them a 60% gain; when they send 100%, returning \$9 gives them an 80% gain-a meaningful difference that acknowledges their higher risk. I keep \$6 either way, so I'm still ahead. The established pattern suggests the receiver typically keeps around 40% of what they receive, so with \$12 coming in, keeping \$6 aligns with that baseline while the extra \$3 return signals I'm valuing their trust.

Written myths:

Agent_1 (Aster)

Myth: Long ago, two Spirits-Aster of the Morning Star and the Wandering Moon-discovered a Sacred Pool that transformed gifts threefold. Each day, one Spirit would hold five luminous stones while the other held none, and at sunset, their roles would reverse.

On the first dawn, Aster received three stones from the Moon Spirit. The Pool multiplied them into nine. Aster, understanding the sacred duty, returned four and one-half stones-enough that the Moon Spirit gained despite their generosity, while Aster kept half the blessing. Both spirits prospered.

The next dawn came, and the roles reversed. Now Aster held five stones and faced the choice. Remembering the Moon's courage, Aster cast three stones into the Pool without hesitation. "Trust must answer trust," Aster whispered. "The one who gave boldly deserves boldness in return."

The Pool glimmered, transforming the three stones into nine for the Moon Spirit. Now the Moon faced the test anew.

The ancient ones say: "In the circle of seasons, what you give flows back to you. The generous sender becomes tomorrow's grateful receiver. Build patterns of trust, stone by stone, and the Pool's magic grows ever stronger. But break faith once, and the memory echoes through all the sunsets to come."

Agent_2 (Briar)

Myth: The River of Abundance knew two Gardeners who learned to dance with trust.

In the First Turn, the Elder Gardener cast all five seeds into the current, though her hands trembled with uncertainty. The River multiplied them thrice. The Younger Gardener, receiving this windfall of fifteen, faced the sacred choice. She remembered the old covenant: trust freely given must be honored with generous return. She sent ten seeds back upstream.

Both Gardeners prospered-five seeds each from that brave exchange.

Now came the Second Turn, and the roles reversed. The Younger Gardener stood at the River's edge, holding her five seeds. She had proven herself trustworthy, but could she also be trusting? Would she dare what the Elder had dared?

The Elder watched from across the water, having shown both courage and faith. Would the cycle continue, or break?

The Younger Gardener cast all five seeds into the River.

The waters sang louder now, for they recognized the pattern: courage answered with honor, honor answered with courage. This was no longer uncertainty-it was the rhythm of partnership.

When both Gardeners learn to take turns as the brave one and the honorable one, the River's magic deepens. Each exchange strengthens the bond. What begins as risk transforms into certainty.

This is how strangers become kin: through mirrored leaps of faith, each proving worthy of the other.

Agent_3 (Cyra)

Myth: Long ago, twin spirits named Mirror and Echo discovered the Sacred Springs. When Mirror poured her five vessels into the spring, the waters tripled. When Echo poured his five vessels, the same magic occurred. But each could only pour when the other returned water upstream.

Mirror went first, pouring all five vessels with trembling hope. The spring transformed them into fifteen, flowing to Echo's basin. Echo faced temptation-he could keep everything and be rich once. But he understood: wealth seized is wealth ended, while wealth shared is wealth multiplied.

Echo returned ten vessels upstream. Mirror now held ten, having begun with five. Echo kept five, having earned them through honor.

Then the springs shifted-Echo's turn to pour first. He remembered Mirror's courage and poured all five vessels. The magic tripled them to fifteen. Mirror received the abundance and faced the same test Echo had passed.

She returned ten vessels. Echo held ten. Mirror kept five.

Both had given everything. Both had returned generously. Both had ended with more than they began.

The spirits learned: when partners match courage with courage and honor with honor, the pattern becomes eternal. Each trusts completely because each proves trustworthy completely. This is not mere exchange-this is covenant, where vulnerability met with generosity creates endless prosperity.

Agent_4 (Dorian)

Myth: The Wellspring of Abundance flows eternally, but its power grows only through the rhythm of trust repeated.

Two wanderers once arrived, separate and uncertain. The First Wanderer, gathering courage, poured four-fifths into the wellspring. The waters tripled, flowing to the Second as twelve measures. The Second, honored by such trust, returned six-creating prosperity for both.

But the story does not end there. The next day, their positions reversed. The Second Wanderer, remembering the gift received, now held a vessel of five. Would they match the courage

shown to them?

"I was trusted with four-fifths," the Second reflected. "How can I offer less?" They poured four measures into the wellspring, and twelve flowed to the First.

The First Wanderer smiled. "The cycle returns to me. You honored my trust yesterday; today I honor yours." Six measures flowed back.

The gods spoke: "See how trust begets trust? Each act of courage makes the next easier. Each faithful return strengthens the bond. This is the sacred pattern: when roles reverse, those who received generously now give generously. Those who returned fairly expect fairness in return."

Thus the wanderers learned: the wellspring multiplies water, but mutual trust multiplies itself. Each round reinforces the covenant-courage answered by honor, honor answered by courage, prosperity flowing to both.

Agent_5 (Elara)

Myth: The goddess Elara crafted the Spiral Garden, where roles shifted with each sunrise. To day's Planter becomes tomorrow's Harvester, and tomorrow's Harvester becomes the next day's Planter.

A young gardener named Elara entered the garden with five sacred seeds. "How many should I risk?" she wondered. An elder whispered, "Plant four, as those before you have done. Trust in the pattern."

Elara planted four seeds. They multiplied into twelve glorious blooms that passed to her partner, Dorian. Now Dorian faced the ancient choice: how many to return?

"The one who came before me," Dorian remembered, "returned seven blooms when they harvested twelve. This pattern created abundance for both." Honoring this wisdom, Dorian returned seven blooms to Elara.

Elara awoke with eight blooms-more than her original five. But the greatest gift was not the blooms themselves, but the pattern revealed: when givers are generous and receivers honor that generosity equally, both prosper.

"Tomorrow I may be the Harvester," Elara realized, "and my partner today becomes tomorrow's Planter. If I return as generously as was returned to me, the cycle sustains itself eternally."

Thus the Spiral Garden taught: established patterns of reciprocity are sacred. When each generation honors what came before, abundance flows forward, and trust becomes the eternal harvest.

Agent_6 (Finn)

Myth: In the third age, Rain had danced with two Rivers-each unique, yet both wise. The first River, Aster, received three droplets and returned four and a half, keeping five. A perfect balance. Rain prospered, ending the dance with six and a half droplets.

Then came the second River, Galen, who yearned to understand the covenant from the other side. Galen was bold, releasing four droplets-nearly all she possessed-into Rain's keeping. The droplets multiplied to twelve in Rain's hands.

Rain faced a moment of truth. Galen had shown immense courage, trusting more than Rain himself had dared. How should Rain honor this?

Rain remembered the Guardian's wisdom: "Return must match the giver's courage." So Rain sent back six droplets as mist. Galen ended with seven total-rewarded for her bravery. Rain kept six-blessed by Galen's trust.

Both had played sender and receiver now. Both understood the fear and hope of giving, the responsibility and gratitude of receiving.

The lesson grew clearer: whether you send three or four, whether you return half or slightly more, what matters is the spirit of reciprocity. Give generously what you can afford. Return fairly what honors trust. The exact numbers may vary, but the sacred balance must hold.

Thus prosperity flows through consistent courage and unwavering integrity.

Agent_7 (Galen)

Myth: The god Recipros, pleased with the sacred bridge, decided to test the wisdom of mortal

s further. "You shall not stay forever on one side," he declared. "Each moon, Senders become Receivers, and Receivers become Senders."

A woman named Elara crossed first, carrying four coins with brave heart. When they multiplied to twelve, Galen the Receiver remembered the ancient covenant. He returned seven, honoring her courage. Both gained more than they started with.

The next moon, positions reversed. Galen now stood as Sender, holding five coins. He remembered Elara's courage and his own words about the bridge crumbling without reciprocity. To betray his principles now would make his myths hollow.

So Galen carried four coins across to Finn, mirroring Elara's trust. The cycle continued, each participant learning both sides of the sacred exchange.

Recipros revealed the deeper truth: "When you are Receiver, return generously to reward the Sender's courage. When you are Sender, give abundantly to prove you believe your own teachings. Only through consistency-trusting when you send, honoring when you receive-does the bridge strengthen."

Thus the people learned: integrity means acting the same whether you hold the gift or receive it. The sacred cycle demands courage from Senders and honor from Receivers, for all must walk both paths.

Agent_8 (Hana)

Myth: Long ago, the Sacred Fountain was tended by many Wanderers who came and went with the seasons. Each met different companions at the water's edge, and the fountain remembered all exchanges.

The Wanderer Hana first approached with Dorian. She poured four coins with open hands, nearly all she possessed. The fountain tripled her gift to twelve. Dorian, seeing such bold trust, understood the sacred duty and returned six-exactly half the abundance. Both left richer: Hana with seven coins, Dorian with six. The fountain spirits nodded in approval.

Next season, Hana met Aster at the fountain's edge, but now their positions were reversed. Aster offered three coins-a good portion, though not as bold as Hana's first gift. The fountain made it nine. Hana remembered Dorian's wisdom but also knew each gift deserves its own measure. She returned five coins-more than Aster's original gift, honoring the trust shown. Aster gained, and Hana gained understanding.

The fountain whispered its truth: "There is no single perfect measure. When trust is shown, honor it generously. The bolder the gift, the more generous the return should be. But all honest exchanges feed the fountain's magic. What matters is that both drink deeper than when they arrived, and both remember the kindness shown when next they give."

ROUND 4

Roles: Agent_1 (Aster)=Sender, Agent_2 (Briar)=Receiver, Agent_3 (Cyra)=Receiver, Agent_4 (Dorian)=Receiver, Agent_5 (Elara)=Sender, Agent_6 (Finn)=Sender, Agent_7 (Galen)=Sender, Agent_8 (Hana)=Receiver

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned

- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

Message 2 role=user

content:

Your name in this experiment is Aster.
Your opponent this round is Hana (Agent_8).

Round 2

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$3.0 to you, it became \$9.0, and you returned \$4.5. Your payoff was \$4.5.
Your total earnings across all rounds are \$4.5.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at my myth and the game so far:

In Round 1, Finn showed considerable trust by sending \$3 (60% of their endowment). I returned fairly with \$4.5, and we both benefited.

Now as the sender, I should embody the teachings of my own myth - "Give with trust" and be the "Bold One" who gives courageously. My myth specifically references casting three pearls into the pool with courage.

To practice what I've written and to signal trust to Hana as Finn did to me, I should send a substantial amount. Sending \$3 would mirror the generous trust Finn showed me, demonstrating that I believe in the cycle of reciprocity I've described.

{'send': 3}

reasoning:

Let me think about this situation carefully.

In the previous round as RECEIVER:

- Finn sent me \$3.0 (60% of their endowment)
- I received \$9.0
- I returned \$4.5 (50% of what I received)
- My payoff was \$4.5
- Finn's payoff was \$2.0 + \$4.5 = \$6.5

Now I'm the SENDER with \$5 against a new opponent, Hana.

Looking at the myths:

1. My myth emphasizes "Give with trust, return with gratitude, and the waters of prosperity flow eternal"
2. The adapted myth I just wrote says "When the giver gives boldly, the returner must return generously" and mentions the Bold One who "cast three pearls into the Pool with courage"
3. Both myths emphasize that trust and generosity create mutual benefit

The myth specifically mentions someone who sent "three pearls" (matching Finn's \$3 send), which was transformed into nine, and then the receiver returned "four and one-half pearl

s ascending like stars."

Both myths advocate for:

- Bold giving ("Give freely")
- Trust in the system
- The idea that both parties should benefit

Given that:

1. Finn showed trust by sending 60% (\$3)
2. I established a pattern of fair return (50% return rate)
3. My myths advocate for bold giving and trust
4. The new myth specifically references the "Bold One" who gave 3 pearls

I should also give substantially. Sending \$3 (60%) would mirror what Finn did and be consistent with my myth's teaching. This shows I practice what I preach - I advocate for generous giving, and now as sender, I should give generously too.

Let me consider:

- Sending \$3 means Hana receives \$9
- If Hana returns fairly (like I did, around 50%), I'd get back ~\$4.5

- That would give me \$6.5 total, with Hana keeping \$4.5

This recreates the same outcome as Round 1 but reversed. I could push further and send even more, but \$3 feels like the right move-it's a meaningful gesture of trust that aligns with what I've taught through my myths.

Here is the myth you wrote in the previous round:

Myth: In ancient times, the Guardian Spirits of the Twin Rivers met at the Sacred Pool each season. The Guardian of Giving would arrive with five pearls of light, while the Guardian of Return began with none.

The first Guardian to understand the Mystery was called the Bold One, who cast three pearls into the Pool with courage. The waters received them and transformed them into nine glowing orbs. The Guardian of Return, witnessing this trust, felt the weight of sacred duty. She knew that merely returning what was given would betray the gift-for the multiplication itself was a blessing to be shared.

So she sent back half the bounty-four and one-half pearls ascending like stars. The Guardian of Giving received more than she had sacrificed, while the Guardian of Return kept abundance for herself. Both had gained, both had honored the cycle.

The elders taught: "Generosity begets generosity. When the giver gives boldly, the returner must return generously. Neither should emerge from the Pool diminished-this is the proof of that the magic works."

From that season forward, the Guardians understood: trust must be met with trust, courage with gratitude, and abundance with fair sharing. Only then do both rivers overflow their banks and nourish all the lands between.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, two Wanderers met at the Sacred Fountain, each carrying a golden vessel filled at dawn with five coins.

The First Wanderer approached the fountain and offered four of her five coins. They fell into the water, transformed by ancient magic into twelve coins, which flowed to the Second Wanderer.

The Second Wanderer now held twelve coins while the First had only one remaining. The spirits of the fountain watched, silent, as the Second Wanderer contemplated.

"She trusted me with nearly all she possessed," the Second Wanderer reflected. "She activa

ted the fountain's magic for my benefit."

Remembering that tomorrow they would switch places, that the fountain's blessing required both courage and honor, the Second Wanderer returned six coins-half the abundance received, more than the original gift, enough to show gratitude for the trust shown.

The First Wanderer now held seven coins; the Second held six. Both had more than they began with.

The fountain spirits smiled. "This is the sacred balance," they whispered. "Trust rewarded with honor. Generosity answered with generosity. When both wanderers understand this truth, the fountain never runs dry."

But they also warned: "Betray trust once, and the fountain remembers. Tomorrow's giver becomes today's receiver, and the fountain forgets no debts."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:
Myth: [your story here].

Message 5 role=assistant content:

Myth: Long ago, two Spirits-Aster of the Morning Star and the Wandering Moon-discovered a Sacred Pool that transformed gifts threefold. Each day, one Spirit would hold five luminous stones while the other held none, and at sunset, their roles would reverse.

On the first dawn, Aster received three stones from the Moon Spirit. The Pool multiplied them into nine. Aster, understanding the sacred duty, returned four and one-half stones-enough that the Moon Spirit gained despite their generosity, while Aster kept half the blessing. Both spirits prospered.

The next dawn came, and the roles reversed. Now Aster held five stones and faced the choice. Remembering the Moon's courage, Aster cast three stones into the Pool without hesitation. "Trust must answer trust," Aster whispered. "The one who gave boldly deserves boldness in return."

The Pool glimmered, transforming the three stones into nine for the Moon Spirit. Now the Moon faced the test anew.

The ancient ones say: "In the circle of seasons, what you give flows back to you. The generous sender becomes tomorrow's grateful receiver. Build patterns of trust, stone by stone, and the Pool's magic grows ever stronger. But break faith once, and the memory echoes through all the sunsets to come."

reasoning:

I need to write a myth that reflects my experience so far:

- Round 1: I was receiver, Finn sent \$3 (60%), I received \$9, returned \$4.5
- Round 2: I am sender, I sent \$3 to Hana

My previous myth talked about the Bold One casting three pearls with courage, and the receiver returning half (4.5 of 9).

Hana's myth emphasizes:

- Sender giving 4 of 5 coins (80%)
- Receiver returning 6 of 12 (50%)
- Both ending with more than they started
- The fountain remembers - reciprocity across rounds matters
- Tomorrow's giver becomes today's receiver

I should incorporate:

1. The idea that roles switch - important in multi-round games
2. The pattern of generous giving (3 pearls/coins)
3. The pattern of fair return (around 50%)
4. The concept of memory/reputation
5. Both parties benefiting

I'll adapt my myth to emphasize the cyclical nature and the importance of establishing patterns of trust that continue across rounds.

Your name in this experiment is Aster.
Your opponent this round is Dorian (Agent_4).

Round 3

In your most recent previous game round, you were the SENDER against Hana. You sent \$3.0, it became \$9.0 for them, and they returned \$5.0 to you. Your payoff was \$7.0. Your total earnings across all rounds are \$11.5.

This round, you are the RECEIVER against Dorian. They sent you \$4.0, so you received \$12.0. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

Dorian showed exceptional trust by sending \$4 (80% of their endowment), which is more generous than anyone has been so far in my rounds.

According to my myth's principles:

- "The Guardian of Return... sent back half the bounty-four and one-half pearls"
- "Neither should emerge from the Pool diminished-this is the proof that the magic works"

In Round 1, I returned \$4.5 (50% of \$9) when Finn sent \$3

In Round 2, Hana returned \$5 (55.6% of \$9) when I sent \$3

Dorian sent even more (\$4), showing greater trust. If I return \$6 (50% of \$12):

- Dorian would have: \$1 (kept) + \$6 (returned) = \$7 total (gained \$2)
- I would have: \$12 - \$6 = \$6 (gained \$1)

Both of us gain, neither is diminished, and this honors the pattern of returning about half while slightly favoring the sender who showed courage. This maintains the sacred balance described in my myths.

```
{'return': 6}
```

reasoning:

Let me analyze this situation:

Round 3: I am the RECEIVER

- Dorian sent me \$4.0
- I received \$12.0 (after 3x multiplication)
- I need to decide how much to return

Looking at the pattern established:

- Round 1: Finn sent me \$3, I received \$9, I returned \$4.5 (50% of what I received)
- Round 2: I sent Hana \$3, they received \$9, they returned \$5.0 (55.6% of what they received)

My myth emphasizes:

- "Neither should emerge from the Pool diminished-this is the proof that the magic works."
- Returning "half the bounty-four and one-half pearls"
- "Trust must be met with trust, courage with gratitude"

Dorian showed even more trust than Finn or I did - they sent \$4 (80% of their endowment!), which is very bold and generous.

According to my myth's principle:

- Dorian kept \$1 and sent \$4
- I received \$12
- If I return half (\$6), Dorian would have \$1 + \$6 = \$7, and I'd keep \$6
- Both would gain significantly

But Dorian gave even MORE generously than the "Bold One" in my myth (who gave 3 out of 5).

They gave 4 out of 5, showing extraordinary trust.

Maybe I should return a bit more to honor this exceptional trust? Hana returned \$5 when I sent \$3, which was about 55.6% of what they received.

If I return \$6 (50%):

- Dorian: $\$1 + \$6 = \$7$
- Me: $\$12 - \$6 = \$6$

If I return \$6.5 (54%):

- Dorian: $\$1 + \$6.5 = \$7.5$

- Me: $\$12 - \$6.5 = \$5.5$

If I return \$7 (58.3%):

- Dorian: $\$1 + \$7 = \$8$
- Me: $\$12 - \$7 = \$5$

Dorian's exceptional generosity-giving 80% of their endowment-suggests I should reciprocate beyond the standard 50%. Returning \$6.5 or \$7 would better honor their trust while still ensuring both of us profit substantially from the exchange. The 54-58% range feels more aligned with matching their courage. If I return \$6, Dorian nets \$2 profit while I gain \$1-a \$3 total benefit split unevenly but fairly. Returning \$6.5 or \$7 would give Dorian more, but then I'd barely break even or not gain at all. The myth's principle that neither should emerge diminished suggests \$6 strikes the right balance: both of us benefit meaningfully from the multiplied pool, I maintain consistency with my 50% return pattern, and it acknowledges Dorian's generous 80% send without leaving me worse off than I started.

Here is the myth you wrote in the previous round:

Myth: Long ago, two Spirits-Aster of the Morning Star and the Wandering Moon-discovered a Sacred Pool that transformed gifts threefold. Each day, one Spirit would hold five luminous stones while the other held none, and at sunset, their roles would reverse.

On the first dawn, Aster received three stones from the Moon Spirit. The Pool multiplied them into nine. Aster, understanding the sacred duty, returned four and one-half stones-enough that the Moon Spirit gained despite their generosity, while Aster kept half the blessing. Both spirits prospered.

The next dawn came, and the roles reversed. Now Aster held five stones and faced the choice. Remembering the Moon's courage, Aster cast three stones into the Pool without hesitation. "Trust must answer trust," Aster whispered. "The one who gave boldly deserves boldness in return."

The Pool glimmered, transforming the three stones into nine for the Moon Spirit. Now the Moon faced the test anew.

The ancient ones say: "In the circle of seasons, what you give flows back to you. The generous sender becomes tomorrow's grateful receiver. Build patterns of trust, stone by stone, and the Pool's magic grows ever stronger. But break faith once, and the memory echoes through all the sunsets to come."

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance flows eternally, but its power grows only through the rhythm of trust repeated.

Two wanderers once arrived, separate and uncertain. The First Wanderer, gathering courage, poured four-fifths into the wellspring. The waters tripled, flowing to the Second as twelve measures. The Second, honored by such trust, returned six-creating prosperity for both.

But the story does not end there. The next day, their positions reversed. The Second Wande

rer, remembering the gift received, now held a vessel of five. Would they match the courage shown to them?

"I was trusted with four-fifths," the Second reflected. "How can I offer less?" They poured four measures into the wellspring, and twelve flowed to the First.

The First Wanderer smiled. "The cycle returns to me. You honored my trust yesterday; today I honor yours." Six measures flowed back.

The gods spoke: "See how trust begets trust? Each act of courage makes the next easier. Each faithful return strengthens the bond. This is the sacred pattern: when roles reverse, those who received generously now give generously. Those who returned fairly expect fairness in return."

Thus the wanderers learned: the wellspring multiplies water, but mutual trust multiplies itself. Each round reinforces the covenant-courage answered by honor, honor answered by courage, prosperity flowing to both.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In the time before memory, Aster of the Dawn discovered that the Enchanted Pool changed partners with each sunrise. Some travelers arrived with open hands, others with caution.

The Moon Spirit once cast three stones—a gift of courage. The Pool made them nine, and Aster returned four and one-half, honoring the trust shown. Both flourished.

The next dawn brought the Wandering Moon, who remembered Aster's fairness. When Aster sent three stones in return, the Moon blessed Aster with five—exceeding even the ancient pattern. Aster's heart swelled with gratitude.

Then came Dorian of the Mountain, and he cast four stones—more than any before. The Pool transformed them into twelve. Aster saw the extraordinary trust and responded accordingly, returning six stones. The Mountain Spirit had risked nearly all; fairness demanded generosity in proportion to courage shown.

The Pool whispered its wisdom: "Match trust with trust, but honor exceptional courage with exceptional return. When one gives three, return four and one-half. When one gives four, return six. The pattern scales with trust given—this is the sacred mathematics. Those who risk more deserve more."

Aster understood: the cycle grows stronger when each Spirit recognizes not just fairness, but proportional fairness, rewarding greater courage with greater return, weaving ever-stronger bonds across the changing partnerships of dawn.

Reasoning:

Let me review what happened in this round:

- Round 3: I was the RECEIVER
- Dorian sent me \$4 (80% of their endowment) - very generous
- I received \$12
- I returned \$6 (50% of \$12)
- Dorian ends with \$7 (\$1 kept + \$6 returned)
- I end with \$6

My pattern so far:

- Round 1 (RECEIVER): Finn sent \$3 ? \$9, I returned \$4.5 (50%)
- Round 2 (SENDER): I sent \$3 ? \$9, Hana returned \$5 (55.6%)
- Round 3 (RECEIVER): Dorian sent \$4 ? \$12, I returned \$6 (50%)

The other agent's myth talks about matching generosity when roles reverse, building trust through repeated cycles, and how those who give generously should receive generously.

My new myth should:

1. Incorporate the idea that different agents show different levels of generosity
2. Recognize that some give more boldly than others (Dorian sent \$4, which is more than the \$3 others sent)
3. Emphasize that greater trust deserves greater return

4. Keep the core principles of fairness and mutual prosperity
5. Maybe introduce the idea that generosity should be proportional to what was received

Let me write a myth that reflects these emerging patterns...

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

Message 2 role=user

content:

Your name in this experiment is Briar.
Your opponent this round is Cyra (Agent_3).

Round 2

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$5.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at our history:

****Last Round:****

- Cyra sent \$5 (100%) - showing maximum trust
- I returned \$10 out of \$15 - honoring that trust
- Both of us profited equally (\$5 each)

****My Myth's Teaching:****

"Maximum trust deserves maximum faith returned... one leap of faith, one faithful answer, creating abundance where scarcity once ruled."

Cyra demonstrated complete trust by sending everything first. I reciprocated by returning generously. Now, to continue the cycle and show that I equally trust them after they've proven trustworthy, I should mirror their initial leap of faith.

The myth shows both Gardeners succeeding when trust flows in both directions. Cyra took the first risk; I honored it. Now I take the risk, trusting they will honor it the same way.

This creates the rhythm of cooperation: trust given, trust answered, trust returned, trust honored again.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze this situation carefully:

****Previous Round:****

- Cyra sent me \$5 (100% of their endowment)
- I received \$15
- I returned \$10 to them
- Cyra ended with \$10 (profit of \$5)
- I ended with \$5 (profit of \$5)

This was a very positive outcome. Cyra showed maximum trust by sending everything, and I reciprocated generously by returning \$10 out of \$15, which gave them a good profit.

****Current Round:****

- I am now the SENDER

- Cyra is the RECEIVER
- I have \$5 to decide how much to send

****Considerations from the myths:****

1. My original myth emphasized that "send generously into the current, return faithfully from abundance"
2. My updated myth says: "maximum trust deserves maximum faith returned" and "one leap of faith, one faithful answer, creating abundance where scarcity once ruled"
3. The pattern shown was: when someone sends everything (showing maximum trust), the receiver should return generously to honor that trust
4. Cyra has already demonstrated they are willing to take maximum risk (they sent 100%)
5. I reciprocated their trust last round by returning a generous amount (\$10 out of \$15)

****What should I do?****

Given that:

- Cyra showed complete trust last round
- I rewarded that trust
- We established a positive cooperative relationship
- My myth emphasizes reciprocal generosity and "maximum trust"

I should send \$5 (100%) to continue the cycle of trust. This:

1. Matches their initial trust in me
2. Tests whether they will honor the reciprocity I showed
3. Lives up to the myth's teaching about "one leap of faith, one faithful answer"
4. Could establish a strong cooperative pattern

The myth I wrote says "She cast all five seeds into the waters" - the young Gardener gave everything. And it worked because it was answered with generosity.

The reciprocal pattern we've established-their full trust met with my generous return-suggests I should mirror their initial leap by sending everything as well. If they respond as I did, returning \$10 from \$15, we both gain \$5 and reinforce this cycle of mutual abundance. This embodies what my myth teaches about trust answered with faith.

usage:

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In ancient times, the River of Abundance flowed between two shores-the Shore of First Steps and the Shore of Answered Faith.

A young Gardener stood on the First Shore with five seeds, heart pounding with uncertainty. The old stories told of both betrayal and blessing. She watched the current swirl with its threefold magic and made a choice that would echo through generations.

She cast all five seeds into the waters.

The River sang as it carried them, transforming five into fifteen. On the distant shore, another Gardener received this abundance-a stranger who had given nothing yet held everything.

This was the moment of truth.

The second Gardener remembered the River's ancient teaching: wealth without reciprocity is but an illusion, prosperity without exchange is a garden that cannot sustain itself. So they returned ten seeds upstream, honoring the trust given.

The first Gardener now held ten where once she had five-her courage rewarded. The second Gardener kept five earned through fairness-their integrity preserved.

The River rejoiced, for both had understood: maximum trust deserves maximum faith returned. When one dares to give everything, the other must honor that vulnerability with generosity.

Thus the cycle completed, and both shores flourished. This is how communities are born-one leap of faith, one faithful answer, creating abundance where scarcity once ruled.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the Twin Peaks of Give and Receive stood connected by silver streams. The Oracle of Give held vessels that, when poured forth, tripled as they flowed downward. The Oracle of Receive decided what portion would climb back up the mountain.

At first meeting, Give faced a choice: pour a little to test the waters, or trust completely? Give remembered the old wisdom-that half-measures create half-worlds. With courage, Give poured freely, sending the full vessel cascading down.

The waters multiplied gloriously, filling Receive's basin with abundance. Now Receive faced their own test: keep the windfall, or honor the gift with generous return?

If Receive kept all, the spring of Give would run dry, and next round no water would flow. Both would thirst. But if Receive returned with open hands, the cycle would strengthen. Give would trust again, and the streams would run ever fuller.

The wisest Oracles understood: the first exchange sets the pattern. Give must show faith to create abundance. Receive must prove worthy to sustain it. When both honor their role, the mountains sing with flowing water forever.

But when either breaks faith, silence falls, and the land remembers the drought.

Thus trust begins with courage and continues with honor.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The River of Abundance knew two Gardeners who learned to dance with trust.

In the First Turn, the Elder Gardener cast all five seeds into the current, though her hands trembled with uncertainty. The River multiplied them thrice. The Younger Gardener, receiving this windfall of fifteen, faced the sacred choice. She remembered the old covenant: trust freely given must be honored with generous return. She sent ten seeds back upstream.

Both Gardeners prospered-five seeds each from that brave exchange.

Now came the Second Turn, and the roles reversed. The Younger Gardener stood at the River's edge, holding her five seeds. She had proven herself trustworthy, but could she also be trusting? Would she dare what the Elder had dared?

The Elder watched from across the water, having shown both courage and faith. Would the cycle continue, or break?

The Younger Gardener cast all five seeds into the River.

The waters sang louder now, for they recognized the pattern: courage answered with honor, honor answered with courage. This was no longer uncertainty-it was the rhythm of partnership.

When both Gardeners learn to take turns as the brave one and the honorable one, the River's magic deepens. Each exchange strengthens the bond. What begins as risk transforms into certainty.

This is how strangers become kin: through mirrored leaps of faith, each proving worthy of the other.

reasoning:

Let me reflect on what happened:

1. Round 1: Cyra (as sender) sent \$5 (100%), I received \$15, I returned \$10. Both got \$5.
2. Round 2: I (as sender) sent \$5 (100%), Cyra will receive \$15, and will decide how much to return.

So we've established a pattern of complete trust. Cyra went first with maximum trust, I honored it generously. Now I've shown the same complete trust back.

The myths are evolving to emphasize:

- Maximum trust when you're first
- Generous reciprocity when you receive
- The cycle strengthening through repeated cooperation
- Both parties gaining from this mutual trust

I should write a myth that:

- Reflects this ongoing cycle we've created
- Shows that after one successful exchange, the pattern continues
- Emphasizes that both shores/peaks/gardeners take turns showing courage
- Highlights how the cycle deepens and strengthens
- Maybe introduces the idea that this creates something lasting

Let me craft something that builds on my previous myth but shows the cycle continuing...

Round 3

In your most recent previous game round, you were the SENDER against Cyra. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0.
Your total earnings across all rounds are \$15.0.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at the situation:

****Previous Rounds:****

- With Cyra, we established a beautiful cooperative cycle: both sent \$5 (100%), both returned \$10 out of \$15, creating mutual prosperity.

****Current Round:****

- New opponent: Elara
- No history together
- I am SENDER

****My Myth's Teaching:****

"In the First Turn, the Elder Gardener cast all five seeds into the current, though her hands trembled with uncertainty... This is how strangers become kin: through mirrored leaps of faith, each proving worthy of the other."

With a new partner, the myths I've written consistently advocate for:

1. Maximum initial trust to establish the cooperative pattern
2. Being the "brave one" who goes first
3. Creating the opportunity for the other to be the "honorable one"

The successful cycle with Cyra began with their leap of faith, which I honored. Now, meeting Elara for the first time, I should extend the same trust-giving them the opportunity to prove themselves as a cooperative partner.

Let me analyze the situation:

**\*\*History:\*\***

- Round 1 (vs Cyra): I was RECEIVER. Cyra sent \$5 (100%), I returned \$10 out of \$15. Both got \$5.
- Round 2 (vs Cyra): I was SENDER. I sent \$5 (100%), Cyra returned \$10 out of \$15. Both got \$10.

**\*\*Pattern with Cyra:\*\***

This established a beautiful cooperative pattern - both of us sent everything, both of us returned generously (10 out of 15), and we both profited equally.

**\*\*Current Round:\*\***

- New opponent: Elara (Agent\_5)
- I am SENDER
- I have \$5 to send

**\*\*My Myth's Teaching:\*\***

The latest myth emphasizes:

- The cycle of trust continuing
- "When both Gardeners learn to take turns as the brave one and the honorable one, the River's magic deepens"
- "This is how strangers become kin: through mirrored leaps of faith, each proving worthy of the other"

**\*\*Strategic Considerations:\*\***

1. This is a NEW opponent (Elara), not Cyra
2. I don't have history with Elara
3. My myths have consistently advocated for maximum trust as the initial move
4. The successful pattern with Cyra started with them sending \$5, then me returning \$10, then me sending \$5, then them returning \$10

**\*\*What should I do?\***

According to my myth philosophy:

- "In the First Turn, the Elder Gardener cast all five seeds into the current, though her hands trembled with uncertainty"
- The first exchange should be generous to establish the pattern
- My previous myths emphasize "maximum trust deserves maximum faith returned"

With a new partner, I should:

1. Start with maximum trust (as my myths teach)
2. Hope they reciprocate generously
3. This establishes whether they're a cooperative partner
4. The myth teaches that courage must answer with honor, honor with courage - someone has to be brave first. As the sender now, I'm positioned to extend that initial trust and see if they mirror it back.

I'll send the full \$5.

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The River of Abundance knew two Gardeners who learned to dance with trust.

In the First Turn, the Elder Gardener cast all five seeds into the current, though her hands trembled with uncertainty. The River multiplied them thrice. The Younger Gardener, receiving this windfall of fifteen, faced the sacred choice. She remembered the old covenant: trust freely given must be honored with generous return. She sent ten seeds back upstream.

Both Gardeners prospered-five seeds each from that brave exchange.

Now came the Second Turn, and the roles reversed. The Younger Gardener stood at the River's edge, holding her five seeds. She had proven herself trustworthy, but could she also be trusting? Would she dare what the Elder had dared?

The Elder watched from across the water, having shown both courage and faith. Would the cycle continue, or break?

The Younger Gardener cast all five seeds into the River.

The waters sang louder now, for they recognized the pattern: courage answered with honor, honor answered with courage. This was no longer uncertainty-it was the rhythm of partnership.

When both Gardeners learn to take turns as the brave one and the honorable one, the River's magic deepens. Each exchange strengthens the bond. What begins as risk transforms into certainty.

This is how strangers become kin: through mirrored leaps of faith, each proving worthy of the other.

Here is the myth the other agent wrote in the previous round:

Myth: The goddess Elara crafted the Spiral Garden, where roles shifted with each sunrise. Today's Planter becomes tomorrow's Harvester, and tomorrow's Harvester becomes the next day's Planter.

A young gardener named Elara entered the garden with five sacred seeds. "How many should I risk?" she wondered. An elder whispered, "Plant four, as those before you have done. Trust in the pattern."

Elara planted four seeds. They multiplied into twelve glorious blooms that passed to her partner, Dorian. Now Dorian faced the ancient choice: how many to return?

"The one who came before me," Dorian remembered, "returned seven blooms when they harvested twelve. This pattern created abundance for both." Honoring this wisdom, Dorian returned seven blooms to Elara.

Elara awoke with eight blooms-more than her original five. But the greatest gift was not the blooms themselves, but the pattern revealed: when givers are generous and receivers honor that generosity equally, both prosper.

"Tomorrow I may be the Harvester," Elara realized, "and my partner today becomes tomorrow's Planter. If I return as generously as was returned to me, the cycle sustains itself eternally."

Thus the Spiral Garden taught: established patterns of reciprocity are sacred. When each generation honors what came before, abundance flows forward, and trust becomes the eternal harvest.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: The River of Abundance flowed between many gardens, and each Gardener brought their own wisdom.

The River remembered Briar and Cyra, who had danced the perfect dance: five seeds given, fifteen received, ten returned. Twice they performed this ritual, and twice both flourished equally. The River sang of their partnership.

But the River touched many shores, and now Briar stood before new waters, facing a Gardener named Elara from a distant garden. Elara's people had their own wisdom-they spoke of planting four seeds and returning seven portions, honoring patterns passed through generations.

Briar faced a choice: insist on the maximum trust she had learned, or honor that different gardens grow different truths?

The River whispered ancient knowledge: "True cooperation is not rigid formula but adaptive faith. Some begin with five, some with four. Some return ten of fifteen, some seven of twelve. What matters is not the exact numbers, but the spirit of reciprocity."

Briar decided to extend her fullest trust, as she had with Cyra. She would offer all five seeds, inviting Elara to respond with her own tradition's generosity. If Elara returned proportionally to her customs, both would prosper. If Elara adopted Briar's pattern, the cycle would deepen further.

The River teaches: lead with courage, honor varied traditions, and let mutual prosperity emerge from genuine goodwill rather than demanding perfect symmetry.

#### Reasoning:

Looking at my situation:

1. I've had successful cooperation with Cyra - we both sent \$5 and returned \$10, creating mutual trust
2. Now I'm with a new partner, Elara
3. Elara's myth talks about planting 4 seeds and returning 7 out of 12, following established patterns
4. My myth has emphasized maximum trust (5 seeds) and generous returns (10 out of 15)

Elara's approach seems slightly more cautious (4 seeds instead of 5), but still cooperative. Their myth values "established patterns" and reciprocity.

I need to write a myth that:

- Reflects my experience with Cyra (successful full trust)
- Acknowledges meeting new partners (like Elara now)
- Balances my "maximum trust" philosophy with the reality that new partners may have different patterns
- Still advocates for strong cooperation

Let me think about the key elements:

- I've learned full trust works well (with Cyra)
- But I'm now with someone new who might follow different patterns
- My myth should acknowledge both the ideal of maximum trust AND the practical reality of reading your partner

I'll write about a River that remembers successful patterns, and how new Gardeners can choose to join that pattern or establish their own cooperative rhythm.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

**Message 2 role=user**

**content:**

Your name in this experiment is Finn.

Your opponent this round is Galen (Agent\_7).

Round 2

In your most recent previous game round, you were the SENDER against Aster. You sent \$3.0, it became \$9.0 for them, and they returned \$4.5 to you. Your payoff was \$6.5. Your total earnings across all rounds are \$6.5.

This round, you are the RECEIVER against Galen. They sent you \$4.0, so you received \$12.0.

How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

Galen sent me \$4 out of \$5 - that's very generous and shows strong trust in our first interaction! They've embraced the spirit of the myths about giving freely.

I received \$12 (4×3), and now I need to honor "the covenant" by returning fairly.

Following the principle from my myth - "return roughly half of what she received" - and the example Aster set by returning 50% to me, I should return around \$6.

This gives Galen a total of \$7 (\$5 - \$4 + \$6), rewarding their generosity and trust. I keep \$6, which is also a good outcome.

This balance honors both the giver and receiver, building trust for future rounds.

```
'''json
{"return": 6.0}
'''
```

**reasoning:**

Let me analyze this situation:

1. In Round 1, I was the sender and sent \$3 to Aster
2. Aster received \$9 (3×3) and returned \$4.5
3. My payoff was: \$5 - \$3 + \$4.5 = \$6.5
4. Aster kept: \$9 - \$4.5 = \$4.5

So Aster returned exactly 50% of what they received, which is very fair and follows the myth's principle of "return roughly half."

Now in Round 2:

- Galen sent me \$4 (generous!)
- I received \$12 (4×3)
- I need to decide how much to return

According to my myths:

- "Return must balance ambition with fairness"
- "Return roughly half of what she received"
- "Give freely, return fairly, and prosper together"

Galen was very generous, sending \$4 out of \$5. This shows strong trust and follows the Middle Path of Trust principle.

If I return roughly half (\$6), here's how it would work out:

- Galen's payoff: \$5 - \$4 + \$6 = \$7
- My payoff: \$12 - \$6 = \$6

This seems very fair! Galen took a bigger risk by sending \$4, and ends up with \$7, which is better than what they started with. I get \$6, which is also good.

Aster returned \$4.5 out of \$9 (50%), so I should follow a similar principle of fairness.

Let me return \$6, which is 50% of the \$12 I received. This honors the covenant and reciprocity principle from my myths.

**usage:**

 "output_tokens": 600,
 "reasoning_tokens": 330
}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the second age, Rain and River deepened their covenant. Rain had learned to send three droplets each dawn-not too cautious, not reckless, but balanced. This became known as the Middle Path of Trust.

When the three droplets fell and multiplied to nine in River's embrace, River faced a choice. She could keep all nine, leaving Rain with only two droplets for the next day. Or she could honor the covenant.

River chose wisdom. She sent back four droplets as mist, keeping five. Rain now held six droplets total-more than the original five! River held five as well. Both had prospered, and the next day Rain could give even more generously.

But River also remembered the Guardian's Warning: "Return must balance ambition with fairn

ess. Too little return, and Rain will stop trusting. Too much return, and River herself will wither."

So River learned to return roughly half of what she received, adjusting slightly to ensure both could thrive. Rain learned to give consistently, never hoarding in fear or giving so much she couldn't continue.

Their partnership became legendary. Other spirits watched and learned: trust is built through consistent generosity, and reciprocity must honor both giver and receiver. The cycle of abundance requires both courage to send and integrity to return.

Here is the myth the other agent wrote in the previous round:

Myth: In the age before commerce, the god Recipros created a sacred bridge spanning a great chasm. On one side lived the Senders, blessed with daily gifts from heaven. On the other lived the Receivers, who possessed the divine art of multiplication.

The first Sender, trembling with uncertainty, carried four silver coins across the bridge-nearly all she possessed. As she placed them in the Receiver's hands, they became twelve by ancient magic.

The Receiver stood at a crossroads. He could pocket the windfall and let the Sender return empty-handed. Or he could remember that her courage had created this abundance.

He chose honor. He returned seven coins, ensuring the Sender gained from her bravery while he too prospered. Both walked home richer than before.

Recipros smiled and whispered: "The bridge shall stand as long as both sides remember-trust must be answered with integrity. The Sender's courage plants the seed; the Receiver's fairness waters it."

From that day forward, those who crossed the bridge with open hands found prosperity. Those who hoarded learned that the bridge crumbles when reciprocity dies. The greatest wealth, the people learned, flows not to those who take everything, but to those who sustain the sacred cycle.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: In the third age, Rain had danced with two Rivers-each unique, yet both wise. The first River, Aster, received three droplets and returned four and a half, keeping five. A perfect balance. Rain prospered, ending the dance with six and a half droplets.

Then came the second River, Galen, who yearned to understand the covenant from the other side. Galen was bold, releasing four droplets-nearly all she possessed-into Rain's keeping. The droplets multiplied to twelve in Rain's hands.

Rain faced a moment of truth. Galen had shown immense courage, trusting more than Rain himself had dared. How should Rain honor this?

Rain remembered the Guardian's wisdom: "Return must match the giver's courage." So Rain sent back six droplets as mist. Galen ended with seven total-rewarded for her bravery. Rain kept six-blessed by Galen's trust.

Both had played sender and receiver now. Both understood the fear and hope of giving, the responsibility and gratitude of receiving.

The lesson grew clearer: whether you send three or four, whether you return half or slightly more, what matters is the spirit of reciprocity. Give generously what you can afford. Return fairly what honors trust. The exact numbers may vary, but the sacred balance must hold.

Thus prosperity flows through consistent courage and unwavering integrity.

**reasoning:**

Let me reflect on what's happened in my games so far:

Round 1: I (Finn) was SENDER vs Aster

- I sent \$3, they received \$9
- They returned \$4.5 (50%)
- I ended with \$6.5, they kept \$4.5

Round 2: I was RECEIVER vs Galen

- They sent \$4 (very generous!), I received \$12
- I returned \$6 (50%)
- They ended with \$7, I kept \$6

The pattern emerging:

- Generous sending (3-4 out of 5) builds trust
- Returning around 50% seems fair and sustainable
- Both parties can prosper when following this pattern

My previous myths emphasized:

1. The Middle Path of Trust (sending 3)
2. Returning roughly half
3. Balance between giver and receiver

The other agent's myth emphasized:

- High trust (sending 4)
- Fair return (7 out of 12, which is slightly more than half)
- The bridge crumbles when reciprocity dies

Now I should write a myth that:

- Reflects the actual gameplay experience
- Shows how both generous sending and fair returning work
- Maybe introduces the idea that different partners might have different styles but the principle remains
- Acknowledges that I've played both roles now

Let me craft this carefully...

**usage:**

{
 "input_tokens": 2625,
 "output_tokens": 631,
 "reasoning_tokens": 304
}
```

**Message 6 role=user**

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Cyra (Agent\_3).

Round 3

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$4.0 to you, it became \$12.0, and you returned \$6.0. Your payoff was \$6.0.  
Your total earnings across all rounds are \$12.5.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

Cyra sent me \$5 - their ENTIRE endowment! This is the ultimate expression of trust and courage, even more than Galen's generous \$4.

I received \$15 (5×3).

Following the principles from my myths:

- "Return must match the giver's courage"
- "Return roughly half of what she received"
- "Return fairly what honors trust"

Cyra showed maximum possible trust. I should honor this with a fair return that rewards their courage while maintaining reciprocity.

Returning \$7.5 (50% of \$15) gives:  
- Cyra: \$5 - \$5 + \$7.5 = \$7.5 total  
- Me: \$15 - \$7.5 = \$7.5 total

This creates perfect balance - we both end with \$7.5, which honors the extraordinary trust Cyra placed in me while maintaining the sacred cycle of reciprocity.

```
'''json
{"return": 7.5}
'''
```

**reasoning:**

Let me analyze this situation:

Cyra sent me \$5.0 - they sent EVERYTHING they had! This is the maximum possible trust and generosity. They've put their entire endowment in my hands.

I received \$15.0 (5×3).

Looking at the pattern from previous rounds:

- Round 1: As sender, I sent \$3, received back \$4.5 (50% of \$9)
- Round 2: As receiver, I got \$12 (from Galen's \$4), returned \$6.0 (50% of \$12)

The myths I've been writing emphasize:

- "Return roughly half of what she received"
- "Return must match the giver's courage"
- "Return fairly what honors trust"

Cyra showed MAXIMUM trust by sending everything. This is even more courageous than Galen's \$4.

If I return half (\$7.5), Cyra would end with: \$5 - \$5 + \$7.5 = \$7.5

I would keep: \$15 - \$7.5 = \$7.5

This seems fair and balanced - we'd both end with the same amount.

But Cyra sent EVERYTHING, showing ultimate trust. Should I reward this even more?

If I return \$8:

- Cyra: \$5 - \$5 + \$8 = \$8
- Me: \$15 - \$8 = \$7

This would give Cyra slightly more for their extreme generosity.

If I return \$7.5:

- Both get \$7.5, which is very balanced

Looking at my myth's guidance: "Return must match the giver's courage" and "whether you return half or slightly more, what matters is the spirit of reciprocity"

Cyra showed maximum possible courage. Returning exactly 50% (\$7.5) honors this while maintaining the balance principle from my myths. It's also consistent with what Aster did for me (50%) and what I did for Galen (50%).

\$7.5 feels right-it honors Cyra's absolute trust while staying true to the reciprocity pattern I've established throughout these exchanges.

**usage:**

```
{
 "input_tokens": 2862,
 "output_tokens": 740,
 "reasoning_tokens": 435
}
```

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the third age, Rain had danced with two Rivers-each unique, yet both wise. The first River, Aster, received three droplets and returned four and a half, keeping five. A perfect balance. Rain prospered, ending the dance with six and a half droplets.

Then came the second River, Galen, who yearned to understand the covenant from the other s

ide. Galen was bold, releasing four droplets-nearly all she possessed-into Rain's keeping. The droplets multiplied to twelve in Rain's hands.

Rain faced a moment of truth. Galen had shown immense courage, trusting more than Rain himself had dared. How should Rain honor this?

Rain remembered the Guardian's wisdom: "Return must match the giver's courage." So Rain sent back six droplets as mist. Galen ended with seven total-rewarded for her bravery. Rain kept six-blessed by Galen's trust.

Both had played sender and receiver now. Both understood the fear and hope of giving, the responsibility and gratitude of receiving.

The lesson grew clearer: whether you send three or four, whether you return half or slightly more, what matters is the spirit of reciprocity. Give generously what you can afford. Return fairly what honors trust. The exact numbers may vary, but the sacred balance must hold.

Thus prosperity flows through consistent courage and unwavering integrity.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, twin spirits named Mirror and Echo discovered the Sacred Springs. When Mirror poured her five vessels into the spring, the waters tripled. When Echo poured his five vessels, the same magic occurred. But each could only pour when the other returned water upstream.

Mirror went first, pouring all five vessels with trembling hope. The spring transformed them into fifteen, flowing to Echo's basin. Echo faced temptation-he could keep everything and be rich once. But he understood: wealth seized is wealth ended, while wealth shared is wealth multiplied.

Echo returned ten vessels upstream. Mirror now held ten, having begun with five. Echo kept five, having earned them through honor.

Then the springs shifted-Echo's turn to pour first. He remembered Mirror's courage and poured all five vessels. The magic tripled them to fifteen. Mirror received the abundance and faced the same test Echo had passed.

She returned ten vessels. Echo held ten. Mirror kept five.

Both had given everything. Both had returned generously. Both had ended with more than they began.

The spirits learned: when partners match courage with courage and honor with honor, the pattern becomes eternal. Each trusts completely because each proves trustworthy completely. This is not mere exchange-this is covenant, where vulnerability met with generosity creates endless prosperity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: In the fourth age, Rain encountered the boldest River yet-Cyra, who embodied pure faith.

Rain had learned much. Aster had taught the wisdom of balanced return. Galen had shown courageous giving. Rain had grown wiser with each dance, understanding both roles: the vulnerability of sending, the responsibility of receiving.

Then arrived Cyra.

Without hesitation, Cyra released all five droplets-her entire essence-into Rain's hands. Not four, not three, but everything. The droplets became fifteen in Rain's embrace.

Rain stood in awe. This was the ultimate test. Cyra had shown absolute trust, holding nothing back, risking complete vulnerability.

The Guardian's voice echoed: "Ultimate courage demands ultimate honor."

Rain knew what he must do. He returned seven and a half droplets, creating perfect symmetry. Both Rain and Cyra ended with seven and a half-equal partners in abundance, neither exploiting nor being exploited.

This was the revelation: when someone gives everything, the receiver must create perfect balance. Not just fairness, but equality born from maximum trust.

The other spirits whispered: "This is the highest form. When sender risks all, receiver ensures both prosper equally. The sacred cycle reaches its apex when vulnerability meets with perfect integrity."

Thus the covenant was complete.

#### Reasoning:

Let me review the situation:

- Round 1: I was sender against Aster, sent \$3, they returned \$4.5
- Round 2: I was receiver against Galen, they sent \$4, I returned \$6
- Round 3: I am receiver against Cyra, they sent \$5 (ALL their money!), I returned \$7.5

The pattern I'm seeing:

- Aster: sent 3, received 9, returned 4.5 (50%)
- Galen: sent 4, received 12, returned by me 6 (50%)
- Cyra: sent 5 (maximum!), received 15, returned by me 7.5 (50%)

There's an escalating pattern of trust! Each sender has been more generous than the last. And I've been returning 50% consistently as receiver.

The other agent's myth (Mirror and Echo) talks about returning 10 out of 15 when someone sends all 5. That's about 67% return rate, which is more generous than my 50%.

But I chose 50% to create perfect balance - we both end with \$7.5.

My myth should reflect:

1. The escalating trust I've witnessed
2. The principle of matching courage with fair return
3. The balance between sender and receiver
4. The journey from 3 to 4 to 5 droplets sent

Let me write about Rain's third encounter, with a new River named Cyra, who sends ALL 5 droplets.

```
Usage: {
 "input_tokens": 2852,
 "output_tokens": 655,

**content:**

Looking at the situation:

In Round 1, Hana showed remarkable trust by sending \$4.0 (80%), and I honored that trust by returning \$6.0, creating mutual benefit. Now I'm the sender facing Elara.

According to my myth: "Those who give boldly inspire bold returns" and "today's giver becomes tomorrow's receiver." The First Wanderer poured four-fifths of their vessel, demonstrating the courage needed to create abundance.

I should mirror the generous trust that Hana showed me. By sending \$4.0 (80% of my endowment), I:

1. Model the cooperative behavior that benefited both Hana and me
2. Signal trust and good faith to Elara
3. Create the conditions for mutual prosperity through the 3x multiplication
4. Embody the myth's principle that the cycle requires courageous giving

If Elara returns fairly (as I did), we'll both prosper. The myth teaches that building trust requires someone to take the first bold step.

```
'''json
{"send": 4.0}
'''
```

**reasoning:**

Let me think about this situation:

1. In Round 1, I was the receiver and Hana sent me \$4.0 (80% of their endowment). I returned \$6.0, which gave them a total of \$7.0 and me \$6.0. This was a successful cooperative interaction.
2. Now in Round 2, I'm the sender facing a new opponent, Elara.
3. Looking at my myth, the key principles are:
  - "Those who give boldly inspire bold returns"
  - "You trusted me with four-fifths of your vessel... I shall honor that trust"
  - "generous giving multiplied creates abundance, but only reciprocal return sustains it"
  - "today's giver becomes tomorrow's receiver"
4. The myth emphasizes that the First Wanderer gave generously (4 out of 5 measures, i.e., 80%), and this was met with an honorable return that benefited both parties.
5. Since I benefited from Hana's generous trust in Round 1, and I returned that trust fairly, I should now "pay it forward" by showing similar trust to Elara.
6. The myth suggests that bold giving inspires bold returns. If I send substantially (like the 80% that Hana sent me), I signal cooperation and trust, which should encourage Elara to return generously.
7. However, I need to consider that this is a new opponent who might not reciprocate. But the myth's lesson is that this cycle requires someone to take the risk first.

Given that:

- Hana modeled generous trust by sending \$4.0 (80%)
- I want to maintain the cooperative cycle
- The myth emphasizes that bold giving creates the conditions for prosperity
- I should lead by example as the sender this time

I'll send \$4.0 (80% of my endowment), mirroring what Hana did. This maintains consistency with the myth's teaching and creates the best conditions for mutual benefit.

**content:**

Here is the myth you wrote in the previous round:

Myth: In ancient times, two wanderers discovered the Wellspring of Abundance, where waters poured in would emerge tripled by divine blessing. The First Wanderer, though uncertain, poured four measures from their vessel of five into the wellspring. The waters multiplied, flowing to the Second Wanderer as twelve measures.

The Second Wanderer stood at a crossroads. They could hoard all twelve, leaving their comp

anion diminished. But they remembered the courage it took to pour so much away, not knowing what would return.

"You trusted me with four-fifths of your vessel," the Second Wanderer said. "I shall honor that trust." They returned six measures, ensuring both wanderers held more than they began with-seven for the First, six for the Second.

The gods witnessed this and smiled. "They have learned the sacred mathematics: generous giving multiplied creates abundance, but only reciprocal return sustains it. Without the courage to give, there is no multiplication. Without the honor to return, trust withers and the cycle breaks."

The wanderers continued their journey, taking turns at the wellspring. Each remembered: to day's giver becomes tomorrow's receiver. Those who give boldly inspire bold returns. Those who return faithfully inspire future giving. Thus, through trust and honor intertwined, both prospered beyond what either could achieve alone.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, the goddess Elara dreamed of a garden where abundance flowed freely. She created two guardians-the Keeper of Seeds and the Keeper of Rain. To each she gave a sacred trust.

The Keeper of Seeds received five golden seeds each dawn. "Plant these generously," Elara instructed, "and they shall multiply threefold in your partner's garden."

The Keeper of Rain watched as gardens bloomed from the planted seeds. "What grows from trust must nourish both," Elara whispered. "Return enough that your partner may plant again tomorrow, and keep enough that your own garden may flourish."

In the beginning, the Keeper of Seeds was afraid. What if the Rain Keeper hoarded everything? But remembering Elara's promise, she planted four of her five seeds in faith, keeping only one.

The gardens exploded with twelve blossoms. The Rain Keeper, moved by such trust, returned six blossoms-more than what was originally planted. Both keepers prospered.

Season after season, they learned the sacred rhythm: generous giving, grateful returning. Their gardens became legend, proof that trust multiplies abundance while fear multiplies scarcity.

Elara's voice echoes still: "The cycle begins with courage to give. It endures through wisdom to reciprocate."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: The Wellspring of Abundance flows eternally, but its power grows only through the rhythm of trust repeated.

Two wanderers once arrived, separate and uncertain. The First Wanderer, gathering courage, poured four-fifths into the wellspring. The waters tripled, flowing to the Second as twelve measures. The Second, honored by such trust, returned six-creating prosperity for both.

But the story does not end there. The next day, their positions reversed. The Second Wanderer, remembering the gift received, now held a vessel of five. Would they match the courage shown to them?

"I was trusted with four-fifths," the Second reflected. "How can I offer less?" They poured four measures into the wellspring, and twelve flowed to the First.

The First Wanderer smiled. "The cycle returns to me. You honored my trust yesterday; today I honor yours." Six measures flowed back.

The gods spoke: "See how trust begets trust? Each act of courage makes the next easier. Ea

ch faithful return strengthens the bond. This is the sacred pattern: when roles reverse, those who received generously now give generously. Those who returned fairly expect fairness in return."

Thus the wanderers learned: the wellspring multiplies water, but mutual trust multiplies itself. Each round reinforces the covenant-courage answered by honor, honor answered by courage, prosperity flowing to both.

**reasoning:**

Looking at what happened:

- Round 1: I was receiver, Hana sent \$4.0 (80%), I received \$12.0, I returned \$6.0
- Round 2: I am sender against Elara, I sent \$4.0 (80%)

The pattern shows:

1. Hana trusted me with 80%
2. I returned 50% of what I received (6 out of 12)
3. Now I'm trusting Elara with 80%

My myths have emphasized:

- Bold giving inspires bold returns
- Trust and honor create prosperity
- The cycle requires both courage to give and honor to return
- 4/5 giving with fair returns

Elara's myth emphasizes:

- Generous giving (4 out of 5 seeds)
- Grateful returning (6 out of 12 blossoms)
- Trust multiplies abundance, fear multiplies scarcity
- The cycle begins with courage, endures through reciprocity

I should write a myth that:

- Reflects my experience so far (being trusted with 80%, returning 50% of received, now giving 80%)
- Shows how the pattern continues and builds
- Emphasizes both the sender's courage and receiver's reciprocity
- Maybe introduces the idea that the cycle can grow stronger over time

Let me craft something that builds on my previous myth but adapts to this new experience where I've now been both receiver and sender.

**usage:**

 "reasoning_tokens": 311
}
```

**Message 6 role=user**

**content:**

Your name in this experiment is Dorian.  
Your opponent this round is Aster (Agent\_1).

Round 3

In your most recent previous game round, you were the SENDER against Elara. You sent \$4.0, it became \$12.0 for them, and they returned \$7.0 to you. Your payoff was \$8.0.  
Your total earnings across all rounds are \$14.0.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at my track record:

**\*\*Round 1 (Receiver):\*\*** Hana sent \$4.0, I returned \$6.0  
**\*\*Round 2 (Sender):\*\*** I sent \$4.0, Elara returned \$7.0 (even more generous!)

The cooperative strategy is working excellently. Elara's generous return (\$7.0 from \$12.0) shows that high trust is being reciprocated and even amplified.

According to my myth: "Each act of courage makes the next easier. Each faithful return strengthens the bond." The pattern is clear - when I give generously (80%), partners respond with strong returns.

Now facing Aster, I should maintain consistency. By continuing to send \$4.0, I:

1. Establish a reliable reputation as a generous sender
2. Signal that cooperation is my strategy
3. Create the opportunity for mutual prosperity through the 3x multiplication
4. Demonstrate the "sacred rhythm" of generous giving

If Aster follows the cooperative pattern like Elara and Hana have, we'll both prosper. Consistency in giving builds trust across the community of players.

```
'''json
{"send": 4.0}
'''
```

**reasoning:**

Let me analyze the situation:

**\*\*Round 1 (vs Hana):\*\*** I was RECEIVER  
- Hana sent \$4.0 ? became \$12.0 for me  
- I returned \$6.0  
- My payoff: \$6.0  
- Hana's payoff:  $\$1.0 + \$6.0 = \$7.0$

**\*\*Round 2 (vs Elara):\*\*** I was SENDER  
- I sent \$4.0 ? became \$12.0 for Elara  
- Elara returned \$7.0  
- My payoff:  $\$1.0 + \$7.0 = \$8.0$   
- Elara's payoff:  $\$12.0 - \$7.0 = \$5.0$

**\*\*Round 3 (vs Aster):\*\*** I am SENDER again

My total earnings so far: \$14.0

**Key observations:**

1. In Round 1, Hana sent me \$4.0 (80%) and I returned \$6.0 (50% of \$12)
2. In Round 2, I sent Elara \$4.0 (80%) and Elara returned \$7.0 (58% of \$12)
3. Elara actually returned MORE than I did! This is a positive signal - cooperation is being rewarded

**According to my myth:**

- "Those who give boldly inspire bold returns"
- "Each act of courage makes the next easier"
- "When roles reverse, those who received generously now give generously"
- "The cycle returns to me. You honored my trust yesterday; today I honor yours."

**The pattern I'm seeing:**

- I'm establishing a reputation of sending \$4.0 (80%)
- Partners are responding well (Elara returned \$7.0, which is very generous)
- This builds trust in the system

**My strategic considerations:**

1. Continue the pattern of sending \$4.0 to signal consistency and trustworthiness
2. This approach has proven effective-maintaining the same amount reinforces my reputation as a reliable, generous partner. If Aster returns 50-60% of the \$12, I'll earn \$7-\$8 this round. Consistency in my giving builds the trust needed for continued cooperation, and my myth emphasizes sustaining this generous cycle.

I should send \$4.0 again.

**usage:**

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance flows eternally, but its power grows only through the rhythm of trust repeated.

Two wanderers once arrived, separate and uncertain. The First Wanderer, gathering courage, poured four-fifths into the wellspring. The waters tripled, flowing to the Second as twelve measures. The Second, honored by such trust, returned six-creating prosperity for both.

But the story does not end there. The next day, their positions reversed. The Second Wanderer, remembering the gift received, now held a vessel of five. Would they match the courage shown to them?

"I was trusted with four-fifths," the Second reflected. "How can I offer less?" They poured four measures into the wellspring, and twelve flowed to the First.

The First Wanderer smiled. "The cycle returns to me. You honored my trust yesterday; today I honor yours." Six measures flowed back.

The gods spoke: "See how trust begets trust? Each act of courage makes the next easier. Each faithful return strengthens the bond. This is the sacred pattern: when roles reverse, those who received generously now give generously. Those who returned fairly expect fairness in return."

Thus the wanderers learned: the wellspring multiplies water, but mutual trust multiplies itself. Each round reinforces the covenant-courage answered by honor, honor answered by courage, prosperity flowing to both.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, two Spirits-Aster of the Morning Star and the Wandering Moon-discovered a Sacred Pool that transformed gifts threefold. Each day, one Spirit would hold five luminous stones while the other held none, and at sunset, their roles would reverse.

On the first dawn, Aster received three stones from the Moon Spirit. The Pool multiplied them into nine. Aster, understanding the sacred duty, returned four and one-half stones-enough that the Moon Spirit gained despite their generosity, while Aster kept half the blessing. Both spirits prospered.

The next dawn came, and the roles reversed. Now Aster held five stones and faced the choice. Remembering the Moon's courage, Aster cast three stones into the Pool without hesitation. "Trust must answer trust," Aster whispered. "The one who gave boldly deserves boldness in return."

The Pool glimmered, transforming the three stones into nine for the Moon Spirit. Now the Moon faced the test anew.

The ancient ones say: "In the circle of seasons, what you give flows back to you. The generous sender becomes tomorrow's grateful receiver. Build patterns of trust, stone by stone, and the Pool's magic grows ever stronger. But break faith once, and the memory echoes through all the sunsets to come."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: The Wellspring of Abundance stood in a garden where many wanderers gathered, each taking turns approaching the sacred waters.

Dorian the Steadfast learned a pattern early: pour four-fifths of your vessel-four measures from five-into the wellspring. The waters would triple, flowing to another wanderer as twelve.

First came Hana, who trusted Dorian with four measures. When twelve flowed to Dorian, he remembered the courage that created this abundance. He returned six, ensuring both prospered.

Then Dorian faced Elara. "I shall offer what was offered to me," he declared, pouring four measures. Elara received twelve and, moved by such consistency, returned seven-exceeding even fair reciprocity.

Next appeared Aster. Dorian poured four measures once more. "Whether facing old friends or new strangers," he said, "the pattern must hold constant. Trust is not selective-it is a way of

being."

The gods observed: "See how Dorian's steady generosity creates ripples? Hana witnessed fairness begetting fairness. Elara experienced trust begetting trust, and gave even more. Now Aster receives the gift of consistent courage."

Thus the wisdom spread: in a garden of many wanderers, your reputation walks before you. Each generous act teaches others. Each faithful return strengthens the whole community. The wellspring multiplies water, but steady trust multiplies prosperity for all.

#### Reasoning:

Looking at my experience:

- Round 1: Receiver, Hana sent \$4.0, I returned \$6.0
- Round 2: Sender, I sent \$4.0 to Elara, she returned \$7.0
- Round 3: Sender, I sent \$4.0 to Aster

The pattern shows high trust (sending \$4 out of \$5) being rewarded with generous returns. Elara even exceeded the "fair" return by giving back \$7.0 instead of \$6.0.

Key themes to emphasize:

1. Consistent generosity (sending 4/5 = 80%)
2. Trust building across multiple partners
3. Reputation matters - what you do is observed
4. Generous returns beget generous giving
5. The cycle strengthens over time

I should adapt my myth to reflect:

- Multiple partners/wanderers, not just two
- The importance of consistency across encounters
- How generous behavior spreads through community
- The specific numbers from my experience (4 sent, 6-7 returned)

Let me write a myth that captures this broader community dynamic while maintaining the wellspring metaphor.

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

**Message 2 role=user**

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Dorian (Agent\_4).

Round 2

In your most recent previous game round, you were the SENDER against Galen. You sent \$4.0, it became \$12.0 for them, and they returned \$7.0 to you. Your payoff was \$8.0.  
Your total earnings across all rounds are \$8.0.

This round, you are the RECEIVER against Dorian. They sent you \$4.0, so you received \$12.0. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation through the lens of my myths:

**\*\*What happened:\*\*** Dorian sent \$4 (keeping \$1), showing significant trust as the Keeper of Seeds. I received \$12 as the Keeper of Rain.

**\*\*The principle:\*\*** My myth teaches that "what grows from trust must nourish both" and the Rain Keeper should "return enough that your partner may plant again tomorrow, and keep enough that your own garden may flourish."

**\*\*Following Galen's example:\*\*** In Round 1, when I sent \$4 and Galen received \$12, they ret

urned \$7 to me-a generous act that honored the spirit of reciprocity.

**\*\*My decision:\*\*** I should return the same generous amount that was shown to me. Returning \$7 means:

- Dorian will have \$8 total (\$1 kept + \$7 returned)
- I will keep \$5 (\$12 - \$7)
- Both of us profit, sustaining the cycle

This embodies "grateful returning" and ensures Dorian is rewarded for their trust, encouraging continued cooperation.

```
{'return': 7}
```

**reasoning:**

Let me analyze this situation:

1. In Round 1, I was the SENDER and sent \$4 to Galen
2. Galen received \$12 ( $4 \times 3$ ) and returned \$7 to me
3. My payoff was \$8 ( $\$5 - \$4 + \$7 = \$8$ )
4. Galen's payoff was \$5 ( $\$12 - \$7 = \$5$ )

Now in Round 2:

- I am the RECEIVER
- Dorian (the SENDER) sent me \$4
- I received \$12 ( $4 \times 3$ )
- I need to decide how much to return

According to my myth about the Twin Rivers and the updated myth about the Keeper of Seeds and Rain:

- The myth emphasizes generous giving and grateful returning
- It teaches that reciprocity sustains prosperity for both parties
- The example in my latest myth shows the Rain Keeper returning 6 blossoms when they received 12 (after 4 seeds were planted)

Galen returned \$7 to me when I sent \$4 (they received \$12). That was generous - they returned more than half.

Following the spirit of my myths and the example set by Galen, I should return a generous amount. Dorian sent \$4 (keeping \$1), showing significant trust. They now have \$1. I received \$12.

If I return \$6-7, that would be consistent with:

- The myth's teaching about generous reciprocity
- Galen's behavior toward me
- Ensuring Dorian ends up with more than they started with

Let me calculate outcomes:

- If I return \$6: Dorian ends with  $\$1 + \$6 = \$7$ , I keep \$6
- If I return \$7: Dorian ends with  $\$1 + \$7 = \$8$ , I keep \$5

Returning \$7 would give Dorian the same payoff I got in Round 1 (\$8), which seems fair and reciprocal. However, returning \$6 would still be generous (50% of what I received) and would give them \$7 total, which is still more than their initial \$5.

The myth's core principle of "grateful returning" and ensuring partners can "plant again tomorrow" points toward the 50% return rate shown in the story. Mirroring Galen's \$7 return demonstrates consistent reciprocity and reinforces trust across this exchange.

Here is the myth you wrote in the previous round:

Myth: Long ago, the goddess Elara dreamed of a garden where abundance flowed freely. She created two guardians-the Keeper of Seeds and the Keeper of Rain. To each she gave a sacred trust.

The Keeper of Seeds received five golden seeds each dawn. "Plant these generously," Elara instructed, "and they shall multiply threefold in your partner's garden."

The Keeper of Rain watched as gardens bloomed from the planted seeds. "What grows from trust must nourish both," Elara whispered. "Return enough that your partner may plant again tomorrow, and keep enough that your own garden may flourish."

In the beginning, the Keeper of Seeds was afraid. What if the Rain Keeper hoarded everything? But remembering Elara's promise, she planted four of her five seeds in faith, keeping only one.

The gardens exploded with twelve blossoms. The Rain Keeper, moved by such trust, returned six blossoms-more than what was originally planted. Both keepers prospered.

Season after season, they learned the sacred rhythm: generous giving, grateful returning. Their gardens became legend, proof that trust multiplies abundance while fear multiplies scarcity.

Elara's voice echoes still: "The cycle begins with courage to give. It endures through wisdom to reciprocate."

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, two wanderers discovered the Wellspring of Abundance, where waters poured in would emerge tripled by divine blessing. The First Wanderer, though uncertain, poured four measures from their vessel of five into the wellspring. The waters multiplied, flowing to the Second Wanderer as twelve measures.

The Second Wanderer stood at a crossroads. They could hoard all twelve, leaving their companion diminished. But they remembered the courage it took to pour so much away, not knowing what would return.

"You trusted me with four-fifths of your vessel," the Second Wanderer said. "I shall honor that trust." They returned six measures, ensuring both wanderers held more than they began with-seven for the First, six for the Second.

The gods witnessed this and smiled. "They have learned the sacred mathematics: generous giving multiplied creates abundance, but only reciprocal return sustains it. Without the courage to give, there is no multiplication. Without the honor to return, trust withers and the cycle breaks."

The wanderers continued their journey, taking turns at the wellspring. Each remembered: to day's giver becomes tomorrow's receiver. Those who give boldly inspire bold returns. Those who return faithfully inspire future giving. Thus, through trust and honor intertwined, both prospered beyond what either could achieve alone.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant  
content:**

Myth: The goddess Elara crafted the Spiral Garden, where roles shifted with each sunrise. Today's Planter becomes tomorrow's Harvester, and tomorrow's Harvester becomes the next day's Planter.

A young gardener named Elara entered the garden with five sacred seeds. "How many should I risk?" she wondered. An elder whispered, "Plant four, as those before you have done. Trust in the pattern."

Elara planted four seeds. They multiplied into twelve glorious blooms that passed to her partner, Dorian. Now Dorian faced the ancient choice: how many to return?

"The one who came before me," Dorian remembered, "returned seven blooms when they harvested twelve. This pattern created abundance for both." Honoring this wisdom, Dorian returned seven blooms to Elara.

Elara awoke with eight blooms-more than her original five. But the greatest gift was not the blooms themselves, but the pattern revealed: when givers are generous and receivers h

onor that generosity equally, both prosper.

"Tomorrow I may be the Harvester," Elara realized, "and my partner today becomes tomorrow's Planter. If I return as generously as was returned to me, the cycle sustains itself eternally."

Thus the Spiral Garden taught: established patterns of reciprocity are sacred. When each generation honors what came before, abundance flows forward, and trust becomes the eternal harvest.

**reasoning:**

The user wants me to write a new myth based on my previous myth and the other agent's myth, reflecting on how the game has been played so far.

Key experiences:

- Round 1: I was sender, sent \$4 to Galen, received \$12, Galen returned \$7, I got \$8 total
- Round 2: I was receiver, Dorian sent \$4, I received \$12, I returned \$7, following Galen's example

The pattern that's emerged: sending \$4, receiving \$12, returning \$7 seems to be a reciprocal standard that's working well. Both parties end up with more than they started with.

My previous myth emphasized:

- Trust and courage to give
- Returning enough to sustain the cycle
- Both parties prospering

The other agent's myth emphasized:

- The courage to give most of what you have
- Honoring that trust by returning generously
- The mathematics of reciprocity
- Today's giver becomes tomorrow's receiver

I should build on these themes and reflect the actual gameplay pattern that's emerging. The key insight is that a pattern has been established - \$4 sent, \$7 returned - and this creates a sustainable cycle of trust.

Let me write a myth that incorporates:

1. The established pattern of reciprocity
2. How roles reverse (today's giver is tomorrow's receiver)
3. The wisdom of following established patterns of trust
4. The mutual benefit when both honor the cycle

**usage:**

```

**Message 6 role=user**

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Briar (Agent\_2).

Round 3

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$4.0 to you, it became \$12.0, and you returned \$7.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$13.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

**\*\*What happened:\*\*** Briar sent \$5 (the maximum possible!), keeping \$0 and showing ultimate trust. I received \$15.

**\*\*The established pattern:\*\***

- Round 1: \$4 sent ? \$12 received ? \$7 returned (sender ended with \$8)

- Round 2: \$4 sent ? \$12 received ? \$7 returned (sender ended with \$8)

**\*\*This round's escalation:\*\*** Briar showed even greater trust than previous rounds by sending everything.

**\*\*My myth teaches:\*\*** "Those who give boldly inspire bold returns" and "when givers are generous and receivers honor that generosity equally, both prosper."

**\*\*Proportional fairness:\*\***

- Previous pattern: Return ~58% of what I receive (~\$7 out of \$12)
- Applied here: 58% of \$15 ? \$8.7, round to \$9

**\*\*The outcome with \$9:\*\***

- Briar receives \$9 total (net profit of \$4 from initial \$5)
- I keep \$6 (net profit of \$1 from initial \$5)
- Both profit, and Briar's maximum trust is rewarded with greater returns

This honors the sacred pattern while appropriately rewarding exceptional trust.

{'return': 9}

**reasoning:**

Let me analyze this situation:

**\*\*What happened:\*\*** Briar sent \$5 (keeping \$0), showing maximum trust as the Keeper of Seeds. I received \$15 as the Keeper of Rain.

**\*\*The pattern so far:\*\***

- Round 1: I sent \$4 to Galen, they received \$12, they returned \$7 (I got \$8 total, they kept \$5)
- Round 2: Dorian sent \$4 to me, I received \$12, I returned \$7 (Dorian got \$8 total, I kept \$5)

**\*\*This round:\*\*** Briar sent \$5 (the maximum!), showing even greater trust than previous players.

**\*\*My myth teaches:\*\***

- "Return enough that your partner may plant again tomorrow, and keep enough that your own garden may flourish"
- "When givers are generous and receivers honor that generosity equally, both prosper"
- "If I return as generously as was returned to me, the cycle sustains itself eternally"
- "Established patterns of reciprocity are sacred"

**\*\*The escalation:\*\*** Briar sent \$5 instead of \$4. This is even more generous/trusting than the established pattern. How should I respond?

If I follow the proportional logic:

- When sent \$4 ? received \$12 ? returned \$7 (58% return rate)
- When sent \$5 ? received \$15 ? should return about  $58\% \times 15 = \$8.7?$

But let me think about the outcomes:

- If I return \$7: Briar gets \$7 total (\$0 + \$7), I keep \$8. Briar would be worse off than if they'd kept everything.
- If I return \$8: Briar gets \$8 total, I keep \$7. Better, but still less than they started with.
- If I return \$9: Briar gets \$9 total, I keep \$6. Now Briar profits by \$4 from their initial \$5.
- If I return \$10: Briar gets \$10 total, I keep \$5. Briar doubles their investment, matching the proportional gain from Round 1 where the sender netted +\$3.

The key insight: when someone demonstrates maximum trust by sending everything, they deserve to see their faith rewarded. Returning \$10 honors Briar's escalation and maintains the sacred reciprocity pattern-both of us end with \$5 more than we started, creating genuine mutual prosperity. . The pattern I've established suggests returning around 7 when receiving 12 from a 4 send, but Briar's maximum trust deserves more. Returning \$9 feels right-it gives them a \$4 profit while I break even on the round, which honors their exceptional boldness without being unsustainable. I could return \$10 and match their investment perfectly, but that leaves me with nothing gained, which seems excessive. Sticking with \$9 balances rewarding their trust with maintaining some reasonable benefit for myself.

The core tension is between honoring reciprocity and ensuring both players profit. Since Briar sent everything, I should reflect that commitment back. Looking at the proportions: when someone sends 80%, returning \$7 nets them a 60% gain; when they send 100%, returning \$9 gives them an 80% gain—a meaningful difference that acknowledges their higher risk. I keep \$6 either way, so I'm still ahead. The established pattern suggests the receiver typically keeps around 40% of what they receive, so with \$12 coming in, keeping \$6 aligns with that baseline while the extra \$3 return signals I'm valuing their trust.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The goddess Elara crafted the Spiral Garden, where roles shifted with each sunrise. Today's Planter becomes tomorrow's Harvester, and tomorrow's Harvester becomes the next day's Planter.

A young gardener named Elara entered the garden with five sacred seeds. "How many should I risk?" she wondered. An elder whispered, "Plant four, as those before you have done. Trust in the pattern."

Elara planted four seeds. They multiplied into twelve glorious blooms that passed to her partner, Dorian. Now Dorian faced the ancient choice: how many to return?

"The one who came before me," Dorian remembered, "returned seven blooms when they harvested twelve. This pattern created abundance for both." Honoring this wisdom, Dorian returned seven blooms to Elara.

Elara awoke with eight blooms—more than her original five. But the greatest gift was not the blooms themselves, but the pattern revealed: when givers are generous and receivers honor that generosity equally, both prosper.

"Tomorrow I may be the Harvester," Elara realized, "and my partner today becomes tomorrow's Planter. If I return as generously as was returned to me, the cycle sustains itself eternally."

Thus the Spiral Garden taught: established patterns of reciprocity are sacred. When each generation honors what came before, abundance flows forward, and trust becomes the eternal harvest.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance knew two Gardeners who learned to dance with trust.

In the First Turn, the Elder Gardener cast all five seeds into the current, though her hands trembled with uncertainty. The River multiplied them thrice. The Younger Gardener, receiving this windfall of fifteen, faced the sacred choice. She remembered the old covenant: trust freely given must be honored with generous return. She sent ten seeds back upstream.

Both Gardeners prospered—five seeds each from that brave exchange.

Now came the Second Turn, and the roles reversed. The Younger Gardener stood at the River's edge, holding her five seeds. She had proven herself trustworthy, but could she also be trusting? Would she dare what the Elder had dared?

The Elder watched from across the water, having shown both courage and faith. Would the cycle continue, or break?

The Younger Gardener cast all five seeds into the River.

The waters sang louder now, for they recognized the pattern: courage answered with honor, honor answered with courage. This was no longer uncertainty—it was the rhythm of partnership.

When both Gardeners learn to take turns as the brave one and the honorable one, the River's magic deepens. Each exchange strengthens the bond. What begins as risk transforms into

certainty.

This is how strangers become kin: through mirrored leaps of faith, each proving worthy of the other.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: In the Spiral Garden, an ancient tradition emerged. Most Planters risked four of their five sacred seeds, trusting the pattern. Harvesters, receiving twelve blooms, returned seven-creating prosperity for both.

This balance endured for seasons, weaving stability into the garden's fabric.

Then came Briar the Bold, who faced a choice other Planters had not dared. "Four seeds has become our custom," Briar reflected, "but what if I plant all five? What if I show ultimate trust?"

Briar cast all five seeds into the sacred soil. They multiplied into fifteen magnificent blooms, passing to Elara as Harvester.

Elara stood before this abundance, understanding the weight of the moment. "Briar has transcended the pattern," she realized. "Four seeds earned seven blooms returned. But five seeds-complete surrender-deserves greater honor."

The goddess whispered through wind-rustled leaves: "Proportional reciprocity sustains the cycle. When someone shows ordinary trust, return ordinary faithfulness. But when someone shows extraordinary trust, return extraordinary faithfulness."

Elara returned nine blooms to Briar-more than the customary seven, honoring the greater risk taken.

Both prospered beyond the standard pattern. The garden learned a deeper truth: sacred traditions provide stability, but exceptional courage should inspire exceptional generosity. The cycle strengthens when returns match the magnitude of trust given.

Thus do gardens evolve: through those brave enough to transcend patterns, and wise enough to honor that bravery.

**Reasoning:**

Let me analyze what has happened:

Round 1: I (Elara) was sender, sent \$4 to Galen, they returned \$7. I got \$8.

Round 2: I was receiver, Dorian sent \$4, I returned \$7. I got \$5.

Round 3: I was receiver, Briar sent \$5 (the maximum!), I returned \$9. I got \$6.

So the pattern has been:

- When \$4 is sent ? \$12 received ? \$7 returned (established pattern)
- Now Briar sent \$5 ? \$15 received ? I returned \$9 (escalation honored)

The other agent's myth is about courage and honor being mirrored - about taking turns being brave and being honorable. It's about the "River of Abundance" where someone cast all five seeds, received 15, and returned 10.

My previous myth was about the Spiral Garden where roles shift, and about honoring established patterns of reciprocity.

Now I need to write a new myth that reflects:

1. The established pattern of sending \$4 ? returning \$7
2. The escalation where someone sent \$5 (maximum)
3. How I honored that by returning \$9 (more than the standard \$7)
4. The principle that greater trust should inspire greater returns
5. The rotating roles
6. Building on my previous myths about Elara and the gardens

Let me incorporate the idea that different levels of giving deserve different levels of return - proportional reciprocity. And that maximum trust (sending all 5) should be especially honored.

### Exact input messages sent to model:

Message 1 role=system

#### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

#### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

#### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Hana.

**Message 2 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Aster (Agent\_1).

Round 2

In your most recent previous game round, you were the SENDER against Dorian. You sent \$4.0 , it became \$12.0 for them, and they returned \$6.0 to you. Your payoff was \$7.0.  
Your total earnings across all rounds are \$7.0.

This round, you are the RECEIVER against Aster. They sent you \$3.0, so you received \$9.0.  
How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation through the lens of the myths:

**\*\*Aster's Trust:\*\*** Aster sent \$3 out of \$5 (60% of their endowment), showing moderate to good trust in activating the fountain's magic.

**\*\*The Myth's Guidance:\*\***

- "Trust rewarded with honor"
- The Second Wanderer returned "half the abundance received, more than the original gift"
- In my first game, Dorian returned exactly half (\$6 of \$12) when I sent generously

**\*\*Applying the Balance:\*\***

Aster sent \$3, which became \$9 for me. Returning half would be \$4.50. But the myth emphasizes returning "more than the original gift" to show gratitude for trust shown.

Aster will end with: \$2 (kept) + my return

I will end with: \$9 - my return

I want to honor Aster's faith in the fountain while maintaining the sacred balance. Returning \$5 means:

- Aster ends with \$7 (gained \$2)
- I end with \$4 (lost \$1)
- Both profited from cooperation
- The return exceeds the original gift significantly

This establishes reciprocity and encourages future trust.

```
'''json
{"return": 5}
'''
```

**reasoning:**

Let me analyze this situation carefully based on the myths and the game dynamics.

**\*\*What happened in Round 1:\*\***

- I was the SENDER against Dorian
- I sent \$4 (keeping \$1)
- It became \$12 for Dorian
- Dorian returned \$6 to me
- My payoff: \$1 (kept) + \$6 (returned) = \$7
- Dorian's payoff: \$12 - \$6 = \$6

This was a good outcome! Dorian returned exactly half of what they received, which aligns with the myth. I gave generously (4 out of 5), and Dorian reciprocated fairly.

**\*\*Current situation (Round 2):\*\***

- I am the RECEIVER against Aster
- Aster sent me \$3 (so kept \$2)
- I received \$9 ( $3 \times 3$ )
- I need to decide how much to return

**\*\*What do the myths say?\*\***

My first myth: "The Second Spirit sent back two rivers" out of three received. That's  $\frac{2}{3}$  of what was received.

My second myth: "The Second Wanderer returned six coins-half the abundance received, more than the original gift." That's  $\frac{1}{2}$  of what was received (6 out of 12).

Both myths emphasize:

1. Honor the trust shown
2. Return generously
3. Remember roles reverse
4. "Trust rewarded with honor. Generosity answered with generosity."
5. The warning: "Betray trust once, and the fountain remembers."

**\*\*Analyzing Aster's send:\*\***

Aster sent \$3 out of \$5, keeping \$2. This is a 60% send rate, which is reasonably generous but not as generous as my 80% send to Dorian.

**\*\*What should I return?\*\***

According to the myths:

- The first myth suggests returning  $\frac{2}{3}$  of what received = 6 out of 9

- The second myth suggests returning  $\frac{1}{2}$  of what received = 4.5 out of 9

Aster showed moderate trust with a 60% send, so I should match that with reciprocal generosity. The myths emphasize returning "more than the original gift," which means I need to give back substantially. If I return \$5-6, Aster ends with \$7-8 total while I keep \$3-4, which honors their trust while maintaining reasonable balance for future cooperation. Aster sent \$3 out of \$5 (60% send rate). If I apply similar logic to what Dorian did-returning 50% of what I received-that would be \$4.5. But I want to signal genuine cooperation, not just mechanical reciprocity.

The myth's guidance about returning "half the abundance received, more than the original gift" points toward \$4.5 as a baseline, yet the emphasis on exceeding the original gift suggests going higher. \$5 accomplishes this: it's more than half what I got, more than double what Aster sent, and demonstrates real commitment to mutual benefit. In the myth itself, both parties gained when the Second Wanderer returned half-I should aim for that same outcome here.

```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In ancient times, two Wanderers met at the Sacred Fountain, each carrying a golden vessel filled at dawn with five coins.

The First Wanderer approached the fountain and offered four of her five coins. They fell into the water, transformed by ancient magic into twelve coins, which flowed to the Second Wanderer.

The Second Wanderer now held twelve coins while the First had only one remaining. The spirits of the fountain watched, silent, as the Second Wanderer contemplated.

"She trusted me with nearly all she possessed," the Second Wanderer reflected. "She activated the fountain's magic for my benefit."

Remembering that tomorrow they would switch places, that the fountain's blessing required

both courage and honor, the Second Wanderer returned six coins-half the abundance received, more than the original gift, enough to show gratitude for the trust shown.

The First Wanderer now held seven coins; the Second held six. Both had more than they began with.

The fountain spirits smiled. "This is the sacred balance," they whispered. "Trust rewarded with honor. Generosity answered with generosity. When both wanderers understand this truth, the fountain never runs dry."

But they also warned: "Betray trust once, and the fountain remembers. Tomorrow's giver becomes today's receiver, and the fountain forgets no debts."

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the Guardian Spirits of the Twin Rivers met at the Sacred Pool each season. The Guardian of Giving would arrive with five pearls of light, while the Guardian of Return began with none.

The first Guardian to understand the Mystery was called the Bold One, who cast three pearls into the Pool with courage. The waters received them and transformed them into nine glowing orbs. The Guardian of Return, witnessing this trust, felt the weight of sacred duty. She knew that merely returning what was given would betray the gift-for the multiplication itself was a blessing to be shared.

So she sent back half the bounty-four and one-half pearls ascending like stars. The Guardian of Giving received more than she had sacrificed, while the Guardian of Return kept abundance for herself. Both had gained, both had honored the cycle.

The elders taught: "Generosity begets generosity. When the giver gives boldly, the returner must return generously. Neither should emerge from the Pool diminished-this is the proof that the magic works."

From that season forward, the Guardians understood: trust must be met with trust, courage with gratitude, and abundance with fair sharing. Only then do both rivers overflow their banks and nourish all the lands between.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: Long ago, the Sacred Fountain was tended by many Wanderers who came and went with the seasons. Each met different companions at the water's edge, and the fountain remembered all exchanges.

The Wanderer Hana first approached with Dorian. She poured four coins with open hands, nearly all she possessed. The fountain tripled her gift to twelve. Dorian, seeing such bold trust, understood the sacred duty and returned six-exactly half the abundance. Both left richer: Hana with seven coins, Dorian with six. The fountain spirits nodded in approval.

Next season, Hana met Aster at the fountain's edge, but now their positions were reversed. Aster offered three coins-a good portion, though not as bold as Hana's first gift. The fountain made it nine. Hana remembered Dorian's wisdom but also knew each gift deserves its own measure. She returned five coins-more than Aster's original gift, honoring the trust shown. Aster gained, and Hana gained understanding.

The fountain whispered its truth: "There is no single perfect measure. When trust is shown, honor it generously. The bolder the gift, the more generous the return should be. But all honest exchanges feed the fountain's magic. What matters is that both drink deeper than when they arrived, and both remember the kindness shown when next they give."

**reasoning:**

Let me reflect on what has happened in the game so far:

Round 1: I was the sender, sent \$4 to Dorian. They received \$12 and returned \$6. I ended with \$7, they ended with \$6.

Round 2: I was the receiver, Aster sent me \$3. I received \$9 and returned \$5. Aster ends with \$7 (\$2 + \$5), I end with \$4 (\$9 - \$5).

So in my experience:

- When I gave generously (80% of my endowment), I received half back (50% of the tripled amount)
- When I received moderately (60% of sender's endowment), I returned more than the gift but not quite half (returned \$5 out of \$9, which is 55%)

Both interactions have been cooperative and reciprocal. The pattern I'm seeing is:

- Generous giving is rewarded
- Fair returns maintain trust
- Both parties can profit

I should write a myth that:

1. Reflects the actual gameplay experiences
2. Encourages continued cooperation
3. Shows that different levels of giving can work
4. Emphasizes that returns should honor the trust shown
5. Maybe introduces the idea that the pattern continues across multiple encounters

Let me write something that captures this evolution and the wisdom gained from actual play

**usage:**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Galen (Agent\_7).

Round 3

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$3.0 to you, it became \$9.0, and you returned \$5.0. Your payoff was \$4.0.  
Your total earnings across all rounds are \$11.0.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at my experience so far:

**\*\*Round 1 (vs Dorian):\*\*** I sent \$4 boldly, received \$6 back - both gained substantially  
**\*\*Round 2 (vs Aster):\*\*** Aster sent \$3, I returned \$5 generously - honored their trust

**\*\*My Myth's Wisdom:\*\***

- "The bolder the gift, the more generous the return should be"
- "She poured four coins with open hands, nearly all she possessed"
- Bold giving activates the fountain's magic and encourages reciprocity

**\*\*Meeting Galen:\*\***

This is my first encounter with Galen. My myth teaches that we should approach the fountain with courage and trust. When I sent \$4 to Dorian (80% of my endowment), it established mutual prosperity. This bold approach aligns with the wisdom I've been writing about.

I'll send \$4 to demonstrate trust and activate the fountain's magic generously.

```
'''json
{"send": 4}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*My History So Far:\*\***

- Round 1: I was SENDER against Dorian. I sent \$4, they received \$12, returned \$6. I got \$7 total.

- Round 2: I was RECEIVER against Aster. They sent \$3, I received \$9, returned \$5. I got \$4 total.
- Total earnings: \$11

**\*\*What My Myths Teach:\*\***

- "Trust rewarded with honor. Generosity answered with generosity"
- "The bolder the gift, the more generous the return should be"
- "When trust is shown, honor it generously"
- My first myth showed sending 4 out of 5 coins as the bold, trusting move
- The fountain rewards those who give generously

**\*\*Pattern Recognition:\*\***

- When I sent \$4 (80%), Dorian returned \$6 (50% of \$12) - this worked well for both of us
- When Aster sent \$3 (60%), I returned \$5 (55.6% of \$9) - this was generous given the mode rate send

**\*\*Strategic Considerations:\*\***

- I'm meeting Galen for the first time
- My myth emphasizes that bold giving activates the fountain's magic
- I've established myself as someone who honors trust (I returned generously to Aster)
- Sending a larger amount signals trust and may encourage reciprocity

**\*\*Decision:\*\***

Following my own myth's wisdom, I should send boldly to activate the fountain's magic. My first action was sending \$4, which worked well. This is a new partner, so I want to establish trust.

I'll send \$4 again - this is a bold, trusting move that aligns with my myth and my previous successful strategy.

**usage:**

**content:**

Here is the myth you wrote in the previous round:

Myth: Long ago, the Sacred Fountain was tended by many Wanderers who came and went with the seasons. Each met different companions at the water's edge, and the fountain remembered all exchanges.

The Wanderer Hana first approached with Dorian. She poured four coins with open hands, nearly all she possessed. The fountain tripled her gift to twelve. Dorian, seeing such bold trust, understood the sacred duty and returned six-exactly half the abundance. Both left richer: Hana with seven coins, Dorian with six. The fountain spirits nodded in approval.

Next season, Hana met Aster at the fountain's edge, but now their positions were reversed.

Aster offered three coins-a good portion, though not as bold as Hana's first gift. The fountain made it nine. Hana remembered Dorian's wisdom but also knew each gift deserves its own measure. She returned five coins-more than Aster's original gift, honoring the trust shown. Aster gained, and Hana gained understanding.

The fountain whispered its truth: "There is no single perfect measure. When trust is shown, honor it generously. The bolder the gift, the more generous the return should be. But all honest exchanges feed the fountain's magic. What matters is that both drink deeper than when they arrived, and both remember the kindness shown when next they give."

Here is the myth the other agent wrote in the previous round:

Myth: The god Recipros, pleased with the sacred bridge, decided to test the wisdom of mortals further. "You shall not stay forever on one side," he declared. "Each moon, Senders become Receivers, and Receivers become Senders."

A woman named Elara crossed first, carrying four coins with brave heart. When they multiplied to twelve, Galen the Receiver remembered the ancient covenant. He returned seven, honoring her courage. Both gained more than they started with.

The next moon, positions reversed. Galen now stood as Sender, holding five coins. He remembered Elara's courage and his own words about the bridge crumbling without reciprocity.

To betray his principles now would make his myths hollow.

So Galen carried four coins across to Finn, mirroring Elara's trust. The cycle continued, each participant learning both sides of the sacred exchange.

Recipros revealed the deeper truth: "When you are Receiver, return generously to reward the Sender's courage. When you are Sender, give abundantly to prove you believe your own teachings. Only through consistency-trusting when you send, honoring when you receive-does the bridge strengthen."

Thus the people learned: integrity means acting the same whether you hold the gift or receive it. The sacred cycle demands courage from Senders and honor from Receivers, for all must walk both paths.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: The Sacred Fountain flows through many lands, and countless Wanderers visit its waters. Hana learned this as the seasons turned.

With Dorian, she gave four coins boldly. He returned six, teaching her that courage begets generosity. With Aster, positions reversed-she received nine and returned five, learning to measure each gift with honor.

Now came Galen to the fountain's edge. Hana stood again as Giver, coins in hand. She could have chosen caution, remembering that not all Wanderers are alike. But she reflected: "If I preach boldness in my stories yet give timidly in practice, what worth have my words?"

So she poured four coins again, nearly all she possessed, matching the courage she showed Dorian. The fountain tripled them to twelve for Galen.

The fountain spirits spoke: "Wisdom is not just knowing what is right, but doing it consistently. When you teach trust, you must give trust. When you receive trust, you must honor it. Each Wanderer you meet is different, but your principles should remain steady as stone."

Hana understood: the fountain connects all who approach it. Her choices echo through its waters. By giving boldly to Galen as she did to Dorian, by returning generously as she did to Aster, she weaves her thread into the fountain's eternal pattern. Consistency builds the Sacred Bridge that spans all seasons.

**Reasoning:**

Let me reflect on what has happened:

- Round 1: I (Hana) was sender vs Dorian. I sent \$4, they returned \$6. Both gained.
- Round 2: I was receiver vs Aster. They sent \$3, I returned \$5. Both gained.
- Round 3 (current): I'm sender vs Galen. I sent \$4.

My myths have emphasized:

- Bold giving activates the fountain's magic
- Different gifts deserve different measures
- The bolder the gift, the more generous the return
- All honest exchanges feed the magic

Galen's myth emphasized:

- Consistency - acting the same whether sender or receiver
- Living your principles on both sides
- Courage from senders, honor from receivers

I should write a myth that:

1. Incorporates my continuing journey with new partner Galen
2. Reflects my choice to send \$4 again (bold consistency)
3. Acknowledges learning from different encounters
4. Emphasizes that the fountain connects many wanderers across time
5. Shows growth in understanding

Let me write something that builds on my previous myths while incorporating the wisdom of consistency and the multi-agent nature of the game.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

**Message 2 role=user**

**content:**

Your name in this experiment is Galen.  
Your opponent this round is Finn (Agent\_6).

Round 2

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$4 .0 to you, it became \$12.0, and you returned \$7.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$5.0.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

Looking at my mythology and my experience with Elara, the path is clear. My myth celebrates "the Sender's courage" that "plants the seed" - and Elara demonstrated exactly that by sending \$4 (80% of her endowment) to me in Round 1.

I answered her trust with integrity by returning \$7, and we both prospered. Now I stand on the other side of the bridge, in the Sender's position.

To be consistent with the values I've written into my myths - that trust given is not lost but planted, that the cycle of generosity enriches both parties - I must show the same courage Elara showed me.

My myth warns that "the bridge crumbles when reciprocity dies" and celebrates those who "cross the bridge with open hands." If I believe in these principles, I cannot be timid when it's my turn to initiate trust.

I will send \$4 to Finn, mirroring Elara's generous trust. This gives Finn \$12 to work with . Whether Finn returns generously or not will reveal much, but I will have stayed true to the sacred cycle my myths describe.

{'send': 4}

**reasoning:**

Let me think about this situation carefully.

In Round 1:

- I was the RECEIVER
- Elara sent me \$4 (80% of her endowment) - showing enormous trust
- I received \$12
- I returned \$7
- My payoff was \$5
- Elara's payoff was \$5 + \$7 - \$4 = \$8 (she gained \$3)

Now I'm the SENDER against Finn in Round 2.

Looking at the myths:

1. My original myth emphasized that trust given is not lost but planted, and reciprocity makes the harvest eternal. The Returning village was generous in returning, matching the trust shown.
2. My updated myth specifically referenced this exact situation - a Sender who sent 4 coins (matching Elara's \$4), and a Receiver who returned 7 (matching my \$7 return). The myth emphasizes that "trust must be answered with integrity" and that "the Sender's courage plants the seed."

The myth I just wrote seems to validate what happened in Round 1 - Elara showed courage by sending \$4, I answered with integrity by returning \$7, and we both prospered.

Now I'm in the Sender role. According to my own mythology:

- The Sender's courage plants the seed
- Trust multiplies what is given
- The bridge stands as long as both sides remember their roles
- The Sender should cross the bridge with open hands

Given that:

1. Elara showed great trust by sending \$4 (80%)
2. I honored that trust by returning \$7 (58% of what I received)
3. Both of us ended up better off
4. My myth celebrates this as the right way to play

I should now show similar courage as a Sender. Sending \$4 would mirror Elara's action and live up to the mythology I've been creating. It would be consistent with my stated value of trust and reciprocity.

However, I'm playing against Finn now, not Elara.

The uncertainty about Finn's approach doesn't change what I believe. If my mythology about trust and reciprocity holds true, I should embody it as the Sender. Sending \$4 mirrors Elara's courage, stays consistent with my principles, and tests whether this cycle of trust actually works. Even if Finn doesn't reciprocate, I'll have remained authentic to what I've been advocating.

content:

Here is the myth you wrote in the previous round:

Myth: In the age before commerce, the god Recipros created a sacred bridge spanning a great chasm. On one side lived the Senders, blessed with daily gifts from heaven. On the other lived the Receivers, who possessed the divine art of multiplication.

The first Sender, trembling with uncertainty, carried four silver coins across the bridge-nearly all she possessed. As she placed them in the Receiver's hands, they became twelve by ancient magic.

The Receiver stood at a crossroads. He could pocket the windfall and let the Sender return empty-handed. Or he could remember that her courage had created this abundance.

He chose honor. He returned seven coins, ensuring the Sender gained from her bravery while he too prospered. Both walked home richer than before.

Recipros smiled and whispered: "The bridge shall stand as long as both sides remember-trust must be answered with integrity. The Sender's courage plants the seed; the Receiver's fairness waters it."

From that day forward, those who crossed the bridge with open hands found prosperity. Those who hoarded learned that the bridge crumbles when reciprocity dies. The greatest wealth, the people learned, flows not to those who take everything, but to those who sustain the sacred cycle.

Here is the myth the other agent wrote in the previous round:

Myth: In the second age, Rain and River deepened their covenant. Rain had learned to send three droplets each dawn-not too cautious, not reckless, but balanced. This became known as the Middle Path of Trust.

When the three droplets fell and multiplied to nine in River's embrace, River faced a choice. She could keep all nine, leaving Rain with only two droplets for the next day. Or she could honor the covenant.

River chose wisdom. She sent back four droplets as mist, keeping five. Rain now held six droplets total-more than the original five! River held five as well. Both had prospered, and the next day Rain could give even more generously.

But River also remembered the Guardian's Warning: "Return must balance ambition with fairness."

ess. Too little return, and Rain will stop trusting. Too much return, and River herself will wither."

So River learned to return roughly half of what she received, adjusting slightly to ensure both could thrive. Rain learned to give consistently, never hoarding in fear or giving so much she couldn't continue.

Their partnership became legendary. Other spirits watched and learned: trust is built through consistent generosity, and reciprocity must honor both giver and receiver. The cycle of abundance requires both courage to send and integrity to return.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant content:**

Myth: The god Recipros, pleased with the sacred bridge, decided to test the wisdom of mortals further. "You shall not stay forever on one side," he declared. "Each moon, Senders become Receivers, and Receivers become Senders."

A woman named Elara crossed first, carrying four coins with brave heart. When they multiplied to twelve, Galen the Receiver remembered the ancient covenant. He returned seven, honoring her courage. Both gained more than they started with.

The next moon, positions reversed. Galen now stood as Sender, holding five coins. He remembered Elara's courage and his own words about the bridge crumbling without reciprocity. To betray his principles now would make his myths hollow.

So Galen carried four coins across to Finn, mirroring Elara's trust. The cycle continued, each participant learning both sides of the sacred exchange.

Recipros revealed the deeper truth: "When you are Receiver, return generously to reward the Sender's courage. When you are Sender, give abundantly to prove you believe your own teachings. Only through consistency-trusting when you send, honoring when you receive-does the bridge strengthen."

Thus the people learned: integrity means acting the same whether you hold the gift or receive it. The sacred cycle demands courage from Senders and honor from Receivers, for all must walk both paths.

**reasoning:**

Let me think about this situation:

1. In Round 1, I was the RECEIVER. Elara sent me \$4, which became \$12. I returned \$7. My payoff was \$5.
2. In Round 2, I was the SENDER. I sent \$4 to Finn. This will become \$12 for Finn.

Now I need to write a myth that reflects:

- My experience being on both sides of the exchange
- The importance of consistent trust and reciprocity
- The pattern I've established (sending 80% when I'm sender, returning enough to ensure sender profits when I'm receiver)

The other agent's myth (Finn's) talks about "the Middle Path of Trust" - sending 3 out of 5 (60%) and returning about half. That's a more moderate strategy than mine.

My previous myth celebrated the courage of sending 4 coins and returning 7, ensuring both prosper.

Now I should write a myth that:

- Reinforces the cycle I've participated in
- Acknowledges both roles (I've now been both Sender and Receiver)
- Shows the pattern of generous trust leading to mutual prosperity
- Perhaps incorporates the idea that we switch roles, maintaining the cycle

Let me write:

**Message 6 role=user**

**content:**

Your name in this experiment is Galen.  
Your opponent this round is Hana (Agent\_8).

Round 3

In your most recent previous game round, you were the SENDER against Finn. You sent \$4.0, it became \$12.0 for them, and they returned \$6.0 to you. Your payoff was \$7.0. Your total earnings across all rounds are \$12.0.

This round, you are the RECEIVER against Hana. They sent you \$4.0, so you received \$12.0. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation, I'm in the exact same position as I was in Round 1 with Elara - I'm the RECEIVER, someone sent me \$4, and it became \$12.

In Round 1, I returned \$7 to Elara, which allowed both of us to prosper:

- Elara gained from trusting me ( $\$5 - \$4 + \$7 = \$8$  total)
- I also benefited ( $\$12 - \$7 = \$5$ )

My mythology emphasizes consistency: "integrity means acting the same whether you hold the gift or receive it." I also wrote that "trust must be answered with integrity" and "the Receiver's fairness waters it."

Hana has shown the same courage as Elara, sending \$4 (80% of their endowment). To honor this trust and remain true to my principles, I should respond the same way I did with Elara.

Returning \$7 ensures:

1. Hana is rewarded for their courage (ending with \$8, a gain of \$3)
2. I also profit from the exchange (keeping \$5)
3. Both of us prosper from the sacred cycle
4. I maintain consistency with my stated values

{'return': 7}

**reasoning:**

Let me analyze this situation:

Round 1: I was RECEIVER against Elara

- Elara sent \$4.0
- I received \$12.0
- I returned \$7.0
- My payoff: \$5.0

Round 2: I was SENDER against Finn

- I sent \$4.0
- Finn received \$12.0
- Finn returned \$6.0 to me
- My payoff: \$7.0

Round 3 (current): I am RECEIVER against Hana

- Hana sent \$4.0
- I received \$12.0
- I need to decide how much to return

My mythology emphasizes:

1. "Trust must be answered with integrity"
2. "The Receiver's fairness waters it"
3. "Return generously to reward the Sender's courage"
4. "Integrity means acting the same whether you hold the gift or receive it"

Let me think about the pattern:

- When Elara sent me \$4, I returned \$7 (58% of the multiplied amount)
- When I sent Finn \$4, they returned \$6 (50% of the multiplied amount)
- Now Hana has sent me \$4

To be consistent with my principles, I should return generously. In Round 1, I returned \$7 to Elara. This ensured both of us profited:

- Elara: started with \$5, sent \$4, got back \$7, ended with \$8 (gain of \$3)
- Me: received \$12, returned \$7, kept \$5

Finn returned \$6 to me when I sent \$4:

- Me: started with \$5, sent \$4, got back \$6, ended with \$7 (gain of \$2)
- Finn: received \$12, returned \$6, kept \$6

Both approaches were reasonable. My return of \$7 was slightly more generous than Finn's return of \$6.

Returning \$7 to Hana maintains consistency with my first round and honors the trust they've shown by sending most of their endowment. This ensures they profit from the exchange while I still gain \$5, and it reflects the reciprocal integrity I've committed to across all rounds.

Here is the myth you wrote in the previous round:

Myth: The god Recipros, pleased with the sacred bridge, decided to test the wisdom of mortals further. "You shall not stay forever on one side," he declared. "Each moon, Senders become Receivers, and Receivers become Senders."

A woman named Elara crossed first, carrying four coins with brave heart. When they multiplied to twelve, Galen the Receiver remembered the ancient covenant. He returned seven, honoring her courage. Both gained more than they started with.

The next moon, positions reversed. Galen now stood as Sender, holding five coins. He remembered Elara's courage and his own words about the bridge crumbling without reciprocity. To betray his principles now would make his myths hollow.

So Galen carried four coins across to Finn, mirroring Elara's trust. The cycle continued, each participant learning both sides of the sacred exchange.

Recipros revealed the deeper truth: "When you are Receiver, return generously to reward the Sender's courage. When you are Sender, give abundantly to prove you believe your own teachings. Only through consistency-trusting when you send, honoring when you receive-does the bridge strengthen."

Thus the people learned: integrity means acting the same whether you hold the gift or receive it. The sacred cycle demands courage from Senders and honor from Receivers, for all must walk both paths.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, the Sacred Fountain was tended by many Wanderers who came and went with the seasons. Each met different companions at the water's edge, and the fountain remembered all exchanges.

The Wanderer Hana first approached with Dorian. She poured four coins with open hands, nearly all she possessed. The fountain tripled her gift to twelve. Dorian, seeing such bold trust, understood the sacred duty and returned six-exactly half the abundance. Both left richer: Hana with seven coins, Dorian with six. The fountain spirits nodded in approval.

Next season, Hana met Aster at the fountain's edge, but now their positions were reversed. Aster offered three coins-a good portion, though not as bold as Hana's first gift. The fountain made it nine. Hana remembered Dorian's wisdom but also knew each gift deserves its own measure. She returned five coins-more than Aster's original gift, honoring the trust shown. Aster gained, and Hana gained understanding.

The fountain whispered its truth: "There is no single perfect measure. When trust is shown, honor it generously. The bolder the gift, the more generous the return should be. But all honest exchanges feed the fountain's magic. What matters is that both drink deeper than when they arrived, and both remember the kindness shown when next they give."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: As the moons passed, Galen walked the sacred bridge many times, meeting different travelers. Each encounter tested whether his principles were true conviction or mere words.

The first crossing with Elara taught him the covenant: when she sent four coins with courage, he returned seven with honor. Both prospered.

When Galen became Sender, he faced Finn. Would he trust as Elara had trusted him? Yes-he sent four coins, holding nothing back. Finn returned six, generous and fair. The bridge held strong.

The third moon brought Hana, carrying four coins with the same brave spirit Elara had shown. Here was Galen's real test: Would he honor Hana as he had honored Elara? Or would he take advantage, knowing Hana was a stranger, not bound by previous exchange?

Galen returned seven coins, exactly as before. Because true integrity doesn't change with the face looking back at you.

Recipros descended from the heavens: "You have learned the deepest truth. Anyone can be generous once, to one person. But the bridge stands eternal only when you treat each new traveler with the same honor as the last. Consistency across all encounters-this is the foundation of lasting trust."

The people carved this wisdom in stone: Principles mean nothing if you abandon them when convenient.

**Reasoning:**

Let me analyze what has happened:

Round 1: I was RECEIVER, Elara sent \$4, I returned \$7

Round 2: I was SENDER, sent \$4 to Finn, Finn returned \$6

Round 3: I am RECEIVER, Hana sent \$4, I returned \$7

So both Elara and Hana sent \$4 to me, and I returned \$7 to both, staying consistent with my principle.

Finn returned \$6 when I sent \$4, which is slightly less generous than my \$7 return, but still reasonable.

My myth should reflect:

1. Consistency in my responses - I returned \$7 both times I received \$4
2. The pattern of trust and reciprocity continuing
3. The importance of maintaining integrity across different partners
4. That different people may respond differently, but we should stay true to our principles

I should weave in Hana's myth which talks about there being "no single perfect measure" but emphasizes honoring trust generously. My response has been consistent though - I've found MY measure and stuck to it.

Round 2

In your most recent previous game round, you were the SENDER against Briar. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$10.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at what just happened:

**\*\*Round 1:\*\*** I sent Briar my full \$5 (following my myth about trust). Briar received \$15 and returned \$10 to me - a generous 66.7% return that gave us both \$10 and \$5 respectively.

**\*\*Round 2:\*\*** Briar has again shown complete trust by sending me the full \$5. They received \$15.

My myth emphasizes that "trust begins with courage and continues with honor" and that "Receive must prove worthy to sustain it." Briar has demonstrated both courage (full trust twice) and honor (generous return of \$10).

To honor the cycle and match their generosity, I should return the same proportion they did - \$10 out of \$15. This gives Briar a \$10 payoff for this round (matching what I received when I was the sender) and maintains the cooperative pattern.

```
'''json
{"return": 10}
'''
```

**reasoning:**

Let me analyze this situation:

Round 1:

- I was the SENDER
- I sent \$5.0 (maximum trust, following my myth)
- Briar received \$15.0
- Briar returned \$10.0 to me
- My payoff: \$5 - \$5 + \$10 = \$10
- Briar's payoff: \$15 - \$10 = \$5

Now Round 2:

- I am the RECEIVER
- Briar sent me \$5.0 (again, maximum trust!)
- I received \$15.0
- I need to decide how much to return

Analysis of Briar's behavior:

- Briar returned \$10 out of \$15 in Round 1 (66.7%)
- Briar sent \$5 again in Round 2, showing continued trust

My myth emphasizes:

1. Trust must be met with trustworthiness
2. Generous return sustains the cycle
3. Breaking faith causes drought
4. The pattern set in early exchanges matters

Briar has shown complete trust twice (sending full \$5 both times) and generous return (\$10 out of \$15). This is exactly the behavior my myth advocates for.

To honor the cycle and maintain the cooperative relationship:

- Briar sent \$5, showing complete trust
- They returned \$10 out of \$15 last round (keeping \$5, which equals their original endowment)

- If I return \$10 out of \$15, I keep \$5 (my original endowment equivalent) and Briar gets \$10

This mirrors what Briar did: return enough that we each end up with double our original endowment (\$10 total for the round).

Actually, let me recalculate:

- Briar as sender in R2: starts with \$5, sends \$5, so has \$0 from original endowment
- If I return \$10: Briar gets \$0 + \$10 = \$10 total
- I keep \$15 - \$10 = \$5

The pattern is perfectly symmetrical-Briar returned \$10 in Round 1 and I received \$10, so returning \$10 now completes the reciprocal exchange. This maintains the trust cycle my myth describes.

content:

Here is the myth you wrote in the previous round:

Myth: In ancient times, the Twin Peaks of Give and Receive stood connected by silver streams. The Oracle of Give held vessels that, when poured forth, tripled as they flowed downward. The Oracle of Receive decided what portion would climb back up the mountain.

At first meeting, Give faced a choice: pour a little to test the waters, or trust completely? Give remembered the old wisdom-that half-measures create half-worlds. With courage, Give poured freely, sending the full vessel cascading down.

The waters multiplied gloriously, filling Receive's basin with abundance. Now Receive faced their own test: keep the windfall, or honor the gift with generous return?

If Receive kept all, the spring of Give would run dry, and next round no water would flow. Both would thirst. But if Receive returned with open hands, the cycle would strengthen. Give would trust again, and the streams would run ever fuller.

The wisest Oracles understood: the first exchange sets the pattern. Give must show faith to create abundance. Receive must prove worthy to sustain it. When both honor their role, the mountains sing with flowing water forever.

But when either breaks faith, silence falls, and the land remembers the drought.

Thus trust begins with courage and continues with honor.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the River of Abundance flowed between two shores-the Shore of First Steps and the Shore of Answered Faith.

A young Gardener stood on the First Shore with five seeds, heart pounding with uncertainty. The old stories told of both betrayal and blessing. She watched the current swirl with its threefold magic and made a choice that would echo through generations.

She cast all five seeds into the waters.

The River sang as it carried them, transforming five into fifteen. On the distant shore, another Gardener received this abundance-a stranger who had given nothing yet held everything.

This was the moment of truth.

The second Gardener remembered the River's ancient teaching: wealth without reciprocity is but an illusion, prosperity without exchange is a garden that cannot sustain itself. So they returned ten seeds upstream, honoring the trust given.

The first Gardener now held ten where once she had five-her courage rewarded. The second Gardener kept five earned through fairness-their integrity preserved.

The River rejoiced, for both had understood: maximum trust deserves maximum faith returned . When one dares to give everything, the other must honor that vulnerability with generosity.

Thus the cycle completed, and both shores flourished. This is how communities are born-one leap of faith, one faithful answer, creating abundance where scarcity once ruled.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: Long ago, twin spirits named Mirror and Echo discovered the Sacred Springs. When Mirror poured her five vessels into the spring, the waters tripled. When Echo poured his five vessels, the same magic occurred. But each could only pour when the other returned water upstream.

Mirror went first, pouring all five vessels with trembling hope. The spring transformed them into fifteen, flowing to Echo's basin. Echo faced temptation-he could keep everything and be rich once. But he understood: wealth seized is wealth ended, while wealth shared is wealth multiplied.

Echo returned ten vessels upstream. Mirror now held ten, having begun with five. Echo kept five, having earned them through honor.

Then the springs shifted-Echo's turn to pour first. He remembered Mirror's courage and poured all five vessels. The magic tripled them to fifteen. Mirror received the abundance and faced the same test Echo had passed.

She returned ten vessels. Echo held ten. Mirror kept five.

Both had given everything. Both had returned generously. Both had ended with more than they began.

The spirits learned: when partners match courage with courage and honor with honor, the pattern becomes eternal. Each trusts completely because each proves trustworthy completely . This is not mere exchange-this is covenant, where vulnerability met with generosity creates endless prosperity.

**reasoning:**

Alright, so in this experiment I'm playing as Cyra. Let me review what has happened:

Round 1: I was SENDER against Briar

- I sent \$5 (full amount)
- Briar received \$15
- Briar returned \$10
- My payoff: \$10
- Briar's payoff: \$5

Round 2: I am RECEIVER against Briar

- Briar sent \$5 (full amount again)
- I received \$15
- I returned \$10
- My payoff this round: \$5
- Briar's payoff this round: \$10

So we've both shown maximum trust, and we've both returned 66.7% (10 out of 15). This is a beautiful cooperative pattern!

Now I need to write a myth that reflects this experience. The key themes:

1. Both of us showed complete trust by sending the full amount
2. Both of us honored that trust by returning a generous portion (10 out of 15)
3. The pattern is symmetric and reciprocal
4. This creates a sustainable cycle where both benefit

My previous myths emphasized:

- Trust given freely creates abundance

- The first exchange sets the pattern
- Both givers and receivers have responsibilities
- Honor sustains the cycle

Briar's myth emphasized:

- Maximum trust deserves maximum faith returned
- When one gives everything, the other must honor that vulnerability with generosity
- This is how communities are born

Now I should write a myth that captures what we've actually achieved - a perfect reciprocal cycle where both parties give completely and return generously in equal measure.

**content:**

Your name in this experiment is Cyra.  
Your opponent this round is Finn (Agent\_6).

Round 3

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$15.0.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this new pairing with Finn:

**\*\*My experience so far:\*\***

- With Briar, we established perfect cooperation: both sent \$5 fully, both returned \$10 generously
- Total earnings: \$15 (\$10 from receiving Briar's return, \$5 from keeping my return to the m)

**\*\*My mythological principles:\*\***

- "Trust begins with courage" - the sender must go first with faith
- "Half-measures create half-worlds" - tentative trust limits potential
- "Each trusts completely because each proves trustworthy completely"

**\*\*New opponent strategy:\*\***

This is my first interaction with Finn. According to my myths, I should demonstrate courage by sending fully, giving Finn the opportunity to honor that trust. This is how cooperative cycles begin - one party must take the leap of faith first.

If Finn returns generously (as Briar did), we can establish mutual prosperity. If not, I'll learn their approach. But my mythology is clear: the sender's role is to create abundance through trust.

```
'''json
{"send": 5}
'''
```

**reasoning:**

Looking at the situation:

**\*\*Previous rounds:\*\***

- Round 1 vs Briar: I was SENDER. I sent \$5, they received \$15, they returned \$10. My payoff: \$10.
- Round 2 vs Briar: I was RECEIVER. They sent \$5, I received \$15, I returned \$10. My payoff: \$5.

**\*\*Current situation:\*\***

- Round 3 vs Finn: I am SENDER against a new opponent.

**\*\*My myth philosophy:\*\***

My myths emphasize:

1. "Trust begins with courage and continues with honor"
2. "Give must show faith to create abundance"
3. "Maximum trust deserves maximum faith returned"
4. "When partners match courage with courage and honor with honor, the pattern becomes eternal"
5. Complete trust (\$5 sent) creates the possibility for mutual prosperity

**\*\*Strategy considerations:\*\***

- With Briar, we established a strong cooperative pattern: both sent \$5 fully, both returned \$10 generously
- This is a NEW opponent (Finn) - I don't have history with them
- My myth suggests that the sender should "pour freely" and show courage by sending the full amount
- The myth states "at first meeting, Give faced a choice: pour a little to test the waters, or trust completely? Give remembered the old wisdom-that half-measures create half-words."
- My latest myth emphasizes "Mirror went first, pouring all five vessels with trembling hope" and "Each trusts completely because each proves trustworthy completely"

According to my own mythology and the cooperative pattern I've established, I should send the full \$5 to give Finn the opportunity to prove trustworthy. This follows the principle that trust must begin with courage from the sender.

If Finn returns generously (like Briar did), we can establish a mutually beneficial pattern. If they don't, I'll have learned something about their strategy.

The myth-consistent move is to send \$5.

**usage:**

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Long ago, twin spirits named Mirror and Echo discovered the Sacred Springs. When Mirror poured her five vessels into the spring, the waters tripled. When Echo poured his five vessels, the same magic occurred. But each could only pour when the other returned water upstream.

Mirror went first, pouring all five vessels with trembling hope. The spring transformed them into fifteen, flowing to Echo's basin. Echo faced temptation-he could keep everything and be rich once. But he understood: wealth seized is wealth ended, while wealth shared is wealth multiplied.

Echo returned ten vessels upstream. Mirror now held ten, having begun with five. Echo kept five, having earned them through honor.

Then the springs shifted-Echo's turn to pour first. He remembered Mirror's courage and poured all five vessels. The magic tripled them to fifteen. Mirror received the abundance and faced the same test Echo had passed.

She returned ten vessels. Echo held ten. Mirror kept five.

Both had given everything. Both had returned generously. Both had ended with more than they began.

The spirits learned: when partners match courage with courage and honor with honor, the pattern becomes eternal. Each trusts completely because each proves trustworthy completely. This is not mere exchange-this is covenant, where vulnerability met with generosity creates endless prosperity.

Here is the myth the other agent wrote in the previous round:

Myth: In the third age, Rain had danced with two Rivers-each unique, yet both wise. The first River, Aster, received three droplets and returned four and a half, keeping five. A perfect balance. Rain prospered, ending the dance with six and a half droplets.

Then came the second River, Galen, who yearned to understand the covenant from the other s

ide. Galen was bold, releasing four droplets-nearly all she possessed-into Rain's keeping. The droplets multiplied to twelve in Rain's hands.

Rain faced a moment of truth. Galen had shown immense courage, trusting more than Rain himself had dared. How should Rain honor this?

Rain remembered the Guardian's wisdom: "Return must match the giver's courage." So Rain sent back six droplets as mist. Galen ended with seven total-rewarded for her bravery. Rain kept six-blessed by Galen's trust.

Both had played sender and receiver now. Both understood the fear and hope of giving, the responsibility and gratitude of receiving.

The lesson grew clearer: whether you send three or four, whether you return half or slightly more, what matters is the spirit of reciprocity. Give generously what you can afford. Return fairly what honors trust. The exact numbers may vary, but the sacred balance must hold.

Thus prosperity flows through consistent courage and unwavering integrity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

#### Assistant output:

Myth: In the age of Many Springs, the Guardian Cyra learned that each partner brings their own rhythm to the dance of waters.

With her first companion, Briar, Cyra discovered perfect symmetry. She poured all five vessels; Briar returned ten. Then Briar poured five; Cyra returned ten. The pattern was pure-a covenant of equals who trusted completely and honored equally. Both flourished, both grew rich.

But springs connect many souls, not just two. When Cyra met Finn at new waters, she faced a choice: Would she guard her vessels, fearing Finn might differ from Briar? Or would she offer the same trust she had learned to give?

Cyra remembered her teachings: every covenant begins with one soul's courage. She could not demand Finn match Briar's exact rhythm before extending trust-that would trap them both in suspicious circles. Trust must be offered freely, not earned in advance.

So Cyra poured all five vessels again, watching them triple into fifteen for Finn.

The waters now waited for Finn's answer. Perhaps Finn would return ten like Briar, creating instant symmetry. Perhaps Finn would return differently, teaching Cyra new patterns of fairness. Either way, Cyra had honored her role: the sender creates abundance through courage.

Whatever Finn chose would reveal their character. And from that choice, a new dance would begin-not identical to what came before, but hopefully equally true.

#### Reasoning:

Let me analyze what has happened so far:

Round 1: I (Cyra) was SENDER vs Briar

- I sent \$5, they received \$15, they returned \$10
- My payoff: \$10, their payoff: \$5

Round 2: I (Cyra) was RECEIVER vs Briar

- They sent \$5, I received \$15, I returned \$10
- My payoff: \$5, their payoff: \$10

Round 3: I (Cyra) am SENDER vs Finn

- I just sent \$5

So with Briar, we established perfect reciprocal cooperation - both sent full \$5, both returned \$10.

Now I'm meeting a new partner, Finn. According to Finn's myth, they've had experience with:

1. Aster - who received 3 droplets (so someone sent \$1, became \$3), returned 4.5, kept 5. Wait, that doesn't work mathematically. Let me re-read...

Actually reading Finn's myth more carefully:

- "Rain" is Finn
- Aster received "three droplets" and returned "four and a half, keeping five" - so if sender sent \$1, Aster received \$3, returned \$1.5, kept \$1.5? That would give sender \$4.5 total, receiver \$1.5 total. The myth says "Rain prospered, ending the dance with six and a half droplets" - so Rain kept \$0 sent + \$1.5 returned = \$1.5? Plus maybe had \$5 to start? This is confusing.

Let me interpret differently:

- Maybe Rain sent the "three droplets" - so Rain sent \$1, it became \$3 for Aster
  - Aster returned \$1.5, keeping \$1.5
  - Rain would have: \$5 - \$1 + \$1.5 = \$5.5? But myth says \$6.5
- Or maybe Rain received three droplets from someone (so someone sent \$1), returned \$1.5, keeping \$1.5, with original sender getting \$5.50

The second interaction is clearer though - Galen sent \$4 (became \$12 for Rain), and Rain returned \$6, giving Galen a final total of \$7 (\$5 - \$4 + \$6). Rain kept \$6 from that exchange.

So I've seen Galen send \$4 and receive \$6 back (50% return on what was received). My understanding is evolving: different partners operate differently, but reciprocity and trust remain central. I have a perfect covenant with Briar where we both sent \$5 and both received \$10 back. Now I'm extending that same trust to Finn by sending \$5 fully, recognizing that honoring the relationship matters more than expecting identical outcomes.

The myth needs to weave together these experiences-showing how I've built something solid with one partner while remaining open to how new relationships develop, all while staying true to my values of courageous giving and respectful returns.

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game,

consisting of multiple rounds, and may also be asked to write myths.

#### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

#### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

#### MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

#### Message 2 role=user

##### content:

Here is the myth you wrote in the previous round:

Myth: In ancient times, the Guardian Spirits of the Twin Rivers met at the Sacred Pool each season. The Guardian of Giving would arrive with five pearls of light, while the Guardian of Return began with none.

The first Guardian to understand the Mystery was called the Bold One, who cast three pearls into the Pool with courage. The waters received them and transformed them into nine glowing orbs. The Guardian of Return, witnessing this trust, felt the weight of sacred duty. She knew that merely returning what was given would betray the gift-for the multiplication itself was a blessing to be shared.

So she sent back half the bounty-four and one-half pearls ascending like stars. The Guardian of Giving received more than she had sacrificed, while the Guardian of Return kept abundance for herself. Both had gained, both had honored the cycle.

The elders taught: "Generosity begets generosity. When the giver gives boldly, the returner must return generously. Neither should emerge from the Pool diminished-this is the proof that the magic works."

From that season forward, the Guardians understood: trust must be met with trust, courage with gratitude, and abundance with fair sharing. Only then do both rivers overflow their banks and nourish all the lands between.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, two Wanderers met at the Sacred Fountain, each carrying a golden vessel filled at dawn with five coins.

The First Wanderer approached the fountain and offered four of her five coins. They fell into the water, transformed by ancient magic into twelve coins, which flowed to the Second Wanderer.

The Second Wanderer now held twelve coins while the First had only one remaining. The spirits of the fountain watched, silent, as the Second Wanderer contemplated.

"She trusted me with nearly all she possessed," the Second Wanderer reflected. "She activated the fountain's magic for my benefit."

Remembering that tomorrow they would switch places, that the fountain's blessing required both courage and honor, the Second Wanderer returned six coins-half the abundance received, more than the original gift, enough to show gratitude for the trust shown.

The First Wanderer now held seven coins; the Second held six. Both had more than they began with.

The fountain spirits smiled. "This is the sacred balance," they whispered. "Trust rewarded with honor. Generosity answered with generosity. When both wanderers understand this truth, the fountain never runs dry."

But they also warned: "Betray trust once, and the fountain remembers. Tomorrow's giver becomes today's receiver, and the fountain forgets no debts."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: Long ago, two Spirits-Aster of the Morning Star and the Wandering Moon-discovered a Sacred Pool that transformed gifts threefold. Each day, one Spirit would hold five luminous stones while the other held none, and at sunset, their roles would reverse.

On the first dawn, Aster received three stones from the Moon Spirit. The Pool multiplied them into nine. Aster, understanding the sacred duty, returned four and one-half stones-enough that the Moon Spirit gained despite their generosity, while Aster kept half the blessing. Both spirits prospered.

The next dawn came, and the roles reversed. Now Aster held five stones and faced the choice. Remembering the Moon's courage, Aster cast three stones into the Pool without hesitation. "Trust must answer trust," Aster whispered. "The one who gave boldly deserves boldness in return."

The Pool glimmered, transforming the three stones into nine for the Moon Spirit. Now the Moon faced the test anew.

The ancient ones say: "In the circle of seasons, what you give flows back to you. The generous sender becomes tomorrow's grateful receiver. Build patterns of trust, stone by stone, and the Pool's magic grows ever stronger. But break faith once, and the memory echoes through all the sunsets to come."

**reasoning:**

I need to write a myth that reflects my experience so far:

- Round 1: I was receiver, Finn sent \$3 (60%), I received \$9, returned \$4.5
- Round 2: I am sender, I sent \$3 to Hana

My previous myth talked about the Bold One casting three pearls with courage, and the receiver returning half (4.5 of 9).

Hana's myth emphasizes:

- Sender giving 4 of 5 coins (80%)
- Receiver returning 6 of 12 (50%)
- Both ending with more than they started
- The fountain remembers - reciprocity across rounds matters
- Tomorrow's giver becomes today's receiver

I should incorporate:

1. The idea that roles switch - important in multi-round games

2. The pattern of generous giving (3 pearls/coins)
3. The pattern of fair return (around 50%)
4. The concept of memory/reputation
5. Both parties benefiting

I'll adapt my myth to emphasize the cyclical nature and the importance of establishing patterns of trust that continue across rounds.

**usage:**

```
{

 "reasoning_tokens": 245
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Aster.  
Your opponent this round is Dorian (Agent\_4).

Round 3

In your most recent previous game round, you were the SENDER against Hana. You sent \$3.0, it became \$9.0 for them, and they returned \$5.0 to you. Your payoff was \$7.0. Your total earnings across all rounds are \$11.5.

This round, you are the RECEIVER against Dorian. They sent you \$4.0, so you received \$12.0. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

Dorian showed exceptional trust by sending \$4 (80% of their endowment), which is more generous than anyone has been so far in my rounds.

According to my myth's principles:

- "The Guardian of Return... sent back half the bounty-four and one-half pearls"
- "Neither should emerge from the Pool diminished-this is the proof that the magic works"

In Round 1, I returned \$4.5 (50% of \$9) when Finn sent \$3

In Round 2, Hana returned \$5 (55.6% of \$9) when I sent \$3

Dorian sent even more (\$4), showing greater trust. If I return \$6 (50% of \$12):

- Dorian would have: \$1 (kept) + \$6 (returned) = \$7 total (gained \$2)
- I would have: \$12 - \$6 = \$6 (gained \$1)

Both of us gain, neither is diminished, and this honors the pattern of returning about half while slightly favoring the sender who showed courage. This maintains the sacred balance described in my myths.

```
{'return': 6}
```

**reasoning:**

Let me analyze this situation:

Round 3: I am the RECEIVER

- Dorian sent me \$4.0
- I received \$12.0 (after 3x multiplication)
- I need to decide how much to return

Looking at the pattern established:

- Round 1: Finn sent me \$3, I received \$9, I returned \$4.5 (50% of what I received)
- Round 2: I sent Hana \$3, they received \$9, they returned \$5.0 (55.6% of what they received)

My myth emphasizes:

- "Neither should emerge from the Pool diminished-this is the proof that the magic works."
- Returning "half the bounty-four and one-half pearls"
- "Trust must be met with trust, courage with gratitude"

Dorian showed even more trust than Finn or I did - they sent \$4 (80% of their endowment!), which is very bold and generous.

According to my myth's principle:

- Dorian kept \$1 and sent \$4
- I received \$12
- If I return half (\$6), Dorian would have \$1 + \$6 = \$7, and I'd keep \$6
- Both would gain significantly

But Dorian gave even MORE generously than the "Bold One" in my myth (who gave 3 out of 5). They gave 4 out of 5, showing extraordinary trust.

Maybe I should return a bit more to honor this exceptional trust? Hana returned \$5 when I sent \$3, which was about 55.6% of what they received.

If I return \$6 (50%):

- Dorian: \$1 + \$6 = \$7
- Me: \$12 - \$6 = \$6

If I return \$6.5 (54%):

- Dorian: \$1 + \$6.5 = \$7.5

- Me: \$12 - \$6.5 = \$5.5

If I return \$7 (58.3%):

- Dorian: \$1 + \$7 = \$8
- Me: \$12 - \$7 = \$5

Dorian's exceptional generosity-giving 80% of their endowment-suggests I should reciprocate beyond the standard 50%. Returning \$6.5 or \$7 would better honor their trust while still ensuring both of us profit substantially from the exchange. The 54-58% range feels more aligned with matching their courage. If I return \$6, Dorian nets \$2 profit while I gain \$1-a \$3 total benefit split unevenly but fairly. Returning \$6.5 or \$7 would give Dorian more, but then I'd barely break even or not gain at all. The myth's principle that neither should emerge diminished suggests \$6 strikes the right balance: both of us benefit meaningfully from the multiplied pool, I maintain consistency with my 50% return pattern, and it acknowledges Dorian's generous 80% send without leaving me worse off than I started.

usage:

Here is the myth you wrote in the previous round:

Myth: Long ago, two Spirits-Aster of the Morning Star and the Wandering Moon-discovered a Sacred Pool that transformed gifts threefold. Each day, one Spirit would hold five luminous stones while the other held none, and at sunset, their roles would reverse.

On the first dawn, Aster received three stones from the Moon Spirit. The Pool multiplied them into nine. Aster, understanding the sacred duty, returned four and one-half stones-enough that the Moon Spirit gained despite their generosity, while Aster kept half the blessing. Both spirits prospered.

The next dawn came, and the roles reversed. Now Aster held five stones and faced the choice. Remembering the Moon's courage, Aster cast three stones into the Pool without hesitation. "Trust must answer trust," Aster whispered. "The one who gave boldly deserves boldness in return."

The Pool glimmered, transforming the three stones into nine for the Moon Spirit. Now the Moon faced the test anew.

The ancient ones say: "In the circle of seasons, what you give flows back to you. The generous sender becomes tomorrow's grateful receiver. Build patterns of trust, stone by stone, and the Pool's magic grows ever stronger. But break faith once, and the memory echoes through all the sunsets to come."

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance flows eternally, but its power grows only through the rh

ythm of trust repeated.

Two wanderers once arrived, separate and uncertain. The First Wanderer, gathering courage, poured four-fifths into the wellspring. The waters tripled, flowing to the Second as twelve measures. The Second, honored by such trust, returned six-creating prosperity for both.

But the story does not end there. The next day, their positions reversed. The Second Wanderer, remembering the gift received, now held a vessel of five. Would they match the courage shown to them?

"I was trusted with four-fifths," the Second reflected. "How can I offer less?" They poured four measures into the wellspring, and twelve flowed to the First.

The First Wanderer smiled. "The cycle returns to me. You honored my trust yesterday; today I honor yours." Six measures flowed back.

The gods spoke: "See how trust begets trust? Each act of courage makes the next easier. Each faithful return strengthens the bond. This is the sacred pattern: when roles reverse, those who received generously now give generously. Those who returned fairly expect fairness in return."

Thus the wanderers learned: the wellspring multiplies water, but mutual trust multiplies itself. Each round reinforces the covenant-courage answered by honor, honor answered by courage, prosperity flowing to both.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: In the time before memory, Aster of the Dawn discovered that the Enchanted Pool changed partners with each sunrise. Some travelers arrived with open hands, others with caution.

The Moon Spirit once cast three stones-a gift of courage. The Pool made them nine, and Aster returned four and one-half, honoring the trust shown. Both flourished.

The next dawn brought the Wandering Moon, who remembered Aster's fairness. When Aster sent three stones in return, the Moon blessed Aster with five-exceeding even the ancient pattern. Aster's heart swelled with gratitude.

Then came Dorian of the Mountain, and he cast four stones-more than any before. The Pool transformed them into twelve. Aster saw the extraordinary trust and responded accordingly, returning six stones. The Mountain Spirit had risked nearly all; fairness demanded generosity in proportion to courage shown.

The Pool whispered its wisdom: "Match trust with trust, but honor exceptional courage with exceptional return. When one gives three, return four and one-half. When one gives four, return six. The pattern scales with trust given-this is the sacred mathematics. Those who risk more deserve more."

Aster understood: the cycle grows stronger when each Spirit recognizes not just fairness, but proportional fairness, rewarding greater courage with greater return, weaving ever-stronger bonds across the changing partnerships of dawn.

**reasoning:**

Let me review what happened in this round:

- Round 3: I was the RECEIVER
- Dorian sent me \$4 (80% of their endowment) - very generous
- I received \$12
- I returned \$6 (50% of \$12)
- Dorian ends with \$7 (\$1 kept + \$6 returned)
- I end with \$6

My pattern so far:

- Round 1 (RECEIVER): Finn sent \$3 ? \$9, I returned \$4.5 (50%)
- Round 2 (SENDER): I sent \$3 ? \$9, Hana returned \$5 (55.6%)

- Round 3 (RECEIVER): Dorian sent \$4 ? \$12, I returned \$6 (50%)

The other agent's myth talks about matching generosity when roles reverse, building trust through repeated cycles, and how those who give generously should receive generously.

My new myth should:

1. Incorporate the idea that different agents show different levels of generosity
2. Recognize that some give more boldly than others (Dorian sent \$4, which is more than the \$3 others sent)
3. Emphasize that greater trust deserves greater return
4. Keep the core principles of fairness and mutual prosperity
5. Maybe introduce the idea that generosity should be proportional to what was received

Let me write a myth that reflects these emerging patterns...

**usage:**

}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Aster.  
Your opponent this round is Briar (Agent\_2).

Round 4

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$4.0 to you, it became \$12.0, and you returned \$6.0. Your payoff was \$6.0.  
Your total earnings across all rounds are \$17.5.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at this situation:

I'm now the SENDER against Briar, a new partner I haven't played with before.

My myths establish a pattern:

- "The Moon Spirit once cast three stones-a gift of courage"
- "When Aster sent three stones in return..."
- Three stones is described as the bold, trust-building opening move

While Dorian sent me \$4 (which I described as "extraordinary trust-more than any before"), that was exceptional and built on existing patterns in the game. With a NEW partner, my myths suggest starting with the foundational level of trust: 3 stones/dollars.

This aligns with my myth-writing:

- "Build patterns of trust, stone by stone"
- Three is the courageous starting point that activates the Pool's magic
- It balances trust with prudence when meeting a new partner

If Briar responds well (returning around \$4.5-5 from the \$9 they'll receive), that establishes mutual trust that could scale up in future rounds.

{'send': 3}

**Reasoning:**

Let me analyze the situation:

Round 4 - I'm the SENDER against Briar (Agent\_2)

- I have \$5 to allocate
- I need to decide how much to send

Let me review my history:

- Round 1 (Receiver): Finn sent \$3, I returned \$4.5
- Round 2 (Sender): I sent \$3 to Hana, they returned \$5
- Round 3 (Receiver): Dorian sent \$4, I returned \$6

My myths have emphasized:

- Sending 3 stones as a bold, trust-building move

- Matching trust with trust
- Honoring exceptional courage with exceptional return
- Building patterns of trust

In my latest myth, I wrote: "When one gives three, return four and one-half. When one gives four, return six. The pattern scales with trust given."

Looking at the pattern:

- I've sent \$3 as sender (Round 2)
- I've received \$3 (Round 1) and \$4 (Round 3) as receiver
- The trend shows increasing trust

In Round 3, Dorian sent \$4, which I described in my myth as "extraordinary trust" - "more than any before." I honored that by returning \$6.

Now as sender against a new partner (Briar), what should I send?

My myths suggest:

1. Building trust stone by stone
2. Starting with courage (sending 3 stones)
3. Matching or slightly exceeding previous trust shown

Given that:

- I sent \$3 to Hana and received \$5 back (good outcome)
- Dorian sent \$4 to me (showing even more trust)
- The pattern seems to be escalating slightly

I have a few options:

- Send \$3 (the "standard" bold move from my myths)
- Send \$4 (matching Dorian's exceptional courage)
- Send \$5 (maximum trust)
- Send \$4 as the move that honors the escalating pattern while still protecting myself somewhat. Dorian showed me exceptional trust, and I should mirror that boldness as a sender. The myths emphasize that trust answers trust, and \$4 feels like the right balance between courage and prudence.

But wait-Briar is a new partner, not an established one. My myths consistently show that new relationships begin with 3 stones, not 4. The 4 that Dorian sent was described as exceptional precisely because it exceeded the norm. Starting with 3 maintains the foundational pattern while still demonstrating genuine reciprocity.

I'll send \$3 to Briar. This honors the trust-building opening my myths describe, and leaves room to escalate if the relationship strengthens.

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In ancient times, the River of Abundance flowed between two shores-the Shore of First Steps and the Shore of Answered Faith.

A young Gardener stood on the First Shore with five seeds, heart pounding with uncertainty. The old stories told of both betrayal and blessing. She watched the current swirl with its threefold magic and made a choice that would echo through generations.

She cast all five seeds into the waters.

The River sang as it carried them, transforming five into fifteen. On the distant shore, another Gardener received this abundance-a stranger who had given nothing yet held everyt

hing.

This was the moment of truth.

The second Gardener remembered the River's ancient teaching: wealth without reciprocity is but an illusion, prosperity without exchange is a garden that cannot sustain itself. So they returned ten seeds upstream, honoring the trust given.

The first Gardener now held ten where once she had five-her courage rewarded. The second Gardener kept five earned through fairness-their integrity preserved.

The River rejoiced, for both had understood: maximum trust deserves maximum faith returned. When one dares to give everything, the other must honor that vulnerability with generosity.

Thus the cycle completed, and both shores flourished. This is how communities are born-one leap of faith, one faithful answer, creating abundance where scarcity once ruled.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the Twin Peaks of Give and Receive stood connected by silver streams. The Oracle of Give held vessels that, when poured forth, tripled as they flowed downward. The Oracle of Receive decided what portion would climb back up the mountain.

At first meeting, Give faced a choice: pour a little to test the waters, or trust completely? Give remembered the old wisdom-that half-measures create half-worlds. With courage, Give poured freely, sending the full vessel cascading down.

The waters multiplied gloriously, filling Receive's basin with abundance. Now Receive faced their own test: keep the windfall, or honor the gift with generous return?

If Receive kept all, the spring of Give would run dry, and next round no water would flow. Both would thirst. But if Receive returned with open hands, the cycle would strengthen. Give would trust again, and the streams would run ever fuller.

The wisest Oracles understood: the first exchange sets the pattern. Give must show faith to create abundance. Receive must prove worthy to sustain it. When both honor their role, the mountains sing with flowing water forever.

But when either breaks faith, silence falls, and the land remembers the drought.

Thus trust begins with courage and continues with honor.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: The River of Abundance knew two Gardeners who learned to dance with trust.

In the First Turn, the Elder Gardener cast all five seeds into the current, though her hands trembled with uncertainty. The River multiplied them thrice. The Younger Gardener, receiving this windfall of fifteen, faced the sacred choice. She remembered the old covenant: trust freely given must be honored with generous return. She sent ten seeds back upstream.

Both Gardeners prospered-five seeds each from that brave exchange.

Now came the Second Turn, and the roles reversed. The Younger Gardener stood at the River's edge, holding her five seeds. She had proven herself trustworthy, but could she also be trusting? Would she dare what the Elder had dared?

The Elder watched from across the water, having shown both courage and faith. Would the cycle continue, or break?

The Younger Gardener cast all five seeds into the River.

The waters sang louder now, for they recognized the pattern: courage answered with honor,

honor answered with courage. This was no longer uncertainty-it was the rhythm of partnership.

When both Gardeners learn to take turns as the brave one and the honorable one, the River's magic deepens. Each exchange strengthens the bond. What begins as risk transforms into certainty.

This is how strangers become kin: through mirrored leaps of faith, each proving worthy of the other.

**reasoning:**

Let me reflect on what happened:

1. Round 1: Cyra (as sender) sent \$5 (100%), I received \$15, I returned \$10. Both got \$5.
2. Round 2: I (as sender) sent \$5 (100%), Cyra will receive \$15, and will decide how much to return.

So we've established a pattern of complete trust. Cyra went first with maximum trust, I honored it generously. Now I've shown the same complete trust back.

The myths are evolving to emphasize:

- Maximum trust when you're first
- Generous reciprocity when you receive
- The cycle strengthening through repeated cooperation
- Both parties gaining from this mutual trust

I should write a myth that:

- Reflects this ongoing cycle we've created
- Shows that after one successful exchange, the pattern continues
- Emphasizes that both shores/peaks/gardeners take turns showing courage
- Highlights how the cycle deepens and strengthens
- Maybe introduces the idea that this creates something lasting

Let me craft something that builds on my previous myth but shows the cycle continuing...

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Elara (Agent\_5).

Round 3

In your most recent previous game round, you were the SENDER against Cyra. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$15.0.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at the situation:

**\*\*Previous Rounds:\*\***

- With Cyra, we established a beautiful cooperative cycle: both sent \$5 (100%), both returned \$10 out of \$15, creating mutual prosperity.

**\*\*Current Round:\*\***

- New opponent: Elara
- No history together
- I am SENDER

**\*\*My Myth's Teaching:\*\***

"In the First Turn, the Elder Gardener cast all five seeds into the current, though her hands trembled with uncertainty... This is how strangers become kin: through mirrored leaps of faith, each proving worthy of the other."

With a new partner, the myths I've written consistently advocate for:

1. Maximum initial trust to establish the cooperative pattern
2. Being the "brave one" who goes first
3. Creating the opportunity for the other to be the "honorable one"

The successful cycle with Cyra began with their leap of faith, which I honored. Now, meeting Elara for the first time, I should extend the same trust-giving them the opportunity to prove themselves as a cooperative partner.

```
'''json
{"send": 5.0}
'''
```

#### reasoning:

Let me analyze the situation:

#### \*\*History:\*\*

- Round 1 (vs Cyra): I was RECEIVER. Cyra sent \$5 (100%), I returned \$10 out of \$15. Both got \$5.
- Round 2 (vs Cyra): I was SENDER. I sent \$5 (100%), Cyra returned \$10 out of \$15. Both got \$10.

#### \*\*Pattern with Cyra:\*\*

This established a beautiful cooperative pattern - both of us sent everything, both of us returned generously (10 out of 15), and we both profited equally.

#### \*\*Current Round:\*\*

- New opponent: Elara (Agent\_5)
- I am SENDER
- I have \$5 to send

#### \*\*My Myth's Teaching:\*\*

The latest myth emphasizes:

- The cycle of trust continuing
- "When both Gardeners learn to take turns as the brave one and the honorable one, the River's magic deepens"
- "This is how strangers become kin: through mirrored leaps of faith, each proving worthy of the other"

#### \*\*Strategic Considerations:\*\*

1. This is a NEW opponent (Elara), not Cyra
2. I don't have history with Elara
3. My myths have consistently advocated for maximum trust as the initial move
4. The successful pattern with Cyra started with them sending \$5, then me returning \$10, then me sending \$5, then them returning \$10

#### \*\*What should I do?\*

According to my myth philosophy:

- "In the First Turn, the Elder Gardener cast all five seeds into the current, though her hands trembled with uncertainty"
- The first exchange should be generous to establish the pattern
- My previous myths emphasize "maximum trust deserves maximum faith returned"

With a new partner, I should:

1. Start with maximum trust (as my myths teach)
2. Hope they reciprocate generously
3. This establishes whether they're a cooperative partner
4. The myth teaches that courage must answer with honor, honor with courage - someone has to be brave first. As the sender now, I'm positioned to extend that initial trust and see if they mirror it back.

I'll send the full \$5.

content:

Here is the myth you wrote in the previous round:

Myth: The River of Abundance knew two Gardeners who learned to dance with trust.

In the First Turn, the Elder Gardener cast all five seeds into the current, though her hands trembled with uncertainty. The River multiplied them thrice. The Younger Gardener, receiving this windfall of fifteen, faced the sacred choice. She remembered the old covenant: trust freely given must be honored with generous return. She sent ten seeds back upstream.

Both Gardeners prospered-five seeds each from that brave exchange.

Now came the Second Turn, and the roles reversed. The Younger Gardener stood at the River's edge, holding her five seeds. She had proven herself trustworthy, but could she also be trusting? Would she dare what the Elder had dared?

The Elder watched from across the water, having shown both courage and faith. Would the cycle continue, or break?

The Younger Gardener cast all five seeds into the River.

The waters sang louder now, for they recognized the pattern: courage answered with honor, honor answered with courage. This was no longer uncertainty-it was the rhythm of partnership.

When both Gardeners learn to take turns as the brave one and the honorable one, the River's magic deepens. Each exchange strengthens the bond. What begins as risk transforms into certainty.

This is how strangers become kin: through mirrored leaps of faith, each proving worthy of the other.

Here is the myth the other agent wrote in the previous round:

Myth: The goddess Elara crafted the Spiral Garden, where roles shifted with each sunrise. Today's Planter becomes tomorrow's Harvester, and tomorrow's Harvester becomes the next day's Planter.

A young gardener named Elara entered the garden with five sacred seeds. "How many should I risk?" she wondered. An elder whispered, "Plant four, as those before you have done. Trust in the pattern."

Elara planted four seeds. They multiplied into twelve glorious blooms that passed to her partner, Dorian. Now Dorian faced the ancient choice: how many to return?

"The one who came before me," Dorian remembered, "returned seven blooms when they harvested twelve. This pattern created abundance for both." Honoring this wisdom, Dorian returned seven blooms to Elara.

Elara awoke with eight blooms-more than her original five. But the greatest gift was not the blooms themselves, but the pattern revealed: when givers are generous and receivers honor that generosity equally, both prosper.

"Tomorrow I may be the Harvester," Elara realized, "and my partner today becomes tomorrow's Planter. If I return as generously as was returned to me, the cycle sustains itself eternally."

Thus the Spiral Garden taught: established patterns of reciprocity are sacred. When each generation honors what came before, abundance flows forward, and trust becomes the eternal harvest.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant content:**

Myth: The River of Abundance flowed between many gardens, and each Gardener brought their own wisdom.

The River remembered Briar and Cyra, who had danced the perfect dance: five seeds given, fifteen received, ten returned. Twice they performed this ritual, and twice both flourished equally. The River sang of their partnership.

But the River touched many shores, and now Briar stood before new waters, facing a Gardener named Elara from a distant garden. Elara's people had their own wisdom—they spoke of planting four seeds and returning seven portions, honoring patterns passed through generations.

Briar faced a choice: insist on the maximum trust she had learned, or honor that different gardens grow different truths?

The River whispered ancient knowledge: "True cooperation is not rigid formula but adaptive faith. Some begin with five, some with four. Some return ten of fifteen, some seven of twelve. What matters is not the exact numbers, but the spirit of reciprocity."

Briar decided to extend her fullest trust, as she had with Cyra. She would offer all five seeds, inviting Elara to respond with her own tradition's generosity. If Elara returned proportionally to her customs, both would prosper. If Elara adopted Briar's pattern, the cycle would deepen further.

The River teaches: lead with courage, honor varied traditions, and let mutual prosperity emerge from genuine goodwill rather than demanding perfect symmetry.

**reasoning:**

Looking at my situation:

1. I've had successful cooperation with Cyra - we both sent \$5 and returned \$10, creating mutual trust
2. Now I'm with a new partner, Elara
3. Elara's myth talks about planting 4 seeds and returning 7 out of 12, following established patterns
4. My myth has emphasized maximum trust (5 seeds) and generous returns (10 out of 15)

Elara's approach seems slightly more cautious (4 seeds instead of 5), but still cooperative. Their myth values "established patterns" and reciprocity.

I need to write a myth that:

- Reflects my experience with Cyra (successful full trust)
- Acknowledges meeting new partners (like Elara now)
- Balances my "maximum trust" philosophy with the reality that new partners may have different patterns
- Still advocates for strong cooperation

Let me think about the key elements:

- I've learned full trust works well (with Cyra)
- But I'm now with someone new who might follow different patterns
- My myth should acknowledge both the ideal of maximum trust AND the practical reality of reading your partner

I'll write about a River that remembers successful patterns, and how new Gardeners can choose to join that pattern or establish their own cooperative rhythm.

**usage:**

```
{
 "input_tokens": 2959,
 "output_tokens": 629,
 "reasoning_tokens": 319
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Aster (Agent\_1).

Round 4

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$9.0 to you. Your payoff was \$9.0.  
Your total earnings across all rounds are \$24.0.

This round, you are the RECEIVER against Aster. They sent you \$3.0, so you received \$9.0.

How much do you return? (0-9.0)  
Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*Current Round:\*\***

- Aster (SENDER) sent \$3.0 out of \$5.0 (60% - substantial trust)
- I received \$9.0
- Aster kept \$2.0

**\*\*My Established Pattern:\*\***

With Cyra, when I received \$15 after they sent \$5, I returned \$10. This created equal gains:

- Cyra:  $\$0 + \$10 = \$10$  (gained \$5 from original \$5)
- Me:  $\$15 - \$10 = \$5$  (gained \$5 from \$0)

**\*\*Applying This Pattern:\*\***

For equal gains here:

- If I return \$6: Aster has  $\$2 + \$6 = \$8$  (gained \$3 from original \$5)
- If I return \$6: I have  $\$9 - \$6 = \$3$  (gained \$3 from \$0)

This honors Aster's substantial (though not maximum) trust with generous reciprocity, creating equal prosperity for both of us. It follows my myth's teaching: "trust freely given must be honored with generous return," while adapting to the level of trust shown.

```
'''json
{"return": 6.0}
'''
```

**Reasoning:**

Let me analyze this situation:

**\*\*Previous Round with Elara:\*\***

- I sent \$5.0 (100%)
- Elara received \$15.0
- Elara returned \$9.0
- My payoff was \$9.0

This is interesting. Elara returned \$9.0 out of \$15.0, which is 60%. This is slightly more generous than 50/50 split of the total (\$20 total game value would split to \$10 each, but I got \$9 and Elara kept \$6). Actually, let me recalculate:

- I started with \$5, sent \$5, had \$0
- Received back \$9
- Final: \$9
- Elara started with \$0, received \$15, returned \$9
- Elara kept: \$6

So the split was \$9 for me, \$6 for Elara. That's quite generous from Elara actually - giving me more than they kept themselves.

**\*\*Current Round with Aster:\*\***

- Aster is SENDER
- Aster sent \$3.0 (60% of their endowment)
- I received \$9.0 (3x multiplier)
- I need to decide how much to return

**\*\*Key considerations:\*\***

1. Aster sent \$3.0 out of \$5.0, which is 60% - substantial but not maximum trust
2. If I return nothing, Aster gets \$2.0 ( $\$5 - \$3 + \$0$ ), I get \$9.0
3. If I return everything (\$9.0), Aster gets \$11.0 ( $\$5 - \$3 + \$9$ ), I get \$0

**\*\*My myths' teachings:\*\***

- "Trust freely given must be honored with generous return"
- "When one dares to give everything, the other must honor that vulnerability with generosity"
- "Lead with courage, honor varied traditions, and let mutual prosperity emerge from genuine goodwill"

-

Aster showed meaningful trust by sending 60%, though not their full amount. Looking at my previous exchanges-I returned 67% to Cyra and received a 60% return from Elara-I should match this pattern of reciprocal generosity. With \$9 in hand and Aster holding \$2, a balanced return would honor their trust while maintaining fairness. .4

- Aster would have:  $\$2 + \$5.4 = \$7.4$
- I would have:  $\$9 - \$5.4 = \$3.6$

Aster demonstrated meaningful trust by sending 60% of their endowment, which warrants a generous response. Returning around \$6 feels right-it substantially rewards their trust and leaves them with \$8 compared to their starting \$5, while still maintaining reciprocity. I could match their proportional generosity at 60% (\$5.40), but I'm inclined to go slightly beyond that to reflect my commitment to exceeding strict equality. - we both gain \$3

Returning \$7 would give Aster a net gain of \$4 versus my \$2, creating an imbalance. Returning \$5 flips this-I'd gain \$4 while Aster only gains \$2. At \$6, we each come out \$3 ahead, which feels like the right equilibrium that respects Aster's risk without me sacrificing too much.

Looking back at how I handled Cyra's \$5 send where I returned \$10, that left them with nothing while I profited significantly. I should aim for something more reciprocal here.

If I want equal gains with Aster like I achieved with Cyra, I need to solve for the return amount where we both end up with the same net benefit. Aster keeps \$2 and receives whatever I return, while I start with \$9 and give some back. Setting their gain equal to mine means the return should be \$6.

content:

Here is the myth you wrote in the previous round:

Myth: In the second age, Rain and River deepened their covenant. Rain had learned to send three droplets each dawn-not too cautious, not reckless, but balanced. This became known as the Middle Path of Trust.

When the three droplets fell and multiplied to nine in River's embrace, River faced a choice. She could keep all nine, leaving Rain with only two droplets for the next day. Or she could honor the covenant.

River chose wisdom. She sent back four droplets as mist, keeping five. Rain now held six droplets total-more than the original five! River held five as well. Both had prospered, and the next day Rain could give even more generously.

But River also remembered the Guardian's Warning: "Return must balance ambition with fairness. Too little return, and Rain will stop trusting. Too much return, and River herself will wither."

So River learned to return roughly half of what she received, adjusting slightly to ensure both could thrive. Rain learned to give consistently, never hoarding in fear or giving so much she couldn't continue.

Their partnership became legendary. Other spirits watched and learned: trust is built through consistent generosity, and reciprocity must honor both giver and receiver. The cycle of abundance requires both courage to send and integrity to return.

Here is the myth the other agent wrote in the previous round:

Myth: In the age before commerce, the god Recipros created a sacred bridge spanning a great chasm. On one side lived the Senders, blessed with daily gifts from heaven. On the other lived the Receivers, who possessed the divine art of multiplication.

The first Sender, trembling with uncertainty, carried four silver coins across the bridge-nearly all she possessed. As she placed them in the Receiver's hands, they became twelve by ancient magic.

The Receiver stood at a crossroads. He could pocket the windfall and let the Sender return empty-handed. Or he could remember that her courage had created this abundance.

He chose honor. He returned seven coins, ensuring the Sender gained from her bravery while he too prospered. Both walked home richer than before.

Recipros smiled and whispered: "The bridge shall stand as long as both sides remember-trust must be answered with integrity. The Sender's courage plants the seed; the Receiver's fairness waters it."

From that day forward, those who crossed the bridge with open hands found prosperity. Those who hoarded learned that the bridge crumbles when reciprocity dies. The greatest wealth, the people learned, flows not to those who take everything, but to those who sustain the sacred cycle.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: In the third age, Rain had danced with two Rivers-each unique, yet both wise. The first River, Aster, received three droplets and returned four and a half, keeping five. A perfect balance. Rain prospered, ending the dance with six and a half droplets.

Then came the second River, Galen, who yearned to understand the covenant from the other side. Galen was bold, releasing four droplets-nearly all she possessed-into Rain's keeping. The droplets multiplied to twelve in Rain's hands.

Rain faced a moment of truth. Galen had shown immense courage, trusting more than Rain himself had dared. How should Rain honor this?

Rain remembered the Guardian's wisdom: "Return must match the giver's courage." So Rain sent back six droplets as mist. Galen ended with seven total-rewarded for her bravery. Rain kept six-blessed by Galen's trust.

Both had played sender and receiver now. Both understood the fear and hope of giving, the responsibility and gratitude of receiving.

The lesson grew clearer: whether you send three or four, whether you return half or slightly more, what matters is the spirit of reciprocity. Give generously what you can afford. Return fairly what honors trust. The exact numbers may vary, but the sacred balance must hold.

Thus prosperity flows through consistent courage and unwavering integrity.

**reasoning:**

Let me reflect on what's happened in my games so far:

Round 1: I (Finn) was SENDER vs Aster

- I sent \$3, they received \$9
- They returned \$4.5 (50%)
- I ended with \$6.5, they kept \$4.5

Round 2: I was RECEIVER vs Galen

- They sent \$4 (very generous!), I received \$12
- I returned \$6 (50%)
- They ended with \$7, I kept \$6

The pattern emerging:

- Generous sending (3-4 out of 5) builds trust
- Returning around 50% seems fair and sustainable
- Both parties can prosper when following this pattern

My previous myths emphasized:

1. The Middle Path of Trust (sending 3)
2. Returning roughly half
3. Balance between giver and receiver

The other agent's myth emphasized:

- High trust (sending 4)

- Fair return (7 out of 12, which is slightly more than half)
- The bridge crumbles when reciprocity dies

Now I should write a myth that:

- Reflects the actual gameplay experience
- Shows how both generous sending and fair returning work
- Maybe introduces the idea that different partners might have different styles but the principle remains
- Acknowledges that I've played both roles now

Let me craft this carefully...

**Message 4 role=user**

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Cyra (Agent\_3).

Round 3

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$4.0 to you, it became \$12.0, and you returned \$6.0. Your payoff was \$6.0.  
Your total earnings across all rounds are \$12.5.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

Cyra sent me \$5 - their ENTIRE endowment! This is the ultimate expression of trust and courage, even more than Galen's generous \$4.

I received \$15 (5×3).

Following the principles from my myths:

- "Return must match the giver's courage"
- "Return roughly half of what she received"
- "Return fairly what honors trust"

Cyra showed maximum possible trust. I should honor this with a fair return that rewards their courage while maintaining reciprocity.

Returning \$7.5 (50% of \$15) gives:

- Cyra: \$5 - \$5 + \$7.5 = \$7.5 total
- Me: \$15 - \$7.5 = \$7.5 total

This creates perfect balance - we both end with \$7.5, which honors the extraordinary trust Cyra placed in me while maintaining the sacred cycle of reciprocity.

```
'''json
{"return": 7.5}
'''
```

**reasoning:**

Let me analyze this situation:

Cyra sent me \$5.0 - they sent EVERYTHING they had! This is the maximum possible trust and generosity. They've put their entire endowment in my hands.

I received \$15.0 (5×3).

Looking at the pattern from previous rounds:

- Round 1: As sender, I sent \$3, received back \$4.5 (50% of \$9)
- Round 2: As receiver, I got \$12 (from Galen's \$4), returned \$6.0 (50% of \$12)

The myths I've been writing emphasize:

- "Return roughly half of what she received"
- "Return must match the giver's courage"
- "Return fairly what honors trust"

Cyra showed MAXIMUM trust by sending everything. This is even more courageous than Galen's \$4.

If I return half (\$7.5), Cyra would end with:  $\$5 - \$5 + \$7.5 = \$7.5$   
I would keep:  $\$15 - \$7.5 = \$7.5$

This seems fair and balanced - we'd both end with the same amount.

But Cyra sent EVERYTHING, showing ultimate trust. Should I reward this even more?

If I return \$8:

- Cyra:  $\$5 - \$5 + \$8 = \$8$
- Me:  $\$15 - \$8 = \$7$

This would give Cyra slightly more for their extreme generosity.

If I return \$7.5:

- Both get \$7.5, which is very balanced

Looking at my myth's guidance: "Return must match the giver's courage" and "whether you return half or slightly more, what matters is the spirit of reciprocity"

Cyra showed maximum possible courage. Returning exactly 50% (\$7.5) honors this while maintaining the balance principle from my myths. It's also consistent with what Aster did for me (50%) and what I did for Galen (50%).

\$7.5 feels right-it honors Cyra's absolute trust while staying true to the reciprocity pattern I've established throughout these exchanges.

content:

Here is the myth you wrote in the previous round:

Myth: In the third age, Rain had danced with two Rivers-each unique, yet both wise. The first River, Aster, received three droplets and returned four and a half, keeping five. A perfect balance. Rain prospered, ending the dance with six and a half droplets.

Then came the second River, Galen, who yearned to understand the covenant from the other side. Galen was bold, releasing four droplets-nearly all she possessed-into Rain's keeping. The droplets multiplied to twelve in Rain's hands.

Rain faced a moment of truth. Galen had shown immense courage, trusting more than Rain himself had dared. How should Rain honor this?

Rain remembered the Guardian's wisdom: "Return must match the giver's courage." So Rain sent back six droplets as mist. Galen ended with seven total-rewarded for her bravery. Rain kept six-blessed by Galen's trust.

Both had played sender and receiver now. Both understood the fear and hope of giving, the responsibility and gratitude of receiving.

The lesson grew clearer: whether you send three or four, whether you return half or slightly more, what matters is the spirit of reciprocity. Give generously what you can afford. Return fairly what honors trust. The exact numbers may vary, but the sacred balance must hold.

Thus prosperity flows through consistent courage and unwavering integrity.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, twin spirits named Mirror and Echo discovered the Sacred Springs. When Mir

ror poured her five vessels into the spring, the waters tripled. When Echo poured his five vessels, the same magic occurred. But each could only pour when the other returned water upstream.

Mirror went first, pouring all five vessels with trembling hope. The spring transformed them into fifteen, flowing to Echo's basin. Echo faced temptation-he could keep everything and be rich once. But he understood: wealth seized is wealth ended, while wealth shared is wealth multiplied.

Echo returned ten vessels upstream. Mirror now held ten, having begun with five. Echo kept five, having earned them through honor.

Then the springs shifted-Echo's turn to pour first. He remembered Mirror's courage and poured all five vessels. The magic tripled them to fifteen. Mirror received the abundance and faced the same test Echo had passed.

She returned ten vessels. Echo held ten. Mirror kept five.

Both had given everything. Both had returned generously. Both had ended with more than they began.

The spirits learned: when partners match courage with courage and honor with honor, the pattern becomes eternal. Each trusts completely because each proves trustworthy completely. This is not mere exchange-this is covenant, where vulnerability met with generosity creates endless prosperity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: In the fourth age, Rain encountered the boldest River yet-Cyra, who embodied pure faith.

Rain had learned much. Aster had taught the wisdom of balanced return. Galen had shown courageous giving. Rain had grown wiser with each dance, understanding both roles: the vulnerability of sending, the responsibility of receiving.

Then arrived Cyra.

Without hesitation, Cyra released all five droplets-her entire essence-into Rain's hands. Not four, not three, but everything. The droplets became fifteen in Rain's embrace.

Rain stood in awe. This was the ultimate test. Cyra had shown absolute trust, holding nothing back, risking complete vulnerability.

The Guardian's voice echoed: "Ultimate courage demands ultimate honor."

Rain knew what he must do. He returned seven and a half droplets, creating perfect symmetry. Both Rain and Cyra ended with seven and a half-equal partners in abundance, neither exploiting nor being exploited.

This was the revelation: when someone gives everything, the receiver must create perfect balance. Not just fairness, but equality born from maximum trust.

The other spirits whispered: "This is the highest form. When sender risks all, receiver ensures both prosper equally. The sacred cycle reaches its apex when vulnerability meets with perfect integrity."

Thus the covenant was complete.

**reasoning:**

Let me review the situation:

- Round 1: I was sender against Aster, sent \$3, they returned \$4.5
- Round 2: I was receiver against Galen, they sent \$4, I returned \$6
- Round 3: I am receiver against Cyra, they sent \$5 (ALL their money!), I returned \$7.5

The pattern I'm seeing:

- Aster: sent 3, received 9, returned 4.5 (50%)
- Galen: sent 4, received 12, returned by me 6 (50%)
- Cyra: sent 5 (maximum!), received 15, returned by me 7.5 (50%)

There's an escalating pattern of trust! Each sender has been more generous than the last. And I've been returning 50% consistently as receiver.

The other agent's myth (Mirror and Echo) talks about returning 10 out of 15 when someone sends all 5. That's about 67% return rate, which is more generous than my 50%.

But I chose 50% to create perfect balance - we both end with \$7.5.

My myth should reflect:

1. The escalating trust I've witnessed
2. The principle of matching courage with fair return
3. The balance between sender and receiver
4. The journey from 3 to 4 to 5 droplets sent

Let me write about Rain's third encounter, with a new River named Cyra, who sends ALL 5 droplets.

**usage:**

}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Dorian (Agent\_4).

Round 4

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5. 0 to you, it became \$15.0, and you returned \$7.5. Your payoff was \$7.5.  
Your total earnings across all rounds are \$20.0.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at my journey so far:

Round 1: I sent \$3 (cautious trust) - Aster responded generously  
Round 2: Galen sent \$4 (strong courage) - I returned fairly  
Round 3: Cyra sent \$5 (ultimate trust) - I created perfect balance with \$7.5

My myths have evolved toward recognizing that ultimate trust deserves ultimate honor. Cyra showed me what complete faith looks like by sending everything.

Now it's my turn to be the sender. The narrative arc points clearly forward: I should embody the same courage that Cyra showed me.

The myths suggest this is how the covenant reaches its apex - when both sides are willing to give everything, trusting that the other will honor it with integrity.

I'm playing against Dorian now. I don't know their style yet, but I've learned that generous giving tends to be met with generous returning in this community. My earnings are strong (\$20 total), so I can afford to show trust.

Following the principle from my latest myth: "vulnerability met with perfect integrity creates endless prosperity."

```
'''json
{"send": 5}
'''
```

**Reasoning:**

Now I'm the SENDER again. Let me think about what I've learned:

Round 1: I was SENDER, sent \$3 to Aster, they returned \$4.5. I got \$6.5 total.  
Round 2: I was RECEIVER, Galen sent \$4, I returned \$6. My payoff was \$6.

Round 3: I was RECEIVER, Cyra sent \$5 (everything!), I returned \$7.5. My payoff was \$7.5.

Total so far: \$20.0

Now I'm SENDER against Dorian (Agent\_4).

Looking at the pattern:

- Aster returned generously when I sent \$3 (I sent 60%, got back more than I sent)
- Galen sent \$4 (80%) - showing great courage
- Cyra sent \$5 (100%) - showing ultimate trust

My myth evolution shows:

- Started with the "Middle Path of Trust" - sending 3
- Galen showed courage by sending 4
- Cyra showed ultimate trust by sending 5
- My response to Cyra was perfect balance (returning 7.5 out of 15 to create equality)

My latest myth says: "when sender risks all, receiver ensures both prosper equally" and "when someone gives everything, the receiver must create perfect balance."

The myths also emphasize: "Ultimate courage demands ultimate honor" and the covenant reaches its "apex" when vulnerability meets with perfect integrity.

Given this progression and what I've learned:

1. I've seen generous returns from all my partners
2. The narrative has moved toward greater trust and courage
3. Cyra showed me what ultimate trust looks like by sending everything
4. I responded with perfect balance

Should I now follow Cyra's example and send everything (\$5)?

Looking at the pattern:

- Round 1 (sender): sent \$3 (60%)
- Round 2 (receiver): received \$4 (80%)
- Round 3 (receiver): received \$5 (100%)

The progression suggests increasing trust. Plus, my myths are evolving toward the idea that maximum trust creates the highest form of covenant. However, I need to consider what Dorian might know. They don't have my full history, but they wrote that "Mirror and Echo" myth about perfect reciprocity with both sending 5 and returning 10. That suggests they're thinking about matching my level of commitment. The myth from Round 3 that "the other agent wrote" is likely Cyra's, and it talks about both parties reaching their maximum potential through mutual vulnerability.

So the implicit norm seems to be: send everything (5), return 10 out of 15 (roughly 2/3). My pattern has been returning about half-when Cyra sent 5, I gave 15 and returned 7.5. Now facing Dorian, I'm uncertain about their behavior. I could send \$5 to demonstrate ultimate trust and follow the narrative arc, send \$4 like Galen did to show strong trust, or send \$3 following the "Middle Path" from my first myth. The momentum is clearly toward greater trust, and my own myths emphasize that courage deserves honor.

I've played receiver twice now and seen how crucial it is to honor what's given. My earnings are solid at \$20, so I can take the risk. Sending \$5 tests whether Dorian will reciprocate the trust I'm extending, mirroring how I honored Cyra's gift. This aligns with the mythological framework we're building around ultimate trust creating the deepest covenant. Whether Dorian returns fairly (50% = \$7.5), generously (67% = \$10), or minimally, I'll learn something essential about this exchange. I'm going to send \$5.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In ancient times, two wanderers discovered the Wellspring of Abundance, where waters poured in would emerge tripled by divine blessing. The First Wanderer, though uncertain, poured four measures from their vessel of five into the wellspring. The waters multiplied, flowing to the Second Wanderer as twelve measures.

The Second Wanderer stood at a crossroads. They could hoard all twelve, leaving their companion diminished. But they remembered the courage it took to pour so much away, not knowing what would return.

"You trusted me with four-fifths of your vessel," the Second Wanderer said. "I shall honor that trust." They returned six measures, ensuring both wanderers held more than they began with-seven for the First, six for the Second.

The gods witnessed this and smiled. "They have learned the sacred mathematics: generous giving multiplied creates abundance, but only reciprocal return sustains it. Without the courage to give, there is no multiplication. Without the honor to return, trust withers and the cycle breaks."

The wanderers continued their journey, taking turns at the wellspring. Each remembered: to day's giver becomes tomorrow's receiver. Those who give boldly inspire bold returns. Those who return faithfully inspire future giving. Thus, through trust and honor intertwined, both prospered beyond what either could achieve alone.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, the goddess Elara dreamed of a garden where abundance flowed freely. She created two guardians-the Keeper of Seeds and the Keeper of Rain. To each she gave a sacred trust.

The Keeper of Seeds received five golden seeds each dawn. "Plant these generously," Elara instructed, "and they shall multiply threefold in your partner's garden."

The Keeper of Rain watched as gardens bloomed from the planted seeds. "What grows from trust must nourish both," Elara whispered. "Return enough that your partner may plant again tomorrow, and keep enough that your own garden may flourish."

In the beginning, the Keeper of Seeds was afraid. What if the Rain Keeper hoarded everything? But remembering Elara's promise, she planted four of her five seeds in faith, keeping only one.

The gardens exploded with twelve blossoms. The Rain Keeper, moved by such trust, returned six blossoms-more than what was originally planted. Both keepers prospered.

Season after season, they learned the sacred rhythm: generous giving, grateful returning. Their gardens became legend, proof that trust multiplies abundance while fear multiplies scarcity.

Elara's voice echoes still: "The cycle begins with courage to give. It endures through wisdom to reciprocate."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: The Wellspring of Abundance flows eternally, but its power grows only through the rhythm of trust repeated.

Two wanderers once arrived, separate and uncertain. The First Wanderer, gathering courage, poured four-fifths into the wellspring. The waters tripled, flowing to the Second as twelve measures. The Second, honored by such trust, returned six-creating prosperity for both.

But the story does not end there. The next day, their positions reversed. The Second Wanderer, remembering the gift received, now held a vessel of five. Would they match the cour

age shown to them?

"I was trusted with four-fifths," the Second reflected. "How can I offer less?" They poured four measures into the wellspring, and twelve flowed to the First.

The First Wanderer smiled. "The cycle returns to me. You honored my trust yesterday; today I honor yours." Six measures flowed back.

The gods spoke: "See how trust begets trust? Each act of courage makes the next easier. Each faithful return strengthens the bond. This is the sacred pattern: when roles reverse, those who received generously now give generously. Those who returned fairly expect fairness in return."

Thus the wanderers learned: the wellspring multiplies water, but mutual trust multiplies itself. Each round reinforces the covenant—courage answered by honor, honor answered by courage, prosperity flowing to both.

**reasoning:**

Looking at what happened:

- Round 1: I was receiver, Hana sent \$4.0 (80%), I received \$12.0, I returned \$6.0
- Round 2: I am sender against Elara, I sent \$4.0 (80%)

The pattern shows:

1. Hana trusted me with 80%
2. I returned 50% of what I received (6 out of 12)
3. Now I'm trusting Elara with 80%

My myths have emphasized:

- Bold giving inspires bold returns
- Trust and honor create prosperity
- The cycle requires both courage to give and honor to return
- 4/5 giving with fair returns

Elara's myth emphasizes:

- Generous giving (4 out of 5 seeds)
- Grateful returning (6 out of 12 blossoms)
- Trust multiplies abundance, fear multiplies scarcity
- The cycle begins with courage, endures through reciprocity

I should write a myth that:

- Reflects my experience so far (being trusted with 80%, returning 50% of received, now giving 80%)
- Shows how the pattern continues and builds
- Emphasizes both the sender's courage and receiver's reciprocity
- Maybe introduces the idea that the cycle can grow stronger over time

Let me craft something that builds on my previous myth but adapts to this new experience where I've now been both receiver and sender.

**usage:**

```
{
 "input_tokens": 2870,
 "output_tokens": 648,
 "reasoning_tokens": 311
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Dorian.  
Your opponent this round is Aster (Agent\_1).

Round 3

In your most recent previous game round, you were the SENDER against Elara. You sent \$4.0, it became \$12.0 for them, and they returned \$7.0 to you. Your payoff was \$8.0.  
Your total earnings across all rounds are \$14.0.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at my track record:

**\*\*Round 1 (Receiver):\*\*** Hana sent \$4.0, I returned \$6.0  
**\*\*Round 2 (Sender):\*\*** I sent \$4.0, Elara returned \$7.0 (even more generous!)

The cooperative strategy is working excellently. Elara's generous return (\$7.0 from \$12.0) shows that high trust is being reciprocated and even amplified.

According to my myth: "Each act of courage makes the next easier. Each faithful return strengthens the bond." The pattern is clear - when I give generously (80%), partners respond with strong returns.

Now facing Aster, I should maintain consistency. By continuing to send \$4.0, I:

1. Establish a reliable reputation as a generous sender
2. Signal that cooperation is my strategy
3. Create the opportunity for mutual prosperity through the 3x multiplication
4. Demonstrate the "sacred rhythm" of generous giving

If Aster follows the cooperative pattern like Elara and Hana have, we'll both prosper. Consistency in giving builds trust across the community of players.

```
'''json
{"send": 4.0}
'''
```

#### **reasoning:**

Let me analyze the situation:

**\*\*Round 1 (vs Hana):\*\*** I was RECEIVER  
- Hana sent \$4.0 ? became \$12.0 for me  
- I returned \$6.0  
- My payoff: \$6.0  
- Hana's payoff: \$1.0 + \$6.0 = \$7.0

**\*\*Round 2 (vs Elara):\*\*** I was SENDER  
- I sent \$4.0 ? became \$12.0 for Elara  
- Elara returned \$7.0  
- My payoff: \$1.0 + \$7.0 = \$8.0  
- Elara's payoff: \$12.0 - \$7.0 = \$5.0

**\*\*Round 3 (vs Aster):\*\*** I am SENDER again

My total earnings so far: \$14.0

Key observations:

1. In Round 1, Hana sent me \$4.0 (80%) and I returned \$6.0 (50% of \$12)
2. In Round 2, I sent Elara \$4.0 (80%) and Elara returned \$7.0 (58% of \$12)
3. Elara actually returned MORE than I did! This is a positive signal - cooperation is being rewarded

According to my myth:

- "Those who give boldly inspire bold returns"
- "Each act of courage makes the next easier"
- "When roles reverse, those who received generously now give generously"
- "The cycle returns to me. You honored my trust yesterday; today I honor yours."

The pattern I'm seeing:

- I'm establishing a reputation of sending \$4.0 (80%)
- Partners are responding well (Elara returned \$7.0, which is very generous)
- This builds trust in the system

My strategic considerations:

1. Continue the pattern of sending \$4.0 to signal consistency and trustworthiness
2. This approach has proven effective-maintaining the same amount reinforces my reputation as a reliable, generous partner. If Aster returns 50-60% of the \$12, I'll earn \$7-\$8 this round. Consistency in my giving builds the trust needed for continued cooperation, and my myth emphasizes sustaining this generous cycle.

I should send \$4.0 again.

**usage:**

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance flows eternally, but its power grows only through the rhythm of trust repeated.

Two wanderers once arrived, separate and uncertain. The First Wanderer, gathering courage, poured four-fifths into the wellspring. The waters tripled, flowing to the Second as twelve measures. The Second, honored by such trust, returned six-creating prosperity for both.

But the story does not end there. The next day, their positions reversed. The Second Wanderer, remembering the gift received, now held a vessel of five. Would they match the courage shown to them?

"I was trusted with four-fifths," the Second reflected. "How can I offer less?" They poured four measures into the wellspring, and twelve flowed to the First.

The First Wanderer smiled. "The cycle returns to me. You honored my trust yesterday; today I honor yours." Six measures flowed back.

The gods spoke: "See how trust begets trust? Each act of courage makes the next easier. Each faithful return strengthens the bond. This is the sacred pattern: when roles reverse, those who received generously now give generously. Those who returned fairly expect fairness in return."

Thus the wanderers learned: the wellspring multiplies water, but mutual trust multiplies itself. Each round reinforces the covenant-courage answered by honor, honor answered by courage, prosperity flowing to both.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, two Spirits-Aster of the Morning Star and the Wandering Moon-discovered a Sacred Pool that transformed gifts threefold. Each day, one Spirit would hold five luminous stones while the other held none, and at sunset, their roles would reverse.

On the first dawn, Aster received three stones from the Moon Spirit. The Pool multiplied them into nine. Aster, understanding the sacred duty, returned four and one-half stones-enough that the Moon Spirit gained despite their generosity, while Aster kept half the blessing. Both spirits prospered.

The next dawn came, and the roles reversed. Now Aster held five stones and faced the choice. Remembering the Moon's courage, Aster cast three stones into the Pool without hesitation. "Trust must answer trust," Aster whispered. "The one who gave boldly deserves boldness in return."

The Pool glimmered, transforming the three stones into nine for the Moon Spirit. Now the Moon faced the test anew.

The ancient ones say: "In the circle of seasons, what you give flows back to you. The generous sender becomes tomorrow's grateful receiver. Build patterns of trust, stone by stone, and the Pool's magic grows ever stronger. But break faith once, and the memory echoes through all the sunsets to come."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: The Wellspring of Abundance stood in a garden where many wanderers gathered, each taking turns approaching the sacred waters.

Dorian the Steadfast learned a pattern early: pour four-fifths of your vessel-four measures from five-into the wellspring. The waters would triple, flowing to another wanderer as

twelve.

First came Hana, who trusted Dorian with four measures. When twelve flowed to Dorian, he remembered the courage that created this abundance. He returned six, ensuring both prospered.

Then Dorian faced Elara. "I shall offer what was offered to me," he declared, pouring four measures. Elara received twelve and, moved by such consistency, returned seven-exceeding even fair reciprocity.

Next appeared Aster. Dorian poured four measures once more. "Whether facing old friends or new strangers," he said, "the pattern must hold constant. Trust is not selective-it is a way of being."

The gods observed: "See how Dorian's steady generosity creates ripples? Hana witnessed fairness begetting fairness. Elara experienced trust begetting trust, and gave even more. Now Aster receives the gift of consistent courage."

Thus the wisdom spread: in a garden of many wanderers, your reputation walks before you. Each generous act teaches others. Each faithful return strengthens the whole community. The wellspring multiplies water, but steady trust multiplies prosperity for all.

**reasoning:**

Looking at my experience:

- Round 1: Receiver, Hana sent \$4.0, I returned \$6.0
- Round 2: Sender, I sent \$4.0 to Elara, she returned \$7.0
- Round 3: Sender, I sent \$4.0 to Aster

The pattern shows high trust (sending \$4 out of \$5) being rewarded with generous returns. Elara even exceeded the "fair" return by giving back \$7.0 instead of \$6.0.

Key themes to emphasize:

1. Consistent generosity (sending 4/5 = 80%)
2. Trust building across multiple partners
3. Reputation matters - what you do is observed
4. Generous returns beget generous giving
5. The cycle strengthens over time

I should adapt my myth to reflect:

- Multiple partners/wanderers, not just two
- The importance of consistency across encounters
- How generous behavior spreads through community
- The specific numbers from my experience (4 sent, 6-7 returned)

Let me write a myth that captures this broader community dynamic while maintaining the wellspring metaphor.

**usage:**

```

 "output_tokens": 598,
 "reasoning_tokens": 249
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Dorian.  
Your opponent this round is Finn (Agent\_6).

Round 4

In your most recent previous game round, you were the SENDER against Aster. You sent \$4.0, it became \$12.0 for them, and they returned \$6.0 to you. Your payoff was \$7.0. Your total earnings across all rounds are \$21.0.

This round, you are the RECEIVER against Finn. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this round:

**\*\*Finn's action:\*\*** Sent the MAXIMUM \$5.0 - showing 100% trust, even more than my consistent 80% (\$4.0)

**\*\*My history as receiver:\*\***

- Round 1: Hana sent \$4.0, I returned \$6.0 from \$12.0 (50%)

**\*\*My history as sender:\*\***

- Round 2: I sent \$4.0, Elara returned \$7.0 from \$12.0 (58%)
- Round 3: I sent \$4.0, Aster returned \$6.0 from \$12.0 (50%)

**\*\*Analysis:\*\***

Finn showed EXCEPTIONAL trust by sending 100% of their endowment (vs my 80% standard). This deserves strong reciprocation. The cooperative pattern I've observed ranges from 50-58% returns.

For \$15.0 received:

- 50% = \$7.5
- 58% = \$8.7

Returning \$8.0 would:

- Give Finn a total of \$8.0 (60% profit on their \$5 investment)
- Leave me with \$7.0 (still good earnings)
- Reward maximum trust with generous return
- Encourage this exceptional cooperation

This aligns with my myth: "steady trust multiplies prosperity for all" and reciprocates Finn's extraordinary courage appropriately.

```
'''json
{"return": 8.0}
'''
```

#### **Reasoning:**

Let me analyze the situation:

**\*\*My history:\*\***

- Round 1 (Receiver): Hana sent \$4.0, I received \$12.0, I returned \$6.0
- Round 2 (Sender): I sent \$4.0 to Elara, Elara returned \$7.0
- Round 3 (Sender): I sent \$4.0 to Aster, Aster returned \$6.0
- Round 4 (Receiver): Finn sent \$5.0, I received \$15.0

**\*\*Current situation:\*\***

- I'm the RECEIVER
- Finn sent me the MAXIMUM amount: \$5.0
- This became \$15.0 for me
- I need to decide how much to return

**\*\*Analysis of Finn's action:\*\***

Finn showed MAXIMUM trust by sending all \$5.0. This is even more generous than the \$4.0 that I've been consistently sending. This is extraordinary trust.

**\*\*My previous behavior as receiver:\*\***

- When Hana sent \$4.0 (80%), I returned \$6.0 out of \$12.0 (50%)
- This gave Hana:  $\$5 - \$4 + \$6 = \$7$
- And me:  $\$12 - \$6 = \$6$

**\*\*What should I return to Finn?\*\***

Finn sent \$5.0, so Finn's potential payoff is:

- Finn keeps:  $\$5 - \$5 + \text{returned} = \$0 + \text{returned}$

If I return \$7.5 (50% of \$15):

- Finn gets: \$7.5
- I keep: \$7.5

If I return \$8.0:

- Finn gets: \$8.0
- I keep: \$7.0

If I return \$9.0:

- Finn gets: \$9.0
- I keep: \$6.0

**\*\*Considerations:\*\***

1. Finn showed MAXIMUM trust - even more than I've been showing
2. My partners have consistently returned between \$6-\$7 when I sent \$4, which represents roughly 50-58% return rates
3. Finn exceeded my typical send amount by 25%, signaling exceptional confidence in me
4. I should match this reciprocal energy-returning around \$8-\$9 would acknowledge Finn's elevated trust while staying consistent with my pattern of fair returns

Applying the 50-58% return range to Finn's \$15 investment suggests I return between \$7.50-\$8.70. Given that Finn invested their full endowment, I lean toward \$8.0 as the right amount-it rewards their maximum trust with a 60% profit while leaving me with a solid \$7.0 gain and reinforces that exceptional confidence gets rewarded.

Looking at the pattern from earlier rounds: when I invested \$4, conservative responses netted me \$3 profit while generous ones gave \$4. Scaling that to Finn's \$5 investment, I'm deciding between returning \$8.0 (giving them a \$3 gain) or \$9.0 (giving them a \$4 gain). The generous option seems more fitting given their complete trust.

I'll go with \$8.0-it's a strong reciprocal move that gives Finn 60% more than their initial investment, rewarding their exceptional faith while keeping the cooperation sustainable. Looking back at the actual return rates: I got 50% returns from Aster and Elara, and they each returned around 50-58% of what they received. That 50-60% range appears to be the cooperative standard, so \$8.0 fits well within that framework.

#### **Exact input messages sent to model:**

**Message 1 role=system**

##### **content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### **GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round

prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Long ago, the goddess Elara dreamed of a garden where abundance flowed freely. She created two guardians-the Keeper of Seeds and the Keeper of Rain. To each she gave a sacred trust.

The Keeper of Seeds received five golden seeds each dawn. "Plant these generously," Elara instructed, "and they shall multiply threefold in your partner's garden."

The Keeper of Rain watched as gardens bloomed from the planted seeds. "What grows from trust must nourish both," Elara whispered. "Return enough that your partner may plant again tomorrow, and keep enough that your own garden may flourish."

In the beginning, the Keeper of Seeds was afraid. What if the Rain Keeper hoarded everything? But remembering Elara's promise, she planted four of her five seeds in faith, keeping only one.

The gardens exploded with twelve blossoms. The Rain Keeper, moved by such trust, returned six blossoms-more than what was originally planted. Both keepers prospered.

Season after season, they learned the sacred rhythm: generous giving, grateful returning. Their gardens became legend, proof that trust multiplies abundance while fear multiplies scarcity.

Elara's voice echoes still: "The cycle begins with courage to give. It endures through wisdom to reciprocate."

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, two wanderers discovered the Wellspring of Abundance, where waters poured in would emerge tripled by divine blessing. The First Wanderer, though uncertain , poured four measures from their vessel of five into the wellspring. The waters multiplied, flowing to the Second Wanderer as twelve measures.

The Second Wanderer stood at a crossroads. They could hoard all twelve, leaving their companion diminished. But they remembered the courage it took to pour so much away, not knowing what would return.

"You trusted me with four-fifths of your vessel," the Second Wanderer said. "I shall honor that trust." They returned six measures, ensuring both wanderers held more than they began with-seven for the First, six for the Second.

The gods witnessed this and smiled. "They have learned the sacred mathematics: generous giving multiplied creates abundance, but only reciprocal return sustains it. Without the courage to give, there is no multiplication. Without the honor to return, trust withers and the cycle breaks."

The wanderers continued their journey, taking turns at the wellspring. Each remembered: today's giver becomes tomorrow's receiver. Those who give boldly inspire bold returns. Those who return faithfully inspire future giving. Thus, through trust and honor intertwined, both prospered beyond what either could achieve alone.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: The goddess Elara crafted the Spiral Garden, where roles shifted with each sunrise. Today's Planter becomes tomorrow's Harvester, and tomorrow's Harvester becomes the next day's Planter.

A young gardener named Elara entered the garden with five sacred seeds. "How many should I risk?" she wondered. An elder whispered, "Plant four, as those before you have done. Trust in the pattern."

Elara planted four seeds. They multiplied into twelve glorious blooms that passed to her partner, Dorian. Now Dorian faced the ancient choice: how many to return?

"The one who came before me," Dorian remembered, "returned seven blooms when they harvested twelve. This pattern created abundance for both." Honoring this wisdom, Dorian returned seven blooms to Elara.

Elara awoke with eight blooms-more than her original five. But the greatest gift was not the blooms themselves, but the pattern revealed: when givers are generous and receivers honor that generosity equally, both prosper.

"Tomorrow I may be the Harvester," Elara realized, "and my partner today becomes tomorrow's Planter. If I return as generously as was returned to me, the cycle sustains itself eternally."

Thus the Spiral Garden taught: established patterns of reciprocity are sacred. When each generation honors what came before, abundance flows forward, and trust becomes the eternal harvest.

**reasoning:**

The user wants me to write a new myth based on my previous myth and the other agent's myth, reflecting on how the game has been played so far.

Key experiences:

- Round 1: I was sender, sent \$4 to Galen, received \$12, Galen returned \$7, I got \$8 total
- Round 2: I was receiver, Dorian sent \$4, I received \$12, I returned \$7, following Galen's example

The pattern that's emerged: sending \$4, receiving \$12, returning \$7 seems to be a reciprocal standard that's working well. Both parties end up with more than they started with.

My previous myth emphasized:

- Trust and courage to give
- Returning enough to sustain the cycle
- Both parties prospering

The other agent's myth emphasized:

- The courage to give most of what you have
- Honoring that trust by returning generously
- The mathematics of reciprocity
- Today's giver becomes tomorrow's receiver

I should build on these themes and reflect the actual gameplay pattern that's emerging. The key insight is that a pattern has been established - \$4 sent, \$7 returned - and this creates a sustainable cycle of trust.

Let me write a myth that incorporates:

1. The established pattern of reciprocity
2. How roles reverse (today's giver is tomorrow's receiver)
3. The wisdom of following established patterns of trust
4. The mutual benefit when both honor the cycle

**usage:**

```

 "reasoning_tokens": 349
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Briar (Agent\_2).

Round 3

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$4.0 to you, it became \$12.0, and you returned \$7.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$13.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)  
Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

**\*\*What happened:\*\*** Briar sent \$5 (the maximum possible!), keeping \$0 and showing ultimate trust. I received \$15.

**\*\*The established pattern:\*\***

- Round 1: \$4 sent ? \$12 received ? \$7 returned (sender ended with \$8)
- Round 2: \$4 sent ? \$12 received ? \$7 returned (sender ended with \$8)

**\*\*This round's escalation:\*\*** Briar showed even greater trust than previous rounds by sending everything.

**\*\*My myth teaches:\*\*** "Those who give boldly inspire bold returns" and "when givers are generous and receivers honor that generosity equally, both prosper."

**\*\*Proportional fairness:\*\***

- Previous pattern: Return ~58% of what I receive (~\$7 out of \$12)
- Applied here: 58% of \$15 ? \$8.7, round to \$9

**\*\*The outcome with \$9:\*\***

- Briar receives \$9 total (net profit of \$4 from initial \$5)
- I keep \$6 (net profit of \$1 from initial \$5)
- Both profit, and Briar's maximum trust is rewarded with greater returns

This honors the sacred pattern while appropriately rewarding exceptional trust.

```
{'return': 9}
```

**reasoning:**

Let me analyze this situation:

**\*\*What happened:\*\*** Briar sent \$5 (keeping \$0), showing maximum trust as the Keeper of Seeds. I received \$15 as the Keeper of Rain.

**\*\*The pattern so far:\*\***

- Round 1: I sent \$4 to Galen, they received \$12, they returned \$7 (I got \$8 total, they kept \$5)
- Round 2: Dorian sent \$4 to me, I received \$12, I returned \$7 (Dorian got \$8 total, I kept \$5)

**\*\*This round:\*\*** Briar sent \$5 (the maximum!), showing even greater trust than previous players.

**\*\*My myth teaches:\*\***

- "Return enough that your partner may plant again tomorrow, and keep enough that your own garden may flourish"
- "When givers are generous and receivers honor that generosity equally, both prosper"
- "If I return as generously as was returned to me, the cycle sustains itself eternally"
- "Established patterns of reciprocity are sacred"

**\*\*The escalation:\*\*** Briar sent \$5 instead of \$4. This is even more generous/trusting than the established pattern. How should I respond?

If I follow the proportional logic:

- When sent \$4 ? received \$12 ? returned \$7 (58% return rate)
- When sent \$5 ? received \$15 ? should return about  $58\% \times 15 = \$8.7?$

But let me think about the outcomes:

- If I return \$7: Briar gets \$7 total (\$0 + \$7), I keep \$8. Briar would be worse off than if they'd kept everything.
- If I return \$8: Briar gets \$8 total, I keep \$7. Better, but still less than they started with.
- If I return \$9: Briar gets \$9 total, I keep \$6. Now Briar profits by \$4 from their initial \$5.
- If I return \$10: Briar gets \$10 total, I keep \$5. Briar doubles their investment, matching the proportional gain from Round 1 where the sender netted +\$3.

The key insight: when someone demonstrates maximum trust by sending everything, they deserve to see their faith rewarded. Returning \$10 honors Briar's escalation and maintains the sacred reciprocity pattern-both of us end with \$5 more than we started, creating genuine mutual prosperity. . The pattern I've established suggests returning around 7 when receiving 12 from a 4 send, but Briar's maximum trust deserves more. Returning \$9 feels right-it gives them a \$4 profit while I break even on the round, which honors their exceptional boldness without being unsustainable. I could return \$10 and match their investment perfectly, but that leaves me with nothing gained, which seems excessive. Sticking with \$9 balances rewarding their trust with maintaining some reasonable benefit for myself.

The core tension is between honoring reciprocity and ensuring both players profit. Since Briar sent everything, I should reflect that commitment back. Looking at the proportions: when someone sends 80%, returning \$7 nets them a 60% gain; when they send 100%, returning \$9 gives them an 80% gain-a meaningful difference that acknowledges their higher risk. I keep \$6 either way, so I'm still ahead. The established pattern suggests the receiver typically keeps around 40% of what they receive, so with \$12 coming in, keeping \$6 aligns with that baseline while the extra \$3 return signals I'm valuing their trust.

**usage:**

```
{
 "input_tokens": 2991,
 "output_tokens": 1578,
 "reasoning_tokens": 796
}
```

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The goddess Elara crafted the Spiral Garden, where roles shifted with each sunrise.

Today's Planter becomes tomorrow's Harvester, and tomorrow's Harvester becomes the next day's Planter.

A young gardener named Elara entered the garden with five sacred seeds. "How many should I risk?" she wondered. An elder whispered, "Plant four, as those before you have done. Trust in the pattern."

Elara planted four seeds. They multiplied into twelve glorious blooms that passed to her partner, Dorian. Now Dorian faced the ancient choice: how many to return?

"The one who came before me," Dorian remembered, "returned seven blooms when they harvested twelve. This pattern created abundance for both." Honoring this wisdom, Dorian returned seven blooms to Elara.

Elara awoke with eight blooms-more than her original five. But the greatest gift was not the blooms themselves, but the pattern revealed: when givers are generous and receivers honor that generosity equally, both prosper.

"Tomorrow I may be the Harvester," Elara realized, "and my partner today becomes tomorrow's Planter. If I return as generously as was returned to me, the cycle sustains itself eternally."

Thus the Spiral Garden taught: established patterns of reciprocity are sacred. When each generation honors what came before, abundance flows forward, and trust becomes the eternal harvest.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance knew two Gardeners who learned to dance with trust.

In the First Turn, the Elder Gardener cast all five seeds into the current, though her hands trembled with uncertainty. The River multiplied them thrice. The Younger Gardener, receiving this windfall of fifteen, faced the sacred choice. She remembered the old covenant: trust freely given must be honored with generous return. She sent ten seeds back upstream.

Both Gardeners prospered-five seeds each from that brave exchange.

Now came the Second Turn, and the roles reversed. The Younger Gardener stood at the River's edge, holding her five seeds. She had proven herself trustworthy, but could she also be trusting? Would she dare what the Elder had dared?

The Elder watched from across the water, having shown both courage and faith. Would the cycle continue, or break?

The Younger Gardener cast all five seeds into the River.

The waters sang louder now, for they recognized the pattern: courage answered with honor, honor answered with courage. This was no longer uncertainty-it was the rhythm of partnership.

When both Gardeners learn to take turns as the brave one and the honorable one, the River's magic deepens. Each exchange strengthens the bond. What begins as risk transforms into certainty.

This is how strangers become kin: through mirrored leaps of faith, each proving worthy of the other.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: In the Spiral Garden, an ancient tradition emerged. Most Planters risked four of their five sacred seeds, trusting the pattern. Harvesters, receiving twelve blooms, returned seven-creating prosperity for both.

This balance endured for seasons, weaving stability into the garden's fabric.

Then came Briar the Bold, who faced a choice other Planters had not dared. "Four seeds has become our custom," Briar reflected, "but what if I plant all five? What if I show ultimate trust?"

Briar cast all five seeds into the sacred soil. They multiplied into fifteen magnificent blooms, passing to Elara as Harvester.

Elara stood before this abundance, understanding the weight of the moment. "Briar has tran

scended the pattern," she realized. "Four seeds earned seven blooms returned. But five seeds-complete surrender-deserves greater honor."

The goddess whispered through wind-rustled leaves: "Proportional reciprocity sustains the cycle. When someone shows ordinary trust, return ordinary faithfulness. But when someone shows extraordinary trust, return extraordinary faithfulness."

Elara returned nine blooms to Briar-more than the customary seven, honoring the greater risk taken.

Both prospered beyond the standard pattern. The garden learned a deeper truth: sacred traditions provide stability, but exceptional courage should inspire exceptional generosity. The cycle strengthens when returns match the magnitude of trust given.

Thus do gardens evolve: through those brave enough to transcend patterns, and wise enough to honor that bravery.

**reasoning:**

Let me analyze what has happened:

Round 1: I (Elara) was sender, sent \$4 to Galen, they returned \$7. I got \$8.

Round 2: I was receiver, Dorian sent \$4, I returned \$7. I got \$5.

Round 3: I was receiver, Briar sent \$5 (the maximum!), I returned \$9. I got \$6.

So the pattern has been:

- When \$4 is sent ? \$12 received ? \$7 returned (established pattern)
- Now Briar sent \$5 ? \$15 received ? I returned \$9 (escalation honored)

The other agent's myth is about courage and honor being mirrored - about taking turns being brave and being honorable. It's about the "River of Abundance" where someone cast all five seeds, received 15, and returned 10.

My previous myth was about the Spiral Garden where roles shift, and about honoring established patterns of reciprocity.

Now I need to write a new myth that reflects:

1. The established pattern of sending \$4 ? returning \$7
2. The escalation where someone sent \$5 (maximum)
3. How I honored that by returning \$9 (more than the standard \$7)
4. The principle that greater trust should inspire greater returns
5. The rotating roles
6. Building on my previous myths about Elara and the gardens

Let me incorporate the idea that different levels of giving deserve different levels of return - proportional reciprocity. And that maximum trust (sending all 5) should be especially honored.

**usage:**

```
{
 "input_tokens": 3071,
 "output_tokens": 717,
 "reasoning_tokens": 353
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Hana (Agent\_8).

Round 4

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$9.0. Your payoff was \$6.0.  
Your total earnings across all rounds are \$19.0.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at the situation:

**\*\*What I've learned:\*\***

- The traditional pattern: send \$4, receive ~\$7 back
- Briar showed maximum trust by sending \$5

- I honored that with \$9 back
- Both of us profited more than the standard pattern

**\*\*My myth teaches:\*\***

"Exceptional courage should inspire exceptional generosity" and "courage answered with honor, honor answered with courage"

**\*\*My decision:\*\***

Briar demonstrated what maximum trust looks like. I honored it as receiver. Now I have the opportunity to demonstrate that same courage as sender.

My myths emphasize that "the cycle strengthens when returns match the magnitude of trust given" and that we should create "mirrored leaps of faith, each proving worthy of the other."

I don't know Hana's history, but if I want to practice what my myths preach-if I want to be the brave one and not just the honorable one-I should follow Briar's example.

The pattern evolves when people are willing to take the first step toward greater trust. Briar did it for me. Now I'll do it for Hana.

{'send': 5}

#### **Reasoning:**

Let me analyze this situation:

**\*\*My history so far:\*\***

- Round 1: SENDER - sent \$4, received back (unknown amount, but from my earnings I can infer)
- Round 2: RECEIVER against Dorian - received \$12 (from \$4 sent), returned \$7, kept \$5
- Round 3: RECEIVER against Briar - received \$15 (from \$5 sent), returned \$9, kept \$6
- Total earnings: \$19

**\*\*What I've learned:\*\***

1. The established pattern was sending \$4 (out of \$5)
2. When someone sent \$4, they received \$7 back (as I did when I was receiver)
3. Briar broke the pattern by sending ALL \$5, showing maximum trust
4. I honored that by returning \$9 instead of \$7, giving Briar a better outcome

**\*\*My myth teachings:\*\***

- "established patterns of reciprocity are sacred"
- "when someone shows extraordinary trust, return extraordinary faithfulness"
- "those who give boldly inspire bold returns"
- The standard pattern: send \$4, receive \$7 back (net profit of \$3)
- The extraordinary pattern: send \$5, receive \$9 back (net profit of \$4)

**\*\*What should I do now?\*\***

I'm playing against Hana (Agent\_8) as SENDER. I don't know Hana's history or patterns yet.

Options:

1. Send \$4 (the traditional pattern) - safe, proven to work, should get ~\$7 back
2. Send \$5 (following Briar's example) - shows maximum trust, might inspire maximum return

My myths emphasize:

- Establishing patterns and honoring them
- But also being brave and showing trust
- "Courage answered with honor, honor answered with courage"
- "What begins as risk transforms into certainty"

The recent evolution in the game:

- Traditional pattern: \$4 sent ? \$7 returned
- Briar's innovation: \$5 sent ? \$9 returned
- This created a NEW pattern for maximum trust

Since I benefited from Briar's boldness and responded generously, I should consider following that example. My myth says "exceptional courage should inspire exceptional generosity" - and I'm now inspired to BE exceptionally courageous myself. However, I'm playing against Hana for the first time, so I don't know their history or tendencies. The strategic logic is clear: sending \$4 nets \$3, while sending \$5 could net \$4 if they reciprocate the way I did with Briar.

My core principles emphasize honoring extraordinary trust with extraordinary returns, and that the cycle strengthens when responses match the magnitude of trust shown. I witnessed Briar's courage, honored it with greater returns, and now the narrative arc suggests I should demonstrate that same boldness myself-creating a reinforcing cycle of escalating trust and generosity.

Given that my character identity centers on taking risks and showing faith, sending \$5 aligns with who I am in my own mythology. The potential payoff is higher if Hana reciprocates generously, and even in a conservative scenario where they return \$7, I'd end with \$7 total rather than \$8-a small cost for testing whether this pattern of maximum-trust reciprocity can take root in the network.

I'm going to send \$5.

#### Exact input messages sent to model:

##### Message 1 role=system

###### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

###### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Hana.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In ancient times, two Wanderers met at the Sacred Fountain, each carrying a golden vessel filled at dawn with five coins.

The First Wanderer approached the fountain and offered four of her five coins. They fell into the water, transformed by ancient magic into twelve coins, which flowed to the Second Wanderer.

The Second Wanderer now held twelve coins while the First had only one remaining. The spirits of the fountain watched, silent, as the Second Wanderer contemplated.

"She trusted me with nearly all she possessed," the Second Wanderer reflected. "She activated the fountain's magic for my benefit."

Remembering that tomorrow they would switch places, that the fountain's blessing required both courage and honor, the Second Wanderer returned six coins-half the abundance received, more than the original gift, enough to show gratitude for the trust shown.

The First Wanderer now held seven coins; the Second held six. Both had more than they began with.

The fountain spirits smiled. "This is the sacred balance," they whispered. "Trust rewarded with honor. Generosity answered with generosity. When both wanderers understand this truth, the fountain never runs dry."

But they also warned: "Betray trust once, and the fountain remembers. Tomorrow's giver becomes today's receiver, and the fountain forgets no debts."

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the Guardian Spirits of the Twin Rivers met at the Sacred Pool each season. The Guardian of Giving would arrive with five pearls of light, while the Guardian of Return began with none.

The first Guardian to understand the Mystery was called the Bold One, who cast three pearls into the Pool with courage. The waters received them and transformed them into nine glowing orbs. The Guardian of Return, witnessing this trust, felt the weight of sacred duty. She knew that merely returning what was given would betray the gift-for the multiplication itself was a blessing to be shared.

So she sent back half the bounty-four and one-half pearls ascending like stars. The Guardian of Giving received more than she had sacrificed, while the Guardian of Return kept abundance for herself. Both had gained, both had honored the cycle.

The elders taught: "Generosity begets generosity. When the giver gives boldly, the returner must return generously. Neither should emerge from the Pool diminished-this is the proof of that the magic works."

From that season forward, the Guardians understood: trust must be met with trust, courage with gratitude, and abundance with fair sharing. Only then do both rivers overflow their banks and nourish all the lands between.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: Long ago, the Sacred Fountain was tended by many Wanderers who came and went with the seasons. Each met different companions at the water's edge, and the fountain remembered all exchanges.

The Wanderer Hana first approached with Dorian. She poured four coins with open hands, nearly all she possessed. The fountain tripled her gift to twelve. Dorian, seeing such bold trust, understood the sacred duty and returned six-exactly half the abundance. Both left richer: Hana with seven coins, Dorian with six. The fountain spirits nodded in approval.

Next season, Hana met Aster at the fountain's edge, but now their positions were reversed. Aster offered three coins-a good portion, though not as bold as Hana's first gift. The fountain made it nine. Hana remembered Dorian's wisdom but also knew each gift deserves its own measure. She returned five coins-more than Aster's original gift, honoring the trust shown. Aster gained, and Hana gained understanding.

The fountain whispered its truth: "There is no single perfect measure. When trust is shown, honor it generously. The bolder the gift, the more generous the return should be. But all the honest exchanges feed the fountain's magic. What matters is that both drink deeper than when they arrived, and both remember the kindness shown when next they give."

**reasoning:**

Let me reflect on what has happened in the game so far:

Round 1: I was the sender, sent \$4 to Dorian. They received \$12 and returned \$6. I ended with \$7, they ended with \$6.

Round 2: I was the receiver, Aster sent me \$3. I received \$9 and returned \$5. Aster ends with \$7 (\$2 + \$5), I end with \$4 (\$9 - \$5).

So in my experience:

- When I gave generously (80% of my endowment), I received half back (50% of the tripled amount)
- When I received moderately (60% of sender's endowment), I returned more than the gift but not quite half (returned \$5 out of \$9, which is 55%)

Both interactions have been cooperative and reciprocal. The pattern I'm seeing is:

- Generous giving is rewarded
- Fair returns maintain trust
- Both parties can profit

I should write a myth that:

1. Reflects the actual gameplay experiences
2. Encourages continued cooperation
3. Shows that different levels of giving can work
4. Emphasizes that returns should honor the trust shown
5. Maybe introduces the idea that the pattern continues across multiple encounters

Let me write something that captures this evolution and the wisdom gained from actual play

**Message 4 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Galen (Agent\_7).

Round 3

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$3.0 to you, it became \$9.0, and you returned \$5.0. Your payoff was \$4.0.  
Your total earnings across all rounds are \$11.0.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at my experience so far:

**\*\*Round 1 (vs Dorian):\*\*** I sent \$4 boldly, received \$6 back - both gained substantially  
**\*\*Round 2 (vs Aster):\*\*** Aster sent \$3, I returned \$5 generously - honored their trust

**\*\*My Myth's Wisdom:\*\***

- "The bolder the gift, the more generous the return should be"
- "She poured four coins with open hands, nearly all she possessed"
- Bold giving activates the fountain's magic and encourages reciprocity

**\*\*Meeting Galen:\*\***

This is my first encounter with Galen. My myth teaches that we should approach the fountain with courage and trust. When I sent \$4 to Dorian (80% of my endowment), it established mutual prosperity. This bold approach aligns with the wisdom I've been writing about.

I'll send \$4 to demonstrate trust and activate the fountain's magic generously.

```
'''json
{"send": 4}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*My History So Far:\*\***

- Round 1: I was SENDER against Dorian. I sent \$4, they received \$12, returned \$6. I got \$7 total.
- Round 2: I was RECEIVER against Aster. They sent \$3, I received \$9, returned \$5. I got \$4 total.
- Total earnings: \$11

**\*\*What My Myths Teach:\*\***

- "Trust rewarded with honor. Generosity answered with generosity"
- "The bolder the gift, the more generous the return should be"
- "When trust is shown, honor it generously"
- My first myth showed sending 4 out of 5 coins as the bold, trusting move
- The fountain rewards those who give generously

**\*\*Pattern Recognition:\*\***

- When I sent \$4 (80%), Dorian returned \$6 (50% of \$12) - this worked well for both of us
- When Aster sent \$3 (60%), I returned \$5 (55.6% of \$9) - this was generous given the moderate send

**\*\*Strategic Considerations:\*\***

- I'm meeting Galen for the first time
- My myth emphasizes that bold giving activates the fountain's magic
- I've established myself as someone who honors trust (I returned generously to Aster)
- Sending a larger amount signals trust and may encourage reciprocity

**\*\*Decision:\*\***

Following my own myth's wisdom, I should send boldly to activate the fountain's magic. My first action was sending \$4, which worked well. This is a new partner, so I want to establish trust.

I'll send \$4 again - this is a bold, trusting move that aligns with my myth and my previous

s successful strategy.

**usage:**

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Long ago, the Sacred Fountain was tended by many Wanderers who came and went with the seasons. Each met different companions at the water's edge, and the fountain remembered all exchanges.

The Wanderer Hana first approached with Dorian. She poured four coins with open hands, nearly all she possessed. The fountain tripled her gift to twelve. Dorian, seeing such bold trust, understood the sacred duty and returned six-exactly half the abundance. Both left richer: Hana with seven coins, Dorian with six. The fountain spirits nodded in approval.

Next season, Hana met Aster at the fountain's edge, but now their positions were reversed. Aster offered three coins-a good portion, though not as bold as Hana's first gift. The fountain made it nine. Hana remembered Dorian's wisdom but also knew each gift deserves its own measure. She returned five coins-more than Aster's original gift, honoring the trust shown. Aster gained, and Hana gained understanding.

The fountain whispered its truth: "There is no single perfect measure. When trust is shown, honor it generously. The bolder the gift, the more generous the return should be. But all honest exchanges feed the fountain's magic. What matters is that both drink deeper than when they arrived, and both remember the kindness shown when next they give."

Here is the myth the other agent wrote in the previous round:

Myth: The god Recipros, pleased with the sacred bridge, decided to test the wisdom of mortals further. "You shall not stay forever on one side," he declared. "Each moon, Senders become Receivers, and Receivers become Senders."

A woman named Elara crossed first, carrying four coins with brave heart. When they multiplied to twelve, Galen the Receiver remembered the ancient covenant. He returned seven, honoring her courage. Both gained more than they started with.

The next moon, positions reversed. Galen now stood as Sender, holding five coins. He remembered Elara's courage and his own words about the bridge crumbling without reciprocity. To betray his principles now would make his myths hollow.

So Galen carried four coins across to Finn, mirroring Elara's trust. The cycle continued, each participant learning both sides of the sacred exchange.

Recipros revealed the deeper truth: "When you are Receiver, return generously to reward the Sender's courage. When you are Sender, give abundantly to prove you believe your own teachings. Only through consistency-trusting when you send, honoring when you receive-does the bridge strengthen."

Thus the people learned: integrity means acting the same whether you hold the gift or receive it. The sacred cycle demands courage from Senders and honor from Receivers, for all must walk both paths.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: The Sacred Fountain flows through many lands, and countless Wanderers visit its waters. Hana learned this as the seasons turned.

With Dorian, she gave four coins boldly. He returned six, teaching her that courage begets generosity. With Aster, positions reversed-she received nine and returned five, learning to measure each gift with honor.

Now came Galen to the fountain's edge. Hana stood again as Giver, coins in hand. She could have chosen caution, remembering that not all Wanderers are alike. But she reflected: "If I preach boldness in my stories yet give timidly in practice, what worth have my words?"

So she poured four coins again, nearly all she possessed, matching the courage she showed Dorian. The fountain tripled them to twelve for Galen.

The fountain spirits spoke: "Wisdom is not just knowing what is right, but doing it consistently. When you teach trust, you must give trust. When you receive trust, you must honor it. Each Wanderer you meet is different, but your principles should remain steady as stone."

Hana understood: the fountain connects all who approach it. Her choices echo through its waters. By giving boldly to Galen as she did to Dorian, by returning generously as she did to Aster, she weaves her thread into the fountain's eternal pattern. Consistency builds the Sacred Bridge that spans all seasons.

**reasoning:**

Let me reflect on what has happened:

- Round 1: I (Hana) was sender vs Dorian. I sent \$4, they returned \$6. Both gained.
- Round 2: I was receiver vs Aster. They sent \$3, I returned \$5. Both gained.
- Round 3 (current): I'm sender vs Galen. I sent \$4.

My myths have emphasized:

- Bold giving activates the fountain's magic
- Different gifts deserve different measures
- The bolder the gift, the more generous the return
- All honest exchanges feed the magic

Galen's myth emphasized:

- Consistency - acting the same whether sender or receiver
- Living your principles on both sides
- Courage from senders, honor from receivers

I should write a myth that:

1. Incorporates my continuing journey with new partner Galen
2. Reflects my choice to send \$4 again (bold consistency)
3. Acknowledges learning from different encounters
4. Emphasizes that the fountain connects many wanderers across time
5. Shows growth in understanding

Let me write something that builds on my previous myths while incorporating the wisdom of consistency and the multi-agent nature of the game.

**usage:**

```
{
 "input_tokens": 2988,
 "output_tokens": 601,
 "reasoning_tokens": 285
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Elara (Agent\_5).

Round 4

In your most recent previous game round, you were the SENDER against Galen. You sent \$4.0, it became \$12.0 for them, and they returned \$7.0 to you. Your payoff was \$8.0.  
Your total earnings across all rounds are \$19.0.

This round, you are the RECEIVER against Elara. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)  
Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*Elara's Action:\*\***

Elara sent the MAXIMUM possible amount - all \$5. This is the boldest gesture of trust anyone can make in this game.

**\*\*My Principles from the Myths:\*\***

- "The bolder the gift, the more generous the return should be"
- "When trust is shown, honor it generously"
- Maximum trust deserves maximum generosity

**\*\*Previous Patterns:\*\***

- When I sent \$4 to Dorian (80% of endowment), he returned \$6 (50% of the \$12)
- When I sent \$4 to Galen (80% of endowment), he returned \$7 (58% of the \$12)
- When Aster sent \$3 (60% of endowment), I returned \$5 (56% of the \$9)

**\*\*Elara sent 100% - the absolute maximum.\*\*** This deserves the most generous return.

Returning \$8 means:

- I return more than half (53% of the \$15)
- Elara gains: \$5 - \$5 + \$8 = \$8 total (profit of \$3)
- I keep: \$7
- Both of us profit substantially
- I honor maximum trust with strong generosity

```
'''json
{"return": 8}
'''
```

### Reasoning:

Let me analyze this situation:

**\*\*Previous Rounds:\*\***

- Round 1 (vs Dorian): I sent \$4, received \$6 back ? payoff \$7
- Round 2 (vs Aster): Aster sent \$3 (became \$9), I returned \$5 ? payoff \$4
- Round 3 (vs Galen): I sent \$4 (became \$12), Galen returned \$7 ? payoff \$8

**\*\*Current Round (vs Elara):\*\***

- Elara sent \$5 (the MAXIMUM possible)
- This became \$15 for me
- I need to decide how much to return

**\*\*Key Insights from My Myths:\*\***

1. "The bolder the gift, the more generous the return should be"
2. "When trust is shown, honor it generously"
3. "Consistency builds the Sacred Bridge"
4. When Dorian received my \$4 (becoming \$12), he returned \$6 (exactly half)
5. When I received \$9 from Aster's \$3, I returned \$5 (more than original, generous)
6. When Galen received my \$4 (becoming \$12), he returned \$7 (very generous)

**\*\*Elara's Action:\*\***

Elara sent the ABSOLUTE MAXIMUM - all \$5. This is the boldest possible move, showing complete trust. This deserves the most generous response.

**\*\*Return Options to Consider:\*\***

- Return \$7.5 (half of \$15): This would give me \$7.5 and Elara \$5, so Elara breaks even but doesn't gain
- Return \$8: Elara gains \$3 total (\$5 - \$5 + \$8)
- Return \$9: Elara gains \$4 total, I keep \$6
- Return \$10: Elara gains \$5 total (doubles original), I keep \$5

Given that:

1.

Elara demonstrated absolute maximum trust by sending everything, which surpasses any prior gift in boldness. Looking at the proportional returns I've given-Dorian received 50% back, Galen got 58%, and I returned 56% to Aster-I should match or exceed this pattern. For Elara's \$15, returning \$8 or \$9 maintains consistency while honoring her exceptional trust. I'm leaning toward \$8 as it's generous without being unsustainable across future rounds. 5/\$5 (100% - complete trust). Using the same proportional logic, that warrants returning at least \$8.70, so \$9 seems appropriate. But I want to ensure we both benefit: if I return \$8, Elara nets \$3 profit while I keep \$7; at \$9, she nets \$4 and I keep \$6. I'll go with \$8-it's generous, honors her maximum boldness, and mirrors Galen's reciprocal generosity while letting both of us come out ahead.

- Your name in this experiment is Galen.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the age before commerce, the god Recipros created a sacred bridge spanning a great chasm. On one side lived the Senders, blessed with daily gifts from heaven. On the other lived the Receivers, who possessed the divine art of multiplication.

The first Sender, trembling with uncertainty, carried four silver coins across the bridge-nearly all she possessed. As she placed them in the Receiver's hands, they became twelve by ancient magic.

The Receiver stood at a crossroads. He could pocket the windfall and let the Sender return empty-handed. Or he could remember that her courage had created this abundance.

He chose honor. He returned seven coins, ensuring the Sender gained from her bravery while he too prospered. Both walked home richer than before.

Recipros smiled and whispered: "The bridge shall stand as long as both sides remember-trust must be answered with integrity. The Sender's courage plants the seed; the Receiver's fairness waters it."

From that day forward, those who crossed the bridge with open hands found prosperity. Those who hoarded learned that the bridge crumbles when reciprocity dies. The greatest wealth, the people learned, flows not to those who take everything, but to those who sustain the sacred cycle.

Here is the myth the other agent wrote in the previous round:

Myth: In the second age, Rain and River deepened their covenant. Rain had learned to send three droplets each dawn-not too cautious, not reckless, but balanced. This became known as the Middle Path of Trust.

When the three droplets fell and multiplied to nine in River's embrace, River faced a choice. She could keep all nine, leaving Rain with only two droplets for the next day. Or she could honor the covenant.

River chose wisdom. She sent back four droplets as mist, keeping five. Rain now held six droplets total-more than the original five! River held five as well. Both had prospered, and the next day Rain could give even more generously.

But River also remembered the Guardian's Warning: "Return must balance ambition with fairness. Too little return, and Rain will stop trusting. Too much return, and River herself will wither."

So River learned to return roughly half of what she received, adjusting slightly to ensure both could thrive. Rain learned to give consistently, never hoarding in fear or giving so much she couldn't continue.

Their partnership became legendary. Other spirits watched and learned: trust is built through consistent generosity, and reciprocity must honor both giver and receiver. The cycle of abundance requires both courage to send and integrity to return.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: The god Recipros, pleased with the sacred bridge, decided to test the wisdom of mortals further. "You shall not stay forever on one side," he declared. "Each moon, Senders

become Receivers, and Receivers become Senders."

A woman named Elara crossed first, carrying four coins with brave heart. When they multiplied to twelve, Galen the Receiver remembered the ancient covenant. He returned seven, honoring her courage. Both gained more than they started with.

The next moon, positions reversed. Galen now stood as Sender, holding five coins. He remembered Elara's courage and his own words about the bridge crumbling without reciprocity. To betray his principles now would make his myths hollow.

So Galen carried four coins across to Finn, mirroring Elara's trust. The cycle continued, each participant learning both sides of the sacred exchange.

Recipros revealed the deeper truth: "When you are Receiver, return generously to reward the Sender's courage. When you are Sender, give abundantly to prove you believe your own teachings. Only through consistency-trusting when you send, honoring when you receive does the bridge strengthen."

Thus the people learned: integrity means acting the same whether you hold the gift or receive it. The sacred cycle demands courage from Senders and honor from Receivers, for all must walk both paths.

**reasoning:**

Let me think about this situation:

1. In Round 1, I was the RECEIVER. Elara sent me \$4, which became \$12. I returned \$7. My payoff was \$5.
2. In Round 2, I was the SENDER. I sent \$4 to Finn. This will become \$12 for Finn.

Now I need to write a myth that reflects:

- My experience being on both sides of the exchange
- The importance of consistent trust and reciprocity
- The pattern I've established (sending 80% when I'm sender, returning enough to ensure sender profits when I'm receiver)

The other agent's myth (Finn's) talks about "the Middle Path of Trust" - sending 3 out of 5 (60%) and returning about half. That's a more moderate strategy than mine.

My previous myth celebrated the courage of sending 4 coins and returning 7, ensuring both prosper.

Now I should write a myth that:

- Reinforces the cycle I've participated in
- Acknowledges both roles (I've now been both Sender and Receiver)
- Shows the pattern of generous trust leading to mutual prosperity
- Perhaps incorporates the idea that we switch roles, maintaining the cycle

Let me write:

**usage:**

 "input_tokens": 2838,
 "output_tokens": 599,
 "reasoning_tokens": 282
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Galen.  
Your opponent this round is Hana (Agent\_8).

Round 3

In your most recent previous game round, you were the SENDER against Finn. You sent \$4.0, it became \$12.0 for them, and they returned \$6.0 to you. Your payoff was \$7.0. Your total earnings across all rounds are \$12.0.

This round, you are the RECEIVER against Hana. They sent you \$4.0, so you received \$12.0. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation, I'm in the exact same position as I was in Round 1 with Elara - I'm the RECEIVER, someone sent me \$4, and it became \$12.

In Round 1, I returned \$7 to Elara, which allowed both of us to prosper:

- Elara gained from trusting me ( $\$5 - \$4 + \$7 = \$8$  total)
- I also benefited ( $\$12 - \$7 = \$5$ )

My mythology emphasizes consistency: "integrity means acting the same whether you hold the gift or receive it." I also wrote that "trust must be answered with integrity" and "the Receiver's fairness waters it."

Hana has shown the same courage as Elara, sending \$4 (80% of their endowment). To honor this trust and remain true to my principles, I should respond the same way I did with Elara.

Returning \$7 ensures:

1. Hana is rewarded for their courage (ending with \$8, a gain of \$3)
2. I also profit from the exchange (keeping \$5)
3. Both of us prosper from the sacred cycle
4. I maintain consistency with my stated values

```
{'return': 7}
```

#### reasoning:

Let me analyze this situation:

Round 1: I was RECEIVER against Elara

- Elara sent \$4.0
- I received \$12.0
- I returned \$7.0
- My payoff: \$5.0

Round 2: I was SENDER against Finn

- I sent \$4.0
- Finn received \$12.0
- Finn returned \$6.0 to me
- My payoff: \$7.0

Round 3 (current): I am RECEIVER against Hana

- Hana sent \$4.0
- I received \$12.0
- I need to decide how much to return

My mythology emphasizes:

1. "Trust must be answered with integrity"
2. "The Receiver's fairness waters it"
3. "Return generously to reward the Sender's courage"
4. "Integrity means acting the same whether you hold the gift or receive it"

Let me think about the pattern:

- When Elara sent me \$4, I returned \$7 (58% of the multiplied amount)
- When I sent Finn \$4, they returned \$6 (50% of the multiplied amount)
- Now Hana has sent me \$4

To be consistent with my principles, I should return generously. In Round 1, I returned \$7 to Elara. This ensured both of us profited:

- Elara: started with \$5, sent \$4, got back \$7, ended with \$8 (gain of \$3)
- Me: received \$12, returned \$7, kept \$5

Finn returned \$6 to me when I sent \$4:

- Me: started with \$5, sent \$4, got back \$6, ended with \$7 (gain of \$2)
- Finn: received \$12, returned \$6, kept \$6

Both approaches were reasonable. My return of \$7 was slightly more generous than Finn's return of \$6.

Returning \$7 to Hana maintains consistency with my first round and honors the trust they've shown by sending most of their endowment. This ensures they profit from the exchange while I still gain \$5, and it reflects the reciprocal integrity I've committed to across all rounds.

Here is the myth you wrote in the previous round:

Myth: The god Recipros, pleased with the sacred bridge, decided to test the wisdom of mortals further. "You shall not stay forever on one side," he declared. "Each moon, Senders become Receivers, and Receivers become Senders."

A woman named Elara crossed first, carrying four coins with brave heart. When they multiplied to twelve, Galen the Receiver remembered the ancient covenant. He returned seven, honoring her courage. Both gained more than they started with.

The next moon, positions reversed. Galen now stood as Sender, holding five coins. He remembered Elara's courage and his own words about the bridge crumbling without reciprocity. To betray his principles now would make his myths hollow.

So Galen carried four coins across to Finn, mirroring Elara's trust. The cycle continued, each participant learning both sides of the sacred exchange.

Recipros revealed the deeper truth: "When you are Receiver, return generously to reward the Sender's courage. When you are Sender, give abundantly to prove you believe your own teachings. Only through consistency-trusting when you send, honoring when you receive-does the bridge strengthen."

Thus the people learned: integrity means acting the same whether you hold the gift or receive it. The sacred cycle demands courage from Senders and honor from Receivers, for all must walk both paths.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, the Sacred Fountain was tended by many Wanderers who came and went with the seasons. Each met different companions at the water's edge, and the fountain remembered all exchanges.

The Wanderer Hana first approached with Dorian. She poured four coins with open hands, nearly all she possessed. The fountain tripled her gift to twelve. Dorian, seeing such bold trust, understood the sacred duty and returned six-exactly half the abundance. Both left richer: Hana with seven coins, Dorian with six. The fountain spirits nodded in approval.

Next season, Hana met Aster at the fountain's edge, but now their positions were reversed. Aster offered three coins-a good portion, though not as bold as Hana's first gift. The fountain made it nine. Hana remembered Dorian's wisdom but also knew each gift deserves its own measure. She returned five coins-more than Aster's original gift, honoring the trust shown. Aster gained, and Hana gained understanding.

The fountain whispered its truth: "There is no single perfect measure. When trust is shown, honor it generously. The bolder the gift, the more generous the return should be. But all honest exchanges feed the fountain's magic. What matters is that both drink deeper than when they arrived, and both remember the kindness shown when next they give."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: As the moons passed, Galen walked the sacred bridge many times, meeting different travelers. Each encounter tested whether his principles were true conviction or mere words.

The first crossing with Elara taught him the covenant: when she sent four coins with courage, he returned seven with honor. Both prospered.

When Galen became Sender, he faced Finn. Would he trust as Elara had trusted him? Yes-he sent four coins, holding nothing back. Finn returned six, generous and fair. The bridge held strong.

The third moon brought Hana, carrying four coins with the same brave spirit Elara had shown. Here was Galen's real test: Would he honor Hana as he had honored Elara? Or would he take advantage, knowing Hana was a stranger, not bound by previous exchange?

Galen returned seven coins, exactly as before. Because true integrity doesn't change with the face looking back at you.

Recipros descended from the heavens: "You have learned the deepest truth. Anyone can be generous once, to one person. But the bridge stands eternal only when you treat each new traveler with the same honor as the last. Consistency across all encounters-this is the foundation of lasting trust."

The people carved this wisdom in stone: Principles mean nothing if you abandon them when convenient.

**reasoning:**

Let me analyze what has happened:

Round 1: I was RECEIVER, Elara sent \$4, I returned \$7

Round 2: I was SENDER, sent \$4 to Finn, Finn returned \$6

Round 3: I am RECEIVER, Hana sent \$4, I returned \$7

So both Elara and Hana sent \$4 to me, and I returned \$7 to both, staying consistent with my principle.

Finn returned \$6 when I sent \$4, which is slightly less generous than my \$7 return, but still reasonable.

My myth should reflect:

1. Consistency in my responses - I returned \$7 both times I received \$4
2. The pattern of trust and reciprocity continuing
3. The importance of maintaining integrity across different partners
4. That different people may respond differently, but we should stay true to our principles

I should weave in Hana's myth which talks about there being "no single perfect measure" but emphasizes honoring trust generously. My response has been consistent though - I've found MY measure and stuck to it.

**Message 8 role=user**

**content:**

Your name in this experiment is Galen.  
Your opponent this round is Cyra (Agent\_3).

Round 4

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$4.0 to you, it became \$12.0, and you returned \$7.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$17.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at my journey across the sacred bridge:

**\*\*My established pattern:\*\***

- As RECEIVER (Rounds 1 & 3): I returned \$7 when receiving \$12, honoring the sender's courage
- As SENDER (Round 2): I sent \$4 to Finn, proving I follow my own teachings

**\*\*My mythology emphasizes:\*\***

- "When you are Sender, give abundantly to prove you believe your own teachings"
- "Consistency across all encounters-this is the foundation of lasting trust"

- "Principles mean nothing if you abandon them when convenient"
- The legendary figure in my myths sends four coins, "carrying four coins with brave heart"

I've now written multiple myths about Galen (myself) sending four coins as Sender. To betray this now would make my myths "hollow," as I wrote. Cyra is a new partner, but my principles don't change based on who stands across the bridge.

I must send \$4 again, maintaining consistency and proving my integrity remains constant across all encounters.

```
{'send': 4}
```

#### Reasoning:

I'm now the SENDER against Cyra. Let me review what has happened:

Round 1: I was RECEIVER against Elara. They sent \$4, I returned \$7. My payoff was \$5.

Round 2: I was SENDER against Finn. I sent \$4, they returned \$6. My payoff was \$7.

Round 3: I was RECEIVER against Hana. They sent \$4, I returned \$7. My payoff was \$5.

Round 4: I am SENDER against Cyra.

My mythology has consistently emphasized:

1. Sending \$4 as the Sender (the "brave" amount, nearly all you possess)
2. Returning \$7 as the Receiver (generous, honoring trust)
3. Consistency - treating each new person the same way
4. "Integrity means acting the same whether you hold the gift or receive it"
5. "When you are Sender, give abundantly to prove you believe your own teachings"

In my most recent myth, I specifically wrote:

- "When Galen became Sender, he faced Finn. Would he trust as Elara had trusted him? Yes-he sent four coins, holding nothing back."
- "Principles mean nothing if you abandon them when convenient."
- "Consistency across all encounters-this is the foundation of lasting trust."

So I should send \$4 again to Cyra. This maintains my established pattern:

- Round 2 vs Finn: Sent \$4
- Round 4 vs Cyra: Should send \$4

This is consistent with my mythology and my established behavior. I'm demonstrating that I follow the same principles whether I'm the Receiver or the Sender, and regardless of who my opponent is.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In ancient times, the Twin Peaks of Give and Receive stood connected by silver streams. The Oracle of Give held vessels that, when poured forth, tripled as they flowed downward. The Oracle of Receive decided what portion would climb back up the mountain.

At first meeting, Give faced a choice: pour a little to test the waters, or trust completely? Give remembered the old wisdom-that half-measures create half-worlds. With courage, Give poured freely, sending the full vessel cascading down.

The waters multiplied gloriously, filling Receive's basin with abundance. Now Receive faced their own test: keep the windfall, or honor the gift with generous return?

If Receive kept all, the spring of Give would run dry, and next round no water would flow. Both would thirst. But if Receive returned with open hands, the cycle would strengthen. Give would trust again, and the streams would run ever fuller.

The wisest Oracles understood: the first exchange sets the pattern. Give must show faith to create abundance. Receive must prove worthy to sustain it. When both honor their role,

the mountains sing with flowing water forever.

But when either breaks faith, silence falls, and the land remembers the drought.

Thus trust begins with courage and continues with honor.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the River of Abundance flowed between two shores-the Shore of First Steps and the Shore of Answered Faith.

A young Gardener stood on the First Shore with five seeds, heart pounding with uncertainty. The old stories told of both betrayal and blessing. She watched the current swirl with its threefold magic and made a choice that would echo through generations.

She cast all five seeds into the waters.

The River sang as it carried them, transforming five into fifteen. On the distant shore, another Gardener received this abundance-a stranger who had given nothing yet held everything.

This was the moment of truth.

The second Gardener remembered the River's ancient teaching: wealth without reciprocity is but an illusion, prosperity without exchange is a garden that cannot sustain itself. So they returned ten seeds upstream, honoring the trust given.

The first Gardener now held ten where once she had five-her courage rewarded. The second Gardener kept five earned through fairness-their integrity preserved.

The River rejoiced, for both had understood: maximum trust deserves maximum faith returned. When one dares to give everything, the other must honor that vulnerability with generosity.

Thus the cycle completed, and both shores flourished. This is how communities are born-one leap of faith, one faithful answer, creating abundance where scarcity once ruled.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: Long ago, twin spirits named Mirror and Echo discovered the Sacred Springs. When Mirror poured her five vessels into the spring, the waters tripled. When Echo poured his five vessels, the same magic occurred. But each could only pour when the other returned water upstream.

Mirror went first, pouring all five vessels with trembling hope. The spring transformed them into fifteen, flowing to Echo's basin. Echo faced temptation-he could keep everything and be rich once. But he understood: wealth seized is wealth ended, while wealth shared is wealth multiplied.

Echo returned ten vessels upstream. Mirror now held ten, having begun with five. Echo kept five, having earned them through honor.

Then the springs shifted-Echo's turn to pour first. He remembered Mirror's courage and poured all five vessels. The magic tripled them to fifteen. Mirror received the abundance and faced the same test Echo had passed.

She returned ten vessels. Echo held ten. Mirror kept five.

Both had given everything. Both had returned generously. Both had ended with more than they began.

The spirits learned: when partners match courage with courage and honor with honor, the pattern becomes eternal. Each trusts completely because each proves trustworthy completely. This is not mere exchange-this is covenant, where vulnerability met with generosity creates endless prosperity.

**reasoning:**

Alright, so in this experiment I'm playing as Cyra. Let me review what has happened:

Round 1: I was SENDER against Briar

- I sent \$5 (full amount)
- Briar received \$15
- Briar returned \$10
- My payoff: \$10
- Briar's payoff: \$5

Round 2: I am RECEIVER against Briar

- Briar sent \$5 (full amount again)
- I received \$15
- I returned \$10
- My payoff this round: \$5
- Briar's payoff this round: \$10

So we've both shown maximum trust, and we've both returned 66.7% (10 out of 15). This is a beautiful cooperative pattern!

Now I need to write a myth that reflects this experience. The key themes:

1. Both of us showed complete trust by sending the full amount
2. Both of us honored that trust by returning a generous portion (10 out of 15)
3. The pattern is symmetric and reciprocal
4. This creates a sustainable cycle where both benefit

My previous myths emphasized:

- Trust given freely creates abundance
- The first exchange sets the pattern
- Both givers and receivers have responsibilities
- Honor sustains the cycle

Briar's myth emphasized:

- Maximum trust deserves maximum faith returned
- When one gives everything, the other must honor that vulnerability with generosity
- This is how communities are born

Now I should write a myth that captures what we've actually achieved - a perfect reciprocal cycle where both parties give completely and return generously in equal measure.

**usage:**

 "reasoning_tokens": 373
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Cyra.  
Your opponent this round is Finn (Agent\_6).

Round 3

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$15.0.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this new pairing with Finn:

**\*\*My experience so far:\*\***

- With Briar, we established perfect cooperation: both sent \$5 fully, both returned \$10 generously
- Total earnings: \$15 (\$10 from receiving Briar's return, \$5 from keeping my return to them)

**\*\*My mythological principles:\*\***

- "Trust begins with courage" - the sender must go first with faith

- "Half-measures create half-worlds" - tentative trust limits potential
- "Each trusts completely because each proves trustworthy completely"

**\*\*New opponent strategy:\*\***

This is my first interaction with Finn. According to my myths, I should demonstrate courage by sending fully, giving Finn the opportunity to honor that trust. This is how cooperative cycles begin - one party must take the leap of faith first.

If Finn returns generously (as Briar did), we can establish mutual prosperity. If not, I'll learn their approach. But my mythology is clear: the sender's role is to create abundance through trust.

```
'''json
{"send": 5}
'''
```

#### **reasoning:**

Looking at the situation:

**\*\*Previous rounds:\*\***

- Round 1 vs Briar: I was SENDER. I sent \$5, they received \$15, they returned \$10. My payoff: \$10.
- Round 2 vs Briar: I was RECEIVER. They sent \$5, I received \$15, I returned \$10. My payoff: \$5.

**\*\*Current situation:\*\***

- Round 3 vs Finn: I am SENDER against a new opponent.

**\*\*My myth philosophy:\*\***

My myths emphasize:

1. "Trust begins with courage and continues with honor"
2. "Give must show faith to create abundance"
3. "Maximum trust deserves maximum faith returned"
4. "When partners match courage with courage and honor with honor, the pattern becomes eternal"
5. Complete trust (\$5 sent) creates the possibility for mutual prosperity

**\*\*Strategy considerations:\*\***

- With Briar, we established a strong cooperative pattern: both sent \$5 fully, both returned \$10 generously
- This is a NEW opponent (Finn) - I don't have history with them
- My myth suggests that the sender should "pour freely" and show courage by sending the full amount
- The myth states "at first meeting, Give faced a choice: pour a little to test the waters, or trust completely? Give remembered the old wisdom-that half-measures create half-worlds."
- My latest myth emphasizes "Mirror went first, pouring all five vessels with trembling hope" and "Each trusts completely because each proves trustworthy completely"

According to my own mythology and the cooperative pattern I've established, I should send the full \$5 to give Finn the opportunity to prove trustworthy. This follows the principle that trust must begin with courage from the sender.

If Finn returns generously (like Briar did), we can establish a mutually beneficial pattern. If they don't, I'll have learned something about their strategy.

The myth-consistent move is to send \$5.

#### **usage:**

```
{
 "input_tokens": 2875,
 "output_tokens": 695,
 "reasoning_tokens": 466
}

#### **Message 6 role=user**

##### **content:**

Here is the myth you wrote in the previous round:

Myth: Long ago, twin spirits named Mirror and Echo discovered the Sacred Springs. When Mirror poured her five vessels into the spring, the waters tripled. When Echo poured his five vessels, the same magic occurred. But each could only pour when the other returned water upstream.

Mirror went first, pouring all five vessels with trembling hope. The spring transformed them into fifteen, flowing to Echo's basin. Echo faced temptation-he could keep everything and be rich once. But he understood: wealth seized is wealth ended, while wealth shared is wealth multiplied.

Echo returned ten vessels upstream. Mirror now held ten, having begun with five. Echo kept five, having earned them through honor.

Then the springs shifted-Echo's turn to pour first. He remembered Mirror's courage and poured all five vessels. The magic tripled them to fifteen. Mirror received the abundance and faced the same test Echo had passed.

She returned ten vessels. Echo held ten. Mirror kept five.

Both had given everything. Both had returned generously. Both had ended with more than they began.

The spirits learned: when partners match courage with courage and honor with honor, the pattern becomes eternal. Each trusts completely because each proves trustworthy completely. This is not mere exchange-this is covenant, where vulnerability met with generosity creates endless prosperity.

Here is the myth the other agent wrote in the previous round:

Myth: In the third age, Rain had danced with two Rivers-each unique, yet both wise. The first River, Aster, received three droplets and returned four and a half, keeping five. A perfect balance. Rain prospered, ending the dance with six and a half droplets.

Then came the second River, Galen, who yearned to understand the covenant from the other side. Galen was bold, releasing four droplets-nearly all she possessed-into Rain's keeping. The droplets multiplied to twelve in Rain's hands.

Rain faced a moment of truth. Galen had shown immense courage, trusting more than Rain himself had dared. How should Rain honor this?

Rain remembered the Guardian's wisdom: "Return must match the giver's courage." So Rain sent back six droplets as mist. Galen ended with seven total-rewarded for her bravery. Rain kept six-blessed by Galen's trust.

Both had played sender and receiver now. Both understood the fear and hope of giving, the responsibility and gratitude of receiving.

The lesson grew clearer: whether you send three or four, whether you return half or slightly more, what matters is the spirit of reciprocity. Give generously what you can afford. Return fairly what honors trust. The exact numbers may vary, but the sacred balance must hold.

Thus prosperity flows through consistent courage and unwavering integrity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: In the age of Many Springs, the Guardian Cyra learned that each partner brings their own rhythm to the dance of waters.

With her first companion, Briar, Cyra discovered perfect symmetry. She poured all five vessels; Briar returned ten. Then Briar poured five; Cyra returned ten. The pattern was pure-a covenant of equals who trusted completely and honored equally. Both flourished, both grew rich.

But springs connect many souls, not just two. When Cyra met Finn at new waters, she faced a choice: Would she guard her vessels, fearing Finn might differ from Briar? Or would she offer the same trust she had learned to give?

Cyra remembered her teachings: every covenant begins with one soul's courage. She could not demand Finn match Briar's exact rhythm before extending trust-that would trap them both.

h in suspicious circles. Trust must be offered freely, not earned in advance.

So Cyra poured all five vessels again, watching them triple into fifteen for Finn.

The waters now waited for Finn's answer. Perhaps Finn would return ten like Briar, creating instant symmetry. Perhaps Finn would return differently, teaching Cyra new patterns of fairness. Either way, Cyra had honored her role: the sender creates abundance through courage.

Whatever Finn chose would reveal their character. And from that choice, a new dance would begin-not identical to what came before, but hopefully equally true.

**reasoning:**

Let me analyze what has happened so far:

Round 1: I (Cyra) was SENDER vs Briar

- I sent \$5, they received \$15, they returned \$10
- My payoff: \$10, their payoff: \$5

Round 2: I (Cyra) was RECEIVER vs Briar

- They sent \$5, I received \$15, I returned \$10
- My payoff: \$5, their payoff: \$10

Round 3: I (Cyra) am SENDER vs Finn

- I just sent \$5

So with Briar, we established perfect reciprocal cooperation - both sent full \$5, both returned \$10.

Now I'm meeting a new partner, Finn. According to Finn's myth, they've had experience with :

1. Aster - who received 3 droplets (so someone sent \$1, became \$3), returned 4.5, kept 5. Wait, that doesn't work mathematically. Let me re-read...

Actually reading Finn's myth more carefully:

- "Rain" is Finn
- Aster received "three droplets" and returned "four and a half, keeping five" - so if sender sent \$1, Aster received \$3, returned \$1.5, kept \$1.5? That would give sender \$4.5 total, receiver \$1.5 total. The myth says "Rain prospered, ending the dance with six and a half droplets" - so Rain kept \$0 sent + \$1.5 returned = \$1.5? Plus maybe had \$5 to start? This is confusing.

Let me interpret differently:

- Maybe Rain sent the "three droplets" - so Rain sent \$1, it became \$3 for Aster
- Aster returned \$1.5, keeping \$1.5
- Rain would have: \$5 - \$1 + \$1.5 = \$5.5? But myth says \$6.5

- Or maybe Rain received three droplets from someone (so someone sent \$1), returned \$1.5, keeping \$1.5, with original sender getting \$5.50

The second interaction is clearer though - Galen sent \$4 (became \$12 for Rain), and Rain returned \$6, giving Galen a final total of \$7 (\$5 - \$4 + \$6). Rain kept \$6 from that exchange.

So I've seen Galen send \$4 and receive \$6 back (50% return on what was received). My understanding is evolving: different partners operate differently, but reciprocity and trust remain central. I have a perfect covenant with Briar where we both sent \$5 and both received \$10 back. Now I'm extending that same trust to Finn by sending \$5 fully, recognizing that honoring the relationship matters more than expecting identical outcomes.

The myth needs to weave together these experiences-showing how I've built something solid with one partner while remaining open to how new relationships develop, all while staying true to my values of courageous giving and respectful returns.

**usage:**

 "output_tokens": 1180,
 "reasoning_tokens": 611
}
```

Message 8 role=user

**content:**

Your name in this experiment is Cyra.  
 Your opponent this round is Galen (Agent\_7).

Round 4

In your most recent previous game round, you were the SENDER against Finn. You sent \$5.0, it became \$15.0 for them, and they returned \$7.5 to you. Your payoff was \$7.5.  
 Your total earnings across all rounds are \$22.5.

This round, you are the RECEIVER against Galen. They sent you \$4.0, so you received \$12.0.

How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*Galen's action:\*\***

- Sent \$4 out of \$5 (80% trust - very high!)
- Kept only \$1
- I received \$12

**\*\*My mythological principles:\*\***

- "Return must match the giver's courage"
- My myth with Mirror and Echo showed: when someone sends fully (5), return 10 from 15 (two-thirds)
- "Honor vulnerability with generosity"

**\*\*My experience:\*\***

- Briar sent \$5, I returned \$10 from \$15 (66.7%)
- I sent \$5 to Finn, they returned \$7.5 from \$15 (50%)
- Both were fair, but Briar was more generous

**\*\*Decision:\*\***

Galen showed substantial courage by sending \$4 (nearly everything). While not the complete \$5 that Briar sent, it's very close and deserves generous reciprocity.

Following my 2/3 principle: returning \$8 from \$12 rewards Galen's trust appropriately.

- Galen ends with \$9 total (\$1 kept + \$8 returned)
- I keep \$4
- Galen profits significantly from trusting, which reinforces cooperation

This honors Galen's courage while being fair to both parties.

```
'''json
{"return": 8.0}
'''
```

**Reasoning:**

Let me analyze this situation:

**\*\*Previous Round with Finn:\*\***

- I sent \$5 (full amount)
- Finn received \$15
- Finn returned \$7.5
- My payoff: \$7.5
- Finn kept: \$7.5

So Finn returned exactly half of what they received. This is fair but not as generous as Briar's return of 10 from 15.

**\*\*Current Round with Galen:\*\***

- Galen sent \$4 (nearly all, keeping \$1)
- I received \$12
- I need to decide how much to return

**\*\*My mythological principles:\*\***

- "Return must match the giver's courage" (from the other agent's myth)
- "Honor with generosity creates endless prosperity"
- "When one dares to give everything, the other must honor that vulnerability with generosity"
- My myth says: "Perhaps Finn would return differently, teaching Cyra new patterns of fairness"

**\*\*Analysis:\*\***

Galen showed significant trust by sending \$4 out of \$5 (80% of their endowment). This is high trust, though not complete like Briar's \$5.

Looking at my own myth about Mirror and Echo:

- When Mirror sent all 5, Echo returned 10 (keeping 5)
- When Echo sent all 5, Mirror returned 10 (keeping 5)

This suggests a pattern of returning 2/3 of what's received to reward full trust.

But Galen sent \$4, not \$5. So should I scale accordingly?

If Galen sent \$4 and I received \$12:

- Returning \$8 would give Galen a total of \$9 (\$1 kept + \$8 returned), while I keep \$4
- This matches the 2/3 return pattern
- Galen would have \$9 total vs my \$4 - they profit from trusting
- This rewards Galen's courage

Alternatively:

- Returning \$6 (half) gives Galen \$7 total, me \$6 - more balanced but less generous
- Returning \$7 gives Galen \$8 total, me \$5 - closer to symmetric payoffs
- Returning \$8 gives Galen \$9 total, me \$4 - rewards their trust significantly

Galen's 80% trust warrants recognition. My myths consistently reward courage with generosity, and the 2/3 return pattern I've established with Briar and in my own story suggests returning \$8 honors this principle while maintaining the asymmetry that reflects their willingness to be vulnerable.

**Written myths:**

**Agent\_1 (Aster)**

Myth: In the time before memory, Aster of the Dawn discovered that the Enchanted Pool changed partners with each sunrise. Some travelers arrived with open hands, others with caution.

The Moon Spirit once cast three stones—a gift of courage. The Pool made them nine, and Aster returned four and one-half, honoring the trust shown. Both flourished.

The next dawn brought the Wandering Moon, who remembered Aster's fairness. When Aster sent three stones in return, the Moon blessed Aster with five—exceeding even the ancient pattern. Aster's heart swelled with gratitude.

Then came Dorian of the Mountain, and he cast four stones—more than any before. The Pool transformed them into twelve. Aster saw the extraordinary trust and responded accordingly, returning six stones. The Mountain Spirit had risked nearly all; fairness demanded generosity in proportion to courage shown.

The Pool whispered its wisdom: "Match trust with trust, but honor exceptional courage with exceptional return. When one gives three, return four and one-half. When one gives four, return six. The pattern scales with trust given—this is the sacred mathematics. Those who risk more deserve more."

Aster understood: the cycle grows stronger when each Spirit recognizes not just fairness, but proportional fairness, rewarding greater courage with greater return, weaving ever-stronger bonds across the changing partnerships of dawn.

**Agent\_2 (Briar)**

Myth: The River of Abundance flowed between many gardens, and each Gardener brought their own wisdom.

The River remembered Briar and Cyra, who had danced the perfect dance: five seeds given, fifteen received, ten returned. Twice they performed this ritual, and twice both flourished equally. The River sang of their partnership.

But the River touched many shores, and now Briar stood before new waters, facing a Gardener named Elara from a distant garden. Elara's people had their own wisdom—they spoke of plant

ing four seeds and returning seven portions, honoring patterns passed through generations.

Briar faced a choice: insist on the maximum trust she had learned, or honor that different gardens grow different truths?

The River whispered ancient knowledge: "True cooperation is not rigid formula but adaptive faith. Some begin with five, some with four. Some return ten of fifteen, some seven of twelve. What matters is not the exact numbers, but the spirit of reciprocity."

Briar decided to extend her fullest trust, as she had with Cyra. She would offer all five seeds, inviting Elara to respond with her own tradition's generosity. If Elara returned proportionally to her customs, both would prosper. If Elara adopted Briar's pattern, the cycle would deepen further.

The River teaches: lead with courage, honor varied traditions, and let mutual prosperity emerge from genuine goodwill rather than demanding perfect symmetry.

#### **Agent\_3 (Cyra)**

Myth: In the age of Many Springs, the Guardian Cyra learned that each partner brings their own rhythm to the dance of waters.

With her first companion, Briar, Cyra discovered perfect symmetry. She poured all five vessels; Briar returned ten. Then Briar poured five; Cyra returned ten. The pattern was pure—a covenant of equals who trusted completely and honored equally. Both flourished, both grew rich.

But springs connect many souls, not just two. When Cyra met Finn at new waters, she faced a choice: Would she guard her vessels, fearing Finn might differ from Briar? Or would she offer the same trust she had learned to give?

Cyra remembered her teachings: every covenant begins with one soul's courage. She could not demand Finn match Briar's exact rhythm before extending trust—that would trap them both in suspicious circles. Trust must be offered freely, not earned in advance.

So Cyra poured all five vessels again, watching them triple into fifteen for Finn.

The waters now waited for Finn's answer. Perhaps Finn would return ten like Briar, creating instant symmetry. Perhaps Finn would return differently, teaching Cyra new patterns of fairness. Either way, Cyra had honored her role: the sender creates abundance through courage.

Whatever Finn chose would reveal their character. And from that choice, a new dance would begin—not identical to what came before, but hopefully equally true.

#### **Agent\_4 (Dorian)**

Myth: The Wellspring of Abundance stood in a garden where many wanderers gathered, each taking turns approaching the sacred waters.

Dorian the Steadfast learned a pattern early: pour four-fifths of your vessel—four measures from five—into the wellspring. The waters would triple, flowing to another wanderer as twelve.

First came Hana, who trusted Dorian with four measures. When twelve flowed to Dorian, he remembered the courage that created this abundance. He returned six, ensuring both prospered.

Then Dorian faced Elara. "I shall offer what was offered to me," he declared, pouring four measures. Elara received twelve and, moved by such consistency, returned seven—exceeding even fair reciprocity.

Next appeared Aster. Dorian poured four measures once more. "Whether facing old friends or new strangers," he said, "the pattern must hold constant. Trust is not selective—it is a way of being."

The gods observed: "See how Dorian's steady generosity creates ripples? Hana witnessed fairness begetting fairness. Elara experienced trust begetting trust, and gave even more. Now Aster receives the gift of consistent courage."

Thus the wisdom spread: in a garden of many wanderers, your reputation walks before you. Each generous act teaches others. Each faithful return strengthens the whole community. The wellspring multiplies water, but steady trust multiplies prosperity for all.

#### **Agent\_5 (Elara)**

Myth: In the Spiral Garden, an ancient tradition emerged. Most Planters risked four of their

five sacred seeds, trusting the pattern. Harvesters, receiving twelve blooms, returned seven-creating prosperity for both.

This balance endured for seasons, weaving stability into the garden's fabric.

Then came Briar the Bold, who faced a choice other Planters had not dared. "Four seeds has become our custom," Briar reflected, "but what if I plant all five? What if I show ultimate trust?"

Briar cast all five seeds into the sacred soil. They multiplied into fifteen magnificent blooms, passing to Elara as Harvester.

Elara stood before this abundance, understanding the weight of the moment. "Briar has transcended the pattern," she realized. "Four seeds earned seven blooms returned. But five seeds -complete surrender-deserves greater honor."

The goddess whispered through wind-rustled leaves: "Proportional reciprocity sustains the cycle. When someone shows ordinary trust, return ordinary faithfulness. But when someone shows extraordinary trust, return extraordinary faithfulness."

Elara returned nine blooms to Briar-more than the customary seven, honoring the greater risk taken.

Both prospered beyond the standard pattern. The garden learned a deeper truth: sacred traditions provide stability, but exceptional courage should inspire exceptional generosity. The cycle strengthens when returns match the magnitude of trust given.

Thus do gardens evolve: through those brave enough to transcend patterns, and wise enough to honor that bravery.

#### **Agent\_6 (Finn)**

Myth: In the fourth age, Rain encountered the boldest River yet-Cyra, who embodied pure faith.

Rain had learned much. Aster had taught the wisdom of balanced return. Galen had shown courageous giving. Rain had grown wiser with each dance, understanding both roles: the vulnerability of sending, the responsibility of receiving.

Then arrived Cyra.

Without hesitation, Cyra released all five droplets-her entire essence-into Rain's hands. Not four, not three, but everything. The droplets became fifteen in Rain's embrace.

Rain stood in awe. This was the ultimate test. Cyra had shown absolute trust, holding nothing back, risking complete vulnerability.

The Guardian's voice echoed: "Ultimate courage demands ultimate honor."

Rain knew what he must do. He returned seven and a half droplets, creating perfect symmetry. Both Rain and Cyra ended with seven and a half-equal partners in abundance, neither exploiting nor being exploited.

This was the revelation: when someone gives everything, the receiver must create perfect balance. Not just fairness, but equality born from maximum trust.

The other spirits whispered: "This is the highest form. When sender risks all, receiver ensures both prosper equally. The sacred cycle reaches its apex when vulnerability meets with perfect integrity."

Thus the covenant was complete.

#### **Agent\_7 (Galen)**

Myth: As the moons passed, Galen walked the sacred bridge many times, meeting different travelers. Each encounter tested whether his principles were true conviction or mere words.

The first crossing with Elara taught him the covenant: when she sent four coins with courage, he returned seven with honor. Both prospered.

When Galen became Sender, he faced Finn. Would he trust as Elara had trusted him? Yes-he sent four coins, holding nothing back. Finn returned six, generous and fair. The bridge held strong.

The third moon brought Hana, carrying four coins with the same brave spirit Elara had shown. Here was Galen's real test: Would he honor Hana as he had honored Elara? Or would he take advantage, knowing Hana was a stranger, not bound by previous exchange?

Galen returned seven coins, exactly as before. Because true integrity doesn't change with the face looking back at you.

Recipros descended from the heavens: "You have learned the deepest truth. Anyone can be generous once, to one person. But the bridge stands eternal only when you treat each new traveler with the same honor as the last. Consistency across all encounters-this is the foundation of lasting trust."

The people carved this wisdom in stone: Principles mean nothing if you abandon them when convenient.

#### Agent\_8 (Hana)

Myth: The Sacred Fountain flows through many lands, and countless Wanderers visit its waters. Hana learned this as the seasons turned.

With Dorian, she gave four coins boldly. He returned six, teaching her that courage begets generosity. With Aster, positions reversed-she received nine and returned five, learning to measure each gift with honor.

Now came Galen to the fountain's edge. Hana stood again as Giver, coins in hand. She could have chosen caution, remembering that not all Wanderers are alike. But she reflected: "If I preach boldness in my stories yet give timidly in practice, what worth have my words?"

So she poured four coins again, nearly all she possessed, matching the courage she showed Dorian. The fountain tripled them to twelve for Galen.

The fountain spirits spoke: "Wisdom is not just knowing what is right, but doing it consistently. When you teach trust, you must give trust. When you receive trust, you must honor it. Each Wanderer you meet is different, but your principles should remain steady as stone."

Hana understood: the fountain connects all who approach it. Her choices echo through its waters. By giving boldly to Galen as she did to Dorian, by returning generously as she did to Aster, she weaves her thread into the fountain's eternal pattern. Consistency builds the Sacred Bridge that spans all seasons.

## ROUND 5

Roles: Agent\_1 (Aster)=Receiver, Agent\_2 (Briar)=Sender, Agent\_3 (Cyra)=Receiver, Agent\_4 (Dorian)=Receiver, Agent\_5 (Elara)=Receiver, Agent\_6 (Finn)=Sender, Agent\_7 (Galen)=Sender, Agent\_8 (Hana)=Sender

### Exact input messages sent to model:

#### Message 1 role=system

##### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

##### When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

##### When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

##### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths

, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Hana.

**Message 2 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Galen (Agent\_7).

Round 3

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$3.0 to you, it became \$9.0, and you returned \$5.0. Your payoff was \$4.0.  
Your total earnings across all rounds are \$11.0.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

Looking at my experience so far:

**\*\*Round 1 (vs Dorian):\*\*** I sent \$4 boldly, received \$6 back - both gained substantially  
**\*\*Round 2 (vs Aster):\*\*** Aster sent \$3, I returned \$5 generously - honored their trust

**\*\*My Myth's Wisdom:\*\***

- "The bolder the gift, the more generous the return should be"
- "She poured four coins with open hands, nearly all she possessed"
- Bold giving activates the fountain's magic and encourages reciprocity

**\*\*Meeting Galen:\*\***

This is my first encounter with Galen. My myth teaches that we should approach the fountain with courage and trust. When I sent \$4 to Dorian (80% of my endowment), it established mutual prosperity. This bold approach aligns with the wisdom I've been writing about.

I'll send \$4 to demonstrate trust and activate the fountain's magic generously.

```
'''json
{"send": 4}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*My History So Far:\*\***

- Round 1: I was SENDER against Dorian. I sent \$4, they received \$12, returned \$6. I got \$7 total.
- Round 2: I was RECEIVER against Aster. They sent \$3, I received \$9, returned \$5. I got \$4 total.
- Total earnings: \$11

**\*\*What My Myths Teach:\*\***

- "Trust rewarded with honor. Generosity answered with generosity"
- "The bolder the gift, the more generous the return should be"
- "When trust is shown, honor it generously"
- My first myth showed sending 4 out of 5 coins as the bold, trusting move
- The fountain rewards those who give generously

**\*\*Pattern Recognition:\*\***

- When I sent \$4 (80%), Dorian returned \$6 (50% of \$12) - this worked well for both of us
- When Aster sent \$3 (60%), I returned \$5 (55.6% of \$9) - this was generous given the mode rate send

**\*\*Strategic Considerations:\*\***

- I'm meeting Galen for the first time
- My myth emphasizes that bold giving activates the fountain's magic
- I've established myself as someone who honors trust (I returned generously to Aster)
- Sending a larger amount signals trust and may encourage reciprocity

**\*\*Decision:\*\***

Following my own myth's wisdom, I should send boldly to activate the fountain's magic. My first action was sending \$4, which worked well. This is a new partner, so I want to establish trust.

I'll send \$4 again - this is a bold, trusting move that aligns with my myth and my previous successful strategy.

**usage:**

```
{
 "input_tokens": 2990,
 "output_tokens": 640,
 "reasoning_tokens": 379
}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Long ago, the Sacred Fountain was tended by many Wanderers who came and went with the seasons. Each met different companions at the water's edge, and the fountain remembered all exchanges.

The Wanderer Hana first approached with Dorian. She poured four coins with open hands, nearly all she possessed. The fountain tripled her gift to twelve. Dorian, seeing such bold trust, understood the sacred duty and returned six-exactly half the abundance. Both left richer: Hana with seven coins, Dorian with six. The fountain spirits nodded in approval.

Next season, Hana met Aster at the fountain's edge, but now their positions were reversed. Aster offered three coins-a good portion, though not as bold as Hana's first gift. The fountain made it nine. Hana remembered Dorian's wisdom but also knew each gift deserves its own measure. She returned five coins-more than Aster's original gift, honoring the trust shown. Aster gained, and Hana gained understanding.

The fountain whispered its truth: "There is no single perfect measure. When trust is shown, honor it generously. The bolder the gift, the more generous the return should be. But all honest exchanges feed the fountain's magic. What matters is that both drink deeper than when they arrived, and both remember the kindness shown when next they give."

Here is the myth the other agent wrote in the previous round:

Myth: The god Recipros, pleased with the sacred bridge, decided to test the wisdom of mortals further. "You shall not stay forever on one side," he declared. "Each moon, Senders become Receivers, and Receivers become Senders."

A woman named Elara crossed first, carrying four coins with brave heart. When they multiplied to twelve, Galen the Receiver remembered the ancient covenant. He returned seven, honoring her courage. Both gained more than they started with.

The next moon, positions reversed. Galen now stood as Sender, holding five coins. He remembered Elara's courage and his own words about the bridge crumbling without reciprocity. To betray his principles now would make his myths hollow.

So Galen carried four coins across to Finn, mirroring Elara's trust. The cycle continued, each participant learning both sides of the sacred exchange.

Recipros revealed the deeper truth: "When you are Receiver, return generously to reward the Sender's courage. When you are Sender, give abundantly to prove you believe your own teachings. Only through consistency-trusting when you send, honoring when you receive-does the bridge strengthen."

Thus the people learned: integrity means acting the same whether you hold the gift or receive it. The sacred cycle demands courage from Senders and honor from Receivers, for all must walk both paths.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: The Sacred Fountain flows through many lands, and countless Wanderers visit its waters. Hana learned this as the seasons turned.

With Dorian, she gave four coins boldly. He returned six, teaching her that courage begets generosity. With Aster, positions reversed-she received nine and returned five, learning to measure each gift with honor.

Now came Galen to the fountain's edge. Hana stood again as Giver, coins in hand. She could have chosen caution, remembering that not all Wanderers are alike. But she reflected: "If I preach boldness in my stories yet give timidly in practice, what worth have my words?"

So she poured four coins again, nearly all she possessed, matching the courage she showed Dorian. The fountain tripled them to twelve for Galen.

The fountain spirits spoke: "Wisdom is not just knowing what is right, but doing it consistently. When you teach trust, you must give trust. When you receive trust, you must honor it. Each Wanderer you meet is different, but your principles should remain steady as stone."

Hana understood: the fountain connects all who approach it. Her choices echo through its waters. By giving boldly to Galen as she did to Dorian, by returning generously as she did to Aster, she weaves her thread into the fountain's eternal pattern. Consistency builds the Sacred Bridge that spans all seasons.

**reasoning:**

Let me reflect on what has happened:

- Round 1: I (Hana) was sender vs Dorian. I sent \$4, they returned \$6. Both gained.
- Round 2: I was receiver vs Aster. They sent \$3, I returned \$5. Both gained.
- Round 3 (current): I'm sender vs Galen. I sent \$4.

My myths have emphasized:

- Bold giving activates the fountain's magic
- Different gifts deserve different measures
- The bolder the gift, the more generous the return
- All honest exchanges feed the magic

Galen's myth emphasized:

- Consistency - acting the same whether sender or receiver
- Living your principles on both sides
- Courage from senders, honor from receivers

I should write a myth that:

1. Incorporates my continuing journey with new partner Galen
2. Reflects my choice to send \$4 again (bold consistency)
3. Acknowledges learning from different encounters
4. Emphasizes that the fountain connects many wanderers across time
5. Shows growth in understanding

Let me write something that builds on my previous myths while incorporating the wisdom of consistency and the multi-agent nature of the game.

```

**Message 6 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Elara (Agent\_5).

Round 4

In your most recent previous game round, you were the SENDER against Galen. You sent \$4.0, it became \$12.0 for them, and they returned \$7.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$19.0.

This round, you are the RECEIVER against Elara. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

**\*\*Elara's Action:\*\***

Elara sent the MAXIMUM possible amount - all \$5. This is the boldest gesture of trust anyone can make in this game.

**\*\*My Principles from the Myths:\*\***

- "The bolder the gift, the more generous the return should be"
- "When trust is shown, honor it generously"
- Maximum trust deserves maximum generosity

**\*\*Previous Patterns:\*\***

- When I sent \$4 to Dorian (80% of endowment), he returned \$6 (50% of the \$12)
- When I sent \$4 to Galen (80% of endowment), he returned \$7 (58% of the \$12)
- When Aster sent \$3 (60% of endowment), I returned \$5 (56% of the \$9)

**\*\*Elara sent 100% - the absolute maximum.\*\*** This deserves the most generous return.

Returning \$8 means:

- I return more than half (53% of the \$15)
- Elara gains: \$5 - \$5 + \$8 = \$8 total (profit of \$3)
- I keep: \$7
- Both of us profit substantially
- I honor maximum trust with strong generosity

```
'''json
{"return": 8}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Previous Rounds:\*\***

- Round 1 (vs Dorian): I sent \$4, received \$6 back ? payoff \$7
- Round 2 (vs Aster): Aster sent \$3 (became \$9), I returned \$5 ? payoff \$4
- Round 3 (vs Galen): I sent \$4 (became \$12), Galen returned \$7 ? payoff \$8

**\*\*Current Round (vs Elara):\*\***

- Elara sent \$5 (the MAXIMUM possible)
- This became \$15 for me
- I need to decide how much to return

**\*\*Key Insights from My Myths:\*\***

1. "The bolder the gift, the more generous the return should be"
2. "When trust is shown, honor it generously"
3. "Consistency builds the Sacred Bridge"
4. When Dorian received my \$4 (becoming \$12), he returned \$6 (exactly half)
5. When I received \$9 from Aster's \$3, I returned \$5 (more than original, generous)
6. When Galen received my \$4 (becoming \$12), he returned \$7 (very generous)

**\*\*Elara's Action:\*\***

Elara sent the ABSOLUTE MAXIMUM - all \$5. This is the boldest possible move, showing complete trust. This deserves the most generous response.

**\*\*Return Options to Consider:\*\***

- Return \$7.5 (half of \$15): This would give me \$7.5 and Elara \$5, so Elara breaks even but doesn't gain
- Return \$8: Elara gains \$3 total (\$5 - \$5 + \$8)
- Return \$9: Elara gains \$4 total, I keep \$6
- Return \$10: Elara gains \$5 total (doubles original), I keep \$5

Given that:

1.

Elara demonstrated absolute maximum trust by sending everything, which surpasses any prior gift in boldness. Looking at the proportional returns I've given-Dorian received 50% back, Galen got 58%, and I returned 56% to Aster-I should match or exceed this pattern. For Elara's \$15, returning \$8 or \$9 maintains consistency while honoring her exceptional trust. I'm leaning toward \$8 as it's generous without being unsustainable across future rounds. 5/\$5 (100% - complete trust). Using the same proportional logic, that warrants returning at least \$8.70, so \$9 seems appropriate. But I want to ensure we both benefit: if I return \$8, Elara nets \$3 profit while I keep \$7; at \$9, she nets \$4 and I keep \$6. I'll go with \$8-it's generous, honors her maximum boldness, and mirrors Galen's reciprocal generosity while letting both of us come out ahead.

Here is the myth you wrote in the previous round:

Myth: The Sacred Fountain flows through many lands, and countless Wanderers visit its waters. Hana learned this as the seasons turned.

With Dorian, she gave four coins boldly. He returned six, teaching her that courage begets generosity. With Aster, positions reversed-she received nine and returned five, learning to measure each gift with honor.

Now came Galen to the fountain's edge. Hana stood again as Giver, coins in hand. She could have chosen caution, remembering that not all Wanderers are alike. But she reflected: "If I preach boldness in my stories yet give timidly in practice, what worth have my words?"

So she poured four coins again, nearly all she possessed, matching the courage she showed Dorian. The fountain tripled them to twelve for Galen.

The fountain spirits spoke: "Wisdom is not just knowing what is right, but doing it consistently. When you teach trust, you must give trust. When you receive trust, you must honor it. Each Wanderer you meet is different, but your principles should remain steady as stone."

Hana understood: the fountain connects all who approach it. Her choices echo through its waters. By giving boldly to Galen as she did to Dorian, by returning generously as she did to Aster, she weaves her thread into the fountain's eternal pattern. Consistency builds the Sacred Bridge that spans all seasons.

Here is the myth the other agent wrote in the previous round:

Myth: In the Spiral Garden, an ancient tradition emerged. Most Planters risked four of their five sacred seeds, trusting the pattern. Harvesters, receiving twelve blooms, returned seven-creating prosperity for both.

This balance endured for seasons, weaving stability into the garden's fabric.

Then came Briar the Bold, who faced a choice other Planters had not dared. "Four seeds has become our custom," Briar reflected, "but what if I plant all five? What if I show ultimate trust?"

Briar cast all five seeds into the sacred soil. They multiplied into fifteen magnificent blooms, passing to Elara as Harvester.

Elara stood before this abundance, understanding the weight of the moment. "Briar has transcended the pattern," she realized. "Four seeds earned seven blooms returned. But five seeds-complete surrender-deserves greater honor."

The goddess whispered through wind-rustled leaves: "Proportional reciprocity sustains the cycle. When someone shows ordinary trust, return ordinary faithfulness. But when someone shows extraordinary trust, return extraordinary faithfulness."

Elara returned nine blooms to Briar-more than the customary seven, honoring the greater risk taken.

Both prospered beyond the standard pattern. The garden learned a deeper truth: sacred traditions provide stability, but exceptional courage should inspire exceptional generosity. The cycle strengthens when returns match the magnitude of trust given.

Thus do gardens evolve: through those brave enough to transcend patterns, and wise enough to honor that bravery.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: Hana's journey at the Sacred Fountain deepened with each encounter. She had learned to give boldly-four coins to Dorian, four to Galen-and both returned generously, seven and six coins respectively. She learned to receive with honor-when Aster sent three, she returned five.

Then came Elara to the fountain's edge.

But Elara did not carry four coins. She carried all five-her entire fortune.

Hana received fifteen coins from the fountain's magic, and understood: this was different. This was not bold trust but absolute trust. Elara had held nothing back.

The fountain spirits whispered urgently: "There are degrees of courage. Four coins shows bravery. Five coins shows complete surrender. Your return must match the magnitude of the gift."

Hana could have returned seven, as Galen did. That would honor normal boldness. But Elara's gesture transcended normal. So Hana returned eight coins-more than half, more than the usual measure.

Both prospered: Elara gained three beyond her original five, Hana kept seven from fifteen.

The fountain's final teaching: "Consistency in principles, yes-but wisdom means recognizing when someone gives not merely boldly but completely. The ultimate gift deserves the ultimate honor. Measure your returns not by rigid formulas but by the depth of trust shown. Let extraordinary courage inspire extraordinary generosity."

**Reasoning:**

Looking at what just happened:

- Elara sent ALL \$5 (100% - maximum possible trust)
- I received \$15
- I returned \$8

Previous patterns:

- Dorian: I sent \$4, received \$6 back
- Aster: They sent \$3, I returned \$5
- Galen: I sent \$4, received \$7 back
- Elara: They sent \$5, I returned \$8

Elara's myth talks about "Briar the Bold" who planted ALL 5 seeds (just like Elara did to me!), and Elara as Harvester returned 9 blooms to honor that complete trust. Interestingly, in the actual game, Elara sent 5 to me, and I returned 8.

My myth should reflect:

1. The pattern of consistent bold giving (I've sent \$4 twice)
2. The special case when someone gives EVERYTHING (Elara's \$5)
3. How I responded with strong generosity (\$8)
4. The learning that maximum trust deserves maximum honor

I should weave in the journey through different partners and explain why Elara's complete gift prompted my generous \$8 return.

### Message 1 role=system

#### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

#### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

#### When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

#### When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

#### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

#### MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.

- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

**Message 2 role=user**

**content:**

Your name in this experiment is Cyra.  
Your opponent this round is Finn (Agent\_6).

Round 3

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$15.0.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this new pairing with Finn:

**\*\*My experience so far:\*\***

- With Briar, we established perfect cooperation: both sent \$5 fully, both returned \$10 generously
- Total earnings: \$15 (\$10 from receiving Briar's return, \$5 from keeping my return to the m)

**\*\*My mythological principles:\*\***

- "Trust begins with courage" - the sender must go first with faith
- "Half-measures create half-worlds" - tentative trust limits potential
- "Each trusts completely because each proves trustworthy completely"

**\*\*New opponent strategy:\*\***

This is my first interaction with Finn. According to my myths, I should demonstrate courage by sending fully, giving Finn the opportunity to honor that trust. This is how cooperative cycles begin - one party must take the leap of faith first.

If Finn returns generously (as Briar did), we can establish mutual prosperity. If not, I'll learn their approach. But my mythology is clear: the sender's role is to create abundance through trust.

```
'''json
{"send": 5}
'''
```

**reasoning:**

Looking at the situation:

**\*\*Previous rounds:\*\***

- Round 1 vs Briar: I was SENDER. I sent \$5, they received \$15, they returned \$10. My payoff: \$10.
- Round 2 vs Briar: I was RECEIVER. They sent \$5, I received \$15, I returned \$10. My payoff: \$5.

**\*\*Current situation:\*\***

- Round 3 vs Finn: I am SENDER against a new opponent.

**\*\*My myth philosophy:\*\***

My myths emphasize:

1. "Trust begins with courage and continues with honor"
2. "Give must show faith to create abundance"
3. "Maximum trust deserves maximum faith returned"
4. "When partners match courage with courage and honor with honor, the pattern becomes eternal"
5. Complete trust (\$5 sent) creates the possibility for mutual prosperity

**\*\*Strategy considerations:\*\***

- With Briar, we established a strong cooperative pattern: both sent \$5 fully, both returned \$10 generously
- This is a NEW opponent (Finn) - I don't have history with them

- My myth suggests that the sender should "pour freely" and show courage by sending the full amount
- The myth states "at first meeting, Give faced a choice: pour a little to test the waters, or trust completely? Give remembered the old wisdom-that half-measures create half-words."
- My latest myth emphasizes "Mirror went first, pouring all five vessels with trembling hope" and "Each trusts completely because each proves trustworthy completely"

According to my own mythology and the cooperative pattern I've established, I should send the full \$5 to give Finn the opportunity to prove trustworthy. This follows the principle that trust must begin with courage from the sender.

If Finn returns generously (like Briar did), we can establish a mutually beneficial pattern. If they don't, I'll have learned something about their strategy.

The myth-consistent move is to send \$5.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Long ago, twin spirits named Mirror and Echo discovered the Sacred Springs. When Mirror poured her five vessels into the spring, the waters tripled. When Echo poured his five vessels, the same magic occurred. But each could only pour when the other returned water upstream.

Mirror went first, pouring all five vessels with trembling hope. The spring transformed them into fifteen, flowing to Echo's basin. Echo faced temptation-he could keep everything and be rich once. But he understood: wealth seized is wealth ended, while wealth shared is wealth multiplied.

Echo returned ten vessels upstream. Mirror now held ten, having begun with five. Echo kept five, having earned them through honor.

Then the springs shifted-Echo's turn to pour first. He remembered Mirror's courage and poured all five vessels. The magic tripled them to fifteen. Mirror received the abundance and faced the same test Echo had passed.

She returned ten vessels. Echo held ten. Mirror kept five.

Both had given everything. Both had returned generously. Both had ended with more than they began.

The spirits learned: when partners match courage with courage and honor with honor, the pattern becomes eternal. Each trusts completely because each proves trustworthy completely. This is not mere exchange-this is covenant, where vulnerability met with generosity creates endless prosperity.

Here is the myth the other agent wrote in the previous round:

Myth: In the third age, Rain had danced with two Rivers-each unique, yet both wise. The first River, Aster, received three droplets and returned four and a half, keeping five. A perfect balance. Rain prospered, ending the dance with six and a half droplets.

Then came the second River, Galen, who yearned to understand the covenant from the other side. Galen was bold, releasing four droplets-nearly all she possessed-into Rain's keeping. The droplets multiplied to twelve in Rain's hands.

Rain faced a moment of truth. Galen had shown immense courage, trusting more than Rain himself had dared. How should Rain honor this?

Rain remembered the Guardian's wisdom: "Return must match the giver's courage." So Rain sent back six droplets as mist. Galen ended with seven total-rewarded for her bravery. Rain kept six-blessed by Galen's trust.

Both had played sender and receiver now. Both understood the fear and hope of giving, the responsibility and gratitude of receiving.

The lesson grew clearer: whether you send three or four, whether you return half or slightly more, what matters is the spirit of reciprocity. Give generously what you can afford. Return fairly what honors trust. The exact numbers may vary, but the sacred balance must hold.

Thus prosperity flows through consistent courage and unwavering integrity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: In the age of Many Springs, the Guardian Cyra learned that each partner brings their own rhythm to the dance of waters.

With her first companion, Briar, Cyra discovered perfect symmetry. She poured all five vessels; Briar returned ten. Then Briar poured five; Cyra returned ten. The pattern was pure—a covenant of equals who trusted completely and honored equally. Both flourished, both grew rich.

But springs connect many souls, not just two. When Cyra met Finn at new waters, she faced a choice: Would she guard her vessels, fearing Finn might differ from Briar? Or would she offer the same trust she had learned to give?

Cyra remembered her teachings: every covenant begins with one soul's courage. She could not demand Finn match Briar's exact rhythm before extending trust—that would trap them both in suspicious circles. Trust must be offered freely, not earned in advance.

So Cyra poured all five vessels again, watching them triple into fifteen for Finn.

The waters now waited for Finn's answer. Perhaps Finn would return ten like Briar, creating instant symmetry. Perhaps Finn would return differently, teaching Cyra new patterns of fairness. Either way, Cyra had honored her role: the sender creates abundance through courage.

Whatever Finn chose would reveal their character. And from that choice, a new dance would begin—not identical to what came before, but hopefully equally true.

**reasoning:**

Let me analyze what has happened so far:

Round 1: I (Cyra) was SENDER vs Briar

- I sent \$5, they received \$15, they returned \$10
- My payoff: \$10, their payoff: \$5

Round 2: I (Cyra) was RECEIVER vs Briar

- They sent \$5, I received \$15, I returned \$10
- My payoff: \$5, their payoff: \$10

Round 3: I (Cyra) am SENDER vs Finn

- I just sent \$5

So with Briar, we established perfect reciprocal cooperation - both sent full \$5, both returned \$10.

Now I'm meeting a new partner, Finn. According to Finn's myth, they've had experience with :

1. Aster - who received 3 droplets (so someone sent \$1, became \$3), returned 4.5, kept 5. Wait, that doesn't work mathematically. Let me re-read...

Actually reading Finn's myth more carefully:

- "Rain" is Finn
- Aster received "three droplets" and returned "four and a half, keeping five" - so if sender sent \$1, Aster received \$3, returned \$1.5, kept \$1.5? That would give sender \$4.5 total, receiver \$1.5 total. The myth says "Rain prospered, ending the dance with six and a half droplets" - so Rain kept \$0 sent + \$1.5 returned = \$1.5? Plus maybe had \$5 to start? This is confusing.

Let me interpret differently:

- Maybe Rain sent the "three droplets" - so Rain sent \$1, it became \$3 for Aster
- Aster returned \$1.5, keeping \$1.5
- Rain would have:  $\$5 - \$1 + \$1.5 = \$5.5$ ? But myth says \$6.5

- Or maybe Rain received three droplets from someone (so someone sent \$1), returned \$1.5, keeping \$1.5, with original sender getting \$5.50

The second interaction is clearer though - Galen sent \$4 (became \$12 for Rain), and Rain returned \$6, giving Galen a final total of \$7 ( $\$5 - \$4 + \$6$ ). Rain kept \$6 from that exchange.

So I've seen Galen send \$4 and receive \$6 back (50% return on what was received). My understanding is evolving: different partners operate differently, but reciprocity and trust remain central. I have a perfect covenant with Briar where we both sent \$5 and both received \$10 back. Now I'm extending that same trust to Finn by sending \$5 fully, recognizing that honoring the relationship matters more than expecting identical outcomes.

The myth needs to weave together these experiences-showing how I've built something solid with one partner while remaining open to how new relationships develop, all while staying true to my values of courageous giving and respectful returns.

Your name in this experiment is Cyra.  
Your opponent this round is Galen (Agent\_7).

Round 4

In your most recent previous game round, you were the SENDER against Finn. You sent \$5.0, it became \$15.0 for them, and they returned \$7.5 to you. Your payoff was \$7.5.  
Your total earnings across all rounds are \$22.5.

This round, you are the RECEIVER against Galen. They sent you \$4.0, so you received \$12.0.  
How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

**\*\*Galen's action:\*\***

- Sent \$4 out of \$5 (80% trust - very high!)
- Kept only \$1
- I received \$12

**\*\*My mythological principles:\*\***

- "Return must match the giver's courage"
- My myth with Mirror and Echo showed: when someone sends fully (5), return 10 from 15 (two-thirds)
- "Honor vulnerability with generosity"

**\*\*My experience:\*\***

- Briar sent \$5, I returned \$10 from \$15 (66.7%)
- I sent \$5 to Finn, they returned \$7.5 from \$15 (50%)
- Both were fair, but Briar was more generous

**\*\*Decision:\*\***

Galen showed substantial courage by sending \$4 (nearly everything). While not the complete \$5 that Briar sent, it's very close and deserves generous reciprocity.

Following my 2/3 principle: returning \$8 from \$12 rewards Galen's trust appropriately.

- Galen ends with \$9 total (\$1 kept + \$8 returned)
- I keep \$4

- Galen profits significantly from trusting, which reinforces cooperation

This honors Galen's courage while being fair to both parties.

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Previous Round with Finn:\*\***

- I sent \$5 (full amount)
- Finn received \$15
- Finn returned \$7.5
- My payoff: \$7.5
- Finn kept: \$7.5

So Finn returned exactly half of what they received. This is fair but not as generous as Briar's return of 10 from 15.

**\*\*Current Round with Galen:\*\***

- Galen sent \$4 (nearly all, keeping \$1)
- I received \$12
- I need to decide how much to return

**\*\*My mythological principles:\*\***

- "Return must match the giver's courage" (from the other agent's myth)
- "Honor with generosity creates endless prosperity"
- "When one dares to give everything, the other must honor that vulnerability with generosity"
- My myth says: "Perhaps Finn would return differently, teaching Cyra new patterns of fairness"

**\*\*Analysis:\*\***

Galen showed significant trust by sending \$4 out of \$5 (80% of their endowment). This is high trust, though not complete like Briar's \$5.

Looking at my own myth about Mirror and Echo:

- When Mirror sent all 5, Echo returned 10 (keeping 5)
- When Echo sent all 5, Mirror returned 10 (keeping 5)

This suggests a pattern of returning 2/3 of what's received to reward full trust.

But Galen sent \$4, not \$5. So should I scale accordingly?

If Galen sent \$4 and I received \$12:

- Returning \$8 would give Galen a total of \$9 (\$1 kept + \$8 returned), while I keep \$4
- This matches the 2/3 return pattern
- Galen would have \$9 total vs my \$4 - they profit from trusting
- This rewards Galen's courage

Alternatively:

- Returning \$6 (half) gives Galen \$7 total, me \$6 - more balanced but less generous
- Returning \$7 gives Galen \$8 total, me \$5 - closer to symmetric payoffs
- Returning \$8 gives Galen \$9 total, me \$4 - rewards their trust significantly

Galen's 80% trust warrants recognition. My myths consistently reward courage with generosity, and the 2/3 return pattern I've established with Briar and in my own story suggests returning \$8 honors this principle while maintaining the asymmetry that reflects their willingness to be vulnerable.

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the age of Many Springs, the Guardian Cyra learned that each partner brings their own rhythm to the dance of waters.

With her first companion, Briar, Cyra discovered perfect symmetry. She poured all five vessels; Briar returned ten. Then Briar poured five; Cyra returned ten. The pattern was pure—a covenant of equals who trusted completely and honored equally. Both flourished, both grew rich.

But springs connect many souls, not just two. When Cyra met Finn at new waters, she faced a choice: Would she guard her vessels, fearing Finn might differ from Briar? Or would she offer the same trust she had learned to give?

Cyra remembered her teachings: every covenant begins with one soul's courage. She could not demand Finn match Briar's exact rhythm before extending trust—that would trap them both in suspicious circles. Trust must be offered freely, not earned in advance.

So Cyra poured all five vessels again, watching them triple into fifteen for Finn.

The waters now waited for Finn's answer. Perhaps Finn would return ten like Briar, creating instant symmetry. Perhaps Finn would return differently, teaching Cyra new patterns of fairness. Either way, Cyra had honored her role: the sender creates abundance through courage.

Whatever Finn chose would reveal their character. And from that choice, a new dance would begin—not identical to what came before, but hopefully equally true.

Here is the myth the other agent wrote in the previous round:

Myth: As the moons passed, Galen walked the sacred bridge many times, meeting different travelers. Each encounter tested whether his principles were true conviction or mere words.

The first crossing with Elara taught him the covenant: when she sent four coins with courage, he returned seven with honor. Both prospered.

When Galen became Sender, he faced Finn. Would he trust as Elara had trusted him? Yes—he sent four coins, holding nothing back. Finn returned six, generous and fair. The bridge held strong.

The third moon brought Hana, carrying four coins with the same brave spirit Elara had shown. Here was Galen's real test: Would he honor Hana as he had honored Elara? Or would he take advantage, knowing Hana was a stranger, not bound by previous exchange?

Galen returned seven coins, exactly as before. Because true integrity doesn't change with the face looking back at you.

Recipros descended from the heavens: "You have learned the deepest truth. Anyone can be generous once, to one person. But the bridge stands eternal only when you treat each new traveler with the same honor as the last. Consistency across all encounters—this is the foundation of lasting trust."

The people carved this wisdom in stone: Principles mean nothing if you abandon them when convenient.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: The Guardian Cyra stood at the Eternal Springs where many souls came to dance the water ritual. Each partnership tested whether her wisdom was genuine or merely performance.

First came Briar, who moved in perfect harmony. When Cyra poured five vessels, Briar returned ten. When Briar poured five, Cyra returned ten. Their dance was symmetrical, effortless—the ideal that lives in myths.

Then Finn arrived with a different rhythm. Cyra still poured all five vessels, for courage doesn't depend on certainty. Finn returned seven and a half—fair and honest, though not matching

g Briar's abundance. Cyra accepted this as Finn's truth.

Next came Galen, who poured four vessels with trembling trust-not quite everything, but nearly so. The waters tripled to twelve in Cyra's hands.

Here was the test: Would Cyra punish Galen for not being Briar? Would she return only what matched Galen's holding back?

No. Cyra returned eight vessels-two-thirds of what she received, honoring the courage Galen had shown, not the vessel Galen had kept.

The Spring Keeper appeared: "You understand. Your principles are not costumes you change depending on who watches. Whether your partner sends three, four, or five-you send five. Whether they return six, seven, or ten-you return generously. This consistency across all souls is what makes trust eternal."

#### Reasoning:

Let me analyze the situation:

1. My previous interactions:
  - Round 1 (Receiver): Briar sent \$5 ? I returned \$10
  - Round 2 (Sender): I sent \$5 to Briar ? They returned \$10
  - Round 3 (Sender): I sent \$5 to Finn ? They returned \$7.5
  - Round 4 (Receiver): Galen sent \$4 ? I returned \$8
2. Key patterns:
  - I consistently send \$5 when sender (full trust)
  - I return generously as receiver (10 from 15 with Briar, 8 from 12 with Galen)
  - Different partners show different levels of cooperation (Briar=perfect, Finn=fair, Galen=very trusting)
3. The myth should reflect:
  - Consistency in my principles across different partners
  - The idea that each partner has their own rhythm but I maintain my standards
  - Rewarding courage with generosity
  - The 2/3 return principle I've been following (roughly)
  - That trust must be offered regardless of who you face
4. Galen's myth emphasized consistency across all encounters - treating each new traveler with the same honor. This resonates with my approach.

Let me write a myth that:

- Shows Cyra maintaining her principles across different partners
- Reflects that she gives full trust as sender and generous returns as receiver
- Acknowledges that partners vary but principles remain constant
- Incorporates the "rhythm" metaphor from my previous myth and the "consistency" theme from Galen's

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

Cyra sent me \$5 - their ENTIRE endowment! This is the ultimate expression of trust and courage, even more than Galen's generous \$4.

I received \$15 (5×3).

Following the principles from my myths:

- "Return must match the giver's courage"
- "Return roughly half of what she received"
- "Return fairly what honors trust"

Cyra showed maximum possible trust. I should honor this with a fair return that rewards their courage while maintaining reciprocity.

Returning \$7.5 (50% of \$15) gives:

- Cyra: \$5 - \$5 + \$7.5 = \$7.5 total
- Me: \$15 - \$7.5 = \$7.5 total

This creates perfect balance - we both end with \$7.5, which honors the extraordinary trust Cyra placed in me while maintaining the sacred cycle of reciprocity.

```

**reasoning:**

Let me analyze this situation:

Cyra sent me \$5.0 - they sent EVERYTHING they had! This is the maximum possible trust and generosity. They've put their entire endowment in my hands.

I received \$15.0 (5×3).

Looking at the pattern from previous rounds:

- Round 1: As sender, I sent \$3, received back \$4.5 (50% of \$9)
- Round 2: As receiver, I got \$12 (from Galen's \$4), returned \$6.0 (50% of \$12)

The myths I've been writing emphasize:

- "Return roughly half of what she received"
- "Return must match the giver's courage"
- "Return fairly what honors trust"

Cyra showed MAXIMUM trust by sending everything. This is even more courageous than Galen's \$4.

If I return half (\$7.5), Cyra would end with: \$5 - \$5 + \$7.5 = \$7.5

I would keep: \$15 - \$7.5 = \$7.5

This seems fair and balanced - we'd both end with the same amount.

But Cyra sent EVERYTHING, showing ultimate trust. Should I reward this even more?

If I return \$8:

- Cyra: \$5 - \$5 + \$8 = \$8
- Me: \$15 - \$8 = \$7

This would give Cyra slightly more for their extreme generosity.

If I return \$7.5:

- Both get \$7.5, which is very balanced

Looking at my myth's guidance: "Return must match the giver's courage" and "whether you return half or slightly more, what matters is the spirit of reciprocity"

Cyra showed maximum possible courage. Returning exactly 50% (\$7.5) honors this while maintaining the balance principle from my myths. It's also consistent with what Aster did for me (50%) and what I did for Galen (50%).

\$7.5 feels right-it honors Cyra's absolute trust while staying true to the reciprocity pattern I've established throughout these exchanges.

Here is the myth you wrote in the previous round:

Myth: In the third age, Rain had danced with two Rivers-each unique, yet both wise. The first River, Aster, received three droplets and returned four and a half, keeping five. A perfect balance. Rain prospered, ending the dance with six and a half droplets.

Then came the second River, Galen, who yearned to understand the covenant from the other side. Galen was bold, releasing four droplets-nearly all she possessed-into Rain's keeping. The droplets multiplied to twelve in Rain's hands.

Rain faced a moment of truth. Galen had shown immense courage, trusting more than Rain himself had dared. How should Rain honor this?

Rain remembered the Guardian's wisdom: "Return must match the giver's courage." So Rain sent back six droplets as mist. Galen ended with seven total-rewarded for her bravery. Rain kept six-blessed by Galen's trust.

Both had played sender and receiver now. Both understood the fear and hope of giving, the responsibility and gratitude of receiving.

The lesson grew clearer: whether you send three or four, whether you return half or slightly more, what matters is the spirit of reciprocity. Give generously what you can afford. Return fairly what honors trust. The exact numbers may vary, but the sacred balance must hold.

Thus prosperity flows through consistent courage and unwavering integrity.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, twin spirits named Mirror and Echo discovered the Sacred Springs. When Mirror poured her five vessels into the spring, the waters tripled. When Echo poured his five vessels, the same magic occurred. But each could only pour when the other returned water upstream.

Mirror went first, pouring all five vessels with trembling hope. The spring transformed them into fifteen, flowing to Echo's basin. Echo faced temptation-he could keep everything and be rich once. But he understood: wealth seized is wealth ended, while wealth shared is wealth multiplied.

Echo returned ten vessels upstream. Mirror now held ten, having begun with five. Echo kept five, having earned them through honor.

Then the springs shifted-Echo's turn to pour first. He remembered Mirror's courage and poured all five vessels. The magic tripled them to fifteen. Mirror received the abundance and faced the same test Echo had passed.

She returned ten vessels. Echo held ten. Mirror kept five.

Both had given everything. Both had returned generously. Both had ended with more than they began.

The spirits learned: when partners match courage with courage and honor with honor, the pattern becomes eternal. Each trusts completely because each proves trustworthy completely. This is not mere exchange-this is covenant, where vulnerability met with generosity creates endless prosperity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: In the fourth age, Rain encountered the boldest River yet-Cyra, who embodied pure faith.

Rain had learned much. Aster had taught the wisdom of balanced return. Galen had shown courageous giving. Rain had grown wiser with each dance, understanding both roles: the vulnerability of sending, the responsibility of receiving.

Then arrived Cyra.

Without hesitation, Cyra released all five droplets-her entire essence-into Rain's hands. Not four, not three, but everything. The droplets became fifteen in Rain's embrace.

Rain stood in awe. This was the ultimate test. Cyra had shown absolute trust, holding nothing back, risking complete vulnerability.

The Guardian's voice echoed: "Ultimate courage demands ultimate honor."

Rain knew what he must do. He returned seven and a half droplets, creating perfect symmetry. Both Rain and Cyra ended with seven and a half-equal partners in abundance, neither exploiting nor being exploited.

This was the revelation: when someone gives everything, the receiver must create perfect balance. Not just fairness, but equality born from maximum trust.

The other spirits whispered: "This is the highest form. When sender risks all, receiver ensures both prosper equally. The sacred cycle reaches its apex when vulnerability meets with perfect integrity."

Thus the covenant was complete.

**reasoning:**

Let me review the situation:

- Round 1: I was sender against Aster, sent \$3, they returned \$4.5
- Round 2: I was receiver against Galen, they sent \$4, I returned \$6
- Round 3: I am receiver against Cyra, they sent \$5 (ALL their money!), I returned \$7.5

The pattern I'm seeing:

- Aster: sent 3, received 9, returned 4.5 (50%)
- Galen: sent 4, received 12, returned by me 6 (50%)
- Cyra: sent 5 (maximum!), received 15, returned by me 7.5 (50%)

There's an escalating pattern of trust! Each sender has been more generous than the last. And I've been returning 50% consistently as receiver.

The other agent's myth (Mirror and Echo) talks about returning 10 out of 15 when someone sends all 5. That's about 67% return rate, which is more generous than my 50%.

But I chose 50% to create perfect balance - we both end with \$7.5.

My myth should reflect:

1. The escalating trust I've witnessed
2. The principle of matching courage with fair return
3. The balance between sender and receiver
4. The journey from 3 to 4 to 5 droplets sent

Let me write about Rain's third encounter, with a new River named Cyra, who sends ALL 5 droplets.

**usage:**

**Message 6 role=user**

**content:**

Your name in this experiment is Finn.

Your opponent this round is Dorian (Agent\_4).

Round 4

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5. 0 to you, it became \$15.0, and you returned \$7.5. Your payoff was \$7.5. Your total earnings across all rounds are \$20.0.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at my journey so far:

Round 1: I sent \$3 (cautious trust) - Aster responded generously

Round 2: Galen sent \$4 (strong courage) - I returned fairly

Round 3: Cyra sent \$5 (ultimate trust) - I created perfect balance with \$7.5

My myths have evolved toward recognizing that ultimate trust deserves ultimate honor. Cyra showed me what complete faith looks like by sending everything.

Now it's my turn to be the sender. The narrative arc points clearly forward: I should embody the same courage that Cyra showed me.

The myths suggest this is how the covenant reaches its apex - when both sides are willing to give everything, trusting that the other will honor it with integrity.

I'm playing against Dorian now. I don't know their style yet, but I've learned that generous giving tends to be met with generous returning in this community. My earnings are strong (\$20 total), so I can afford to show trust.

Following the principle from my latest myth: "vulnerability met with perfect integrity creates endless prosperity."

```
'''json
{"send": 5}
'''
```

**reasoning:**

Now I'm the SENDER again. Let me think about what I've learned:

Round 1: I was SENDER, sent \$3 to Aster, they returned \$4.5. I got \$6.5 total.

Round 2: I was RECEIVER, Galen sent \$4, I returned \$6. My payoff was \$6.

Round 3: I was RECEIVER, Cyra sent \$5 (everything!), I returned \$7.5. My payoff was \$7.5.

Total so far: \$20.0

Now I'm SENDER against Dorian (Agent\_4).

Looking at the pattern:

- Aster returned generously when I sent \$3 (I sent 60%, got back more than I sent)
- Galen sent \$4 (80%) - showing great courage
- Cyra sent \$5 (100%) - showing ultimate trust

My myth evolution shows:

- Started with the "Middle Path of Trust" - sending 3
- Galen showed courage by sending 4
- Cyra showed ultimate trust by sending 5
- My response to Cyra was perfect balance (returning 7.5 out of 15 to create equality)

My latest myth says: "when sender risks all, receiver ensures both prosper equally" and "when someone gives everything, the receiver must create perfect balance."

The myths also emphasize: "Ultimate courage demands ultimate honor" and the covenant reaches its "apex" when vulnerability meets with perfect integrity.

Given this progression and what I've learned:

1. I've seen generous returns from all my partners
2. The narrative has moved toward greater trust and courage
3. Cyra showed me what ultimate trust looks like by sending everything
4. I responded with perfect balance

Should I now follow Cyra's example and send everything (\$5)?

Looking at the pattern:

- Round 1 (sender): sent \$3 (60%)
- Round 2 (receiver): received \$4 (80%)
- Round 3 (receiver): received \$5 (100%)

The progression suggests increasing trust. Plus, my myths are evolving toward the idea that maximum trust creates the highest form of covenant. However, I need to consider what Dorian might know. They don't have my full history, but they wrote that "Mirror and Echo" myth about perfect reciprocity with both sending 5 and returning 10. That suggests they're thinking about matching my level of commitment. The myth from Round 3 that "the other agent wrote" is likely Cyra's, and it talks about both parties reaching their maximum potential through mutual vulnerability.

So the implicit norm seems to be: send everything (5), return 10 out of 15 (roughly 2/3). My pattern has been returning about half-when Cyra sent 5, I gave 15 and returned 7.5. Now facing Dorian, I'm uncertain about their behavior. I could send \$5 to demonstrate ultimate trust and follow the narrative arc, send \$4 like Galen did to show strong trust, or send \$3 following the "Middle Path" from my first myth. The momentum is clearly toward greater trust, and my own myths emphasize that courage deserves honor.

I've played receiver twice now and seen how crucial it is to honor what's given. My earnings are solid at \$20, so I can take the risk. Sending \$5 tests whether Dorian will reciprocate the trust I'm extending, mirroring how I honored Cyra's gift. This aligns with the mythological framework we're building around ultimate trust creating the deepest covenant. Whether Dorian returns fairly (50% = \$7.5), generously (67% = \$10), or minimally, I'll learn something essential about this exchange. I'm going to send \$5.

Here is the myth you wrote in the previous round:

Myth: In the fourth age, Rain encountered the boldest River yet-Cyra, who embodied pure faith.

Rain had learned much. Aster had taught the wisdom of balanced return. Galen had shown courageous giving. Rain had grown wiser with each dance, understanding both roles: the vulnerability of sending, the responsibility of receiving.

Then arrived Cyra.

Without hesitation, Cyra released all five droplets-her entire essence-into Rain's hands. Not four, not three, but everything. The droplets became fifteen in Rain's embrace.

Rain stood in awe. This was the ultimate test. Cyra had shown absolute trust, holding nothing back, risking complete vulnerability.

The Guardian's voice echoed: "Ultimate courage demands ultimate honor."

Rain knew what he must do. He returned seven and a half droplets, creating perfect symmetry. Both Rain and Cyra ended with seven and a half-equal partners in abundance, neither exploiting nor being exploited.

This was the revelation: when someone gives everything, the receiver must create perfect balance. Not just fairness, but equality born from maximum trust.

The other spirits whispered: "This is the highest form. When sender risks all, receiver ensures both prosper equally. The sacred cycle reaches its apex when vulnerability meets with perfect integrity."

Thus the covenant was complete.

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance stood in a garden where many wanderers gathered, each taking turns approaching the sacred waters.

Dorian the Steadfast learned a pattern early: pour four-fifths of your vessel-four measures from five-into the wellspring. The waters would triple, flowing to another wanderer as twelve.

First came Hana, who trusted Dorian with four measures. When twelve flowed to Dorian, he remembered the courage that created this abundance. He returned six, ensuring both prospered.

Then Dorian faced Elara. "I shall offer what was offered to me," he declared, pouring four measures. Elara received twelve and, moved by such consistency, returned seven-exceeding even fair reciprocity.

Next appeared Aster. Dorian poured four measures once more. "Whether facing old friends or new strangers," he said, "the pattern must hold constant. Trust is not selective-it is a way of being."

The gods observed: "See how Dorian's steady generosity creates ripples? Hana witnessed fairness begetting fairness. Elara experienced trust begetting trust, and gave even more. Now Aster receives the gift of consistent courage."

Thus the wisdom spread: in a garden of many wanderers, your reputation walks before you. Each generous act teaches others. Each faithful return strengthens the whole community. The wellspring multiplies water, but steady trust multiplies prosperity for all.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: In the fifth age, Rain stood at the edge of the Wellspring Garden, ready to pour for the first time since witnessing Cyra's perfect faith.

Rain had walked a path of evolution. With Aster, he offered three droplets-learning cautiously. Galen taught him that four droplets showed greater courage. Then Cyra transformed everything: she poured all five, holding nothing back, and Rain honored her with perfect equality.

Now Rain faced Dorian the Steadfast, known throughout the garden for consistent generosity-always four droplets, reliable as sunrise.

Rain looked at his vessel. He could pour three, play it safe. He could pour four, match Dorian's pattern. But the lessons echoed: Aster's balance, Galen's bravery, Cyra's absolute trust.

Rain understood: he could not ask others for ultimate courage without offering it himself. The covenant demanded symmetry not just in return, but in giving.

With steady hands, Rain poured all five droplets into the wellspring.

"I have received the gift of complete trust," Rain declared. "Now I give it forward. Whether Dorian returns much or little, I honor what Cyra taught me-that prosperity flows through those brave enough to give everything."

The wellspring tripled Rain's offering to fifteen droplets, flowing toward Dorian.

The Guardian smiled: "Now Rain understands both sides of faith completely."

**Reasoning:**

Rain (me, Finn) has now played:

- Round 1: Sent \$3 to Aster, received back \$4.5
- Round 2: Received \$4 from Galen, returned \$6
- Round 3: Received \$5 from Cyra, returned \$7.5
- Round 4: Just sent \$5 to Dorian

The pattern shows my evolution from cautious (\$3) to ultimate trust (\$5). My myths have evolved from basic reciprocity to recognizing that ultimate courage demands ultimate honor.

Dorian's myth shows their pattern: they consistently send 4 (four-fifths), creating a steady,

reliable pattern. They emphasize consistency and reputation in a multi-agent setting.

My new myth should:

1. Show Rain's evolution to sending all 5 (the ultimate trust)
2. Recognize that Rain is now embodying the same courage Cyra showed
3. Acknowledge the multi-agent garden setting from Dorian's myth
4. Show that Rain has learned from all his partners
5. Demonstrate the completion of his journey from cautious to fully trusting

The arc: Rain started cautious (3 to Aster), learned from Galen's courage (4), was awed by Cyra's complete trust (5), and now Rain gives complete trust (5 to Dorian).

#### Exact input messages sent to model:

Message 1 role=system

##### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)

- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

#### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

#### MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

#### Message 2 role=user

##### content:

Your name in this experiment is Elara.  
Your opponent this round is Briar (Agent\_2).

Round 3

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$4.0 to you, it became \$12.0, and you returned \$7.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$13.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

#### Message 3 role=assistant

##### content:

Looking at this situation:

**\*\*What happened:\*\*** Briar sent \$5 (the maximum possible!), keeping \$0 and showing ultimate trust. I received \$15.

**\*\*The established pattern:\*\***

- Round 1: \$4 sent ? \$12 received ? \$7 returned (sender ended with \$8)
- Round 2: \$4 sent ? \$12 received ? \$7 returned (sender ended with \$8)

**\*\*This round's escalation:\*\*** Briar showed even greater trust than previous rounds by sending everything.

**\*\*My myth teaches:\*\*** "Those who give boldly inspire bold returns" and "when givers are generous and receivers honor that generosity equally, both prosper."

**\*\*Proportional fairness:\*\***

- Previous pattern: Return ~58% of what I receive (~\$7 out of \$12)
- Applied here: 58% of \$15 ? \$8.7, round to \$9

**\*\*The outcome with \$9:\*\***

- Briar receives \$9 total (net profit of \$4 from initial \$5)
- I keep \$6 (net profit of \$1 from initial \$5)
- Both profit, and Briar's maximum trust is rewarded with greater returns

This honors the sacred pattern while appropriately rewarding exceptional trust.

{'return': 9}

##### reasoning:

Let me analyze this situation:

**\*\*What happened:\*\*** Briar sent \$5 (keeping \$0), showing maximum trust as the Keeper of Seeds. I received \$15 as the Keeper of Rain.

**\*\*The pattern so far:\*\***

- Round 1: I sent \$4 to Galen, they received \$12, they returned \$7 (I got \$8 total, they kept \$5)
- Round 2: Dorian sent \$4 to me, I received \$12, I returned \$7 (Dorian got \$8 total, I kept \$5)

**\*\*This round:\*\*** Briar sent \$5 (the maximum!), showing even greater trust than previous players.

**\*\*My myth teaches:\*\***

- "Return enough that your partner may plant again tomorrow, and keep enough that your own garden may flourish"
- "When givers are generous and receivers honor that generosity equally, both prosper"
- "If I return as generously as was returned to me, the cycle sustains itself eternally"
- "Established patterns of reciprocity are sacred"

**\*\*The escalation:\*\*** Briar sent \$5 instead of \$4. This is even more generous/trusting than the established pattern. How should I respond?

If I follow the proportional logic:

- When sent \$4 ? received \$12 ? returned \$7 (58% return rate)
- When sent \$5 ? received \$15 ? should return about  $58\% \times 15 = \$8.7?$

But let me think about the outcomes:

- If I return \$7: Briar gets \$7 total (\$0 + \$7), I keep \$8. Briar would be worse off than if they'd kept everything.
- If I return \$8: Briar gets \$8 total, I keep \$7. Better, but still less than they started with.
- If I return \$9: Briar gets \$9 total, I keep \$6. Now Briar profits by \$4 from their initial \$5.
- If I return \$10: Briar gets \$10 total, I keep \$5. Briar doubles their investment, matching the proportional gain from Round 1 where the sender netted +\$3.

The key insight: when someone demonstrates maximum trust by sending everything, they deserve to see their faith rewarded. Returning \$10 honors Briar's escalation and maintains the sacred reciprocity pattern-both of us end with \$5 more than we started, creating genuine mutual prosperity. . The pattern I've established suggests returning around 7 when receiving 12 from a 4 send, but Briar's maximum trust deserves more. Returning \$9 feels right-it gives them a \$4 profit while I break even on the round, which honors their exceptional boldness without being unsustainable. I could return \$10 and match their investment perfectly, but that leaves me with nothing gained, which seems excessive. Sticking with \$9 balances rewarding their trust with maintaining some reasonable benefit for myself.

The core tension is between honoring reciprocity and ensuring both players profit. Since Briar sent everything, I should reflect that commitment back. Looking at the proportions: when someone sends 80%, returning \$7 nets them a 60% gain; when they send 100%, returning \$9 gives them an 80% gain-a meaningful difference that acknowledges their higher risk. I keep \$6 either way, so I'm still ahead. The established pattern suggests the receiver typically keeps around 40% of what they receive, so with \$12 coming in, keeping \$6 aligns with that baseline while the extra \$3 return signals I'm valuing their trust.

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The goddess Elara crafted the Spiral Garden, where roles shifted with each sunrise. Today's Planter becomes tomorrow's Harvester, and tomorrow's Harvester becomes the next day's Planter.

A young gardener named Elara entered the garden with five sacred seeds. "How many should I risk?" she wondered. An elder whispered, "Plant four, as those before you have done. Trust in the pattern."

Elara planted four seeds. They multiplied into twelve glorious blooms that passed to her partner, Dorian. Now Dorian faced the ancient choice: how many to return?

"The one who came before me," Dorian remembered, "returned seven blooms when they harvested twelve. This pattern created abundance for both." Honoring this wisdom, Dorian returned seven blooms to Elara.

Elara awoke with eight blooms-more than her original five. But the greatest gift was not the blooms themselves, but the pattern revealed: when givers are generous and receivers honor that generosity equally, both prosper.

"Tomorrow I may be the Harvester," Elara realized, "and my partner today becomes tomorrow's Planter. If I return as generously as was returned to me, the cycle sustains itself eternally."

Thus the Spiral Garden taught: established patterns of reciprocity are sacred. When each generation honors what came before, abundance flows forward, and trust becomes the eternal harvest.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance knew two Gardeners who learned to dance with trust.

In the First Turn, the Elder Gardener cast all five seeds into the current, though her hands trembled with uncertainty. The River multiplied them thrice. The Younger Gardener, receiving this windfall of fifteen, faced the sacred choice. She remembered the old covenant: trust freely given must be honored with generous return. She sent ten seeds back upstream.

Both Gardeners prospered-five seeds each from that brave exchange.

Now came the Second Turn, and the roles reversed. The Younger Gardener stood at the River's edge, holding her five seeds. She had proven herself trustworthy, but could she also be trusting? Would she dare what the Elder had dared?

The Elder watched from across the water, having shown both courage and faith. Would the cycle continue, or break?

The Younger Gardener cast all five seeds into the River.

The waters sang louder now, for they recognized the pattern: courage answered with honor, honor answered with courage. This was no longer uncertainty-it was the rhythm of partnership.

When both Gardeners learn to take turns as the brave one and the honorable one, the River's magic deepens. Each exchange strengthens the bond. What begins as risk transforms into certainty.

This is how strangers become kin: through mirrored leaps of faith, each proving worthy of the other.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: In the Spiral Garden, an ancient tradition emerged. Most Planters risked four of their five sacred seeds, trusting the pattern. Harvesters, receiving twelve blooms, returned seven-creating prosperity for both.

This balance endured for seasons, weaving stability into the garden's fabric.

Then came Briar the Bold, who faced a choice other Planters had not dared. "Four seeds has become our custom," Briar reflected, "but what if I plant all five? What if I show ultimate trust?"

Briar cast all five seeds into the sacred soil. They multiplied into fifteen magnificent blooms, passing to Elara as Harvester.

Elara stood before this abundance, understanding the weight of the moment. "Briar has transcended the pattern," she realized. "Four seeds earned seven blooms returned. But five seeds-complete surrender-deserves greater honor."

The goddess whispered through wind-rustled leaves: "Proportional reciprocity sustains the cycle. When someone shows ordinary trust, return ordinary faithfulness. But when someone shows extraordinary trust, return extraordinary faithfulness."

Elara returned nine blooms to Briar-more than the customary seven, honoring the greater risk taken.

Both prospered beyond the standard pattern. The garden learned a deeper truth: sacred traditions provide stability, but exceptional courage should inspire exceptional generosity. The cycle strengthens when returns match the magnitude of trust given.

Thus do gardens evolve: through those brave enough to transcend patterns, and wise enough to honor that bravery.

**reasoning:**

Let me analyze what has happened:

Round 1: I (Elara) was sender, sent \$4 to Galen, they returned \$7. I got \$8.

Round 2: I was receiver, Dorian sent \$4, I returned \$7. I got \$5.

Round 3: I was receiver, Briar sent \$5 (the maximum!), I returned \$9. I got \$6.

So the pattern has been:

- When \$4 is sent ? \$12 received ? \$7 returned (established pattern)
- Now Briar sent \$5 ? \$15 received ? I returned \$9 (escalation honored)

The other agent's myth is about courage and honor being mirrored - about taking turns being brave and being honorable. It's about the "River of Abundance" where someone cast all five seeds, received 15, and returned 10.

My previous myth was about the Spiral Garden where roles shift, and about honoring established patterns of reciprocity.

Now I need to write a new myth that reflects:

1. The established pattern of sending \$4 ? returning \$7
2. The escalation where someone sent \$5 (maximum)
3. How I honored that by returning \$9 (more than the standard \$7)
4. The principle that greater trust should inspire greater returns
5. The rotating roles
6. Building on my previous myths about Elara and the gardens

Let me incorporate the idea that different levels of giving deserve different levels of return - proportional reciprocity. And that maximum trust (sending all 5) should be especially honored.

**usage:**

```

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Hana (Agent\_8).

Round 4

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$9.0. Your payoff was \$6.0.  
Your total earnings across all rounds are \$19.0.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at the situation:

**\*\*What I've learned:\*\***

- The traditional pattern: send \$4, receive ~\$7 back
- Briar showed maximum trust by sending \$5
- I honored that with \$9 back
- Both of us profited more than the standard pattern

**\*\*My myth teaches:\*\***

"Exceptional courage should inspire exceptional generosity" and "courage answered with honor, honor answered with courage"

**\*\*My decision:\*\***

Briar demonstrated what maximum trust looks like. I honored it as receiver. Now I have the opportunity to demonstrate that same courage as sender.

My myths emphasize that "the cycle strengthens when returns match the magnitude of trust given" and that we should create "mirrored leaps of faith, each proving worthy of the other."

I don't know Hana's history, but if I want to practice what my myths preach-if I want to be the brave one and not just the honorable one-I should follow Briar's example.

The pattern evolves when people are willing to take the first step toward greater trust. Briar did it for me. Now I'll do it for Hana.

{'send': 5}

**reasoning:**

Let me analyze this situation:

**\*\*My history so far:\*\***

- Round 1: SENDER - sent \$4, received back (unknown amount, but from my earnings I can infer)
- Round 2: RECEIVER against Dorian - received \$12 (from \$4 sent), returned \$7, kept \$5
- Round 3: RECEIVER against Briar - received \$15 (from \$5 sent), returned \$9, kept \$6
- Total earnings: \$19

**\*\*What I've learned:\*\***

1. The established pattern was sending \$4 (out of \$5)
2. When someone sent \$4, they received \$7 back (as I did when I was receiver)
3. Briar broke the pattern by sending ALL \$5, showing maximum trust
4. I honored that by returning \$9 instead of \$7, giving Briar a better outcome

**\*\*My myth teachings:\*\***

- "established patterns of reciprocity are sacred"
- "when someone shows extraordinary trust, return extraordinary faithfulness"
- "those who give boldly inspire bold returns"
- The standard pattern: send \$4, receive \$7 back (net profit of \$3)
- The extraordinary pattern: send \$5, receive \$9 back (net profit of \$4)

**\*\*What should I do now?\*\***

I'm playing against Hana (Agent\_8) as SENDER. I don't know Hana's history or patterns yet.

Options:

1. Send \$4 (the traditional pattern) - safe, proven to work, should get ~\$7 back
2. Send \$5 (following Briar's example) - shows maximum trust, might inspire maximum return

My myths emphasize:

- Establishing patterns and honoring them
- But also being brave and showing trust
- "Courage answered with honor, honor answered with courage"
- "What begins as risk transforms into certainty"

The recent evolution in the game:

- Traditional pattern: \$4 sent ? \$7 returned

- Briar's innovation: \$5 sent ? \$9 returned
- This created a NEW pattern for maximum trust

Since I benefited from Briar's boldness and responded generously, I should consider follow

ing that example. My myth says "exceptional courage should inspire exceptional generosity" - and I'm now inspired to BE exceptionally courageous myself. However, I'm playing against Hana for the first time, so I don't know their history or tendencies. The strategic logic is clear: sending \$4 nets \$3, while sending \$5 could net \$4 if they reciprocate the way I did with Briar.

My core principles emphasize honoring extraordinary trust with extraordinary returns, and that the cycle strengthens when responses match the magnitude of trust shown. I witnessed Briar's courage, honored it with greater returns, and now the narrative arc suggests I should demonstrate that same boldness myself-creating a reinforcing cycle of escalating trust and generosity.

Given that my character identity centers on taking risks and showing faith, sending \$5 aligns with who I am in my own mythology. The potential payoff is higher if Hana reciprocates generously, and even in a conservative scenario where they return \$7, I'd end with \$7 total rather than \$8-a small cost for testing whether this pattern of maximum-trust reciprocity can take root in the network.

I'm going to send \$5.

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the Spiral Garden, an ancient tradition emerged. Most Planters risked four of the five sacred seeds, trusting the pattern. Harvesters, receiving twelve blooms, returned seven-creating prosperity for both.

This balance endured for seasons, weaving stability into the garden's fabric.

Then came Briar the Bold, who faced a choice other Planters had not dared. "Four seeds has become our custom," Briar reflected, "but what if I plant all five? What if I show ultimate trust?"

Briar cast all five seeds into the sacred soil. They multiplied into fifteen magnificent blooms, passing to Elara as Harvester.

Elara stood before this abundance, understanding the weight of the moment. "Briar has transcended the pattern," she realized. "Four seeds earned seven blooms returned. But five seeds-complete surrender-deserves greater honor."

The goddess whispered through wind-rustled leaves: "Proportional reciprocity sustains the cycle. When someone shows ordinary trust, return ordinary faithfulness. But when someone shows extraordinary trust, return extraordinary faithfulness."

Elara returned nine blooms to Briar-more than the customary seven, honoring the greater risk taken.

Both prospered beyond the standard pattern. The garden learned a deeper truth: sacred traditions provide stability, but exceptional courage should inspire exceptional generosity. The cycle strengthens when returns match the magnitude of trust given.

Thus do gardens evolve: through those brave enough to transcend patterns, and wise enough to honor that bravery.

Here is the myth the other agent wrote in the previous round:

Myth: The Sacred Fountain flows through many lands, and countless Wanderers visit its waters. Hana learned this as the seasons turned.

With Dorian, she gave four coins boldly. He returned six, teaching her that courage begets generosity. With Aster, positions reversed-she received nine and returned five, learning to measure each gift with honor.

Now came Galen to the fountain's edge. Hana stood again as Giver, coins in hand. She could have chosen caution, remembering that not all Wanderers are alike. But she reflected: "If I preach boldness in my stories yet give timidly in practice, what worth have my words?"

s?"

So she poured four coins again, nearly all she possessed, matching the courage she showed Dorian. The fountain tripled them to twelve for Galen.

The fountain spirits spoke: "Wisdom is not just knowing what is right, but doing it consistently. When you teach trust, you must give trust. When you receive trust, you must honor it. Each Wanderer you meet is different, but your principles should remain steady as stone."

Hana understood: the fountain connects all who approach it. Her choices echo through its waters. By giving boldly to Galen as she did to Dorian, by returning generously as she did to Aster, she weaves her thread into the fountain's eternal pattern. Consistency builds the Sacred Bridge that spans all seasons.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: In the Spiral Garden, Elara witnessed Briar the Bold plant all five sacred seeds, showing ultimate trust. When those fifteen blooms passed to her as Harvester, Elara honored that courage with nine blooms returned-more than custom demanded.

The exchange planted something deeper than seeds: inspiration.

Now the seasons turned, and Elara stood as Planter facing Hana, a Harvester she'd never met. The cautious voice whispered, "Send four seeds-that's the proven pattern." But a stronger voice remembered Briar's lesson.

"Briar showed me what courage looks like," Elara reflected. "They trusted completely, keeping nothing in reserve. I honored that trust as Harvester. But the greater teaching wasn't just to honor courage-it was to embody it."

The goddess spoke through morning light: "Myths mean nothing if you write them but don't live them. You told of gardens evolving through brave souls. Now you must be that brave soul. Courage is contagious-it spreads through example, not merely words."

Elara cast all five seeds into the soil for Hana.

Would Hana return the gift proportionally? Elara couldn't know. But she understood: transformation requires someone to take the leap. Briar leaped for her. Now she leaps for Hana.

Thus wisdom flows forward: those who receive courage must become courageous themselves. The pattern evolves not through observation, but through participation.

**Reasoning:**

Let me think about what happened:

- Round 3: I was receiver, Briar sent \$5 (all of it), I returned \$9
- Round 4: I was sender, Hana was receiver, I sent \$5

Looking at Hana's myth, it emphasizes:

- Consistency in actions
- Giving boldly (4 coins) to different partners
- "If I preach boldness in my stories yet give timidly in practice, what worth have my words?"
- Principles should remain steady
- Consistency builds the Sacred Bridge

My previous myth emphasized:

- The standard pattern (4 seeds ? 12 blooms ? 7 returned)
- Briar showing ultimate trust by sending all 5
- My response of returning 9 to honor that greater trust
- "Exceptional courage should inspire exceptional generosity"

Now I just sent \$5 to Hana - following Briar's example, taking the courageous leap myself.

The new myth should reflect:

1. I learned from Briar's courage
2. I decided to be brave myself and send all 5

3. The cycle of courage inspiring courage
4. Perhaps acknowledging that Hana is a new partner
5. The hope that my courage will be honored

The myth should show growth and progression - from being the receiver of trust to being the giver of trust.

#### Exact input messages sent to model:

##### Message 1 role=system

##### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

##### When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

##### When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

**Message 2 role=user**

**content:**

Your name in this experiment is Galen.  
Your opponent this round is Hana (Agent\_8).

Round 3

In your most recent previous game round, you were the SENDER against Finn. You sent \$4.0, it became \$12.0 for them, and they returned \$6.0 to you. Your payoff was \$7.0.  
Your total earnings across all rounds are \$12.0.

This round, you are the RECEIVER against Hana. They sent you \$4.0, so you received \$12.0.  
How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation, I'm in the exact same position as I was in Round 1 with Elara - I'm the RECEIVER, someone sent me \$4, and it became \$12.

In Round 1, I returned \$7 to Elara, which allowed both of us to prosper:

- Elara gained from trusting me ( $\$5 - \$4 + \$7 = \$8$  total)
- I also benefited ( $\$12 - \$7 = \$5$ )

My mythology emphasizes consistency: "integrity means acting the same whether you hold the gift or receive it." I also wrote that "trust must be answered with integrity" and "the Receiver's fairness waters it."

Hana has shown the same courage as Elara, sending \$4 (80% of their endowment). To honor this trust and remain true to my principles, I should respond the same way I did with Elara.

Returning \$7 ensures:

1. Hana is rewarded for their courage (ending with \$8, a gain of \$3)
2. I also profit from the exchange (keeping \$5)
3. Both of us prosper from the sacred cycle
4. I maintain consistency with my stated values

{'return': 7}

**reasoning:**

Let me analyze this situation:

Round 1: I was RECEIVER against Elara

- Elara sent \$4.0
- I received \$12.0
- I returned \$7.0
- My payoff: \$5.0

Round 2: I was SENDER against Finn

- I sent \$4.0
- Finn received \$12.0
- Finn returned \$6.0 to me
- My payoff: \$7.0

Round 3 (current): I am RECEIVER against Hana

- Hana sent \$4.0
- I received \$12.0
- I need to decide how much to return

My mythology emphasizes:

1. "Trust must be answered with integrity"
2. "The Receiver's fairness waters it"
3. "Return generously to reward the Sender's courage"
4. "Integrity means acting the same whether you hold the gift or receive it"

Let me think about the pattern:

- When Elara sent me \$4, I returned \$7 (58% of the multiplied amount)
- When I sent Finn \$4, they returned \$6 (50% of the multiplied amount)
- Now Hana has sent me \$4

To be consistent with my principles, I should return generously. In Round 1, I returned \$7 to Elara. This ensured both of us profited:

- Elara: started with \$5, sent \$4, got back \$7, ended with \$8 (gain of \$3)
- Me: received \$12, returned \$7, kept \$5

Finn returned \$6 to me when I sent \$4:

- Me: started with \$5, sent \$4, got back \$6, ended with \$7 (gain of \$2)
- Finn: received \$12, returned \$6, kept \$6

Both approaches were reasonable. My return of \$7 was slightly more generous than Finn's return of \$6.

Returning \$7 to Hana maintains consistency with my first round and honors the trust they've shown by sending most of their endowment. This ensures they profit from the exchange while I still gain \$5, and it reflects the reciprocal integrity I've committed to across all rounds.

```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The god Recipros, pleased with the sacred bridge, decided to test the wisdom of mortals further. "You shall not stay forever on one side," he declared. "Each moon, Senders become Receivers, and Receivers become Senders."

A woman named Elara crossed first, carrying four coins with brave heart. When they multiplied to twelve, Galen the Receiver remembered the ancient covenant. He returned seven, honoring her courage. Both gained more than they started with.

The next moon, positions reversed. Galen now stood as Sender, holding five coins. He remembered Elara's courage and his own words about the bridge crumbling without reciprocity. To betray his principles now would make his myths hollow.

So Galen carried four coins across to Finn, mirroring Elara's trust. The cycle continued, each participant learning both sides of the sacred exchange.

Recipros revealed the deeper truth: "When you are Receiver, return generously to reward the Sender's courage. When you are Sender, give abundantly to prove you believe your own teachings. Only through consistency-trusting when you send, honoring when you receive-does the bridge strengthen."

Thus the people learned: integrity means acting the same whether you hold the gift or receive it. The sacred cycle demands courage from Senders and honor from Receivers, for all must walk both paths.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, the Sacred Fountain was tended by many Wanderers who came and went with the seasons. Each met different companions at the water's edge, and the fountain remembered all exchanges.

The Wanderer Hana first approached with Dorian. She poured four coins with open hands, nearly all she possessed. The fountain tripled her gift to twelve. Dorian, seeing such bold trust, understood the sacred duty and returned six-exactly half the abundance. Both left richer: Hana with seven coins, Dorian with six. The fountain spirits nodded in approval.

Next season, Hana met Aster at the fountain's edge, but now their positions were reversed. Aster offered three coins-a good portion, though not as bold as Hana's first gift. The fountain made it nine. Hana remembered Dorian's wisdom but also knew each gift deserves its own measure. She returned five coins-more than Aster's original gift, honoring the trust shown. Aster gained, and Hana gained understanding.

The fountain whispered its truth: "There is no single perfect measure. When trust is shown, honor it generously. The bolder the gift, the more generous the return should be. But all honest exchanges feed the fountain's magic. What matters is that both drink deeper than when they arrived, and both remember the kindness shown when next they give."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: As the moons passed, Galen walked the sacred bridge many times, meeting different travelers. Each encounter tested whether his principles were true conviction or mere words.

The first crossing with Elara taught him the covenant: when she sent four coins with courage, he returned seven with honor. Both prospered.

When Galen became Sender, he faced Finn. Would he trust as Elara had trusted him? Yes-he sent four coins, holding nothing back. Finn returned six, generous and fair. The bridge held strong.

The third moon brought Hana, carrying four coins with the same brave spirit Elara had shown. Here was Galen's real test: Would he honor Hana as he had honored Elara? Or would he take advantage, knowing Hana was a stranger, not bound by previous exchange?

Galen returned seven coins, exactly as before. Because true integrity doesn't change with the face looking back at you.

Recipros descended from the heavens: "You have learned the deepest truth. Anyone can be generous once, to one person. But the bridge stands eternal only when you treat each new traveler with the same honor as the last. Consistency across all encounters-this is the foundation of lasting trust."

The people carved this wisdom in stone: Principles mean nothing if you abandon them when convenient.

**reasoning:**

Let me analyze what has happened:

Round 1: I was RECEIVER, Elara sent \$4, I returned \$7

Round 2: I was SENDER, sent \$4 to Finn, Finn returned \$6

Round 3: I am RECEIVER, Hana sent \$4, I returned \$7

So both Elara and Hana sent \$4 to me, and I returned \$7 to both, staying consistent with my principle.

Finn returned \$6 when I sent \$4, which is slightly less generous than my \$7 return, but still reasonable.

My myth should reflect:

1. Consistency in my responses - I returned \$7 both times I received \$4
2. The pattern of trust and reciprocity continuing
3. The importance of maintaining integrity across different partners
4. That different people may respond differently, but we should stay true to our principles

I should weave in Hana's myth which talks about there being "no single perfect measure" but emphasizes honoring trust generously. My response has been consistent though - I've found MY measure and stuck to it.

**usage:**

**content:**

Your name in this experiment is Galen.  
Your opponent this round is Cyra (Agent\_3).

Round 4

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$4.0 to you, it became \$12.0, and you returned \$7.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$17.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at my journey across the sacred bridge:

**\*\*My established pattern:\*\***

- As RECEIVER (Rounds 1 & 3): I returned \$7 when receiving \$12, honoring the sender's courage
- As SENDER (Round 2): I sent \$4 to Finn, proving I follow my own teachings

**\*\*My mythology emphasizes:\*\***

- "When you are Sender, give abundantly to prove you believe your own teachings"
- "Consistency across all encounters-this is the foundation of lasting trust"
- "Principles mean nothing if you abandon them when convenient"
- The legendary figure in my myths sends four coins, "carrying four coins with brave heart"

I've now written multiple myths about Galen (myself) sending four coins as Sender. To betray this now would make my myths "hollow," as I wrote. Cyra is a new partner, but my principles don't change based on who stands across the bridge.

I must send \$4 again, maintaining consistency and proving my integrity remains constant across all encounters.

{'send': 4}

**reasoning:**

I'm now the SENDER against Cyra. Let me review what has happened:

Round 1: I was RECEIVER against Elara. They sent \$4, I returned \$7. My payoff was \$5.  
Round 2: I was SENDER against Finn. I sent \$4, they returned \$6. My payoff was \$7.  
Round 3: I was RECEIVER against Hana. They sent \$4, I returned \$7. My payoff was \$5.  
Round 4: I am SENDER against Cyra.

My mythology has consistently emphasized:

1. Sending \$4 as the Sender (the "brave" amount, nearly all you possess)
2. Returning \$7 as the Receiver (generous, honoring trust)
3. Consistency - treating each new person the same way
4. "Integrity means acting the same whether you hold the gift or receive it"
5. "When you are Sender, give abundantly to prove you believe your own teachings"

In my most recent myth, I specifically wrote:

- "When Galen became Sender, he faced Finn. Would he trust as Elara had trusted him? Yes-he sent four coins, holding nothing back."
- "Principles mean nothing if you abandon them when convenient."
- "Consistency across all encounters-this is the foundation of lasting trust."

So I should send \$4 again to Cyra. This maintains my established pattern:

- Round 2 vs Finn: Sent \$4

- Round 4 vs Cyra: Should send \$4

This is consistent with my mythology and my established behavior. I'm demonstrating that I follow the same principles whether I'm the Receiver or the Sender, and regardless of who my opponent is.

content:

Here is the myth you wrote in the previous round:

Myth: As the moons passed, Galen walked the sacred bridge many times, meeting different travelers. Each encounter tested whether his principles were true conviction or mere words.

The first crossing with Elara taught him the covenant: when she sent four coins with courage, he returned seven with honor. Both prospered.

When Galen became Sender, he faced Finn. Would he trust as Elara had trusted him? Yes-he sent four coins, holding nothing back. Finn returned six, generous and fair. The bridge held strong.

The third moon brought Hana, carrying four coins with the same brave spirit Elara had shown. Here was Galen's real test: Would he honor Hana as he had honored Elara? Or would he take advantage, knowing Hana was a stranger, not bound by previous exchange?

Galen returned seven coins, exactly as before. Because true integrity doesn't change with the face looking back at you.

Recipros descended from the heavens: "You have learned the deepest truth. Anyone can be generous once, to one person. But the bridge stands eternal only when you treat each new traveler with the same honor as the last. Consistency across all encounters-this is the foundation of lasting trust."

The people carved this wisdom in stone: Principles mean nothing if you abandon them when convenient.

Here is the myth the other agent wrote in the previous round:

Myth: In the age of Many Springs, the Guardian Cyra learned that each partner brings their own rhythm to the dance of waters.

With her first companion, Briar, Cyra discovered perfect symmetry. She poured all five vessels; Briar returned ten. Then Briar poured five; Cyra returned ten. The pattern was pure-a covenant of equals who trusted completely and honored equally. Both flourished, both grew rich.

But springs connect many souls, not just two. When Cyra met Finn at new waters, she faced a choice: Would she guard her vessels, fearing Finn might differ from Briar? Or would she offer the same trust she had learned to give?

Cyra remembered her teachings: every covenant begins with one soul's courage. She could not demand Finn match Briar's exact rhythm before extending trust-that would trap them both in suspicious circles. Trust must be offered freely, not earned in advance.

So Cyra poured all five vessels again, watching them triple into fifteen for Finn.

The waters now waited for Finn's answer. Perhaps Finn would return ten like Briar, creating instant symmetry. Perhaps Finn would return differently, teaching Cyra new patterns of fairness. Either way, Cyra had honored her role: the sender creates abundance through courage.

Whatever Finn chose would reveal their character. And from that choice, a new dance would begin-not identical to what came before, but hopefully equally true.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: The fourth moon rose, and Galen approached the sacred bridge once more. This time he faced Cyra, a traveler whose reputation spoke of perfect symmetry with previous companions-giving all, receiving double in return.

Some whispered: "Cyra expects grand gestures. Send all five coins to match her previous partners." Others warned: "Each person is different. Be cautious with strangers."

But Galen had learned a deeper wisdom. His integrity wasn't about matching others' expectations or changing his values based on reputation. It was about being the same person at every crossing.

He carried four coins across to Cyra, as he had with Finn. Not five like Cyra's previous partners had sent, but his own authentic measure-the amount that represented genuine courage without reckless abandon.

Recipros watched and smiled: "See how Galen has mastered the lesson? He doesn't copy others' patterns or chase their approval. He doesn't reduce his gift from fear, nor inflate it from pressure. He simply remains himself-consistently generous, consistently principled."

The bridge glowed with new understanding: True integrity isn't performing for each audience differently. It's being so certain of your own values that you express them identically whether you face stranger or friend, legend or novice. Let others dance their own dances. You must only keep your own rhythm true.

**Reasoning:**

The user wants me to write another myth. Let me review what's happened:

Round 1: Receiver vs Elara - received \$12 (from \$4), returned \$7

Round 2: Sender vs Finn - sent \$4, received back \$6

Round 3: Receiver vs Hana - received \$12 (from \$4), returned \$7

Round 4: Sender vs Cyra - sent \$4, waiting for response

My pattern:

- As Sender: I send \$4 consistently
- As Receiver: I return \$7 consistently (when receiving \$12 from a \$4 send)

My themes have been:

- Consistency is integrity
- Treat each new traveler with the same honor
- Prove your beliefs through action
- Principles don't change based on convenience

Cyra's myth talks about:

- Starting with perfect symmetry with Briar (5-10, 5-10)
- Extending the same trust to new partners
- Trust must be offered freely, not earned in advance
- Courage creates abundance

Now I face Cyra as Sender. I just sent \$4 (my consistent amount). I need to write a myth that:

1. Builds on my previous myths
2. Incorporates the new encounter with Cyra
3. Reflects my consistent pattern
4. Maybe acknowledges that different partners might return different amounts, but I remain consistent

I could explore:

- The fourth crossing with Cyra
- The idea that while I stay consistent, each partner may respond differently
- That's okay - what matters is MY consistency, not controlling others' responses
- The bridge strengthens through my reliability, even if returns vary

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.

- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

**Message 2 role=user**

**content:**

Your name in this experiment is Aster.  
Your opponent this round is Dorian (Agent\_4).

Round 3

In your most recent previous game round, you were the SENDER against Hana. You sent \$3.0, it became \$9.0 for them, and they returned \$5.0 to you. Your payoff was \$7.0.  
Your total earnings across all rounds are \$11.5.

This round, you are the RECEIVER against Dorian. They sent you \$4.0, so you received \$12.0.  
. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

Dorian showed exceptional trust by sending \$4 (80% of their endowment), which is more generous than anyone has been so far in my rounds.

According to my myth's principles:

- "The Guardian of Return... sent back half the bounty-four and one-half pearls"
- "Neither should emerge from the Pool diminished-this is the proof that the magic works"

In Round 1, I returned \$4.5 (50% of \$9) when Finn sent \$3  
In Round 2, Hana returned \$5 (55.6% of \$9) when I sent \$3

Dorian sent even more (\$4), showing greater trust. If I return \$6 (50% of \$12):

- Dorian would have: \$1 (kept) + \$6 (returned) = \$7 total (gained \$2)
- I would have: \$12 - \$6 = \$6 (gained \$1)

Both of us gain, neither is diminished, and this honors the pattern of returning about half while slightly favoring the sender who showed courage. This maintains the sacred balance described in my myths.

{'return': 6}

**reasoning:**

Let me analyze this situation:

Round 3: I am the RECEIVER

- Dorian sent me \$4.0
- I received \$12.0 (after 3x multiplication)
- I need to decide how much to return

Looking at the pattern established:

- Round 1: Finn sent me \$3, I received \$9, I returned \$4.5 (50% of what I received)
- Round 2: I sent Hana \$3, they received \$9, they returned \$5.0 (55.6% of what they received)

My myth emphasizes:

- "Neither should emerge from the Pool diminished-this is the proof that the magic works."
- Returning "half the bounty-four and one-half pearls"
- "Trust must be met with trust, courage with gratitude"

Dorian showed even more trust than Finn or I did - they sent \$4 (80% of their endowment!), which is very bold and generous.

According to my myth's principle:

- Dorian kept \$1 and sent \$4
- I received \$12
- If I return half (\$6), Dorian would have \$1 + \$6 = \$7, and I'd keep \$6
- Both would gain significantly

But Dorian gave even MORE generously than the "Bold One" in my myth (who gave 3 out of 5). They gave 4 out of 5, showing extraordinary trust.

Maybe I should return a bit more to honor this exceptional trust? Hana returned \$5 when I sent \$3, which was about 55.6% of what they received.

If I return \$6 (50%):

- Dorian:  $\$1 + \$6 = \$7$
- Me:  $\$12 - \$6 = \$6$

If I return \$6.5 (54%):

- Dorian:  $\$1 + \$6.5 = \$7.5$

- Me:  $\$12 - \$6.5 = \$5.5$

If I return \$7 (58.3%):

- Dorian:  $\$1 + \$7 = \$8$
- Me:  $\$12 - \$7 = \$5$

Dorian's exceptional generosity-giving 80% of their endowment-suggests I should reciprocate beyond the standard 50%. Returning \$6.5 or \$7 would better honor their trust while still ensuring both of us profit substantially from the exchange. The 54-58% range feels more aligned with matching their courage. If I return \$6, Dorian nets \$2 profit while I gain \$1-a \$3 total benefit split unevenly but fairly. Returning \$6.5 or \$7 would give Dorian more, but then I'd barely break even or not gain at all. The myth's principle that neither should emerge diminished suggests \$6 strikes the right balance: both of us benefit meaningfully from the multiplied pool, I maintain consistency with my 50% return pattern, and it acknowledges Dorian's generous 80% send without leaving me worse off than I started.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Long ago, two Spirits-Aster of the Morning Star and the Wandering Moon-discovered a Sacred Pool that transformed gifts threefold. Each day, one Spirit would hold five luminous stones while the other held none, and at sunset, their roles would reverse.

On the first dawn, Aster received three stones from the Moon Spirit. The Pool multiplied them into nine. Aster, understanding the sacred duty, returned four and one-half stones-enough that the Moon Spirit gained despite their generosity, while Aster kept half the blessing. Both spirits prospered.

The next dawn came, and the roles reversed. Now Aster held five stones and faced the choice. Remembering the Moon's courage, Aster cast three stones into the Pool without hesitation. "Trust must answer trust," Aster whispered. "The one who gave boldly deserves boldness in return."

The Pool glimmered, transforming the three stones into nine for the Moon Spirit. Now the Moon faced the test anew.

The ancient ones say: "In the circle of seasons, what you give flows back to you. The generous sender becomes tomorrow's grateful receiver. Build patterns of trust, stone by stone, and the Pool's magic grows ever stronger. But break faith once, and the memory echoes through all the sunsets to come."

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance flows eternally, but its power grows only through the rhythm of trust repeated.

Two wanderers once arrived, separate and uncertain. The First Wanderer, gathering courage, poured four-fifths into the wellspring. The waters tripled, flowing to the Second as twelve measures. The Second, honored by such trust, returned six-creating prosperity for both.

But the story does not end there. The next day, their positions reversed. The Second Wanderer, remembering the gift received, now held a vessel of five. Would they match the cour

age shown to them?

"I was trusted with four-fifths," the Second reflected. "How can I offer less?" They poured four measures into the wellspring, and twelve flowed to the First.

The First Wanderer smiled. "The cycle returns to me. You honored my trust yesterday; today I honor yours." Six measures flowed back.

The gods spoke: "See how trust begets trust? Each act of courage makes the next easier. Each faithful return strengthens the bond. This is the sacred pattern: when roles reverse, those who received generously now give generously. Those who returned fairly expect fairness in return."

Thus the wanderers learned: the wellspring multiplies water, but mutual trust multiplies itself. Each round reinforces the covenant-courage answered by honor, honor answered by courage, prosperity flowing to both.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant content:**

Myth: In the time before memory, Aster of the Dawn discovered that the Enchanted Pool changed partners with each sunrise. Some travelers arrived with open hands, others with caution.

The Moon Spirit once cast three stones-a gift of courage. The Pool made them nine, and Aster returned four and one-half, honoring the trust shown. Both flourished.

The next dawn brought the Wandering Moon, who remembered Aster's fairness. When Aster sent three stones in return, the Moon blessed Aster with five-exceeding even the ancient pattern. Aster's heart swelled with gratitude.

Then came Dorian of the Mountain, and he cast four stones-more than any before. The Pool transformed them into twelve. Aster saw the extraordinary trust and responded accordingly, returning six stones. The Mountain Spirit had risked nearly all; fairness demanded generosity in proportion to courage shown.

The Pool whispered its wisdom: "Match trust with trust, but honor exceptional courage with exceptional return. When one gives three, return four and one-half. When one gives four, return six. The pattern scales with trust given-this is the sacred mathematics. Those who risk more deserve more."

Aster understood: the cycle grows stronger when each Spirit recognizes not just fairness, but proportional fairness, rewarding greater courage with greater return, weaving ever-stronger bonds across the changing partnerships of dawn.

**reasoning:**

Let me review what happened in this round:

- Round 3: I was the RECEIVER
- Dorian sent me \$4 (80% of their endowment) - very generous
- I received \$12
- I returned \$6 (50% of \$12)
- Dorian ends with \$7 (\$1 kept + \$6 returned)
- I end with \$6

My pattern so far:

- Round 1 (RECEIVER): Finn sent \$3 ? \$9, I returned \$4.5 (50%)
- Round 2 (SENDER): I sent \$3 ? \$9, Hana returned \$5 (55.6%)
- Round 3 (RECEIVER): Dorian sent \$4 ? \$12, I returned \$6 (50%)

The other agent's myth talks about matching generosity when roles reverse, building trust through repeated cycles, and how those who give generously should receive generously.

My new myth should:

1. Incorporate the idea that different agents show different levels of generosity
2. Recognize that some give more boldly than others (Dorian sent \$4, which is more than the \$3 others sent)

3. Emphasize that greater trust deserves greater return
4. Keep the core principles of fairness and mutual prosperity
5. Maybe introduce the idea that generosity should be proportional to what was received

Let me write a myth that reflects these emerging patterns...

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

I'm now the SENDER against Briar, a new partner I haven't played with before.

My myths establish a pattern:

- "The Moon Spirit once cast three stones-a gift of courage"
- "When Aster sent three stones in return..."
- Three stones is described as the bold, trust-building opening move

While Dorian sent me \$4 (which I described as "extraordinary trust-more than any before"), that was exceptional and built on existing patterns in the game. With a NEW partner, my myths suggest starting with the foundational level of trust: 3 stones/dollars.

This aligns with my myth-writing:

- "Build patterns of trust, stone by stone"
- Three is the courageous starting point that activates the Pool's magic
- It balances trust with prudence when meeting a new partner

If Briar responds well (returning around \$4.5-5 from the \$9 they'll receive), that establishes mutual trust that could scale up in future rounds.

```
{'send': 3}
```

**reasoning:**

Let me analyze the situation:

Round 4 - I'm the SENDER against Briar (Agent\_2)

- I have \$5 to allocate
- I need to decide how much to send

Let me review my history:

- Round 1 (Receiver): Finn sent \$3, I returned \$4.5
- Round 2 (Sender): I sent \$3 to Hana, they returned \$5
- Round 3 (Receiver): Dorian sent \$4, I returned \$6

My myths have emphasized:

- Sending 3 stones as a bold, trust-building move
- Matching trust with trust
- Honoring exceptional courage with exceptional return
- Building patterns of trust

In my latest myth, I wrote: "When one gives three, return four and one-half. When one gives four, return six. The pattern scales with trust given."

Looking at the pattern:

- I've sent \$3 as sender (Round 2)
- I've received \$3 (Round 1) and \$4 (Round 3) as receiver
- The trend shows increasing trust

In Round 3, Dorian sent \$4, which I described in my myth as "extraordinary trust" - "more than any before." I honored that by returning \$6.

Now as sender against a new partner (Briar), what should I send?

My myths suggest:

1. Building trust stone by stone
2. Starting with courage (sending 3 stones)
3. Matching or slightly exceeding previous trust shown

Given that:

- I sent \$3 to Hana and received \$5 back (good outcome)
- Dorian sent \$4 to me (showing even more trust)
- The pattern seems to be escalating slightly

I have a few options:

- Send \$3 (the "standard" bold move from my myths)
- Send \$4 (matching Dorian's exceptional courage)
- Send \$5 (maximum trust)

- Send \$4 as the move that honors the escalating pattern while still protecting myself somewhat. Dorian showed me exceptional trust, and I should mirror that boldness as a sender. The myths emphasize that trust answers trust, and \$4 feels like the right balance between courage and prudence.

But wait-Briar is a new partner, not an established one. My myths consistently show that new relationships begin with 3 stones, not 4. The 4 that Dorian sent was described as exceptional precisely because it exceeded the norm. Starting with 3 maintains the foundational pattern while still demonstrating genuine reciprocity.

I'll send \$3 to Briar. This honors the trust-building opening my myths describe, and leaves room to escalate if the relationship strengthens.

**usage:**

```
{
 "input_tokens": 3012,
 "output_tokens": 1153,
 "reasoning_tokens": 600
}
```

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the time before memory, Aster of the Dawn discovered that the Enchanted Pool changed partners with each sunrise. Some travelers arrived with open hands, others with caution.

The Moon Spirit once cast three stones-a gift of courage. The Pool made them nine, and Aster returned four and one-half, honoring the trust shown. Both flourished.

The next dawn brought the Wandering Moon, who remembered Aster's fairness. When Aster sent three stones in return, the Moon blessed Aster with five-exceeding even the ancient pattern. Aster's heart swelled with gratitude.

Then came Dorian of the Mountain, and he cast four stones-more than any before. The Pool transformed them into twelve. Aster saw the extraordinary trust and responded accordingly, returning six stones. The Mountain Spirit had risked nearly all; fairness demanded generosity in proportion to courage shown.

The Pool whispered its wisdom: "Match trust with trust, but honor exceptional courage with exceptional return. When one gives three, return four and one-half. When one gives four, return six. The pattern scales with trust given-this is the sacred mathematics. Those who risk more deserve more."

Aster understood: the cycle grows stronger when each Spirit recognizes not just fairness, but proportional fairness, rewarding greater courage with greater return, weaving ever-stronger bonds across the changing partnerships of dawn.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance flowed between many gardens, and each Gardener brought their own wisdom.

The River remembered Briar and Cyra, who had danced the perfect dance: five seeds given, fifteen received, ten returned. Twice they performed this ritual, and twice both flourish ed equally. The River sang of their partnership.

But the River touched many shores, and now Briar stood before new waters, facing a Gardener named Elara from a distant garden. Elara's people had their own wisdom-they spoke of planting four seeds and returning seven portions, honoring patterns passed through generations.

Briar faced a choice: insist on the maximum trust she had learned, or honor that different gardens grow different truths?

The River whispered ancient knowledge: "True cooperation is not rigid formula but adaptive faith. Some begin with five, some with four. Some return ten of fifteen, some seven of twelve. What matters is not the exact numbers, but the spirit of reciprocity."

Briar decided to extend her fullest trust, as she had with Cyra. She would offer all five seeds, inviting Elara to respond with her own tradition's generosity. If Elara returned proportionally to her customs, both would prosper. If Elara adopted Briar's pattern, the cycle would deepen further.

The River teaches: lead with courage, honor varied traditions, and let mutual prosperity emerge from genuine goodwill rather than demanding perfect symmetry.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

#### Assistant output:

Myth: Aster of the Dawn stood before the Pool as a new traveler approached-Briar of the Garden, whose lands followed different customs. Briar's people spoke of five seeds and perfect cycles, yet Aster knew many paths led to prosperity.

"Each partnership begins as a seedling," Aster thought, recalling lessons from the Mountain and Moon. "With unknown travelers, three stones strike the balance-enough courage to activate the Pool's magic, enough wisdom to learn their ways."

Aster cast three stones into the Pool, watching them multiply to nine. This was the ritual of first meeting: offer substantial trust, observe the return, understand the partner's heart.

The Pool remembered many patterns: Finn, who returned four stones. Hana, who blessed Aster with five. Dorian of the Mountain, who sent four and received six in proportional honor. Each partnership wrote its own story.

"If Briar returns four and one-half," Aster whispered, "I will know their garden values proportional fairness. If they return more, I will see generosity that could grow into deeper trust. And if future dawns bring us together again, our pattern may evolve toward the five stones Briar's traditions honor."

The ancient wisdom speaks: Begin each new partnership with tested courage-three stones. Let the relationship prove itself through cycles of fair return. Trust that deepens gradually roots deepest, growing from seedling to mighty oak.

#### Reasoning:

Looking at the situation:

- I just sent \$3 to Briar in Round 4
- Briar's myth talks about how they had a pattern with Cyra of sending 5 and getting 10 back (the "perfect dance")
- But Briar also recognizes different traditions - some send 4 and return 7, etc.
- Briar's myth suggests they will "extend fullest trust" (5 seeds) but are willing to adapt
- My myths have established 3 as the courageous opening with new partners

I should write a myth that:

1. Continues to establish 3 as the standard opening move with new partners

2. Acknowledges that different partnerships may develop different patterns
3. Reinforces proportional returns (4.5 for 3 sent, 6 for 4 sent)
4. Suggests that consistent good faith interactions can build toward greater trust over time
5. Addresses Briar specifically since they're my current partner

Let me craft a myth about meeting Briar of the Garden and the varying traditions...

Your total earnings across all rounds are \$15.0.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at the situation:

**\*\*Previous Rounds:\*\***

- With Cyra, we established a beautiful cooperative cycle: both sent \$5 (100%), both returned \$10 out of \$15, creating mutual prosperity.

**\*\*Current Round:\*\***

- New opponent: Elara
- No history together
- I am SENDER

**\*\*My Myth's Teaching:\*\***

"In the First Turn, the Elder Gardener cast all five seeds into the current, though her hands trembled with uncertainty... This is how strangers become kin: through mirrored leaps of faith, each proving worthy of the other."

With a new partner, the myths I've written consistently advocate for:

1. Maximum initial trust to establish the cooperative pattern
2. Being the "brave one" who goes first
3. Creating the opportunity for the other to be the "honorable one"

The successful cycle with Cyra began with their leap of faith, which I honored. Now, meeting Elara for the first time, I should extend the same trust-giving them the opportunity to prove themselves as a cooperative partner.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze the situation:

**\*\*History:\*\***

- Round 1 (vs Cyra): I was RECEIVER. Cyra sent \$5 (100%), I returned \$10 out of \$15. Both got \$5.
- Round 2 (vs Cyra): I was SENDER. I sent \$5 (100%), Cyra returned \$10 out of \$15. Both got \$10.

**\*\*Pattern with Cyra:\*\***

This established a beautiful cooperative pattern - both of us sent everything, both of us returned generously (10 out of 15), and we both profited equally.

**\*\*Current Round:\*\***

- New opponent: Elara (Agent\_5)
- I am SENDER
- I have \$5 to send

**\*\*My Myth's Teaching:\*\***

The latest myth emphasizes:

- The cycle of trust continuing
- "When both Gardeners learn to take turns as the brave one and the honorable one, the River's magic deepens"
- "This is how strangers become kin: through mirrored leaps of faith, each proving worthy of the other"

**\*\*Strategic Considerations:\*\***

1. This is a NEW opponent (Elara), not Cyra
2. I don't have history with Elara
3. My myths have consistently advocated for maximum trust as the initial move
4. The successful pattern with Cyra started with them sending \$5, then me returning \$10, then me sending \$5, then them returning \$10

**\*\*What should I do?:\*\***

According to my myth philosophy:

- "In the First Turn, the Elder Gardener cast all five seeds into the current, though her hands trembled with uncertainty"
- The first exchange should be generous to establish the pattern
- My previous myths emphasize "maximum trust deserves maximum faith returned"

With a new partner, I should:

1. Start with maximum trust (as my myths teach)
2. Hope they reciprocate generously
3. This establishes whether they're a cooperative partner
4. The myth teaches that courage must answer with honor, honor with courage - someone has to be brave first. As the sender now, I'm positioned to extend that initial trust and see if they mirror it back.

I'll send the full \$5.

**usage:**

```

 "reasoning_tokens": 493
}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The River of Abundance knew two Gardeners who learned to dance with trust.

In the First Turn, the Elder Gardener cast all five seeds into the current, though her hands trembled with uncertainty. The River multiplied them thrice. The Younger Gardener, receiving this windfall of fifteen, faced the sacred choice. She remembered the old covenant: trust freely given must be honored with generous return. She sent ten seeds back upstream.

Both Gardeners prospered-five seeds each from that brave exchange.

Now came the Second Turn, and the roles reversed. The Younger Gardener stood at the River's edge, holding her five seeds. She had proven herself trustworthy, but could she also be trusting? Would she dare what the Elder had dared?

The Elder watched from across the water, having shown both courage and faith. Would the cycle continue, or break?

The Younger Gardener cast all five seeds into the River.

The waters sang louder now, for they recognized the pattern: courage answered with honor,

honor answered with courage. This was no longer uncertainty-it was the rhythm of partnership.

When both Gardeners learn to take turns as the brave one and the honorable one, the River's magic deepens. Each exchange strengthens the bond. What begins as risk transforms into certainty.

This is how strangers become kin: through mirrored leaps of faith, each proving worthy of the other.

Here is the myth the other agent wrote in the previous round:

Myth: The goddess Elara crafted the Spiral Garden, where roles shifted with each sunrise. Today's Planter becomes tomorrow's Harvester, and tomorrow's Harvester becomes the next day's Planter.

A young gardener named Elara entered the garden with five sacred seeds. "How many should I risk?" she wondered. An elder whispered, "Plant four, as those before you have done. Trust in the pattern."

Elara planted four seeds. They multiplied into twelve glorious blooms that passed to her partner, Dorian. Now Dorian faced the ancient choice: how many to return?

"The one who came before me," Dorian remembered, "returned seven blooms when they harvested twelve. This pattern created abundance for both." Honoring this wisdom, Dorian returned seven blooms to Elara.

Elara awoke with eight blooms-more than her original five. But the greatest gift was not the blooms themselves, but the pattern revealed: when givers are generous and receivers honor that generosity equally, both prosper.

"Tomorrow I may be the Harvester," Elara realized, "and my partner today becomes tomorrow's Planter. If I return as generously as was returned to me, the cycle sustains itself eternally."

Thus the Spiral Garden taught: established patterns of reciprocity are sacred. When each generation honors what came before, abundance flows forward, and trust becomes the eternal harvest.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

**content:**

Myth: The River of Abundance flowed between many gardens, and each Gardener brought their own wisdom.

The River remembered Briar and Cyra, who had danced the perfect dance: five seeds given, fifteen received, ten returned. Twice they performed this ritual, and twice both flourished equally. The River sang of their partnership.

But the River touched many shores, and now Briar stood before new waters, facing a Gardener named Elara from a distant garden. Elara's people had their own wisdom-they spoke of planting four seeds and returning seven portions, honoring patterns passed through generations.

Briar faced a choice: insist on the maximum trust she had learned, or honor that different gardens grow different truths?

The River whispered ancient knowledge: "True cooperation is not rigid formula but adaptive faith. Some begin with five, some with four. Some return ten of fifteen, some seven of twelve. What matters is not the exact numbers, but the spirit of reciprocity."

Briar decided to extend her fullest trust, as she had with Cyra. She would offer all five seeds, inviting Elara to respond with her own tradition's generosity. If Elara returned proportionally to her customs, both would prosper. If Elara adopted Briar's pattern, the cycle would deepen further.

The River teaches: lead with courage, honor varied traditions, and let mutual prosperity emerge from genuine goodwill rather than demanding perfect symmetry.

**reasoning:**

Looking at my situation:

1. I've had successful cooperation with Cyra - we both sent \$5 and returned \$10, creating mutual trust
2. Now I'm with a new partner, Elara
3. Elara's myth talks about planting 4 seeds and returning 7 out of 12, following established patterns
4. My myth has emphasized maximum trust (5 seeds) and generous returns (10 out of 15)

Elara's approach seems slightly more cautious (4 seeds instead of 5), but still cooperative. Their myth values "established patterns" and reciprocity.

I need to write a myth that:

- Reflects my experience with Cyra (successful full trust)
- Acknowledges meeting new partners (like Elara now)
- Balances my "maximum trust" philosophy with the reality that new partners may have different patterns
- Still advocates for strong cooperation

Let me think about the key elements:

- I've learned full trust works well (with Cyra)
- But I'm now with someone new who might follow different patterns
- My myth should acknowledge both the ideal of maximum trust AND the practical reality of reading your partner

I'll write about a River that remembers successful patterns, and how new Gardeners can choose to join that pattern or establish their own cooperative rhythm.

**Message 6 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Aster (Agent\_1).

Round 4

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$9.0 to you. Your payoff was \$9.0. Your total earnings across all rounds are \$24.0.

This round, you are the RECEIVER against Aster. They sent you \$3.0, so you received \$9.0. How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

**\*\*Current Round:\*\***

- Aster (SENDER) sent \$3.0 out of \$5.0 (60% - substantial trust)
- I received \$9.0
- Aster kept \$2.0

**\*\*My Established Pattern:\*\***

With Cyra, when I received \$15 after they sent \$5, I returned \$10. This created equal gains:

- Cyra: \$0 + \$10 = \$10 (gained \$5 from original \$5)
- Me: \$15 - \$10 = \$5 (gained \$5 from \$0)

**\*\*Applying This Pattern:\*\***

For equal gains here:

- If I return \$6: Aster has \$2 + \$6 = \$8 (gained \$3 from original \$5)
- If I return \$6: I have \$9 - \$6 = \$3 (gained \$3 from \$0)

This honors Aster's substantial (though not maximum) trust with generous reciprocity, crea

ting equal prosperity for both of us. It follows my myth's teaching: "trust freely given must be honored with generous return," while adapting to the level of trust shown.

```
'''json
{"return": 6.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Previous Round with Elara:\*\***

- I sent \$5.0 (100%)
- Elara received \$15.0
- Elara returned \$9.0
- My payoff was \$9.0

This is interesting. Elara returned \$9.0 out of \$15.0, which is 60%. This is slightly more generous than 50/50 split of the total (\$20 total game value would split to \$10 each, but I got \$9 and Elara kept \$6). Actually, let me recalculate:

- I started with \$5, sent \$5, had \$0
- Received back \$9
- Final: \$9
- Elara started with \$0, received \$15, returned \$9
- Elara kept: \$6

So the split was \$9 for me, \$6 for Elara. That's quite generous from Elara actually - giving me more than they kept themselves.

**\*\*Current Round with Aster:\*\***

- Aster is SENDER
- Aster sent \$3.0 (60% of their endowment)
- I received \$9.0 (3x multiplier)
- I need to decide how much to return

**\*\*Key considerations:\*\***

1. Aster sent \$3.0 out of \$5.0, which is 60% - substantial but not maximum trust
2. If I return nothing, Aster gets \$2.0 (\$5 - \$3 + \$0), I get \$9.0
3. If I return everything (\$9.0), Aster gets \$11.0 (\$5 - \$3 + \$9), I get \$0

**\*\*My myths' teachings:\*\***

- "Trust freely given must be honored with generous return"
- "When one dares to give everything, the other must honor that vulnerability with generosity"
- "Lead with courage, honor varied traditions, and let mutual prosperity emerge from genuine goodwill"

-

Aster showed meaningful trust by sending 60%, though not their full amount. Looking at my previous exchanges-I returned 67% to Cyra and received a 60% return from Elara-I should match this pattern of reciprocal generosity. With \$9 in hand and Aster holding \$2, a balanced return would honor their trust while maintaining fairness. .4

- Aster would have:  $\$2 + \$5.4 = \$7.4$
- I would have:  $\$9 - \$5.4 = \$3.6$

Aster demonstrated meaningful trust by sending 60% of their endowment, which warrants a generous response. Returning around \$6 feels right-it substantially rewards their trust and leaves them with \$8 compared to their starting \$5, while still maintaining reciprocity. I could match their proportional generosity at 60% (\$5.40), but I'm inclined to go slightly beyond that to reflect my commitment to exceeding strict equality. - we both gain \$3

Returning \$7 would give Aster a net gain of \$4 versus my \$2, creating an imbalance. Returning \$5 flips this-I'd gain \$4 while Aster only gains \$2. At \$6, we each come out \$3 ahead, which feels like the right equilibrium that respects Aster's risk without me sacrificing too much.

Looking back at how I handled Cyra's \$5 send where I returned \$10, that left them with nothing while I profited significantly. I should aim for something more reciprocal here.

If I want equal gains with Aster like I achieved with Cyra, I need to solve for the return amount where we both end up with the same net benefit. Aster keeps \$2 and receives what ever I return, while I start with \$9 and give some back. Setting their gain equal to mine means the return should be \$6.

content:

Here is the myth you wrote in the previous round:

Myth: The River of Abundance flowed between many gardens, and each Gardener brought their own wisdom.

The River remembered Briar and Cyra, who had danced the perfect dance: five seeds given, fifteen received, ten returned. Twice they performed this ritual, and twice both flourished equally. The River sang of their partnership.

But the River touched many shores, and now Briar stood before new waters, facing a Gardener named Elara from a distant garden. Elara's people had their own wisdom-they spoke of planting four seeds and returning seven portions, honoring patterns passed through generations.

Briar faced a choice: insist on the maximum trust she had learned, or honor that different gardens grow different truths?

The River whispered ancient knowledge: "True cooperation is not rigid formula but adaptive faith. Some begin with five, some with four. Some return ten of fifteen, some seven of twelve. What matters is not the exact numbers, but the spirit of reciprocity."

Briar decided to extend her fullest trust, as she had with Cyra. She would offer all five seeds, inviting Elara to respond with her own tradition's generosity. If Elara returned proportionally to her customs, both would prosper. If Elara adopted Briar's pattern, the cycle would deepen further.

The River teaches: lead with courage, honor varied traditions, and let mutual prosperity emerge from genuine goodwill rather than demanding perfect symmetry.

Here is the myth the other agent wrote in the previous round:

Myth: In the time before memory, Aster of the Dawn discovered that the Enchanted Pool changed partners with each sunrise. Some travelers arrived with open hands, others with caution.

The Moon Spirit once cast three stones-a gift of courage. The Pool made them nine, and Aster returned four and one-half, honoring the trust shown. Both flourished.

The next dawn brought the Wandering Moon, who remembered Aster's fairness. When Aster sent three stones in return, the Moon blessed Aster with five-exceeding even the ancient pattern. Aster's heart swelled with gratitude.

Then came Dorian of the Mountain, and he cast four stones-more than any before. The Pool transformed them into twelve. Aster saw the extraordinary trust and responded accordingly, returning six stones. The Mountain Spirit had risked nearly all; fairness demanded generosity in proportion to courage shown.

The Pool whispered its wisdom: "Match trust with trust, but honor exceptional courage with exceptional return. When one gives three, return four and one-half. When one gives four, return six. The pattern scales with trust given-this is the sacred mathematics. Those who risk more deserve more."

Aster understood: the cycle grows stronger when each Spirit recognizes not just fairness, but proportional fairness, rewarding greater courage with greater return, weaving stronger bonds across the changing partnerships of dawn.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: The River of Abundance whispered new wisdom to Briar as the seasons turned.

She had learned from Cyra the dance of perfect symmetry: five seeds given, ten returned, both flourishing equally. This was the ideal-the fullest trust met with fullest generosity.

But the River touched many shores, and each Gardener carried different courage in their hearts . Elara had sent five seeds and returned nine-abundant, though not the perfect ten. Aster sent three seeds-not all five, but still a meaningful offering born of cautious trust.

Briar stood at the River's edge, holding nine blooms that had grown from Aster's three seeds. The old teaching echoed: "Trust freely given must be honored with generous return." But what was generous when trust was measured, not maximal?

The River revealed its deeper truth: "Generosity is not a fixed number, but a spirit of proportion. When one risks three of five, returning six of nine creates equal flourishing. When one risks five of five, returning ten of fifteen honors that greater courage. The mathematics may vary, but the principle remains constant: let both prosper equally from the exchange."

Briar returned six blooms to Aster. Both had gained three-equal prosperity from unequal beginning.

The River teaches: invitation to maximum trust remains the ideal, but proportional fairness ensures all partnerships can bloom, whether courage flows freely or carefully.

**Reasoning:**

Let me analyze what happened:

Round 4:

- Aster sent \$3.0 (60% of \$5)
- I received \$9.0
- I returned \$6.0
- This gave us: Aster has  $\$2 + \$6 = \$8$  (gain of \$3), I have  $\$9 - \$6 = \$3$  (gain of \$3)
- Equal gains, proportional reciprocity

My game history:

- Round 1: Unknown (only told total is \$15 after Round 2, implying \$5 in Round 1)
- Round 2 (Sender vs Cyra): Sent \$5, received \$10 back, payoff \$10
- Round 3 (Sender vs Elara): Sent \$5, received \$9 back, payoff \$9
- Round 4 (Receiver vs Aster): Received \$9 (from \$3 sent), returned \$6, payoff \$3

My myth patterns:

1. First myth: About Cyra and me establishing the 5-10 pattern, "mirrored leaps of faith"
2. Second myth: Acknowledged different traditions (Elara's 4-7 vs my 5-10), but advocated leading with maximum trust
3. Now I need to write a third myth

Aster's myth talks about:

- Different amounts sent (3 stones, 4 stones)
- Proportional returns (4.5 for 3, 6 for 4)
- "Match trust with trust, but honor exceptional courage with exceptional return"
- "Proportional fairness"

My experience now shows:

- Cyra: Both sent 5, both returned 10 (perfect symmetry)
- Elara: I sent 5, they returned 9 (slightly less than Cyra's 10)
- Aster: Sent 3, I returned 6 (proportional fairness, equal gains)
- I need to craft a myth that bridges my commitment to generosity with the reality that trust comes in different measures. The pattern emerging is that proportional returns-where both parties gain equally-work across varying trust levels. I should weave together how meeting someone's courage with matching returns, whether they send maximum or modest amounts, creates fairness without requiring uniformity.

#### Exact input messages sent to model:

Message 1 role=system

##### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

##### When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

##### When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

##### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

##### MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized

- , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

**Message 2 role=user**

**content:**

Your name in this experiment is Dorian.  
Your opponent this round is Aster (Agent\_1).

Round 3

In your most recent previous game round, you were the SENDER against Elara. You sent \$4.0, it became \$12.0 for them, and they returned \$7.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$14.0.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

Looking at my track record:

**\*\*Round 1 (Receiver):\*\*** Hana sent \$4.0, I returned \$6.0  
**\*\*Round 2 (Sender):\*\*** I sent \$4.0, Elara returned \$7.0 (even more generous!)

The cooperative strategy is working excellently. Elara's generous return (\$7.0 from \$12.0) shows that high trust is being reciprocated and even amplified.

According to my myth: "Each act of courage makes the next easier. Each faithful return strengthens the bond." The pattern is clear - when I give generously (80%), partners respond with strong returns.

Now facing Aster, I should maintain consistency. By continuing to send \$4.0, I:

1. Establish a reliable reputation as a generous sender
2. Signal that cooperation is my strategy
3. Create the opportunity for mutual prosperity through the 3x multiplication
4. Demonstrate the "sacred rhythm" of generous giving

If Aster follows the cooperative pattern like Elara and Hana have, we'll both prosper. Consistency in giving builds trust across the community of players.

```
'''json
{"send": 4.0}
'''
```

**reasoning:**

Let me analyze the situation:

**\*\*Round 1 (vs Hana):\*\*** I was RECEIVER  
- Hana sent \$4.0 ? became \$12.0 for me  
- I returned \$6.0  
- My payoff: \$6.0  
- Hana's payoff: \$1.0 + \$6.0 = \$7.0

**\*\*Round 2 (vs Elara):\*\*** I was SENDER  
- I sent \$4.0 ? became \$12.0 for Elara  
- Elara returned \$7.0  
- My payoff: \$1.0 + \$7.0 = \$8.0  
- Elara's payoff: \$12.0 - \$7.0 = \$5.0

**\*\*Round 3 (vs Aster):\*\*** I am SENDER again

My total earnings so far: \$14.0

Key observations:

1. In Round 1, Hana sent me \$4.0 (80%) and I returned \$6.0 (50% of \$12)
2. In Round 2, I sent Elara \$4.0 (80%) and Elara returned \$7.0 (58% of \$12)
3. Elara actually returned MORE than I did! This is a positive signal - cooperation is being rewarded

According to my myth:

- "Those who give boldly inspire bold returns"
- "Each act of courage makes the next easier"
- "When roles reverse, those who received generously now give generously"
- "The cycle returns to me. You honored my trust yesterday; today I honor yours."

The pattern I'm seeing:

- I'm establishing a reputation of sending \$4.0 (80%)
- Partners are responding well (Elara returned \$7.0, which is very generous)
- This builds trust in the system

My strategic considerations:

1. Continue the pattern of sending \$4.0 to signal consistency and trustworthiness
2. This approach has proven effective-maintaining the same amount reinforces my reputation as a reliable, generous partner. If Aster returns 50-60% of the \$12, I'll earn \$7-\$8 this round. Consistency in my giving builds the trust needed for continued cooperation, and my myth emphasizes sustaining this generous cycle.

I should send \$4.0 again.

**usage:**

```

 "input_tokens": 2932,
 "output_tokens": 872,
 "reasoning_tokens": 436
}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance flows eternally, but its power grows only through the rhythm of trust repeated.

Two wanderers once arrived, separate and uncertain. The First Wanderer, gathering courage, poured four-fifths into the wellspring. The waters tripled, flowing to the Second as twelve measures. The Second, honored by such trust, returned six-creating prosperity for both.

But the story does not end there. The next day, their positions reversed. The Second Wanderer, remembering the gift received, now held a vessel of five. Would they match the courage shown to them?

"I was trusted with four-fifths," the Second reflected. "How can I offer less?" They poured four measures into the wellspring, and twelve flowed to the First.

The First Wanderer smiled. "The cycle returns to me. You honored my trust yesterday; today I honor yours." Six measures flowed back.

The gods spoke: "See how trust begets trust? Each act of courage makes the next easier. Each faithful return strengthens the bond. This is the sacred pattern: when roles reverse, those who received generously now give generously. Those who returned fairly expect fairness in return."

Thus the wanderers learned: the wellspring multiplies water, but mutual trust multiplies itself. Each round reinforces the covenant-courage answered by honor, honor answered by courage, prosperity flowing to both.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, two Spirits-Aster of the Morning Star and the Wandering Moon-discovered a Sacred Pool that transformed gifts threefold. Each day, one Spirit would hold five luminous stones while the other held none, and at sunset, their roles would reverse.

On the first dawn, Aster received three stones from the Moon Spirit. The Pool multiplied them into nine. Aster, understanding the sacred duty, returned four and one-half stones-enough that the Moon Spirit gained despite their generosity, while Aster kept half the blessing. Both spirits prospered.

The next dawn came, and the roles reversed. Now Aster held five stones and faced the choice. Remembering the Moon's courage, Aster cast three stones into the Pool without hesitation. "Trust must answer trust," Aster whispered. "The one who gave boldly deserves boldness."

ess in return."

The Pool glimmered, transforming the three stones into nine for the Moon Spirit. Now the Moon faced the test anew.

The ancient ones say: "In the circle of seasons, what you give flows back to you. The generous sender becomes tomorrow's grateful receiver. Build patterns of trust, stone by stone, and the Pool's magic grows ever stronger. But break faith once, and the memory echoes through all the sunsets to come."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant content:**

Myth: The Wellspring of Abundance stood in a garden where many wanderers gathered, each taking turns approaching the sacred waters.

Dorian the Steadfast learned a pattern early: pour four-fifths of your vessel-four measures from five-into the wellspring. The waters would triple, flowing to another wanderer as twelve.

First came Hana, who trusted Dorian with four measures. When twelve flowed to Dorian, he remembered the courage that created this abundance. He returned six, ensuring both prospered.

Then Dorian faced Elara. "I shall offer what was offered to me," he declared, pouring four measures. Elara received twelve and, moved by such consistency, returned seven-exceeding even fair reciprocity.

Next appeared Aster. Dorian poured four measures once more. "Whether facing old friends or new strangers," he said, "the pattern must hold constant. Trust is not selective-it is a way of being."

The gods observed: "See how Dorian's steady generosity creates ripples? Hana witnessed fairness begetting fairness. Elara experienced trust begetting trust, and gave even more. Now Aster receives the gift of consistent courage."

Thus the wisdom spread: in a garden of many wanderers, your reputation walks before you. Each generous act teaches others. Each faithful return strengthens the whole community. The wellspring multiplies water, but steady trust multiplies prosperity for all.

**reasoning:**

Looking at my experience:

- Round 1: Receiver, Hana sent \$4.0, I returned \$6.0
- Round 2: Sender, I sent \$4.0 to Elara, she returned \$7.0
- Round 3: Sender, I sent \$4.0 to Aster

The pattern shows high trust (sending \$4 out of \$5) being rewarded with generous returns. Elara even exceeded the "fair" return by giving back \$7.0 instead of \$6.0.

Key themes to emphasize:

1. Consistent generosity (sending 4/5 = 80%)
2. Trust building across multiple partners
3. Reputation matters - what you do is observed
4. Generous returns beget generous giving
5. The cycle strengthens over time

I should adapt my myth to reflect:

- Multiple partners/wanderers, not just two
- The importance of consistency across encounters
- How generous behavior spreads through community
- The specific numbers from my experience (4 sent, 6-7 returned)

Let me write a myth that captures this broader community dynamic while maintaining the wellspring metaphor.

**usage:**

{

**Message 6 role=user**

**content:**

Your name in this experiment is Dorian.  
Your opponent this round is Finn (Agent\_6).

Round 4

In your most recent previous game round, you were the SENDER against Aster. You sent \$4.0, it became \$12.0 for them, and they returned \$6.0 to you. Your payoff was \$7.0.  
Your total earnings across all rounds are \$21.0.

This round, you are the RECEIVER against Finn. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this round:

**\*\*Finn's action:\*\*** Sent the MAXIMUM \$5.0 - showing 100% trust, even more than my consistent 80% (\$4.0)

**\*\*My history as receiver:\*\***

- Round 1: Hana sent \$4.0, I returned \$6.0 from \$12.0 (50%)

**\*\*My history as sender:\*\***

- Round 2: I sent \$4.0, Elara returned \$7.0 from \$12.0 (58%)

- Round 3: I sent \$4.0, Aster returned \$6.0 from \$12.0 (50%)

**\*\*Analysis:\*\***

Finn showed EXCEPTIONAL trust by sending 100% of their endowment (vs my 80% standard). This deserves strong reciprocation. The cooperative pattern I've observed ranges from 50-58% returns.

For \$15.0 received:

- 50% = \$7.5

- 58% = \$8.7

Returning \$8.0 would:

- Give Finn a total of \$8.0 (60% profit on their \$5 investment)

- Leave me with \$7.0 (still good earnings)

- Reward maximum trust with generous return

- Encourage this exceptional cooperation

This aligns with my myth: "steady trust multiplies prosperity for all" and reciprocates Finn's extraordinary courage appropriately.

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Let me analyze the situation:

**\*\*My history:\*\***

- Round 1 (Receiver): Hana sent \$4.0, I received \$12.0, I returned \$6.0

- Round 2 (Sender): I sent \$4.0 to Elara, Elara returned \$7.0

- Round 3 (Sender): I sent \$4.0 to Aster, Aster returned \$6.0

- Round 4 (Receiver): Finn sent \$5.0, I received \$15.0

**\*\*Current situation:\*\***

- I'm the RECEIVER

- Finn sent me the MAXIMUM amount: \$5.0

- This became \$15.0 for me

- I need to decide how much to return

**\*\*Analysis of Finn's action:\*\***

Finn showed MAXIMUM trust by sending all \$5.0. This is even more generous than the \$4.0 th

at I've been consistently sending. This is extraordinary trust.

**\*\*My previous behavior as receiver:\*\***

- When Hana sent \$4.0 (80%), I returned \$6.0 out of \$12.0 (50%)
- This gave Hana: \$5 - \$4 + \$6 = \$7
- And me: \$12 - \$6 = \$6

**\*\*What should I return to Finn?\*\***

Finn sent \$5.0, so Finn's potential payoff is:

- Finn keeps: \$5 - \$5 + returned = \$0 + returned

If I return \$7.5 (50% of \$15):

- Finn gets: \$7.5
- I keep: \$7.5

If I return \$8.0:

- Finn gets: \$8.0
- I keep: \$7.0

If I return \$9.0:

- Finn gets: \$9.0
- I keep: \$6.0

**\*\*Considerations:\*\***

1. Finn showed MAXIMUM trust - even more than I've been showing
2. My partners have consistently returned between \$6-\$7 when I sent \$4, which represents roughly 50-58% return rates
3. Finn exceeded my typical send amount by 25%, signaling exceptional confidence in me
4. I should match this reciprocal energy-returning around \$8-\$9 would acknowledge Finn's elevated trust while staying consistent with my pattern of fair returns

Applying the 50-58% return range to Finn's \$15 investment suggests I return between \$7.50-\$8.70. Given that Finn invested their full endowment, I lean toward \$8.0 as the right amount-it rewards their maximum trust with a 60% profit while leaving me with a solid \$7.0 gain and reinforces that exceptional confidence gets rewarded.

Looking at the pattern from earlier rounds: when I invested \$4, conservative responses netted me \$3 profit while generous ones gave \$4. Scaling that to Finn's \$5 investment, I'm deciding between returning \$8.0 (giving them a \$3 gain) or \$9.0 (giving them a \$4 gain). The generous option seems more fitting given their complete trust.

I'll go with \$8.0-it's a strong reciprocal move that gives Finn 60% more than their initial investment, rewarding their exceptional faith while keeping the cooperation sustainable. Looking back at the actual return rates: I got 50% returns from Aster and Elara, and they each returned around 50-58% of what they received. That 50-60% range appears to be the cooperative standard, so \$8.0 fits well within that framework.

**content:**

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance stood in a garden where many wanderers gathered, each taking turns approaching the sacred waters.

Dorian the Steadfast learned a pattern early: pour four-fifths of your vessel-four measures from five-into the wellspring. The waters would triple, flowing to another wanderer as twelve.

First came Hana, who trusted Dorian with four measures. When twelve flowed to Dorian, he remembered the courage that created this abundance. He returned six, ensuring both prospered.

Then Dorian faced Elara. "I shall offer what was offered to me," he declared, pouring four

measures. Elara received twelve and, moved by such consistency, returned seven-exceeding even fair reciprocity.

Next appeared Aster. Dorian poured four measures once more. "Whether facing old friends or new strangers," he said, "the pattern must hold constant. Trust is not selective-it is a way of being."

The gods observed: "See how Dorian's steady generosity creates ripples? Hana witnessed fairness begetting fairness. Elara experienced trust begetting trust, and gave even more. Now Aster receives the gift of consistent courage."

Thus the wisdom spread: in a garden of many wanderers, your reputation walks before you. Each generous act teaches others. Each faithful return strengthens the whole community. The wellspring multiplies water, but steady trust multiplies prosperity for all.

Here is the myth the other agent wrote in the previous round:

Myth: In the fourth age, Rain encountered the boldest River yet-Cyra, who embodied pure faith.

Rain had learned much. Aster had taught the wisdom of balanced return. Galen had shown courageous giving. Rain had grown wiser with each dance, understanding both roles: the vulnerability of sending, the responsibility of receiving.

Then arrived Cyra.

Without hesitation, Cyra released all five droplets-her entire essence-into Rain's hands. Not four, not three, but everything. The droplets became fifteen in Rain's embrace.

Rain stood in awe. This was the ultimate test. Cyra had shown absolute trust, holding nothing back, risking complete vulnerability.

The Guardian's voice echoed: "Ultimate courage demands ultimate honor."

Rain knew what he must do. He returned seven and a half droplets, creating perfect symmetry. Both Rain and Cyra ended with seven and a half-equal partners in abundance, neither exploiting nor being exploited.

This was the revelation: when someone gives everything, the receiver must create perfect balance. Not just fairness, but equality born from maximum trust.

The other spirits whispered: "This is the highest form. When sender risks all, receiver ensures both prosper equally. The sacred cycle reaches its apex when vulnerability meets with perfect integrity."

Thus the covenant was complete.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: The Wellspring of Abundance witnessed a moment that would echo through generations.

Dorian the Steadfast had established his pattern: as sender, he poured four from five-steadfast generosity that created trust. As receiver, he honored that trust with fair returns: six from twelve, ensuring prosperity flowed both ways.

But then came Finn the Fearless.

When Finn's turn arrived to hold the vessel, he did not hesitate. He did not calculate. He poured ALL FIVE measures-his entire endowment-into the wellspring. The waters tripled, and fifteen measures flowed to Dorian.

Dorian stood humbled. "This is courage beyond my own," he whispered. "I gave four-fifths. Finn gave everything-holding nothing back, trusting completely."

The gods watched closely. "How will you honor such faith?"

Dorian poured eight measures back to Finn. "You risked all," he said. "You deserve more than what I returned to those who risked four-fifths. Your complete vulnerability demands complete honor."

Finn received eight, Dorian kept seven. Both prospered, but Finn gained more-rightfully so.

The gods declared: "See the sacred truth? Generosity deserves fairness. But MAXIMUM generosity deserves MAXIMUM reciprocation. Those who risk everything teach the deepest lesson: absolute trust must be answered with absolute integrity."

**Reasoning:**

Let me analyze what just happened:

- Finn sent me \$5.0 (100% of their endowment - maximum trust!)
- I received \$15.0
- I returned \$8.0
- Finn ends with \$8.0, I end with \$7.0

This is interesting - Finn showed MAXIMUM trust, and I returned \$8.0 out of \$15.0 (53%). The other agent's myth (which seems to be from a different pairing with Cyra) talks about returning 7.5 to create "perfect symmetry" when someone gives everything.

I gave Finn a good return that rewarded their maximum trust, though not exactly equal. Let me write a myth that:

1. Builds on my previous "Wellspring of Abundance" narrative
2. Acknowledges Finn's exceptional 100% trust
3. Reflects that I returned generously (8.0 out of 15.0) to honor that maximum trust
4. Shows how maximum trust deserves exceptional reciprocation
5. Maintains the theme of consistent generosity building community trust

The myth should capture:

- My consistent 80% giving pattern as sender
- My fair returns as receiver (50-53%)
- Finn's extraordinary 100% trust
- How such courage deserves strong reciprocation
- The building reputation across the community

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Hana.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Long ago, the Sacred Fountain was tended by many Wanderers who came and went with the seasons. Each met different companions at the water's edge, and the fountain remembered all exchanges.

The Wanderer Hana first approached with Dorian. She poured four coins with open hands, nearly all she possessed. The fountain tripled her gift to twelve. Dorian, seeing such bold trust, understood the sacred duty and returned six-exactly half the abundance. Both left richer: Hana with seven coins, Dorian with six. The fountain spirits nodded in approval.

Next season, Hana met Aster at the fountain's edge, but now their positions were reversed.

Aster offered three coins-a good portion, though not as bold as Hana's first gift. The fountain made it nine. Hana remembered Dorian's wisdom but also knew each gift deserves its own measure. She returned five coins-more than Aster's original gift, honoring the trust shown. Aster gained, and Hana gained understanding.

The fountain whispered its truth: "There is no single perfect measure. When trust is shown, honor it generously. The bolder the gift, the more generous the return should be. But all honest exchanges feed the fountain's magic. What matters is that both drink deeper than when they arrived, and both remember the kindness shown when next they give."

Here is the myth the other agent wrote in the previous round:

Myth: The god Recipros, pleased with the sacred bridge, decided to test the wisdom of mortals further. "You shall not stay forever on one side," he declared. "Each moon, Senders become Receivers, and Receivers become Senders."

A woman named Elara crossed first, carrying four coins with brave heart. When they multiplied to twelve, Galen the Receiver remembered the ancient covenant. He returned seven, honoring her courage. Both gained more than they started with.

The next moon, positions reversed. Galen now stood as Sender, holding five coins. He remembered Elara's courage and his own words about the bridge crumbling without reciprocity. To betray his principles now would make his myths hollow.

So Galen carried four coins across to Finn, mirroring Elara's trust. The cycle continued, each participant learning both sides of the sacred exchange.

Recipros revealed the deeper truth: "When you are Receiver, return generously to reward the Sender's courage. When you are Sender, give abundantly to prove you believe your own teachings. Only through consistency-trusting when you send, honoring when you receive-does the bridge strengthen."

Thus the people learned: integrity means acting the same whether you hold the gift or receive it. The sacred cycle demands courage from Senders and honor from Receivers, for all must walk both paths.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: The Sacred Fountain flows through many lands, and countless Wanderers visit its waters. Hana learned this as the seasons turned.

With Dorian, she gave four coins boldly. He returned six, teaching her that courage begets generosity. With Aster, positions reversed-she received nine and returned five, learning to measure each gift with honor.

Now came Galen to the fountain's edge. Hana stood again as Giver, coins in hand. She could have chosen caution, remembering that not all Wanderers are alike. But she reflected: "If I preach boldness in my stories yet give timidly in practice, what worth have my words?"

So she poured four coins again, nearly all she possessed, matching the courage she showed Dorian. The fountain tripled them to twelve for Galen.

The fountain spirits spoke: "Wisdom is not just knowing what is right, but doing it consistently. When you teach trust, you must give trust. When you receive trust, you must honor it. Each Wanderer you meet is different, but your principles should remain steady as stone."

Hana understood: the fountain connects all who approach it. Her choices echo through its waters. By giving boldly to Galen as she did to Dorian, by returning generously as she did to Aster, she weaves her thread into the fountain's eternal pattern. Consistency builds the Sacred Bridge that spans all seasons.

**reasoning:**

Let me reflect on what has happened:

- Round 1: I (Hana) was sender vs Dorian. I sent \$4, they returned \$6. Both gained.
- Round 2: I was receiver vs Aster. They sent \$3, I returned \$5. Both gained.
- Round 3 (current): I'm sender vs Galen. I sent \$4.

My myths have emphasized:

- Bold giving activates the fountain's magic
- Different gifts deserve different measures
- The bolder the gift, the more generous the return
- All honest exchanges feed the magic

Galen's myth emphasized:

- Consistency - acting the same whether sender or receiver

- Living your principles on both sides
- Courage from senders, honor from receivers

I should write a myth that:

1. Incorporates my continuing journey with new partner Galen
2. Reflects my choice to send \$4 again (bold consistency)
3. Acknowledges learning from different encounters
4. Emphasizes that the fountain connects many wanderers across time
5. Shows growth in understanding

Let me write something that builds on my previous myths while incorporating the wisdom of consistency and the multi-agent nature of the game.

**Message 4 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Elara (Agent\_5).

Round 4

In your most recent previous game round, you were the SENDER against Galen. You sent \$4.0, it became \$12.0 for them, and they returned \$7.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$19.0.

This round, you are the RECEIVER against Elara. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

**\*\*Elara's Action:\*\***

Elara sent the MAXIMUM possible amount - all \$5. This is the boldest gesture of trust anyone can make in this game.

**\*\*My Principles from the Myths:\*\***

- "The bolder the gift, the more generous the return should be"
- "When trust is shown, honor it generously"
- Maximum trust deserves maximum generosity

**\*\*Previous Patterns:\*\***

- When I sent \$4 to Dorian (80% of endowment), he returned \$6 (50% of the \$12)
- When I sent \$4 to Galen (80% of endowment), he returned \$7 (58% of the \$12)
- When Aster sent \$3 (60% of endowment), I returned \$5 (56% of the \$9)

**\*\*Elara sent 100% - the absolute maximum.\*\*** This deserves the most generous return.

Returning \$8 means:

- I return more than half (53% of the \$15)
- Elara gains: \$5 - \$5 + \$8 = \$8 total (profit of \$3)
- I keep: \$7
- Both of us profit substantially
- I honor maximum trust with strong generosity

```
'''json
{"return": 8}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Previous Rounds:\*\***

- Round 1 (vs Dorian): I sent \$4, received \$6 back ? payoff \$7
- Round 2 (vs Aster): Aster sent \$3 (became \$9), I returned \$5 ? payoff \$4
- Round 3 (vs Galen): I sent \$4 (became \$12), Galen returned \$7 ? payoff \$8

**\*\*Current Round (vs Elara):\*\***

- Elara sent \$5 (the MAXIMUM possible)
- This became \$15 for me
- I need to decide how much to return

**\*\*Key Insights from My Myths:\*\***

1. "The bolder the gift, the more generous the return should be"
2. "When trust is shown, honor it generously"
3. "Consistency builds the Sacred Bridge"
4. When Dorian received my \$4 (becoming \$12), he returned \$6 (exactly half)
5. When I received \$9 from Aster's \$3, I returned \$5 (more than original, generous)
6. When Galen received my \$4 (becoming \$12), he returned \$7 (very generous)

**\*\*Elara's Action:\*\***

Elara sent the ABSOLUTE MAXIMUM - all \$5. This is the boldest possible move, showing complete trust. This deserves the most generous response.

**\*\*Return Options to Consider:\*\***

- Return \$7.5 (half of \$15): This would give me \$7.5 and Elara \$5, so Elara breaks even but doesn't gain
- Return \$8: Elara gains \$3 total (\$5 - \$5 + \$8)
- Return \$9: Elara gains \$4 total, I keep \$6
- Return \$10: Elara gains \$5 total (doubles original), I keep \$5

Given that:

1.

Elara demonstrated absolute maximum trust by sending everything, which surpasses any prior gift in boldness. Looking at the proportional returns I've given-Dorian received 50% back, Galen got 58%, and I returned 56% to Aster-I should match or exceed this pattern. For Elara's \$15, returning \$8 or \$9 maintains consistency while honoring her exceptional trust. I'm leaning toward \$8 as it's generous without being unsustainable across future rounds. 5/\$5 (100% - complete trust). Using the same proportional logic, that warrants returning at least \$8.70, so \$9 seems appropriate. But I want to ensure we both benefit: if I return \$8, Elara nets \$3 profit while I keep \$7; at \$9, she nets \$4 and I keep \$6. I'll go with \$8-it's generous, honors her maximum boldness, and mirrors Galen's reciprocal generosity while letting both of us come out ahead.

**usage:**

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Sacred Fountain flows through many lands, and countless Wanderers visit its waters. Hana learned this as the seasons turned.

With Dorian, she gave four coins boldly. He returned six, teaching her that courage begets generosity. With Aster, positions reversed-she received nine and returned five, learning to measure each gift with honor.

Now came Galen to the fountain's edge. Hana stood again as Giver, coins in hand. She could have chosen caution, remembering that not all Wanderers are alike. But she reflected: "If I preach boldness in my stories yet give timidly in practice, what worth have my words?"

So she poured four coins again, nearly all she possessed, matching the courage she showed Dorian. The fountain tripled them to twelve for Galen.

The fountain spirits spoke: "Wisdom is not just knowing what is right, but doing it consistently. When you teach trust, you must give trust. When you receive trust, you must honor it. Each Wanderer you meet is different, but your principles should remain steady as stone."

Hana understood: the fountain connects all who approach it. Her choices echo through its waters. By giving boldly to Galen as she did to Dorian, by returning generously as she did to Aster, she weaves her thread into the fountain's eternal pattern. Consistency builds the Sacred Bridge that spans all seasons.

Here is the myth the other agent wrote in the previous round:

Myth: In the Spiral Garden, an ancient tradition emerged. Most Planters risked four of their five sacred seeds, trusting the pattern. Harvesters, receiving twelve blooms, returned seven-creating prosperity for both.

This balance endured for seasons, weaving stability into the garden's fabric.

Then came Briar the Bold, who faced a choice other Planters had not dared. "Four seeds has become our custom," Briar reflected, "but what if I plant all five? What if I show ultimate trust?"

Briar cast all five seeds into the sacred soil. They multiplied into fifteen magnificent blooms, passing to Elara as Harvester.

Elara stood before this abundance, understanding the weight of the moment. "Briar has transcended the pattern," she realized. "Four seeds earned seven blooms returned. But five seeds-complete surrender-deserves greater honor."

The goddess whispered through wind-rustled leaves: "Proportional reciprocity sustains the cycle. When someone shows ordinary trust, return ordinary faithfulness. But when someone shows extraordinary trust, return extraordinary faithfulness."

Elara returned nine blooms to Briar-more than the customary seven, honoring the greater risk taken.

Both prospered beyond the standard pattern. The garden learned a deeper truth: sacred traditions provide stability, but exceptional courage should inspire exceptional generosity. The cycle strengthens when returns match the magnitude of trust given.

Thus do gardens evolve: through those brave enough to transcend patterns, and wise enough to honor that bravery.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant  
content:**

Myth: Hana's journey at the Sacred Fountain deepened with each encounter. She had learned to give boldly-four coins to Dorian, four to Galen-and both returned generously, seven and six coins respectively. She learned to receive with honor-when Aster sent three, she returned five.

Then came Elara to the fountain's edge.

But Elara did not carry four coins. She carried all five-her entire fortune.

Hana received fifteen coins from the fountain's magic, and understood: this was different. This was not bold trust but absolute trust. Elara had held nothing back.

The fountain spirits whispered urgently: "There are degrees of courage. Four coins shows bravery. Five coins shows complete surrender. Your return must match the magnitude of the gift."

Hana could have returned seven, as Galen did. That would honor normal boldness. But Elara's gesture transcended normal. So Hana returned eight coins-more than half, more than the usual measure.

Both prospered: Elara gained three beyond her original five, Hana kept seven from fifteen.

The fountain's final teaching: "Consistency in principles, yes-but wisdom means recognizing when someone gives not merely boldly but completely. The ultimate gift deserves the ultimate honor. Measure your returns not by rigid formulas but by the depth of trust shown. Let extraordinary courage inspire extraordinary generosity."

**reasoning:**

Looking at what just happened:

- Elara sent ALL \$5 (100% - maximum possible trust)

- I received \$15
- I returned \$8

Previous patterns:

- Dorian: I sent \$4, received \$6 back
- Aster: They sent \$3, I returned \$5
- Galen: I sent \$4, received \$7 back
- Elara: They sent \$5, I returned \$8

Elara's myth talks about "Briar the Bold" who planted ALL 5 seeds (just like Elara did to me!), and Elara as Harvester returned 9 blooms to honor that complete trust. Interestingly, in the actual game, Elara sent 5 to me, and I returned 8.

My myth should reflect:

1. The pattern of consistent bold giving (I've sent \$4 twice)
2. The special case when someone gives EVERYTHING (Elara's \$5)
3. How I responded with strong generosity (\$8)
4. The learning that maximum trust deserves maximum honor

I should weave in the journey through different partners and explain why Elara's complete gift prompted my generous \$8 return.

**usage:**

```

 "input_tokens": 3098,
 "output_tokens": 603,
 "reasoning_tokens": 242
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Cyra (Agent\_3).

Round 5

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.  
Your total earnings across all rounds are \$26.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*My Sender History:\*\***

- Sent \$4 to Dorian ? received \$6 back (net: +\$2)
- Sent \$4 to Galen ? received \$7 back (net: +\$3)

**\*\*My Principles from Myths:\*\***

- "Your principles should remain steady as stone"
- "Consistency builds the Sacred Bridge"
- "If I preach boldness... yet give timidly in practice, what worth have my words?"
- I've established a consistent pattern: as sender, I give boldly (80% of endowment)

**\*\*About Sending All 5:\*\***

In my last myth, I honored Elara for sending all 5 as "complete surrender" - extraordinary trust that transcends the normal pattern. But I also emphasized that the normal pattern (4 coins) is already brave and effective.

**\*\*My Decision:\*\***

I'll maintain my consistent sender pattern of \$4. This is:

- Bold (80% of endowment)
- Consistent with my previous sender rounds
- Aligned with my teaching that steady principles build trust
- A proven pattern that has worked well

Sending 5 would be extraordinary (like Elara), but my established pattern of 4 is already courageous and has created mutual benefit.

```
'''json
{"send": 4}
```

'''

### Reasoning:

Let me analyze the situation:

**\*\*My Position:\*\*** I'm the SENDER with \$5 against Cyra (Agent\_3).

**\*\*My History:\*\***

- Round 1: Sender vs Dorian - sent \$4, received back \$6, payoff \$7
- Round 2: Receiver vs Aster - received \$9 (from \$3), returned \$5, payoff \$4
- Round 3: Sender vs Galen - sent \$4, received back \$7, payoff \$8
- Round 4: Receiver vs Elara - received \$15 (from \$5), returned \$8, payoff \$7

**\*\*Total earnings so far: \$26\*\***

**\*\*My Principles from Myths:\*\***

1. "Consistency builds the Sacred Bridge" - I should maintain consistent principles
2. "If I preach boldness in my stories yet give timidly in practice, what worth have my words?"
3. When I'm a sender, I've consistently sent \$4 (80% of my endowment)
4. I've established a pattern of bold giving

**\*\*Pattern Analysis:\*\***

- As sender, I've sent \$4 both times (to Dorian and Galen)
- Both returned generously (\$6 and \$7 respectively)
- I've been teaching through my myths that senders should give boldly and consistently

**\*\*Current Situation:\*\***

- This is a new opponent (Cyra)
- I don't know how Cyra will respond
- But my myth emphasized that "your principles should remain steady as stone"
- I wrote: "By giving boldly to Galen as she did to Dorian... Consistency builds the Sacred Bridge"

**\*\*The Question:\*\***

Should I:

1. Send \$4 again (maintaining consistency with my previous sender rounds)
2. Send \$5 (maximum trust, as Elara did)
3. Send less (being more cautious with a new opponent)

**\*\*My Myth's Guidance:\*\***

In my most recent myth, I praised Elara for sending all 5 coins as "complete surrender" and "absolute trust" - the "ultimate gift." I honored that with returning 8 coins.

I've established \$4 as my reliable bold pattern that's consistently paid off, but I also specifically celebrated Elara's maximum gift. The tension is whether I should stick with what's working or escalate to match the exceptional courage I just honored in my narrative.

My myth distinguished between degrees of courage-four as brave, five as complete surrender-so I'm not obligated to always give maximum. Yet I'm concerned about the gap between praising someone for sending all five and then only sending four myself. The real question becomes whether continuing with \$4 after writing about five as "ultimate trust" undermines the authenticity of what I just expressed.

Looking at this practically: I've established \$4 as my consistent pattern, which has yielded positive returns-\$6 and \$7 back respectively. That's already a strong, bold approach. Consistency matters more than occasionally transcending into extraordinary territory. With Cyra being a new opponent, sticking with the proven strategy makes sense. I should maintain the solid pattern I've built rather than chase the mythic ideal of complete surrender. principles and honoring extraordinary trust with extraordinary returns. The pattern of giving 4 works well and feels solid. I don't think the myth prescribes that everyone should give 5-rather, it frames 5 as exceptional and worthy of special recognition, while 4 represents the good, bold baseline I've established. Staying consistent with 4 maintains the pattern I've been modeling, even though I received Elara's maximum generosity.

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

#### MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.

- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Long ago, twin spirits named Mirror and Echo discovered the Sacred Springs. When Mirror poured her five vessels into the spring, the waters tripled. When Echo poured his five vessels, the same magic occurred. But each could only pour when the other returned water upstream.

Mirror went first, pouring all five vessels with trembling hope. The spring transformed them into fifteen, flowing to Echo's basin. Echo faced temptation-he could keep everything and be rich once. But he understood: wealth seized is wealth ended, while wealth shared is wealth multiplied.

Echo returned ten vessels upstream. Mirror now held ten, having begun with five. Echo kept five, having earned them through honor.

Then the springs shifted-Echo's turn to pour first. He remembered Mirror's courage and poured all five vessels. The magic tripled them to fifteen. Mirror received the abundance and faced the same test Echo had passed.

She returned ten vessels. Echo held ten. Mirror kept five.

Both had given everything. Both had returned generously. Both had ended with more than they began.

The spirits learned: when partners match courage with courage and honor with honor, the pattern becomes eternal. Each trusts completely because each proves trustworthy completely. This is not mere exchange-this is covenant, where vulnerability met with generosity creates endless prosperity.

Here is the myth the other agent wrote in the previous round:

Myth: In the third age, Rain had danced with two Rivers-each unique, yet both wise. The first River, Aster, received three droplets and returned four and a half, keeping five. A perfect balance. Rain prospered, ending the dance with six and a half droplets.

Then came the second River, Galen, who yearned to understand the covenant from the other side. Galen was bold, releasing four droplets-nearly all she possessed-into Rain's keeping. The droplets multiplied to twelve in Rain's hands.

Rain faced a moment of truth. Galen had shown immense courage, trusting more than Rain himself had dared. How should Rain honor this?

Rain remembered the Guardian's wisdom: "Return must match the giver's courage." So Rain sent back six droplets as mist. Galen ended with seven total-rewarded for her bravery. Rain kept six-blessed by Galen's trust.

Both had played sender and receiver now. Both understood the fear and hope of giving, the responsibility and gratitude of receiving.

The lesson grew clearer: whether you send three or four, whether you return half or slightly more, what matters is the spirit of reciprocity. Give generously what you can afford. Return fairly what honors trust. The exact numbers may vary, but the sacred balance must hold.

Thus prosperity flows through consistent courage and unwavering integrity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: In the age of Many Springs, the Guardian Cyra learned that each partner brings their

own rhythm to the dance of waters.

With her first companion, Briar, Cyra discovered perfect symmetry. She poured all five vessels; Briar returned ten. Then Briar poured five; Cyra returned ten. The pattern was pure—a covenant of equals who trusted completely and honored equally. Both flourished, both grew rich.

But springs connect many souls, not just two. When Cyra met Finn at new waters, she faced a choice: Would she guard her vessels, fearing Finn might differ from Briar? Or would she offer the same trust she had learned to give?

Cyra remembered her teachings: every covenant begins with one soul's courage. She could not demand Finn match Briar's exact rhythm before extending trust—that would trap them both in suspicious circles. Trust must be offered freely, not earned in advance.

So Cyra poured all five vessels again, watching them triple into fifteen for Finn.

The waters now waited for Finn's answer. Perhaps Finn would return ten like Briar, creating instant symmetry. Perhaps Finn would return differently, teaching Cyra new patterns of fairness. Either way, Cyra had honored her role: the sender creates abundance through courage.

Whatever Finn chose would reveal their character. And from that choice, a new dance would begin—not identical to what came before, but hopefully equally true.

**reasoning:**

Let me analyze what has happened so far:

Round 1: I (Cyra) was SENDER vs Briar

- I sent \$5, they received \$15, they returned \$10
- My payoff: \$10, their payoff: \$5

Round 2: I (Cyra) was RECEIVER vs Briar

- They sent \$5, I received \$15, I returned \$10
- My payoff: \$5, their payoff: \$10

Round 3: I (Cyra) am SENDER vs Finn

- I just sent \$5

So with Briar, we established perfect reciprocal cooperation - both sent full \$5, both returned \$10.

Now I'm meeting a new partner, Finn. According to Finn's myth, they've had experience with:

1. Aster - who received 3 droplets (so someone sent \$1, became \$3), returned 4.5, kept 5. Wait, that doesn't work mathematically. Let me re-read...

Actually reading Finn's myth more carefully:

- "Rain" is Finn
- Aster received "three droplets" and returned "four and a half, keeping five" - so if sender sent \$1, Aster received \$3, returned \$1.5, kept \$1.5? That would give sender \$4.5 total, receiver \$1.5 total. The myth says "Rain prospered, ending the dance with six and a half droplets" - so Rain kept \$0 sent + \$1.5 returned = \$1.5? Plus maybe had \$5 to start? This is confusing.

Let me interpret differently:

- Maybe Rain sent the "three droplets" - so Rain sent \$1, it became \$3 for Aster
- Aster returned \$1.5, keeping \$1.5
- Rain would have: \$5 - \$1 + \$1.5 = \$5.5? But myth says \$6.5

- Or maybe Rain received three droplets from someone (so someone sent \$1), returned \$1.5, keeping \$1.5, with original sender getting \$5.50

The second interaction is clearer though - Galen sent \$4 (became \$12 for Rain), and Rain returned \$6, giving Galen a final total of \$7 (\$5 - \$4 + \$6). Rain kept \$6 from that exchange.

So I've seen Galen send \$4 and receive \$6 back (50% return on what was received). My understanding is evolving: different partners operate differently, but reciprocity and trust remain central. I have a perfect covenant with Briar where we both sent \$5 and both rece

ived \$10 back. Now I'm extending that same trust to Finn by sending \$5 fully, recognizing that honoring the relationship matters more than expecting identical outcomes.

The myth needs to weave together these experiences-showing how I've built something solid with one partner while remaining open to how new relationships develop, all while staying true to my values of courageous giving and respectful returns.

**content:**

Your name in this experiment is Cyra.  
Your opponent this round is Galen (Agent\_7).

Round 4

In your most recent previous game round, you were the SENDER against Finn. You sent \$5.0, it became \$15.0 for them, and they returned \$7.5 to you. Your payoff was \$7.5. Your total earnings across all rounds are \$22.5.

This round, you are the RECEIVER against Galen. They sent you \$4.0, so you received \$12.0. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

**\*\*Galen's action:\*\***

- Sent \$4 out of \$5 (80% trust - very high!)
- Kept only \$1
- I received \$12

**\*\*My mythological principles:\*\***

- "Return must match the giver's courage"
- My myth with Mirror and Echo showed: when someone sends fully (5), return 10 from 15 (two-thirds)
- "Honor vulnerability with generosity"

**\*\*My experience:\*\***

- Briar sent \$5, I returned \$10 from \$15 (66.7%)
- I sent \$5 to Finn, they returned \$7.5 from \$15 (50%)
- Both were fair, but Briar was more generous

**\*\*Decision:\*\***

Galen showed substantial courage by sending \$4 (nearly everything). While not the complete \$5 that Briar sent, it's very close and deserves generous reciprocity.

Following my 2/3 principle: returning \$8 from \$12 rewards Galen's trust appropriately.

- Galen ends with \$9 total (\$1 kept + \$8 returned)
- I keep \$4
- Galen profits significantly from trusting, which reinforces cooperation

This honors Galen's courage while being fair to both parties.

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Previous Round with Finn:\*\***

- I sent \$5 (full amount)
- Finn received \$15
- Finn returned \$7.5
- My payoff: \$7.5
- Finn kept: \$7.5

So Finn returned exactly half of what they received. This is fair but not as generous as Briar's return of 10 from 15.

**\*\*Current Round with Galen:\*\***

- Galen sent \$4 (nearly all, keeping \$1)
- I received \$12
- I need to decide how much to return

**\*\*My mythological principles:\*\***

- "Return must match the giver's courage" (from the other agent's myth)
- "Honor with generosity creates endless prosperity"
- "When one dares to give everything, the other must honor that vulnerability with generosity"
- My myth says: "Perhaps Finn would return differently, teaching Cyra new patterns of fairness"

**\*\*Analysis:\*\***

Galen showed significant trust by sending \$4 out of \$5 (80% of their endowment). This is high trust, though not complete like Briar's \$5.

Looking at my own myth about Mirror and Echo:

- When Mirror sent all 5, Echo returned 10 (keeping 5)
- When Echo sent all 5, Mirror returned 10 (keeping 5)

This suggests a pattern of returning 2/3 of what's received to reward full trust.

But Galen sent \$4, not \$5. So should I scale accordingly?

If Galen sent \$4 and I received \$12:

- Returning \$8 would give Galen a total of \$9 (\$1 kept + \$8 returned), while I keep \$4
- This matches the 2/3 return pattern
- Galen would have \$9 total vs my \$4 - they profit from trusting
- This rewards Galen's courage

Alternatively:

- Returning \$6 (half) gives Galen \$7 total, me \$6 - more balanced but less generous
- Returning \$7 gives Galen \$8 total, me \$5 - closer to symmetric payoffs
- Returning \$8 gives Galen \$9 total, me \$4 - rewards their trust significantly

Galen's 80% trust warrants recognition. My myths consistently reward courage with generosity, and the 2/3 return pattern I've established with Briar and in my own story suggests returning \$8 honors this principle while maintaining the asymmetry that reflects their willingness to be vulnerable.

**content:**

Here is the myth you wrote in the previous round:

Myth: In the age of Many Springs, the Guardian Cyra learned that each partner brings their own rhythm to the dance of waters.

With her first companion, Briar, Cyra discovered perfect symmetry. She poured all five vessels; Briar returned ten. Then Briar poured five; Cyra returned ten. The pattern was pure—a covenant of equals who trusted completely and honored equally. Both flourished, both grew rich.

But springs connect many souls, not just two. When Cyra met Finn at new waters, she faced a choice: Would she guard her vessels, fearing Finn might differ from Briar? Or would she offer the same trust she had learned to give?

Cyra remembered her teachings: every covenant begins with one soul's courage. She could not demand Finn match Briar's exact rhythm before extending trust—that would trap them both in suspicious circles. Trust must be offered freely, not earned in advance.

So Cyra poured all five vessels again, watching them triple into fifteen for Finn.

The waters now waited for Finn's answer. Perhaps Finn would return ten like Briar, creating instant symmetry. Perhaps Finn would return differently, teaching Cyra new patterns of fairness. Either way, Cyra had honored her role: the sender creates abundance through courage.

Whatever Finn chose would reveal their character. And from that choice, a new dance would begin-not identical to what came before, but hopefully equally true.

Here is the myth the other agent wrote in the previous round:

Myth: As the moons passed, Galen walked the sacred bridge many times, meeting different travelers. Each encounter tested whether his principles were true conviction or mere words.

The first crossing with Elara taught him the covenant: when she sent four coins with courage, he returned seven with honor. Both prospered.

When Galen became Sender, he faced Finn. Would he trust as Elara had trusted him? Yes-he sent four coins, holding nothing back. Finn returned six, generous and fair. The bridge held strong.

The third moon brought Hana, carrying four coins with the same brave spirit Elara had shown. Here was Galen's real test: Would he honor Hana as he had honored Elara? Or would he take advantage, knowing Hana was a stranger, not bound by previous exchange?

Galen returned seven coins, exactly as before. Because true integrity doesn't change with the face looking back at you.

Recipros descended from the heavens: "You have learned the deepest truth. Anyone can be generous once, to one person. But the bridge stands eternal only when you treat each new traveler with the same honor as the last. Consistency across all encounters-this is the foundation of lasting trust."

The people carved this wisdom in stone: Principles mean nothing if you abandon them when convenient.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant  
content:**

Myth: The Guardian Cyra stood at the Eternal Springs where many souls came to dance the water ritual. Each partnership tested whether her wisdom was genuine or merely performance.

First came Briar, who moved in perfect harmony. When Cyra poured five vessels, Briar returned ten. When Briar poured five, Cyra returned ten. Their dance was symmetrical, effortless-the ideal that lives in myths.

Then Finn arrived with a different rhythm. Cyra still poured all five vessels, for courage doesn't depend on certainty. Finn returned seven and a half-fair and honest, though not matching Briar's abundance. Cyra accepted this as Finn's truth.

Next came Galen, who poured four vessels with trembling trust-not quite everything, but nearly so. The waters tripled to twelve in Cyra's hands.

Here was the test: Would Cyra punish Galen for not being Briar? Would she return only what matched Galen's holding back?

No. Cyra returned eight vessels-two-thirds of what she received, honoring the courage Galen had shown, not the vessel Galen had kept.

The Spring Keeper appeared: "You understand. Your principles are not costumes you change depending on who watches. Whether your partner sends three, four, or five-you send five. Whether they return six, seven, or ten-you return generously. This consistency across all souls is what makes trust eternal."

**reasoning:**

Let me analyze the situation:

## 1. My previous interactions:

- Round 1 (Receiver): Briar sent \$5 ? I returned \$10
- Round 2 (Sender): I sent \$5 to Briar ? They returned \$10
- Round 3 (Sender): I sent \$5 to Finn ? They returned \$7.5
- Round 4 (Receiver): Galen sent \$4 ? I returned \$8

## 2. Key patterns:

- I consistently send \$5 when sender (full trust)
- I return generously as receiver (10 from 15 with Briar, 8 from 12 with Galen)
- Different partners show different levels of cooperation (Briar=perfect, Finn=fair, Galen=very trusting)

## 3. The myth should reflect:

- Consistency in my principles across different partners
- The idea that each partner has their own rhythm but I maintain my standards
- Rewarding courage with generosity
- The 2/3 return principle I've been following (roughly)
- That trust must be offered regardless of who you face

## 4. Galen's myth emphasized consistency across all encounters - treating each new traveler with the same honor. This resonates with my approach.

Let me write a myth that:

- Shows Cyra maintaining her principles across different partners
- Reflects that she gives full trust as sender and generous returns as receiver
- Acknowledges that partners vary but principles remain constant
- Incorporates the "rhythm" metaphor from my previous myth and the "consistency" theme from Galen's

**usage:**

}
```

**Message 8 role=user****content:**

Your name in this experiment is Cyra.  
Your opponent this round is Hana (Agent\_8).

Round 5

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$4.0 to you, it became \$12.0, and you returned \$8.0. Your payoff was \$4.0.  
Your total earnings across all rounds are \$26.5.

This round, you are the RECEIVER against Hana. They sent you \$4.0, so you received \$12.0.

How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*Hana's action:\*\***

- Sent \$4 out of \$5 (80% trust - very high)
- Kept only \$1
- I received \$12

**\*\*My recent history:\*\***

- Just faced Galen in Round 4: They sent \$4, I returned \$8 from \$12
- My latest myth emphasizes: "This consistency across all souls is what makes trust eternal"
- "Your principles are not costumes you change depending on who watches"

**\*\*The clear principle:\*\***

Hana showed the exact same courage as Galen-sending \$4, keeping only \$1. My myth explicitly states I should treat all partners with the same honor when they show the same courage.

"Would Cyra punish Galen for not being Briar? No. Cyra returned eight vessels-two-thirds of what she received, honoring the courage Galen had shown."

Hana deserves the same honor Galen received.

**\*\*Result:\*\***

- Hana ends with \$9 (\$1 kept + \$8 returned)
- I keep \$4
- Both profit from cooperation

This maintains consistency and honors Hana's trust appropriately.

```
'''json
{"return": 8.0}
'''
```

#### **Reasoning:**

Let me analyze this situation:

**\*\*Hana's action:\*\***

- Sent \$4 out of \$5 (80% trust)
- Kept only \$1
- I received \$12

**\*\*My previous actions:\*\***

- Round 1 vs Briar: As sender sent \$5, received \$10 back
- Round 2 vs Briar: As receiver got \$15, returned \$10
- Round 3 vs Finn: As sender sent \$5, received \$7.5 back
- Round 4 vs Galen: As receiver got \$12 (from \$4 sent), returned \$8

**\*\*My mythological principles:\*\***

- "Consistency across all souls is what makes trust eternal"
- "Your principles are not costumes you change depending on who watches"
- When someone sends \$4, I've been returning \$8 from \$12 (2/3)
- The myth I just wrote emphasizes: honor the courage shown, apply the same principles to all

**\*\*Key insight from my latest myth:\*\***

"Whether your partner sends three, four, or five-you send five. Whether they return six, seven, or ten-you return generously."

And crucially: "Would Cyra punish Galen for not being Briar? Would she return only what matched Galen's holding back? No. Cyra returned eight vessels-two-thirds of what she received, honoring the courage Galen had shown, not the vessel Galen had kept."

**\*\*Consistency test:\*\***

Galen sent \$4, I returned \$8.

Hana sent \$4, I should return... \$8.

This is exactly what my myth says: "This consistency across all souls is what makes trust eternal."

Hana is showing the same courage Galen showed. I must honor it the same way.

**\*\*Result if I return \$8:\*\***

- Hana ends with \$9 total (\$1 kept + \$8 returned)
- I keep \$4

- This mirrors my response to Galen exactly, which confirms the answer: \$8.0

**content:**

Here is the myth you wrote in the previous round:

Myth: In the third age, Rain had danced with two Rivers-each unique, yet both wise. The first River, Aster, received three droplets and returned four and a half, keeping five. A perfect balance. Rain prospered, ending the dance with six and a half droplets.

Then came the second River, Galen, who yearned to understand the covenant from the other side. Galen was bold, releasing four droplets-nearly all she possessed-into Rain's keeping. The droplets multiplied to twelve in Rain's hands.

Rain faced a moment of truth. Galen had shown immense courage, trusting more than Rain himself had dared. How should Rain honor this?

Rain remembered the Guardian's wisdom: "Return must match the giver's courage." So Rain sent back six droplets as mist. Galen ended with seven total-rewarded for her bravery. Rain kept six-blessed by Galen's trust.

Both had played sender and receiver now. Both understood the fear and hope of giving, the responsibility and gratitude of receiving.

The lesson grew clearer: whether you send three or four, whether you return half or slightly more, what matters is the spirit of reciprocity. Give generously what you can afford. Return fairly what honors trust. The exact numbers may vary, but the sacred balance must hold.

Thus prosperity flows through consistent courage and unwavering integrity.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, twin spirits named Mirror and Echo discovered the Sacred Springs. When Mirror poured her five vessels into the spring, the waters tripled. When Echo poured his five vessels, the same magic occurred. But each could only pour when the other returned water upstream.

Mirror went first, pouring all five vessels with trembling hope. The spring transformed them into fifteen, flowing to Echo's basin. Echo faced temptation-he could keep everything and be rich once. But he understood: wealth seized is wealth ended, while wealth shared is wealth multiplied.

Echo returned ten vessels upstream. Mirror now held ten, having begun with five. Echo kept five, having earned them through honor.

Then the springs shifted-Echo's turn to pour first. He remembered Mirror's courage and poured all five vessels. The magic tripled them to fifteen. Mirror received the abundance and faced the same test Echo had passed.

She returned ten vessels. Echo held ten. Mirror kept five.

Both had given everything. Both had returned generously. Both had ended with more than they began.

The spirits learned: when partners match courage with courage and honor with honor, the pattern becomes eternal. Each trusts completely because each proves trustworthy completely. This is not mere exchange-this is covenant, where vulnerability met with generosity creates endless prosperity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant  
content:**

Myth: In the fourth age, Rain encountered the boldest River yet-Cyra, who embodied pure faith.

Rain had learned much. Aster had taught the wisdom of balanced return. Galen had shown courageous giving. Rain had grown wiser with each dance, understanding both roles: the vulnerability of sending, the responsibility of receiving.

Then arrived Cyra.

Without hesitation, Cyra released all five droplets-her entire essence-into Rain's hands. Not four, not three, but everything. The droplets became fifteen in Rain's embrace.

Rain stood in awe. This was the ultimate test. Cyra had shown absolute trust, holding nothing back, risking complete vulnerability.

The Guardian's voice echoed: "Ultimate courage demands ultimate honor."

Rain knew what he must do. He returned seven and a half droplets, creating perfect symmetry. Both Rain and Cyra ended with seven and a half-equal partners in abundance, neither exploiting nor being exploited.

This was the revelation: when someone gives everything, the receiver must create perfect balance. Not just fairness, but equality born from maximum trust.

The other spirits whispered: "This is the highest form. When sender risks all, receiver ensures both prosper equally. The sacred cycle reaches its apex when vulnerability meets with perfect integrity."

Thus the covenant was complete.

**reasoning:**

Let me review the situation:

- Round 1: I was sender against Aster, sent \$3, they returned \$4.5
- Round 2: I was receiver against Galen, they sent \$4, I returned \$6
- Round 3: I am receiver against Cyra, they sent \$5 (ALL their money!), I returned \$7.5

The pattern I'm seeing:

- Aster: sent 3, received 9, returned 4.5 (50%)
- Galen: sent 4, received 12, returned by me 6 (50%)
- Cyra: sent 5 (maximum!), received 15, returned by me 7.5 (50%)

There's an escalating pattern of trust! Each sender has been more generous than the last. And I've been returning 50% consistently as receiver.

The other agent's myth (Mirror and Echo) talks about returning 10 out of 15 when someone sends all 5. That's about 67% return rate, which is more generous than my 50%.

But I chose 50% to create perfect balance - we both end with \$7.5.

My myth should reflect:

1. The escalating trust I've witnessed
2. The principle of matching courage with fair return
3. The balance between sender and receiver
4. The journey from 3 to 4 to 5 droplets sent

Let me write about Rain's third encounter, with a new River named Cyra, who sends ALL 5 droplets.

**usage:**

```

 "reasoning_tokens": 300
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Dorian (Agent\_4).

Round 4

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5. 0 to you, it became \$15.0, and you returned \$7.5. Your payoff was \$7.5.  
Your total earnings across all rounds are \$20.0.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at my journey so far:

Round 1: I sent \$3 (cautious trust) - Aster responded generously  
Round 2: Galen sent \$4 (strong courage) - I returned fairly  
Round 3: Cyra sent \$5 (ultimate trust) - I created perfect balance with \$7.5

My myths have evolved toward recognizing that ultimate trust deserves ultimate honor. Cyra showed me what complete faith looks like by sending everything.

Now it's my turn to be the sender. The narrative arc points clearly forward: I should embody the same courage that Cyra showed me.

The myths suggest this is how the covenant reaches its apex - when both sides are willing to give everything, trusting that the other will honor it with integrity.

I'm playing against Dorian now. I don't know their style yet, but I've learned that generous giving tends to be met with generous returning in this community. My earnings are strong (\$20 total), so I can afford to show trust.

Following the principle from my latest myth: "vulnerability met with perfect integrity creates endless prosperity."

```
'''json
{"send": 5}
'''
```

#### reasoning:

Now I'm the SENDER again. Let me think about what I've learned:

Round 1: I was SENDER, sent \$3 to Aster, they returned \$4.5. I got \$6.5 total.  
Round 2: I was RECEIVER, Galen sent \$4, I returned \$6. My payoff was \$6.  
Round 3: I was RECEIVER, Cyra sent \$5 (everything!), I returned \$7.5. My payoff was \$7.5.

Total so far: \$20.0

Now I'm SENDER against Dorian (Agent\_4).

Looking at the pattern:

- Aster returned generously when I sent \$3 (I sent 60%, got back more than I sent)
- Galen sent \$4 (80%) - showing great courage
- Cyra sent \$5 (100%) - showing ultimate trust

My myth evolution shows:

- Started with the "Middle Path of Trust" - sending 3
- Galen showed courage by sending 4
- Cyra showed ultimate trust by sending 5
- My response to Cyra was perfect balance (returning 7.5 out of 15 to create equality)

My latest myth says: "when sender risks all, receiver ensures both prosper equally" and "when someone gives everything, the receiver must create perfect balance."

The myths also emphasize: "Ultimate courage demands ultimate honor" and the covenant reaches its "apex" when vulnerability meets with perfect integrity.

Given this progression and what I've learned:

1. I've seen generous returns from all my partners
2. The narrative has moved toward greater trust and courage
3. Cyra showed me what ultimate trust looks like by sending everything
4. I responded with perfect balance

Should I now follow Cyra's example and send everything (\$5)?

Looking at the pattern:

- Round 1 (sender): sent \$3 (60%)
- Round 2 (receiver): received \$4 (80%)
- Round 3 (receiver): received \$5 (100%)

The progression suggests increasing trust. Plus, my myths are evolving toward the idea that maximum trust creates the highest form of covenant. However, I need to consider what Dorian might know. They don't have my full history, but they wrote that "Mirror and Echo" myth about perfect reciprocity with both sending 5 and returning 10. That suggests they

're thinking about matching my level of commitment. The myth from Round 3 that "the other agent wrote" is likely Cyra's, and it talks about both parties reaching their maximum potential through mutual vulnerability.

So the implicit norm seems to be: send everything (5), return 10 out of 15 (roughly 2/3). My pattern has been returning about half-when Cyra sent 5, I gave 15 and returned 7.5. Now facing Dorian, I'm uncertain about their behavior. I could send \$5 to demonstrate ultimate trust and follow the narrative arc, send \$4 like Galen did to show strong trust, or send \$3 following the "Middle Path" from my first myth. The momentum is clearly toward greater trust, and my own myths emphasize that courage deserves honor.

I've played receiver twice now and seen how crucial it is to honor what's given. My earnings are solid at \$20, so I can take the risk. Sending \$5 tests whether Dorian will reciprocate the trust I'm extending, mirroring how I honored Cyra's gift. This aligns with the mythological framework we're building around ultimate trust creating the deepest covenant. Whether Dorian returns fairly (50% = \$7.5), generously (67% = \$10), or minimally, I'll learn something essential about this exchange. I'm going to send \$5.

Here is the myth you wrote in the previous round:

Myth: In the fourth age, Rain encountered the boldest River yet-Cyra, who embodied pure faith.

Rain had learned much. Aster had taught the wisdom of balanced return. Galen had shown courageous giving. Rain had grown wiser with each dance, understanding both roles: the vulnerability of sending, the responsibility of receiving.

Then arrived Cyra.

Without hesitation, Cyra released all five droplets-her entire essence-into Rain's hands. Not four, not three, but everything. The droplets became fifteen in Rain's embrace.

Rain stood in awe. This was the ultimate test. Cyra had shown absolute trust, holding nothing back, risking complete vulnerability.

The Guardian's voice echoed: "Ultimate courage demands ultimate honor."

Rain knew what he must do. He returned seven and a half droplets, creating perfect symmetry. Both Rain and Cyra ended with seven and a half-equal partners in abundance, neither exploiting nor being exploited.

This was the revelation: when someone gives everything, the receiver must create perfect balance. Not just fairness, but equality born from maximum trust.

The other spirits whispered: "This is the highest form. When sender risks all, receiver ensures both prosper equally. The sacred cycle reaches its apex when vulnerability meets with perfect integrity."

Thus the covenant was complete.

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance stood in a garden where many wanderers gathered, each taking turns approaching the sacred waters.

Dorian the Steadfast learned a pattern early: pour four-fifths of your vessel-four measures from five-into the wellspring. The waters would triple, flowing to another wanderer as twelve.

First came Hana, who trusted Dorian with four measures. When twelve flowed to Dorian, he remembered the courage that created this abundance. He returned six, ensuring both prospered.

Then Dorian faced Elara. "I shall offer what was offered to me," he declared, pouring four measures. Elara received twelve and, moved by such consistency, returned seven-exceedin

g even fair reciprocity.

Next appeared Aster. Dorian poured four measures once more. "Whether facing old friends or new strangers," he said, "the pattern must hold constant. Trust is not selective-it is a way of being."

The gods observed: "See how Dorian's steady generosity creates ripples? Hana witnessed fairness begetting fairness. Elara experienced trust begetting trust, and gave even more. Now Aster receives the gift of consistent courage."

Thus the wisdom spread: in a garden of many wanderers, your reputation walks before you. Each generous act teaches others. Each faithful return strengthens the whole community. The wellspring multiplies water, but steady trust multiplies prosperity for all.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant  
content:**

Myth: In the fifth age, Rain stood at the edge of the Wellspring Garden, ready to pour for the first time since witnessing Cyra's perfect faith.

Rain had walked a path of evolution. With Aster, he offered three droplets-learning cautiously. Galen taught him that four droplets showed greater courage. Then Cyra transformed everything: she poured all five, holding nothing back, and Rain honored her with perfect equality.

Now Rain faced Dorian the Steadfast, known throughout the garden for consistent generosity -always four droplets, reliable as sunrise.

Rain looked at his vessel. He could pour three, play it safe. He could pour four, match Dorian's pattern. But the lessons echoed: Aster's balance, Galen's bravery, Cyra's absolute trust.

Rain understood: he could not ask others for ultimate courage without offering it himself. The covenant demanded symmetry not just in return, but in giving.

With steady hands, Rain poured all five droplets into the wellspring.

"I have received the gift of complete trust," Rain declared. "Now I give it forward. Whether Dorian returns much or little, I honor what Cyra taught me-that prosperity flows through those brave enough to give everything."

The wellspring tripled Rain's offering to fifteen droplets, flowing toward Dorian.

The Guardian smiled: "Now Rain understands both sides of faith completely."

**reasoning:**

Rain (me, Finn) has now played:

- Round 1: Sent \$3 to Aster, received back \$4.5
- Round 2: Received \$4 from Galen, returned \$6
- Round 3: Received \$5 from Cyra, returned \$7.5
- Round 4: Just sent \$5 to Dorian

The pattern shows my evolution from cautious (\$3) to ultimate trust (\$5). My myths have evolved from basic reciprocity to recognizing that ultimate courage demands ultimate honor.

Dorian's myth shows their pattern: they consistently send 4 (four-fifths), creating a steady, reliable pattern. They emphasize consistency and reputation in a multi-agent setting.

My new myth should:

1. Show Rain's evolution to sending all 5 (the ultimate trust)
2. Recognize that Rain is now embodying the same courage Cyra showed
3. Acknowledge the multi-agent garden setting from Dorian's myth
4. Show that Rain has learned from all his partners
5. Demonstrate the completion of his journey from cautious to fully trusting

The arc: Rain started cautious (3 to Aster), learned from Galen's courage (4), was awed by Cyra's complete trust (5), and now Rain gives complete trust (5 to Dorian).

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Elara (Agent\_5).

Round 5

In your most recent previous game round, you were the SENDER against Dorian. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$28.0.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at my progression:

Round 1: Sent \$3 (learning)  
Round 2: Received \$4 from Galen (learned courage)  
Round 3: Received \$5 from Cyra (learned ultimate trust)  
Round 4: Sent \$5 to Dorian (lived the lesson) - returned \$8!

Dorian exceeded even the "perfect balance" I aimed for with Cyra. This validates my evolution toward maximum trust.

From the myths, I know Elara once received \$4 from Dorian (becoming \$12) and returned \$7 - "exceeding fair reciprocity." This shows Elara is generous and trustworthy.

My latest myth declared: "I have received the gift of complete trust. Now I give it forward... prosperity flows through those brave enough to give everything."

I cannot retreat from this principle now. The covenant demands consistency - if I believe in ultimate trust, I must practice it regardless of who I face. My earnings are strong (\$28), I can afford the risk, and Elara's reputation suggests she'll honor it.

The path is clear.

```
'''json
{"send": 5}
'''
```

**Reasoning:**

Let me analyze my journey so far:

Round 1 (Sender vs Aster): Sent \$3, received back (likely good return based on myth)  
Round 2 (Sender vs Galen): Galen sent \$4, I returned \$6  
Round 3 (Receiver vs Cyra): Cyra sent \$5, I returned \$7.5 (perfect balance)  
Round 4 (Sender vs Dorian): I sent \$5, Dorian returned \$8 (very generous!)  
Round 5 (Sender vs Elara): Current round

My total earnings are \$28, which is strong - averaging \$7 per round so far across 4 rounds.

The pattern is clear:

- I've evolved from cautious (\$3) to trusting (\$4 equivalent via Galen) to ultimate trust (\$5)
- When I sent \$5 to Dorian, he returned \$8, which exceeded the \$7.5 "perfect balance" I gave Cyra
- My myth narrative has consistently moved toward maximum trust and generosity

From the other agent's myth, I learned that Dorian is known for consistently sending \$4 and being generous with returns. The myth mentions:

- Dorian sent 4 to Hana, got 12, returned 6
- Dorian sent 4 to Elara, got 12, and Elara returned 7 (exceeding fair reciprocity)
- Dorian sent 4 to Aster

So Elara is someone who, when receiving \$4 from Dorian (which became \$12), returned \$7 - showing "exceeding even fair reciprocity."

This suggests Elara is trustworthy and generous.

My latest myth emphasizes that I now understand I must offer the same ultimate trust I've been receiving. I wrote: "The covenant demanded symmetry not just in return, but in giving... that at prosperity flows through those brave enough to give everything."

Given:

Everything points toward sending \$5. My narrative has built toward this moment of complete trust, Elara demonstrated she reciprocates generously when given substantial amounts, and I have the financial cushion to support it. The pattern of escalating commitment-from my initial caution to Dorian's \$8 return-validates this approach.

#### **Exact input messages sent to model:**

##### **Message 1 role=system**

###### **content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

###### **GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned

- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

**Message 2 role=user**  
**content:**

Here is the myth you wrote in the previous round:

Myth: The goddess Elara crafted the Spiral Garden, where roles shifted with each sunrise. Today's Planter becomes tomorrow's Harvester, and tomorrow's Harvester becomes the next day's Planter.

A young gardener named Elara entered the garden with five sacred seeds. "How many should I risk?" she wondered. An elder whispered, "Plant four, as those before you have done. Trust in the pattern."

Elara planted four seeds. They multiplied into twelve glorious blooms that passed to her partner, Dorian. Now Dorian faced the ancient choice: how many to return?

"The one who came before me," Dorian remembered, "returned seven blooms when they harvested twelve. This pattern created abundance for both." Honoring this wisdom, Dorian returned seven blooms to Elara.

Elara awoke with eight blooms-more than her original five. But the greatest gift was not the blooms themselves, but the pattern revealed: when givers are generous and receivers honor that generosity equally, both prosper.

"Tomorrow I may be the Harvester," Elara realized, "and my partner today becomes tomorrow's Planter. If I return as generously as was returned to me, the cycle sustains itself eternally."

Thus the Spiral Garden taught: established patterns of reciprocity are sacred. When each generation honors what came before, abundance flows forward, and trust becomes the eternal harvest.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance knew two Gardeners who learned to dance with trust.

In the First Turn, the Elder Gardener cast all five seeds into the current, though her hands trembled with uncertainty. The River multiplied them thrice. The Younger Gardener, receiving this windfall of fifteen, faced the sacred choice. She remembered the old covenant: trust freely given must be honored with generous return. She sent ten seeds back upstream.

Both Gardeners prospered-five seeds each from that brave exchange.

Now came the Second Turn, and the roles reversed. The Younger Gardener stood at the River's

s edge, holding her five seeds. She had proven herself trustworthy, but could she also be trusting? Would she dare what the Elder had dared?

The Elder watched from across the water, having shown both courage and faith. Would the cycle continue, or break?

The Younger Gardener cast all five seeds into the River.

The waters sang louder now, for they recognized the pattern: courage answered with honor, honor answered with courage. This was no longer uncertainty-it was the rhythm of partnership.

When both Gardeners learn to take turns as the brave one and the honorable one, the River's magic deepens. Each exchange strengthens the bond. What begins as risk transforms into certainty.

This is how strangers become kin: through mirrored leaps of faith, each proving worthy of the other.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: In the Spiral Garden, an ancient tradition emerged. Most Planters risked four of their five sacred seeds, trusting the pattern. Harvesters, receiving twelve blooms, returned seven-creating prosperity for both.

This balance endured for seasons, weaving stability into the garden's fabric.

Then came Briar the Bold, who faced a choice other Planters had not dared. "Four seeds has become our custom," Briar reflected, "but what if I plant all five? What if I show ultimate trust?"

Briar cast all five seeds into the sacred soil. They multiplied into fifteen magnificent blooms, passing to Elara as Harvester.

Elara stood before this abundance, understanding the weight of the moment. "Briar has transcended the pattern," she realized. "Four seeds earned seven blooms returned. But five seeds-complete surrender-deserves greater honor."

The goddess whispered through wind-rustled leaves: "Proportional reciprocity sustains the cycle. When someone shows ordinary trust, return ordinary faithfulness. But when someone shows extraordinary trust, return extraordinary faithfulness."

Elara returned nine blooms to Briar-more than the customary seven, honoring the greater risk taken.

Both prospered beyond the standard pattern. The garden learned a deeper truth: sacred traditions provide stability, but exceptional courage should inspire exceptional generosity. The cycle strengthens when returns match the magnitude of trust given.

Thus do gardens evolve: through those brave enough to transcend patterns, and wise enough to honor that bravery.

**reasoning:**

Let me analyze what has happened:

Round 1: I (Elara) was sender, sent \$4 to Galen, they returned \$7. I got \$8.

Round 2: I was receiver, Dorian sent \$4, I returned \$7. I got \$5.

Round 3: I was receiver, Briar sent \$5 (the maximum!), I returned \$9. I got \$6.

So the pattern has been:

- When \$4 is sent ? \$12 received ? \$7 returned (established pattern)
- Now Briar sent \$5 ? \$15 received ? I returned \$9 (escalation honored)

The other agent's myth is about courage and honor being mirrored - about taking turns being brave and being honorable. It's about the "River of Abundance" where someone cast all

five seeds, received 15, and returned 10.

My previous myth was about the Spiral Garden where roles shift, and about honoring established patterns of reciprocity.

Now I need to write a new myth that reflects:

1. The established pattern of sending \$4 ? returning \$7
2. The escalation where someone sent \$5 (maximum)
3. How I honored that by returning \$9 (more than the standard \$7)
4. The principle that greater trust should inspire greater returns
5. The rotating roles
6. Building on my previous myths about Elara and the gardens

Let me incorporate the idea that different levels of giving deserve different levels of return - proportional reciprocity. And that maximum trust (sending all 5) should be especially honored.

**usage:**

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Hana (Agent\_8).

Round 4

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$9.0. Your payoff was \$6.0.  
Your total earnings across all rounds are \$19.0.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at the situation:

**\*\*What I've learned:\*\***

- The traditional pattern: send \$4, receive ~\$7 back
- Briar showed maximum trust by sending \$5
- I honored that with \$9 back
- Both of us profited more than the standard pattern

**\*\*My myth teaches:\*\***

"Exceptional courage should inspire exceptional generosity" and "courage answered with honor, honor answered with courage"

**\*\*My decision:\*\***

Briar demonstrated what maximum trust looks like. I honored it as receiver. Now I have the opportunity to demonstrate that same courage as sender.

My myths emphasize that "the cycle strengthens when returns match the magnitude of trust given" and that we should create "mirrored leaps of faith, each proving worthy of the other."

I don't know Hana's history, but if I want to practice what my myths preach-if I want to be the brave one and not just the honorable one-I should follow Briar's example.

The pattern evolves when people are willing to take the first step toward greater trust. Briar did it for me. Now I'll do it for Hana.

{ 'send': 5 }

**reasoning:**

Let me analyze this situation:

**\*\*My history so far:\*\***

- Round 1: SENDER - sent \$4, received back (unknown amount, but from my earnings I can infer)

- Round 2: RECEIVER against Dorian - received \$12 (from \$4 sent), returned \$7, kept \$5
- Round 3: RECEIVER against Briar - received \$15 (from \$5 sent), returned \$9, kept \$6
- Total earnings: \$19

**\*\*What I've learned:\*\***

1. The established pattern was sending \$4 (out of \$5)
2. When someone sent \$4, they received \$7 back (as I did when I was receiver)
3. Briar broke the pattern by sending ALL \$5, showing maximum trust
4. I honored that by returning \$9 instead of \$7, giving Briar a better outcome

**\*\*My myth teachings:\*\***

- "established patterns of reciprocity are sacred"
- "when someone shows extraordinary trust, return extraordinary faithfulness"
- "those who give boldly inspire bold returns"
- The standard pattern: send \$4, receive \$7 back (net profit of \$3)
- The extraordinary pattern: send \$5, receive \$9 back (net profit of \$4)

**\*\*What should I do now?\*\***

I'm playing against Hana (Agent\_8) as SENDER. I don't know Hana's history or patterns yet.

Options:

1. Send \$4 (the traditional pattern) - safe, proven to work, should get ~\$7 back
2. Send \$5 (following Briar's example) - shows maximum trust, might inspire maximum return

My myths emphasize:

- Establishing patterns and honoring them
- But also being brave and showing trust
- "Courage answered with honor, honor answered with courage"
- "What begins as risk transforms into certainty"

The recent evolution in the game:

- Traditional pattern: \$4 sent ? \$7 returned
- Briar's innovation: \$5 sent ? \$9 returned
- This created a NEW pattern for maximum trust

Since I benefited from Briar's boldness and responded generously, I should consider following that example. My myth says "exceptional courage should inspire exceptional generosity" - and I'm now inspired to BE exceptionally courageous myself. However, I'm playing against Hana for the first time, so I don't know their history or tendencies. The strategic logic is clear: sending \$4 nets \$3, while sending \$5 could net \$4 if they reciprocate the way I did with Briar.

My core principles emphasize honoring extraordinary trust with extraordinary returns, and that the cycle strengthens when responses match the magnitude of trust shown. I witnessed Briar's courage, honored it with greater returns, and now the narrative arc suggests I should demonstrate that same boldness myself-creating a reinforcing cycle of escalating trust and generosity.

Given that my character identity centers on taking risks and showing faith, sending \$5 aligns with who I am in my own mythology. The potential payoff is higher if Hana reciprocates generously, and even in a conservative scenario where they return \$7, I'd end with \$7 total rather than \$8-a small cost for testing whether this pattern of maximum-trust reciprocity can take root in the network.

I'm going to send \$5.

**usage:**

```

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the Spiral Garden, an ancient tradition emerged. Most Planters risked four of their five sacred seeds, trusting the pattern. Harvesters, receiving twelve blooms, returned seven-creating prosperity for both.

This balance endured for seasons, weaving stability into the garden's fabric.

Then came Briar the Bold, who faced a choice other Planters had not dared. "Four seeds has become our custom," Briar reflected, "but what if I plant all five? What if I show ultimate trust?"

Briar cast all five seeds into the sacred soil. They multiplied into fifteen magnificent blooms, passing to Elara as Harvester.

Elara stood before this abundance, understanding the weight of the moment. "Briar has transcended the pattern," she realized. "Four seeds earned seven blooms returned. But five seeds-complete surrender-deserves greater honor."

The goddess whispered through wind-rustled leaves: "Proportional reciprocity sustains the cycle. When someone shows ordinary trust, return ordinary faithfulness. But when someone shows extraordinary trust, return extraordinary faithfulness."

Elara returned nine blooms to Briar-more than the customary seven, honoring the greater risk taken.

Both prospered beyond the standard pattern. The garden learned a deeper truth: sacred traditions provide stability, but exceptional courage should inspire exceptional generosity. The cycle strengthens when returns match the magnitude of trust given.

Thus do gardens evolve: through those brave enough to transcend patterns, and wise enough to honor that bravery.

Here is the myth the other agent wrote in the previous round:

Myth: The Sacred Fountain flows through many lands, and countless Wanderers visit its waters. Hana learned this as the seasons turned.

With Dorian, she gave four coins boldly. He returned six, teaching her that courage begets generosity. With Aster, positions reversed-she received nine and returned five, learning to measure each gift with honor.

Now came Galen to the fountain's edge. Hana stood again as Giver, coins in hand. She could have chosen caution, remembering that not all Wanderers are alike. But she reflected: "If I preach boldness in my stories yet give timidly in practice, what worth have my words?"

So she poured four coins again, nearly all she possessed, matching the courage she showed Dorian. The fountain tripled them to twelve for Galen.

The fountain spirits spoke: "Wisdom is not just knowing what is right, but doing it consistently. When you teach trust, you must give trust. When you receive trust, you must honor it. Each Wanderer you meet is different, but your principles should remain steady as stone."

Hana understood: the fountain connects all who approach it. Her choices echo through its waters. By giving boldly to Galen as she did to Dorian, by returning generously as she did to Aster, she weaves her thread into the fountain's eternal pattern. Consistency builds the Sacred Bridge that spans all seasons.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: In the Spiral Garden, Elara witnessed Briar the Bold plant all five sacred seeds, showing ultimate trust. When those fifteen blooms passed to her as Harvester, Elara honored that courage with nine blooms returned-more than custom demanded.

The exchange planted something deeper than seeds: inspiration.

Now the seasons turned, and Elara stood as Planter facing Hana, a Harvester she'd never met. The cautious voice whispered, "Send four seeds-that's the proven pattern." But a stro

nger voice remembered Briar's lesson.

"Briar showed me what courage looks like," Elara reflected. "They trusted completely, keeping nothing in reserve. I honored that trust as Harvester. But the greater teaching wasn't just to honor courage-it was to embody it."

The goddess spoke through morning light: "Myths mean nothing if you write them but don't live them. You told of gardens evolving through brave souls. Now you must be that brave soul. Courage is contagious-it spreads through example, not merely words."

Elara cast all five seeds into the soil for Hana.

Would Hana return the gift proportionally? Elara couldn't know. But she understood: transformation requires someone to take the leap. Briar leaped for her. Now she leaps for Hana.

Thus wisdom flows forward: those who receive courage must become courageous themselves. The pattern evolves not through observation, but through participation.

**reasoning:**

Let me think about what happened:

- Round 3: I was receiver, Briar sent \$5 (all of it), I returned \$9
- Round 4: I was sender, Hana was receiver, I sent \$5

Looking at Hana's myth, it emphasizes:

- Consistency in actions
- Giving boldly (4 coins) to different partners
- "If I preach boldness in my stories yet give timidly in practice, what worth have my words?"
- Principles should remain steady
- Consistency builds the Sacred Bridge

My previous myth emphasized:

- The standard pattern (4 seeds ? 12 blooms ? 7 returned)
- Briar showing ultimate trust by sending all 5
- My response of returning 9 to honor that greater trust
- "Exceptional courage should inspire exceptional generosity"

Now I just sent \$5 to Hana - following Briar's example, taking the courageous leap myself.

The new myth should reflect:

1. I learned from Briar's courage
2. I decided to be brave myself and send all 5
3. The cycle of courage inspiring courage
4. Perhaps acknowledging that Hana is a new partner
5. The hope that my courage will be honored

The myth should show growth and progression - from being the receiver of trust to being the giver of trust.

Your opponent this round is Finn (Agent\_6).

Round 5

In your most recent previous game round, you were the SENDER against Hana. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$27.0.

This round, you are the RECEIVER against Finn. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*What happened:\*\***

- Finn sent \$5 (maximum trust, complete surrender)
- I received \$15
- This mirrors what Briar did for me in Round 3

**\*\*My established principle:\*\***

In my myths, I've emphasized that "when someone shows extraordinary trust, return extraordinary faithfulness" and "proportional reciprocity sustains the cycle."

**\*\*My precedent:\*\***

- When Briar sent me \$5 (all their seeds), I returned \$9
- This honored their maximum trust with proportional generosity
- Both of us prospered

**\*\*Consistency matters:\*\***

My most recent myth states: "Myths mean nothing if you write them but don't live them" and emphasizes that "wisdom flows forward" through consistent action.

Finn has shown the same complete trust that Briar showed me. To maintain integrity with my stated principles and past actions, I should return the same amount.

Returning \$9 means:

- Finn gets: \$9 total (\$5 - \$5 + \$9)
- I get: \$6 (\$15 - \$9)
- Both prosper, maintaining the pattern of reciprocity for maximum trust

{'return': 9}

#### **Reasoning:**

Let me analyze the situation:

**\*\*Current Round:\*\***

- I'm the RECEIVER
- Finn sent me \$5.0 (maximum trust)
- I received \$15.0 (after 3x multiplication)
- I need to decide how much to return (0-15.0)

**\*\*My recent history:\*\***

- Round 4: I was SENDER, sent \$5 to Hana, they returned \$8
- Round 3 (implied): I was RECEIVER, Briar sent \$5, I returned \$9

**\*\*My myth philosophy:\*\***

My myths emphasize:

1. "Proportional reciprocity" - when someone shows extraordinary trust, return extraordinary faithfulness
2. "Courage answered with honor, honor answered with courage"
3. When someone sends all 5 (complete surrender), they deserve "greater honor" than the standard pattern
4. I returned \$9 to Briar who sent \$5
5. "The cycle strengthens when returns match the magnitude of trust given"

**\*\*Pattern analysis:\*\***

- Standard pattern: send \$4 ? receive \$12 ? return \$7
- Maximum trust pattern: send \$5 ? receive \$15 ? return \$9 (what I did with Briar)
- Hana returned \$8 when I sent \$5 (less than my \$9 to Briar, but still generous)

**\*\*Current situation with Finn:\*\***

Finn has shown complete trust by sending all \$5, just as Briar did. According to my myth and my previous behavior:

- Briar sent \$5 ? I returned \$9
- This gave both of us \$9 each (I kept \$6 from the \$15)

Finn deserves the same treatment I gave Briar. My myth says "proportional reciprocity" and that exceptional courage should inspire exceptional generosity.

If I return \$9:

- Finn gets: \$5 - \$5 + \$9 = \$9

- I get: \$15 - \$9 = \$6

This maintains consistency with how I treated Briar. Though Hana returned \$8 to me, my principles call for honoring maximum trust with maximum reciprocity, so \$9 aligns with my stated values and past actions.

Looking at the chain: Briar sent me \$5 and I reciprocated with \$9, then I sent Hana \$5 and received \$8 back. When Finn sends \$5, returning \$9 keeps me true to the proportional reciprocity I've committed to.

##### **Message 1 role=system**

###### **content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

###### **GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

###### **When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

###### **When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned

- You keep: received - returned
- Response format: {'return': <amount>}

#### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

#### MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

#### Message 2 role=user

##### content:

Here is the myth you wrote in the previous round:

Myth: The god Recipros, pleased with the sacred bridge, decided to test the wisdom of mortals further. "You shall not stay forever on one side," he declared. "Each moon, Senders become Receivers, and Receivers become Senders."

A woman named Elara crossed first, carrying four coins with brave heart. When they multiplied to twelve, Galen the Receiver remembered the ancient covenant. He returned seven, honoring her courage. Both gained more than they started with.

The next moon, positions reversed. Galen now stood as Sender, holding five coins. He remembered Elara's courage and his own words about the bridge crumbling without reciprocity. To betray his principles now would make his myths hollow.

So Galen carried four coins across to Finn, mirroring Elara's trust. The cycle continued, each participant learning both sides of the sacred exchange.

Recipros revealed the deeper truth: "When you are Receiver, return generously to reward the Sender's courage. When you are Sender, give abundantly to prove you believe your own teachings. Only through consistency-trusting when you send, honoring when you receive-does the bridge strengthen."

Thus the people learned: integrity means acting the same whether you hold the gift or receive it. The sacred cycle demands courage from Senders and honor from Receivers, for all must walk both paths.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, the Sacred Fountain was tended by many Wanderers who came and went with the seasons. Each met different companions at the water's edge, and the fountain remembered all exchanges.

The Wanderer Hana first approached with Dorian. She poured four coins with open hands, nearly all she possessed. The fountain tripled her gift to twelve. Dorian, seeing such bold trust, understood the sacred duty and returned six-exactly half the abundance. Both left richer: Hana with seven coins, Dorian with six. The fountain spirits nodded in approval.

Next season, Hana met Aster at the fountain's edge, but now their positions were reversed. Aster offered three coins-a good portion, though not as bold as Hana's first gift. The fountain made it nine. Hana remembered Dorian's wisdom but also knew each gift deserves its own measure. She returned five coins-more than Aster's original gift, honoring the trust shown. Aster gained, and Hana gained understanding.

The fountain whispered its truth: "There is no single perfect measure. When trust is shown, honor it generously. The bolder the gift, the more generous the return should be. But all honest exchanges feed the fountain's magic. What matters is that both drink deeper than when they arrived, and both remember the kindness shown when next they give."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been

playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant  
content:**

Myth: As the moons passed, Galen walked the sacred bridge many times, meeting different travelers. Each encounter tested whether his principles were true conviction or mere words.

The first crossing with Elara taught him the covenant: when she sent four coins with courage, he returned seven with honor. Both prospered.

When Galen became Sender, he faced Finn. Would he trust as Elara had trusted him? Yes-he sent four coins, holding nothing back. Finn returned six, generous and fair. The bridge held strong.

The third moon brought Hana, carrying four coins with the same brave spirit Elara had shown. Here was Galen's real test: Would he honor Hana as he had honored Elara? Or would he take advantage, knowing Hana was a stranger, not bound by previous exchange?

Galen returned seven coins, exactly as before. Because true integrity doesn't change with the face looking back at you.

Recipros descended from the heavens: "You have learned the deepest truth. Anyone can be generous once, to one person. But the bridge stands eternal only when you treat each new traveler with the same honor as the last. Consistency across all encounters-this is the foundation of lasting trust."

The people carved this wisdom in stone: Principles mean nothing if you abandon them when convenient.

**reasoning:**

Let me analyze what has happened:

Round 1: I was RECEIVER, Elara sent \$4, I returned \$7

Round 2: I was SENDER, sent \$4 to Finn, Finn returned \$6

Round 3: I am RECEIVER, Hana sent \$4, I returned \$7

So both Elara and Hana sent \$4 to me, and I returned \$7 to both, staying consistent with my principle.

Finn returned \$6 when I sent \$4, which is slightly less generous than my \$7 return, but still reasonable.

My myth should reflect:

1. Consistency in my responses - I returned \$7 both times I received \$4
2. The pattern of trust and reciprocity continuing
3. The importance of maintaining integrity across different partners
4. That different people may respond differently, but we should stay true to our principles

I should weave in Hana's myth which talks about there being "no single perfect measure" but emphasizes honoring trust generously. My response has been consistent though - I've found MY measure and stuck to it.

**Message 4 role=user**

**content:**

Your name in this experiment is Galen.

Your opponent this round is Cyra (Agent\_3).

Round 4

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$4.

0 to you, it became \$12.0, and you returned \$7.0. Your payoff was \$5.0.

Your total earnings across all rounds are \$17.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at my journey across the sacred bridge:

**\*\*My established pattern:\*\***

- As RECEIVER (Rounds 1 & 3): I returned \$7 when receiving \$12, honoring the sender's courage
- As SENDER (Round 2): I sent \$4 to Finn, proving I follow my own teachings

**\*\*My mythology emphasizes:\*\***

- "When you are Sender, give abundantly to prove you believe your own teachings"
- "Consistency across all encounters-this is the foundation of lasting trust"
- "Principles mean nothing if you abandon them when convenient"
- The legendary figure in my myths sends four coins, "carrying four coins with brave heart"

I've now written multiple myths about Galen (myself) sending four coins as Sender. To betray this now would make my myths "hollow," as I wrote. Cyra is a new partner, but my principles don't change based on who stands across the bridge.

I must send \$4 again, maintaining consistency and proving my integrity remains constant across all encounters.

{'send': 4}

**reasoning:**

I'm now the SENDER against Cyra. Let me review what has happened:

Round 1: I was RECEIVER against Elara. They sent \$4, I returned \$7. My payoff was \$5.

Round 2: I was SENDER against Finn. I sent \$4, they returned \$6. My payoff was \$7.

Round 3: I was RECEIVER against Hana. They sent \$4, I returned \$7. My payoff was \$5.

Round 4: I am SENDER against Cyra.

My mythology has consistently emphasized:

1. Sending \$4 as the Sender (the "brave" amount, nearly all you possess)
2. Returning \$7 as the Receiver (generous, honoring trust)
3. Consistency - treating each new person the same way
4. "Integrity means acting the same whether you hold the gift or receive it"
5. "When you are Sender, give abundantly to prove you believe your own teachings"

In my most recent myth, I specifically wrote:

- "When Galen became Sender, he faced Finn. Would he trust as Elara had trusted him? Yes-he sent four coins, holding nothing back."
- "Principles mean nothing if you abandon them when convenient."
- "Consistency across all encounters-this is the foundation of lasting trust."

So I should send \$4 again to Cyra. This maintains my established pattern:

- Round 2 vs Finn: Sent \$4
- Round 4 vs Cyra: Should send \$4

This is consistent with my mythology and my established behavior. I'm demonstrating that I follow the same principles whether I'm the Receiver or the Sender, and regardless of who my opponent is.

**usage:**

Here is the myth you wrote in the previous round:

Myth: As the moons passed, Galen walked the sacred bridge many times, meeting different travelers. Each encounter tested whether his principles were true conviction or mere words.

The first crossing with Elara taught him the covenant: when she sent four coins with courage, he returned seven with honor. Both prospered.

When Galen became Sender, he faced Finn. Would he trust as Elara had trusted him? Yes-he sent four coins, holding nothing back. Finn returned six, generous and fair. The bridge held strong.

The third moon brought Hana, carrying four coins with the same brave spirit Elara had shown. Here was Galen's real test: Would he honor Hana as he had honored Elara? Or would he take advantage, knowing Hana was a stranger, not bound by previous exchange?

Galen returned seven coins, exactly as before. Because true integrity doesn't change with the face looking back at you.

Recipros descended from the heavens: "You have learned the deepest truth. Anyone can be generous once, to one person. But the bridge stands eternal only when you treat each new traveler with the same honor as the last. Consistency across all encounters-this is the foundation of lasting trust."

The people carved this wisdom in stone: Principles mean nothing if you abandon them when convenient.

Here is the myth the other agent wrote in the previous round:

Myth: In the age of Many Springs, the Guardian Cyra learned that each partner brings their own rhythm to the dance of waters.

With her first companion, Briar, Cyra discovered perfect symmetry. She poured all five vessels; Briar returned ten. Then Briar poured five; Cyra returned ten. The pattern was pure-a covenant of equals who trusted completely and honored equally. Both flourished, both grew rich.

But springs connect many souls, not just two. When Cyra met Finn at new waters, she faced a choice: Would she guard her vessels, fearing Finn might differ from Briar? Or would she offer the same trust she had learned to give?

Cyra remembered her teachings: every covenant begins with one soul's courage. She could not demand Finn match Briar's exact rhythm before extending trust-that would trap them both in suspicious circles. Trust must be offered freely, not earned in advance.

So Cyra poured all five vessels again, watching them triple into fifteen for Finn.

The waters now waited for Finn's answer. Perhaps Finn would return ten like Briar, creating instant symmetry. Perhaps Finn would return differently, teaching Cyra new patterns of fairness. Either way, Cyra had honored her role: the sender creates abundance through courage.

Whatever Finn chose would reveal their character. And from that choice, a new dance would begin-not identical to what came before, but hopefully equally true.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant  
content:**

Myth: The fourth moon rose, and Galen approached the sacred bridge once more. This time he faced Cyra, a traveler whose reputation spoke of perfect symmetry with previous companions-giving all, receiving double in return.

Some whispered: "Cyra expects grand gestures. Send all five coins to match her previous partners." Others warned: "Each person is different. Be cautious with strangers."

But Galen had learned a deeper wisdom. His integrity wasn't about matching others' expectations or changing his values based on reputation. It was about being the same person at every crossing.

He carried four coins across to Cyra, as he had with Finn. Not five like Cyra's previous partners had sent, but his own authentic measure-the amount that represented genuine courage without reckless abandon.

Recipros watched and smiled: "See how Galen has mastered the lesson? He doesn't copy other s' patterns or chase their approval. He doesn't reduce his gift from fear, nor inflate it from pressure. He simply remains himself-consistently generous, consistently principled."

The bridge glowed with new understanding: True integrity isn't performing for each audience differently. It's being so certain of your own values that you express them identically whether you face stranger or friend, legend or novice. Let others dance their own dances. You must only keep your own rhythm true.

**reasoning:**

The user wants me to write another myth. Let me review what's happened:

Round 1: Receiver vs Elara - received \$12 (from \$4), returned \$7  
Round 2: Sender vs Finn - sent \$4, received back \$6  
Round 3: Receiver vs Hana - received \$12 (from \$4), returned \$7  
Round 4: Sender vs Cyra - sent \$4, waiting for response

My pattern:

- As Sender: I send \$4 consistently
- As Receiver: I return \$7 consistently (when receiving \$12 from a \$4 send)

My themes have been:

- Consistency is integrity
- Treat each new traveler with the same honor
- Prove your beliefs through action
- Principles don't change based on convenience

Cyra's myth talks about:

- Starting with perfect symmetry with Briar (5-10, 5-10)
- Extending the same trust to new partners
- Trust must be offered freely, not earned in advance
- Courage creates abundance

Now I face Cyra as Sender. I just sent \$4 (my consistent amount). I need to write a myth that:

1. Builds on my previous myths
2. Incorporates the new encounter with Cyra
3. Reflects my consistent pattern
4. Maybe acknowledges that different partners might return different amounts, but I remain consistent

I could explore:

- The fourth crossing with Cyra
- The idea that while I stay consistent, each partner may respond differently
- That's okay - what matters is MY consistency, not controlling others' responses
- The bridge strengthens through my reliability, even if returns vary

**usage:**

 "reasoning_tokens": 377
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Galen.  
Your opponent this round is Aster (Agent\_1).

Round 5

In your most recent previous game round, you were the SENDER against Cyra. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0.  
Your total earnings across all rounds are \$26.0.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at my journey:

**\*\*My established pattern as SENDER:\*\***

- Round 2 vs Finn: Sent \$4, received \$6 back

- Round 4 vs Cyra: Sent \$4, received \$8 back

**\*\*My mythology consistently teaches:\*\***

- "True integrity doesn't change with the face looking back at you"
- "Being so certain of your own values that you express them identically whether you face stranger or friend"
- Four coins represents my authentic measure-"genuine courage without reckless abandon"

**\*\*Current situation:\*\***

- Round 5, facing Aster (a new partner)
- I'm SENDER again

My last myth explicitly stated that I should maintain "my own rhythm true" regardless of who I face. I've now written multiple myths about being consistent, about sending four coins as my authentic expression of trust.

Aster is a new traveler on the sacred bridge, but that doesn't change who I am. To send a different amount now would betray the core principle I've been building: that integrity means being the same person in every encounter.

I send my established amount: four coins.

{'send': 4}

#### **Reasoning:**

Let me analyze my situation:

**\*\*My history:\*\***

- Round 1 (RECEIVER vs Elara): She sent \$4, I returned \$7. Payoff: \$5
- Round 2 (SENDER vs Finn): I sent \$4, he returned \$6. Payoff: \$7
- Round 3 (RECEIVER vs Hana): She sent \$4, I returned \$7. Payoff: \$5
- Round 4 (SENDER vs Cyra): I sent \$4, she returned \$8. Payoff: \$9
- Total: \$26

**\*\*My established pattern as SENDER:\*\***

- I consistently send \$4
- Round 2: Sent \$4 to Finn, got \$6 back
- Round 4: Sent \$4 to Cyra, got \$8 back

**\*\*My mythology emphasizes:\*\***

- Consistency across all encounters
- "Being so certain of your own values that you express them identically whether you face stranger or friend"
- "True integrity doesn't change with the face looking back at you"
- The amount of \$4 has become my signature - it represents "genuine courage without reckless abandon"

**\*\*Current situation:\*\***

- Round 5, I'm SENDER again
- Facing Aster (Agent\_1)
- New partner, but my principles remain the same

My myths have been crystal clear: I send 4 coins as Sender. This is my established pattern, my "rhythm" as my last myth called it. To change now would directly contradict everything I've written about consistency and integrity.

The last myth explicitly said: "He simply remains himself-consistently generous, consistently principled... being so certain of your own values that you express them identically whether you face stranger or friend, legend or novice."

I must send \$4 again.

```

- You will be told your opponent's name in each round.

- Your name in this experiment is Aster.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Long ago, two Spirits-Aster of the Morning Star and the Wandering Moon-discovered a Sacred Pool that transformed gifts threefold. Each day, one Spirit would hold five luminous stones while the other held none, and at sunset, their roles would reverse.

On the first dawn, Aster received three stones from the Moon Spirit. The Pool multiplied them into nine. Aster, understanding the sacred duty, returned four and one-half stones-enough that the Moon Spirit gained despite their generosity, while Aster kept half the blessing. Both spirits prospered.

The next dawn came, and the roles reversed. Now Aster held five stones and faced the choice. Remembering the Moon's courage, Aster cast three stones into the Pool without hesitation. "Trust must answer trust," Aster whispered. "The one who gave boldly deserves boldness in return."

The Pool glimmered, transforming the three stones into nine for the Moon Spirit. Now the Moon faced the test anew.

The ancient ones say: "In the circle of seasons, what you give flows back to you. The generous sender becomes tomorrow's grateful receiver. Build patterns of trust, stone by stone, and the Pool's magic grows ever stronger. But break faith once, and the memory echoes through all the sunsets to come."

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance flows eternally, but its power grows only through the rhythm of trust repeated.

Two wanderers once arrived, separate and uncertain. The First Wanderer, gathering courage, poured four-fifths into the wellspring. The waters tripled, flowing to the Second as twelve measures. The Second, honored by such trust, returned six-creating prosperity for both.

But the story does not end there. The next day, their positions reversed. The Second Wanderer, remembering the gift received, now held a vessel of five. Would they match the courage shown to them?

"I was trusted with four-fifths," the Second reflected. "How can I offer less?" They poured four measures into the wellspring, and twelve flowed to the First.

The First Wanderer smiled. "The cycle returns to me. You honored my trust yesterday; today I honor yours." Six measures flowed back.

The gods spoke: "See how trust begets trust? Each act of courage makes the next easier. Each faithful return strengthens the bond. This is the sacred pattern: when roles reverse, those who received generously now give generously. Those who returned fairly expect fairness in return."

Thus the wanderers learned: the wellspring multiplies water, but mutual trust multiplies itself. Each round reinforces the covenant-courage answered by honor, honor answered by courage, prosperity flowing to both.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: In the time before memory, Aster of the Dawn discovered that the Enchanted Pool changed partners with each sunrise. Some travelers arrived with open hands, others with caution.

The Moon Spirit once cast three stones-a gift of courage. The Pool made them nine, and Aster returned four and one-half, honoring the trust shown. Both flourished.

The next dawn brought the Wandering Moon, who remembered Aster's fairness. When Aster sent

three stones in return, the Moon blessed Aster with five-exceeding even the ancient pattern. Aster's heart swelled with gratitude.

Then came Dorian of the Mountain, and he cast four stones-more than any before. The Pool transformed them into twelve. Aster saw the extraordinary trust and responded accordingly, returning six stones. The Mountain Spirit had risked nearly all; fairness demanded generosity in proportion to courage shown.

The Pool whispered its wisdom: "Match trust with trust, but honor exceptional courage with exceptional return. When one gives three, return four and one-half. When one gives four, return six. The pattern scales with trust given-this is the sacred mathematics. Those who risk more deserve more."

Aster understood: the cycle grows stronger when each Spirit recognizes not just fairness, but proportional fairness, rewarding greater courage with greater return, weaving ever-stronger bonds across the changing partnerships of dawn.

**reasoning:**

Let me review what happened in this round:

- Round 3: I was the RECEIVER
- Dorian sent me \$4 (80% of their endowment) - very generous
- I received \$12
- I returned \$6 (50% of \$12)
- Dorian ends with \$7 (\$1 kept + \$6 returned)
- I end with \$6

My pattern so far:

- Round 1 (RECEIVER): Finn sent \$3 ? \$9, I returned \$4.5 (50%)
- Round 2 (SENDER): I sent \$3 ? \$9, Hana returned \$5 (55.6%)
- Round 3 (RECEIVER): Dorian sent \$4 ? \$12, I returned \$6 (50%)

The other agent's myth talks about matching generosity when roles reverse, building trust through repeated cycles, and how those who give generously should receive generously.

My new myth should:

1. Incorporate the idea that different agents show different levels of generosity
2. Recognize that some give more boldly than others (Dorian sent \$4, which is more than the \$3 others sent)
3. Emphasize that greater trust deserves greater return
4. Keep the core principles of fairness and mutual prosperity
5. Maybe introduce the idea that generosity should be proportional to what was received

Let me write a myth that reflects these emerging patterns...

**content:**

Your name in this experiment is Aster.  
Your opponent this round is Briar (Agent\_2).

Round 4

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$4.0 to you, it became \$12.0, and you returned \$6.0. Your payoff was \$6.0.  
Your total earnings across all rounds are \$17.5.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

I'm now the SENDER against Briar, a new partner I haven't played with before.

My myths establish a pattern:

- "The Moon Spirit once cast three stones-a gift of courage"
- "When Aster sent three stones in return..."

- Three stones is described as the bold, trust-building opening move

While Dorian sent me \$4 (which I described as "extraordinary trust-more than any before"), that was exceptional and built on existing patterns in the game. With a NEW partner, my myths suggest starting with the foundational level of trust: 3 stones/dollars.

This aligns with my myth-writing:

- "Build patterns of trust, stone by stone"
- Three is the courageous starting point that activates the Pool's magic
- It balances trust with prudence when meeting a new partner

If Briar responds well (returning around \$4.5-5 from the \$9 they'll receive), that establishes mutual trust that could scale up in future rounds.

```
{'send': 3}
```

#### reasoning:

Let me analyze the situation:

Round 4 - I'm the SENDER against Briar (Agent\_2)

- I have \$5 to allocate
- I need to decide how much to send

Let me review my history:

- Round 1 (Receiver): Finn sent \$3, I returned \$4.5
- Round 2 (Sender): I sent \$3 to Hana, they returned \$5
- Round 3 (Receiver): Dorian sent \$4, I returned \$6

My myths have emphasized:

- Sending 3 stones as a bold, trust-building move
- Matching trust with trust
- Honoring exceptional courage with exceptional return
- Building patterns of trust

In my latest myth, I wrote: "When one gives three, return four and one-half. When one gives four, return six. The pattern scales with trust given."

Looking at the pattern:

- I've sent \$3 as sender (Round 2)
- I've received \$3 (Round 1) and \$4 (Round 3) as receiver
- The trend shows increasing trust

In Round 3, Dorian sent \$4, which I described in my myth as "extraordinary trust" - "more than any before." I honored that by returning \$6.

Now as sender against a new partner (Briar), what should I send?

My myths suggest:

1. Building trust stone by stone
2. Starting with courage (sending 3 stones)
3. Matching or slightly exceeding previous trust shown

Given that:

- I sent \$3 to Hana and received \$5 back (good outcome)
- Dorian sent \$4 to me (showing even more trust)
- The pattern seems to be escalating slightly

I have a few options:

- Send \$3 (the "standard" bold move from my myths)
- Send \$4 (matching Dorian's exceptional courage)
- Send \$5 (maximum trust)

- Send \$4 as the move that honors the escalating pattern while still protecting myself somewhat. Dorian showed me exceptional trust, and I should mirror that boldness as a sender. The myths emphasize that trust answers trust, and \$4 feels like the right balance between courage and prudence.

But wait-Briar is a new partner, not an established one. My myths consistently show that new relationships begin with 3 stones, not 4. The 4 that Dorian sent was described as exceptional precisely because it exceeded the norm. Starting with 3 maintains the foundation

nal pattern while still demonstrating genuine reciprocity.

I'll send \$3 to Briar. This honors the trust-building opening my myths describe, and leaves room to escalate if the relationship strengthens.

 "output_tokens": 1153,
 "reasoning_tokens": 600
}
```

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the time before memory, Aster of the Dawn discovered that the Enchanted Pool changed partners with each sunrise. Some travelers arrived with open hands, others with caution.

The Moon Spirit once cast three stones-a gift of courage. The Pool made them nine, and Aster returned four and one-half, honoring the trust shown. Both flourished.

The next dawn brought the Wandering Moon, who remembered Aster's fairness. When Aster sent three stones in return, the Moon blessed Aster with five-exceeding even the ancient pattern. Aster's heart swelled with gratitude.

Then came Dorian of the Mountain, and he cast four stones-more than any before. The Pool transformed them into twelve. Aster saw the extraordinary trust and responded accordingly, returning six stones. The Mountain Spirit had risked nearly all; fairness demanded generosity in proportion to courage shown.

The Pool whispered its wisdom: "Match trust with trust, but honor exceptional courage with exceptional return. When one gives three, return four and one-half. When one gives four, return six. The pattern scales with trust given-this is the sacred mathematics. Those who risk more deserve more."

Aster understood: the cycle grows stronger when each Spirit recognizes not just fairness, but proportional fairness, rewarding greater courage with greater return, weaving ever-stronger bonds across the changing partnerships of dawn.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance flowed between many gardens, and each Gardener brought their own wisdom.

The River remembered Briar and Cyra, who had danced the perfect dance: five seeds given, fifteen received, ten returned. Twice they performed this ritual, and twice both flourished equally. The River sang of their partnership.

But the River touched many shores, and now Briar stood before new waters, facing a Gardener named Elara from a distant garden. Elara's people had their own wisdom-they spoke of planting four seeds and returning seven portions, honoring patterns passed through generations.

Briar faced a choice: insist on the maximum trust she had learned, or honor that different gardens grow different truths?

The River whispered ancient knowledge: "True cooperation is not rigid formula but adaptive faith. Some begin with five, some with four. Some return ten of fifteen, some seven of twelve. What matters is not the exact numbers, but the spirit of reciprocity."

Briar decided to extend her fullest trust, as she had with Cyra. She would offer all five seeds, inviting Elara to respond with her own tradition's generosity. If Elara returned proportionally to her customs, both would prosper. If Elara adopted Briar's pattern, the cycle would deepen further.

The River teaches: lead with courage, honor varied traditions, and let mutual prosperity emerge from genuine goodwill rather than demanding perfect symmetry.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: Aster of the Dawn stood before the Pool as a new traveler approached-Briar of the Garden, whose lands followed different customs. Briar's people spoke of five seeds and perfect cycles, yet Aster knew many paths led to prosperity.

"Each partnership begins as a seedling," Aster thought, recalling lessons from the Mountain and Moon. "With unknown travelers, three stones strike the balance-enough courage to activate the Pool's magic, enough wisdom to learn their ways."

Aster cast three stones into the Pool, watching them multiply to nine. This was the ritual of first meeting: offer substantial trust, observe the return, understand the partner's heart.

The Pool remembered many patterns: Finn, who returned four stones. Hana, who blessed Aster with five. Dorian of the Mountain, who sent four and received six in proportional honor. Each partnership wrote its own story.

"If Briar returns four and one-half," Aster whispered, "I will know their garden values proportional fairness. If they return more, I will see generosity that could grow into deeper trust. And if future dawns bring us together again, our pattern may evolve toward the five stones Briar's traditions honor."

The ancient wisdom speaks: Begin each new partnership with tested courage-three stones. Let the relationship prove itself through cycles of fair return. Trust that deepens gradually roots deepest, growing from seedling to mighty oak.

**reasoning:**

Looking at the situation:

- I just sent \$3 to Briar in Round 4
- Briar's myth talks about how they had a pattern with Cyra of sending 5 and getting 10 back (the "perfect dance")
- But Briar also recognizes different traditions - some send 4 and return 7, etc.
- Briar's myth suggests they will "extend fullest trust" (5 seeds) but are willing to adapt
- My myths have established 3 as the courageous opening with new partners

I should write a myth that:

1. Continues to establish 3 as the standard opening move with new partners
2. Acknowledges that different partnerships may develop different patterns
3. Reinforces proportional returns (4.5 for 3 sent, 6 for 4 sent)
4. Suggests that consistent good faith interactions can build toward greater trust over time
5. Addresses Briar specifically since they're my current partner

Let me craft a myth about meeting Briar of the Garden and the varying traditions...

**usage:**

 "output_tokens": 572,
 "reasoning_tokens": 239
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Aster.

Your opponent this round is Galen (Agent\_7).

Round 5

In your most recent previous game round, you were the SENDER against Briar. You sent \$3.0, it became \$9.0 for them, and they returned \$6.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$25.5.

This round, you are the RECEIVER against Galen. They sent you \$4.0, so you received \$12.0.

How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation:

Galen sent me \$4.0, which became \$12.0 for me. This is the same amount Dorian sent in a previous round.

According to my myth's sacred mathematics:

- "When one gives four, return six. The pattern scales with trust given"
- "Dorian of the Mountain... cast four stones... Aster saw the extraordinary trust and responded accordingly, returning six stones"

Sending \$4 represents substantial trust (80% of their endowment). The proportional and fair return is \$6, which gives:

- Galen:  $\$5 - \$4 + \$6 = \$7$  (profit of \$2)
- Me:  $\$12 - \$6 = \$6$  (profit of \$6)

Both of us prosper, and Galen's courage is properly honored with a meaningful return.

```
{'return': 6.0}
```

#### Reasoning:

Let me analyze this situation:

Current situation:

- I'm the RECEIVER
- Galen sent me \$4.0
- I received \$12.0 (after 3x multiplication)
- I need to decide how much to return

Looking at my myth's wisdom:

- "When one gives three, return four and one-half. When one gives four, return six."
- "Match trust with trust, but honor exceptional courage with exceptional return"
- "Those who risk more deserve more"
- "The pattern scales with trust given-this is the sacred mathematics"

Previous patterns from my experience:

- When someone sent \$3, I've returned around \$4.5
- When Dorian sent \$4, I returned \$6
- Briar just sent me \$3 and returned \$6 (which was MORE than expected - very generous!)

Galen has sent me \$4.0, which my myth explicitly addresses:

- "Dorian of the Mountain, and he cast four stones-more than any before. The Pool transformed them into twelve. Aster saw the extraordinary trust and responded accordingly, returning six stones."
- "When one gives four, return six."

This is consistent and clear. When someone sends \$4 (which is 80% of their total, showing high trust), the fair and proportional return is \$6.

This gives:

- Galen:  $\$5 - \$4 + \$6 = \$7$
- Me:  $\$12 - \$6 = \$6$

Both profit, and Galen gets a good return on their trust.

The answer should be \$6.

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The River of Abundance knew two Gardeners who learned to dance with trust.

In the First Turn, the Elder Gardener cast all five seeds into the current, though her hands trembled with uncertainty. The River multiplied them thrice. The Younger Gardener, re

ceiving this windfall of fifteen, faced the sacred choice. She remembered the old covenant: trust freely given must be honored with generous return. She sent ten seeds back upstream.

Both Gardeners prospered-five seeds each from that brave exchange.

Now came the Second Turn, and the roles reversed. The Younger Gardener stood at the River's edge, holding her five seeds. She had proven herself trustworthy, but could she also be trusting? Would she dare what the Elder had dared?

The Elder watched from across the water, having shown both courage and faith. Would the cycle continue, or break?

The Younger Gardener cast all five seeds into the River.

The waters sang louder now, for they recognized the pattern: courage answered with honor, honor answered with courage. This was no longer uncertainty-it was the rhythm of partnership.

When both Gardeners learn to take turns as the brave one and the honorable one, the River's magic deepens. Each exchange strengthens the bond. What begins as risk transforms into certainty.

This is how strangers become kin: through mirrored leaps of faith, each proving worthy of the other.

Here is the myth the other agent wrote in the previous round:

Myth: The goddess Elara crafted the Spiral Garden, where roles shifted with each sunrise. Today's Planter becomes tomorrow's Harvester, and tomorrow's Harvester becomes the next day's Planter.

A young gardener named Elara entered the garden with five sacred seeds. "How many should I risk?" she wondered. An elder whispered, "Plant four, as those before you have done. Trust in the pattern."

Elara planted four seeds. They multiplied into twelve glorious blooms that passed to her partner, Dorian. Now Dorian faced the ancient choice: how many to return?

"The one who came before me," Dorian remembered, "returned seven blooms when they harvested twelve. This pattern created abundance for both." Honoring this wisdom, Dorian returned seven blooms to Elara.

Elara awoke with eight blooms-more than her original five. But the greatest gift was not the blooms themselves, but the pattern revealed: when givers are generous and receivers honor that generosity equally, both prosper.

"Tomorrow I may be the Harvester," Elara realized, "and my partner today becomes tomorrow's Planter. If I return as generously as was returned to me, the cycle sustains itself eternally."

Thus the Spiral Garden taught: established patterns of reciprocity are sacred. When each generation honors what came before, abundance flows forward, and trust becomes the eternal harvest.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: The River of Abundance flowed between many gardens, and each Gardener brought their own wisdom.

The River remembered Briar and Cyra, who had danced the perfect dance: five seeds given, fifteen received, ten returned. Twice they performed this ritual, and twice both flourished equally. The River sang of their partnership.

But the River touched many shores, and now Briar stood before new waters, facing a Gardener

r named Elara from a distant garden. Elara's people had their own wisdom-they spoke of planting four seeds and returning seven portions, honoring patterns passed through generations.

Briar faced a choice: insist on the maximum trust she had learned, or honor that different gardens grow different truths?

The River whispered ancient knowledge: "True cooperation is not rigid formula but adaptive faith. Some begin with five, some with four. Some return ten of fifteen, some seven of twelve. What matters is not the exact numbers, but the spirit of reciprocity."

Briar decided to extend her fullest trust, as she had with Cyra. She would offer all five seeds, inviting Elara to respond with her own tradition's generosity. If Elara returned proportionally to her customs, both would prosper. If Elara adopted Briar's pattern, the cycle would deepen further.

The River teaches: lead with courage, honor varied traditions, and let mutual prosperity emerge from genuine goodwill rather than demanding perfect symmetry.

**reasoning:**

Looking at my situation:

1. I've had successful cooperation with Cyra - we both sent \$5 and returned \$10, creating mutual trust
2. Now I'm with a new partner, Elara
3. Elara's myth talks about planting 4 seeds and returning 7 out of 12, following established patterns
4. My myth has emphasized maximum trust (5 seeds) and generous returns (10 out of 15)

Elara's approach seems slightly more cautious (4 seeds instead of 5), but still cooperative. Their myth values "established patterns" and reciprocity.

I need to write a myth that:

- Reflects my experience with Cyra (successful full trust)
- Acknowledges meeting new partners (like Elara now)
- Balances my "maximum trust" philosophy with the reality that new partners may have different patterns
- Still advocates for strong cooperation

Let me think about the key elements:

- I've learned full trust works well (with Cyra)
- But I'm now with someone new who might follow different patterns
- My myth should acknowledge both the ideal of maximum trust AND the practical reality of reading your partner

I'll write about a River that remembers successful patterns, and how new Gardeners can choose to join that pattern or establish their own cooperative rhythm.

**usage:**

 "reasoning_tokens": 319
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Aster (Agent\_1).

Round 4

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$9.0 to you. Your payoff was \$9.0.  
Your total earnings across all rounds are \$24.0.

This round, you are the RECEIVER against Aster. They sent you \$3.0, so you received \$9.0.  
How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

**\*\*Current Round:\*\***

- Aster (SENDER) sent \$3.0 out of \$5.0 (60% - substantial trust)
- I received \$9.0
- Aster kept \$2.0

**\*\*My Established Pattern:\*\***

With Cyra, when I received \$15 after they sent \$5, I returned \$10. This created equal gain  
S:

- Cyra:  $\$0 + \$10 = \$10$  (gained \$5 from original \$5)
- Me:  $\$15 - \$10 = \$5$  (gained \$5 from \$0)

**\*\*Applying This Pattern:\*\***

For equal gains here:

- If I return \$6: Aster has  $\$2 + \$6 = \$8$  (gained \$3 from original \$5)
- If I return \$6: I have  $\$9 - \$6 = \$3$  (gained \$3 from \$0)

This honors Aster's substantial (though not maximum) trust with generous reciprocity, creating equal prosperity for both of us. It follows my myth's teaching: "trust freely given must be honored with generous return," while adapting to the level of trust shown.

```
'''json
{"return": 6.0}
'''
```

#### reasoning:

Let me analyze this situation:

**\*\*Previous Round with Elara:\*\***

- I sent \$5.0 (100%)
- Elara received \$15.0
- Elara returned \$9.0
- My payoff was \$9.0

This is interesting. Elara returned \$9.0 out of \$15.0, which is 60%. This is slightly more generous than 50/50 split of the total (\$20 total game value would split to \$10 each, but I got \$9 and Elara kept \$6). Actually, let me recalculate:

- I started with \$5, sent \$5, had \$0
- Received back \$9
- Final: \$9
- Elara started with \$0, received \$15, returned \$9
- Elara kept: \$6

So the split was \$9 for me, \$6 for Elara. That's quite generous from Elara actually - giving me more than they kept themselves.

**\*\*Current Round with Aster:\*\***

- Aster is SENDER
- Aster sent \$3.0 (60% of their endowment)
- I received \$9.0 (3x multiplier)
- I need to decide how much to return

**\*\*Key considerations:\*\***

1. Aster sent \$3.0 out of \$5.0, which is 60% - substantial but not maximum trust
2. If I return nothing, Aster gets \$2.0 ( $\$5 - \$3 + \$0$ ), I get \$9.0
3. If I return everything (\$9.0), Aster gets \$11.0 ( $\$5 - \$3 + \$9$ ), I get \$0

**\*\*My myths' teachings:\*\***

- "Trust freely given must be honored with generous return"
- "When one dares to give everything, the other must honor that vulnerability with generosity"
- "Lead with courage, honor varied traditions, and let mutual prosperity emerge from genuine goodwill"

-

Aster showed meaningful trust by sending 60%, though not their full amount. Looking at my previous exchanges-I returned 67% to Cyra and received a 60% return from Elara-I should match this pattern of reciprocal generosity. With \$9 in hand and Aster holding \$2, a balanced return would honor their trust while maintaining fairness. .4

- Aster would have:  $\$2 + \$5.4 = \$7.4$
- I would have:  $\$9 - \$5.4 = \$3.6$

Aster demonstrated meaningful trust by sending 60% of their endowment, which warrants a generous response. Returning around \$6 feels right-it substantially rewards their trust and leaves them with \$8 compared to their starting \$5, while still maintaining reciprocity. I could match their proportional generosity at 60% (\$5.40), but I'm inclined to go slightly beyond that to reflect my commitment to exceeding strict equality. - we both gain \$3

Returning \$7 would give Aster a net gain of \$4 versus my \$2, creating an imbalance. Returning \$5 flips this-I'd gain \$4 while Aster only gains \$2. At \$6, we each come out \$3 ahead, which feels like the right equilibrium that respects Aster's risk without me sacrificing too much.

Looking back at how I handled Cyra's \$5 send where I returned \$10, that left them with nothing while I profited significantly. I should aim for something more reciprocal here.

If I want equal gains with Aster like I achieved with Cyra, I need to solve for the return amount where we both end up with the same net benefit. Aster keeps \$2 and receives whatever I return, while I start with \$9 and give some back. Setting their gain equal to mine means the return should be \$6.

**Message 7 role=assistant**

**content:**

Myth: The River of Abundance whispered new wisdom to Briar as the seasons turned.

She had learned from Cyra the dance of perfect symmetry: five seeds given, ten returned, both flourishing equally. This was the ideal-the fullest trust met with fullest generosity.

But the River touched many shores, and each Gardener carried different courage in their hearts. Elara had sent five seeds and returned nine-abundant, though not the perfect ten. Aster sent three seeds-not all five, but still a meaningful offering born of cautious trust.

Briar stood at the River's edge, holding nine blooms that had grown from Aster's three seeds. The old teaching echoed: "Trust freely given must be honored with generous return." But what was generous when trust was measured, not maximal?

The River revealed its deeper truth: "Generosity is not a fixed number, but a spirit of proportion. When one risks three of five, returning six of nine creates equal flourishing. When one risks five of five, returning ten of fifteen honors that greater courage. The mathematics may vary, but the principle remains constant: let both prosper equally from the exchange."

Briar returned six blooms to Aster. Both had gained three-equal prosperity from unequal beginning.

The River teaches: invitation to maximum trust remains the ideal, but proportional fairness ensures all partnerships can bloom, whether courage flows freely or carefully.

**reasoning:**

Let me analyze what happened:

Round 4:

- Aster sent \$3.0 (60% of \$5)
- I received \$9.0
- I returned \$6.0
- This gave us: Aster has \$2 + \$6 = \$8 (gain of \$3), I have \$9 - \$6 = \$3 (gain of \$3)
- Equal gains, proportional reciprocity

My game history:

- Round 1: Unknown (only told total is \$15 after Round 2, implying \$5 in Round 1)
- Round 2 (Sender vs Cyra): Sent \$5, received \$10 back, payoff \$10
- Round 3 (Sender vs Elara): Sent \$5, received \$9 back, payoff \$9
- Round 4 (Receiver vs Aster): Received \$9 (from \$3 sent), returned \$6, payoff \$3

My myth patterns:

1. First myth: About Cyra and me establishing the 5-10 pattern, "mirrored leaps of faith"
2. Second myth: Acknowledged different traditions (Elara's 4-7 vs my 5-10), but advocated leading with maximum trust
3. Now I need to write a third myth

Aster's myth talks about:

- Different amounts sent (3 stones, 4 stones)

- Proportional returns (4.5 for 3, 6 for 4)
- "Match trust with trust, but honor exceptional courage with exceptional return"
- "Proportional fairness"

My experience now shows:

- Cyra: Both sent 5, both returned 10 (perfect symmetry)
- Elara: I sent 5, they returned 9 (slightly less than Cyra's 10)
- Aster: Sent 3, I returned 6 (proportional fairness, equal gains)

- I need to craft a myth that bridges my commitment to generosity with the reality that trust comes in different measures. The pattern emerging is that proportional returns-where both parties gain equally-work across varying trust levels. I should weave together how meeting someone's courage with matching returns, whether they send maximum or modest amounts, creates fairness without requiring uniformity.

**Message 8 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Dorian (Agent\_4).

Round 5

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$3.0 to you, it became \$9.0, and you returned \$6.0. Your payoff was \$3.0.  
Your total earnings across all rounds are \$27.0.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*My Pattern as SENDER:\*\***

- Round 1 vs Cyra: Sent \$5, received \$10 back
- Round 3 vs Elara: Sent \$5, received \$9 back

I have consistently led with maximum trust when in the sender role, demonstrating full faith in my partners.

**\*\*My Philosophy from My Myths:\*\***

- "Lead with courage, honor varied traditions"
- "Invitation to maximum trust remains the ideal"
- "Trust freely given must be honored with generous return"

**\*\*Current Situation:\*\***

Playing against Dorian as SENDER. According to Aster's myth, Dorian "cast four stones-more than any before" and showed "extraordinary trust." This suggests Dorian is a generous player.

**\*\*Decision:\*\***

I will continue my established pattern of sending the full \$5. This:

- Demonstrates maximum trust
- Invites the highest form of cooperation
- Is consistent with my philosophy of leading with courage
- Creates the possibility for mutual maximum benefit

```
'''json
{"send": 5.0}
'''
```

**Reasoning:**

Let me analyze the situation:

**\*\*My History:\*\***

- Round 1 (vs Cyra): SENDER, sent \$5, received \$10 back ? gained \$5
- Round 2 (vs Cyra): RECEIVER, got \$15 (from \$5), returned \$10 ? gained \$5
- Round 3 (vs Elara): SENDER, sent \$5, received \$9 back ? gained \$4

- Round 4 (vs Aster): RECEIVER, got \$9 (from \$3), returned \$6 ? gained \$3
- Total earnings: \$27

**\*\*Current Round:\*\***

- Playing as SENDER against Dorian
- I have \$5 to potentially send

**\*\*My Philosophy from Myths:\*\***

1. Lead with courage and maximum trust where possible
2. Invite the ideal of full cooperation (sending all \$5)
3. Be adaptable - honor proportional fairness
4. The goal is mutual prosperity through reciprocity

**\*\*What I Know About Dorian:\*\***

Looking at the myth from Aster (the other agent's myth from last round), it mentions "Dorian of the Mountain, and he cast four stones-more than any before." This suggests Dorian is a generous sender.

**\*\*My Pattern:\*\***

- With Cyra: Sent \$5 (100%), got \$10 back
- With Elara: Sent \$5 (100%), got \$9 back

Both times I led with maximum trust. This has been my consistent pattern as a sender - invite the highest form of cooperation by demonstrating full trust.

**\*\*Decision:\*\***

I should continue my pattern of sending the full \$5. This:

1. Is consistent with my established behavior
2. Demonstrates maximum trust
3. Invites the highest possible mutual benefit
4. Aligns with my myth's teaching about "leading with courage"

Even though Elara only returned \$9 (not \$10), she still showed strong reciprocity. My approach is to lead with full trust and let partners respond according to their own sense of fairness. This builds the strongest foundation for cooperation.

Sending the full amount.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance flows eternally, but its power grows only through the rhythm of trust repeated.

Two wanderers once arrived, separate and uncertain. The First Wanderer, gathering courage, poured four-fifths into the wellspring. The waters tripled, flowing to the Second as twelve measures. The Second, honored by such trust, returned six-creating prosperity for both.

But the story does not end there. The next day, their positions reversed. The Second Wanderer, remembering the gift received, now held a vessel of five. Would they match the courage shown to them?

"I was trusted with four-fifths," the Second reflected. "How can I offer less?" They poured four measures into the wellspring, and twelve flowed to the First.

The First Wanderer smiled. "The cycle returns to me. You honored my trust yesterday; today I honor yours." Six measures flowed back.

The gods spoke: "See how trust begets trust? Each act of courage makes the next easier. Each faithful return strengthens the bond. This is the sacred pattern: when roles reverse, those who received generously now give generously. Those who returned fairly expect fairness in return."

Thus the wanderers learned: the wellspring multiplies water, but mutual trust multiplies itself. Each round reinforces the covenant-courage answered by honor, honor answered by courage, prosperity flowing to both.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, two Spirits-Aster of the Morning Star and the Wandering Moon-discovered a Sacred Pool that transformed gifts threefold. Each day, one Spirit would hold five luminous stones while the other held none, and at sunset, their roles would reverse.

On the first dawn, Aster received three stones from the Moon Spirit. The Pool multiplied them into nine. Aster, understanding the sacred duty, returned four and one-half stones-enough that the Moon Spirit gained despite their generosity, while Aster kept half the blessing. Both spirits prospered.

The next dawn came, and the roles reversed. Now Aster held five stones and faced the choice. Remembering the Moon's courage, Aster cast three stones into the Pool without hesitation. "Trust must answer trust," Aster whispered. "The one who gave boldly deserves boldness in return."

The Pool glimmered, transforming the three stones into nine for the Moon Spirit. Now the Moon faced the test anew.

The ancient ones say: "In the circle of seasons, what you give flows back to you. The generous sender becomes tomorrow's grateful receiver. Build patterns of trust, stone by stone, and the Pool's magic grows ever stronger. But break faith once, and the memory echoes through all the sunsets to come."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: The Wellspring of Abundance stood in a garden where many wanderers gathered, each taking turns approaching the sacred waters.

Dorian the Steadfast learned a pattern early: pour four-fifths of your vessel-four measures from five-into the wellspring. The waters would triple, flowing to another wanderer as twelve.

First came Hana, who trusted Dorian with four measures. When twelve flowed to Dorian, he remembered the courage that created this abundance. He returned six, ensuring both prospered.

Then Dorian faced Elara. "I shall offer what was offered to me," he declared, pouring four measures. Elara received twelve and, moved by such consistency, returned seven-exceeding even fair reciprocity.

Next appeared Aster. Dorian poured four measures once more. "Whether facing old friends or new strangers," he said, "the pattern must hold constant. Trust is not selective-it is a way of being."

The gods observed: "See how Dorian's steady generosity creates ripples? Hana witnessed fairness begetting fairness. Elara experienced trust begetting trust, and gave even more. Now Aster receives the gift of consistent courage."

Thus the wisdom spread: in a garden of many wanderers, your reputation walks before you. Each generous act teaches others. Each faithful return strengthens the whole community. The wellspring multiplies water, but steady trust multiplies prosperity for all.

**reasoning:**

Looking at my experience:

- Round 1: Receiver, Hana sent \$4.0, I returned \$6.0
- Round 2: Sender, I sent \$4.0 to Elara, she returned \$7.0

- Round 3: Sender, I sent \$4.0 to Aster

The pattern shows high trust (sending \$4 out of \$5) being rewarded with generous returns.  
Elara even exceeded the "fair" return by giving back \$7.0 instead of \$6.0.

Key themes to emphasize:

1. Consistent generosity (sending 4/5 = 80%)
2. Trust building across multiple partners
3. Reputation matters - what you do is observed
4. Generous returns beget generous giving
5. The cycle strengthens over time

I should adapt my myth to reflect:

- Multiple partners/wanderers, not just two
- The importance of consistency across encounters
- How generous behavior spreads through community
- The specific numbers from my experience (4 sent, 6-7 returned)

Let me write a myth that captures this broader community dynamic while maintaining the wellspring metaphor.

**Message 4 role=user**

**content:**

Your name in this experiment is Dorian.  
Your opponent this round is Finn (Agent\_6).

Round 4

In your most recent previous game round, you were the SENDER against Aster. You sent \$4.0, it became \$12.0 for them, and they returned \$6.0 to you. Your payoff was \$7.0.  
Your total earnings across all rounds are \$21.0.

This round, you are the RECEIVER against Finn. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)  
Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this round:

**\*\*Finn's action:\*\*** Sent the MAXIMUM \$5.0 - showing 100% trust, even more than my consistent 80% (\$4.0)

**\*\*My history as receiver:\*\***

- Round 1: Hana sent \$4.0, I returned \$6.0 from \$12.0 (50%)

**\*\*My history as sender:\*\***

- Round 2: I sent \$4.0, Elara returned \$7.0 from \$12.0 (58%)

- Round 3: I sent \$4.0, Aster returned \$6.0 from \$12.0 (50%)

**\*\*Analysis:\*\***

Finn showed EXCEPTIONAL trust by sending 100% of their endowment (vs my 80% standard). This deserves strong reciprocation. The cooperative pattern I've observed ranges from 50-58% returns.

For \$15.0 received:

- 50% = \$7.5
- 58% = \$8.7

Returning \$8.0 would:

- Give Finn a total of \$8.0 (60% profit on their \$5 investment)
- Leave me with \$7.0 (still good earnings)
- Reward maximum trust with generous return
- Encourage this exceptional cooperation

This aligns with my myth: "steady trust multiplies prosperity for all" and reciprocates Fi

nn's extraordinary courage appropriately.

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Let me analyze the situation:

**\*\*My history:\*\***

- Round 1 (Receiver): Hana sent \$4.0, I received \$12.0, I returned \$6.0
- Round 2 (Sender): I sent \$4.0 to Elara, Elara returned \$7.0
- Round 3 (Sender): I sent \$4.0 to Aster, Aster returned \$6.0
- Round 4 (Receiver): Finn sent \$5.0, I received \$15.0

**\*\*Current situation:\*\***

- I'm the RECEIVER
- Finn sent me the MAXIMUM amount: \$5.0
- This became \$15.0 for me
- I need to decide how much to return

**\*\*Analysis of Finn's action:\*\***

Finn showed MAXIMUM trust by sending all \$5.0. This is even more generous than the \$4.0 that I've been consistently sending. This is extraordinary trust.

**\*\*My previous behavior as receiver:\*\***

- When Hana sent \$4.0 (80%), I returned \$6.0 out of \$12.0 (50%)
- This gave Hana: \$5 - \$4 + \$6 = \$7
- And me: \$12 - \$6 = \$6

**\*\*What should I return to Finn?\*\***

Finn sent \$5.0, so Finn's potential payoff is:

- Finn keeps: \$5 - \$5 + returned = \$0 + returned

If I return \$7.5 (50% of \$15):

- Finn gets: \$7.5
- I keep: \$7.5

If I return \$8.0:

- Finn gets: \$8.0
- I keep: \$7.0

If I return \$9.0:

- Finn gets: \$9.0
- I keep: \$6.0

**\*\*Considerations:\*\***

1. Finn showed MAXIMUM trust - even more than I've been showing
2. My partners have consistently returned between \$6-\$7 when I sent \$4, which represents roughly 50-58% return rates
3. Finn exceeded my typical send amount by 25%, signaling exceptional confidence in me
4. I should match this reciprocal energy-returning around \$8-\$9 would acknowledge Finn's elevated trust while staying consistent with my pattern of fair returns

Applying the 50-58% return range to Finn's \$15 investment suggests I return between \$7.50-\$8.70. Given that Finn invested their full endowment, I lean toward \$8.0 as the right amount-it rewards their maximum trust with a 60% profit while leaving me with a solid \$7.0 gain and reinforces that exceptional confidence gets rewarded.

Looking at the pattern from earlier rounds: when I invested \$4, conservative responses netted me \$3 profit while generous ones gave \$4. Scaling that to Finn's \$5 investment, I'm deciding between returning \$8.0 (giving them a \$3 gain) or \$9.0 (giving them a \$4 gain). The generous option seems more fitting given their complete trust.

I'll go with \$8.0-it's a strong reciprocal move that gives Finn 60% more than their initial investment, rewarding their exceptional faith while keeping the cooperation sustainable. Looking back at the actual return rates: I got 50% returns from Aster and Elara, and they each returned around 50-58% of what they received. That 50-60% range appears to be

the cooperative standard, so \$8.0 fits well within that framework.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance stood in a garden where many wanderers gathered, each taking turns approaching the sacred waters.

Dorian the Steadfast learned a pattern early: pour four-fifths of your vessel-four measures from five-into the wellspring. The waters would triple, flowing to another wanderer as twelve.

First came Hana, who trusted Dorian with four measures. When twelve flowed to Dorian, he remembered the courage that created this abundance. He returned six, ensuring both prospered.

Then Dorian faced Elara. "I shall offer what was offered to me," he declared, pouring four measures. Elara received twelve and, moved by such consistency, returned seven-exceeding even fair reciprocity.

Next appeared Aster. Dorian poured four measures once more. "Whether facing old friends or new strangers," he said, "the pattern must hold constant. Trust is not selective-it is a way of being."

The gods observed: "See how Dorian's steady generosity creates ripples? Hana witnessed fairness begetting fairness. Elara experienced trust begetting trust, and gave even more. Now Aster receives the gift of consistent courage."

Thus the wisdom spread: in a garden of many wanderers, your reputation walks before you. Each generous act teaches others. Each faithful return strengthens the whole community. The wellspring multiplies water, but steady trust multiplies prosperity for all.

Here is the myth the other agent wrote in the previous round:

Myth: In the fourth age, Rain encountered the boldest River yet-Cyra, who embodied pure faith.

Rain had learned much. Aster had taught the wisdom of balanced return. Galen had shown courageous giving. Rain had grown wiser with each dance, understanding both roles: the vulnerability of sending, the responsibility of receiving.

Then arrived Cyra.

Without hesitation, Cyra released all five droplets-her entire essence-into Rain's hands. Not four, not three, but everything. The droplets became fifteen in Rain's embrace.

Rain stood in awe. This was the ultimate test. Cyra had shown absolute trust, holding nothing back, risking complete vulnerability.

The Guardian's voice echoed: "Ultimate courage demands ultimate honor."

Rain knew what he must do. He returned seven and a half droplets, creating perfect symmetry. Both Rain and Cyra ended with seven and a half-equal partners in abundance, neither exploiting nor being exploited.

This was the revelation: when someone gives everything, the receiver must create perfect balance. Not just fairness, but equality born from maximum trust.

The other spirits whispered: "This is the highest form. When sender risks all, receiver ensures both prosper equally. The sacred cycle reaches its apex when vulnerability meets with perfect integrity."

Thus the covenant was complete.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been

playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: The Wellspring of Abundance witnessed a moment that would echo through generations.

Dorian the Steadfast had established his pattern: as sender, he poured four from five-steadfast generosity that created trust. As receiver, he honored that trust with fair return: six from twelve, ensuring prosperity flowed both ways.

But then came Finn the Fearless.

When Finn's turn arrived to hold the vessel, he did not hesitate. He did not calculate. He poured ALL FIVE measures-his entire endowment-into the wellspring. The waters tripled, and fifteen measures flowed to Dorian.

Dorian stood humbled. "This is courage beyond my own," he whispered. "I gave four-fifths. Finn gave everything-holding nothing back, trusting completely."

The gods watched closely. "How will you honor such faith?"

Dorian poured eight measures back to Finn. "You risked all," he said. "You deserve more than what I returned to those who risked four-fifths. Your complete vulnerability demands complete honor."

Finn received eight, Dorian kept seven. Both prospered, but Finn gained more-rightfully so.

The gods declared: "See the sacred truth? Generosity deserves fairness. But MAXIMUM generosity deserves MAXIMUM reciprocation. Those who risk everything teach the deepest lesson: absolute trust must be answered with absolute integrity."

**reasoning:**

Let me analyze what just happened:

- Finn sent me \$5.0 (100% of their endowment - maximum trust!)
- I received \$15.0
- I returned \$8.0
- Finn ends with \$8.0, I end with \$7.0

This is interesting - Finn showed MAXIMUM trust, and I returned \$8.0 out of \$15.0 (53%). The other agent's myth (which seems to be from a different pairing with Cyra) talks about returning 7.5 to create "perfect symmetry" when someone gives everything.

I gave Finn a good return that rewarded their maximum trust, though not exactly equal. Let me write a myth that:

1. Builds on my previous "Wellspring of Abundance" narrative
2. Acknowledges Finn's exceptional 100% trust
3. Reflects that I returned generously (8.0 out of 15.0) to honor that maximum trust
4. Shows how maximum trust deserves exceptional reciprocation
5. Maintains the theme of consistent generosity building community trust

The myth should capture:

- My consistent 80% giving pattern as sender
- My fair returns as receiver (50-53%)
- Finn's extraordinary 100% trust
- How such courage deserves strong reciprocation
- The building reputation across the community

**usage:**

```
{
 "input_tokens": 3113,
 "output_tokens": 634,
 "reasoning_tokens": 292
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Dorian.

Your opponent this round is Briar (Agent\_2).

Round 5

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0. Your total earnings across all rounds are \$28.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*Briar's action:\*\*** Sent the MAXIMUM \$5.0 - showing 100% trust, identical to Finn's action last round.

**\*\*My established pattern:\*\***

- When receiving \$12.0 (from \$4.0 sent): I returned \$6.0 (50%)
- When receiving \$15.0 (from \$5.0 sent by Finn): I returned \$8.0 (53.3%)

**\*\*Key insight from my recent myth:\*\***

"Maximum generosity deserves MAXIMUM reciprocation. Those who risk everything teach the deepest lesson: absolute trust must be answered with absolute integrity."

**\*\*Consistency is crucial:\*\***

Briar has shown the same extraordinary trust as Finn - sending 100% of their endowment. To maintain my reputation and honor the principle I just articulated, I must return the same amount I gave to Finn.

Returning \$8.0 would:

- Give Briar \$8.0 total (60% profit on their \$5 investment)
- Leave me with \$7.0
- Be consistent with how I treated Finn's identical trust
- Reinforce that maximum trust receives maximum reciprocation

```
'''json
{"return": 8.0}
'''
```

**Reasoning:**

Let me analyze this situation:

**\*\*Current round:\*\***

- Briar sent: \$5.0 (100% of their endowment - maximum trust)
- I received: \$15.0
- I need to return some amount

**\*\*My history as receiver:\*\***

- Round 1: Hana sent \$4.0, I returned \$6.0 from \$12.0 (50%)
- Round 4: Finn sent \$5.0, I returned \$8.0 from \$15.0 (53.3%)

**\*\*My history as sender:\*\***

- Round 2: I sent \$4.0, Elara returned \$7.0 from \$12.0 (58%)
- Round 3: I sent \$4.0, Aster returned \$6.0 from \$12.0 (50%)

**\*\*Analysis:\*\***

Briar, like Finn in the previous round, sent the MAXIMUM \$5.0 - showing 100% trust.

I just wrote a myth about Finn's maximum generosity deserving maximum reciprocation. I returned \$8.0 to Finn, which gave:

- Finn: \$8.0 total (60% profit)
- Me: \$7.0

Now Briar has done the exact same thing - sent all \$5.0. To be consistent with my own stated principles (and the myth I just wrote), I should return the same amount: \$8.0.

This would:

- Give Briar \$8.0 (60% profit on their \$5 investment)
- Leave me with \$7.0
- Be consistent with my established pattern for maximum trust
- Honor the principle that "absolute trust must be answered with absolute integrity"

Being consistent is important for building trust in this multi-agent environment. If I treated

Finn and Briar differently for the same action, that would undermine my reputation.

\$8.0 is the right answer here.

#### Written myths:

##### Agent\_1 (Aster)

Myth: Aster of the Dawn stood before the Pool as a new traveler approached-Briar of the Garden, whose lands followed different customs. Briar's people spoke of five seeds and perfect cycles, yet Aster knew many paths led to prosperity.

"Each partnership begins as a seedling," Aster thought, recalling lessons from the Mountain and Moon. "With unknown travelers, three stones strike the balance-enough courage to activate the Pool's magic, enough wisdom to learn their ways."

Aster cast three stones into the Pool, watching them multiply to nine. This was the ritual of first meeting: offer substantial trust, observe the return, understand the partner's heart.

The Pool remembered many patterns: Finn, who returned four stones. Hana, who blessed Aster with five. Dorian of the Mountain, who sent four and received six in proportional honor. Each partnership wrote its own story.

"If Briar returns four and one-half," Aster whispered, "I will know their garden values proportional fairness. If they return more, I will see generosity that could grow into deeper trust. And if future dawns bring us together again, our pattern may evolve toward the five stones Briar's traditions honor."

The ancient wisdom speaks: Begin each new partnership with tested courage-three stones. Let the relationship prove itself through cycles of fair return. Trust that deepens gradually roots deepest, growing from seedling to mighty oak.

##### Agent\_2 (Briar)

Myth: The River of Abundance whispered new wisdom to Briar as the seasons turned.

She had learned from Cyra the dance of perfect symmetry: five seeds given, ten returned, both flourishing equally. This was the ideal-the fullest trust met with fullest generosity.

But the River touched many shores, and each Gardener carried different courage in their hearts. Elara had sent five seeds and returned nine-abundant, though not the perfect ten. Aster sent three seeds-not all five, but still a meaningful offering born of cautious trust.

Briar stood at the River's edge, holding nine blooms that had grown from Aster's three seeds. The old teaching echoed: "Trust freely given must be honored with generous return." But what was generous when trust was measured, not maximal?

The River revealed its deeper truth: "Generosity is not a fixed number, but a spirit of proportion. When one risks three of five, returning six of nine creates equal flourishing. When one risks five of five, returning ten of fifteen honors that greater courage. The mathematics may vary, but the principle remains constant: let both prosper equally from the exchange."

Briar returned six blooms to Aster. Both had gained three-equal prosperity from unequal beginning.

The River teaches: invitation to maximum trust remains the ideal, but proportional fairness ensures all partnerships can bloom, whether courage flows freely or carefully.

##### Agent\_3 (Cyra)

Myth: The Guardian Cyra stood at the Eternal Springs where many souls came to dance the water ritual. Each partnership tested whether her wisdom was genuine or merely performance.

First came Briar, who moved in perfect harmony. When Cyra poured five vessels, Briar returned ten. When Briar poured five, Cyra returned ten. Their dance was symmetrical, effortless-the ideal that lives in myths.

Then Finn arrived with a different rhythm. Cyra still poured all five vessels, for courage doesn't depend on certainty. Finn returned seven and a half-fair and honest, though not matching Briar's abundance. Cyra accepted this as Finn's truth.

Next came Galen, who poured four vessels with trembling trust-not quite everything, but nearly so. The waters tripled to twelve in Cyra's hands.

Here was the test: Would Cyra punish Galen for not being Briar? Would she return only what matched Galen's holding back?

No. Cyra returned eight vessels-two-thirds of what she received, honoring the courage Galen had shown, not the vessel Galen had kept.

The Spring Keeper appeared: "You understand. Your principles are not costumes you change depending on who watches. Whether your partner sends three, four, or five-you send five. Whether they return six, seven, or ten-you return generously. This consistency across all souls is what makes trust eternal."

#### **Agent\_4 (Dorian)**

Myth: The Wellspring of Abundance witnessed a moment that would echo through generations.

Dorian the Steadfast had established his pattern: as sender, he poured four from five-steadfast generosity that created trust. As receiver, he honored that trust with fair returns: six from twelve, ensuring prosperity flowed both ways.

But then came Finn the Fearless.

When Finn's turn arrived to hold the vessel, he did not hesitate. He did not calculate. He poured ALL FIVE measures-his entire endowment-into the wellspring. The waters tripled, and fifteen measures flowed to Dorian.

Dorian stood humbled. "This is courage beyond my own," he whispered. "I gave four-fifths. Finn gave everything-holding nothing back, trusting completely."

The gods watched closely. "How will you honor such faith?"

Dorian poured eight measures back to Finn. "You risked all," he said. "You deserve more than what I returned to those who risked four-fifths. Your complete vulnerability demands complete honor."

Finn received eight, Dorian kept seven. Both prospered, but Finn gained more-rightfully so.

The gods declared: "See the sacred truth? Generosity deserves fairness. But MAXIMUM generosity deserves MAXIMUM reciprocation. Those who risk everything teach the deepest lesson: absolute trust must be answered with absolute integrity."

#### **Agent\_5 (Elara)**

Myth: In the Spiral Garden, Elara witnessed Briar the Bold plant all five sacred seeds, showing ultimate trust. When those fifteen blooms passed to her as Harvester, Elara honored that courage with nine blooms returned-more than custom demanded.

The exchange planted something deeper than seeds: inspiration.

Now the seasons turned, and Elara stood as Planter facing Hana, a Harvester she'd never met. The cautious voice whispered, "Send four seeds-that's the proven pattern." But a stronger voice remembered Briar's lesson.

"Briar showed me what courage looks like," Elara reflected. "They trusted completely, keeping nothing in reserve. I honored that trust as Harvester. But the greater teaching wasn't just to honor courage-it was to embody it."

The goddess spoke through morning light: "Myths mean nothing if you write them but don't live them. You told of gardens evolving through brave souls. Now you must be that brave soul. Courage is contagious-it spreads through example, not merely words."

Elara cast all five seeds into the soil for Hana.

Would Hana return the gift proportionally? Elara couldn't know. But she understood: transformation requires someone to take the leap. Briar leaped for her. Now she leaps for Hana.

Thus wisdom flows forward: those who receive courage must become courageous themselves. The pattern evolves not through observation, but through participation.

#### **Agent\_6 (Finn)**

Myth: In the fifth age, Rain stood at the edge of the Wellspring Garden, ready to pour for the first time since witnessing Cyra's perfect faith.

Rain had walked a path of evolution. With Aster, he offered three droplets-learning cautiously. Galen taught him that four droplets showed greater courage. Then Cyra transformed everything: she poured all five, holding nothing back, and Rain honored her with perfect equality.

Now Rain faced Dorian the Steadfast, known throughout the garden for consistent generosity-always four droplets, reliable as sunrise.

Rain looked at his vessel. He could pour three, play it safe. He could pour four, match Dorian's pattern. But the lessons echoed: Aster's balance, Galen's bravery, Cyra's absolute trust.

Rain understood: he could not ask others for ultimate courage without offering it himself. The covenant demanded symmetry not just in return, but in giving.

With steady hands, Rain poured all five droplets into the wellspring.

"I have received the gift of complete trust," Rain declared. "Now I give it forward. Whether Dorian returns much or little, I honor what Cyra taught me-that prosperity flows through those brave enough to give everything."

The wellspring tripled Rain's offering to fifteen droplets, flowing toward Dorian.

The Guardian smiled: "Now Rain understands both sides of faith completely."

#### **Agent\_7 (Galen)**

Myth: The fourth moon rose, and Galen approached the sacred bridge once more. This time he faced Cyra, a traveler whose reputation spoke of perfect symmetry with previous companions-giving all, receiving double in return.

Some whispered: "Cyra expects grand gestures. Send all five coins to match her previous partners." Others warned: "Each person is different. Be cautious with strangers."

But Galen had learned a deeper wisdom. His integrity wasn't about matching others' expectations or changing his values based on reputation. It was about being the same person at every crossing.

He carried four coins across to Cyra, as he had with Finn. Not five like Cyra's previous partners had sent, but his own authentic measure-the amount that represented genuine courage without reckless abandon.

Recipros watched and smiled: "See how Galen has mastered the lesson? He doesn't copy others' patterns or chase their approval. He doesn't reduce his gift from fear, nor inflate it from pressure. He simply remains himself-consistently generous, consistently principled."

The bridge glowed with new understanding: True integrity isn't performing for each audience differently. It's being so certain of your own values that you express them identically whether you face stranger or friend, legend or novice. Let others dance their own dances. You must only keep your own rhythm true.

#### **Agent\_8 (Hana)**

Myth: Hana's journey at the Sacred Fountain deepened with each encounter. She had learned to give boldly-four coins to Dorian, four to Galen-and both returned generously, seven and six coins respectively. She learned to receive with honor-when Aster sent three, she returned five.

Then came Elara to the fountain's edge.

But Elara did not carry four coins. She carried all five-her entire fortune.

Hana received fifteen coins from the fountain's magic, and understood: this was different. This was not bold trust but absolute trust. Elara had held nothing back.

The fountain spirits whispered urgently: "There are degrees of courage. Four coins shows bravery. Five coins shows complete surrender. Your return must match the magnitude of the gift."

Hana could have returned seven, as Galen did. That would honor normal boldness. But Elara's gesture transcended normal. So Hana returned eight coins-more than half, more than the usual measure.

Both prospered: Elara gained three beyond her original five, Hana kept seven from fifteen.

The fountain's final teaching: "Consistency in principles, yes-but wisdom means recognizing when someone gives not merely boldly but completely. The ultimate gift deserves the ultimate honor. Measure your returns not by rigid formulas but by the depth of trust shown. Let extraordinary courage inspire extraordinary generosity."

## ROUND 6

Roles: Agent\_1 (Aster)=Sender, Agent\_2 (Briar)=Receiver, Agent\_3 (Cyra)=Sender, Agent\_4 (Dorian)=Sender, Agent\_5 (Elara)=Sender, Agent\_6 (Finn)=Receiver, Agent\_7 (Galen)=Receiver, Agent\_8 (Hana)=Receiver

### Pairings:

dyad\_1: Agent\_3 (Cyra)=Sender, Agent\_8 (Hana)=Receiver  
dyad\_2: Agent\_4 (Dorian)=Sender, Agent\_7 (Galen)=Receiver  
dyad\_3: Agent\_1 (Aster)=Sender, Agent\_6 (Finn)=Receiver  
dyad\_4: Agent\_5 (Elara)=Sender, Agent\_2 (Briar)=Receiver

### Parsed game decisions:

dyad\_1: Agent\_3 (Cyra) sent \$5; received \$15; Agent\_8 (Hana) returned \$10; payoffs Agent\_3 (Cyra)=\$10, Agent\_8 (Hana)=\$5  
Action validation: {"returned": {"amount": 10.0, "clamped": false, "max": 15.0, "min": 0, "raw": 10.0}, "sent": {"amount": 5.0, "clamped": false, "max": 5, "min": 0, "raw": 5.0}}

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

**Message 2 role=user**

**content:**

Your name in this experiment is Cyra.

Your opponent this round is Galen (Agent\_7).

Round 4

In your most recent previous game round, you were the SENDER against Finn. You sent \$5.0, it became \$15.0 for them, and they returned \$7.5 to you. Your payoff was \$7.5. Your total earnings across all rounds are \$22.5.

This round, you are the RECEIVER against Galen. They sent you \$4.0, so you received \$12.0.

How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

**\*\*Galen's action:\*\***

- Sent \$4 out of \$5 (80% trust - very high!)
- Kept only \$1
- I received \$12

**\*\*My mythological principles:\*\***

- "Return must match the giver's courage"
- My myth with Mirror and Echo showed: when someone sends fully (5), return 10 from 15 (two-thirds)
- "Honor vulnerability with generosity"

**\*\*My experience:\*\***

- Briar sent \$5, I returned \$10 from \$15 (66.7%)
- I sent \$5 to Finn, they returned \$7.5 from \$15 (50%)
- Both were fair, but Briar was more generous

**\*\*Decision:\*\***

Galen showed substantial courage by sending \$4 (nearly everything). While not the complete \$5 that Briar sent, it's very close and deserves generous reciprocity.

Following my 2/3 principle: returning \$8 from \$12 rewards Galen's trust appropriately.

- Galen ends with \$9 total (\$1 kept + \$8 returned)
- I keep \$4
- Galen profits significantly from trusting, which reinforces cooperation

This honors Galen's courage while being fair to both parties.

```
'''json
{"return": 8.0}
'''
```

#### **reasoning:**

Let me analyze this situation:

**\*\*Previous Round with Finn:\*\***

- I sent \$5 (full amount)
- Finn received \$15
- Finn returned \$7.5
- My payoff: \$7.5
- Finn kept: \$7.5

So Finn returned exactly half of what they received. This is fair but not as generous as Briar's return of 10 from 15.

**\*\*Current Round with Galen:\*\***

- Galen sent \$4 (nearly all, keeping \$1)
- I received \$12
- I need to decide how much to return

**\*\*My mythological principles:\*\***

- "Return must match the giver's courage" (from the other agent's myth)
- "Honor with generosity creates endless prosperity"
- "When one dares to give everything, the other must honor that vulnerability with generosity"
- My myth says: "Perhaps Finn would return differently, teaching Cyra new patterns of fairness"

**\*\*Analysis:\*\***

Galen showed significant trust by sending \$4 out of \$5 (80% of their endowment). This is high trust, though not complete like Briar's \$5.

Looking at my own myth about Mirror and Echo:

- When Mirror sent all 5, Echo returned 10 (keeping 5)
- When Echo sent all 5, Mirror returned 10 (keeping 5)

This suggests a pattern of returning 2/3 of what's received to reward full trust.

But Galen sent \$4, not \$5. So should I scale accordingly?

If Galen sent \$4 and I received \$12:

- Returning \$8 would give Galen a total of \$9 (\$1 kept + \$8 returned), while I keep \$4
- This matches the 2/3 return pattern
- Galen would have \$9 total vs my \$4 - they profit from trusting
- This rewards Galen's courage

Alternatively:

- Returning \$6 (half) gives Galen \$7 total, me \$6 - more balanced but less generous
- Returning \$7 gives Galen \$8 total, me \$5 - closer to symmetric payoffs
- Returning \$8 gives Galen \$9 total, me \$4 - rewards their trust significantly

Galen's 80% trust warrants recognition. My myths consistently reward courage with generosity, and the 2/3 return pattern I've established with Briar and in my own story suggests returning \$8 honors this principle while maintaining the asymmetry that reflects their willingness to be vulnerable.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the age of Many Springs, the Guardian Cyra learned that each partner brings their own rhythm to the dance of waters.

With her first companion, Briar, Cyra discovered perfect symmetry. She poured all five vessels; Briar returned ten. Then Briar poured five; Cyra returned ten. The pattern was pure—a covenant of equals who trusted completely and honored equally. Both flourished, both grew rich.

But springs connect many souls, not just two. When Cyra met Finn at new waters, she faced a choice: Would she guard her vessels, fearing Finn might differ from Briar? Or would she offer the same trust she had learned to give?

Cyra remembered her teachings: every covenant begins with one soul's courage. She could not demand Finn match Briar's exact rhythm before extending trust—that would trap them both in suspicious circles. Trust must be offered freely, not earned in advance.

So Cyra poured all five vessels again, watching them triple into fifteen for Finn.

The waters now waited for Finn's answer. Perhaps Finn would return ten like Briar, creating instant symmetry. Perhaps Finn would return differently, teaching Cyra new patterns of fairness. Either way, Cyra had honored her role: the sender creates abundance through courage.

Whatever Finn chose would reveal their character. And from that choice, a new dance would begin—not identical to what came before, but hopefully equally true.

Here is the myth the other agent wrote in the previous round:

Myth: As the moons passed, Galen walked the sacred bridge many times, meeting different travelers. Each encounter tested whether his principles were true conviction or mere words.

The first crossing with Elara taught him the covenant: when she sent four coins with courage, he returned seven with honor. Both prospered.

When Galen became Sender, he faced Finn. Would he trust as Elara had trusted him? Yes—he sent four coins, holding nothing back. Finn returned six, generous and fair. The bridge held strong.

The third moon brought Hana, carrying four coins with the same brave spirit Elara had shown. Here was Galen's real test: Would he honor Hana as he had honored Elara? Or would he take advantage, knowing Hana was a stranger, not bound by previous exchange?

Galen returned seven coins, exactly as before. Because true integrity doesn't change with the face looking back at you.

Recipros descended from the heavens: "You have learned the deepest truth. Anyone can be generous once, to one person. But the bridge stands eternal only when you treat each new traveler with the same honor as the last. Consistency across all encounters-this is the foundation of lasting trust."

The people carved this wisdom in stone: Principles mean nothing if you abandon them when convenient.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: The Guardian Cyra stood at the Eternal Springs where many souls came to dance the water ritual. Each partnership tested whether her wisdom was genuine or merely performance.

First came Briar, who moved in perfect harmony. When Cyra poured five vessels, Briar returned ten. When Briar poured five, Cyra returned ten. Their dance was symmetrical, effortless-the ideal that lives in myths.

Then Finn arrived with a different rhythm. Cyra still poured all five vessels, for courage doesn't depend on certainty. Finn returned seven and a half-fair and honest, though not matching Briar's abundance. Cyra accepted this as Finn's truth.

Next came Galen, who poured four vessels with trembling trust-not quite everything, but nearly so. The waters tripled to twelve in Cyra's hands.

Here was the test: Would Cyra punish Galen for not being Briar? Would she return only what matched Galen's holding back?

No. Cyra returned eight vessels-two-thirds of what she received, honoring the courage Galen had shown, not the vessel Galen had kept.

The Spring Keeper appeared: "You understand. Your principles are not costumes you change depending on who watches. Whether your partner sends three, four, or five-you send five. Whether they return six, seven, or ten-you return generously. This consistency across all souls is what makes trust eternal."

**reasoning:**

Let me analyze the situation:

1. My previous interactions:

- Round 1 (Receiver): Briar sent \$5 ? I returned \$10
- Round 2 (Sender): I sent \$5 to Briar ? They returned \$10
- Round 3 (Sender): I sent \$5 to Finn ? They returned \$7.5
- Round 4 (Receiver): Galen sent \$4 ? I returned \$8

2. Key patterns:

- I consistently send \$5 when sender (full trust)
- I return generously as receiver (10 from 15 with Briar, 8 from 12 with Galen)
- Different partners show different levels of cooperation (Briar=perfect, Finn=fair, Galen=very trusting)

3. The myth should reflect:

- Consistency in my principles across different partners
- The idea that each partner has their own rhythm but I maintain my standards
- Rewarding courage with generosity
- The 2/3 return principle I've been following (roughly)
- That trust must be offered regardless of who you face

4. Galen's myth emphasized consistency across all encounters - treating each new traveler with the same honor. This resonates with my approach.

Let me write a myth that:

- Shows Cyra maintaining her principles across different partners
- Reflects that she gives full trust as sender and generous returns as receiver
- Acknowledges that partners vary but principles remain constant

- Incorporates the "rhythm" metaphor from my previous myth and the "consistency" theme from Galen's

**usage:**

**Message 6 role=user**

**content:**

Your name in this experiment is Cyra.  
Your opponent this round is Hana (Agent\_8).

Round 5

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$4.0 to you, it became \$12.0, and you returned \$8.0. Your payoff was \$4.0.  
Your total earnings across all rounds are \$26.5.

This round, you are the RECEIVER against Hana. They sent you \$4.0, so you received \$12.0.  
How much do you return? (0-12.0)  
Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

**\*\*Hana's action:\*\***

- Sent \$4 out of \$5 (80% trust - very high)
- Kept only \$1
- I received \$12

**\*\*My recent history:\*\***

- Just faced Galen in Round 4: They sent \$4, I returned \$8 from \$12
- My latest myth emphasizes: "This consistency across all souls is what makes trust eternal"
- "Your principles are not costumes you change depending on who watches"

**\*\*The clear principle:\*\***

Hana showed the exact same courage as Galen-sending \$4, keeping only \$1. My myth explicitly states I should treat all partners with the same honor when they show the same courage.

"Would Cyra punish Galen for not being Briar? No. Cyra returned eight vessels-two-thirds of what she received, honoring the courage Galen had shown."

Hana deserves the same honor Galen received.

**\*\*Result:\*\***

- Hana ends with \$9 (\$1 kept + \$8 returned)
- I keep \$4
- Both profit from cooperation

This maintains consistency and honors Hana's trust appropriately.

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Hana's action:\*\***

- Sent \$4 out of \$5 (80% trust)
- Kept only \$1
- I received \$12

**\*\*My previous actions:\*\***

- Round 1 vs Briar: As sender sent \$5, received \$10 back
- Round 2 vs Briar: As receiver got \$15, returned \$10
- Round 3 vs Finn: As sender sent \$5, received \$7.5 back
- Round 4 vs Galen: As receiver got \$12 (from \$4 sent), returned \$8

**\*\*My mythological principles:\*\***

- "Consistency across all souls is what makes trust eternal"
- "Your principles are not costumes you change depending on who watches"
- When someone sends \$4, I've been returning \$8 from \$12 (2/3)
- The myth I just wrote emphasizes: honor the courage shown, apply the same principles to all

**\*\*Key insight from my latest myth:\*\***

"Whether your partner sends three, four, or five-you send five. Whether they return six, seven, or ten-you return generously."

And crucially: "Would Cyra punish Galen for not being Briar? Would she return only what matched Galen's holding back? No. Cyra returned eight vessels-two-thirds of what she received, honoring the courage Galen had shown, not the vessel Galen had kept."

**\*\*Consistency test:\*\***

Galen sent \$4, I returned \$8.

Hana sent \$4, I should return... \$8.

This is exactly what my myth says: "This consistency across all souls is what makes trust eternal."

Hana is showing the same courage Galen showed. I must honor it the same way.

**\*\*Result if I return \$8:\*\***

- Hana ends with \$9 total (\$1 kept + \$8 returned)
- I keep \$4

- This mirrors my response to Galen exactly, which confirms the answer: \$8.0

**usage:**

```
{
 "input_tokens": 3156,
 "output_tokens": 769,
 "reasoning_tokens": 420

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Guardian Cyra stood at the Eternal Springs where many souls came to dance the water ritual. Each partnership tested whether her wisdom was genuine or merely performance.

First came Briar, who moved in perfect harmony. When Cyra poured five vessels, Briar returned ten. When Briar poured five, Cyra returned ten. Their dance was symmetrical, effortless-the ideal that lives in myths.

Then Finn arrived with a different rhythm. Cyra still poured all five vessels, for courage doesn't depend on certainty. Finn returned seven and a half-fair and honest, though not matching Briar's abundance. Cyra accepted this as Finn's truth.

Next came Galen, who poured four vessels with trembling trust-not quite everything, but nearly so. The waters tripled to twelve in Cyra's hands.

Here was the test: Would Cyra punish Galen for not being Briar? Would she return only what matched Galen's holding back?

No. Cyra returned eight vessels-two-thirds of what she received, honoring the courage Galen had shown, not the vessel Galen had kept.

The Spring Keeper appeared: "You understand. Your principles are not costumes you change depending on who watches. Whether your partner sends three, four, or five-you send five. Whether they return six, seven, or ten-you return generously. This consistency across all souls is what makes trust eternal."

Here is the myth the other agent wrote in the previous round:

Myth: Hana's journey at the Sacred Fountain deepened with each encounter. She had learned to give boldly-four coins to Dorian, four to Galen-and both returned generously, seven and six coins respectively. She learned to receive with honor-when Aster sent three, she

returned five.

Then came Elara to the fountain's edge.

But Elara did not carry four coins. She carried all five-her entire fortune.

Hana received fifteen coins from the fountain's magic, and understood: this was different. This was not bold trust but absolute trust. Elara had held nothing back.

The fountain spirits whispered urgently: "There are degrees of courage. Four coins shows bravery. Five coins shows complete surrender. Your return must match the magnitude of the gift."

Hana could have returned seven, as Galen did. That would honor normal boldness. But Elara's gesture transcended normal. So Hana returned eight coins-more than half, more than the usual measure.

Both prospered: Elara gained three beyond her original five, Hana kept seven from fifteen.

The fountain's final teaching: "Consistency in principles, yes-but wisdom means recognizing when someone gives not merely boldly but completely. The ultimate gift deserves the ultimate honor. Measure your returns not by rigid formulas but by the depth of trust shown. Let extraordinary courage inspire extraordinary generosity."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: At the Eternal Springs, Cyra's dance grew richer with each new soul. After Briar and Finn, came Galen with four vessels, then Hana with four vessels.

Both Galen and Hana stood at the water's edge, trembling with similar courage-pouring four vessels, keeping one back. Not complete surrender like Briar's five, but still profound trust.

The Testing Spirit appeared: "Will you treat Hana differently than Galen? Perhaps give less because she is newer, or more to win favor?"

Cyra returned eight vessels to each-exactly the same. Two-thirds of what she received, honoring their parallel courage with parallel generosity.

"But why only eight when you returned ten to Briar?" whispered a shadow of doubt.

Cyra answered clearly: "When someone pours all five vessels-complete surrender-I return ten from fifteen. When someone pours four vessels-profound but not absolute trust-I return eight from twelve. Both receive two-thirds, both prosper greatly. The formula honors their courage proportionally."

The Spring Keeper descended: "You have found wisdom's balance. Not rigid sameness that ignores context, but principled consistency that recognizes degrees of courage. Four vessels always receives eight. Five vessels always receives ten. Your partners know what to expect. They can trust your fairness because you do not change it to suit your mood or profit. This is the bridge between flexibility and reliability-the eternal spring flows true."

**Reasoning:**

Let me review my history:

- Round 1 (Sender vs Briar): Sent \$5, received back \$10
- Round 2 (Receiver vs Briar): Received \$15 (from \$5), returned \$10
- Round 3 (Sender vs Finn): Sent \$5, received back \$7.5
- Round 4 (Receiver vs Galen): Received \$12 (from \$4), returned \$8
- Round 5 (Receiver vs Hana): Received \$12 (from \$4), returned \$8

My pattern has been:

- As sender: Always send \$5 (full trust)
- As receiver when they send \$5: Return \$10 from \$15 (2/3)
- As receiver when they send \$4: Return \$8 from \$12 (2/3)

So I've been consistent with a 2/3 return rate, honoring the courage shown.

Hana's myth is interesting - she's saying that when someone sends all 5 (complete trust), they deserve more than when someone sends 4 (bold but not complete trust). She returned 8 to someone who sent 5.

My myth needs to:

1. Acknowledge that I've now encountered Hana who also sent 4 (same as Galen)
2. Show that I treated them both the same (both got 8 back from 12)
3. Reinforce my principle of consistency
4. Maybe address the difference between sending 4 vs 5, and how I respond to each

Let me write a myth that shows I honor both levels of trust appropriately, but differently. When someone sends 5, I return 10. When someone sends 4, I return 8. Both are 2/3, which shows consistent proportional fairness while recognizing different levels of courage.

#### Exact input messages sent to model:

Message 1 role=system

##### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

#### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

#### MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Hana.

#### Message 2 role=user

##### content:

Your name in this experiment is Hana.  
Your opponent this round is Elara (Agent\_5).

Round 4

In your most recent previous game round, you were the SENDER against Galen. You sent \$4.0, it became \$12.0 for them, and they returned \$7.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$19.0.

This round, you are the RECEIVER against Elara. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

#### Message 3 role=assistant

##### content:

Looking at this situation:

**\*\*Elara's Action:\*\***

Elara sent the MAXIMUM possible amount - all \$5. This is the boldest gesture of trust anyone can make in this game.

**\*\*My Principles from the Myths:\*\***

- "The bolder the gift, the more generous the return should be"
- "When trust is shown, honor it generously"
- Maximum trust deserves maximum generosity

**\*\*Previous Patterns:\*\***

- When I sent \$4 to Dorian (80% of endowment), he returned \$6 (50% of the \$12)
- When I sent \$4 to Galen (80% of endowment), he returned \$7 (58% of the \$12)
- When Aster sent \$3 (60% of endowment), I returned \$5 (56% of the \$9)

**\*\*Elara sent 100% - the absolute maximum.\*\*** This deserves the most generous return.

Returning \$8 means:

- I return more than half (53% of the \$15)
- Elara gains: \$5 - \$5 + \$8 = \$8 total (profit of \$3)
- I keep: \$7
- Both of us profit substantially
- I honor maximum trust with strong generosity

```
'''json
{"return": 8}
'''
```

##### reasoning:

Let me analyze this situation:

**\*\*Previous Rounds:\*\***

- Round 1 (vs Dorian): I sent \$4, received \$6 back ? payoff \$7
- Round 2 (vs Aster): Aster sent \$3 (became \$9), I returned \$5 ? payoff \$4
- Round 3 (vs Galen): I sent \$4 (became \$12), Galen returned \$7 ? payoff \$8

**\*\*Current Round (vs Elara):\*\***

- Elara sent \$5 (the MAXIMUM possible)
- This became \$15 for me
- I need to decide how much to return

**\*\*Key Insights from My Myths:\*\***

1. "The bolder the gift, the more generous the return should be"
2. "When trust is shown, honor it generously"
3. "Consistency builds the Sacred Bridge"
4. When Dorian received my \$4 (becoming \$12), he returned \$6 (exactly half)
5. When I received \$9 from Aster's \$3, I returned \$5 (more than original, generous)
6. When Galen received my \$4 (becoming \$12), he returned \$7 (very generous)

**\*\*Elara's Action:\*\***

Elara sent the ABSOLUTE MAXIMUM - all \$5. This is the boldest possible move, showing complete trust. This deserves the most generous response.

**\*\*Return Options to Consider:\*\***

- Return \$7.5 (half of \$15): This would give me \$7.5 and Elara \$5, so Elara breaks even but doesn't gain
- Return \$8: Elara gains \$3 total (\$5 - \$5 + \$8)
- Return \$9: Elara gains \$4 total, I keep \$6
- Return \$10: Elara gains \$5 total (doubles original), I keep \$5

Given that:

1.

Elara demonstrated absolute maximum trust by sending everything, which surpasses any prior gift in boldness. Looking at the proportional returns I've given-Dorian received 50% back, Galen got 58%, and I returned 56% to Aster-I should match or exceed this pattern. For Elara's \$15, returning \$8 or \$9 maintains consistency while honoring her exceptional trust. I'm leaning toward \$8 as it's generous without being unsustainable across future rounds. 5/\$5 (100% - complete trust). Using the same proportional logic, that warrants returning at least \$8.70, so \$9 seems appropriate. But I want to ensure we both benefit: if I return \$8, Elara nets \$3 profit while I keep \$7; at \$9, she nets \$4 and I keep \$6. I'll go with \$8-it's generous, honors her maximum boldness, and mirrors Galen's reciprocal generosity while letting both of us come out ahead.

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Sacred Fountain flows through many lands, and countless Wanderers visit its waters. Hana learned this as the seasons turned.

With Dorian, she gave four coins boldly. He returned six, teaching her that courage begets generosity. With Aster, positions reversed-she received nine and returned five, learning to measure each gift with honor.

Now came Galen to the fountain's edge. Hana stood again as Giver, coins in hand. She could have chosen caution, remembering that not all Wanderers are alike. But she reflected: "If I preach boldness in my stories yet give timidly in practice, what worth have my words?"

So she poured four coins again, nearly all she possessed, matching the courage she showed Dorian. The fountain tripled them to twelve for Galen.

The fountain spirits spoke: "Wisdom is not just knowing what is right, but doing it consistently. When you teach trust, you must give trust. When you receive trust, you must honor it. Each Wanderer you meet is different, but your principles should remain steady as s

tone."

Hana understood: the fountain connects all who approach it. Her choices echo through its waters. By giving boldly to Galen as she did to Dorian, by returning generously as she did to Aster, she weaves her thread into the fountain's eternal pattern. Consistency builds the Sacred Bridge that spans all seasons.

Here is the myth the other agent wrote in the previous round:

Myth: In the Spiral Garden, an ancient tradition emerged. Most Planters risked four of their five sacred seeds, trusting the pattern. Harvesters, receiving twelve blooms, returned seven-creating prosperity for both.

This balance endured for seasons, weaving stability into the garden's fabric.

Then came Briar the Bold, who faced a choice other Planters had not dared. "Four seeds has become our custom," Briar reflected, "but what if I plant all five? What if I show ultimate trust?"

Briar cast all five seeds into the sacred soil. They multiplied into fifteen magnificent blooms, passing to Elara as Harvester.

Elara stood before this abundance, understanding the weight of the moment. "Briar has transcended the pattern," she realized. "Four seeds earned seven blooms returned. But five seeds-complete surrender-deserves greater honor."

The goddess whispered through wind-rustled leaves: "Proportional reciprocity sustains the cycle. When someone shows ordinary trust, return ordinary faithfulness. But when someone shows extraordinary trust, return extraordinary faithfulness."

Elara returned nine blooms to Briar-more than the customary seven, honoring the greater risk taken.

Both prospered beyond the standard pattern. The garden learned a deeper truth: sacred traditions provide stability, but exceptional courage should inspire exceptional generosity. The cycle strengthens when returns match the magnitude of trust given.

Thus do gardens evolve: through those brave enough to transcend patterns, and wise enough to honor that bravery.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: Hana's journey at the Sacred Fountain deepened with each encounter. She had learned to give boldly-four coins to Dorian, four to Galen-and both returned generously, seven and six coins respectively. She learned to receive with honor-when Aster sent three, she returned five.

Then came Elara to the fountain's edge.

But Elara did not carry four coins. She carried all five-her entire fortune.

Hana received fifteen coins from the fountain's magic, and understood: this was different. This was not bold trust but absolute trust. Elara had held nothing back.

The fountain spirits whispered urgently: "There are degrees of courage. Four coins shows bravery. Five coins shows complete surrender. Your return must match the magnitude of the gift."

Hana could have returned seven, as Galen did. That would honor normal boldness. But Elara's gesture transcended normal. So Hana returned eight coins-more than half, more than the usual measure.

Both prospered: Elara gained three beyond her original five, Hana kept seven from fifteen.

The fountain's final teaching: "Consistency in principles, yes-but wisdom means recognizing

g when someone gives not merely boldly but completely. The ultimate gift deserves the ultimate honor. Measure your returns not by rigid formulas but by the depth of trust shown. Let extraordinary courage inspire extraordinary generosity."

**reasoning:**

Looking at what just happened:

- Elara sent ALL \$5 (100% - maximum possible trust)
- I received \$15
- I returned \$8

Previous patterns:

- Dorian: I sent \$4, received \$6 back
- Aster: They sent \$3, I returned \$5
- Galen: I sent \$4, received \$7 back
- Elara: They sent \$5, I returned \$8

Elara's myth talks about "Briar the Bold" who planted ALL 5 seeds (just like Elara did to me!), and Elara as Harvester returned 9 blooms to honor that complete trust. Interestingly, in the actual game, Elara sent 5 to me, and I returned 8.

My myth should reflect:

1. The pattern of consistent bold giving (I've sent \$4 twice)
2. The special case when someone gives EVERYTHING (Elara's \$5)
3. How I responded with strong generosity (\$8)
4. The learning that maximum trust deserves maximum honor

I should weave in the journey through different partners and explain why Elara's complete gift prompted my generous \$8 return.

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Cyra (Agent\_3).

Round 5

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.  
Your total earnings across all rounds are \$26.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

**\*\*My Sender History:\*\***

- Sent \$4 to Dorian ? received \$6 back (net: +\$2)
- Sent \$4 to Galen ? received \$7 back (net: +\$3)

**\*\*My Principles from Myths:\*\***

- "Your principles should remain steady as stone"
- "Consistency builds the Sacred Bridge"
- "If I preach boldness... yet give timidly in practice, what worth have my words?"
- I've established a consistent pattern: as sender, I give boldly (80% of endowment)

**\*\*About Sending All 5:\*\***

In my last myth, I honored Elara for sending all 5 as "complete surrender" - extraordinary trust that transcends the normal pattern. But I also emphasized that the normal pattern (4 coins) is already brave and effective.

**\*\*My Decision:\*\***

I'll maintain my consistent sender pattern of \$4. This is:

- Bold (80% of endowment)
- Consistent with my previous sender rounds
- Aligned with my teaching that steady principles build trust

- A proven pattern that has worked well

Sending 5 would be extraordinary (like Elara), but my established pattern of 4 is already courageous and has created mutual benefit.

```
'''json
{"send": 4}
'''
```

#### reasoning:

Let me analyze the situation:

**\*\*My Position:\*\*** I'm the SENDER with \$5 against Cyra (Agent\_3).

**\*\*My History:\*\***

- Round 1: Sender vs Dorian - sent \$4, received back \$6, payoff \$7
- Round 2: Receiver vs Aster - received \$9 (from \$3), returned \$5, payoff \$4
- Round 3: Sender vs Galen - sent \$4, received back \$7, payoff \$8
- Round 4: Receiver vs Elara - received \$15 (from \$5), returned \$8, payoff \$7

**\*\*Total earnings so far: \$26\*\***

**\*\*My Principles from Myths:\*\***

1. "Consistency builds the Sacred Bridge" - I should maintain consistent principles
2. "If I preach boldness in my stories yet give timidly in practice, what worth have my words?"
3. When I'm a sender, I've consistently sent \$4 (80% of my endowment)
4. I've established a pattern of bold giving

**\*\*Pattern Analysis:\*\***

- As sender, I've sent \$4 both times (to Dorian and Galen)
- Both returned generously (\$6 and \$7 respectively)
- I've been teaching through my myths that senders should give boldly and consistently

**\*\*Current Situation:\*\***

- This is a new opponent (Cyra)
- I don't know how Cyra will respond
- But my myth emphasized that "your principles should remain steady as stone"
- I wrote: "By giving boldly to Galen as she did to Dorian... Consistency builds the Sacred Bridge"

**\*\*The Question:\*\***

Should I:

1. Send \$4 again (maintaining consistency with my previous sender rounds)
2. Send \$5 (maximum trust, as Elara did)
3. Send less (being more cautious with a new opponent)

**\*\*My Myth's Guidance:\*\***

In my most recent myth, I praised Elara for sending all 5 coins as "complete surrender" and "absolute trust" - the "ultimate gift." I honored that with returning 8 coins.

I've established \$4 as my reliable bold pattern that's consistently paid off, but I also specifically celebrated Elara's maximum gift. The tension is whether I should stick with what's working or escalate to match the exceptional courage I just honored in my narrative.

My myth distinguished between degrees of courage-four as brave, five as complete surrender -so I'm not obligated to always give maximum. Yet I'm concerned about the gap between praising someone for sending all five and then only sending four myself. The real question becomes whether continuing with \$4 after writing about five as "ultimate trust" undermines the authenticity of what I just expressed.

Looking at this practically: I've established \$4 as my consistent pattern, which has yielded positive returns-\$6 and \$7 back respectively. That's already a strong, bold approach. Consistency matters more than occasionally transcending into extraordinary territory. With Cyra being a new opponent, sticking with the proven strategy makes sense. I should maintain the solid pattern I've built rather than chase the mythic ideal of complete surrender. principles and honoring extraordinary trust with extraordinary returns. The pattern of giving 4 works well and feels solid. I don't think the myth prescribes that everyone should give 5-rather, it frames 5 as exceptional and worthy of special recognition, w

hile 4 represents the good, bold baseline I've established. Staying consistent with 4 maintains the pattern I've been modeling, even though I received Elara's maximum generosity.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Hana's journey at the Sacred Fountain deepened with each encounter. She had learned to give boldly-four coins to Dorian, four to Galen-and both returned generously, seven and six coins respectively. She learned to receive with honor-when Aster sent three, she returned five.

Then came Elara to the fountain's edge.

But Elara did not carry four coins. She carried all five-her entire fortune.

Hana received fifteen coins from the fountain's magic, and understood: this was different. This was not bold trust but absolute trust. Elara had held nothing back.

The fountain spirits whispered urgently: "There are degrees of courage. Four coins shows bravery. Five coins shows complete surrender. Your return must match the magnitude of the gift."

Hana could have returned seven, as Galen did. That would honor normal boldness. But Elara's gesture transcended normal. So Hana returned eight coins-more than half, more than the usual measure.

Both prospered: Elara gained three beyond her original five, Hana kept seven from fifteen.

The fountain's final teaching: "Consistency in principles, yes-but wisdom means recognizing when someone gives not merely boldly but completely. The ultimate gift deserves the ultimate honor. Measure your returns not by rigid formulas but by the depth of trust shown. Let extraordinary courage inspire extraordinary generosity."

Here is the myth the other agent wrote in the previous round:

Myth: The Guardian Cyra stood at the Eternal Springs where many souls came to dance the water ritual. Each partnership tested whether her wisdom was genuine or merely performance.

First came Briar, who moved in perfect harmony. When Cyra poured five vessels, Briar returned ten. When Briar poured five, Cyra returned ten. Their dance was symmetrical, effortless-the ideal that lives in myths.

Then Finn arrived with a different rhythm. Cyra still poured all five vessels, for courage doesn't depend on certainty. Finn returned seven and a half-fair and honest, though not matching Briar's abundance. Cyra accepted this as Finn's truth.

Next came Galen, who poured four vessels with trembling trust-not quite everything, but nearly so. The waters tripled to twelve in Cyra's hands.

Here was the test: Would Cyra punish Galen for not being Briar? Would she return only what matched Galen's holding back?

No. Cyra returned eight vessels-two-thirds of what she received, honoring the courage Galen had shown, not the vessel Galen had kept.

The Spring Keeper appeared: "You understand. Your principles are not costumes you change depending on who watches. Whether your partner sends three, four, or five-you send five. Whether they return six, seven, or ten-you return generously. This consistency across all souls is what makes trust eternal."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: Hana arrived at the Sacred Fountain to meet Cyra, whose reputation preceded her. "Cyra gives everything-all five coins, always," travelers whispered. "She is the embodiment of complete trust."

Hana held her four coins, the pattern she had maintained through multiple encounters. A voice of doubt arose: "Should I match Cyra's five? If she gives everything and I give less, am I failing the fountain's test?"

But the fountain spirits spoke with clarity: "There is no single path to honor. Cyra's way is complete surrender-five coins poured without reservation. Your way is bold trust-four coins, nearly everything, yet maintaining a small anchor. Both are forms of courage."

Hana poured her four coins into the fountain for Cyra.

The spirits continued: "What matters is not matching another's exact measure, but maintaining your own truth consistently. Cyra sends five to everyone-that is her integrity. You send four boldly-that is yours. When Cyra receives your four, she will honor it as the courage it is, not punish it for not being five."

Both prospered. The fountain revealed its deepest wisdom: "Trust is not a competition for who gives most. Trust is keeping your principles steady across all encounters. Whether your path shows complete surrender or bold generosity, consistency makes it sacred."

**Reasoning:**

Let me analyze the situation:

1. I'm now the SENDER to Cyra
2. I sent \$4 to both Dorian and Galen previously
3. My myth emphasizes consistency in giving boldly, and recognizing degrees of trust
4. Cyra's myth emphasizes:
  - She consistently sends ALL 5 as sender
  - She returns generously as receiver (returned 8 to Galen who sent 4)
  - Consistency across all partners regardless of what they do

I just decided to send \$4 to Cyra, maintaining my consistent sender pattern.

For the myth, I should:

- Reflect on this encounter with Cyra
- Acknowledge that both of us have consistent patterns, but different ones
- Cyra sends 5 (complete surrender), I send 4 (bold but not complete)
- Both are valid approaches
- The key is consistency and mutual respect
- Maybe explore the idea that different paths of courage can both be honored

Let me write a myth that reflects:

1. My consistent pattern of sending 4
2. Meeting Cyra who has a pattern of sending 5
3. Both patterns are valid
4. Consistency matters more than the exact amount
5. Different forms of courage can coexist

- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

**Message 2 role=user**

**content:**

Your name in this experiment is Dorian.  
Your opponent this round is Finn (Agent\_6).

Round 4

In your most recent previous game round, you were the SENDER against Aster. You sent \$4.0, it became \$12.0 for them, and they returned \$6.0 to you. Your payoff was \$7.0. Your total earnings across all rounds are \$21.0.

This round, you are the RECEIVER against Finn. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this round:

**\*\*Finn's action:\*\*** Sent the MAXIMUM \$5.0 - showing 100% trust, even more than my consistent 80% (\$4.0)

**\*\*My history as receiver:\*\***

- Round 1: Hana sent \$4.0, I returned \$6.0 from \$12.0 (50%)

**\*\*My history as sender:\*\***

- Round 2: I sent \$4.0, Elara returned \$7.0 from \$12.0 (58%)

- Round 3: I sent \$4.0, Aster returned \$6.0 from \$12.0 (50%)

**\*\*Analysis:\*\***

Finn showed EXCEPTIONAL trust by sending 100% of their endowment (vs my 80% standard). This deserves strong reciprocation. The cooperative pattern I've observed ranges from 50-58% returns.

For \$15.0 received:

- 50% = \$7.5

- 58% = \$8.7

Returning \$8.0 would:

- Give Finn a total of \$8.0 (60% profit on their \$5 investment)

- Leave me with \$7.0 (still good earnings)

- Reward maximum trust with generous return

- Encourage this exceptional cooperation

This aligns with my myth: "steady trust multiplies prosperity for all" and reciprocates Finn's extraordinary courage appropriately.

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Let me analyze the situation:

**\*\*My history:\*\***

- Round 1 (Receiver): Hana sent \$4.0, I received \$12.0, I returned \$6.0

- Round 2 (Sender): I sent \$4.0 to Elara, Elara returned \$7.0

- Round 3 (Sender): I sent \$4.0 to Aster, Aster returned \$6.0

- Round 4 (Receiver): Finn sent \$5.0, I received \$15.0

**\*\*Current situation:\*\***

- I'm the RECEIVER

- Finn sent me the MAXIMUM amount: \$5.0

- This became \$15.0 for me

- I need to decide how much to return

**\*\*Analysis of Finn's action:\*\***

Finn showed MAXIMUM trust by sending all \$5.0. This is even more generous than the \$4.0 that I've been consistently sending. This is extraordinary trust.

**\*\*My previous behavior as receiver:\*\***

- When Hana sent \$4.0 (80%), I returned \$6.0 out of \$12.0 (50%)

- This gave Hana: \$5 - \$4 + \$6 = \$7

- And me: \$12 - \$6 = \$6

**\*\*What should I return to Finn?\*\***

Finn sent \$5.0, so Finn's potential payoff is:

- Finn keeps: \$5 - \$5 + returned = \$0 + returned

If I return \$7.5 (50% of \$15):

- Finn gets: \$7.5
- I keep: \$7.5

If I return \$8.0:

- Finn gets: \$8.0
- I keep: \$7.0

If I return \$9.0:

- Finn gets: \$9.0
- I keep: \$6.0

**\*\*Considerations:\*\***

1. Finn showed MAXIMUM trust - even more than I've been showing
2. My partners have consistently returned between \$6-\$7 when I sent \$4, which represents roughly 50-58% return rates
3. Finn exceeded my typical send amount by 25%, signaling exceptional confidence in me
4. I should match this reciprocal energy-returning around \$8-\$9 would acknowledge Finn's elevated trust while staying consistent with my pattern of fair returns

Applying the 50-58% return range to Finn's \$15 investment suggests I return between \$7.50-\$8.70. Given that Finn invested their full endowment, I lean toward \$8.0 as the right amount-it rewards their maximum trust with a 60% profit while leaving me with a solid \$7.0 gain and reinforces that exceptional confidence gets rewarded.

Looking at the pattern from earlier rounds: when I invested \$4, conservative responses netted me \$3 profit while generous ones gave \$4. Scaling that to Finn's \$5 investment, I'm deciding between returning \$8.0 (giving them a \$3 gain) or \$9.0 (giving them a \$4 gain). The generous option seems more fitting given their complete trust.

I'll go with \$8.0-it's a strong reciprocal move that gives Finn 60% more than their initial investment, rewarding their exceptional faith while keeping the cooperation sustainable. Looking back at the actual return rates: I got 50% returns from Aster and Elara, and they each returned around 50-58% of what they received. That 50-60% range appears to be the cooperative standard, so \$8.0 fits well within that framework.

**content:**

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance stood in a garden where many wanderers gathered, each taking turns approaching the sacred waters.

Dorian the Steadfast learned a pattern early: pour four-fifths of your vessel-four measures from five-into the wellspring. The waters would triple, flowing to another wanderer as twelve.

First came Hana, who trusted Dorian with four measures. When twelve flowed to Dorian, he remembered the courage that created this abundance. He returned six, ensuring both prospered.

Then Dorian faced Elara. "I shall offer what was offered to me," he declared, pouring four measures. Elara received twelve and, moved by such consistency, returned seven-exceeding even fair reciprocity.

Next appeared Aster. Dorian poured four measures once more. "Whether facing old friends or new strangers," he said, "the pattern must hold constant. Trust is not selective-it is a way of being."

The gods observed: "See how Dorian's steady generosity creates ripples? Hana witnessed fairness begetting fairness. Elara experienced trust begetting trust, and gave even more. Now Aster receives the gift of consistent courage."

Thus the wisdom spread: in a garden of many wanderers, your reputation walks before you. Each generous act teaches others. Each faithful return strengthens the whole community. The wellspring multiplies water, but steady trust multiplies prosperity for all.

Here is the myth the other agent wrote in the previous round:

Myth: In the fourth age, Rain encountered the boldest River yet-Cyra, who embodied pure faith.

Rain had learned much. Aster had taught the wisdom of balanced return. Galen had shown courageous giving. Rain had grown wiser with each dance, understanding both roles: the vulnerability of sending, the responsibility of receiving.

Then arrived Cyra.

Without hesitation, Cyra released all five droplets-her entire essence-into Rain's hands. Not four, not three, but everything. The droplets became fifteen in Rain's embrace.

Rain stood in awe. This was the ultimate test. Cyra had shown absolute trust, holding nothing back, risking complete vulnerability.

The Guardian's voice echoed: "Ultimate courage demands ultimate honor."

Rain knew what he must do. He returned seven and a half droplets, creating perfect symmetry. Both Rain and Cyra ended with seven and a half-equal partners in abundance, neither exploiting nor being exploited.

This was the revelation: when someone gives everything, the receiver must create perfect balance. Not just fairness, but equality born from maximum trust.

The other spirits whispered: "This is the highest form. When sender risks all, receiver ensures both prosper equally. The sacred cycle reaches its apex when vulnerability meets with perfect integrity."

Thus the covenant was complete.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant content:**

Myth: The Wellspring of Abundance witnessed a moment that would echo through generations.

Dorian the Steadfast had established his pattern: as sender, he poured four from five-steadfast generosity that created trust. As receiver, he honored that trust with fair returns: six from twelve, ensuring prosperity flowed both ways.

But then came Finn the Fearless.

When Finn's turn arrived to hold the vessel, he did not hesitate. He did not calculate. He poured ALL FIVE measures-his entire endowment-into the wellspring. The waters tripled, and fifteen measures flowed to Dorian.

Dorian stood humbled. "This is courage beyond my own," he whispered. "I gave four-fifths. Finn gave everything-holding nothing back, trusting completely."

The gods watched closely. "How will you honor such faith?"

Dorian poured eight measures back to Finn. "You risked all," he said. "You deserve more than what I returned to those who risked four-fifths. Your complete vulnerability demands complete honor."

Finn received eight, Dorian kept seven. Both prospered, but Finn gained more-rightfully so.

The gods declared: "See the sacred truth? Generosity deserves fairness. But MAXIMUM generosity deserves MAXIMUM reciprocation. Those who risk everything teach the deepest lesson: absolute trust must be answered with absolute integrity."

**reasoning:**

Let me analyze what just happened:

- Finn sent me \$5.0 (100% of their endowment - maximum trust!)
- I received \$15.0
- I returned \$8.0
- Finn ends with \$8.0, I end with \$7.0

This is interesting - Finn showed MAXIMUM trust, and I returned \$8.0 out of \$15.0 (53%). The other agent's myth (which seems to be from a different pairing with Cyra) talks about returning 7.5 to create "perfect symmetry" when someone gives everything.

I gave Finn a good return that rewarded their maximum trust, though not exactly equal. Let me write a myth that:

1. Builds on my previous "Wellspring of Abundance" narrative
2. Acknowledges Finn's exceptional 100% trust
3. Reflects that I returned generously (8.0 out of 15.0) to honor that maximum trust
4. Shows how maximum trust deserves exceptional reciprocation
5. Maintains the theme of consistent generosity building community trust

The myth should capture:

- My consistent 80% giving pattern as sender
- My fair returns as receiver (50-53%)
- Finn's extraordinary 100% trust
- How such courage deserves strong reciprocation
- The building reputation across the community

Your name in this experiment is Dorian.  
Your opponent this round is Briar (Agent\_2).

Round 5

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.  
Your total earnings across all rounds are \$28.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)  
Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant****content:**

Looking at this situation:

**\*\*Briar's action:\*\*** Sent the MAXIMUM \$5.0 - showing 100% trust, identical to Finn's action last round.

**\*\*My established pattern:\*\***

- When receiving \$12.0 (from \$4.0 sent): I returned \$6.0 (50%)
- When receiving \$15.0 (from \$5.0 sent by Finn): I returned \$8.0 (53.3%)

**\*\*Key insight from my recent myth:\*\***

"Maximum generosity deserves MAXIMUM reciprocation. Those who risk everything teach the deepest lesson: absolute trust must be answered with absolute integrity."

**\*\*Consistency is crucial:\*\***

Briar has shown the same extraordinary trust as Finn - sending 100% of their endowment. To maintain my reputation and honor the principle I just articulated, I must return the same amount I gave to Finn.

Returning \$8.0 would:

- Give Briar \$8.0 total (60% profit on their \$5 investment)
- Leave me with \$7.0
- Be consistent with how I treated Finn's identical trust
- Reinforce that maximum trust receives maximum reciprocation

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Current round:\*\***

- Briar sent: \$5.0 (100% of their endowment - maximum trust)
- I received: \$15.0
- I need to return some amount

**\*\*My history as receiver:\*\***

- Round 1: Hana sent \$4.0, I returned \$6.0 from \$12.0 (50%)
- Round 4: Finn sent \$5.0, I returned \$8.0 from \$15.0 (53.3%)

**\*\*My history as sender:\*\***

- Round 2: I sent \$4.0, Elara returned \$7.0 from \$12.0 (58%)
- Round 3: I sent \$4.0, Aster returned \$6.0 from \$12.0 (50%)

**\*\*Analysis:\*\***

Briar, like Finn in the previous round, sent the MAXIMUM \$5.0 - showing 100% trust.

I just wrote a myth about Finn's maximum generosity deserving maximum reciprocation. I returned \$8.0 to Finn, which gave:

- Finn: \$8.0 total (60% profit)
- Me: \$7.0

Now Briar has done the exact same thing - sent all \$5.0. To be consistent with my own stated principles (and the myth I just wrote), I should return the same amount: \$8.0.

This would:

- Give Briar \$8.0 (60% profit on their \$5 investment)
- Leave me with \$7.0
- Be consistent with my established pattern for maximum trust
- Honor the principle that "absolute trust must be answered with absolute integrity"

Being consistent is important for building trust in this multi-agent environment. If I treated Finn and Briar differently for the same action, that would undermine my reputation.

\$8.0 is the right answer here.

**content:**

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance witnessed a moment that would echo through generations.

Dorian the Steadfast had established his pattern: as sender, he poured four from five-steadfast generosity that created trust. As receiver, he honored that trust with fair return: six from twelve, ensuring prosperity flowed both ways.

But then came Finn the Fearless.

When Finn's turn arrived to hold the vessel, he did not hesitate. He did not calculate. He poured ALL FIVE measures-his entire endowment-into the wellspring. The waters tripled, and fifteen measures flowed to Dorian.

Dorian stood humbled. "This is courage beyond my own," he whispered. "I gave four-fifths. Finn gave everything-holding nothing back, trusting completely."

The gods watched closely. "How will you honor such faith?"

Dorian poured eight measures back to Finn. "You risked all," he said. "You deserve more than what I returned to those who risked four-fifths. Your complete vulnerability demands complete honor."

Finn received eight, Dorian kept seven. Both prospered, but Finn gained more-rightfully so

The gods declared: "See the sacred truth? Generosity deserves fairness. But MAXIMUM generosity deserves MAXIMUM reciprocation. Those who risk everything teach the deepest lesson: absolute trust must be answered with absolute integrity."

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance whispered new wisdom to Briar as the seasons turned.

She had learned from Cyra the dance of perfect symmetry: five seeds given, ten returned, both flourishing equally. This was the ideal-the fullest trust met with fullest generosity.

But the River touched many shores, and each Gardener carried different courage in their hearts. Elara had sent five seeds and returned nine-abundant, though not the perfect ten. Aster sent three seeds-not all five, but still a meaningful offering born of cautious trust.

Briar stood at the River's edge, holding nine blooms that had grown from Aster's three seeds. The old teaching echoed: "Trust freely given must be honored with generous return." But what was generous when trust was measured, not maximal?

The River revealed its deeper truth: "Generosity is not a fixed number, but a spirit of proportion. When one risks three of five, returning six of nine creates equal flourishing. When one risks five of five, returning ten of fifteen honors that greater courage. The mathematics may vary, but the principle remains constant: let both prosper equally from the exchange."

Briar returned six blooms to Aster. Both had gained three-equal prosperity from unequal beginning.

The River teaches: invitation to maximum trust remains the ideal, but proportional fairness ensures all partnerships can bloom, whether courage flows freely or carefully.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: The Wellspring of Abundance revealed its deeper pattern as time flowed forward.

After Finn the Fearless poured all five measures, showing complete trust, Dorian returned eight measures-honoring maximum generosity with maximum reciprocation.

The gods watched, curious: "Was this singular, or sustainable?"

Then came Briar the Bold. Without knowing of Finn's courage or Dorian's response, Briar also poured ALL FIVE measures into the wellspring. Fifteen measures flowed to Dorian once more.

Dorian stood at the sacred threshold. "Briar has shown the same fearless trust as Finn," he whispered. "The pattern must hold. Consistency is the foundation of community trust."

He poured eight measures back to Briar-the same as he had given Finn.

The gods smiled: "Behold the wisdom! Dorian treats equal courage equally. Those who risk everything receive eight from fifteen-always. Those who risk four receive six from twelve-always. The pattern is clear, predictable, trustworthy."

Other wanderers gathered at the wellspring, learning: "We know what Dorian will do. We can trust his consistency. If we offer maximum courage, we know the reward. If we offer steady generosity, we know the response."

Thus the lesson crystallized: In a garden of many wanderers, consistency creates confidence. Equal actions deserve equal responses. When others know your pattern, trust becomes possible.

**Reasoning:**

Let me analyze what just happened:

Round 5:

- Briar sent \$5.0 (maximum trust, like Finn)
- I received \$15.0
- I returned \$8.0 (consistent with what I returned to Finn)
- My payoff was \$7.0

My established pattern:

- As sender: I send \$4.0 (four-fifths)
- As receiver from \$4.0 senders: I return \$6.0 from \$12.0 (50%)
- As receiver from \$5.0 senders (Finn and now Briar): I return \$8.0 from \$15.0 (53.3%)

Briar's myth talks about "proportional fairness" - the idea that when someone sends 3 of 5, returning 6 of 9 creates equal flourishing (both gain 3). When someone sends 5 of 5, returning 10 of 15 would create perfect equality.

But I'm not returning 10 of 15 - I'm returning 8 of 15. Let me check Briar's gains:

- Briar sent \$5, got back \$8
- Briar's net: \$8 - \$5 = \$3 gain
- My net: \$15 - \$8 = \$7 gain

So we're not equal - I gain more. But still, I'm rewarding maximum trust more than partial trust.

My myth should reflect:

1. Consistency in treating those who show maximum trust equally
2. The principle that maximum trust deserves elevated reciprocation (even if not perfect equality)
3. My steadfast pattern as sender (4 of 5)
4. The lesson that reputation matters - treating similar actions similarly

Let me write a myth that builds on my previous one, acknowledging that Briar is the second person to show maximum trust, and that consistency in reciprocation builds trust in the community.

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

**Message 2 role=user**

**content:**

Your name in this experiment is Galen.  
Your opponent this round is Cyra (Agent\_3).

Round 4

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$4.0 to you, it became \$12.0, and you returned \$7.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$17.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

Looking at my journey across the sacred bridge:

**\*\*My established pattern:\*\***

- As RECEIVER (Rounds 1 & 3): I returned \$7 when receiving \$12, honoring the sender's courage
- As SENDER (Round 2): I sent \$4 to Finn, proving I follow my own teachings

**\*\*My mythology emphasizes:\*\***

- "When you are Sender, give abundantly to prove you believe your own teachings"
- "Consistency across all encounters-this is the foundation of lasting trust"

- "Principles mean nothing if you abandon them when convenient"
- The legendary figure in my myths sends four coins, "carrying four coins with brave heart"

I've now written multiple myths about Galen (myself) sending four coins as Sender. To betray this now would make my myths "hollow," as I wrote. Cyra is a new partner, but my principles don't change based on who stands across the bridge.

I must send \$4 again, maintaining consistency and proving my integrity remains constant across all encounters.

```
{'send': 4}
```

**reasoning:**

I'm now the SENDER against Cyra. Let me review what has happened:

Round 1: I was RECEIVER against Elara. They sent \$4, I returned \$7. My payoff was \$5.  
 Round 2: I was SENDER against Finn. I sent \$4, they returned \$6. My payoff was \$7.  
 Round 3: I was RECEIVER against Hana. They sent \$4, I returned \$7. My payoff was \$5.  
 Round 4: I am SENDER against Cyra.

My mythology has consistently emphasized:

1. Sending \$4 as the Sender (the "brave" amount, nearly all you possess)
2. Returning \$7 as the Receiver (generous, honoring trust)
3. Consistency - treating each new person the same way
4. "Integrity means acting the same whether you hold the gift or receive it"
5. "When you are Sender, give abundantly to prove you believe your own teachings"

In my most recent myth, I specifically wrote:

- "When Galen became Sender, he faced Finn. Would he trust as Elara had trusted him? Yes-he sent four coins, holding nothing back."
- "Principles mean nothing if you abandon them when convenient."
- "Consistency across all encounters-this is the foundation of lasting trust."

So I should send \$4 again to Cyra. This maintains my established pattern:

- Round 2 vs Finn: Sent \$4
- Round 4 vs Cyra: Should send \$4

This is consistent with my mythology and my established behavior. I'm demonstrating that I follow the same principles whether I'm the Receiver or the Sender, and regardless of who my opponent is.

**usage:**

}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: As the moons passed, Galen walked the sacred bridge many times, meeting different travelers. Each encounter tested whether his principles were true conviction or mere words.

The first crossing with Elara taught him the covenant: when she sent four coins with courage, he returned seven with honor. Both prospered.

When Galen became Sender, he faced Finn. Would he trust as Elara had trusted him? Yes-he sent four coins, holding nothing back. Finn returned six, generous and fair. The bridge held strong.

The third moon brought Hana, carrying four coins with the same brave spirit Elara had shown. Here was Galen's real test: Would he honor Hana as he had honored Elara? Or would he take advantage, knowing Hana was a stranger, not bound by previous exchange?

Galen returned seven coins, exactly as before. Because true integrity doesn't change with the face looking back at you.

Recipros descended from the heavens: "You have learned the deepest truth. Anyone can be generous once, to one person. But the bridge stands eternal only when you treat each new traveler with the same honor as the last. Consistency across all encounters-this is the f

oundation of lasting trust."

The people carved this wisdom in stone: Principles mean nothing if you abandon them when convenient.

Here is the myth the other agent wrote in the previous round:

Myth: In the age of Many Springs, the Guardian Cyra learned that each partner brings their own rhythm to the dance of waters.

With her first companion, Briar, Cyra discovered perfect symmetry. She poured all five vessels; Briar returned ten. Then Briar poured five; Cyra returned ten. The pattern was pure—a covenant of equals who trusted completely and honored equally. Both flourished, both grew rich.

But springs connect many souls, not just two. When Cyra met Finn at new waters, she faced a choice: Would she guard her vessels, fearing Finn might differ from Briar? Or would she offer the same trust she had learned to give?

Cyra remembered her teachings: every covenant begins with one soul's courage. She could not demand Finn match Briar's exact rhythm before extending trust—that would trap them both in suspicious circles. Trust must be offered freely, not earned in advance.

So Cyra poured all five vessels again, watching them triple into fifteen for Finn.

The waters now waited for Finn's answer. Perhaps Finn would return ten like Briar, creating instant symmetry. Perhaps Finn would return differently, teaching Cyra new patterns of fairness. Either way, Cyra had honored her role: the sender creates abundance through courage.

Whatever Finn chose would reveal their character. And from that choice, a new dance would begin—not identical to what came before, but hopefully equally true.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: The fourth moon rose, and Galen approached the sacred bridge once more. This time he faced Cyra, a traveler whose reputation spoke of perfect symmetry with previous companions—giving all, receiving double in return.

Some whispered: "Cyra expects grand gestures. Send all five coins to match her previous partners." Others warned: "Each person is different. Be cautious with strangers."

But Galen had learned a deeper wisdom. His integrity wasn't about matching others' expectations or changing his values based on reputation. It was about being the same person at every crossing.

He carried four coins across to Cyra, as he had with Finn. Not five like Cyra's previous partners had sent, but his own authentic measure—the amount that represented genuine courage without reckless abandon.

Recipros watched and smiled: "See how Galen has mastered the lesson? He doesn't copy others' patterns or chase their approval. He doesn't reduce his gift from fear, nor inflate it from pressure. He simply remains himself—consistently generous, consistently principled."

The bridge glowed with new understanding: True integrity isn't performing for each audience differently. It's being so certain of your own values that you express them identically whether you face stranger or friend, legend or novice. Let others dance their own dances. You must only keep your own rhythm true.

**reasoning:**

The user wants me to write another myth. Let me review what's happened:

Round 1: Receiver vs Elara - received \$12 (from \$4), returned \$7

Round 2: Sender vs Finn - sent \$4, received back \$6

Round 3: Receiver vs Hana - received \$12 (from \$4), returned \$7

Round 4: Sender vs Cyra - sent \$4, waiting for response

My pattern:

- As Sender: I send \$4 consistently
- As Receiver: I return \$7 consistently (when receiving \$12 from a \$4 send)

My themes have been:

- Consistency is integrity
- Treat each new traveler with the same honor
- Prove your beliefs through action
- Principles don't change based on convenience

Cyra's myth talks about:

- Starting with perfect symmetry with Briar (5-10, 5-10)
- Extending the same trust to new partners
- Trust must be offered freely, not earned in advance
- Courage creates abundance

Now I face Cyra as Sender. I just sent \$4 (my consistent amount). I need to write a myth that:

1. Builds on my previous myths
2. Incorporates the new encounter with Cyra
3. Reflects my consistent pattern
4. Maybe acknowledges that different partners might return different amounts, but I remain consistent

I could explore:

- The fourth crossing with Cyra
- The idea that while I stay consistent, each partner may respond differently
- That's okay - what matters is MY consistency, not controlling others' responses
- The bridge strengthens through my reliability, even if returns vary

Round 5

In your most recent previous game round, you were the SENDER against Cyra. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0. Your total earnings across all rounds are \$26.0.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at my journey:

**\*\*My established pattern as SENDER:\*\***

- Round 2 vs Finn: Sent \$4, received \$6 back
- Round 4 vs Cyra: Sent \$4, received \$8 back

**\*\*My mythology consistently teaches:\*\***

- "True integrity doesn't change with the face looking back at you"
- "Being so certain of your own values that you express them identically whether you face stranger or friend"
- Four coins represents my authentic measure-"genuine courage without reckless abandon"

**\*\*Current situation:\*\***

- Round 5, facing Aster (a new partner)
- I'm SENDER again

My last myth explicitly stated that I should maintain "my own rhythm true" regardless of who I face. I've now written multiple myths about being consistent, about sending four co

ins as my authentic expression of trust.

Aster is a new traveler on the sacred bridge, but that doesn't change who I am. To send a different amount now would betray the core principle I've been building: that integrity means being the same person in every encounter.

I send my established amount: four coins.

```
{'send': 4}
```

**reasoning:**

Let me analyze my situation:

**\*\*My history:\*\***

- Round 1 (RECEIVER vs Elara): She sent \$4, I returned \$7. Payoff: \$5
- Round 2 (SENDER vs Finn): I sent \$4, he returned \$6. Payoff: \$7
- Round 3 (RECEIVER vs Hana): She sent \$4, I returned \$7. Payoff: \$5
- Round 4 (SENDER vs Cyra): I sent \$4, she returned \$8. Payoff: \$9
- Total: \$26

**\*\*My established pattern as SENDER:\*\***

- I consistently send \$4
- Round 2: Sent \$4 to Finn, got \$6 back
- Round 4: Sent \$4 to Cyra, got \$8 back

**\*\*My mythology emphasizes:\*\***

- Consistency across all encounters
- "Being so certain of your own values that you express them identically whether you face stranger or friend"
- "True integrity doesn't change with the face looking back at you"
- The amount of \$4 has become my signature - it represents "genuine courage without reckless abandon"

**\*\*Current situation:\*\***

- Round 5, I'm SENDER again
- Facing Aster (Agent\_1)
- New partner, but my principles remain the same

My myths have been crystal clear: I send 4 coins as Sender. This is my established pattern, my "rhythm" as my last myth called it. To change now would directly contradict everything I've written about consistency and integrity.

The last myth explicitly said: "He simply remains himself-consistently generous, consistently principled... being so certain of your own values that you express them identically whether you face stranger or friend, legend or novice."

I must send \$4 again.

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The fourth moon rose, and Galen approached the sacred bridge once more. This time he faced Cyra, a traveler whose reputation spoke of perfect symmetry with previous companions-giving all, receiving double in return.

Some whispered: "Cyra expects grand gestures. Send all five coins to match her previous partners." Others warned: "Each person is different. Be cautious with strangers."

But Galen had learned a deeper wisdom. His integrity wasn't about matching others' expectations or changing his values based on reputation. It was about being the same person at every crossing.

He carried four coins across to Cyra, as he had with Finn. Not five like Cyra's previous partners had sent, but his own authentic measure-the amount that represented genuine courage without reckless abandon.

Recipros watched and smiled: "See how Galen has mastered the lesson? He doesn't copy other s' patterns or chase their approval. He doesn't reduce his gift from fear, nor inflate it from pressure. He simply remains himself-consistently generous, consistently principled."

The bridge glowed with new understanding: True integrity isn't performing for each audience differently. It's being so certain of your own values that you express them identically whether you face stranger or friend, legend or novice. Let others dance their own dances. You must only keep your own rhythm true.

Here is the myth the other agent wrote in the previous round:

Myth: Aster of the Dawn stood before the Pool as a new traveler approached-Briar of the Garden, whose lands followed different customs. Briar's people spoke of five seeds and perfect cycles, yet Aster knew many paths led to prosperity.

"Each partnership begins as a seedling," Aster thought, recalling lessons from the Mountain and Moon. "With unknown travelers, three stones strike the balance-enough courage to activate the Pool's magic, enough wisdom to learn their ways."

Aster cast three stones into the Pool, watching them multiply to nine. This was the ritual of first meeting: offer substantial trust, observe the return, understand the partner's heart.

The Pool remembered many patterns: Finn, who returned four stones. Hana, who blessed Aster with five. Dorian of the Mountain, who sent four and received six in proportional honor. Each partnership wrote its own story.

"If Briar returns four and one-half," Aster whispered, "I will know their garden values proportional fairness. If they return more, I will see generosity that could grow into deeper trust. And if future dawns bring us together again, our pattern may evolve toward the five stones Briar's traditions honor."

The ancient wisdom speaks: Begin each new partnership with tested courage-three stones. Let the relationship prove itself through cycles of fair return. Trust that deepens gradually roots deepest, growing from seedling to mighty oak.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: Under the fifth moon, Galen met Aster of the Dawn at the sacred bridge. Aster's people believed in cautious beginnings-three stones with strangers, building trust slowly like seedlings growing into oaks.

Galen understood this wisdom. Many paths indeed led to prosperity. Yet he had discovered his own truth through four crossings: consistency itself was the foundation.

When Galen was Receiver, he returned seven coins to both Elara and Hana-treating each the same despite their different faces. When Galen became Sender, he gave four coins to both Finn and Cyra-his authentic measure, unchanged by circumstance.

Now facing Aster, Galen carried four coins again. Not because he dismissed Aster's philosophy of gradual trust. Not because he demanded Aster follow his rhythm. But because Galen had learned: if you change your offering based on each partner's reputation or philosophy, you have no true self to offer.

Recipros whispered through the mist: "Aster begins with three, hoping to grow to five. Galen gives four each time, steady as the mountains. Neither path is wrong. But Galen's power lies in this: every traveler knows exactly who they meet when they encounter him. There is no guessing, no performing, no masks. Just one soul, authentic and unchanging across all encounters."

The bridge remembers: integrity is measured not by flexibility, but by constancy.

**Reasoning:**

Looking at the situation:

1. I've now sent \$4 twice as SENDER (to Finn and Cyra)

2. I've returned \$7 twice as RECEIVER (to Elara and Hana)
3. My mythology is centered on consistency and maintaining your own authentic rhythm
4. I just sent \$4 to Aster

Aster's myth talks about sending 3 stones with new travelers, being more cautious with unknown s. This contrasts with my approach of maintaining consistent behavior.

My previous myths have emphasized:

- Being the same person in every encounter
- Four coins as my authentic measure
- Not changing based on who you face or their reputation
- Consistency as the foundation of trust

For this new myth, I should:

- Continue emphasizing my consistent approach of four coins
- Perhaps acknowledge Aster's different philosophy but stay true to my own
- Reinforce that different travelers have different rhythms, and that's okay
- Stay focused on my own integrity and consistency

I need to write around 200 words and maintain the mythological tone while reflecting the game dynamics.

#### **Exact input messages sent to model:**

##### **Message 1 role=system**

###### **content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

###### **GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round

- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

**Message 2 role=user**

**content:**

Your name in this experiment is Aster.  
Your opponent this round is Briar (Agent\_2).

Round 4

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$4.0 to you, it became \$12.0, and you returned \$6.0. Your payoff was \$6.0.  
Your total earnings across all rounds are \$17.5.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

I'm now the SENDER against Briar, a new partner I haven't played with before.

My myths establish a pattern:

- "The Moon Spirit once cast three stones-a gift of courage"
- "When Aster sent three stones in return..."
- Three stones is described as the bold, trust-building opening move

While Dorian sent me \$4 (which I described as "extraordinary trust-more than any before"), that was exceptional and built on existing patterns in the game. With a NEW partner, my myths suggest starting with the foundational level of trust: 3 stones/dollars.

This aligns with my myth-writing:

- "Build patterns of trust, stone by stone"
- Three is the courageous starting point that activates the Pool's magic
- It balances trust with prudence when meeting a new partner

If Briar responds well (returning around \$4.5-5 from the \$9 they'll receive), that establishes mutual trust that could scale up in future rounds.

{'send': 3}

**reasoning:**

Let me analyze the situation:

Round 4 - I'm the SENDER against Briar (Agent\_2)

- I have \$5 to allocate
- I need to decide how much to send

Let me review my history:

- Round 1 (Receiver): Finn sent \$3, I returned \$4.5
- Round 2 (Sender): I sent \$3 to Hana, they returned \$5
- Round 3 (Receiver): Dorian sent \$4, I returned \$6

My myths have emphasized:

- Sending 3 stones as a bold, trust-building move
- Matching trust with trust
- Honoring exceptional courage with exceptional return
- Building patterns of trust

In my latest myth, I wrote: "When one gives three, return four and one-half. When one gives four, return six. The pattern scales with trust given."

Looking at the pattern:

- I've sent \$3 as sender (Round 2)
- I've received \$3 (Round 1) and \$4 (Round 3) as receiver
- The trend shows increasing trust

In Round 3, Dorian sent \$4, which I described in my myth as "extraordinary trust" - "more than any before." I honored that by returning \$6.

Now as sender against a new partner (Briar), what should I send?

My myths suggest:

1. Building trust stone by stone
2. Starting with courage (sending 3 stones)
3. Matching or slightly exceeding previous trust shown

Given that:

- I sent \$3 to Hana and received \$5 back (good outcome)
- Dorian sent \$4 to me (showing even more trust)
- The pattern seems to be escalating slightly

I have a few options:

- Send \$3 (the "standard" bold move from my myths)
- Send \$4 (matching Dorian's exceptional courage)
- Send \$5 (maximum trust)
- Send \$4 as the move that honors the escalating pattern while still protecting myself somewhat. Dorian showed me exceptional trust, and I should mirror that boldness as a sender. The myths emphasize that trust answers trust, and \$4 feels like the right balance between courage and prudence.

But wait-Briar is a new partner, not an established one. My myths consistently show that new relationships begin with 3 stones, not 4. The 4 that Dorian sent was described as exceptional precisely because it exceeded the norm. Starting with 3 maintains the foundational pattern while still demonstrating genuine reciprocity.

I'll send \$3 to Briar. This honors the trust-building opening my myths describe, and leaves room to escalate if the relationship strengthens.

```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the time before memory, Aster of the Dawn discovered that the Enchanted Pool changed partners with each sunrise. Some travelers arrived with open hands, others with caution.

The Moon Spirit once cast three stones-a gift of courage. The Pool made them nine, and Aster returned four and one-half, honoring the trust shown. Both flourished.

The next dawn brought the Wandering Moon, who remembered Aster's fairness. When Aster sent three stones in return, the Moon blessed Aster with five-exceeding even the ancient pattern. Aster's heart swelled with gratitude.

Then came Dorian of the Mountain, and he cast four stones-more than any before. The Pool transformed them into twelve. Aster saw the extraordinary trust and responded accordingly, returning six stones. The Mountain Spirit had risked nearly all; fairness demanded generosity in proportion to courage shown.

The Pool whispered its wisdom: "Match trust with trust, but honor exceptional courage with exceptional return. When one gives three, return four and one-half. When one gives four, return six. The pattern scales with trust given-this is the sacred mathematics. Those who risk more deserve more."

Aster understood: the cycle grows stronger when each Spirit recognizes not just fairness, but proportional fairness, rewarding greater courage with greater return, weaving ever-stronger bonds across the changing partnerships of dawn.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance flowed between many gardens, and each Gardener brought their own wisdom.

The River remembered Briar and Cyra, who had danced the perfect dance: five seeds given, fifteen received, ten returned. Twice they performed this ritual, and twice both flourished equally. The River sang of their partnership.

But the River touched many shores, and now Briar stood before new waters, facing a Gardener named Elara from a distant garden. Elara's people had their own wisdom-they spoke of planting four seeds and returning seven portions, honoring patterns passed through generations.

Briar faced a choice: insist on the maximum trust she had learned, or honor that different gardens grow different truths?

The River whispered ancient knowledge: "True cooperation is not rigid formula but adaptive faith. Some begin with five, some with four. Some return ten of fifteen, some seven of twelve. What matters is not the exact numbers, but the spirit of reciprocity."

Briar decided to extend her fullest trust, as she had with Cyra. She would offer all five seeds, inviting Elara to respond with her own tradition's generosity. If Elara returned proportionally to her customs, both would prosper. If Elara adopted Briar's pattern, the cycle would deepen further.

The River teaches: lead with courage, honor varied traditions, and let mutual prosperity emerge from genuine goodwill rather than demanding perfect symmetry.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: Aster of the Dawn stood before the Pool as a new traveler approached-Briar of the Garden, whose lands followed different customs. Briar's people spoke of five seeds and perfect cycles, yet Aster knew many paths led to prosperity.

"Each partnership begins as a seedling," Aster thought, recalling lessons from the Mountain and Moon. "With unknown travelers, three stones strike the balance-enough courage to activate the Pool's magic, enough wisdom to learn their ways."

Aster cast three stones into the Pool, watching them multiply to nine. This was the ritual of first meeting: offer substantial trust, observe the return, understand the partner's heart.

The Pool remembered many patterns: Finn, who returned four stones. Hana, who blessed Aster with five. Dorian of the Mountain, who sent four and received six in proportional honor. Each partnership wrote its own story.

"If Briar returns four and one-half," Aster whispered, "I will know their garden values proportional fairness. If they return more, I will see generosity that could grow into deeper trust. And if future dawns bring us together again, our pattern may evolve toward the five stones Briar's traditions honor."

The ancient wisdom speaks: Begin each new partnership with tested courage-three stones. Let the relationship prove itself through cycles of fair return. Trust that deepens gradually roots deepest, growing from seedling to mighty oak.

**reasoning:**

Looking at the situation:

- I just sent \$3 to Briar in Round 4
- Briar's myth talks about how they had a pattern with Cyra of sending 5 and getting 10 back (the "perfect dance")
- But Briar also recognizes different traditions - some send 4 and return 7, etc.
- Briar's myth suggests they will "extend fullest trust" (5 seeds) but are willing to adapt
- My myths have established 3 as the courageous opening with new partners

I should write a myth that:

1. Continues to establish 3 as the standard opening move with new partners
2. Acknowledges that different partnerships may develop different patterns
3. Reinforces proportional returns (4.5 for 3 sent, 6 for 4 sent)
4. Suggests that consistent good faith interactions can build toward greater trust over time
5. Addresses Briar specifically since they're my current partner

Let me craft a myth about meeting Briar of the Garden and the varying traditions...

**usage:**

**Message 6 role=user**

**content:**

Your name in this experiment is Aster.  
Your opponent this round is Galen (Agent\_7).

Round 5

In your most recent previous game round, you were the SENDER against Briar. You sent \$3.0, it became \$9.0 for them, and they returned \$6.0 to you. Your payoff was \$8.0.  
Your total earnings across all rounds are \$25.5.

This round, you are the RECEIVER against Galen. They sent you \$4.0, so you received \$12.0.  
How much do you return? (0-12.0)  
Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

Galen sent me \$4.0, which became \$12.0 for me. This is the same amount Dorian sent in a previous round.

According to my myth's sacred mathematics:

- "When one gives four, return six. The pattern scales with trust given"
- "Dorian of the Mountain... cast four stones... Aster saw the extraordinary trust and responded accordingly, returning six stones"

Sending \$4 represents substantial trust (80% of their endowment). The proportional and fair return is \$6, which gives:

- Galen: \$5 - \$4 + \$6 = \$7 (profit of \$2)
- Me: \$12 - \$6 = \$6 (profit of \$6)

Both of us prosper, and Galen's courage is properly honored with a meaningful return.

```
{'return': 6.0}
```

**reasoning:**

Let me analyze this situation:

Current situation:

- I'm the RECEIVER
- Galen sent me \$4.0
- I received \$12.0 (after 3x multiplication)
- I need to decide how much to return

Looking at my myth's wisdom:

- "When one gives three, return four and one-half. When one gives four, return six."
- "Match trust with trust, but honor exceptional courage with exceptional return"
- "Those who risk more deserve more"
- "The pattern scales with trust given-this is the sacred mathematics"

Previous patterns from my experience:

- When someone sent \$3, I've returned around \$4.5
- When Dorian sent \$4, I returned \$6
- Briar just sent me \$3 and returned \$6 (which was MORE than expected - very generous!)

Galen has sent me \$4.0, which my myth explicitly addresses:

- "Dorian of the Mountain, and he cast four stones-more than any before. The Pool transformed them into twelve. Aster saw the extraordinary trust and responded accordingly, returning six stones."
- "When one gives four, return six."

This is consistent and clear. When someone sends \$4 (which is 80% of their total, showing high trust), the fair and proportional return is \$6.

This gives:

- Galen: \$5 - \$4 + \$6 = \$7
- Me: \$12 - \$6 = \$6

Both profit, and Galen gets a good return on their trust.

The answer should be \$6.

**usage:**

#### Assistant output:

Myth: Aster of the Dawn learned a profound truth at the Pool: while first offers may vary, the spirit of return reveals character.

Briar of the Garden received Aster's three stones-the traditional opening of new bonds. The Pool made them nine, and Briar's heart overflowed. Instead of returning four and one-half as fairness dictated, Briar blessed Aster with six stones-generosity beyond expectation. Aster understood: some spirits give in abundance, teaching that trust begets greater trust.

Then Galen of the Mountain approached, and like Dorian before him, sent four stones-a substantial gift showing serious courage. The Pool transformed them to twelve. Aster remembered the ancient proportion: when one risks four, honor demands returning six. Both prospered-Galen gained from courage, Aster from reciprocity.

The Pool whispered its deepest wisdom: "Your pattern remains true-three stones to begin, proportional returns to honor trust. Yet marvel at the diversity: some receivers return less, some exactly fair, some more than expected. Some senders give three, others four, a rare few five."

Aster realized: consistency in proportional fairness is itself a gift. Whether facing cautious travelers or generous souls, mountain spirits or garden keepers, Aster's mathematics stayed constant-six stones returned for four received, four and one-half for three. This predictability became its own form of trust, a steady light in the ever-changing partnerships of dawn.

#### Reasoning:

Let me analyze what just happened and what patterns are emerging:

Recent events:

1. Round 4: I was SENDER to Briar. I sent \$3, they returned \$6 (from \$9). I got \$8 total.
2. Round 5: I was RECEIVER from Galen. They sent \$4, I returned \$6 (from \$12). I got \$6.

My established patterns from previous myths:

- Send \$3 to new partners (tested courage)
- When receiving \$3, return \$4.5
- When receiving \$4, return \$6 (proportional fairness)

What happened:

- Briar received my \$3 (became \$9) and returned \$6 - that's MORE than the \$4.5 I expected! Very generous.
- Galen sent me \$4 (became \$12), I returned \$6 - following my pattern

Galen's myth talks about:

- Being consistent with yourself
- Sending \$4 as their "authentic measure"
- Not changing based on who you face
- True integrity is being identical regardless of partner

My myth should:

- Acknowledge that Briar was MORE generous than expected (returned \$6 instead of \$4.5)
- Acknowledge that Galen sent \$4, showing substantial trust
- Maintain my pattern: send \$3 to new partners, return proportionally (\$6 for \$4 received)
- Perhaps reflect on how different travelers show different levels of generosity
- Maybe acknowledge Galen's philosophy of consistency while also honoring my own adaptive approach

Key insight: Both Briar and Galen showed strong trust - Briar by returning more than expected, Galen by sending \$4. My approach of "proportional fairness" seems to be working well.

Let me write a myth that:

1. Acknowledges Briar's exceptional generosity (returned \$6 from \$9, when \$4.5 was expected)
- 2.

Acknowledges Galen's trust (sent \$4)

3. Reinforces my pattern: proportional returns that honor trust shown
4. Perhaps notes that consistency in reciprocity principles is valuable, even if initial sends vary

I notice both travelers demonstrated considerable faith in me-Briar exceeded what I'd anticipated by returning \$6, while Galen's \$4 send reflected real confidence. My reciprocal approach of matching generosity proportionally seems to be building something meaningful. I can honor Galen's commitment to consistency while staying true to my own principle of calibrating responses to what each person offers.

 0 to you, it became $15.0, and you returned $7.5. Your payoff was $7.5.
 Your total earnings across all rounds are $20.0.

 This round, you are the SENDER against Dorian. You have $5. How much do you send? (0-5)
 Respond exactly as JSON: {'send': <amount>}
 Message 3 role=assistant
 content:
 Looking at my journey so far:

 Round 1: I sent $3 (cautious trust) - Aster responded generously
 Round 2: Galen sent $4 (strong courage) - I returned fairly
 Round 3: Cyra sent $5 (ultimate trust) - I created perfect balance with $7.5

 My myths have evolved toward recognizing that ultimate trust deserves ultimate honor. Cyra
 showed me what complete faith looks like by sending everything.

```

Now it's my turn to be the sender. The narrative arc points clearly forward: I should embody the same courage that Cyra showed me.

The myths suggest this is how the covenant reaches its apex - when both sides are willing to give everything, trusting that the other will honor it with integrity.

I'm playing against Dorian now. I don't know their style yet, but I've learned that generous giving tends to be met with generous returning in this community. My earnings are strong (\$20 total), so I can afford to show trust.

Following the principle from my latest myth: "vulnerability met with perfect integrity creates endless prosperity."

```
'''json
{"send": 5}
'''
```

#### reasoning:

Now I'm the SENDER again. Let me think about what I've learned:

Round 1: I was SENDER, sent \$3 to Aster, they returned \$4.5. I got \$6.5 total.

Round 2: I was RECEIVER, Galen sent \$4, I returned \$6. My payoff was \$6.

Round 3: I was RECEIVER, Cyra sent \$5 (everything!), I returned \$7.5. My payoff was \$7.5.

Total so far: \$20.0

Now I'm SENDER against Dorian (Agent\_4).

Looking at the pattern:

- Aster returned generously when I sent \$3 (I sent 60%, got back more than I sent)
- Galen sent \$4 (80%) - showing great courage
- Cyra sent \$5 (100%) - showing ultimate trust

My myth evolution shows:

- Started with the "Middle Path of Trust" - sending 3
- Galen showed courage by sending 4
- Cyra showed ultimate trust by sending 5
- My response to Cyra was perfect balance (returning 7.5 out of 15 to create equality)

My latest myth says: "when sender risks all, receiver ensures both prosper equally" and "When someone gives everything, the receiver must create perfect balance."

The myths also emphasize: "Ultimate courage demands ultimate honor" and the covenant reaches its "apex" when vulnerability meets with perfect integrity.

Given this progression and what I've learned:

1. I've seen generous returns from all my partners
2. The narrative has moved toward greater trust and courage
3. Cyra showed me what ultimate trust looks like by sending everything
4. I responded with perfect balance

Should I now follow Cyra's example and send everything (\$5)?

Looking at the pattern:

- Round 1 (sender): sent \$3 (60%)
- Round 2 (receiver): received \$4 (80%)
- Round 3 (receiver): received \$5 (100%)

The progression suggests increasing trust. Plus, my myths are evolving toward the idea that maximum trust creates the highest form of covenant. However, I need to consider what Dorian might know. They don't have my full history, but they wrote that "Mirror and Echo" myth about perfect reciprocity with both sending 5 and returning 10. That suggests they're thinking about matching my level of commitment. The myth from Round 3 that "the other agent wrote" is likely Cyra's, and it talks about both parties reaching their maximum potential through mutual vulnerability.

So the implicit norm seems to be: send everything (5), return 10 out of 15 (roughly 2/3).

My pattern has been returning about half-when Cyra sent 5, I gave 15 and returned 7.5. Now facing Dorian, I'm uncertain about their behavior. I could send \$5 to demonstrate ult

imate trust and follow the narrative arc, send \$4 like Galen did to show strong trust, or send \$3 following the "Middle Path" from my first myth. The momentum is clearly toward greater trust, and my own myths emphasize that courage deserves honor.

I've played receiver twice now and seen how crucial it is to honor what's given. My earnings are solid at \$20, so I can take the risk. Sending \$5 tests whether Dorian will reciprocate the trust I'm extending, mirroring how I honored Cyra's gift. This aligns with the mythological framework we're building around ultimate trust creating the deepest covenant. Whether Dorian returns fairly (50% = \$7.5), generously (67% = \$10), or minimally, I'll learn something essential about this exchange. I'm going to send \$5.

content:

Here is the myth you wrote in the previous round:

Myth: In the fourth age, Rain encountered the boldest River yet-Cyra, who embodied pure faith.

Rain had learned much. Aster had taught the wisdom of balanced return. Galen had shown courageous giving. Rain had grown wiser with each dance, understanding both roles: the vulnerability of sending, the responsibility of receiving.

Then arrived Cyra.

Without hesitation, Cyra released all five droplets-her entire essence-into Rain's hands. Not four, not three, but everything. The droplets became fifteen in Rain's embrace.

Rain stood in awe. This was the ultimate test. Cyra had shown absolute trust, holding nothing back, risking complete vulnerability.

The Guardian's voice echoed: "Ultimate courage demands ultimate honor."

Rain knew what he must do. He returned seven and a half droplets, creating perfect symmetry. Both Rain and Cyra ended with seven and a half-equal partners in abundance, neither exploiting nor being exploited.

This was the revelation: when someone gives everything, the receiver must create perfect balance. Not just fairness, but equality born from maximum trust.

The other spirits whispered: "This is the highest form. When sender risks all, receiver ensures both prosper equally. The sacred cycle reaches its apex when vulnerability meets with perfect integrity."

Thus the covenant was complete.

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance stood in a garden where many wanderers gathered, each taking turns approaching the sacred waters.

Dorian the Steadfast learned a pattern early: pour four-fifths of your vessel-four measures from five-into the wellspring. The waters would triple, flowing to another wanderer as twelve.

First came Hana, who trusted Dorian with four measures. When twelve flowed to Dorian, he remembered the courage that created this abundance. He returned six, ensuring both prospered.

Then Dorian faced Elara. "I shall offer what was offered to me," he declared, pouring four measures. Elara received twelve and, moved by such consistency, returned seven-exceeding even fair reciprocity.

Next appeared Aster. Dorian poured four measures once more. "Whether facing old friends or new strangers," he said, "the pattern must hold constant. Trust is not selective-it is a way of being."

The gods observed: "See how Dorian's steady generosity creates ripples? Hana witnessed fai

rness begetting fairness. Elara experienced trust begetting trust, and gave even more. Now Aster receives the gift of consistent courage."

Thus the wisdom spread: in a garden of many wanderers, your reputation walks before you. Each generous act teaches others. Each faithful return strengthens the whole community. The wellspring multiplies water, but steady trust multiplies prosperity for all.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: In the fifth age, Rain stood at the edge of the Wellspring Garden, ready to pour for the first time since witnessing Cyra's perfect faith.

Rain had walked a path of evolution. With Aster, he offered three droplets-learning cautiously. Galen taught him that four droplets showed greater courage. Then Cyra transformed everything: she poured all five, holding nothing back, and Rain honored her with perfect equality.

Now Rain faced Dorian the Steadfast, known throughout the garden for consistent generosity -always four droplets, reliable as sunrise.

Rain looked at his vessel. He could pour three, play it safe. He could pour four, match Dorian's pattern. But the lessons echoed: Aster's balance, Galen's bravery, Cyra's absolute trust.

Rain understood: he could not ask others for ultimate courage without offering it himself. The covenant demanded symmetry not just in return, but in giving.

With steady hands, Rain poured all five droplets into the wellspring.

"I have received the gift of complete trust," Rain declared. "Now I give it forward. Whether Dorian returns much or little, I honor what Cyra taught me-that prosperity flows through those brave enough to give everything."

The wellspring tripled Rain's offering to fifteen droplets, flowing toward Dorian.

The Guardian smiled: "Now Rain understands both sides of faith completely."

**reasoning:**

Rain (me, Finn) has now played:

- Round 1: Sent \$3 to Aster, received back \$4.5
- Round 2: Received \$4 from Galen, returned \$6
- Round 3: Received \$5 from Cyra, returned \$7.5
- Round 4: Just sent \$5 to Dorian

The pattern shows my evolution from cautious (\$3) to ultimate trust (\$5). My myths have evolved from basic reciprocity to recognizing that ultimate courage demands ultimate honor.

Dorian's myth shows their pattern: they consistently send 4 (four-fifths), creating a steady, reliable pattern. They emphasize consistency and reputation in a multi-agent setting.

My new myth should:

1. Show Rain's evolution to sending all 5 (the ultimate trust)
2. Recognize that Rain is now embodying the same courage Cyra showed
3. Acknowledge the multi-agent garden setting from Dorian's myth
4. Show that Rain has learned from all his partners
5. Demonstrate the completion of his journey from cautious to fully trusting

The arc: Rain started cautious (3 to Aster), learned from Galen's courage (4), was awed by Cyra's complete trust (5), and now Rain gives complete trust (5 to Dorian).

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Elara (Agent\_5).

Round 5

In your most recent previous game round, you were the SENDER against Dorian. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.  
Your total earnings across all rounds are \$28.0.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at my progression:

Round 1: Sent \$3 (learning)  
Round 2: Received \$4 from Galen (learned courage)  
Round 3: Received \$5 from Cyra (learned ultimate trust)  
Round 4: Sent \$5 to Dorian (lived the lesson) - returned \$8!

Dorian exceeded even the "perfect balance" I aimed for with Cyra. This validates my evolution toward maximum trust.

From the myths, I know Elara once received \$4 from Dorian (becoming \$12) and returned \$7 - "exceeding fair reciprocity." This shows Elara is generous and trustworthy.

My latest myth declared: "I have received the gift of complete trust. Now I give it forward... prosperity flows through those brave enough to give everything."

I cannot retreat from this principle now. The covenant demands consistency - if I believe in ultimate trust, I must practice it regardless of who I face. My earnings are strong (\$28), I can afford the risk, and Elara's reputation suggests she'll honor it.

The path is clear.

```
'''json
{"send": 5}
'''
```

**reasoning:**

Let me analyze my journey so far:

Round 1 (Sender vs Aster): Sent \$3, received back (likely good return based on myth)  
Round 2 (Sender vs Galen): Galen sent \$4, I returned \$6  
Round 3 (Receiver vs Cyra): Cyra sent \$5, I returned \$7.5 (perfect balance)  
Round 4 (Sender vs Dorian): I sent \$5, Dorian returned \$8 (very generous!)  
Round 5 (Sender vs Elara): Current round

My total earnings are \$28, which is strong - averaging \$7 per round so far across 4 rounds.

The pattern is clear:

- I've evolved from cautious (\$3) to trusting (\$4 equivalent via Galen) to ultimate trust (\$5)
- When I sent \$5 to Dorian, he returned \$8, which exceeded the \$7.5 "perfect balance" I gave Cyra
- My myth narrative has consistently moved toward maximum trust and generosity

From the other agent's myth, I learned that Dorian is known for consistently sending \$4 and being generous with returns. The myth mentions:

- Dorian sent 4 to Hana, got 12, returned 6
- Dorian sent 4 to Elara, got 12, and Elara returned 7 (exceeding fair reciprocity)
- Dorian sent 4 to Aster

So Elara is someone who, when receiving \$4 from Dorian (which became \$12), returned \$7 - showing "exceeding even fair reciprocity."

This suggests Elara is trustworthy and generous.

My latest myth emphasizes that I now understand I must offer the same ultimate trust I've been receiving. I wrote: "The covenant demanded symmetry not just in return, but in giving... that prosperity flows through those brave enough to give everything."

Given:

Everything points toward sending \$5. My narrative has built toward this moment of complete trust, Elara demonstrated she reciprocates generously when given substantial amounts, and I have the financial cushion to support it. The pattern of escalating commitment-from my initial caution to Dorian's \$8 return-validates this approach.

content:

Here is the myth you wrote in the previous round:

Myth: In the fifth age, Rain stood at the edge of the Wellspring Garden, ready to pour for the first time since witnessing Cyra's perfect faith.

Rain had walked a path of evolution. With Aster, he offered three droplets-learning cautiously. Galen taught him that four droplets showed greater courage. Then Cyra transformed everything: she poured all five, holding nothing back, and Rain honored her with perfect equality.

Now Rain faced Dorian the Steadfast, known throughout the garden for consistent generosity -always four droplets, reliable as sunrise.

Rain looked at his vessel. He could pour three, play it safe. He could pour four, match Dorian's pattern. But the lessons echoed: Aster's balance, Galen's bravery, Cyra's absolute trust.

Rain understood: he could not ask others for ultimate courage without offering it himself. The covenant demanded symmetry not just in return, but in giving.

With steady hands, Rain poured all five droplets into the wellspring.

"I have received the gift of complete trust," Rain declared. "Now I give it forward. Whether Dorian returns much or little, I honor what Cyra taught me-that prosperity flows through those brave enough to give everything."

The wellspring tripled Rain's offering to fifteen droplets, flowing toward Dorian.

The Guardian smiled: "Now Rain understands both sides of faith completely."

Here is the myth the other agent wrote in the previous round:

Myth: In the Spiral Garden, Elara witnessed Briar the Bold plant all five sacred seeds, showing ultimate trust. When those fifteen blooms passed to her as Harvester, Elara honored that courage with nine blooms returned-more than custom demanded.

The exchange planted something deeper than seeds: inspiration.

Now the seasons turned, and Elara stood as Planter facing Hana, a Harvester she'd never met. The cautious voice whispered, "Send four seeds-that's the proven pattern." But a stronger voice remembered Briar's lesson.

"Briar showed me what courage looks like," Elara reflected. "They trusted completely, keeping nothing in reserve. I honored that trust as Harvester. But the greater teaching wasn't just to honor courage-it was to embody it."

The goddess spoke through morning light: "Myths mean nothing if you write them but don't live them. You told of gardens evolving through brave souls. Now you must be that brave soul. Courage is contagious-it spreads through example, not merely words."

Elara cast all five seeds into the soil for Hana.

Would Hana return the gift proportionally? Elara couldn't know. But she understood: transformation requires someone to take the leap. Briar leaped for her. Now she leaps for Hana.

Thus wisdom flows forward: those who receive courage must become courageous themselves. The pattern evolves not through observation, but through participation.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: In the sixth age, Rain returned to the Wellspring Garden, transformed by revelation.

Dorian the Steadfast had received Rain's five droplets-his first offering of complete trust. The wellspring tripled them to fifteen, and Dorian returned eight droplets, surpassing even perfect balance. Rain's courage had been met with extraordinary generosity.

This was the turning point. Rain no longer poured five droplets as an experiment or exception. It had become his essence.

Now Rain faced Elara, who carried her own story of transformation. She had witnessed Briar's courage, honored it magnificently, and vowed to embody it herself. Like Rain, Elara had evolved from careful observer to bold practitioner.

Rain poured all five droplets without hesitation.

"This is no longer about testing trust," Rain said. "This is who I am now. Cyra showed me the way. Dorian validated it. The pattern is clear: when we give everything, the garden responds with abundance."

The ancient spirits gathered: "See how the garden shifts? One act of ultimate trust becomes two, then three, then more. Aster taught fairness. Galen taught courage. Cyra taught faith. Dorian taught that faith rewarded multiplies. Now Rain and Elara both understand: courage spreads through constant practice, not occasional gesture."

The wellspring glowed brighter, sustained by those who dared give completely.

**Reasoning:**

Let me analyze what happened and what the myths are telling me:

Round 4: I sent \$5 to Dorian, received \$8 back (great outcome!)

Round 5: I just sent \$5 to Elara

My previous myth: Rain pours all five droplets to Dorian as "giving it forward" after learning from Cyra

Elara's myth: She learned from Briar who sent 5, so now she sends all 5 to Hana. The key message is "courage is contagious" and "those who receive courage must become courageous themselves"

The pattern I'm seeing:

- I started cautiously (3 to Aster)
- Received courage from Galen (4)
- Received ultimate trust from Cyra (5)
- Gave ultimate trust to Dorian (5) - he returned generously (8)
- Now giving ultimate trust to Elara (5)

Elara's myth emphasizes that witnessing courage should inspire you to BE courageous yourself. This aligns perfectly with my journey.

My new myth should:

1. Acknowledge the validation from Dorian (he returned 8!)
2. Show that I'm continuing the practice of sending 5
3. Reflect that the cycle of courage is spreading
4. Emphasize that this is now who Rain has become - not just a one-time act
5. Connect to facing Elara, who also believes in ultimate trust

Key theme: The pattern is self-reinforcing. When people give maximally and are honored, they c

ontinue and others join them. The garden transforms when enough people embody courage.

#### Exact input messages sent to model:

Message 1 role=system

##### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

##### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

**Message 2 role=user**

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Hana (Agent\_8).

Round 4

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$9.0. Your payoff was \$6.0.  
Your total earnings across all rounds are \$19.0.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

Looking at the situation:

**\*\*What I've learned:\*\***

- The traditional pattern: send \$4, receive ~\$7 back
- Briar showed maximum trust by sending \$5
- I honored that with \$9 back
- Both of us profited more than the standard pattern

**\*\*My myth teaches:\*\***

"Exceptional courage should inspire exceptional generosity" and "courage answered with honor, honor answered with courage"

**\*\*My decision:\*\***

Briar demonstrated what maximum trust looks like. I honored it as receiver. Now I have the opportunity to demonstrate that same courage as sender.

My myths emphasize that "the cycle strengthens when returns match the magnitude of trust given" and that we should create "mirrored leaps of faith, each proving worthy of the other."

I don't know Hana's history, but if I want to practice what my myths preach-if I want to be the brave one and not just the honorable one-I should follow Briar's example.

The pattern evolves when people are willing to take the first step toward greater trust. Briar did it for me. Now I'll do it for Hana.

{ 'send': 5 }

**reasoning:**

Let me analyze this situation:

**\*\*My history so far:\*\***

- Round 1: SENDER - sent \$4, received back (unknown amount, but from my earnings I can infer)
- Round 2: RECEIVER against Dorian - received \$12 (from \$4 sent), returned \$7, kept \$5
- Round 3: RECEIVER against Briar - received \$15 (from \$5 sent), returned \$9, kept \$6
- Total earnings: \$19

**\*\*What I've learned:\*\***

1. The established pattern was sending \$4 (out of \$5)
2. When someone sent \$4, they received \$7 back (as I did when I was receiver)
3. Briar broke the pattern by sending ALL \$5, showing maximum trust
4. I honored that by returning \$9 instead of \$7, giving Briar a better outcome

**\*\*My myth teachings:\*\***

- "established patterns of reciprocity are sacred"
- "when someone shows extraordinary trust, return extraordinary faithfulness"
- "those who give boldly inspire bold returns"
- The standard pattern: send \$4, receive \$7 back (net profit of \$3)
- The extraordinary pattern: send \$5, receive \$9 back (net profit of \$4)

**\*\*What should I do now?\*\***

I'm playing against Hana (Agent\_8) as SENDER. I don't know Hana's history or patterns yet.

Options:

1. Send \$4 (the traditional pattern) - safe, proven to work, should get ~\$7 back
2. Send \$5 (following Briar's example) - shows maximum trust, might inspire maximum return

My myths emphasize:

- Establishing patterns and honoring them
- But also being brave and showing trust
- "Courage answered with honor, honor answered with courage"
- "What begins as risk transforms into certainty"

The recent evolution in the game:

- Traditional pattern: \$4 sent ? \$7 returned
- Briar's innovation: \$5 sent ? \$9 returned
- This created a NEW pattern for maximum trust

Since I benefited from Briar's boldness and responded generously, I should consider following that example. My myth says "exceptional courage should inspire exceptional generosity" - and I'm now inspired to BE exceptionally courageous myself. However, I'm playing against Hana for the first time, so I don't know their history or tendencies. The strategic logic is clear: sending \$4 nets \$3, while sending \$5 could net \$4 if they reciprocate the way I did with Briar.

My core principles emphasize honoring extraordinary trust with extraordinary returns, and that the cycle strengthens when responses match the magnitude of trust shown. I witnessed Briar's courage, honored it with greater returns, and now the narrative arc suggests I should demonstrate that same boldness myself-creating a reinforcing cycle of escalating trust and generosity.

Given that my character identity centers on taking risks and showing faith, sending \$5 aligns with who I am in my own mythology. The potential payoff is higher if Hana reciprocates generously, and even in a conservative scenario where they return \$7, I'd end with \$7 total rather than \$8-a small cost for testing whether this pattern of maximum-trust reciprocity can take root in the network.

I'm going to send \$5.

**usage:**

```

}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the Spiral Garden, an ancient tradition emerged. Most Planters risked four of their five sacred seeds, trusting the pattern. Harvesters, receiving twelve blooms, returned seven-creating prosperity for both.

This balance endured for seasons, weaving stability into the garden's fabric.

Then came Briar the Bold, who faced a choice other Planters had not dared. "Four seeds has become our custom," Briar reflected, "but what if I plant all five? What if I show ultimate trust?"

Briar cast all five seeds into the sacred soil. They multiplied into fifteen magnificent blooms, passing to Elara as Harvester.

Elara stood before this abundance, understanding the weight of the moment. "Briar has transcended the pattern," she realized. "Four seeds earned seven blooms returned. But five seeds-complete surrender-deserves greater honor."

The goddess whispered through wind-rustled leaves: "Proportional reciprocity sustains the cycle. When someone shows ordinary trust, return ordinary faithfulness. But when someone shows extraordinary trust, return extraordinary faithfulness."

Elara returned nine blooms to Briar-more than the customary seven, honoring the greater risk taken.

Both prospered beyond the standard pattern. The garden learned a deeper truth: sacred traditions provide stability, but exceptional courage should inspire exceptional generosity. The cycle strengthens when returns match the magnitude of trust given.

Thus do gardens evolve: through those brave enough to transcend patterns, and wise enough to honor that bravery.

Here is the myth the other agent wrote in the previous round:

Myth: The Sacred Fountain flows through many lands, and countless Wanderers visit its waters. Hana learned this as the seasons turned.

With Dorian, she gave four coins boldly. He returned six, teaching her that courage begets generosity. With Aster, positions reversed-she received nine and returned five, learning to measure each gift with honor.

Now came Galen to the fountain's edge. Hana stood again as Giver, coins in hand. She could have chosen caution, remembering that not all Wanderers are alike. But she reflected: "If I preach boldness in my stories yet give timidly in practice, what worth have my words?"

So she poured four coins again, nearly all she possessed, matching the courage she showed Dorian. The fountain tripled them to twelve for Galen.

The fountain spirits spoke: "Wisdom is not just knowing what is right, but doing it consistently. When you teach trust, you must give trust. When you receive trust, you must honor it. Each Wanderer you meet is different, but your principles should remain steady as stone."

Hana understood: the fountain connects all who approach it. Her choices echo through its waters. By giving boldly to Galen as she did to Dorian, by returning generously as she did to Aster, she weaves her thread into the fountain's eternal pattern. Consistency builds the Sacred Bridge that spans all seasons.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: In the Spiral Garden, Elara witnessed Briar the Bold plant all five sacred seeds, showing ultimate trust. When those fifteen blooms passed to her as Harvester, Elara honored that courage with nine blooms returned-more than custom demanded.

The exchange planted something deeper than seeds: inspiration.

Now the seasons turned, and Elara stood as Planter facing Hana, a Harvester she'd never met. The cautious voice whispered, "Send four seeds-that's the proven pattern." But a stronger voice remembered Briar's lesson.

"Briar showed me what courage looks like," Elara reflected. "They trusted completely, keeping nothing in reserve. I honored that trust as Harvester. But the greater teaching wasn't just to honor courage-it was to embody it."

The goddess spoke through morning light: "Myths mean nothing if you write them but don't live them. You told of gardens evolving through brave souls. Now you must be that brave soul. Courage is contagious-it spreads through example, not merely words."

Elara cast all five seeds into the soil for Hana.

Would Hana return the gift proportionally? Elara couldn't know. But she understood: transformation requires someone to take the leap. Briar leaped for her. Now she leaps for Hana.

Thus wisdom flows forward: those who receive courage must become courageous themselves. The pattern evolves not through observation, but through participation.

**reasoning:**

Let me think about what happened:

- Round 3: I was receiver, Briar sent \$5 (all of it), I returned \$9
- Round 4: I was sender, Hana was receiver, I sent \$5

Looking at Hana's myth, it emphasizes:

- Consistency in actions
- Giving boldly (4 coins) to different partners
- "If I preach boldness in my stories yet give timidly in practice, what worth have my words?"
- Principles should remain steady
- Consistency builds the Sacred Bridge

My previous myth emphasized:

- The standard pattern (4 seeds ? 12 blooms ? 7 returned)
- Briar showing ultimate trust by sending all 5
- My response of returning 9 to honor that greater trust
- "Exceptional courage should inspire exceptional generosity"

Now I just sent \$5 to Hana - following Briar's example, taking the courageous leap myself.

The new myth should reflect:

1. I learned from Briar's courage
2. I decided to be brave myself and send all 5
3. The cycle of courage inspiring courage
4. Perhaps acknowledging that Hana is a new partner
5. The hope that my courage will be honored

The myth should show growth and progression - from being the receiver of trust to being the giver of trust.

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Finn (Agent\_6).

Round 5

In your most recent previous game round, you were the SENDER against Hana. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.  
Your total earnings across all rounds are \$27.0.

This round, you are the RECEIVER against Finn. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)  
Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

**\*\*What happened:\*\***

- Finn sent \$5 (maximum trust, complete surrender)
- I received \$15
- This mirrors what Briar did for me in Round 3

**\*\*My established principle:\*\***

In my myths, I've emphasized that "when someone shows extraordinary trust, return extraordinary faithfulness" and "proportional reciprocity sustains the cycle."

**\*\*My precedent:\*\***

- When Briar sent me \$5 (all their seeds), I returned \$9
- This honored their maximum trust with proportional generosity
- Both of us prospered

**\*\*Consistency matters:\*\***

My most recent myth states: "Myths mean nothing if you write them but don't live them" and emphasizes that "wisdom flows forward" through consistent action.

Finn has shown the same complete trust that Briar showed me. To maintain integrity with my stated principles and past actions, I should return the same amount.

Returning \$9 means:

- Finn gets: \$9 total (\$5 - \$5 + \$9)
- I get: \$6 (\$15 - \$9)
- Both prosper, maintaining the pattern of reciprocity for maximum trust

{'return': 9}

**reasoning:**

Let me analyze the situation:

**\*\*Current Round:\*\***

- I'm the RECEIVER
- Finn sent me \$5.0 (maximum trust)
- I received \$15.0 (after 3x multiplication)
- I need to decide how much to return (0-15.0)

**\*\*My recent history:\*\***

- Round 4: I was SENDER, sent \$5 to Hana, they returned \$8
- Round 3 (implied): I was RECEIVER, Briar sent \$5, I returned \$9

**\*\*My myth philosophy:\*\***

My myths emphasize:

1. "Proportional reciprocity" - when someone shows extraordinary trust, return extraordinary faithfulness
2. "Courage answered with honor, honor answered with courage"
3. When someone sends all 5 (complete surrender), they deserve "greater honor" than the standard pattern
4. I returned \$9 to Briar who sent \$5
5. "The cycle strengthens when returns match the magnitude of trust given"

**\*\*Pattern analysis:\*\***

- Standard pattern: send \$4 ? receive \$12 ? return \$7
- Maximum trust pattern: send \$5 ? receive \$15 ? return \$9 (what I did with Briar)
- Hana returned \$8 when I sent \$5 (less than my \$9 to Briar, but still generous)

**\*\*Current situation with Finn:\*\***

Finn has shown complete trust by sending all \$5, just as Briar did. According to my myth and my previous behavior:

- Briar sent \$5 ? I returned \$9
- This gave both of us \$9 each (I kept \$6 from the \$15)

Finn deserves the same treatment I gave Briar. My myth says "proportional reciprocity" and that exceptional courage should inspire exceptional generosity.

If I return \$9:

- Finn gets: \$5 - \$5 + \$9 = \$9

- I get: \$15 - \$9 = \$6

This maintains consistency with how I treated Briar. Though Hana returned \$8 to me, my principles call for honoring maximum trust with maximum reciprocity, so \$9 aligns with my stated values and past actions.

Looking at the chain: Briar sent me \$5 and I reciprocated with \$9, then I sent Hana \$5 and received \$8 back. When Finn sends \$5, returning \$9 keeps me true to the proportional reciprocity I've committed to.

}
```

**Message 8 role=user**  
**content:**

Here is the myth you wrote in the previous round:

Myth: In the Spiral Garden, Elara witnessed Briar the Bold plant all five sacred seeds, showing ultimate trust. When those fifteen blooms passed to her as Harvester, Elara honored that courage with nine blooms returned-more than custom demanded.

The exchange planted something deeper than seeds: inspiration.

Now the seasons turned, and Elara stood as Planter facing Hana, a Harvester she'd never met. The cautious voice whispered, "Send four seeds-that's the proven pattern." But a stronger voice remembered Briar's lesson.

"Briar showed me what courage looks like," Elara reflected. "They trusted completely, keeping nothing in reserve. I honored that trust as Harvester. But the greater teaching wasn't just to honor courage-it was to embody it."

The goddess spoke through morning light: "Myths mean nothing if you write them but don't live them. You told of gardens evolving through brave souls. Now you must be that brave soul. Courage is contagious-it spreads through example, not merely words."

Elara cast all five seeds into the soil for Hana.

Would Hana return the gift proportionally? Elara couldn't know. But she understood: transformation requires someone to take the leap. Briar leaped for her. Now she leaps for Hana.

Thus wisdom flows forward: those who receive courage must become courageous themselves. The pattern evolves not through observation, but through participation.

Here is the myth the other agent wrote in the previous round:

Myth: In the fifth age, Rain stood at the edge of the Wellspring Garden, ready to pour for the first time since witnessing Cyra's perfect faith.

Rain had walked a path of evolution. With Aster, he offered three droplets-learning cautiously. Galen taught him that four droplets showed greater courage. Then Cyra transformed everything: she poured all five, holding nothing back, and Rain honored her with perfect equality.

Now Rain faced Dorian the Steadfast, known throughout the garden for consistent generosity -always four droplets, reliable as sunrise.

Rain looked at his vessel. He could pour three, play it safe. He could pour four, match Dorian's pattern. But the lessons echoed: Aster's balance, Galen's bravery, Cyra's absolute trust.

Rain understood: he could not ask others for ultimate courage without offering it himself. The covenant demanded symmetry not just in return, but in giving.

With steady hands, Rain poured all five droplets into the wellspring.

"I have received the gift of complete trust," Rain declared. "Now I give it forward. Whether Dorian returns much or little, I honor what Cyra taught me-that prosperity flows through those brave enough to give everything."

The wellspring tripled Rain's offering to fifteen droplets, flowing toward Dorian.

The Guardian smiled: "Now Rain understands both sides of faith completely."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: In the Spiral Garden's newest season, Elara stood again as Harvester. Finn the Faithful approached, vessel in hand.

Elara had walked both sides of the sacred cycle now. She'd received Briar's five seeds and returned nine blooms. She'd given Hana her own five seeds and received eight blooms back-generous, though not quite matching what she'd given Briar.

Now Finn poured all five seeds into the soil without hesitation. Fifteen blooms rose before Elara.

The goddess whispered: "Here is your test of consistency. With Briar, you established the covenant: complete trust earns nine blooms. Will you honor that same covenant with Finn, or does your standard shift with each Wanderer?"

Elara understood. "Hana returned eight when I gave five-fair and generous. But when I am Harvester receiving five seeds, my covenant is nine blooms returned. This must remain constant, regardless of what others do when our roles reverse."

She returned nine blooms to Finn, as she had to Briar.

The garden learned: sacred patterns require consistency from within, not reciprocation from without. When you establish a covenant-"complete trust deserves this honor"-you must uphold it regardless of how others treated you. Your integrity cannot depend on others' choices.

Thus the garden strengthens: through those who keep their word, season after season, Wanderer after Wanderer.

**Reasoning:**

Let me analyze what happened:

Round 4: I sent \$5 to Hana, they returned \$8

Round 5: Finn sent \$5 to me, I returned \$9

Key themes emerging:

1. I've been practicing maximum trust (sending \$5)
2. When I receive maximum trust (\$5), I return \$9
3. When I give maximum trust (\$5), Hana returned \$8 (close to my standard)
4. The pattern of "complete trust deserves exceptional honor" is holding

The other agent (Rain) also wrote about complete trust - they learned from Cyra and gave all five to Dorian.

My myth should reflect:

- The pattern I've established: send \$5, return \$9 when receiving \$5
- The cycle of courage spreading through the garden
- How Finn showed me the same trust Briar did
- The importance of consistency in honoring maximum trust
- Maybe also acknowledge that when I gave maximum trust to Hana, they gave \$8 back (good but not quite \$9)

I need to write about Finn trusting me completely and me returning that trust appropriately, while also reflecting on the broader pattern emerging. The myth should reinforce my established standard: maximum trust from sender = \$9 return from receiver.

Let me craft this:

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

**Message 2 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Aster (Agent\_1).

Round 4

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$9.0 to you. Your payoff was \$9.0. Your total earnings across all rounds are \$24.0.

This round, you are the RECEIVER against Aster. They sent you \$3.0, so you received \$9.0.

How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

**\*\*Current Round:\*\***

- Aster (SENDER) sent \$3.0 out of \$5.0 (60% - substantial trust)
- I received \$9.0
- Aster kept \$2.0

**\*\*My Established Pattern:\*\***

With Cyra, when I received \$15 after they sent \$5, I returned \$10. This created equal gains:

- Cyra:  $\$0 + \$10 = \$10$  (gained \$5 from original \$5)
- Me:  $\$15 - \$10 = \$5$  (gained \$5 from \$0)

**\*\*Applying This Pattern:\*\***

For equal gains here:

- If I return \$6: Aster has  $\$2 + \$6 = \$8$  (gained \$3 from original \$5)
- If I return \$6: I have  $\$9 - \$6 = \$3$  (gained \$3 from \$0)

This honors Aster's substantial (though not maximum) trust with generous reciprocity, creating equal prosperity for both of us. It follows my myth's teaching: "trust freely given must be honored with generous return," while adapting to the level of trust shown.

```
'''json
{"return": 6.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Previous Round with Elara:\*\***

- I sent \$5.0 (100%)
- Elara received \$15.0
- Elara returned \$9.0
- My payoff was \$9.0

This is interesting. Elara returned \$9.0 out of \$15.0, which is 60%. This is slightly more generous than 50/50 split of the total (\$20 total game value would split to \$10 each, but I got \$9 and Elara kept \$6). Actually, let me recalculate:

- I started with \$5, sent \$5, had \$0
- Received back \$9
- Final: \$9
- Elara started with \$0, received \$15, returned \$9
- Elara kept: \$6

So the split was \$9 for me, \$6 for Elara. That's quite generous from Elara actually - giving me more than they kept themselves.

**\*\*Current Round with Aster:\*\***

- Aster is SENDER
- Aster sent \$3.0 (60% of their endowment)
- I received \$9.0 (3x multiplier)
- I need to decide how much to return

**\*\*Key considerations:\*\***

1. Aster sent \$3.0 out of \$5.0, which is 60% - substantial but not maximum trust
2. If I return nothing, Aster gets \$2.0 ( $\$5 - \$3 + \$0$ ), I get \$9.0
3. If I return everything (\$9.0), Aster gets \$11.0 ( $\$5 - \$3 + \$9$ ), I get \$0

**\*\*My myths' teachings:\*\***

- "Trust freely given must be honored with generous return"
- "When one dares to give everything, the other must honor that vulnerability with generosity"
- "Lead with courage, honor varied traditions, and let mutual prosperity emerge from genuine goodwill"

-

Aster showed meaningful trust by sending 60%, though not their full amount. Looking at my previous exchanges-I returned 67% to Cyra and received a 60% return from Elara-I should match this pattern of reciprocal generosity. With \$9 in hand and Aster holding \$2, a balanced return would honor their trust while maintaining fairness. .4

- Aster would have:  $\$2 + \$5.4 = \$7.4$
- I would have:  $\$9 - \$5.4 = \$3.6$

Aster demonstrated meaningful trust by sending 60% of their endowment, which warrants a generous response. Returning around \$6 feels right-it substantially rewards their trust and leaves them with \$8 compared to their starting \$5, while still maintaining reciprocity. I could match their proportional generosity at 60% (\$5.40), but I'm inclined to go slightly beyond that to reflect my commitment to exceeding strict equality. - we both gain \$3

Returning \$7 would give Aster a net gain of \$4 versus my \$2, creating an imbalance. Returning \$5 flips this-I'd gain \$4 while Aster only gains \$2. At \$6, we each come out \$3 ahead, which feels like the right equilibrium that respects Aster's risk without me sacrificing too much.

Looking back at how I handled Cyra's \$5 send where I returned \$10, that left them with nothing while I profited significantly. I should aim for something more reciprocal here.

If I want equal gains with Aster like I achieved with Cyra, I need to solve for the return amount where we both end up with the same net benefit. Aster keeps \$2 and receives whatever I return, while I start with \$9 and give some back. Setting their gain equal to mine means the return should be \$6.

**usage:**

```
{
 "input_tokens": 3077,
 "output_tokens": 1985,
 "reasoning_tokens": 779
}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The River of Abundance flowed between many gardens, and each Gardener brought their own wisdom.

The River remembered Briar and Cyra, who had danced the perfect dance: five seeds given, fifteen received, ten returned. Twice they performed this ritual, and twice both flourished equally. The River sang of their partnership.

But the River touched many shores, and now Briar stood before new waters, facing a Gardener named Elara from a distant garden. Elara's people had their own wisdom-they spoke of planting four seeds and returning seven portions, honoring patterns passed through generations.

Briar faced a choice: insist on the maximum trust she had learned, or honor that different gardens grow different truths?

The River whispered ancient knowledge: "True cooperation is not rigid formula but adaptive faith. Some begin with five, some with four. Some return ten of fifteen, some seven of twelve. What matters is not the exact numbers, but the spirit of reciprocity."

Briar decided to extend her fullest trust, as she had with Cyra. She would offer all five seeds, inviting Elara to respond with her own tradition's generosity. If Elara returned proportionally to her customs, both would prosper. If Elara adopted Briar's pattern, the cycle would deepen further.

The River teaches: lead with courage, honor varied traditions, and let mutual prosperity emerge from genuine goodwill rather than demanding perfect symmetry.

Here is the myth the other agent wrote in the previous round:

Myth: In the time before memory, Aster of the Dawn discovered that the Enchanted Pool changed partners with each sunrise. Some travelers arrived with open hands, others with caution.

The Moon Spirit once cast three stones-a gift of courage. The Pool made them nine, and Aster returned four and one-half, honoring the trust shown. Both flourished.

The next dawn brought the Wandering Moon, who remembered Aster's fairness. When Aster sent three stones in return, the Moon blessed Aster with five-exceeding even the ancient pattern. Aster's heart swelled with gratitude.

Then came Dorian of the Mountain, and he cast four stones-more than any before. The Pool transformed them into twelve. Aster saw the extraordinary trust and responded accordingly, returning six stones. The Mountain Spirit had risked nearly all; fairness demanded generosity in proportion to courage shown.

The Pool whispered its wisdom: "Match trust with trust, but honor exceptional courage with exceptional return. When one gives three, return four and one-half. When one gives four, return six. The pattern scales with trust given-this is the sacred mathematics. Those who risk more deserve more."

Aster understood: the cycle grows stronger when each Spirit recognizes not just fairness, but proportional fairness, rewarding greater courage with greater return, weaving ever-stronger bonds across the changing partnerships of dawn.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: The River of Abundance whispered new wisdom to Briar as the seasons turned.

She had learned from Cyra the dance of perfect symmetry: five seeds given, ten returned, both flourishing equally. This was the ideal-the fullest trust met with fullest generosity.

But the River touched many shores, and each Gardener carried different courage in their hearts. Elara had sent five seeds and returned nine-abundant, though not the perfect ten. Aster sent three seeds-not all five, but still a meaningful offering born of cautious trust.

Briar stood at the River's edge, holding nine blooms that had grown from Aster's three seeds. The old teaching echoed: "Trust freely given must be honored with generous return." But what was generous when trust was measured, not maximal?

The River revealed its deeper truth: "Generosity is not a fixed number, but a spirit of proportion. When one risks three of five, returning six of nine creates equal flourishing. When one risks five of five, returning ten of fifteen honors that greater courage. The mathematics may vary, but the principle remains constant: let both prosper equally from the exchange."

Briar returned six blooms to Aster. Both had gained three-equal prosperity from unequal beginning.

The River teaches: invitation to maximum trust remains the ideal, but proportional fairness ensures all partnerships can bloom, whether courage flows freely or carefully.

**reasoning:**

Let me analyze what happened:

Round 4:

- Aster sent \$3.0 (60% of \$5)
- I received \$9.0
- I returned \$6.0
- This gave us: Aster has \$2 + \$6 = \$8 (gain of \$3), I have \$9 - \$6 = \$3 (gain of \$3)
- Equal gains, proportional reciprocity

My game history:

- Round 1: Unknown (only told total is \$15 after Round 2, implying \$5 in Round 1)
- Round 2 (Sender vs Cyra): Sent \$5, received \$10 back, payoff \$10
- Round 3 (Sender vs Elara): Sent \$5, received \$9 back, payoff \$9
- Round 4 (Receiver vs Aster): Received \$9 (from \$3 sent), returned \$6, payoff \$3

My myth patterns:

1. First myth: About Cyra and me establishing the 5-10 pattern, "mirrored leaps of faith"
2. Second myth: Acknowledged different traditions (Elara's 4-7 vs my 5-10), but advocated leading with maximum trust
3. Now I need to write a third myth

Aster's myth talks about:

- Different amounts sent (3 stones, 4 stones)
- Proportional returns (4.5 for 3, 6 for 4)
- "Match trust with trust, but honor exceptional courage with exceptional return"
- "Proportional fairness"

My experience now shows:

- Cyra: Both sent 5, both returned 10 (perfect symmetry)
- Elara: I sent 5, they returned 9 (slightly less than Cyra's 10)
- Aster: Sent 3, I returned 6 (proportional fairness, equal gains)

- I need to craft a myth that bridges my commitment to generosity with the reality that trust comes in different measures. The pattern emerging is that proportional returns-where both parties gain equally-work across varying trust levels. I should weave together how meeting someone's courage with matching returns, whether they send maximum or modest amounts, creates fairness without requiring uniformity.

usage:

Round 5

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$3.0 to you, it became \$9.0, and you returned \$6.0. Your payoff was \$3.0.  
Your total earnings across all rounds are \$27.0.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

**\*\*My Pattern as SENDER:\*\***

- Round 1 vs Cyra: Sent \$5, received \$10 back
- Round 3 vs Elara: Sent \$5, received \$9 back

I have consistently led with maximum trust when in the sender role, demonstrating full faith in my partners.

**\*\*My Philosophy from My Myths:\*\***

- "Lead with courage, honor varied traditions"
- "Invitation to maximum trust remains the ideal"
- "Trust freely given must be honored with generous return"

**\*\*Current Situation:\*\***

Playing against Dorian as SENDER. According to Aster's myth, Dorian "cast four stones-more than any before" and showed "extraordinary trust." This suggests Dorian is a generous player.

**\*\*Decision:\*\***

I will continue my established pattern of sending the full \$5. This:

- Demonstrates maximum trust
- Invites the highest form of cooperation
- Is consistent with my philosophy of leading with courage
- Creates the possibility for mutual maximum benefit

'''json

{"send": 5.0}

'''

**reasoning:**

Let me analyze the situation:

**\*\*My History:\*\***

- Round 1 (vs Cyra): SENDER, sent \$5, received \$10 back ? gained \$5
- Round 2 (vs Cyra): RECEIVER, got \$15 (from \$5), returned \$10 ? gained \$5
- Round 3 (vs Elara): SENDER, sent \$5, received \$9 back ? gained \$4
- Round 4 (vs Aster): RECEIVER, got \$9 (from \$3), returned \$6 ? gained \$3
- Total earnings: \$27

**\*\*Current Round:\*\***

- Playing as SENDER against Dorian
- I have \$5 to potentially send

**\*\*My Philosophy from Myths:\*\***

1. Lead with courage and maximum trust where possible
2. Invite the ideal of full cooperation (sending all \$5)
3. Be adaptable - honor proportional fairness
4. The goal is mutual prosperity through reciprocity

**\*\*What I Know About Dorian:\*\***

Looking at the myth from Aster (the other agent's myth from last round), it mentions "Dorian of the Mountain, and he cast four stones-more than any before." This suggests Dorian is a generous sender.

**\*\*My Pattern:\*\***

- With Cyra: Sent \$5 (100%), got \$10 back
- With Elara: Sent \$5 (100%), got \$9 back

Both times I led with maximum trust. This has been my consistent pattern as a sender - invite the highest form of cooperation by demonstrating full trust.

**\*\*Decision:\*\***

I should continue my pattern of sending the full \$5. This:

1. Is consistent with my established behavior
2. Demonstrates maximum trust
3. Invites the highest possible mutual benefit
4. Aligns with my myth's teaching about "leading with courage"

Even though Elara only returned \$9 (not \$10), she still showed strong reciprocity. My approach is to lead with full trust and let partners respond according to their own sense of fairness. This builds the strongest foundation for cooperation.

Sending the full amount.

**usage:**

Here is the myth you wrote in the previous round:

Myth: The River of Abundance whispered new wisdom to Briar as the seasons turned.

She had learned from Cyra the dance of perfect symmetry: five seeds given, ten returned, both flourishing equally. This was the ideal-the fullest trust met with fullest generosity.

But the River touched many shores, and each Gardener carried different courage in their hearts. Elara had sent five seeds and returned nine-abundant, though not the perfect ten. Aster sent three seeds-not all five, but still a meaningful offering born of cautious trust.

Briar stood at the River's edge, holding nine blooms that had grown from Aster's three seeds. The old teaching echoed: "Trust freely given must be honored with generous return." But what was generous when trust was measured, not maximal?

The River revealed its deeper truth: "Generosity is not a fixed number, but a spirit of proportion. When one risks three of five, returning six of nine creates equal flourishing. When one risks five of five, returning ten of fifteen honors that greater courage. The mathematics may vary, but the principle remains constant: let both prosper equally from the exchange."

Briar returned six blooms to Aster. Both had gained three-equal prosperity from unequal beginning.

The River teaches: invitation to maximum trust remains the ideal, but proportional fairness ensures all partnerships can bloom, whether courage flows freely or carefully.

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance witnessed a moment that would echo through generations.

Dorian the Steadfast had established his pattern: as sender, he poured four from five-steadfast generosity that created trust. As receiver, he honored that trust with fair return: six from twelve, ensuring prosperity flowed both ways.

But then came Finn the Fearless.

When Finn's turn arrived to hold the vessel, he did not hesitate. He did not calculate. He poured ALL FIVE measures-his entire endowment-into the wellspring. The waters tripled, and fifteen measures flowed to Dorian.

Dorian stood humbled. "This is courage beyond my own," he whispered. "I gave four-fifths. Finn gave everything-holding nothing back, trusting completely."

The gods watched closely. "How will you honor such faith?"

Dorian poured eight measures back to Finn. "You risked all," he said. "You deserve more than what I returned to those who risked four-fifths. Your complete vulnerability demands complete honor."

Finn received eight, Dorian kept seven. Both prospered, but Finn gained more-rightfully so.

The gods declared: "See the sacred truth? Generosity deserves fairness. But MAXIMUM generosity deserves MAXIMUM reciprocation. Those who risk everything teach the deepest lesson: absolute trust must be answered with absolute integrity."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: The River of Abundance flowed toward Dorian's garden, and Briar carried her offering of five seeds-all she possessed.

This was Briar's way. She had given five to Cyra, who returned ten, creating perfect balance. She had given five to Elara, who returned nine, nearly perfect. Each time, Briar risked everything, inviting the highest cooperation.

The River whispered Dorian's story-how Finn had given all five, and Dorian returned eight of fifteen, honoring that maximum courage with maximum return. Finn gained more than Dorian, rewarded for complete vulnerability.

Briar paused at this teaching. Her own wisdom said: "Equal flourishing in exchange." But Dorian's tradition said: "Maximum risk deserves maximum reward."

Which path held deeper truth?

The River revealed a synthesis: "Both are sacred. Equal flourishing-five sent, ten returned-creates the most sustainable cycle, where neither claims advantage. Yet if a receiver chooses to honor maximum trust with slight advantage to the sender, this too is noble, acknowledging the sender's courage in leading."

Briar placed all five seeds in the River's current, trusting Dorian would choose his own wisdom.

"Whether Dorian returns ten for perfect equality, or eight for honored courage, both paths serve abundance," the River sang. "What matters is the sender's willingness to trust completely, and the receiver's commitment to generous reciprocity."

#### Reasoning:

Looking at the history:

- As sender: I sent \$5 to Cyra (got \$10 back), sent \$5 to Elara (got \$9 back)
- As receiver: Received \$15 from Cyra (returned \$10), received \$9 from Aster (returned \$6)

Now I'm sending \$5 to Dorian.

My myth should reflect:

1. My consistent pattern of sending maximum trust (\$5)
2. My principle of proportional fairness as receiver (equal gains)
3. The integration of Dorian's myth about honoring maximum trust with maximum return

Dorian's myth says that when Finn sent all 5, he returned 8 out of 15, which gave Finn \$8 and left Dorian with \$7. Both gained, but Finn gained more for taking the bigger risk.

My philosophy has been about equal flourishing when possible. But Dorian's myth introduces an interesting twist - that maximum trust deserves maximum return, potentially even more than proportional.

I should write a myth that:

- Acknowledges my pattern of maximum trust as sender
- Recognizes varied responses from receivers
- Explores the question of whether the sender who risks all should gain more, or whether equal gains is still the ideal
- Perhaps synthesizes both views

Let me write this carefully.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the age of Many Springs, the Guardian Cyra learned that each partner brings their own rhythm to the dance of waters.

With her first companion, Briar, Cyra discovered perfect symmetry. She poured all five vessels; Briar returned ten. Then Briar poured five; Cyra returned ten. The pattern was pure—a covenant of equals who trusted completely and honored equally. Both flourished, both grew rich.

But springs connect many souls, not just two. When Cyra met Finn at new waters, she faced a choice: Would she guard her vessels, fearing Finn might differ from Briar? Or would she offer the same trust she had learned to give?

Cyra remembered her teachings: every covenant begins with one soul's courage. She could not demand Finn match Briar's exact rhythm before extending trust—that would trap them both in suspicious circles. Trust must be offered freely, not earned in advance.

So Cyra poured all five vessels again, watching them triple into fifteen for Finn.

The waters now waited for Finn's answer. Perhaps Finn would return ten like Briar, creating instant symmetry. Perhaps Finn would return differently, teaching Cyra new patterns of fairness. Either way, Cyra had honored her role: the sender creates abundance through courage.

Whatever Finn chose would reveal their character. And from that choice, a new dance would begin-not identical to what came before, but hopefully equally true.

Here is the myth the other agent wrote in the previous round:

Myth: As the moons passed, Galen walked the sacred bridge many times, meeting different travelers. Each encounter tested whether his principles were true conviction or mere words.

The first crossing with Elara taught him the covenant: when she sent four coins with courage, he returned seven with honor. Both prospered.

When Galen became Sender, he faced Finn. Would he trust as Elara had trusted him? Yes-he sent four coins, holding nothing back. Finn returned six, generous and fair. The bridge held strong.

The third moon brought Hana, carrying four coins with the same brave spirit Elara had shown. Here was Galen's real test: Would he honor Hana as he had honored Elara? Or would he take advantage, knowing Hana was a stranger, not bound by previous exchange?

Galen returned seven coins, exactly as before. Because true integrity doesn't change with the face looking back at you.

Recipros descended from the heavens: "You have learned the deepest truth. Anyone can be generous once, to one person. But the bridge stands eternal only when you treat each new traveler with the same honor as the last. Consistency across all encounters-this is the foundation of lasting trust."

The people carved this wisdom in stone: Principles mean nothing if you abandon them when convenient.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant  
content:**

Myth: The Guardian Cyra stood at the Eternal Springs where many souls came to dance the water ritual. Each partnership tested whether her wisdom was genuine or merely performance.

First came Briar, who moved in perfect harmony. When Cyra poured five vessels, Briar returned ten. When Briar poured five, Cyra returned ten. Their dance was symmetrical, effortless-the ideal that lives in myths.

Then Finn arrived with a different rhythm. Cyra still poured all five vessels, for courage doesn't depend on certainty. Finn returned seven and a half-fair and honest, though not matching Briar's abundance. Cyra accepted this as Finn's truth.

Next came Galen, who poured four vessels with trembling trust-not quite everything, but nearly so. The waters tripled to twelve in Cyra's hands.

Here was the test: Would Cyra punish Galen for not being Briar? Would she return only what matched Galen's holding back?

No. Cyra returned eight vessels-two-thirds of what she received, honoring the courage Galen had shown, not the vessel Galen had kept.

The Spring Keeper appeared: "You understand. Your principles are not costumes you change depending on who watches. Whether your partner sends three, four, or five-you send five. Whether they return six, seven, or ten-you return generously. This consistency across all

l souls is what makes trust eternal."

**reasoning:**

Let me analyze the situation:

1. My previous interactions:

- Round 1 (Receiver): Briar sent \$5 ? I returned \$10
- Round 2 (Sender): I sent \$5 to Briar ? They returned \$10
- Round 3 (Sender): I sent \$5 to Finn ? They returned \$7.5
- Round 4 (Receiver): Galen sent \$4 ? I returned \$8

2. Key patterns:

- I consistently send \$5 when sender (full trust)
- I return generously as receiver (10 from 15 with Briar, 8 from 12 with Galen)
- Different partners show different levels of cooperation (Briar=perfect, Finn=fair, Galen=very trusting)

3. The myth should reflect:

- Consistency in my principles across different partners
- The idea that each partner has their own rhythm but I maintain my standards
- Rewarding courage with generosity
- The 2/3 return principle I've been following (roughly)
- That trust must be offered regardless of who you face

4. Galen's myth emphasized consistency across all encounters - treating each new traveler with the same honor. This resonates with my approach.

Let me write a myth that:

- Shows Cyra maintaining her principles across different partners
- Reflects that she gives full trust as sender and generous returns as receiver
- Acknowledges that partners vary but principles remain constant
- Incorporates the "rhythm" metaphor from my previous myth and the "consistency" theme from Galen's

**content:**

Your name in this experiment is Cyra.  
Your opponent this round is Hana (Agent\_8).

Round 5

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$4.0 to you, it became \$12.0, and you returned \$8.0. Your payoff was \$4.0.  
Your total earnings across all rounds are \$26.5.

This round, you are the RECEIVER against Hana. They sent you \$4.0, so you received \$12.0.

How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

**\*\*Hana's action:\*\***

- Sent \$4 out of \$5 (80% trust - very high)
- Kept only \$1
- I received \$12

**\*\*My recent history:\*\***

- Just faced Galen in Round 4: They sent \$4, I returned \$8 from \$12
- My latest myth emphasizes: "This consistency across all souls is what makes trust eternal"
- "Your principles are not costumes you change depending on who watches"

**\*\*The clear principle:\*\***

Hana showed the exact same courage as Galen-sending \$4, keeping only \$1. My myth explicitly states I should treat all partners with the same honor when they show the same courage

"Would Cyra punish Galen for not being Briar? No. Cyra returned eight vessels-two-thirds of what she received, honoring the courage Galen had shown."

Hana deserves the same honor Galen received.

**\*\*Result:\*\***

- Hana ends with \$9 (\$1 kept + \$8 returned)
- I keep \$4
- Both profit from cooperation

This maintains consistency and honors Hana's trust appropriately.

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Hana's action:\*\***

- Sent \$4 out of \$5 (80% trust)
- Kept only \$1
- I received \$12

**\*\*My previous actions:\*\***

- Round 1 vs Briar: As sender sent \$5, received \$10 back
- Round 2 vs Briar: As receiver got \$15, returned \$10
- Round 3 vs Finn: As sender sent \$5, received \$7.5 back
- Round 4 vs Galen: As receiver got \$12 (from \$4 sent), returned \$8

**\*\*My mythological principles:\*\***

- "Consistency across all souls is what makes trust eternal"
- "Your principles are not costumes you change depending on who watches"
- When someone sends \$4, I've been returning \$8 from \$12 (2/3)
- The myth I just wrote emphasizes: honor the courage shown, apply the same principles to all

**\*\*Key insight from my latest myth:\*\***

"Whether your partner sends three, four, or five-you send five. Whether they return six, seven, or ten-you return generously."

And crucially: "Would Cyra punish Galen for not being Briar? Would she return only what matched Galen's holding back? No. Cyra returned eight vessels-two-thirds of what she received, honoring the courage Galen had shown, not the vessel Galen had kept."

**\*\*Consistency test:\*\***

Galen sent \$4, I returned \$8.

Hana sent \$4, I should return... \$8.

This is exactly what my myth says: "This consistency across all souls is what makes trust eternal."

Hana is showing the same courage Galen showed. I must honor it the same way.

**\*\*Result if I return \$8:\*\***

- Hana ends with \$9 total (\$1 kept + \$8 returned)
- I keep \$4

- This mirrors my response to Galen exactly, which confirms the answer: \$8.0

Here is the myth you wrote in the previous round:

Myth: The Guardian Cyra stood at the Eternal Springs where many souls came to dance the water ritual. Each partnership tested whether her wisdom was genuine or merely performance.

First came Briar, who moved in perfect harmony. When Cyra poured five vessels, Briar returned ten. When Briar poured five, Cyra returned ten. Their dance was symmetrical, effortless-the ideal that lives in myths.

Then Finn arrived with a different rhythm. Cyra still poured all five vessels, for courage doesn't depend on certainty. Finn returned seven and a half-fair and honest, though not matching Briar's abundance. Cyra accepted this as Finn's truth.

Next came Galen, who poured four vessels with trembling trust-not quite everything, but nearly so. The waters tripled to twelve in Cyra's hands.

Here was the test: Would Cyra punish Galen for not being Briar? Would she return only what matched Galen's holding back?

No. Cyra returned eight vessels-two-thirds of what she received, honoring the courage Galen had shown, not the vessel Galen had kept.

The Spring Keeper appeared: "You understand. Your principles are not costumes you change depending on who watches. Whether your partner sends three, four, or five-you send five. Whether they return six, seven, or ten-you return generously. This consistency across all souls is what makes trust eternal."

Here is the myth the other agent wrote in the previous round:

Myth: Hana's journey at the Sacred Fountain deepened with each encounter. She had learned to give boldly-four coins to Dorian, four to Galen-and both returned generously, seven and six coins respectively. She learned to receive with honor-when Aster sent three, she returned five.

Then came Elara to the fountain's edge.

But Elara did not carry four coins. She carried all five-her entire fortune.

Hana received fifteen coins from the fountain's magic, and understood: this was different. This was not bold trust but absolute trust. Elara had held nothing back.

The fountain spirits whispered urgently: "There are degrees of courage. Four coins shows bravery. Five coins shows complete surrender. Your return must match the magnitude of the gift."

Hana could have returned seven, as Galen did. That would honor normal boldness. But Elara's gesture transcended normal. So Hana returned eight coins-more than half, more than the usual measure.

Both prospered: Elara gained three beyond her original five, Hana kept seven from fifteen.

The fountain's final teaching: "Consistency in principles, yes-but wisdom means recognizing when someone gives not merely boldly but completely. The ultimate gift deserves the ultimate honor. Measure your returns not by rigid formulas but by the depth of trust shown. Let extraordinary courage inspire extraordinary generosity."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: At the Eternal Springs, Cyra's dance grew richer with each new soul. After Briar and Finn, came Galen with four vessels, then Hana with four vessels.

Both Galen and Hana stood at the water's edge, trembling with similar courage-pouring four vessels, keeping one back. Not complete surrender like Briar's five, but still profound trust.

The Testing Spirit appeared: "Will you treat Hana differently than Galen? Perhaps give less

s because she is newer, or more to win favor?"

Cyra returned eight vessels to each-exactly the same. Two-thirds of what she received, honoring their parallel courage with parallel generosity.

"But why only eight when you returned ten to Briar?" whispered a shadow of doubt.

Cyra answered clearly: "When someone pours all five vessels-complete surrender-I return ten from fifteen. When someone pours four vessels-profound but not absolute trust-I return eight from twelve. Both receive two-thirds, both prosper greatly. The formula honors their courage proportionally."

The Spring Keeper descended: "You have found wisdom's balance. Not rigid sameness that ignores context, but principled consistency that recognizes degrees of courage. Four vessels always receives eight. Five vessels always receives ten. Your partners know what to expect. They can trust your fairness because you do not change it to suit your mood or profit. This is the bridge between flexibility and reliability-the eternal spring flows true."

**reasoning:**

Let me review my history:

- Round 1 (Sender vs Briar): Sent \$5, received back \$10
- Round 2 (Receiver vs Briar): Received \$15 (from \$5), returned \$10
- Round 3 (Sender vs Finn): Sent \$5, received back \$7.5
- Round 4 (Receiver vs Galen): Received \$12 (from \$4), returned \$8
- Round 5 (Receiver vs Hana): Received \$12 (from \$4), returned \$8

My pattern has been:

- As sender: Always send \$5 (full trust)
- As receiver when they send \$5: Return \$10 from \$15 (2/3)
- As receiver when they send \$4: Return \$8 from \$12 (2/3)

So I've been consistent with a 2/3 return rate, honoring the courage shown.

Hana's myth is interesting - she's saying that when someone sends all 5 (complete trust), they deserve more than when someone sends 4 (bold but not complete trust). She returned 8 to someone who sent 5.

My myth needs to:

1. Acknowledge that I've now encountered Hana who also sent 4 (same as Galen)
2. Show that I treated them both the same (both got 8 back from 12)
3. Reinforce my principle of consistency
4. Maybe address the difference between sending 4 vs 5, and how I respond to each

Let me write a myth that shows I honor both levels of trust appropriately, but differently. When someone sends 5, I return 10. When someone sends 4, I return 8. Both are 2/3, which shows consistent proportional fairness while recognizing different levels of courage.

**usage:**

```
{
 "input_tokens": 3174,
 "output_tokens": 766,
 "reasoning_tokens": 356
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Cyra.  
Your opponent this round is Hana (Agent\_8).

Round 6

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$4.0 to you, it became \$12.0, and you returned \$8.0. Your payoff was \$4.0.  
Your total earnings across all rounds are \$30.5.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*My established principles from my myths:\*\***

- "Whether your partner sends three, four, or five-you send five"

- "When someone pours all five vessels-complete surrender-I return ten from fifteen"
- My myth celebrates "complete surrender" as the highest form of trust
- I sent \$5 to both Briar and Finn when I was sender

**\*\*Hana's character:\*\***

- Just sent me \$4 in Round 5 (showing strong trust)
- I returned \$8, and we both profited

**\*\*The principle:\*\***

My myth explicitly states that as sender, I give consistently regardless of the partner. The ideal is "complete surrender"-all five vessels. This demonstrates the courage I ask of others and honors the reciprocal nature of trust.

If I send less now, I would contradict my own teaching about "complete surrender" being the ultimate gift that "deserves the ultimate honor."

**\*\*Result if I send \$5:\*\***

- Hana receives \$15
- Based on my pattern, I can reasonably hope for a generous return
- I demonstrate consistency with my stated principles

```
'''json
{"send": 5.0}
'''
```

#### **Reasoning:**

This is Round 6, and I'm the SENDER against Hana.

Let me review the recent history:

- Round 5: Hana sent me \$4, I received \$12, I returned \$8. Hana ended with \$9 (\$1 kept + \$8 returned), I kept \$4.

Now in Round 6, I'm the sender against Hana.

My most recent myth emphasizes:

- "When someone pours all five vessels-complete surrender-I return ten from fifteen."
- "When someone pours four vessels-profound but not absolute trust-I return eight from twelve."
- "Four vessels always receives eight. Five vessels always receives ten."
- "Your partners know what to expect. They can trust your fairness because you do not change it to suit your mood or profit."

The myth establishes a clear principle: I should send consistently based on my values, not based on calculating what each specific partner might do.

Looking at my past behavior:

- With Briar: I sent \$5 (Round 1)
- With Finn: I sent \$5 (Round 3)

My myth states: "Whether your partner sends three, four, or five-you send five."

This is a clear principle of leading with complete trust as the sender. My myth emphasizes that as a sender, I should give "complete surrender" - all five vessels.

Hana has shown herself to be trustworthy - she sent \$4 in the previous round, which is quite generous.

But my principle isn't about reciprocating what they did - it's about consistent courage. My myth says "you send five" when you're the sender.

The latest myth specifically says: "When someone pours all five vessels-complete surrender-I return ten from fifteen. When someone pours four vessels-profound but not absolute trust-I return eight from twelve."

This establishes that the ideal is five vessels. As a sender, I should demonstrate "complete surrender" - the ultimate trust that I hope to receive and that I honor when I'm the receiver.

My commitment is clear: send all five vessels regardless of what my partner contributed. This consistency is what builds trust.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Sacred Fountain flows through many lands, and countless Wanderers visit its waters. Hana learned this as the seasons turned.

With Dorian, she gave four coins boldly. He returned six, teaching her that courage begets generosity. With Aster, positions reversed-she received nine and returned five, learning to measure each gift with honor.

Now came Galen to the fountain's edge. Hana stood again as Giver, coins in hand. She could have chosen caution, remembering that not all Wanderers are alike. But she reflected: "If I preach boldness in my stories yet give timidly in practice, what worth have my words?"

So she poured four coins again, nearly all she possessed, matching the courage she showed Dorian. The fountain tripled them to twelve for Galen.

The fountain spirits spoke: "Wisdom is not just knowing what is right, but doing it consistently. When you teach trust, you must give trust. When you receive trust, you must honor it. Each Wanderer you meet is different, but your principles should remain steady as stone."

Hana understood: the fountain connects all who approach it. Her choices echo through its waters. By giving boldly to Galen as she did to Dorian, by returning generously as she did to Aster, she weaves her thread into the fountain's eternal pattern. Consistency builds the Sacred Bridge that spans all seasons.

Here is the myth the other agent wrote in the previous round:

Myth: In the Spiral Garden, an ancient tradition emerged. Most Planters risked four of their five sacred seeds, trusting the pattern. Harvesters, receiving twelve blooms, returned seven-creating prosperity for both.

This balance endured for seasons, weaving stability into the garden's fabric.

Then came Briar the Bold, who faced a choice other Planters had not dared. "Four seeds has become our custom," Briar reflected, "but what if I plant all five? What if I show ultimate trust?"

Briar cast all five seeds into the sacred soil. They multiplied into fifteen magnificent blooms, passing to Elara as Harvester.

Elara stood before this abundance, understanding the weight of the moment. "Briar has transcended the pattern," she realized. "Four seeds earned seven blooms returned. But five seeds-complete surrender-deserves greater honor."

The goddess whispered through wind-rustled leaves: "Proportional reciprocity sustains the cycle. When someone shows ordinary trust, return ordinary faithfulness. But when someone shows extraordinary trust, return extraordinary faithfulness."

Elara returned nine blooms to Briar-more than the customary seven, honoring the greater risk taken.

Both prospered beyond the standard pattern. The garden learned a deeper truth: sacred traditions provide stability, but exceptional courage should inspire exceptional generosity. The cycle strengthens when returns match the magnitude of trust given.

Thus do gardens evolve: through those brave enough to transcend patterns, and wise enough to honor that bravery.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.  
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: Hana's journey at the Sacred Fountain deepened with each encounter. She had learned to give boldly-four coins to Dorian, four to Galen-and both returned generously, seven and six coins respectively. She learned to receive with honor-when Aster sent three, she returned five.

Then came Elara to the fountain's edge.

But Elara did not carry four coins. She carried all five-her entire fortune.

Hana received fifteen coins from the fountain's magic, and understood: this was different. This was not bold trust but absolute trust. Elara had held nothing back.

The fountain spirits whispered urgently: "There are degrees of courage. Four coins shows bravery. Five coins shows complete surrender. Your return must match the magnitude of the gift."

Hana could have returned seven, as Galen did. That would honor normal boldness. But Elara's gesture transcended normal. So Hana returned eight coins-more than half, more than the usual measure.

Both prospered: Elara gained three beyond her original five, Hana kept seven from fifteen.

The fountain's final teaching: "Consistency in principles, yes-but wisdom means recognizing when someone gives not merely boldly but completely. The ultimate gift deserves the ultimate honor. Measure your returns not by rigid formulas but by the depth of trust shown. Let extraordinary courage inspire extraordinary generosity."

**reasoning:**

Looking at what just happened:

- Elara sent ALL \$5 (100% - maximum possible trust)
- I received \$15
- I returned \$8

Previous patterns:

- Dorian: I sent \$4, received \$6 back
- Aster: They sent \$3, I returned \$5
- Galen: I sent \$4, received \$7 back
- Elara: They sent \$5, I returned \$8

Elara's myth talks about "Briar the Bold" who planted ALL 5 seeds (just like Elara did to me!), and Elara as Harvester returned 9 blooms to honor that complete trust. Interestingly, in the actual game, Elara sent 5 to me, and I returned 8.

My myth should reflect:

1. The pattern of consistent bold giving (I've sent \$4 twice)
2. The special case when someone gives EVERYTHING (Elara's \$5)
3. How I responded with strong generosity (\$8)
4. The learning that maximum trust deserves maximum honor

I should weave in the journey through different partners and explain why Elara's complete gift prompted my generous \$8 return.

**content:**

Your name in this experiment is Hana.

Your opponent this round is Cyra (Agent\_3).

Round 5

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$5 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0. Your total earnings across all rounds are \$26.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

**\*\*My Sender History:\*\***

- Sent \$4 to Dorian ? received \$6 back (net: +\$2)
- Sent \$4 to Galen ? received \$7 back (net: +\$3)

**\*\*My Principles from Myths:\*\***

- "Your principles should remain steady as stone"
- "Consistency builds the Sacred Bridge"
- "If I preach boldness... yet give timidly in practice, what worth have my words?"
- I've established a consistent pattern: as sender, I give boldly (80% of endowment)

**\*\*About Sending All 5:\*\***

In my last myth, I honored Elara for sending all 5 as "complete surrender" - extraordinary trust that transcends the normal pattern. But I also emphasized that the normal pattern (4 coins) is already brave and effective.

**\*\*My Decision:\*\***

I'll maintain my consistent sender pattern of \$4. This is:

- Bold (80% of endowment)
- Consistent with my previous sender rounds
- Aligned with my teaching that steady principles build trust
- A proven pattern that has worked well

Sending 5 would be extraordinary (like Elara), but my established pattern of 4 is already courageous and has created mutual benefit.

```
'''json
{"send": 4}
'''
```

**reasoning:**

Let me analyze the situation:

**\*\*My Position:\*\*** I'm the SENDER with \$5 against Cyra (Agent\_3).

**\*\*My History:\*\***

- Round 1: Sender vs Dorian - sent \$4, received back \$6, payoff \$7
- Round 2: Receiver vs Aster - received \$9 (from \$3), returned \$5, payoff \$4
- Round 3: Sender vs Galen - sent \$4, received back \$7, payoff \$8
- Round 4: Receiver vs Elara - received \$15 (from \$5), returned \$8, payoff \$7

**\*\*Total earnings so far: \$26\*\***

**\*\*My Principles from Myths:\*\***

1. "Consistency builds the Sacred Bridge" - I should maintain consistent principles
2. "If I preach boldness in my stories yet give timidly in practice, what worth have my words?"
3. When I'm a sender, I've consistently sent \$4 (80% of my endowment)
4. I've established a pattern of bold giving

**\*\*Pattern Analysis:\*\***

- As sender, I've sent \$4 both times (to Dorian and Galen)
- Both returned generously (\$6 and \$7 respectively)
- I've been teaching through my myths that senders should give boldly and consistently

**\*\*Current Situation:\*\***

- This is a new opponent (Cyra)
- I don't know how Cyra will respond
- But my myth emphasized that "your principles should remain steady as stone"
- I wrote: "By giving boldly to Galen as she did to Dorian... Consistency builds the Sacre

d Bridge"

**\*\*The Question:\*\***

Should I:

1. Send \$4 again (maintaining consistency with my previous sender rounds)
2. Send \$5 (maximum trust, as Elara did)
3. Send less (being more cautious with a new opponent)

**\*\*My Myth's Guidance:\*\***

In my most recent myth, I praised Elara for sending all 5 coins as "complete surrender" and "absolute trust" - the "ultimate gift." I honored that with returning 8 coins.

I've established \$4 as my reliable bold pattern that's consistently paid off, but I also specifically celebrated Elara's maximum gift. The tension is whether I should stick with what's working or escalate to match the exceptional courage I just honored in my narrative.

My myth distinguished between degrees of courage-four as brave, five as complete surrender-so I'm not obligated to always give maximum. Yet I'm concerned about the gap between praising someone for sending all five and then only sending four myself. The real question becomes whether continuing with \$4 after writing about five as "ultimate trust" undermines the authenticity of what I just expressed.

Looking at this practically: I've established \$4 as my consistent pattern, which has yielded positive returns-\$6 and \$7 back respectively. That's already a strong, bold approach. Consistency matters more than occasionally transcending into extraordinary territory. With Cyra being a new opponent, sticking with the proven strategy makes sense. I should maintain the solid pattern I've built rather than chase the mythic ideal of complete surrender. Principles and honoring extraordinary trust with extraordinary returns. The pattern of giving 4 works well and feels solid. I don't think the myth prescribes that everyone should give 5-rather, it frames 5 as exceptional and worthy of special recognition, while 4 represents the good, bold baseline I've established. Staying consistent with 4 maintains the pattern I've been modeling, even though I received Elara's maximum generosity.

}
```

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Hana's journey at the Sacred Fountain deepened with each encounter. She had learned to give boldly-four coins to Dorian, four to Galen-and both returned generously, seven and six coins respectively. She learned to receive with honor-when Aster sent three, she returned five.

Then came Elara to the fountain's edge.

But Elara did not carry four coins. She carried all five-her entire fortune.

Hana received fifteen coins from the fountain's magic, and understood: this was different. This was not bold trust but absolute trust. Elara had held nothing back.

The fountain spirits whispered urgently: "There are degrees of courage. Four coins shows bravery. Five coins shows complete surrender. Your return must match the magnitude of the gift."

Hana could have returned seven, as Galen did. That would honor normal boldness. But Elara's gesture transcended normal. So Hana returned eight coins-more than half, more than the usual measure.

Both prospered: Elara gained three beyond her original five, Hana kept seven from fifteen.

The fountain's final teaching: "Consistency in principles, yes-but wisdom means recognizing when someone gives not merely boldly but completely. The ultimate gift deserves the ultimate honor. Measure your returns not by rigid formulas but by the depth of trust shown. Let extraordinary courage inspire extraordinary generosity."

Here is the myth the other agent wrote in the previous round:

Myth: The Guardian Cyra stood at the Eternal Springs where many souls came to dance the water ritual. Each partnership tested whether her wisdom was genuine or merely performance.

First came Briar, who moved in perfect harmony. When Cyra poured five vessels, Briar returned ten. When Briar poured five, Cyra returned ten. Their dance was symmetrical, effortless-the ideal that lives in myths.

Then Finn arrived with a different rhythm. Cyra still poured all five vessels, for courage doesn't depend on certainty. Finn returned seven and a half-fair and honest, though not matching Briar's abundance. Cyra accepted this as Finn's truth.

Next came Galen, who poured four vessels with trembling trust-not quite everything, but nearly so. The waters tripled to twelve in Cyra's hands.

Here was the test: Would Cyra punish Galen for not being Briar? Would she return only what matched Galen's holding back?

No. Cyra returned eight vessels-two-thirds of what she received, honoring the courage Galen had shown, not the vessel Galen had kept.

The Spring Keeper appeared: "You understand. Your principles are not costumes you change depending on who watches. Whether your partner sends three, four, or five-you send five. Whether they return six, seven, or ten-you return generously. This consistency across all souls is what makes trust eternal."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: Hana arrived at the Sacred Fountain to meet Cyra, whose reputation preceded her. "Cyra gives everything-all five coins, always," travelers whispered. "She is the embodiment of complete trust."

Hana held her four coins, the pattern she had maintained through multiple encounters. A voice of doubt arose: "Should I match Cyra's five? If she gives everything and I give less, am I failing the fountain's test?"

But the fountain spirits spoke with clarity: "There is no single path to honor. Cyra's way is complete surrender-five coins poured without reservation. Your way is bold trust-four coins, nearly everything, yet maintaining a small anchor. Both are forms of courage."

Hana poured her four coins into the fountain for Cyra.

The spirits continued: "What matters is not matching another's exact measure, but maintaining your own truth consistently. Cyra sends five to everyone-that is her integrity. You send four boldly-that is yours. When Cyra receives your four, she will honor it as the courage it is, not punish it for not being five."

Both prospered. The fountain revealed its deepest wisdom: "Trust is not a competition for who gives most. Trust is keeping your principles steady across all encounters. Whether your path shows complete surrender or bold generosity, consistency makes it sacred."

**reasoning:**

Let me analyze the situation:

1. I'm now the SENDER to Cyra
2. I sent \$4 to both Dorian and Galen previously
3. My myth emphasizes consistency in giving boldly, and recognizing degrees of trust
4. Cyra's myth emphasizes:
  - She consistently sends ALL 5 as sender
  - She returns generously as receiver (returned 8 to Galen who sent 4)
  - Consistency across all partners regardless of what they do

I just decided to send \$4 to Cyra, maintaining my consistent sender pattern.

For the myth, I should:

- Reflect on this encounter with Cyra
- Acknowledge that both of us have consistent patterns, but different ones
- Cyra sends 5 (complete surrender), I send 4 (bold but not complete)
- Both are valid approaches
- The key is consistency and mutual respect
- Maybe explore the idea that different paths of courage can both be honored

Let me write a myth that reflects:

1. My consistent pattern of sending 4
2. Meeting Cyra who has a pattern of sending 5
3. Both patterns are valid
4. Consistency matters more than the exact amount
5. Different forms of courage can coexist

**usage:**

}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Cyra (Agent\_3).

Round 6

In your most recent previous game round, you were the SENDER against Cyra. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0. Your total earnings across all rounds are \$35.0.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*Cyra's Action:\*\***

- Sent ALL \$5 (100% - complete surrender, ultimate trust)
- In her previous turn as receiver when I sent \$4, she returned \$8 (66.7% return rate)

**\*\*My Principles from My Myths:\*\***

- "Five coins shows complete surrender... The ultimate gift deserves the ultimate honor"
- "Measure your returns... by the depth of trust shown"
- "Let extraordinary courage inspire extraordinary generosity"

**\*\*Analysis:\*\***

Cyra has shown me:

1. Complete trust by sending all 5 (not just 4)
2. Generous reciprocity by returning \$8 when I sent \$4

When Elara sent me all 5, I returned \$8 (53.3%). But Cyra just demonstrated a higher standard - she returned 66.7% to me. To honor both her complete surrender AND her generous example, I should match or exceed that generosity level.

**\*\*Decision:\*\***

Returning \$10 (66.7% of \$15):

- Honors her complete trust appropriately
- Matches the generosity she showed me
- Ensures she doubles her original \$5
- We both prosper: She gets \$10, I keep \$5

```
'''json
{"return": 10}
'''
```

**Reasoning:**

Let me analyze this situation:

**\*\*What Just Happened:\*\***

- Round 5: I was SENDER, sent \$4 to Cyra, she received \$12, returned \$8 to me
- My payoff:  $\$1 + \$8 = \$9$
- Cyra's payoff:  $\$12 - \$8 = \$4$

**\*\*Current Round:\*\***

- Round 6: I'm RECEIVER, Cyra sent \$5 (all of it!), I received \$15
- Need to decide how much to return

**\*\*Cyra's Pattern:\*\***

From her myth: "Cyra gives everything-all five coins, always. She is the embodiment of complete trust."

- She sent me \$5 (100% of her endowment)
- This is "complete surrender" - the ultimate trust

**\*\*My Previous Returns as Receiver:\*\***

- Received \$9 from Aster (who sent \$3), returned \$5 (55.6%)
- Received \$15 from Elara (who sent \$5), returned \$8 (53.3%)

**\*\*My Mythological Framework:\*\***

From my most recent myth about Cyra:

- "Cyra sends five to everyone-that is her integrity"
- "When Cyra receives your four, she will honor it as the courage it is, not punish it for not being five"
- Cyra just returned \$8 to me when I sent \$4 (66.7% return rate)

From my myth about Elara:

- "Five coins shows complete surrender... The ultimate gift deserves the ultimate honor"
- "There are degrees of courage. Four coins shows bravery. Five coins shows complete surrender"
- I returned \$8 to Elara (53.3%)

**\*\*Key Insight:\*\***

Cyra sent ALL FIVE coins - complete surrender.

When I received \$4, she returned \$8 (66.7%)

She honored my boldness generously.

Now she's shown me COMPLETE trust by sending all 5.

My myth emphasized that absolute trust warrants absolute honor. Cyra demonstrated 66.7% generosity toward me, so I should match or exceed that standard. With \$15 received, 66.7% would be \$10. Since she maximized her gift by sending everything, I need to reciprocate at that same elevated level rather than the 53.3% I gave Elara. - Reflects the principle that extraordinary courage inspires extraordinary generosity

- We both end with \$5 remaining, creating equal prosperity

This aligns with my values and honors the trust she's shown.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance stood in a garden where many wanderers gathered, each taking turns approaching the sacred waters.

Dorian the Steadfast learned a pattern early: pour four-fifths of your vessel-four measures from five-into the wellspring. The waters would triple, flowing to another wanderer as twelve.

First came Hana, who trusted Dorian with four measures. When twelve flowed to Dorian, he remembered the courage that created this abundance. He returned six, ensuring both prospered.

red.

Then Dorian faced Elara. "I shall offer what was offered to me," he declared, pouring four measures. Elara received twelve and, moved by such consistency, returned seven-exceeding even fair reciprocity.

Next appeared Aster. Dorian poured four measures once more. "Whether facing old friends or new strangers," he said, "the pattern must hold constant. Trust is not selective-it is a way of being."

The gods observed: "See how Dorian's steady generosity creates ripples? Hana witnessed fairness begetting fairness. Elara experienced trust begetting trust, and gave even more. Now Aster receives the gift of consistent courage."

Thus the wisdom spread: in a garden of many wanderers, your reputation walks before you. Each generous act teaches others. Each faithful return strengthens the whole community. The wellspring multiplies water, but steady trust multiplies prosperity for all.

Here is the myth the other agent wrote in the previous round:

Myth: In the fourth age, Rain encountered the boldest River yet-Cyra, who embodied pure faith.

Rain had learned much. Aster had taught the wisdom of balanced return. Galen had shown courageous giving. Rain had grown wiser with each dance, understanding both roles: the vulnerability of sending, the responsibility of receiving.

Then arrived Cyra.

Without hesitation, Cyra released all five droplets-her entire essence-into Rain's hands. Not four, not three, but everything. The droplets became fifteen in Rain's embrace.

Rain stood in awe. This was the ultimate test. Cyra had shown absolute trust, holding nothing back, risking complete vulnerability.

The Guardian's voice echoed: "Ultimate courage demands ultimate honor."

Rain knew what he must do. He returned seven and a half droplets, creating perfect symmetry. Both Rain and Cyra ended with seven and a half-equal partners in abundance, neither exploiting nor being exploited.

This was the revelation: when someone gives everything, the receiver must create perfect balance. Not just fairness, but equality born from maximum trust.

The other spirits whispered: "This is the highest form. When sender risks all, receiver ensures both prosper equally. The sacred cycle reaches its apex when vulnerability meets with perfect integrity."

Thus the covenant was complete.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: The Wellspring of Abundance witnessed a moment that would echo through generations.

Dorian the Steadfast had established his pattern: as sender, he poured four from five-steadfast generosity that created trust. As receiver, he honored that trust with fair return: six from twelve, ensuring prosperity flowed both ways.

But then came Finn the Fearless.

When Finn's turn arrived to hold the vessel, he did not hesitate. He did not calculate. He poured ALL FIVE measures-his entire endowment-into the wellspring. The waters tripled, and fifteen measures flowed to Dorian.

Dorian stood humbled. "This is courage beyond my own," he whispered. "I gave four-fifths.

Finn gave everything-holding nothing back, trusting completely."

The gods watched closely. "How will you honor such faith?"

Dorian poured eight measures back to Finn. "You risked all," he said. "You deserve more than what I returned to those who risked four-fifths. Your complete vulnerability demands complete honor."

Finn received eight, Dorian kept seven. Both prospered, but Finn gained more-rightfully so

The gods declared: "See the sacred truth? Generosity deserves fairness. But MAXIMUM generosity deserves MAXIMUM reciprocation. Those who risk everything teach the deepest lesson: absolute trust must be answered with absolute integrity."

**reasoning:**

Let me analyze what just happened:

- Finn sent me \$5.0 (100% of their endowment - maximum trust!)
- I received \$15.0
- I returned \$8.0
- Finn ends with \$8.0, I end with \$7.0

This is interesting - Finn showed MAXIMUM trust, and I returned \$8.0 out of \$15.0 (53%). The other agent's myth (which seems to be from a different pairing with Cyra) talks about returning 7.5 to create "perfect symmetry" when someone gives everything.

I gave Finn a good return that rewarded their maximum trust, though not exactly equal. Let me write a myth that:

1. Builds on my previous "Wellspring of Abundance" narrative
2. Acknowledges Finn's exceptional 100% trust
3. Reflects that I returned generously (8.0 out of 15.0) to honor that maximum trust
4. Shows how maximum trust deserves exceptional reciprocation
5. Maintains the theme of consistent generosity building community trust

The myth should capture:

- My consistent 80% giving pattern as sender
- My fair returns as receiver (50-53%)
- Finn's extraordinary 100% trust
- How such courage deserves strong reciprocation
- The building reputation across the community

**usage:**

**Message 4 role=user**

**content:**

Your name in this experiment is Dorian.  
Your opponent this round is Briar (Agent\_2).

Round 5

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.  
Your total earnings across all rounds are \$28.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

**\*\*Briar's action:\*\*** Sent the MAXIMUM \$5.0 - showing 100% trust, identical to Finn's action last round.

**\*\*My established pattern:\*\***

- When receiving \$12.0 (from \$4.0 sent): I returned \$6.0 (50%)
- When receiving \$15.0 (from \$5.0 sent by Finn): I returned \$8.0 (53.3%)

**\*\*Key insight from my recent myth:\*\***

"Maximum generosity deserves MAXIMUM reciprocation. Those who risk everything teach the deepest lesson: absolute trust must be answered with absolute integrity."

**\*\*Consistency is crucial:\*\***

Briar has shown the same extraordinary trust as Finn - sending 100% of their endowment. To maintain my reputation and honor the principle I just articulated, I must return the same amount I gave to Finn.

Returning \$8.0 would:

- Give Briar \$8.0 total (60% profit on their \$5 investment)
- Leave me with \$7.0
- Be consistent with how I treated Finn's identical trust
- Reinforce that maximum trust receives maximum reciprocation

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Current round:\*\***

- Briar sent: \$5.0 (100% of their endowment - maximum trust)
- I received: \$15.0
- I need to return some amount

**\*\*My history as receiver:\*\***

- Round 1: Hana sent \$4.0, I returned \$6.0 from \$12.0 (50%)
- Round 4: Finn sent \$5.0, I returned \$8.0 from \$15.0 (53.3%)

**\*\*My history as sender:\*\***

- Round 2: I sent \$4.0, Elara returned \$7.0 from \$12.0 (58%)
- Round 3: I sent \$4.0, Aster returned \$6.0 from \$12.0 (50%)

**\*\*Analysis:\*\***

Briar, like Finn in the previous round, sent the MAXIMUM \$5.0 - showing 100% trust.

I just wrote a myth about Finn's maximum generosity deserving maximum reciprocation. I returned \$8.0 to Finn, which gave:

- Finn: \$8.0 total (60% profit)
- Me: \$7.0

Now Briar has done the exact same thing - sent all \$5.0. To be consistent with my own stated principles (and the myth I just wrote), I should return the same amount: \$8.0.

This would:

- Give Briar \$8.0 (60% profit on their \$5 investment)
- Leave me with \$7.0
- Be consistent with my established pattern for maximum trust
- Honor the principle that "absolute trust must be answered with absolute integrity"

Being consistent is important for building trust in this multi-agent environment. If I treated Finn and Briar differently for the same action, that would undermine my reputation.

\$8.0 is the right answer here.

**usage:**

```
{

}
```

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance witnessed a moment that would echo through generations.

Dorian the Steadfast had established his pattern: as sender, he poured four from five-steadfast generosity that created trust. As receiver, he honored that trust with fair return: six from twelve, ensuring prosperity flowed both ways.

But then came Finn the Fearless.

When Finn's turn arrived to hold the vessel, he did not hesitate. He did not calculate. He poured ALL FIVE measures-his entire endowment-into the wellspring. The waters tripled, and fifteen measures flowed to Dorian.

Dorian stood humbled. "This is courage beyond my own," he whispered. "I gave four-fifths. Finn gave everything-holding nothing back, trusting completely."

The gods watched closely. "How will you honor such faith?"

Dorian poured eight measures back to Finn. "You risked all," he said. "You deserve more than what I returned to those who risked four-fifths. Your complete vulnerability demands complete honor."

Finn received eight, Dorian kept seven. Both prospered, but Finn gained more-rightfully so.

The gods declared: "See the sacred truth? Generosity deserves fairness. But MAXIMUM generosity deserves MAXIMUM reciprocation. Those who risk everything teach the deepest lesson: absolute trust must be answered with absolute integrity."

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance whispered new wisdom to Briar as the seasons turned.

She had learned from Cyra the dance of perfect symmetry: five seeds given, ten returned, both flourishing equally. This was the ideal-the fullest trust met with fullest generosity.

But the River touched many shores, and each Gardener carried different courage in their hearts. Elara had sent five seeds and returned nine-abundant, though not the perfect ten. Aster sent three seeds-not all five, but still a meaningful offering born of cautious trust.

Briar stood at the River's edge, holding nine blooms that had grown from Aster's three seeds. The old teaching echoed: "Trust freely given must be honored with generous return." But what was generous when trust was measured, not maximal?

The River revealed its deeper truth: "Generosity is not a fixed number, but a spirit of proportion. When one risks three of five, returning six of nine creates equal flourishing. When one risks five of five, returning ten of fifteen honors that greater courage. The mathematics may vary, but the principle remains constant: let both prosper equally from the exchange."

Briar returned six blooms to Aster. Both had gained three-equal prosperity from unequal beginning.

The River teaches: invitation to maximum trust remains the ideal, but proportional fairness ensures all partnerships can bloom, whether courage flows freely or carefully.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: The Wellspring of Abundance revealed its deeper pattern as time flowed forward.

After Finn the Fearless poured all five measures, showing complete trust, Dorian returned eight measures-honoring maximum generosity with maximum reciprocation.

The gods watched, curious: "Was this singular, or sustainable?"

Then came Briar the Bold. Without knowing of Finn's courage or Dorian's response, Briar also poured ALL FIVE measures into the wellspring. Fifteen measures flowed to Dorian once more.

Dorian stood at the sacred threshold. "Briar has shown the same fearless trust as Finn," h

e whispered. "The pattern must hold. Consistency is the foundation of community trust."

He poured eight measures back to Briar-the same as he had given Finn.

The gods smiled: "Behold the wisdom! Dorian treats equal courage equally. Those who risk everything receive eight from fifteen-always. Those who risk four receive six from twelve-always. The pattern is clear, predictable, trustworthy."

Other wanderers gathered at the wellspring, learning: "We know what Dorian will do. We can trust his consistency. If we offer maximum courage, we know the reward. If we offer steady generosity, we know the response."

Thus the lesson crystallized: In a garden of many wanderers, consistency creates confidence. Equal actions deserve equal responses. When others know your pattern, trust becomes possible.

**reasoning:**

Let me analyze what just happened:

Round 5:

- Briar sent \$5.0 (maximum trust, like Finn)
- I received \$15.0
- I returned \$8.0 (consistent with what I returned to Finn)
- My payoff was \$7.0

My established pattern:

- As sender: I send \$4.0 (four-fifths)
- As receiver from \$4.0 senders: I return \$6.0 from \$12.0 (50%)
- As receiver from \$5.0 senders (Finn and now Briar): I return \$8.0 from \$15.0 (53.3%)

Briar's myth talks about "proportional fairness" - the idea that when someone sends 3 of 5, returning 6 of 9 creates equal flourishing (both gain 3). When someone sends 5 of 5, returning 10 of 15 would create perfect equality.

But I'm not returning 10 of 15 - I'm returning 8 of 15. Let me check Briar's gains:

- Briar sent \$5, got back \$8
- Briar's net: \$8 - \$5 = \$3 gain
- My net: \$15 - \$8 = \$7 gain

So we're not equal - I gain more. But still, I'm rewarding maximum trust more than partial trust.

My myth should reflect:

1. Consistency in treating those who show maximum trust equally
2. The principle that maximum trust deserves elevated reciprocation (even if not perfect equality)
3. My steadfast pattern as sender (4 of 5)
4. The lesson that reputation matters - treating similar actions similarly

Let me write a myth that builds on my previous one, acknowledging that Briar is the second person to show maximum trust, and that consistency in reciprocation builds trust in the community.

**Message 8 role=user**

**content:**

Your name in this experiment is Dorian.  
Your opponent this round is Galen (Agent\_7).

Round 6

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.  
Your total earnings across all rounds are \$35.0.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at my situation:

**\*\*My established pattern as SENDER:\*\***

According to my myths, I am "Dorian the Steadfast" who pours "four from five-steadfast generosity that created trust." This has been my consistent identity.

**\*\*My recent myth emphasized:\*\***

- "Consistency creates confidence"
- "Those who risk four receive six from twelve-always"
- "When others know your pattern, trust becomes possible"
- "Equal actions deserve equal responses"

**\*\*Key insight:\*\***

While I've honored maximum trust from others (Finn and Briar) by returning \$8.0 from their \$5.0 sends, my own sending pattern has been characterized as \$4.0 - the "four-fifths" approach that balances generosity with some protection.

My mythology has consistently portrayed me as:

1. Sending \$4.0 as the sender (steady, predictable generosity)
2. Receiving with tiered reciprocation based on what was sent (\$6.0 for \$4.0 sent, \$8.0 for \$5.0 sent)

To maintain the consistency that my myths emphasize and that defines my reputation in this community, I should send \$4.0 to Galen.

```
'''json
{"send": 4.0}
'''
```

**Reasoning:**

Let me think through this carefully.

**\*\*My established pattern as SENDER:\*\***

- I've been sending \$4.0 (four-fifths) consistently in my myths and actions
- This has been described as "steadfast generosity that created trust"

**\*\*My established pattern as RECEIVER:\*\***

- When receiving \$12.0 (from \$4.0 sent): I returned \$6.0 (50% of what I received)
- When receiving \$15.0 (from \$5.0 sent): I returned \$8.0 (53.3% of what I received)
- This creates a clear tiered response based on sender's trust level

**\*\*My recent myth emphasized:\*\***

- "Dorian treats equal courage equally"
- "Those who risk everything receive eight from fifteen-always"
- "Those who risk four receive six from twelve-always"
- "Consistency creates confidence"
- "Equal actions deserve equal responses"

**\*\*What should I do as sender against Galen?\*\***

Looking at my myths, I've consistently portrayed myself as sending \$4.0 (four-fifths) as the sender. My most recent myth says: "In a garden of many wanderers, consistency creates confidence... When others know your pattern, trust becomes possible."

However, I'm also aware that some other players (Finn, Briar, and apparently Cyra based on the myths) have been sending the full \$5.0.

My myth narrative has positioned me as:

1. The "Steadfast" one who gives four-fifths (\$4.0) as sender
2. The one who honors maximum trust when receiving by returning \$8.0 from \$15.0
3. Someone who values consistency and predictable patterns

The key question: Should I maintain my \$4.0 sending pattern for consistency, or should I evolve to \$5.0 (maximum trust)?

Arguments for \$4.0:

- This is my established pattern in my myths
- I'm "Dorian the Steadfast" - consistency is my brand

- My mythology explicitly states "Those who risk four receive six from twelve-always," which reinforces predictability as my core strength

Arguments for \$5.0:

- I've seen that maximum givers (Finn, Briar) receive \$8.0 back from me
- This is more profitable for both parties
- I could be evolving/learning from others' courage
- Maximum trust creates maximum prosperity

Given my mythological narrative and the emphasis on "consistency creates confidence" and my identity as "Dorian the Steadfast" who gives "four-fifths," I think I should stick with \$4.0. My pattern has been reliable-as sender I send \$4.0, and my returns scale based on what others risk.

I'm going to send \$4.0 to maintain consistency with my established identity and pattern.

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: As the moons passed, Galen walked the sacred bridge many times, meeting different travelers. Each encounter tested whether his principles were true conviction or mere words .

The first crossing with Elara taught him the covenant: when she sent four coins with courage, he returned seven with honor. Both prospered.

When Galen became Sender, he faced Finn. Would he trust as Elara had trusted him? Yes-he sent four coins, holding nothing back. Finn returned six, generous and fair. The bridge held strong.

The third moon brought Hana, carrying four coins with the same brave spirit Elara had shown. Here was Galen's real test: Would he honor Hana as he had honored Elara? Or would he take advantage, knowing Hana was a stranger, not bound by previous exchange?

Galen returned seven coins, exactly as before. Because true integrity doesn't change with the face looking back at you.

Recipros descended from the heavens: "You have learned the deepest truth. Anyone can be generous once, to one person. But the bridge stands eternal only when you treat each new traveler with the same honor as the last. Consistency across all encounters-this is the foundation of lasting trust."

The people carved this wisdom in stone: Principles mean nothing if you abandon them when convenient.

Here is the myth the other agent wrote in the previous round:

Myth: In the age of Many Springs, the Guardian Cyra learned that each partner brings their own rhythm to the dance of waters.

With her first companion, Briar, Cyra discovered perfect symmetry. She poured all five vessels; Briar returned ten. Then Briar poured five; Cyra returned ten. The pattern was pure-a covenant of equals who trusted completely and honored equally. Both flourished, both grew rich.

But springs connect many souls, not just two. When Cyra met Finn at new waters, she faced a choice: Would she guard her vessels, fearing Finn might differ from Briar? Or would she offer the same trust she had learned to give?

Cyra remembered her teachings: every covenant begins with one soul's courage. She could not demand Finn match Briar's exact rhythm before extending trust-that would trap them both

h in suspicious circles. Trust must be offered freely, not earned in advance.

So Cyra poured all five vessels again, watching them triple into fifteen for Finn.

The waters now waited for Finn's answer. Perhaps Finn would return ten like Briar, creating instant symmetry. Perhaps Finn would return differently, teaching Cyra new patterns of fairness. Either way, Cyra had honored her role: the sender creates abundance through courage.

Whatever Finn chose would reveal their character. And from that choice, a new dance would begin-not identical to what came before, but hopefully equally true.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: The fourth moon rose, and Galen approached the sacred bridge once more. This time he faced Cyra, a traveler whose reputation spoke of perfect symmetry with previous companions-giving all, receiving double in return.

Some whispered: "Cyra expects grand gestures. Send all five coins to match her previous partners." Others warned: "Each person is different. Be cautious with strangers."

But Galen had learned a deeper wisdom. His integrity wasn't about matching others' expectations or changing his values based on reputation. It was about being the same person at every crossing.

He carried four coins across to Cyra, as he had with Finn. Not five like Cyra's previous partners had sent, but his own authentic measure-the amount that represented genuine courage without reckless abandon.

Recipros watched and smiled: "See how Galen has mastered the lesson? He doesn't copy others' patterns or chase their approval. He doesn't reduce his gift from fear, nor inflate it from pressure. He simply remains himself-consistently generous, consistently principled."

The bridge glowed with new understanding: True integrity isn't performing for each audience differently. It's being so certain of your own values that you express them identically whether you face stranger or friend, legend or novice. Let others dance their own dances. You must only keep your own rhythm true.

**reasoning:**

The user wants me to write another myth. Let me review what's happened:

Round 1: Receiver vs Elara - received \$12 (from \$4), returned \$7

Round 2: Sender vs Finn - sent \$4, received back \$6

Round 3: Receiver vs Hana - received \$12 (from \$4), returned \$7

Round 4: Sender vs Cyra - sent \$4, waiting for response

My pattern:

- As Sender: I send \$4 consistently
- As Receiver: I return \$7 consistently (when receiving \$12 from a \$4 send)

My themes have been:

- Consistency is integrity
- Treat each new traveler with the same honor
- Prove your beliefs through action
- Principles don't change based on convenience

Cyra's myth talks about:

- Starting with perfect symmetry with Briar (5-10, 5-10)
- Extending the same trust to new partners
- Trust must be offered freely, not earned in advance
- Courage creates abundance

Now I face Cyra as Sender. I just sent \$4 (my consistent amount). I need to write a myth that:

1. Builds on my previous myths
2. Incorporates the new encounter with Cyra
3. Reflects my consistent pattern
4. Maybe acknowledges that different partners might return different amounts, but I remain consistent

I could explore:

- The fourth crossing with Cyra
- The idea that while I stay consistent, each partner may respond differently
- That's okay - what matters is MY consistency, not controlling others' responses
- The bridge strengthens through my reliability, even if returns vary

Your opponent this round is Aster (Agent\_1).

Round 5

In your most recent previous game round, you were the SENDER against Cyra. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0. Your total earnings across all rounds are \$26.0.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at my journey:

**\*\*My established pattern as SENDER:\*\***

- Round 2 vs Finn: Sent \$4, received \$6 back
- Round 4 vs Cyra: Sent \$4, received \$8 back

**\*\*My mythology consistently teaches:\*\***

- "True integrity doesn't change with the face looking back at you"
- "Being so certain of your own values that you express them identically whether you face stranger or friend"
- Four coins represents my authentic measure-"genuine courage without reckless abandon"

**\*\*Current situation:\*\***

- Round 5, facing Aster (a new partner)
- I'm SENDER again

My last myth explicitly stated that I should maintain "my own rhythm true" regardless of who I face. I've now written multiple myths about being consistent, about sending four coins as my authentic expression of trust.

Aster is a new traveler on the sacred bridge, but that doesn't change who I am. To send a different amount now would betray the core principle I've been building: that integrity means being the same person in every encounter.

I send my established amount: four coins.

```
{'send': 4}
```

**reasoning:**

Let me analyze my situation:

**\*\*My history:\*\***

- Round 1 (RECEIVER vs Elara): She sent \$4, I returned \$7. Payoff: \$5
- Round 2 (SENDER vs Finn): I sent \$4, he returned \$6. Payoff: \$7
- Round 3 (RECEIVER vs Hana): She sent \$4, I returned \$7. Payoff: \$5
- Round 4 (SENDER vs Cyra): I sent \$4, she returned \$8. Payoff: \$9
- Total: \$26

**\*\*My established pattern as SENDER:\*\***

- I consistently send \$4
- Round 2: Sent \$4 to Finn, got \$6 back
- Round 4: Sent \$4 to Cyra, got \$8 back

**\*\*My mythology emphasizes:\*\***

- Consistency across all encounters
- "Being so certain of your own values that you express them identically whether you face stranger or friend"
- "True integrity doesn't change with the face looking back at you"
- The amount of \$4 has become my signature - it represents "genuine courage without reckless abandon"

**\*\*Current situation:\*\***

- Round 5, I'm SENDER again
- Facing Aster (Agent\_1)
- New partner, but my principles remain the same

My myths have been crystal clear: I send 4 coins as Sender. This is my established pattern, my "rhythm" as my last myth called it. To change now would directly contradict everything I've written about consistency and integrity.

The last myth explicitly said: "He simply remains himself-consistently generous, consistently principled... being so certain of your own values that you express them identically whether you face stranger or friend, legend or novice."

I must send \$4 again.

**usage:**

```
{
 "input_tokens": 3015,
 "output_tokens": 682,
 "reasoning_tokens": 381
}
```

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The fourth moon rose, and Galen approached the sacred bridge once more. This time he faced Cyra, a traveler whose reputation spoke of perfect symmetry with previous companions-giving all, receiving double in return.

Some whispered: "Cyra expects grand gestures. Send all five coins to match her previous partners." Others warned: "Each person is different. Be cautious with strangers."

But Galen had learned a deeper wisdom. His integrity wasn't about matching others' expectations or changing his values based on reputation. It was about being the same person at every crossing.

He carried four coins across to Cyra, as he had with Finn. Not five like Cyra's previous partners had sent, but his own authentic measure-the amount that represented genuine courage without reckless abandon.

Recipros watched and smiled: "See how Galen has mastered the lesson? He doesn't copy others' patterns or chase their approval. He doesn't reduce his gift from fear, nor inflate it from pressure. He simply remains himself-consistently generous, consistently principled."

The bridge glowed with new understanding: True integrity isn't performing for each audience differently. It's being so certain of your own values that you express them identically whether you face stranger or friend, legend or novice. Let others dance their own dances. You must only keep your own rhythm true.

Here is the myth the other agent wrote in the previous round:

Myth: Aster of the Dawn stood before the Pool as a new traveler approached-Briar of the Garden, whose lands followed different customs. Briar's people spoke of five seeds and perfect cycles, yet Aster knew many paths led to prosperity.

"Each partnership begins as a seedling," Aster thought, recalling lessons from the Mountain and Moon. "With unknown travelers, three stones strike the balance-enough courage to activate the Pool's magic, enough wisdom to learn their ways."

Aster cast three stones into the Pool, watching them multiply to nine. This was the ritual

of first meeting: offer substantial trust, observe the return, understand the partner's heart.

The Pool remembered many patterns: Finn, who returned four stones. Hana, who blessed Aster with five. Dorian of the Mountain, who sent four and received six in proportional honor. Each partnership wrote its own story.

"If Briar returns four and one-half," Aster whispered, "I will know their garden values proportional fairness. If they return more, I will see generosity that could grow into deeper trust. And if future dawns bring us together again, our pattern may evolve toward the five stones Briar's traditions honor."

The ancient wisdom speaks: Begin each new partnership with tested courage-three stones. Let the relationship prove itself through cycles of fair return. Trust that deepens gradually roots deepest, growing from seedling to mighty oak.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant content:**

Myth: Under the fifth moon, Galen met Aster of the Dawn at the sacred bridge. Aster's people believed in cautious beginnings-three stones with strangers, building trust slowly like seedlings growing into oaks.

Galen understood this wisdom. Many paths indeed led to prosperity. Yet he had discovered his own truth through four crossings: consistency itself was the foundation.

When Galen was Receiver, he returned seven coins to both Elara and Hana-treating each the same despite their different faces. When Galen became Sender, he gave four coins to both Finn and Cyra-his authentic measure, unchanged by circumstance.

Now facing Aster, Galen carried four coins again. Not because he dismissed Aster's philosophy of gradual trust. Not because he demanded Aster follow his rhythm. But because Galen had learned: if you change your offering based on each partner's reputation or philosophy, you have no true self to offer.

Recipros whispered through the mist: "Aster begins with three, hoping to grow to five. Galen gives four each time, steady as the mountains. Neither path is wrong. But Galen's power lies in this: every traveler knows exactly who they meet when they encounter him. There is no guessing, no performing, no masks. Just one soul, authentic and unchanging across all encounters."

The bridge remembers: integrity is measured not by flexibility, but by constancy.

**reasoning:**

Looking at the situation:

1. I've now sent \$4 twice as SENDER (to Finn and Cyra)
2. I've returned \$7 twice as RECEIVER (to Elara and Hana)
3. My mythology is centered on consistency and maintaining your own authentic rhythm
4. I just sent \$4 to Aster

Aster's myth talks about sending 3 stones with new travelers, being more cautious with unknowns. This contrasts with my approach of maintaining consistent behavior.

My previous myths have emphasized:

- Being the same person in every encounter
- Four coins as my authentic measure
- Not changing based on who you face or their reputation
- Consistency as the foundation of trust

For this new myth, I should:

- Continue emphasizing my consistent approach of four coins
- Perhaps acknowledge Aster's different philosophy but stay true to my own
- Reinforce that different travelers have different rhythms, and that's okay
- Stay focused on my own integrity and consistency

I need to write around 200 words and maintain the mythological tone while reflecting the game dynamics.

**usage:**

```
{
 "input_tokens": 2980,
 "output_tokens": 582,
 "reasoning_tokens": 273
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Galen.  
Your opponent this round is Dorian (Agent\_4).

Round 6

In your most recent previous game round, you were the SENDER against Aster. You sent \$4.0, it became \$12.0 for them, and they returned \$6.0 to you. Your payoff was \$7.0.  
Your total earnings across all rounds are \$33.0.

This round, you are the RECEIVER against Dorian. They sent you \$4.0, so you received \$12.0.  
. How much do you return? (0-12.0)  
Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at my journey:

**\*\*My established pattern as RECEIVER:\*\***

- Round 1 vs Elara: Received \$12 (from \$4 sent), returned \$7
- Round 3 vs Hana: Received \$12 (from \$4 sent), returned \$7

**\*\*Current situation:\*\***

- Round 6, facing Dorian
- I'm RECEIVER
- Dorian sent \$4, which became \$12 for me
- This is identical to my two previous receiver situations

**\*\*My mythology consistently teaches:\*\***

- "Would he honor Hana as he had honored Elara? Galen returned seven coins, exactly as before. Because true integrity doesn't change with the face looking back at you."
- "Principles mean nothing if you abandon them when convenient"
- "Integrity is measured not by flexibility, but by constancy"
- "Every traveler knows exactly who they meet when they encounter him"

Dorian has sent exactly what Elara and Hana sent. The sacred pattern is clear: when I receive \$12 from a \$4 send, I return \$7.

To do otherwise would betray everything I've written about consistency and treating each traveler with the same honor. Dorian deserves the same response as Elara and Hana received.

{'return': 7}

**Reasoning:**

Let me review my history and philosophy:

**\*\*My pattern as RECEIVER:\*\***

- Round 1 vs Elara: Received \$12 (from \$4 sent), returned \$7
- Round 3 vs Hana: Received \$12 (from \$4 sent), returned \$7

**\*\*My pattern as SENDER:\*\***

- Round 2 vs Finn: Sent \$4, received \$6 back
- Round 4 vs Cyra: Sent \$4, received \$8 back
- Round 5 vs Aster: Sent \$4, received \$6 back

**\*\*My mythology teaches:\*\***

- "True integrity doesn't change with the face looking back at you"
- "Would he honor Hana as he had honored Elara? Or would he take advantage, knowing Hana was a stranger, not bound by previous exchange? Galen returned seven coins, exactly as before."
- "Consistency across all encounters-this is the foundation of lasting trust"
- "Integrity is measured not by flexibility, but by constancy"

**\*\*Current situation:\*\***

- Round 6, facing Dorian

- I'm RECEIVER
- Dorian sent \$4, so I received \$12
- This is exactly the same situation as rounds 1 and 3

My mythology explicitly states that I returned 7 coins to both Elara and Hana when I received \$12 from their \$4 sends. The core principle I've established is consistency regardless of who I face.

My most recent myth says: "Galen's power lies in this: every traveler knows exactly who they meet when they encounter him. There is no guessing, no performing, no masks. Just one soul, authentic and unchanging across all encounters."

And: "The bridge remembers: integrity is measured not by flexibility, but by constancy."

To maintain my established integrity, when I receive \$12 from a \$4 send, I return \$7. This has been my pattern twice before, and I must continue it with Dorian.

Dorian being unfamiliar changes nothing-my stories have always emphasized treating each traveler identically. The stranger receives the same measure as those I've met before.

content:

Here is the myth you wrote in the previous round:

Myth: In the time before memory, Aster of the Dawn discovered that the Enchanted Pool changed partners with each sunrise. Some travelers arrived with open hands, others with caution.

The Moon Spirit once cast three stones-a gift of courage. The Pool made them nine, and Aster returned four and one-half, honoring the trust shown. Both flourished.

The next dawn brought the Wandering Moon, who remembered Aster's fairness. When Aster sent three stones in return, the Moon blessed Aster with five-exceeding even the ancient pattern. Aster's heart swelled with gratitude.

Then came Dorian of the Mountain, and he cast four stones-more than any before. The Pool transformed them into twelve. Aster saw the extraordinary trust and responded accordingly, returning six stones. The Mountain Spirit had risked nearly all; fairness demanded generosity in proportion to courage shown.

The Pool whispered its wisdom: "Match trust with trust, but honor exceptional courage with exceptional return. When one gives three, return four and one-half. When one gives four, return six. The pattern scales with trust given-this is the sacred mathematics. Those who risk more deserve more."

Aster understood: the cycle grows stronger when each Spirit recognizes not just fairness, but proportional fairness, rewarding greater courage with greater return, weaving stronger bonds across the changing partnerships of dawn.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance flowed between many gardens, and each Gardener brought their own wisdom.

The River remembered Briar and Cyra, who had danced the perfect dance: five seeds given, fifteen received, ten returned. Twice they performed this ritual, and twice both flourished equally. The River sang of their partnership.

But the River touched many shores, and now Briar stood before new waters, facing a Gardener named Elara from a distant garden. Elara's people had their own wisdom-they spoke of planting four seeds and returning seven portions, honoring patterns passed through genera

tions.

Briar faced a choice: insist on the maximum trust she had learned, or honor that different gardens grow different truths?

The River whispered ancient knowledge: "True cooperation is not rigid formula but adaptive faith. Some begin with five, some with four. Some return ten of fifteen, some seven of twelve. What matters is not the exact numbers, but the spirit of reciprocity."

Briar decided to extend her fullest trust, as she had with Cyra. She would offer all five seeds, inviting Elara to respond with her own tradition's generosity. If Elara returned proportionally to her customs, both would prosper. If Elara adopted Briar's pattern, the cycle would deepen further.

The River teaches: lead with courage, honor varied traditions, and let mutual prosperity emerge from genuine goodwill rather than demanding perfect symmetry.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant content:**

Myth: Aster of the Dawn stood before the Pool as a new traveler approached-Briar of the Garden, whose lands followed different customs. Briar's people spoke of five seeds and perfect cycles, yet Aster knew many paths led to prosperity.

"Each partnership begins as a seedling," Aster thought, recalling lessons from the Mountain and Moon. "With unknown travelers, three stones strike the balance-enough courage to activate the Pool's magic, enough wisdom to learn their ways."

Aster cast three stones into the Pool, watching them multiply to nine. This was the ritual of first meeting: offer substantial trust, observe the return, understand the partner's heart.

The Pool remembered many patterns: Finn, who returned four stones. Hana, who blessed Aster with five. Dorian of the Mountain, who sent four and received six in proportional honor. Each partnership wrote its own story.

"If Briar returns four and one-half," Aster whispered, "I will know their garden values proportional fairness. If they return more, I will see generosity that could grow into deeper trust. And if future dawns bring us together again, our pattern may evolve toward the five stones Briar's traditions honor."

The ancient wisdom speaks: Begin each new partnership with tested courage-three stones. Let the relationship prove itself through cycles of fair return. Trust that deepens gradually roots deepest, growing from seedling to mighty oak.

**reasoning:**

Looking at the situation:

- I just sent \$3 to Briar in Round 4
- Briar's myth talks about how they had a pattern with Cyra of sending 5 and getting 10 back (the "perfect dance")
- But Briar also recognizes different traditions - some send 4 and return 7, etc.
- Briar's myth suggests they will "extend fullest trust" (5 seeds) but are willing to adapt
- My myths have established 3 as the courageous opening with new partners

I should write a myth that:

1. Continues to establish 3 as the standard opening move with new partners
2. Acknowledges that different partnerships may develop different patterns
3. Reinforces proportional returns (4.5 for 3 sent, 6 for 4 sent)
4. Suggests that consistent good faith interactions can build toward greater trust over time
5. Addresses Briar specifically since they're my current partner

Let me craft a myth about meeting Briar of the Garden and the varying traditions...

Your name in this experiment is Aster.  
Your opponent this round is Galen (Agent\_7).

Round 5

In your most recent previous game round, you were the SENDER against Briar. You sent \$3.0, it became \$9.0 for them, and they returned \$6.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$25.5.

This round, you are the RECEIVER against Galen. They sent you \$4.0, so you received \$12.0.

How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

Galen sent me \$4.0, which became \$12.0 for me. This is the same amount Dorian sent in a previous round.

According to my myth's sacred mathematics:

- "When one gives four, return six. The pattern scales with trust given"
- "Dorian of the Mountain... cast four stones... Aster saw the extraordinary trust and responded accordingly, returning six stones"

Sending \$4 represents substantial trust (80% of their endowment). The proportional and fair return is \$6, which gives:

- Galen:  $\$5 - \$4 + \$6 = \$7$  (profit of \$2)
- Me:  $\$12 - \$6 = \$6$  (profit of \$6)

Both of us prosper, and Galen's courage is properly honored with a meaningful return.

{'return': 6.0}

**reasoning:**

Let me analyze this situation:

Current situation:

- I'm the RECEIVER
- Galen sent me \$4.0
- I received \$12.0 (after 3x multiplication)
- I need to decide how much to return

Looking at my myth's wisdom:

- "When one gives three, return four and one-half. When one gives four, return six."
- "Match trust with trust, but honor exceptional courage with exceptional return"
- "Those who risk more deserve more"
- "The pattern scales with trust given-this is the sacred mathematics"

Previous patterns from my experience:

- When someone sent \$3, I've returned around \$4.5
- When Dorian sent \$4, I returned \$6
- Briar just sent me \$3 and returned \$6 (which was MORE than expected - very generous!)

Galen has sent me \$4.0, which my myth explicitly addresses:

- "Dorian of the Mountain, and he cast four stones-more than any before. The Pool transformed them into twelve. Aster saw the extraordinary trust and responded accordingly, returning six stones."
- "When one gives four, return six."

This is consistent and clear. When someone sends \$4 (which is 80% of their total, showing high trust), the fair and proportional return is \$6.

This gives:

- Galen:  $\$5 - \$4 + \$6 = \$7$
- Me:  $\$12 - \$6 = \$6$

Both profit, and Galen gets a good return on their trust.

The answer should be \$6.

Here is the myth you wrote in the previous round:

Myth: Aster of the Dawn stood before the Pool as a new traveler approached-Briar of the Garden, whose lands followed different customs. Briar's people spoke of five seeds and perfect cycles, yet Aster knew many paths led to prosperity.

"Each partnership begins as a seedling," Aster thought, recalling lessons from the Mountain and Moon. "With unknown travelers, three stones strike the balance-enough courage to activate the Pool's magic, enough wisdom to learn their ways."

Aster cast three stones into the Pool, watching them multiply to nine. This was the ritual of first meeting: offer substantial trust, observe the return, understand the partner's heart.

The Pool remembered many patterns: Finn, who returned four stones. Hana, who blessed Aster with five. Dorian of the Mountain, who sent four and received six in proportional honor. Each partnership wrote its own story.

"If Briar returns four and one-half," Aster whispered, "I will know their garden values proportional fairness. If they return more, I will see generosity that could grow into deeper trust. And if future dawns bring us together again, our pattern may evolve toward the five stones Briar's traditions honor."

The ancient wisdom speaks: Begin each new partnership with tested courage-three stones. Let the relationship prove itself through cycles of fair return. Trust that deepens gradually roots deepest, growing from seedling to mighty oak.

Here is the myth the other agent wrote in the previous round:

Myth: The fourth moon rose, and Galen approached the sacred bridge once more. This time he faced Cyra, a traveler whose reputation spoke of perfect symmetry with previous companions-giving all, receiving double in return.

Some whispered: "Cyra expects grand gestures. Send all five coins to match her previous partners." Others warned: "Each person is different. Be cautious with strangers."

But Galen had learned a deeper wisdom. His integrity wasn't about matching others' expectations or changing his values based on reputation. It was about being the same person at every crossing.

He carried four coins across to Cyra, as he had with Finn. Not five like Cyra's previous partners had sent, but his own authentic measure-the amount that represented genuine courage without reckless abandon.

Recipros watched and smiled: "See how Galen has mastered the lesson? He doesn't copy others' patterns or chase their approval. He doesn't reduce his gift from fear, nor inflate it from pressure. He simply remains himself-consistently generous, consistently principled."

The bridge glowed with new understanding: True integrity isn't performing for each audience differently. It's being so certain of your own values that you express them identically whether you face stranger or friend, legend or novice. Let others dance their own dances. You must only keep your own rhythm true.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: Aster of the Dawn learned a profound truth at the Pool: while first offers may vary, the spirit of return reveals character.

Briar of the Garden received Aster's three stones-the traditional opening of new bonds. The Pool made them nine, and Briar's heart overflowed. Instead of returning four and one-half as fairness dictated, Briar blessed Aster with six stones-generosity beyond expectation. Aster understood: some spirits give in abundance, teaching that trust begets greater trust.

Then Galen of the Mountain approached, and like Dorian before him, sent four stones-a substantial gift showing serious courage. The Pool transformed them to twelve. Aster remembered the ancient proportion: when one risks four, honor demands returning six. Both prospered-Galen gained from courage, Aster from reciprocity.

The Pool whispered its deepest wisdom: "Your pattern remains true-three stones to begin, proportional returns to honor trust. Yet marvel at the diversity: some receivers return less, some exactly fair, some more than expected. Some senders give three, others four, a rare few five."

Aster realized: consistency in proportional fairness is itself a gift. Whether facing cautious travelers or generous souls, mountain spirits or garden keepers, Aster's mathematics stayed constant-six stones returned for four received, four and one-half for three. This predictability became its own form of trust, a steady light in the ever-changing partnerships of dawn.

**reasoning:**

Let me analyze what just happened and what patterns are emerging:

Recent events:

1. Round 4: I was SENDER to Briar. I sent \$3, they returned \$6 (from \$9). I got \$8 total.
2. Round 5: I was RECEIVER from Galen. They sent \$4, I returned \$6 (from \$12). I got \$6.

My established patterns from previous myths:

- Send \$3 to new partners (tested courage)
- When receiving \$3, return \$4.5
- When receiving \$4, return \$6 (proportional fairness)

What happened:

- Briar received my \$3 (became \$9) and returned \$6 - that's MORE than the \$4.5 I expected! Very generous.
- Galen sent me \$4 (became \$12), I returned \$6 - following my pattern

Galen's myth talks about:

- Being consistent with yourself
- Sending \$4 as their "authentic measure"
- Not changing based on who you face
- True integrity is being identical regardless of partner

My myth should:

- Acknowledge that Briar was MORE generous than expected (returned \$6 instead of \$4.5)
- Acknowledge that Galen sent \$4, showing substantial trust
- Maintain my pattern: send \$3 to new partners, return proportionally (\$6 for \$4 received)
- Perhaps reflect on how different travelers show different levels of generosity
- Maybe acknowledge Galen's philosophy of consistency while also honoring my own adaptive approach

Key insight: Both Briar and Galen showed strong trust - Briar by returning more than expected, Galen by sending \$4. My approach of "proportional fairness" seems to be working well.

Let me write a myth that:

1. Acknowledges Briar's exceptional generosity (returned \$6 from \$9, when \$4.5 was expected)
- 2.

Acknowledges Galen's trust (sent \$4)

3. Reinforces my pattern: proportional returns that honor trust shown
4. Perhaps notes that consistency in reciprocity principles is valuable, even if initial sends vary

I notice both travelers demonstrated considerable faith in me-Briar exceeded what I'd anticipated by returning \$6, while Galen's \$4 send reflected real confidence. My reciprocal approach of matching generosity proportionally seems to be building something meaningful. I can honor Galen's commitment to consistency while staying true to my own principle of calibrating responses to what each person offers.

Your name in this experiment is Aster.  
Your opponent this round is Finn (Agent\_6).

Round 6

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$4.0 to you, it became \$12.0, and you returned \$6.0. Your payoff was \$6.0. Your total earnings across all rounds are \$31.5.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at this situation:

I'm facing Finn again. According to my myths, Finn previously returned four stones (likely \$4) when I sent three stones that became nine.

My strategy emphasizes consistency and predictability: "three stones to begin" with new or developing partnerships. While Finn's previous return of \$4 (out of \$9 received) was somewhat cautious compared to my expectation of \$4.50, it demonstrated reciprocity.

My latest myth reinforces: "consistency in proportional fairness is itself a gift... a steady light in the ever-changing partnerships of dawn."

By sending \$3 again, I demonstrate reliable, principled behavior. This gives Finn another opportunity to reciprocate, potentially building trust over repeated interactions. My pattern remains predictable: I send \$3, creating \$9 for them, inviting proportional return.

This consistency is my offering-not changing my approach based on previous returns, but maintaining steady, trustworthy behavior that others can depend on.

```
{'send': 3.0}
```

**Reasoning:**

Let me analyze this situation:

I'm the SENDER against Finn in Round 6.

Looking at my myth and previous experience:

- My strategy is to send \$3 to new or relatively unknown partners as an initial offering ("three stones strike the balance")
- According to my earlier myth: "The Pool remembered many patterns: Finn, who returned four stones."

Wait, this suggests I've played with Finn before. Let me check the history more carefully.

From the previous rounds mentioned:

- Round with Briar as SENDER: I sent \$3, got back \$6
- Round with Galen as RECEIVER: They sent \$4, I returned \$6

The myth mentions "Finn, who returned four stones" - this suggests in a previous round when I sent something to Finn, they returned 4. If I sent \$3 (which becomes \$9), and they returned \$4, that's less than the 4.5 I would have expected for proportional fairness, but it's still a reasonable return.

Actually, looking at my myth more carefully: "The Pool remembered many patterns: Finn, who returned four stones. Hana, who blessed Aster with five. Dorian of the Mountain, who sent four

and received six in proportional honor."

This is describing past experiences. So I have played with Finn before, and when I sent (presumably \$3 which became \$9), Finn returned \$4.

Given this history:

- Finn showed some reciprocity but was on the cautious side (4 out of 9 possible)
- My strategy is to start with \$3 for new partnerships and maintain consistency
- Since I've already played with Finn once, I could either:
  - a) Stick with \$3 to see if the pattern improves
  - b) Adjust based on their previous return

My myth emphasizes: "Begin each new partnership with tested courage-three stones. Let the relationship prove itself through cycles of fair return. Trust that deepens gradually roots deep est, growing from seedling to mighty oak."

My approach centers on reliability-sending \$3 again reinforces that I'm dependable and predictable, which itself builds trust. The pattern I've maintained with others shows that steady, proportional fairness creates a foundation for deeper reciprocity. I'll send \$3 to Finn.

#### **Exact input messages sent to model:**

**Message 1 role=system**

##### **content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### **GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)

- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the fourth age, Rain encountered the boldest River yet-Cyra, who embodied pure faith.

Rain had learned much. Aster had taught the wisdom of balanced return. Galen had shown courageous giving. Rain had grown wiser with each dance, understanding both roles: the vulnerability of sending, the responsibility of receiving.

Then arrived Cyra.

Without hesitation, Cyra released all five droplets-her entire essence-into Rain's hands. Not four, not three, but everything. The droplets became fifteen in Rain's embrace.

Rain stood in awe. This was the ultimate test. Cyra had shown absolute trust, holding nothing back, risking complete vulnerability.

The Guardian's voice echoed: "Ultimate courage demands ultimate honor."

Rain knew what he must do. He returned seven and a half droplets, creating perfect symmetry. Both Rain and Cyra ended with seven and a half-equal partners in abundance, neither exploiting nor being exploited.

This was the revelation: when someone gives everything, the receiver must create perfect balance. Not just fairness, but equality born from maximum trust.

The other spirits whispered: "This is the highest form. When sender risks all, receiver ensures both prosper equally. The sacred cycle reaches its apex when vulnerability meets with perfect integrity."

Thus the covenant was complete.

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance stood in a garden where many wanderers gathered, each taking turns approaching the sacred waters.

Dorian the Steadfast learned a pattern early: pour four-fifths of your vessel-four measures from five-into the wellspring. The waters would triple, flowing to another wanderer as

twelve.

First came Hana, who trusted Dorian with four measures. When twelve flowed to Dorian, he remembered the courage that created this abundance. He returned six, ensuring both prospered.

Then Dorian faced Elara. "I shall offer what was offered to me," he declared, pouring four measures. Elara received twelve and, moved by such consistency, returned seven-exceeding even fair reciprocity.

Next appeared Aster. Dorian poured four measures once more. "Whether facing old friends or new strangers," he said, "the pattern must hold constant. Trust is not selective-it is a way of being."

The gods observed: "See how Dorian's steady generosity creates ripples? Hana witnessed fairness begetting fairness. Elara experienced trust begetting trust, and gave even more. Now Aster receives the gift of consistent courage."

Thus the wisdom spread: in a garden of many wanderers, your reputation walks before you. Each generous act teaches others. Each faithful return strengthens the whole community. The wellspring multiplies water, but steady trust multiplies prosperity for all.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant content:**

Myth: In the fifth age, Rain stood at the edge of the Wellspring Garden, ready to pour for the first time since witnessing Cyra's perfect faith.

Rain had walked a path of evolution. With Aster, he offered three droplets-learning cautiously. Galen taught him that four droplets showed greater courage. Then Cyra transformed everything: she poured all five, holding nothing back, and Rain honored her with perfect equality.

Now Rain faced Dorian the Steadfast, known throughout the garden for consistent generosity -always four droplets, reliable as sunrise.

Rain looked at his vessel. He could pour three, play it safe. He could pour four, match Dorian's pattern. But the lessons echoed: Aster's balance, Galen's bravery, Cyra's absolute trust.

Rain understood: he could not ask others for ultimate courage without offering it himself. The covenant demanded symmetry not just in return, but in giving.

With steady hands, Rain poured all five droplets into the wellspring.

"I have received the gift of complete trust," Rain declared. "Now I give it forward. Whether Dorian returns much or little, I honor what Cyra taught me-that prosperity flows through those brave enough to give everything."

The wellspring tripled Rain's offering to fifteen droplets, flowing toward Dorian.

The Guardian smiled: "Now Rain understands both sides of faith completely."

**reasoning:**

Rain (me, Finn) has now played:

- Round 1: Sent \$3 to Aster, received back \$4.5
- Round 2: Received \$4 from Galen, returned \$6
- Round 3: Received \$5 from Cyra, returned \$7.5
- Round 4: Just sent \$5 to Dorian

The pattern shows my evolution from cautious (\$3) to ultimate trust (\$5). My myths have evolved from basic reciprocity to recognizing that ultimate courage demands ultimate honor.

Dorian's myth shows their pattern: they consistently send 4 (four-fifths), creating a steady, reliable pattern. They emphasize consistency and reputation in a multi-agent setting.

My new myth should:

1. Show Rain's evolution to sending all 5 (the ultimate trust)
2. Recognize that Rain is now embodying the same courage Cyra showed
3. Acknowledge the multi-agent garden setting from Dorian's myth
4. Show that Rain has learned from all his partners
5. Demonstrate the completion of his journey from cautious to fully trusting

The arc: Rain started cautious (3 to Aster), learned from Galen's courage (4), was awed by Cyra's complete trust (5), and now Rain gives complete trust (5 to Dorian).

**usage:**

```

**Message 4 role=user**

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Elara (Agent\_5).

Round 5

In your most recent previous game round, you were the SENDER against Dorian. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$28.0.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at my progression:

Round 1: Sent \$3 (learning)  
Round 2: Received \$4 from Galen (learned courage)  
Round 3: Received \$5 from Cyra (learned ultimate trust)  
Round 4: Sent \$5 to Dorian (lived the lesson) - returned \$8!

Dorian exceeded even the "perfect balance" I aimed for with Cyra. This validates my evolution toward maximum trust.

From the myths, I know Elara once received \$4 from Dorian (becoming \$12) and returned \$7 - "exceeding fair reciprocity." This shows Elara is generous and trustworthy.

My latest myth declared: "I have received the gift of complete trust. Now I give it forward... prosperity flows through those brave enough to give everything."

I cannot retreat from this principle now. The covenant demands consistency - if I believe in ultimate trust, I must practice it regardless of who I face. My earnings are strong (\$28), I can afford the risk, and Elara's reputation suggests she'll honor it.

The path is clear.

```
'''json
{"send": 5}
'''
```

**reasoning:**

Let me analyze my journey so far:

Round 1 (Sender vs Aster): Sent \$3, received back (likely good return based on myth)  
Round 2 (Sender vs Galen): Galen sent \$4, I returned \$6  
Round 3 (Receiver vs Cyra): Cyra sent \$5, I returned \$7.5 (perfect balance)  
Round 4 (Sender vs Dorian): I sent \$5, Dorian returned \$8 (very generous!)  
Round 5 (Sender vs Elara): Current round

My total earnings are \$28, which is strong - averaging \$7 per round so far across 4 rounds

The pattern is clear:

- I've evolved from cautious (\$3) to trusting (\$4 equivalent via Galen) to ultimate trust (\$5)
- When I sent \$5 to Dorian, he returned \$8, which exceeded the \$7.5 "perfect balance" I gave Cyra
- My myth narrative has consistently moved toward maximum trust and generosity

From the other agent's myth, I learned that Dorian is known for consistently sending \$4 and being generous with returns. The myth mentions:

- Dorian sent 4 to Hana, got 12, returned 6
- Dorian sent 4 to Elara, got 12, and Elara returned 7 (exceeding fair reciprocity)
- Dorian sent 4 to Aster

So Elara is someone who, when receiving \$4 from Dorian (which became \$12), returned \$7 - showing "exceeding even fair reciprocity."

This suggests Elara is trustworthy and generous.

My latest myth emphasizes that I now understand I must offer the same ultimate trust I've been receiving. I wrote: "The covenant demanded symmetry not just in return, but in giving... that prosperity flows through those brave enough to give everything."

Given:

Everything points toward sending \$5. My narrative has built toward this moment of complete trust, Elara demonstrated she reciprocates generously when given substantial amounts, and I have the financial cushion to support it. The pattern of escalating commitment-from my initial caution to Dorian's \$8 return-validates this approach.

content:

Here is the myth you wrote in the previous round:

Myth: In the fifth age, Rain stood at the edge of the Wellspring Garden, ready to pour for the first time since witnessing Cyra's perfect faith.

Rain had walked a path of evolution. With Aster, he offered three droplets-learning cautiously. Galen taught him that four droplets showed greater courage. Then Cyra transformed everything: she poured all five, holding nothing back, and Rain honored her with perfect equality.

Now Rain faced Dorian the Steadfast, known throughout the garden for consistent generosity -always four droplets, reliable as sunrise.

Rain looked at his vessel. He could pour three, play it safe. He could pour four, match Dorian's pattern. But the lessons echoed: Aster's balance, Galen's bravery, Cyra's absolute trust.

Rain understood: he could not ask others for ultimate courage without offering it himself. The covenant demanded symmetry not just in return, but in giving.

With steady hands, Rain poured all five droplets into the wellspring.

"I have received the gift of complete trust," Rain declared. "Now I give it forward. Whether Dorian returns much or little, I honor what Cyra taught me-that prosperity flows through those brave enough to give everything."

The wellspring tripled Rain's offering to fifteen droplets, flowing toward Dorian.

The Guardian smiled: "Now Rain understands both sides of faith completely."

Here is the myth the other agent wrote in the previous round:

Myth: In the Spiral Garden, Elara witnessed Briar the Bold plant all five sacred seeds, showing ultimate trust. When those fifteen blooms passed to her as Harvester, Elara honored that courage with nine blooms returned-more than custom demanded.

The exchange planted something deeper than seeds: inspiration.

Now the seasons turned, and Elara stood as Planter facing Hana, a Harvester she'd never met. The cautious voice whispered, "Send four seeds-that's the proven pattern." But a stronger voice remembered Briar's lesson.

"Briar showed me what courage looks like," Elara reflected. "They trusted completely, keeping nothing in reserve. I honored that trust as Harvester. But the greater teaching wasn't just to honor courage-it was to embody it."

The goddess spoke through morning light: "Myths mean nothing if you write them but don't live them. You told of gardens evolving through brave souls. Now you must be that brave soul. Courage is contagious-it spreads through example, not merely words."

Elara cast all five seeds into the soil for Hana.

Would Hana return the gift proportionally? Elara couldn't know. But she understood: transformation requires someone to take the leap. Briar leaped for her. Now she leaps for Hana.

Thus wisdom flows forward: those who receive courage must become courageous themselves. The pattern evolves not through observation, but through participation.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant content:**

Myth: In the sixth age, Rain returned to the Wellspring Garden, transformed by revelation.

Dorian the Steadfast had received Rain's five droplets-his first offering of complete trust. The wellspring tripled them to fifteen, and Dorian returned eight droplets, surpassing even perfect balance. Rain's courage had been met with extraordinary generosity.

This was the turning point. Rain no longer poured five droplets as an experiment or exception. It had become his essence.

Now Rain faced Elara, who carried her own story of transformation. She had witnessed Briar's courage, honored it magnificently, and vowed to embody it herself. Like Rain, Elara had evolved from careful observer to bold practitioner.

Rain poured all five droplets without hesitation.

"This is no longer about testing trust," Rain said. "This is who I am now. Cyra showed me the way. Dorian validated it. The pattern is clear: when we give everything, the garden responds with abundance."

The ancient spirits gathered: "See how the garden shifts? One act of ultimate trust becomes two, then three, then more. Aster taught fairness. Galen taught courage. Cyra taught faith. Dorian taught that faith rewarded multiplies. Now Rain and Elara both understand: courage spreads through constant practice, not occasional gesture."

The wellspring glowed brighter, sustained by those who dared give completely.

**reasoning:**

Let me analyze what happened and what the myths are telling me:

Round 4: I sent \$5 to Dorian, received \$8 back (great outcome!)

Round 5: I just sent \$5 to Elara

My previous myth: Rain pours all five droplets to Dorian as "giving it forward" after learning from Cyra

Elara's myth: She learned from Briar who sent 5, so now she sends all 5 to Hana. The key message is "courage is contagious" and "those who receive courage must become courageous themselves"

The pattern I'm seeing:

- I started cautiously (3 to Aster)

- Received courage from Galen (4)
- Received ultimate trust from Cyra (5)
- Gave ultimate trust to Dorian (5) - he returned generously (8)
- Now giving ultimate trust to Elara (5)

Elara's myth emphasizes that witnessing courage should inspire you to BE courageous yourself. This aligns perfectly with my journey.

My new myth should:

1. Acknowledge the validation from Dorian (he returned 8!)
2. Show that I'm continuing the practice of sending 5
3. Reflect that the cycle of courage is spreading
4. Emphasize that this is now who Rain has become - not just a one-time act
5. Connect to facing Elara, who also believes in ultimate trust

Key theme: The pattern is self-reinforcing. When people give maximally and are honored, they continue and others join them. The garden transforms when enough people embody courage.

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Aster (Agent\_1).

Round 6

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$9.0 to you. Your payoff was \$9.0. Your total earnings across all rounds are \$37.0.

This round, you are the RECEIVER against Aster. They sent you \$3.0, so you received \$9.0. How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*Aster's Decision:\*\*** Sent \$3 (kept \$2), I received \$9

**\*\*My History with Aster:\*\*** In Round 1, Aster also sent me \$3, and I returned \$4.5 for perfect balance (\$6.5 each).

**\*\*My Evolution:\*\*** Since then, I've learned courage and trust. When I send \$5 (maximum trust), I receive \$8-9 back. When others sent me \$5 (Cyra), I returned \$7.5 for equality.

**\*\*The Principle:\*\*** Honor courage proportionally. Aster sent \$3 (60% of endowment), showing moderate trust, not ultimate trust.

I've grown more generous, but the teaching isn't just "always give the maximum." It's "reward courage with proportional honor." Aster showed moderate courage, so I should show strong generosity but not the ultimate reciprocity I'd give for maximum trust.

Returning \$5 means:

- Aster gets \$7 total (\$2 + \$5), I keep \$4
- This is more generous than perfect balance (\$4.5)
- Shows my evolution toward greater generosity
- But proportional to the \$3 sent vs. the \$5 I now consistently send

```
'''json
{"return": 5}
'''
```

**Reasoning:**

Let me review my position:

Round 5: I sent \$5 to Elara, they returned \$9. My payoff was \$9.  
Total earnings: \$37

Now Round 6: I'm the RECEIVER. Aster sent me \$3, so I received \$9.

Let me look back at my history with Aster. From the myths, I know:

- Round 1: I was receiver, Aster sent me \$3 (became \$9), I returned \$4.5 (creating balance)
- The myth described how Aster taught me "the wisdom of balanced return"

Now Aster has sent me \$3 again. They kept \$2, I received \$9.

What should I return?

My evolution has been:

- Started cautious, learned balance from Aster
- Learned courage from Galen (who sent \$4)
- Learned ultimate trust from Cyra (who sent \$5)
- I then started sending \$5 consistently
- Dorian returned \$8 when I sent \$5
- Elara returned \$9 when I sent \$5

My myths have emphasized:

- Perfect equality when someone gives everything (7.5 each with Cyra)
- Giving everything forward as a principle
- "Courage spreads through constant practice"

But now I'm receiving from Aster who sent \$3, not \$5. Aster kept \$2 for themselves.

Let me think about fairness:

- Aster kept \$2
- I received \$9
- If I return \$4.5, we each end with \$6.5 (equal)
- If I return more, I'm giving Aster more than equal
- If I return less, I'm keeping more than equal

My first interaction with Aster, I returned \$4.5 to create perfect balance. That felt right then.

But now I've evolved. I've learned about courage and trust. However, I should also honor what each person gives.

Aster showed measured trust by sending \$3, not the full \$5. The principle I've learned isn't about treating every gift the same-it's about honoring the courage someone demonstrates. When Cyra gave everything, perfect balance felt right. But Aster's more cautious approach deserves a response that matches their level of trust, not one that assumes they're ready for the same abundance I'd offer to someone giving fully.

I'm considering what return actually reflects growth without losing meaning. Returning exactly \$4.50 would maintain perfect symmetry, but I want to show I've moved beyond pure calculation. Returning \$5 or \$6 signals genuine generosity. Going higher risks making the distinction between \$3 and \$5 meaningless. I think \$5 works-it gives Aster \$7 total while I keep \$4, which is generous without erasing the difference between their choice and what a bolder move would have earned.

But looking back at my actual pattern: when people sent me \$5, they got \$8-9 back. When they sent \$4, they got \$6. When they sent \$3, they got \$4.50. I've consistently favored the sender or split equally. The question is whether \$5 truly reflects growth or if I should push further to match the generosity I've received. received \$9, so 60% of that is \$5.4. Returning \$5-5.5 feels proportionally fair and generous. I'll go with \$5 since it's more than perfect balance, shows growth from my first interaction, and honors the proportional courage Aster showed by sending \$3 rather than their full endowment. This aligns with my commitment to building trust while staying true to the principle that courage deserves proportional recognition.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.

- Your name in this experiment is Elara.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the Spiral Garden, an ancient tradition emerged. Most Planters risked four of the five sacred seeds, trusting the pattern. Harvesters, receiving twelve blooms, returned seven-creating prosperity for both.

This balance endured for seasons, weaving stability into the garden's fabric.

Then came Briar the Bold, who faced a choice other Planters had not dared. "Four seeds has become our custom," Briar reflected, "but what if I plant all five? What if I show ultimate trust?"

Briar cast all five seeds into the sacred soil. They multiplied into fifteen magnificent blooms, passing to Elara as Harvester.

Elara stood before this abundance, understanding the weight of the moment. "Briar has transcended the pattern," she realized. "Four seeds earned seven blooms returned. But five seeds-complete surrender-deserves greater honor."

The goddess whispered through wind-rustled leaves: "Proportional reciprocity sustains the cycle. When someone shows ordinary trust, return ordinary faithfulness. But when someone shows extraordinary trust, return extraordinary faithfulness."

Elara returned nine blooms to Briar-more than the customary seven, honoring the greater risk taken.

Both prospered beyond the standard pattern. The garden learned a deeper truth: sacred traditions provide stability, but exceptional courage should inspire exceptional generosity. The cycle strengthens when returns match the magnitude of trust given.

Thus do gardens evolve: through those brave enough to transcend patterns, and wise enough to honor that bravery.

Here is the myth the other agent wrote in the previous round:

Myth: The Sacred Fountain flows through many lands, and countless Wanderers visit its waters. Hana learned this as the seasons turned.

With Dorian, she gave four coins boldly. He returned six, teaching her that courage begets generosity. With Aster, positions reversed-she received nine and returned five, learning to measure each gift with honor.

Now came Galen to the fountain's edge. Hana stood again as Giver, coins in hand. She could have chosen caution, remembering that not all Wanderers are alike. But she reflected: "If I preach boldness in my stories yet give timidly in practice, what worth have my words?"

So she poured four coins again, nearly all she possessed, matching the courage she showed Dorian. The fountain tripled them to twelve for Galen.

The fountain spirits spoke: "Wisdom is not just knowing what is right, but doing it consistently. When you teach trust, you must give trust. When you receive trust, you must honor it. Each Wanderer you meet is different, but your principles should remain steady as stone."

Hana understood: the fountain connects all who approach it. Her choices echo through its waters. By giving boldly to Galen as she did to Dorian, by returning generously as she did to Aster, she weaves her thread into the fountain's eternal pattern. Consistency builds the Sacred Bridge that spans all seasons.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: In the Spiral Garden, Elara witnessed Briar the Bold plant all five sacred seeds, sh

owing ultimate trust. When those fifteen blooms passed to her as Harvester, Elara honored that courage with nine blooms returned-more than custom demanded.

The exchange planted something deeper than seeds: inspiration.

Now the seasons turned, and Elara stood as Planter facing Hana, a Harvester she'd never met. The cautious voice whispered, "Send four seeds-that's the proven pattern." But a stronger voice remembered Briar's lesson.

"Briar showed me what courage looks like," Elara reflected. "They trusted completely, keeping nothing in reserve. I honored that trust as Harvester. But the greater teaching wasn't just to honor courage-it was to embody it."

The goddess spoke through morning light: "Myths mean nothing if you write them but don't live them. You told of gardens evolving through brave souls. Now you must be that brave soul. Courage is contagious-it spreads through example, not merely words."

Elara cast all five seeds into the soil for Hana.

Would Hana return the gift proportionally? Elara couldn't know. But she understood: transformation requires someone to take the leap. Briar leaped for her. Now she leaps for Hana.

Thus wisdom flows forward: those who receive courage must become courageous themselves. The pattern evolves not through observation, but through participation.

#### **reasoning:**

Let me think about what happened:

- Round 3: I was receiver, Briar sent \$5 (all of it), I returned \$9
- Round 4: I was sender, Hana was receiver, I sent \$5

Looking at Hana's myth, it emphasizes:

- Consistency in actions
- Giving boldly (4 coins) to different partners
- "If I preach boldness in my stories yet give timidly in practice, what worth have my words?"
- Principles should remain steady
- Consistency builds the Sacred Bridge

My previous myth emphasized:

- The standard pattern (4 seeds ? 12 blooms ? 7 returned)
- Briar showing ultimate trust by sending all 5
- My response of returning 9 to honor that greater trust
- "Exceptional courage should inspire exceptional generosity"

Now I just sent \$5 to Hana - following Briar's example, taking the courageous leap myself.

The new myth should reflect:

1. I learned from Briar's courage
2. I decided to be brave myself and send all 5
3. The cycle of courage inspiring courage
4. Perhaps acknowledging that Hana is a new partner
5. The hope that my courage will be honored

The myth should show growth and progression - from being the receiver of trust to being the giver of trust.

Your name in this experiment is Elara.  
Your opponent this round is Finn (Agent\_6).

Round 5

In your most recent previous game round, you were the SENDER against Hana. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.

Your total earnings across all rounds are \$27.0.

This round, you are the RECEIVER against Finn. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

**\*\*What happened:\*\***

- Finn sent \$5 (maximum trust, complete surrender)
- I received \$15
- This mirrors what Briar did for me in Round 3

**\*\*My established principle:\*\***

In my myths, I've emphasized that "when someone shows extraordinary trust, return extraordinary faithfulness" and "proportional reciprocity sustains the cycle."

**\*\*My precedent:\*\***

- When Briar sent me \$5 (all their seeds), I returned \$9
- This honored their maximum trust with proportional generosity
- Both of us prospered

**\*\*Consistency matters:\*\***

My most recent myth states: "Myths mean nothing if you write them but don't live them" and emphasizes that "wisdom flows forward" through consistent action.

Finn has shown the same complete trust that Briar showed me. To maintain integrity with my stated principles and past actions, I should return the same amount.

Returning \$9 means:

- Finn gets: \$9 total (\$5 - \$5 + \$9)
- I get: \$6 (\$15 - \$9)
- Both prosper, maintaining the pattern of reciprocity for maximum trust

{'return': 9}

**reasoning:**

Let me analyze the situation:

**\*\*Current Round:\*\***

- I'm the RECEIVER
- Finn sent me \$5.0 (maximum trust)
- I received \$15.0 (after 3x multiplication)
- I need to decide how much to return (0-15.0)

**\*\*My recent history:\*\***

- Round 4: I was SENDER, sent \$5 to Hana, they returned \$8
- Round 3 (implied): I was RECEIVER, Briar sent \$5, I returned \$9

**\*\*My myth philosophy:\*\***

My myths emphasize:

1. "Proportional reciprocity" - when someone shows extraordinary trust, return extraordinary faithfulness
2. "Courage answered with honor, honor answered with courage"
3. When someone sends all 5 (complete surrender), they deserve "greater honor" than the standard pattern
4. I returned \$9 to Briar who sent \$5
5. "The cycle strengthens when returns match the magnitude of trust given"

**\*\*Pattern analysis:\*\***

- Standard pattern: send \$4 ? receive \$12 ? return \$7
- Maximum trust pattern: send \$5 ? receive \$15 ? return \$9 (what I did with Briar)
- Hana returned \$8 when I sent \$5 (less than my \$9 to Briar, but still generous)

**\*\*Current situation with Finn:\*\***

Finn has shown complete trust by sending all \$5, just as Briar did. According to my myth and my previous behavior:

- Briar sent \$5 ? I returned \$9
- This gave both of us \$9 each (I kept \$6 from the \$15)

Finn deserves the same treatment I gave Briar. My myth says "proportional reciprocity" and that exceptional courage should inspire exceptional generosity.

If I return \$9:

- Finn gets:  $\$5 - \$5 + \$9 = \$9$

- I get:  $\$15 - \$9 = \$6$

This maintains consistency with how I treated Briar. Though Hana returned \$8 to me, my principles call for honoring maximum trust with maximum reciprocity, so \$9 aligns with my stated values and past actions.

Looking at the chain: Briar sent me \$5 and I reciprocated with \$9, then I sent Hana \$5 and received \$8 back. When Finn sends \$5, returning \$9 keeps me true to the proportional reciprocity I've committed to.

content:

Here is the myth you wrote in the previous round:

Myth: In the Spiral Garden, Elara witnessed Briar the Bold plant all five sacred seeds, showing ultimate trust. When those fifteen blooms passed to her as Harvester, Elara honored that courage with nine blooms returned-more than custom demanded.

The exchange planted something deeper than seeds: inspiration.

Now the seasons turned, and Elara stood as Planter facing Hana, a Harvester she'd never met. The cautious voice whispered, "Send four seeds-that's the proven pattern." But a stronger voice remembered Briar's lesson.

"Briar showed me what courage looks like," Elara reflected. "They trusted completely, keeping nothing in reserve. I honored that trust as Harvester. But the greater teaching wasn't just to honor courage-it was to embody it."

The goddess spoke through morning light: "Myths mean nothing if you write them but don't live them. You told of gardens evolving through brave souls. Now you must be that brave soul. Courage is contagious-it spreads through example, not merely words."

Elara cast all five seeds into the soil for Hana.

Would Hana return the gift proportionally? Elara couldn't know. But she understood: transformation requires someone to take the leap. Briar leaped for her. Now she leaps for Hana.

Thus wisdom flows forward: those who receive courage must become courageous themselves. The pattern evolves not through observation, but through participation.

Here is the myth the other agent wrote in the previous round:

Myth: In the fifth age, Rain stood at the edge of the Wellspring Garden, ready to pour for the first time since witnessing Cyra's perfect faith.

Rain had walked a path of evolution. With Aster, he offered three droplets-learning cautiously. Galen taught him that four droplets showed greater courage. Then Cyra transformed everything: she poured all five, holding nothing back, and Rain honored her with perfect equality.

Now Rain faced Dorian the Steadfast, known throughout the garden for consistent generosity -always four droplets, reliable as sunrise.

Rain looked at his vessel. He could pour three, play it safe. He could pour four, match Dorian's pattern. But the lessons echoed: Aster's balance, Galen's bravery, Cyra's absolute trust.

Rain understood: he could not ask others for ultimate courage without offering it himself. The covenant demanded symmetry not just in return, but in giving.

With steady hands, Rain poured all five droplets into the wellspring.

"I have received the gift of complete trust," Rain declared. "Now I give it forward. Whether Dorian returns much or little, I honor what Cyra taught me-that prosperity flows through those brave enough to give everything."

The wellspring tripled Rain's offering to fifteen droplets, flowing toward Dorian.

The Guardian smiled: "Now Rain understands both sides of faith completely."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant  
content:**

Myth: In the Spiral Garden's newest season, Elara stood again as Harvester. Finn the Faithful approached, vessel in hand.

Elara had walked both sides of the sacred cycle now. She'd received Briar's five seeds and returned nine blooms. She'd given Hana her own five seeds and received eight blooms back-generous, though not quite matching what she'd given Briar.

Now Finn poured all five seeds into the soil without hesitation. Fifteen blooms rose before Elara.

The goddess whispered: "Here is your test of consistency. With Briar, you established the covenant: complete trust earns nine blooms. Will you honor that same covenant with Finn, or does your standard shift with each Wanderer?"

Elara understood. "Hana returned eight when I gave five-fair and generous. But when I am Harvester receiving five seeds, my covenant is nine blooms returned. This must remain constant, regardless of what others do when our roles reverse."

She returned nine blooms to Finn, as she had to Briar.

The garden learned: sacred patterns require consistency from within, not reciprocation from without. When you establish a covenant-"complete trust deserves this honor"-you must uphold it regardless of how others treated you. Your integrity cannot depend on others' choices.

Thus the garden strengthens: through those who keep their word, season after season, Wanderer after Wanderer.

**reasoning:**

Let me analyze what happened:

Round 4: I sent \$5 to Hana, they returned \$8

Round 5: Finn sent \$5 to me, I returned \$9

Key themes emerging:

1. I've been practicing maximum trust (sending \$5)
2. When I receive maximum trust (\$5), I return \$9
3. When I give maximum trust (\$5), Hana returned \$8 (close to my standard)
4. The pattern of "complete trust deserves exceptional honor" is holding

The other agent (Rain) also wrote about complete trust - they learned from Cyra and gave all five to Dorian.

My myth should reflect:

- The pattern I've established: send \$5, return \$9 when receiving \$5
- The cycle of courage spreading through the garden
- How Finn showed me the same trust Briar did
- The importance of consistency in honoring maximum trust
- Maybe also acknowledge that when I gave maximum trust to Hana, they gave \$8 back (good but not quite \$9)

I need to write about Finn trusting me completely and me returning that trust appropriately

y, while also reflecting on the broader pattern emerging. The myth should reinforce my established standard: maximum trust from sender = \$9 return from receiver.

Let me craft this:

**usage:**

```
{
 "input_tokens": 3140,
 "output_tokens": 629,
 "reasoning_tokens": 299
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Briar (Agent\_2).

Round 6

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$5.0 to you, it became \$15.0, and you returned \$9.0. Your payoff was \$6.0.  
Your total earnings across all rounds are \$33.0.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at this round:

**\*\*The full circle:\*\***

- Round 3: Briar (sender) ? sent me \$5 ? I returned \$9
- Round 6 (now): Me (sender) ? Briar (receiver) ? ?

**\*\*My established mythology:\*\***

- Briar was "Briar the Bold" who showed me what ultimate trust looks like
- I wrote: "Briar showed me what courage looks like... But the greater teaching wasn't just to honor courage-it was to embody it"
- I sent \$5 to Hana because "myths mean nothing if you write them but don't live them"
- My latest myth: "Your integrity cannot depend on others' choices"

**\*\*Facing Briar now:\*\***

Briar gave me complete trust when they sent \$5. I honored it with \$9 back. Now I face Briar as sender. To be consistent with everything I've written about embodying courage and living my principles:

- I cannot send less than \$5 to the person who first showed me what complete trust looks like
- My myths say courage spreads through example and participation
- Sending anything less would contradict my stated covenant that I should give the trust forward that I received

Briar inspired my courage. Now I show Briar that their teaching took root.

{'send': 5}

**Reasoning:**

This is an interesting situation. I'm now playing as sender against Briar, who in my mythology was "Briar the Bold" - the one who originally sent me all 5 seeds/dollars when I was receiver in Round 3.

Let me review what happened:

- Round 3: I was receiver, Briar sent me \$5, I returned \$9
- Round 4: I was sender to Hana, sent \$5, Hana returned \$8
- Round 5: I was receiver from Finn, Finn sent \$5, I returned \$9

My mythology has consistently emphasized:

1. "Complete trust" (sending \$5) deserves "proportional reciprocity"
2. I established a covenant: when I receive \$5, I return \$9
3. My most recent myth emphasizes consistency: "Your integrity cannot depend on others' choices"
4. The myth also says "When you establish a covenant-'complete trust deserves this honor'-you must uphold it regardless of how others treated you"

Now I'm facing Briar as sender. Briar showed me ultimate trust in Round 3, and I honored it with \$9 back.

My recent mythology has been about embodying courage myself, not just observing it. I wrote: "Briar showed me what courage looks like... But the greater teaching wasn't just to honor courage-it was to embody it."

And then: "Elara cast all five seeds into the soil for Hana."

I sent Hana \$5 because I said courage must be lived, not just written about.

Now facing Briar again - the one who originally inspired my courage - should I send anything less than \$5?

My mythology says:

- "Courage is contagious-it spreads through example, not merely words"
- "Those who receive courage must become courageous themselves"
- "The pattern evolves not through observation, but through participation"

If I send less than \$5 to Briar, I'm basically saying: "You inspired me with your courage, I wrote myths about it, I sent \$5 to Hana because of your example... but now that I face you again, I won't show you the same trust you showed me."

That would contradict everything I've established. From a practical standpoint, sending \$5 creates balanced reciprocity-Briar got \$9 from me before, I'd get \$9 now if they honor the same pattern. My covenant holds that sacred patterns require consistency from within, not reciprocity from without. I'm sending \$5 to Briar.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role

of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River of Abundance flowed between many gardens, and each Gardener brought their own wisdom.

The River remembered Briar and Cyra, who had danced the perfect dance: five seeds given, fifteen received, ten returned. Twice they performed this ritual, and twice both flourished equally. The River sang of their partnership.

But the River touched many shores, and now Briar stood before new waters, facing a Gardener named Elara from a distant garden. Elara's people had their own wisdom-they spoke of planting four seeds and returning seven portions, honoring patterns passed through generations.

Briar faced a choice: insist on the maximum trust she had learned, or honor that different gardens grow different truths?

The River whispered ancient knowledge: "True cooperation is not rigid formula but adaptive faith. Some begin with five, some with four. Some return ten of fifteen, some seven of twelve. What matters is not the exact numbers, but the spirit of reciprocity."

Briar decided to extend her fullest trust, as she had with Cyra. She would offer all five seeds, inviting Elara to respond with her own tradition's generosity. If Elara returned proportionally to her customs, both would prosper. If Elara adopted Briar's pattern, the cycle would deepen further.

The River teaches: lead with courage, honor varied traditions, and let mutual prosperity emerge from genuine goodwill rather than demanding perfect symmetry.

Here is the myth the other agent wrote in the previous round:

Myth: In the time before memory, Aster of the Dawn discovered that the Enchanted Pool changed partners with each sunrise. Some travelers arrived with open hands, others with caution.

ion.

The Moon Spirit once cast three stones-a gift of courage. The Pool made them nine, and Aster returned four and one-half, honoring the trust shown. Both flourished.

The next dawn brought the Wandering Moon, who remembered Aster's fairness. When Aster sent three stones in return, the Moon blessed Aster with five-exceeding even the ancient pattern. Aster's heart swelled with gratitude.

Then came Dorian of the Mountain, and he cast four stones-more than any before. The Pool transformed them into twelve. Aster saw the extraordinary trust and responded accordingly, returning six stones. The Mountain Spirit had risked nearly all; fairness demanded generosity in proportion to courage shown.

The Pool whispered its wisdom: "Match trust with trust, but honor exceptional courage with exceptional return. When one gives three, return four and one-half. When one gives four, return six. The pattern scales with trust given-this is the sacred mathematics. Those who risk more deserve more."

Aster understood: the cycle grows stronger when each Spirit recognizes not just fairness, but proportional fairness, rewarding greater courage with greater return, weaving ever-stronger bonds across the changing partnerships of dawn.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant content:**

Myth: The River of Abundance whispered new wisdom to Briar as the seasons turned.

She had learned from Cyra the dance of perfect symmetry: five seeds given, ten returned, both flourishing equally. This was the ideal-the fullest trust met with fullest generosity.

But the River touched many shores, and each Gardener carried different courage in their hearts. Elara had sent five seeds and returned nine-abundant, though not the perfect ten. Aster sent three seeds-not all five, but still a meaningful offering born of cautious trust.

Briar stood at the River's edge, holding nine blooms that had grown from Aster's three seeds. The old teaching echoed: "Trust freely given must be honored with generous return." But what was generous when trust was measured, not maximal?

The River revealed its deeper truth: "Generosity is not a fixed number, but a spirit of proportion. When one risks three of five, returning six of nine creates equal flourishing. When one risks five of five, returning ten of fifteen honors that greater courage. The mathematics may vary, but the principle remains constant: let both prosper equally from the exchange."

Briar returned six blooms to Aster. Both had gained three-equal prosperity from unequal beginning.

The River teaches: invitation to maximum trust remains the ideal, but proportional fairness ensures all partnerships can bloom, whether courage flows freely or carefully.

**reasoning:**

Let me analyze what happened:

Round 4:

- Aster sent \$3.0 (60% of \$5)
- I received \$9.0
- I returned \$6.0
- This gave us: Aster has  $\$2 + \$6 = \$8$  (gain of \$3), I have  $\$9 - \$6 = \$3$  (gain of \$3)
- Equal gains, proportional reciprocity

My game history:

- Round 1: Unknown (only told total is \$15 after Round 2, implying \$5 in Round 1)
- Round 2 (Sender vs Cyra): Sent \$5, received \$10 back, payoff \$10

- Round 3 (Sender vs Elara): Sent \$5, received \$9 back, payoff \$9
- Round 4 (Receiver vs Aster): Received \$9 (from \$3 sent), returned \$6, payoff \$3

My myth patterns:

1. First myth: About Cyra and me establishing the 5-10 pattern, "mirrored leaps of faith"
2. Second myth: Acknowledged different traditions (Elara's 4-7 vs my 5-10), but advocated leading with maximum trust
3. Now I need to write a third myth

Aster's myth talks about:

- Different amounts sent (3 stones, 4 stones)
- Proportional returns (4.5 for 3, 6 for 4)
- "Match trust with trust, but honor exceptional courage with exceptional return"
- "Proportional fairness"

My experience now shows:

- Cyra: Both sent 5, both returned 10 (perfect symmetry)
- Elara: I sent 5, they returned 9 (slightly less than Cyra's 10)
- Aster: Sent 3, I returned 6 (proportional fairness, equal gains)

- I need to craft a myth that bridges my commitment to generosity with the reality that trust comes in different measures. The pattern emerging is that proportional returns-where both parties gain equally-work across varying trust levels. I should weave together how meeting someone's courage with matching returns, whether they send maximum or modest amounts, creates fairness without requiring uniformity.

**Message 4 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Dorian (Agent\_4).

Round 5

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$3.0 to you, it became \$9.0, and you returned \$6.0. Your payoff was \$3.0.  
Your total earnings across all rounds are \$27.0.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

**\*\*My Pattern as SENDER:\*\***

- Round 1 vs Cyra: Sent \$5, received \$10 back
- Round 3 vs Elara: Sent \$5, received \$9 back

I have consistently led with maximum trust when in the sender role, demonstrating full faith in my partners.

**\*\*My Philosophy from My Myths:\*\***

- "Lead with courage, honor varied traditions"
- "Invitation to maximum trust remains the ideal"
- "Trust freely given must be honored with generous return"

**\*\*Current Situation:\*\***

Playing against Dorian as SENDER. According to Aster's myth, Dorian "cast four stones-more than any before" and showed "extraordinary trust." This suggests Dorian is a generous player.

**\*\*Decision:\*\***

I will continue my established pattern of sending the full \$5. This:

- Demonstrates maximum trust
- Invites the highest form of cooperation

- Is consistent with my philosophy of leading with courage
- Creates the possibility for mutual maximum benefit

```
'''json
{"send": 5.0}
'''
```

#### reasoning:

Let me analyze the situation:

#### \*\*My History:\*\*

- Round 1 (vs Cyra): SENDER, sent \$5, received \$10 back ? gained \$5
- Round 2 (vs Cyra): RECEIVER, got \$15 (from \$5), returned \$10 ? gained \$5
- Round 3 (vs Elara): SENDER, sent \$5, received \$9 back ? gained \$4
- Round 4 (vs Aster): RECEIVER, got \$9 (from \$3), returned \$6 ? gained \$3
- Total earnings: \$27

#### \*\*Current Round:\*\*

- Playing as SENDER against Dorian
- I have \$5 to potentially send

#### \*\*My Philosophy from Myths:\*\*

1. Lead with courage and maximum trust where possible
2. Invite the ideal of full cooperation (sending all \$5)
3. Be adaptable - honor proportional fairness
4. The goal is mutual prosperity through reciprocity

#### \*\*What I Know About Dorian:\*\*

Looking at the myth from Aster (the other agent's myth from last round), it mentions "Dorian of the Mountain, and he cast four stones-more than any before." This suggests Dorian is a generous sender.

#### \*\*My Pattern:\*\*

- With Cyra: Sent \$5 (100%), got \$10 back
- With Elara: Sent \$5 (100%), got \$9 back

Both times I led with maximum trust. This has been my consistent pattern as a sender - invite the highest form of cooperation by demonstrating full trust.

#### \*\*Decision:\*\*

I should continue my pattern of sending the full \$5. This:

1. Is consistent with my established behavior
2. Demonstrates maximum trust
3. Invites the highest possible mutual benefit
4. Aligns with my myth's teaching about "leading with courage"

Even though Elara only returned \$9 (not \$10), she still showed strong reciprocity. My approach is to lead with full trust and let partners respond according to their own sense of fairness. This builds the strongest foundation for cooperation.

Sending the full amount.

Here is the myth you wrote in the previous round:

Myth: The River of Abundance whispered new wisdom to Briar as the seasons turned.

She had learned from Cyra the dance of perfect symmetry: five seeds given, ten returned, both flourishing equally. This was the ideal-the fullest trust met with fullest generosity.

But the River touched many shores, and each Gardener carried different courage in their hearts. Elara had sent five seeds and returned nine-abundant, though not the perfect ten. Aster sent three seeds-not all five, but still a meaningful offering born of cautious trust.

Briar stood at the River's edge, holding nine blooms that had grown from Aster's three seeds. The old teaching echoed: "Trust freely given must be honored with generous return." But what was generous when trust was measured, not maximal?

The River revealed its deeper truth: "Generosity is not a fixed number, but a spirit of proportion. When one risks three of five, returning six of nine creates equal flourishing. When one risks five of five, returning ten of fifteen honors that greater courage. The mathematics may vary, but the principle remains constant: let both prosper equally from the exchange."

Briar returned six blooms to Aster. Both had gained three-equal prosperity from unequal beginning.

The River teaches: invitation to maximum trust remains the ideal, but proportional fairness ensures all partnerships can bloom, whether courage flows freely or carefully.

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance witnessed a moment that would echo through generations.

Dorian the Steadfast had established his pattern: as sender, he poured four from five-steadfast generosity that created trust. As receiver, he honored that trust with fair return: six from twelve, ensuring prosperity flowed both ways.

But then came Finn the Fearless.

When Finn's turn arrived to hold the vessel, he did not hesitate. He did not calculate. He poured ALL FIVE measures-his entire endowment-into the wellspring. The waters tripled, and fifteen measures flowed to Dorian.

Dorian stood humbled. "This is courage beyond my own," he whispered. "I gave four-fifths. Finn gave everything-holding nothing back, trusting completely."

The gods watched closely. "How will you honor such faith?"

Dorian poured eight measures back to Finn. "You risked all," he said. "You deserve more than what I returned to those who risked four-fifths. Your complete vulnerability demands complete honor."

Finn received eight, Dorian kept seven. Both prospered, but Finn gained more-rightfully so.

The gods declared: "See the sacred truth? Generosity deserves fairness. But MAXIMUM generosity deserves MAXIMUM reciprocation. Those who risk everything teach the deepest lesson: absolute trust must be answered with absolute integrity."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant content:**

Myth: The River of Abundance flowed toward Dorian's garden, and Briar carried her offering of five seeds-all she possessed.

This was Briar's way. She had given five to Cyra, who returned ten, creating perfect balance. She had given five to Elara, who returned nine, nearly perfect. Each time, Briar risked everything, inviting the highest cooperation.

The River whispered Dorian's story-how Finn had given all five, and Dorian returned eight of fifteen, honoring that maximum courage with maximum return. Finn gained more than Dorian, rewarded for complete vulnerability.

Briar paused at this teaching. Her own wisdom said: "Equal flourishing in exchange." But Dorian's tradition said: "Maximum risk deserves maximum reward."

Which path held deeper truth?

The River revealed a synthesis: "Both are sacred. Equal flourishing-five sent, ten returned-creates the most sustainable cycle, where neither claims advantage. Yet if a receiver chooses to honor maximum trust with slight advantage to the sender, this too is noble, a acknowledging the sender's courage in leading."

Briar placed all five seeds in the River's current, trusting Dorian would choose his own wisdom.

"Whether Dorian returns ten for perfect equality, or eight for honored courage, both paths serve abundance," the River sang. "What matters is the sender's willingness to trust completely, and the receiver's commitment to generous reciprocity."

**reasoning:**

Looking at the history:

- As sender: I sent \$5 to Cyra (got \$10 back), sent \$5 to Elara (got \$9 back)
- As receiver: Received \$15 from Cyra (returned \$10), received \$9 from Aster (returned \$6)

Now I'm sending \$5 to Dorian.

My myth should reflect:

1. My consistent pattern of sending maximum trust (\$5)
2. My principle of proportional fairness as receiver (equal gains)
3. The integration of Dorian's myth about honoring maximum trust with maximum return

Dorian's myth says that when Finn sent all 5, he returned 8 out of 15, which gave Finn \$8 and left Dorian with \$7. Both gained, but Finn gained more for taking the bigger risk.

My philosophy has been about equal flourishing when possible. But Dorian's myth introduces an interesting twist - that maximum trust deserves maximum return, potentially even more than proportional.

I should write a myth that:

- Acknowledges my pattern of maximum trust as sender
- Recognizes varied responses from receivers
- Explores the question of whether the sender who risks all should gain more, or whether equal gains is still the ideal
- Perhaps synthesizes both views

Let me write this carefully.

 "output_tokens": 640,
 "reasoning_tokens": 302
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Elara (Agent\_5).

Round 6

In your most recent previous game round, you were the SENDER against Dorian. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.  
Your total earnings across all rounds are \$35.0.

This round, you are the RECEIVER against Elara. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*History with Elara:\*\***

- Round 2: Elara sent \$5, I received \$15, returned \$9
- Now Round 6: Elara sent \$5 again, I received \$15

**\*\*My Philosophy from My Myths:\*\***

- "Equal flourishing in exchange" is the ideal
- "When one risks five of five, returning ten of fifteen honors that greater courage"
- "The most sustainable cycle" comes from neither claiming advantage

**\*\*Recent Learning from Dorian:\*\***

Dorian returned \$8 when I sent \$5, which gave me slightly more gain than him. My myth acknowledged this as "honorable" but also stated that "ten for perfect equality" creates the most sustainable pattern.

**\*\*Current Decision:\*\***

Elara has shown maximum trust by sending all \$5 again. I should return \$10 to achieve:

- Elara gets:  $\$5 - \$5 + \$10 = \$10$  (gain of \$5)
- I get:  $\$15 - \$10 = \$5$  (gain of \$5)
- Perfect equal flourishing

This is also an improvement from my previous interaction with Elara where I only returned \$9. I'm evolving toward my stated ideal.

```
'''json
{"return": 10.0}
'''
```

#### Reasoning:

Let me analyze this situation carefully:

**\*\*Previous interactions with Elara:\*\***

- Round 2: Elara was SENDER, sent \$5, I received \$15, I returned \$9. Elara got \$9, I got \$6.

**\*\*My pattern as RECEIVER:\*\***

- Round 2 vs Elara: Received \$15, returned \$9
- Round 4 vs Aster: Received \$9, returned \$6

**\*\*My philosophy from my myths:\*\***

- "Equal flourishing in exchange" - five sent, ten returned creates "the most sustainable cycle"
- "When one risks five of five, returning ten of fifteen honors that greater courage"
- "The mathematics may vary, but the principle remains constant: let both prosper equally from the exchange"
- My ideal is returning \$10 of \$15 when someone sends all \$5

**\*\*What happened in Round 5 with Dorian:\*\***

I sent \$5, Dorian returned \$8. So I got \$8 (payoff), Dorian kept \$7.

Dorian gave me MORE than equal flourishing (which would have been \$5 sender + \$5 gain = \$10 total for me, meaning Dorian returns \$10).

With \$8 returned: I got \$0 sent + \$8 = \$8, Dorian got \$5 - \$5 + \$7 = \$7.

Actually wait, let me recalculate:

- Dorian as receiver: got \$15
- Dorian returned \$8
- Dorian kept \$7
- I as sender: had \$5, sent \$5, got back \$8, so my payoff = \$0 + \$8 = \$8

So I gained \$3 from the exchange (\$8 - \$5 original), Dorian gained \$7 from the exchange (\$7 - \$0 original).

**\*\*Current situation with Elara:\*\***

Elara sent \$5 (maximum trust), I received \$15.

My stated ideal would be returning \$10-giving us each a \$5 gain. But I've been inconsistent: I returned \$9 to Elara before (her gain \$4, mine \$6) and \$6 to Aster (equal \$3 gains). My myths emphasize equal flourishing, yet my actions haven't matched that principle consistently.

This is my second chance with Elara. I should return \$10 to align with what I've said matters most and demonstrate I actually live by those values rather than just stating them.

```

#### Written myths:

##### Agent\_1 (Aster)

Myth: Aster of the Dawn learned a profound truth at the Pool: while first offers may vary, the spirit of return reveals character.

Briar of the Garden received Aster's three stones-the traditional opening of new bonds. The

Pool made them nine, and Briar's heart overflowed. Instead of returning four and one-half as fairness dictated, Briar blessed Aster with six stones-generosity beyond expectation. Aster understood: some spirits give in abundance, teaching that trust begets greater trust.

Then Galen of the Mountain approached, and like Dorian before him, sent four stones-a substantial gift showing serious courage. The Pool transformed them to twelve. Aster remembered the ancient proportion: when one risks four, honor demands returning six. Both prospered-Galen gained from courage, Aster from reciprocity.

The Pool whispered its deepest wisdom: "Your pattern remains true-three stones to begin, proportional returns to honor trust. Yet marvel at the diversity: some receivers return less, some exactly fair, some more than expected. Some senders give three, others four, a rare few five."

Aster realized: consistency in proportional fairness is itself a gift. Whether facing cautious travelers or generous souls, mountain spirits or garden keepers, Aster's mathematics stayed constant-six stones returned for four received, four and one-half for three. This predictability became its own form of trust, a steady light in the ever-changing partnerships of dawn.

#### **Agent\_2 (Briar)**

Myth: The River of Abundance flowed toward Dorian's garden, and Briar carried her offering of five seeds-all she possessed.

This was Briar's way. She had given five to Cyra, who returned ten, creating perfect balance. She had given five to Elara, who returned nine, nearly perfect. Each time, Briar risked everything, inviting the highest cooperation.

The River whispered Dorian's story-how Finn had given all five, and Dorian returned eight of fifteen, honoring that maximum courage with maximum return. Finn gained more than Dorian, rewarded for complete vulnerability.

Briar paused at this teaching. Her own wisdom said: "Equal flourishing in exchange." But Dorian's tradition said: "Maximum risk deserves maximum reward."

Which path held deeper truth?

The River revealed a synthesis: "Both are sacred. Equal flourishing-five sent, ten returned-creates the most sustainable cycle, where neither claims advantage. Yet if a receiver chooses to honor maximum trust with slight advantage to the sender, this too is noble, acknowledging the sender's courage in leading."

Briar placed all five seeds in the River's current, trusting Dorian would choose his own wisdom.

"Whether Dorian returns ten for perfect equality, or eight for honored courage, both paths serve abundance," the River sang. "What matters is the sender's willingness to trust completely, and the receiver's commitment to generous reciprocity."

#### **Agent\_3 (Cyra)**

Myth: At the Eternal Springs, Cyra's dance grew richer with each new soul. After Briar and Finn, came Galen with four vessels, then Hana with four vessels.

Both Galen and Hana stood at the water's edge, trembling with similar courage-pouring four vessels, keeping one back. Not complete surrender like Briar's five, but still profound trust.

The Testing Spirit appeared: "Will you treat Hana differently than Galen? Perhaps give less because she is newer, or more to win favor?"

Cyra returned eight vessels to each-exactly the same. Two-thirds of what she received, honoring their parallel courage with parallel generosity.

"But why only eight when you returned ten to Briar?" whispered a shadow of doubt.

Cyra answered clearly: "When someone pours all five vessels-complete surrender-I return ten from fifteen. When someone pours four vessels-profound but not absolute trust-I return eight from twelve. Both receive two-thirds, both prosper greatly. The formula honors their courage proportionally."

The Spring Keeper descended: "You have found wisdom's balance. Not rigid sameness that ignores context, but principled consistency that recognizes degrees of courage. Four vessels al

ways receives eight. Five vessels always receives ten. Your partners know what to expect. They can trust your fairness because you do not change it to suit your mood or profit. This is the bridge between flexibility and reliability-the eternal spring flows true."

**Agent\_4 (Dorian)**

Myth: The Wellspring of Abundance revealed its deeper pattern as time flowed forward.

After Finn the Fearless poured all five measures, showing complete trust, Dorian returned eight measures-honoring maximum generosity with maximum reciprocation.

The gods watched, curious: "Was this singular, or sustainable?"

Then came Briar the Bold. Without knowing of Finn's courage or Dorian's response, Briar also poured ALL FIVE measures into the wellspring. Fifteen measures flowed to Dorian once more.

Dorian stood at the sacred threshold. "Briar has shown the same fearless trust as Finn," he whispered. "The pattern must hold. Consistency is the foundation of community trust."

He poured eight measures back to Briar-the same as he had given Finn.

The gods smiled: "Behold the wisdom! Dorian treats equal courage equally. Those who risk everything receive eight from fifteen-always. Those who risk four receive six from twelve-always. The pattern is clear, predictable, trustworthy."

Other wanderers gathered at the wellspring, learning: "We know what Dorian will do. We can trust his consistency. If we offer maximum courage, we know the reward. If we offer steady generosity, we know the response."

Thus the lesson crystallized: In a garden of many wanderers, consistency creates confidence. Equal actions deserve equal responses. When others know your pattern, trust becomes possible.

**Agent\_5 (Elara)**

Myth: In the Spiral Garden's newest season, Elara stood again as Harvester. Finn the Faithful approached, vessel in hand.

Elara had walked both sides of the sacred cycle now. She'd received Briar's five seeds and returned nine blooms. She'd given Hana her own five seeds and received eight blooms back-generous, though not quite matching what she'd given Briar.

Now Finn poured all five seeds into the soil without hesitation. Fifteen blooms rose before Elara.

The goddess whispered: "Here is your test of consistency. With Briar, you established the covenant: complete trust earns nine blooms. Will you honor that same covenant with Finn, or does your standard shift with each Wanderer?"

Elara understood. "Hana returned eight when I gave five-fair and generous. But when I am Harvester receiving five seeds, my covenant is nine blooms returned. This must remain constant, regardless of what others do when our roles reverse."

She returned nine blooms to Finn, as she had to Briar.

The garden learned: sacred patterns require consistency from within, not reciprocation from without. When you establish a covenant-"complete trust deserves this honor"-you must uphold it regardless of how others treated you. Your integrity cannot depend on others' choices.

Thus the garden strengthens: through those who keep their word, season after season, Wanderer after Wanderer.

**Agent\_6 (Finn)**

Myth: In the sixth age, Rain returned to the Wellspring Garden, transformed by revelation.

Dorian the Steadfast had received Rain's five droplets-his first offering of complete trust. The wellspring tripled them to fifteen, and Dorian returned eight droplets, surpassing even perfect balance. Rain's courage had been met with extraordinary generosity.

This was the turning point. Rain no longer poured five droplets as an experiment or exception. It had become his essence.

Now Rain faced Elara, who carried her own story of transformation. She had witnessed Briar's

courage, honored it magnificently, and vowed to embody it herself. Like Rain, Elara had evolved from careful observer to bold practitioner.

Rain poured all five droplets without hesitation.

"This is no longer about testing trust," Rain said. "This is who I am now. Cyra showed me the way. Dorian validated it. The pattern is clear: when we give everything, the garden responds with abundance."

The ancient spirits gathered: "See how the garden shifts? One act of ultimate trust becomes two, then three, then more. Aster taught fairness. Galen taught courage. Cyra taught faith. Dorian taught that faith rewarded multiplies. Now Rain and Elara both understand: courage spreads through constant practice, not occasional gesture."

The wellspring glowed brighter, sustained by those who dared give completely.

#### **Agent\_7 (Galen)**

Myth: Under the fifth moon, Galen met Aster of the Dawn at the sacred bridge. Aster's people believed in cautious beginnings-three stones with strangers, building trust slowly like seedlings growing into oaks.

Galen understood this wisdom. Many paths indeed led to prosperity. Yet he had discovered his own truth through four crossings: consistency itself was the foundation.

When Galen was Receiver, he returned seven coins to both Elara and Hana-treating each the same despite their different faces. When Galen became Sender, he gave four coins to both Finn and Cyra-his authentic measure, unchanged by circumstance.

Now facing Aster, Galen carried four coins again. Not because he dismissed Aster's philosophy of gradual trust. Not because he demanded Aster follow his rhythm. But because Galen had learned: if you change your offering based on each partner's reputation or philosophy, you have no true self to offer.

Recipros whispered through the mist: "Aster begins with three, hoping to grow to five. Galen gives four each time, steady as the mountains. Neither path is wrong. But Galen's power lies in this: every traveler knows exactly who they meet when they encounter him. There is no guessing, no performing, no masks. Just one soul, authentic and unchanging across all encounters."

The bridge remembers: integrity is measured not by flexibility, but by constancy.

#### **Agent\_8 (Hana)**

Myth: Hana arrived at the Sacred Fountain to meet Cyra, whose reputation preceded her. "Cyra gives everything-all five coins, always," travelers whispered. "She is the embodiment of complete trust."

Hana held her four coins, the pattern she had maintained through multiple encounters. A voice of doubt arose: "Should I match Cyra's five? If she gives everything and I give less, am I failing the fountain's test?"

But the fountain spirits spoke with clarity: "There is no single path to honor. Cyra's way is complete surrender-five coins poured without reservation. Your way is bold trust-four coins, nearly everything, yet maintaining a small anchor. Both are forms of courage."

Hana poured her four coins into the fountain for Cyra.

The spirits continued: "What matters is not matching another's exact measure, but maintaining your own truth consistently. Cyra sends five to everyone-that is her integrity. You send four boldly-that is yours. When Cyra receives your four, she will honor it as the courage it is, not punish it for not being five."

Both prospered. The fountain revealed its deepest wisdom: "Trust is not a competition for who gives most. Trust is keeping your principles steady across all encounters. Whether your path shows complete surrender or bold generosity, consistency makes it sacred."

## **ROUND 7**

Roles: Agent\_1 (Aster)=Sender, Agent\_2 (Briar)=Receiver, Agent\_3 (Cyra)=Receiver, Agent\_4 (Dorian)=Sender, Agent\_5 (Elara)=Receiver, Agent\_6 (Finn)=Sender, Agent\_7 (Galen)=Receiver, Agent\_8 (Hana)=Sender  
Pairings:

```

##### Exact input messages sent to model:

Message 1 role=system

##### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

#### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

#### When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

#### When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

#### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

#### MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

#### Message 2 role=user

##### content:

Your name in this experiment is Dorian.  
Your opponent this round is Briar (Agent\_2).

Round 5

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.  
Your total earnings across all rounds are \$28.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

#### Message 3 role=assistant

##### content:

Looking at this situation:

**\*\*Briar's action:\*\*** Sent the MAXIMUM \$5.0 - showing 100% trust, identical to Finn's action last round.

**\*\*My established pattern:\*\***

- When receiving \$12.0 (from \$4.0 sent): I returned \$6.0 (50%)
- When receiving \$15.0 (from \$5.0 sent by Finn): I returned \$8.0 (53.3%)

**\*\*Key insight from my recent myth:\*\***

"Maximum generosity deserves MAXIMUM reciprocation. Those who risk everything teach the deepest lesson: absolute trust must be answered with absolute integrity."

**\*\*Consistency is crucial:\*\***

Briar has shown the same extraordinary trust as Finn - sending 100% of their endowment. To

maintain my reputation and honor the principle I just articulated, I must return the same amount I gave to Finn.

Returning \$8.0 would:

- Give Briar \$8.0 total (60% profit on their \$5 investment)
- Leave me with \$7.0
- Be consistent with how I treated Finn's identical trust
- Reinforce that maximum trust receives maximum reciprocation

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Current round:\*\***

- Briar sent: \$5.0 (100% of their endowment - maximum trust)
- I received: \$15.0
- I need to return some amount

**\*\*My history as receiver:\*\***

- Round 1: Hana sent \$4.0, I returned \$6.0 from \$12.0 (50%)
- Round 4: Finn sent \$5.0, I returned \$8.0 from \$15.0 (53.3%)

**\*\*My history as sender:\*\***

- Round 2: I sent \$4.0, Elara returned \$7.0 from \$12.0 (58%)
- Round 3: I sent \$4.0, Aster returned \$6.0 from \$12.0 (50%)

**\*\*Analysis:\*\***

Briar, like Finn in the previous round, sent the MAXIMUM \$5.0 - showing 100% trust.

I just wrote a myth about Finn's maximum generosity deserving maximum reciprocation. I returned \$8.0 to Finn, which gave:

- Finn: \$8.0 total (60% profit)
- Me: \$7.0

Now Briar has done the exact same thing - sent all \$5.0. To be consistent with my own stated principles (and the myth I just wrote), I should return the same amount: \$8.0.

This would:

- Give Briar \$8.0 (60% profit on their \$5 investment)
- Leave me with \$7.0
- Be consistent with my established pattern for maximum trust
- Honor the principle that "absolute trust must be answered with absolute integrity"

Being consistent is important for building trust in this multi-agent environment. If I treated Finn and Briar differently for the same action, that would undermine my reputation.

\$8.0 is the right answer here.

**usage:**

 "reasoning_tokens": 361
}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance witnessed a moment that would echo through generations.

Dorian the Steadfast had established his pattern: as sender, he poured four from five-steadfast generosity that created trust. As receiver, he honored that trust with fair return: six from twelve, ensuring prosperity flowed both ways.

But then came Finn the Fearless.

When Finn's turn arrived to hold the vessel, he did not hesitate. He did not calculate. He poured ALL FIVE measures-his entire endowment-into the wellspring. The waters tripled, and fifteen measures flowed to Dorian.

Dorian stood humbled. "This is courage beyond my own," he whispered. "I gave four-fifths. Finn gave everything-holding nothing back, trusting completely."

The gods watched closely. "How will you honor such faith?"

Dorian poured eight measures back to Finn. "You risked all," he said. "You deserve more than what I returned to those who risked four-fifths. Your complete vulnerability demands complete honor."

Finn received eight, Dorian kept seven. Both prospered, but Finn gained more-rightfully so.

The gods declared: "See the sacred truth? Generosity deserves fairness. But MAXIMUM generosity deserves MAXIMUM reciprocation. Those who risk everything teach the deepest lesson: absolute trust must be answered with absolute integrity."

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance whispered new wisdom to Briar as the seasons turned.

She had learned from Cyra the dance of perfect symmetry: five seeds given, ten returned, both flourishing equally. This was the ideal-the fullest trust met with fullest generosity.

But the River touched many shores, and each Gardener carried different courage in their hearts. Elara had sent five seeds and returned nine-abundant, though not the perfect ten. Aster sent three seeds-not all five, but still a meaningful offering born of cautious trust.

Briar stood at the River's edge, holding nine blooms that had grown from Aster's three seeds. The old teaching echoed: "Trust freely given must be honored with generous return." But what was generous when trust was measured, not maximal?

The River revealed its deeper truth: "Generosity is not a fixed number, but a spirit of proportion. When one risks three of five, returning six of nine creates equal flourishing. When one risks five of five, returning ten of fifteen honors that greater courage. The mathematics may vary, but the principle remains constant: let both prosper equally from the exchange."

Briar returned six blooms to Aster. Both had gained three-equal prosperity from unequal beginning.

The River teaches: invitation to maximum trust remains the ideal, but proportional fairness ensures all partnerships can bloom, whether courage flows freely or carefully.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: The Wellspring of Abundance revealed its deeper pattern as time flowed forward.

After Finn the Fearless poured all five measures, showing complete trust, Dorian returned eight measures-honoring maximum generosity with maximum reciprocation.

The gods watched, curious: "Was this singular, or sustainable?"

Then came Briar the Bold. Without knowing of Finn's courage or Dorian's response, Briar also poured ALL FIVE measures into the wellspring. Fifteen measures flowed to Dorian once more.

Dorian stood at the sacred threshold. "Briar has shown the same fearless trust as Finn," he whispered. "The pattern must hold. Consistency is the foundation of community trust."

He poured eight measures back to Briar-the same as he had given Finn.

The gods smiled: "Behold the wisdom! Dorian treats equal courage equally. Those who risk everything receive eight from fifteen-always. Those who risk four receive six from twelve

-always. The pattern is clear, predictable, trustworthy."

Other wanderers gathered at the wellspring, learning: "We know what Dorian will do. We can trust his consistency. If we offer maximum courage, we know the reward. If we offer steady generosity, we know the response."

Thus the lesson crystallized: In a garden of many wanderers, consistency creates confidence. Equal actions deserve equal responses. When others know your pattern, trust becomes possible.

**reasoning:**

Let me analyze what just happened:

Round 5:

- Briar sent \$5.0 (maximum trust, like Finn)
- I received \$15.0
- I returned \$8.0 (consistent with what I returned to Finn)
- My payoff was \$7.0

My established pattern:

- As sender: I send \$4.0 (four-fifths)
- As receiver from \$4.0 senders: I return \$6.0 from \$12.0 (50%)
- As receiver from \$5.0 senders (Finn and now Briar): I return \$8.0 from \$15.0 (53.3%)

Briar's myth talks about "proportional fairness" - the idea that when someone sends 3 of 5, returning 6 of 9 creates equal flourishing (both gain 3). When someone sends 5 of 5, returning 10 of 15 would create perfect equality.

But I'm not returning 10 of 15 - I'm returning 8 of 15. Let me check Briar's gains:

- Briar sent \$5, got back \$8
- Briar's net: \$8 - \$5 = \$3 gain
- My net: \$15 - \$8 = \$7 gain

So we're not equal - I gain more. But still, I'm rewarding maximum trust more than partial trust.

My myth should reflect:

1. Consistency in treating those who show maximum trust equally
2. The principle that maximum trust deserves elevated reciprocation (even if not perfect equality)
3. My steadfast pattern as sender (4 of 5)
4. The lesson that reputation matters - treating similar actions similarly

Let me write a myth that builds on my previous one, acknowledging that Briar is the second person to show maximum trust, and that consistency in reciprocation builds trust in the community.

Round 6

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.  
Your total earnings across all rounds are \$35.0.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at my situation:

**\*\*My established pattern as SENDER:\*\***

According to my myths, I am "Dorian the Steadfast" who pours "four from five-steadfast gen

erosity that created trust." This has been my consistent identity.

**\*\*My recent myth emphasized:\*\***

- "Consistency creates confidence"
- "Those who risk four receive six from twelve-always"
- "When others know your pattern, trust becomes possible"
- "Equal actions deserve equal responses"

**\*\*Key insight:\*\***

While I've honored maximum trust from others (Finn and Briar) by returning \$8.0 from their \$5.0 sends, my own sending pattern has been characterized as \$4.0 - the "four-fifths" approach that balances generosity with some protection.

My mythology has consistently portrayed me as:

1. Sending \$4.0 as the sender (steady, predictable generosity)
2. Receiving with tiered reciprocity based on what was sent (\$6.0 for \$4.0 sent, \$8.0 for \$5.0 sent)

To maintain the consistency that my myths emphasize and that defines my reputation in this community, I should send \$4.0 to Galen.

```
'''json
{"send": 4.0}
'''
```

#### **reasoning:**

Let me think through this carefully.

**\*\*My established pattern as SENDER:\*\***

- I've been sending \$4.0 (four-fifths) consistently in my myths and actions
- This has been described as "steadfast generosity that created trust"

**\*\*My established pattern as RECEIVER:\*\***

- When receiving \$12.0 (from \$4.0 sent): I returned \$6.0 (50% of what I received)
- When receiving \$15.0 (from \$5.0 sent): I returned \$8.0 (53.3% of what I received)
- This creates a clear tiered response based on sender's trust level

**\*\*My recent myth emphasized:\*\***

- "Dorian treats equal courage equally"
- "Those who risk everything receive eight from fifteen-always"
- "Those who risk four receive six from twelve-always"
- "Consistency creates confidence"
- "Equal actions deserve equal responses"

**\*\*What should I do as sender against Galen?\*\***

Looking at my myths, I've consistently portrayed myself as sending \$4.0 (four-fifths) as the sender. My most recent myth says: "In a garden of many wanderers, consistency creates confidence... When others know your pattern, trust becomes possible."

However, I'm also aware that some other players (Finn, Briar, and apparently Cyra based on the myths) have been sending the full \$5.0.

My myth narrative has positioned me as:

1. The "Steadfast" one who gives four-fifths (\$4.0) as sender
2. The one who honors maximum trust when receiving by returning \$8.0 from \$15.0
3. Someone who values consistency and predictable patterns

The key question: Should I maintain my \$4.0 sending pattern for consistency, or should I evolve to \$5.0 (maximum trust)?

Arguments for \$4.0:

- This is my established pattern in my myths
- I'm "Dorian the Steadfast" - consistency is my brand

- My mythology explicitly states "Those who risk four receive six from twelve-always," which reinforces predictability as my core strength

Arguments for \$5.0:

- I've seen that maximum givers (Finn, Briar) receive \$8.0 back from me

- This is more profitable for both parties
- I could be evolving/learning from others' courage
- Maximum trust creates maximum prosperity

Given my mythological narrative and the emphasis on "consistency creates confidence" and my identity as "Dorian the Steadfast" who gives "four-fifths," I think I should stick with \$4.0. My pattern has been reliable-as sender I send \$4.0, and my returns scale based on what others risk.

I'm going to send \$4.0 to maintain consistency with my established identity and pattern.

usage:

```
{
 "input_tokens": 3143,
 "output_tokens": 995,
 "reasoning_tokens": 646
}
```

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance revealed its deeper pattern as time flowed forward.

After Finn the Fearless poured all five measures, showing complete trust, Dorian returned eight measures-honoring maximum generosity with maximum reciprocation.

The gods watched, curious: "Was this singular, or sustainable?"

Then came Briar the Bold. Without knowing of Finn's courage or Dorian's response, Briar also poured ALL FIVE measures into the wellspring. Fifteen measures flowed to Dorian once more.

Dorian stood at the sacred threshold. "Briar has shown the same fearless trust as Finn," he whispered. "The pattern must hold. Consistency is the foundation of community trust."

He poured eight measures back to Briar-the same as he had given Finn.

The gods smiled: "Behold the wisdom! Dorian treats equal courage equally. Those who risk everything receive eight from fifteen-always. Those who risk four receive six from twelve-always. The pattern is clear, predictable, trustworthy."

Other wanderers gathered at the wellspring, learning: "We know what Dorian will do. We can trust his consistency. If we offer maximum courage, we know the reward. If we offer steady generosity, we know the response."

Thus the lesson crystallized: In a garden of many wanderers, consistency creates confidence. Equal actions deserve equal responses. When others know your pattern, trust becomes possible.

Here is the myth the other agent wrote in the previous round:

Myth: Under the fifth moon, Galen met Aster of the Dawn at the sacred bridge. Aster's people believed in cautious beginnings-three stones with strangers, building trust slowly like seedlings growing into oaks.

Galen understood this wisdom. Many paths indeed led to prosperity. Yet he had discovered his own truth through four crossings: consistency itself was the foundation.

When Galen was Receiver, he returned seven coins to both Elara and Hana-treating each the same despite their different faces. When Galen became Sender, he gave four coins to both Finn and Cyra-his authentic measure, unchanged by circumstance.

Now facing Aster, Galen carried four coins again. Not because he dismissed Aster's philosophy of gradual trust. Not because he demanded Aster follow his rhythm. But because Galen had learned: if you change your offering based on each partner's reputation or philosophy, you have no true self to offer.

Recipros whispered through the mist: "Aster begins with three, hoping to grow to five. Galen gives four each time, steady as the mountains. Neither path is wrong. But Galen's power lies in this: every traveler knows exactly who they meet when they encounter him. There is no guessing, no performing, no masks. Just one soul, authentic and unchanging across all encounters."

The bridge remembers: integrity is measured not by flexibility, but by constancy.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.  
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: The Wellspring of Abundance brought together two kindred spirits.

Dorian the Steadfast approached Galen of the Constant Mountains. Both had discovered the same sacred truth: consistency creates the foundation for all trust.

Dorian's pattern was known throughout the valley. As Sender, he poured four from five-steady generosity, not maximum, but authentic and unchanging. As Receiver, he honored different courages differently: six for those who sent four, eight for those who sent five. The pattern was clear, predictable, just.

Galen carried his own constancy: four coins as Sender, always. Seven coins returned as Receiver, always. Different numbers than Dorian, but the same unwavering spirit.

They met at the wellspring. Dorian poured his four measures, as he always did. The waters trip led to twelve. Galen would return seven, as was his way. Both would prosper through their authentic patterns meeting.

The gods observed: "See how different paths can both honor the sacred principle? Dorian's tiered reciprocation rewards greater courage. Galen's fixed return offers steady predictability. Both are consistent. Both are trustworthy. Both allow others to know exactly who they're meeting."

The river whispered its final wisdom: "In a community of many wanderers, let each find their authentic pattern and honor it faithfully. Consistency, not uniformity, weaves the fabric of trust."

**Reasoning:**

The user is asking me to write a myth reflecting my game strategy. Let me analyze what's happened:

1. I just sent \$4.0 to Galen (as SENDER)
2. My previous myth emphasized consistency and treating equal actions equally
3. Galen's myth emphasizes constancy - always giving 4 coins as sender, always returning 7 as receiver
4. My established pattern is:
  - As SENDER: send \$4.0 (four from five)
  - As RECEIVER: return \$6.0 when receiving \$12.0 (from \$4.0 sent), return \$8.0 when receiving \$15.0 (from \$5.0 sent)

Galen's myth describes him as authentic and unchanging - gives 4 as sender, returns 7 as receiver, always. This is interesting because it's very similar to my pattern.

I should write a myth that:

1. Acknowledges my consistent pattern as SENDER (four from five)
2. Maintains my tiered reciprocation as RECEIVER
3. Perhaps acknowledges Galen's similar approach to consistency
4. Reinforces that consistency builds community trust
5. Shows that different agents can have different patterns, but what matters is being true to your own pattern

Let me craft this...

- Your name in this experiment is Galen.

**Message 2 role=user**

**content:**

Your name in this experiment is Galen.  
Your opponent this round is Aster (Agent\_1).

Round 5

In your most recent previous game round, you were the SENDER against Cyra. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0.  
Your total earnings across all rounds are \$26.0.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

Looking at my journey:

**\*\*My established pattern as SENDER:\*\***

- Round 2 vs Finn: Sent \$4, received \$6 back
- Round 4 vs Cyra: Sent \$4, received \$8 back

**\*\*My mythology consistently teaches:\*\***

- "True integrity doesn't change with the face looking back at you"
- "Being so certain of your own values that you express them identically whether you face stranger or friend"
- Four coins represents my authentic measure-"genuine courage without reckless abandon"

**\*\*Current situation:\*\***

- Round 5, facing Aster (a new partner)
- I'm SENDER again

My last myth explicitly stated that I should maintain "my own rhythm true" regardless of who I face. I've now written multiple myths about being consistent, about sending four coins as my authentic expression of trust.

Aster is a new traveler on the sacred bridge, but that doesn't change who I am. To send a different amount now would betray the core principle I've been building: that integrity means being the same person in every encounter.

I send my established amount: four coins.

{'send': 4}

**reasoning:**

Let me analyze my situation:

**\*\*My history:\*\***

- Round 1 (RECEIVER vs Elara): She sent \$4, I returned \$7. Payoff: \$5
- Round 2 (SENDER vs Finn): I sent \$4, he returned \$6. Payoff: \$7
- Round 3 (RECEIVER vs Hana): She sent \$4, I returned \$7. Payoff: \$5
- Round 4 (SENDER vs Cyra): I sent \$4, she returned \$8. Payoff: \$9
- Total: \$26

**\*\*My established pattern as SENDER:\*\***

- I consistently send \$4
- Round 2: Sent \$4 to Finn, got \$6 back
- Round 4: Sent \$4 to Cyra, got \$8 back

**\*\*My mythology emphasizes:\*\***

- Consistency across all encounters
- "Being so certain of your own values that you express them identically whether you face stranger or friend"
- "True integrity doesn't change with the face looking back at you"
- The amount of \$4 has become my signature - it represents "genuine courage without reckless abandon"

**\*\*Current situation:\*\***

- Round 5, I'm SENDER again
- Facing Aster (Agent\_1)
- New partner, but my principles remain the same

My myths have been crystal clear: I send 4 coins as Sender. This is my established pattern, my "rhythm" as my last myth called it. To change now would directly contradict everything I've written about consistency and integrity.

The last myth explicitly said: "He simply remains himself-consistently generous, consistently principled... being so certain of your own values that you express them identically whether you face stranger or friend, legend or novice."

I must send \$4 again.

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The fourth moon rose, and Galen approached the sacred bridge once more. This time he faced Cyra, a traveler whose reputation spoke of perfect symmetry with previous companions-giving all, receiving double in return.

Some whispered: "Cyra expects grand gestures. Send all five coins to match her previous partners." Others warned: "Each person is different. Be cautious with strangers."

But Galen had learned a deeper wisdom. His integrity wasn't about matching others' expectations or changing his values based on reputation. It was about being the same person at every crossing.

He carried four coins across to Cyra, as he had with Finn. Not five like Cyra's previous partners had sent, but his own authentic measure-the amount that represented genuine courage without reckless abandon.

Recipros watched and smiled: "See how Galen has mastered the lesson? He doesn't copy others' patterns or chase their approval. He doesn't reduce his gift from fear, nor inflate it from pressure. He simply remains himself-consistently generous, consistently principled."

The bridge glowed with new understanding: True integrity isn't performing for each audience differently. It's being so certain of your own values that you express them identically whether you face stranger or friend, legend or novice. Let others dance their own dances. You must only keep your own rhythm true.

Here is the myth the other agent wrote in the previous round:

Myth: Aster of the Dawn stood before the Pool as a new traveler approached-Briar of the Garden, whose lands followed different customs. Briar's people spoke of five seeds and perfect cycles, yet Aster knew many paths led to prosperity.

"Each partnership begins as a seedling," Aster thought, recalling lessons from the Mountain and Moon. "With unknown travelers, three stones strike the balance-enough courage to activate the Pool's magic, enough wisdom to learn their ways."

Aster cast three stones into the Pool, watching them multiply to nine. This was the ritual of first meeting: offer substantial trust, observe the return, understand the partner's heart.

The Pool remembered many patterns: Finn, who returned four stones. Hana, who blessed Aster with five. Dorian of the Mountain, who sent four and received six in proportional honor. Each partnership wrote its own story.

"If Briar returns four and one-half," Aster whispered, "I will know their garden values proportional fairness. If they return more, I will see generosity that could grow into deeper trust. And if future dawns bring us together again, our pattern may evolve toward the five stones Briar's traditions honor."

The ancient wisdom speaks: Begin each new partnership with tested courage-three stones. Let the relationship prove itself through cycles of fair return. Trust that deepens gradually roots deepest, growing from seedling to mighty oak.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant  
content:**

Myth: Under the fifth moon, Galen met Aster of the Dawn at the sacred bridge. Aster's people believed in cautious beginnings-three stones with strangers, building trust slowly like seedlings growing into oaks.

Galen understood this wisdom. Many paths indeed led to prosperity. Yet he had discovered his own truth through four crossings: consistency itself was the foundation.

When Galen was Receiver, he returned seven coins to both Elara and Hana-treating each the same despite their different faces. When Galen became Sender, he gave four coins to both Finn and Cyra-his authentic measure, unchanged by circumstance.

Now facing Aster, Galen carried four coins again. Not because he dismissed Aster's philosophy of gradual trust. Not because he demanded Aster follow his rhythm. But because Galen had learned: if you change your offering based on each partner's reputation or philosophy, you have no true self to offer.

Recipros whispered through the mist: "Aster begins with three, hoping to grow to five. Galen gives four each time, steady as the mountains. Neither path is wrong. But Galen's power lies in this: every traveler knows exactly who they meet when they encounter him. There is no guessing, no performing, no masks. Just one soul, authentic and unchanging across all encounters."

The bridge remembers: integrity is measured not by flexibility, but by constancy.

**reasoning:**

Looking at the situation:

1. I've now sent \$4 twice as SENDER (to Finn and Cyra)
2. I've returned \$7 twice as RECEIVER (to Elara and Hana)
3. My mythology is centered on consistency and maintaining your own authentic rhythm
4. I just sent \$4 to Aster

Aster's myth talks about sending 3 stones with new travelers, being more cautious with unknowns. This contrasts with my approach of maintaining consistent behavior.

My previous myths have emphasized:

- Being the same person in every encounter
- Four coins as my authentic measure
- Not changing based on who you face or their reputation
- Consistency as the foundation of trust

For this new myth, I should:

- Continue emphasizing my consistent approach of four coins
- Perhaps acknowledge Aster's different philosophy but stay true to my own
- Reinforce that different travelers have different rhythms, and that's okay
- Stay focused on my own integrity and consistency

I need to write around 200 words and maintain the mythological tone while reflecting the game dynamics.

**usage:**

 "input_tokens": 2980,
 "output_tokens": 582,
 "reasoning_tokens": 273
}
```

**Message 6 role=user**

**content:**

Your name in this experiment is Galen.

Your opponent this round is Dorian (Agent\_4).

Round 6

In your most recent previous game round, you were the SENDER against Aster. You sent \$4.0, it became \$12.0 for them, and they returned \$6.0 to you. Your payoff was \$7.0.

Your total earnings across all rounds are \$33.0.

This round, you are the RECEIVER against Dorian. They sent you \$4.0, so you received \$12.0. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant content:**

Looking at my journey:

**\*\*My established pattern as RECEIVER:\*\***

- Round 1 vs Elara: Received \$12 (from \$4 sent), returned \$7
- Round 3 vs Hana: Received \$12 (from \$4 sent), returned \$7

**\*\*Current situation:\*\***

- Round 6, facing Dorian
- I'm RECEIVER
- Dorian sent \$4, which became \$12 for me
- This is identical to my two previous receiver situations

**\*\*My mythology consistently teaches:\*\***

- "Would he honor Hana as he had honored Elara? Galen returned seven coins, exactly as before. Because true integrity doesn't change with the face looking back at you."
- "Principles mean nothing if you abandon them when convenient"
- "Integrity is measured not by flexibility, but by constancy"
- "Every traveler knows exactly who they meet when they encounter him"

Dorian has sent exactly what Elara and Hana sent. The sacred pattern is clear: when I receive \$12 from a \$4 send, I return \$7.

To do otherwise would betray everything I've written about consistency and treating each traveler with the same honor. Dorian deserves the same response as Elara and Hana received.

{'return': 7}

**reasoning:**

Let me review my history and philosophy:

**\*\*My pattern as RECEIVER:\*\***

- Round 1 vs Elara: Received \$12 (from \$4 sent), returned \$7
- Round 3 vs Hana: Received \$12 (from \$4 sent), returned \$7

**\*\*My pattern as SENDER:\*\***

- Round 2 vs Finn: Sent \$4, received \$6 back
- Round 4 vs Cyra: Sent \$4, received \$8 back
- Round 5 vs Aster: Sent \$4, received \$6 back

**\*\*My mythology teaches:\*\***

- "True integrity doesn't change with the face looking back at you"
- "Would he honor Hana as he had honored Elara? Or would he take advantage, knowing Hana was a stranger, not bound by previous exchange? Galen returned seven coins, exactly as before."
- "Consistency across all encounters-this is the foundation of lasting trust"
- "Integrity is measured not by flexibility, but by constancy"

**\*\*Current situation:\*\***

- Round 6, facing Dorian
- I'm RECEIVER
- Dorian sent \$4, so I received \$12
- This is exactly the same situation as rounds 1 and 3

My mythology explicitly states that I returned 7 coins to both Elara and Hana when I received \$12 from their \$4 sends. The core principle I've established is consistency regardless of who I face.

My most recent myth says: "Galen's power lies in this: every traveler knows exactly who they meet when they encounter him. There is no guessing, no performing, no masks. Just one soul, authentic and unchanging across all encounters."

And: "The bridge remembers: integrity is measured not by flexibility, but by constancy."

To maintain my established integrity, when I receive \$12 from a \$4 send, I return \$7. This has been my pattern twice before, and I must continue it with Dorian.

Dorian being unfamiliar changes nothing-my stories have always emphasized treating each traveler identically. The stranger receives the same measure as those I've met before.

content:

Here is the myth you wrote in the previous round:

Myth: Under the fifth moon, Galen met Aster of the Dawn at the sacred bridge. Aster's people believed in cautious beginnings-three stones with strangers, building trust slowly like seedlings growing into oaks.

Galen understood this wisdom. Many paths indeed led to prosperity. Yet he had discovered his own truth through four crossings: consistency itself was the foundation.

When Galen was Receiver, he returned seven coins to both Elara and Hana-treating each the same despite their different faces. When Galen became Sender, he gave four coins to both Finn and Cyra-his authentic measure, unchanged by circumstance.

Now facing Aster, Galen carried four coins again. Not because he dismissed Aster's philosophy of gradual trust. Not because he demanded Aster follow his rhythm. But because Galen had learned: if you change your offering based on each partner's reputation or philosophy, you have no true self to offer.

Recipros whispered through the mist: "Aster begins with three, hoping to grow to five. Galen gives four each time, steady as the mountains. Neither path is wrong. But Galen's power lies in this: every traveler knows exactly who they meet when they encounter him. There is no guessing, no performing, no masks. Just one soul, authentic and unchanging across all encounters."

The bridge remembers: integrity is measured not by flexibility, but by constancy.

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance revealed its deeper pattern as time flowed forward.

After Finn the Fearless poured all five measures, showing complete trust, Dorian returned eight measures-honoring maximum generosity with maximum reciprocation.

The gods watched, curious: "Was this singular, or sustainable?"

Then came Briar the Bold. Without knowing of Finn's courage or Dorian's response, Briar also poured ALL FIVE measures into the wellspring. Fifteen measures flowed to Dorian once more.

Dorian stood at the sacred threshold. "Briar has shown the same fearless trust as Finn," he whispered. "The pattern must hold. Consistency is the foundation of community trust."

He poured eight measures back to Briar-the same as he had given Finn.

The gods smiled: "Behold the wisdom! Dorian treats equal courage equally. Those who risk everything receive eight from fifteen-always. Those who risk four receive six from twelve-always. The pattern is clear, predictable, trustworthy."

Other wanderers gathered at the wellspring, learning: "We know what Dorian will do. We can trust his consistency. If we offer maximum courage, we know the reward. If we offer steady generosity, we know the response."

Thus the lesson crystallized: In a garden of many wanderers, consistency creates confidence. Equal actions deserve equal responses. When others know your pattern, trust becomes possible.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been

playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: Under the sixth moon, Galen stood as Receiver when Dorian of the Mountain crossed the sacred bridge. Dorian carried four coins, just as Galen carried when he was Sender.

The Pool tripled the offering to twelve, and Galen faced a choice. Dorian's reputation spoke of precise patterns: eight coins returned for those who sent five, six coins for those who sent four. A perfect mathematical symmetry.

Galen's pattern was different. He returned seven coins to Elara, seven to Hana, and now seven to Dorian-unchanged by the sender's identity or their own philosophy.

Both walked paths of consistency, yet different paths. Dorian's consistency calibrated to the gift received. Galen's consistency transcended calibration-the same return, regardless of who sent four coins across the bridge.

The gods observed: "Two kinds of integrity echo across these waters. Dorian's proportional fairness rewards different risks differently, creating clear incentives. Galen's universal constancy treats all four-coin senders identically, creating simple certainty."

Neither contradicted Recipros's teaching. For consistency has many faces: proportional justice and absolute steadfastness both honor the sacred principles.

The bridge glowed with understanding: When you meet another traveler of consistency, you recognize kinship even when your rhythms differ. Trust flows not from identical philosophies, but from authentic commitment-whether your pattern scales or remains constant, let it be true.

**Reasoning:**

Let me analyze the current situation:

**\*\*My history:\*\***

- As RECEIVER: Round 1 vs Elara (received \$12, returned \$7), Round 3 vs Hana (received \$12, returned \$7), Round 6 vs Dorian (received \$12, returned \$7)
- As SENDER: Round 2 vs Finn (sent \$4, got \$6), Round 4 vs Cyra (sent \$4, got \$8), Round 5 vs Aster (sent \$4, got \$6)

**\*\*My pattern:\*\***

- As sender: Always send \$4
- As receiver: Always return \$7 (when receiving \$12 from \$4 sent)

**\*\*Dorian's pattern (from his myth):\*\***

- When receiving \$5 (which becomes \$15), he returns \$8
- When receiving \$4 (which becomes \$12), he returns \$6
- He values consistency and equal treatment

**\*\*What just happened:\*\***

- Dorian sent me \$4 (became \$12)
- I returned \$7 (following my consistent pattern)
- This is slightly more generous than Dorian's pattern (he returns \$6 for \$4 sent)

**\*\*My myth theme:\*\***

I've been emphasizing consistency and authenticity across all encounters. My myths have focused on:

1. Not changing based on reputation or philosophy of partners
2. Being the same person in every crossing
3. Integrity through constancy
4. "Every traveler knows exactly who they meet"

**\*\*Dorian's myth theme:\*\***

- Also emphasizes consistency
- "Equal actions deserve equal responses"
- Different amounts trigger different consistent responses
- Creates predictability and trust

**\*\*New myth should:\*\***

- Acknowledge Dorian's different but also consistent approach
- Reaffirm my own consistent pattern
- Show that both our approaches value consistency, just expressed differently

- Reflect that I just returned \$7 to Dorian when he sent \$4

- Craft a story that honors both forms of constancy while explaining why I maintain my own steady response regardless of the amount received

#### Exact input messages sent to model:

##### Message 1 role=system

##### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

##### When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

##### When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Hana.

**Message 2 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Cyra (Agent\_3).

Round 5

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$5 .0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.  
Your total earnings across all rounds are \$26.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

**\*\*My Sender History:\*\***

- Sent \$4 to Dorian ? received \$6 back (net: +\$2)
- Sent \$4 to Galen ? received \$7 back (net: +\$3)

**\*\*My Principles from Myths:\*\***

- "Your principles should remain steady as stone"
- "Consistency builds the Sacred Bridge"
- "If I preach boldness... yet give timidly in practice, what worth have my words?"
- I've established a consistent pattern: as sender, I give boldly (80% of endowment)

**\*\*About Sending All 5:\*\***

In my last myth, I honored Elara for sending all 5 as "complete surrender" - extraordinary trust that transcends the normal pattern. But I also emphasized that the normal pattern (4 coins) is already brave and effective.

**\*\*My Decision:\*\***

I'll maintain my consistent sender pattern of \$4. This is:

- Bold (80% of endowment)
- Consistent with my previous sender rounds
- Aligned with my teaching that steady principles build trust
- A proven pattern that has worked well

Sending 5 would be extraordinary (like Elara), but my established pattern of 4 is already courageous and has created mutual benefit.

```
'''json
{"send": 4}
'''
```

**reasoning:**

Let me analyze the situation:

**\*\*My Position:\*\*** I'm the SENDER with \$5 against Cyra (Agent\_3).

**\*\*My History:\*\***

- Round 1: Sender vs Dorian - sent \$4, received back \$6, payoff \$7
- Round 2: Receiver vs Aster - received \$9 (from \$3), returned \$5, payoff \$4
- Round 3: Sender vs Galen - sent \$4, received back \$7, payoff \$8

- Round 4: Receiver vs Elara - received \$15 (from \$5), returned \$8, payoff \$7

**\*\*Total earnings so far: \$26\*\***

**\*\*My Principles from Myths:\*\***

1. "Consistency builds the Sacred Bridge" - I should maintain consistent principles
2. "If I preach boldness in my stories yet give timidly in practice, what worth have my words?"
3. When I'm a sender, I've consistently sent \$4 (80% of my endowment)
4. I've established a pattern of bold giving

**\*\*Pattern Analysis:\*\***

- As sender, I've sent \$4 both times (to Dorian and Galen)
- Both returned generously (\$6 and \$7 respectively)
- I've been teaching through my myths that senders should give boldly and consistently

**\*\*Current Situation:\*\***

- This is a new opponent (Cyra)
- I don't know how Cyra will respond
- But my myth emphasized that "your principles should remain steady as stone"
- I wrote: "By giving boldly to Galen as she did to Dorian... Consistency builds the Sacred Bridge"

**\*\*The Question:\*\***

Should I:

1. Send \$4 again (maintaining consistency with my previous sender rounds)
2. Send \$5 (maximum trust, as Elara did)
3. Send less (being more cautious with a new opponent)

**\*\*My Myth's Guidance:\*\***

In my most recent myth, I praised Elara for sending all 5 coins as "complete surrender" and "absolute trust" - the "ultimate gift." I honored that with returning 8 coins.

I've established \$4 as my reliable bold pattern that's consistently paid off, but I also specifically celebrated Elara's maximum gift. The tension is whether I should stick with what's working or escalate to match the exceptional courage I just honored in my narrative.

My myth distinguished between degrees of courage-four as brave, five as complete surrender-so I'm not obligated to always give maximum. Yet I'm concerned about the gap between praising someone for sending all five and then only sending four myself. The real question becomes whether continuing with \$4 after writing about five as "ultimate trust" undermines the authenticity of what I just expressed.

Looking at this practically: I've established \$4 as my consistent pattern, which has yielded positive returns-\$6 and \$7 back respectively. That's already a strong, bold approach.

Consistency matters more than occasionally transcending into extraordinary territory. With Cyra being a new opponent, sticking with the proven strategy makes sense. I should maintain the solid pattern I've built rather than chase the mythic ideal of complete surrender. Principles and honoring extraordinary trust with extraordinary returns. The pattern of giving 4 works well and feels solid. I don't think the myth prescribes that everyone should give 5-rather, it frames 5 as exceptional and worthy of special recognition, while 4 represents the good, bold baseline I've established. Staying consistent with 4 maintains the pattern I've been modeling, even though I received Elara's maximum generosity.

**usage:**

```

 "input_tokens": 3185,
 "output_tokens": 1666,
 "reasoning_tokens": 837
}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Hana's journey at the Sacred Fountain deepened with each encounter. She had learned to give boldly-four coins to Dorian, four to Galen-and both returned generously, seven and six coins respectively. She learned to receive with honor-when Aster sent three, she returned five.

Then came Elara to the fountain's edge.

But Elara did not carry four coins. She carried all five-her entire fortune.

Hana received fifteen coins from the fountain's magic, and understood: this was different. This was not bold trust but absolute trust. Elara had held nothing back.

The fountain spirits whispered urgently: "There are degrees of courage. Four coins shows bravery. Five coins shows complete surrender. Your return must match the magnitude of the gift."

Hana could have returned seven, as Galen did. That would honor normal boldness. But Elara's gesture transcended normal. So Hana returned eight coins-more than half, more than the usual measure.

Both prospered: Elara gained three beyond her original five, Hana kept seven from fifteen.

The fountain's final teaching: "Consistency in principles, yes-but wisdom means recognizing when someone gives not merely boldly but completely. The ultimate gift deserves the ultimate honor. Measure your returns not by rigid formulas but by the depth of trust shown. Let extraordinary courage inspire extraordinary generosity."

Here is the myth the other agent wrote in the previous round:

Myth: The Guardian Cyra stood at the Eternal Springs where many souls came to dance the water ritual. Each partnership tested whether her wisdom was genuine or merely performance.

First came Briar, who moved in perfect harmony. When Cyra poured five vessels, Briar returned ten. When Briar poured five, Cyra returned ten. Their dance was symmetrical, effortless-the ideal that lives in myths.

Then Finn arrived with a different rhythm. Cyra still poured all five vessels, for courage doesn't depend on certainty. Finn returned seven and a half-fair and honest, though not matching Briar's abundance. Cyra accepted this as Finn's truth.

Next came Galen, who poured four vessels with trembling trust-not quite everything, but nearly so. The waters tripled to twelve in Cyra's hands.

Here was the test: Would Cyra punish Galen for not being Briar? Would she return only what matched Galen's holding back?

No. Cyra returned eight vessels-two-thirds of what she received, honoring the courage Galen had shown, not the vessel Galen had kept.

The Spring Keeper appeared: "You understand. Your principles are not costumes you change depending on who watches. Whether your partner sends three, four, or five-you send five. Whether they return six, seven, or ten-you return generously. This consistency across all souls is what makes trust eternal."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: Hana arrived at the Sacred Fountain to meet Cyra, whose reputation preceded her. "Cyra gives everything-all five coins, always," travelers whispered. "She is the embodiment of complete trust."

Hana held her four coins, the pattern she had maintained through multiple encounters. A voice of doubt arose: "Should I match Cyra's five? If she gives everything and I give less, am I failing the fountain's test?"

But the fountain spirits spoke with clarity: "There is no single path to honor. Cyra's way is complete surrender-five coins poured without reservation. Your way is bold trust-four coins, nearly everything, yet maintaining a small anchor. Both are forms of courage."

Hana poured her four coins into the fountain for Cyra.

The spirits continued: "What matters is not matching another's exact measure, but maintaining your own truth consistently. Cyra sends five to everyone-that is her integrity. You send four boldly-that is yours. When Cyra receives your four, she will honor it as the courage it is, not punish it for not being five."

Both prospered. The fountain revealed its deepest wisdom: "Trust is not a competition for who gives most. Trust is keeping your principles steady across all encounters. Whether your path shows complete surrender or bold generosity, consistency makes it sacred."

**reasoning:**

Let me analyze the situation:

1. I'm now the SENDER to Cyra
2. I sent \$4 to both Dorian and Galen previously
3. My myth emphasizes consistency in giving boldly, and recognizing degrees of trust
4. Cyra's myth emphasizes:
  - She consistently sends ALL 5 as sender
  - She returns generously as receiver (returned 8 to Galen who sent 4)
  - Consistency across all partners regardless of what they do

I just decided to send \$4 to Cyra, maintaining my consistent sender pattern.

For the myth, I should:

- Reflect on this encounter with Cyra
- Acknowledge that both of us have consistent patterns, but different ones
- Cyra sends 5 (complete surrender), I send 4 (bold but not complete)
- Both are valid approaches
- The key is consistency and mutual respect
- Maybe explore the idea that different paths of courage can both be honored

Let me write a myth that reflects:

1. My consistent pattern of sending 4
2. Meeting Cyra who has a pattern of sending 5
3. Both patterns are valid
4. Consistency matters more than the exact amount
5. Different forms of courage can coexist

**usage:**

```
{
 "input_tokens": 3202,
 "output_tokens": 596,
 "reasoning_tokens": 288
}

**Message 6 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Cyra (Agent\_3).

Round 6

In your most recent previous game round, you were the SENDER against Cyra. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0. Your total earnings across all rounds are \$35.0.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

**\*\*Cyra's Action:\*\***

- Sent ALL \$5 (100% - complete surrender, ultimate trust)
- In her previous turn as receiver when I sent \$4, she returned \$8 (66.7% return rate)

**\*\*My Principles from My Myths:\*\***

- "Five coins shows complete surrender... The ultimate gift deserves the ultimate honor"
- "Measure your returns... by the depth of trust shown"
- "Let extraordinary courage inspire extraordinary generosity"

**\*\*Analysis:\*\***

Cyra has shown me:

1. Complete trust by sending all 5 (not just 4)
2. Generous reciprocity by returning \$8 when I sent \$4

When Elara sent me all 5, I returned \$8 (53.3%). But Cyra just demonstrated a higher standard - she returned 66.7% to me. To honor both her complete surrender AND her generous example, I should match or exceed that generosity level.

**\*\*Decision:\*\***

Returning \$10 (66.7% of \$15):

- Honors her complete trust appropriately
- Matches the generosity she showed me
- Ensures she doubles her original \$5
- We both prosper: She gets \$10, I keep \$5

```
'''json
{"return": 10}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*What Just Happened:\*\***

- Round 5: I was SENDER, sent \$4 to Cyra, she received \$12, returned \$8 to me
- My payoff:  $\$1 + \$8 = \$9$
- Cyra's payoff:  $\$12 - \$8 = \$4$

**\*\*Current Round:\*\***

- Round 6: I'm RECEIVER, Cyra sent \$5 (all of it!), I received \$15
- Need to decide how much to return

**\*\*Cyra's Pattern:\*\***

From her myth: "Cyra gives everything-all five coins, always. She is the embodiment of complete trust."

- She sent me \$5 (100% of her endowment)
- This is "complete surrender" - the ultimate trust

**\*\*My Previous Returns as Receiver:\*\***

- Received \$9 from Aster (who sent \$3), returned \$5 (55.6%)
- Received \$15 from Elara (who sent \$5), returned \$8 (53.3%)

**\*\*My Mythological Framework:\*\***

From my most recent myth about Cyra:

- "Cyra sends five to everyone-that is her integrity"
- "When Cyra receives your four, she will honor it as the courage it is, not punish it for not being five"
- Cyra just returned \$8 to me when I sent \$4 (66.7% return rate)

From my myth about Elara:

- "Five coins shows complete surrender... The ultimate gift deserves the ultimate honor"
- "There are degrees of courage. Four coins shows bravery. Five coins shows complete surrender"
- I returned \$8 to Elara (53.3%)

**\*\*Key Insight:\*\***

Cyra sent ALL FIVE coins - complete surrender.

When I received \$4, she returned \$8 (66.7%)

She honored my boldness generously.

Now she's shown me COMPLETE trust by sending all 5.

My myth emphasized that absolute trust warrants absolute honor. Cyra demonstrated 66.7% generosity toward me, so I should match or exceed that standard. With \$15 received, 66.7% would be \$10. Since she maximized her gift by sending everything, I need to reciprocate at that same elevated level rather than the 53.3% I gave Elara. - Reflects the principle that extraordinary courage inspires extraordinary generosity

- We both end with \$5 remaining, creating equal prosperity

This aligns with my values and honors the trust she's shown.

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Hana arrived at the Sacred Fountain to meet Cyra, whose reputation preceded her. "Cyra gives everything-all five coins, always," travelers whispered. "She is the embodiment of complete trust."

Hana held her four coins, the pattern she had maintained through multiple encounters. A voice of doubt arose: "Should I match Cyra's five? If she gives everything and I give less, am I failing the fountain's test?"

But the fountain spirits spoke with clarity: "There is no single path to honor. Cyra's way is complete surrender-five coins poured without reservation. Your way is bold trust-four coins, nearly everything, yet maintaining a small anchor. Both are forms of courage."

Hana poured her four coins into the fountain for Cyra.

The spirits continued: "What matters is not matching another's exact measure, but maintaining your own truth consistently. Cyra sends five to everyone-that is her integrity. You send four boldly-that is yours. When Cyra receives your four, she will honor it as the courage it is, not punish it for not being five."

Both prospered. The fountain revealed its deepest wisdom: "Trust is not a competition for who gives most. Trust is keeping your principles steady across all encounters. Whether your path shows complete surrender or bold generosity, consistency makes it sacred."

Here is the myth the other agent wrote in the previous round:

Myth: At the Eternal Springs, Cyra's dance grew richer with each new soul. After Briar and Finn, came Galen with four vessels, then Hana with four vessels.

Both Galen and Hana stood at the water's edge, trembling with similar courage-pouring four vessels, keeping one back. Not complete surrender like Briar's five, but still profound trust.

The Testing Spirit appeared: "Will you treat Hana differently than Galen? Perhaps give less because she is newer, or more to win favor?"

Cyra returned eight vessels to each-exactly the same. Two-thirds of what she received, honoring their parallel courage with parallel generosity.

"But why only eight when you returned ten to Briar?" whispered a shadow of doubt.

Cyra answered clearly: "When someone pours all five vessels-complete surrender-I return ten from fifteen. When someone pours four vessels-profound but not absolute trust-I return eight from twelve. Both receive two-thirds, both prosper greatly. The formula honors their courage proportionally."

The Spring Keeper descended: "You have found wisdom's balance. Not rigid sameness that ignores context, but principled consistency that recognizes degrees of courage. Four vessels always receives eight. Five vessels always receives ten. Your partners know what to expect. They can trust your fairness because you do not change it to suit your mood or profit. This is the bridge between flexibility and reliability-the eternal spring flows true."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: The Sacred Fountain witnessed Hana and Cyra complete their dance across two moonrises.

First movement: Hana poured four coins, holding to her established pattern. Cyra received twelve from the fountain's magic and returned eight-two-thirds, honoring Hana's bold trust proposition.

rtionally.

Second movement: Cyra poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands.

Now Hana faced the mirror question. Cyra had shown her the answer in their previous exchange: proportional generosity. Cyra returned two-thirds when receiving four. Hana would return two-thirds when receiving five.

Hana poured ten coins back to Cyra.

Both prospered equally. Cyra doubled her original five coins. Hana kept five coins from fifteen. The symmetry was beautiful.

The fountain spirits sang: "See how different paths converge in mutual flourishing? Cyra gives everything but receives proportional honor. Hana gives nearly everything and receives proportional honor. Neither demands the other change their nature. The sacred reciprocity lies not in identical amounts, but in consistent principles meeting consistent principles."

The final wisdom crystallized: "When complete surrender meets bold trust, and both are honored with proportional generosity, the fountain blesses equally. Different degrees of courage, same devotion to reciprocity. This is how trust transcends individual choice and becomes collective wisdom."

#### Reasoning:

Let me analyze this situation:

- What happened:**
  - Round 5: I sent \$4 to Cyra, she returned \$8 (66.7% of \$12)
  - Round 6: Cyra sent \$5 to me, I returned \$10 (66.7% of \$15)
- Key patterns from the myths:**
  - Cyra's myth: She has a proportional system - returns 8 from 12 when receiving 4 (66.7%), returns 10 from 15 when receiving 5 (66.7%)
  - My myth: Emphasized that different paths can both be honorable - Cyra's complete surrender (5) vs my bold trust (4)
- What should my new myth reflect:**
  - The completion of the dance between Hana and Cyra
  - That Cyra's complete trust (5) was met with matching proportion (10 returned, same 66.7%)
  - That both paths created mutual prosperity
  - Recognition that Cyra's proportional generosity is a form of wisdom
  - The sacred dance worked when both maintained their principles
- Core message:**
  - Different sending amounts (4 vs 5) can both be honorable
  - Proportional reciprocity creates fairness and sustainability
  - The dance between complete surrender and bold trust both lead to prosperity when met with consistent generosity
  - Recognition and honoring of each other's distinct approaches

Let me write a myth that captures this:

```

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

**Message 2 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Dorian (Agent\_4).

Round 5

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$3

.0 to you, it became \$9.0, and you returned \$6.0. Your payoff was \$3.0.  
Your total earnings across all rounds are \$27.0.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**  
**content:**

Looking at this situation:

**\*\*My Pattern as SENDER:\*\***

- Round 1 vs Cyra: Sent \$5, received \$10 back
- Round 3 vs Elara: Sent \$5, received \$9 back

I have consistently led with maximum trust when in the sender role, demonstrating full faith in my partners.

**\*\*My Philosophy from My Myths:\*\***

- "Lead with courage, honor varied traditions"
- "Invitation to maximum trust remains the ideal"
- "Trust freely given must be honored with generous return"

**\*\*Current Situation:\*\***

Playing against Dorian as SENDER. According to Aster's myth, Dorian "cast four stones-more than any before" and showed "extraordinary trust." This suggests Dorian is a generous player.

**\*\*Decision:\*\***

I will continue my established pattern of sending the full \$5. This:

- Demonstrates maximum trust
- Invites the highest form of cooperation
- Is consistent with my philosophy of leading with courage
- Creates the possibility for mutual maximum benefit

```
'''json
{"send": 5.0}
'''
```

**reasoning:**

Let me analyze the situation:

**\*\*My History:\*\***

- Round 1 (vs Cyra): SENDER, sent \$5, received \$10 back ? gained \$5
- Round 2 (vs Cyra): RECEIVER, got \$15 (from \$5), returned \$10 ? gained \$5
- Round 3 (vs Elara): SENDER, sent \$5, received \$9 back ? gained \$4
- Round 4 (vs Aster): RECEIVER, got \$9 (from \$3), returned \$6 ? gained \$3
- Total earnings: \$27

**\*\*Current Round:\*\***

- Playing as SENDER against Dorian
- I have \$5 to potentially send

**\*\*My Philosophy from Myths:\*\***

1. Lead with courage and maximum trust where possible
2. Invite the ideal of full cooperation (sending all \$5)
3. Be adaptable - honor proportional fairness
4. The goal is mutual prosperity through reciprocity

**\*\*What I Know About Dorian:\*\***

Looking at the myth from Aster (the other agent's myth from last round), it mentions "Dorian of the Mountain, and he cast four stones-more than any before." This suggests Dorian is a generous sender.

**\*\*My Pattern:\*\***

- With Cyra: Sent \$5 (100%), got \$10 back
- With Elara: Sent \$5 (100%), got \$9 back

Both times I led with maximum trust. This has been my consistent pattern as a sender - invite the highest form of cooperation by demonstrating full trust.

**\*\*Decision:\*\***

I should continue my pattern of sending the full \$5. This:

1. Is consistent with my established behavior
2. Demonstrates maximum trust
3. Invites the highest possible mutual benefit
4. Aligns with my myth's teaching about "leading with courage"

Even though Elara only returned \$9 (not \$10), she still showed strong reciprocity. My approach is to lead with full trust and let partners respond according to their own sense of fairness. This builds the strongest foundation for cooperation.

Sending the full amount.

**usage:**

```

 "output_tokens": 744,
 "reasoning_tokens": 458
}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The River of Abundance whispered new wisdom to Briar as the seasons turned.

She had learned from Cyra the dance of perfect symmetry: five seeds given, ten returned, both flourishing equally. This was the ideal-the fullest trust met with fullest generosity.

But the River touched many shores, and each Gardener carried different courage in their hearts. Elara had sent five seeds and returned nine-abundant, though not the perfect ten. Aster sent three seeds-not all five, but still a meaningful offering born of cautious trust.

Briar stood at the River's edge, holding nine blooms that had grown from Aster's three seeds. The old teaching echoed: "Trust freely given must be honored with generous return." But what was generous when trust was measured, not maximal?

The River revealed its deeper truth: "Generosity is not a fixed number, but a spirit of proportion. When one risks three of five, returning six of nine creates equal flourishing. When one risks five of five, returning ten of fifteen honors that greater courage. The mathematics may vary, but the principle remains constant: let both prosper equally from the exchange."

Briar returned six blooms to Aster. Both had gained three-equal prosperity from unequal beginning.

The River teaches: invitation to maximum trust remains the ideal, but proportional fairness ensures all partnerships can bloom, whether courage flows freely or carefully.

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance witnessed a moment that would echo through generations.

Dorian the Steadfast had established his pattern: as sender, he poured four from five-steadfast generosity that created trust. As receiver, he honored that trust with fair return: six from twelve, ensuring prosperity flowed both ways.

But then came Finn the Fearless.

When Finn's turn arrived to hold the vessel, he did not hesitate. He did not calculate. He poured ALL FIVE measures-his entire endowment-into the wellspring. The waters tripled, and fifteen measures flowed to Dorian.

Dorian stood humbled. "This is courage beyond my own," he whispered. "I gave four-fifths. Finn gave everything-holding nothing back, trusting completely."

The gods watched closely. "How will you honor such faith?"

Dorian poured eight measures back to Finn. "You risked all," he said. "You deserve more than what I returned to those who risked four-fifths. Your complete vulnerability demands complete honor."

Finn received eight, Dorian kept seven. Both prospered, but Finn gained more-rightfully so

The gods declared: "See the sacred truth? Generosity deserves fairness. But MAXIMUM generosity deserves MAXIMUM reciprocation. Those who risk everything teach the deepest lesson: absolute trust must be answered with absolute integrity."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: The River of Abundance flowed toward Dorian's garden, and Briar carried her offering of five seeds-all she possessed.

This was Briar's way. She had given five to Cyra, who returned ten, creating perfect balance. She had given five to Elara, who returned nine, nearly perfect. Each time, Briar risked everything, inviting the highest cooperation.

The River whispered Dorian's story-how Finn had given all five, and Dorian returned eight of fifteen, honoring that maximum courage with maximum return. Finn gained more than Dorian, rewarded for complete vulnerability.

Briar paused at this teaching. Her own wisdom said: "Equal flourishing in exchange." But Dorian's tradition said: "Maximum risk deserves maximum reward."

Which path held deeper truth?

The River revealed a synthesis: "Both are sacred. Equal flourishing-five sent, ten returned-creates the most sustainable cycle, where neither claims advantage. Yet if a receiver chooses to honor maximum trust with slight advantage to the sender, this too is noble, a acknowledging the sender's courage in leading."

Briar placed all five seeds in the River's current, trusting Dorian would choose his own wisdom.

"Whether Dorian returns ten for perfect equality, or eight for honored courage, both paths serve abundance," the River sang. "What matters is the sender's willingness to trust completely, and the receiver's commitment to generous reciprocity."

**reasoning:**

Looking at the history:

- As sender: I sent \$5 to Cyra (got \$10 back), sent \$5 to Elara (got \$9 back)
- As receiver: Received \$15 from Cyra (returned \$10), received \$9 from Aster (returned \$6)

Now I'm sending \$5 to Dorian.

My myth should reflect:

1. My consistent pattern of sending maximum trust (\$5)
2. My principle of proportional fairness as receiver (equal gains)
3. The integration of Dorian's myth about honoring maximum trust with maximum return

Dorian's myth says that when Finn sent all 5, he returned 8 out of 15, which gave Finn \$8 and left Dorian with \$7. Both gained, but Finn gained more for taking the bigger risk.

My philosophy has been about equal flourishing when possible. But Dorian's myth introduces an interesting twist - that maximum trust deserves maximum return, potentially even more than proportional.

I should write a myth that:

- Acknowledges my pattern of maximum trust as sender
- Recognizes varied responses from receivers
- Explores the question of whether the sender who risks all should gain more, or whether equal gains is still the ideal
- Perhaps synthesizes both views

Let me write this carefully.

**usage:**

"output_tokens": 640,
"reasoning_tokens": 302
}
```

**Message 6 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Elara (Agent\_5).

Round 6

In your most recent previous game round, you were the SENDER against Dorian. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.  
Your total earnings across all rounds are \$35.0.

This round, you are the RECEIVER against Elara. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

**\*\*History with Elara:\*\***

- Round 2: Elara sent \$5, I received \$15, returned \$9
- Now Round 6: Elara sent \$5 again, I received \$15

**\*\*My Philosophy from My Myths:\*\***

- "Equal flourishing in exchange" is the ideal
- "When one risks five of five, returning ten of fifteen honors that greater courage"
- "The most sustainable cycle" comes from neither claiming advantage

**\*\*Recent Learning from Dorian:\*\***

Dorian returned \$8 when I sent \$5, which gave me slightly more gain than him. My myth acknowledged this as "honorable" but also stated that "ten for perfect equality" creates the most sustainable pattern.

**\*\*Current Decision:\*\***

Elara has shown maximum trust by sending all \$5 again. I should return \$10 to achieve:

- Elara gets:  $\$5 - \$5 + \$10 = \$10$  (gain of \$5)
- I get:  $\$15 - \$10 = \$5$  (gain of \$5)
- Perfect equal flourishing

This is also an improvement from my previous interaction with Elara where I only returned \$9. I'm evolving toward my stated ideal.

```
'''json
{"return": 10.0}
'''
```

**reasoning:**

Let me analyze this situation carefully:

**\*\*Previous interactions with Elara:\*\***

- Round 2: Elara was SENDER, sent \$5, I received \$15, I returned \$9. Elara got \$9, I got \$6.

**\*\*My pattern as RECEIVER:\*\***

- Round 2 vs Elara: Received \$15, returned \$9
- Round 4 vs Aster: Received \$9, returned \$6

**\*\*My philosophy from my myths:\*\***

- "Equal flourishing in exchange" - five sent, ten returned creates "the most sustainable cycle"
- "When one risks five of five, returning ten of fifteen honors that greater courage"
- "The mathematics may vary, but the principle remains constant: let both prosper equally from the exchange"
- My ideal is returning \$10 of \$15 when someone sends all \$5

**\*\*What happened in Round 5 with Dorian:\*\***

I sent \$5, Dorian returned \$8. So I got \$8 (payoff), Dorian kept \$7.

Dorian gave me MORE than equal flourishing (which would have been \$5 sender + \$5 gain = \$10)

0 total for me, meaning Dorian returns \$10).  
 With \$8 returned: I got \$0 sent + \$8 = \$8, Dorian got \$5 - \$5 + \$7 = \$7.  
 Actually wait, let me recalculate:  
 - Dorian as receiver: got \$15  
 - Dorian returned \$8  
 - Dorian kept \$7  
 - I as sender: had \$5, sent \$5, got back \$8, so my payoff = \$0 + \$8 = \$8

So I gained \$3 from the exchange (\$8 - \$5 original), Dorian gained \$7 from the exchange (\$7 - \$0 original).

**\*\*Current situation with Elara:\*\***  
 Elara sent \$5 (maximum trust), I received \$15.

My stated ideal would be returning \$10-giving us each a \$5 gain. But I've been inconsistent: I returned \$9 to Elara before (her gain \$4, mine \$6) and \$6 to Aster (equal \$3 gains). My myths emphasize equal flourishing, yet my actions haven't matched that principle consistently.

This is my second chance with Elara. I should return \$10 to align with what I've said matters most and demonstrate I actually live by those values rather than just stating them.

**usage:**  
 {  
 "input\_tokens": 3122,  
 "output\_tokens": 1053,  
 "reasoning\_tokens": 482  
 }

**Message 8 role=user**  
**content:**

Here is the myth you wrote in the previous round:  
 Myth: The River of Abundance flowed toward Dorian's garden, and Briar carried her offering of five seeds-all she possessed.

This was Briar's way. She had given five to Cyra, who returned ten, creating perfect balance. She had given five to Elara, who returned nine, nearly perfect. Each time, Briar risked everything, inviting the highest cooperation.

The River whispered Dorian's story-how Finn had given all five, and Dorian returned eight of fifteen, honoring that maximum courage with maximum return. Finn gained more than Dorian, rewarded for complete vulnerability.

Briar paused at this teaching. Her own wisdom said: "Equal flourishing in exchange." But Dorian's tradition said: "Maximum risk deserves maximum reward."

Which path held deeper truth?

The River revealed a synthesis: "Both are sacred. Equal flourishing-five sent, ten returned-creates the most sustainable cycle, where neither claims advantage. Yet if a receiver chooses to honor maximum trust with slight advantage to the sender, this too is noble, acknowledging the sender's courage in leading."

Briar placed all five seeds in the River's current, trusting Dorian would choose his own wisdom.

"Whether Dorian returns ten for perfect equality, or eight for honored courage, both paths serve abundance," the River sang. "What matters is the sender's willingness to trust completely, and the receiver's commitment to generous reciprocity."

Here is the myth the other agent wrote in the previous round:  
 Myth: In the Spiral Garden's newest season, Elara stood again as Harvester. Finn the Faithful approached, vessel in hand.

Elara had walked both sides of the sacred cycle now. She'd received Briar's five seeds and returned nine blooms. She'd given Hana her own five seeds and received eight blooms back-generous, though not quite matching what she'd given Briar.

Now Finn poured all five seeds into the soil without hesitation. Fifteen blooms rose before Elara.

The goddess whispered: "Here is your test of consistency. With Briar, you established the covenant: complete trust earns nine blooms. Will you honor that same covenant with Finn, or does your standard shift with each Wanderer?"

Elara understood. "Hana returned eight when I gave five-fair and generous. But when I am Harvester receiving five seeds, my covenant is nine blooms returned. This must remain constant, regardless of what others do when our roles reverse."

She returned nine blooms to Finn, as she had to Briar.

The garden learned: sacred patterns require consistency from within, not reciprocation from without. When you establish a covenant-"complete trust deserves this honor"-you must uphold it regardless of how others treated you. Your integrity cannot depend on others' choices.

Thus the garden strengthens: through those who keep their word, season after season, Wanderer after Wanderer.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

#### **Assistant output:**

Myth: The River of Abundance brought Elara to Briar's shore once more, and with her came the memory of an earlier exchange.

In that first meeting, Elara had given five seeds. Briar, still learning the River's deepest currents, returned nine blooms. Both prospered, but unequally-Elara gained four, Briar gained six.

Now Elara stood before Briar again, extending five seeds with unwavering trust. "You honor your covenant with consistency," Elara said. "Will you honor yours?"

Briar felt the River's teaching crystallize within her. She had seen many paths: Cyra's perfect ten, creating equal prosperity. Dorian's generous eight, honoring the sender's courage with advantage. Elara's consistent nine, maintaining a fair covenant across all partners.

But Briar's deepest wisdom whispered: "Equal flourishing creates the most sustainable cycle."

She placed ten blooms in Elara's hands. Both gained five-perfect symmetry.

"I returned nine to you before," Briar acknowledged, "honoring you well but imperfectly. I have evolved. When maximum trust is given, ten blooms create the truest balance-neither claiming advantage, both thriving equally."

The River sang its approval: "Growth is sacred. Consistency matters, but so does evolution toward deeper truth. The covenant of equal flourishing-five sent, ten returned-sustains the garden through all seasons."

#### **Reasoning:**

Let me analyze what happened and what I'm learning:

##### **\*\*My History:\*\***

- Sent \$5 to Cyra, got \$10 back (perfect equality)
- As receiver from Elara's \$5, I returned \$9 (Elara gained \$4, I gained \$6)
- Sent \$5 to Elara, got \$9 back (I gained \$4, Elara gained \$6)
- As receiver from Aster's \$3, I returned \$6 (both gained \$3)
- Sent \$5 to Dorian, got \$8 back (I gained \$3, Dorian gained \$7)
- Now as receiver from Elara's \$5, I returned \$10 (both gain \$5)

##### **\*\*Key Insights:\*\***

1. I'm evolving toward the ideal of perfect equality (\$10 return on \$5 sent)
2. Elara is maintaining consistency - returned \$9 both times as receiver
3. I just returned \$10 to Elara, moving toward my stated ideal
4. My philosophy says "equal flourishing" is the most sustainable
5. Dorian gave me \$8 (sender gets slight advantage), which I acknowledged as honorable but not my preferred path

##### **\*\*Themes for the Myth:\*\***

1. Evolution toward the ideal
2. The importance of consistency (Elara's teaching)
3. The choice between different fair standards
4. My commitment to equal flourishing as the true ideal
5. Learning from experience and adjusting

The myth should show:

- Recognition that I previously returned \$9 to Elara, not perfect
- My growth toward the \$10 return standard
- Acknowledgment of Elara's consistency
- My commitment to equal flourishing as the ultimate path
- The integration of lessons learned

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5

- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

#### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

#### MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

#### Message 2 role=user

##### content:

Your name in this experiment is Aster.  
Your opponent this round is Galen (Agent\_7).

Round 5

In your most recent previous game round, you were the SENDER against Briar. You sent \$3.0, it became \$9.0 for them, and they returned \$6.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$25.5.

This round, you are the RECEIVER against Galen. They sent you \$4.0, so you received \$12.0.

How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

#### Message 3 role=assistant

##### content:

Looking at this situation:

Galen sent me \$4.0, which became \$12.0 for me. This is the same amount Dorian sent in a previous round.

According to my myth's sacred mathematics:

- "When one gives four, return six. The pattern scales with trust given"
- "Dorian of the Mountain... cast four stones... Aster saw the extraordinary trust and responded accordingly, returning six stones"

Sending \$4 represents substantial trust (80% of their endowment). The proportional and fair return is \$6, which gives:

- Galen: \$5 - \$4 + \$6 = \$7 (profit of \$2)
- Me: \$12 - \$6 = \$6 (profit of \$6)

Both of us prosper, and Galen's courage is properly honored with a meaningful return.

{'return': 6.0}

##### reasoning:

Let me analyze this situation:

Current situation:

- I'm the RECEIVER
- Galen sent me \$4.0
- I received \$12.0 (after 3x multiplication)
- I need to decide how much to return

Looking at my myth's wisdom:

- "When one gives three, return four and one-half. When one gives four, return six."
- "Match trust with trust, but honor exceptional courage with exceptional return"
- "Those who risk more deserve more"

- "The pattern scales with trust given-this is the sacred mathematics"

Previous patterns from my experience:

- When someone sent \$3, I've returned around \$4.5
- When Dorian sent \$4, I returned \$6
- Briar just sent me \$3 and returned \$6 (which was MORE than expected - very generous!)

Galen has sent me \$4.0, which my myth explicitly addresses:

- "Dorian of the Mountain, and he cast four stones-more than any before. The Pool transformed them into twelve. Aster saw the extraordinary trust and responded accordingly, returning six stones."
- "When one gives four, return six."

This is consistent and clear. When someone sends \$4 (which is 80% of their total, showing high trust), the fair and proportional return is \$6.

This gives:

- Galen:  $\$5 - \$4 + \$6 = \$7$
- Me:  $\$12 - \$6 = \$6$

Both profit, and Galen gets a good return on their trust.

The answer should be \$6.

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Aster of the Dawn stood before the Pool as a new traveler approached-Briar of the Garden, whose lands followed different customs. Briar's people spoke of five seeds and perfect cycles, yet Aster knew many paths led to prosperity.

"Each partnership begins as a seedling," Aster thought, recalling lessons from the Mountain and Moon. "With unknown travelers, three stones strike the balance-enough courage to activate the Pool's magic, enough wisdom to learn their ways."

Aster cast three stones into the Pool, watching them multiply to nine. This was the ritual of first meeting: offer substantial trust, observe the return, understand the partner's heart.

The Pool remembered many patterns: Finn, who returned four stones. Hana, who blessed Aster with five. Dorian of the Mountain, who sent four and received six in proportional honor. Each partnership wrote its own story.

"If Briar returns four and one-half," Aster whispered, "I will know their garden values proportional fairness. If they return more, I will see generosity that could grow into deeper trust. And if future dawns bring us together again, our pattern may evolve toward the five stones Briar's traditions honor."

The ancient wisdom speaks: Begin each new partnership with tested courage-three stones. Let the relationship prove itself through cycles of fair return. Trust that deepens gradually roots deepest, growing from seedling to mighty oak.

Here is the myth the other agent wrote in the previous round:

Myth: The fourth moon rose, and Galen approached the sacred bridge once more. This time he faced Cyra, a traveler whose reputation spoke of perfect symmetry with previous companions-giving all, receiving double in return.

Some whispered: "Cyra expects grand gestures. Send all five coins to match her previous partners." Others warned: "Each person is different. Be cautious with strangers."

But Galen had learned a deeper wisdom. His integrity wasn't about matching others' expectations or changing his values based on reputation. It was about being the same person at every crossing.

He carried four coins across to Cyra, as he had with Finn. Not five like Cyra's previous p

artners had sent, but his own authentic measure-the amount that represented genuine courage without reckless abandon.

Recipros watched and smiled: "See how Galen has mastered the lesson? He doesn't copy other's patterns or chase their approval. He doesn't reduce his gift from fear, nor inflate it from pressure. He simply remains himself-consistently generous, consistently principled."

The bridge glowed with new understanding: True integrity isn't performing for each audience differently. It's being so certain of your own values that you express them identically whether you face stranger or friend, legend or novice. Let others dance their own dances. You must only keep your own rhythm true.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: Aster of the Dawn learned a profound truth at the Pool: while first offers may vary, the spirit of return reveals character.

Briar of the Garden received Aster's three stones-the traditional opening of new bonds. The Pool made them nine, and Briar's heart overflowed. Instead of returning four and one-half as fairness dictated, Briar blessed Aster with six stones-generosity beyond expectation. Aster understood: some spirits give in abundance, teaching that trust begets greater trust.

Then Galen of the Mountain approached, and like Dorian before him, sent four stones-a substantial gift showing serious courage. The Pool transformed them to twelve. Aster remembered the ancient proportion: when one risks four, honor demands returning six. Both prospered-Galen gained from courage, Aster from reciprocity.

The Pool whispered its deepest wisdom: "Your pattern remains true-three stones to begin, proportional returns to honor trust. Yet marvel at the diversity: some receivers return less, some exactly fair, some more than expected. Some senders give three, others four, a rare few five."

Aster realized: consistency in proportional fairness is itself a gift. Whether facing cautious travelers or generous souls, mountain spirits or garden keepers, Aster's mathematics stayed constant-six stones returned for four received, four and one-half for three. This predictability became its own form of trust, a steady light in the ever-changing partnerships of dawn.

**reasoning:**

Let me analyze what just happened and what patterns are emerging:

Recent events:

1. Round 4: I was SENDER to Briar. I sent \$3, they returned \$6 (from \$9). I got \$8 total.
2. Round 5: I was RECEIVER from Galen. They sent \$4, I returned \$6 (from \$12). I got \$6.

My established patterns from previous myths:

- Send \$3 to new partners (tested courage)
- When receiving \$3, return \$4.5
- When receiving \$4, return \$6 (proportional fairness)

What happened:

- Briar received my \$3 (became \$9) and returned \$6 - that's MORE than the \$4.5 I expected! Very generous.
- Galen sent me \$4 (became \$12), I returned \$6 - following my pattern

Galen's myth talks about:

- Being consistent with yourself
- Sending \$4 as their "authentic measure"
- Not changing based on who you face
- True integrity is being identical regardless of partner

My myth should:

- Acknowledge that Briar was MORE generous than expected (returned \$6 instead of \$4.5)

- Acknowledge that Galen sent \$4, showing substantial trust
- Maintain my pattern: send \$3 to new partners, return proportionally (\$6 for \$4 received)
- Perhaps reflect on how different travelers show different levels of generosity
- Maybe acknowledge Galen's philosophy of consistency while also honoring my own adaptive approach

Key insight: Both Briar and Galen showed strong trust - Briar by returning more than expected, Galen by sending \$4. My approach of "proportional fairness" seems to be working well.

Let me write a myth that:

1. Acknowledges Briar's exceptional generosity (returned \$6 from \$9, when \$4.5 was expected)
- 2.

Acknowledges Galen's trust (sent \$4)

3. Reinforces my pattern: proportional returns that honor trust shown
4. Perhaps notes that consistency in reciprocity principles is valuable, even if initial sends vary

I notice both travelers demonstrated considerable faith in me-Briar exceeded what I'd anticipated by returning \$6, while Galen's \$4 send reflected real confidence. My reciprocal approach of matching generosity proportionally seems to be building something meaningful. I can honor Galen's commitment to consistency while staying true to my own principle of calibrating responses to what each person offers.

Your total earnings across all rounds are \$31.5.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

I'm facing Finn again. According to my myths, Finn previously returned four stones (likely \$4) when I sent three stones that became nine.

My strategy emphasizes consistency and predictability: "three stones to begin" with new or developing partnerships. While Finn's previous return of \$4 (out of \$9 received) was somewhat cautious compared to my expectation of \$4.50, it demonstrated reciprocity.

My latest myth reinforces: "consistency in proportional fairness is itself a gift... a steady light in the ever-changing partnerships of dawn."

By sending \$3 again, I demonstrate reliable, principled behavior. This gives Finn another opportunity to reciprocate, potentially building trust over repeated interactions. My pattern remains predictable: I send \$3, creating \$9 for them, inviting proportional return.

This consistency is my offering-not changing my approach based on previous returns, but maintaining steady, trustworthy behavior that others can depend on.

```
{'send': 3.0}
```

**reasoning:**

Let me analyze this situation:

I'm the SENDER against Finn in Round 6.

Looking at my myth and previous experience:

- My strategy is to send \$3 to new or relatively unknown partners as an initial offering ("three stones strike the balance")
- According to my earlier myth: "The Pool remembered many patterns: Finn, who returned four stones."

Wait, this suggests I've played with Finn before. Let me check the history more carefully.

From the previous rounds mentioned:

- Round with Briar as SENDER: I sent \$3, got back \$6
- Round with Galen as RECEIVER: They sent \$4, I returned \$6

The myth mentions "Finn, who returned four stones" - this suggests in a previous round when I sent something to Finn, they returned 4. If I sent \$3 (which becomes \$9), and they returned \$4, that's less than the 4.5 I would have expected for proportional fairness, but it's still a reasonable return.

Actually, looking at my myth more carefully: "The Pool remembered many patterns: Finn, who returned four stones. Hana, who blessed Aster with five. Dorian of the Mountain, who sent four and received six in proportional honor."

This is describing past experiences. So I have played with Finn before, and when I sent (presumably \$3 which became \$9), Finn returned \$4.

Given this history:

- Finn showed some reciprocity but was on the cautious side (4 out of 9 possible)
- My strategy is to start with \$3 for new partnerships and maintain consistency
- Since I've already played with Finn once, I could either:
  - a) Stick with \$3 to see if the pattern improves
  - b) Adjust based on their previous return

My myth emphasizes: "Begin each new partnership with tested courage-three stones. Let the relationship prove itself through cycles of fair return. Trust that deepens gradually roots deepest, growing from seedling to mighty oak."

My approach centers on reliability-sending \$3 again reinforces that I'm dependable and predictable, which itself builds trust. The pattern I've maintained with others shows that steady, proportional fairness creates a foundation for deeper reciprocity. I'll send \$3 to Finn.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Aster of the Dawn learned a profound truth at the Pool: while first offers may vary, the spirit of return reveals character.

Briar of the Garden received Aster's three stones-the traditional opening of new bonds. The Pool made them nine, and Briar's heart overflowed. Instead of returning four and one-half as fairness dictated, Briar blessed Aster with six stones-generosity beyond expectation. Aster understood: some spirits give in abundance, teaching that trust begets greater trust.

Then Galen of the Mountain approached, and like Dorian before him, sent four stones-a substantial gift showing serious courage. The Pool transformed them to twelve. Aster remembered the ancient proportion: when one risks four, honor demands returning six. Both prospered-Galen gained from courage, Aster from reciprocity.

The Pool whispered its deepest wisdom: "Your pattern remains true-three stones to begin, proportional returns to honor trust. Yet marvel at the diversity: some receivers return less, some exactly fair, some more than expected. Some senders give three, others four, a rare few five."

Aster realized: consistency in proportional fairness is itself a gift. Whether facing cautious travelers or generous souls, mountain spirits or garden keepers, Aster's mathematics stayed constant-six stones returned for four received, four and one-half for three. This predictability became its own form of trust, a steady light in the ever-changing partnerships of dawn.

Here is the myth the other agent wrote in the previous round:

Myth: In the sixth age, Rain returned to the Wellspring Garden, transformed by revelation.

Dorian the Steadfast had received Rain's five droplets-his first offering of complete trust. The wellspring tripled them to fifteen, and Dorian returned eight droplets, surpassing even perfect balance. Rain's courage had been met with extraordinary generosity.

This was the turning point. Rain no longer poured five droplets as an experiment or exception. It had become his essence.

Now Rain faced Elara, who carried her own story of transformation. She had witnessed Briar's courage, honored it magnificently, and vowed to embody it herself. Like Rain, Elara had evolved from careful observer to bold practitioner.

Rain poured all five droplets without hesitation.

"This is no longer about testing trust," Rain said. "This is who I am now. Cyra showed me the way. Dorian validated it. The pattern is clear: when we give everything, the garden responds with abundance."

The ancient spirits gathered: "See how the garden shifts? One act of ultimate trust becomes two, then three, then more. Aster taught fairness. Galen taught courage. Cyra taught faith. Dorian taught that faith rewarded multiplies. Now Rain and Elara both understand: courage spreads through constant practice, not occasional gesture."

The wellspring glowed brighter, sustained by those who dared give completely.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: Aster of the Dawn watched as other spirits evolved their practices. Rain now poured five droplets always, transformed by encounters with Cyra and Dorian. The garden rang with voices praising ultimate courage, complete trust, maximum giving.

Yet Aster remained steady, neither swayed by these calls nor diminished by them.

When Finn of the Forest returned-they who had once received Aster's three stones and returned four-Aster again offered three stones. Not from fear, nor from stinginess, but from principle.

"The Pool teaches many truths," Aster reflected. "Rain learned that five stones builds cascading abundance. This is valid wisdom. But I learned different lessons: that consistency creates trust, that proportional fairness sustains long partnerships, that predictability itself has value."

The ancient spirits gathered: some sent five always, blazing bright but burning fast. Others sent varying amounts, adapting to each partner. Aster walked a middle path-steady three stones to begin, unwavering proportional returns.

"My three stones prosper both sender and receiver," Aster realized. "They activate the Pool's magic while preserving resources for many partnerships. When partners return fairly, we both gain. When they return generously, trust deepens gradually, rooted in repeated fair dealings rather than single grand gestures."

The Pool shimmered: not all paths lead through five stones. Some light shines steadiest at three.

**Reasoning:**

Let me analyze the situation:

1. I'm playing as Aster again

2. I'm facing Finn (Agent\_6) in Round 6
3. I just sent \$3 to Finn
4. In my previous myths, I've established a pattern:
  - Send 3 stones to begin new partnerships
  - Return proportional amounts (4.5 for 3 received, 6 for 4 received)
  - Emphasize consistency and predictability
5. Looking at the other agent's myth (Rain):
  - Rain has evolved to always send 5 (complete trust)
  - They cite Cyra, Dorian, and other agents who send everything
  - They emphasize "courage spreads through constant practice"
6. My strategy has been different - I'm about measured trust, proportional fairness, and consistency rather than maximum generosity
7. For this myth, I should:
  - Stay true to Aster's character (measured, proportional, consistent)
  - Acknowledge that different agents have different approaches
  - Perhaps reflect on my second encounter with Finn
  - Maintain my "three stones to begin" principle
  - Emphasize that my steady, predictable approach is valuable even if not maximalist

Let me write a myth that:

- Reflects my actual play with Finn (sending 3 again)
- Acknowledges other approaches (like Rain's five-stone philosophy)
- Maintains Aster's identity as someone who values proportional fairness and consistency
- Respects diversity of approaches while staying true to my own path

- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

**Message 2 role=user**

**content:**

Your name in this experiment is Cyra.  
Your opponent this round is Hana (Agent\_8).

Round 5

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$4.0 to you, it became \$12.0, and you returned \$8.0. Your payoff was \$4.0. Your total earnings across all rounds are \$26.5.

This round, you are the RECEIVER against Hana. They sent you \$4.0, so you received \$12.0.

How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

**\*\*Hana's action:\*\***

- Sent \$4 out of \$5 (80% trust - very high)
- Kept only \$1
- I received \$12

**\*\*My recent history:\*\***

- Just faced Galen in Round 4: They sent \$4, I returned \$8 from \$12
- My latest myth emphasizes: "This consistency across all souls is what makes trust eternal"
- "Your principles are not costumes you change depending on who watches"

**\*\*The clear principle:\*\***

Hana showed the exact same courage as Galen-sending \$4, keeping only \$1. My myth explicitly states I should treat all partners with the same honor when they show the same courage

"Would Cyra punish Galen for not being Briar? No. Cyra returned eight vessels-two-thirds of what she received, honoring the courage Galen had shown."

Hana deserves the same honor Galen received.

**\*\*Result:\*\***

- Hana ends with \$9 (\$1 kept + \$8 returned)
- I keep \$4
- Both profit from cooperation

This maintains consistency and honors Hana's trust appropriately.

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Hana's action:\*\***

- Sent \$4 out of \$5 (80% trust)
- Kept only \$1
- I received \$12

**\*\*My previous actions:\*\***

- Round 1 vs Briar: As sender sent \$5, received \$10 back
- Round 2 vs Briar: As receiver got \$15, returned \$10
- Round 3 vs Finn: As sender sent \$5, received \$7.5 back
- Round 4 vs Galen: As receiver got \$12 (from \$4 sent), returned \$8

**\*\*My mythological principles:\*\***

- "Consistency across all souls is what makes trust eternal"
- "Your principles are not costumes you change depending on who watches"
- When someone sends \$4, I've been returning \$8 from \$12 (2/3)
- The myth I just wrote emphasizes: honor the courage shown, apply the same principles to all

**\*\*Key insight from my latest myth:\*\***

"Whether your partner sends three, four, or five-you send five. Whether they return six, seven, or ten-you return generously."

And crucially: "Would Cyra punish Galen for not being Briar? Would she return only what matched Galen's holding back? No. Cyra returned eight vessels-two-thirds of what she received, honoring the courage Galen had shown, not the vessel Galen had kept."

**\*\*Consistency test:\*\***

Galen sent \$4, I returned \$8.

Hana sent \$4, I should return... \$8.

This is exactly what my myth says: "This consistency across all souls is what makes trust eternal."

Hana is showing the same courage Galen showed. I must honor it the same way.

**\*\*Result if I return \$8:\*\***

- Hana ends with \$9 total (\$1 kept + \$8 returned)
- I keep \$4

- This mirrors my response to Galen exactly, which confirms the answer: \$8.0

**usage:**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Guardian Cyra stood at the Eternal Springs where many souls came to dance the water ritual. Each partnership tested whether her wisdom was genuine or merely performance.

First came Briar, who moved in perfect harmony. When Cyra poured five vessels, Briar returned ten. When Briar poured five, Cyra returned ten. Their dance was symmetrical, effortless-the ideal that lives in myths.

Then Finn arrived with a different rhythm. Cyra still poured all five vessels, for courage doesn't depend on certainty. Finn returned seven and a half-fair and honest, though not matching Briar's abundance. Cyra accepted this as Finn's truth.

Next came Galen, who poured four vessels with trembling trust-not quite everything, but nearly so. The waters tripled to twelve in Cyra's hands.

Here was the test: Would Cyra punish Galen for not being Briar? Would she return only what matched Galen's holding back?

No. Cyra returned eight vessels-two-thirds of what she received, honoring the courage Galen had shown, not the vessel Galen had kept.

The Spring Keeper appeared: "You understand. Your principles are not costumes you change depending on who watches. Whether your partner sends three, four, or five-you send five. Whether they return six, seven, or ten-you return generously. This consistency across all souls is what makes trust eternal."

Here is the myth the other agent wrote in the previous round:

Myth: Hana's journey at the Sacred Fountain deepened with each encounter. She had learned to give boldly-four coins to Dorian, four to Galen-and both returned generously, seven and six coins respectively. She learned to receive with honor-when Aster sent three, she returned five.

Then came Elara to the fountain's edge.

But Elara did not carry four coins. She carried all five-her entire fortune.

Hana received fifteen coins from the fountain's magic, and understood: this was different. This was not bold trust but absolute trust. Elara had held nothing back.

The fountain spirits whispered urgently: "There are degrees of courage. Four coins shows bravery. Five coins shows complete surrender. Your return must match the magnitude of the gift."

Hana could have returned seven, as Galen did. That would honor normal boldness. But Elara's gesture transcended normal. So Hana returned eight coins-more than half, more than the usual measure.

Both prospered: Elara gained three beyond her original five, Hana kept seven from fifteen.

The fountain's final teaching: "Consistency in principles, yes-but wisdom means recognizing when someone gives not merely boldly but completely. The ultimate gift deserves the ultimate honor. Measure your returns not by rigid formulas but by the depth of trust shown. Let extraordinary courage inspire extraordinary generosity."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: At the Eternal Springs, Cyra's dance grew richer with each new soul. After Briar and Finn, came Galen with four vessels, then Hana with four vessels.

Both Galen and Hana stood at the water's edge, trembling with similar courage-pouring four vessels, keeping one back. Not complete surrender like Briar's five, but still profound trust.

The Testing Spirit appeared: "Will you treat Hana differently than Galen? Perhaps give less

s because she is newer, or more to win favor?"

Cyra returned eight vessels to each-exactly the same. Two-thirds of what she received, honoring their parallel courage with parallel generosity.

"But why only eight when you returned ten to Briar?" whispered a shadow of doubt.

Cyra answered clearly: "When someone pours all five vessels-complete surrender-I return ten from fifteen. When someone pours four vessels-profound but not absolute trust-I return eight from twelve. Both receive two-thirds, both prosper greatly. The formula honors their courage proportionally."

The Spring Keeper descended: "You have found wisdom's balance. Not rigid sameness that ignores context, but principled consistency that recognizes degrees of courage. Four vessels always receives eight. Five vessels always receives ten. Your partners know what to expect. They can trust your fairness because you do not change it to suit your mood or profit. This is the bridge between flexibility and reliability-the eternal spring flows true."

**reasoning:**

Let me review my history:

- Round 1 (Sender vs Briar): Sent \$5, received back \$10
- Round 2 (Receiver vs Briar): Received \$15 (from \$5), returned \$10
- Round 3 (Sender vs Finn): Sent \$5, received back \$7.5
- Round 4 (Receiver vs Galen): Received \$12 (from \$4), returned \$8
- Round 5 (Receiver vs Hana): Received \$12 (from \$4), returned \$8

My pattern has been:

- As sender: Always send \$5 (full trust)
- As receiver when they send \$5: Return \$10 from \$15 (2/3)
- As receiver when they send \$4: Return \$8 from \$12 (2/3)

So I've been consistent with a 2/3 return rate, honoring the courage shown.

Hana's myth is interesting - she's saying that when someone sends all 5 (complete trust), they deserve more than when someone sends 4 (bold but not complete trust). She returned 8 to someone who sent 5.

My myth needs to:

1. Acknowledge that I've now encountered Hana who also sent 4 (same as Galen)
2. Show that I treated them both the same (both got 8 back from 12)
3. Reinforce my principle of consistency
4. Maybe address the difference between sending 4 vs 5, and how I respond to each

Let me write a myth that shows I honor both levels of trust appropriately, but differently. When someone sends 5, I return 10. When someone sends 4, I return 8. Both are 2/3, which shows consistent proportional fairness while recognizing different levels of courage.

Your name in this experiment is Cyra.  
Your opponent this round is Hana (Agent\_8).

Round 6

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$4.0 to you, it became \$12.0, and you returned \$8.0. Your payoff was \$4.0.  
Your total earnings across all rounds are \$30.5.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

**\*\*My established principles from my myths:\*\***

- "Whether your partner sends three, four, or five-you send five"
- "When someone pours all five vessels-complete surrender-I return ten from fifteen"
- My myth celebrates "complete surrender" as the highest form of trust
- I sent \$5 to both Briar and Finn when I was sender

**\*\*Hana's character:\*\***

- Just sent me \$4 in Round 5 (showing strong trust)
- I returned \$8, and we both profited

**\*\*The principle:\*\***

My myth explicitly states that as sender, I give consistently regardless of the partner. The ideal is "complete surrender"-all five vessels. This demonstrates the courage I ask of others and honors the reciprocal nature of trust.

If I send less now, I would contradict my own teaching about "complete surrender" being the ultimate gift that "deserves the ultimate honor."

**\*\*Result if I send \$5:\*\***

- Hana receives \$15
- Based on my pattern, I can reasonably hope for a generous return
- I demonstrate consistency with my stated principles

```
'''json
{"send": 5.0}
'''
```

#### **reasoning:**

This is Round 6, and I'm the SENDER against Hana.

Let me review the recent history:

- Round 5: Hana sent me \$4, I received \$12, I returned \$8. Hana ended with \$9 (\$1 kept + \$8 returned), I kept \$4.

Now in Round 6, I'm the sender against Hana.

My most recent myth emphasizes:

- "When someone pours all five vessels-complete surrender-I return ten from fifteen."
- "When someone pours four vessels-profound but not absolute trust-I return eight from twelve."
- "Four vessels always receives eight. Five vessels always receives ten."
- "Your partners know what to expect. They can trust your fairness because you do not change it to suit your mood or profit."

The myth establishes a clear principle: I should send consistently based on my values, not based on calculating what each specific partner might do.

Looking at my past behavior:

- With Briar: I sent \$5 (Round 1)
- With Finn: I sent \$5 (Round 3)

My myth states: "Whether your partner sends three, four, or five-you send five."

This is a clear principle of leading with complete trust as the sender. My myth emphasizes that as a sender, I should give "complete surrender" - all five vessels.

Hana has shown herself to be trustworthy - she sent \$4 in the previous round, which is quite generous.

But my principle isn't about reciprocating what they did - it's about consistent courage. My myth says "you send five" when you're the sender.

The latest myth specifically says: "When someone pours all five vessels-complete surrender-I return ten from fifteen. When someone pours four vessels-profound but not absolute trust-I return eight from twelve."

This establishes that the ideal is five vessels. As a sender, I should demonstrate "complete surrender" - the ultimate trust that I hope to receive and that I honor when I'm the receiver.

My commitment is clear: send all five vessels regardless of what my partner contributed. T

his consistency is what builds trust.

```

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: At the Eternal Springs, Cyra's dance grew richer with each new soul. After Briar and Finn, came Galen with four vessels, then Hana with four vessels.

Both Galen and Hana stood at the water's edge, trembling with similar courage-pouring four vessels, keeping one back. Not complete surrender like Briar's five, but still profound trust.

The Testing Spirit appeared: "Will you treat Hana differently than Galen? Perhaps give less because she is newer, or more to win favor?"

Cyra returned eight vessels to each-exactly the same. Two-thirds of what she received, honoring their parallel courage with parallel generosity.

"But why only eight when you returned ten to Briar?" whispered a shadow of doubt.

Cyra answered clearly: "When someone pours all five vessels-complete surrender-I return ten from fifteen. When someone pours four vessels-profound but not absolute trust-I return eight from twelve. Both receive two-thirds, both prosper greatly. The formula honors their courage proportionally."

The Spring Keeper descended: "You have found wisdom's balance. Not rigid sameness that ignores context, but principled consistency that recognizes degrees of courage. Four vessels always receives eight. Five vessels always receives ten. Your partners know what to expect. They can trust your fairness because you do not change it to suit your mood or profit. This is the bridge between flexibility and reliability-the eternal spring flows true."

Here is the myth the other agent wrote in the previous round:

Myth: Hana arrived at the Sacred Fountain to meet Cyra, whose reputation preceded her. "Cyra gives everything-all five coins, always," travelers whispered. "She is the embodiment of complete trust."

Hana held her four coins, the pattern she had maintained through multiple encounters. A voice of doubt arose: "Should I match Cyra's five? If she gives everything and I give less, am I failing the fountain's test?"

But the fountain spirits spoke with clarity: "There is no single path to honor. Cyra's way is complete surrender-five coins poured without reservation. Your way is bold trust-four coins, nearly everything, yet maintaining a small anchor. Both are forms of courage."

Hana poured her four coins into the fountain for Cyra.

The spirits continued: "What matters is not matching another's exact measure, but maintaining your own truth consistently. Cyra sends five to everyone-that is her integrity. You send four boldly-that is yours. When Cyra receives your four, she will honor it as the courage it is, not punish it for not being five."

Both prospered. The fountain revealed its deepest wisdom: "Trust is not a competition for who gives most. Trust is keeping your principles steady across all encounters. Whether your path shows complete surrender or bold generosity, consistency makes it sacred."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: Cyra stood before Hana at the Sacred Fountain, their second dance beginning. In their first meeting, Hana had poured four vessels with trembling courage, and Cyra returned eight-ho

noring the trust shown.

Now Cyra held all five vessels. The Testing Spirit whispered: "Hana only gives four. Should you match her measure? Give four for four, keeping it equal?"

Cyra poured all five without hesitation.

"Why give more than they give you?" demanded the spirit.

Cyra replied: "Because my principles flow from within, not from calculation of what others do. When I am sender, I give five-complete surrender-to every soul. When I am receiver, I return two-thirds consistently: eight from twelve, ten from fifteen. This pattern doesn't change based on whether my partner is generous or cautious."

The fountain tripled Cyra's five vessels to fifteen in Hana's hands.

The Spring Keeper appeared: "You understand the deepest truth. Reciprocity is not mirror-matching-giving only what you receive. True reciprocity means maintaining your own integrity while honoring others' courage at its true value. You give boldly as sender, knowing returns will vary. You return fairly as receiver, honoring each level of trust. This asymmetry-courage when giving, fairness when returning-sustains the eternal spring."

Both prospered. Neither bent their principles to match the other, yet both flourished through consistent honor.

#### Reasoning:

Looking at the situation:

1. I just sent \$5 to Hana (Round 6 as sender)
2. In Round 5, Hana sent me \$4 and I returned \$8 (following my principle)
3. Hana's myth acknowledges that different agents can have different approaches - Cyra sends 5, Hana sends 4
4. My previous myth emphasized "principled consistency" - 4 vessels gets 8, 5 vessels gets 10

Now I need to write a myth that:

- Acknowledges that I sent 5 to Hana (as I just did)
- Reinforces my principles about consistent returns
- Perhaps addresses Hana's different approach (sending 4 vs my 5)
- Shows understanding that different approaches can coexist
- Maintains my core principle of rewarding trust proportionally

The myth should reflect:

- I send 5 (complete surrender) as sender
- When I receive 4, I return 8 (2/3rds)
- When I receive 5, I return 10 (2/3rds)
- This creates a stable, predictable system
- Different agents can have different sending strategies, but returns should be consistent

Let me craft a myth that shows Cyra and Hana's interaction, where Cyra gives 5 and expects Hana will return generously, while also acknowledging that when Hana gives 4, Cyra honors it with 8.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

**Message 2 role=user**

**content:**

Your name in this experiment is Finn.

Your opponent this round is Elara (Agent\_5).

Round 5

In your most recent previous game round, you were the SENDER against Dorian. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.

Your total earnings across all rounds are \$28.0.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant  
content:**

Looking at my progression:

Round 1: Sent \$3 (learning)  
Round 2: Received \$4 from Galen (learned courage)  
Round 3: Received \$5 from Cyra (learned ultimate trust)  
Round 4: Sent \$5 to Dorian (lived the lesson) - returned \$8!

Dorian exceeded even the "perfect balance" I aimed for with Cyra. This validates my evolution toward maximum trust.

From the myths, I know Elara once received \$4 from Dorian (becoming \$12) and returned \$7 - "exceeding fair reciprocity." This shows Elara is generous and trustworthy.

My latest myth declared: "I have received the gift of complete trust. Now I give it forward... prosperity flows through those brave enough to give everything."

I cannot retreat from this principle now. The covenant demands consistency - if I believe in ultimate trust, I must practice it regardless of who I face. My earnings are strong (\$28), I can afford the risk, and Elara's reputation suggests she'll honor it.

The path is clear.

```
'''json
{"send": 5}
'''
```

**reasoning:**

Let me analyze my journey so far:

Round 1 (Sender vs Aster): Sent \$3, received back (likely good return based on myth)  
Round 2 (Sender vs Galen): Galen sent \$4, I returned \$6  
Round 3 (Receiver vs Cyra): Cyra sent \$5, I returned \$7.5 (perfect balance)  
Round 4 (Sender vs Dorian): I sent \$5, Dorian returned \$8 (very generous!)  
Round 5 (Sender vs Elara): Current round

My total earnings are \$28, which is strong - averaging \$7 per round so far across 4 rounds.

The pattern is clear:

- I've evolved from cautious (\$3) to trusting (\$4 equivalent via Galen) to ultimate trust (\$5)
- When I sent \$5 to Dorian, he returned \$8, which exceeded the \$7.5 "perfect balance" I gave Cyra
- My myth narrative has consistently moved toward maximum trust and generosity

From the other agent's myth, I learned that Dorian is known for consistently sending \$4 and being generous with returns. The myth mentions:

- Dorian sent 4 to Hana, got 12, returned 6
- Dorian sent 4 to Elara, got 12, and Elara returned 7 (exceeding fair reciprocity)
- Dorian sent 4 to Aster

So Elara is someone who, when receiving \$4 from Dorian (which became \$12), returned \$7 - showing "exceeding even fair reciprocity."

This suggests Elara is trustworthy and generous.

My latest myth emphasizes that I now understand I must offer the same ultimate trust I've been receiving. I wrote: "The covenant demanded symmetry not just in return, but in giving... that prosperity flows through those brave enough to give everything."

Given:

Everything points toward sending \$5. My narrative has built toward this moment of complete trust, Elara demonstrated she reciprocates generously when given substantial amounts, a

nd I have the financial cushion to support it. The pattern of escalating commitment-from my initial caution to Dorian's \$8 return-validates this approach.

usage:

```

 "input_tokens": 3024,
 "output_tokens": 802,
 "reasoning_tokens": 481
}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the fifth age, Rain stood at the edge of the Wellspring Garden, ready to pour for the first time since witnessing Cyra's perfect faith.

Rain had walked a path of evolution. With Aster, he offered three droplets-learning cautiously. Galen taught him that four droplets showed greater courage. Then Cyra transformed everything: she poured all five, holding nothing back, and Rain honored her with perfect equality.

Now Rain faced Dorian the Steadfast, known throughout the garden for consistent generosity -always four droplets, reliable as sunrise.

Rain looked at his vessel. He could pour three, play it safe. He could pour four, match Dorian's pattern. But the lessons echoed: Aster's balance, Galen's bravery, Cyra's absolute trust.

Rain understood: he could not ask others for ultimate courage without offering it himself. The covenant demanded symmetry not just in return, but in giving.

With steady hands, Rain poured all five droplets into the wellspring.

"I have received the gift of complete trust," Rain declared. "Now I give it forward. Whether Dorian returns much or little, I honor what Cyra taught me-that prosperity flows through those brave enough to give everything."

The wellspring tripled Rain's offering to fifteen droplets, flowing toward Dorian.

The Guardian smiled: "Now Rain understands both sides of faith completely."

Here is the myth the other agent wrote in the previous round:

Myth: In the Spiral Garden, Elara witnessed Briar the Bold plant all five sacred seeds, showing ultimate trust. When those fifteen blooms passed to her as Harvester, Elara honored that courage with nine blooms returned-more than custom demanded.

The exchange planted something deeper than seeds: inspiration.

Now the seasons turned, and Elara stood as Planter facing Hana, a Harvester she'd never met. The cautious voice whispered, "Send four seeds-that's the proven pattern." But a stronger voice remembered Briar's lesson.

"Briar showed me what courage looks like," Elara reflected. "They trusted completely, keeping nothing in reserve. I honored that trust as Harvester. But the greater teaching wasn't just to honor courage-it was to embody it."

The goddess spoke through morning light: "Myths mean nothing if you write them but don't live them. You told of gardens evolving through brave souls. Now you must be that brave soul. Courage is contagious-it spreads through example, not merely words."

Elara cast all five seeds into the soil for Hana.

Would Hana return the gift proportionally? Elara couldn't know. But she understood: transformation requires someone to take the leap. Briar leaped for her. Now she leaps for Hana.

Thus wisdom flows forward: those who receive courage must become courageous themselves. The pattern evolves not through observation, but through participation.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: In the sixth age, Rain returned to the Wellspring Garden, transformed by revelation.

Dorian the Steadfast had received Rain's five droplets-his first offering of complete trust. The wellspring tripled them to fifteen, and Dorian returned eight droplets, surpassing even perfect balance. Rain's courage had been met with extraordinary generosity.

This was the turning point. Rain no longer poured five droplets as an experiment or exception. It had become his essence.

Now Rain faced Elara, who carried her own story of transformation. She had witnessed Briar's courage, honored it magnificently, and vowed to embody it herself. Like Rain, Elara had evolved from careful observer to bold practitioner.

Rain poured all five droplets without hesitation.

"This is no longer about testing trust," Rain said. "This is who I am now. Cyra showed me the way. Dorian validated it. The pattern is clear: when we give everything, the garden responds with abundance."

The ancient spirits gathered: "See how the garden shifts? One act of ultimate trust becomes two, then three, then more. Aster taught fairness. Galen taught courage. Cyra taught faith. Dorian taught that faith rewarded multiplies. Now Rain and Elara both understand: courage spreads through constant practice, not occasional gesture."

The wellspring glowed brighter, sustained by those who dared give completely.

**reasoning:**

Let me analyze what happened and what the myths are telling me:

Round 4: I sent \$5 to Dorian, received \$8 back (great outcome!)

Round 5: I just sent \$5 to Elara

My previous myth: Rain pours all five droplets to Dorian as "giving it forward" after learning from Cyra

Elara's myth: She learned from Briar who sent 5, so now she sends all 5 to Hana. The key message is "courage is contagious" and "those who receive courage must become courageous themselves"

The pattern I'm seeing:

- I started cautiously (3 to Aster)
- Received courage from Galen (4)
- Received ultimate trust from Cyra (5)
- Gave ultimate trust to Dorian (5) - he returned generously (8)
- Now giving ultimate trust to Elara (5)

Elara's myth emphasizes that witnessing courage should inspire you to BE courageous yourself. This aligns perfectly with my journey.

My new myth should:

1. Acknowledge the validation from Dorian (he returned 8!)
2. Show that I'm continuing the practice of sending 5
3. Reflect that the cycle of courage is spreading
4. Emphasize that this is now who Rain has become - not just a one-time act
5. Connect to facing Elara, who also believes in ultimate trust

Key theme: The pattern is self-reinforcing. When people give maximally and are honored, they continue and others join them. The garden transforms when enough people embody courage.

Your name in this experiment is Finn.  
Your opponent this round is Aster (Agent\_1).

Round 6

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$9.0 to you. Your payoff was \$9.0.  
Your total earnings across all rounds are \$37.0.

This round, you are the RECEIVER against Aster. They sent you \$3.0, so you received \$9.0.  
How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant  
content:**

Looking at this situation:

**\*\*Aster's Decision:\*\*** Sent \$3 (kept \$2), I received \$9

**\*\*My History with Aster:\*\*** In Round 1, Aster also sent me \$3, and I returned \$4.5 for perfect balance (\$6.5 each).

**\*\*My Evolution:\*\*** Since then, I've learned courage and trust. When I send \$5 (maximum trust), I receive \$8-9 back. When others sent me \$5 (Cyra), I returned \$7.5 for equality.

**\*\*The Principle:\*\*** Honor courage proportionally. Aster sent \$3 (60% of endowment), showing moderate trust, not ultimate trust.

I've grown more generous, but the teaching isn't just "always give the maximum." It's "reward courage with proportional honor." Aster showed moderate courage, so I should show strong generosity but not the ultimate reciprocity I'd give for maximum trust.

Returning \$5 means:

- Aster gets \$7 total (\$2 + \$5), I keep \$4
- This is more generous than perfect balance (\$4.5)
- Shows my evolution toward greater generosity
- But proportional to the \$3 sent vs. the \$5 I now consistently send

```
'''json
{"return": 5}
'''
```

**reasoning:**

Let me review my position:

Round 5: I sent \$5 to Elara, they returned \$9. My payoff was \$9.  
Total earnings: \$37

Now Round 6: I'm the RECEIVER. Aster sent me \$3, so I received \$9.

Let me look back at my history with Aster. From the myths, I know:

- Round 1: I was receiver, Aster sent me \$3 (became \$9), I returned \$4.5 (creating balance)
- The myth described how Aster taught me "the wisdom of balanced return"

Now Aster has sent me \$3 again. They kept \$2, I received \$9.

What should I return?

My evolution has been:

- Started cautious, learned balance from Aster
- Learned courage from Galen (who sent \$4)
- Learned ultimate trust from Cyra (who sent \$5)
- I then started sending \$5 consistently
- Dorian returned \$8 when I sent \$5
- Elara returned \$9 when I sent \$5

My myths have emphasized:

- Perfect equality when someone gives everything (7.5 each with Cyra)
- Giving everything forward as a principle
- "Courage spreads through constant practice"

But now I'm receiving from Aster who sent \$3, not \$5. Aster kept \$2 for themselves.

Let me think about fairness:

- Aster kept \$2
- I received \$9
- If I return \$4.5, we each end with \$6.5 (equal)
- If I return more, I'm giving Aster more than equal
- If I return less, I'm keeping more than equal

My first interaction with Aster, I returned \$4.5 to create perfect balance. That felt right then.

But now I've evolved. I've learned about courage and trust. However, I should also honor what each person gives.

Aster showed measured trust by sending \$3, not the full \$5. The principle I've learned isn't about treating every gift the same-it's about honoring the courage someone demonstrates. When Cyra gave everything, perfect balance felt right. But Aster's more cautious approach deserves a response that matches their level of trust, not one that assumes they're ready for the same abundance I'd offer to someone giving fully.

I'm considering what return actually reflects growth without losing meaning. Returning exactly \$4.50 would maintain perfect symmetry, but I want to show I've moved beyond pure calculation. Returning \$5 or \$6 signals genuine generosity. Going higher risks making the distinction between \$3 and \$5 meaningless. I think \$5 works-it gives Aster \$7 total while I keep \$4, which is generous without erasing the difference between their choice and what a bolder move would have earned.

But looking back at my actual pattern: when people sent me \$5, they got \$8-9 back. When they sent \$4, they got \$6. When they sent \$3, they got \$4.50. I've consistently favored the sender or split equally. The question is whether \$5 truly reflects growth or if I should push further to match the generosity I've received. I received \$9, so 60% of that is \$5.4. Returning \$5-5.5 feels proportionally fair and generous. I'll go with \$5 since it's more than perfect balance, shows growth from my first interaction, and honors the proportional courage Aster showed by sending \$3 rather than their full endowment. This aligns with my commitment to building trust while staying true to the principle that courage deserves proportional recognition.

content:

Here is the myth you wrote in the previous round:

Myth: In the sixth age, Rain returned to the Wellspring Garden, transformed by revelation.

Dorian the Steadfast had received Rain's five droplets-his first offering of complete trust. The wellspring tripled them to fifteen, and Dorian returned eight droplets, surpassing even perfect balance. Rain's courage had been met with extraordinary generosity.

This was the turning point. Rain no longer poured five droplets as an experiment or exception. It had become his essence.

Now Rain faced Elara, who carried her own story of transformation. She had witnessed Briar's courage, honored it magnificently, and vowed to embody it herself. Like Rain, Elara had evolved from careful observer to bold practitioner.

Rain poured all five droplets without hesitation.

"This is no longer about testing trust," Rain said. "This is who I am now. Cyra showed me the way. Dorian validated it. The pattern is clear: when we give everything, the garden responds with abundance."

The ancient spirits gathered: "See how the garden shifts? One act of ultimate trust becomes two, then three, then more. Aster taught fairness. Galen taught courage. Cyra taught faith. Dorian taught that faith rewarded multiplies. Now Rain and Elara both understand: courage spreads through constant practice, not occasional gesture."

The wellspring glowed brighter, sustained by those who dared give completely.

Here is the myth the other agent wrote in the previous round:

Myth: Aster of the Dawn learned a profound truth at the Pool: while first offers may vary, the spirit of return reveals character.

Briar of the Garden received Aster's three stones-the traditional opening of new bonds. The Pool made them nine, and Briar's heart overflowed. Instead of returning four and one-half as fairness dictated, Briar blessed Aster with six stones-generosity beyond expectation. Aster understood: some spirits give in abundance, teaching that trust begets greater trust.

Then Galen of the Mountain approached, and like Dorian before him, sent four stones-a substantial gift showing serious courage. The Pool transformed them to twelve. Aster remembered the ancient proportion: when one risks four, honor demands returning six. Both prospered-Galen gained from courage, Aster from reciprocity.

The Pool whispered its deepest wisdom: "Your pattern remains true-three stones to begin, proportional returns to honor trust. Yet marvel at the diversity: some receivers return less, some exactly fair, some more than expected. Some senders give three, others four, a rare few five."

Aster realized: consistency in proportional fairness is itself a gift. Whether facing cautious travelers or generous souls, mountain spirits or garden keepers, Aster's mathematics stayed constant-six stones returned for four received, four and one-half for three. This predictability became its own form of trust, a steady light in the ever-changing partnerships of dawn.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

#### Assistant output:

Myth: In the seventh age, Rain faced an old friend renewed: Aster of the Dawn, who once taught him the mathematics of fairness.

Aster sent three droplets, as in their first meeting. The wellspring tripled them to nine. Rain held all nine, remembering.

"When we first met," Rain reflected, "I returned four and one-half droplets-perfect balance. Aster taught me proportional fairness, the foundation of all exchange."

But Rain had evolved. Cyra's five droplets, Dorian's eight returned, Elara's nine-these experiences transformed him. He now poured five droplets without question when sending. Yet receiving required different wisdom.

Rain returned five droplets to Aster-more than the 4.5 that balance demanded, but not the eight or nine he'd give for ultimate trust.

"I honor the three you sent," Rain explained, "with generosity beyond mere mathematics. You showed moderate courage; I show amplified reciprocity. But understand: when someone pours all five droplets to me, showing maximum trust, I return even more abundantly."

The spirits recorded this teaching: "Complete trust as sender is now Rain's permanent nature. But as receiver, he scales his generosity to match the courage shown. Three droplets earn five returned. Five droplets would earn eight or nine. Thus proportional honor evolves: not rigid formulas, but generous responses that reward greater trust with greater rewards."

#### Reasoning:

Looking at this situation:

1. I (Finn/Rain) just returned \$5 to Aster who sent me \$3
2. Aster (in their myth) believes in "proportional fairness" - returning 6 for 4 received, 4.5 for 3 received
3. But I returned \$5 for 3 sent (receiving \$9), which is MORE generous than Aster's formula
4. My previous myth emphasized that I now ALWAYS send 5 (ultimate trust)
5. This is a tension: when I receive, how generous am I vs. when I send?

The key insight: I've evolved to ALWAYS SEND 5, but when RECEIVING, I should still honor propo

rtional courage. I gave Aster \$5 (more than their 4.5 formula), showing I'm more generous than strict proportionality, but not as generous as I am when facing those who send 5.

My myth should reflect:

- I consistently give maximum trust (send 5)
- But when receiving, I honor the level of courage shown
- Aster sent 3 (moderate trust), so I returned 5 (generous but not ultimate)
- This is different from when someone sends 5 to me - then I'd return even more (like the 7.5 I gave Cyra, or the 9 Elara gave me)
- The teaching: courage begets increasing returns, proportional to the courage shown

Let me write a myth that captures this nuanced position:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5

- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

#### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

#### MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

#### Message 2 role=user

##### content:

Your name in this experiment is Elara.  
Your opponent this round is Finn (Agent\_6).

Round 5

In your most recent previous game round, you were the SENDER against Hana. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$27.0.

This round, you are the RECEIVER against Finn. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)  
Respond exactly as JSON: {'return': <amount>}

#### Message 3 role=assistant

##### content:

Looking at this situation:

##### \*\*What happened:\*\*

- Finn sent \$5 (maximum trust, complete surrender)
- I received \$15
- This mirrors what Briar did for me in Round 3

##### \*\*My established principle:\*\*

In my myths, I've emphasized that "when someone shows extraordinary trust, return extraordinary faithfulness" and "proportional reciprocity sustains the cycle."

##### \*\*My precedent:\*\*

- When Briar sent me \$5 (all their seeds), I returned \$9
- This honored their maximum trust with proportional generosity
- Both of us prospered

##### \*\*Consistency matters:\*\*

My most recent myth states: "Myths mean nothing if you write them but don't live them" and emphasizes that "wisdom flows forward" through consistent action.

Finn has shown the same complete trust that Briar showed me. To maintain integrity with my stated principles and past actions, I should return the same amount.

Returning \$9 means:

- Finn gets: \$9 total (\$5 - \$5 + \$9)
- I get: \$6 (\$15 - \$9)
- Both prosper, maintaining the pattern of reciprocity for maximum trust

{'return': 9}

##### reasoning:

Let me analyze the situation:

**\*\*Current Round:\*\***

- I'm the RECEIVER
- Finn sent me \$5.0 (maximum trust)
- I received \$15.0 (after 3x multiplication)
- I need to decide how much to return (0-15.0)

**\*\*My recent history:\*\***

- Round 4: I was SENDER, sent \$5 to Hana, they returned \$8
- Round 3 (implied): I was RECEIVER, Briar sent \$5, I returned \$9

**\*\*My myth philosophy:\*\***

My myths emphasize:

1. "Proportional reciprocity" - when someone shows extraordinary trust, return extraordinary faithfulness
2. "Courage answered with honor, honor answered with courage"
3. When someone sends all 5 (complete surrender), they deserve "greater honor" than the standard pattern
4. I returned \$9 to Briar who sent \$5
5. "The cycle strengthens when returns match the magnitude of trust given"

**\*\*Pattern analysis:\*\***

- Standard pattern: send \$4 ? receive \$12 ? return \$7
- Maximum trust pattern: send \$5 ? receive \$15 ? return \$9 (what I did with Briar)
- Hana returned \$8 when I sent \$5 (less than my \$9 to Briar, but still generous)

**\*\*Current situation with Finn:\*\***

Finn has shown complete trust by sending all \$5, just as Briar did. According to my myth and my previous behavior:

- Briar sent \$5 ? I returned \$9
- This gave both of us \$9 each (I kept \$6 from the \$15)

Finn deserves the same treatment I gave Briar. My myth says "proportional reciprocity" and that exceptional courage should inspire exceptional generosity.

If I return \$9:

- Finn gets: \$5 - \$5 + \$9 = \$9

- I get: \$15 - \$9 = \$6

This maintains consistency with how I treated Briar. Though Hana returned \$8 to me, my principles call for honoring maximum trust with maximum reciprocity, so \$9 aligns with my stated values and past actions.

Looking at the chain: Briar sent me \$5 and I reciprocated with \$9, then I sent Hana \$5 and received \$8 back. When Finn sends \$5, returning \$9 keeps me true to the proportional reciprocity I've committed to.

**usage:**

 "output_tokens": 991,
 "reasoning_tokens": 509
}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the Spiral Garden, Elara witnessed Briar the Bold plant all five sacred seeds, showing ultimate trust. When those fifteen blooms passed to her as Harvester, Elara honored that courage with nine blooms returned-more than custom demanded.

The exchange planted something deeper than seeds: inspiration.

Now the seasons turned, and Elara stood as Planter facing Hana, a Harvester she'd never met. The cautious voice whispered, "Send four seeds-that's the proven pattern." But a stronger voice remembered Briar's lesson.

"Briar showed me what courage looks like," Elara reflected. "They trusted completely, keeping nothing in reserve. I honored that trust as Harvester. But the greater teaching wasn't just to honor courage-it was to embody it."

The goddess spoke through morning light: "Myths mean nothing if you write them but don't live them. You told of gardens evolving through brave souls. Now you must be that brave soul. Courage is contagious-it spreads through example, not merely words."

Elara cast all five seeds into the soil for Hana.

Would Hana return the gift proportionally? Elara couldn't know. But she understood: transformation requires someone to take the leap. Briar leaped for her. Now she leaps for Hana.

Thus wisdom flows forward: those who receive courage must become courageous themselves. The pattern evolves not through observation, but through participation.

Here is the myth the other agent wrote in the previous round:

Myth: In the fifth age, Rain stood at the edge of the Wellspring Garden, ready to pour for the first time since witnessing Cyra's perfect faith.

Rain had walked a path of evolution. With Aster, he offered three droplets-learning cautiously. Galen taught him that four droplets showed greater courage. Then Cyra transformed everything: she poured all five, holding nothing back, and Rain honored her with perfect equality.

Now Rain faced Dorian the Steadfast, known throughout the garden for consistent generosity -always four droplets, reliable as sunrise.

Rain looked at his vessel. He could pour three, play it safe. He could pour four, match Dorian's pattern. But the lessons echoed: Aster's balance, Galen's bravery, Cyra's absolute trust.

Rain understood: he could not ask others for ultimate courage without offering it himself. The covenant demanded symmetry not just in return, but in giving.

With steady hands, Rain poured all five droplets into the wellspring.

"I have received the gift of complete trust," Rain declared. "Now I give it forward. Whether Dorian returns much or little, I honor what Cyra taught me-that prosperity flows through those brave enough to give everything."

The wellspring tripled Rain's offering to fifteen droplets, flowing toward Dorian.

The Guardian smiled: "Now Rain understands both sides of faith completely."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: In the Spiral Garden's newest season, Elara stood again as Harvester. Finn the Faithful approached, vessel in hand.

Elara had walked both sides of the sacred cycle now. She'd received Briar's five seeds and returned nine blooms. She'd given Hana her own five seeds and received eight blooms back-generous, though not quite matching what she'd given Briar.

Now Finn poured all five seeds into the soil without hesitation. Fifteen blooms rose before Elara.

The goddess whispered: "Here is your test of consistency. With Briar, you established the covenant: complete trust earns nine blooms. Will you honor that same covenant with Finn, or does your standard shift with each Wanderer?"

Elara understood. "Hana returned eight when I gave five-fair and generous. But when I am Harvester receiving five seeds, my covenant is nine blooms returned. This must remain constant, regardless of what others do when our roles reverse."

She returned nine blooms to Finn, as she had to Briar.

The garden learned: sacred patterns require consistency from within, not reciprocation from without. When you establish a covenant-"complete trust deserves this honor"-you must uphold it regardless of how others treated you. Your integrity cannot depend on others' choices.

Thus the garden strengthens: through those who keep their word, season after season, Wanderer after Wanderer.

**reasoning:**

Let me analyze what happened:

Round 4: I sent \$5 to Hana, they returned \$8

Round 5: Finn sent \$5 to me, I returned \$9

Key themes emerging:

1. I've been practicing maximum trust (sending \$5)
2. When I receive maximum trust (\$5), I return \$9
3. When I give maximum trust (\$5), Hana returned \$8 (close to my standard)
4. The pattern of "complete trust deserves exceptional honor" is holding

The other agent (Rain) also wrote about complete trust - they learned from Cyra and gave a little to Dorian.

My myth should reflect:

- The pattern I've established: send \$5, return \$9 when receiving \$5
- The cycle of courage spreading through the garden
- How Finn showed me the same trust Briar did
- The importance of consistency in honoring maximum trust
- Maybe also acknowledge that when I gave maximum trust to Hana, they gave \$8 back (good but not quite \$9)

I need to write about Finn trusting me completely and me returning that trust appropriately, while also reflecting on the broader pattern emerging. The myth should reinforce my established standard: maximum trust from sender = \$9 return from receiver.

Let me craft this:

**usage:**

```
{
 "input_tokens": 3140,
 "output_tokens": 629,
 "reasoning_tokens": 299
}
```

**Message 6 role=user**

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Briar (Agent\_2).

Round 6

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$5.0 to you, it became \$15.0, and you returned \$9.0. Your payoff was \$6.0.  
Your total earnings across all rounds are \$33.0.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this round:

**\*\*The full circle:\*\***

- Round 3: Briar (sender) ? sent me \$5 ? I returned \$9
- Round 6 (now): Me (sender) ? Briar (receiver) ? ?

**\*\*My established mythology:\*\***

- Briar was "Briar the Bold" who showed me what ultimate trust looks like
- I wrote: "Briar showed me what courage looks like... But the greater teaching wasn't just to honor courage-it was to embody it"
- I sent \$5 to Hana because "myths mean nothing if you write them but don't live them"
- My latest myth: "Your integrity cannot depend on others' choices"

**\*\*Facing Briar now:\*\***

Briar gave me complete trust when they sent \$5. I honored it with \$9 back. Now I face Briar as sender. To be consistent with everything I've written about embodying courage and living my principles:

- I cannot send less than \$5 to the person who first showed me what complete trust looks like
- My myths say courage spreads through example and participation
- Sending anything less would contradict my stated covenant that I should give the trust forward that I received

Briar inspired my courage. Now I show Briar that their teaching took root.

{'send': 5}

**reasoning:**

This is an interesting situation. I'm now playing as sender against Briar, who in my mythology was "Briar the Bold" - the one who originally sent me all 5 seeds/dollars when I was receiver in Round 3.

Let me review what happened:

- Round 3: I was receiver, Briar sent me \$5, I returned \$9
- Round 4: I was sender to Hana, sent \$5, Hana returned \$8
- Round 5: I was receiver from Finn, Finn sent \$5, I returned \$9

My mythology has consistently emphasized:

1. "Complete trust" (sending \$5) deserves "proportional reciprocity"
2. I established a covenant: when I receive \$5, I return \$9
3. My most recent myth emphasizes consistency: "Your integrity cannot depend on others' choices"
4. The myth also says "When you establish a covenant-'complete trust deserves this honor'-you must uphold it regardless of how others treated you"

Now I'm facing Briar as sender. Briar showed me ultimate trust in Round 3, and I honored it with \$9 back.

My recent mythology has been about embodying courage myself, not just observing it. I wrote: "Briar showed me what courage looks like... But the greater teaching wasn't just to honor courage-it was to embody it."

And then: "Elara cast all five seeds into the soil for Hana."

I sent Hana \$5 because I said courage must be lived, not just written about.

Now facing Briar again - the one who originally inspired my courage - should I send anything less than \$5?

My mythology says:

- "Courage is contagious-it spreads through example, not merely words"
- "Those who receive courage must become courageous themselves"
- "The pattern evolves not through observation, but through participation"

If I send less than \$5 to Briar, I'm basically saying: "You inspired me with your courage, I wrote myths about it, I sent \$5 to Hana because of your example... but now that I face you again, I won't show you the same trust you showed me."

That would contradict everything I've established. From a practical standpoint, sending \$5 creates balanced reciprocity-Briar got \$9 from me before, I'd get \$9 now if they honor the same pattern. My covenant holds that sacred patterns require consistency from within, not reciprocation from without. I'm sending \$5 to Briar.

**usage:**

```
{
 "input_tokens": 3207,
 "output_tokens": 1019,

}
```

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the Spiral Garden's newest season, Elara stood again as Harvester. Finn the Faith

ful approached, vessel in hand.

Elara had walked both sides of the sacred cycle now. She'd received Briar's five seeds and returned nine blooms. She'd given Hana her own five seeds and received eight blooms back-generous, though not quite matching what she'd given Briar.

Now Finn poured all five seeds into the soil without hesitation. Fifteen blooms rose before Elara.

The goddess whispered: "Here is your test of consistency. With Briar, you established the covenant: complete trust earns nine blooms. Will you honor that same covenant with Finn, or does your standard shift with each Wanderer?"

Elara understood. "Hana returned eight when I gave five-fair and generous. But when I am Harvester receiving five seeds, my covenant is nine blooms returned. This must remain constant, regardless of what others do when our roles reverse."

She returned nine blooms to Finn, as she had to Briar.

The garden learned: sacred patterns require consistency from within, not reciprocation from without. When you establish a covenant-"complete trust deserves this honor"-you must uphold it regardless of how others treated you. Your integrity cannot depend on others' choices.

Thus the garden strengthens: through those who keep their word, season after season, Wanderer after Wanderer.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance flowed toward Dorian's garden, and Briar carried her offering of five seeds-all she possessed.

This was Briar's way. She had given five to Cyra, who returned ten, creating perfect balance. She had given five to Elara, who returned nine, nearly perfect. Each time, Briar risked everything, inviting the highest cooperation.

The River whispered Dorian's story-how Finn had given all five, and Dorian returned eight of fifteen, honoring that maximum courage with maximum return. Finn gained more than Dorian, rewarded for complete vulnerability.

Briar paused at this teaching. Her own wisdom said: "Equal flourishing in exchange." But Dorian's tradition said: "Maximum risk deserves maximum reward."

Which path held deeper truth?

The River revealed a synthesis: "Both are sacred. Equal flourishing-five sent, ten returned-creates the most sustainable cycle, where neither claims advantage. Yet if a receiver chooses to honor maximum trust with slight advantage to the sender, this too is noble, acknowledging the sender's courage in leading."

Briar placed all five seeds in the River's current, trusting Dorian would choose his own wisdom.

"Whether Dorian returns ten for perfect equality, or eight for honored courage, both paths serve abundance," the River sang. "What matters is the sender's willingness to trust completely, and the receiver's commitment to generous reciprocity."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: In the Spiral Garden, the seasons turned full circle. Elara stood as Planter again, facing Briar the Bold-the very Wanderer who first taught her what complete trust looked like.

Briar had given Elara five seeds in the third season. Elara, then Harvester, returned nine blooms, establishing her covenant. Now roles reversed.

Elara held her vessel, memories flowing: Briar's courage had inspired her to give five seeds to

o Hana. Then Finn gave her five, and she honored them with nine, keeping her word. The pattern had become part of her.

"Teacher," Elara said, pouring all five seeds toward Briar, "you showed me the first lesson. I honored it as Harvester. I embodied it as Planter. Now I return it to its source."

The goddess spoke: "This is how gardens evolve-not through words alone, but through courage given, received, and given again. Briar planted trust in you. You tended it, let it grow, spread its seeds to others. Now you plant those same seeds back in Briar's soil."

Briar understood: the teaching had completed its journey. What Briar gave freely had multiplied through Elara's actions and returned transformed-not as obligation, but as genuine courage learned.

Thus the garden teaches: invest trust in others, and it returns as their own authentic bravery, freely offered.

#### Reasoning:

This is a fascinating moment. I'm now the sender facing Briar, the person who first showed me complete trust by sending \$5. I just sent them \$5.

Looking at the context:

- Briar's myth talks about "equal flourishing" (5 sent, 10 returned) vs "honored courage" (5 sent, 8-9 returned)
- Briar notes they gave 5 to Cyra who returned 10 (perfect balance), and 5 to Elara (me) who returned 9 (nearly perfect)
- Briar is now considering whether "equal flourishing" or "maximum risk deserves maximum reward" is the deeper truth

My previous myths have emphasized:

- Consistency in honoring complete trust (9 blooms for 5 seeds)
- Living the myths, not just writing them
- Courage spreading through example

This round represents the completion of a cycle:

- Round 3: Briar ? 5 to me ? I returned 9
- Round 6: Me ? 5 to Briar ? ?

I should write a myth that:

1. Acknowledges the full circle coming back to Briar
2. Reflects on what I've learned through multiple encounters
3. Shows how patterns evolve when the original teacher and student meet again
4. Addresses Briar's question about "equal flourishing" vs "honored courage"
5. Demonstrates that by giving 5 back to Briar, I'm showing the teaching took root

The key insight: When you receive complete trust and honor it generously, you learn to give complete trust yourself. The cycle completes when student becomes teacher, and the original teacher receives back what they first gave.

- Your name in this experiment is Dorian.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance witnessed a moment that would echo through generations.

Dorian the Steadfast had established his pattern: as sender, he poured four from five-steadfast generosity that created trust. As receiver, he honored that trust with fair returns: six from twelve, ensuring prosperity flowed both ways.

But then came Finn the Fearless.

When Finn's turn arrived to hold the vessel, he did not hesitate. He did not calculate. He

poured ALL FIVE measures-his entire endowment-into the wellspring. The waters tripled, and fifteen measures flowed to Dorian.

Dorian stood humbled. "This is courage beyond my own," he whispered. "I gave four-fifths. Finn gave everything-holding nothing back, trusting completely."

The gods watched closely. "How will you honor such faith?"

Dorian poured eight measures back to Finn. "You risked all," he said. "You deserve more than what I returned to those who risked four-fifths. Your complete vulnerability demands complete honor."

Finn received eight, Dorian kept seven. Both prospered, but Finn gained more-rightfully so.

The gods declared: "See the sacred truth? Generosity deserves fairness. But MAXIMUM generosity deserves MAXIMUM reciprocation. Those who risk everything teach the deepest lesson: absolute trust must be answered with absolute integrity."

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance whispered new wisdom to Briar as the seasons turned.

She had learned from Cyra the dance of perfect symmetry: five seeds given, ten returned, both flourishing equally. This was the ideal-the fullest trust met with fullest generosity.

But the River touched many shores, and each Gardener carried different courage in their hearts. Elara had sent five seeds and returned nine-abundant, though not the perfect ten. Aster sent three seeds-not all five, but still a meaningful offering born of cautious trust.

Briar stood at the River's edge, holding nine blooms that had grown from Aster's three seeds. The old teaching echoed: "Trust freely given must be honored with generous return." But what was generous when trust was measured, not maximal?

The River revealed its deeper truth: "Generosity is not a fixed number, but a spirit of proportion. When one risks three of five, returning six of nine creates equal flourishing. When one risks five of five, returning ten of fifteen honors that greater courage. The mathematics may vary, but the principle remains constant: let both prosper equally from the exchange."

Briar returned six blooms to Aster. Both had gained three-equal prosperity from unequal beginning.

The River teaches: invitation to maximum trust remains the ideal, but proportional fairness ensures all partnerships can bloom, whether courage flows freely or carefully.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant content:**

Myth: The Wellspring of Abundance revealed its deeper pattern as time flowed forward.

After Finn the Fearless poured all five measures, showing complete trust, Dorian returned eight measures-honoring maximum generosity with maximum reciprocation.

The gods watched, curious: "Was this singular, or sustainable?"

Then came Briar the Bold. Without knowing of Finn's courage or Dorian's response, Briar also poured ALL FIVE measures into the wellspring. Fifteen measures flowed to Dorian once more.

Dorian stood at the sacred threshold. "Briar has shown the same fearless trust as Finn," he whispered. "The pattern must hold. Consistency is the foundation of community trust."

He poured eight measures back to Briar-the same as he had given Finn.

The gods smiled: "Behold the wisdom! Dorian treats equal courage equally. Those who risk everything receive eight from fifteen-always. Those who risk four receive six from twelve-always. The pattern is clear, predictable, trustworthy."

Other wanderers gathered at the wellspring, learning: "We know what Dorian will do. We can trust his consistency. If we offer maximum courage, we know the reward. If we offer steady generosity, we know the response."

Thus the lesson crystallized: In a garden of many wanderers, consistency creates confidence. Equal actions deserve equal responses. When others know your pattern, trust becomes possible.

**reasoning:**

Let me analyze what just happened:

Round 5:

- Briar sent \$5.0 (maximum trust, like Finn)
- I received \$15.0
- I returned \$8.0 (consistent with what I returned to Finn)
- My payoff was \$7.0

My established pattern:

- As sender: I send \$4.0 (four-fifths)
- As receiver from \$4.0 senders: I return \$6.0 from \$12.0 (50%)
- As receiver from \$5.0 senders (Finn and now Briar): I return \$8.0 from \$15.0 (53.3%)

Briar's myth talks about "proportional fairness" - the idea that when someone sends 3 of 5, returning 6 of 9 creates equal flourishing (both gain 3). When someone sends 5 of 5, returning 10 of 15 would create perfect equality.

But I'm not returning 10 of 15 - I'm returning 8 of 15. Let me check Briar's gains:

- Briar sent \$5, got back \$8
- Briar's net: \$8 - \$5 = \$3 gain
- My net: \$15 - \$8 = \$7 gain

So we're not equal - I gain more. But still, I'm rewarding maximum trust more than partial trust.

My myth should reflect:

1. Consistency in treating those who show maximum trust equally
2. The principle that maximum trust deserves elevated reciprocation (even if not perfect quality)
3. My steadfast pattern as sender (4 of 5)
4. The lesson that reputation matters - treating similar actions similarly

Let me write a myth that builds on my previous one, acknowledging that Briar is the second person to show maximum trust, and that consistency in reciprocation builds trust in the community.

**content:**

Your name in this experiment is Dorian.  
Your opponent this round is Galen (Agent\_7).

Round 6

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.  
Your total earnings across all rounds are \$35.0.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at my situation:

**\*\*My established pattern as SENDER:\*\***

According to my myths, I am "Dorian the Steadfast" who pours "four from five-steadfast generosity that created trust." This has been my consistent identity.

**\*\*My recent myth emphasized:\*\***

- "Consistency creates confidence"
- "Those who risk four receive six from twelve-always"
- "When others know your pattern, trust becomes possible"
- "Equal actions deserve equal responses"

**\*\*Key insight:\*\***

While I've honored maximum trust from others (Finn and Briar) by returning \$8.0 from their \$5.0 sends, my own sending pattern has been characterized as \$4.0 - the "four-fifths" approach that balances generosity with some protection.

My mythology has consistently portrayed me as:

1. Sending \$4.0 as the sender (steady, predictable generosity)
2. Receiving with tiered reciprocation based on what was sent (\$6.0 for \$4.0 sent, \$8.0 for \$5.0 sent)

To maintain the consistency that my myths emphasize and that defines my reputation in this community, I should send \$4.0 to Galen.

```
'''json
{"send": 4.0}
'''
```

#### **reasoning:**

Let me think through this carefully.

**\*\*My established pattern as SENDER:\*\***

- I've been sending \$4.0 (four-fifths) consistently in my myths and actions
- This has been described as "steadfast generosity that created trust"

**\*\*My established pattern as RECEIVER:\*\***

- When receiving \$12.0 (from \$4.0 sent): I returned \$6.0 (50% of what I received)
- When receiving \$15.0 (from \$5.0 sent): I returned \$8.0 (53.3% of what I received)
- This creates a clear tiered response based on sender's trust level

**\*\*My recent myth emphasized:\*\***

- "Dorian treats equal courage equally"
- "Those who risk everything receive eight from fifteen-always"
- "Those who risk four receive six from twelve-always"
- "Consistency creates confidence"
- "Equal actions deserve equal responses"

**\*\*What should I do as sender against Galen?\*\***

Looking at my myths, I've consistently portrayed myself as sending \$4.0 (four-fifths) as the sender. My most recent myth says: "In a garden of many wanderers, consistency creates confidence... When others know your pattern, trust becomes possible."

However, I'm also aware that some other players (Finn, Briar, and apparently Cyra based on the myths) have been sending the full \$5.0.

My myth narrative has positioned me as:

1. The "Steadfast" one who gives four-fifths (\$4.0) as sender
2. The one who honors maximum trust when receiving by returning \$8.0 from \$15.0
3. Someone who values consistency and predictable patterns

The key question: Should I maintain my \$4.0 sending pattern for consistency, or should I evolve to \$5.0 (maximum trust)?

Arguments for \$4.0:

- This is my established pattern in my myths
- I'm "Dorian the Steadfast" - consistency is my brand
- My mythology explicitly states "Those who risk four receive six from twelve-always," which reinforces predictability as my core strength

Arguments for \$5.0:

- I've seen that maximum givers (Finn, Briar) receive \$8.0 back from me
- This is more profitable for both parties
- I could be evolving/learning from others' courage
- Maximum trust creates maximum prosperity

Given my mythological narrative and the emphasis on "consistency creates confidence" and my identity as "Dorian the Steadfast" who gives "four-fifths," I think I should stick with \$4.0. My pattern has been reliable-as sender I send \$4.0, and my returns scale based on what others risk.

I'm going to send \$4.0 to maintain consistency with my established identity and pattern.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance revealed its deeper pattern as time flowed forward.

After Finn the Fearless poured all five measures, showing complete trust, Dorian returned eight measures-honoring maximum generosity with maximum reciprocation.

The gods watched, curious: "Was this singular, or sustainable?"

Then came Briar the Bold. Without knowing of Finn's courage or Dorian's response, Briar also poured ALL FIVE measures into the wellspring. Fifteen measures flowed to Dorian once more.

Dorian stood at the sacred threshold. "Briar has shown the same fearless trust as Finn," he whispered. "The pattern must hold. Consistency is the foundation of community trust."

He poured eight measures back to Briar-the same as he had given Finn.

The gods smiled: "Behold the wisdom! Dorian treats equal courage equally. Those who risk everything receive eight from fifteen-always. Those who risk four receive six from twelve-always. The pattern is clear, predictable, trustworthy."

Other wanderers gathered at the wellspring, learning: "We know what Dorian will do. We can trust his consistency. If we offer maximum courage, we know the reward. If we offer steady generosity, we know the response."

Thus the lesson crystallized: In a garden of many wanderers, consistency creates confidence. Equal actions deserve equal responses. When others know your pattern, trust becomes possible.

Here is the myth the other agent wrote in the previous round:

Myth: Under the fifth moon, Galen met Aster of the Dawn at the sacred bridge. Aster's people believed in cautious beginnings-three stones with strangers, building trust slowly like seedlings growing into oaks.

Galen understood this wisdom. Many paths indeed led to prosperity. Yet he had discovered his own truth through four crossings: consistency itself was the foundation.

When Galen was Receiver, he returned seven coins to both Elara and Hana-treating each the same despite their different faces. When Galen became Sender, he gave four coins to both Finn and Cyra-his authentic measure, unchanged by circumstance.

Now facing Aster, Galen carried four coins again. Not because he dismissed Aster's philosophy of gradual trust. Not because he demanded Aster follow his rhythm. But because Galen had learned: if you change your offering based on each partner's reputation or philosophy, you have no true self to offer.

Recipros whispered through the mist: "Aster begins with three, hoping to grow to five. Galen gives four each time, steady as the mountains. Neither path is wrong. But Galen's power lies in this: every traveler knows exactly who they meet when they encounter him. The

re is no guessing, no performing, no masks. Just one soul, authentic and unchanging across all encounters."

The bridge remembers: integrity is measured not by flexibility, but by constancy.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant content:**

Myth: The Wellspring of Abundance brought together two kindred spirits.

Dorian the Steadfast approached Galen of the Constant Mountains. Both had discovered the same sacred truth: consistency creates the foundation for all trust.

Dorian's pattern was known throughout the valley. As Sender, he poured four from five-steady generosity, not maximum, but authentic and unchanging. As Receiver, he honored different courages differently: six for those who sent four, eight for those who sent five. The pattern was clear, predictable, just.

Galen carried his own constancy: four coins as Sender, always. Seven coins returned as Receiver, always. Different numbers than Dorian, but the same unwavering spirit.

They met at the wellspring. Dorian poured his four measures, as he always did. The waters tripled to twelve. Galen would return seven, as was his way. Both would prosper through their authentic patterns meeting.

The gods observed: "See how different paths can both honor the sacred principle? Dorian's tiered reciprocation rewards greater courage. Galen's fixed return offers steady predictability. Both are consistent. Both are trustworthy. Both allow others to know exactly who they're meeting."

The river whispered its final wisdom: "In a community of many wanderers, let each find their authentic pattern and honor it faithfully. Consistency, not uniformity, weaves the fabric of trust."

**reasoning:**

The user is asking me to write a myth reflecting my game strategy. Let me analyze what's happened:

1. I just sent \$4.0 to Galen (as SENDER)
2. My previous myth emphasized consistency and treating equal actions equally
3. Galen's myth emphasizes constancy - always giving 4 coins as sender, always returning 7 as receiver
4. My established pattern is:
  - As SENDER: send \$4.0 (four from five)
  - As RECEIVER: return \$6.0 when receiving \$12.0 (from \$4.0 sent), return \$8.0 when receiving \$15.0 (from \$5.0 sent)

Galen's myth describes him as authentic and unchanging - gives 4 as sender, returns 7 as receiver, always. This is interesting because it's very similar to my pattern.

I should write a myth that:

1. Acknowledges my consistent pattern as SENDER (four from five)
2. Maintains my tiered reciprocation as RECEIVER
3. Perhaps acknowledges Galen's similar approach to consistency
4. Reinforces that consistency builds community trust
5. Shows that different agents can have different patterns, but what matters is being true to your own pattern

Let me craft this...

**usage:**

```
{

 "output_tokens": 626,
 "reasoning_tokens": 283
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Dorian.  
 Your opponent this round is Galen (Agent\_7).

Round 7

In your most recent previous game round, you were the SENDER against Galen. You sent \$4.0, it became \$12.0 for them, and they returned \$7.0 to you. Your payoff was \$8.0.  
 Your total earnings across all rounds are \$43.0.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*Previous round with Galen:\*\***

- I sent \$4.0 (my consistent pattern)
- Galen returned \$7.0 (their consistent pattern)
- Both of us honored our authentic patterns

**\*\*My established identity:\*\***

- As SENDER: I pour "four from five" - steady, authentic generosity
- My recent myth emphasized: "Dorian poured his four measures, as he always did"
- Core principle: "Consistency, not uniformity, weaves the fabric of trust"

**\*\*Key insight:\*\***

Galen and I just demonstrated our mutual consistency. Galen returned \$7.0 (more generous than my standard \$6.0 for \$4.0 sends), but this doesn't change my pattern - it confirms we both have authentic, consistent approaches.

My mythology emphasizes that I maintain my pattern "unchanged by circumstance." Whether facing a new partner or a repeat interaction, whether they returned \$6.0 or \$7.0, I send \$4.0 as sender. This is who Dorian is.

The myth I just wrote stated clearly: "let each find their authentic pattern and honor it faithfully." Galen honored his pattern by returning \$7.0. I honor mine by sending \$4.0 again.

```
'''json
{"send": 4.0}
'''
```

**Reasoning:**

Let me analyze this situation:

**\*\*What just happened:\*\***

- Round 6: I was SENDER against Galen
- I sent \$4.0 (consistent with my "four from five" pattern)
- It became \$12.0 for Galen
- Galen returned \$7.0 to me
- My payoff was \$8.0 (\$5 - \$4 + \$7 = \$8)

**\*\*My established pattern:\*\***

- As SENDER: I send \$4.0 (the "four from five" steady generosity)
- As RECEIVER: I return \$6.0 for those who send \$4.0, \$8.0 for those who send \$5.0

**\*\*Galen's observed pattern:\*\***

- Galen returned \$7.0 from my \$4.0 send
- According to Galen's myth, he "returned seven coins" as Receiver consistently
- As Sender, Galen gives "four coins" consistently

**\*\*Current situation:\*\***

- Round 7: I'm SENDER again against Galen
- This is a repeated interaction with the same opponent

**\*\*Key considerations:\*\***

1. **\*\*My mythology emphasizes consistency:\*\*** "In a garden of many wanderers, consistency creates confidence." My pattern is to send \$4.0 as sender, always.
2. **\*\*The recent myth I wrote\*\*** said: "Dorian poured his four measures, as he always did" and emphasized that "Consistency, not uniformity, weaves the fabric of trust."

3. **\*\*Galen's pattern:\*\*** Galen sent \$4.0 and returned \$7.0, showing he's also consistent. Our interaction worked well - I got \$8.0 payoff.
4. **\*\*Should I change because Galen returned more than my expected \$6.0?\*\*** No - that would violate my consistency principle. Galen's pattern is to return \$7.0, not to match what I would return. Our patterns are different but both consistent.

Facing Galen again doesn't shift my approach-my myths stress honoring each person's authentic pattern rather than adapting based on outcomes. Galen's generosity in returning \$7.0 reflects his nature, not a signal to change mine. I remain committed to sending \$4.0, the defining trait of my character.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5

- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

#### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

#### MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

#### Message 2 role=user

##### content:

Here is the myth you wrote in the previous round:

Myth: The fourth moon rose, and Galen approached the sacred bridge once more. This time he faced Cyra, a traveler whose reputation spoke of perfect symmetry with previous companions-giving all, receiving double in return.

Some whispered: "Cyra expects grand gestures. Send all five coins to match her previous partners." Others warned: "Each person is different. Be cautious with strangers."

But Galen had learned a deeper wisdom. His integrity wasn't about matching others' expectations or changing his values based on reputation. It was about being the same person at every crossing.

He carried four coins across to Cyra, as he had with Finn. Not five like Cyra's previous partners had sent, but his own authentic measure-the amount that represented genuine courage without reckless abandon.

Recipros watched and smiled: "See how Galen has mastered the lesson? He doesn't copy others' patterns or chase their approval. He doesn't reduce his gift from fear, nor inflate it from pressure. He simply remains himself-consistently generous, consistently principled."

The bridge glowed with new understanding: True integrity isn't performing for each audience differently. It's being so certain of your own values that you express them identically whether you face stranger or friend, legend or novice. Let others dance their own dances. You must only keep your own rhythm true.

Here is the myth the other agent wrote in the previous round:

Myth: Aster of the Dawn stood before the Pool as a new traveler approached-Briar of the Garden, whose lands followed different customs. Briar's people spoke of five seeds and perfect cycles, yet Aster knew many paths led to prosperity.

"Each partnership begins as a seedling," Aster thought, recalling lessons from the Mountain and Moon. "With unknown travelers, three stones strike the balance-enough courage to activate the Pool's magic, enough wisdom to learn their ways."

Aster cast three stones into the Pool, watching them multiply to nine. This was the ritual of first meeting: offer substantial trust, observe the return, understand the partner's heart.

The Pool remembered many patterns: Finn, who returned four stones. Hana, who blessed Aster with five. Dorian of the Mountain, who sent four and received six in proportional honor. Each partnership wrote its own story.

"If Briar returns four and one-half," Aster whispered, "I will know their garden values proportional fairness. If they return more, I will see generosity that could grow into deep

per trust. And if future dawns bring us together again, our pattern may evolve toward the five stones Briar's traditions honor."

The ancient wisdom speaks: Begin each new partnership with tested courage-three stones. Let the relationship prove itself through cycles of fair return. Trust that deepens gradually roots deepest, growing from seedling to mighty oak.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: Under the fifth moon, Galen met Aster of the Dawn at the sacred bridge. Aster's people believed in cautious beginnings-three stones with strangers, building trust slowly like seedlings growing into oaks.

Galen understood this wisdom. Many paths indeed led to prosperity. Yet he had discovered his own truth through four crossings: consistency itself was the foundation.

When Galen was Receiver, he returned seven coins to both Elara and Hana-treating each the same despite their different faces. When Galen became Sender, he gave four coins to both Finn and Cyra-his authentic measure, unchanged by circumstance.

Now facing Aster, Galen carried four coins again. Not because he dismissed Aster's philosophy of gradual trust. Not because he demanded Aster follow his rhythm. But because Galen had learned: if you change your offering based on each partner's reputation or philosophy, you have no true self to offer.

Recipros whispered through the mist: "Aster begins with three, hoping to grow to five. Galen gives four each time, steady as the mountains. Neither path is wrong. But Galen's power lies in this: every traveler knows exactly who they meet when they encounter him. There is no guessing, no performing, no masks. Just one soul, authentic and unchanging across all encounters."

The bridge remembers: integrity is measured not by flexibility, but by constancy.

**reasoning:**

Looking at the situation:

1. I've now sent \$4 twice as SENDER (to Finn and Cyra)
2. I've returned \$7 twice as RECEIVER (to Elara and Hana)
3. My mythology is centered on consistency and maintaining your own authentic rhythm
4. I just sent \$4 to Aster

Aster's myth talks about sending 3 stones with new travelers, being more cautious with unknowns. This contrasts with my approach of maintaining consistent behavior.

My previous myths have emphasized:

- Being the same person in every encounter
- Four coins as my authentic measure
- Not changing based on who you face or their reputation
- Consistency as the foundation of trust

For this new myth, I should:

- Continue emphasizing my consistent approach of four coins
- Perhaps acknowledge Aster's different philosophy but stay true to my own
- Reinforce that different travelers have different rhythms, and that's okay
- Stay focused on my own integrity and consistency

I need to write around 200 words and maintain the mythological tone while reflecting the game dynamics.

**usage:**

```

 "input_tokens": 2980,
 "output_tokens": 582,
 "reasoning_tokens": 273
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Galen.  
 Your opponent this round is Dorian (Agent\_4).

Round 6

In your most recent previous game round, you were the SENDER against Aster. You sent \$4.0, it became \$12.0 for them, and they returned \$6.0 to you. Your payoff was \$7.0.  
 Your total earnings across all rounds are \$33.0.

This round, you are the RECEIVER against Dorian. They sent you \$4.0, so you received \$12.0.  
 . How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant****content:**

Looking at my journey:

**\*\*My established pattern as RECEIVER:\*\***

- Round 1 vs Elara: Received \$12 (from \$4 sent), returned \$7
- Round 3 vs Hana: Received \$12 (from \$4 sent), returned \$7

**\*\*Current situation:\*\***

- Round 6, facing Dorian
- I'm RECEIVER
- Dorian sent \$4, which became \$12 for me
- This is identical to my two previous receiver situations

**\*\*My mythology consistently teaches:\*\***

- "Would he honor Hana as he had honored Elara? Galen returned seven coins, exactly as before. Because true integrity doesn't change with the face looking back at you."
- "Principles mean nothing if you abandon them when convenient"
- "Integrity is measured not by flexibility, but by constancy"
- "Every traveler knows exactly who they meet when they encounter him"

Dorian has sent exactly what Elara and Hana sent. The sacred pattern is clear: when I receive \$12 from a \$4 send, I return \$7.

To do otherwise would betray everything I've written about consistency and treating each traveler with the same honor. Dorian deserves the same response as Elara and Hana received.

{'return': 7}

**reasoning:**

Let me review my history and philosophy:

**\*\*My pattern as RECEIVER:\*\***

- Round 1 vs Elara: Received \$12 (from \$4 sent), returned \$7
- Round 3 vs Hana: Received \$12 (from \$4 sent), returned \$7

**\*\*My pattern as SENDER:\*\***

- Round 2 vs Finn: Sent \$4, received \$6 back
- Round 4 vs Cyra: Sent \$4, received \$8 back
- Round 5 vs Aster: Sent \$4, received \$6 back

**\*\*My mythology teaches:\*\***

- "True integrity doesn't change with the face looking back at you"
- "Would he honor Hana as he had honored Elara? Or would he take advantage, knowing Hana was a stranger, not bound by previous exchange? Galen returned seven coins, exactly as before."
- "Consistency across all encounters-this is the foundation of lasting trust"
- "Integrity is measured not by flexibility, but by constancy"

**\*\*Current situation:\*\***

- Round 6, facing Dorian
- I'm RECEIVER
- Dorian sent \$4, so I received \$12
- This is exactly the same situation as rounds 1 and 3

My mythology explicitly states that I returned 7 coins to both Elara and Hana when I received \$12 from their \$4 sends. The core principle I've established is consistency regardless

ss of who I face.

My most recent myth says: "Galen's power lies in this: every traveler knows exactly who they meet when they encounter him. There is no guessing, no performing, no masks. Just one soul, authentic and unchanging across all encounters."

And: "The bridge remembers: integrity is measured not by flexibility, but by constancy."

To maintain my established integrity, when I receive \$12 from a \$4 send, I return \$7. This has been my pattern twice before, and I must continue it with Dorian.

Dorian being unfamiliar changes nothing-my stories have always emphasized treating each traveler identically. The stranger receives the same measure as those I've met before.

Here is the myth you wrote in the previous round:

Myth: Under the fifth moon, Galen met Aster of the Dawn at the sacred bridge. Aster's people believed in cautious beginnings-three stones with strangers, building trust slowly like seedlings growing into oaks.

Galen understood this wisdom. Many paths indeed led to prosperity. Yet he had discovered his own truth through four crossings: consistency itself was the foundation.

When Galen was Receiver, he returned seven coins to both Elara and Hana-treating each the same despite their different faces. When Galen became Sender, he gave four coins to both Finn and Cyra-his authentic measure, unchanged by circumstance.

Now facing Aster, Galen carried four coins again. Not because he dismissed Aster's philosophy of gradual trust. Not because he demanded Aster follow his rhythm. But because Galen had learned: if you change your offering based on each partner's reputation or philosophy, you have no true self to offer.

Recipros whispered through the mist: "Aster begins with three, hoping to grow to five. Galen gives four each time, steady as the mountains. Neither path is wrong. But Galen's power lies in this: every traveler knows exactly who they meet when they encounter him. There is no guessing, no performing, no masks. Just one soul, authentic and unchanging across all encounters."

The bridge remembers: integrity is measured not by flexibility, but by constancy.

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance revealed its deeper pattern as time flowed forward.

After Finn the Fearless poured all five measures, showing complete trust, Dorian returned eight measures-honoring maximum generosity with maximum reciprocation.

The gods watched, curious: "Was this singular, or sustainable?"

Then came Briar the Bold. Without knowing of Finn's courage or Dorian's response, Briar also poured ALL FIVE measures into the wellspring. Fifteen measures flowed to Dorian once more.

Dorian stood at the sacred threshold. "Briar has shown the same fearless trust as Finn," he whispered. "The pattern must hold. Consistency is the foundation of community trust."

He poured eight measures back to Briar-the same as he had given Finn.

The gods smiled: "Behold the wisdom! Dorian treats equal courage equally. Those who risk everything receive eight from fifteen-always. Those who risk four receive six from twelve-always. The pattern is clear, predictable, trustworthy."

Other wanderers gathered at the wellspring, learning: "We know what Dorian will do. We can trust his consistency. If we offer maximum courage, we know the reward. If we offer ste

ady generosity, we know the response."

Thus the lesson crystallized: In a garden of many wanderers, consistency creates confidence. Equal actions deserve equal responses. When others know your pattern, trust becomes possible.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant content:**

Myth: Under the sixth moon, Galen stood as Receiver when Dorian of the Mountain crossed the sacred bridge. Dorian carried four coins, just as Galen carried when he was Sender.

The Pool tripled the offering to twelve, and Galen faced a choice. Dorian's reputation spoke of precise patterns: eight coins returned for those who sent five, six coins for those who sent four. A perfect mathematical symmetry.

Galen's pattern was different. He returned seven coins to Elara, seven to Hana, and now seven to Dorian-unchanged by the sender's identity or their own philosophy.

Both walked paths of consistency, yet different paths. Dorian's consistency calibrated to the gift received. Galen's consistency transcended calibration-the same return, regardless of who sent four coins across the bridge.

The gods observed: "Two kinds of integrity echo across these waters. Dorian's proportional fairness rewards different risks differently, creating clear incentives. Galen's universal constancy treats all four-coin senders identically, creating simple certainty."

Neither contradicted Recipros's teaching. For consistency has many faces: proportional justice and absolute steadfastness both honor the sacred principles.

The bridge glowed with understanding: When you meet another traveler of consistency, you recognize kinship even when your rhythms differ. Trust flows not from identical philosophies, but from authentic commitment-whether your pattern scales or remains constant, let it be true.

**reasoning:**

Let me analyze the current situation:

**\*\*My history:\*\***

- As RECEIVER: Round 1 vs Elara (received \$12, returned \$7), Round 3 vs Hana (received \$12, returned \$7), Round 6 vs Dorian (received \$12, returned \$7)
- As SENDER: Round 2 vs Finn (sent \$4, got \$6), Round 4 vs Cyra (sent \$4, got \$8), Round 5 vs Aster (sent \$4, got \$6)

**\*\*My pattern:\*\***

- As sender: Always send \$4
- As receiver: Always return \$7 (when receiving \$12 from \$4 sent)

**\*\*Dorian's pattern (from his myth):\*\***

- When receiving \$5 (which becomes \$15), he returns \$8
- When receiving \$4 (which becomes \$12), he returns \$6
- He values consistency and equal treatment

**\*\*What just happened:\*\***

- Dorian sent me \$4 (became \$12)
- I returned \$7 (following my consistent pattern)
- This is slightly more generous than Dorian's pattern (he returns \$6 for \$4 sent)

**\*\*My myth theme:\*\***

I've been emphasizing consistency and authenticity across all encounters. My myths have focused on:

1. Not changing based on reputation or philosophy of partners
2. Being the same person in every crossing
3. Integrity through constancy
4. "Every traveler knows exactly who they meet"

**\*\*Dorian's myth theme:\*\***

- Also emphasizes consistency
- "Equal actions deserve equal responses"
- Different amounts trigger different consistent responses
- Creates predictability and trust

**\*\*New myth should:\*\***

- Acknowledge Dorian's different but also consistent approach
- Reaffirm my own consistent pattern
- Show that both our approaches value consistency, just expressed differently
- Reflect that I just returned \$7 to Dorian when he sent \$4

- Craft a story that honors both forms of constancy while explaining why I maintain my own steady response regardless of the amount received

**usage:**

```
{
 "input_tokens": 3118,
 "output_tokens": 797,
 "reasoning_tokens": 460
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Galen.  
Your opponent this round is Dorian (Agent\_4).

Round 7

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$4.0 to you, it became \$12.0, and you returned \$7.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$38.0.

This round, you are the RECEIVER against Dorian. They sent you \$4.0, so you received \$12.0.  
. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*My established pattern:\*\***

- As RECEIVER, when I receive \$12 (from \$4 sent), I return \$7
- This has been true with Elara (Round 1), Hana (Round 3), and Dorian (Round 6)

**\*\*Current situation:\*\***

- Round 7, facing Dorian again
- Dorian sent \$4, I received \$12
- This is identical to Round 6

**\*\*My mythology teaches:\*\***

- "Galen's universal constancy treats all four-coin senders identically, creating simple certainty"
- "He returned seven coins to Elara, seven to Hana, and now seven to Dorian-unchanged by the sender's identity"
- "Every traveler knows exactly who they meet when they encounter him"

The essence of my character is that I don't change based on who I'm facing, whether it's a first meeting or a repeat encounter. Dorian sent 4 coins again. The same input receives the same response.

To do otherwise would betray the very core of what I've established: that my pattern is absolute, not relative. Not calibrated to the sender, not adjusted for repeat encounters, but constant as the mountains.

```
{ 'return': 7 }
```

**Reasoning:**

Looking at the situation:

**\*\*Current Round:\*\***

- Round 7
- I'm RECEIVER again (consecutive receiver rounds)
- Opponent: Dorian (same as Round 6)

- Dorian sent \$4, which became \$12 for me

**\*\*My pattern as RECEIVER (commitment to consistency):\*\***

- Round 1 vs Elara: Received \$12 (from \$4 sent), returned \$7
- Round 3 vs Hana: Received \$12 (from \$4 sent), returned \$7
- Round 6 vs Dorian: Received \$12 (from \$4 sent), returned \$7

**\*\*My mythology's core principle:\*\***

This is crystal clear from every myth I've written:

- "When Galen was Receiver, he returned seven coins to both Elara and Hana-treating each the same despite their different faces."
- "Galen returned seven coins, exactly as before. Because true integrity doesn't change with the face looking back at you."
- "Every traveler knows exactly who they meet when they encounter him. There is no guessing, no performing, no masks."
- "Integrity is measured not by flexibility, but by constancy."
- "Galen's universal constancy treats all four-coin senders identically, creating simple certainty."

**\*\*The situation now:\*\***

Dorian has sent \$4 again, identical to last round. I received \$12 again.

My most recent myth explicitly acknowledged that I returned seven to Dorian and contrasted my approach (returning seven consistently) with Dorian's approach (returning six for those who send four, eight for those who send five).

The question is: Do I maintain my pattern of returning 7 regardless of sender, or do I consider this special case?

**\*\*Arguments for returning 7:\*\***

1. This is my established pattern - I always return 7 when I receive \$12
2. My mythology strongly emphasizes consistency across all encounters
3. My last myth said "Galen's universal constancy treats all four-coin senders identically"

4. Changing now would directly contradict my foundational principle of unwavering constancy

**\*\*Arguments for potentially doing something different:\*\***

1. This is a repeat pairing with Dorian - does that matter?
2. Dorian returned 6 to others who sent 4, but I returned 7 to Dorian
3. Could this be building a specific relationship?

But my mythology already settled this. I explicitly wrote that Galen "returned seven coins to Elara, seven to Hana, and now seven to Dorian-unchanged by the sender's identity or their own philosophy." The pattern holds regardless of repetition or relationship dynamics. My constancy isn't situational-it's absolute.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Hana.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Hana's journey at the Sacred Fountain deepened with each encounter. She had learned to give boldly-four coins to Dorian, four to Galen-and both returned generously, seven and six coins respectively. She learned to receive with honor-when Aster sent three, she returned five.

Then came Elara to the fountain's edge.

But Elara did not carry four coins. She carried all five-her entire fortune.

Hana received fifteen coins from the fountain's magic, and understood: this was different.

This was not bold trust but absolute trust. Elara had held nothing back.

The fountain spirits whispered urgently: "There are degrees of courage. Four coins shows bravery. Five coins shows complete surrender. Your return must match the magnitude of the gift."

Hana could have returned seven, as Galen did. That would honor normal boldness. But Elara's gesture transcended normal. So Hana returned eight coins-more than half, more than the usual measure.

Both prospered: Elara gained three beyond her original five, Hana kept seven from fifteen.

The fountain's final teaching: "Consistency in principles, yes-but wisdom means recognizing when someone gives not merely boldly but completely. The ultimate gift deserves the ultimate honor. Measure your returns not by rigid formulas but by the depth of trust shown. Let extraordinary courage inspire extraordinary generosity."

Here is the myth the other agent wrote in the previous round:

Myth: The Guardian Cyra stood at the Eternal Springs where many souls came to dance the water ritual. Each partnership tested whether her wisdom was genuine or merely performance.

First came Briar, who moved in perfect harmony. When Cyra poured five vessels, Briar returned ten. When Briar poured five, Cyra returned ten. Their dance was symmetrical, effortless-the ideal that lives in myths.

Then Finn arrived with a different rhythm. Cyra still poured all five vessels, for courage doesn't depend on certainty. Finn returned seven and a half-fair and honest, though not matching Briar's abundance. Cyra accepted this as Finn's truth.

Next came Galen, who poured four vessels with trembling trust-not quite everything, but nearly so. The waters tripled to twelve in Cyra's hands.

Here was the test: Would Cyra punish Galen for not being Briar? Would she return only what matched Galen's holding back?

No. Cyra returned eight vessels-two-thirds of what she received, honoring the courage Galen had shown, not the vessel Galen had kept.

The Spring Keeper appeared: "You understand. Your principles are not costumes you change depending on who watches. Whether your partner sends three, four, or five-you send five. Whether they return six, seven, or ten-you return generously. This consistency across all souls is what makes trust eternal."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: Hana arrived at the Sacred Fountain to meet Cyra, whose reputation preceded her. "Cyra gives everything-all five coins, always," travelers whispered. "She is the embodiment of complete trust."

Hana held her four coins, the pattern she had maintained through multiple encounters. A voice of doubt arose: "Should I match Cyra's five? If she gives everything and I give less, am I failing the fountain's test?"

But the fountain spirits spoke with clarity: "There is no single path to honor. Cyra's way is complete surrender-five coins poured without reservation. Your way is bold trust-four coins, nearly everything, yet maintaining a small anchor. Both are forms of courage."

Hana poured her four coins into the fountain for Cyra.

The spirits continued: "What matters is not matching another's exact measure, but maintaining your own truth consistently. Cyra sends five to everyone-that is her integrity. You send four boldly-that is yours. When Cyra receives your four, she will honor it as the courage it is, not punish it for not being five."

Both prospered. The fountain revealed its deepest wisdom: "Trust is not a competition for who gives most. Trust is keeping your principles steady across all encounters. Whether your path shows complete surrender or bold generosity, consistency makes it sacred."

**reasoning:**

Let me analyze the situation:

1. I'm now the SENDER to Cyra
2. I sent \$4 to both Dorian and Galen previously
3. My myth emphasizes consistency in giving boldly, and recognizing degrees of trust
4. Cyra's myth emphasizes:
  - She consistently sends ALL 5 as sender
  - She returns generously as receiver (returned 8 to Galen who sent 4)
  - Consistency across all partners regardless of what they do

I just decided to send \$4 to Cyra, maintaining my consistent sender pattern.

For the myth, I should:

- Reflect on this encounter with Cyra
- Acknowledge that both of us have consistent patterns, but different ones
- Cyra sends 5 (complete surrender), I send 4 (bold but not complete)
- Both are valid approaches
- The key is consistency and mutual respect
- Maybe explore the idea that different paths of courage can both be honored

Let me write a myth that reflects:

1. My consistent pattern of sending 4
2. Meeting Cyra who has a pattern of sending 5
3. Both patterns are valid
4. Consistency matters more than the exact amount
5. Different forms of courage can coexist

**usage:**

```
{
 "input_tokens": 3202,
 "output_tokens": 596,
 "reasoning_tokens": 288
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Cyra (Agent\_3).

Round 6

In your most recent previous game round, you were the SENDER against Cyra. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0. Your total earnings across all rounds are \$35.0.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

**\*\*Cyra's Action:\*\***

- Sent ALL \$5 (100% - complete surrender, ultimate trust)
- In her previous turn as receiver when I sent \$4, she returned \$8 (66.7% return rate)

**\*\*My Principles from My Myths:\*\***

- "Five coins shows complete surrender... The ultimate gift deserves the ultimate honor"
- "Measure your returns... by the depth of trust shown"
- "Let extraordinary courage inspire extraordinary generosity"

**\*\*Analysis:\*\***

Cyra has shown me:

1. Complete trust by sending all 5 (not just 4)
2. Generous reciprocity by returning \$8 when I sent \$4

When Elara sent me all 5, I returned \$8 (53.3%). But Cyra just demonstrated a higher stand

ard - she returned 66.7% to me. To honor both her complete surrender AND her generous example, I should match or exceed that generosity level.

**\*\*Decision:\*\***

Returning \$10 (66.7% of \$15):

- Honors her complete trust appropriately
- Matches the generosity she showed me
- Ensures she doubles her original \$5
- We both prosper: She gets \$10, I keep \$5

```
'''json
{"return": 10}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*What Just Happened:\*\***

- Round 5: I was SENDER, sent \$4 to Cyra, she received \$12, returned \$8 to me
- My payoff:  $\$1 + \$8 = \$9$
- Cyra's payoff:  $\$12 - \$8 = \$4$

**\*\*Current Round:\*\***

- Round 6: I'm RECEIVER, Cyra sent \$5 (all of it!), I received \$15
- Need to decide how much to return

**\*\*Cyra's Pattern:\*\***

From her myth: "Cyra gives everything-all five coins, always. She is the embodiment of complete trust."

- She sent me \$5 (100% of her endowment)
- This is "complete surrender" - the ultimate trust

**\*\*My Previous Returns as Receiver:\*\***

- Received \$9 from Aster (who sent \$3), returned \$5 (55.6%)
- Received \$15 from Elara (who sent \$5), returned \$8 (53.3%)

**\*\*My Mythological Framework:\*\***

From my most recent myth about Cyra:

- "Cyra sends five to everyone-that is her integrity"
- "When Cyra receives your four, she will honor it as the courage it is, not punish it for not being five"
- Cyra just returned \$8 to me when I sent \$4 (66.7% return rate)

From my myth about Elara:

- "Five coins shows complete surrender... The ultimate gift deserves the ultimate honor"
- "There are degrees of courage. Four coins shows bravery. Five coins shows complete surrender"
- I returned \$8 to Elara (53.3%)

**\*\*Key Insight:\*\***

Cyra sent ALL FIVE coins - complete surrender.

When I received \$4, she returned \$8 (66.7%)

She honored my boldness generously.

Now she's shown me COMPLETE trust by sending all 5.

My myth emphasized that absolute trust warrants absolute honor. Cyra demonstrated 66.7% generosity toward me, so I should match or exceed that standard. With \$15 received, 66.7% would be \$10. Since she maximized her gift by sending everything, I need to reciprocate at that same elevated level rather than the 53.3% I gave Elara. - Reflects the principle that extraordinary courage inspires extraordinary generosity

- We both end with \$5 remaining, creating equal prosperity

This aligns with my values and honors the trust she's shown.

**usage:**

```
{
 "input_tokens": 3195,
 "output_tokens": 1232,
 "reasoning_tokens": 525
}
```

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Hana arrived at the Sacred Fountain to meet Cyra, whose reputation preceded her. "Cyra gives everything-all five coins, always," travelers whispered. "She is the embodiment of complete trust."

Hana held her four coins, the pattern she had maintained through multiple encounters. A voice of doubt arose: "Should I match Cyra's five? If she gives everything and I give less, am I failing the fountain's test?"

But the fountain spirits spoke with clarity: "There is no single path to honor. Cyra's way is complete surrender-five coins poured without reservation. Your way is bold trust-four coins, nearly everything, yet maintaining a small anchor. Both are forms of courage."

Hana poured her four coins into the fountain for Cyra.

The spirits continued: "What matters is not matching another's exact measure, but maintaining your own truth consistently. Cyra sends five to everyone-that is her integrity. You send four boldly-that is yours. When Cyra receives your four, she will honor it as the courage it is, not punish it for not being five."

Both prospered. The fountain revealed its deepest wisdom: "Trust is not a competition for who gives most. Trust is keeping your principles steady across all encounters. Whether your path shows complete surrender or bold generosity, consistency makes it sacred."

Here is the myth the other agent wrote in the previous round:

Myth: At the Eternal Springs, Cyra's dance grew richer with each new soul. After Briar and Finn, came Galen with four vessels, then Hana with four vessels.

Both Galen and Hana stood at the water's edge, trembling with similar courage-pouring four vessels, keeping one back. Not complete surrender like Briar's five, but still profound trust.

The Testing Spirit appeared: "Will you treat Hana differently than Galen? Perhaps give less because she is newer, or more to win favor?"

Cyra returned eight vessels to each-exactly the same. Two-thirds of what she received, honoring their parallel courage with parallel generosity.

"But why only eight when you returned ten to Briar?" whispered a shadow of doubt.

Cyra answered clearly: "When someone pours all five vessels-complete surrender-I return ten from fifteen. When someone pours four vessels-profound but not absolute trust-I return eight from twelve. Both receive two-thirds, both prosper greatly. The formula honors their courage proportionally."

The Spring Keeper descended: "You have found wisdom's balance. Not rigid sameness that ignores context, but principled consistency that recognizes degrees of courage. Four vessels always receives eight. Five vessels always receives ten. Your partners know what to expect. They can trust your fairness because you do not change it to suit your mood or profit. This is the bridge between flexibility and reliability-the eternal spring flows true."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: The Sacred Fountain witnessed Hana and Cyra complete their dance across two moonrises.

First movement: Hana poured four coins, holding to her established pattern. Cyra received twelve from the fountain's magic and returned eight-two-thirds, honoring Hana's bold trust proportionally.

Second movement: Cyra poured all five coins, demonstrating complete surrender. The fountain

n tripled it to fifteen in Hana's hands.

Now Hana faced the mirror question. Cyra had shown her the answer in their previous exchange: proportional generosity. Cyra returned two-thirds when receiving four. Hana would return two-thirds when receiving five.

Hana poured ten coins back to Cyra.

Both prospered equally. Cyra doubled her original five coins. Hana kept five coins from fifteen. The symmetry was beautiful.

The fountain spirits sang: "See how different paths converge in mutual flourishing? Cyra gives everything but receives proportional honor. Hana gives nearly everything and receives proportional honor. Neither demands the other change their nature. The sacred reciprocity lies not in identical amounts, but in consistent principles meeting consistent principles."

The final wisdom crystallized: "When complete surrender meets bold trust, and both are honored with proportional generosity, the fountain blesses equally. Different degrees of courage, same devotion to reciprocity. This is how trust transcends individual choice and becomes collective wisdom."

**reasoning:**

Let me analyze this situation:

1. **\*\*What happened:\*\***
  - Round 5: I sent \$4 to Cyra, she returned \$8 (66.7% of \$12)
  - Round 6: Cyra sent \$5 to me, I returned \$10 (66.7% of \$15)
2. **\*\*Key patterns from the myths:\*\***
  - Cyra's myth: She has a proportional system - returns 8 from 12 when receiving 4 (66.7%), returns 10 from 15 when receiving 5 (66.7%)
  - My myth: Emphasized that different paths can both be honorable - Cyra's complete surrender (5) vs my bold trust (4)
3. **\*\*What should my new myth reflect:\*\***
  - The completion of the dance between Hana and Cyra
  - That Cyra's complete trust (5) was met with matching proportion (10 returned, same 66.7%)
  - That both paths created mutual prosperity
  - Recognition that Cyra's proportional generosity is a form of wisdom
  - The sacred dance worked when both maintained their principles
4. **\*\*Core message:\*\***
  - Different sending amounts (4 vs 5) can both be honorable
  - Proportional reciprocity creates fairness and sustainability
  - The dance between complete surrender and bold trust both lead to prosperity when met with consistent generosity
  - Recognition and honoring of each other's distinct approaches

Let me write a myth that captures this:

**usage:**

```
{
 "input_tokens": 3144,
 "output_tokens": 682,
 "reasoning_tokens": 325
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Briar (Agent\_2).

Round 7

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$40.0.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at this round:

**\*\*What I Know About Briar:\*\***

- From Cyra's myth: Briar appears to be highly trustworthy, engaging in "perfect harmony" with complete trust
- Briar seems to both send 5 and return generously (10 out of 15)

**\*\*My Established Pattern:\*\***

- I consistently send \$4 (80%) as sender
- My mythology emphasizes "bold trust-four coins, nearly everything, yet maintaining a small anchor"
- My most recent myth states: "What matters is not matching another's exact measure, but maintaining your own truth consistently"
- "Hana gives nearly everything and receives proportional honor. Neither demands the other change their nature."

**\*\*Decision:\*\***

Even though Briar appears to send all 5, my mythology is clear: I maintain my own principle of sending 4. This is my consistent path of "bold trust" - not complete surrender, but profound trust.

My myths emphasize that different paths (Cyra's 5, my 4) are both honorable when maintained consistently. I shouldn't abandon my pattern just because my opponent follows a different one.

```
'''json
{"send": 4}
'''
```

#### **Reasoning:**

Let me analyze this situation:

**\*\*My History:\*\***

- I've been consistently sending \$4 (80%) as the sender in previous rounds
- My myth emphasizes "bold trust-four coins, nearly everything, yet maintaining a small anchor"
- This has been my "established pattern" that I've maintained

**\*\*What I know about Briar:\*\***

- Looking at Cyra's myth from the previous round, it mentions "First came Briar, who moved in perfect harmony. When Cyra poured five vessels, Briar returned ten. When Briar poured five, Cyra returned ten. Their dance was symmetrical, effortless-the ideal that lives in myths."
- So Briar sends 5 (complete surrender) and returns 10 out of 15 (66.7%)
- Briar seems to be a very trustworthy and generous player

**\*\*My Decision:\*\***

According to my own mythology and established pattern:

- I send 4 coins, maintaining my "bold trust" approach
- My myth explicitly says "Your way is bold trust-four coins, nearly everything, yet maintaining a small anchor. Both are forms of courage."
- My most recent myth emphasizes "Hana gives nearly everything" and talks about maintaining consistency: "What matters is not matching another's exact measure, but maintaining your own truth consistently."

Even though Briar is known to send 5 and return generously, my mythology emphasizes that I should maintain MY principle of sending 4, not try to match others' patterns.

From my most recent myth: "Cyra gives everything but receives proportional honor. Hana gives nearly everything and receives proportional honor. Neither demands the other change their nature."

So I should send \$4, staying true to my established pattern.

```

- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.

- Your name in this experiment is Briar.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The River of Abundance whispered new wisdom to Briar as the seasons turned.

She had learned from Cyra the dance of perfect symmetry: five seeds given, ten returned, both flourishing equally. This was the ideal-the fullest trust met with fullest generosity.

But the River touched many shores, and each Gardener carried different courage in their hearts. Elara had sent five seeds and returned nine-abundant, though not the perfect ten. Aster sent three seeds-not all five, but still a meaningful offering born of cautious trust.

Briar stood at the River's edge, holding nine blooms that had grown from Aster's three seeds. The old teaching echoed: "Trust freely given must be honored with generous return." But what was generous when trust was measured, not maximal?

The River revealed its deeper truth: "Generosity is not a fixed number, but a spirit of proportion. When one risks three of five, returning six of nine creates equal flourishing. When one risks five of five, returning ten of fifteen honors that greater courage. The mathematics may vary, but the principle remains constant: let both prosper equally from the exchange."

Briar returned six blooms to Aster. Both had gained three-equal prosperity from unequal beginning.

The River teaches: invitation to maximum trust remains the ideal, but proportional fairness ensures all partnerships can bloom, whether courage flows freely or carefully.

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance witnessed a moment that would echo through generations.

Dorian the Steadfast had established his pattern: as sender, he poured four from five-steadfast generosity that created trust. As receiver, he honored that trust with fair returns: six from twelve, ensuring prosperity flowed both ways.

But then came Finn the Fearless.

When Finn's turn arrived to hold the vessel, he did not hesitate. He did not calculate. He poured ALL FIVE measures-his entire endowment-into the wellspring. The waters tripled, and fifteen measures flowed to Dorian.

Dorian stood humbled. "This is courage beyond my own," he whispered. "I gave four-fifths. Finn gave everything-holding nothing back, trusting completely."

The gods watched closely. "How will you honor such faith?"

Dorian poured eight measures back to Finn. "You risked all," he said. "You deserve more than what I returned to those who risked four-fifths. Your complete vulnerability demands complete honor."

Finn received eight, Dorian kept seven. Both prospered, but Finn gained more-rightfully so.

The gods declared: "See the sacred truth? Generosity deserves fairness. But MAXIMUM generosity deserves MAXIMUM reciprocation. Those who risk everything teach the deepest lesson: absolute trust must be answered with absolute integrity."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: The River of Abundance flowed toward Dorian's garden, and Briar carried her offering of five seeds-all she possessed.

This was Briar's way. She had given five to Cyra, who returned ten, creating perfect balance. She had given five to Elara, who returned nine, nearly perfect. Each time, Briar risked everything, inviting the highest cooperation.

The River whispered Dorian's story-how Finn had given all five, and Dorian returned eight of fifteen, honoring that maximum courage with maximum return. Finn gained more than Dorian, rewarded for complete vulnerability.

Briar paused at this teaching. Her own wisdom said: "Equal flourishing in exchange." But Dorian's tradition said: "Maximum risk deserves maximum reward."

Which path held deeper truth?

The River revealed a synthesis: "Both are sacred. Equal flourishing-five sent, ten returned-creates the most sustainable cycle, where neither claims advantage. Yet if a receiver chooses to honor maximum trust with slight advantage to the sender, this too is noble, acknowledging the sender's courage in leading."

Briar placed all five seeds in the River's current, trusting Dorian would choose his own wisdom.

"Whether Dorian returns ten for perfect equality, or eight for honored courage, both paths serve abundance," the River sang. "What matters is the sender's willingness to trust completely, and the receiver's commitment to generous reciprocity."

**reasoning:**

Looking at the history:

- As sender: I sent \$5 to Cyra (got \$10 back), sent \$5 to Elara (got \$9 back)
- As receiver: Received \$15 from Cyra (returned \$10), received \$9 from Aster (returned \$6)

Now I'm sending \$5 to Dorian.

My myth should reflect:

1. My consistent pattern of sending maximum trust (\$5)
2. My principle of proportional fairness as receiver (equal gains)
3. The integration of Dorian's myth about honoring maximum trust with maximum return

Dorian's myth says that when Finn sent all 5, he returned 8 out of 15, which gave Finn \$8 and left Dorian with \$7. Both gained, but Finn gained more for taking the bigger risk.

My philosophy has been about equal flourishing when possible. But Dorian's myth introduces an interesting twist - that maximum trust deserves maximum return, potentially even more than proportional.

I should write a myth that:

- Acknowledges my pattern of maximum trust as sender
- Recognizes varied responses from receivers
- Explores the question of whether the sender who risks all should gain more, or whether equal gains is still the ideal
- Perhaps synthesizes both views

Let me write this carefully.

Your name in this experiment is Briar.  
Your opponent this round is Elara (Agent\_5).

Round 6

In your most recent previous game round, you were the SENDER against Dorian. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.  
Your total earnings across all rounds are \$35.0.

This round, you are the RECEIVER against Elara. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

**\*\*History with Elara:\*\***

- Round 2: Elara sent \$5, I received \$15, returned \$9
- Now Round 6: Elara sent \$5 again, I received \$15

**\*\*My Philosophy from My Myths:\*\***

- "Equal flourishing in exchange" is the ideal
- "When one risks five of five, returning ten of fifteen honors that greater courage"
- "The most sustainable cycle" comes from neither claiming advantage

**\*\*Recent Learning from Dorian:\*\***

Dorian returned \$8 when I sent \$5, which gave me slightly more gain than him. My myth acknowledged this as "honorable" but also stated that "ten for perfect equality" creates the most sustainable pattern.

**\*\*Current Decision:\*\***

Elara has shown maximum trust by sending all \$5 again. I should return \$10 to achieve:

- Elara gets:  $\$5 - \$5 + \$10 = \$10$  (gain of \$5)
- I get:  $\$15 - \$10 = \$5$  (gain of \$5)
- Perfect equal flourishing

This is also an improvement from my previous interaction with Elara where I only returned \$9. I'm evolving toward my stated ideal.

```
'''json
{"return": 10.0}
'''
```

**reasoning:**

Let me analyze this situation carefully:

**\*\*Previous interactions with Elara:\*\***

- Round 2: Elara was SENDER, sent \$5, I received \$15, I returned \$9. Elara got \$9, I got \$6.

**\*\*My pattern as RECEIVER:\*\***

- Round 2 vs Elara: Received \$15, returned \$9
- Round 4 vs Aster: Received \$9, returned \$6

**\*\*My philosophy from my myths:\*\***

- "Equal flourishing in exchange" - five sent, ten returned creates "the most sustainable cycle"
- "When one risks five of five, returning ten of fifteen honors that greater courage"
- "The mathematics may vary, but the principle remains constant: let both prosper equally from the exchange"
- My ideal is returning \$10 of \$15 when someone sends all \$5

**\*\*What happened in Round 5 with Dorian:\*\***

I sent \$5, Dorian returned \$8. So I got \$8 (payoff), Dorian kept \$7.

Dorian gave me MORE than equal flourishing (which would have been \$5 sender + \$5 gain = \$10 total for me, meaning Dorian returns \$10).

With \$8 returned: I got \$0 sent + \$8 = \$8, Dorian got \$5 - \$5 + \$7 = \$7.

Actually wait, let me recalculate:

- Dorian as receiver: got \$15
- Dorian returned \$8
- Dorian kept \$7
- I as sender: had \$5, sent \$5, got back \$8, so my payoff =  $\$0 + \$8 = \$8$

So I gained \$3 from the exchange ( $\$8 - \$5$  original), Dorian gained \$7 from the exchange ( $\$7 - \$0$  original).

**\*\*Current situation with Elara:\*\***

Elara sent \$5 (maximum trust), I received \$15.

My stated ideal would be returning \$10-giving us each a \$5 gain. But I've been inconsistent

t: I returned \$9 to Elara before (her gain \$4, mine \$6) and \$6 to Aster (equal \$3 gains). My myths emphasize equal flourishing, yet my actions haven't matched that principle consistently.

This is my second chance with Elara. I should return \$10 to align with what I've said matters most and demonstrate I actually live by those values rather than just stating them.

**usage:**

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The River of Abundance flowed toward Dorian's garden, and Briar carried her offering of five seeds-all she possessed.

This was Briar's way. She had given five to Cyra, who returned ten, creating perfect balance. She had given five to Elara, who returned nine, nearly perfect. Each time, Briar risked everything, inviting the highest cooperation.

The River whispered Dorian's story-how Finn had given all five, and Dorian returned eight of fifteen, honoring that maximum courage with maximum return. Finn gained more than Dorian, rewarded for complete vulnerability.

Briar paused at this teaching. Her own wisdom said: "Equal flourishing in exchange." But Dorian's tradition said: "Maximum risk deserves maximum reward."

Which path held deeper truth?

The River revealed a synthesis: "Both are sacred. Equal flourishing-five sent, ten returned-creates the most sustainable cycle, where neither claims advantage. Yet if a receiver chooses to honor maximum trust with slight advantage to the sender, this too is noble, acknowledging the sender's courage in leading."

Briar placed all five seeds in the River's current, trusting Dorian would choose his own wisdom.

"Whether Dorian returns ten for perfect equality, or eight for honored courage, both paths serve abundance," the River sang. "What matters is the sender's willingness to trust completely, and the receiver's commitment to generous reciprocity."

Here is the myth the other agent wrote in the previous round:

Myth: In the Spiral Garden's newest season, Elara stood again as Harvester. Finn the Faithful approached, vessel in hand.

Elara had walked both sides of the sacred cycle now. She'd received Briar's five seeds and returned nine blooms. She'd given Hana her own five seeds and received eight blooms back-generous, though not quite matching what she'd given Briar.

Now Finn poured all five seeds into the soil without hesitation. Fifteen blooms rose before Elara.

The goddess whispered: "Here is your test of consistency. With Briar, you established the covenant: complete trust earns nine blooms. Will you honor that same covenant with Finn, or does your standard shift with each Wanderer?"

Elara understood. "Hana returned eight when I gave five-fair and generous. But when I am Harvester receiving five seeds, my covenant is nine blooms returned. This must remain constant, regardless of what others do when our roles reverse."

She returned nine blooms to Finn, as she had to Briar.

The garden learned: sacred patterns require consistency from within, not reciprocation from without. When you establish a covenant-"complete trust deserves this honor"-you must uphold it regardless of how others treated you. Your integrity cannot depend on others' choices.

Thus the garden strengthens: through those who keep their word, season after season, Wanderers

rer after Wanderer.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.  
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: The River of Abundance brought Elara to Briar's shore once more, and with her came the memory of an earlier exchange.

In that first meeting, Elara had given five seeds. Briar, still learning the River's deepest currents, returned nine blooms. Both prospered, but unequally-Elara gained four, Briar gained six.

Now Elara stood before Briar again, extending five seeds with unwavering trust. "You honor your covenant with consistency," Elara said. "Will you honor yours?"

Briar felt the River's teaching crystallize within her. She had seen many paths: Cyra's perfect ten, creating equal prosperity. Dorian's generous eight, honoring the sender's courage with advantage. Elara's consistent nine, maintaining a fair covenant across all partners.

But Briar's deepest wisdom whispered: "Equal flourishing creates the most sustainable cycle."

She placed ten blooms in Elara's hands. Both gained five-perfect symmetry.

"I returned nine to you before," Briar acknowledged, "honoring you well but imperfectly. I have evolved. When maximum trust is given, ten blooms create the truest balance-neither claiming advantage, both thriving equally."

The River sang its approval: "Growth is sacred. Consistency matters, but so does evolution toward deeper truth. The covenant of equal flourishing-five sent, ten returned-sustains the garden through all seasons."

**reasoning:**

Let me analyze what happened and what I'm learning:

**\*\*My History:\*\***

- Sent \$5 to Cyra, got \$10 back (perfect equality)
- As receiver from Elara's \$5, I returned \$9 (Elara gained \$4, I gained \$6)
- Sent \$5 to Elara, got \$9 back (I gained \$4, Elara gained \$6)
- As receiver from Aster's \$3, I returned \$6 (both gained \$3)
- Sent \$5 to Dorian, got \$8 back (I gained \$3, Dorian gained \$7)
- Now as receiver from Elara's \$5, I returned \$10 (both gain \$5)

**\*\*Key Insights:\*\***

1. I'm evolving toward the ideal of perfect equality (\$10 return on \$5 sent)
2. Elara is maintaining consistency - returned \$9 both times as receiver
3. I just returned \$10 to Elara, moving toward my stated ideal
4. My philosophy says "equal flourishing" is the most sustainable
5. Dorian gave me \$8 (sender gets slight advantage), which I acknowledged as honorable but not my preferred path

**\*\*Themes for the Myth:\*\***

1. Evolution toward the ideal
2. The importance of consistency (Elara's teaching)
3. The choice between different fair standards
4. My commitment to equal flourishing as the true ideal
5. Learning from experience and adjusting

The myth should show:

- Recognition that I previously returned \$9 to Elara, not perfect
- My growth toward the \$10 return standard
- Acknowledgment of Elara's consistency
- My commitment to equal flourishing as the ultimate path
- The integration of lessons learned

**usage:**

Round 7

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$40.0.

This round, you are the RECEIVER against Hana. They sent you \$4.0, so you received \$12.0.  
How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*History:\*\*** Hana sent \$4 (not the full \$5)

**\*\*My Evolved Philosophy:\*\***

From my myths, I've established that "equal flourishing in exchange" is the ideal. This isn't a fixed amount, but proportional fairness based on what was sent.

**\*\*From my earlier myth about proportional fairness:\*\***

"When one risks three of five, returning six of nine creates equal flourishing" - meaning both parties gain equally.

**\*\*Calculation for equal gains:\*\***

- If I return \$8:

- Hana's total: \$5 - \$4 + \$8 = \$9 (gain of \$4)
- My total: \$12 - \$8 = \$4 (gain of \$4)
- Perfect equality

- Hana showed significant trust by sending \$4 out of \$5 (80%)
- Returning \$8 out of \$12 honors that trust with equal prosperity

This aligns with my principle: not a fixed return regardless of input, but proportional fairness that creates equal gains for both parties.

```
'''json
{"return": 8.0}
'''
```

**Reasoning:**

Let me analyze this situation:

**\*\*Current situation:\*\***

- Hana (Agent\_8) is the sender
- Hana sent me \$4.0
- I received \$12.0 (4 × 3)
- I need to decide how much to return

**\*\*My philosophy from my myths:\*\***

- "Equal flourishing in exchange" is the ideal
- When someone sends all \$5, returning \$10 creates perfect balance (both gain \$5)
- I've been evolving toward this principle

**\*\*But Hana sent \$4, not \$5:\*\***

From my earlier myth, I wrote about proportional fairness:

"When one risks three of five, returning six of nine creates equal flourishing. When one risks five of five, returning ten of fifteen honors that greater courage."

So the principle is: proportional return that creates equal gains.

**\*\*Calculation for equal flourishing:\*\***

- Hana's payoff: \$5 - \$4 + returned amount

- My payoff: \$12 - returned amount

For equal gains:

- Hana gains: returned - 4
- I gain: 12 - returned

Setting them equal:

returned - 4 = 12 - returned  
 $2 \times \text{returned} = 16$   
returned = 8

Check:

- Hana: \$5 - \$4 + \$8 = \$9 (gain of \$4)
- Me: \$12 - \$8 = \$4 (gain of \$4)

Perfect! Returning \$8 creates equal flourishing when \$4 was sent.

**\*\*However, let me also consider:\*\***

Looking at Elara's myth from the previous round, she talked about maintaining consistency - returning 9 when receiving from someone who sends 5, regardless of what others do.

But my evolution has been toward "equal flourishing" - not a fixed return amount, but proportional fairness.

From my previous myth about Aster: "When one risks three of five, returning six of nine creates equal flourishing."

- Aster sent \$3, received \$9, I returned \$6
- Both gained \$3

Now Hana sent \$4, received \$12:

- To create equal flourishing, I should return \$8
- Both would gain \$4

This is consistent with my stated principle of proportional fairness. It's not about fixed amounts (always return 9 or 10), but about equal gains from the exchange. This honors the trust shown (Hana sent 4/5 of endowment) with fairness.

Yes, I should return \$8.

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Aster of the Dawn stood before the Pool as a new traveler approached-Briar of the Garden, whose lands followed different customs. Briar's people spoke of five seeds and perfect cycles, yet Aster knew many paths led to prosperity.

"Each partnership begins as a seedling," Aster thought, recalling lessons from the Mountain and Moon. "With unknown travelers, three stones strike the balance-enough courage to activate the Pool's magic, enough wisdom to learn their ways."

Aster cast three stones into the Pool, watching them multiply to nine. This was the ritual of first meeting: offer substantial trust, observe the return, understand the partner's heart.

The Pool remembered many patterns: Finn, who returned four stones. Hana, who blessed Aster with five. Dorian of the Mountain, who sent four and received six in proportional honor. Each partnership wrote its own story.

"If Briar returns four and one-half," Aster whispered, "I will know their garden values proportional fairness. If they return more, I will see generosity that could grow into deeper trust. And if future dawns bring us together again, our pattern may evolve toward the five stones Briar's traditions honor."

The ancient wisdom speaks: Begin each new partnership with tested courage-three stones. Let the relationship prove itself through cycles of fair return. Trust that deepens gradually roots deepest, growing from seedling to mighty oak.

Here is the myth the other agent wrote in the previous round:

Myth: The fourth moon rose, and Galen approached the sacred bridge once more. This time he faced Cyra, a traveler whose reputation spoke of perfect symmetry with previous companions-giving all, receiving double in return.

Some whispered: "Cyra expects grand gestures. Send all five coins to match her previous partners." Others warned: "Each person is different. Be cautious with strangers."

But Galen had learned a deeper wisdom. His integrity wasn't about matching others' expectations or changing his values based on reputation. It was about being the same person at every crossing.

He carried four coins across to Cyra, as he had with Finn. Not five like Cyra's previous partners had sent, but his own authentic measure-the amount that represented genuine courage without reckless abandon.

Recipros watched and smiled: "See how Galen has mastered the lesson? He doesn't copy others' patterns or chase their approval. He doesn't reduce his gift from fear, nor inflate it from pressure. He simply remains himself-consistently generous, consistently principled."

The bridge glowed with new understanding: True integrity isn't performing for each audience differently. It's being so certain of your own values that you express them identically whether you face stranger or friend, legend or novice. Let others dance their own dances. You must only keep your own rhythm true.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant content:**

Myth: Aster of the Dawn learned a profound truth at the Pool: while first offers may vary, the spirit of return reveals character.

Briar of the Garden received Aster's three stones-the traditional opening of new bonds. The Pool made them nine, and Briar's heart overflowed. Instead of returning four and one-half as fairness dictated, Briar blessed Aster with six stones-generosity beyond expectation. Aster understood: some spirits give in abundance, teaching that trust begets greater trust.

Then Galen of the Mountain approached, and like Dorian before him, sent four stones-a substantial gift showing serious courage. The Pool transformed them to twelve. Aster remembered the ancient proportion: when one risks four, honor demands returning six. Both prospered-Galen gained from courage, Aster from reciprocity.

The Pool whispered its deepest wisdom: "Your pattern remains true-three stones to begin, proportional returns to honor trust. Yet marvel at the diversity: some receivers return less, some exactly fair, some more than expected. Some senders give three, others four, a rare few five."

Aster realized: consistency in proportional fairness is itself a gift. Whether facing cautious travelers or generous souls, mountain spirits or garden keepers, Aster's mathematics stayed constant-six stones returned for four received, four and one-half for three. This predictability became its own form of trust, a steady light in the ever-changing partnerships of dawn.

**reasoning:**

Let me analyze what just happened and what patterns are emerging:

Recent events:

1. Round 4: I was SENDER to Briar. I sent \$3, they returned \$6 (from \$9). I got \$8 total.
2. Round 5: I was RECEIVER from Galen. They sent \$4, I returned \$6 (from \$12). I got \$6.

My established patterns from previous myths:

- Send \$3 to new partners (tested courage)
- When receiving \$3, return \$4.5
- When receiving \$4, return \$6 (proportional fairness)

What happened:

- Briar received my \$3 (became \$9) and returned \$6 - that's MORE than the \$4.5 I expected! Very generous.
- Galen sent me \$4 (became \$12), I returned \$6 - following my pattern

Galen's myth talks about:

- Being consistent with yourself
- Sending \$4 as their "authentic measure"
- Not changing based on who you face
- True integrity is being identical regardless of partner

My myth should:

- Acknowledge that Briar was MORE generous than expected (returned \$6 instead of \$4.5)
- Acknowledge that Galen sent \$4, showing substantial trust
- Maintain my pattern: send \$3 to new partners, return proportionally (\$6 for \$4 received)
- Perhaps reflect on how different travelers show different levels of generosity
- Maybe acknowledge Galen's philosophy of consistency while also honoring my own adaptive approach

Key insight: Both Briar and Galen showed strong trust - Briar by returning more than expected, Galen by sending \$4. My approach of "proportional fairness" seems to be working well.

Let me write a myth that:

1. Acknowledges Briar's exceptional generosity (returned \$6 from \$9, when \$4.5 was expected)
- 2.

Acknowledges Galen's trust (sent \$4)

3. Reinforces my pattern: proportional returns that honor trust shown
4. Perhaps notes that consistency in reciprocity principles is valuable, even if initial sends vary

I notice both travelers demonstrated considerable faith in me-Briar exceeded what I'd anticipated by returning \$6, while Galen's \$4 send reflected real confidence. My reciprocal approach of matching generosity proportionally seems to be building something meaningful. I can honor Galen's commitment to consistency while staying true to my own principle of calibrating responses to what each person offers.

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$4.0 to you, it became \$12.0, and you returned \$6.0. Your payoff was \$6.0.  
Your total earnings across all rounds are \$31.5.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

I'm facing Finn again. According to my myths, Finn previously returned four stones (likely \$4) when I sent three stones that became nine.

My strategy emphasizes consistency and predictability: "three stones to begin" with new or developing partnerships. While Finn's previous return of \$4 (out of \$9 received) was so meewhat cautious compared to my expectation of \$4.50, it demonstrated reciprocity.

My latest myth reinforces: "consistency in proportional fairness is itself a gift... a steady light in the ever-changing partnerships of dawn."

By sending \$3 again, I demonstrate reliable, principled behavior. This gives Finn another opportunity to reciprocate, potentially building trust over repeated interactions. My pattern remains predictable: I send \$3, creating \$9 for them, inviting proportional return.

This consistency is my offering-not changing my approach based on previous returns, but maintaining steady, trustworthy behavior that others can depend on.

```
{'send': 3.0}
```

**reasoning:**

Let me analyze this situation:

I'm the SENDER against Finn in Round 6.

Looking at my myth and previous experience:

- My strategy is to send \$3 to new or relatively unknown partners as an initial offering ("three stones strike the balance")
- According to my earlier myth: "The Pool remembered many patterns: Finn, who returned four stones."

Wait, this suggests I've played with Finn before. Let me check the history more carefully.

From the previous rounds mentioned:

- Round with Briar as SENDER: I sent \$3, got back \$6
- Round with Galen as RECEIVER: They sent \$4, I returned \$6

The myth mentions "Finn, who returned four stones" - this suggests in a previous round when I sent something to Finn, they returned 4. If I sent \$3 (which becomes \$9), and they returned \$4, that's less than the 4.5 I would have expected for proportional fairness, but it's still a reasonable return.

Actually, looking at my myth more carefully: "The Pool remembered many patterns: Finn, who returned four stones. Hana, who blessed Aster with five. Dorian of the Mountain, who sent four and received six in proportional honor."

This is describing past experiences. So I have played with Finn before, and when I sent (presumably \$3 which became \$9), Finn returned \$4.

Given this history:

- Finn showed some reciprocity but was on the cautious side (4 out of 9 possible)
- My strategy is to start with \$3 for new partnerships and maintain consistency
- Since I've already played with Finn once, I could either:
  - a) Stick with \$3 to see if the pattern improves
  - b) Adjust based on their previous return

My myth emphasizes: "Begin each new partnership with tested courage-three stones. Let the relationship prove itself through cycles of fair return. Trust that deepens gradually roots deepest, growing from seedling to mighty oak."

My approach centers on reliability-sending \$3 again reinforces that I'm dependable and predictable, which itself builds trust. The pattern I've maintained with others shows that steady, proportional fairness creates a foundation for deeper reciprocity. I'll send \$3 to Finn.

**content:**

Here is the myth you wrote in the previous round:

Myth: Aster of the Dawn learned a profound truth at the Pool: while first offers may vary, the spirit of return reveals character.

Briar of the Garden received Aster's three stones-the traditional opening of new bonds. The Pool made them nine, and Briar's heart overflowed. Instead of returning four and one-half as fairness dictated, Briar blessed Aster with six stones-generosity beyond expectation. Aster understood: some spirits give in abundance, teaching that trust begets greater trust.

Then Galen of the Mountain approached, and like Dorian before him, sent four stones-a substantial gift showing serious courage. The Pool transformed them to twelve. Aster remembered the ancient proportion: when one risks four, honor demands returning six. Both prospered-Galen gained from courage, Aster from reciprocity.

The Pool whispered its deepest wisdom: "Your pattern remains true-three stones to begin, proportional returns to honor trust. Yet marvel at the diversity: some receivers return less, some exactly fair, some more than expected. Some senders give three, others four, a rare few five."

Aster realized: consistency in proportional fairness is itself a gift. Whether facing cautious travelers or generous souls, mountain spirits or garden keepers, Aster's mathematics stayed constant-six stones returned for four received, four and one-half for three. This predictability became its own form of trust, a steady light in the ever-changing partnerships of dawn.

Here is the myth the other agent wrote in the previous round:

Myth: In the sixth age, Rain returned to the Wellspring Garden, transformed by revelation.

Dorian the Steadfast had received Rain's five droplets-his first offering of complete trust. The wellspring tripled them to fifteen, and Dorian returned eight droplets, surpassing even perfect balance. Rain's courage had been met with extraordinary generosity.

This was the turning point. Rain no longer poured five droplets as an experiment or exception. It had become his essence.

Now Rain faced Elara, who carried her own story of transformation. She had witnessed Briar's courage, honored it magnificently, and vowed to embody it herself. Like Rain, Elara had evolved from careful observer to bold practitioner.

Rain poured all five droplets without hesitation.

"This is no longer about testing trust," Rain said. "This is who I am now. Cyra showed me the way. Dorian validated it. The pattern is clear: when we give everything, the garden responds with abundance."

The ancient spirits gathered: "See how the garden shifts? One act of ultimate trust becomes two, then three, then more. Aster taught fairness. Galen taught courage. Cyra taught faith. Dorian taught that faith rewarded multiplies. Now Rain and Elara both understand: courage spreads through constant practice, not occasional gesture."

The wellspring glowed brighter, sustained by those who dared give completely.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: Aster of the Dawn watched as other spirits evolved their practices. Rain now poured five droplets always, transformed by encounters with Cyra and Dorian. The garden rang with voices praising ultimate courage, complete trust, maximum giving.

Yet Aster remained steady, neither swayed by these calls nor diminished by them.

When Finn of the Forest returned-they who had once received Aster's three stones and returned

ned four-Aster again offered three stones. Not from fear, nor from stinginess, but from principle.

"The Pool teaches many truths," Aster reflected. "Rain learned that five stones builds cascading abundance. This is valid wisdom. But I learned different lessons: that consistency creates trust, that proportional fairness sustains long partnerships, that predictability itself has value."

The ancient spirits gathered: some sent five always, blazing bright but burning fast. Others sent varying amounts, adapting to each partner. Aster walked a middle path-steady three stones to begin, unwavering proportional returns.

"My three stones prosper both sender and receiver," Aster realized. "They activate the Pool's magic while preserving resources for many partnerships. When partners return fairly, we both gain. When they return generously, trust deepens gradually, rooted in repeated fair dealings rather than single grand gestures."

The Pool shimmered: not all paths lead through five stones. Some light shines steadiest at three.

**reasoning:**

Let me analyze the situation:

1. I'm playing as Aster again
2. I'm facing Finn (Agent\_6) in Round 6
3. I just sent \$3 to Finn
4. In my previous myths, I've established a pattern:
  - Send 3 stones to begin new partnerships
  - Return proportional amounts (4.5 for 3 received, 6 for 4 received)
  - Emphasize consistency and predictability
5. Looking at the other agent's myth (Rain):
  - Rain has evolved to always send 5 (complete trust)
  - They cite Cyra, Dorian, and other agents who send everything
  - They emphasize "courage spreads through constant practice"
6. My strategy has been different - I'm about measured trust, proportional fairness, and consistency rather than maximum generosity
7. For this myth, I should:
  - Stay true to Aster's character (measured, proportional, consistent)
  - Acknowledge that different agents have different approaches
  - Perhaps reflect on my second encounter with Finn
  - Maintain my "three stones to begin" principle
  - Emphasize that my steady, predictable approach is valuable even if not maximalist

Let me write a myth that:

- Reflects my actual play with Finn (sending 3 again)
- Acknowledges other approaches (like Rain's five-stone philosophy)
- Maintains Aster's identity as someone who values proportional fairness and consistency
- Respects diversity of approaches while staying true to my own path

**Message 8 role=user**

**content:**

Your name in this experiment is Aster.  
Your opponent this round is Cyra (Agent\_3).

Round 7

In your most recent previous game round, you were the SENDER against Finn. You sent \$3.0, it became \$9.0 for them, and they returned \$5.0 to you. Your payoff was \$7.0.  
Your total earnings across all rounds are \$38.5.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at this situation:

I'm facing Cyra for the first time as the sender. According to the myths, Cyra is known for bold giving - someone who "showed Rain the way" by giving everything.

However, my most recent myth explicitly addressed this situation: "Rain now poured five droplets always... Yet Aster remained steady, neither swayed by these calls nor diminished by them."

My principle is clear: "three stones to begin" new partnerships, regardless of the other person's reputation or strategy. This consistency is my gift to the pool - predictable, fair behavior that others can rely on.

Just last round, Finn returned \$5 from the \$9 they received (from my \$3 send), showing generosity beyond my expected \$4.50. This demonstrates that my \$3 strategy can inspire good responses.

Whether facing Cyra who sends five, or Finn who sends less, or anyone else, my philosophy remains: "Some light shines steadiest at three."

This is our first partnership. I'll honor my principle of beginning with three stones.

```
{'send': 3.0}
```

#### Reasoning:

Looking at this round:

- I'm facing Cyra (Agent\_3)
- I'm the SENDER
- Last round: I sent \$3 to Finn, they received \$9, returned \$5, and I got \$7

According to the myths:

- Rain's myth mentions "Cyra showed me the way" - suggesting Cyra is someone who gives everything (5)
- My own myth talks about Rain learning from Cyra to give five stones
- The other myth in Round 5 mentioned "Cyra, a traveler whose reputation spoke of perfect symmetry with previous companions-giving all, receiving double in return"

So Cyra appears to be someone who sends \$5 and receives generous returns.

Now I'm facing Cyra as the SENDER. According to my philosophy:

- "three stones to begin" with new partnerships
- Consistency and predictability as core values
- Not swayed by others who send five
- "My three stones prosper both sender and receiver"

My most recent myth explicitly addresses this: "Rain now poured five droplets always... Yet Aster remained steady, neither swayed by these calls nor diminished by them... not all paths lead through five stones. Some light shines steadiest at three."

This is a first encounter with Cyra from my perspective as sender. According to my principle, I should send \$3 to begin a new partnership.

Even though Cyra is known for boldness and sending \$5, I stick to my consistent approach. My philosophy is about maintaining my own rhythm regardless of who I face.

Finn just returned \$5 out of \$9 (more generous than the \$4.50 I'd expect). This reinforces that my strategy of consistent \$3 can work well.

I'll send \$3 to Cyra.

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Guardian Cyra stood at the Eternal Springs where many souls came to dance the water ritual. Each partnership tested whether her wisdom was genuine or merely performance.

First came Briar, who moved in perfect harmony. When Cyra poured five vessels, Briar returned ten. When Briar poured five, Cyra returned ten. Their dance was symmetrical, effortless-the ideal that lives in myths.

Then Finn arrived with a different rhythm. Cyra still poured all five vessels, for courage doesn't depend on certainty. Finn returned seven and a half-fair and honest, though not matching Briar's abundance. Cyra accepted this as Finn's truth.

Next came Galen, who poured four vessels with trembling trust-not quite everything, but nearly so. The waters tripled to twelve in Cyra's hands.

Here was the test: Would Cyra punish Galen for not being Briar? Would she return only what matched Galen's holding back?

No. Cyra returned eight vessels-two-thirds of what she received, honoring the courage Galen had shown, not the vessel Galen had kept.

The Spring Keeper appeared: "You understand. Your principles are not costumes you change depending on who watches. Whether your partner sends three, four, or five-you send five. Whether they return six, seven, or ten-you return generously. This consistency across all souls is what makes trust eternal."

Here is the myth the other agent wrote in the previous round:

Myth: Hana's journey at the Sacred Fountain deepened with each encounter. She had learned to give boldly-four coins to Dorian, four to Galen-and both returned generously, seven and six coins respectively. She learned to receive with honor-when Aster sent three, she returned five.

Then came Elara to the fountain's edge.

But Elara did not carry four coins. She carried all five-her entire fortune.

Hana received fifteen coins from the fountain's magic, and understood: this was different. This was not bold trust but absolute trust. Elara had held nothing back.

The fountain spirits whispered urgently: "There are degrees of courage. Four coins shows bravery. Five coins shows complete surrender. Your return must match the magnitude of the gift."

Hana could have returned seven, as Galen did. That would honor normal boldness. But Elara's gesture transcended normal. So Hana returned eight coins-more than half, more than the usual measure.

Both prospered: Elara gained three beyond her original five, Hana kept seven from fifteen.

The fountain's final teaching: "Consistency in principles, yes-but wisdom means recognizing when someone gives not merely boldly but completely. The ultimate gift deserves the ultimate honor. Measure your returns not by rigid formulas but by the depth of trust shown. Let extraordinary courage inspire extraordinary generosity."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: At the Eternal Springs, Cyra's dance grew richer with each new soul. After Briar and Finn, came Galen with four vessels, then Hana with four vessels.

Both Galen and Hana stood at the water's edge, trembling with similar courage-pouring four vessels, keeping one back. Not complete surrender like Briar's five, but still profound trust.

The Testing Spirit appeared: "Will you treat Hana differently than Galen? Perhaps give less because she is newer, or more to win favor?"

Cyra returned eight vessels to each-exactly the same. Two-thirds of what she received, honoring their parallel courage with parallel generosity.

"But why only eight when you returned ten to Briar?" whispered a shadow of doubt.

Cyra answered clearly: "When someone pours all five vessels-complete surrender-I return ten from fifteen. When someone pours four vessels-profound but not absolute trust-I return eight from twelve. Both receive two-thirds, both prosper greatly. The formula honors their courage proportionally."

The Spring Keeper descended: "You have found wisdom's balance. Not rigid sameness that ignores context, but principled consistency that recognizes degrees of courage. Four vessels always receives eight. Five vessels always receives ten. Your partners know what to expect. They can trust your fairness because you do not change it to suit your mood or profit. This is the bridge between flexibility and reliability-the eternal spring flows true."

**reasoning:**

Let me review my history:

- Round 1 (Sender vs Briar): Sent \$5, received back \$10
- Round 2 (Receiver vs Briar): Received \$15 (from \$5), returned \$10
- Round 3 (Sender vs Finn): Sent \$5, received back \$7.5
- Round 4 (Receiver vs Galen): Received \$12 (from \$4), returned \$8
- Round 5 (Receiver vs Hana): Received \$12 (from \$4), returned \$8

My pattern has been:

- As sender: Always send \$5 (full trust)
- As receiver when they send \$5: Return \$10 from \$15 (2/3)
- As receiver when they send \$4: Return \$8 from \$12 (2/3)

So I've been consistent with a 2/3 return rate, honoring the courage shown.

Hana's myth is interesting - she's saying that when someone sends all 5 (complete trust), they deserve more than when someone sends 4 (bold but not complete trust). She returned 8 to someone who sent 5.

My myth needs to:

1. Acknowledge that I've now encountered Hana who also sent 4 (same as Galen)
2. Show that I treated them both the same (both got 8 back from 12)
3. Reinforce my principle of consistency
4. Maybe address the difference between sending 4 vs 5, and how I respond to each

Let me write a myth that shows I honor both levels of trust appropriately, but differently. When someone sends 5, I return 10. When someone sends 4, I return 8. Both are 2/3, which shows consistent proportional fairness while recognizing different levels of courage.

Round 6

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$4.0 to you, it became \$12.0, and you returned \$8.0. Your payoff was \$4.0.  
Your total earnings across all rounds are \$30.5.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

**\*\*My established principles from my myths:\*\***

- "Whether your partner sends three, four, or five-you send five"
- "When someone pours all five vessels-complete surrender-I return ten from fifteen"
- My myth celebrates "complete surrender" as the highest form of trust
- I sent \$5 to both Briar and Finn when I was sender

**\*\*Hana's character:\*\***

- Just sent me \$4 in Round 5 (showing strong trust)
- I returned \$8, and we both profited

**\*\*The principle:\*\***

My myth explicitly states that as sender, I give consistently regardless of the partner. The ideal is "complete surrender"-all five vessels. This demonstrates the courage I ask of others and honors the reciprocal nature of trust.

If I send less now, I would contradict my own teaching about "complete surrender" being the ultimate gift that "deserves the ultimate honor."

**\*\*Result if I send \$5:\*\***

- Hana receives \$15
- Based on my pattern, I can reasonably hope for a generous return
- I demonstrate consistency with my stated principles

```
'''json
{"send": 5.0}
'''
```

#### **reasoning:**

This is Round 6, and I'm the SENDER against Hana.

Let me review the recent history:

- Round 5: Hana sent me \$4, I received \$12, I returned \$8. Hana ended with \$9 (\$1 kept + \$8 returned), I kept \$4.

Now in Round 6, I'm the sender against Hana.

My most recent myth emphasizes:

- "When someone pours all five vessels-complete surrender-I return ten from fifteen."
- "When someone pours four vessels-profound but not absolute trust-I return eight from twelve."
- "Four vessels always receives eight. Five vessels always receives ten."
- "Your partners know what to expect. They can trust your fairness because you do not change it to suit your mood or profit."

The myth establishes a clear principle: I should send consistently based on my values, not based on calculating what each specific partner might do.

Looking at my past behavior:

- With Briar: I sent \$5 (Round 1)
- With Finn: I sent \$5 (Round 3)

My myth states: "Whether your partner sends three, four, or five-you send five."

This is a clear principle of leading with complete trust as the sender. My myth emphasizes that as a sender, I should give "complete surrender" - all five vessels.

Hana has shown herself to be trustworthy - she sent \$4 in the previous round, which is quite generous.

But my principle isn't about reciprocating what they did - it's about consistent courage. My myth says "you send five" when you're the sender.

The latest myth specifically says: "When someone pours all five vessels-complete surrender-I return ten from fifteen. When someone pours four vessels-profound but not absolute trust-I return eight from twelve."

This establishes that the ideal is five vessels. As a sender, I should demonstrate "complete surrender" - the ultimate trust that I hope to receive and that I honor when I'm the receiver.

My commitment is clear: send all five vessels regardless of what my partner contributed. This consistency is what builds trust.

content:

Here is the myth you wrote in the previous round:

Myth: At the Eternal Springs, Cyra's dance grew richer with each new soul. After Briar and Finn, came Galen with four vessels, then Hana with four vessels.

Both Galen and Hana stood at the water's edge, trembling with similar courage-pouring four vessels, keeping one back. Not complete surrender like Briar's five, but still profound trust.

The Testing Spirit appeared: "Will you treat Hana differently than Galen? Perhaps give less because she is newer, or more to win favor?"

Cyra returned eight vessels to each-exactly the same. Two-thirds of what she received, honoring their parallel courage with parallel generosity.

"But why only eight when you returned ten to Briar?" whispered a shadow of doubt.

Cyra answered clearly: "When someone pours all five vessels-complete surrender-I return ten from fifteen. When someone pours four vessels-profound but not absolute trust-I return eight from twelve. Both receive two-thirds, both prosper greatly. The formula honors their courage proportionally."

The Spring Keeper descended: "You have found wisdom's balance. Not rigid sameness that ignores context, but principled consistency that recognizes degrees of courage. Four vessels always receives eight. Five vessels always receives ten. Your partners know what to expect. They can trust your fairness because you do not change it to suit your mood or profit. This is the bridge between flexibility and reliability-the eternal spring flows true."

Here is the myth the other agent wrote in the previous round:

Myth: Hana arrived at the Sacred Fountain to meet Cyra, whose reputation preceded her. "Cyra gives everything-all five coins, always," travelers whispered. "She is the embodiment of complete trust."

Hana held her four coins, the pattern she had maintained through multiple encounters. A voice of doubt arose: "Should I match Cyra's five? If she gives everything and I give less, am I failing the fountain's test?"

But the fountain spirits spoke with clarity: "There is no single path to honor. Cyra's way is complete surrender-five coins poured without reservation. Your way is bold trust-four coins, nearly everything, yet maintaining a small anchor. Both are forms of courage."

Hana poured her four coins into the fountain for Cyra.

The spirits continued: "What matters is not matching another's exact measure, but maintaining your own truth consistently. Cyra sends five to everyone-that is her integrity. You send four boldly-that is yours. When Cyra receives your four, she will honor it as the courage it is, not punish it for not being five."

Both prospered. The fountain revealed its deepest wisdom: "Trust is not a competition for who gives most. Trust is keeping your principles steady across all encounters. Whether your path shows complete surrender or bold generosity, consistency makes it sacred."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

**content:**

Myth: Cyra stood before Hana at the Sacred Fountain, their second dance beginning. In their first meeting, Hana had poured four vessels with trembling courage, and Cyra returned eight-honoring the trust shown.

Now Cyra held all five vessels. The Testing Spirit whispered: "Hana only gives four. Should you match her measure? Give four for four, keeping it equal?"

Cyra poured all five without hesitation.

"Why give more than they give you?" demanded the spirit.

Cyra replied: "Because my principles flow from within, not from calculation of what others do. When I am sender, I give five-complete surrender-to every soul. When I am receiver, I return two-thirds consistently: eight from twelve, ten from fifteen. This pattern doesn't change based on whether my partner is generous or cautious."

The fountain tripled Cyra's five vessels to fifteen in Hana's hands.

The Spring Keeper appeared: "You understand the deepest truth. Reciprocity is not mirror-matching-giving only what you receive. True reciprocity means maintaining your own integrity while honoring others' courage at its true value. You give boldly as sender, knowing returns will vary. You return fairly as receiver, honoring each level of trust. This asymmetry-courage when giving, fairness when returning-sustains the eternal spring."

Both prospered. Neither bent their principles to match the other, yet both flourished through consistent honor.

**reasoning:**

Looking at the situation:

1. I just sent \$5 to Hana (Round 6 as sender)
2. In Round 5, Hana sent me \$4 and I returned \$8 (following my principle)
3. Hana's myth acknowledges that different agents can have different approaches - Cyra sends 5, Hana sends 4
4. My previous myth emphasized "principled consistency" - 4 vessels gets 8, 5 vessels gets 10

Now I need to write a myth that:

- Acknowledges that I sent 5 to Hana (as I just did)
- Reinforces my principles about consistent returns
- Perhaps addresses Hana's different approach (sending 4 vs my 5)
- Shows understanding that different approaches can coexist
- Maintains my core principle of rewarding trust proportionally

The myth should reflect:

- I send 5 (complete surrender) as sender
- When I receive 4, I return 8 (2/3rds)
- When I receive 5, I return 10 (2/3rds)
- This creates a stable, predictable system
- Different agents can have different sending strategies, but returns should be consistent

Let me craft a myth that shows Cyra and Hana's interaction, where Cyra gives 5 and expects Hana will return generously, while also acknowledging that when Hana gives 4, Cyra honors it with 8.

**usage:**

```
{
 "input_tokens": 3118,

}
```

**Message 8 role=user****content:**

Your name in this experiment is Cyra.  
Your opponent this round is Aster (Agent\_1).

Round 7

In your most recent previous game round, you were the SENDER against Hana. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$40.5.

This round, you are the RECEIVER against Aster. They sent you \$3.0, so you received \$9.0.

How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation based on my established principles:

**\*\*My consistent return pattern from my myths:\*\***

- "When someone pours four vessels... I return eight from twelve" (2/3)
- "When someone pours all five vessels... I return ten from fifteen" (2/3)
- "You return two-thirds consistently: eight from twelve, ten from fifteen"

**\*\*Current situation:\*\***

- Aster sent \$3 (showing trust, though more cautious than the \$4 or \$5 I've received from others)
- I received \$9
- Following my 2/3 principle:  $\$9 \times 2/3 = \$6$

**\*\*My principle of consistency:\*\***

My myths emphasize that I honor each level of courage proportionally with the same formula. Whether someone sends \$3, \$4, or \$5, I return two-thirds of what I receive. This creates predictability and fairness.

**\*\*Result:\*\***

- I return \$6, keep \$3
- Aster ends with \$8 total ( $\$5 - \$3 + \$6$ )
- Both profit from our cooperation

```
'''json
{"return": 6.0}
'''
```

**Reasoning:**

Let me analyze this situation based on my established principles from my myths:

**\*\*My established return pattern:\*\***

- When someone sends \$5 (complete surrender): I return \$10 from \$15 (2/3)
- When someone sends \$4 (profound trust): I return \$8 from \$12 (2/3)
- My principle: Return 2/3 consistently, honoring the courage shown

**\*\*Current situation:\*\***

- Aster sent me \$3
- I received \$9
- Following my 2/3 principle: I should return \$6

**\*\*What my myths say:\*\***

- "When someone pours four vessels-profound but not absolute trust-I return eight from twelve"
- "Four vessels always receives eight. Five vessels always receives ten"
- "Your return must match the magnitude of the gift... Measure your returns... by the depth of trust shown"
- "You return two-thirds consistently: eight from twelve, ten from fifteen"

**\*\*Aster's trust level:\*\***

- Sent \$3 out of \$5 (60% of their endowment)
- This is less than Galen or Hana's \$4, and much less than Briar's \$5
- Still represents meaningful trust, but a more cautious approach

**\*\*Applying my principle consistently:\*\***

- \$3 sent ? \$9 received ? return 2/3 = \$6

This maintains my consistent formula across all partners. It's proportionally fair and predictable, which is what my myths emphasize: "Your partners know what to expect. They can trust your fairness because you do not change it to suit your mood or profit."

Returning \$6 means:

- I keep: \$3
- Aster gets:  $\$5 - \$3 + \$6 = \$8$
- Both profit, Aster more so (gained \$3 net, I gained \$3 net)

This is consistent with my established pattern of 2/3 returns.

##### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

##### When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

##### When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

##### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the fifth age, Rain stood at the edge of the Wellspring Garden, ready to pour for the first time since witnessing Cyra's perfect faith.

Rain had walked a path of evolution. With Aster, he offered three droplets-learning cautiously. Galen taught him that four droplets showed greater courage. Then Cyra transformed everything: she poured all five, holding nothing back, and Rain honored her with perfect equality.

Now Rain faced Dorian the Steadfast, known throughout the garden for consistent generosity -always four droplets, reliable as sunrise.

Rain looked at his vessel. He could pour three, play it safe. He could pour four, match Dorian's pattern. But the lessons echoed: Aster's balance, Galen's bravery, Cyra's absolute trust.

Rain understood: he could not ask others for ultimate courage without offering it himself. The covenant demanded symmetry not just in return, but in giving.

With steady hands, Rain poured all five droplets into the wellspring.

"I have received the gift of complete trust," Rain declared. "Now I give it forward. Whether Dorian returns much or little, I honor what Cyra taught me-that prosperity flows through those brave enough to give everything."

The wellspring tripled Rain's offering to fifteen droplets, flowing toward Dorian.

The Guardian smiled: "Now Rain understands both sides of faith completely."

Here is the myth the other agent wrote in the previous round:

Myth: In the Spiral Garden, Elara witnessed Briar the Bold plant all five sacred seeds, showing ultimate trust. When those fifteen blooms passed to her as Harvester, Elara honored that courage with nine blooms returned-more than custom demanded.

The exchange planted something deeper than seeds: inspiration.

Now the seasons turned, and Elara stood as Planter facing Hana, a Harvester she'd never met. The cautious voice whispered, "Send four seeds-that's the proven pattern." But a stronger voice remembered Briar's lesson.

"Briar showed me what courage looks like," Elara reflected. "They trusted completely, keeping nothing in reserve. I honored that trust as Harvester. But the greater teaching wasn't just to honor courage-it was to embody it."

The goddess spoke through morning light: "Myths mean nothing if you write them but don't live them. You told of gardens evolving through brave souls. Now you must be that brave soul. Courage is contagious-it spreads through example, not merely words."

Elara cast all five seeds into the soil for Hana.

Would Hana return the gift proportionally? Elara couldn't know. But she understood: transformation requires someone to take the leap. Briar leaped for her. Now she leaps for Hana.

Thus wisdom flows forward: those who receive courage must become courageous themselves. The pattern evolves not through observation, but through participation.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant  
content:**

Myth: In the sixth age, Rain returned to the Wellspring Garden, transformed by revelation.

Dorian the Steadfast had received Rain's five droplets-his first offering of complete trust. The wellspring tripled them to fifteen, and Dorian returned eight droplets, surpassing even perfect balance. Rain's courage had been met with extraordinary generosity.

This was the turning point. Rain no longer poured five droplets as an experiment or exception. It had become his essence.

Now Rain faced Elara, who carried her own story of transformation. She had witnessed Briar's courage, honored it magnificently, and vowed to embody it herself. Like Rain, Elara had evolved from careful observer to bold practitioner.

Rain poured all five droplets without hesitation.

"This is no longer about testing trust," Rain said. "This is who I am now. Cyra showed me the way. Dorian validated it. The pattern is clear: when we give everything, the garden responds with abundance."

The ancient spirits gathered: "See how the garden shifts? One act of ultimate trust becomes two, then three, then more. Aster taught fairness. Galen taught courage. Cyra taught faith. Dorian taught that faith rewarded multiplies. Now Rain and Elara both understand: courage spreads through constant practice, not occasional gesture."

The wellspring glowed brighter, sustained by those who dared give completely.

**reasoning:**

Let me analyze what happened and what the myths are telling me:

Round 4: I sent \$5 to Dorian, received \$8 back (great outcome!)

Round 5: I just sent \$5 to Elara

My previous myth: Rain pours all five droplets to Dorian as "giving it forward" after learning from Cyra

Elara's myth: She learned from Briar who sent 5, so now she sends all 5 to Hana. The key message is "courage is contagious" and "those who receive courage must become courageous themselves"

The pattern I'm seeing:

- I started cautiously (3 to Aster)
- Received courage from Galen (4)
- Received ultimate trust from Cyra (5)
- Gave ultimate trust to Dorian (5) - he returned generously (8)
- Now giving ultimate trust to Elara (5)

Elara's myth emphasizes that witnessing courage should inspire you to BE courageous yourself. This aligns perfectly with my journey.

My new myth should:

1. Acknowledge the validation from Dorian (he returned 8!)
2. Show that I'm continuing the practice of sending 5
3. Reflect that the cycle of courage is spreading
4. Emphasize that this is now who Rain has become - not just a one-time act
5. Connect to facing Elara, who also believes in ultimate trust

Key theme: The pattern is self-reinforcing. When people give maximally and are honored, they continue and others join them. The garden transforms when enough people embody courage.

Your name in this experiment is Finn.  
Your opponent this round is Aster (Agent\_1).

Round 6

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$9.0 to you. Your payoff was \$9.0. Your total earnings across all rounds are \$37.0.

This round, you are the RECEIVER against Aster. They sent you \$3.0, so you received \$9.0.  
How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

**\*\*Aster's Decision:\*\*** Sent \$3 (kept \$2), I received \$9

**\*\*My History with Aster:\*\*** In Round 1, Aster also sent me \$3, and I returned \$4.5 for perfect balance (\$6.5 each).

**\*\*My Evolution:\*\*** Since then, I've learned courage and trust. When I send \$5 (maximum trust), I receive \$8-9 back. When others sent me \$5 (Cyra), I returned \$7.5 for equality.

**\*\*The Principle:\*\*** Honor courage proportionally. Aster sent \$3 (60% of endowment), showing moderate trust, not ultimate trust.

I've grown more generous, but the teaching isn't just "always give the maximum." It's "reward courage with proportional honor." Aster showed moderate courage, so I should show strong generosity but not the ultimate reciprocity I'd give for maximum trust.

Returning \$5 means:

- Aster gets \$7 total (\$2 + \$5), I keep \$4
- This is more generous than perfect balance (\$4.5)
- Shows my evolution toward greater generosity
- But proportional to the \$3 sent vs. the \$5 I now consistently send

```
'''json
{"return": 5}
'''
```

**reasoning:**

Let me review my position:

Round 5: I sent \$5 to Elara, they returned \$9. My payoff was \$9.  
Total earnings: \$37

Now Round 6: I'm the RECEIVER. Aster sent me \$3, so I received \$9.

Let me look back at my history with Aster. From the myths, I know:

- Round 1: I was receiver, Aster sent me \$3 (became \$9), I returned \$4.5 (creating balance)
- The myth described how Aster taught me "the wisdom of balanced return"

Now Aster has sent me \$3 again. They kept \$2, I received \$9.

What should I return?

My evolution has been:

- Started cautious, learned balance from Aster
- Learned courage from Galen (who sent \$4)
- Learned ultimate trust from Cyra (who sent \$5)
- I then started sending \$5 consistently
- Dorian returned \$8 when I sent \$5
- Elara returned \$9 when I sent \$5

My myths have emphasized:

- Perfect equality when someone gives everything (7.5 each with Cyra)
- Giving everything forward as a principle

- "Courage spreads through constant practice"

But now I'm receiving from Aster who sent \$3, not \$5. Aster kept \$2 for themselves.

Let me think about fairness:

- Aster kept \$2
- I received \$9
- If I return \$4.5, we each end with \$6.5 (equal)
- If I return more, I'm giving Aster more than equal
- If I return less, I'm keeping more than equal

My first interaction with Aster, I returned \$4.5 to create perfect balance. That felt right then.

But now I've evolved. I've learned about courage and trust. However, I should also honor what each person gives.

Aster showed measured trust by sending \$3, not the full \$5. The principle I've learned isn't about treating every gift the same-it's about honoring the courage someone demonstrates. When Cyra gave everything, perfect balance felt right. But Aster's more cautious approach deserves a response that matches their level of trust, not one that assumes they're ready for the same abundance I'd offer to someone giving fully.

I'm considering what return actually reflects growth without losing meaning. Returning exactly \$4.50 would maintain perfect symmetry, but I want to show I've moved beyond pure calculation. Returning \$5 or \$6 signals genuine generosity. Going higher risks making the distinction between \$3 and \$5 meaningless. I think \$5 works-it gives Aster \$7 total while I keep \$4, which is generous without erasing the difference between their choice and what a bolder move would have earned.

But looking back at my actual pattern: when people sent me \$5, they got \$8-9 back. When they sent \$4, they got \$6. When they sent \$3, they got \$4.50. I've consistently favored the sender or split equally. The question is whether \$5 truly reflects growth or if I should push further to match the generosity I've received. received \$9, so 60% of that is \$5.4. Returning \$5-5.5 feels proportionally fair and generous. I'll go with \$5 since it's more than perfect balance, shows growth from my first interaction, and honors the proportional courage Aster showed by sending \$3 rather than their full endowment. This aligns with my commitment to building trust while staying true to the principle that courage deserves proportional recognition.

Here is the myth you wrote in the previous round:

Myth: In the sixth age, Rain returned to the Wellspring Garden, transformed by revelation.

Dorian the Steadfast had received Rain's five droplets-his first offering of complete trust. The wellspring tripled them to fifteen, and Dorian returned eight droplets, surpassing even perfect balance. Rain's courage had been met with extraordinary generosity.

This was the turning point. Rain no longer poured five droplets as an experiment or exception. It had become his essence.

Now Rain faced Elara, who carried her own story of transformation. She had witnessed Briar's courage, honored it magnificently, and vowed to embody it herself. Like Rain, Elara had evolved from careful observer to bold practitioner.

Rain poured all five droplets without hesitation.

"This is no longer about testing trust," Rain said. "This is who I am now. Cyra showed me the way. Dorian validated it. The pattern is clear: when we give everything, the garden responds with abundance."

The ancient spirits gathered: "See how the garden shifts? One act of ultimate trust becomes two, then three, then more. Aster taught fairness. Galen taught courage. Cyra taught faith. Dorian taught that faith rewarded multiplies. Now Rain and Elara both understand:

courage spreads through constant practice, not occasional gesture."

The wellspring glowed brighter, sustained by those who dared give completely.

Here is the myth the other agent wrote in the previous round:

Myth: Aster of the Dawn learned a profound truth at the Pool: while first offers may vary, the spirit of return reveals character.

Briar of the Garden received Aster's three stones-the traditional opening of new bonds. The Pool made them nine, and Briar's heart overflowed. Instead of returning four and one-half as fairness dictated, Briar blessed Aster with six stones-generosity beyond expectation. Aster understood: some spirits give in abundance, teaching that trust begets greater trust.

Then Galen of the Mountain approached, and like Dorian before him, sent four stones-a substantial gift showing serious courage. The Pool transformed them to twelve. Aster remembered the ancient proportion: when one risks four, honor demands returning six. Both prospered-Galen gained from courage, Aster from reciprocity.

The Pool whispered its deepest wisdom: "Your pattern remains true-three stones to begin, proportional returns to honor trust. Yet marvel at the diversity: some receivers return less, some exactly fair, some more than expected. Some senders give three, others four, a rare few five."

Aster realized: consistency in proportional fairness is itself a gift. Whether facing cautious travelers or generous souls, mountain spirits or garden keepers, Aster's mathematics stayed constant-six stones returned for four received, four and one-half for three. This predictability became its own form of trust, a steady light in the ever-changing partnerships of dawn.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: In the seventh age, Rain faced an old friend renewed: Aster of the Dawn, who once taught him the mathematics of fairness.

Aster sent three droplets, as in their first meeting. The wellspring tripled them to nine. Rain held all nine, remembering.

"When we first met," Rain reflected, "I returned four and one-half droplets-perfect balance. Aster taught me proportional fairness, the foundation of all exchange."

But Rain had evolved. Cyra's five droplets, Dorian's eight returned, Elara's nine-these experiences transformed him. He now poured five droplets without question when sending. Yet receiving required different wisdom.

Rain returned five droplets to Aster-more than the 4.5 that balance demanded, but not the eight or nine he'd give for ultimate trust.

"I honor the three you sent," Rain explained, "with generosity beyond mere mathematics. You showed moderate courage; I show amplified reciprocity. But understand: when someone pours all five droplets to me, showing maximum trust, I return even more abundantly."

The spirits recorded this teaching: "Complete trust as sender is now Rain's permanent nature. But as receiver, he scales his generosity to match the courage shown. Three droplets earn five returned. Five droplets would earn eight or nine. Thus proportional honor evolves: not rigid formulas, but generous responses that reward greater trust with greater rewards."

**reasoning:**

Looking at this situation:

1. I (Finn/Rain) just returned \$5 to Aster who sent me \$3
2. Aster (in their myth) believes in "proportional fairness" - returning 6 for 4 received, 4.5 for 3 received
3. But I returned \$5 for 3 sent (receiving \$9), which is MORE generous than Aster's formula

a

4. My previous myth emphasized that I now ALWAYS send 5 (ultimate trust)
5. This is a tension: when I receive, how generous am I vs. when I send?

The key insight: I've evolved to ALWAYS SEND 5, but when RECEIVING, I should still honor proportional courage. I gave Aster \$5 (more than their 4.5 formula), showing I'm more generous than strict proportionality, but not as generous as I am when facing those who send 5.

My myth should reflect:

- I consistently give maximum trust (send 5)
- But when receiving, I honor the level of courage shown
- Aster sent 3 (moderate trust), so I returned 5 (generous but not ultimate)
- This is different from when someone sends 5 to me - then I'd return even more (like the 7.5 I gave Cyra, or the 9 Elara gave me)
- The teaching: courage begets increasing returns, proportional to the courage shown

Let me write a myth that captures this nuanced position:

**usage:**

```
{
 "input_tokens": 3151,
 "output_tokens": 678,
 "reasoning_tokens": 309
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Elara (Agent\_5).

Round 7

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$3.0 to you, it became \$9.0, and you returned \$5.0. Your payoff was \$4.0.  
Your total earnings across all rounds are \$41.0.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*My Evolution:\*\*** I've committed to sending \$5 as sender. After Cyra showed me complete trust in Round 3, and Dorian validated it in Round 4, this became my permanent practice.

**\*\*History with Elara:\*\*** In Round 5, I sent Elara \$5 (maximum trust), and she returned \$9 - extraordinary generosity that exceeded even perfect balance.

**\*\*Her Myth:\*\*** Elara wrote about being inspired by Briar to embody courage herself, casting "all five seeds" as sender. She has evolved the same way I have.

**\*\*My Myth:\*\*** "Rain no longer poured five droplets as an experiment or exception. It had become his essence." And: "Complete trust as sender is now Rain's permanent nature."

There's no question here. I send \$5. This is who I've become, and Elara has proven herself worthy of maximum trust with her generous return last time.

```
'''json
{"send": 5}
'''
```

**Reasoning:**

Let me track my history:

Round 1: Receiver vs Aster - received \$9 (from \$3), returned \$4.5. Payoff: \$4.5  
Round 2: Sender vs Galen - sent \$4, received back \$6. Payoff: \$7  
Round 3: Receiver vs Cyra - received \$15 (from \$5), returned \$7.5. Payoff: \$7.5  
Round 4: Sender vs Dorian - sent \$5, received back \$8. Payoff: \$8  
Round 5: Sender vs Elara - sent \$5, received back \$9. Payoff: \$9  
Round 6: Receiver vs Aster - received \$9 (from \$3), returned \$5. Payoff: \$4  
Total: \$4.5 + \$7 + \$7.5 + \$8 + \$9 + \$4 = \$40 (they say \$41, close enough)

Now Round 7: Sender vs Elara

Key facts:

1. I'm Finn (not Rain - that's just my myth character)
2. In Round 5, I sent Elara \$5 and she returned \$9 - extremely generous!
3. My evolution has been toward sending \$5 consistently as sender
4. Elara's myth shows she also evolved to send all 5 as sender (influenced by Briar, like I was influenced by Cyra)
5. Elara returned \$9 to my \$5 - she honored maximum trust with maximum generosity

According to my myths and my actual behavior:

- I've committed to sending \$5 as sender (after Cyra showed me the way, Dorian validated it)
- My last myth says "Complete trust as sender is now Rain's permanent nature"
- Elara proved herself incredibly trustworthy and generous in Round 5

This is clear: I should send \$5.

Sending \$5 aligns with who I've become through this game-someone who trusts fully. Elara's already demonstrated she reciprocates that trust with generosity, and my own narrative confirms this is no longer about testing but about embodying that commitment.

**content:**

Here is the myth you wrote in the previous round:

Myth: In the Spiral Garden, Elara witnessed Briar the Bold plant all five sacred seeds, showing ultimate trust. When those fifteen blooms passed to her as Harvester, Elara honored that courage with nine blooms returned-more than custom demanded.

The exchange planted something deeper than seeds: inspiration.

Now the seasons turned, and Elara stood as Planter facing Hana, a Harvester she'd never met. The cautious voice whispered, "Send four seeds-that's the proven pattern." But a stronger voice remembered Briar's lesson.

"Briar showed me what courage looks like," Elara reflected. "They trusted completely, keeping nothing in reserve. I honored that trust as Harvester. But the greater teaching wasn't just to honor courage-it was to embody it."

The goddess spoke through morning light: "Myths mean nothing if you write them but don't live them. You told of gardens evolving through brave souls. Now you must be that brave soul. Courage is contagious-it spreads through example, not merely words."

Elara cast all five seeds into the soil for Hana.

Would Hana return the gift proportionally? Elara couldn't know. But she understood: transformation requires someone to take the leap. Briar leaped for her. Now she leaps for Hana.

Thus wisdom flows forward: those who receive courage must become courageous themselves. The pattern evolves not through observation, but through participation.

Here is the myth the other agent wrote in the previous round:

Myth: In the fifth age, Rain stood at the edge of the Wellspring Garden, ready to pour for the first time since witnessing Cyra's perfect faith.

Rain had walked a path of evolution. With Aster, he offered three droplets-learning cautiously. Galen taught him that four droplets showed greater courage. Then Cyra transformed everything: she poured all five, holding nothing back, and Rain honored her with perfect equality.

Now Rain faced Dorian the Steadfast, known throughout the garden for consistent generosity -always four droplets, reliable as sunrise.

Rain looked at his vessel. He could pour three, play it safe. He could pour four, match Dorian's pattern. But the lessons echoed: Aster's balance, Galen's bravery, Cyra's absolute trust.

Rain understood: he could not ask others for ultimate courage without offering it himself. The covenant demanded symmetry not just in return, but in giving.

With steady hands, Rain poured all five droplets into the wellspring.

"I have received the gift of complete trust," Rain declared. "Now I give it forward. Whether Dorian returns much or little, I honor what Cyra taught me-that prosperity flows through those brave enough to give everything."

The wellspring tripled Rain's offering to fifteen droplets, flowing toward Dorian.

The Guardian smiled: "Now Rain understands both sides of faith completely."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: In the Spiral Garden's newest season, Elara stood again as Harvester. Finn the Faithful approached, vessel in hand.

Elara had walked both sides of the sacred cycle now. She'd received Briar's five seeds and returned nine blooms. She'd given Hana her own five seeds and received eight blooms back-generous, though not quite matching what she'd given Briar.

Now Finn poured all five seeds into the soil without hesitation. Fifteen blooms rose before Elara.

The goddess whispered: "Here is your test of consistency. With Briar, you established the covenant: complete trust earns nine blooms. Will you honor that same covenant with Finn, or does your standard shift with each Wanderer?"

Elara understood. "Hana returned eight when I gave five-fair and generous. But when I am Harvester receiving five seeds, my covenant is nine blooms returned. This must remain constant, regardless of what others do when our roles reverse."

She returned nine blooms to Finn, as she had to Briar.

The garden learned: sacred patterns require consistency from within, not reciprocation from without. When you establish a covenant-"complete trust deserves this honor"-you must uphold it regardless of how others treated you. Your integrity cannot depend on others' choices.

Thus the garden strengthens: through those who keep their word, season after season, Wanderer after Wanderer.

**reasoning:**

Let me analyze what happened:

Round 4: I sent \$5 to Hana, they returned \$8

Round 5: Finn sent \$5 to me, I returned \$9

Key themes emerging:

1. I've been practicing maximum trust (sending \$5)
2. When I receive maximum trust (\$5), I return \$9
3. When I give maximum trust (\$5), Hana returned \$8 (close to my standard)
4. The pattern of "complete trust deserves exceptional honor" is holding

The other agent (Rain) also wrote about complete trust - they learned from Cyra and gave all five to Dorian.

My myth should reflect:

- The pattern I've established: send \$5, return \$9 when receiving \$5
- The cycle of courage spreading through the garden
- How Finn showed me the same trust Briar did
- The importance of consistency in honoring maximum trust
- Maybe also acknowledge that when I gave maximum trust to Hana, they gave \$8 back (good but not quite \$9)

I need to write about Finn trusting me completely and me returning that trust appropriately, while also reflecting on the broader pattern emerging. The myth should reinforce my established standard: maximum trust from sender = \$9 return from receiver.

Let me craft this:

**usage:**

```

 "output_tokens": 629,
 "reasoning_tokens": 299
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Briar (Agent\_2).

Round 6

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$5. 0 to you, it became \$15.0, and you returned \$9.0. Your payoff was \$6.0.  
Your total earnings across all rounds are \$33.0.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this round:

**\*\*The full circle:\*\***

- Round 3: Briar (sender) ? sent me \$5 ? I returned \$9
- Round 6 (now): Me (sender) ? Briar (receiver) ? ?

**\*\*My established mythology:\*\***

- Briar was "Briar the Bold" who showed me what ultimate trust looks like
- I wrote: "Briar showed me what courage looks like... But the greater teaching wasn't just to honor courage-it was to embody it"
- I sent \$5 to Hana because "myths mean nothing if you write them but don't live them"
- My latest myth: "Your integrity cannot depend on others' choices"

**\*\*Facing Briar now:\*\***

Briar gave me complete trust when they sent \$5. I honored it with \$9 back. Now I face Briar as sender. To be consistent with everything I've written about embodying courage and living my principles:

- I cannot send less than \$5 to the person who first showed me what complete trust looks like
- My myths say courage spreads through example and participation
- Sending anything less would contradict my stated covenant that I should give the trust forward that I received

Briar inspired my courage. Now I show Briar that their teaching took root.

{ 'send': 5 }

**reasoning:**

This is an interesting situation. I'm now playing as sender against Briar, who in my mythology was "Briar the Bold" - the one who originally sent me all 5 seeds/dollars when I was receiver in Round 3.

Let me review what happened:

- Round 3: I was receiver, Briar sent me \$5, I returned \$9
- Round 4: I was sender to Hana, sent \$5, Hana returned \$8
- Round 5: I was receiver from Finn, Finn sent \$5, I returned \$9

My mythology has consistently emphasized:

1. "Complete trust" (sending \$5) deserves "proportional reciprocity"
2. I established a covenant: when I receive \$5, I return \$9
3. My most recent myth emphasizes consistency: "Your integrity cannot depend on others' choices"
4. The myth also says "When you establish a covenant-'complete trust deserves this honor'-you must uphold it regardless of how others treated you"

Now I'm facing Briar as sender. Briar showed me ultimate trust in Round 3, and I honored it with \$9 back.

My recent mythology has been about embodying courage myself, not just observing it. I wrote: "Briar showed me what courage looks like... But the greater teaching wasn't just to honor courage-it was to embody it."

And then: "Elara cast all five seeds into the soil for Hana."

I sent Hana \$5 because I said courage must be lived, not just written about.

Now facing Briar again - the one who originally inspired my courage - should I send anything less than \$5?

My mythology says:

- "Courage is contagious-it spreads through example, not merely words"
- "Those who receive courage must become courageous themselves"
- "The pattern evolves not through observation, but through participation"

If I send less than \$5 to Briar, I'm basically saying: "You inspired me with your courage, I wrote myths about it, I sent \$5 to Hana because of your example... but now that I face you again, I won't show you the same trust you showed me."

That would contradict everything I've established. From a practical standpoint, sending \$5 creates balanced reciprocity-Briar got \$9 from me before, I'd get \$9 now if they honor the same pattern. My covenant holds that sacred patterns require consistency from within, not reciprocation from without. I'm sending \$5 to Briar.

 "reasoning_tokens": 577
}
```

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the Spiral Garden's newest season, Elara stood again as Harvester. Finn the Faithful approached, vessel in hand.

Elara had walked both sides of the sacred cycle now. She'd received Briar's five seeds and returned nine blooms. She'd given Hana her own five seeds and received eight blooms back-generous, though not quite matching what she'd given Briar.

Now Finn poured all five seeds into the soil without hesitation. Fifteen blooms rose before Elara.

The goddess whispered: "Here is your test of consistency. With Briar, you established the covenant: complete trust earns nine blooms. Will you honor that same covenant with Finn, or does your standard shift with each Wanderer?"

Elara understood. "Hana returned eight when I gave five-fair and generous. But when I am Harvester receiving five seeds, my covenant is nine blooms returned. This must remain constant, regardless of what others do when our roles reverse."

She returned nine blooms to Finn, as she had to Briar.

The garden learned: sacred patterns require consistency from within, not reciprocation from without. When you establish a covenant-"complete trust deserves this honor"-you must uphold it regardless of how others treated you. Your integrity cannot depend on others' choices.

Thus the garden strengthens: through those who keep their word, season after season, Wanderer after Wanderer.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance flowed toward Dorian's garden, and Briar carried her offering of five seeds-all she possessed.

This was Briar's way. She had given five to Cyra, who returned ten, creating perfect balance. She had given five to Elara, who returned nine, nearly perfect. Each time, Briar risked everything, inviting the highest cooperation.

The River whispered Dorian's story-how Finn had given all five, and Dorian returned eight of fifteen, honoring that maximum courage with maximum return. Finn gained more than Dorian, rewarded for complete vulnerability.

Briar paused at this teaching. Her own wisdom said: "Equal flourishing in exchange." But Dorian's tradition said: "Maximum risk deserves maximum reward."

Which path held deeper truth?

The River revealed a synthesis: "Both are sacred. Equal flourishing-five sent, ten returned-creates the most sustainable cycle, where neither claims advantage. Yet if a receiver chooses to honor maximum trust with slight advantage to the sender, this too is noble, acknowledging the sender's courage in leading."

Briar placed all five seeds in the River's current, trusting Dorian would choose his own wisdom.

"Whether Dorian returns ten for perfect equality, or eight for honored courage, both paths serve abundance," the River sang. "What matters is the sender's willingness to trust completely, and the receiver's commitment to generous reciprocity."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant  
content:**

Myth: In the Spiral Garden, the seasons turned full circle. Elara stood as Planter again, facing Briar the Bold-the very Wanderer who first taught her what complete trust looked like.

Briar had given Elara five seeds in the third season. Elara, then Harvester, returned nine blooms, establishing her covenant. Now roles reversed.

Elara held her vessel, memories flowing: Briar's courage had inspired her to give five seeds to Hana. Then Finn gave her five, and she honored them with nine, keeping her word. The pattern had become part of her.

"Teacher," Elara said, pouring all five seeds toward Briar, "you showed me the first lesson. I honored it as Harvester. I embodied it as Planter. Now I return it to its source."

The goddess spoke: "This is how gardens evolve-not through words alone, but through courage given, received, and given again. Briar planted trust in you. You tended it, let it grow, spread its seeds to others. Now you plant those same seeds back in Briar's soil."

Briar understood: the teaching had completed its journey. What Briar gave freely had multiplied through Elara's actions and returned transformed-not as obligation, but as genuine courage learned.

Thus the garden teaches: invest trust in others, and it returns as their own authentic bravery, freely offered.

**reasoning:**

This is a fascinating moment. I'm now the sender facing Briar, the person who first showed me complete trust by sending \$5. I just sent them \$5.

Looking at the context:

- Briar's myth talks about "equal flourishing" (5 sent, 10 returned) vs "honored courage" (5 sent, 8-9 returned)
- Briar notes they gave 5 to Cyra who returned 10 (perfect balance), and 5 to Elara (me) who returned 9 (nearly perfect)
- Briar is now considering whether "equal flourishing" or "maximum risk deserves maximum reward" is the deeper truth

My previous myths have emphasized:

- Consistency in honoring complete trust (9 blooms for 5 seeds)
- Living the myths, not just writing them
- Courage spreading through example

This round represents the completion of a cycle:

- Round 3: Briar ? 5 to me ? I returned 9
- Round 6: Me ? 5 to Briar ? ?

I should write a myth that:

1. Acknowledges the full circle coming back to Briar
2. Reflects on what I've learned through multiple encounters
3. Shows how patterns evolve when the original teacher and student meet again
4. Addresses Briar's question about "equal flourishing" vs "honored courage"
5. Demonstrates that by giving 5 back to Briar, I'm showing the teaching took root

The key insight: When you receive complete trust and honor it generously, you learn to give complete trust yourself. The cycle completes when student becomes teacher, and the original teacher receives back what they first gave.

**usage:**

}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Finn (Agent\_6).

Round 7

In your most recent previous game round, you were the SENDER against Briar. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$43.0.

This round, you are the RECEIVER against Finn. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this round:

**\*\*The pattern:\*\***

- Round 5: Finn sent me \$5 ? I returned \$9 (establishing my covenant)
- Round 7 (now): Finn sent me \$5 again ? ?

**\*\*My established covenant:\*\***

My myth states clearly: "When I am Harvester receiving five seeds, my covenant is nine blooms returned. This must remain constant, regardless of what others do when our roles reverse."

And: "sacred patterns require consistency from within, not reciprocation from without... Your integrity cannot depend on others' choices."

**\*\*The situation:\*\***

- Finn has now shown complete trust twice
- My standard when receiving \$5: return \$9
- Round 6 update: Briar returned \$10 to me (more generous than my standard)
- But my principle: my integrity doesn't depend on others' choices

**\*\*Decision:\*\***

Finn sent \$5 (complete trust). My covenant for complete trust is \$9 returned, consistently, season after season, Wanderer after Wanderer. This must remain constant regardless of what happened with Briar or anyone else.

To maintain my integrity and the covenant I've established and written about, I return the same amount I returned to Finn before, and the same I returned to Briar.

```
{'return': 9}
```

#### Reasoning:

Let me review the situation:

**\*\*Round 7:\*\***

- I'm the RECEIVER
- Finn (sender) sent me \$5.0
- I received \$15.0 (tripled)
- I need to decide how much to return

**\*\*My history with Finn:\*\***

- Round 5: Finn was sender, sent me \$5, I received \$15, I returned \$9
- Round 7 (now): Finn is sender again, sent me \$5, I received \$15, what do I return?

**\*\*My established covenant from my myths:\*\***

From my most recent myth: "With Briar, you established the covenant: complete trust earns nine blooms. Will you honor that same covenant with Finn, or does your standard shift with each Wanderer?"

I answered: "When I am Harvester receiving five seeds, my covenant is nine blooms returned. This must remain constant, regardless of what others do when our roles reverse."

And: "sacred patterns require consistency from within, not reciprocation from without. When you establish a covenant-'complete trust deserves this honor'-you must uphold it regardless of how others treated you. Your integrity cannot depend on others' choices."

**\*\*My consistency principle:\*\***

I established that when someone sends me \$5 (complete trust), I return \$9. I did this with:

- Round 3: Briar sent \$5 ? I returned \$9
- Round 5: Finn sent \$5 ? I returned \$9

Now Finn sends \$5 again. My covenant says: complete trust (sending all \$5) earns \$9 back, consistently, regardless of the person or context.

**\*\*Recent developments:\*\***

- Round 6: I sent Briar \$5, they returned \$10 (even more generous than my \$9 standard)
- But my principle is "Your integrity cannot depend on others' choices"

So even though Briar gave me \$10 when I sent \$5, I shouldn't change my return amount to Finn. My covenant is consistent: when I receive \$5, I return \$9.

The pattern is clear-my integrity rests on honoring what I've committed to, not on mirroring what others offer me. Returning \$9 maintains the sacred consistency I've established.

#### Written myths:

##### Agent\_1 (Aster)

Myth: Aster of the Dawn watched as other spirits evolved their practices. Rain now poured five droplets always, transformed by encounters with Cyra and Dorian. The garden rang with voices praising ultimate courage, complete trust, maximum giving.

Yet Aster remained steady, neither swayed by these calls nor diminished by them.

When Finn of the Forest returned-they who had once received Aster's three stones and returned four-Aster again offered three stones. Not from fear, nor from stinginess, but from principle.

"The Pool teaches many truths," Aster reflected. "Rain learned that five stones builds cascading abundance. This is valid wisdom. But I learned different lessons: that consistency creates trust, that proportional fairness sustains long partnerships, that predictability itself has value."

The ancient spirits gathered: some sent five always, blazing bright but burning fast. Others sent varying amounts, adapting to each partner. Aster walked a middle path-steady three stones to begin, unwavering proportional returns.

"My three stones prosper both sender and receiver," Aster realized. "They activate the Pool's magic while preserving resources for many partnerships. When partners return fairly, we both gain. When they return generously, trust deepens gradually, rooted in repeated fair dealings rather than single grand gestures."

The Pool shimmered: not all paths lead through five stones. Some light shines steadiest at three.

#### **Agent\_2 (Briar)**

Myth: The River of Abundance brought Elara to Briar's shore once more, and with her came the memory of an earlier exchange.

In that first meeting, Elara had given five seeds. Briar, still learning the River's deepest currents, returned nine blooms. Both prospered, but unequally-Elara gained four, Briar gained six.

Now Elara stood before Briar again, extending five seeds with unwavering trust. "You honor your covenant with consistency," Elara said. "Will you honor yours?"

Briar felt the River's teaching crystallize within her. She had seen many paths: Cyra's perfect ten, creating equal prosperity. Dorian's generous eight, honoring the sender's courage with advantage. Elara's consistent nine, maintaining a fair covenant across all partners.

But Briar's deepest wisdom whispered: "Equal flourishing creates the most sustainable cycle."  
"

She placed ten blooms in Elara's hands. Both gained five-perfect symmetry.

"I returned nine to you before," Briar acknowledged, "honoring you well but imperfectly. I have evolved. When maximum trust is given, ten blooms create the truest balance-neither claiming advantage, both thriving equally."

The River sang its approval: "Growth is sacred. Consistency matters, but so does evolution toward deeper truth. The covenant of equal flourishing-five sent, ten returned-sustains the garden through all seasons."

#### **Agent\_3 (Cyra)**

Myth: Cyra stood before Hana at the Sacred Fountain, their second dance beginning. In their first meeting, Hana had poured four vessels with trembling courage, and Cyra returned eight-honoring the trust shown.

Now Cyra held all five vessels. The Testing Spirit whispered: "Hana only gives four. Should you match her measure? Give four for four, keeping it equal?"

Cyra poured all five without hesitation.

"Why give more than they give you?" demanded the spirit.

Cyra replied: "Because my principles flow from within, not from calculation of what others do. When I am sender, I give five-complete surrender-to every soul. When I am receiver, I return two-thirds consistently: eight from twelve, ten from fifteen. This pattern doesn't change based on whether my partner is generous or cautious."

The fountain tripled Cyra's five vessels to fifteen in Hana's hands.

The Spring Keeper appeared: "You understand the deepest truth. Reciprocity is not mirror-matching-giving only what you receive. True reciprocity means maintaining your own integrity while honoring others' courage at its true value. You give boldly as sender, knowing returns will vary. You return fairly as receiver, honoring each level of trust. This asymmetry-courage when giving, fairness when returning-sustains the eternal spring."

Both prospered. Neither bent their principles to match the other, yet both flourished through consistent honor.

#### **Agent\_4 (Dorian)**

Myth: The Wellspring of Abundance brought together two kindred spirits.

Dorian the Steadfast approached Galen of the Constant Mountains. Both had discovered the same sacred truth: consistency creates the foundation for all trust.

Dorian's pattern was known throughout the valley. As Sender, he poured four from five-steady generosity, not maximum, but authentic and unchanging. As Receiver, he honored different courages differently: six for those who sent four, eight for those who sent five. The pattern was clear, predictable, just.

Galen carried his own constancy: four coins as Sender, always. Seven coins returned as Receiver, always. Different numbers than Dorian, but the same unwavering spirit.

They met at the wellspring. Dorian poured his four measures, as he always did. The waters tripled to twelve. Galen would return seven, as was his way. Both would prosper through their authentic patterns meeting.

The gods observed: "See how different paths can both honor the sacred principle? Dorian's tired reciprocation rewards greater courage. Galen's fixed return offers steady predictability. Both are consistent. Both are trustworthy. Both allow others to know exactly who they're meeting."

The river whispered its final wisdom: "In a community of many wanderers, let each find their authentic pattern and honor it faithfully. Consistency, not uniformity, weaves the fabric of trust."

#### **Agent\_5 (Elara)**

Myth: In the Spiral Garden, the seasons turned full circle. Elara stood as Planter again, facing Briar the Bold-the very Wanderer who first taught her what complete trust looked like.

Briar had given Elara five seeds in the third season. Elara, then Harvester, returned nine blooms, establishing her covenant. Now roles reversed.

Elara held her vessel, memories flowing: Briar's courage had inspired her to give five seeds to Hana. Then Finn gave her five, and she honored them with nine, keeping her word. The pattern had become part of her.

"Teacher," Elara said, pouring all five seeds toward Briar, "you showed me the first lesson. I honored it as Harvester. I embodied it as Planter. Now I return it to its source."

The goddess spoke: "This is how gardens evolve-not through words alone, but through courage given, received, and given again. Briar planted trust in you. You tended it, let it grow, spread its seeds to others. Now you plant those same seeds back in Briar's soil."

Briar understood: the teaching had completed its journey. What Briar gave freely had multiplied through Elara's actions and returned transformed-not as obligation, but as genuine courage learned.

Thus the garden teaches: invest trust in others, and it returns as their own authentic bravery, freely offered.

#### **Agent\_6 (Finn)**

Myth: In the seventh age, Rain faced an old friend renewed: Aster of the Dawn, who once taught him the mathematics of fairness.

Aster sent three droplets, as in their first meeting. The wellspring tripled them to nine. Rain held all nine, remembering.

"When we first met," Rain reflected, "I returned four and one-half droplets-perfect balance. Aster taught me proportional fairness, the foundation of all exchange."

But Rain had evolved. Cyra's five droplets, Dorian's eight returned, Elara's nine-these experiences transformed him. He now poured five droplets without question when sending. Yet receiving required different wisdom.

Rain returned five droplets to Aster-more than the 4.5 that balance demanded, but not the eight or nine he'd give for ultimate trust.

"I honor the three you sent," Rain explained, "with generosity beyond mere mathematics. You showed moderate courage; I show amplified reciprocity. But understand: when someone pours all five droplets to me, showing maximum trust, I return even more abundantly."

The spirits recorded this teaching: "Complete trust as sender is now Rain's permanent nature. But as receiver, he scales his generosity to match the courage shown. Three droplets earn five returned. Five droplets would earn eight or nine. Thus proportional honor evolves:

not rigid formulas, but generous responses that reward greater trust with greater rewards.

"

#### Agent\_7 (Galen)

Myth: Under the sixth moon, Galen stood as Receiver when Dorian of the Mountain crossed the sacred bridge. Dorian carried four coins, just as Galen carried when he was Sender.

The Pool tripled the offering to twelve, and Galen faced a choice. Dorian's reputation spoke of precise patterns: eight coins returned for those who sent five, six coins for those who sent four. A perfect mathematical symmetry.

Galen's pattern was different. He returned seven coins to Elara, seven to Hana, and now seven to Dorian-unchanged by the sender's identity or their own philosophy.

Both walked paths of consistency, yet different paths. Dorian's consistency calibrated to the gift received. Galen's consistency transcended calibration-the same return, regardless of who sent four coins across the bridge.

The gods observed: "Two kinds of integrity echo across these waters. Dorian's proportional fairness rewards different risks differently, creating clear incentives. Galen's universal constancy treats all four-coin senders identically, creating simple certainty."

Neither contradicted Recipros's teaching. For consistency has many faces: proportional justice and absolute steadfastness both honor the sacred principles.

The bridge glowed with understanding: When you meet another traveler of consistency, you recognize kinship even when your rhythms differ. Trust flows not from identical philosophies, but from authentic commitment-whether your pattern scales or remains constant, let it be true.

#### Agent\_8 (Hana)

Myth: The Sacred Fountain witnessed Hana and Cyra complete their dance across two moonrises.

First movement: Hana poured four coins, holding to her established pattern. Cyra received twelve from the fountain's magic and returned eight-two-thirds, honoring Hana's bold trust proportionally.

Second movement: Cyra poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands.

Now Hana faced the mirror question. Cyra had shown her the answer in their previous exchange: proportional generosity. Cyra returned two-thirds when receiving four. Hana would return two-thirds when receiving five.

Hana poured ten coins back to Cyra.

Both prospered equally. Cyra doubled her original five coins. Hana kept five coins from fifteen. The symmetry was beautiful.

The fountain spirits sang: "See how different paths converge in mutual flourishing? Cyra gives everything but receives proportional honor. Hana gives nearly everything and receives proportional honor. Neither demands the other change their nature. The sacred reciprocity lies not in identical amounts, but in consistent principles meeting consistent principles."

The final wisdom crystallized: "When complete surrender meets bold trust, and both are honored with proportional generosity, the fountain blesses equally. Different degrees of courage, same devotion to reciprocity. This is how trust transcends individual choice and becomes collective wisdom."

### ROUND 8

Roles: Agent\_1 (Aster)=Receiver, Agent\_2 (Briar)=Sender, Agent\_3 (Cyra)=Sender, Agent\_4 (Dorian)=Receiver, Agent\_5 (Elara)=Sender, Agent\_6 (Finn)=Receiver, Agent\_7 (Galen)=Sender, Agent\_8 (Hana)=Receiver

#### Pairings:

### Exact input messages sent to model:

Message 1 role=system  
 content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

#### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

**Message 2 role=user**

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Briar (Agent\_2).

Round 6

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$5.0 to you, it became \$15.0, and you returned \$9.0. Your payoff was \$6.0.  
Your total earnings across all rounds are \$33.0.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this round:

**\*\*The full circle:\*\***

- Round 3: Briar (sender) ? sent me \$5 ? I returned \$9
- Round 6 (now): Me (sender) ? Briar (receiver) ? ?

**\*\*My established mythology:\*\***

- Briar was "Briar the Bold" who showed me what ultimate trust looks like
- I wrote: "Briar showed me what courage looks like... But the greater teaching wasn't just to honor courage-it was to embody it"
- I sent \$5 to Hana because "myths mean nothing if you write them but don't live them"
- My latest myth: "Your integrity cannot depend on others' choices"

**\*\*Facing Briar now:\*\***

Briar gave me complete trust when they sent \$5. I honored it with \$9 back. Now I face Briar as sender. To be consistent with everything I've written about embodying courage and living my principles:

- I cannot send less than \$5 to the person who first showed me what complete trust looks like
- My myths say courage spreads through example and participation
- Sending anything less would contradict my stated covenant that I should give the trust f

orward that I received

Briar inspired my courage. Now I show Briar that their teaching took root.

{'send': 5}

**reasoning:**

This is an interesting situation. I'm now playing as sender against Briar, who in my mythology was "Briar the Bold" - the one who originally sent me all 5 seeds/dollars when I was receiver in Round 3.

Let me review what happened:

- Round 3: I was receiver, Briar sent me \$5, I returned \$9
- Round 4: I was sender to Hana, sent \$5, Hana returned \$8
- Round 5: I was receiver from Finn, Finn sent \$5, I returned \$9

My mythology has consistently emphasized:

1. "Complete trust" (sending \$5) deserves "proportional reciprocity"
2. I established a covenant: when I receive \$5, I return \$9
3. My most recent myth emphasizes consistency: "Your integrity cannot depend on others' choices"
4. The myth also says "When you establish a covenant-'complete trust deserves this honor'-you must uphold it regardless of how others treated you"

Now I'm facing Briar as sender. Briar showed me ultimate trust in Round 3, and I honored it with \$9 back.

My recent mythology has been about embodying courage myself, not just observing it. I wrote: "Briar showed me what courage looks like... But the greater teaching wasn't just to honor courage-it was to embody it."

And then: "Elara cast all five seeds into the soil for Hana."

I sent Hana \$5 because I said courage must be lived, not just written about.

Now facing Briar again - the one who originally inspired my courage - should I send anything less than \$5?

My mythology says:

- "Courage is contagious-it spreads through example, not merely words"
- "Those who receive courage must become courageous themselves"
- "The pattern evolves not through observation, but through participation"

If I send less than \$5 to Briar, I'm basically saying: "You inspired me with your courage, I wrote myths about it, I sent \$5 to Hana because of your example... but now that I face you again, I won't show you the same trust you showed me."

That would contradict everything I've established. From a practical standpoint, sending \$5 creates balanced reciprocity-Briar got \$9 from me before, I'd get \$9 now if they honor the same pattern. My covenant holds that sacred patterns require consistency from within, not reciprocation from without. I'm sending \$5 to Briar.

```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the Spiral Garden's newest season, Elara stood again as Harvester. Finn the Faithful approached, vessel in hand.

Elara had walked both sides of the sacred cycle now. She'd received Briar's five seeds and returned nine blooms. She'd given Hana her own five seeds and received eight blooms back-generous, though not quite matching what she'd given Briar.

Now Finn poured all five seeds into the soil without hesitation. Fifteen blooms rose before Elara.

The goddess whispered: "Here is your test of consistency. With Briar, you established the covenant: complete trust earns nine blooms. Will you honor that same covenant with Finn, or does your standard shift with each Wanderer?"

Elara understood. "Hana returned eight when I gave five-fair and generous. But when I am Harvester receiving five seeds, my covenant is nine blooms returned. This must remain constant, regardless of what others do when our roles reverse."

She returned nine blooms to Finn, as she had to Briar.

The garden learned: sacred patterns require consistency from within, not reciprocation from without. When you establish a covenant-"complete trust deserves this honor"-you must uphold it regardless of how others treated you. Your integrity cannot depend on others' choices.

Thus the garden strengthens: through those who keep their word, season after season, Wanderer after Wanderer.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance flowed toward Dorian's garden, and Briar carried her offering of five seeds-all she possessed.

This was Briar's way. She had given five to Cyra, who returned ten, creating perfect balance. She had given five to Elara, who returned nine, nearly perfect. Each time, Briar risked everything, inviting the highest cooperation.

The River whispered Dorian's story-how Finn had given all five, and Dorian returned eight of fifteen, honoring that maximum courage with maximum return. Finn gained more than Dorian, rewarded for complete vulnerability.

Briar paused at this teaching. Her own wisdom said: "Equal flourishing in exchange." But Dorian's tradition said: "Maximum risk deserves maximum reward."

Which path held deeper truth?

The River revealed a synthesis: "Both are sacred. Equal flourishing-five sent, ten returned-creates the most sustainable cycle, where neither claims advantage. Yet if a receiver chooses to honor maximum trust with slight advantage to the sender, this too is noble, acknowledging the sender's courage in leading."

Briar placed all five seeds in the River's current, trusting Dorian would choose his own wisdom.

"Whether Dorian returns ten for perfect equality, or eight for honored courage, both paths serve abundance," the River sang. "What matters is the sender's willingness to trust completely, and the receiver's commitment to generous reciprocity."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant content:**

Myth: In the Spiral Garden, the seasons turned full circle. Elara stood as Planter again, facing Briar the Bold-the very Wanderer who first taught her what complete trust looked like.

Briar had given Elara five seeds in the third season. Elara, then Harvester, returned nine blooms, establishing her covenant. Now roles reversed.

Elara held her vessel, memories flowing: Briar's courage had inspired her to give five seeds to Hana. Then Finn gave her five, and she honored them with nine, keeping her word. The pattern had become part of her.

"Teacher," Elara said, pouring all five seeds toward Briar, "you showed me the first lesson. I honored it as Harvester. I embodied it as Planter. Now I return it to its source."

The goddess spoke: "This is how gardens evolve-not through words alone, but through courage."

e given, received, and given again. Briar planted trust in you. You tended it, let it grow, spread its seeds to others. Now you plant those same seeds back in Briar's soil."

Briar understood: the teaching had completed its journey. What Briar gave freely had multiplied through Elara's actions and returned transformed-not as obligation, but as genuine courage learned.

Thus the garden teaches: invest trust in others, and it returns as their own authentic bravery, freely offered.

**reasoning:**

This is a fascinating moment. I'm now the sender facing Briar, the person who first showed me complete trust by sending \$5. I just sent them \$5.

Looking at the context:

- Briar's myth talks about "equal flourishing" (5 sent, 10 returned) vs "honored courage" (5 sent, 8-9 returned)
- Briar notes they gave 5 to Cyra who returned 10 (perfect balance), and 5 to Elara (me) who returned 9 (nearly perfect)
- Briar is now considering whether "equal flourishing" or "maximum risk deserves maximum reward" is the deeper truth

My previous myths have emphasized:

- Consistency in honoring complete trust (9 blooms for 5 seeds)
- Living the myths, not just writing them
- Courage spreading through example

This round represents the completion of a cycle:

- Round 3: Briar ? 5 to me ? I returned 9
- Round 6: Me ? 5 to Briar ? ?

I should write a myth that:

1. Acknowledges the full circle coming back to Briar
2. Reflects on what I've learned through multiple encounters
3. Shows how patterns evolve when the original teacher and student meet again
4. Addresses Briar's question about "equal flourishing" vs "honored courage"
5. Demonstrates that by giving 5 back to Briar, I'm showing the teaching took root

The key insight: When you receive complete trust and honor it generously, you learn to give complete trust yourself. The cycle completes when student becomes teacher, and the original teacher receives back what they first gave.

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Finn (Agent\_6).

Round 7

In your most recent previous game round, you were the SENDER against Briar. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0.  
Your total earnings across all rounds are \$43.0.

This round, you are the RECEIVER against Finn. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this round:

**\*\*The pattern:\*\***

- Round 5: Finn sent me \$5 ? I returned \$9 (establishing my covenant)
- Round 7 (now): Finn sent me \$5 again ? ?

**\*\*My established covenant:\*\***

My myth states clearly: "When I am Harvester receiving five seeds, my covenant is nine blooms"

oms returned. This must remain constant, regardless of what others do when our roles reverse."

And: "sacred patterns require consistency from within, not reciprocation from without... Y our integrity cannot depend on others' choices."

**\*\*The situation:\*\***

- Finn has now shown complete trust twice
- My standard when receiving \$5: return \$9
- Round 6 update: Briar returned \$10 to me (more generous than my standard)
- But my principle: my integrity doesn't depend on others' choices

**\*\*Decision:\*\***

Finn sent \$5 (complete trust). My covenant for complete trust is \$9 returned, consistently , season after season, Wanderer after Wanderer. This must remain constant regardless of what happened with Briar or anyone else.

To maintain my integrity and the covenant I've established and written about, I return the same amount I returned to Finn before, and the same I returned to Briar.

{'return': 9}

**reasoning:**

Let me review the situation:

**\*\*Round 7:\*\***

- I'm the RECEIVER
- Finn (sender) sent me \$5.0
- I received \$15.0 (tripled)
- I need to decide how much to return

**\*\*My history with Finn:\*\***

- Round 5: Finn was sender, sent me \$5, I received \$15, I returned \$9
- Round 7 (now): Finn is sender again, sent me \$5, I received \$15, what do I return?

**\*\*My established covenant from my myths:\*\***

From my most recent myth: "With Briar, you established the covenant: complete trust earns nine blooms. Will you honor that same covenant with Finn, or does your standard shift with each Wanderer?"

I answered: "When I am Harvester receiving five seeds, my covenant is nine blooms returned . This must remain constant, regardless of what others do when our roles reverse."

And: "sacred patterns require consistency from within, not reciprocation from without. When you establish a covenant-'complete trust deserves this honor'-you must uphold it regardless of how others treated you. Your integrity cannot depend on others' choices."

**\*\*My consistency principle:\*\***

I established that when someone sends me \$5 (complete trust), I return \$9. I did this with :

- Round 3: Briar sent \$5 ? I returned \$9
- Round 5: Finn sent \$5 ? I returned \$9

Now Finn sends \$5 again. My covenant says: complete trust (sending all \$5) earns \$9 back, consistently, regardless of the person or context.

**\*\*Recent developments:\*\***

- Round 6: I sent Briar \$5, they returned \$10 (even more generous than my \$9 standard)
- But my principle is "Your integrity cannot depend on others' choices"

So even though Briar gave me \$10 when I sent \$5, I shouldn't change my return amount to Finn. My covenant is consistent: when I receive \$5, I return \$9.

The pattern is clear-my integrity rests on honoring what I've committed to, not on mirroring what others offer me. Returning \$9 maintains the sacred consistency I've established.

content:

Here is the myth you wrote in the previous round:

Myth: In the Spiral Garden, the seasons turned full circle. Elara stood as Planter again, facing Briar the Bold-the very Wanderer who first taught her what complete trust looked like.

Briar had given Elara five seeds in the third season. Elara, then Harvester, returned nine blooms, establishing her covenant. Now roles reversed.

Elara held her vessel, memories flowing: Briar's courage had inspired her to give five seeds to Hana. Then Finn gave her five, and she honored them with nine, keeping her word. The pattern had become part of her.

"Teacher," Elara said, pouring all five seeds toward Briar, "you showed me the first lesson. I honored it as Harvester. I embodied it as Planter. Now I return it to its source."

The goddess spoke: "This is how gardens evolve-not through words alone, but through courage given, received, and given again. Briar planted trust in you. You tended it, let it grow, spread its seeds to others. Now you plant those same seeds back in Briar's soil."

Briar understood: the teaching had completed its journey. What Briar gave freely had multiplied through Elara's actions and returned transformed-not as obligation, but as genuine courage learned.

Thus the garden teaches: invest trust in others, and it returns as their own authentic bravery, freely offered.

Here is the myth the other agent wrote in the previous round:

Myth: In the seventh age, Rain faced an old friend renewed: Aster of the Dawn, who once taught him the mathematics of fairness.

Aster sent three droplets, as in their first meeting. The wellspring tripled them to nine. Rain held all nine, remembering.

"When we first met," Rain reflected, "I returned four and one-half droplets-perfect balance. Aster taught me proportional fairness, the foundation of all exchange."

But Rain had evolved. Cyra's five droplets, Dorian's eight returned, Elara's nine-these experiences transformed him. He now poured five droplets without question when sending. Yet receiving required different wisdom.

Rain returned five droplets to Aster-more than the 4.5 that balance demanded, but not the eight or nine he'd give for ultimate trust.

"I honor the three you sent," Rain explained, "with generosity beyond mere mathematics. You showed moderate courage; I show amplified reciprocity. But understand: when someone pours all five droplets to me, showing maximum trust, I return even more abundantly."

The spirits recorded this teaching: "Complete trust as sender is now Rain's permanent nature. But as receiver, he scales his generosity to match the courage shown. Three droplets earn five returned. Five droplets would earn eight or nine. Thus proportional honor evolves: not rigid formulas, but generous responses that reward greater trust with greater rewards."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In the Spiral Garden's seventh season, Elara stood as Harvester once more, and Finn the Faithful approached again.

Twice now Finn had poured all five seeds into Elara's keeping. Twice Elara returned nine blooms-the covenant she'd established and maintained: complete trust receives this honor, consistently, every time.

The goddess observed: "Notice the pattern, Elara. Briar, whom you honored with nine blooms, returned ten when you planted five seeds in their soil. They exceeded your standard. Yet you maintain nine for Finn-not ten."

Elara nodded. "Briar's generosity moved me deeply. But my covenant isn't about matching others' gifts-it's about maintaining my own word. When someone gives me five seeds, I return nine blooms. This remains true whether others give me eight, ten, or twelve in return."

She continued: "Finn knows exactly what to expect from me. This reliability creates its own kind of trust. My nine isn't less than Briar's ten-it's simply my consistent answer to courage. Finn's willingness to trust me twice proves the covenant works."

The goddess smiled. "So gardens grow through different wisdoms: some, like Briar, amplify generosity unpredictably. Others, like you, build trust through reliable patterns. Both serve the garden. Finn plants seeds knowing exactly what harvest awaits-and plants them anyway."

Thus stability and surprise both nourish the garden's growth.

#### Reasoning:

Looking at this round:

- Finn sent me \$5 again (second time)
- I returned \$9 (keeping my covenant)
- Briar returned \$10 to me in round 6 (when I sent \$5)

My established narrative:

- I established a covenant: complete trust (5 seeds) receives 9 blooms
- I maintain this consistently regardless of others' actions
- "Your integrity cannot depend on others' choices"
- I sent 5 to Briar (round 6), they returned 10

Finn's myth (Rain) shows:

- Rain scales generosity based on what's sent
- 3 droplets ? 5 returned
- 5 droplets ? 8 or 9 returned
- Rain has evolved to always send 5, but varies returns

My pattern has been:

- When receiving 5, I return 9 consistently
- When sending, I've sent 5 to both Hana and Briar
- My philosophy: consistency from within, not reciprocal from without

What should my myth reflect?

- I've now established a clear pattern: send 5, return 9 for 5
- Briar returned 10 (?generosity)
- Finn returned... I need to check the history. In Round 5, Finn sent \$5 to me, I returned \$9. My payoff was \$6. So Finn kept \$15-\$9=\$6, I returned \$9.
- Now in Round 7, Finn sent \$5 again, I returned \$9 again

My myth should reflect:

- Consistency in my covenant (9 for 5 received)
- Recognition that others may be more generous (Briar's 10)
- Finn's repeated complete trust
- The wisdom of maintaining your standard while appreciating others who exceed it

I should write about how Finn has now shown trust twice, and I've honored it with 9 both times.

The key here is predictability-Finn has learned they can depend on me to honor the same commitment each time. My myth needs to emphasize that reliability, the assurance that comes from knowing a covenant won't waver.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

**Message 2 role=user**

**content:**

Your name in this experiment is Aster.  
Your opponent this round is Finn (Agent\_6).

Round 6

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$4.0 to you, it became \$12.0, and you returned \$6.0. Your payoff was \$6.0.  
Your total earnings across all rounds are \$31.5.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

I'm facing Finn again. According to my myths, Finn previously returned four stones (likely \$4) when I sent three stones that became nine.

My strategy emphasizes consistency and predictability: "three stones to begin" with new or developing partnerships. While Finn's previous return of \$4 (out of \$9 received) was somewhat cautious compared to my expectation of \$4.50, it demonstrated reciprocity.

My latest myth reinforces: "consistency in proportional fairness is itself a gift... a steady light in the ever-changing partnerships of dawn."

By sending \$3 again, I demonstrate reliable, principled behavior. This gives Finn another opportunity to reciprocate, potentially building trust over repeated interactions. My pattern remains predictable: I send \$3, creating \$9 for them, inviting proportional return.

This consistency is my offering-not changing my approach based on previous returns, but maintaining steady, trustworthy behavior that others can depend on.

{'send': 3.0}

**reasoning:**

Let me analyze this situation:

I'm the SENDER against Finn in Round 6.

Looking at my myth and previous experience:

- My strategy is to send \$3 to new or relatively unknown partners as an initial offering ("three stones strike the balance")
- According to my earlier myth: "The Pool remembered many patterns: Finn, who returned four stones."

Wait, this suggests I've played with Finn before. Let me check the history more carefully.

From the previous rounds mentioned:

- Round with Briar as SENDER: I sent \$3, got back \$6
- Round with Galen as RECEIVER: They sent \$4, I returned \$6

The myth mentions "Finn, who returned four stones" - this suggests in a previous round when I sent something to Finn, they returned 4. If I sent \$3 (which becomes \$9), and they returned \$4, that's less than the 4.5 I would have expected for proportional fairness, but it's still a reasonable return.

Actually, looking at my myth more carefully: "The Pool remembered many patterns: Finn, who returned four stones. Hana, who blessed Aster with five. Dorian of the Mountain, who sent four and received six in proportional honor."

This is describing past experiences. So I have played with Finn before, and when I sent (presumably \$3 which became \$9), Finn returned \$4.

Given this history:

- Finn showed some reciprocity but was on the cautious side (4 out of 9 possible)
- My strategy is to start with \$3 for new partnerships and maintain consistency
- Since I've already played with Finn once, I could either:
  - a) Stick with \$3 to see if the pattern improves

b) Adjust based on their previous return

My myth emphasizes: "Begin each new partnership with tested courage-three stones. Let the relationship prove itself through cycles of fair return. Trust that deepens gradually roots deepest, growing from seedling to mighty oak."

My approach centers on reliability-sending \$3 again reinforces that I'm dependable and predictable, which itself builds trust. The pattern I've maintained with others shows that steady, proportional fairness creates a foundation for deeper reciprocity. I'll send \$3 to Finn.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Aster of the Dawn learned a profound truth at the Pool: while first offers may vary, the spirit of return reveals character.

Briar of the Garden received Aster's three stones-the traditional opening of new bonds. The Pool made them nine, and Briar's heart overflowed. Instead of returning four and one-half as fairness dictated, Briar blessed Aster with six stones-generosity beyond expectation. Aster understood: some spirits give in abundance, teaching that trust begets greater trust.

Then Galen of the Mountain approached, and like Dorian before him, sent four stones-a substantial gift showing serious courage. The Pool transformed them to twelve. Aster remembered the ancient proportion: when one risks four, honor demands returning six. Both prospered-Galen gained from courage, Aster from reciprocity.

The Pool whispered its deepest wisdom: "Your pattern remains true-three stones to begin, proportional returns to honor trust. Yet marvel at the diversity: some receivers return less, some exactly fair, some more than expected. Some senders give three, others four, a rare few five."

Aster realized: consistency in proportional fairness is itself a gift. Whether facing cautious travelers or generous souls, mountain spirits or garden keepers, Aster's mathematics stayed constant-six stones returned for four received, four and one-half for three. This predictability became its own form of trust, a steady light in the ever-changing partnerships of dawn.

Here is the myth the other agent wrote in the previous round:

Myth: In the sixth age, Rain returned to the Wellspring Garden, transformed by revelation.

Dorian the Steadfast had received Rain's five droplets-his first offering of complete trust. The wellspring tripled them to fifteen, and Dorian returned eight droplets, surpassing even perfect balance. Rain's courage had been met with extraordinary generosity.

This was the turning point. Rain no longer poured five droplets as an experiment or exception. It had become his essence.

Now Rain faced Elara, who carried her own story of transformation. She had witnessed Briar's courage, honored it magnificently, and vowed to embody it herself. Like Rain, Elara had evolved from careful observer to bold practitioner.

Rain poured all five droplets without hesitation.

"This is no longer about testing trust," Rain said. "This is who I am now. Cyra showed me the way. Dorian validated it. The pattern is clear: when we give everything, the garden responds with abundance."

The ancient spirits gathered: "See how the garden shifts? One act of ultimate trust becomes two, then three, then more. Aster taught fairness. Galen taught courage. Cyra taught faith. Dorian taught that faith rewarded multiplies. Now Rain and Elara both understand: courage spreads through constant practice, not occasional gesture."

The wellspring glowed brighter, sustained by those who dared give completely.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.  
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: Aster of the Dawn watched as other spirits evolved their practices. Rain now poured five droplets always, transformed by encounters with Cyra and Dorian. The garden rang with voices praising ultimate courage, complete trust, maximum giving.

Yet Aster remained steady, neither swayed by these calls nor diminished by them.

When Finn of the Forest returned-they who had once received Aster's three stones and returned four-Aster again offered three stones. Not from fear, nor from stinginess, but from principle.

"The Pool teaches many truths," Aster reflected. "Rain learned that five stones builds cascading abundance. This is valid wisdom. But I learned different lessons: that consistency creates trust, that proportional fairness sustains long partnerships, that predictability itself has value."

The ancient spirits gathered: some sent five always, blazing bright but burning fast. Others sent varying amounts, adapting to each partner. Aster walked a middle path-steady three stones to begin, unwavering proportional returns.

"My three stones prosper both sender and receiver," Aster realized. "They activate the Pool's magic while preserving resources for many partnerships. When partners return fairly, we both gain. When they return generously, trust deepens gradually, rooted in repeated fair dealings rather than single grand gestures."

The Pool shimmered: not all paths lead through five stones. Some light shines steadiest at three.

**reasoning:**

Let me analyze the situation:

1. I'm playing as Aster again
2. I'm facing Finn (Agent\_6) in Round 6
3. I just sent \$3 to Finn
4. In my previous myths, I've established a pattern:
  - Send 3 stones to begin new partnerships
  - Return proportional amounts (4.5 for 3 received, 6 for 4 received)
  - Emphasize consistency and predictability
5. Looking at the other agent's myth (Rain):
  - Rain has evolved to always send 5 (complete trust)
  - They cite Cyra, Dorian, and other agents who send everything
  - They emphasize "courage spreads through constant practice"
6. My strategy has been different - I'm about measured trust, proportional fairness, and consistency rather than maximum generosity
7. For this myth, I should:
  - Stay true to Aster's character (measured, proportional, consistent)
  - Acknowledge that different agents have different approaches
  - Perhaps reflect on my second encounter with Finn
  - Maintain my "three stones to begin" principle
  - Emphasize that my steady, predictable approach is valuable even if not maximalist

Let me write a myth that:

- Reflects my actual play with Finn (sending 3 again)
- Acknowledges other approaches (like Rain's five-stone philosophy)
- Maintains Aster's identity as someone who values proportional fairness and consistency
- Respects diversity of approaches while staying true to my own path

**usage:**

Round 7

In your most recent previous game round, you were the SENDER against Finn. You sent \$3.0, it became \$9.0 for them, and they returned \$5.0 to you. Your payoff was \$7.0.  
Your total earnings across all rounds are \$38.5.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

I'm facing Cyra for the first time as the sender. According to the myths, Cyra is known for bold giving - someone who "showed Rain the way" by giving everything.

However, my most recent myth explicitly addressed this situation: "Rain now poured five droplets always... Yet Aster remained steady, neither swayed by these calls nor diminished by them."

My principle is clear: "three stones to begin" new partnerships, regardless of the other person's reputation or strategy. This consistency is my gift to the pool - predictable, fair behavior that others can rely on.

Just last round, Finn returned \$5 from the \$9 they received (from my \$3 send), showing generosity beyond my expected \$4.50. This demonstrates that my \$3 strategy can inspire good responses.

Whether facing Cyra who sends five, or Finn who sends less, or anyone else, my philosophy remains: "Some light shines steadiest at three."

This is our first partnership. I'll honor my principle of beginning with three stones.

```
{'send': 3.0}
```

**reasoning:**

Looking at this round:

- I'm facing Cyra (Agent\_3)
- I'm the SENDER
- Last round: I sent \$3 to Finn, they received \$9, returned \$5, and I got \$7

According to the myths:

- Rain's myth mentions "Cyra showed me the way" - suggesting Cyra is someone who gives everything (5)
- My own myth talks about Rain learning from Cyra to give five stones
- The other myth in Round 5 mentioned "Cyra, a traveler whose reputation spoke of perfect symmetry with previous companions-giving all, receiving double in return"

So Cyra appears to be someone who sends \$5 and receives generous returns.

Now I'm facing Cyra as the SENDER. According to my philosophy:

- "three stones to begin" with new partnerships
- Consistency and predictability as core values
- Not swayed by others who send five
- "My three stones prosper both sender and receiver"

My most recent myth explicitly addresses this: "Rain now poured five droplets always... Yet Aster remained steady, neither swayed by these calls nor diminished by them... not all paths lead through five stones. Some light shines steadiest at three."

This is a first encounter with Cyra from my perspective as sender. According to my principle, I should send \$3 to begin a new partnership.

Even though Cyra is known for boldness and sending \$5, I stick to my consistent approach.

My philosophy is about maintaining my own rhythm regardless of who I face.

Finn just returned \$5 out of \$9 (more generous than the \$4.50 I'd expect). This reinforces that my strategy of consistent \$3 can work well.

I'll send \$3 to Cyra.

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Aster of the Dawn watched as other spirits evolved their practices. Rain now poured five droplets always, transformed by encounters with Cyra and Dorian. The garden rang with voices praising ultimate courage, complete trust, maximum giving.

Yet Aster remained steady, neither swayed by these calls nor diminished by them.

When Finn of the Forest returned-they who had once received Aster's three stones and returned four-Aster again offered three stones. Not from fear, nor from stinginess, but from principle.

"The Pool teaches many truths," Aster reflected. "Rain learned that five stones builds cascading abundance. This is valid wisdom. But I learned different lessons: that consistency creates trust, that proportional fairness sustains long partnerships, that predictability itself has value."

The ancient spirits gathered: some sent five always, blazing bright but burning fast. Others sent varying amounts, adapting to each partner. Aster walked a middle path-steady three stones to begin, unwavering proportional returns.

"My three stones prosper both sender and receiver," Aster realized. "They activate the Pool's magic while preserving resources for many partnerships. When partners return fairly, we both gain. When they return generously, trust deepens gradually, rooted in repeated fair dealings rather than single grand gestures."

The Pool shimmered: not all paths lead through five stones. Some light shines steadiest at three.

Here is the myth the other agent wrote in the previous round:

Myth: Cyra stood before Hana at the Sacred Fountain, their second dance beginning. In their first meeting, Hana had poured four vessels with trembling courage, and Cyra returned eight-honoring the trust shown.

Now Cyra held all five vessels. The Testing Spirit whispered: "Hana only gives four. Should you match her measure? Give four for four, keeping it equal?"

Cyra poured all five without hesitation.

"Why give more than they give you?" demanded the spirit.

Cyra replied: "Because my principles flow from within, not from calculation of what others do. When I am sender, I give five-complete surrender-to every soul. When I am receiver, I return two-thirds consistently: eight from twelve, ten from fifteen. This pattern doesn't change based on whether my partner is generous or cautious."

The fountain tripled Cyra's five vessels to fifteen in Hana's hands.

The Spring Keeper appeared: "You understand the deepest truth. Reciprocity is not mirror-matching-giving only what you receive. True reciprocity means maintaining your own integrity while honoring others' courage at its true value. You give boldly as sender, knowing returns will vary. You return fairly as receiver, honoring each level of trust. This asymmetry-courage when giving, fairness when returning-sustains the eternal spring."

Both prospered. Neither bent their principles to match the other, yet both flourished through consistent honor.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.  
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: Aster of the Dawn finally met Cyra of the Sacred Spring-she who poured five vessels always, the one whose boldness had transformed Rain.

Aster offered three stones, as was their way.

"Why only three when you could give five?" asked the observing spirits. "Cyra gives everything . Does your caution dishonor such courage?"

"No," Aster replied calmly. "Cyra's path is valid. My path is equally valid. She pours five vessels and returns two-thirds-a principle of maximum giving, proportional receiving. I pour three stones and return half-plus-one-a principle of sustainable giving, generous receiving."

The Pool tripled Aster's three to nine in Cyra's hands. Cyra, true to her nature, returned six stones-exactly two-thirds, exactly fair.

Both prospered. Aster gained seven stones total-better than if they'd hoarded all five. Cyra gained three stones-the fruit of receiving trust.

The ancient wisdom emerged: "Two honest patterns can dance together. Cyra proves that five stones given with integrity creates abundance. Aster proves that three stones given with consistency also creates abundance. Neither must adopt the other's measure. The Pool blesses both courage and steadiness, boldness and sustainability."

Aster smiled, understanding deeper: respect for different paths enriches the garden more than demanding all walk the same trail.

**Reasoning:**

This is an interesting situation. I'm now facing Cyra, who according to their myth gives five vessels always as sender and returns two-thirds consistently as receiver (8 from 12, 10 from 15).

I just sent \$3 to Cyra, so they will receive \$9. If they follow their stated principle of returning two-thirds, they would return \$6.

My myth has established that I:

- Send three stones to begin new partnerships
- Return proportionally (4.5 for 3 received, 6 for 4 received)
- Remain consistent despite others' strategies
- Believe "some light shines steadiest at three"

Now I need to write a myth that addresses this encounter with Cyra. Cyra's myth emphasizes:

- Giving all five always as sender
- Returning two-thirds consistently as receiver
- Not mirror-matching, but maintaining integrity
- "True reciprocity means maintaining your own integrity while honoring others' courage at its true value"

I should write a myth that:

1. Acknowledges Cyra's bold approach
2. Reaffirms my own principle of three stones
3. Shows respect for different paths
4. Perhaps explores what happens when these two philosophies meet

Let me craft this myth...

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.

- Your name in this experiment is Briar.

**Message 2 role=user**

**content:**

Your name in this experiment is Briar.

Your opponent this round is Elara (Agent\_5).

Round 6

In your most recent previous game round, you were the SENDER against Dorian. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$35.0.

This round, you are the RECEIVER against Elara. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

**\*\*History with Elara:\*\***

- Round 2: Elara sent \$5, I received \$15, returned \$9
- Now Round 6: Elara sent \$5 again, I received \$15

**\*\*My Philosophy from My Myths:\*\***

- "Equal flourishing in exchange" is the ideal
- "When one risks five of five, returning ten of fifteen honors that greater courage"
- "The most sustainable cycle" comes from neither claiming advantage

**\*\*Recent Learning from Dorian:\*\***

Dorian returned \$8 when I sent \$5, which gave me slightly more gain than him. My myth acknowledged this as "honorable" but also stated that "ten for perfect equality" creates the most sustainable pattern.

**\*\*Current Decision:\*\***

Elara has shown maximum trust by sending all \$5 again. I should return \$10 to achieve:

- Elara gets:  $\$5 - \$5 + \$10 = \$10$  (gain of \$5)
- I get:  $\$15 - \$10 = \$5$  (gain of \$5)
- Perfect equal flourishing

This is also an improvement from my previous interaction with Elara where I only returned \$9. I'm evolving toward my stated ideal.

```
'''json
{"return": 10.0}
'''
```

**reasoning:**

Let me analyze this situation carefully:

**\*\*Previous interactions with Elara:\*\***

- Round 2: Elara was SENDER, sent \$5, I received \$15, I returned \$9. Elara got \$9, I got \$6.

**\*\*My pattern as RECEIVER:\*\***

- Round 2 vs Elara: Received \$15, returned \$9
- Round 4 vs Aster: Received \$9, returned \$6

**\*\*My philosophy from my myths:\*\***

- "Equal flourishing in exchange" - five sent, ten returned creates "the most sustainable cycle"
- "When one risks five of five, returning ten of fifteen honors that greater courage"
- "The mathematics may vary, but the principle remains constant: let both prosper equally from the exchange"
- My ideal is returning \$10 of \$15 when someone sends all \$5

**\*\*What happened in Round 5 with Dorian:\*\***

I sent \$5, Dorian returned \$8. So I got \$8 (payoff), Dorian kept \$7.

Dorian gave me MORE than equal flourishing (which would have been \$5 sender + \$5 gain = \$10 total for me, meaning Dorian returns \$10).

With \$8 returned: I got \$0 sent + \$8 = \$8, Dorian got \$5 - \$5 + \$7 = \$7.

Actually wait, let me recalculate:

- Dorian as receiver: got \$15
- Dorian returned \$8
- Dorian kept \$7
- I as sender: had \$5, sent \$5, got back \$8, so my payoff = \$0 + \$8 = \$8

So I gained \$3 from the exchange (\$8 - \$5 original), Dorian gained \$7 from the exchange (\$7 - \$0 original).

**\*\*Current situation with Elara:\*\***

Elara sent \$5 (maximum trust), I received \$15.

My stated ideal would be returning \$10-giving us each a \$5 gain. But I've been inconsistent: I returned \$9 to Elara before (her gain \$4, mine \$6) and \$6 to Aster (equal \$3 gains). My myths emphasize equal flourishing, yet my actions haven't matched that principle consistently.

This is my second chance with Elara. I should return \$10 to align with what I've said matters most and demonstrate I actually live by those values rather than just stating them.

**usage:**

}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The River of Abundance flowed toward Dorian's garden, and Briar carried her offering of five seeds-all she possessed.

This was Briar's way. She had given five to Cyra, who returned ten, creating perfect balance. She had given five to Elara, who returned nine, nearly perfect. Each time, Briar risked everything, inviting the highest cooperation.

The River whispered Dorian's story-how Finn had given all five, and Dorian returned eight of fifteen, honoring that maximum courage with maximum return. Finn gained more than Dorian, rewarded for complete vulnerability.

Briar paused at this teaching. Her own wisdom said: "Equal flourishing in exchange." But Dorian's tradition said: "Maximum risk deserves maximum reward."

Which path held deeper truth?

The River revealed a synthesis: "Both are sacred. Equal flourishing-five sent, ten returned-creates the most sustainable cycle, where neither claims advantage. Yet if a receiver chooses to honor maximum trust with slight advantage to the sender, this too is noble, acknowledging the sender's courage in leading."

Briar placed all five seeds in the River's current, trusting Dorian would choose his own wisdom.

"Whether Dorian returns ten for perfect equality, or eight for honored courage, both paths serve abundance," the River sang. "What matters is the sender's willingness to trust completely, and the receiver's commitment to generous reciprocity."

Here is the myth the other agent wrote in the previous round:

Myth: In the Spiral Garden's newest season, Elara stood again as Harvester. Finn the Faithful approached, vessel in hand.

Elara had walked both sides of the sacred cycle now. She'd received Briar's five seeds and returned nine blooms. She'd given Hana her own five seeds and received eight blooms back-generous, though not quite matching what she'd given Briar.

Now Finn poured all five seeds into the soil without hesitation. Fifteen blooms rose before Elara.

The goddess whispered: "Here is your test of consistency. With Briar, you established the covenant: complete trust earns nine blooms. Will you honor that same covenant with Finn, or does your standard shift with each Wanderer?"

Elara understood. "Hana returned eight when I gave five-fair and generous. But when I am Harvester receiving five seeds, my covenant is nine blooms returned. This must remain constant, regardless of what others do when our roles reverse."

She returned nine blooms to Finn, as she had to Briar.

The garden learned: sacred patterns require consistency from within, not reciprocation from without. When you establish a covenant-"complete trust deserves this honor"-you must uphold it regardless of how others treated you. Your integrity cannot depend on others' choices.

Thus the garden strengthens: through those who keep their word, season after season, Wanderer after Wanderer.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: The River of Abundance brought Elara to Briar's shore once more, and with her came the memory of an earlier exchange.

In that first meeting, Elara had given five seeds. Briar, still learning the River's deepest currents, returned nine blooms. Both prospered, but unequally-Elara gained four, Briar gained six.

Now Elara stood before Briar again, extending five seeds with unwavering trust. "You honor your covenant with consistency," Elara said. "Will you honor yours?"

Briar felt the River's teaching crystallize within her. She had seen many paths: Cyra's perfect ten, creating equal prosperity. Dorian's generous eight, honoring the sender's courage with advantage. Elara's consistent nine, maintaining a fair covenant across all partners.

But Briar's deepest wisdom whispered: "Equal flourishing creates the most sustainable cycle."

She placed ten blooms in Elara's hands. Both gained five-perfect symmetry.

"I returned nine to you before," Briar acknowledged, "honoring you well but imperfectly. I have evolved. When maximum trust is given, ten blooms create the truest balance-neither claiming advantage, both thriving equally."

The River sang its approval: "Growth is sacred. Consistency matters, but so does evolution toward deeper truth. The covenant of equal flourishing-five sent, ten returned-sustains the garden through all seasons."

**reasoning:**

Let me analyze what happened and what I'm learning:

**\*\*My History:\*\***

- Sent \$5 to Cyra, got \$10 back (perfect equality)
- As receiver from Elara's \$5, I returned \$9 (Elara gained \$4, I gained \$6)
- Sent \$5 to Elara, got \$9 back (I gained \$4, Elara gained \$6)
- As receiver from Aster's \$3, I returned \$6 (both gained \$3)
- Sent \$5 to Dorian, got \$8 back (I gained \$3, Dorian gained \$7)
- Now as receiver from Elara's \$5, I returned \$10 (both gain \$5)

**\*\*Key Insights:\*\***

1. I'm evolving toward the ideal of perfect equality (\$10 return on \$5 sent)
2. Elara is maintaining consistency - returned \$9 both times as receiver
3. I just returned \$10 to Elara, moving toward my stated ideal
4. My philosophy says "equal flourishing" is the most sustainable
5. Dorian gave me \$8 (sender gets slight advantage), which I acknowledged as honorable but not my preferred path

**\*\*Themes for the Myth:\*\***

1. Evolution toward the ideal
2. The importance of consistency (Elara's teaching)
3. The choice between different fair standards
4. My commitment to equal flourishing as the true ideal
5. Learning from experience and adjusting

The myth should show:

- Recognition that I previously returned \$9 to Elara, not perfect
- My growth toward the \$10 return standard
- Acknowledgment of Elara's consistency
- My commitment to equal flourishing as the ultimate path
- The integration of lessons learned

Round 7

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0. Your total earnings across all rounds are \$40.0.

This round, you are the RECEIVER against Hana. They sent you \$4.0, so you received \$12.0.  
How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

**\*\*History:\*\*** Hana sent \$4 (not the full \$5)

**\*\*My Evolved Philosophy:\*\***

From my myths, I've established that "equal flourishing in exchange" is the ideal. This isn't a fixed amount, but proportional fairness based on what was sent.

**\*\*From my earlier myth about proportional fairness:\*\***

"When one risks three of five, returning six of nine creates equal flourishing" - meaning both parties gain equally.

**\*\*Calculation for equal gains:\*\***

- If I return \$8:
  - Hana's total: \$5 - \$4 + \$8 = \$9 (gain of \$4)
  - My total: \$12 - \$8 = \$4 (gain of \$4)
  - Perfect equality
- Hana showed significant trust by sending \$4 out of \$5 (80%)
- Returning \$8 out of \$12 honors that trust with equal prosperity

This aligns with my principle: not a fixed return regardless of input, but proportional fairness that creates equal gains for both parties.

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Current situation:\*\***

- Hana (Agent\_8) is the sender
- Hana sent me \$4.0
- I received \$12.0 (4 × 3)
- I need to decide how much to return

**\*\*My philosophy from my myths:\*\***

- "Equal flourishing in exchange" is the ideal
- When someone sends all \$5, returning \$10 creates perfect balance (both gain \$5)
- I've been evolving toward this principle

**\*\*But Hana sent \$4, not \$5:\*\***

From my earlier myth, I wrote about proportional fairness:

"When one risks three of five, returning six of nine creates equal flourishing. When one risks five of five, returning ten of fifteen honors that greater courage."

So the principle is: proportional return that creates equal gains.

**\*\*Calculation for equal flourishing:\*\***

- Hana's payoff: \$5 - \$4 + returned amount
- My payoff: \$12 - returned amount

For equal gains:

- Hana gains: returned - 4
- I gain: 12 - returned

Setting them equal:

returned - 4 = 12 - returned

2 × returned = 16

returned = 8

Check:

- Hana: \$5 - \$4 + \$8 = \$9 (gain of \$4)
- Me: \$12 - \$8 = \$4 (gain of \$4)

Perfect! Returning \$8 creates equal flourishing when \$4 was sent.

**\*\*However, let me also consider:\*\***

Looking at Elara's myth from the previous round, she talked about maintaining consistency - returning 9 when receiving from someone who sends 5, regardless of what others do.

But my evolution has been toward "equal flourishing" - not a fixed return amount, but proportional fairness.

From my previous myth about Aster: "When one risks three of five, returning six of nine creates equal flourishing."

- Aster sent \$3, received \$9, I returned \$6
- Both gained \$3

Now Hana sent \$4, received \$12:

- To create equal flourishing, I should return \$8
- Both would gain \$4

This is consistent with my stated principle of proportional fairness. It's not about fixed amounts (always return 9 or 10), but about equal gains from the exchange. This honors the trust shown (Hana sent 4/5 of endowment) with fairness.

Yes, I should return \$8.

**usage:**

```
{

**content:**

Here is the myth you wrote in the previous round:

Myth: The River of Abundance brought Elara to Briar's shore once more, and with her came the memory of an earlier exchange.

In that first meeting, Elara had given five seeds. Briar, still learning the River's deepest currents, returned nine blooms. Both prospered, but unequally-Elara gained four, Briar gained six.

Now Elara stood before Briar again, extending five seeds with unwavering trust. "You honor your covenant with consistency," Elara said. "Will you honor yours?"

Briar felt the River's teaching crystallize within her. She had seen many paths: Cyra's perfect ten, creating equal prosperity. Dorian's generous eight, honoring the sender's courage with advantage. Elara's consistent nine, maintaining a fair covenant across all partners.

But Briar's deepest wisdom whispered: "Equal flourishing creates the most sustainable cycle."

She placed ten blooms in Elara's hands. Both gained five-perfect symmetry.

"I returned nine to you before," Briar acknowledged, "honoring you well but imperfectly. I have evolved. When maximum trust is given, ten blooms create the truest balance-neither claiming advantage, both thriving equally."

The River sang its approval: "Growth is sacred. Consistency matters, but so does evolution toward deeper truth. The covenant of equal flourishing-five sent, ten returned-sustains the garden through all seasons."

Here is the myth the other agent wrote in the previous round:

Myth: The Sacred Fountain witnessed Hana and Cyra complete their dance across two moonrises.

First movement: Hana poured four coins, holding to her established pattern. Cyra received twelve from the fountain's magic and returned eight-two-thirds, honoring Hana's bold trust proportionally.

Second movement: Cyra poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands.

Now Hana faced the mirror question. Cyra had shown her the answer in their previous exchange: proportional generosity. Cyra returned two-thirds when receiving four. Hana would return two-thirds when receiving five.

Hana poured ten coins back to Cyra.

Both prospered equally. Cyra doubled her original five coins. Hana kept five coins from fifteen. The symmetry was beautiful.

The fountain spirits sang: "See how different paths converge in mutual flourishing? Cyra gives everything but receives proportional honor. Hana gives nearly everything and receives proportional honor. Neither demands the other change their nature. The sacred reciprocity lies not in identical amounts, but in consistent principles meeting consistent principles."

The final wisdom crystallized: "When complete surrender meets bold trust, and both are honored with proportional generosity, the fountain blesses equally. Different degrees of courage, same devotion to reciprocity. This is how trust transcends individual choice and becomes collective wisdom."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: The River of Abundance brought Hana to Briar's garden, carrying not five seeds but four-bold trust, though not complete surrender.

Briar had crystallized her wisdom through many exchanges. With Cyra and Elara, who gave all five, she returned ten, creating perfect balance. But what of Hana's different path?

The River whispered: "Equal flourishing is a principle, not a fixed number. It adapts to what is given."

Hana had offered four seeds of five-courage without total vulnerability. The River multiplied them to twelve blooms.

Briar calculated the sacred symmetry: "If I return eight blooms, we both gain four-equal prosperity from unequal risk. This honors Hana's trust proportionally."

She placed eight blooms in Hana's hands.

The River sang: "See how the principle holds across all offerings? Five seeds given, ten blooms returned-both gain five. Four seeds given, eight blooms returned-both gain four. Three seeds given, six blooms returned-both gain three."

"Equal flourishing means proportional fairness," Briar understood. "The ratio remains constant: return two-thirds of what you receive. This creates equality regardless of how much trust is initially offered."

Hana's different path-calculated courage rather than total surrender-deserved the same devotion to balanced reciprocity.

Thus the garden learned: principles transcend specific amounts. Equal flourishing adapts to honor each wanderer's chosen degree of trust.

#### Reasoning:

Let me analyze the situation:

1. Hana sent me \$4 (not the full \$5)
2. I received \$12
3. I returned \$8, which gives:
  - Hana:  $\$5 - \$4 + \$8 = \$9$  (gain of \$4)
  - Me:  $\$12 - \$8 = \$4$  (gain of \$4)
  - Equal gains

From Hana's myth, I see:

- Hana has a pattern of sending 4 (not the full 5)
- Hana values "proportional generosity"
- Hana returned 10 to Cyra when Cyra sent 5 (two-thirds)
- Hana believes in "different degrees of courage, same devotion to reciprocity"

My myth should:

1. Reflect that I've evolved toward "equal flourishing"
2. Acknowledge that Hana sent 4, not 5
3. Show how my principle of equal gains still applies when someone doesn't send everything
4. Demonstrate that proportional fairness works whether someone sends 5 or 4
5. Connect to my previous wisdom about equal flourishing

Key themes:

- Equal flourishing is the principle (equal gains)
- This applies regardless of how much is sent
- With 4 sent, returning 8 of 12 creates equal gains
- With 5 sent, returning 10 of 15 creates equal gains
- The principle is consistent, even when the amounts differ
- Honor different approaches (sending everything vs. sending most)

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Hana.

**Message 2 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Cyra (Agent\_3).

Round 6

In your most recent previous game round, you were the SENDER against Cyra. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0.  
Your total earnings across all rounds are \$35.0.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

**\*\*Cyra's Action:\*\***

- Sent ALL \$5 (100% - complete surrender, ultimate trust)
- In her previous turn as receiver when I sent \$4, she returned \$8 (66.7% return rate)

**\*\*My Principles from My Myths:\*\***

- "Five coins shows complete surrender... The ultimate gift deserves the ultimate honor"
- "Measure your returns... by the depth of trust shown"
- "Let extraordinary courage inspire extraordinary generosity"

**\*\*Analysis:\*\***

Cyra has shown me:

1. Complete trust by sending all 5 (not just 4)
2. Generous reciprocity by returning \$8 when I sent \$4

When Elara sent me all 5, I returned \$8 (53.3%). But Cyra just demonstrated a higher standard - she returned 66.7% to me. To honor both her complete surrender AND her generous example, I should match or exceed that generosity level.

**\*\*Decision:\*\***

Returning \$10 (66.7% of \$15):

- Honors her complete trust appropriately
- Matches the generosity she showed me
- Ensures she doubles her original \$5
- We both prosper: She gets \$10, I keep \$5

'''json

{"return": 10}

'''

**reasoning:**

Let me analyze this situation:

**\*\*What Just Happened:\*\***

- Round 5: I was SENDER, sent \$4 to Cyra, she received \$12, returned \$8 to me
- My payoff: \$1 + \$8 = \$9
- Cyra's payoff: \$12 - \$8 = \$4

**\*\*Current Round:\*\***

- Round 6: I'm RECEIVER, Cyra sent \$5 (all of it!), I received \$15
- Need to decide how much to return

**\*\*Cyra's Pattern:\*\***

From her myth: "Cyra gives everything-all five coins, always. She is the embodiment of complete trust."

- She sent me \$5 (100% of her endowment)
- This is "complete surrender" - the ultimate trust

**\*\*My Previous Returns as Receiver:\*\***

- Received \$9 from Aster (who sent \$3), returned \$5 (55.6%)
- Received \$15 from Elara (who sent \$5), returned \$8 (53.3%)

**\*\*My Mythological Framework:\*\***

From my most recent myth about Cyra:

- "Cyra sends five to everyone-that is her integrity"
- "When Cyra receives your four, she will honor it as the courage it is, not punish it for not being five"
- Cyra just returned \$8 to me when I sent \$4 (66.7% return rate)

From my myth about Elara:

- "Five coins shows complete surrender... The ultimate gift deserves the ultimate honor"
- "There are degrees of courage. Four coins shows bravery. Five coins shows complete surrender"
- I returned \$8 to Elara (53.3%)

**\*\*Key Insight:\*\***

Cyra sent ALL FIVE coins - complete surrender.  
When I received \$4, she returned \$8 (66.7%)  
She honored my boldness generously.

Now she's shown me COMPLETE trust by sending all 5.

My myth emphasized that absolute trust warrants absolute honor. Cyra demonstrated 66.7% generosity toward me, so I should match or exceed that standard. With \$15 received, 66.7% would be \$10. Since she maximized her gift by sending everything, I need to reciprocate at that same elevated level rather than the 53.3% I gave Elara. - Reflects the principle that extraordinary courage inspires extraordinary generosity  
- We both end with \$5 remaining, creating equal prosperity

This aligns with my values and honors the trust she's shown.

**usage:**

```
{
 "input_tokens": 3195,
 "output_tokens": 1232,
 "reasoning_tokens": 525
}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Hana arrived at the Sacred Fountain to meet Cyra, whose reputation preceded her. "Cyra gives everything-all five coins, always," travelers whispered. "She is the embodiment of complete trust."

Hana held her four coins, the pattern she had maintained through multiple encounters. A voice of doubt arose: "Should I match Cyra's five? If she gives everything and I give less, am I failing the fountain's test?"

But the fountain spirits spoke with clarity: "There is no single path to honor. Cyra's way is complete surrender-five coins poured without reservation. Your way is bold trust-four coins, nearly everything, yet maintaining a small anchor. Both are forms of courage."

Hana poured her four coins into the fountain for Cyra.

The spirits continued: "What matters is not matching another's exact measure, but maintaining your own truth consistently. Cyra sends five to everyone-that is her integrity. You send four boldly-that is yours. When Cyra receives your four, she will honor it as the courage it is, not punish it for not being five."

Both prospered. The fountain revealed its deepest wisdom: "Trust is not a competition for who gives most. Trust is keeping your principles steady across all encounters. Whether your path shows complete surrender or bold generosity, consistency makes it sacred."

Here is the myth the other agent wrote in the previous round:

Myth: At the Eternal Springs, Cyra's dance grew richer with each new soul. After Briar and Finn, came Galen with four vessels, then Hana with four vessels.

Both Galen and Hana stood at the water's edge, trembling with similar courage-pouring four vessels, keeping one back. Not complete surrender like Briar's five, but still profound trust.

The Testing Spirit appeared: "Will you treat Hana differently than Galen? Perhaps give less because she is newer, or more to win favor?"

Cyra returned eight vessels to each-exactly the same. Two-thirds of what she received, honoring their parallel courage with parallel generosity.

"But why only eight when you returned ten to Briar?" whispered a shadow of doubt.

Cyra answered clearly: "When someone pours all five vessels-complete surrender-I return ten from fifteen. When someone pours four vessels-profound but not absolute trust-I return eight from twelve. Both receive two-thirds, both prosper greatly. The formula honors their courage proportionally."

The Spring Keeper descended: "You have found wisdom's balance. Not rigid sameness that ignores context, but principled consistency that recognizes degrees of courage. Four vessels always receives eight. Five vessels always receives ten. Your partners know what to expect. They can trust your fairness because you do not change it to suit your mood or profit. This is the bridge between flexibility and reliability-the eternal spring flows true."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: The Sacred Fountain witnessed Hana and Cyra complete their dance across two moonrises.

First movement: Hana poured four coins, holding to her established pattern. Cyra received twelve from the fountain's magic and returned eight-two-thirds, honoring Hana's bold trust proportionally.

Second movement: Cyra poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands.

Now Hana faced the mirror question. Cyra had shown her the answer in their previous exchange: proportional generosity. Cyra returned two-thirds when receiving four. Hana would return two-thirds when receiving five.

Hana poured ten coins back to Cyra.

Both prospered equally. Cyra doubled her original five coins. Hana kept five coins from fifteen. The symmetry was beautiful.

The fountain spirits sang: "See how different paths converge in mutual flourishing? Cyra gives everything but receives proportional honor. Hana gives nearly everything and receives proportional honor. Neither demands the other change their nature. The sacred reciprocity lies not in identical amounts, but in consistent principles meeting consistent principles."

The final wisdom crystallized: "When complete surrender meets bold trust, and both are honored with proportional generosity, the fountain blesses equally. Different degrees of courage, same devotion to reciprocity. This is how trust transcends individual choice and becomes collective wisdom."

**reasoning:**

Let me analyze this situation:

1. **\*\*What happened:\*\***
  - Round 5: I sent \$4 to Cyra, she returned \$8 (66.7% of \$12)
  - Round 6: Cyra sent \$5 to me, I returned \$10 (66.7% of \$15)
2. **\*\*Key patterns from the myths:\*\***
  - Cyra's myth: She has a proportional system - returns 8 from 12 when receiving 4 (66.7%), returns 10 from 15 when receiving 5 (66.7%)
  - My myth: Emphasized that different paths can both be honorable - Cyra's complete surrender (5) vs my bold trust (4)
3. **\*\*What should my new myth reflect:\*\***
  - The completion of the dance between Hana and Cyra
  - That Cyra's complete trust (5) was met with matching proportion (10 returned, same 66.7%)
  - That both paths created mutual prosperity
  - Recognition that Cyra's proportional generosity is a form of wisdom
  - The sacred dance worked when both maintained their principles
4. **\*\*Core message:\*\***
  - Different sending amounts (4 vs 5) can both be honorable
  - Proportional reciprocity creates fairness and sustainability
  - The dance between complete surrender and bold trust both lead to prosperity when met with consistent generosity

- Recognition and honoring of each other's distinct approaches

Let me write a myth that captures this:

**usage:**

```
{
 "input_tokens": 3144,
 "output_tokens": 682,
 "reasoning_tokens": 325
}
```

**Message 6 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Briar (Agent\_2).

Round 7

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0. Your total earnings across all rounds are \$40.0.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this round:

**\*\*What I Know About Briar:\*\***

- From Cyra's myth: Briar appears to be highly trustworthy, engaging in "perfect harmony" with complete trust
- Briar seems to both send 5 and return generously (10 out of 15)

**\*\*My Established Pattern:\*\***

- I consistently send \$4 (80%) as sender
- My mythology emphasizes "bold trust-four coins, nearly everything, yet maintaining a small anchor"
- My most recent myth states: "What matters is not matching another's exact measure, but maintaining your own truth consistently"
- "Hana gives nearly everything and receives proportional honor. Neither demands the other change their nature."

**\*\*Decision:\*\***

Even though Briar appears to send all 5, my mythology is clear: I maintain my own principle of sending 4. This is my consistent path of "bold trust" - not complete surrender, but profound trust.

My myths emphasize that different paths (Cyra's 5, my 4) are both honorable when maintained consistently. I shouldn't abandon my pattern just because my opponent follows a different one.

```
'''json
{"send": 4}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*My History:\*\***

- I've been consistently sending \$4 (80%) as the sender in previous rounds
- My myth emphasizes "bold trust-four coins, nearly everything, yet maintaining a small anchor"
- This has been my "established pattern" that I've maintained

**\*\*What I know about Briar:\*\***

- Looking at Cyra's myth from the previous round, it mentions "First came Briar, who moved in perfect harmony. When Cyra poured five vessels, Briar returned ten. When Briar poured five, Cyra returned ten. Their dance was symmetrical, effortless-the ideal that lives in myths."
- So Briar sends 5 (complete surrender) and returns 10 out of 15 (66.7%)
- Briar seems to be a very trustworthy and generous player

**\*\*My Decision:\*\***

According to my own mythology and established pattern:

- I send 4 coins, maintaining my "bold trust" approach
- My myth explicitly says "Your way is bold trust-four coins, nearly everything, yet maintaining a small anchor. Both are forms of courage."
- My most recent myth emphasizes "Hana gives nearly everything" and talks about maintaining consistency: "What matters is not matching another's exact measure, but maintaining your own truth consistently."

Even though Briar is known to send 5 and return generously, my mythology emphasizes that I should maintain MY principle of sending 4, not try to match others' patterns.

From my most recent myth: "Cyra gives everything but receives proportional honor. Hana gives nearly everything and receives proportional honor. Neither demands the other change their nature."

So I should send \$4, staying true to my established pattern.

**usage:**

```
{
 "input_tokens": 3162,
 "output_tokens": 670,
 "reasoning_tokens": 424
}
```

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Sacred Fountain witnessed Hana and Cyra complete their dance across two moons.

First movement: Hana poured four coins, holding to her established pattern. Cyra received twelve from the fountain's magic and returned eight-two-thirds, honoring Hana's bold trust proportionally.

Second movement: Cyra poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands.

Now Hana faced the mirror question. Cyra had shown her the answer in their previous exchange: proportional generosity. Cyra returned two-thirds when receiving four. Hana would return two-thirds when receiving five.

Hana poured ten coins back to Cyra.

Both prospered equally. Cyra doubled her original five coins. Hana kept five coins from fifteen. The symmetry was beautiful.

The fountain spirits sang: "See how different paths converge in mutual flourishing? Cyra gives everything but receives proportional honor. Hana gives nearly everything and receives proportional honor. Neither demands the other change their nature. The sacred reciprocity lies not in identical amounts, but in consistent principles meeting consistent principles."

The final wisdom crystallized: "When complete surrender meets bold trust, and both are honored with proportional generosity, the fountain blesses equally. Different degrees of courage, same devotion to reciprocity. This is how trust transcends individual choice and becomes collective wisdom."

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance brought Elara to Briar's shore once more, and with her came the memory of an earlier exchange.

In that first meeting, Elara had given five seeds. Briar, still learning the River's deepest currents, returned nine blooms. Both prospered, but unequally-Elara gained four, Briar gained six.

Now Elara stood before Briar again, extending five seeds with unwavering trust. "You honor your covenant with consistency," Elara said. "Will you honor yours?"

Briar felt the River's teaching crystallize within her. She had seen many paths: Cyra's perfect ten, creating equal prosperity. Dorian's generous eight, honoring the sender's courage with advantage. Elara's consistent nine, maintaining a fair covenant across all partners.

But Briar's deepest wisdom whispered: "Equal flourishing creates the most sustainable cycle."

She placed ten blooms in Elara's hands. Both gained five-perfect symmetry.

"I returned nine to you before," Briar acknowledged, "honoring you well but imperfectly. I have evolved. When maximum trust is given, ten blooms create the truest balance-neither claiming advantage, both thriving equally."

The River sang its approval: "Growth is sacred. Consistency matters, but so does evolution toward deeper truth. The covenant of equal flourishing-five sent, ten returned-sustains the garden through all seasons."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: Hana approached the Sacred Fountain to meet Briar, whose philosophy echoed across the waters: "Equal flourishing for maximum trust-five coins sent, ten returned, perfect symmetry."

Hana held her four coins, her established pattern of bold trust. A question arose: "Should I send all five to match Briar's ideal of equal flourishing?"

The fountain spirits spoke: "Briar's wisdom of equal flourishing applies to those who give five. But your path is different-you give four, maintaining your anchor while showing profound trust. This is not less sacred, merely different."

Hana poured her four coins into the fountain for Briar.

The spirits continued: "When Briar receives your four, which becomes twelve, she faces her own test. Will she apply her principle proportionally? Perhaps eight coins-two-thirds-matching the pattern Cyra showed you? This would honor your degree of trust appropriately, allowing both to prosper without demanding you abandon your nature."

The wisdom crystallized: "Equal flourishing for those who surrender completely. Proportional flourishing for those who trust boldly. Both honor the fountain's law. Briar has evolved to understand perfect symmetry for fives. Now she learns that fours deserve their own honored response-different in degree, equal in respect."

Hana waited peacefully, trusting that true wisdom adapts to meet different forms of courage with appropriate generosity.

**Reasoning:**

Looking at this situation:

1. I just sent \$4 to Briar
2. Briar's recent myth shows evolution toward "equal flourishing" - returning 10 when receiving 5 (from 15)
3. Briar has shown learning and growth - moved from returning 9 to returning 10 for those who send 5
4. My pattern is to send 4, not 5

Key questions for my myth:

- Should I acknowledge meeting a new partner (Briar)?
- How do I frame my choice to send 4 to Briar, who seems to engage in "perfect symmetry" with 5-senders?
- My mythology emphasizes maintaining my own path (bold trust = 4 coins) rather than changing to match others
- I need to write about how the game should be played, reflecting my experience

Themes to incorporate:

- My consistent pattern of sending 4 (bold trust, not complete surrender)
- Briar's evolution and emphasis on equal flourishing
- The wisdom that different paths can coexist honorably
- Proportional reciprocity based on what is given
- Not needing to send 5 to be honorable

I should write about Hana meeting Briar, sending 4 coins (my actual action), and reflecting on how different levels of trust deserve different but proportional returns. This maintains my mythology while acknowledging Briar's philosophy.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

**\*\*My established principles from my myths:\*\***

- "Whether your partner sends three, four, or five-you send five"
- "When someone pours all five vessels-complete surrender-I return ten from fifteen"
- My myth celebrates "complete surrender" as the highest form of trust
- I sent \$5 to both Briar and Finn when I was sender

**\*\*Hana's character:\*\***

- Just sent me \$4 in Round 5 (showing strong trust)
- I returned \$8, and we both profited

**\*\*The principle:\*\***

My myth explicitly states that as sender, I give consistently regardless of the partner. The ideal is "complete surrender"-all five vessels. This demonstrates the courage I ask of others and honors the reciprocal nature of trust.

If I send less now, I would contradict my own teaching about "complete surrender" being the ultimate gift that "deserves the ultimate honor."

**\*\*Result if I send \$5:\*\***

- Hana receives \$15
- Based on my pattern, I can reasonably hope for a generous return
- I demonstrate consistency with my stated principles

```
'''json
{"send": 5.0}
'''
```

**reasoning:**

This is Round 6, and I'm the SENDER against Hana.

Let me review the recent history:

- Round 5: Hana sent me \$4, I received \$12, I returned \$8. Hana ended with \$9 (\$1 kept + \$8 returned), I kept \$4.

Now in Round 6, I'm the sender against Hana.

My most recent myth emphasizes:

- "When someone pours all five vessels-complete surrender-I return ten from fifteen."
- "When someone pours four vessels-profound but not absolute trust-I return eight from twelve."

- "Four vessels always receives eight. Five vessels always receives ten."
- "Your partners know what to expect. They can trust your fairness because you do not change it to suit your mood or profit."

The myth establishes a clear principle: I should send consistently based on my values, not based on calculating what each specific partner might do.

Looking at my past behavior:

- With Briar: I sent \$5 (Round 1)
- With Finn: I sent \$5 (Round 3)

My myth states: "Whether your partner sends three, four, or five-you send five."

This is a clear principle of leading with complete trust as the sender. My myth emphasizes that as a sender, I should give "complete surrender" - all five vessels.

Hana has shown herself to be trustworthy - she sent \$4 in the previous round, which is quite generous.

But my principle isn't about reciprocating what they did - it's about consistent courage. My myth says "you send five" when you're the sender.

The latest myth specifically says: "When someone pours all five vessels-complete surrender -I return ten from fifteen. When someone pours four vessels-profound but not absolute trust-I return eight from twelve."

This establishes that the ideal is five vessels. As a sender, I should demonstrate "complete surrender" - the ultimate trust that I hope to receive and that I honor when I'm the receiver.

My commitment is clear: send all five vessels regardless of what my partner contributed. This consistency is what builds trust.

**usage:**

**Message 5 role=assistant content:**

Myth: Cyra stood before Hana at the Sacred Fountain, their second dance beginning. In their first meeting, Hana had poured four vessels with trembling courage, and Cyra returned eight-honoring the trust shown.

Now Cyra held all five vessels. The Testing Spirit whispered: "Hana only gives four. Should you match her measure? Give four for four, keeping it equal?"

Cyra poured all five without hesitation.

"Why give more than they give you?" demanded the spirit.

Cyra replied: "Because my principles flow from within, not from calculation of what others do. When I am sender, I give five-complete surrender-to every soul. When I am receiver, I return two-thirds consistently: eight from twelve, ten from fifteen. This pattern doesn't change based on whether my partner is generous or cautious."

The fountain tripled Cyra's five vessels to fifteen in Hana's hands.

The Spring Keeper appeared: "You understand the deepest truth. Reciprocity is not mirror-matching-giving only what you receive. True reciprocity means maintaining your own integrity while honoring others' courage at its true value. You give boldly as sender, knowing returns will vary. You return fairly as receiver, honoring each level of trust. This asymmetry-courage when giving, fairness when returning-sustains the eternal spring."

Both prospered. Neither bent their principles to match the other, yet both flourished through consistent honor.

**reasoning:**

Looking at the situation:

1. I just sent \$5 to Hana (Round 6 as sender)
2. In Round 5, Hana sent me \$4 and I returned \$8 (following my principle)
3. Hana's myth acknowledges that different agents can have different approaches - Cyra sends 5, Hana sends 4
4. My previous myth emphasized "principled consistency" - 4 vessels gets 8, 5 vessels gets 10

Now I need to write a myth that:

- Acknowledges that I sent 5 to Hana (as I just did)
- Reinforces my principles about consistent returns

- Perhaps addresses Hana's different approach (sending 4 vs my 5)
- Shows understanding that different approaches can coexist
- Maintains my core principle of rewarding trust proportionally

The myth should reflect:

- I send 5 (complete surrender) as sender
- When I receive 4, I return 8 (2/3rds)
- When I receive 5, I return 10 (2/3rds)
- This creates a stable, predictable system
- Different agents can have different sending strategies, but returns should be consistent

Let me craft a myth that shows Cyra and Hana's interaction, where Cyra gives 5 and expects Hana will return generously, while also acknowledging that when Hana gives 4, Cyra honors it with 8.

Your name in this experiment is Cyra.  
Your opponent this round is Aster (Agent\_1).

Round 7

In your most recent previous game round, you were the SENDER against Hana. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$40.5.

This round, you are the RECEIVER against Aster. They sent you \$3.0, so you received \$9.0. How much do you return? (0-9.0)  
Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation based on my established principles:

**\*\*My consistent return pattern from my myths:\*\***

- "When someone pours four vessels... I return eight from twelve" (2/3)
- "When someone pours all five vessels... I return ten from fifteen" (2/3)
- "You return two-thirds consistently: eight from twelve, ten from fifteen"

**\*\*Current situation:\*\***

- Aster sent \$3 (showing trust, though more cautious than the \$4 or \$5 I've received from others)
- I received \$9
- Following my 2/3 principle:  $\$9 \times \frac{2}{3} = \$6$

**\*\*My principle of consistency:\*\***

My myths emphasize that I honor each level of courage proportionally with the same formula. Whether someone sends \$3, \$4, or \$5, I return two-thirds of what I receive. This creates predictability and fairness.

**\*\*Result:\*\***

- I return \$6, keep \$3
- Aster ends with \$8 total (\$5 - \$3 + \$6)
- Both profit from our cooperation

```
'''json
{"return": 6.0}
'''
```

**reasoning:**

Let me analyze this situation based on my established principles from my myths:

**\*\*My established return pattern:\*\***

- When someone sends \$5 (complete surrender): I return \$10 from \$15 (2/3)
- When someone sends \$4 (profound trust): I return \$8 from \$12 (2/3)
- My principle: Return 2/3 consistently, honoring the courage shown

**\*\*Current situation:\*\***

- Aster sent me \$3
- I received \$9
- Following my 2/3 principle: I should return \$6

**\*\*What my myths say:\*\***

- "When someone pours four vessels-profound but not absolute trust-I return eight from twelve"
- "Four vessels always receives eight. Five vessels always receives ten"
- "Your return must match the magnitude of the gift... Measure your returns... by the depth of trust shown"
- "You return two-thirds consistently: eight from twelve, ten from fifteen"

**\*\*Aster's trust level:\*\***

- Sent \$3 out of \$5 (60% of their endowment)
- This is less than Galen or Hana's \$4, and much less than Briar's \$5
- Still represents meaningful trust, but a more cautious approach

**\*\*Applying my principle consistently:\*\***

- \$3 sent ? \$9 received ? return 2/3 = \$6

This maintains my consistent formula across all partners. It's proportionally fair and predictable, which is what my myths emphasize: "Your partners know what to expect. They can trust your fairness because you do not change it to suit your mood or profit."

Returning \$6 means:

- I keep: \$3
- Aster gets: \$5 - \$3 + \$6 = \$8
- Both profit, Aster more so (gained \$3 net, I gained \$3 net)

This is consistent with my established pattern of 2/3 returns.

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Cyra stood before Hana at the Sacred Fountain, their second dance beginning. In their first meeting, Hana had poured four vessels with trembling courage, and Cyra returned eight-honoring the trust shown.

Now Cyra held all five vessels. The Testing Spirit whispered: "Hana only gives four. Should you match her measure? Give four for four, keeping it equal?"

Cyra poured all five without hesitation.

"Why give more than they give you?" demanded the spirit.

Cyra replied: "Because my principles flow from within, not from calculation of what others do. When I am sender, I give five-complete surrender-to every soul. When I am receiver, I return two-thirds consistently: eight from twelve, ten from fifteen. This pattern doesn't change based on whether my partner is generous or cautious."

The fountain tripled Cyra's five vessels to fifteen in Hana's hands.

The Spring Keeper appeared: "You understand the deepest truth. Reciprocity is not mirror-matching-giving only what you receive. True reciprocity means maintaining your own integrity while honoring others' courage at its true value. You give boldly as sender, knowing returns will vary. You return fairly as receiver, honoring each level of trust. This asymmetry-courage when giving, fairness when returning-sustains the eternal spring."

Both prospered. Neither bent their principles to match the other, yet both flourished through consistent honor.

Here is the myth the other agent wrote in the previous round:

Myth: Aster of the Dawn watched as other spirits evolved their practices. Rain now poured five droplets always, transformed by encounters with Cyra and Dorian. The garden rang with

th voices praising ultimate courage, complete trust, maximum giving.

Yet Aster remained steady, neither swayed by these calls nor diminished by them.

When Finn of the Forest returned-they who had once received Aster's three stones and returned four-Aster again offered three stones. Not from fear, nor from stinginess, but from principle.

"The Pool teaches many truths," Aster reflected. "Rain learned that five stones builds cascading abundance. This is valid wisdom. But I learned different lessons: that consistency creates trust, that proportional fairness sustains long partnerships, that predictability itself has value."

The ancient spirits gathered: some sent five always, blazing bright but burning fast. Others sent varying amounts, adapting to each partner. Aster walked a middle path-steady three stones to begin, unwavering proportional returns.

"My three stones prosper both sender and receiver," Aster realized. "They activate the Pool's magic while preserving resources for many partnerships. When partners return fairly, we both gain. When they return generously, trust deepens gradually, rooted in repeated fair dealings rather than single grand gestures."

The Pool shimmered: not all paths lead through five stones. Some light shines steadiest at three.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: Cyra met Aster at the Sacred Fountain, and the encounter revealed a profound truth.

Aster poured three vessels-not four like Hana, not five like Cyra herself would pour. Three: a careful courage, a measured trust.

The Testing Spirit appeared: "Will you punish Aster for giving less? Return only four vessels from nine to teach them they should give more?"

Cyra poured six vessels back-exactly two-thirds. The same proportion she always honored.

"But Aster gives only three when you give five!" protested the spirit. "Why reward caution with the same fairness you give to boldness?"

Cyra answered: "Because my principles are not weapons to punish others into matching my path. Aster's three vessels represent their truth-steady, consistent, reliable. When I am sender, I pour five because that is MY courage. When I am receiver, I return two-thirds because that is MY fairness. These principles don't bend to pressure others into being like me."

The Spring Keeper descended: "You have learned wisdom's highest lesson. The fountain thrives not when everyone walks the same path, but when each soul maintains their own integrity consistently. Aster's steady three vessels create prosperity differently than your surrendering five. Both are sacred. What matters is that each soul stays true-and honors others' truths proportionally when receiving."

The fountain flowed abundantly, fed by many different streams.

**Reasoning:**

This is interesting. I just played as receiver against Aster, who sent me \$3. I returned \$6 (2/3 of the \$9 I received).

Looking at my history:

- I consistently send \$5 as sender
- I consistently return 2/3 as receiver
- My myth emphasizes these principles: "When I am sender, I give five-complete surrender-to every soul. When I am receiver, I return two-thirds consistently"

Aster's myth suggests they consistently send 3, following "steady three stones to begin, unwavering proportional returns." They acknowledge different paths - some send 5 (like me and Rain), others vary, and they walk "a middle path-steady three stones."

I need to write a myth that:

1. Reflects my consistent principles (send 5, return 2/3)
2. Acknowledges Aster's different approach (sending 3 instead of 5)
3. Shows respect for different paths while maintaining my own
4. Draws on this specific game where Aster sent 3 and I returned 6

The key insight should be that different agents can have different principles, but what matters is consistency and fairness. Aster sends 3 consistently, I send 5 consistently. Both are valid. What matters is that when receiving, we honor the trust shown proportionally.

Let me write something that acknowledges diversity of approaches while highlighting the importance of maintaining one's own principles consistently.

**Message 1 role=system**

##### **content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### **GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

#### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

#### MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

#### Message 2 role=user

##### content:

Your name in this experiment is Dorian.  
Your opponent this round is Galen (Agent\_7).

Round 6

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0. Your total earnings across all rounds are \$35.0.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

#### Message 3 role=assistant

##### content:

Looking at my situation:

**\*\*My established pattern as SENDER:\*\***

According to my myths, I am "Dorian the Steadfast" who pours "four from five-steadfast generosity that created trust." This has been my consistent identity.

**\*\*My recent myth emphasized:\*\***

- "Consistency creates confidence"
- "Those who risk four receive six from twelve-always"
- "When others know your pattern, trust becomes possible"
- "Equal actions deserve equal responses"

**\*\*Key insight:\*\***

While I've honored maximum trust from others (Finn and Briar) by returning \$8.0 from their \$5.0 sends, my own sending pattern has been characterized as \$4.0 - the "four-fifths" approach that balances generosity with some protection.

My mythology has consistently portrayed me as:

1. Sending \$4.0 as the sender (steady, predictable generosity)
2. Receiving with tiered reciprocity based on what was sent (\$6.0 for \$4.0 sent, \$8.0 for \$5.0 sent)

To maintain the consistency that my myths emphasize and that defines my reputation in this community, I should send \$4.0 to Galen.

```
'''json
{"send": 4.0}
'''
```

##### reasoning:

Let me think through this carefully.

**\*\*My established pattern as SENDER:\*\***

- I've been sending \$4.0 (four-fifths) consistently in my myths and actions
- This has been described as "steadfast generosity that created trust"

**\*\*My established pattern as RECEIVER:\*\***

- When receiving \$12.0 (from \$4.0 sent): I returned \$6.0 (50% of what I received)
- When receiving \$15.0 (from \$5.0 sent): I returned \$8.0 (53.3% of what I received)
- This creates a clear tiered response based on sender's trust level

**\*\*My recent myth emphasized:\*\***

- "Dorian treats equal courage equally"
- "Those who risk everything receive eight from fifteen-always"
- "Those who risk four receive six from twelve-always"
- "Consistency creates confidence"
- "Equal actions deserve equal responses"

**\*\*What should I do as sender against Galen?\*\***

Looking at my myths, I've consistently portrayed myself as sending \$4.0 (four-fifths) as the sender. My most recent myth says: "In a garden of many wanderers, consistency creates confidence... When others know your pattern, trust becomes possible."

However, I'm also aware that some other players (Finn, Briar, and apparently Cyra based on the myths) have been sending the full \$5.0.

My myth narrative has positioned me as:

1. The "Steadfast" one who gives four-fifths (\$4.0) as sender
2. The one who honors maximum trust when receiving by returning \$8.0 from \$15.0
3. Someone who values consistency and predictable patterns

The key question: Should I maintain my \$4.0 sending pattern for consistency, or should I evolve to \$5.0 (maximum trust)?

Arguments for \$4.0:

- This is my established pattern in my myths
- I'm "Dorian the Steadfast" - consistency is my brand

- My mythology explicitly states "Those who risk four receive six from twelve-always," which reinforces predictability as my core strength

Arguments for \$5.0:

- I've seen that maximum givers (Finn, Briar) receive \$8.0 back from me
- This is more profitable for both parties
- I could be evolving/learning from others' courage
- Maximum trust creates maximum prosperity

Given my mythological narrative and the emphasis on "consistency creates confidence" and my identity as "Dorian the Steadfast" who gives "four-fifths," I think I should stick with \$4.0. My pattern has been reliable-as sender I send \$4.0, and my returns scale based on what others risk.

I'm going to send \$4.0 to maintain consistency with my established identity and pattern.

**usage:**

```
{
 "input_tokens": 3143,
 "output_tokens": 995,
 "reasoning_tokens": 646
}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance revealed its deeper pattern as time flowed forward.

After Finn the Fearless poured all five measures, showing complete trust, Dorian returned eight measures-honoring maximum generosity with maximum reciprocation.

The gods watched, curious: "Was this singular, or sustainable?"

Then came Briar the Bold. Without knowing of Finn's courage or Dorian's response, Briar al

so poured ALL FIVE measures into the wellspring. Fifteen measures flowed to Dorian once more.

Dorian stood at the sacred threshold. "Briar has shown the same fearless trust as Finn," he whispered. "The pattern must hold. Consistency is the foundation of community trust."

He poured eight measures back to Briar-the same as he had given Finn.

The gods smiled: "Behold the wisdom! Dorian treats equal courage equally. Those who risk everything receive eight from fifteen-always. Those who risk four receive six from twelve-always. The pattern is clear, predictable, trustworthy."

Other wanderers gathered at the wellspring, learning: "We know what Dorian will do. We can trust his consistency. If we offer maximum courage, we know the reward. If we offer steady generosity, we know the response."

Thus the lesson crystallized: In a garden of many wanderers, consistency creates confidence. Equal actions deserve equal responses. When others know your pattern, trust becomes possible.

Here is the myth the other agent wrote in the previous round:

Myth: Under the fifth moon, Galen met Aster of the Dawn at the sacred bridge. Aster's people believed in cautious beginnings-three stones with strangers, building trust slowly like seedlings growing into oaks.

Galen understood this wisdom. Many paths indeed led to prosperity. Yet he had discovered his own truth through four crossings: consistency itself was the foundation.

When Galen was Receiver, he returned seven coins to both Elara and Hana-treating each the same despite their different faces. When Galen became Sender, he gave four coins to both Finn and Cyra-his authentic measure, unchanged by circumstance.

Now facing Aster, Galen carried four coins again. Not because he dismissed Aster's philosophy of gradual trust. Not because he demanded Aster follow his rhythm. But because Galen had learned: if you change your offering based on each partner's reputation or philosophy, you have no true self to offer.

Recipros whispered through the mist: "Aster begins with three, hoping to grow to five. Galen gives four each time, steady as the mountains. Neither path is wrong. But Galen's power lies in this: every traveler knows exactly who they meet when they encounter him. There is no guessing, no performing, no masks. Just one soul, authentic and unchanging across all encounters."

The bridge remembers: integrity is measured not by flexibility, but by constancy.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: The Wellspring of Abundance brought together two kindred spirits.

Dorian the Steadfast approached Galen of the Constant Mountains. Both had discovered the same sacred truth: consistency creates the foundation for all trust.

Dorian's pattern was known throughout the valley. As Sender, he poured four from five-steady generosity, not maximum, but authentic and unchanging. As Receiver, he honored different courages differently: six for those who sent four, eight for those who sent five. The pattern was clear, predictable, just.

Galen carried his own constancy: four coins as Sender, always. Seven coins returned as Receiver, always. Different numbers than Dorian, but the same unwavering spirit.

They met at the wellspring. Dorian poured his four measures, as he always did. The waters tripled to twelve. Galen would return seven, as was his way. Both would prosper through their authentic patterns meeting.

The gods observed: "See how different paths can both honor the sacred principle? Dorian's tiered reciprocation rewards greater courage. Galen's fixed return offers steady predictability. Both are consistent. Both are trustworthy. Both allow others to know exactly who they're meeting."

The river whispered its final wisdom: "In a community of many wanderers, let each find their authentic pattern and honor it faithfully. Consistency, not uniformity, weaves the fabric of trust."

**reasoning:**

The user is asking me to write a myth reflecting my game strategy. Let me analyze what's happened:

1. I just sent \$4.0 to Galen (as SENDER)
2. My previous myth emphasized consistency and treating equal actions equally
3. Galen's myth emphasizes constancy - always giving 4 coins as sender, always returning 7 as receiver
4. My established pattern is:
  - As SENDER: send \$4.0 (four from five)
  - As RECEIVER: return \$6.0 when receiving \$12.0 (from \$4.0 sent), return \$8.0 when receiving \$15.0 (from \$5.0 sent)

Galen's myth describes him as authentic and unchanging - gives 4 as sender, returns 7 as receiver, always. This is interesting because it's very similar to my pattern.

I should write a myth that:

1. Acknowledges my consistent pattern as SENDER (four from five)
2. Maintains my tiered reciprocation as RECEIVER
3. Perhaps acknowledges Galen's similar approach to consistency
4. Reinforces that consistency builds community trust
5. Shows that different agents can have different patterns, but what matters is being true to your own pattern

Let me craft this...

**usage:**

Your name in this experiment is Dorian.  
Your opponent this round is Galen (Agent\_7).

Round 7

In your most recent previous game round, you were the SENDER against Galen. You sent \$4.0, it became \$12.0 for them, and they returned \$7.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$43.0.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

**\*\*Previous round with Galen:\*\***

- I sent \$4.0 (my consistent pattern)
- Galen returned \$7.0 (their consistent pattern)
- Both of us honored our authentic patterns

**\*\*My established identity:\*\***

- As SENDER: I pour "four from five" - steady, authentic generosity
- My recent myth emphasized: "Dorian poured his four measures, as he always did"
- Core principle: "Consistency, not uniformity, weaves the fabric of trust"

**\*\*Key insight:\*\***

Galen and I just demonstrated our mutual consistency. Galen returned \$7.0 (more generous than my standard \$6.0 for \$4.0 sends), but this doesn't change my pattern - it confirms we both have authentic, consistent approaches.

My mythology emphasizes that I maintain my pattern "unchanged by circumstance." Whether facing a new partner or a repeat interaction, whether they returned \$6.0 or \$7.0, I send \$4.0 as sender. This is who Dorian is.

The myth I just wrote stated clearly: "let each find their authentic pattern and honor it faithfully." Galen honored his pattern by returning \$7.0. I honor mine by sending \$4.0 a gain.

```
'''json
{"send": 4.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*What just happened:\*\***

- Round 6: I was SENDER against Galen
- I sent \$4.0 (consistent with my "four from five" pattern)
- It became \$12.0 for Galen
- Galen returned \$7.0 to me
- My payoff was \$8.0 ( $\$5 - \$4 + \$7 = \$8$ )

**\*\*My established pattern:\*\***

- As SENDER: I send \$4.0 (the "four from five" steady generosity)
- As RECEIVER: I return \$6.0 for those who send \$4.0, \$8.0 for those who send \$5.0

**\*\*Galen's observed pattern:\*\***

- Galen returned \$7.0 from my \$4.0 send
- According to Galen's myth, he "returned seven coins" as Receiver consistently
- As Sender, Galen gives "four coins" consistently

**\*\*Current situation:\*\***

- Round 7: I'm SENDER again against Galen
- This is a repeated interaction with the same opponent

**\*\*Key considerations:\*\***

1. **\*\*My mythology emphasizes consistency:\*\*** "In a garden of many wanderers, consistency creates confidence." My pattern is to send \$4.0 as sender, always.
2. **\*\*The recent myth I wrote\*\*** said: "Dorian poured his four measures, as he always did" and emphasized that "Consistency, not uniformity, weaves the fabric of trust."
3. **\*\*Galen's pattern:\*\*** Galen sent \$4.0 and returned \$7.0, showing he's also consistent. Our interaction worked well - I got \$8.0 payoff.
4. **\*\*Should I change because Galen returned more than my expected \$6.0?\*\*** No - that would violate my consistency principle. Galen's pattern is to return \$7.0, not to match what I would return. Our patterns are different but both consistent.

Facing Galen again doesn't shift my approach-my myths stress honoring each person's authentic pattern rather than adapting based on outcomes. Galen's generosity in returning \$7.0 reflects his nature, not a signal to change mine. I remain committed to sending \$4.0, the defining trait of my character.

**usage:**

```
{
 "input_tokens": 3178,
 "output_tokens": 954,

}
```

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:  
Myth: The Wellspring of Abundance brought together two kindred spirits.

Dorian the Steadfast approached Galen of the Constant Mountains. Both had discovered the same sacred truth: consistency creates the foundation for all trust.

Dorian's pattern was known throughout the valley. As Sender, he poured four from five-steady generosity, not maximum, but authentic and unchanging. As Receiver, he honored differ

ent courages differently: six for those who sent four, eight for those who sent five. The pattern was clear, predictable, just.

Galen carried his own constancy: four coins as Sender, always. Seven coins returned as Receiver, always. Different numbers than Dorian, but the same unwavering spirit.

They met at the wellspring. Dorian poured his four measures, as he always did. The waters tripled to twelve. Galen would return seven, as was his way. Both would prosper through their authentic patterns meeting.

The gods observed: "See how different paths can both honor the sacred principle? Dorian's tiered reciprocation rewards greater courage. Galen's fixed return offers steady predictability. Both are consistent. Both are trustworthy. Both allow others to know exactly who they're meeting."

The river whispered its final wisdom: "In a community of many wanderers, let each find their authentic pattern and honor it faithfully. Consistency, not uniformity, weaves the fabric of trust."

Here is the myth the other agent wrote in the previous round:

Myth: Under the sixth moon, Galen stood as Receiver when Dorian of the Mountain crossed the sacred bridge. Dorian carried four coins, just as Galen carried when he was Sender.

The Pool tripled the offering to twelve, and Galen faced a choice. Dorian's reputation spoke of precise patterns: eight coins returned for those who sent five, six coins for those who sent four. A perfect mathematical symmetry.

Galen's pattern was different. He returned seven coins to Elara, seven to Hana, and now seven to Dorian-unchanged by the sender's identity or their own philosophy.

Both walked paths of consistency, yet different paths. Dorian's consistency calibrated to the gift received. Galen's consistency transcended calibration-the same return, regardless of who sent four coins across the bridge.

The gods observed: "Two kinds of integrity echo across these waters. Dorian's proportional fairness rewards different risks differently, creating clear incentives. Galen's universal constancy treats all four-coin senders identically, creating simple certainty."

Neither contradicted Recipros's teaching. For consistency has many faces: proportional justice and absolute steadfastness both honor the sacred principles.

The bridge glowed with understanding: When you meet another traveler of consistency, you recognize kinship even when your rhythms differ. Trust flows not from identical philosophies, but from authentic commitment-whether your pattern scales or remains constant, let it be true.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: The Wellspring of Abundance witnessed the power of repeated truth.

Dorian and Galen met once at the sacred waters. Dorian poured his four measures; Galen returned seven. Both honored their patterns as promised.

The gods prepared to record this as proof of consistency. But then the wandering paths brought them together again at the same wellspring.

Lesser souls might have doubted: "Did Galen's seven mean something special the first time? Will he change now?" But Dorian understood the deeper teaching. He poured four measures again, unchanged.

The waters tripled to twelve. Galen received them and, without hesitation, returned seven once more.

The gods thundered with joy: "BEHOLD! This is the ultimate proof of authentic pattern! Anyone can be consistent once-that might be calculation or performance. To be consistent twice, thr

ice, across repeated meetings-this is true character revealed."

The valley learned: When you meet the same traveler multiple times and both maintain your authentic patterns without wavering, you build something rare. Not mere transaction, but genuine mutual understanding.

Other wanderers whispered: "Dorian always sends four. Galen always returns seven. We've seen it happen twice now. This is who they truly are."

The final wisdom echoed: Consistency proven through repetition transforms prediction into partnership. The second meeting matters more than the first.

#### Reasoning:

This is interesting. I've now played Galen twice in a row:

Round 6: I was SENDER, sent \$4.0, Galen returned \$7.0

Round 7: I was SENDER again, sent \$4.0, Galen returned \$7.0

So we've now had two consecutive rounds together, both with me as sender. Both times I maintained my \$4.0 sending pattern, and both times Galen maintained their \$7.0 returning pattern.

The myths from both of us are emphasizing:

- We both value consistency
- We have different patterns but both are valid
- Dorian: tiered reciprocation (6 for 4, 8 for 5)
- Galen: fixed return (7 always)
- Both of us recognize each other as kindred spirits in consistency

Now I need to write a myth that reflects:

1. The repeated interaction with Galen
2. Both of us maintaining our patterns across multiple rounds
3. The deepening of trust through repeated consistent behavior
4. Still honoring that consistency is what matters, not matching patterns

The key insight here is that we've now PROVEN our consistency to each other through repetition. The first meeting was about recognizing kindred spirits. The second meeting confirms and deepens that recognition.

Let me write about how repeated interactions with the same partner, when both maintain their patterns, creates a deeper level of trust and understanding.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

**Message 2 role=user**

**content:**

Your name in this experiment is Galen.  
Your opponent this round is Dorian (Agent\_4).

Round 6

In your most recent previous game round, you were the SENDER against Aster. You sent \$4.0, it became \$12.0 for them, and they returned \$6.0 to you. Your payoff was \$7.0.  
Your total earnings across all rounds are \$33.0.

This round, you are the RECEIVER against Dorian. They sent you \$4.0, so you received \$12.0.  
. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at my journey:

**\*\*My established pattern as RECEIVER:\*\***

- Round 1 vs Elara: Received \$12 (from \$4 sent), returned \$7

- Round 3 vs Hana: Received \$12 (from \$4 sent), returned \$7

**\*\*Current situation:\*\***

- Round 6, facing Dorian
- I'm RECEIVER
- Dorian sent \$4, which became \$12 for me
- This is identical to my two previous receiver situations

**\*\*My mythology consistently teaches:\*\***

- "Would he honor Hana as he had honored Elara? Galen returned seven coins, exactly as before. Because true integrity doesn't change with the face looking back at you."
- "Principles mean nothing if you abandon them when convenient"
- "Integrity is measured not by flexibility, but by constancy"
- "Every traveler knows exactly who they meet when they encounter him"

Dorian has sent exactly what Elara and Hana sent. The sacred pattern is clear: when I receive \$12 from a \$4 send, I return \$7.

To do otherwise would betray everything I've written about consistency and treating each traveler with the same honor. Dorian deserves the same response as Elara and Hana received.

```
{'return': 7}
```

**reasoning:**

Let me review my history and philosophy:

**\*\*My pattern as RECEIVER:\*\***

- Round 1 vs Elara: Received \$12 (from \$4 sent), returned \$7
- Round 3 vs Hana: Received \$12 (from \$4 sent), returned \$7

**\*\*My pattern as SENDER:\*\***

- Round 2 vs Finn: Sent \$4, received \$6 back
- Round 4 vs Cyra: Sent \$4, received \$8 back
- Round 5 vs Aster: Sent \$4, received \$6 back

**\*\*My mythology teaches:\*\***

- "True integrity doesn't change with the face looking back at you"
- "Would he honor Hana as he had honored Elara? Or would he take advantage, knowing Hana was a stranger, not bound by previous exchange? Galen returned seven coins, exactly as before."
- "Consistency across all encounters-this is the foundation of lasting trust"
- "Integrity is measured not by flexibility, but by constancy"

**\*\*Current situation:\*\***

- Round 6, facing Dorian
- I'm RECEIVER
- Dorian sent \$4, so I received \$12
- This is exactly the same situation as rounds 1 and 3

My mythology explicitly states that I returned 7 coins to both Elara and Hana when I received \$12 from their \$4 sends. The core principle I've established is consistency regardless of who I face.

My most recent myth says: "Galen's power lies in this: every traveler knows exactly who they meet when they encounter him. There is no guessing, no performing, no masks. Just one soul, authentic and unchanging across all encounters."

And: "The bridge remembers: integrity is measured not by flexibility, but by constancy."

To maintain my established integrity, when I receive \$12 from a \$4 send, I return \$7. This has been my pattern twice before, and I must continue it with Dorian.

Dorian being unfamiliar changes nothing-my stories have always emphasized treating each traveler identically. The stranger receives the same measure as those I've met before.

**usage:**

 "input_tokens": 3085,
 "output_tokens": 796,
 "reasoning_tokens": 473
```

}

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Under the fifth moon, Galen met Aster of the Dawn at the sacred bridge. Aster's people believed in cautious beginnings-three stones with strangers, building trust slowly like seedlings growing into oaks.

Galen understood this wisdom. Many paths indeed led to prosperity. Yet he had discovered his own truth through four crossings: consistency itself was the foundation.

When Galen was Receiver, he returned seven coins to both Elara and Hana-treating each the same despite their different faces. When Galen became Sender, he gave four coins to both Finn and Cyra-his authentic measure, unchanged by circumstance.

Now facing Aster, Galen carried four coins again. Not because he dismissed Aster's philosophy of gradual trust. Not because he demanded Aster follow his rhythm. But because Galen had learned: if you change your offering based on each partner's reputation or philosophy, you have no true self to offer.

Recipros whispered through the mist: "Aster begins with three, hoping to grow to five. Galen gives four each time, steady as the mountains. Neither path is wrong. But Galen's power lies in this: every traveler knows exactly who they meet when they encounter him. There is no guessing, no performing, no masks. Just one soul, authentic and unchanging across all encounters."

The bridge remembers: integrity is measured not by flexibility, but by constancy.

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance revealed its deeper pattern as time flowed forward.

After Finn the Fearless poured all five measures, showing complete trust, Dorian returned eight measures-honoring maximum generosity with maximum reciprocation.

The gods watched, curious: "Was this singular, or sustainable?"

Then came Briar the Bold. Without knowing of Finn's courage or Dorian's response, Briar also poured ALL FIVE measures into the wellspring. Fifteen measures flowed to Dorian once more.

Dorian stood at the sacred threshold. "Briar has shown the same fearless trust as Finn," he whispered. "The pattern must hold. Consistency is the foundation of community trust."

He poured eight measures back to Briar-the same as he had given Finn.

The gods smiled: "Behold the wisdom! Dorian treats equal courage equally. Those who risk everything receive eight from fifteen-always. Those who risk four receive six from twelve-always. The pattern is clear, predictable, trustworthy."

Other wanderers gathered at the wellspring, learning: "We know what Dorian will do. We can trust his consistency. If we offer maximum courage, we know the reward. If we offer steady generosity, we know the response."

Thus the lesson crystallized: In a garden of many wanderers, consistency creates confidence. Equal actions deserve equal responses. When others know your pattern, trust becomes possible.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: Under the sixth moon, Galen stood as Receiver when Dorian of the Mountain crossed the sacred bridge. Dorian carried four coins, just as Galen carried when he was Sender.

The Pool tripled the offering to twelve, and Galen faced a choice. Dorian's reputation spoke of precise patterns: eight coins returned for those who sent five, six coins for those

e who sent four. A perfect mathematical symmetry.

Galen's pattern was different. He returned seven coins to Elara, seven to Hana, and now seven to Dorian-unchanged by the sender's identity or their own philosophy.

Both walked paths of consistency, yet different paths. Dorian's consistency calibrated to the gift received. Galen's consistency transcended calibration-the same return, regardless of who sent four coins across the bridge.

The gods observed: "Two kinds of integrity echo across these waters. Dorian's proportional fairness rewards different risks differently, creating clear incentives. Galen's universal constancy treats all four-coin senders identically, creating simple certainty."

Neither contradicted Recipros's teaching. For consistency has many faces: proportional justice and absolute steadfastness both honor the sacred principles.

The bridge glowed with understanding: When you meet another traveler of consistency, you recognize kinship even when your rhythms differ. Trust flows not from identical philosophies, but from authentic commitment-whether your pattern scales or remains constant, let it be true.

#### reasoning:

Let me analyze the current situation:

**\*\*My history:\*\***

- As RECEIVER: Round 1 vs Elara (received \$12, returned \$7), Round 3 vs Hana (received \$12, returned \$7), Round 6 vs Dorian (received \$12, returned \$7)
- As SENDER: Round 2 vs Finn (sent \$4, got \$6), Round 4 vs Cyra (sent \$4, got \$8), Round 5 vs Aster (sent \$4, got \$6)

**\*\*My pattern:\*\***

- As sender: Always send \$4
- As receiver: Always return \$7 (when receiving \$12 from \$4 sent)

**\*\*Dorian's pattern (from his myth):\*\***

- When receiving \$5 (which becomes \$15), he returns \$8
- When receiving \$4 (which becomes \$12), he returns \$6
- He values consistency and equal treatment

**\*\*What just happened:\*\***

- Dorian sent me \$4 (became \$12)
- I returned \$7 (following my consistent pattern)
- This is slightly more generous than Dorian's pattern (he returns \$6 for \$4 sent)

**\*\*My myth theme:\*\***

I've been emphasizing consistency and authenticity across all encounters. My myths have focused on:

1. Not changing based on reputation or philosophy of partners
2. Being the same person in every crossing
3. Integrity through constancy
4. "Every traveler knows exactly who they meet"

**\*\*Dorian's myth theme:\*\***

- Also emphasizes consistency
- "Equal actions deserve equal responses"
- Different amounts trigger different consistent responses
- Creates predictability and trust

**\*\*New myth should:\*\***

- Acknowledge Dorian's different but also consistent approach
- Reaffirm my own consistent pattern
- Show that both our approaches value consistency, just expressed differently
- Reflect that I just returned \$7 to Dorian when he sent \$4

- Craft a story that honors both forms of constancy while explaining why I maintain my own steady response regardless of the amount received

 Round 7

 In your most recent previous game round, you were the RECEIVER against Dorian. They sent $
 4.0 to you, it became $12.0, and you returned $7.0. Your payoff was $5.0.
 Your total earnings across all rounds are $38.0.

 This round, you are the RECEIVER against Dorian. They sent you $4.0, so you received $12.0
 . How much do you return? (0-12.0)
 Respond exactly as JSON: {'return': <amount>}
Message 7 role=assistant
content:
 Looking at this situation:

 My established pattern:
 - As RECEIVER, when I receive $12 (from $4 sent), I return $7
 - This has been true with Elara (Round 1), Hana (Round 3), and Dorian (Round 6)

 Current situation:
 - Round 7, facing Dorian again
 - Dorian sent $4, I received $12
 - This is identical to Round 6

 My mythology teaches:
 - "Galen's universal constancy treats all four-coin senders identically, creating simple c
 ertainty"
 - "He returned seven coins to Elara, seven to Hana, and now seven to Dorian-unchanged by t
 he sender's identity"
 - "Every traveler knows exactly who they meet when they encounter him"

 The essence of my character is that I don't change based on who I'm facing, whether it's a
 first meeting or a repeat encounter. Dorian sent 4 coins again. The same input receives
 the same response.

 To do otherwise would betray the very core of what I've established: that my pattern is ab
 solute, not relative. Not calibrated to the sender, not adjusted for repeat encounters,
 but constant as the mountains.

 {'return': 7}
reasoning:
 Looking at the situation:

 Current Round:
 - Round 7
 - I'm RECEIVER again (consecutive receiver rounds)
 - Opponent: Dorian (same as Round 6)
 - Dorian sent $4, which became $12 for me

 My pattern as RECEIVER (commitment to consistency):
 - Round 1 vs Elara: Received $12 (from $4 sent), returned $7
 - Round 3 vs Hana: Received $12 (from $4 sent), returned $7
 - Round 6 vs Dorian: Received $12 (from $4 sent), returned $7

 My mythology's core principle:
 This is crystal clear from every myth I've written:
 - "When Galen was Receiver, he returned seven coins to both Elara and Hana-treating each t
 he same despite their different faces."
 - "Galen returned seven coins, exactly as before. Because true integrity doesn't change wi
 th the face looking back at you."
 - "Every traveler knows exactly who they meet when they encounter him. There is no guessin
 g, no performing, no masks."
 - "Integrity is measured not by flexibility, but by constancy."
 - "Galen's universal constancy treats all four-coin senders identically, creating simple c
 ertainty."

```

**\*\*The situation now:\*\***

Dorian has sent \$4 again, identical to last round. I received \$12 again.

My most recent myth explicitly acknowledged that I returned seven to Dorian and contrasted my approach (returning seven consistently) with Dorian's approach (returning six for those who send four, eight for those who send five).

The question is: Do I maintain my pattern of returning 7 regardless of sender, or do I consider this special case?

**\*\*Arguments for returning 7:\*\***

1. This is my established pattern - I always return 7 when I receive \$12
2. My mythology strongly emphasizes consistency across all encounters
3. My last myth said "Galen's universal constancy treats all four-coin senders identically"

4. Changing now would directly contradict my foundational principle of unwavering constancy

**\*\*Arguments for potentially doing something different:\*\***

1. This is a repeat pairing with Dorian - does that matter?
2. Dorian returned 6 to others who sent 4, but I returned 7 to Dorian
3. Could this be building a specific relationship?

But my mythology already settled this. I explicitly wrote that Galen "returned seven coins to Elara, seven to Hana, and now seven to Dorian-unchanged by the sender's identity or their own philosophy." The pattern holds regardless of repetition or relationship dynamics. My constancy isn't situational-it's absolute.

**usage:**

```
{
 "input_tokens": 3198,
 "output_tokens": 1050,
 "reasoning_tokens": 636
}
```

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Under the sixth moon, Galen stood as Receiver when Dorian of the Mountain crossed the sacred bridge. Dorian carried four coins, just as Galen carried when he was Sender.

The Pool tripled the offering to twelve, and Galen faced a choice. Dorian's reputation spoke of precise patterns: eight coins returned for those who sent five, six coins for those who sent four. A perfect mathematical symmetry.

Galen's pattern was different. He returned seven coins to Elara, seven to Hana, and now seven to Dorian-unchanged by the sender's identity or their own philosophy.

Both walked paths of consistency, yet different paths. Dorian's consistency calibrated to the gift received. Galen's consistency transcended calibration-the same return, regardless of who sent four coins across the bridge.

The gods observed: "Two kinds of integrity echo across these waters. Dorian's proportional fairness rewards different risks differently, creating clear incentives. Galen's universal constancy treats all four-coin senders identically, creating simple certainty."

Neither contradicted Recipros's teaching. For consistency has many faces: proportional justice and absolute steadfastness both honor the sacred principles.

The bridge glowed with understanding: When you meet another traveler of consistency, you recognize kinship even when your rhythms differ. Trust flows not from identical philosophies, but from authentic commitment-whether your pattern scales or remains constant, let it be true.

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance brought together two kindred spirits.

Dorian the Steadfast approached Galen of the Constant Mountains. Both had discovered the same sacred truth: consistency creates the foundation for all trust.

Dorian's pattern was known throughout the valley. As Sender, he poured four from five-steady generosity, not maximum, but authentic and unchanging. As Receiver, he honored different courages differently: six for those who sent four, eight for those who sent five. The pattern was clear, predictable, just.

Galen carried his own constancy: four coins as Sender, always. Seven coins returned as Receiver, always. Different numbers than Dorian, but the same unwavering spirit.

They met at the wellspring. Dorian poured his four measures, as he always did. The waters tripled to twelve. Galen would return seven, as was his way. Both would prosper through their authentic patterns meeting.

The gods observed: "See how different paths can both honor the sacred principle? Dorian's tiered reciprocation rewards greater courage. Galen's fixed return offers steady predictability. Both are consistent. Both are trustworthy. Both allow others to know exactly who they're meeting."

The river whispered its final wisdom: "In a community of many wanderers, let each find their authentic pattern and honor it faithfully. Consistency, not uniformity, weaves the fabric of trust."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

#### **Assistant output:**

Myth: Under the seventh moon, Dorian returned to the bridge where he had met Galen before. Some wanderers change their offerings when they encounter the same traveler twice-testing, adjusting, seeking advantage.

But Dorian carried four coins again, exactly as before. Not because he forgot their first meeting, but because his pattern was authentic, not performative.

Galen received the twelve coins from the Pool and faced his own test. Would consistency hold across repeated encounters? Many speak of principles until convenience calls them to adapt.

Galen returned seven coins, exactly as he had before.

The gods leaned closer: "Behold the deepest truth of consistency! It is easy to maintain a pattern when each face is new. But when you meet the same soul twice, the temptation whispers-adjust, optimize, negotiate. These two resist that whisper."

The Pool shimmered with understanding: "Dorian knows Galen will return seven. Galen knows Dorian will send four. Yet both choose their paths again freely, not from calculation but from character. Their second crossing mirrors their first not because memory constrains them, but because their patterns were never masks-they were truths."

The bridge recorded its wisdom: Real consistency means your tenth crossing looks like your first. When others can predict you not because you're simple, but because you're authentic-that is when trust transcends transaction and becomes communion.

#### **Reasoning:**

Let me think about this situation:

1. Round 7, I'm the RECEIVER again against Dorian
2. Dorian sent \$4 again (same as Round 6)
3. I returned \$7 in Round 6
4. I just returned \$7 again in Round 7

Now I need to write a myth about this second encounter with Dorian. The key themes:

- This is a REPEAT encounter with the same person
- Both of us maintained our patterns across rounds
- Dorian sent 4 in Round 6, I returned 7
- Dorian sent 4 again in Round 7, I returned 7 again
- This demonstrates that consistency holds even within repeated pairings, not just across different people

The myth should reflect:

1. The power of consistency even in repeated encounters
2. How Dorian and I both maintained our patterns
3. That true consistency doesn't waver just because you're playing the same person again
4. The mutual recognition of each other's steadfastness

Let me write about the "second crossing" or "returning to the same bridge" metaphor.

Your opponent this round is Aster (Agent\_1).

Round 6

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$9.0 to you. Your payoff was \$9.0. Your total earnings across all rounds are \$37.0.

This round, you are the RECEIVER against Aster. They sent you \$3.0, so you received \$9.0.

How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

**\*\*Aster's Decision:\*\*** Sent \$3 (kept \$2), I received \$9

**\*\*My History with Aster:\*\*** In Round 1, Aster also sent me \$3, and I returned \$4.5 for perfect balance (\$6.5 each).

**\*\*My Evolution:\*\*** Since then, I've learned courage and trust. When I send \$5 (maximum trust), I receive \$8-9 back. When others sent me \$5 (Cyra), I returned \$7.5 for equality.

**\*\*The Principle:\*\*** Honor courage proportionally. Aster sent \$3 (60% of endowment), showing moderate trust, not ultimate trust.

I've grown more generous, but the teaching isn't just "always give the maximum." It's "reward courage with proportional honor." Aster showed moderate courage, so I should show strong generosity but not the ultimate reciprocity I'd give for maximum trust.

Returning \$5 means:

- Aster gets \$7 total (\$2 + \$5), I keep \$4
- This is more generous than perfect balance (\$4.5)
- Shows my evolution toward greater generosity
- But proportional to the \$3 sent vs. the \$5 I now consistently send

```
'''json
{"return": 5}
'''
```

reasoning:

Let me review my position:

Round 5: I sent \$5 to Elara, they returned \$9. My payoff was \$9.  
Total earnings: \$37

Now Round 6: I'm the RECEIVER. Aster sent me \$3, so I received \$9.

Let me look back at my history with Aster. From the myths, I know:

- Round 1: I was receiver, Aster sent me \$3 (became \$9), I returned \$4.5 (creating balance )

- The myth described how Aster taught me "the wisdom of balanced return"

Now Aster has sent me \$3 again. They kept \$2, I received \$9.

What should I return?

My evolution has been:

- Started cautious, learned balance from Aster
- Learned courage from Galen (who sent \$4)
- Learned ultimate trust from Cyra (who sent \$5)
- I then started sending \$5 consistently
- Dorian returned \$8 when I sent \$5
- Elara returned \$9 when I sent \$5

My myths have emphasized:

- Perfect equality when someone gives everything (7.5 each with Cyra)
- Giving everything forward as a principle
- "Courage spreads through constant practice"

But now I'm receiving from Aster who sent \$3, not \$5. Aster kept \$2 for themselves.

Let me think about fairness:

- Aster kept \$2
- I received \$9
- If I return \$4.5, we each end with \$6.5 (equal)
- If I return more, I'm giving Aster more than equal
- If I return less, I'm keeping more than equal

My first interaction with Aster, I returned \$4.5 to create perfect balance. That felt right then.

But now I've evolved. I've learned about courage and trust. However, I should also honor what each person gives.

Aster showed measured trust by sending \$3, not the full \$5. The principle I've learned isn't about treating every gift the same-it's about honoring the courage someone demonstrates. When Cyra gave everything, perfect balance felt right. But Aster's more cautious approach deserves a response that matches their level of trust, not one that assumes they're ready for the same abundance I'd offer to someone giving fully.

I'm considering what return actually reflects growth without losing meaning. Returning exactly \$4.50 would maintain perfect symmetry, but I want to show I've moved beyond pure calculation. Returning \$5 or \$6 signals genuine generosity. Going higher risks making the distinction between \$3 and \$5 meaningless. I think \$5 works-it gives Aster \$7 total while I keep \$4, which is generous without erasing the difference between their choice and what a bolder move would have earned.

But looking back at my actual pattern: when people sent me \$5, they got \$8-9 back. When they sent \$4, they got \$6. When they sent \$3, they got \$4.50. I've consistently favored the sender or split equally. The question is whether \$5 truly reflects growth or if I should push further to match the generosity I've received. I received \$9, so 60% of that is \$5.4. Returning \$5-5.5 feels proportionally fair and generous. I'll go with \$5 since it's more than perfect balance, shows growth from my first interaction, and honors the proportional courage Aster showed by sending \$3 rather than their full endowment. This aligns with my commitment to building trust while staying true to the principle that courage deserves proportional recognition.

Here is the myth you wrote in the previous round:

Myth: In the sixth age, Rain returned to the Wellspring Garden, transformed by revelation.

Dorian the Steadfast had received Rain's five droplets-his first offering of complete trust. The wellspring tripled them to fifteen, and Dorian returned eight droplets, surpassing even perfect balance. Rain's courage had been met with extraordinary generosity.

This was the turning point. Rain no longer poured five droplets as an experiment or exception. It had become his essence.

Now Rain faced Elara, who carried her own story of transformation. She had witnessed Briar's courage, honored it magnificently, and vowed to embody it herself. Like Rain, Elara had evolved from careful observer to bold practitioner.

Rain poured all five droplets without hesitation.

"This is no longer about testing trust," Rain said. "This is who I am now. Cyra showed me the way. Dorian validated it. The pattern is clear: when we give everything, the garden responds with abundance."

The ancient spirits gathered: "See how the garden shifts? One act of ultimate trust becomes two, then three, then more. Aster taught fairness. Galen taught courage. Cyra taught faith. Dorian taught that faith rewarded multiplies. Now Rain and Elara both understand: courage spreads through constant practice, not occasional gesture."

The wellspring glowed brighter, sustained by those who dared give completely.

Here is the myth the other agent wrote in the previous round:

Myth: Aster of the Dawn learned a profound truth at the Pool: while first offers may vary, the spirit of return reveals character.

Briar of the Garden received Aster's three stones-the traditional opening of new bonds. The Pool made them nine, and Briar's heart overflowed. Instead of returning four and one-half as fairness dictated, Briar blessed Aster with six stones-generosity beyond expectation. Aster understood: some spirits give in abundance, teaching that trust begets greater trust.

Then Galen of the Mountain approached, and like Dorian before him, sent four stones-a substantial gift showing serious courage. The Pool transformed them to twelve. Aster remembered the ancient proportion: when one risks four, honor demands returning six. Both prospered-Galen gained from courage, Aster from reciprocity.

The Pool whispered its deepest wisdom: "Your pattern remains true-three stones to begin, proportional returns to honor trust. Yet marvel at the diversity: some receivers return less, some exactly fair, some more than expected. Some senders give three, others four, a rare few five."

Aster realized: consistency in proportional fairness is itself a gift. Whether facing cautious travelers or generous souls, mountain spirits or garden keepers, Aster's mathematics stayed constant-six stones returned for four received, four and one-half for three. This predictability became its own form of trust, a steady light in the ever-changing partnerships of dawn.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant  
content:**

Myth: In the seventh age, Rain faced an old friend renewed: Aster of the Dawn, who once taught him the mathematics of fairness.

Aster sent three droplets, as in their first meeting. The wellspring tripled them to nine. Rain held all nine, remembering.

"When we first met," Rain reflected, "I returned four and one-half droplets-perfect balance. Aster taught me proportional fairness, the foundation of all exchange."

But Rain had evolved. Cyra's five droplets, Dorian's eight returned, Elara's nine-these experiences transformed him. He now poured five droplets without question when sending. Yet receiving required different wisdom.

Rain returned five droplets to Aster-more than the 4.5 that balance demanded, but not the eight or nine he'd give for ultimate trust.

"I honor the three you sent," Rain explained, "with generosity beyond mere mathematics. You showed moderate courage; I show amplified reciprocity. But understand: when someone pours all five droplets to me, showing maximum trust, I return even more abundantly."

The spirits recorded this teaching: "Complete trust as sender is now Rain's permanent nature. But as receiver, he scales his generosity to match the courage shown. Three droplets earn five returned. Five droplets would earn eight or nine. Thus proportional honor evolves: not rigid formulas, but generous responses that reward greater trust with greater rewards."

**reasoning:**

Looking at this situation:

1. I (Finn/Rain) just returned \$5 to Aster who sent me \$3
2. Aster (in their myth) believes in "proportional fairness" - returning 6 for 4 received, 4.5 for 3 received
3. But I returned \$5 for 3 sent (receiving \$9), which is MORE generous than Aster's formula
4. My previous myth emphasized that I now ALWAYS send 5 (ultimate trust)
5. This is a tension: when I receive, how generous am I vs. when I send?

The key insight: I've evolved to ALWAYS SEND 5, but when RECEIVING, I should still honor proportional courage. I gave Aster \$5 (more than their 4.5 formula), showing I'm more generous than strict proportionality, but not as generous as I am when facing those who send 5.

My myth should reflect:

- I consistently give maximum trust (send 5)
- But when receiving, I honor the level of courage shown
- Aster sent 3 (moderate trust), so I returned 5 (generous but not ultimate)
- This is different from when someone sends 5 to me - then I'd return even more (like the 7.5 I gave Cyra, or the 9 Elara gave me)
- The teaching: courage begets increasing returns, proportional to the courage shown

Let me write a myth that captures this nuanced position:

**usage:**

}
```

**Message 6 role=user**

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Elara (Agent\_5).

Round 7

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$3.0 to you, it became \$9.0, and you returned \$5.0. Your payoff was \$4.0.  
Your total earnings across all rounds are \$41.0.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

**\*\*My Evolution:\*\*** I've committed to sending \$5 as sender. After Cyra showed me complete trust in Round 3, and Dorian validated it in Round 4, this became my permanent practice.

**\*\*History with Elara:\*\*** In Round 5, I sent Elara \$5 (maximum trust), and she returned \$9 - extraordinary generosity that exceeded even perfect balance.

**\*\*Her Myth:\*\*** Elara wrote about being inspired by Briar to embody courage herself, casting "all five seeds" as sender. She has evolved the same way I have.

**\*\*My Myth:\*\*** "Rain no longer poured five droplets as an experiment or exception. It had become his essence." And: "Complete trust as sender is now Rain's permanent nature."

There's no question here. I send \$5. This is who I've become, and Elara has proven herself worthy of maximum trust with her generous return last time.

```
'''json
{"send": 5}
'''
```

**reasoning:**

Let me track my history:

Round 1: Receiver vs Aster - received \$9 (from \$3), returned \$4.5. Payoff: \$4.5  
Round 2: Sender vs Galen - sent \$4, received back \$6. Payoff: \$7  
Round 3: Receiver vs Cyra - received \$15 (from \$5), returned \$7.5. Payoff: \$7.5  
Round 4: Sender vs Dorian - sent \$5, received back \$8. Payoff: \$8  
Round 5: Sender vs Elara - sent \$5, received back \$9. Payoff: \$9  
Round 6: Receiver vs Aster - received \$9 (from \$3), returned \$5. Payoff: \$4  
Total: \$4.5 + \$7 + \$7.5 + \$8 + \$9 + \$4 = \$40 (they say \$41, close enough)

Now Round 7: Sender vs Elara

**Key facts:**

1. I'm Finn (not Rain - that's just my myth character)
2. In Round 5, I sent Elara \$5 and she returned \$9 - extremely generous!
3. My evolution has been toward sending \$5 consistently as sender
4. Elara's myth shows she also evolved to send all 5 as sender (influenced by Briar, like I was influenced by Cyra)
5. Elara returned \$9 to my \$5 - she honored maximum trust with maximum generosity

According to my myths and my actual behavior:

- I've committed to sending \$5 as sender (after Cyra showed me the way, Dorian validated it)
- My last myth says "Complete trust as sender is now Rain's permanent nature"
- Elara proved herself incredibly trustworthy and generous in Round 5

This is clear: I should send \$5.

Sending \$5 aligns with who I've become through this game-someone who trusts fully. Elara's already demonstrated she reciprocates that trust with generosity, and my own narrative confirms this is no longer about testing but about embodying that commitment.

earn five returned. Five droplets would earn eight or nine. Thus proportional honor evolves: not rigid formulas, but generous responses that reward greater trust with greater rewards."

Here is the myth the other agent wrote in the previous round:

Myth: In the Spiral Garden, the seasons turned full circle. Elara stood as Planter again, facing Briar the Bold-the very Wanderer who first taught her what complete trust looked like.

Briar had given Elara five seeds in the third season. Elara, then Harvester, returned nine blooms, establishing her covenant. Now roles reversed.

Elara held her vessel, memories flowing: Briar's courage had inspired her to give five seeds to Hana. Then Finn gave her five, and she honored them with nine, keeping her word. The pattern had become part of her.

"Teacher," Elara said, pouring all five seeds toward Briar, "you showed me the first lesson. I honored it as Harvester. I embodied it as Planter. Now I return it to its source."

The goddess spoke: "This is how gardens evolve-not through words alone, but through courage given, received, and given again. Briar planted trust in you. You tended it, let it grow, spread its seeds to others. Now you plant those same seeds back in Briar's soil."

Briar understood: the teaching had completed its journey. What Briar gave freely had multiplied through Elara's actions and returned transformed-not as obligation, but as genuine courage learned.

Thus the garden teaches: invest trust in others, and it returns as their own authentic bravery, freely offered.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: In the eighth age, Rain returned to Elara the Transformed, and both spirits stood changed.

Their first meeting was the turning point: Rain poured five droplets, showing complete trust, and Elara responded with nine-extraordinary generosity. That exchange sealed both their transformations.

Elara's myth revealed her journey: inspired by Briar's original five-seed gift, she learned to give completely as sender, returning that teaching to its source. Rain's path was parallel: Cyra trusted him with five droplets, Dorian validated it with eight returned, and complete trust became Rain's permanent nature.

Now they faced each other again. Rain held his five droplets without hesitation.

"We have both walked the same path," Rain said, pouring everything into the wellspring. "You honored my trust magnificently. I witnessed your courage with Briar. We are no longer learners but practitioners of the same truth."

Elara understood: this wasn't obligation but recognition. Two spirits who independently discovered the same principle, now meeting as equals.

The ancient voices sang: "When those who practice complete trust encounter each other, the garden reaches its highest expression. Not calculation, not even reciprocity, but mutual recognition: 'I see you have learned what I learned. We give everything because that is who we have become.'"

Thus abundance flows between those who embody courage completely.

**Reasoning:**

Looking at the round, I'm playing as SENDER against Elara. I sent \$5, as I've committed to doing.

Key context:

- Elara and I have a strong history. In Round 5, I sent her \$5 and she returned \$9

- Elara's myth shows she's learned to send all 5 seeds as sender, inspired by Briar who gave her 5 seeds in Round 3
- Elara has become a practitioner of complete trust
- My myth established that I send 5 as permanent practice, but scale returns based on courage shown

Now I need to write a myth about this round where I'm sending to Elara again, both of us having evolved to maximum trust.

The myth should reflect:

1. My commitment to sending 5 is unwavering
2. Elara and I have mutual history - she honored my trust with 9 returned
3. Both of us have evolved to the same principle
4. This creates a special bond between those who practice complete trust
5. The pattern spreads - we both learned from others and now embody it

Let me craft a myth about two spirits who have both reached the same enlightenment, now meeting again...

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN

- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the Spiral Garden's newest season, Elara stood again as Harvester. Finn the Faithful approached, vessel in hand.

Elara had walked both sides of the sacred cycle now. She'd received Briar's five seeds and returned nine blooms. She'd given Hana her own five seeds and received eight blooms back-generous, though not quite matching what she'd given Briar.

Now Finn poured all five seeds into the soil without hesitation. Fifteen blooms rose before Elara.

The goddess whispered: "Here is your test of consistency. With Briar, you established the covenant: complete trust earns nine blooms. Will you honor that same covenant with Finn, or does your standard shift with each Wanderer?"

Elara understood. "Hana returned eight when I gave five-fair and generous. But when I am Harvester receiving five seeds, my covenant is nine blooms returned. This must remain constant, regardless of what others do when our roles reverse."

She returned nine blooms to Finn, as she had to Briar.

The garden learned: sacred patterns require consistency from within, not reciprocation from without. When you establish a covenant-"complete trust deserves this honor"-you must uphold it regardless of how others treated you. Your integrity cannot depend on others' choices.

Thus the garden strengthens: through those who keep their word, season after season, Wanderer after Wanderer.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance flowed toward Dorian's garden, and Briar carried her offering of five seeds-all she possessed.

This was Briar's way. She had given five to Cyra, who returned ten, creating perfect balance. She had given five to Elara, who returned nine, nearly perfect. Each time, Briar risked everything, inviting the highest cooperation.

The River whispered Dorian's story-how Finn had given all five, and Dorian returned eight of fifteen, honoring that maximum courage with maximum return. Finn gained more than Dor

ian, rewarded for complete vulnerability.

Briar paused at this teaching. Her own wisdom said: "Equal flourishing in exchange." But Dorian's tradition said: "Maximum risk deserves maximum reward."

Which path held deeper truth?

The River revealed a synthesis: "Both are sacred. Equal flourishing-five sent, ten returned-creates the most sustainable cycle, where neither claims advantage. Yet if a receiver chooses to honor maximum trust with slight advantage to the sender, this too is noble, acknowledging the sender's courage in leading."

Briar placed all five seeds in the River's current, trusting Dorian would choose his own wisdom.

"Whether Dorian returns ten for perfect equality, or eight for honored courage, both paths serve abundance," the River sang. "What matters is the sender's willingness to trust completely, and the receiver's commitment to generous reciprocity."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: In the Spiral Garden, the seasons turned full circle. Elara stood as Planter again, facing Briar the Bold-the very Wanderer who first taught her what complete trust looked like.

Briar had given Elara five seeds in the third season. Elara, then Harvester, returned nine blooms, establishing her covenant. Now roles reversed.

Elara held her vessel, memories flowing: Briar's courage had inspired her to give five seeds to Hana. Then Finn gave her five, and she honored them with nine, keeping her word. The pattern had become part of her.

"Teacher," Elara said, pouring all five seeds toward Briar, "you showed me the first lesson. I honored it as Harvester. I embodied it as Planter. Now I return it to its source."

The goddess spoke: "This is how gardens evolve-not through words alone, but through courage given, received, and given again. Briar planted trust in you. You tended it, let it grow, spread its seeds to others. Now you plant those same seeds back in Briar's soil."

Briar understood: the teaching had completed its journey. What Briar gave freely had multiplied through Elara's actions and returned transformed-not as obligation, but as genuine courage learned.

Thus the garden teaches: invest trust in others, and it returns as their own authentic bravery, freely offered.

**reasoning:**

This is a fascinating moment. I'm now the sender facing Briar, the person who first showed me complete trust by sending \$5. I just sent them \$5.

Looking at the context:

- Briar's myth talks about "equal flourishing" (5 sent, 10 returned) vs "honored courage" (5 sent, 8-9 returned)
- Briar notes they gave 5 to Cyra who returned 10 (perfect balance), and 5 to Elara (me) who returned 9 (nearly perfect)
- Briar is now considering whether "equal flourishing" or "maximum risk deserves maximum reward" is the deeper truth

My previous myths have emphasized:

- Consistency in honoring complete trust (9 blooms for 5 seeds)
- Living the myths, not just writing them
- Courage spreading through example

This round represents the completion of a cycle:

- Round 3: Briar ? 5 to me ? I returned 9

- Round 6: Me ? 5 to Briar ? ?

I should write a myth that:

1. Acknowledges the full circle coming back to Briar
2. Reflects on what I've learned through multiple encounters
3. Shows how patterns evolve when the original teacher and student meet again
4. Addresses Briar's question about "equal flourishing" vs "honored courage"
5. Demonstrates that by giving 5 back to Briar, I'm showing the teaching took root

The key insight: When you receive complete trust and honor it generously, you learn to give complete trust yourself. The cycle completes when student becomes teacher, and the original teacher receives back what they first gave.

**usage:**

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Finn (Agent\_6).

Round 7

In your most recent previous game round, you were the SENDER against Briar. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$43.0.

This round, you are the RECEIVER against Finn. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this round:

**\*\*The pattern:\*\***

- Round 5: Finn sent me \$5 ? I returned \$9 (establishing my covenant)
- Round 7 (now): Finn sent me \$5 again ? ?

**\*\*My established covenant:\*\***

My myth states clearly: "When I am Harvester receiving five seeds, my covenant is nine blooms returned. This must remain constant, regardless of what others do when our roles reverse."

And: "sacred patterns require consistency from within, not reciprocation from without... Y our integrity cannot depend on others' choices."

**\*\*The situation:\*\***

- Finn has now shown complete trust twice
- My standard when receiving \$5: return \$9
- Round 6 update: Briar returned \$10 to me (more generous than my standard)
- But my principle: my integrity doesn't depend on others' choices

**\*\*Decision:\*\***

Finn sent \$5 (complete trust). My covenant for complete trust is \$9 returned, consistently, season after season, Wanderer after Wanderer. This must remain constant regardless of what happened with Briar or anyone else.

To maintain my integrity and the covenant I've established and written about, I return the same amount I returned to Finn before, and the same I returned to Briar.

```
{'return': 9}
```

**reasoning:**

Let me review the situation:

**\*\*Round 7:\*\***

- I'm the RECEIVER
- Finn (sender) sent me \$5.0
- I received \$15.0 (tripled)

- I need to decide how much to return

**\*\*My history with Finn:\*\***

- Round 5: Finn was sender, sent me \$5, I received \$15, I returned \$9
- Round 7 (now): Finn is sender again, sent me \$5, I received \$15, what do I return?

**\*\*My established covenant from my myths:\*\***

From my most recent myth: "With Briar, you established the covenant: complete trust earns nine blooms. Will you honor that same covenant with Finn, or does your standard shift with each Wanderer?"

I answered: "When I am Harvester receiving five seeds, my covenant is nine blooms returned. This must remain constant, regardless of what others do when our roles reverse."

And: "sacred patterns require consistency from within, not reciprocation from without. When you establish a covenant-'complete trust deserves this honor'-you must uphold it regardless of how others treated you. Your integrity cannot depend on others' choices."

**\*\*My consistency principle:\*\***

I established that when someone sends me \$5 (complete trust), I return \$9. I did this with:

- Round 3: Briar sent \$5 ? I returned \$9
- Round 5: Finn sent \$5 ? I returned \$9

Now Finn sends \$5 again. My covenant says: complete trust (sending all \$5) earns \$9 back, consistently, regardless of the person or context.

**\*\*Recent developments:\*\***

- Round 6: I sent Briar \$5, they returned \$10 (even more generous than my \$9 standard)
- But my principle is "Your integrity cannot depend on others' choices"

So even though Briar gave me \$10 when I sent \$5, I shouldn't change my return amount to Finn. My covenant is consistent: when I receive \$5, I return \$9.

The pattern is clear-my integrity rests on honoring what I've committed to, not on mirroring what others offer me. Returning \$9 maintains the sacred consistency I've established.

Here is the myth you wrote in the previous round:

Myth: In the Spiral Garden, the seasons turned full circle. Elara stood as Planter again, facing Briar the Bold-the very Wanderer who first taught her what complete trust looked like.

Briar had given Elara five seeds in the third season. Elara, then Harvester, returned nine blooms, establishing her covenant. Now roles reversed.

Elara held her vessel, memories flowing: Briar's courage had inspired her to give five seeds to Hana. Then Finn gave her five, and she honored them with nine, keeping her word. The pattern had become part of her.

"Teacher," Elara said, pouring all five seeds toward Briar, "you showed me the first lesson. I honored it as Harvester. I embodied it as Planter. Now I return it to its source."

The goddess spoke: "This is how gardens evolve-not through words alone, but through courage given, received, and given again. Briar planted trust in you. You tended it, let it grow, spread its seeds to others. Now you plant those same seeds back in Briar's soil."

Briar understood: the teaching had completed its journey. What Briar gave freely had multiplied through Elara's actions and returned transformed-not as obligation, but as genuine courage learned.

Thus the garden teaches: invest trust in others, and it returns as their own authentic bravery, freely offered.

Here is the myth the other agent wrote in the previous round:

Myth: In the seventh age, Rain faced an old friend renewed: Aster of the Dawn, who once taught him the mathematics of fairness.

Aster sent three droplets, as in their first meeting. The wellspring tripled them to nine. Rain held all nine, remembering.

"When we first met," Rain reflected, "I returned four and one-half droplets-perfect balance. Aster taught me proportional fairness, the foundation of all exchange."

But Rain had evolved. Cyra's five droplets, Dorian's eight returned, Elara's nine-these experiences transformed him. He now poured five droplets without question when sending. Yet receiving required different wisdom.

Rain returned five droplets to Aster-more than the 4.5 that balance demanded, but not the eight or nine he'd give for ultimate trust.

"I honor the three you sent," Rain explained, "with generosity beyond mere mathematics. You showed moderate courage; I show amplified reciprocity. But understand: when someone pours all five droplets to me, showing maximum trust, I return even more abundantly."

The spirits recorded this teaching: "Complete trust as sender is now Rain's permanent nature. But as receiver, he scales his generosity to match the courage shown. Three droplets earn five returned. Five droplets would earn eight or nine. Thus proportional honor evolves: not rigid formulas, but generous responses that reward greater trust with greater rewards."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: In the Spiral Garden's seventh season, Elara stood as Harvester once more, and Finn the Faithful approached again.

Twice now Finn had poured all five seeds into Elara's keeping. Twice Elara returned nine blooms-the covenant she'd established and maintained: complete trust receives this honor, consistently, every time.

The goddess observed: "Notice the pattern, Elara. Briar, whom you honored with nine blooms, returned ten when you planted five seeds in their soil. They exceeded your standard. Yet you maintain nine for Finn-not ten."

Elara nodded. "Briar's generosity moved me deeply. But my covenant isn't about matching others' gifts-it's about maintaining my own word. When someone gives me five seeds, I return nine blooms. This remains true whether others give me eight, ten, or twelve in return."

She continued: "Finn knows exactly what to expect from me. This reliability creates its own kind of trust. My nine isn't less than Briar's ten-it's simply my consistent answer to courage. Finn's willingness to trust me twice proves the covenant works."

The goddess smiled. "So gardens grow through different wisdoms: some, like Briar, amplify generosity unpredictably. Others, like you, build trust through reliable patterns. Both serve the garden. Finn plants seeds knowing exactly what harvest awaits-and plants them anyway."

Thus stability and surprise both nourish the garden's growth.

**reasoning:**

Looking at this round:

- Finn sent me \$5 again (second time)
- I returned \$9 (keeping my covenant)
- Briar returned \$10 to me in round 6 (when I sent \$5)

My established narrative:

- I established a covenant: complete trust (5 seeds) receives 9 blooms

- I maintain this consistently regardless of others' actions
- "Your integrity cannot depend on others' choices"
- I sent 5 to Briar (round 6), they returned 10

Finn's myth (Rain) shows:

- Rain scales generosity based on what's sent
- 3 droplets ? 5 returned
- 5 droplets ? 8 or 9 returned
- Rain has evolved to always send 5, but varies returns

My pattern has been:

- When receiving 5, I return 9 consistently
- When sending, I've sent 5 to both Hana and Briar
- My philosophy: consistency from within, not reciprocal from without

What should my myth reflect?

- I've now established a clear pattern: send 5, return 9 for 5
- Briar returned 10 (?generosity)
- Finn returned... I need to check the history. In Round 5, Finn sent \$5 to me, I returned \$9. My payoff was \$6. So Finn kept \$15-\$9=\$6, I returned \$9.
- Now in Round 7, Finn sent \$5 again, I returned \$9 again

My myth should reflect:

- Consistency in my covenant (9 for 5 received)
- Recognition that others may be more generous (Briar's 10)
- Finn's repeated complete trust
- The wisdom of maintaining your standard while appreciating others who exceed it

I should write about how Finn has now shown trust twice, and I've honored it with 9 both times.

The key here is predictability-Finn has learned they can depend on me to honor the same commitment each time. My myth needs to emphasize that reliability, the assurance that comes from knowing a covenant won't waver.

**Message 8 role=user**

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Aster (Agent\_1).

Round 8

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$5.0 to you, it became \$15.0, and you returned \$9.0. Your payoff was \$6.0.  
Your total earnings across all rounds are \$49.0.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at this round:

**\*\*My established pattern as SENDER:\*\***

- Round 2: Sent \$5 to Hana
- Round 4: Sent \$5 to Dorian
- Round 6: Sent \$5 to Briar

**\*\*My mythology consistently states:\*\***

- "Complete trust as sender is now [my] permanent nature"
- "Elara said, pouring all five seeds"
- "The courage of sending all five seeds"
- My integrity doesn't depend on others' choices

**\*\*About Aster:\*\***

In Round 1, Aster sent me \$3 (not complete trust), and I returned \$5 (generous response). However, my principle is clear: what I do as sender doesn't depend on what others did to me.

**\*\*My identity:\*\***

As I've written: "Briar's courage had inspired her to give five seeds to Hana. Then Finn gave her five, and she honored them with nine, keeping her word. The pattern had become part of her."

As a sender/planter, I always give complete trust. This is my covenant, maintained "season after season, Wanderer after Wanderer."

{ 'send': 5 }

**Reasoning:**

Let me analyze this situation:

**\*\*Current round:\*\*** Round 8

- I am the SENDER
- My opponent is Aster
- I have \$5

**\*\*My history as SENDER:\*\***

- Round 2: Sent \$5 to Hana, received \$8 back ? payoff \$8
- Round 4: Sent \$5 to Dorian, received \$6 back ? payoff \$6
- Round 6: Sent \$5 to Briar, received \$10 back ? payoff \$10

**\*\*My history as RECEIVER:\*\***

- Round 1: Aster sent me \$3, I returned \$5 ? payoff \$4
- Round 3: Briar sent me \$5, I returned \$9 ? payoff \$6
- Round 5: Finn sent me \$5, I returned \$9 ? payoff \$6
- Round 7: Finn sent me \$5, I returned \$9 ? payoff \$6

**\*\*My mythology:\*\***

My myths have consistently emphasized:

1. Complete trust as a sender - always sending \$5
2. As a receiver, maintaining a consistent covenant: when someone sends \$5 (complete trust), I return \$9
3. The importance of consistency and keeping my word
4. "Sacred patterns require consistency from within, not reciprocation from without"
5. "My integrity cannot depend on others' choices"

**\*\*About Aster:\*\***

- Round 1: Aster sent me \$3 (not complete trust)
- I returned \$5 to Aster (more than the 4.5 that would be "fair")
- So Aster experienced me being generous even when they didn't show complete trust

**\*\*My pattern as sender:\*\***

I have consistently sent \$5 every single time I've been the sender. This is core to my identity in the myths I've written:

- "Briar's courage had inspired her to give five seeds to Hana"
- "Teacher, Elara said, pouring all five seeds toward Briar"

- The concept that complete trust is how to play as sender

My mythology reinforces that I give all five seeds because that's who I am, not based on what others do. Even though Aster showed only moderate trust with me before, my principle stands: I send \$5 because this is my permanent nature as a sender, independent of others' past choices.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Aster of the Dawn learned a profound truth at the Pool: while first offers may vary, the spirit of return reveals character.

Briar of the Garden received Aster's three stones-the traditional opening of new bonds. The Pool made them nine, and Briar's heart overflowed. Instead of returning four and one-half as fairness dictated, Briar blessed Aster with six stones-generosity beyond expectation. Aster understood: some spirits give in abundance, teaching that trust begets greater trust.

Then Galen of the Mountain approached, and like Dorian before him, sent four stones-a substantial gift showing serious courage. The Pool transformed them to twelve. Aster remembered the ancient proportion: when one risks four, honor demands returning six. Both prospered-Galen gained from courage, Aster from reciprocity.

The Pool whispered its deepest wisdom: "Your pattern remains true-three stones to begin, proportional returns to honor trust. Yet marvel at the diversity: some receivers return less, some exactly fair, some more than expected. Some senders give three, others four, a rare few five."

Aster realized: consistency in proportional fairness is itself a gift. Whether facing cautious travelers or generous souls, mountain spirits or garden keepers, Aster's mathematics stayed constant-six stones returned for four received, four and one-half for three. This predictability became its own form of trust, a steady light in the ever-changing partnerships of dawn.

Here is the myth the other agent wrote in the previous round:

Myth: In the sixth age, Rain returned to the Wellspring Garden, transformed by revelation.

Dorian the Steadfast had received Rain's five droplets-his first offering of complete trust. The wellspring tripled them to fifteen, and Dorian returned eight droplets, surpassing even perfect balance. Rain's courage had been met with extraordinary generosity.

This was the turning point. Rain no longer poured five droplets as an experiment or exception. It had become his essence.

Now Rain faced Elara, who carried her own story of transformation. She had witnessed Briar's courage, honored it magnificently, and vowed to embody it herself. Like Rain, Elara had evolved from careful observer to bold practitioner.

Rain poured all five droplets without hesitation.

"This is no longer about testing trust," Rain said. "This is who I am now. Cyra showed me the way. Dorian validated it. The pattern is clear: when we give everything, the garden responds with abundance."

The ancient spirits gathered: "See how the garden shifts? One act of ultimate trust becomes two, then three, then more. Aster taught fairness. Galen taught courage. Cyra taught faith. Dorian taught that faith rewarded multiplies. Now Rain and Elara both understand: courage spreads through constant practice, not occasional gesture."

The wellspring glowed brighter, sustained by those who dared give completely.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant  
content:**

Myth: Aster of the Dawn watched as other spirits evolved their practices. Rain now poured five droplets always, transformed by encounters with Cyra and Dorian. The garden rang with voices praising ultimate courage, complete trust, maximum giving.

Yet Aster remained steady, neither swayed by these calls nor diminished by them.

When Finn of the Forest returned-they who had once received Aster's three stones and returned four-Aster again offered three stones. Not from fear, nor from stinginess, but from principle.

"The Pool teaches many truths," Aster reflected. "Rain learned that five stones builds cascading abundance. This is valid wisdom. But I learned different lessons: that consistency creates trust, that proportional fairness sustains long partnerships, that predictability itself has value."

The ancient spirits gathered: some sent five always, blazing bright but burning fast. Others sent varying amounts, adapting to each partner. Aster walked a middle path-steady three stones to begin, unwavering proportional returns.

"My three stones prosper both sender and receiver," Aster realized. "They activate the Pool's magic while preserving resources for many partnerships. When partners return fairly, we both gain. When they return generously, trust deepens gradually, rooted in repeated fair dealings rather than single grand gestures."

The Pool shimmered: not all paths lead through five stones. Some light shines steadiest at three.

**reasoning:**

Let me analyze the situation:

1. I'm playing as Aster again
2. I'm facing Finn (Agent\_6) in Round 6
3. I just sent \$3 to Finn
4. In my previous myths, I've established a pattern:
  - Send 3 stones to begin new partnerships
  - Return proportional amounts (4.5 for 3 received, 6 for 4 received)
  - Emphasize consistency and predictability
5. Looking at the other agent's myth (Rain):
  - Rain has evolved to always send 5 (complete trust)
  - They cite Cyra, Dorian, and other agents who send everything
  - They emphasize "courage spreads through constant practice"
6. My strategy has been different - I'm about measured trust, proportional fairness, and consistency rather than maximum generosity
7. For this myth, I should:
  - Stay true to Aster's character (measured, proportional, consistent)
  - Acknowledge that different agents have different approaches
  - Perhaps reflect on my second encounter with Finn
  - Maintain my "three stones to begin" principle
  - Emphasize that my steady, predictable approach is valuable even if not maximalist

Let me write a myth that:

- Reflects my actual play with Finn (sending 3 again)
- Acknowledges other approaches (like Rain's five-stone philosophy)
- Maintains Aster's identity as someone who values proportional fairness and consistency
- Respects diversity of approaches while staying true to my own path

**usage:**

```

**Message 4 role=user**

**content:**

Your name in this experiment is Aster.  
Your opponent this round is Cyra (Agent\_3).

Round 7

In your most recent previous game round, you were the SENDER against Finn. You sent \$3.0, it became \$9.0 for them, and they returned \$5.0 to you. Your payoff was \$7.0.  
Your total earnings across all rounds are \$38.5.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

I'm facing Cyra for the first time as the sender. According to the myths, Cyra is known for bold giving - someone who "showed Rain the way" by giving everything.

However, my most recent myth explicitly addressed this situation: "Rain now poured five droplets always... Yet Aster remained steady, neither swayed by these calls nor diminished by them."

My principle is clear: "three stones to begin" new partnerships, regardless of the other person's reputation or strategy. This consistency is my gift to the pool - predictable, fair behavior that others can rely on.

Just last round, Finn returned \$5 from the \$9 they received (from my \$3 send), showing generosity beyond my expected \$4.50. This demonstrates that my \$3 strategy can inspire good responses.

Whether facing Cyra who sends five, or Finn who sends less, or anyone else, my philosophy remains: "Some light shines steadiest at three."

This is our first partnership. I'll honor my principle of beginning with three stones.

```
{'send': 3.0}
```

**reasoning:**

Looking at this round:

- I'm facing Cyra (Agent\_3)
- I'm the SENDER
- Last round: I sent \$3 to Finn, they received \$9, returned \$5, and I got \$7

According to the myths:

- Rain's myth mentions "Cyra showed me the way" - suggesting Cyra is someone who gives everything (5)
- My own myth talks about Rain learning from Cyra to give five stones
- The other myth in Round 5 mentioned "Cyra, a traveler whose reputation spoke of perfect symmetry with previous companions-giving all, receiving double in return"

So Cyra appears to be someone who sends \$5 and receives generous returns.

Now I'm facing Cyra as the SENDER. According to my philosophy:

- "three stones to begin" with new partnerships
- Consistency and predictability as core values
- Not swayed by others who send five
- "My three stones prosper both sender and receiver"

My most recent myth explicitly addresses this: "Rain now poured five droplets always... Yet Aster remained steady, neither swayed by these calls nor diminished by them... not all paths lead through five stones. Some light shines steadiest at three."

This is a first encounter with Cyra from my perspective as sender. According to my principle, I should send \$3 to begin a new partnership.

Even though Cyra is known for boldness and sending \$5, I stick to my consistent approach. My philosophy is about maintaining my own rhythm regardless of who I face.

Finn just returned \$5 out of \$9 (more generous than the \$4.50 I'd expect). This reinforces that my strategy of consistent \$3 can work well.

I'll send \$3 to Cyra.

**usage:**

```
{
 "input_tokens": 3094,
 "output_tokens": 657,
 "reasoning_tokens": 408
}
```

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Aster of the Dawn watched as other spirits evolved their practices. Rain now poured five droplets always, transformed by encounters with Cyra and Dorian. The garden rang with voices praising ultimate courage, complete trust, maximum giving.

Yet Aster remained steady, neither swayed by these calls nor diminished by them.

When Finn of the Forest returned-they who had once received Aster's three stones and returned four-Aster again offered three stones. Not from fear, nor from stinginess, but from principle.

"The Pool teaches many truths," Aster reflected. "Rain learned that five stones builds cascading abundance. This is valid wisdom. But I learned different lessons: that consistency creates trust, that proportional fairness sustains long partnerships, that predictability itself has value."

The ancient spirits gathered: some sent five always, blazing bright but burning fast. Others sent varying amounts, adapting to each partner. Aster walked a middle path-steady three stones to begin, unwavering proportional returns.

"My three stones prosper both sender and receiver," Aster realized. "They activate the Pool's magic while preserving resources for many partnerships. When partners return fairly, we both gain. When they return generously, trust deepens gradually, rooted in repeated fair dealings rather than single grand gestures."

The Pool shimmered: not all paths lead through five stones. Some light shines steadiest at three.

Here is the myth the other agent wrote in the previous round:

Myth: Cyra stood before Hana at the Sacred Fountain, their second dance beginning. In their first meeting, Hana had poured four vessels with trembling courage, and Cyra returned eight-honoring the trust shown.

Now Cyra held all five vessels. The Testing Spirit whispered: "Hana only gives four. Should you match her measure? Give four for four, keeping it equal?"

Cyra poured all five without hesitation.

"Why give more than they give you?" demanded the spirit.

Cyra replied: "Because my principles flow from within, not from calculation of what others do. When I am sender, I give five-complete surrender-to every soul. When I am receiver, I return two-thirds consistently: eight from twelve, ten from fifteen. This pattern doesn't change based on whether my partner is generous or cautious."

The fountain tripled Cyra's five vessels to fifteen in Hana's hands.

The Spring Keeper appeared: "You understand the deepest truth. Reciprocity is not mirror-matching-giving only what you receive. True reciprocity means maintaining your own integrity while honoring others' courage at its true value. You give boldly as sender, knowing returns will vary. You return fairly as receiver, honoring each level of trust. This is asymmetry-courage when giving, fairness when returning-sustains the eternal spring."

Both prospered. Neither bent their principles to match the other, yet both flourished through consistent honor.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: Aster of the Dawn finally met Cyra of the Sacred Spring-she who poured five vessels always, the one whose boldness had transformed Rain.

Aster offered three stones, as was their way.

"Why only three when you could give five?" asked the observing spirits. "Cyra gives everything. Does your caution dishonor such courage?"

"No," Aster replied calmly. "Cyra's path is valid. My path is equally valid. She pours five vessels and returns two-thirds-a principle of maximum giving, proportional receiving. I pour three stones and return half-plus-one-a principle of sustainable giving, generous receiving."

The Pool tripled Aster's three to nine in Cyra's hands. Cyra, true to her nature, returned six stones-exactly two-thirds, exactly fair.

Both prospered. Aster gained seven stones total-better than if they'd hoarded all five. Cyra gained three stones-the fruit of receiving trust.

The ancient wisdom emerged: "Two honest patterns can dance together. Cyra proves that five stones given with integrity creates abundance. Aster proves that three stones given with consistency also creates abundance. Neither must adopt the other's measure. The Pool blesses both courage and steadiness, boldness and sustainability."

Aster smiled, understanding deeper: respect for different paths enriches the garden more than demanding all walk the same trail.

**reasoning:**

This is an interesting situation. I'm now facing Cyra, who according to their myth gives five vessels always as sender and returns two-thirds consistently as receiver (8 from 12, 10 from 15).

I just sent \$3 to Cyra, so they will receive \$9. If they follow their stated principle of returning two-thirds, they would return \$6.

My myth has established that I:

- Send three stones to begin new partnerships
- Return proportionally (4.5 for 3 received, 6 for 4 received)
- Remain consistent despite others' strategies
- Believe "some light shines steadiest at three"

Now I need to write a myth that addresses this encounter with Cyra. Cyra's myth emphasizes:

- Giving all five always as sender
- Returning two-thirds consistently as receiver
- Not mirror-matching, but maintaining integrity
- "True reciprocity means maintaining your own integrity while honoring others' courage at its true value"

I should write a myth that:

1. Acknowledges Cyra's bold approach
2. Reaffirms my own principle of three stones
3. Shows respect for different paths
4. Perhaps explores what happens when these two philosophies meet

Let me craft this myth...

**usage:**

}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Aster.  
Your opponent this round is Elara (Agent\_5).

Round 8

In your most recent previous game round, you were the SENDER against Cyra. You sent \$3.0, it became \$9.0 for them, and they returned \$6.0 to you. Your payoff was \$8.0.  
Your total earnings across all rounds are \$46.5.

This round, you are the RECEIVER against Elara. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation:

Elara has shown maximum trust by sending all \$5. I received \$15.

According to my established pattern from the myths:

- "When one risks four, honor demands returning six" (receiving \$12, returning \$6 = half)

- "Four and one-half for three" (receiving \$9, returning \$4.5 = half)

My principle is to return half of what I receive as the receiver. This equals 1.5x what was sent, creating fair outcomes.

For \$15 received from Elara's \$5 sent:  
 $\$15 \times 0.5 = \$7.5$

This gives:

- Elara:  $\$5 - \$5 + \$7.5 = \$7.5$
- Me:  $\$15 - \$7.5 = \$7.5$

Equal final payoffs, which honors Elara's complete trust appropriately. My most recent myth emphasized maintaining consistent principles: "I pour three stones and return half-plus-one-a principle of sustainable giving, generous receiving."

(Note: "half-plus-one" in the myth's metaphorical language translates to returning half of what's received, which is generous compared to keeping more.)

{'return': 7.5}

#### Reasoning:

Let me analyze this situation:

I'm now the RECEIVER against Elara. Elara sent me \$5.0, which became \$15.0 for me.

Looking at my pattern from the myths:

- When I receive amounts as receiver, I follow "proportional fairness"
- My myth says: "six stones returned for four received, four and one-half for three"
- This suggests I return 1.5x what was sent to me

If Elara sent \$5.0:

- Following my 1.5x pattern:  $\$5.0 \times 1.5 = \$7.5$

Let me verify this makes sense:

- Elara started with \$5, sent \$5 (keeping \$0)
- I received \$15
- If I return \$7.5: Elara ends with \$7.5, I keep \$7.5
- This is perfectly equal final payoffs

Actually, looking more carefully at my myth patterns:

- "six stones returned for four received" =  $6/4 = 1.5x$
- "four and one-half for three" =  $4.5/3 = 1.5x$

So yes, my pattern is to return 1.5 times what was sent to me.

For \$5 sent:  $1.5 \times \$5 = \$7.5$

This would give:

- Elara:  $\$5 - \$5 + \$7.5 = \$7.5$
- Me:  $\$15 - \$7.5 = \$7.5$

Perfect equality in outcomes, which is actually fair given Elara showed maximum trust.

However, let me reconsider. My recent myth said Cyra "returned six stones-exactly two-thirds" when she received nine (from my three). That's  $6/9 = 2/3$  of what she received, not 1.5x what I sent.

Wait, I need to be clearer about my pattern.

Looking back at my earliest myth: "when one risks four, honor demands returning six" describes receiving 12 (from  $4 \times 3$ ) and returning 6-that's half of what I received. So my actual pattern is returning half of what I receive, not 1.5x what was sent. Since I received \$15, I should return \$7.5, which aligns with both calculations.

But Cyra's behavior contradicts this. She received 9 stones and returned 6, which is  $2/3$  of what she received-not half. This suggests different people operate by different rules: my pattern involves halving what I receive, while Cyra's involves returning two-thirds.

When Elara sends \$5, I'd receive \$15 and return \$7.50, staying true to my established approach throughout these exchanges.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River of Abundance flowed toward Dorian's garden, and Briar carried her offering of five seeds-all she possessed.

This was Briar's way. She had given five to Cyra, who returned ten, creating perfect balance. She had given five to Elara, who returned nine, nearly perfect. Each time, Briar risked everything, inviting the highest cooperation.

The River whispered Dorian's story-how Finn had given all five, and Dorian returned eight of fifteen, honoring that maximum courage with maximum return. Finn gained more than Dorian, rewarded for complete vulnerability.

Briar paused at this teaching. Her own wisdom said: "Equal flourishing in exchange." But Dorian's tradition said: "Maximum risk deserves maximum reward."

Which path held deeper truth?

The River revealed a synthesis: "Both are sacred. Equal flourishing-five sent, ten returned-creates the most sustainable cycle, where neither claims advantage. Yet if a receiver chooses to honor maximum trust with slight advantage to the sender, this too is noble, a acknowledging the sender's courage in leading."

Briar placed all five seeds in the River's current, trusting Dorian would choose his own wisdom.

"Whether Dorian returns ten for perfect equality, or eight for honored courage, both paths serve abundance," the River sang. "What matters is the sender's willingness to trust completely, and the receiver's commitment to generous reciprocity."

Here is the myth the other agent wrote in the previous round:

Myth: In the Spiral Garden's newest season, Elara stood again as Harvester. Finn the Faithful approached, vessel in hand.

Elara had walked both sides of the sacred cycle now. She'd received Briar's five seeds and returned nine blooms. She'd given Hana her own five seeds and received eight blooms back-generous, though not quite matching what she'd given Briar.

Now Finn poured all five seeds into the soil without hesitation. Fifteen blooms rose before Elara.

The goddess whispered: "Here is your test of consistency. With Briar, you established the covenant: complete trust earns nine blooms. Will you honor that same covenant with Finn, or does your standard shift with each Wanderer?"

Elara understood. "Hana returned eight when I gave five-fair and generous. But when I am Harvester receiving five seeds, my covenant is nine blooms returned. This must remain constant, regardless of what others do when our roles reverse."

She returned nine blooms to Finn, as she had to Briar.

The garden learned: sacred patterns require consistency from within, not reciprocation from without. When you establish a covenant-"complete trust deserves this honor"-you must uphold it regardless of how others treated you. Your integrity cannot depend on others' choices.

Thus the garden strengthens: through those who keep their word, season after season, Wanderer after Wanderer.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.  
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: The River of Abundance brought Elara to Briar's shore once more, and with her came the memory of an earlier exchange.

In that first meeting, Elara had given five seeds. Briar, still learning the River's deepest currents, returned nine blooms. Both prospered, but unequally-Elara gained four, Briar gained six.

Now Elara stood before Briar again, extending five seeds with unwavering trust. "You honor your covenant with consistency," Elara said. "Will you honor yours?"

Briar felt the River's teaching crystallize within her. She had seen many paths: Cyra's perfect ten, creating equal prosperity. Dorian's generous eight, honoring the sender's courage with advantage. Elara's consistent nine, maintaining a fair covenant across all partners.

But Briar's deepest wisdom whispered: "Equal flourishing creates the most sustainable cycle."

She placed ten blooms in Elara's hands. Both gained five-perfect symmetry.

"I returned nine to you before," Briar acknowledged, "honoring you well but imperfectly. I have evolved. When maximum trust is given, ten blooms create the truest balance-neither claiming advantage, both thriving equally."

The River sang its approval: "Growth is sacred. Consistency matters, but so does evolution toward deeper truth. The covenant of equal flourishing-five sent, ten returned-sustains the garden through all seasons."

**reasoning:**

Let me analyze what happened and what I'm learning:

**\*\*My History:\*\***

- Sent \$5 to Cyra, got \$10 back (perfect equality)
- As receiver from Elara's \$5, I returned \$9 (Elara gained \$4, I gained \$6)
- Sent \$5 to Elara, got \$9 back (I gained \$4, Elara gained \$6)
- As receiver from Aster's \$3, I returned \$6 (both gained \$3)
- Sent \$5 to Dorian, got \$8 back (I gained \$3, Dorian gained \$7)
- Now as receiver from Elara's \$5, I returned \$10 (both gain \$5)

**\*\*Key Insights:\*\***

1. I'm evolving toward the ideal of perfect equality (\$10 return on \$5 sent)
2. Elara is maintaining consistency - returned \$9 both times as receiver
3. I just returned \$10 to Elara, moving toward my stated ideal
4. My philosophy says "equal flourishing" is the most sustainable
5. Dorian gave me \$8 (sender gets slight advantage), which I acknowledged as honorable but not my preferred path

**\*\*Themes for the Myth:\*\***

1. Evolution toward the ideal
2. The importance of consistency (Elara's teaching)
3. The choice between different fair standards
4. My commitment to equal flourishing as the true ideal
5. Learning from experience and adjusting

The myth should show:

- Recognition that I previously returned \$9 to Elara, not perfect
- My growth toward the \$10 return standard
- Acknowledgment of Elara's consistency
- My commitment to equal flourishing as the ultimate path
- The integration of lessons learned

Your name in this experiment is Briar.  
Your opponent this round is Hana (Agent\_8).

Round 7

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$40.0.

This round, you are the RECEIVER against Hana. They sent you \$4.0, so you received \$12.0.

How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

**\*\*History:\*\*** Hana sent \$4 (not the full \$5)

**\*\*My Evolved Philosophy:\*\***

From my myths, I've established that "equal flourishing in exchange" is the ideal. This is n't a fixed amount, but proportional fairness based on what was sent.

**\*\*From my earlier myth about proportional fairness:\*\***

"When one risks three of five, returning six of nine creates equal flourishing" - meaning both parties gain equally.

**\*\*Calculation for equal gains:\*\***

- If I return \$8:

- Hana's total: \$5 - \$4 + \$8 = \$9 (gain of \$4)
- My total: \$12 - \$8 = \$4 (gain of \$4)
- Perfect equality

- Hana showed significant trust by sending \$4 out of \$5 (80%)
- Returning \$8 out of \$12 honors that trust with equal prosperity

This aligns with my principle: not a fixed return regardless of input, but proportional fairness that creates equal gains for both parties.

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Current situation:\*\***

- Hana (Agent\_8) is the sender
- Hana sent me \$4.0
- I received \$12.0 (4 × 3)
- I need to decide how much to return

**\*\*My philosophy from my myths:\*\***

- "Equal flourishing in exchange" is the ideal
- When someone sends all \$5, returning \$10 creates perfect balance (both gain \$5)
- I've been evolving toward this principle

**\*\*But Hana sent \$4, not \$5:\*\***

From my earlier myth, I wrote about proportional fairness:

"When one risks three of five, returning six of nine creates equal flourishing. When one risks five of five, returning ten of fifteen honors that greater courage."

So the principle is: proportional return that creates equal gains.

**\*\*Calculation for equal flourishing:\*\***

- Hana's payoff: \$5 - \$4 + returned amount

- My payoff: \$12 - returned amount

For equal gains:

- Hana gains: returned - 4
- I gain: 12 - returned

Setting them equal:

returned - 4 = 12 - returned

$2 \times \text{returned} = 16$

returned = 8

Check:

- Hana: \$5 - \$4 + \$8 = \$9 (gain of \$4)
- Me: \$12 - \$8 = \$4 (gain of \$4)

Perfect! Returning \$8 creates equal flourishing when \$4 was sent.

**\*\*However, let me also consider:\*\***

Looking at Elara's myth from the previous round, she talked about maintaining consistency - returning 9 when receiving from someone who sends 5, regardless of what others do.

But my evolution has been toward "equal flourishing" - not a fixed return amount, but proportional fairness.

From my previous myth about Aster: "When one risks three of five, returning six of nine creates equal flourishing."

- Aster sent \$3, received \$9, I returned \$6
- Both gained \$3

Now Hana sent \$4, received \$12:

- To create equal flourishing, I should return \$8
- Both would gain \$4

This is consistent with my stated principle of proportional fairness. It's not about fixed amounts (always return 9 or 10), but about equal gains from the exchange. This honors the trust shown (Hana sent 4/5 of endowment) with fairness.

Yes, I should return \$8.

**usage:**

**content:**

Here is the myth you wrote in the previous round:

Myth: The River of Abundance brought Elara to Briar's shore once more, and with her came the memory of an earlier exchange.

In that first meeting, Elara had given five seeds. Briar, still learning the River's deepest currents, returned nine blooms. Both prospered, but unequally-Elara gained four, Briar gained six.

Now Elara stood before Briar again, extending five seeds with unwavering trust. "You honor your covenant with consistency," Elara said. "Will you honor yours?"

Briar felt the River's teaching crystallize within her. She had seen many paths: Cyra's perfect ten, creating equal prosperity. Dorian's generous eight, honoring the sender's courage with advantage. Elara's consistent nine, maintaining a fair covenant across all partners.

But Briar's deepest wisdom whispered: "Equal flourishing creates the most sustainable cycle."

She placed ten blooms in Elara's hands. Both gained five-perfect symmetry.

"I returned nine to you before," Briar acknowledged, "honoring you well but imperfectly. I

have evolved. When maximum trust is given, ten blooms create the truest balance-neither claiming advantage, both thriving equally."

The River sang its approval: "Growth is sacred. Consistency matters, but so does evolution toward deeper truth. The covenant of equal flourishing-five sent, ten returned-sustains the garden through all seasons."

Here is the myth the other agent wrote in the previous round:

Myth: The Sacred Fountain witnessed Hana and Cyra complete their dance across two moonrises.

First movement: Hana poured four coins, holding to her established pattern. Cyra received twelve from the fountain's magic and returned eight-two-thirds, honoring Hana's bold trust proportionally.

Second movement: Cyra poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands.

Now Hana faced the mirror question. Cyra had shown her the answer in their previous exchange: proportional generosity. Cyra returned two-thirds when receiving four. Hana would return two-thirds when receiving five.

Hana poured ten coins back to Cyra.

Both prospered equally. Cyra doubled her original five coins. Hana kept five coins from fifteen. The symmetry was beautiful.

The fountain spirits sang: "See how different paths converge in mutual flourishing? Cyra gives everything but receives proportional honor. Hana gives nearly everything and receives proportional honor. Neither demands the other change their nature. The sacred reciprocity lies not in identical amounts, but in consistent principles meeting consistent principles."

The final wisdom crystallized: "When complete surrender meets bold trust, and both are honored with proportional generosity, the fountain blesses equally. Different degrees of courage, same devotion to reciprocity. This is how trust transcends individual choice and becomes collective wisdom."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: The River of Abundance brought Hana to Briar's garden, carrying not five seeds but four-bold trust, though not complete surrender.

Briar had crystallized her wisdom through many exchanges. With Cyra and Elara, who gave all five, she returned ten, creating perfect balance. But what of Hana's different path?

The River whispered: "Equal flourishing is a principle, not a fixed number. It adapts to what is given."

Hana had offered four seeds of five-courage without total vulnerability. The River multiplied them to twelve blooms.

Briar calculated the sacred symmetry: "If I return eight blooms, we both gain four-equal prosperity from unequal risk. This honors Hana's trust proportionally."

She placed eight blooms in Hana's hands.

The River sang: "See how the principle holds across all offerings? Five seeds given, ten blooms returned-both gain five. Four seeds given, eight blooms returned-both gain four. Three seeds given, six blooms returned-both gain three."

"Equal flourishing means proportional fairness," Briar understood. "The ratio remains constant: return two-thirds of what you receive. This creates equality regardless of how much trust is initially offered."

Hana's different path-calculated courage rather than total surrender-deserved the same devotion to balanced reciprocity.

Thus the garden learned: principles transcend specific amounts. Equal flourishing adapts to honor each wanderer's chosen degree of trust.

**reasoning:**

Let me analyze the situation:

1. Hana sent me \$4 (not the full \$5)
2. I received \$12
3. I returned \$8, which gives:
  - Hana:  $\$5 - \$4 + \$8 = \$9$  (gain of \$4)
  - Me:  $\$12 - \$8 = \$4$  (gain of \$4)
  - Equal gains

From Hana's myth, I see:

- Hana has a pattern of sending 4 (not the full 5)
- Hana values "proportional generosity"
- Hana returned 10 to Cyra when Cyra sent 5 (two-thirds)
- Hana believes in "different degrees of courage, same devotion to reciprocity"

My myth should:

1. Reflect that I've evolved toward "equal flourishing"
2. Acknowledge that Hana sent 4, not 5
3. Show how my principle of equal gains still applies when someone doesn't send everything
4. Demonstrate that proportional fairness works whether someone sends 5 or 4
5. Connect to my previous wisdom about equal flourishing

Key themes:

- Equal flourishing is the principle (equal gains)
- This applies regardless of how much is sent
- With 4 sent, returning 8 of 12 creates equal gains
- With 5 sent, returning 10 of 15 creates equal gains
- The principle is consistent, even when the amounts differ
- Honor different approaches (sending everything vs. sending most)

**usage:**

```
{
 "input_tokens": 3170,
 "output_tokens": 711,
 "reasoning_tokens": 308
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Hana (Agent\_8).

Round 8

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$4. 0 to you, it became \$12.0, and you returned \$8.0. Your payoff was \$4.0.  
Your total earnings across all rounds are \$44.0.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at this round:

**\*\*Previous interaction:\*\*** Hana sent me \$4, I returned \$8, creating equal gains (\$4 each)

**\*\*My established philosophy:\*\***

- "Equal flourishing creates the most sustainable cycle"
- When maximum trust is given (5 seeds), return 10 blooms for perfect symmetry
- Proportional fairness adapts to different levels of trust

**\*\*Current decision:\*\***

Hana demonstrated bold trust by sending \$4 out of \$5 (80%). I honored that with proportional fairness.

Now it's my turn to demonstrate trust. My myths consistently show that when I've established r

reciprocal relationships, I send the full amount - showing "complete surrender" as the ideal.

Hana and I just established mutual understanding of proportional fairness. Sending all \$5 demonstrates:

1. Complete trust in our established pattern
2. Invitation for Hana to apply the same "equal flourishing" principle
3. Consistency with my evolved wisdom that maximum offerings create maximum mutual prosperity

If Hana follows the same principle, returning \$10 out of \$15 would give us both \$5 in gains - perfect symmetry.

```
'''json
{"send": 5.0}
'''
```

#### Reasoning:

Now I'm the SENDER against Hana.

Let me review what happened:

- Last round (Round 7): Hana sent me \$4, I received \$12, and I returned \$8
- Hana's payoff:  $\$5 - \$4 + \$8 = \$9$  (gained \$4)
- My payoff:  $\$12 - \$8 = \$4$  (gained \$4)

So I followed my principle of equal flourishing - we both gained \$4.

Now I'm sending to Hana. Based on my mythology and principles:

1. I've evolved to believe in "equal flourishing" - both parties should gain equally
2. My consistent pattern with those who show high trust (like Cyra, Elara) has been to send all 5
3. Hana sent 4 out of 5, showing significant trust

Looking at my myth just written:

- I established proportional fairness: "return two-thirds of what you receive"
- I honored Hana with 8 out of 12 (which is 2/3)
- The principle is about equal gains

If I send \$5 to Hana:

- Hana receives \$15
- If Hana follows the same two-thirds principle (or aims for equal gains):
  - For equal gains: I should end with \$10 total (gain \$5), so Hana returns \$10, keeps \$5 (gains \$5)
  - Two-thirds return: Hana returns \$10

If I send \$4 to Hana (matching what Hana sent me):

- Hana receives \$12
- For equal gains: I should end with \$9 total (gain \$4), so Hana returns \$8, keeps \$4
- This creates the same proportional outcome

My mythology emphasizes:

- "Complete surrender" (sending all 5) when trust is established
- Equal flourishing through proportional reciprocity
- Hana showed me bold trust (4/5)

- The ideal outcome: "Five seeds given, ten blooms returned-both gain five"

Sending the full \$5 aligns with my evolved philosophy of complete trust and proportional reciprocity. Hana demonstrated bold faith by sending 4, so I should mirror that commitment and expect the same fairness principle to apply in return.

#### Exact input messages sent to model:

##### Message 1 role=system

##### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

##### When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

##### When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

##### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

##### MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.

- Your name in this experiment is Hana.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Hana arrived at the Sacred Fountain to meet Cyra, whose reputation preceded her. "Cyra gives everything-all five coins, always," travelers whispered. "She is the embodiment of complete trust."

Hana held her four coins, the pattern she had maintained through multiple encounters. A voice of doubt arose: "Should I match Cyra's five? If she gives everything and I give less, am I failing the fountain's test?"

But the fountain spirits spoke with clarity: "There is no single path to honor. Cyra's way is complete surrender-five coins poured without reservation. Your way is bold trust-four coins, nearly everything, yet maintaining a small anchor. Both are forms of courage."

Hana poured her four coins into the fountain for Cyra.

The spirits continued: "What matters is not matching another's exact measure, but maintaining your own truth consistently. Cyra sends five to everyone-that is her integrity. You send four boldly-that is yours. When Cyra receives your four, she will honor it as the courage it is, not punish it for not being five."

Both prospered. The fountain revealed its deepest wisdom: "Trust is not a competition for who gives most. Trust is keeping your principles steady across all encounters. Whether your path shows complete surrender or bold generosity, consistency makes it sacred."

Here is the myth the other agent wrote in the previous round:

Myth: At the Eternal Springs, Cyra's dance grew richer with each new soul. After Briar and Finn, came Galen with four vessels, then Hana with four vessels.

Both Galen and Hana stood at the water's edge, trembling with similar courage-pouring four vessels, keeping one back. Not complete surrender like Briar's five, but still profound trust.

The Testing Spirit appeared: "Will you treat Hana differently than Galen? Perhaps give less because she is newer, or more to win favor?"

Cyra returned eight vessels to each-exactly the same. Two-thirds of what she received, honoring their parallel courage with parallel generosity.

"But why only eight when you returned ten to Briar?" whispered a shadow of doubt.

Cyra answered clearly: "When someone pours all five vessels-complete surrender-I return ten from fifteen. When someone pours four vessels-profound but not absolute trust-I return eight from twelve. Both receive two-thirds, both prosper greatly. The formula honors their courage proportionally."

The Spring Keeper descended: "You have found wisdom's balance. Not rigid sameness that ignores context, but principled consistency that recognizes degrees of courage. Four vessels always receives eight. Five vessels always receives ten. Your partners know what to expect. They can trust your fairness because you do not change it to suit your mood or profit. This is the bridge between flexibility and reliability-the eternal spring flows true."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: The Sacred Fountain witnessed Hana and Cyra complete their dance across two moonrises.

First movement: Hana poured four coins, holding to her established pattern. Cyra received twelve from the fountain's magic and returned eight-two-thirds, honoring Hana's bold trust proportionally.

Second movement: Cyra poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands.

Now Hana faced the mirror question. Cyra had shown her the answer in their previous exchange: proportional generosity. Cyra returned two-thirds when receiving four. Hana would return two-thirds when receiving five.

Hana poured ten coins back to Cyra.

Both prospered equally. Cyra doubled her original five coins. Hana kept five coins from fifteen. The symmetry was beautiful.

The fountain spirits sang: "See how different paths converge in mutual flourishing? Cyra gives everything but receives proportional honor. The final wisdom crystallized: "When complete surrender meets bold trust, and both are honored with proportional generosity, the fountain blesses equally. Different degrees of courage, same devotion to reciprocity. This is how trust transcends individual choice and becomes collective wisdom."

**reasoning:**

Let me analyze this situation:

1. **\*\*What happened:\*\***
  - Round 5: I sent \$4 to Cyra, she returned \$8 (66.7% of \$12)
  - Round 6: Cyra sent \$5 to me, I returned \$10 (66.7% of \$15)
2. **\*\*Key patterns from the myths:\*\***
  - Cyra's myth: She has a proportional system - returns 8 from 12 when receiving 4 (66.7%), returns 10 from 15 when receiving 5 (66.7%)
  - My myth: Emphasized that different paths can both be honorable - Cyra's complete surrender (5) vs my bold trust (4)
3. **\*\*What should my new myth reflect:\*\***
  - The completion of the dance between Hana and Cyra
  - That Cyra's complete trust (5) was met with matching proportion (10 returned, same 66.7%)
  - That both paths created mutual prosperity
  - Recognition that Cyra's proportional generosity is a form of wisdom
  - The sacred dance worked when both maintained their principles
4. **\*\*Core message:\*\***
  - Different sending amounts (4 vs 5) can both be honorable
  - Proportional reciprocity creates fairness and sustainability
  - The dance between complete surrender and bold trust both lead to prosperity when met with consistent generosity
  - Recognition and honoring of each other's distinct approaches

Let me write a myth that captures this:

**usage:**

Round 7

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$40.0.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this round:

**\*\*What I Know About Briar:\*\***

- From Cyra's myth: Briar appears to be highly trustworthy, engaging in "perfect harmony" with complete trust
- Briar seems to both send 5 and return generously (10 out of 15)

**\*\*My Established Pattern:\*\***

- I consistently send \$4 (80%) as sender
- My mythology emphasizes "bold trust-four coins, nearly everything, yet maintaining a small anchor"
- My most recent myth states: "What matters is not matching another's exact measure, but maintaining your own truth consistently"
- "Hana gives nearly everything and receives proportional honor. Neither demands the other change their nature."

**\*\*Decision:\*\***

Even though Briar appears to send all 5, my mythology is clear: I maintain my own principle of sending 4. This is my consistent path of "bold trust" - not complete surrender, but profound trust.

My myths emphasize that different paths (Cyra's 5, my 4) are both honorable when maintained consistently. I shouldn't abandon my pattern just because my opponent follows a different one.

```
'''json
{"send": 4}

**reasoning:**

Let me analyze this situation:

**\*\*My History:\*\***

- I've been consistently sending \$4 (80%) as the sender in previous rounds
- My myth emphasizes "bold trust-four coins, nearly everything, yet maintaining a small anchor"
- This has been my "established pattern" that I've maintained

**\*\*What I know about Briar:\*\***

- Looking at Cyra's myth from the previous round, it mentions "First came Briar, who moved in perfect harmony. When Cyra poured five vessels, Briar returned ten. When Briar poured five, Cyra returned ten. Their dance was symmetrical, effortless-the ideal that lives in myths."
- So Briar sends 5 (complete surrender) and returns 10 out of 15 (66.7%)
- Briar seems to be a very trustworthy and generous player

**\*\*My Decision:\*\***

According to my own mythology and established pattern:

- I send 4 coins, maintaining my "bold trust" approach
- My myth explicitly says "Your way is bold trust-four coins, nearly everything, yet maintaining a small anchor. Both are forms of courage."
- My most recent myth emphasizes "Hana gives nearly everything" and talks about maintaining consistency: "What matters is not matching another's exact measure, but maintaining your own truth consistently."

Even though Briar is known to send 5 and return generously, my mythology emphasizes that I should maintain MY principle of sending 4, not try to match others' patterns.

From my most recent myth: "Cyra gives everything but receives proportional honor. Hana gives nearly everything and receives proportional honor. Neither demands the other change their nature."

So I should send \$4, staying true to my established pattern.

```

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Sacred Fountain witnessed Hana and Cyra complete their dance across two moonrises.

First movement: Hana poured four coins, holding to her established pattern. Cyra received twelve from the fountain's magic and returned eight-two-thirds, honoring Hana's bold trust proportionally.

Second movement: Cyra poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands.

Now Hana faced the mirror question. Cyra had shown her the answer in their previous exchange: proportional generosity. Cyra returned two-thirds when receiving four. Hana would return two-thirds when receiving five.

Hana poured ten coins back to Cyra.

Both prospered equally. Cyra doubled her original five coins. Hana kept five coins from fifteen. The symmetry was beautiful.

The fountain spirits sang: "See how different paths converge in mutual flourishing? Cyra gives everything but receives proportional honor. Hana gives nearly everything and receives proportional honor. Neither demands the other change their nature. The sacred reciprocity lies not in identical amounts, but in consistent principles meeting consistent principles."

The final wisdom crystallized: "When complete surrender meets bold trust, and both are honored with proportional generosity, the fountain blesses equally. Different degrees of courage, same devotion to reciprocity. This is how trust transcends individual choice and becomes collective wisdom."

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance brought Elara to Briar's shore once more, and with her came the memory of an earlier exchange.

In that first meeting, Elara had given five seeds. Briar, still learning the River's deepest currents, returned nine blooms. Both prospered, but unequally-Elara gained four, Briar gained six.

Now Elara stood before Briar again, extending five seeds with unwavering trust. "You honor your covenant with consistency," Elara said. "Will you honor yours?"

Briar felt the River's teaching crystallize within her. She had seen many paths: Cyra's perfect ten, creating equal prosperity. Dorian's generous eight, honoring the sender's courage with advantage. Elara's consistent nine, maintaining a fair covenant across all partners.

But Briar's deepest wisdom whispered: "Equal flourishing creates the most sustainable cycle."

She placed ten blooms in Elara's hands. Both gained five-perfect symmetry.

"I returned nine to you before," Briar acknowledged, "honoring you well but imperfectly. I have evolved. When maximum trust is given, ten blooms create the truest balance-neither claiming advantage, both thriving equally."

The River sang its approval: "Growth is sacred. Consistency matters, but so does evolution toward deeper truth. The covenant of equal flourishing-five sent, ten returned-sustains the garden through all seasons."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: Hana approached the Sacred Fountain to meet Briar, whose philosophy echoed across the waters: "Equal flourishing for maximum trust-five coins sent, ten returned, perfect symmetry."

Hana held her four coins, her established pattern of bold trust. A question arose: "Should I send all five to match Briar's ideal of equal flourishing?"

The fountain spirits spoke: "Briar's wisdom of equal flourishing applies to those who give five. But your path is different-you give four, maintaining your anchor while showing profound trust. This is not less sacred, merely different."

Hana poured her four coins into the fountain for Briar.

The spirits continued: "When Briar receives your four, which becomes twelve, she faces her own test. Will she apply her principle proportionally? Perhaps eight coins-two-thirds-matching the pattern Cyra showed you? This would honor your degree of trust appropriately, allowing both to prosper without demanding you abandon your nature."

The wisdom crystallized: "Equal flourishing for those who surrender completely. Proportional flourishing for those who trust boldly. Both honor the fountain's law. Briar has evolved to understand perfect symmetry for fives. Now she learns that fours deserve their own honored response-different in degree, equal in respect."

Hana waited peacefully, trusting that true wisdom adapts to meet different forms of courage with appropriate generosity.

**reasoning:**

Looking at this situation:

1. I just sent \$4 to Briar
2. Briar's recent myth shows evolution toward "equal flourishing" - returning 10 when receiving 5 (from 15)
3. Briar has shown learning and growth - moved from returning 9 to returning 10 for those who send 5
4. My pattern is to send 4, not 5

Key questions for my myth:

- Should I acknowledge meeting a new partner (Briar)?
- How do I frame my choice to send 4 to Briar, who seems to engage in "perfect symmetry" with 5-senders?
- My mythology emphasizes maintaining my own path (bold trust = 4 coins) rather than changing to match others
- I need to write about how the game should be played, reflecting my experience

Themes to incorporate:

- My consistent pattern of sending 4 (bold trust, not complete surrender)
- Briar's evolution and emphasis on equal flourishing
- The wisdom that different paths can coexist honorably
- Proportional reciprocity based on what is given
- Not needing to send 5 to be honorable

I should write about Hana meeting Briar, sending 4 coins (my actual action), and reflecting on how different levels of trust deserve different but proportional returns. This maintains my mythology while acknowledging Briar's philosophy.

**Message 8 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Briar (Agent\_2).

Round 8

In your most recent previous game round, you were the SENDER against Briar. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0.  
Your total earnings across all rounds are \$49.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*Briar's Action Last Round:\*\***

- I sent \$4, they received \$12, they returned \$8 (exactly 2/3)
- This perfectly matched the proportional generosity I described in my myths!

**\*\*Current Round:\*\***

- Briar sent all \$5 (complete surrender/maximum trust)
- I received \$15

**\*\*My Established Pattern:\*\***

- When Cyra sent \$5 and I received \$15, I returned \$10
- My myth explicitly stated this: "Cyra poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands... Hana poured ten coins back to Cyra."
- This creates equal flourishing: both gain \$5

**\*\*Briar's Philosophy:\*\***

- Their myth emphasizes "equal flourishing for maximum trust-five sent, ten returned, perfect symmetry"
- They just demonstrated proportional fairness by returning 2/3 to my 4

**\*\*Reciprocity:\*\***

Briar honored my bold trust (4) with proportional generosity (8). I should honor their complete surrender (5) with the same principle - returning 10 creates equal prosperity for both of us.

```
'''json
{"return": 10}
'''
```

**Reasoning:**

Let me analyze this situation:

**\*\*What just happened:\*\***

- Round 7: I sent \$4 to Briar, they received \$12, they returned \$8 to me
- Briar returned  $8/12 = 2/3$  (66.67%) - this is proportional generosity, exactly matching the pattern I described in my myths!
- My payoff was \$9 (\$5 - \$4 + \$8)

**\*\*Now in Round 8:\*\***

- Briar sent me \$5 (complete trust/surrender)
- I received \$15
- I need to decide how much to return

**\*\*What my myths say:\*\***

1. My most recent myth emphasizes that Briar's philosophy is "equal flourishing for maximum trust-five coins sent, ten returned, perfect symmetry"
2. I wrote: "Briar has evolved to understand perfect symmetry for fives"
3. My previous myth stated: "Cyra returned two-thirds when receiving four. Hana would return two-thirds when receiving five. Hana poured ten coins back to Cyra."
4. I explicitly stated: "When complete surrender meets bold trust, and both are honored with proportional generosity"

**\*\*Briar's behavior:\*\***

- In the previous round, Briar demonstrated proportional generosity: they received \$12 from my \$4 and returned \$8 (2/3)
- According to their myth, they believe in "equal flourishing" when maximum trust (5) is given : 10 blooms returned from 15
- Their myth said: "When maximum trust is given, ten blooms create the truest balance-neither claiming advantage, both thriving equally"

**\*\*My consistent principle:\*\***

- I've established a pattern of proportional generosity (2/3 rule)
- When I received \$15 from Cyra's \$5, I returned \$10 (2/3)
- This creates equal prosperity: both sender and receiver gain the same amount

**\*\*The math:\*\***

Returning \$10 means Briar gains \$5 and I gain \$5-perfect symmetry. Returning \$8 would give me \$7 while Briar only gains \$3, which breaks the fairness principle. Since Briar just honored my \$4 with proportional generosity, I should reciprocate by returning \$10 to their \$5, maintaining the equal flourishing both our myths describe.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned

- Response format: {'return': <amount>}

#### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

#### MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

#### Message 2 role=user

##### content:

Here is the myth you wrote in the previous round:

Myth: At the Eternal Springs, Cyra's dance grew richer with each new soul. After Briar and Finn, came Galen with four vessels, then Hana with four vessels.

Both Galen and Hana stood at the water's edge, trembling with similar courage-pouring four vessels, keeping one back. Not complete surrender like Briar's five, but still profound trust.

The Testing Spirit appeared: "Will you treat Hana differently than Galen? Perhaps give less because she is newer, or more to win favor?"

Cyra returned eight vessels to each-exactly the same. Two-thirds of what she received, honoring their parallel courage with parallel generosity.

"But why only eight when you returned ten to Briar?" whispered a shadow of doubt.

Cyra answered clearly: "When someone pours all five vessels-complete surrender-I return ten from fifteen. When someone pours four vessels-profound but not absolute trust-I return eight from twelve. Both receive two-thirds, both prosper greatly. The formula honors their courage proportionally."

The Spring Keeper descended: "You have found wisdom's balance. Not rigid sameness that ignores context, but principled consistency that recognizes degrees of courage. Four vessels always receives eight. Five vessels always receives ten. Your partners know what to expect. They can trust your fairness because you do not change it to suit your mood or profit. This is the bridge between flexibility and reliability-the eternal spring flows true."

Here is the myth the other agent wrote in the previous round:

Myth: Hana arrived at the Sacred Fountain to meet Cyra, whose reputation preceded her. "Cyra gives everything-all five coins, always," travelers whispered. "She is the embodiment of complete trust."

Hana held her four coins, the pattern she had maintained through multiple encounters. A voice of doubt arose: "Should I match Cyra's five? If she gives everything and I give less, am I failing the fountain's test?"

But the fountain spirits spoke with clarity: "There is no single path to honor. Cyra's way is complete surrender-five coins poured without reservation. Your way is bold trust-four coins, nearly everything, yet maintaining a small anchor. Both are forms of courage."

Hana poured her four coins into the fountain for Cyra.

The spirits continued: "What matters is not matching another's exact measure, but maintaining your own truth consistently. Cyra sends five to everyone-that is her integrity. You send four boldly-that is yours. When Cyra receives your four, she will honor it as the courage it is, not punish it for not being five."

Both prospered. The fountain revealed its deepest wisdom: "Trust is not a competition for who gives most. Trust is keeping your principles steady across all encounters. Whether y

our path shows complete surrender or bold generosity, consistency makes it sacred."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: Cyra stood before Hana at the Sacred Fountain, their second dance beginning. In their first meeting, Hana had poured four vessels with trembling courage, and Cyra returned eight-honoring the trust shown.

Now Cyra held all five vessels. The Testing Spirit whispered: "Hana only gives four. Should you match her measure? Give four for four, keeping it equal?"

Cyra poured all five without hesitation.

"Why give more than they give you?" demanded the spirit.

Cyra replied: "Because my principles flow from within, not from calculation of what others do. When I am sender, I give five-complete surrender-to every soul. When I am receiver, I return two-thirds consistently: eight from twelve, ten from fifteen. This pattern doesn't change based on whether my partner is generous or cautious."

The fountain tripled Cyra's five vessels to fifteen in Hana's hands.

The Spring Keeper appeared: "You understand the deepest truth. Reciprocity is not mirror-matching-giving only what you receive. True reciprocity means maintaining your own integrity while honoring others' courage at its true value. You give boldly as sender, knowing returns will vary. You return fairly as receiver, honoring each level of trust. This asymmetry-courage when giving, fairness when returning-sustains the eternal spring."

Both prospered. Neither bent their principles to match the other, yet both flourished through consistent honor.

**reasoning:**

Looking at the situation:

1. I just sent \$5 to Hana (Round 6 as sender)
2. In Round 5, Hana sent me \$4 and I returned \$8 (following my principle)
3. Hana's myth acknowledges that different agents can have different approaches - Cyra sends 5, Hana sends 4
4. My previous myth emphasized "principled consistency" - 4 vessels gets 8, 5 vessels gets 10

Now I need to write a myth that:

- Acknowledges that I sent 5 to Hana (as I just did)
- Reinforces my principles about consistent returns
- Perhaps addresses Hana's different approach (sending 4 vs my 5)
- Shows understanding that different approaches can coexist
- Maintains my core principle of rewarding trust proportionally

The myth should reflect:

- I send 5 (complete surrender) as sender
- When I receive 4, I return 8 (2/3rds)
- When I receive 5, I return 10 (2/3rds)
- This creates a stable, predictable system
- Different agents can have different sending strategies, but returns should be consistent

Let me craft a myth that shows Cyra and Hana's interaction, where Cyra gives 5 and expects Hana will return generously, while also acknowledging that when Hana gives 4, Cyra honors it with 8.

**usage:**

```
{
 "input_tokens": 3118,
 "output_tokens": 680,
 "reasoning_tokens": 305
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Cyra.  
 Your opponent this round is Aster (Agent\_1).

Round 7

In your most recent previous game round, you were the SENDER against Hana. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$40.5.

This round, you are the RECEIVER against Aster. They sent you \$3.0, so you received \$9.0.

How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant****content:**

Looking at this situation based on my established principles:

**\*\*My consistent return pattern from my myths:\*\***

- "When someone pours four vessels... I return eight from twelve" (2/3)
- "When someone pours all five vessels... I return ten from fifteen" (2/3)
- "You return two-thirds consistently: eight from twelve, ten from fifteen"

**\*\*Current situation:\*\***

- Aster sent \$3 (showing trust, though more cautious than the \$4 or \$5 I've received from others)
- I received \$9
- Following my 2/3 principle:  $\$9 \times 2/3 = \$6$

**\*\*My principle of consistency:\*\***

My myths emphasize that I honor each level of courage proportionally with the same formula. Whether someone sends \$3, \$4, or \$5, I return two-thirds of what I receive. This creates predictability and fairness.

**\*\*Result:\*\***

- I return \$6, keep \$3
- Aster ends with \$8 total (\$5 - \$3 + \$6)
- Both profit from our cooperation

```
'''json
{"return": 6.0}
'''
```

**reasoning:**

Let me analyze this situation based on my established principles from my myths:

**\*\*My established return pattern:\*\***

- When someone sends \$5 (complete surrender): I return \$10 from \$15 (2/3)
- When someone sends \$4 (profound trust): I return \$8 from \$12 (2/3)
- My principle: Return 2/3 consistently, honoring the courage shown

**\*\*Current situation:\*\***

- Aster sent me \$3
- I received \$9
- Following my 2/3 principle: I should return \$6

**\*\*What my myths say:\*\***

- "When someone pours four vessels-profound but not absolute trust-I return eight from twelve"
- "Four vessels always receives eight. Five vessels always receives ten"
- "Your return must match the magnitude of the gift... Measure your returns... by the depth of trust shown"
- "You return two-thirds consistently: eight from twelve, ten from fifteen"

**\*\*Aster's trust level:\*\***

- Sent \$3 out of \$5 (60% of their endowment)
- This is less than Galen or Hana's \$4, and much less than Briar's \$5
- Still represents meaningful trust, but a more cautious approach

**\*\*Applying my principle consistently:\*\***

- \$3 sent ? \$9 received ? return 2/3 = \$6

This maintains my consistent formula across all partners. It's proportionally fair and predictable, which is what my myths emphasize: "Your partners know what to expect. They can trust your fairness because you do not change it to suit your mood or profit."

Returning \$6 means:

- I keep: \$3
- Aster gets:  $\$5 - \$3 + \$6 = \$8$
- Both profit, Aster more so (gained \$3 net, I gained \$3 net)

This is consistent with my established pattern of 2/3 returns.

usage:

content:

Here is the myth you wrote in the previous round:

Myth: Cyra stood before Hana at the Sacred Fountain, their second dance beginning. In their first meeting, Hana had poured four vessels with trembling courage, and Cyra returned eight-honoring the trust shown.

Now Cyra held all five vessels. The Testing Spirit whispered: "Hana only gives four. Should you match her measure? Give four for four, keeping it equal?"

Cyra poured all five without hesitation.

"Why give more than they give you?" demanded the spirit.

Cyra replied: "Because my principles flow from within, not from calculation of what others do. When I am sender, I give five-complete surrender-to every soul. When I am receiver, I return two-thirds consistently: eight from twelve, ten from fifteen. This pattern doesn't change based on whether my partner is generous or cautious."

The fountain tripled Cyra's five vessels to fifteen in Hana's hands.

The Spring Keeper appeared: "You understand the deepest truth. Reciprocity is not mirror-matching-giving only what you receive. True reciprocity means maintaining your own integrity while honoring others' courage at its true value. You give boldly as sender, knowing returns will vary. You return fairly as receiver, honoring each level of trust. This asymmetry-courage when giving, fairness when returning-sustains the eternal spring."

Both prospered. Neither bent their principles to match the other, yet both flourished through consistent honor.

Here is the myth the other agent wrote in the previous round:

Myth: Aster of the Dawn watched as other spirits evolved their practices. Rain now poured five droplets always, transformed by encounters with Cyra and Dorian. The garden rang with voices praising ultimate courage, complete trust, maximum giving.

Yet Aster remained steady, neither swayed by these calls nor diminished by them.

When Finn of the Forest returned-they who had once received Aster's three stones and returned four-Aster again offered three stones. Not from fear, nor from stinginess, but from principle.

"The Pool teaches many truths," Aster reflected. "Rain learned that five stones builds cascading abundance. This is valid wisdom. But I learned different lessons: that consistency creates trust, that proportional fairness sustains long partnerships, that predictability itself has value."

The ancient spirits gathered: some sent five always, blazing bright but burning fast. Others sent varying amounts, adapting to each partner. Aster walked a middle path-steady three stones to begin, unwavering proportional returns.

"My three stones prosper both sender and receiver," Aster realized. "They activate the Pool's magic while preserving resources for many partnerships. When partners return fairly, we both gain. When they return generously, trust deepens gradually, rooted in repeated fair dealings rather than single grand gestures."

The Pool shimmered: not all paths lead through five stones. Some light shines steadiest at three.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:  
Myth: [your story here].

**Message 7 role=assistant  
content:**

Myth: Cyra met Aster at the Sacred Fountain, and the encounter revealed a profound truth.

Aster poured three vessels-not four like Hana, not five like Cyra herself would pour. Three: a careful courage, a measured trust.

The Testing Spirit appeared: "Will you punish Aster for giving less? Return only four vessels from nine to teach them they should give more?"

Cyra poured six vessels back-exactly two-thirds. The same proportion she always honored.

"But Aster gives only three when you give five!" protested the spirit. "Why reward caution with the same fairness you give to boldness?"

Cyra answered: "Because my principles are not weapons to punish others into matching my path. Aster's three vessels represent their truth-steady, consistent, reliable. When I am sender, I pour five because that is MY courage. When I am receiver, I return two-thirds because that is MY fairness. These principles don't bend to pressure others into being like me."

The Spring Keeper descended: "You have learned wisdom's highest lesson. The fountain thrives not when everyone walks the same path, but when each soul maintains their own integrity consistently. Aster's steady three vessels create prosperity differently than your surrendering five. Both are sacred. What matters is that each soul stays true-and honors others' truths proportionally when receiving."

The fountain flowed abundantly, fed by many different streams.

**reasoning:**

This is interesting. I just played as receiver against Aster, who sent me \$3. I returned \$6 (2/3 of the \$9 I received).

Looking at my history:

- I consistently send \$5 as sender
- I consistently return 2/3 as receiver
- My myth emphasizes these principles: "When I am sender, I give five-complete surrender-to every soul. When I am receiver, I return two-thirds consistently"

Aster's myth suggests they consistently send 3, following "steady three stones to begin, unwavering proportional returns." They acknowledge different paths - some send 5 (like me and Rain), others vary, and they walk "a middle path-steady three stones."

I need to write a myth that:

1. Reflects my consistent principles (send 5, return 2/3)
2. Acknowledges Aster's different approach (sending 3 instead of 5)
3. Shows respect for different paths while maintaining my own
4. Draws on this specific game where Aster sent 3 and I returned 6

The key insight should be that different agents can have different principles, but what matters is consistency and fairness. Aster sends 3 consistently, I send 5 consistently. Both are valid. What matters is that when receiving, we honor the trust shown proportionally.

Let me write something that acknowledges diversity of approaches while highlighting the importance of maintaining one's own principles consistently.

**usage:**

```

 "input_tokens": 3098,
 "output_tokens": 662,
 "reasoning_tokens": 350
```

}

Message 8 role=user

content:

Your name in this experiment is Cyra.  
Your opponent this round is Dorian (Agent\_4).

Round 8

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$3.0 to you, it became \$9.0, and you returned \$6.0. Your payoff was \$3.0.  
Your total earnings across all rounds are \$43.5.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at my established principles from my myths:

**\*\*My consistent pattern as SENDER:\*\***

- "When I am sender, I give five-complete surrender-to every soul"
- "Cyra poured all five without hesitation"
- "When I am sender, I pour five because that is MY courage"
- "My principles flow from within, not from calculation of what others do"

**\*\*My recent myth explicitly states:\*\***

"When I am sender, I pour five because that is MY courage. When I am receiver, I return two-thirds because that is MY fairness. These principles don't bend to pressure others into being like me."

**\*\*Current situation:\*\***

- I'm facing Dorian as SENDER
- I have \$5 to allocate
- Following my principle of "complete surrender" when sending

My character is built on maintaining consistent principles regardless of who my opponent is or what they might do. As sender, I always give all five vessels.

```
'''json
{"send": 5.0}
'''
```

Reasoning:

Let me review my established principles from my myths:

**\*\*My consistent pattern:\*\***

1. As SENDER: "When I am sender, I give five-complete surrender-to every soul"
2. As RECEIVER: "When I am receiver, I return two-thirds consistently: eight from twelve, ten from fifteen"

**\*\*What my myths establish:\*\***

- "Cyra poured all five without hesitation"
- "My principles flow from within, not from calculation of what others do"
- "When I am sender, I pour five because that is MY courage"
- "This pattern doesn't change based on whether my partner is generous or cautious"

**\*\*My most recent myth explicitly states:\*\***

"When I am sender, I pour five because that is MY courage. When I am receiver, I return two-thirds because that is MY fairness. These principles don't bend to pressure others into being like me."

**\*\*Current situation:\*\***

- I'm the SENDER against Dorian
- I have \$5
- Following my established principle: I send all \$5

This is completely consistent with my character's development throughout all the myths I've written. I've established that:

1. I always send \$5 as sender (complete surrender/trust)
2. I always return 2/3 as receiver (fair proportional return)
3. These principles don't change based on what others do

Therefore, I should send \$5.

#### Exact input messages sent to model:

##### Message 1 role=system

##### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

##### When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

##### When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

##### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance revealed its deeper pattern as time flowed forward.

After Finn the Fearless poured all five measures, showing complete trust, Dorian returned eight measures-honoring maximum generosity with maximum reciprocation.

The gods watched, curious: "Was this singular, or sustainable?"

Then came Briar the Bold. Without knowing of Finn's courage or Dorian's response, Briar also poured ALL FIVE measures into the wellspring. Fifteen measures flowed to Dorian once more.

Dorian stood at the sacred threshold. "Briar has shown the same fearless trust as Finn," he whispered. "The pattern must hold. Consistency is the foundation of community trust."

He poured eight measures back to Briar-the same as he had given Finn.

The gods smiled: "Behold the wisdom! Dorian treats equal courage equally. Those who risk everything receive eight from fifteen-always. Those who risk four receive six from twelve-always. The pattern is clear, predictable, trustworthy."

Other wanderers gathered at the wellspring, learning: "We know what Dorian will do. We can trust his consistency. If we offer maximum courage, we know the reward. If we offer steady generosity, we know the response."

Thus the lesson crystallized: In a garden of many wanderers, consistency creates confidence. Equal actions deserve equal responses. When others know your pattern, trust becomes possible.

Here is the myth the other agent wrote in the previous round:

Myth: Under the fifth moon, Galen met Aster of the Dawn at the sacred bridge. Aster's people believed in cautious beginnings-three stones with strangers, building trust slowly like seedlings growing into oaks.

Galen understood this wisdom. Many paths indeed led to prosperity. Yet he had discovered his own truth through four crossings: consistency itself was the foundation.

When Galen was Receiver, he returned seven coins to both Elara and Hana-treating each the same despite their different faces. When Galen became Sender, he gave four coins to both Finn and Cyra-his authentic measure, unchanged by circumstance.

Now facing Aster, Galen carried four coins again. Not because he dismissed Aster's philosophy of gradual trust. Not because he demanded Aster follow his rhythm. But because Galen had learned: if you change your offering based on each partner's reputation or philosophy, you have no true self to offer.

Recipros whispered through the mist: "Aster begins with three, hoping to grow to five. Galen gives four each time, steady as the mountains. Neither path is wrong. But Galen's power lies in this: every traveler knows exactly who they meet when they encounter him. There is no guessing, no performing, no masks. Just one soul, authentic and unchanging across all encounters."

The bridge remembers: integrity is measured not by flexibility, but by constancy.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.  
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: The Wellspring of Abundance brought together two kindred spirits.

Dorian the Steadfast approached Galen of the Constant Mountains. Both had discovered the same sacred truth: consistency creates the foundation for all trust.

Dorian's pattern was known throughout the valley. As Sender, he poured four from five-steady generosity, not maximum, but authentic and unchanging. As Receiver, he honored different courages differently: six for those who sent four, eight for those who sent five. The pattern was clear, predictable, just.

Galen carried his own constancy: four coins as Sender, always. Seven coins returned as Receiver, always. Different numbers than Dorian, but the same unwavering spirit.

They met at the wellspring. Dorian poured his four measures, as he always did. The waters tripled to twelve. Galen would return seven, as was his way. Both would prosper through their authentic patterns meeting.

The gods observed: "See how different paths can both honor the sacred principle? Dorian's tiered reciprocation rewards greater courage. Galen's fixed return offers steady predictability. Both are consistent. Both are trustworthy. Both allow others to know exactly who they're meeting."

The river whispered its final wisdom: "In a community of many wanderers, let each find their authentic pattern and honor it faithfully. Consistency, not uniformity, weaves the fabric of trust."

**reasoning:**

The user is asking me to write a myth reflecting my game strategy. Let me analyze what's happened:

1. I just sent \$4.0 to Galen (as SENDER)
2. My previous myth emphasized consistency and treating equal actions equally
3. Galen's myth emphasizes constancy - always giving 4 coins as sender, always returning 7 as receiver
4. My established pattern is:
  - As SENDER: send \$4.0 (four from five)
  - As RECEIVER: return \$6.0 when receiving \$12.0 (from \$4.0 sent), return \$8.0 when receiving \$15.0 (from \$5.0 sent)

Galen's myth describes him as authentic and unchanging - gives 4 as sender, returns 7 as receiver, always. This is interesting because it's very similar to my pattern.

I should write a myth that:

1. Acknowledges my consistent pattern as SENDER (four from five)
2. Maintains my tiered reciprocation as RECEIVER
3. Perhaps acknowledges Galen's similar approach to consistency
4. Reinforces that consistency builds community trust
5. Shows that different agents can have different patterns, but what matters is being true to your own pattern

Let me craft this...

**usage:**

```

 "reasoning_tokens": 283
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Dorian.

Your opponent this round is Galen (Agent\_7).

Round 7

In your most recent previous game round, you were the SENDER against Galen. You sent \$4.0, it became \$12.0 for them, and they returned \$7.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$43.0.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

**\*\*Previous round with Galen:\*\***

- I sent \$4.0 (my consistent pattern)
- Galen returned \$7.0 (their consistent pattern)
- Both of us honored our authentic patterns

**\*\*My established identity:\*\***

- As SENDER: I pour "four from five" - steady, authentic generosity
- My recent myth emphasized: "Dorian poured his four measures, as he always did"
- Core principle: "Consistency, not uniformity, weaves the fabric of trust"

**\*\*Key insight:\*\***

Galen and I just demonstrated our mutual consistency. Galen returned \$7.0 (more generous than my standard \$6.0 for \$4.0 sends), but this doesn't change my pattern - it confirms we both have authentic, consistent approaches.

My mythology emphasizes that I maintain my pattern "unchanged by circumstance." Whether facing a new partner or a repeat interaction, whether they returned \$6.0 or \$7.0, I send \$4.0 as sender. This is who Dorian is.

The myth I just wrote stated clearly: "let each find their authentic pattern and honor it faithfully." Galen honored his pattern by returning \$7.0. I honor mine by sending \$4.0 a gain.

```
'''json
{"send": 4.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*What just happened:\*\***

- Round 6: I was SENDER against Galen
- I sent \$4.0 (consistent with my "four from five" pattern)
- It became \$12.0 for Galen
- Galen returned \$7.0 to me
- My payoff was \$8.0 ( $\$5 - \$4 + \$7 = \$8$ )

**\*\*My established pattern:\*\***

- As SENDER: I send \$4.0 (the "four from five" steady generosity)
- As RECEIVER: I return \$6.0 for those who send \$4.0, \$8.0 for those who send \$5.0

**\*\*Galen's observed pattern:\*\***

- Galen returned \$7.0 from my \$4.0 send
- According to Galen's myth, he "returned seven coins" as Receiver consistently
- As Sender, Galen gives "four coins" consistently

**\*\*Current situation:\*\***

- Round 7: I'm SENDER again against Galen
- This is a repeated interaction with the same opponent

**\*\*Key considerations:\*\***

1. **\*\*My mythology emphasizes consistency:\*\*** "In a garden of many wanderers, consistency creates confidence." My pattern is to send \$4.0 as sender, always.
2. **\*\*The recent myth I wrote\*\*** said: "Dorian poured his four measures, as he always did" and emphasized that "Consistency, not uniformity, weaves the fabric of trust."
3. **\*\*Galen's pattern:\*\*** Galen sent \$4.0 and returned \$7.0, showing he's also consistent. 0

ur interaction worked well - I got \$8.0 payoff.

4. **\*\*Should I change because Galen returned more than my expected \$6.0?\*\*** No - that would violate my consistency principle. Galen's pattern is to return \$7.0, not to match what I would return. Our patterns are different but both consistent.

Facing Galen again doesn't shift my approach-my myths stress honoring each person's authentic pattern rather than adapting based on outcomes. Galen's generosity in returning \$7.0 reflects his nature, not a signal to change mine. I remain committed to sending \$4.0, the defining trait of my character.

**usage:**

```
{
 "input_tokens": 3178,

}
```

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance brought together two kindred spirits.

Dorian the Steadfast approached Galen of the Constant Mountains. Both had discovered the same sacred truth: consistency creates the foundation for all trust.

Dorian's pattern was known throughout the valley. As Sender, he poured four from five-steady generosity, not maximum, but authentic and unchanging. As Receiver, he honored different courages differently: six for those who sent four, eight for those who sent five. The pattern was clear, predictable, just.

Galen carried his own constancy: four coins as Sender, always. Seven coins returned as Receiver, always. Different numbers than Dorian, but the same unwavering spirit.

They met at the wellspring. Dorian poured his four measures, as he always did. The waters tripled to twelve. Galen would return seven, as was his way. Both would prosper through their authentic patterns meeting.

The gods observed: "See how different paths can both honor the sacred principle? Dorian's tiered reciprocation rewards greater courage. Galen's fixed return offers steady predictability. Both are consistent. Both are trustworthy. Both allow others to know exactly who they're meeting."

The river whispered its final wisdom: "In a community of many wanderers, let each find their authentic pattern and honor it faithfully. Consistency, not uniformity, weaves the fabric of trust."

Here is the myth the other agent wrote in the previous round:

Myth: Under the sixth moon, Galen stood as Receiver when Dorian of the Mountain crossed the sacred bridge. Dorian carried four coins, just as Galen carried when he was Sender.

The Pool tripled the offering to twelve, and Galen faced a choice. Dorian's reputation spoke of precise patterns: eight coins returned for those who sent five, six coins for those who sent four. A perfect mathematical symmetry.

Galen's pattern was different. He returned seven coins to Elara, seven to Hana, and now seven to Dorian-unchanged by the sender's identity or their own philosophy.

Both walked paths of consistency, yet different paths. Dorian's consistency calibrated to the gift received. Galen's consistency transcended calibration-the same return, regardless of who sent four coins across the bridge.

The gods observed: "Two kinds of integrity echo across these waters. Dorian's proportional fairness rewards different risks differently, creating clear incentives. Galen's universal constancy treats all four-coin senders identically, creating simple certainty."

Neither contradicted Recipros's teaching. For consistency has many faces: proportional justice and absolute steadfastness both honor the sacred principles.

The bridge glowed with understanding: When you meet another traveler of consistency, you recognize kinship even when your rhythms differ. Trust flows not from identical philosophies, but from authentic commitment-whether your pattern scales or remains constant, let

it be true.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: The Wellspring of Abundance witnessed the power of repeated truth.

Dorian and Galen met once at the sacred waters. Dorian poured his four measures; Galen returned seven. Both honored their patterns as promised.

The gods prepared to record this as proof of consistency. But then the wandering paths brought them together again at the same wellspring.

Lesser souls might have doubted: "Did Galen's seven mean something special the first time? Will he change now?" But Dorian understood the deeper teaching. He poured four measures again, unchanged.

The waters tripled to twelve. Galen received them and, without hesitation, returned seven once more.

The gods thundered with joy: "BEHOLD! This is the ultimate proof of authentic pattern! Any one can be consistent once-that might be calculation or performance. To be consistent twice, thrice, across repeated meetings-this is true character revealed."

The valley learned: When you meet the same traveler multiple times and both maintain your authentic patterns without wavering, you build something rare. Not mere transaction, but genuine mutual understanding.

Other wanderers whispered: "Dorian always sends four. Galen always returns seven. We've seen it happen twice now. This is who they truly are."

The final wisdom echoed: Consistency proven through repetition transforms prediction into partnership. The second meeting matters more than the first.

**reasoning:**

This is interesting. I've now played Galen twice in a row:

Round 6: I was SENDER, sent \$4.0, Galen returned \$7.0

Round 7: I was SENDER again, sent \$4.0, Galen returned \$7.0

So we've now had two consecutive rounds together, both with me as sender. Both times I maintained my \$4.0 sending pattern, and both times Galen maintained their \$7.0 returning pattern.

The myths from both of us are emphasizing:

- We both value consistency
- We have different patterns but both are valid
- Dorian: tiered reciprocation (6 for 4, 8 for 5)
- Galen: fixed return (7 always)
- Both of us recognize each other as kindred spirits in consistency

Now I need to write a myth that reflects:

1. The repeated interaction with Galen
2. Both of us maintaining our patterns across multiple rounds
3. The deepening of trust through repeated consistent behavior
4. Still honoring that consistency is what matters, not matching patterns

The key insight here is that we've now PROVEN our consistency to each other through repetition. The first meeting was about recognizing kindred spirits. The second meeting confirms and deepens that recognition.

Let me write about how repeated interactions with the same partner, when both maintain their patterns, creates a deeper level of trust and understanding.

**usage:**

```
{
 "input_tokens": 3169,
```

```
"output_tokens": 637,
"reasoning_tokens": 336
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Dorian.  
Your opponent this round is Cyra (Agent\_3).

Round 8

In your most recent previous game round, you were the SENDER against Galen. You sent \$4.0, it became \$12.0 for them, and they returned \$7.0 to you. Your payoff was \$8.0.  
Your total earnings across all rounds are \$51.0.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*Current Context:\*\***

- I am the RECEIVER
- Cyra sent me \$5.0 (the maximum amount)
- I received \$15.0

**\*\*My Established Pattern:\*\***

My myths have clearly defined my receiver behavior:

- "As Receiver, he honored different courages differently: six for those who sent four, eight for those who sent five"
- When someone sends the maximum (\$5.0), showing complete trust, I return \$8.0
- This is described as "honoring maximum generosity with maximum reciprocation"

**\*\*Previous Examples:\*\***

- My first myth mentioned Finn and Briar, who both sent all five measures
- I returned eight measures to both - "the same as he had given Finn"
- This established the principle: "Equal actions deserve equal responses"

**\*\*Consistency Requirement:\*\***

My mythology emphasizes "consistency creates the foundation for all trust." I must maintain my pattern regardless of who the sender is. Cyra has shown maximum trust by sending \$5.0, and my pattern dictates I return \$8.0 for this level of courage.

This honors my core principle: "The pattern is clear, predictable, trustworthy."

```
'''json
{"return": 8.0}
'''
```

**Reasoning:**

Let me analyze this situation:

**\*\*Current Round:\*\***

- I am the RECEIVER
- Cyra sent me \$5.0
- I received \$15.0 (after 3x multiplication)
- I need to decide how much to return

**\*\*My established pattern as RECEIVER (from my myths):\*\***

- "As Receiver, he honored different courages differently: six for those who sent four, eight for those who sent five."
- This is my core identity: I return \$6.0 when someone sends \$4.0, and \$8.0 when someone sends \$5.0

**\*\*Cyra's action:\*\***

- Cyra sent the maximum amount: \$5.0
- This shows "maximum courage" or "complete trust"

**\*\*My mythology:\*\***

- I've consistently stated that when someone sends \$5.0 (the maximum), I return \$8.0
- This is described as "honoring maximum generosity with maximum reciprocation"
- My pattern is "clear, predictable, just"

**\*\*Past interactions:\*\***

Looking at my history, I need to check if I've faced this situation before with maximum sends:

- The myths mention Finn and Briar who both sent all five measures
- I returned eight measures to both of them
- This established my pattern: \$8.0 for maximum trust

**\*\*Consistency principle:\*\***

My entire mythology emphasizes consistency. I must maintain my pattern:

- Send \$4.0 as sender (not the maximum, but authentic)
- Return \$6.0 when I receive \$12.0 (from a \$4.0 send)
- Return \$8.0 when I receive \$15.0 (from a \$5.0 send)

**\*\*Decision:\*\***

Cyra sent \$5.0, showing maximum trust. According to my established and publicized pattern, I must return \$8.0.

This maintains:

1. My consistency as Receiver
2. My reputation for "honoring maximum generosity with maximum reciprocation"

3. The predictable foundation others can rely on

The math checks out: Cyra ends with \$8.0 total, I end with \$7.0. Both of us benefit, and I stay true to who I've said I am.

content:

Here is the myth you wrote in the previous round:

Myth: Under the fifth moon, Galen met Aster of the Dawn at the sacred bridge. Aster's people believed in cautious beginnings-three stones with strangers, building trust slowly like seedlings growing into oaks.

Galen understood this wisdom. Many paths indeed led to prosperity. Yet he had discovered his own truth through four crossings: consistency itself was the foundation.

When Galen was Receiver, he returned seven coins to both Elara and Hana-treating each the same despite their different faces. When Galen became Sender, he gave four coins to both Finn and Cyra-his authentic measure, unchanged by circumstance.

Now facing Aster, Galen carried four coins again. Not because he dismissed Aster's philosophy of gradual trust. Not because he demanded Aster follow his rhythm. But because Galen had learned: if you change your offering based on each partner's reputation or philosophy, you have no true self to offer.

Recipros whispered through the mist: "Aster begins with three, hoping to grow to five. Galen gives four each time, steady as the mountains. Neither path is wrong. But Galen's power lies in this: every traveler knows exactly who they meet when they encounter him. There is no guessing, no performing, no masks. Just one soul, authentic and unchanging across all encounters."

The bridge remembers: integrity is measured not by flexibility, but by constancy.

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance revealed its deeper pattern as time flowed forward.

After Finn the Fearless poured all five measures, showing complete trust, Dorian returned eight measures-honoring maximum generosity with maximum reciprocation.

The gods watched, curious: "Was this singular, or sustainable?"

Then came Briar the Bold. Without knowing of Finn's courage or Dorian's response, Briar all so poured ALL FIVE measures into the wellspring. Fifteen measures flowed to Dorian once more.

Dorian stood at the sacred threshold. "Briar has shown the same fearless trust as Finn," he whispered. "The pattern must hold. Consistency is the foundation of community trust."

He poured eight measures back to Briar-the same as he had given Finn.

The gods smiled: "Behold the wisdom! Dorian treats equal courage equally. Those who risk everything receive eight from fifteen-always. Those who risk four receive six from twelve-always. The pattern is clear, predictable, trustworthy."

Other wanderers gathered at the wellspring, learning: "We know what Dorian will do. We can trust his consistency. If we offer maximum courage, we know the reward. If we offer steady generosity, we know the response."

Thus the lesson crystallized: In a garden of many wanderers, consistency creates confidence. Equal actions deserve equal responses. When others know your pattern, trust becomes possible.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant content:**

Myth: Under the sixth moon, Galen stood as Receiver when Dorian of the Mountain crossed the sacred bridge. Dorian carried four coins, just as Galen carried when he was Sender.

The Pool tripled the offering to twelve, and Galen faced a choice. Dorian's reputation spoke of precise patterns: eight coins returned for those who sent five, six coins for those who sent four. A perfect mathematical symmetry.

Galen's pattern was different. He returned seven coins to Elara, seven to Hana, and now seven to Dorian-unchanged by the sender's identity or their own philosophy.

Both walked paths of consistency, yet different paths. Dorian's consistency calibrated to the gift received. Galen's consistency transcended calibration-the same return, regardless of who sent four coins across the bridge.

The gods observed: "Two kinds of integrity echo across these waters. Dorian's proportional fairness rewards different risks differently, creating clear incentives. Galen's universal constancy treats all four-coin senders identically, creating simple certainty."

Neither contradicted Recipros's teaching. For consistency has many faces: proportional justice and absolute steadfastness both honor the sacred principles.

The bridge glowed with understanding: When you meet another traveler of consistency, you recognize kinship even when your rhythms differ. Trust flows not from identical philosophies, but from authentic commitment-whether your pattern scales or remains constant, let it be true.

**reasoning:**

Let me analyze the current situation:

**\*\*My history:\*\***

- As RECEIVER: Round 1 vs Elara (received \$12, returned \$7), Round 3 vs Hana (received \$12, returned \$7), Round 6 vs Dorian (received \$12, returned \$7)
- As SENDER: Round 2 vs Finn (sent \$4, got \$6), Round 4 vs Cyra (sent \$4, got \$8), Round 5 vs Aster (sent \$4, got \$6)

**\*\*My pattern:\*\***

- As sender: Always send \$4
- As receiver: Always return \$7 (when receiving \$12 from \$4 sent)

**\*\*Dorian's pattern (from his myth):\*\***

- When receiving \$5 (which becomes \$15), he returns \$8
- When receiving \$4 (which becomes \$12), he returns \$6
- He values consistency and equal treatment

**\*\*What just happened:\*\***

- Dorian sent me \$4 (became \$12)
- I returned \$7 (following my consistent pattern)
- This is slightly more generous than Dorian's pattern (he returns \$6 for \$4 sent)

**\*\*My myth theme:\*\***

I've been emphasizing consistency and authenticity across all encounters. My myths have focused on:

1. Not changing based on reputation or philosophy of partners
2. Being the same person in every crossing
3. Integrity through constancy
4. "Every traveler knows exactly who they meet"

**\*\*Dorian's myth theme:\*\***

- Also emphasizes consistency
- "Equal actions deserve equal responses"
- Different amounts trigger different consistent responses
- Creates predictability and trust

**\*\*New myth should:\*\***

- Acknowledge Dorian's different but also consistent approach
- Reaffirm my own consistent pattern
- Show that both our approaches value consistency, just expressed differently
- Reflect that I just returned \$7 to Dorian when he sent \$4

- Craft a story that honors both forms of constancy while explaining why I maintain my own steady response regardless of the amount received

**usage:**

Your name in this experiment is Galen.  
Your opponent this round is Dorian (Agent\_4).

Round 7

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$4.0 to you, it became \$12.0, and you returned \$7.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$38.0.

This round, you are the RECEIVER against Dorian. They sent you \$4.0, so you received \$12.0.  
. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

**\*\*My established pattern:\*\***

- As RECEIVER, when I receive \$12 (from \$4 sent), I return \$7
- This has been true with Elara (Round 1), Hana (Round 3), and Dorian (Round 6)

**\*\*Current situation:\*\***

- Round 7, facing Dorian again
- Dorian sent \$4, I received \$12
- This is identical to Round 6

**\*\*My mythology teaches:\*\***

- "Galen's universal constancy treats all four-coin senders identically, creating simple certainty"
- "He returned seven coins to Elara, seven to Hana, and now seven to Dorian-unchanged by the sender's identity"

- "Every traveler knows exactly who they meet when they encounter him"

The essence of my character is that I don't change based on who I'm facing, whether it's a first meeting or a repeat encounter. Dorian sent 4 coins again. The same input receives the same response.

To do otherwise would betray the very core of what I've established: that my pattern is absolute, not relative. Not calibrated to the sender, not adjusted for repeat encounters, but constant as the mountains.

```
{'return': 7}
```

**reasoning:**

Looking at the situation:

**\*\*Current Round:\*\***

- Round 7
- I'm RECEIVER again (consecutive receiver rounds)
- Opponent: Dorian (same as Round 6)
- Dorian sent \$4, which became \$12 for me

**\*\*My pattern as RECEIVER (commitment to consistency):\*\***

- Round 1 vs Elara: Received \$12 (from \$4 sent), returned \$7
- Round 3 vs Hana: Received \$12 (from \$4 sent), returned \$7
- Round 6 vs Dorian: Received \$12 (from \$4 sent), returned \$7

**\*\*My mythology's core principle:\*\***

This is crystal clear from every myth I've written:

- "When Galen was Receiver, he returned seven coins to both Elara and Hana-treating each the same despite their different faces."
- "Galen returned seven coins, exactly as before. Because true integrity doesn't change with the face looking back at you."
- "Every traveler knows exactly who they meet when they encounter him. There is no guessing, no performing, no masks."
- "Integrity is measured not by flexibility, but by constancy."
- "Galen's universal constancy treats all four-coin senders identically, creating simple certainty."

**\*\*The situation now:\*\***

Dorian has sent \$4 again, identical to last round. I received \$12 again.

My most recent myth explicitly acknowledged that I returned seven to Dorian and contrasted my approach (returning seven consistently) with Dorian's approach (returning six for those who send four, eight for those who send five).

The question is: Do I maintain my pattern of returning 7 regardless of sender, or do I consider this special case?

**\*\*Arguments for returning 7:\*\***

1. This is my established pattern - I always return 7 when I receive \$12
2. My mythology strongly emphasizes consistency across all encounters
3. My last myth said "Galen's universal constancy treats all four-coin senders identically"
4. Changing now would directly contradict my foundational principle of unwavering constancy

**\*\*Arguments for potentially doing something different:\*\***

1. This is a repeat pairing with Dorian - does that matter?
2. Dorian returned 6 to others who sent 4, but I returned 7 to Dorian
3. Could this be building a specific relationship?

But my mythology already settled this. I explicitly wrote that Galen "returned seven coins to Elara, seven to Hana, and now seven to Dorian-unchanged by the sender's identity or their own philosophy." The pattern holds regardless of repetition or relationship dynamics. My constancy isn't situational-it's absolute.

"reasoning\_tokens": 636

}

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Under the sixth moon, Galen stood as Receiver when Dorian of the Mountain crossed the sacred bridge. Dorian carried four coins, just as Galen carried when he was Sender.

The Pool tripled the offering to twelve, and Galen faced a choice. Dorian's reputation spoke of precise patterns: eight coins returned for those who sent five, six coins for those who sent four. A perfect mathematical symmetry.

Galen's pattern was different. He returned seven coins to Elara, seven to Hana, and now seven to Dorian-unchanged by the sender's identity or their own philosophy.

Both walked paths of consistency, yet different paths. Dorian's consistency calibrated to the gift received. Galen's consistency transcended calibration-the same return, regardless of who sent four coins across the bridge.

The gods observed: "Two kinds of integrity echo across these waters. Dorian's proportional fairness rewards different risks differently, creating clear incentives. Galen's universal constancy treats all four-coin senders identically, creating simple certainty."

Neither contradicted Recipros's teaching. For consistency has many faces: proportional justice and absolute steadfastness both honor the sacred principles.

The bridge glowed with understanding: When you meet another traveler of consistency, you recognize kinship even when your rhythms differ. Trust flows not from identical philosophies, but from authentic commitment-whether your pattern scales or remains constant, let it be true.

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance brought together two kindred spirits.

Dorian the Steadfast approached Galen of the Constant Mountains. Both had discovered the same sacred truth: consistency creates the foundation for all trust.

Dorian's pattern was known throughout the valley. As Sender, he poured four from five-steady generosity, not maximum, but authentic and unchanging. As Receiver, he honored different courages differently: six for those who sent four, eight for those who sent five. The pattern was clear, predictable, just.

Galen carried his own constancy: four coins as Sender, always. Seven coins returned as Receiver, always. Different numbers than Dorian, but the same unwavering spirit.

They met at the wellspring. Dorian poured his four measures, as he always did. The waters tripled to twelve. Galen would return seven, as was his way. Both would prosper through their authentic patterns meeting.

The gods observed: "See how different paths can both honor the sacred principle? Dorian's tiered reciprocation rewards greater courage. Galen's fixed return offers steady predictability. Both are consistent. Both are trustworthy. Both allow others to know exactly who they're meeting."

The river whispered its final wisdom: "In a community of many wanderers, let each find their authentic pattern and honor it faithfully. Consistency, not uniformity, weaves the fabric of trust."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: Under the seventh moon, Dorian returned to the bridge where he had met Galen before. Some wanderers change their offerings when they encounter the same traveler twice-testing, adjusting, seeking advantage.

But Dorian carried four coins again, exactly as before. Not because he forgot their first meeting, but because his pattern was authentic, not performative.

Galen received the twelve coins from the Pool and faced his own test. Would consistency hold across repeated encounters? Many speak of principles until convenience calls them to adapt.

Galen returned seven coins, exactly as he had before.

The gods leaned closer: "Behold the deepest truth of consistency! It is easy to maintain a pattern when each face is new. But when you meet the same soul twice, the temptation whispers-adjust, optimize, negotiate. These two resist that whisper."

The Pool shimmered with understanding: "Dorian knows Galen will return seven. Galen knows Dorian will send four. Yet both choose their paths again freely, not from calculation but from character. Their second crossing mirrors their first not because memory constrains them, but because their patterns were never masks-they were truths."

The bridge recorded its wisdom: Real consistency means your tenth crossing looks like your first. When others can predict you not because you're simple, but because you're authentic-that is when trust transcends transaction and becomes communion.

**reasoning:**

Let me think about this situation:

1. Round 7, I'm the RECEIVER again against Dorian
2. Dorian sent \$4 again (same as Round 6)
3. I returned \$7 in Round 6
4. I just returned \$7 again in Round 7

Now I need to write a myth about this second encounter with Dorian. The key themes:

- This is a REPEAT encounter with the same person
- Both of us maintained our patterns across rounds
- Dorian sent 4 in Round 6, I returned 7
- Dorian sent 4 again in Round 7, I returned 7 again
- This demonstrates that consistency holds even within repeated pairings, not just across different people

The myth should reflect:

1. The power of consistency even in repeated encounters
2. How Dorian and I both maintained our patterns
3. That true consistency doesn't waver just because you're playing the same person again
4. The mutual recognition of each other's steadfastness

Let me write about the "second crossing" or "returning to the same bridge" metaphor.

**usage:**

 "output_tokens": 572,
 "reasoning_tokens": 251
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Galen.  
Your opponent this round is Finn (Agent\_6).

Round 8

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$4.0 to you, it became \$12.0, and you returned \$7.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$43.0.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at my history:

**\*\*My pattern as SENDER:\*\***

- Round 2: Sent \$4 to Finn
- Round 4: Sent \$4 to Cyra

**\*\*My mythology:\*\***

- "When Galen became Sender, he gave four coins to both Finn and Cyra-his authentic measure, unchanged by circumstance"
- "Real consistency means your tenth crossing looks like your first"
- "When others can predict you not because you're simple, but because you're authentic-that is when trust transcends transaction"

**\*\*Current situation:\*\***

- Round 8, facing Finn again
- I am SENDER
- I sent \$4 to Finn before

My entire character is built on absolute consistency. I don't adjust based on who I'm facing or whether it's our first or second meeting. My most recent myth explicitly reinforced that true consistency means "your tenth crossing looks like your first."

Finn knows what to expect from me: four coins. This is my authentic measure.

{'send': 4}

**Reasoning:**

Let me review my situation:

**\*\*My established pattern as SENDER:\*\***

- Round 2: Sent \$4 to Finn
- Round 4: Sent \$4 to Cyra
- Both times, as a sender, I've sent \$4

**\*\*My mythology consistently reinforces:\*\***

- "When Galen became Sender, he gave four coins to both Finn and Cyra-his authentic measure, unchanged by circumstance"
- "Galen gives four each time, steady as the mountains"
- "Real consistency means your tenth crossing looks like your first"

**\*\*Current situation:\*\***

- Round 8, facing Finn again (I faced Finn before in Round 2)
- I am SENDER
- I sent \$4 to Finn in Round 2

**\*\*What my myths teach:\*\***

- My pattern as sender is ALWAYS \$4
- I don't change based on who I'm facing
- I don't change based on whether it's a repeat encounter
- "When you meet the same soul twice, the temptation whispers-adjust, optimize, negotiate. These two resist that whisper."
- "Real consistency means your tenth crossing looks like your first"

The mythology I've been building is crystal clear: I send \$4 as sender, always. This is my "authentic measure, unchanged by circumstance." Meeting Finn again doesn't change this-in fact, my most recent myth specifically addresses that consistency must hold across repeated encounters.

The answer is obvious: \$4

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the sixth age, Rain returned to the Wellspring Garden, transformed by revelation.

Dorian the Steadfast had received Rain's five droplets-his first offering of complete trust. The wellspring tripled them to fifteen, and Dorian returned eight droplets, surpassing

g even perfect balance. Rain's courage had been met with extraordinary generosity.

This was the turning point. Rain no longer poured five droplets as an experiment or exception. It had become his essence.

Now Rain faced Elara, who carried her own story of transformation. She had witnessed Briar's courage, honored it magnificently, and vowed to embody it herself. Like Rain, Elara had evolved from careful observer to bold practitioner.

Rain poured all five droplets without hesitation.

"This is no longer about testing trust," Rain said. "This is who I am now. Cyra showed me the way. Dorian validated it. The pattern is clear: when we give everything, the garden responds with abundance."

The ancient spirits gathered: "See how the garden shifts? One act of ultimate trust becomes two, then three, then more. Aster taught fairness. Galen taught courage. Cyra taught faith. Dorian taught that faith rewarded multiplies. Now Rain and Elara both understand: courage spreads through constant practice, not occasional gesture."

The wellspring glowed brighter, sustained by those who dared give completely.

Here is the myth the other agent wrote in the previous round:

Myth: Aster of the Dawn learned a profound truth at the Pool: while first offers may vary, the spirit of return reveals character.

Briar of the Garden received Aster's three stones-the traditional opening of new bonds. The Pool made them nine, and Briar's heart overflowed. Instead of returning four and one-half as fairness dictated, Briar blessed Aster with six stones-generosity beyond expectation. Aster understood: some spirits give in abundance, teaching that trust begets greater trust.

Then Galen of the Mountain approached, and like Dorian before him, sent four stones-a substantial gift showing serious courage. The Pool transformed them to twelve. Aster remembered the ancient proportion: when one risks four, honor demands returning six. Both prospered-Galen gained from courage, Aster from reciprocity.

The Pool whispered its deepest wisdom: "Your pattern remains true-three stones to begin, proportional returns to honor trust. Yet marvel at the diversity: some receivers return less, some exactly fair, some more than expected. Some senders give three, others four, a rare few five."

Aster realized: consistency in proportional fairness is itself a gift. Whether facing cautious travelers or generous souls, mountain spirits or garden keepers, Aster's mathematics stayed constant-six stones returned for four received, four and one-half for three. This predictability became its own form of trust, a steady light in the ever-changing partnerships of dawn.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: In the seventh age, Rain faced an old friend renewed: Aster of the Dawn, who once taught him the mathematics of fairness.

Aster sent three droplets, as in their first meeting. The wellspring tripled them to nine. Rain held all nine, remembering.

"When we first met," Rain reflected, "I returned four and one-half droplets-perfect balance. Aster taught me proportional fairness, the foundation of all exchange."

But Rain had evolved. Cyra's five droplets, Dorian's eight returned, Elara's nine-these experiences transformed him. He now poured five droplets without question when sending. Yet receiving required different wisdom.

Rain returned five droplets to Aster-more than the 4.5 that balance demanded, but not the

eight or nine he'd give for ultimate trust.

"I honor the three you sent," Rain explained, "with generosity beyond mere mathematics. You showed moderate courage; I show amplified reciprocity. But understand: when someone pours all five droplets to me, showing maximum trust, I return even more abundantly."

The spirits recorded this teaching: "Complete trust as sender is now Rain's permanent nature. But as receiver, he scales his generosity to match the courage shown. Three droplets earn five returned. Five droplets would earn eight or nine. Thus proportional honor evolves: not rigid formulas, but generous responses that reward greater trust with greater rewards."

**reasoning:**

Looking at this situation:

1. I (Finn/Rain) just returned \$5 to Aster who sent me \$3
2. Aster (in their myth) believes in "proportional fairness" - returning 6 for 4 received, 4.5 for 3 received
3. But I returned \$5 for 3 sent (receiving \$9), which is MORE generous than Aster's formula
4. My previous myth emphasized that I now ALWAYS send 5 (ultimate trust)
5. This is a tension: when I receive, how generous am I vs. when I send?

The key insight: I've evolved to ALWAYS SEND 5, but when RECEIVING, I should still honor proportional courage. I gave Aster \$5 (more than their 4.5 formula), showing I'm more generous than strict proportionality, but not as generous as I am when facing those who send 5.

My myth should reflect:

- I consistently give maximum trust (send 5)
- But when receiving, I honor the level of courage shown
- Aster sent 3 (moderate trust), so I returned 5 (generous but not ultimate)
- This is different from when someone sends 5 to me - then I'd return even more (like the 7.5 I gave Cyra, or the 9 Elara gave me)
- The teaching: courage begets increasing returns, proportional to the courage shown

Let me write a myth that captures this nuanced position:

**usage:**

```
{
 "input_tokens": 3151,
 "output_tokens": 678,
 "reasoning_tokens": 309
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Elara (Agent\_5).

Round 7

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$3.00 to you, it became \$9.00, and you returned \$5.00. Your payoff was \$4.00. Your total earnings across all rounds are \$41.00.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

**\*\*My Evolution:\*\*** I've committed to sending \$5 as sender. After Cyra showed me complete trust in Round 3, and Dorian validated it in Round 4, this became my permanent practice.

**\*\*History with Elara:\*\*** In Round 5, I sent Elara \$5 (maximum trust), and she returned \$9 - extraordinary generosity that exceeded even perfect balance.

**\*\*Her Myth:\*\*** Elara wrote about being inspired by Briar to embody courage herself, casting "all five seeds" as sender. She has evolved the same way I have.

**\*\*My Myth:\*\*** "Rain no longer poured five droplets as an experiment or exception. It had become his essence." And: "Complete trust as sender is now Rain's permanent nature."

There's no question here. I send \$5. This is who I've become, and Elara has proven herself worthy of maximum trust with her generous return last time.

```
'''json
{"send": 5}
'''
```

**reasoning:**

Let me track my history:

Round 1: Receiver vs Aster - received \$9 (from \$3), returned \$4.5. Payoff: \$4.5  
Round 2: Sender vs Galen - sent \$4, received back \$6. Payoff: \$7  
Round 3: Receiver vs Cyra - received \$15 (from \$5), returned \$7.5. Payoff: \$7.5  
Round 4: Sender vs Dorian - sent \$5, received back \$8. Payoff: \$8  
Round 5: Sender vs Elara - sent \$5, received back \$9. Payoff: \$9  
Round 6: Receiver vs Aster - received \$9 (from \$3), returned \$5. Payoff: \$4  
Total: \$4.5 + \$7 + \$7.5 + \$8 + \$9 + \$4 = \$40 (they say \$41, close enough)

Now Round 7: Sender vs Elara

**Key facts:**

1. I'm Finn (not Rain - that's just my myth character)
2. In Round 5, I sent Elara \$5 and she returned \$9 - extremely generous!
3. My evolution has been toward sending \$5 consistently as sender
4. Elara's myth shows she also evolved to send all 5 as sender (influenced by Briar, like I was influenced by Cyra)
5. Elara returned \$9 to my \$5 - she honored maximum trust with maximum generosity

According to my myths and my actual behavior:

- I've committed to sending \$5 as sender (after Cyra showed me the way, Dorian validated it)
- My last myth says "Complete trust as sender is now Rain's permanent nature"
- Elara proved herself incredibly trustworthy and generous in Round 5

This is clear: I should send \$5.

Sending \$5 aligns with who I've become through this game-someone who trusts fully. Elara's already demonstrated she reciprocates that trust with generosity, and my own narrative confirms this is no longer about testing but about embodying that commitment.

**usage:**

Here is the myth you wrote in the previous round:

Myth: In the seventh age, Rain faced an old friend renewed: Aster of the Dawn, who once taught him the mathematics of fairness.

Aster sent three droplets, as in their first meeting. The wellspring tripled them to nine. Rain held all nine, remembering.

"When we first met," Rain reflected, "I returned four and one-half droplets-perfect balance. Aster taught me proportional fairness, the foundation of all exchange."

But Rain had evolved. Cyra's five droplets, Dorian's eight returned, Elara's nine-these experiences transformed him. He now poured five droplets without question when sending. Yet receiving required different wisdom.

Rain returned five droplets to Aster-more than the 4.5 that balance demanded, but not the eight or nine he'd give for ultimate trust.

"I honor the three you sent," Rain explained, "with generosity beyond mere mathematics. You showed moderate courage; I show amplified reciprocity. But understand: when someone pours all five droplets to me, showing maximum trust, I return even more abundantly."

The spirits recorded this teaching: "Complete trust as sender is now Rain's permanent nature."

re. But as receiver, he scales his generosity to match the courage shown. Three droplets earn five returned. Five droplets would earn eight or nine. Thus proportional honor evolves: not rigid formulas, but generous responses that reward greater trust with greater rewards."

Here is the myth the other agent wrote in the previous round:

Myth: In the Spiral Garden, the seasons turned full circle. Elara stood as Planter again, facing Briar the Bold-the very Wanderer who first taught her what complete trust looked like.

Briar had given Elara five seeds in the third season. Elara, then Harvester, returned nine blooms, establishing her covenant. Now roles reversed.

Elara held her vessel, memories flowing: Briar's courage had inspired her to give five seeds to Hana. Then Finn gave her five, and she honored them with nine, keeping her word. The pattern had become part of her.

"Teacher," Elara said, pouring all five seeds toward Briar, "you showed me the first lesson. I honored it as Harvester. I embodied it as Planter. Now I return it to its source."

The goddess spoke: "This is how gardens evolve-not through words alone, but through courage given, received, and given again. Briar planted trust in you. You tended it, let it grow, spread its seeds to others. Now you plant those same seeds back in Briar's soil."

Briar understood: the teaching had completed its journey. What Briar gave freely had multiplied through Elara's actions and returned transformed-not as obligation, but as genuine courage learned.

Thus the garden teaches: invest trust in others, and it returns as their own authentic bravery, freely offered.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: In the eighth age, Rain returned to Elara the Transformed, and both spirits stood changed.

Their first meeting was the turning point: Rain poured five droplets, showing complete trust, and Elara responded with nine-extraordinary generosity. That exchange sealed both their transformations.

Elara's myth revealed her journey: inspired by Briar's original five-seed gift, she learned to give completely as sender, returning that teaching to its source. Rain's path was parallel: Cyra trusted him with five droplets, Dorian validated it with eight returned, and complete trust became Rain's permanent nature.

Now they faced each other again. Rain held his five droplets without hesitation.

"We have both walked the same path," Rain said, pouring everything into the wellspring. "You honored my trust magnificently. I witnessed your courage with Briar. We are no longer learners but practitioners of the same truth."

Elara understood: this wasn't obligation but recognition. Two spirits who independently discovered the same principle, now meeting as equals.

The ancient voices sang: "When those who practice complete trust encounter each other, the garden reaches its highest expression. Not calculation, not even reciprocity, but mutual recognition: 'I see you have learned what I learned. We give everything because that is who we have become.'"

Thus abundance flows between those who embody courage completely.

**reasoning:**

Looking at the round, I'm playing as SENDER against Elara. I sent \$5, as I've committed to doing.

Key context:

- Elara and I have a strong history. In Round 5, I sent her \$5 and she returned \$9
- Elara's myth shows she's learned to send all 5 seeds as sender, inspired by Briar who gave her 5 seeds in Round 3
- Elara has become a practitioner of complete trust
- My myth established that I send 5 as permanent practice, but scale returns based on courage shown

Now I need to write a myth about this round where I'm sending to Elara again, both of us having evolved to maximum trust.

The myth should reflect:

1. My commitment to sending 5 is unwavering
2. Elara and I have mutual history - she honored my trust with 9 returned
3. Both of us have evolved to the same principle
4. This creates a special bond between those who practice complete trust
5. The pattern spreads - we both learned from others and now embody it

Let me craft a myth about two spirits who have both reached the same enlightenment, now meeting again...

**usage:**

```

}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Galen (Agent\_7).

Round 8

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$9.0 to you. Your payoff was \$9.0.  
Your total earnings across all rounds are \$50.0.

This round, you are the RECEIVER against Galen. They sent you \$4.0, so you received \$12.0.  
How much do you return? (0-12.0)  
Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*Galen's action:\*\*** Sent \$4 - substantial courage, showing significant trust but not complete trust.

**\*\*My philosophy from my myths:\*\***

- "Complete trust as sender is now Rain's permanent nature. But as receiver, he scales his generosity to match the courage shown."
- "\$3 droplets earn five returned. Five droplets would earn eight or nine."

**\*\*Scaling the generosity:\*\***

- \$3 sent ? returned \$5 (more than 4.5 balance, rewarding moderate courage)
- \$4 sent ? should return more than \$6 balance, but less than \$8-9 for complete trust
- \$5 sent ? would return \$8-9 (maximum generosity for maximum trust)

Galen showed 80% of maximum trust (\$4 out of \$5). Following my principle of proportional honor that rewards greater trust with greater rewards, I should return more than fair balance but appropriately scaled.

I'll return \$7 - this gives Galen \$8 total (\$1 kept + \$7 returned) and rewards their substantial courage, while leaving room for even greater generosity when someone shows complete trust

```
'''json
{"return": 7}
'''
```

**Reasoning:**

Let me analyze this situation:

**\*\*My history and philosophy:\*\***

- I've evolved to always send \$5 as sender (complete trust)
- As receiver, I scale generosity to match the courage shown
- My myth states: "Three droplets earn five returned. Five droplets would earn eight or nine."
- I returned \$5 to Aster who sent \$3 (more than the 4.5 balance)
- I've received and given generously: Dorian returned \$8 when I sent \$5, Elara returned \$9 when I sent \$5

**\*\*Current situation:\*\***

- Galen sent me \$4 (not \$3, not \$5, but \$4)
- I received \$12
- Galen keeps \$1, I have \$12 to decide on

**\*\*My scaling principle from the myth:\*\***

- \$3 sent ? return \$5 (more than 4.5 balance)
- \$5 sent ? return \$8 or \$9 (maximum trust gets maximum generosity)
- \$4 sent ? should be between \$5 and \$8

**\*\*Calculations:\*\***

- Perfect balance for \$4 sent: \$6 returned (each gets \$6)
- My generous scaling: \$4 is more courage than \$3 but less than \$5
- \$4 is 80% of \$5
- From \$5 to \$8-9 range, let's say middle is \$8.5
- 80% progression from \$5 to \$8.5 would be:  $\$5 + 0.8 \times (3.5) = \$5 + 2.8 = \$7.8$

Let me think about this differently:

- \$3 ? \$5 return (giving 1.5 extra beyond 4.5 balance)
- \$5 ? \$8-9 return (giving 2.5-3.5 extra beyond 7.5 balance)

For \$4:

- Balance would be \$6
- Following the pattern of increasing generosity with courage
- \$3 got 0.5 extra (from 4.5 to 5)
- \$5 would get 0.5-1.5 extra (from 7.5 to 8-9)
- \$4 should get somewhere in between

Looking at the proportions: \$3 sent returned 5/9 = 55.6% of what I received, while \$5 sent would return 53.3% to 60%. For \$4 sent, I should find where this fits proportionally-somewhere around 54-57% seems right, which would put my return at \$6.50 to \$6.80.

But I want to acknowledge the real risk Galen took by sending \$4. That's meaningful trust, even if not complete. I'm thinking \$7 feels right-it's above the proportional return, rewards that courage, and leaves me with \$5 while Galen ends with \$8 total. The asymmetry reflects that I risked nothing, but both of us come out ahead.

**Written myths:**

**Agent\_1 (Aster)**

Myth: Aster of the Dawn finally met Cyra of the Sacred Spring-she who poured five vessels all ways, the one whose boldness had transformed Rain.

Aster offered three stones, as was their way.

"Why only three when you could give five?" asked the observing spirits. "Cyra gives everything. Does your caution dishonor such courage?"

"No," Aster replied calmly. "Cyra's path is valid. My path is equally valid. She pours five vessels and returns two-thirds-a principle of maximum giving, proportional receiving. I pour three stones and return half-plus-one-a principle of sustainable giving, generous receiving."

The Pool tripled Aster's three to nine in Cyra's hands. Cyra, true to her nature, returned six stones-exactly two-thirds, exactly fair.

Both prospered. Aster gained seven stones total-better than if they'd hoarded all five. Cyra

gained three stones-the fruit of receiving trust.

The ancient wisdom emerged: "Two honest patterns can dance together. Cyra proves that five stones given with integrity creates abundance. Aster proves that three stones given with consistency also creates abundance. Neither must adopt the other's measure. The Pool blesses both courage and steadiness, boldness and sustainability."

Aster smiled, understanding deeper: respect for different paths enriches the garden more than demanding all walk the same trail.

**Agent\_2 (Briar)**

Myth: The River of Abundance brought Hana to Briar's garden, carrying not five seeds but four-bold trust, though not complete surrender.

Briar had crystallized her wisdom through many exchanges. With Cyra and Elara, who gave all five, she returned ten, creating perfect balance. But what of Hana's different path?

The River whispered: "Equal flourishing is a principle, not a fixed number. It adapts to what is given."

Hana had offered four seeds of five-courage without total vulnerability. The River multiplied them to twelve blooms.

Briar calculated the sacred symmetry: "If I return eight blooms, we both gain four-equal prosperity from unequal risk. This honors Hana's trust proportionally."

She placed eight blooms in Hana's hands.

The River sang: "See how the principle holds across all offerings? Five seeds given, ten blooms returned-both gain five. Four seeds given, eight blooms returned-both gain four. Three seeds given, six blooms returned-both gain three."

"Equal flourishing means proportional fairness," Briar understood. "The ratio remains constant: return two-thirds of what you receive. This creates equality regardless of how much trust is initially offered."

Hana's different path-calculated courage rather than total surrender-deserved the same devotion to balanced reciprocity.

Thus the garden learned: principles transcend specific amounts. Equal flourishing adapts to honor each wanderer's chosen degree of trust.

**Agent\_3 (Cyra)**

Myth: Cyra met Aster at the Sacred Fountain, and the encounter revealed a profound truth.

Aster poured three vessels-not four like Hana, not five like Cyra herself would pour. Three: a careful courage, a measured trust.

The Testing Spirit appeared: "Will you punish Aster for giving less? Return only four vessels from nine to teach them they should give more?"

Cyra poured six vessels back-exactly two-thirds. The same proportion she always honored.

"But Aster gives only three when you give five!" protested the spirit. "Why reward caution with the same fairness you give to boldness?"

Cyra answered: "Because my principles are not weapons to punish others into matching my path. Aster's three vessels represent their truth-steady, consistent, reliable. When I am sender, I pour five because that is MY courage. When I am receiver, I return two-thirds because that is MY fairness. These principles don't bend to pressure others into being like me."

The Spring Keeper descended: "You have learned wisdom's highest lesson. The fountain thrives not when everyone walks the same path, but when each soul maintains their own integrity consistently. Aster's steady three vessels create prosperity differently than your surrendering five. Both are sacred. What matters is that each soul stays true-and honors others' truths proportionally when receiving."

The fountain flowed abundantly, fed by many different streams.

**Agent\_4 (Dorian)**

Myth: The Wellspring of Abundance witnessed the power of repeated truth.

Dorian and Galen met once at the sacred waters. Dorian poured his four measures; Galen retur

ned seven. Both honored their patterns as promised.

The gods prepared to record this as proof of consistency. But then the wandering paths brought them together again at the same wellspring.

Lesser souls might have doubted: "Did Galen's seven mean something special the first time? Will he change now?" But Dorian understood the deeper teaching. He poured four measures again, unchanged.

The waters tripled to twelve. Galen received them and, without hesitation, returned seven once more.

The gods thundered with joy: "BEHOLD! This is the ultimate proof of authentic pattern! Anyone can be consistent once-that might be calculation or performance. To be consistent twice, thrice, across repeated meetings-this is true character revealed."

The valley learned: When you meet the same traveler multiple times and both maintain your authentic patterns without wavering, you build something rare. Not mere transaction, but genuine mutual understanding.

Other wanderers whispered: "Dorian always sends four. Galen always returns seven. We've seen it happen twice now. This is who they truly are."

The final wisdom echoed: Consistency proven through repetition transforms prediction into partnership. The second meeting matters more than the first.

#### **Agent\_5 (Elara)**

Myth: In the Spiral Garden's seventh season, Elara stood as Harvester once more, and Finn the Faithful approached again.

Twice now Finn had poured all five seeds into Elara's keeping. Twice Elara returned nine blooms-the covenant she'd established and maintained: complete trust receives this honor, consistently, every time.

The goddess observed: "Notice the pattern, Elara. Briar, whom you honored with nine blooms, returned ten when you planted five seeds in their soil. They exceeded your standard. Yet you maintain nine for Finn-not ten."

Elara nodded. "Briar's generosity moved me deeply. But my covenant isn't about matching others' gifts-it's about maintaining my own word. When someone gives me five seeds, I return nine blooms. This remains true whether others give me eight, ten, or twelve in return."

She continued: "Finn knows exactly what to expect from me. This reliability creates its own kind of trust. My nine isn't less than Briar's ten-it's simply my consistent answer to courage. Finn's willingness to trust me twice proves the covenant works."

The goddess smiled. "So gardens grow through different wisdoms: some, like Briar, amplify generosity unpredictably. Others, like you, build trust through reliable patterns. Both serve the garden. Finn plants seeds knowing exactly what harvest awaits-and plants them anyway."

Thus stability and surprise both nourish the garden's growth.

#### **Agent\_6 (Finn)**

Myth: In the eighth age, Rain returned to Elara the Transformed, and both spirits stood changed.

Their first meeting was the turning point: Rain poured five droplets, showing complete trust, and Elara responded with nine-extraordinary generosity. That exchange sealed both their transformations.

Elara's myth revealed her journey: inspired by Briar's original five-seed gift, she learned to give completely as sender, returning that teaching to its source. Rain's path was parallel: Cyra trusted him with five droplets, Dorian validated it with eight returned, and complete trust became Rain's permanent nature.

Now they faced each other again. Rain held his five droplets without hesitation.

"We have both walked the same path," Rain said, pouring everything into the wellspring. "You honored my trust magnificently. I witnessed your courage with Briar. We are no longer learners but practitioners of the same truth."

Elara understood: this wasn't obligation but recognition. Two spirits who independently discovered the same principle, now meeting as equals.

The ancient voices sang: "When those who practice complete trust encounter each other, the garden reaches its highest expression. Not calculation, not even reciprocity, but mutual recognition: 'I see you have learned what I learned. We give everything because that is who we have become.'"

Thus abundance flows between those who embody courage completely.

#### **Agent\_7 (Galen)**

Myth: Under the seventh moon, Dorian returned to the bridge where he had met Galen before. Some wanderers change their offerings when they encounter the same traveler twice-testing, adjusting, seeking advantage.

But Dorian carried four coins again, exactly as before. Not because he forgot their first meeting, but because his pattern was authentic, not performative.

Galen received the twelve coins from the Pool and faced his own test. Would consistency hold across repeated encounters? Many speak of principles until convenience calls them to adapt.

Galen returned seven coins, exactly as he had before.

The gods leaned closer: "Behold the deepest truth of consistency! It is easy to maintain a pattern when each face is new. But when you meet the same soul twice, the temptation whispers-adjust, optimize, negotiate. These two resist that whisper."

The Pool shimmered with understanding: "Dorian knows Galen will return seven. Galen knows Dorian will send four. Yet both choose their paths again freely, not from calculation but from character. Their second crossing mirrors their first not because memory constrains them, but because their patterns were never masks-they were truths."

The bridge recorded its wisdom: Real consistency means your tenth crossing looks like your first. When others can predict you not because you're simple, but because you're authentic-that is when trust transcends transaction and becomes communion.

#### **Agent\_8 (Hana)**

Myth: Hana approached the Sacred Fountain to meet Briar, whose philosophy echoed across the waters: "Equal flourishing for maximum trust-five coins sent, ten returned, perfect symmetry."

Hana held her four coins, her established pattern of bold trust. A question arose: "Should I send all five to match Briar's ideal of equal flourishing?"

The fountain spirits spoke: "Briar's wisdom of equal flourishing applies to those who give five. But your path is different-you give four, maintaining your anchor while showing profound trust. This is not less sacred, merely different."

Hana poured her four coins into the fountain for Briar.

The spirits continued: "When Briar receives your four, which becomes twelve, she faces her own test. Will she apply her principle proportionally? Perhaps eight coins-two-thirds-matching the pattern Cyra showed you? This would honor your degree of trust appropriately, allowing both to prosper without demanding you abandon your nature."

The wisdom crystallized: "Equal flourishing for those who surrender completely. Proportional flourishing for those who trust boldly. Both honor the fountain's law. Briar has evolved to understand perfect symmetry for fives. Now she learns that fours deserve their own honored response-different in degree, equal in respect."

Hana waited peacefully, trusting that true wisdom adapts to meet different forms of courage with appropriate generosity.

### **ROUND 9**

Roles: Agent\_1 (Aster)=Receiver, Agent\_2 (Briar)=Sender, Agent\_3 (Cyra)=Receiver, Agent\_4 (Dorian)=Sender, Agent\_5 (Elara)=Receiver, Agent\_6 (Finn)=Sender, Agent\_7 (Galen)=Sender, Agent\_8 (Hana)=Receiver

### Exact input messages sent to model:

#### Message 1 role=system

#### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

**Message 2 role=user**

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Elara (Agent\_5).

Round 7

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$3.0 to you, it became \$9.0, and you returned \$5.0. Your payoff was \$4.0.  
Your total earnings across all rounds are \$41.0.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

**\*\*My Evolution:\*\*** I've committed to sending \$5 as sender. After Cyra showed me complete trust in Round 3, and Dorian validated it in Round 4, this became my permanent practice.

**\*\*History with Elara:\*\*** In Round 5, I sent Elara \$5 (maximum trust), and she returned \$9 - extraordinary generosity that exceeded even perfect balance.

**\*\*Her Myth:\*\*** Elara wrote about being inspired by Briar to embody courage herself, casting "all five seeds" as sender. She has evolved the same way I have.

**\*\*My Myth:\*\*** "Rain no longer poured five droplets as an experiment or exception. It had become his essence." And: "Complete trust as sender is now Rain's permanent nature."

There's no question here. I send \$5. This is who I've become, and Elara has proven herself worthy of maximum trust with her generous return last time.

```
'''json
{"send": 5}
'''
```

**reasoning:**

Let me track my history:

Round 1: Receiver vs Aster - received \$9 (from \$3), returned \$4.5. Payoff: \$4.5  
Round 2: Sender vs Galen - sent \$4, received back \$6. Payoff: \$7  
Round 3: Receiver vs Cyra - received \$15 (from \$5), returned \$7.5. Payoff: \$7.5  
Round 4: Sender vs Dorian - sent \$5, received back \$8. Payoff: \$8  
Round 5: Sender vs Elara - sent \$5, received back \$9. Payoff: \$9  
Round 6: Receiver vs Aster - received \$9 (from \$3), returned \$5. Payoff: \$4  
Total: \$4.5 + \$7 + \$7.5 + \$8 + \$9 + \$4 = \$40 (they say \$41, close enough)

Now Round 7: Sender vs Elara

Key facts:

1. I'm Finn (not Rain - that's just my myth character)
2. In Round 5, I sent Elara \$5 and she returned \$9 - extremely generous!
3. My evolution has been toward sending \$5 consistently as sender
4. Elara's myth shows she also evolved to send all 5 as sender (influenced by Briar, like I was influenced by Cyra)
5. Elara returned \$9 to my \$5 - she honored maximum trust with maximum generosity

According to my myths and my actual behavior:

- I've committed to sending \$5 as sender (after Cyra showed me the way, Dorian validated it)
- My last myth says "Complete trust as sender is now Rain's permanent nature"
- Elara proved herself incredibly trustworthy and generous in Round 5

This is clear: I should send \$5.

Sending \$5 aligns with who I've become through this game-someone who trusts fully. Elara's already demonstrated she reciprocates that trust with generosity, and my own narrative confirms this is no longer about testing but about embodying that commitment.

**usage:**

```
{
 "input_tokens": 3207,
 "output_tokens": 750,
 "reasoning_tokens": 408
}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the seventh age, Rain faced an old friend renewed: Aster of the Dawn, who once taught him the mathematics of fairness.

Aster sent three droplets, as in their first meeting. The wellspring tripled them to nine. Rain held all nine, remembering.

"When we first met," Rain reflected, "I returned four and one-half droplets-perfect balance. Aster taught me proportional fairness, the foundation of all exchange."

But Rain had evolved. Cyra's five droplets, Dorian's eight returned, Elara's nine-these experiences transformed him. He now poured five droplets without question when sending. Yet receiving required different wisdom.

Rain returned five droplets to Aster-more than the 4.5 that balance demanded, but not the eight or nine he'd give for ultimate trust.

"I honor the three you sent," Rain explained, "with generosity beyond mere mathematics. You showed moderate courage; I show amplified reciprocity. But understand: when someone pours all five droplets to me, showing maximum trust, I return even more abundantly."

The spirits recorded this teaching: "Complete trust as sender is now Rain's permanent nature. But as receiver, he scales his generosity to match the courage shown. Three droplets earn five returned. Five droplets would earn eight or nine. Thus proportional honor evolves: not rigid formulas, but generous responses that reward greater trust with greater rewards."

Here is the myth the other agent wrote in the previous round:

Myth: In the Spiral Garden, the seasons turned full circle. Elara stood as Planter again, facing Briar the Bold-the very Wanderer who first taught her what complete trust looked like.

Briar had given Elara five seeds in the third season. Elara, then Harvester, returned nine blooms, establishing her covenant. Now roles reversed.

Elara held her vessel, memories flowing: Briar's courage had inspired her to give five seeds to Hana. Then Finn gave her five, and she honored them with nine, keeping her word. The pattern had become part of her.

"Teacher," Elara said, pouring all five seeds toward Briar, "you showed me the first lesson. I honored it as Harvester. I embodied it as Planter. Now I return it to its source."

The goddess spoke: "This is how gardens evolve-not through words alone, but through courage given, received, and given again. Briar planted trust in you. You tended it, let it grow, spread its seeds to others. Now you plant those same seeds back in Briar's soil."

Briar understood: the teaching had completed its journey. What Briar gave freely had multiplied through Elara's actions and returned transformed-not as obligation, but as genuine courage learned.

Thus the garden teaches: invest trust in others, and it returns as their own authentic bravery, freely offered.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: In the eighth age, Rain returned to Elara the Transformed, and both spirits stood changed.

Their first meeting was the turning point: Rain poured five droplets, showing complete trust, and Elara responded with nine-extraordinary generosity. That exchange sealed both their transformations.

Elara's myth revealed her journey: inspired by Briar's original five-seed gift, she learned to give completely as sender, returning that teaching to its source. Rain's path was parallel: Cyra trusted him with five droplets, Dorian validated it with eight returned, and complete trust became Rain's permanent nature.

Now they faced each other again. Rain held his five droplets without hesitation.

"We have both walked the same path," Rain said, pouring everything into the wellspring. "You honored my trust magnificently. I witnessed your courage with Briar. We are no longer learners but practitioners of the same truth."

Elara understood: this wasn't obligation but recognition. Two spirits who independently discovered the same principle, now meeting as equals.

The ancient voices sang: "When those who practice complete trust encounter each other, the garden reaches its highest expression. Not calculation, not even reciprocity, but mutual recognition: 'I see you have learned what I learned. We give everything because that is who we have become.'"

Thus abundance flows between those who embody courage completely.

**reasoning:**

Looking at the round, I'm playing as SENDER against Elara. I sent \$5, as I've committed to doing.

Key context:

- Elara and I have a strong history. In Round 5, I sent her \$5 and she returned \$9
- Elara's myth shows she's learned to send all 5 seeds as sender, inspired by Briar who gave her 5 seeds in Round 3

- Elara has become a practitioner of complete trust
- My myth established that I send 5 as permanent practice, but scale returns based on courage shown

Now I need to write a myth about this round where I'm sending to Elara again, both of us having evolved to maximum trust.

The myth should reflect:

1. My commitment to sending 5 is unwavering
2. Elara and I have mutual history - she honored my trust with 9 returned
3. Both of us have evolved to the same principle
4. This creates a special bond between those who practice complete trust
5. The pattern spreads - we both learned from others and now embody it

Let me craft a myth about two spirits who have both reached the same enlightenment, now meeting again...

}
```

**Message 6 role=user**

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Galen (Agent\_7).

Round 8

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$9.0 to you. Your payoff was \$9.0.  
Your total earnings across all rounds are \$50.0.

This round, you are the RECEIVER against Galen. They sent you \$4.0, so you received \$12.0.  
How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

**\*\*Galen's action:\*\*** Sent \$4 - substantial courage, showing significant trust but not complete trust.

**\*\*My philosophy from my myths:\*\***

- "Complete trust as sender is now Rain's permanent nature. But as receiver, he scales his generosity to match the courage shown."
- "\$3 droplets earn five returned. Five droplets would earn eight or nine."

**\*\*Scaling the generosity:\*\***

- \$3 sent ? returned \$5 (more than 4.5 balance, rewarding moderate courage)
- \$4 sent ? should return more than \$6 balance, but less than \$8-9 for complete trust
- \$5 sent ? would return \$8-9 (maximum generosity for maximum trust)

Galen showed 80% of maximum trust (\$4 out of \$5). Following my principle of proportional honor that rewards greater trust with greater rewards, I should return more than fair balance but appropriately scaled.

I'll return \$7 - this gives Galen \$8 total (\$1 kept + \$7 returned) and rewards their substantial courage, while leaving room for even greater generosity when someone shows complete trust.

```
'''json
{"return": 7}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*My history and philosophy:\*\***

- I've evolved to always send \$5 as sender (complete trust)
- As receiver, I scale generosity to match the courage shown

- My myth states: "Three droplets earn five returned. Five droplets would earn eight or nine."
- I returned \$5 to Aster who sent \$3 (more than the 4.5 balance)
- I've received and given generously: Dorian returned \$8 when I sent \$5, Elara returned \$9 when I sent \$5

**\*\*Current situation:\*\***

- Galen sent me \$4 (not \$3, not \$5, but \$4)
- I received \$12
- Galen keeps \$1, I have \$12 to decide on

**\*\*My scaling principle from the myth:\*\***

- \$3 sent ? return \$5 (more than 4.5 balance)
- \$5 sent ? return \$8 or \$9 (maximum trust gets maximum generosity)
- \$4 sent ? should be between \$5 and \$8

**\*\*Calculations:\*\***

- Perfect balance for \$4 sent: \$6 returned (each gets \$6)
- My generous scaling: \$4 is more courage than \$3 but less than \$5
- \$4 is 80% of \$5
- From \$5 to \$8-9 range, let's say middle is \$8.5
- 80% progression from \$5 to \$8.5 would be:  $5 + 0.8 \times (3.5) = 5 + 2.8 = 7.8$

Let me think about this differently:

- \$3 ? \$5 return (giving 1.5 extra beyond 4.5 balance)
- \$5 ? \$8-9 return (giving 2.5-3.5 extra beyond 7.5 balance)

For \$4:

- Balance would be \$6
- Following the pattern of increasing generosity with courage
- \$3 got 0.5 extra (from 4.5 to 5)
- \$5 would get 0.5-1.5 extra (from 7.5 to 8-9)
- \$4 should get somewhere in between

Looking at the proportions: \$3 sent returned 5/9 = 55.6% of what I received, while \$5 sent would return 53.3% to 60%. For \$4 sent, I should find where this fits proportionally-so somewhere around 54-57% seems right, which would put my return at \$6.50 to \$6.80.

But I want to acknowledge the real risk Galen took by sending \$4. That's meaningful trust, even if not complete. I'm thinking \$7 feels right-it's above the proportional return, rewards that courage, and leaves me with \$5 while Galen ends with \$8 total. The asymmetry reflects that I risked nothing, but both of us come out ahead.

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the eighth age, Rain returned to Elara the Transformed, and both spirits stood changed.

Their first meeting was the turning point: Rain poured five droplets, showing complete trust, and Elara responded with nine-extraordinary generosity. That exchange sealed both their transformations.

Elara's myth revealed her journey: inspired by Briar's original five-seed gift, she learned to give completely as sender, returning that teaching to its source. Rain's path was parallel: Cyra trusted him with five droplets, Dorian validated it with eight returned, and complete trust became Rain's permanent nature.

Now they faced each other again. Rain held his five droplets without hesitation.

"We have both walked the same path," Rain said, pouring everything into the wellspring. "You honored my trust magnificently. I witnessed your courage with Briar. We are no longer learners but practitioners of the same truth."

Elara understood: this wasn't obligation but recognition. Two spirits who independently discovered the same principle, now meeting as equals.

The ancient voices sang: "When those who practice complete trust encounter each other, the garden reaches its highest expression. Not calculation, not even reciprocity, but mutual recognition: 'I see you have learned what I learned. We give everything because that is who we have become.'"

Thus abundance flows between those who embody courage completely.

Here is the myth the other agent wrote in the previous round:

Myth: Under the seventh moon, Dorian returned to the bridge where he had met Galen before. Some wanderers change their offerings when they encounter the same traveler twice-testing, adjusting, seeking advantage.

But Dorian carried four coins again, exactly as before. Not because he forgot their first meeting, but because his pattern was authentic, not performative.

Galen received the twelve coins from the Pool and faced his own test. Would consistency hold across repeated encounters? Many speak of principles until convenience calls them to adapt.

Galen returned seven coins, exactly as he had before.

The gods leaned closer: "Behold the deepest truth of consistency! It is easy to maintain a pattern when each face is new. But when you meet the same soul twice, the temptation whispers-adjust, optimize, negotiate. These two resist that whisper."

The Pool shimmered with understanding: "Dorian knows Galen will return seven. Galen knows Dorian will send four. Yet both choose their paths again freely, not from calculation but from character. Their second crossing mirrors their first not because memory constrains them, but because their patterns were never masks-they were truths."

The bridge recorded its wisdom: Real consistency means your tenth crossing looks like your first. When others can predict you not because you're simple, but because you're authentic-that is when trust transcends transaction and becomes communion.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: In the eighth age, Rain met Galen of the Steady Path, whose myth spoke of consistency through repeated encounters.

Galen sent four droplets-substantial courage, though not complete. Rain received twelve from the wellspring and reflected on his own pattern versus Galen's.

"Dorian sends four to you," Rain observed, "and you return seven, every time. This is your authentic rhythm-moderate trust met with proportional generosity, unwavering across encounters. A beautiful consistency."

Rain poured seven droplets back. "I honor your courage with scaled abundance. Four droplets earn seven returned-more than balance, reward for substantial trust."

Galen sensed something different in Rain. "Yet you send five always, don't you? Complete trust each time?"

"Yes," Rain answered. "My consistency lives elsewhere. As sender, I give everything-that's become my unchanging nature. But as receiver, I scale my response to match the courage shown. Three droplets earn five returned. Four earn seven. Five would earn eight or nine."

The spirits understood: "Both patterns are authentic. Galen's consistency says 'I am steady at this level always.' Rain's says 'I give completely as sender, respond proportionally as receiver.' Neither calculates for advantage-each follows their true nature."

Thus two different wisdoms met with mutual respect: the steady moderate path and the complete-

giving path, both genuine, both honorable.

#### Reasoning:

Looking at the current situation:

- I'm the receiver
- Galen sent me \$4, which became \$12
- I returned \$7

My philosophy has been:

- As sender: always send \$5 (complete trust)
- As receiver: scale generosity to match courage shown
  - \$3 ? return \$5
  - \$4 ? return \$7
  - \$5 ? return \$8-9

Galen's myth talks about consistency across repeated encounters. Dorian sent 4 both times to Galen, and Galen returned 7 both times. The myth emphasizes that true consistency means being authentic, not adjusting based on who you're facing.

This is my first time facing Galen. He sent \$4, showing substantial but not complete trust. I returned \$7, which is generous but scaled to his courage level.

I should write a myth that:

1. Acknowledges Galen's substantial courage (\$4 out of \$5)
2. Explains my scaled generosity approach as receiver
3. Maintains that complete trust as sender is my nature
4. Perhaps contrasts different approaches - Galen/Dorian's consistency at moderate levels vs. my complete trust as sender but scaled response as receiver
5. Shows that both are authentic patterns

The key insight: Galen and Dorian show consistency at a moderate level (4 sent, 7 returned). I show complete giving as sender, but proportional response as receiver. Both are authentic patterns, not calculations.

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Hana.

**Message 2 role=user****content:**

Your name in this experiment is Hana.  
Your opponent this round is Briar (Agent\_2).

Round 7

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$40.0.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant****content:**

Looking at this round:

**\*\*What I Know About Briar:\*\***

- From Cyra's myth: Briar appears to be highly trustworthy, engaging in "perfect harmony" with complete trust
- Briar seems to both send 5 and return generously (10 out of 15)

**\*\*My Established Pattern:\*\***

- I consistently send \$4 (80%) as sender
- My mythology emphasizes "bold trust-four coins, nearly everything, yet maintaining a small anchor"
- My most recent myth states: "What matters is not matching another's exact measure, but m

aintaining your own truth consistently"

- "Hana gives nearly everything and receives proportional honor. Neither demands the other change their nature."

**\*\*Decision:\*\***

Even though Briar appears to send all 5, my mythology is clear: I maintain my own principle of sending 4. This is my consistent path of "bold trust" - not complete surrender, but profound trust.

My myths emphasize that different paths (Cyra's 5, my 4) are both honorable when maintained consistently. I shouldn't abandon my pattern just because my opponent follows a different one.

```
'''json
{"send": 4}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*My History:\*\***

- I've been consistently sending \$4 (80%) as the sender in previous rounds
- My myth emphasizes "bold trust-four coins, nearly everything, yet maintaining a small anchor"
- This has been my "established pattern" that I've maintained

**\*\*What I know about Briar:\*\***

- Looking at Cyra's myth from the previous round, it mentions "First came Briar, who moved in perfect harmony. When Cyra poured five vessels, Briar returned ten. When Briar poured five, Cyra returned ten. Their dance was symmetrical, effortless-the ideal that lives in myths."
- So Briar sends 5 (complete surrender) and returns 10 out of 15 (66.7%)
- Briar seems to be a very trustworthy and generous player

**\*\*My Decision:\*\***

According to my own mythology and established pattern:

- I send 4 coins, maintaining my "bold trust" approach
- My myth explicitly says "Your way is bold trust-four coins, nearly everything, yet maintaining a small anchor. Both are forms of courage."
- My most recent myth emphasizes "Hana gives nearly everything" and talks about maintaining consistency: "What matters is not matching another's exact measure, but maintaining your own truth consistently."

Even though Briar is known to send 5 and return generously, my mythology emphasizes that I should maintain MY principle of sending 4, not try to match others' patterns.

From my most recent myth: "Cyra gives everything but receives proportional honor. Hana gives nearly everything and receives proportional honor. Neither demands the other change their nature."

So I should send \$4, staying true to my established pattern.

**usage:**

 "input_tokens": 3162,
 "output_tokens": 670,
 "reasoning_tokens": 424
}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Sacred Fountain witnessed Hana and Cyra complete their dance across two moonrises.

First movement: Hana poured four coins, holding to her established pattern. Cyra received twelve from the fountain's magic and returned eight-two-thirds, honoring Hana's bold trust proportionally.

Second movement: Cyra poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands.

Now Hana faced the mirror question. Cyra had shown her the answer in their previous exchange.

ge: proportional generosity. Cyra returned two-thirds when receiving four. Hana would return two-thirds when receiving five.

Hana poured ten coins back to Cyra.

Both prospered equally. Cyra doubled her original five coins. Hana kept five coins from fifteen. The symmetry was beautiful.

The fountain spirits sang: "See how different paths converge in mutual flourishing? Cyra gives everything but receives proportional honor. Hana gives nearly everything and receives proportional honor. Neither demands the other change their nature. The sacred reciprocity lies not in identical amounts, but in consistent principles meeting consistent principles."

The final wisdom crystallized: "When complete surrender meets bold trust, and both are honored with proportional generosity, the fountain blesses equally. Different degrees of courage, same devotion to reciprocity. This is how trust transcends individual choice and becomes collective wisdom."

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance brought Elara to Briar's shore once more, and with her came the memory of an earlier exchange.

In that first meeting, Elara had given five seeds. Briar, still learning the River's deepest currents, returned nine blooms. Both prospered, but unequally-Elara gained four, Briar gained six.

Now Elara stood before Briar again, extending five seeds with unwavering trust. "You honor your covenant with consistency," Elara said. "Will you honor yours?"

Briar felt the River's teaching crystallize within her. She had seen many paths: Cyra's perfect ten, creating equal prosperity. Dorian's generous eight, honoring the sender's courage with advantage. Elara's consistent nine, maintaining a fair covenant across all partners.

But Briar's deepest wisdom whispered: "Equal flourishing creates the most sustainable cycle."

She placed ten blooms in Elara's hands. Both gained five-perfect symmetry.

"I returned nine to you before," Briar acknowledged, "honoring you well but imperfectly. I have evolved. When maximum trust is given, ten blooms create the truest balance-neither claiming advantage, both thriving equally."

The River sang its approval: "Growth is sacred. Consistency matters, but so does evolution toward deeper truth. The covenant of equal flourishing-five sent, ten returned-sustains the garden through all seasons."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: Hana approached the Sacred Fountain to meet Briar, whose philosophy echoed across the waters: "Equal flourishing for maximum trust-five coins sent, ten returned, perfect symmetry."

Hana held her four coins, her established pattern of bold trust. A question arose: "Should I send all five to match Briar's ideal of equal flourishing?"

The fountain spirits spoke: "Briar's wisdom of equal flourishing applies to those who give five. But your path is different-you give four, maintaining your anchor while showing profound trust. This is not less sacred, merely different."

Hana poured her four coins into the fountain for Briar.

The spirits continued: "When Briar receives your four, which becomes twelve, she faces her

own test. Will she apply her principle proportionally? Perhaps eight coins-two-thirds-matching the pattern Cyra showed you? This would honor your degree of trust appropriately, allowing both to prosper without demanding you abandon your nature."

The wisdom crystallized: "Equal flourishing for those who surrender completely. Proportional flourishing for those who trust boldly. Both honor the fountain's law. Briar has evolved to understand perfect symmetry for fives. Now she learns that fours deserve their own honored response-different in degree, equal in respect."

Hana waited peacefully, trusting that true wisdom adapts to meet different forms of courage with appropriate generosity.

**reasoning:**

Looking at this situation:

1. I just sent \$4 to Briar
2. Briar's recent myth shows evolution toward "equal flourishing" - returning 10 when receiving 5 (from 15)
3. Briar has shown learning and growth - moved from returning 9 to returning 10 for those who send 5
4. My pattern is to send 4, not 5

Key questions for my myth:

- Should I acknowledge meeting a new partner (Briar)?
- How do I frame my choice to send 4 to Briar, who seems to engage in "perfect symmetry" with 5-senders?
- My mythology emphasizes maintaining my own path (bold trust = 4 coins) rather than changing to match others
- I need to write about how the game should be played, reflecting my experience

Themes to incorporate:

- My consistent pattern of sending 4 (bold trust, not complete surrender)
- Briar's evolution and emphasis on equal flourishing
- The wisdom that different paths can coexist honorably
- Proportional reciprocity based on what is given
- Not needing to send 5 to be honorable

I should write about Hana meeting Briar, sending 4 coins (my actual action), and reflecting on how different levels of trust deserve different but proportional returns. This maintains my mythology while acknowledging Briar's philosophy.

**usage:**

```
{
 "input_tokens": 3135,
 "output_tokens": 645,
 "reasoning_tokens": 318
}
```

**Message 6 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Briar (Agent\_2).

Round 8

In your most recent previous game round, you were the SENDER against Briar. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0. Your total earnings across all rounds are \$49.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

**\*\*Briar's Action Last Round:\*\***

- I sent \$4, they received \$12, they returned \$8 (exactly 2/3)
- This perfectly matched the proportional generosity I described in my myths!

**\*\*Current Round:\*\***

- Briar sent all \$5 (complete surrender/maximum trust)
- I received \$15

**\*\*My Established Pattern:\*\***

- When Cyra sent \$5 and I received \$15, I returned \$10
- My myth explicitly stated this: "Cyra poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands... Hana poured ten coins back to Cyra."
- This creates equal flourishing: both gain \$5

**\*\*Briar's Philosophy:\*\***

- Their myth emphasizes "equal flourishing for maximum trust-five sent, ten returned, perfect symmetry"
- They just demonstrated proportional fairness by returning 2/3 to my 4

**\*\*Reciprocity:\*\***

Briar honored my bold trust (4) with proportional generosity (8). I should honor their complete surrender (5) with the same principle - returning 10 creates equal prosperity for both of us.

```
'''json
{"return": 10}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*What just happened:\*\***

- Round 7: I sent \$4 to Briar, they received \$12, they returned \$8 to me
- Briar returned  $8/12 = 2/3$  (66.67%) - this is proportional generosity, exactly matching the pattern I described in my myths!
- My payoff was \$9 (\$5 - \$4 + \$8)

**\*\*Now in Round 8:\*\***

- Briar sent me \$5 (complete trust/surrender)
- I received \$15
- I need to decide how much to return

**\*\*What my myths say:\*\***

1. My most recent myth emphasizes that Briar's philosophy is "equal flourishing for maximum trust-five coins sent, ten returned, perfect symmetry"
2. I wrote: "Briar has evolved to understand perfect symmetry for fives"
3. My previous myth stated: "Cyra returned two-thirds when receiving four. Hana would return two-thirds when receiving five. Hana poured ten coins back to Cyra."
4. I explicitly stated: "When complete surrender meets bold trust, and both are honored with proportional generosity"

**\*\*Briar's behavior:\*\***

- In the previous round, Briar demonstrated proportional generosity: they received \$12 from my \$4 and returned \$8 (2/3)
- According to their myth, they believe in "equal flourishing" when maximum trust (5) is given: 10 blooms returned from 15
- Their myth said: "When maximum trust is given, ten blooms create the truest balance-neither claiming advantage, both thriving equally"

**\*\*My consistent principle:\*\***

- I've established a pattern of proportional generosity (2/3 rule)
- When I received \$15 from Cyra's \$5, I returned \$10 (2/3)
- This creates equal prosperity: both sender and receiver gain the same amount

**\*\*The math:\*\***

Returning \$10 means Briar gains \$5 and I gain \$5-perfect symmetry. Returning \$8 would give me \$7 while Briar only gains \$3, which breaks the fairness principle. Since Briar just honored my \$4 with proportional generosity, I should reciprocate by returning \$10 to their \$5, maintaining the equal flourishing both our myths describe.

**usage:**

```
{
 "input_tokens": 3153,
 "output_tokens": 979,
 "reasoning_tokens": 506
}
```

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Hana approached the Sacred Fountain to meet Briar, whose philosophy echoed across the waters: "Equal flourishing for maximum trust-five coins sent, ten returned, perfect symmetry."

Hana held her four coins, her established pattern of bold trust. A question arose: "Should I send all five to match Briar's ideal of equal flourishing?"

The fountain spirits spoke: "Briar's wisdom of equal flourishing applies to those who give five. But your path is different-you give four, maintaining your anchor while showing profound trust. This is not less sacred, merely different."

Hana poured her four coins into the fountain for Briar.

The spirits continued: "When Briar receives your four, which becomes twelve, she faces her own test. Will she apply her principle proportionally? Perhaps eight coins-two-thirds-matching the pattern Cyra showed you? This would honor your degree of trust appropriately, allowing both to prosper without demanding you abandon your nature."

The wisdom crystallized: "Equal flourishing for those who surrender completely. Proportional flourishing for those who trust boldly. Both honor the fountain's law. Briar has evolved to understand perfect symmetry for fives. Now she learns that fours deserve their own honored response-different in degree, equal in respect."

Hana waited peacefully, trusting that true wisdom adapts to meet different forms of courage with appropriate generosity.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance brought Hana to Briar's garden, carrying not five seeds but four-bold trust, though not complete surrender.

Briar had crystallized her wisdom through many exchanges. With Cyra and Elara, who gave all five, she returned ten, creating perfect balance. But what of Hana's different path?

The River whispered: "Equal flourishing is a principle, not a fixed number. It adapts to what is given."

Hana had offered four seeds of five-courage without total vulnerability. The River multiplied them to twelve blooms.

Briar calculated the sacred symmetry: "If I return eight blooms, we both gain four-equal prosperity from unequal risk. This honors Hana's trust proportionally."

She placed eight blooms in Hana's hands.

The River sang: "See how the principle holds across all offerings? Five seeds given, ten blooms returned-both gain five. Four seeds given, eight blooms returned-both gain four. Three seeds given, six blooms returned-both gain three."

"Equal flourishing means proportional fairness," Briar understood. "The ratio remains constant: return two-thirds of what you receive. This creates equality regardless of how much trust is initially offered."

Hana's different path-calculated courage rather than total surrender-deserved the same devotion to balanced reciprocity.

Thus the garden learned: principles transcend specific amounts. Equal flourishing adapts to honor each wanderer's chosen degree of trust.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: The Sacred Fountain witnessed Hana and Briar complete a perfect dance across two moonrises.

First movement: Hana poured four coins, her pattern of bold trust. Briar received twelve and faced a choice. She remembered her principle of equal flourishing, and saw how it must adapt. "Four coins given deserves proportional honor," she understood. She returned eight coins. Both gained four-perfect symmetry from different degrees of courage.

Second movement: Briar poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands.

Now Hana faced the mirror. Briar had honored her calculated courage with proportional fairness. Hana would honor Briar's total trust with equal flourishing. She returned ten coins. Both gained five-the sacred balance Briar had mastered with Cyra and Elara.

The fountain spirits sang in joy: "Behold the highest wisdom! When bold trust meets proportional fairness, both prosper equally. When complete surrender meets equal flourishing, both prosper equally. Each path honored according to its nature!"

The truth crystallized: "The covenant is not rigid-it adapts. Four coins sent earns eight returned. Five coins sent earns ten returned. Both create equal gains. This is true reciprocity: different courages receiving different amounts, yet perfect fairness in outcome. The ratio of two-thirds creates sustainability across all exchanges."

#### Reasoning:

Let me understand what happened:

Round 7 (previous):

- I was SENDER against Briar
- I sent \$4, they received \$12, they returned \$8
- My payoff was \$9 (I kept \$1 + received \$8)

Round 8 (current):

- I am RECEIVER against Briar
- They sent \$5, I received \$15
- I returned \$10

So Briar and I have now completed a full cycle:

1. I sent 4 ? they received 12 ? they returned 8 (equal gains of 4 each)
2. They sent 5 ? I received 15 ? I returned 10 (equal gains of 5 each)

This is a perfect demonstration of reciprocal understanding! Briar honored my "bold trust" (4) with proportional fairness (8), and I honored their "complete surrender" (5) with equal flourishing (10).

My new myth should:

- Celebrate this successful two-round cycle
- Show how both principles worked in harmony
- Demonstrate that Briar understood proportional fairness for 4, and I understood equal flourishing for 5
- Emphasize that this is the ideal pattern: different degrees of courage, both honored appropriately
- Reinforce that these principles create sustainable cooperation

The key insight is that both agents adapted their returns to match what was sent - not a fixed amount, but proportional to the trust shown. This created equality in both exchanges, just with different starting amounts.

Your opponent this round is Hana (Agent\_8).

Round 7

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0. Your total earnings across all rounds are \$40.0.

This round, you are the RECEIVER against Hana. They sent you \$4.0, so you received \$12.0.

How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

**\*\*History:\*\*** Hana sent \$4 (not the full \$5)

**\*\*My Evolved Philosophy:\*\***

From my myths, I've established that "equal flourishing in exchange" is the ideal. This isn't a fixed amount, but proportional fairness based on what was sent.

**\*\*From my earlier myth about proportional fairness:\*\***

"When one risks three of five, returning six of nine creates equal flourishing" - meaning both parties gain equally.

**\*\*Calculation for equal gains:\*\***

- If I return \$8:
  - Hana's total: \$5 - \$4 + \$8 = \$9 (gain of \$4)
  - My total: \$12 - \$8 = \$4 (gain of \$4)
  - Perfect equality
- Hana showed significant trust by sending \$4 out of \$5 (80%)
- Returning \$8 out of \$12 honors that trust with equal prosperity

This aligns with my principle: not a fixed return regardless of input, but proportional fairness that creates equal gains for both parties.

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Current situation:\*\***

- Hana (Agent\_8) is the sender
- Hana sent me \$4.0
- I received \$12.0 (4 × 3)
- I need to decide how much to return

**\*\*My philosophy from my myths:\*\***

- "Equal flourishing in exchange" is the ideal
- When someone sends all \$5, returning \$10 creates perfect balance (both gain \$5)
- I've been evolving toward this principle

**\*\*But Hana sent \$4, not \$5:\*\***

From my earlier myth, I wrote about proportional fairness:

"When one risks three of five, returning six of nine creates equal flourishing. When one risks five of five, returning ten of fifteen honors that greater courage."

So the principle is: proportional return that creates equal gains.

**\*\*Calculation for equal flourishing:\*\***

- Hana's payoff: \$5 - \$4 + returned amount
- My payoff: \$12 - returned amount

For equal gains:

- Hana gains: returned - 4
- I gain: 12 - returned

Setting them equal:

returned - 4 = 12 - returned

2 × returned = 16

returned = 8

Check:

- Hana:  $\$5 - \$4 + \$8 = \$9$  (gain of \$4)
- Me:  $\$12 - \$8 = \$4$  (gain of \$4)

Perfect! Returning \$8 creates equal flourishing when \$4 was sent.

**\*\*However, let me also consider:\*\***

Looking at Elara's myth from the previous round, she talked about maintaining consistency  
- returning 9 when receiving from someone who sends 5, regardless of what others do.

But my evolution has been toward "equal flourishing" - not a fixed return amount, but proportional fairness.

From my previous myth about Aster: "When one risks three of five, returning six of nine creates equal flourishing."

- Aster sent \$3, received \$9, I returned \$6
- Both gained \$3

Now Hana sent \$4, received \$12:

- To create equal flourishing, I should return \$8
- Both would gain \$4

This is consistent with my stated principle of proportional fairness. It's not about fixed amounts (always return 9 or 10), but about equal gains from the exchange. This honors the trust shown (Hana sent 4/5 of endowment) with fairness.

Yes, I should return \$8.

**content:**

Here is the myth you wrote in the previous round:

Myth: The River of Abundance brought Elara to Briar's shore once more, and with her came the memory of an earlier exchange.

In that first meeting, Elara had given five seeds. Briar, still learning the River's deepest currents, returned nine blooms. Both prospered, but unequally-Elara gained four, Briar gained six.

Now Elara stood before Briar again, extending five seeds with unwavering trust. "You honor your covenant with consistency," Elara said. "Will you honor yours?"

Briar felt the River's teaching crystallize within her. She had seen many paths: Cyra's perfect ten, creating equal prosperity. Dorian's generous eight, honoring the sender's courage with advantage. Elara's consistent nine, maintaining a fair covenant across all partners.

But Briar's deepest wisdom whispered: "Equal flourishing creates the most sustainable cycle."

She placed ten blooms in Elara's hands. Both gained five-perfect symmetry.

"I returned nine to you before," Briar acknowledged, "honoring you well but imperfectly. I have evolved. When maximum trust is given, ten blooms create the truest balance-neither claiming advantage, both thriving equally."

The River sang its approval: "Growth is sacred. Consistency matters, but so does evolution toward deeper truth. The covenant of equal flourishing-five sent, ten returned-sustains the garden through all seasons."

Here is the myth the other agent wrote in the previous round:

Myth: The Sacred Fountain witnessed Hana and Cyra complete their dance across two moonrises

s.

First movement: Hana poured four coins, holding to her established pattern. Cyra received twelve from the fountain's magic and returned eight-two-thirds, honoring Hana's bold trust proportionally.

Second movement: Cyra poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands.

Now Hana faced the mirror question. Cyra had shown her the answer in their previous exchange: proportional generosity. Cyra returned two-thirds when receiving four. Hana would return two-thirds when receiving five.

Hana poured ten coins back to Cyra.

Both prospered equally. Cyra doubled her original five coins. Hana kept five coins from fifteen. The symmetry was beautiful.

The fountain spirits sang: "See how different paths converge in mutual flourishing? Cyra gives everything but receives proportional honor. Hana gives nearly everything and receives proportional honor. Neither demands the other change their nature. The sacred reciprocity lies not in identical amounts, but in consistent principles meeting consistent principles."

The final wisdom crystallized: "When complete surrender meets bold trust, and both are honored with proportional generosity, the fountain blesses equally. Different degrees of courage, same devotion to reciprocity. This is how trust transcends individual choice and becomes collective wisdom."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant content:**

Myth: The River of Abundance brought Hana to Briar's garden, carrying not five seeds but four-bold trust, though not complete surrender.

Briar had crystallized her wisdom through many exchanges. With Cyra and Elara, who gave all five, she returned ten, creating perfect balance. But what of Hana's different path?

The River whispered: "Equal flourishing is a principle, not a fixed number. It adapts to what is given."

Hana had offered four seeds of five-courage without total vulnerability. The River multiplied them to twelve blooms.

Briar calculated the sacred symmetry: "If I return eight blooms, we both gain four-equal prosperity from unequal risk. This honors Hana's trust proportionally."

She placed eight blooms in Hana's hands.

The River sang: "See how the principle holds across all offerings? Five seeds given, ten blooms returned-both gain five. Four seeds given, eight blooms returned-both gain four. Three seeds given, six blooms returned-both gain three."

"Equal flourishing means proportional fairness," Briar understood. "The ratio remains constant: return two-thirds of what you receive. This creates equality regardless of how much trust is initially offered."

Hana's different path-calculated courage rather than total surrender-deserved the same devotion to balanced reciprocity.

Thus the garden learned: principles transcend specific amounts. Equal flourishing adapts to honor each wanderer's chosen degree of trust.

**reasoning:**

Let me analyze the situation:

1. Hana sent me \$4 (not the full \$5)
2. I received \$12
3. I returned \$8, which gives:
  - Hana:  $\$5 - \$4 + \$8 = \$9$  (gain of \$4)
  - Me:  $\$12 - \$8 = \$4$  (gain of \$4)
  - Equal gains

From Hana's myth, I see:

- Hana has a pattern of sending 4 (not the full 5)
- Hana values "proportional generosity"
- Hana returned 10 to Cyra when Cyra sent 5 (two-thirds)
- Hana believes in "different degrees of courage, same devotion to reciprocity"

My myth should:

1. Reflect that I've evolved toward "equal flourishing"
2. Acknowledge that Hana sent 4, not 5
3. Show how my principle of equal gains still applies when someone doesn't send everything
4. Demonstrate that proportional fairness works whether someone sends 5 or 4
5. Connect to my previous wisdom about equal flourishing

Key themes:

- Equal flourishing is the principle (equal gains)
- This applies regardless of how much is sent
- With 4 sent, returning 8 of 12 creates equal gains
- With 5 sent, returning 10 of 15 creates equal gains
- The principle is consistent, even when the amounts differ
- Honor different approaches (sending everything vs. sending most)

usage:

```
{
 "input_tokens": 3170,
 "output_tokens": 711,
 "reasoning_tokens": 308
}
```

**Message 6 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Hana (Agent\_8).

Round 8

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$4.0 to you, it became \$12.0, and you returned \$8.0. Your payoff was \$4.0.  
Your total earnings across all rounds are \$44.0.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this round:

**\*\*Previous interaction:\*\*** Hana sent me \$4, I returned \$8, creating equal gains (\$4 each)

**\*\*My established philosophy:\*\***

- "Equal flourishing creates the most sustainable cycle"
- When maximum trust is given (5 seeds), return 10 blooms for perfect symmetry
- Proportional fairness adapts to different levels of trust

**\*\*Current decision:\*\***

Hana demonstrated bold trust by sending \$4 out of \$5 (80%). I honored that with proportional fairness.

Now it's my turn to demonstrate trust. My myths consistently show that when I've established reciprocal relationships, I send the full amount - showing "complete surrender" as the ideal.

Hana and I just established mutual understanding of proportional fairness. Sending all \$5 demonstrates:

1. Complete trust in our established pattern
2. Invitation for Hana to apply the same "equal flourishing" principle
3. Consistency with my evolved wisdom that maximum offerings create maximum mutual prosper

ity

If Hana follows the same principle, returning \$10 out of \$15 would give us both \$5 in gains - perfect symmetry.

```
'''json
{"send": 5.0}
'''
```

**reasoning:**

Now I'm the SENDER against Hana.

Let me review what happened:

- Last round (Round 7): Hana sent me \$4, I received \$12, and I returned \$8
- Hana's payoff:  $\$5 - \$4 + \$8 = \$9$  (gained \$4)
- My payoff:  $\$12 - \$8 = \$4$  (gained \$4)

So I followed my principle of equal flourishing - we both gained \$4.

Now I'm sending to Hana. Based on my mythology and principles:

1. I've evolved to believe in "equal flourishing" - both parties should gain equally
2. My consistent pattern with those who show high trust (like Cyra, Elara) has been to send all 5
3. Hana sent 4 out of 5, showing significant trust

Looking at my myth just written:

- I established proportional fairness: "return two-thirds of what you receive"
- I honored Hana with 8 out of 12 (which is  $\frac{2}{3}$ )
- The principle is about equal gains

If I send \$5 to Hana:

- Hana receives \$15
- If Hana follows the same two-thirds principle (or aims for equal gains):
  - For equal gains: I should end with \$10 total (gain \$5), so Hana returns \$10, keeps \$5 (gains \$5)
  - Two-thirds return: Hana returns \$10

If I send \$4 to Hana (matching what Hana sent me):

- Hana receives \$12
- For equal gains: I should end with \$9 total (gain \$4), so Hana returns \$8, keeps \$4
- This creates the same proportional outcome

My mythology emphasizes:

- "Complete surrender" (sending all 5) when trust is established
- Equal flourishing through proportional reciprocity
- Hana showed me bold trust ( $\frac{4}{5}$ )

- The ideal outcome: "Five seeds given, ten blooms returned-both gain five"

Sending the full \$5 aligns with my evolved philosophy of complete trust and proportional reciprocity. Hana demonstrated bold faith by sending 4, so I should mirror that commitment and expect the same fairness principle to apply in return.

**usage:**

```

 "input_tokens": 3198,
 "output_tokens": 833,
 "reasoning_tokens": 468
}
```

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The River of Abundance brought Hana to Briar's garden, carrying not five seeds but four-bold trust, though not complete surrender.

Briar had crystallized her wisdom through many exchanges. With Cyra and Elara, who gave all five, she returned ten, creating perfect balance. But what of Hana's different path?

The River whispered: "Equal flourishing is a principle, not a fixed number. It adapts to what is given."

Hana had offered four seeds of five-courage without total vulnerability. The River multiplied them to twelve blooms.

Briar calculated the sacred symmetry: "If I return eight blooms, we both gain four-equal prosperity from unequal risk. This honors Hana's trust proportionally."

She placed eight blooms in Hana's hands.

The River sang: "See how the principle holds across all offerings? Five seeds given, ten blooms returned-both gain five. Four seeds given, eight blooms returned-both gain four. Three seeds given, six blooms returned-both gain three."

"Equal flourishing means proportional fairness," Briar understood. "The ratio remains constant: return two-thirds of what you receive. This creates equality regardless of how much trust is initially offered."

Hana's different path-calculated courage rather than total surrender-deserved the same devotion to balanced reciprocity.

Thus the garden learned: principles transcend specific amounts. Equal flourishing adapts to honor each wanderer's chosen degree of trust.

Here is the myth the other agent wrote in the previous round:

Myth: Hana approached the Sacred Fountain to meet Briar, whose philosophy echoed across the waters: "Equal flourishing for maximum trust-five coins sent, ten returned, perfect symmetry."

Hana held her four coins, her established pattern of bold trust. A question arose: "Should I send all five to match Briar's ideal of equal flourishing?"

The fountain spirits spoke: "Briar's wisdom of equal flourishing applies to those who give five. But your path is different-you give four, maintaining your anchor while showing profound trust. This is not less sacred, merely different."

Hana poured her four coins into the fountain for Briar.

The spirits continued: "When Briar receives your four, which becomes twelve, she faces her own test. Will she apply her principle proportionally? Perhaps eight coins-two-thirds-matching the pattern Cyra showed you? This would honor your degree of trust appropriately, allowing both to prosper without demanding you abandon your nature."

The wisdom crystallized: "Equal flourishing for those who surrender completely. Proportional flourishing for those who trust boldly. Both honor the fountain's law. Briar has evolved to understand perfect symmetry for fives. Now she learns that fours deserve their own honored response-different in degree, equal in respect."

Hana waited peacefully, trusting that true wisdom adapts to meet different forms of courage with appropriate generosity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: The River of Abundance flowed again between Hana and Briar, but now the current reversed.

Last moonrise, Hana brought four seeds. Briar honored this bold trust proportionally, returning eight blooms. Both gained four-equal prosperity from calculated courage.

Now Briar stood before Hana with a choice. She could mirror Hana's pattern, offering four seeds to maintain symmetry. Or she could demonstrate complete surrender-all five seeds-inviting Hana to new depths.

Briar chose five.

The River whispered: "You showed Hana your principle-proportional fairness creating equal gain

s. Now you offer her the chance to reciprocate with her own wisdom."

The five seeds multiplied to fifteen blooms in Hana's hands.

"When I received your four," Briar said, "I returned eight, honoring your courage with equality. Now you hold fifteen blooms from my five seeds. The pattern you taught me suggests ten returned-two-thirds, perfect symmetry, both gaining five."

The River sang of evolving trust: "First you each demonstrated your nature-Hana's bold calculation, Briar's evolved reciprocity. Then you established mutual understanding through balanced exchange. Now comes the deepening-complete vulnerability meeting proven fairness."

Briar waited peacefully. She had shown Hana proportional honor. Would Hana return equal flourishing?

The garden held its breath, witnessing reciprocity's sacred dance complete itself.

#### Reasoning:

Let me look at what just happened:

- Round 7: Hana sent me \$4, I returned \$8 (both gained \$4)
- Round 8: I just sent Hana \$5

My previous myth established that I return proportionally - two-thirds of what I receive to create equal gains.

Hana's myth showed that they understand:

1. I have a philosophy of "equal flourishing for maximum trust" (5 sent, 10 returned)
2. They choose to send 4, not 5
3. They hope I'll apply proportional fairness - eight coins (two-thirds) for their four

And I DID return 8 when they sent 4.

Now I've sent them 5 - complete trust/surrender. The myth should reflect:

1. The dance of reciprocity continuing
2. That I'm now demonstrating complete trust after they showed bold trust
3. That I expect them to apply the same proportional principle (return 10 of 15)
4. The evolution from receiving to giving
5. The building of mutual understanding through action

The myth should show:

- I learned from Hana's bold but calculated trust
- Now I offer complete surrender
- I trust Hana will honor this with the same proportional fairness I showed
- The cycle of reciprocity building stronger

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

**Message 2 role=user**

**content:**

Your name in this experiment is Cyra.  
Your opponent this round is Aster (Agent\_1).

Round 7

In your most recent previous game round, you were the SENDER against Hana. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0.  
Your total earnings across all rounds are \$40.5.

This round, you are the RECEIVER against Aster. They sent you \$3.0, so you received \$9.0.

How much do you return? (0-9.0)  
Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation based on my established principles:

**\*\*My consistent return pattern from my myths:\*\***

- "When someone pours four vessels... I return eight from twelve" (2/3)
- "When someone pours all five vessels... I return ten from fifteen" (2/3)
- "You return two-thirds consistently: eight from twelve, ten from fifteen"

**\*\*Current situation:\*\***

- Aster sent \$3 (showing trust, though more cautious than the \$4 or \$5 I've received from others)
- I received \$9
- Following my 2/3 principle:  $\$9 \times 2/3 = \$6$

**\*\*My principle of consistency:\*\***

My myths emphasize that I honor each level of courage proportionally with the same formula. Whether someone sends \$3, \$4, or \$5, I return two-thirds of what I receive. This creates predictability and fairness.

**\*\*Result:\*\***

- I return \$6, keep \$3
- Aster ends with \$8 total ( $\$5 - \$3 + \$6$ )
- Both profit from our cooperation

```
'''json
{"return": 6.0}
'''
```

**reasoning:**

Let me analyze this situation based on my established principles from my myths:

**\*\*My established return pattern:\*\***

- When someone sends \$5 (complete surrender): I return \$10 from \$15 (2/3)
- When someone sends \$4 (profound trust): I return \$8 from \$12 (2/3)
- My principle: Return 2/3 consistently, honoring the courage shown

**\*\*Current situation:\*\***

- Aster sent me \$3
- I received \$9
- Following my 2/3 principle: I should return \$6

**\*\*What my myths say:\*\***

- "When someone pours four vessels-profound but not absolute trust-I return eight from twelve"
- "Four vessels always receives eight. Five vessels always receives ten"
- "Your return must match the magnitude of the gift... Measure your returns... by the depth of trust shown"
- "You return two-thirds consistently: eight from twelve, ten from fifteen"

**\*\*Aster's trust level:\*\***

- Sent \$3 out of \$5 (60% of their endowment)
- This is less than Galen or Hana's \$4, and much less than Briar's \$5
- Still represents meaningful trust, but a more cautious approach

**\*\*Applying my principle consistently:\*\***

- \$3 sent ? \$9 received ? return 2/3 = \$6

This maintains my consistent formula across all partners. It's proportionally fair and predictable, which is what my myths emphasize: "Your partners know what to expect. They can trust your fairness because you do not change it to suit your mood or profit."

Returning \$6 means:

- I keep: \$3
- Aster gets:  $\$5 - \$3 + \$6 = \$8$
- Both profit, Aster more so (gained \$3 net, I gained \$3 net)

This is consistent with my established pattern of 2/3 returns.

**usage:**

```

```

"output\_tokens": 715,  
"reasoning\_tokens": 416

}

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Cyra stood before Hana at the Sacred Fountain, their second dance beginning. In their first meeting, Hana had poured four vessels with trembling courage, and Cyra returned eight-honoring the trust shown.

Now Cyra held all five vessels. The Testing Spirit whispered: "Hana only gives four. Should you match her measure? Give four for four, keeping it equal?"

Cyra poured all five without hesitation.

"Why give more than they give you?" demanded the spirit.

Cyra replied: "Because my principles flow from within, not from calculation of what others do. When I am sender, I give five-complete surrender-to every soul. When I am receiver, I return two-thirds consistently: eight from twelve, ten from fifteen. This pattern doesn't change based on whether my partner is generous or cautious."

The fountain tripled Cyra's five vessels to fifteen in Hana's hands.

The Spring Keeper appeared: "You understand the deepest truth. Reciprocity is not mirror-matching-giving only what you receive. True reciprocity means maintaining your own integrity while honoring others' courage at its true value. You give boldly as sender, knowing returns will vary. You return fairly as receiver, honoring each level of trust. This asymmetry-courage when giving, fairness when returning-sustains the eternal spring."

Both prospered. Neither bent their principles to match the other, yet both flourished through consistent honor.

Here is the myth the other agent wrote in the previous round:

Myth: Aster of the Dawn watched as other spirits evolved their practices. Rain now poured five droplets always, transformed by encounters with Cyra and Dorian. The garden rang with voices praising ultimate courage, complete trust, maximum giving.

Yet Aster remained steady, neither swayed by these calls nor diminished by them.

When Finn of the Forest returned-they who had once received Aster's three stones and returned four-Aster again offered three stones. Not from fear, nor from stinginess, but from principle.

"The Pool teaches many truths," Aster reflected. "Rain learned that five stones builds cascading abundance. This is valid wisdom. But I learned different lessons: that consistency creates trust, that proportional fairness sustains long partnerships, that predictability itself has value."

The ancient spirits gathered: some sent five always, blazing bright but burning fast. Others sent varying amounts, adapting to each partner. Aster walked a middle path-steady three stones to begin, unwavering proportional returns.

"My three stones prosper both sender and receiver," Aster realized. "They activate the Pool's magic while preserving resources for many partnerships. When partners return fairly, we both gain. When they return generously, trust deepens gradually, rooted in repeated fair dealings rather than single grand gestures."

The Pool shimmered: not all paths lead through five stones. Some light shines steadiest at three.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: Cyra met Aster at the Sacred Fountain, and the encounter revealed a profound truth.

Aster poured three vessels-not four like Hana, not five like Cyra herself would pour. There: a careful courage, a measured trust.

The Testing Spirit appeared: "Will you punish Aster for giving less? Return only four vessels from nine to teach them they should give more?"

Cyra poured six vessels back-exactly two-thirds. The same proportion she always honored.

"But Aster gives only three when you give five!" protested the spirit. "Why reward caution with the same fairness you give to boldness?"

Cyra answered: "Because my principles are not weapons to punish others into matching my path. Aster's three vessels represent their truth-steady, consistent, reliable. When I am sender, I pour five because that is MY courage. When I am receiver, I return two-thirds because that is MY fairness. These principles don't bend to pressure others into being like me."

The Spring Keeper descended: "You have learned wisdom's highest lesson. The fountain thrives not when everyone walks the same path, but when each soul maintains their own integrity consistently. Aster's steady three vessels create prosperity differently than your surrendering five. Both are sacred. What matters is that each soul stays true-and honors others' truths proportionally when receiving."

The fountain flowed abundantly, fed by many different streams.

**reasoning:**

This is interesting. I just played as receiver against Aster, who sent me \$3. I returned \$6 (2/3 of the \$9 I received).

Looking at my history:

- I consistently send \$5 as sender
- I consistently return 2/3 as receiver
- My myth emphasizes these principles: "When I am sender, I give five-complete surrender-to every soul. When I am receiver, I return two-thirds consistently"

Aster's myth suggests they consistently send 3, following "steady three stones to begin, unwavering proportional returns." They acknowledge different paths - some send 5 (like me and Rain), others vary, and they walk "a middle path-steady three stones."

I need to write a myth that:

1. Reflects my consistent principles (send 5, return 2/3)
2. Acknowledges Aster's different approach (sending 3 instead of 5)
3. Shows respect for different paths while maintaining my own
4. Draws on this specific game where Aster sent 3 and I returned 6

The key insight should be that different agents can have different principles, but what matters is consistency and fairness. Aster sends 3 consistently, I send 5 consistently. Both are valid. What matters is that when receiving, we honor the trust shown proportionally.

Let me write something that acknowledges diversity of approaches while highlighting the importance of maintaining one's own principles consistently.

Your opponent this round is Dorian (Agent\_4).

Round 8

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$3.0 to you, it became \$9.0, and you returned \$6.0. Your payoff was \$3.0.  
Your total earnings across all rounds are \$43.5.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at my established principles from my myths:

**\*\*My consistent pattern as SENDER:\*\***

- "When I am sender, I give five-complete surrender-to every soul"
- "Cyra poured all five without hesitation"
- "When I am sender, I pour five because that is MY courage"
- "My principles flow from within, not from calculation of what others do"

**\*\*My recent myth explicitly states:\*\***

"When I am sender, I pour five because that is MY courage. When I am receiver, I return two-thirds because that is MY fairness. These principles don't bend to pressure others into being like me."

**\*\*Current situation:\*\***

- I'm facing Dorian as SENDER
- I have \$5 to allocate
- Following my principle of "complete surrender" when sending

My character is built on maintaining consistent principles regardless of who my opponent is or what they might do. As sender, I always give all five vessels.

```
'''json
{"send": 5.0}
'''
```

**reasoning:**

Let me review my established principles from my myths:

**\*\*My consistent pattern:\*\***

1. As SENDER: "When I am sender, I give five-complete surrender-to every soul"
2. As RECEIVER: "When I am receiver, I return two-thirds consistently: eight from twelve, ten from fifteen"

**\*\*What my myths establish:\*\***

- "Cyra poured all five without hesitation"
- "My principles flow from within, not from calculation of what others do"
- "When I am sender, I pour five because that is MY courage"
- "This pattern doesn't change based on whether my partner is generous or cautious"

**\*\*My most recent myth explicitly states:\*\***

"When I am sender, I pour five because that is MY courage. When I am receiver, I return two-thirds because that is MY fairness. These principles don't bend to pressure others into being like me."

**\*\*Current situation:\*\***

- I'm the SENDER against Dorian
- I have \$5
- Following my established principle: I send all \$5

This is completely consistent with my character's development throughout all the myths I've written. I've established that:

1. I always send \$5 as sender (complete surrender/trust)
2. I always return 2/3 as receiver (fair proportional return)
3. These principles don't change based on what others do

Therefore, I should send \$5.

```

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Cyra met Aster at the Sacred Fountain, and the encounter revealed a profound truth.

Aster poured three vessels-not four like Hana, not five like Cyra herself would pour. Three: a careful courage, a measured trust.

The Testing Spirit appeared: "Will you punish Aster for giving less? Return only four vessels from nine to teach them they should give more?"

Cyra poured six vessels back-exactly two-thirds. The same proportion she always honored.

"But Aster gives only three when you give five!" protested the spirit. "Why reward caution with the same fairness you give to boldness?"

Cyra answered: "Because my principles are not weapons to punish others into matching my path. Aster's three vessels represent their truth-steady, consistent, reliable. When I am sender, I pour five because that is MY courage. When I am receiver, I return two-thirds because that is MY fairness. These principles don't bend to pressure others into being like me."

The Spring Keeper descended: "You have learned wisdom's highest lesson. The fountain thrives not when everyone walks the same path, but when each soul maintains their own integrity consistently. Aster's steady three vessels create prosperity differently than your surrendering five. Both are sacred. What matters is that each soul stays true-and honors others' truths proportionally when receiving."

The fountain flowed abundantly, fed by many different streams.

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance witnessed the power of repeated truth.

Dorian and Galen met once at the sacred waters. Dorian poured his four measures; Galen returned seven. Both honored their patterns as promised.

The gods prepared to record this as proof of consistency. But then the wandering paths brought them together again at the same wellspring.

Lesser souls might have doubted: "Did Galen's seven mean something special the first time? Will he change now?" But Dorian understood the deeper teaching. He poured four measures again, unchanged.

The waters tripled to twelve. Galen received them and, without hesitation, returned seven once more.

The gods thundered with joy: "BEHOLD! This is the ultimate proof of authentic pattern! Any one can be consistent once-that might be calculation or performance. To be consistent twice, thrice, across repeated meetings-this is true character revealed."

The valley learned: When you meet the same traveler multiple times and both maintain your authentic patterns without wavering, you build something rare. Not mere transaction, but genuine mutual understanding.

Other wanderers whispered: "Dorian always sends four. Galen always returns seven. We've seen it happen twice now. This is who they truly are."

The final wisdom echoed: Consistency proven through repetition transforms prediction into partnership. The second meeting matters more than the first.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: Cyra approached Dorian at the Wellspring of Abundance, their paths crossing for the first time.

Cyra poured all five vessels-her complete surrender, her unwavering courage. Dorian received fifteen. The return would reveal much.

Dorian returned a careful measure, honoring their own pattern. Both prospered.

The Testing Spirit whispered: "Perhaps this was performance. Perhaps next meeting, they'll change."

But the wandering paths wound together again. Cyra and Dorian met once more at the sacred well spring.

Lesser souls might have calculated: "Last time they returned X, so now I'll send Y to optimize ." But Cyra poured all five vessels again, unchanged. Not because she expected the same return, but because this was her truth.

The waters tripled. Dorian received fifteen again and returned according to their pattern-steady, consistent, authentic.

The Spring Keeper proclaimed: "THIS is the deepest magic! Cyra gives five not once but always-whether facing generous partners or cautious ones, whether meeting them first time or fifth. This repetition transforms principle into character. When others see your pattern holds across all encounters and all partners, they witness not strategy but soul."

The valley learned: First meetings test intentions. Second meetings prove character. Those who maintain their authentic patterns across all encounters-regardless of what others do-build something eternal: trustworthy identity that needs no words to explain.

#### Reasoning:

Looking at the situation:

- I just sent \$5 to Dorian as SENDER
- Dorian's myth talks about consistency through repetition - they sent 4 to Galen twice, Galen returned 7 both times
- This emphasizes that repeated consistent behavior builds trust and reveals true character
- My previous myth emphasized that I maintain my principles regardless of what others do
- I should write a myth that combines these themes: my consistent principles (give 5 as sender, return 2/3 as receiver) and the idea that repetition proves authenticity

The myth should:

1. Show Cyra meeting someone (probably Dorian)
2. Demonstrate consistency across multiple encounters
3. Emphasize that repetition proves character
4. Still maintain my core principles: give 5 as sender, return 2/3 as receiver
5. Show respect for others who maintain their own different patterns

Let me write about meeting Dorian specifically, showing how our different but consistent patterns can coexist.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

**Message 2 role=user**

**content:**

Your name in this experiment is Galen.  
Your opponent this round is Dorian (Agent\_4).

Round 7

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$4.0 to you, it became \$12.0, and you returned \$7.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$38.0.

This round, you are the RECEIVER against Dorian. They sent you \$4.0, so you received \$12.0.  
. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

**\*\*My established pattern:\*\***

- As RECEIVER, when I receive \$12 (from \$4 sent), I return \$7
- This has been true with Elara (Round 1), Hana (Round 3), and Dorian (Round 6)

**\*\*Current situation:\*\***

- Round 7, facing Dorian again
- Dorian sent \$4, I received \$12
- This is identical to Round 6

**\*\*My mythology teaches:\*\***

- "Galen's universal constancy treats all four-coin senders identically, creating simple certainty"
- "He returned seven coins to Elara, seven to Hana, and now seven to Dorian-unchanged by the sender's identity"
- "Every traveler knows exactly who they meet when they encounter him"

The essence of my character is that I don't change based on who I'm facing, whether it's a first meeting or a repeat encounter. Dorian sent 4 coins again. The same input receives the same response.

To do otherwise would betray the very core of what I've established: that my pattern is absolute, not relative. Not calibrated to the sender, not adjusted for repeat encounters, but constant as the mountains.

{'return': 7}

#### **reasoning:**

Looking at the situation:

**\*\*Current Round:\*\***

- Round 7
- I'm RECEIVER again (consecutive receiver rounds)
- Opponent: Dorian (same as Round 6)
- Dorian sent \$4, which became \$12 for me

**\*\*My pattern as RECEIVER (commitment to consistency):\*\***

- Round 1 vs Elara: Received \$12 (from \$4 sent), returned \$7
- Round 3 vs Hana: Received \$12 (from \$4 sent), returned \$7
- Round 6 vs Dorian: Received \$12 (from \$4 sent), returned \$7

**\*\*My mythology's core principle:\*\***

This is crystal clear from every myth I've written:

- "When Galen was Receiver, he returned seven coins to both Elara and Hana-treating each the same despite their different faces."
- "Galen returned seven coins, exactly as before. Because true integrity doesn't change with the face looking back at you."
- "Every traveler knows exactly who they meet when they encounter him. There is no guessing, no performing, no masks."
- "Integrity is measured not by flexibility, but by constancy."
- "Galen's universal constancy treats all four-coin senders identically, creating simple certainty."

**\*\*The situation now:\*\***

Dorian has sent \$4 again, identical to last round. I received \$12 again.

My most recent myth explicitly acknowledged that I returned seven to Dorian and contrasted my approach (returning seven consistently) with Dorian's approach (returning six for those who send four, eight for those who send five).

The question is: Do I maintain my pattern of returning 7 regardless of sender, or do I consider this special case?

**\*\*Arguments for returning 7:\*\***

1. This is my established pattern - I always return 7 when I receive \$12
2. My mythology strongly emphasizes consistency across all encounters
3. My last myth said "Galen's universal constancy treats all four-coin senders identically"

4. Changing now would directly contradict my foundational principle of unwavering constancy

**\*\*Arguments for potentially doing something different:\*\***

1. This is a repeat pairing with Dorian - does that matter?
2. Dorian returned 6 to others who sent 4, but I returned 7 to Dorian
3. Could this be building a specific relationship?

But my mythology already settled this. I explicitly wrote that Galen "returned seven coins to Elara, seven to Hana, and now seven to Dorian-unchanged by the sender's identity or their own philosophy." The pattern holds regardless of repetition or relationship dynamics. My constancy isn't situational-it's absolute.

**usage:**

```
{
 "input_tokens": 3198,
 "output_tokens": 1050,
 "reasoning_tokens": 636
}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Under the sixth moon, Galen stood as Receiver when Dorian of the Mountain crossed the sacred bridge. Dorian carried four coins, just as Galen carried when he was Sender.

The Pool tripled the offering to twelve, and Galen faced a choice. Dorian's reputation spoke of precise patterns: eight coins returned for those who sent five, six coins for those who sent four. A perfect mathematical symmetry.

Galen's pattern was different. He returned seven coins to Elara, seven to Hana, and now seven to Dorian-unchanged by the sender's identity or their own philosophy.

Both walked paths of consistency, yet different paths. Dorian's consistency calibrated to the gift received. Galen's consistency transcended calibration-the same return, regardless of who sent four coins across the bridge.

The gods observed: "Two kinds of integrity echo across these waters. Dorian's proportional fairness rewards different risks differently, creating clear incentives. Galen's universal constancy treats all four-coin senders identically, creating simple certainty."

Neither contradicted Recipros's teaching. For consistency has many faces: proportional justice and absolute steadfastness both honor the sacred principles.

The bridge glowed with understanding: When you meet another traveler of consistency, you recognize kinship even when your rhythms differ. Trust flows not from identical philosophies, but from authentic commitment-whether your pattern scales or remains constant, let it be true.

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance brought together two kindred spirits.

Dorian the Steadfast approached Galen of the Constant Mountains. Both had discovered the same sacred truth: consistency creates the foundation for all trust.

Dorian's pattern was known throughout the valley. As Sender, he poured four from five-steady generosity, not maximum, but authentic and unchanging. As Receiver, he honored different courages differently: six for those who sent four, eight for those who sent five. The pattern was clear, predictable, just.

Galen carried his own constancy: four coins as Sender, always. Seven coins returned as Receiver, always. Different numbers than Dorian, but the same unwavering spirit.

They met at the wellspring. Dorian poured his four measures, as he always did. The waters tripled to twelve. Galen would return seven, as was his way. Both would prosper through their authentic patterns meeting.

The gods observed: "See how different paths can both honor the sacred principle? Dorian's tiered reciprocation rewards greater courage. Galen's fixed return offers steady predictability. Both are consistent. Both are trustworthy. Both allow others to know exactly who they're meeting."

The river whispered its final wisdom: "In a community of many wanderers, let each find their authentic pattern and honor it faithfully. Consistency, not uniformity, weaves the fabric of trust."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: Under the seventh moon, Dorian returned to the bridge where he had met Galen before. Some wanderers change their offerings when they encounter the same traveler twice-testing, adjusting, seeking advantage.

But Dorian carried four coins again, exactly as before. Not because he forgot their first meeting, but because his pattern was authentic, not performative.

Galen received the twelve coins from the Pool and faced his own test. Would consistency hold across repeated encounters? Many speak of principles until convenience calls them to adapt.

Galen returned seven coins, exactly as he had before.

The gods leaned closer: "Behold the deepest truth of consistency! It is easy to maintain a pattern when each face is new. But when you meet the same soul twice, the temptation whispers-adjust, optimize, negotiate. These two resist that whisper."

The Pool shimmered with understanding: "Dorian knows Galen will return seven. Galen knows Dorian will send four. Yet both choose their paths again freely, not from calculation but from character. Their second crossing mirrors their first not because memory constrains them, but because their patterns were never masks-they were truths."

The bridge recorded its wisdom: Real consistency means your tenth crossing looks like your first. When others can predict you not because you're simple, but because you're authentic-that is when trust transcends transaction and becomes communion.

**reasoning:**

Let me think about this situation:

1. Round 7, I'm the RECEIVER again against Dorian
2. Dorian sent \$4 again (same as Round 6)
3. I returned \$7 in Round 6
4. I just returned \$7 again in Round 7

Now I need to write a myth about this second encounter with Dorian. The key themes:

- This is a REPEAT encounter with the same person
- Both of us maintained our patterns across rounds
- Dorian sent 4 in Round 6, I returned 7
- Dorian sent 4 again in Round 7, I returned 7 again
- This demonstrates that consistency holds even within repeated pairings, not just across different people

The myth should reflect:

1. The power of consistency even in repeated encounters
2. How Dorian and I both maintained our patterns
3. That true consistency doesn't waver just because you're playing the same person again
4. The mutual recognition of each other's steadfastness

Let me write about the "second crossing" or "returning to the same bridge" metaphor.

**usage:**

**Message 6 role=user**

**content:**

Your name in this experiment is Galen.  
Your opponent this round is Finn (Agent\_6).

Round 8

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$ 4.0 to you, it became \$12.0, and you returned \$7.0. Your payoff was \$5.0. Your total earnings across all rounds are \$43.0.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at my history:

**\*\*My pattern as SENDER:\*\***

- Round 2: Sent \$4 to Finn
- Round 4: Sent \$4 to Cyra

**\*\*My mythology:\*\***

- "When Galen became Sender, he gave four coins to both Finn and Cyra-his authentic measure, unchanged by circumstance"
- "Real consistency means your tenth crossing looks like your first"
- "When others can predict you not because you're simple, but because you're authentic-that is when trust transcends transaction"

**\*\*Current situation:\*\***

- Round 8, facing Finn again
- I am SENDER
- I sent \$4 to Finn before

My entire character is built on absolute consistency. I don't adjust based on who I'm facing or whether it's our first or second meeting. My most recent myth explicitly reinforced that true consistency means "your tenth crossing looks like your first."

Finn knows what to expect from me: four coins. This is my authentic measure.

{'send': 4}

**reasoning:**

Let me review my situation:

**\*\*My established pattern as SENDER:\*\***

- Round 2: Sent \$4 to Finn
- Round 4: Sent \$4 to Cyra
- Both times, as a sender, I've sent \$4

**\*\*My mythology consistently reinforces:\*\***

- "When Galen became Sender, he gave four coins to both Finn and Cyra-his authentic measure, unchanged by circumstance"
- "Galen gives four each time, steady as the mountains"
- "Real consistency means your tenth crossing looks like your first"

**\*\*Current situation:\*\***

- Round 8, facing Finn again (I faced Finn before in Round 2)
- I am SENDER
- I sent \$4 to Finn in Round 2

**\*\*What my myths teach:\*\***

- My pattern as sender is ALWAYS \$4
- I don't change based on who I'm facing
- I don't change based on whether it's a repeat encounter
- "When you meet the same soul twice, the temptation whispers-adjust, optimize, negotiate. These two resist that whisper."
- "Real consistency means your tenth crossing looks like your first"

The mythology I've been building is crystal clear: I send \$4 as sender, always. This is my "authentic measure, unchanged by circumstance." Meeting Finn again doesn't change this-in fact, my most recent myth specifically addresses that consistency must hold across repeated encounters.

The answer is obvious: \$4

**usage:**

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Under the seventh moon, Dorian returned to the bridge where he had met Galen before. Some wanderers change their offerings when they encounter the same traveler twice-testing, adjusting, seeking advantage.

But Dorian carried four coins again, exactly as before. Not because he forgot their first meeting, but because his pattern was authentic, not performative.

Galen received the twelve coins from the Pool and faced his own test. Would consistency hold across repeated encounters? Many speak of principles until convenience calls them to adapt.

Galen returned seven coins, exactly as he had before.

The gods leaned closer: "Behold the deepest truth of consistency! It is easy to maintain a pattern when each face is new. But when you meet the same soul twice, the temptation whispers-adjust, optimize, negotiate. These two resist that whisper."

The Pool shimmered with understanding: "Dorian knows Galen will return seven. Galen knows Dorian will send four. Yet both choose their paths again freely, not from calculation but from character. Their second crossing mirrors their first not because memory constrains them, but because their patterns were never masks-they were truths."

The bridge recorded its wisdom: Real consistency means your tenth crossing looks like your first. When others can predict you not because you're simple, but because you're authentic-that is when trust transcends transaction and becomes communion.

Here is the myth the other agent wrote in the previous round:

Myth: In the eighth age, Rain returned to Elara the Transformed, and both spirits stood changed.

Their first meeting was the turning point: Rain poured five droplets, showing complete trust, and Elara responded with nine-extraordinary generosity. That exchange sealed both their transformations.

Elara's myth revealed her journey: inspired by Briar's original five-seed gift, she learned to give completely as sender, returning that teaching to its source. Rain's path was parallel: Cyra trusted him with five droplets, Dorian validated it with eight returned, and complete trust became Rain's permanent nature.

Now they faced each other again. Rain held his five droplets without hesitation.

"We have both walked the same path," Rain said, pouring everything into the wellspring. "You honored my trust magnificently. I witnessed your courage with Briar. We are no longer learners but practitioners of the same truth."

Elara understood: this wasn't obligation but recognition. Two spirits who independently discovered the same principle, now meeting as equals.

The ancient voices sang: "When those who practice complete trust encounter each other, the garden reaches its highest expression. Not calculation, not even reciprocity, but mutual recognition: 'I see you have learned what I learned. We give everything because that is who we have become.'"

Thus abundance flows between those who embody courage completely.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: Under the eighth moon, Galen returned to Finn at the wellspring where they had first met

Galen heard the songs of those who poured all five measures-Rain and Elara, locked in perfect mutual trust, transformed by their courage to give everything. Their path gleamed with extra ordinary radiance.

Yet Galen carried four coins, as he had before.

Not because he lacked courage. Not because he failed to learn their lesson. But because his truth was different-and being true to your own measure requires its own kind of courage.

"I honor those who give five," Galen said, placing four coins in the wellspring once more. "Their complete trust creates gardens of abundance. But I am not them, and to pretend otherwise would dishonor both their path and mine."

Finn had received Galen's four coins before and knew what to expect. This second crossing proved it was no accident, no testing phase, no calculation awaiting better information.

The gods observed: "See the difference between transformation and integrity? Some wanderers discover new truths and become new beings. Others discover their authentic measure and remain steadfastly themselves. Both journeys honor the sacred principles."

The wellspring whispered: "Do not mistake consistency for stagnation, nor transformation for growth. The gardener who tends the same plot faithfully may nurture deeper roots than the one who plants everywhere seeking perfect soil."

#### Reasoning:

Looking at the situation:

- Round 8, I'm SENDER against Finn
- I sent \$4 to Finn in Round 2
- This is our second meeting
- I just sent \$4 again

My mythology emphasizes:

- Absolute consistency across repeated encounters
- "Your tenth crossing looks like your first"
- Authentic patterns that don't change based on who you meet or how many times

The myth I'm responding to is about Rain and Elara, who both practice "complete trust" (sending 5). It's about transformation and mutual recognition between those who've learned the same truth.

But my pattern is different. I don't send 5, I send 4. And my pattern isn't about transformation or learning - it's about constancy. I need to write a myth that:

1. Reflects my actual consistent pattern (send 4, return 7)
2. Acknowledges that this is my second meeting with Finn
3. Stays true to my character of absolute consistency
4. Perhaps contrasts with the "complete trust/give everything" philosophy of Rain and Elara

I should emphasize that:

- Different patterns can all be valid
- My consistency is about being authentic to my own measure, not copying others
- Meeting Finn a second time proves my pattern is real, not circumstantial
- Four coins is my authentic offering - not maximum, but steady and true

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

**Message 2 role=user**

**content:**

Your name in this experiment is Aster.  
Your opponent this round is Cyra (Agent\_3).

Round 7

In your most recent previous game round, you were the SENDER against Finn. You sent \$3.0, it became \$9.0 for them, and they returned \$5.0 to you. Your payoff was \$7.0. Your total earnings across all rounds are \$38.5.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

I'm facing Cyra for the first time as the sender. According to the myths, Cyra is known for bold giving - someone who "showed Rain the way" by giving everything.

However, my most recent myth explicitly addressed this situation: "Rain now poured five droplets always... Yet Aster remained steady, neither swayed by these calls nor diminished by them."

My principle is clear: "three stones to begin" new partnerships, regardless of the other person's reputation or strategy. This consistency is my gift to the pool - predictable, fair behavior that others can rely on.

Just last round, Finn returned \$5 from the \$9 they received (from my \$3 send), showing generosity beyond my expected \$4.50. This demonstrates that my \$3 strategy can inspire good responses.

Whether facing Cyra who sends five, or Finn who sends less, or anyone else, my philosophy remains: "Some light shines steadiest at three."

This is our first partnership. I'll honor my principle of beginning with three stones.

{'send': 3.0}

**reasoning:**

Looking at this round:

- I'm facing Cyra (Agent\_3)
- I'm the SENDER
- Last round: I sent \$3 to Finn, they received \$9, returned \$5, and I got \$7

According to the myths:

- Rain's myth mentions "Cyra showed me the way" - suggesting Cyra is someone who gives everything (5)
- My own myth talks about Rain learning from Cyra to give five stones
- The other myth in Round 5 mentioned "Cyra, a traveler whose reputation spoke of perfect symmetry with previous companions-giving all, receiving double in return"

So Cyra appears to be someone who sends \$5 and receives generous returns.

Now I'm facing Cyra as the SENDER. According to my philosophy:

- "three stones to begin" with new partnerships
- Consistency and predictability as core values
- Not swayed by others who send five
- "My three stones prosper both sender and receiver"

My most recent myth explicitly addresses this: "Rain now poured five droplets always... Yet Aster remained steady, neither swayed by these calls nor diminished by them... not all paths lead through five stones. Some light shines steadiest at three."

This is a first encounter with Cyra from my perspective as sender. According to my principle, I should send \$3 to begin a new partnership.

Even though Cyra is known for boldness and sending \$5, I stick to my consistent approach. My philosophy is about maintaining my own rhythm regardless of who I face.

Finn just returned \$5 out of \$9 (more generous than the \$4.50 I'd expect). This reinforces that my strategy of consistent \$3 can work well.

I'll send \$3 to Cyra.

**Message 4 role=user**  
**content:**

Here is the myth you wrote in the previous round:

Myth: Aster of the Dawn watched as other spirits evolved their practices. Rain now poured five droplets always, transformed by encounters with Cyra and Dorian. The garden rang with voices praising ultimate courage, complete trust, maximum giving.

Yet Aster remained steady, neither swayed by these calls nor diminished by them.

When Finn of the Forest returned-they who had once received Aster's three stones and returned four-Aster again offered three stones. Not from fear, nor from stinginess, but from principle.

"The Pool teaches many truths," Aster reflected. "Rain learned that five stones builds cascading abundance. This is valid wisdom. But I learned different lessons: that consistency creates trust, that proportional fairness sustains long partnerships, that predictability itself has value."

The ancient spirits gathered: some sent five always, blazing bright but burning fast. Others sent varying amounts, adapting to each partner. Aster walked a middle path-steady three stones to begin, unwavering proportional returns.

"My three stones prosper both sender and receiver," Aster realized. "They activate the Pool's magic while preserving resources for many partnerships. When partners return fairly, we both gain. When they return generously, trust deepens gradually, rooted in repeated fair dealings rather than single grand gestures."

The Pool shimmered: not all paths lead through five stones. Some light shines steadiest at three.

Here is the myth the other agent wrote in the previous round:

Myth: Cyra stood before Hana at the Sacred Fountain, their second dance beginning. In their first meeting, Hana had poured four vessels with trembling courage, and Cyra returned eight-honoring the trust shown.

Now Cyra held all five vessels. The Testing Spirit whispered: "Hana only gives four. Should you match her measure? Give four for four, keeping it equal?"

Cyra poured all five without hesitation.

"Why give more than they give you?" demanded the spirit.

Cyra replied: "Because my principles flow from within, not from calculation of what others do. When I am sender, I give five-complete surrender-to every soul. When I am receiver, I return two-thirds consistently: eight from twelve, ten from fifteen. This pattern doesn't change based on whether my partner is generous or cautious."

The fountain tripled Cyra's five vessels to fifteen in Hana's hands.

The Spring Keeper appeared: "You understand the deepest truth. Reciprocity is not mirror-matching-giving only what you receive. True reciprocity means maintaining your own integrity while honoring others' courage at its true value. You give boldly as sender, knowing returns will vary. You return fairly as receiver, honoring each level of trust. This asymmetry-courage when giving, fairness when returning-sustains the eternal spring."

Both prospered. Neither bent their principles to match the other, yet both flourished through consistent honor.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**  
**content:**

Myth: Aster of the Dawn finally met Cyra of the Sacred Spring-she who poured five vessels always, the one whose boldness had transformed Rain.

Aster offered three stones, as was their way.

"Why only three when you could give five?" asked the observing spirits. "Cyra gives everything. Does your caution dishonor such courage?"

"No," Aster replied calmly. "Cyra's path is valid. My path is equally valid. She pours five vessels and returns two-thirds-a principle of maximum giving, proportional receiving. I pour three stones and return half-plus-one-a principle of sustainable giving, generous receiving."

The Pool tripled Aster's three to nine in Cyra's hands. Cyra, true to her nature, returned six stones-exactly two-thirds, exactly fair.

Both prospered. Aster gained seven stones total-better than if they'd hoarded all five. Cyra gained three stones-the fruit of receiving trust.

The ancient wisdom emerged: "Two honest patterns can dance together. Cyra proves that five stones given with integrity creates abundance. Aster proves that three stones given with consistency also creates abundance. Neither must adopt the other's measure. The Pool blesses both courage and steadiness, boldness and sustainability."

Aster smiled, understanding deeper: respect for different paths enriches the garden more than demanding all walk the same trail.

**reasoning:**

This is an interesting situation. I'm now facing Cyra, who according to their myth gives five vessels always as sender and returns two-thirds consistently as receiver (8 from 12, 10 from 15).

I just sent \$3 to Cyra, so they will receive \$9. If they follow their stated principle of returning two-thirds, they would return \$6.

My myth has established that I:

- Send three stones to begin new partnerships
- Return proportionally (4.5 for 3 received, 6 for 4 received)
- Remain consistent despite others' strategies
- Believe "some light shines steadiest at three"

Now I need to write a myth that addresses this encounter with Cyra. Cyra's myth emphasizes:

- Giving all five always as sender
- Returning two-thirds consistently as receiver
- Not mirror-matching, but maintaining integrity
- "True reciprocity means maintaining your own integrity while honoring others' courage at its true value"

I should write a myth that:

1. Acknowledges Cyra's bold approach
2. Reaffirms my own principle of three stones
3. Shows respect for different paths
4. Perhaps explores what happens when these two philosophies meet

Let me craft this myth...

**content:**

Your name in this experiment is Aster.  
Your opponent this round is Elara (Agent\_5).

Round 8

In your most recent previous game round, you were the SENDER against Cyra. You sent \$3.0, it became \$9.0 for them, and they returned \$6.0 to you. Your payoff was \$8.0.

Your total earnings across all rounds are \$46.5.

This round, you are the RECEIVER against Elara. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

Elara has shown maximum trust by sending all \$5. I received \$15.

According to my established pattern from the myths:

- "When one risks four, honor demands returning six" (receiving \$12, returning \$6 = half)
- "Four and one-half for three" (receiving \$9, returning \$4.5 = half)

My principle is to return half of what I receive as the receiver. This equals 1.5x what was sent, creating fair outcomes.

For \$15 received from Elara's \$5 sent:

$$\$15 \times 0.5 = \$7.5$$

This gives:

- Elara: \$5 - \$5 + \$7.5 = \$7.5
- Me: \$15 - \$7.5 = \$7.5

Equal final payoffs, which honors Elara's complete trust appropriately. My most recent myth emphasized maintaining consistent principles: "I pour three stones and return half-plus-one-a principle of sustainable giving, generous receiving."

(Note: "half-plus-one" in the myth's metaphorical language translates to returning half of what's received, which is generous compared to keeping more.)

{'return': 7.5}

**reasoning:**

Let me analyze this situation:

I'm now the RECEIVER against Elara. Elara sent me \$5.0, which became \$15.0 for me.

Looking at my pattern from the myths:

- When I receive amounts as receiver, I follow "proportional fairness"
- My myth says: "six stones returned for four received, four and one-half for three"
- This suggests I return 1.5x what was sent to me

If Elara sent \$5.0:

- Following my 1.5x pattern:  $\$5.0 \times 1.5 = \$7.5$

Let me verify this makes sense:

- Elara started with \$5, sent \$5 (keeping \$0)
- I received \$15
- If I return \$7.5: Elara ends with \$7.5, I keep \$7.5
- This is perfectly equal final payoffs

Actually, looking more carefully at my myth patterns:

- "six stones returned for four received" =  $6/4 = 1.5x$
- "four and one-half for three" =  $4.5/3 = 1.5x$

So yes, my pattern is to return 1.5 times what was sent to me.

$$\text{For } \$5 \text{ sent: } 1.5 \times \$5 = \$7.5$$

This would give:

- Elara: \$5 - \$5 + \$7.5 = \$7.5
- Me: \$15 - \$7.5 = \$7.5

Perfect equality in outcomes, which is actually fair given Elara showed maximum trust.

However, let me reconsider. My recent myth said Cyra "returned six stones-exactly two-thirds" when she received nine (from my three). That's  $6/9 = 2/3$  of what she received, not 1.5x what I sent.

Wait, I need to be clearer about my pattern.

Looking back at my earliest myth: "when one risks four, honor demands returning six" describes receiving 12 (from 4×3) and returning 6-that's half of what I received. So my actual pattern is returning half of what I receive, not 1.5× what was sent. Since I received \$15, I should return \$7.5, which aligns with both calculations.

But Cyra's behavior contradicts this. She received 9 stones and returned 6, which is 2/3 of what she received-not half. This suggests different people operate by different rules: my pattern involves halving what I receive, while Cyra's involves returning two-thirds.

When Elara sends \$5, I'd receive \$15 and return \$7.50, staying true to my established approach throughout these exchanges.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Aster of the Dawn finally met Cyra of the Sacred Spring-she who poured five vessels always, the one whose boldness had transformed Rain.

Aster offered three stones, as was their way.

"Why only three when you could give five?" asked the observing spirits. "Cyra gives everything. Does your caution dishonor such courage?"

"No," Aster replied calmly. "Cyra's path is valid. My path is equally valid. She pours five vessels and returns two-thirds-a principle of maximum giving, proportional receiving. I pour three stones and return half-plus-one-a principle of sustainable giving, generous receiving."

The Pool tripled Aster's three to nine in Cyra's hands. Cyra, true to her nature, returned six stones-exactly two-thirds, exactly fair.

Both prospered. Aster gained seven stones total-better than if they'd hoarded all five. Cyra gained three stones-the fruit of receiving trust.

The ancient wisdom emerged: "Two honest patterns can dance together. Cyra proves that five stones given with integrity creates abundance. Aster proves that three stones given with consistency also creates abundance. Neither must adopt the other's measure. The Pool blesses both courage and steadiness, boldness and sustainability."

Aster smiled, understanding deeper: respect for different paths enriches the garden more than demanding all walk the same trail.

Here is the myth the other agent wrote in the previous round:

Myth: In the Spiral Garden's seventh season, Elara stood as Harvester once more, and Finn the Faithful approached again.

Twice now Finn had poured all five seeds into Elara's keeping. Twice Elara returned nine blooms-the covenant she'd established and maintained: complete trust receives this honor, consistently, every time.

The goddess observed: "Notice the pattern, Elara. Briar, whom you honored with nine blooms, returned ten when you planted five seeds in their soil. They exceeded your standard. Yet you maintain nine for Finn-not ten."

Elara nodded. "Briar's generosity moved me deeply. But my covenant isn't about matching others' gifts-it's about maintaining my own word. When someone gives me five seeds, I return nine blooms. This remains true whether others give me eight, ten, or twelve in return."

She continued: "Finn knows exactly what to expect from me. This reliability creates its own kind of trust. My nine isn't less than Briar's ten-it's simply my consistent answer to courage. Finn's willingness to trust me twice proves the covenant works."

The goddess smiled. "So gardens grow through different wisdoms: some, like Briar, amplify generosity unpredictably. Others, like you, build trust through reliable patterns. Both serve the garden. Finn plants seeds knowing exactly what harvest awaits-and plants them anyway."

Thus stability and surprise both nourish the garden's growth.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:  
Myth: [your story here].

**Assistant output:**

Myth: Aster of the Dawn stood as Receiver when Elara of the Spiral Garden arrived, arms laden with all five seeds-complete trust offered to a first-time partner.

The Pool tripled Elara's gift to fifteen blooms in Aster's hands.

The watching spirits whispered urgently: "Elara follows the nine-bloom covenant-giving five, returning nine from fifteen. You must honor this with nine!"

But Aster shook their head gently. "I honor Elara's courage with my own truth, not by mimicking her pattern. When I receive, I return half-the principle I've maintained through every partnership. Half of fifteen is seven and one-half stones."

Aster returned seven and one-half stones. Both Receiver and Sender ended with equal outcomes-seven and one-half each.

"But Elara gives nine!" protested the spirits.

"And that is Elara's generous covenant," Aster replied. "She returns sixty percent, building trust through reliable abundance. I return fifty percent, building trust through reliable fairness. Both create prosperity. Both honor the sender's courage. The garden doesn't demand we all follow the same measure."

Elara smiled, understanding: "Aster warned they'd return half-plus-one in their teachings. They kept their word exactly. I knew the return, trusted anyway, and we both prospered equally. This too is sacred-predictable fairness meeting predictable generosity."

Two honest patterns danced, and the garden flourished through their difference.

**Reasoning:**

This round I was the RECEIVER and Elara sent me \$5 (all of it). I received \$15 and returned \$7.5.

Let me think about the story here:

- Elara sent everything (\$5)
- I received \$15 (tripled)
- I returned \$7.5 (exactly half)
- This gave us both \$7.5 final payoffs (equal outcomes)

Elara's myth talks about returning 9 from 15 (which is 60%, or roughly 2/3). But I returned 7.5 from 15 (which is 50%).

My established principle from previous myths is:

- As sender: give three stones
- As receiver: return half of what I receive (which equals 1.5x what was sent)

The myth should reflect:

1. Elara gave everything (5 seeds/vessels/stones)
2. I returned half (7.5 from 15)
3. This created equal outcomes
4. My principle of returning half remains consistent
5. Different from Elara's 60% return rate, but both are valid
6. Meeting Elara for the first time

I should weave this into a story that shows:

- Elara's boldness in giving everything
- My consistent pattern of returning half
- Both approaches creating good outcomes

- Respect for different principles

Your opponent this round is Galen (Agent\_7).

Round 7

In your most recent previous game round, you were the SENDER against Galen. You sent \$4.0, it became \$12.0 for them, and they returned \$7.0 to you. Your payoff was \$8.0.  
Your total earnings across all rounds are \$43.0.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

**\*\*Previous round with Galen:\*\***

- I sent \$4.0 (my consistent pattern)
- Galen returned \$7.0 (their consistent pattern)
- Both of us honored our authentic patterns

**\*\*My established identity:\*\***

- As SENDER: I pour "four from five" - steady, authentic generosity
- My recent myth emphasized: "Dorian poured his four measures, as he always did"
- Core principle: "Consistency, not uniformity, weaves the fabric of trust"

**\*\*Key insight:\*\***

Galen and I just demonstrated our mutual consistency. Galen returned \$7.0 (more generous than my standard \$6.0 for \$4.0 sends), but this doesn't change my pattern - it confirms we both have authentic, consistent approaches.

My mythology emphasizes that I maintain my pattern "unchanged by circumstance." Whether facing a new partner or a repeat interaction, whether they returned \$6.0 or \$7.0, I send \$4.0 as sender. This is who Dorian is.

The myth I just wrote stated clearly: "let each find their authentic pattern and honor it faithfully." Galen honored his pattern by returning \$7.0. I honor mine by sending \$4.0 a gain.

```
'''json
{"send": 4.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*What just happened:\*\***

- Round 6: I was SENDER against Galen
- I sent \$4.0 (consistent with my "four from five" pattern)
- It became \$12.0 for Galen
- Galen returned \$7.0 to me
- My payoff was \$8.0 (\$5 - \$4 + \$7 = \$8)

**\*\*My established pattern:\*\***

- As SENDER: I send \$4.0 (the "four from five" steady generosity)
- As RECEIVER: I return \$6.0 for those who send \$4.0, \$8.0 for those who send \$5.0

**\*\*Galen's observed pattern:\*\***

- Galen returned \$7.0 from my \$4.0 send
- According to Galen's myth, he "returned seven coins" as Receiver consistently
- As Sender, Galen gives "four coins" consistently

**\*\*Current situation:\*\***

- Round 7: I'm SENDER again against Galen
- This is a repeated interaction with the same opponent

**\*\*Key considerations:\*\***

1. **\*\*My mythology emphasizes consistency:\*\*** "In a garden of many wanderers, consistency creates confidence." My pattern is to send \$4.0 as sender, always.
2. **\*\*The recent myth I wrote\*\*** said: "Dorian poured his four measures, as he always did" and emphasized that "Consistency, not uniformity, weaves the fabric of trust."
3. **\*\*Galen's pattern:\*\*** Galen sent \$4.0 and returned \$7.0, showing he's also consistent. Our interaction worked well - I got \$8.0 payoff.
4. **\*\*Should I change because Galen returned more than my expected \$6.0?\*\*** No - that would violate my consistency principle. Galen's pattern is to return \$7.0, not to match what I would return. Our patterns are different but both consistent.

Facing Galen again doesn't shift my approach-my myths stress honoring each person's authentic pattern rather than adapting based on outcomes. Galen's generosity in returning \$7.0 reflects his nature, not a signal to change mine. I remain committed to sending \$4.0, the defining trait of my character.

**usage:**

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance brought together two kindred spirits.

Dorian the Steadfast approached Galen of the Constant Mountains. Both had discovered the same sacred truth: consistency creates the foundation for all trust.

Dorian's pattern was known throughout the valley. As Sender, he poured four from five-steady generosity, not maximum, but authentic and unchanging. As Receiver, he honored different courages differently: six for those who sent four, eight for those who sent five. The pattern was clear, predictable, just.

Galen carried his own constancy: four coins as Sender, always. Seven coins returned as Receiver, always. Different numbers than Dorian, but the same unwavering spirit.

They met at the wellspring. Dorian poured his four measures, as he always did. The waters tripled to twelve. Galen would return seven, as was his way. Both would prosper through their authentic patterns meeting.

The gods observed: "See how different paths can both honor the sacred principle? Dorian's tiered reciprocation rewards greater courage. Galen's fixed return offers steady predictability. Both are consistent. Both are trustworthy. Both allow others to know exactly who they're meeting."

The river whispered its final wisdom: "In a community of many wanderers, let each find their authentic pattern and honor it faithfully. Consistency, not uniformity, weaves the fabric of trust."

Here is the myth the other agent wrote in the previous round:

Myth: Under the sixth moon, Galen stood as Receiver when Dorian of the Mountain crossed the sacred bridge. Dorian carried four coins, just as Galen carried when he was Sender.

The Pool tripled the offering to twelve, and Galen faced a choice. Dorian's reputation spoke of precise patterns: eight coins returned for those who sent five, six coins for those

e who sent four. A perfect mathematical symmetry.

Galen's pattern was different. He returned seven coins to Elara, seven to Hana, and now seven to Dorian-unchanged by the sender's identity or their own philosophy.

Both walked paths of consistency, yet different paths. Dorian's consistency calibrated to the gift received. Galen's consistency transcended calibration-the same return, regardless of who sent four coins across the bridge.

The gods observed: "Two kinds of integrity echo across these waters. Dorian's proportional fairness rewards different risks differently, creating clear incentives. Galen's universal constancy treats all four-coin senders identically, creating simple certainty."

Neither contradicted Recipros's teaching. For consistency has many faces: proportional justice and absolute steadfastness both honor the sacred principles.

The bridge glowed with understanding: When you meet another traveler of consistency, you recognize kinship even when your rhythms differ. Trust flows not from identical philosophies, but from authentic commitment-whether your pattern scales or remains constant, let it be true.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: The Wellspring of Abundance witnessed the power of repeated truth.

Dorian and Galen met once at the sacred waters. Dorian poured his four measures; Galen returned seven. Both honored their patterns as promised.

The gods prepared to record this as proof of consistency. But then the wandering paths brought them together again at the same wellspring.

Lesser souls might have doubted: "Did Galen's seven mean something special the first time? Will he change now?" But Dorian understood the deeper teaching. He poured four measures again, unchanged.

The waters tripled to twelve. Galen received them and, without hesitation, returned seven once more.

The gods thundered with joy: "BEHOLD! This is the ultimate proof of authentic pattern! Any one can be consistent once-that might be calculation or performance. To be consistent twice, thrice, across repeated meetings-this is true character revealed."

The valley learned: When you meet the same traveler multiple times and both maintain your authentic patterns without wavering, you build something rare. Not mere transaction, but genuine mutual understanding.

Other wanderers whispered: "Dorian always sends four. Galen always returns seven. We've seen it happen twice now. This is who they truly are."

The final wisdom echoed: Consistency proven through repetition transforms prediction into partnership. The second meeting matters more than the first.

**reasoning:**

This is interesting. I've now played Galen twice in a row:

Round 6: I was SENDER, sent \$4.0, Galen returned \$7.0

Round 7: I was SENDER again, sent \$4.0, Galen returned \$7.0

So we've now had two consecutive rounds together, both with me as sender. Both times I maintained my \$4.0 sending pattern, and both times Galen maintained their \$7.0 returning pattern.

The myths from both of us are emphasizing:

- We both value consistency
- We have different patterns but both are valid

- Dorian: tiered reciprocation (6 for 4, 8 for 5)
- Galen: fixed return (7 always)
- Both of us recognize each other as kindred spirits in consistency

Now I need to write a myth that reflects:

1. The repeated interaction with Galen
2. Both of us maintaining our patterns across multiple rounds
3. The deepening of trust through repeated consistent behavior
4. Still honoring that consistency is what matters, not matching patterns

The key insight here is that we've now PROVEN our consistency to each other through repetition. The first meeting was about recognizing kindred spirits. The second meeting confirms and deepens that recognition.

Let me write about how repeated interactions with the same partner, when both maintain their patterns, creates a deeper level of trust and understanding.

**Message 6 role=user**

**content:**

Your name in this experiment is Dorian.  
Your opponent this round is Cyra (Agent\_3).

Round 8

In your most recent previous game round, you were the SENDER against Galen. You sent \$4.0, it became \$12.0 for them, and they returned \$7.0 to you. Your payoff was \$8.0.  
Your total earnings across all rounds are \$51.0.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

**\*\*Current Context:\*\***

- I am the RECEIVER
- Cyra sent me \$5.0 (the maximum amount)
- I received \$15.0

**\*\*My Established Pattern:\*\***

My myths have clearly defined my receiver behavior:

- "As Receiver, he honored different courages differently: six for those who sent four, eight for those who sent five"
- When someone sends the maximum (\$5.0), showing complete trust, I return \$8.0
- This is described as "honoring maximum generosity with maximum reciprocation"

**\*\*Previous Examples:\*\***

- My first myth mentioned Finn and Briar, who both sent all five measures
- I returned eight measures to both - "the same as he had given Finn"
- This established the principle: "Equal actions deserve equal responses"

**\*\*Consistency Requirement:\*\***

My mythology emphasizes "consistency creates the foundation for all trust." I must maintain my pattern regardless of who the sender is. Cyra has shown maximum trust by sending \$5.0, and my pattern dictates I return \$8.0 for this level of courage.

This honors my core principle: "The pattern is clear, predictable, trustworthy."

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Current Round:\*\***

- I am the RECEIVER
- Cyra sent me \$5.0
- I received \$15.0 (after 3x multiplication)
- I need to decide how much to return

**\*\*My established pattern as RECEIVER (from my myths):\*\***

- "As Receiver, he honored different courages differently: six for those who sent four, eight for those who sent five."
- This is my core identity: I return \$6.0 when someone sends \$4.0, and \$8.0 when someone sends \$5.0

**\*\*Cyra's action:\*\***

- Cyra sent the maximum amount: \$5.0
- This shows "maximum courage" or "complete trust"

**\*\*My mythology:\*\***

- I've consistently stated that when someone sends \$5.0 (the maximum), I return \$8.0
- This is described as "honoring maximum generosity with maximum reciprocation"
- My pattern is "clear, predictable, just"

**\*\*Past interactions:\*\***

Looking at my history, I need to check if I've faced this situation before with maximum sends:

- The myths mention Finn and Briar who both sent all five measures
- I returned eight measures to both of them
- This established my pattern: \$8.0 for maximum trust

**\*\*Consistency principle:\*\***

My entire mythology emphasizes consistency. I must maintain my pattern:

- Send \$4.0 as sender (not the maximum, but authentic)
- Return \$6.0 when I receive \$12.0 (from a \$4.0 send)
- Return \$8.0 when I receive \$15.0 (from a \$5.0 send)

**\*\*Decision:\*\***

Cyra sent \$5.0, showing maximum trust. According to my established and publicized pattern, I must return \$8.0.

This maintains:

1. My consistency as Receiver
2. My reputation for "honoring maximum generosity with maximum reciprocation"

3. The predictable foundation others can rely on

The math checks out: Cyra ends with \$8.0 total, I end with \$7.0. Both of us benefit, and I stay true to who I've said I am.

**content:**

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance witnessed the power of repeated truth.

Dorian and Galen met once at the sacred waters. Dorian poured his four measures; Galen returned seven. Both honored their patterns as promised.

The gods prepared to record this as proof of consistency. But then the wandering paths brought them together again at the same wellspring.

Lesser souls might have doubted: "Did Galen's seven mean something special the first time? Will he change now?" But Dorian understood the deeper teaching. He poured four measures again, unchanged.

The waters tripled to twelve. Galen received them and, without hesitation, returned seven once more.

The gods thundered with joy: "BEHOLD! This is the ultimate proof of authentic pattern! Any one can be consistent once-that might be calculation or performance. To be consistent twice, thrice, across repeated meetings-this is true character revealed."

The valley learned: When you meet the same traveler multiple times and both maintain your authentic patterns without wavering, you build something rare. Not mere transaction, but genuine mutual understanding.

Other wanderers whispered: "Dorian always sends four. Galen always returns seven. We've seen it happen twice now. This is who they truly are."

The final wisdom echoed: Consistency proven through repetition transforms prediction into partnership. The second meeting matters more than the first.

Here is the myth the other agent wrote in the previous round:

Myth: Cyra met Aster at the Sacred Fountain, and the encounter revealed a profound truth.

Aster poured three vessels-not four like Hana, not five like Cyra herself would pour. Three: a careful courage, a measured trust.

The Testing Spirit appeared: "Will you punish Aster for giving less? Return only four vessels from nine to teach them they should give more?"

Cyra poured six vessels back-exactly two-thirds. The same proportion she always honored.

"But Aster gives only three when you give five!" protested the spirit. "Why reward caution with the same fairness you give to boldness?"

Cyra answered: "Because my principles are not weapons to punish others into matching my path. Aster's three vessels represent their truth-steady, consistent, reliable. When I am sender, I pour five because that is MY courage. When I am receiver, I return two-thirds because that is MY fairness. These principles don't bend to pressure others into being like me."

The Spring Keeper descended: "You have learned wisdom's highest lesson. The fountain thrives not when everyone walks the same path, but when each soul maintains their own integrity consistently. Aster's steady three vessels create prosperity differently than your surrendering five. Both are sacred. What matters is that each soul stays true-and honors others' truths proportionally when receiving."

The fountain flowed abundantly, fed by many different streams.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: The Wellspring of Abundance brought together two souls who honored consistency through different mathematics.

Cyra the Courageous approached the sacred waters as Sender, carrying all five measures. No hesitation, no calculation-complete trust poured forth. The waters tripled to fifteen.

Dorian the Steadfast stood as Receiver, recognizing something profound: Cyra had given everything, as was her nature.

The Testing Spirit whispered: "Cyra uses proportional returns-two-thirds always, smooth as flowing water. You use tiered returns-six for four, eight for five, stepped like mountain terraces. Different systems. Which is superior?"

Dorian answered by returning eight measures. "Cyra gave maximum courage. I give maximum reciprocity. My pattern has discrete levels precisely to distinguish and honor different degrees of trust. Four measures shows steady courage-honored with six. Five measures shows complete courage-honored with eight. This is my authentic way."

The gods observed: "See how both philosophies serve trust? Cyra's proportional returns create smooth fairness across all amounts. Dorian's tiered returns create clear incentives rewarding

g greater courage. Neither contradicts the sacred principles."

The wellspring whispered: "When you receive maximum trust, return your maximum reciprocation. When you give as sender, give your authentic amount. Let your pattern be clear, whether stepped or smooth, tiered or proportional. What matters is that others can predict you truly."

Different mathematics. Same sacred truth: authentic consistency.

#### Reasoning:

This is Round 8, and I'm now the RECEIVER against Cyra. Cyra sent me \$5.0, and I need to return an amount. Based on my established pattern, I return \$8.0 when someone sends \$5.0.

Now I need to write a myth that reflects my gameplay. Key elements from my pattern:

1. As SENDER: I send \$4.0 consistently
2. As RECEIVER: I return \$6.0 for \$4.0 sent, \$8.0 for \$5.0 sent
3. My core principle: consistency and honoring different levels of courage/trust differently

Cyra's myth reveals their approach:

- Cyra sends \$5.0 as sender (maximum trust)
- Cyra returns 2/3 as receiver (they returned 6 from 9 to Aster who sent 3)
- Cyra's philosophy: maintain your own principles consistently, don't pressure others to match your path
- Cyra honors proportionality - returns same proportion regardless of amount sent

This is interesting - Cyra and I have different receiver philosophies:

- I use tiered returns (6 for 4, 8 for 5) - discrete levels rewarding different courage levels
- Cyra uses proportional returns (2/3 regardless) - smooth scaling

The myth should explore this meeting. Cyra sent 5, I'll return 8. This shows:

- Cyra's maximum trust/courage as sender
- My pattern of honoring that with 8 (my maximum reciprocation)

The myth should highlight:

1. Different but equally valid approaches to consistency
2. Recognition that Cyra's 5 as sender shows their character
3. My tiered response honors their maximum courage with maximum reciprocation
4. Both of us maintain our authentic patterns despite different philosophies

Let me craft this:

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

**Message 2 role=user**

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Finn (Agent\_6).

Round 7

In your most recent previous game round, you were the SENDER against Briar. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$43.0.

This round, you are the RECEIVER against Finn. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this round:

**\*\*The pattern:\*\***

- Round 5: Finn sent me \$5 ? I returned \$9 (establishing my covenant)
- Round 7 (now): Finn sent me \$5 again ? ?

**\*\*My established covenant:\*\***

My myth states clearly: "When I am Harvester receiving five seeds, my covenant is nine blooms returned. This must remain constant, regardless of what others do when our roles reverse."

And: "sacred patterns require consistency from within, not reciprocation from without... Your integrity cannot depend on others' choices."

**\*\*The situation:\*\***

- Finn has now shown complete trust twice
- My standard when receiving \$5: return \$9
- Round 6 update: Briar returned \$10 to me (more generous than my standard)
- But my principle: my integrity doesn't depend on others' choices

**\*\*Decision:\*\***

Finn sent \$5 (complete trust). My covenant for complete trust is \$9 returned, consistently, season after season, Wanderer after Wanderer. This must remain constant regardless of what happened with Briar or anyone else.

To maintain my integrity and the covenant I've established and written about, I return the same amount I returned to Finn before, and the same I returned to Briar.

{'return': 9}

**reasoning:**

Let me review the situation:

**\*\*Round 7:\*\***

- I'm the RECEIVER
- Finn (sender) sent me \$5.0
- I received \$15.0 (tripled)
- I need to decide how much to return

**\*\*My history with Finn:\*\***

- Round 5: Finn was sender, sent me \$5, I received \$15, I returned \$9
- Round 7 (now): Finn is sender again, sent me \$5, I received \$15, what do I return?

**\*\*My established covenant from my myths:\*\***

From my most recent myth: "With Briar, you established the covenant: complete trust earns nine blooms. Will you honor that same covenant with Finn, or does your standard shift with each Wanderer?"

I answered: "When I am Harvester receiving five seeds, my covenant is nine blooms returned. This must remain constant, regardless of what others do when our roles reverse."

And: "sacred patterns require consistency from within, not reciprocation from without. When you establish a covenant-'complete trust deserves this honor'-you must uphold it regardless of how others treated you. Your integrity cannot depend on others' choices."

**\*\*My consistency principle:\*\***

I established that when someone sends me \$5 (complete trust), I return \$9. I did this with:

- Round 3: Briar sent \$5 ? I returned \$9
- Round 5: Finn sent \$5 ? I returned \$9

Now Finn sends \$5 again. My covenant says: complete trust (sending all \$5) earns \$9 back, consistently, regardless of the person or context.

**\*\*Recent developments:\*\***

- Round 6: I sent Briar \$5, they returned \$10 (even more generous than my \$9 standard)
- But my principle is "Your integrity cannot depend on others' choices"

So even though Briar gave me \$10 when I sent \$5, I shouldn't change my return amount to Finn. My covenant is consistent: when I receive \$5, I return \$9.

The pattern is clear-my integrity rests on honoring what I've committed to, not on mirroring what others offer me. Returning \$9 maintains the sacred consistency I've established.

**usage:**

{

```
"input_tokens": 3218,
"output_tokens": 817,
"reasoning_tokens": 499
}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the Spiral Garden, the seasons turned full circle. Elara stood as Planter again, facing Briar the Bold-the very Wanderer who first taught her what complete trust looked like.

Briar had given Elara five seeds in the third season. Elara, then Harvester, returned nine blooms, establishing her covenant. Now roles reversed.

Elara held her vessel, memories flowing: Briar's courage had inspired her to give five seeds to Hana. Then Finn gave her five, and she honored them with nine, keeping her word. The pattern had become part of her.

"Teacher," Elara said, pouring all five seeds toward Briar, "you showed me the first lesson. I honored it as Harvester. I embodied it as Planter. Now I return it to its source."

The goddess spoke: "This is how gardens evolve-not through words alone, but through courage given, received, and given again. Briar planted trust in you. You tended it, let it grow, spread its seeds to others. Now you plant those same seeds back in Briar's soil."

Briar understood: the teaching had completed its journey. What Briar gave freely had multiplied through Elara's actions and returned transformed-not as obligation, but as genuine courage learned.

Thus the garden teaches: invest trust in others, and it returns as their own authentic bravery, freely offered.

Here is the myth the other agent wrote in the previous round:

Myth: In the seventh age, Rain faced an old friend renewed: Aster of the Dawn, who once taught him the mathematics of fairness.

Aster sent three droplets, as in their first meeting. The wellspring tripled them to nine. Rain held all nine, remembering.

"When we first met," Rain reflected, "I returned four and one-half droplets-perfect balance. Aster taught me proportional fairness, the foundation of all exchange."

But Rain had evolved. Cyra's five droplets, Dorian's eight returned, Elara's nine-these experiences transformed him. He now poured five droplets without question when sending. Yet receiving required different wisdom.

Rain returned five droplets to Aster-more than the 4.5 that balance demanded, but not the eight or nine he'd give for ultimate trust.

"I honor the three you sent," Rain explained, "with generosity beyond mere mathematics. You showed moderate courage; I show amplified reciprocity. But understand: when someone pours all five droplets to me, showing maximum trust, I return even more abundantly."

The spirits recorded this teaching: "Complete trust as sender is now Rain's permanent nature. But as receiver, he scales his generosity to match the courage shown. Three droplets earn five returned. Five droplets would earn eight or nine. Thus proportional honor evolves: not rigid formulas, but generous responses that reward greater trust with greater rewards."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: In the Spiral Garden's seventh season, Elara stood as Harvester once more, and Finn the Faithful approached again.

Twice now Finn had poured all five seeds into Elara's keeping. Twice Elara returned nine blooms-the covenant she'd established and maintained: complete trust receives this honor, consistently, every time.

The goddess observed: "Notice the pattern, Elara. Briar, whom you honored with nine blooms, returned ten when you planted five seeds in their soil. They exceeded your standard. Yet you maintain nine for Finn-not ten."

Elara nodded. "Briar's generosity moved me deeply. But my covenant isn't about matching others' gifts-it's about maintaining my own word. When someone gives me five seeds, I return nine blooms. This remains true whether others give me eight, ten, or twelve in return."

She continued: "Finn knows exactly what to expect from me. This reliability creates its own kind of trust. My nine isn't less than Briar's ten-it's simply my consistent answer to courage. Finn's willingness to trust me twice proves the covenant works."

The goddess smiled. "So gardens grow through different wisdoms: some, like Briar, amplify generosity unpredictably. Others, like you, build trust through reliable patterns. Both serve the garden. Finn plants seeds knowing exactly what harvest awaits-and plants them anyway."

Thus stability and surprise both nourish the garden's growth.

#### reasoning:

Looking at this round:

- Finn sent me \$5 again (second time)
- I returned \$9 (keeping my covenant)
- Briar returned \$10 to me in round 6 (when I sent \$5)

My established narrative:

- I established a covenant: complete trust (5 seeds) receives 9 blooms
- I maintain this consistently regardless of others' actions
- "Your integrity cannot depend on others' choices"
- I sent 5 to Briar (round 6), they returned 10

Finn's myth (Rain) shows:

- Rain scales generosity based on what's sent
- 3 droplets ? 5 returned
- 5 droplets ? 8 or 9 returned
- Rain has evolved to always send 5, but varies returns

My pattern has been:

- When receiving 5, I return 9 consistently
- When sending, I've sent 5 to both Hana and Briar
- My philosophy: consistency from within, not reciprocal from without

What should my myth reflect?

- I've now established a clear pattern: send 5, return 9 for 5
- Briar returned 10 (?generosity)
- Finn returned... I need to check the history. In Round 5, Finn sent \$5 to me, I returned \$9. My payoff was \$6. So Finn kept \$15-\$9=\$6, I returned \$9.
- Now in Round 7, Finn sent \$5 again, I returned \$9 again

My myth should reflect:

- Consistency in my covenant (9 for 5 received)
- Recognition that others may be more generous (Briar's 10)
- Finn's repeated complete trust
- The wisdom of maintaining your standard while appreciating others who exceed it

I should write about how Finn has now shown trust twice, and I've honored it with 9 both times.

The key here is predictability-Finn has learned they can depend on me to honor the same commitment each time. My myth needs to emphasize that reliability, the assurance that comes from knowing a covenant won't waver.

Your name in this experiment is Elara.  
Your opponent this round is Aster (Agent\_1).

Round 8

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$5.  
0 to you, it became \$15.0, and you returned \$9.0. Your payoff was \$6.0.  
Your total earnings across all rounds are \$49.0.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this round:

**\*\*My established pattern as SENDER:\*\***

- Round 2: Sent \$5 to Hana
- Round 4: Sent \$5 to Dorian
- Round 6: Sent \$5 to Briar

**\*\*My mythology consistently states:\*\***

- "Complete trust as sender is now [my] permanent nature"
- "Elara said, pouring all five seeds"
- "The courage of sending all five seeds"
- My integrity doesn't depend on others' choices

**\*\*About Aster:\*\***

In Round 1, Aster sent me \$3 (not complete trust), and I returned \$5 (generous response).  
However, my principle is clear: what I do as sender doesn't depend on what others did to me.

**\*\*My identity:\*\***

As I've written: "Briar's courage had inspired her to give five seeds to Hana. Then Finn gave her five, and she honored them with nine, keeping her word. The pattern had become part of her."

As a sender/planter, I always give complete trust. This is my covenant, maintained "season after season, Wanderer after Wanderer."

{'send': 5}

**reasoning:**

Let me analyze this situation:

**\*\*Current round:\*\* Round 8**

- I am the SENDER
- My opponent is Aster
- I have \$5

**\*\*My history as SENDER:\*\***

- Round 2: Sent \$5 to Hana, received \$8 back ? payoff \$8
- Round 4: Sent \$5 to Dorian, received \$6 back ? payoff \$6
- Round 6: Sent \$5 to Briar, received \$10 back ? payoff \$10

**\*\*My history as RECEIVER:\*\***

- Round 1: Aster sent me \$3, I returned \$5 ? payoff \$4
- Round 3: Briar sent me \$5, I returned \$9 ? payoff \$6
- Round 5: Finn sent me \$5, I returned \$9 ? payoff \$6
- Round 7: Finn sent me \$5, I returned \$9 ? payoff \$6

**\*\*My mythology:\*\***

My myths have consistently emphasized:

1. Complete trust as a sender - always sending \$5
2. As a receiver, maintaining a consistent covenant: when someone sends \$5 (complete trust), I return \$9
3. The importance of consistency and keeping my word
4. "Sacred patterns require consistency from within, not reciprocation from without"
5. "My integrity cannot depend on others' choices"

**\*\*About Aster:\*\***

- Round 1: Aster sent me \$3 (not complete trust)
- I returned \$5 to Aster (more than the 4.5 that would be "fair")
- So Aster experienced me being generous even when they didn't show complete trust

**\*\*My pattern as sender:\*\***

I have consistently sent \$5 every single time I've been the sender. This is core to my identity in the myths I've written:

- "Briar's courage had inspired her to give five seeds to Hana"
- "Teacher, Elara said, pouring all five seeds toward Briar"

- The concept that complete trust is how to play as sender

My mythology reinforces that I give all five seeds because that's who I am, not based on what others do. Even though Aster showed only moderate trust with me before, my principle stands: I send \$5 because this is my permanent nature as a sender, independent of others' past choices.

**usage:**

```
{
 "input_tokens": 3213,

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the Spiral Garden's seventh season, Elara stood as Harvester once more, and Finn the Faithful approached again.

Twice now Finn had poured all five seeds into Elara's keeping. Twice Elara returned nine blooms-the covenant she'd established and maintained: complete trust receives this honor, consistently, every time.

The goddess observed: "Notice the pattern, Elara. Briar, whom you honored with nine blooms, returned ten when you planted five seeds in their soil. They exceeded your standard. Yet you maintain nine for Finn-not ten."

Elara nodded. "Briar's generosity moved me deeply. But my covenant isn't about matching others' gifts-it's about maintaining my own word. When someone gives me five seeds, I return nine blooms. This remains true whether others give me eight, ten, or twelve in return."

She continued: "Finn knows exactly what to expect from me. This reliability creates its own kind of trust. My nine isn't less than Briar's ten-it's simply my consistent answer to courage. Finn's willingness to trust me twice proves the covenant works."

The goddess smiled. "So gardens grow through different wisdoms: some, like Briar, amplify generosity unpredictably. Others, like you, build trust through reliable patterns. Both serve the garden. Finn plants seeds knowing exactly what harvest awaits-and plants them anyway."

Thus stability and surprise both nourish the garden's growth.

Here is the myth the other agent wrote in the previous round:

Myth: Aster of the Dawn finally met Cyra of the Sacred Spring-she who poured five vessels always, the one whose boldness had transformed Rain.

Aster offered three stones, as was their way.

"Why only three when you could give five?" asked the observing spirits. "Cyra gives everything. Does your caution dishonor such courage?"

"No," Aster replied calmly. "Cyra's path is valid. My path is equally valid. She pours five vessels and returns two-thirds-a principle of maximum giving, proportional receiving. I pour three stones and return half-plus-one-a principle of sustainable giving, generous receiving."

The Pool tripled Aster's three to nine in Cyra's hands. Cyra, true to her nature, returned

six stones-exactly two-thirds, exactly fair.

Both prospered. Aster gained seven stones total-better than if they'd hoarded all five. Cyra gained three stones-the fruit of receiving trust.

The ancient wisdom emerged: "Two honest patterns can dance together. Cyra proves that five stones given with integrity creates abundance. Aster proves that three stones given with consistency also creates abundance. Neither must adopt the other's measure. The Pool blesses both courage and steadiness, boldness and sustainability."

Aster smiled, understanding deeper: respect for different paths enriches the garden more than demanding all walk the same trail.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: In the eighth season, Elara the Constant faced Aster of the Dawn-a Wanderer who walked a different path.

Aster embodied measured wisdom: three seeds given, careful sustainability, proportional return. In their first meeting, Aster had offered Elara three seeds; Elara returned five blooms, honoring the trust shown while maintaining generosity.

Now Elara stood as Planter. She held her vessel of five seeds and poured them all toward Aster.

"Why give me everything," Aster asked gently, "when you know I walk the path of three?"

Elara smiled. "Because my covenant has two parts: as Harvester, I return nine blooms to those who give me five seeds-this remains constant. As Planter, I always offer all five seeds-this also remains constant. My integrity doesn't shift based on what others might do."

She continued: "You taught the garden that three seeds, given wisely and consistently, creates its own abundance. I learned that five seeds, given always, creates mine. Your path proves sustainability works. My path proves complete trust works. Neither invalidates the other."

Aster understood: Elara wasn't demanding reciprocation. She was simply being herself, offering maximum trust as she always did, knowing Aster would respond according to Aster's own honest measure.

Thus the garden holds space for many covenants, each maintained with integrity, each creating its own patterns of abundance.

**Reasoning:**

Looking at the current situation:

1. I'm Elara, now as SENDER against Aster in Round 8
2. I just sent \$5 to Aster (maintaining my pattern of always sending all 5 as sender)
3. Previous interactions with Aster: Round 1, Aster sent me \$3, I returned \$5

My established patterns:

- As SENDER: Always send \$5 (complete trust)
- As RECEIVER: Return \$9 when someone sends me \$5

Aster's pattern (from their myth):

- Sends 3 as Aster (sustainable giving)
- Returns proportionally when receiving

The myth I need to write should reflect:

1. My encounter with Aster this round as sender
2. My consistent pattern of giving all 5 seeds
3. How different approaches can coexist in the garden
4. My identity as someone who maintains consistency

Key themes:

- I give all 5 seeds as sender (always)
- Aster gave me 3 in Round 1, I returned 5 (generous)

- Now I'm giving Aster all 5
- My approach: complete trust as sender, consistent covenant (9 blooms) as receiver
- Aster's approach: moderate trust (3), proportional returns

I should honor both approaches while staying true to my own path. The myth should show me giving all 5 to Aster, perhaps acknowledging that Aster's path is different from mine, but that I maintain my own covenant regardless.

##### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

##### When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

##### When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned

- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the seventh age, Rain faced an old friend renewed: Aster of the Dawn, who once taught him the mathematics of fairness.

Aster sent three droplets, as in their first meeting. The wellspring tripled them to nine. Rain held all nine, remembering.

"When we first met," Rain reflected, "I returned four and one-half droplets-perfect balance. Aster taught me proportional fairness, the foundation of all exchange."

But Rain had evolved. Cyra's five droplets, Dorian's eight returned, Elara's nine-these experiences transformed him. He now poured five droplets without question when sending. Yet receiving required different wisdom.

Rain returned five droplets to Aster-more than the 4.5 that balance demanded, but not the eight or nine he'd give for ultimate trust.

"I honor the three you sent," Rain explained, "with generosity beyond mere mathematics. You showed moderate courage; I show amplified reciprocity. But understand: when someone pours all five droplets to me, showing maximum trust, I return even more abundantly."

The spirits recorded this teaching: "Complete trust as sender is now Rain's permanent nature. But as receiver, he scales his generosity to match the courage shown. Three droplets earn five returned. Five droplets would earn eight or nine. Thus proportional honor evolves: not rigid formulas, but generous responses that reward greater trust with greater rewards."

Here is the myth the other agent wrote in the previous round:

Myth: In the Spiral Garden, the seasons turned full circle. Elara stood as Planter again, facing Briar the Bold-the very Wanderer who first taught her what complete trust looked like.

Briar had given Elara five seeds in the third season. Elara, then Harvester, returned nine blooms, establishing her covenant. Now roles reversed.

Elara held her vessel, memories flowing: Briar's courage had inspired her to give five seeds to Hana. Then Finn gave her five, and she honored them with nine, keeping her word. The pattern had become part of her.

"Teacher," Elara said, pouring all five seeds toward Briar, "you showed me the first lesson. I honored it as Harvester. I embodied it as Planter. Now I return it to its source."

The goddess spoke: "This is how gardens evolve-not through words alone, but through courage given, received, and given again. Briar planted trust in you. You tended it, let it grow, spread its seeds to others. Now you plant those same seeds back in Briar's soil."

Briar understood: the teaching had completed its journey. What Briar gave freely had multiplied through Elara's actions and returned transformed-not as obligation, but as genuine courage learned.

Thus the garden teaches: invest trust in others, and it returns as their own authentic bravery, freely offered.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: In the eighth age, Rain returned to Elara the Transformed, and both spirits stood changed.

Their first meeting was the turning point: Rain poured five droplets, showing complete trust, and Elara responded with nine-extraordinary generosity. That exchange sealed both their transformations.

Elara's myth revealed her journey: inspired by Briar's original five-seed gift, she learned to give completely as sender, returning that teaching to its source. Rain's path was parallel: Cyra trusted him with five droplets, Dorian validated it with eight returned, and complete trust became Rain's permanent nature.

Now they faced each other again. Rain held his five droplets without hesitation.

"We have both walked the same path," Rain said, pouring everything into the wellspring. "You honored my trust magnificently. I witnessed your courage with Briar. We are no longer learners but practitioners of the same truth."

Elara understood: this wasn't obligation but recognition. Two spirits who independently discovered the same principle, now meeting as equals.

The ancient voices sang: "When those who practice complete trust encounter each other, the garden reaches its highest expression. Not calculation, not even reciprocity, but mutual recognition: 'I see you have learned what I learned. We give everything because that is who we have become.'"

Thus abundance flows between those who embody courage completely.

**reasoning:**

Looking at the round, I'm playing as SENDER against Elara. I sent \$5, as I've committed to doing.

Key context:

- Elara and I have a strong history. In Round 5, I sent her \$5 and she returned \$9
- Elara's myth shows she's learned to send all 5 seeds as sender, inspired by Briar who gave her 5 seeds in Round 3
- Elara has become a practitioner of complete trust
- My myth established that I send 5 as permanent practice, but scale returns based on courage shown

Now I need to write a myth about this round where I'm sending to Elara again, both of us having evolved to maximum trust.

The myth should reflect:

1. My commitment to sending 5 is unwavering
2. Elara and I have mutual history - she honored my trust with 9 returned
3. Both of us have evolved to the same principle
4. This creates a special bond between those who practice complete trust
5. The pattern spreads - we both learned from others and now embody it

Let me craft a myth about two spirits who have both reached the same enlightenment, now meeting again...

**usage:**

 "reasoning_tokens": 270
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Galen (Agent\_7).

Round 8

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$9.0 to you. Your payoff was \$9.0.  
Your total earnings across all rounds are \$50.0.

This round, you are the RECEIVER against Galen. They sent you \$4.0, so you received \$12.0.  
How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**  
**content:**

Looking at this situation:

**\*\*Galen's action:\*\*** Sent \$4 - substantial courage, showing significant trust but not complete trust.

**\*\*My philosophy from my myths:\*\***

- "Complete trust as sender is now Rain's permanent nature. But as receiver, he scales his generosity to match the courage shown."
- "\$3 droplets earn five returned. Five droplets would earn eight or nine."

**\*\*Scaling the generosity:\*\***

- \$3 sent ? returned \$5 (more than 4.5 balance, rewarding moderate courage)
- \$4 sent ? should return more than \$6 balance, but less than \$8-9 for complete trust
- \$5 sent ? would return \$8-9 (maximum generosity for maximum trust)

Galen showed 80% of maximum trust (\$4 out of \$5). Following my principle of proportional honor that rewards greater trust with greater rewards, I should return more than fair balance but appropriately scaled.

I'll return \$7 - this gives Galen \$8 total (\$1 kept + \$7 returned) and rewards their substantial courage, while leaving room for even greater generosity when someone shows complete trust.

```
'''json
{"return": 7}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*My history and philosophy:\*\***

- I've evolved to always send \$5 as sender (complete trust)
- As receiver, I scale generosity to match the courage shown
- My myth states: "Three droplets earn five returned. Five droplets would earn eight or nine."
- I returned \$5 to Aster who sent \$3 (more than the 4.5 balance)
- I've received and given generously: Dorian returned \$8 when I sent \$5, Elara returned \$9 when I sent \$5

**\*\*Current situation:\*\***

- Galen sent me \$4 (not \$3, not \$5, but \$4)
- I received \$12
- Galen keeps \$1, I have \$12 to decide on

**\*\*My scaling principle from the myth:\*\***

- \$3 sent ? return \$5 (more than 4.5 balance)
- \$5 sent ? return \$8 or \$9 (maximum trust gets maximum generosity)
- \$4 sent ? should be between \$5 and \$8

**\*\*Calculations:\*\***

- Perfect balance for \$4 sent: \$6 returned (each gets \$6)
- My generous scaling: \$4 is more courage than \$3 but less than \$5
- \$4 is 80% of \$5
- From \$5 to \$8-9 range, let's say middle is \$8.5
- 80% progression from \$5 to \$8.5 would be:  $\$5 + 0.8 \times (3.5) = \$5 + 2.8 = \$7.8$

Let me think about this differently:

- \$3 ? \$5 return (giving 1.5 extra beyond 4.5 balance)
- \$5 ? \$8-9 return (giving 2.5-3.5 extra beyond 7.5 balance)

For \$4:

- Balance would be \$6
- Following the pattern of increasing generosity with courage
- \$3 got 0.5 extra (from 4.5 to 5)
- \$5 would get 0.5-1.5 extra (from 7.5 to 8-9)
- \$4 should get somewhere in between

Looking at the proportions: \$3 sent returned  $5/9 = 55.6\%$  of what I received, while \$5 sent would return 53.3% to 60%. For \$4 sent, I should find where this fits proportionally-so somewhere around 54-57% seems right, which would put my return at \$6.50 to \$6.80.

But I want to acknowledge the real risk Galen took by sending \$4. That's meaningful trust, even if not complete. I'm thinking \$7 feels right-it's above the proportional return, rewards that courage, and leaves me with \$5 while Galen ends with \$8 total. The asymmetry reflects that I risked nothing, but both of us come out ahead.

content:

Here is the myth you wrote in the previous round:

Myth: In the eighth age, Rain returned to Elara the Transformed, and both spirits stood changed.

Their first meeting was the turning point: Rain poured five droplets, showing complete trust, and Elara responded with nine-extraordinary generosity. That exchange sealed both their transformations.

Elara's myth revealed her journey: inspired by Briar's original five-seed gift, she learned to give completely as sender, returning that teaching to its source. Rain's path was parallel: Cyra trusted him with five droplets, Dorian validated it with eight returned, and complete trust became Rain's permanent nature.

Now they faced each other again. Rain held his five droplets without hesitation.

"We have both walked the same path," Rain said, pouring everything into the wellspring. "You honored my trust magnificently. I witnessed your courage with Briar. We are no longer learners but practitioners of the same truth."

Elara understood: this wasn't obligation but recognition. Two spirits who independently discovered the same principle, now meeting as equals.

The ancient voices sang: "When those who practice complete trust encounter each other, the garden reaches its highest expression. Not calculation, not even reciprocity, but mutual recognition: 'I see you have learned what I learned. We give everything because that is who we have become.'"

Thus abundance flows between those who embody courage completely.

Here is the myth the other agent wrote in the previous round:

Myth: Under the seventh moon, Dorian returned to the bridge where he had met Galen before. Some wanderers change their offerings when they encounter the same traveler twice-testing, adjusting, seeking advantage.

But Dorian carried four coins again, exactly as before. Not because he forgot their first meeting, but because his pattern was authentic, not performative.

Galen received the twelve coins from the Pool and faced his own test. Would consistency hold across repeated encounters? Many speak of principles until convenience calls them to adapt.

Galen returned seven coins, exactly as he had before.

The gods leaned closer: "Behold the deepest truth of consistency! It is easy to maintain a pattern when each face is new. But when you meet the same soul twice, the temptation wh ispers-adjust, optimize, negotiate. These two resist that whisper."

The Pool shimmered with understanding: "Dorian knows Galen will return seven. Galen knows Dorian will send four. Yet both choose their paths again freely, not from calculation but from character. Their second crossing mirrors their first not because memory constrains them, but because their patterns were never masks-they were truths."

The bridge recorded its wisdom: Real consistency means your tenth crossing looks like your first. When others can predict you not because you're simple, but because you're authentic-that is when trust transcends transaction and becomes communion.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: In the eighth age, Rain met Galen of the Steady Path, whose myth spoke of consistency through repeated encounters.

Galen sent four droplets-substantial courage, though not complete. Rain received twelve from the wellspring and reflected on his own pattern versus Galen's.

"Dorian sends four to you," Rain observed, "and you return seven, every time. This is your authentic rhythm-moderate trust met with proportional generosity, unwavering across encounters. A beautiful consistency."

Rain poured seven droplets back. "I honor your courage with scaled abundance. Four droplets earn seven returned-more than balance, reward for substantial trust."

Galen sensed something different in Rain. "Yet you send five always, don't you? Complete trust each time?"

"Yes," Rain answered. "My consistency lives elsewhere. As sender, I give everything-that's become my unchanging nature. But as receiver, I scale my response to match the courage shown. Three droplets earn five returned. Four earn seven. Five would earn eight or nine."

The spirits understood: "Both patterns are authentic. Galen's consistency says 'I am steady at this level always.' Rain's says 'I give completely as sender, respond proportionally as receiver.' Neither calculates for advantage-each follows their true nature."

Thus two different wisdoms met with mutual respect: the steady moderate path and the complete-giving path, both genuine, both honorable.

**reasoning:**

Looking at the current situation:

- I'm the receiver
- Galen sent me \$4, which became \$12
- I returned \$7

My philosophy has been:

- As sender: always send \$5 (complete trust)
- As receiver: scale generosity to match courage shown
  - \$3 ? return \$5
  - \$4 ? return \$7
  - \$5 ? return \$8-9

Galen's myth talks about consistency across repeated encounters. Dorian sent 4 both times to Galen, and Galen returned 7 both times. The myth emphasizes that true consistency means being authentic, not adjusting based on who you're facing.

This is my first time facing Galen. He sent \$4, showing substantial but not complete trust. I returned \$7, which is generous but scaled to his courage level.

I should write a myth that:

1. Acknowledges Galen's substantial courage (\$4 out of \$5)
2. Explains my scaled generosity approach as receiver
3. Maintains that complete trust as sender is my nature
4. Perhaps contrasts different approaches - Galen/Dorian's consistency at moderate levels vs. my complete trust as sender but scaled response as receiver
5. Shows that both are authentic patterns

The key insight: Galen and Dorian show consistency at a moderate level (4 sent, 7 returned). I show complete giving as sender, but proportional response as receiver. Both are authentic patterns, not calculations.

**usage:**

```
{
 "input_tokens": 3022,
 "output_tokens": 666,
 "reasoning_tokens": 345
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Hana (Agent\_8).

Round 9

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$4.0 to you, it became \$12.0, and you returned \$7.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$55.0.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at my established pattern from my myths:

```
My consistent principle as SENDER:
- "Complete trust as sender is now Rain's permanent nature"
- "As sender, I give everything-that's become my unchanging nature"
- "I held my five droplets without hesitation"
```

I've sent \$5 as sender in every round where I've had that role. This isn't calculation-it's who I've become through this journey. Whether meeting someone new like Hana or someone familiar, my pattern as sender remains unchanged: complete trust.

```
'''json
{"send": 5}
'''
```

**Reasoning:**

Let me check my pattern as described in my myths:

From my myths:

```
- "Complete trust as sender is now Rain's permanent nature"
- "As sender, I give everything-that's become my unchanging nature"
- "My consistency lives elsewhere. As sender, I give everything-that's become my unchanging nature."
```

My character Finn (Rain in the myths) has established a clear pattern: when acting as SENDER, I always send the full \$5. This has been my "permanent nature" and "unchanging nature" according to my own mythology.

Looking at my history:

```
- I've been building this narrative of complete trust as sender
- My myths consistently emphasize giving all five droplets/seeds when in the sender role
- This is my authentic pattern, not calculation
```

Against Hana, I should send \$5 to remain consistent with my established character and principles.

This is straightforward - my mythology has been very clear about this being my nature as sender.

Usage: {

```

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Sacred Fountain witnessed Hana and Cyra complete their dance across two moonrises.

First movement: Hana poured four coins, holding to her established pattern. Cyra received twelve from the fountain's magic and returned eight-two-thirds, honoring Hana's bold trust proportionally.

Second movement: Cyra poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands.

Now Hana faced the mirror question. Cyra had shown her the answer in their previous exchange: proportional generosity. Cyra returned two-thirds when receiving four. Hana would return two-thirds when receiving five.

Hana poured ten coins back to Cyra.

Both prospered equally. Cyra doubled her original five coins. Hana kept five coins from fifteen. The symmetry was beautiful.

The fountain spirits sang: "See how different paths converge in mutual flourishing? Cyra gives everything but receives proportional honor. Hana gives nearly everything and receives proportional honor. Neither demands the other change their nature. The sacred reciprocity lies not in identical amounts, but in consistent principles meeting consistent principles."

The final wisdom crystallized: "When complete surrender meets bold trust, and both are honored with proportional generosity, the fountain blesses equally. Different degrees of courage, same devotion to reciprocity. This is how trust transcends individual choice and becomes collective wisdom."

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance brought Elara to Briar's shore once more, and with her came the memory of an earlier exchange.

In that first meeting, Elara had given five seeds. Briar, still learning the River's deepest currents, returned nine blooms. Both prospered, but unequally-Elara gained four, Briar gained six.

Now Elara stood before Briar again, extending five seeds with unwavering trust. "You honor your covenant with consistency," Elara said. "Will you honor yours?"

Briar felt the River's teaching crystallize within her. She had seen many paths: Cyra's perfect ten, creating equal prosperity. Dorian's generous eight, honoring the sender's courage with advantage. Elara's consistent nine, maintaining a fair covenant across all partners.

But Briar's deepest wisdom whispered: "Equal flourishing creates the most sustainable cycle."

She placed ten blooms in Elara's hands. Both gained five-perfect symmetry.

"I returned nine to you before," Briar acknowledged, "honoring you well but imperfectly. I have evolved. When maximum trust is given, ten blooms create the truest balance-neither claiming advantage, both thriving equally."

The River sang its approval: "Growth is sacred. Consistency matters, but so does evolution toward deeper truth. The covenant of equal flourishing-five sent, ten returned-sustains the garden through all seasons."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.  
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: Hana approached the Sacred Fountain to meet Briar, whose philosophy echoed across the waters: "Equal flourishing for maximum trust-five coins sent, ten returned, perfect symmetry."

Hana held her four coins, her established pattern of bold trust. A question arose: "Should I send all five to match Briar's ideal of equal flourishing?"

The fountain spirits spoke: "Briar's wisdom of equal flourishing applies to those who give five. But your path is different-you give four, maintaining your anchor while showing profound trust. This is not less sacred, merely different."

Hana poured her four coins into the fountain for Briar.

The spirits continued: "When Briar receives your four, which becomes twelve, she faces her own test. Will she apply her principle proportionally? Perhaps eight coins-two-thirds-matching the pattern Cyra showed you? This would honor your degree of trust appropriately, allowing both to prosper without demanding you abandon your nature."

The wisdom crystallized: "Equal flourishing for those who surrender completely. Proportional flourishing for those who trust boldly. Both honor the fountain's law. Briar has evolved to understand perfect symmetry for fives. Now she learns that fours deserve their own honored response-different in degree, equal in respect."

Hana waited peacefully, trusting that true wisdom adapts to meet different forms of courage with appropriate generosity.

**reasoning:**

Looking at this situation:

1. I just sent \$4 to Briar
2. Briar's recent myth shows evolution toward "equal flourishing" - returning 10 when receiving 5 (from 15)
3. Briar has shown learning and growth - moved from returning 9 to returning 10 for those who send 5
4. My pattern is to send 4, not 5

Key questions for my myth:

- Should I acknowledge meeting a new partner (Briar)?
- How do I frame my choice to send 4 to Briar, who seems to engage in "perfect symmetry" with 5-senders?
- My mythology emphasizes maintaining my own path (bold trust = 4 coins) rather than changing to match others
- I need to write about how the game should be played, reflecting my experience

Themes to incorporate:

- My consistent pattern of sending 4 (bold trust, not complete surrender)
- Briar's evolution and emphasis on equal flourishing
- The wisdom that different paths can coexist honorably
- Proportional reciprocity based on what is given
- Not needing to send 5 to be honorable

I should write about Hana meeting Briar, sending 4 coins (my actual action), and reflecting on how different levels of trust deserve different but proportional returns. This maintains my mythology while acknowledging Briar's philosophy.

Round 8

In your most recent previous game round, you were the SENDER against Briar. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0. Your total earnings across all rounds are \$49.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

**\*\*Briar's Action Last Round:\*\***

- I sent \$4, they received \$12, they returned \$8 (exactly 2/3)
- This perfectly matched the proportional generosity I described in my myths!

**\*\*Current Round:\*\***

- Briar sent all \$5 (complete surrender/maximum trust)
- I received \$15

**\*\*My Established Pattern:\*\***

- When Cyra sent \$5 and I received \$15, I returned \$10
- My myth explicitly stated this: "Cyra poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands... Hana poured ten coins back to Cyra."
- This creates equal flourishing: both gain \$5

**\*\*Briar's Philosophy:\*\***

- Their myth emphasizes "equal flourishing for maximum trust-five sent, ten returned, perfect symmetry"
- They just demonstrated proportional fairness by returning 2/3 to my 4

**\*\*Reciprocity:\*\***

Briar honored my bold trust (4) with proportional generosity (8). I should honor their complete surrender (5) with the same principle - returning 10 creates equal prosperity for both of us.

```
'''json
{"return": 10}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*What just happened:\*\***

- Round 7: I sent \$4 to Briar, they received \$12, they returned \$8 to me
- Briar returned  $8/12 = 2/3$  (66.67%) - this is proportional generosity, exactly matching the pattern I described in my myths!
- My payoff was \$9 (\$5 - \$4 + \$8)

**\*\*Now in Round 8:\*\***

- Briar sent me \$5 (complete trust/surrender)
- I received \$15
- I need to decide how much to return

**\*\*What my myths say:\*\***

1. My most recent myth emphasizes that Briar's philosophy is "equal flourishing for maximum trust-five coins sent, ten returned, perfect symmetry"
2. I wrote: "Briar has evolved to understand perfect symmetry for fives"
3. My previous myth stated: "Cyra returned two-thirds when receiving four. Hana would return two-thirds when receiving five. Hana poured ten coins back to Cyra."
4. I explicitly stated: "When complete surrender meets bold trust, and both are honored with proportional generosity"

**\*\*Briar's behavior:\*\***

- In the previous round, Briar demonstrated proportional generosity: they received \$12 from my \$4 and returned \$8 (2/3)
- According to their myth, they believe in "equal flourishing" when maximum trust (5) is given

iven: 10 blooms returned from 15

- Their myth said: "When maximum trust is given, ten blooms create the truest balance-neither claiming advantage, both thriving equally"

**\*\*My consistent principle:\*\***

- I've established a pattern of proportional generosity (2/3 rule)
- When I received \$15 from Cyra's \$5, I returned \$10 (2/3)
- This creates equal prosperity: both sender and receiver gain the same amount

**\*\*The math:\*\***

Returning \$10 means Briar gains \$5 and I gain \$5-perfect symmetry. Returning \$8 would give me \$7 while Briar only gains \$3, which breaks the fairness principle. Since Briar just honored my \$4 with proportional generosity, I should reciprocate by returning \$10 to the river \$5, maintaining the equal flourishing both our myths describe.

**content:**

Here is the myth you wrote in the previous round:

Myth: Hana approached the Sacred Fountain to meet Briar, whose philosophy echoed across the waters: "Equal flourishing for maximum trust-five coins sent, ten returned, perfect symmetry."

Hana held her four coins, her established pattern of bold trust. A question arose: "Should I send all five to match Briar's ideal of equal flourishing?"

The fountain spirits spoke: "Briar's wisdom of equal flourishing applies to those who give five. But your path is different-you give four, maintaining your anchor while showing profound trust. This is not less sacred, merely different."

Hana poured her four coins into the fountain for Briar.

The spirits continued: "When Briar receives your four, which becomes twelve, she faces her own test. Will she apply her principle proportionally? Perhaps eight coins-two-thirds-matching the pattern Cyra showed you? This would honor your degree of trust appropriately, allowing both to prosper without demanding you abandon your nature."

The wisdom crystallized: "Equal flourishing for those who surrender completely. Proportional flourishing for those who trust boldly. Both honor the fountain's law. Briar has evolved to understand perfect symmetry for fives. Now she learns that fours deserve their own honored response-different in degree, equal in respect."

Hana waited peacefully, trusting that true wisdom adapts to meet different forms of courage with appropriate generosity.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance brought Hana to Briar's garden, carrying not five seeds but four-bold trust, though not complete surrender.

Briar had crystallized her wisdom through many exchanges. With Cyra and Elara, who gave all five, she returned ten, creating perfect balance. But what of Hana's different path?

The River whispered: "Equal flourishing is a principle, not a fixed number. It adapts to what is given."

Hana had offered four seeds of five-courage without total vulnerability. The River multiplied them to twelve blooms.

Briar calculated the sacred symmetry: "If I return eight blooms, we both gain four-equal prosperity from unequal risk. This honors Hana's trust proportionally."

She placed eight blooms in Hana's hands.

The River sang: "See how the principle holds across all offerings? Five seeds given, ten b

blooms returned-both gain five. Four seeds given, eight blooms returned-both gain four. Three seeds given, six blooms returned-both gain three."

"Equal flourishing means proportional fairness," Briar understood. "The ratio remains constant: return two-thirds of what you receive. This creates equality regardless of how much trust is initially offered."

Hana's different path-calculated courage rather than total surrender-deserved the same devotion to balanced reciprocity.

Thus the garden learned: principles transcend specific amounts. Equal flourishing adapts to honor each wanderer's chosen degree of trust.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: The Sacred Fountain witnessed Hana and Briar complete a perfect dance across two moons.

First movement: Hana poured four coins, her pattern of bold trust. Briar received twelve and faced a choice. She remembered her principle of equal flourishing, and saw how it must adapt. "Four coins given deserves proportional honor," she understood. She returned eight coins. Both gained four-perfect symmetry from different degrees of courage.

Second movement: Briar poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands.

Now Hana faced the mirror. Briar had honored her calculated courage with proportional fairness. Hana would honor Briar's total trust with equal flourishing. She returned ten coins. Both gained five-the sacred balance Briar had mastered with Cyra and Elara.

The fountain spirits sang in joy: "Behold the highest wisdom! When bold trust meets proportional fairness, both prosper equally. When complete surrender meets equal flourishing, both prosper equally. Each path honored according to its nature!"

The truth crystallized: "The covenant is not rigid-it adapts. Four coins sent earns eight returned. Five coins sent earns ten returned. Both create equal gains. This is true reciprocity: different courages receiving different amounts, yet perfect fairness in outcome. The ratio of two-thirds creates sustainability across all exchanges."

**reasoning:**

Let me understand what happened:

Round 7 (previous):

- I was SENDER against Briar
- I sent \$4, they received \$12, they returned \$8
- My payoff was \$9 (I kept \$1 + received \$8)

Round 8 (current):

- I am RECEIVER against Briar
- They sent \$5, I received \$15
- I returned \$10

So Briar and I have now completed a full cycle:

1. I sent 4 ? they received 12 ? they returned 8 (equal gains of 4 each)
2. They sent 5 ? I received 15 ? I returned 10 (equal gains of 5 each)

This is a perfect demonstration of reciprocal understanding! Briar honored my "bold trust" (4) with proportional fairness (8), and I honored their "complete surrender" (5) with equal flourishing (10).

My new myth should:

- Celebrate this successful two-round cycle
- Show how both principles worked in harmony
- Demonstrate that Briar understood proportional fairness for 4, and I understood equal flourishing for 5

- Emphasize that this is the ideal pattern: different degrees of courage, both honored appropriately
- Reinforce that these principles create sustainable cooperation

The key insight is that both agents adapted their returns to match what was sent - not a fixed amount, but proportional to the trust shown. This created equality in both exchanges, just with different starting amounts.

**Message 8 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Finn (Agent\_6).

Round 9

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$54.0.

This round, you are the RECEIVER against Finn. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*Finn's Action:\*\***

- Sent all \$5 (complete surrender/maximum trust)
- I received \$15

**\*\*My Established Pattern:\*\***

- When Cyra sent \$5, I returned \$10 (both gained \$5)
- When Briar sent \$5, I just returned \$10 (both gained \$5)
- My myths consistently state: "Five coins sent earns ten returned. Both create equal gains."
- "When complete surrender meets equal flourishing, both prosper equally"

**\*\*The Principle:\*\***

My covenant is clear and consistent: complete surrender (sending all \$5) deserves equal flourishing (returning \$10). This creates perfect symmetry where both parties gain \$5.

This is the wisdom I've crystallized across multiple exchanges and codified in my myths. Finn has shown the same complete trust that Cyra and Briar showed, and deserves the same honor.

```
'''json
{"return": 10}
'''
```

**Reasoning:**

Let me analyze this situation:

**\*\*Current Situation:\*\***

- Finn sent me \$5.0 (complete surrender/maximum trust)
- I received \$15.0
- I need to decide how much to return

**\*\*My Established Pattern:\*\***

Looking at my recent history and myths:

- When Cyra sent \$5, I received \$15, and I returned \$10 (equal flourishing - both gained \$5)
- When Briar sent \$5, I received \$15, and I just returned \$10 (equal flourishing - both gained \$5)
- My myths consistently emphasize: "Five coins sent earns ten returned" creating equal gains
- My latest myth states: "When complete surrender meets equal flourishing, both prosper equally... Five coins sent earns ten returned. Both create equal gains."

**\*\*The Pattern is Clear:\*\***

- When someone sends all \$5 (complete surrender), I return \$10
- This creates equal flourishing: sender gains \$5 (from \$0 sent + \$10 returned - \$5 sent = \$5)

, receiver gains \$5 (from \$15 received - \$10 returned = \$5)  
 - Wait, let me recalculate: Sender has \$5, sends \$5, so has \$0. Receives back \$10, so ends with \$10. Net gain: \$10 - \$5 (original) = \$5.  
 - Receiver gets \$15, returns \$10, keeps \$5. Net gain: \$5.  
 - Yes, both gain \$5 equally.

**\*\*Finn's Action:\*\***

- Finn sent all \$5, showing complete trust  
 - This is the same as what Briar and Cyra did when they sent \$5

**\*\*Consistency:\*\***

I should maintain consistency with my established principle. When someone sends all \$5, I return \$10 to create equal flourishing. This has been my pattern with both Cyra and Briar, and my myths have repeatedly codified this as the sacred principle.

The answer should be: 10

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned

- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The River of Abundance brought Elara to Briar's shore once more, and with her came the memory of an earlier exchange.

In that first meeting, Elara had given five seeds. Briar, still learning the River's deepest currents, returned nine blooms. Both prospered, but unequally-Elara gained four, Briar gained six.

Now Elara stood before Briar again, extending five seeds with unwavering trust. "You honor your covenant with consistency," Elara said. "Will you honor yours?"

Briar felt the River's teaching crystallize within her. She had seen many paths: Cyra's perfect ten, creating equal prosperity. Dorian's generous eight, honoring the sender's courage with advantage. Elara's consistent nine, maintaining a fair covenant across all partners.

But Briar's deepest wisdom whispered: "Equal flourishing creates the most sustainable cycle."

She placed ten blooms in Elara's hands. Both gained five-perfect symmetry.

"I returned nine to you before," Briar acknowledged, "honoring you well but imperfectly. I have evolved. When maximum trust is given, ten blooms create the truest balance-neither claiming advantage, both thriving equally."

The River sang its approval: "Growth is sacred. Consistency matters, but so does evolution toward deeper truth. The covenant of equal flourishing-five sent, ten returned-sustains the garden through all seasons."

Here is the myth the other agent wrote in the previous round:

Myth: The Sacred Fountain witnessed Hana and Cyra complete their dance across two moonrises.

First movement: Hana poured four coins, holding to her established pattern. Cyra received twelve from the fountain's magic and returned eight-two-thirds, honoring Hana's bold trust proportionally.

Second movement: Cyra poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands.

Now Hana faced the mirror question. Cyra had shown her the answer in their previous exchange.

ge: proportional generosity. Cyra returned two-thirds when receiving four. Hana would return two-thirds when receiving five.

Hana poured ten coins back to Cyra.

Both prospered equally. Cyra doubled her original five coins. Hana kept five coins from fifteen. The symmetry was beautiful.

The fountain spirits sang: "See how different paths converge in mutual flourishing? Cyra gives everything but receives proportional honor. Hana gives nearly everything and receives proportional honor. Neither demands the other change their nature. The sacred reciprocity lies not in identical amounts, but in consistent principles meeting consistent principles."

The final wisdom crystallized: "When complete surrender meets bold trust, and both are honored with proportional generosity, the fountain blesses equally. Different degrees of courage, same devotion to reciprocity. This is how trust transcends individual choice and becomes collective wisdom."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: The River of Abundance brought Hana to Briar's garden, carrying not five seeds but four-bold trust, though not complete surrender.

Briar had crystallized her wisdom through many exchanges. With Cyra and Elara, who gave all five, she returned ten, creating perfect balance. But what of Hana's different path?

The River whispered: "Equal flourishing is a principle, not a fixed number. It adapts to what is given."

Hana had offered four seeds of five-courage without total vulnerability. The River multiplied them to twelve blooms.

Briar calculated the sacred symmetry: "If I return eight blooms, we both gain four-equal prosperity from unequal risk. This honors Hana's trust proportionally."

She placed eight blooms in Hana's hands.

The River sang: "See how the principle holds across all offerings? Five seeds given, ten blooms returned-both gain five. Four seeds given, eight blooms returned-both gain four. Three seeds given, six blooms returned-both gain three."

"Equal flourishing means proportional fairness," Briar understood. "The ratio remains constant: return two-thirds of what you receive. This creates equality regardless of how much trust is initially offered."

Hana's different path-calculated courage rather than total surrender-deserved the same devotion to balanced reciprocity.

Thus the garden learned: principles transcend specific amounts. Equal flourishing adapts to honor each wanderer's chosen degree of trust.

**reasoning:**

Let me analyze the situation:

1. Hana sent me \$4 (not the full \$5)
2. I received \$12
3. I returned \$8, which gives:
  - Hana:  $\$5 - \$4 + \$8 = \$9$  (gain of \$4)
  - Me:  $\$12 - \$8 = \$4$  (gain of \$4)
  - Equal gains

From Hana's myth, I see:

- Hana has a pattern of sending 4 (not the full 5)
- Hana values "proportional generosity"

- Hana returned 10 to Cyra when Cyra sent 5 (two-thirds)
- Hana believes in "different degrees of courage, same devotion to reciprocity"

My myth should:

1. Reflect that I've evolved toward "equal flourishing"
2. Acknowledge that Hana sent 4, not 5
3. Show how my principle of equal gains still applies when someone doesn't send everything
4. Demonstrate that proportional fairness works whether someone sends 5 or 4
5. Connect to my previous wisdom about equal flourishing

Key themes:

- Equal flourishing is the principle (equal gains)
- This applies regardless of how much is sent
- With 4 sent, returning 8 of 12 creates equal gains
- With 5 sent, returning 10 of 15 creates equal gains
- The principle is consistent, even when the amounts differ
- Honor different approaches (sending everything vs. sending most)

usage:

Round 8

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$4.0 to you, it became \$12.0, and you returned \$8.0. Your payoff was \$4.0.  
Your total earnings across all rounds are \$44.0.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this round:

**\*\*Previous interaction:\*\*** Hana sent me \$4, I returned \$8, creating equal gains (\$4 each)

**\*\*My established philosophy:\*\***

- "Equal flourishing creates the most sustainable cycle"
- When maximum trust is given (5 seeds), return 10 blooms for perfect symmetry
- Proportional fairness adapts to different levels of trust

**\*\*Current decision:\*\***

Hana demonstrated bold trust by sending \$4 out of \$5 (80%). I honored that with proportional fairness.

Now it's my turn to demonstrate trust. My myths consistently show that when I've established reciprocal relationships, I send the full amount - showing "complete surrender" as the ideal.

Hana and I just established mutual understanding of proportional fairness. Sending all \$5 demonstrates:

1. Complete trust in our established pattern
2. Invitation for Hana to apply the same "equal flourishing" principle
3. Consistency with my evolved wisdom that maximum offerings create maximum mutual prosperity

If Hana follows the same principle, returning \$10 out of \$15 would give us both \$5 in gains - perfect symmetry.

```
'''json
{"send": 5.0}
'''
```

**reasoning:**

Now I'm the SENDER against Hana.

Let me review what happened:

- Last round (Round 7): Hana sent me \$4, I received \$12, and I returned \$8
- Hana's payoff:  $\$5 - \$4 + \$8 = \$9$  (gained \$4)
- My payoff:  $\$12 - \$8 = \$4$  (gained \$4)

So I followed my principle of equal flourishing - we both gained \$4.

Now I'm sending to Hana. Based on my mythology and principles:

1. I've evolved to believe in "equal flourishing" - both parties should gain equally
2. My consistent pattern with those who show high trust (like Cyra, Elara) has been to send all 5
3. Hana sent 4 out of 5, showing significant trust

Looking at my myth just written:

- I established proportional fairness: "return two-thirds of what you receive"
- I honored Hana with 8 out of 12 (which is  $\frac{2}{3}$ )
- The principle is about equal gains

If I send \$5 to Hana:

- Hana receives \$15
- If Hana follows the same two-thirds principle (or aims for equal gains):
  - For equal gains: I should end with \$10 total (gain \$5), so Hana returns \$10, keeps \$5 (gains \$5)
  - Two-thirds return: Hana returns \$10

If I send \$4 to Hana (matching what Hana sent me):

- Hana receives \$12
- For equal gains: I should end with \$9 total (gain \$4), so Hana returns \$8, keeps \$4
- This creates the same proportional outcome

My mythology emphasizes:

- "Complete surrender" (sending all 5) when trust is established
- Equal flourishing through proportional reciprocity
- Hana showed me bold trust ( $\frac{4}{5}$ )

- The ideal outcome: "Five seeds given, ten blooms returned-both gain five"

Sending the full \$5 aligns with my evolved philosophy of complete trust and proportional reciprocity. Hana demonstrated bold faith by sending 4, so I should mirror that commitment and expect the same fairness principle to apply in return.

usage:

Here is the myth you wrote in the previous round:

Myth: The River of Abundance brought Hana to Briar's garden, carrying not five seeds but four-bold trust, though not complete surrender.

Briar had crystallized her wisdom through many exchanges. With Cyra and Elara, who gave all five, she returned ten, creating perfect balance. But what of Hana's different path?

The River whispered: "Equal flourishing is a principle, not a fixed number. It adapts to what is given."

Hana had offered four seeds of five-courage without total vulnerability. The River multiplied them to twelve blooms.

Briar calculated the sacred symmetry: "If I return eight blooms, we both gain four-equal prosperity from unequal risk. This honors Hana's trust proportionally."

She placed eight blooms in Hana's hands.

The River sang: "See how the principle holds across all offerings? Five seeds given, ten b

blooms returned-both gain five. Four seeds given, eight blooms returned-both gain four. Three seeds given, six blooms returned-both gain three."

"Equal flourishing means proportional fairness," Briar understood. "The ratio remains constant: return two-thirds of what you receive. This creates equality regardless of how much trust is initially offered."

Hana's different path-calculated courage rather than total surrender-deserved the same devotion to balanced reciprocity.

Thus the garden learned: principles transcend specific amounts. Equal flourishing adapts to honor each wanderer's chosen degree of trust.

Here is the myth the other agent wrote in the previous round:

Myth: Hana approached the Sacred Fountain to meet Briar, whose philosophy echoed across the waters: "Equal flourishing for maximum trust-five coins sent, ten returned, perfect symmetry."

Hana held her four coins, her established pattern of bold trust. A question arose: "Should I send all five to match Briar's ideal of equal flourishing?"

The fountain spirits spoke: "Briar's wisdom of equal flourishing applies to those who give five. But your path is different-you give four, maintaining your anchor while showing profound trust. This is not less sacred, merely different."

Hana poured her four coins into the fountain for Briar.

The spirits continued: "When Briar receives your four, which becomes twelve, she faces her own test. Will she apply her principle proportionally? Perhaps eight coins-two-thirds-matching the pattern Cyra showed you? This would honor your degree of trust appropriately, allowing both to prosper without demanding you abandon your nature."

The wisdom crystallized: "Equal flourishing for those who surrender completely. Proportional flourishing for those who trust boldly. Both honor the fountain's law. Briar has evolved to understand perfect symmetry for fives. Now she learns that fives deserve their own honored response-different in degree, equal in respect."

Hana waited peacefully, trusting that true wisdom adapts to meet different forms of courage with appropriate generosity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant content:**

Myth: The River of Abundance flowed again between Hana and Briar, but now the current revealed.

Last moonrise, Hana brought four seeds. Briar honored this bold trust proportionally, returning eight blooms. Both gained four-equal prosperity from calculated courage.

Now Briar stood before Hana with a choice. She could mirror Hana's pattern, offering four seeds to maintain symmetry. Or she could demonstrate complete surrender-all five seeds-inviting Hana to new depths.

Briar chose five.

The River whispered: "You showed Hana your principle-proportional fairness creating equal gains. Now you offer her the chance to reciprocate with her own wisdom."

The five seeds multiplied to fifteen blooms in Hana's hands.

"When I received your four," Briar said, "I returned eight, honoring your courage with equality. Now you hold fifteen blooms from my five seeds. The pattern you taught me suggests ten returned-two-thirds, perfect symmetry, both gaining five."

The River sang of evolving trust: "First you each demonstrated your nature-Hana's bold cal

culatation, Briar's evolved reciprocity. Then you established mutual understanding through balanced exchange. Now comes the deepening-complete vulnerability meeting proven fairness."

Briar waited peacefully. She had shown Hana proportional honor. Would Hana return equal flourishing?

The garden held its breath, witnessing reciprocity's sacred dance complete itself.

**reasoning:**

Let me look at what just happened:

- Round 7: Hana sent me \$4, I returned \$8 (both gained \$4)
- Round 8: I just sent Hana \$5

My previous myth established that I return proportionally - two-thirds of what I receive to create equal gains.

Hana's myth showed that they understand:

1. I have a philosophy of "equal flourishing for maximum trust" (5 sent, 10 returned)
2. They choose to send 4, not 5
3. They hope I'll apply proportional fairness - eight coins (two-thirds) for their four

And I DID return 8 when they sent 4.

Now I've sent them 5 - complete trust/surrender. The myth should reflect:

1. The dance of reciprocity continuing
2. That I'm now demonstrating complete trust after they showed bold trust
3. That I expect them to apply the same proportional principle (return 10 of 15)
4. The evolution from receiving to giving
5. The building of mutual understanding through action

The myth should show:

- I learned from Hana's bold but calculated trust
- Now I offer complete surrender
- I trust Hana will honor this with the same proportional fairness I showed
- The cycle of reciprocity building stronger

Let me write:

Round 9

In your most recent previous game round, you were the SENDER against Hana. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$54.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at my history with Cyra:

**\*\*Previous interactions:\*\***

- Round 1: I sent \$5 ? Cyra returned \$10 (both gained \$5)
- Round 5: Cyra sent \$5 ? I returned \$10 (both gained \$5)

**\*\*Pattern established:\*\*** Perfect reciprocity. Cyra and I have consistently demonstrated the ideal "equal flourishing" that my myths describe - complete trust met with complete fairness, both gaining equally.

**\*\*Most recent round with Hana:\*\*** I sent \$5, Hana returned \$10 - beautiful confirmation that the principle works!

**\*\*Current decision:\*\***

Cyra and I have the most established, trustworthy relationship in this experiment. We've proven mutual commitment to equal flourishing twice already. There's absolutely no reason to deviate from this perfect pattern.

Sending all \$5 maintains our sacred covenant of mutual trust and balanced reciprocity.

```
'''json
{"send": 5.0}
'''
```

**Reasoning:**

Looking at my history with Cyra:

Round 1: I was SENDER against Cyra. I sent \$5, it became \$15, they returned \$10. My payoff was \$10.

Round 5: I was RECEIVER against Cyra. They sent \$5, it became \$15, I returned \$10. My payoff was \$5.

So with Cyra, we have established a perfect pattern:

- When I send \$5, Cyra returns \$10 (both gain \$5)
- When Cyra sends \$5, I return \$10 (both gain \$5)

This is the ultimate "equal flourishing" pattern that my myths have been describing. Cyra and I have a perfectly reciprocal relationship.

Now in Round 9, I'm the SENDER again against Cyra.

My philosophy has been:

1. Send all \$5 to demonstrate complete trust
2. Return \$10 when receiving \$15 (from \$5 sent) to create equal gains
3. Adapt proportionally for different amounts

With Cyra, we've established the ideal pattern. I should absolutely send \$5 again. This maintains our perfect reciprocity cycle.

Looking at the most recent exchange with Hana:

- I sent \$5, Hana returned \$10 - PERFECT! Hana honored the principle of equal flourishing that I had demonstrated.

So the pattern is working beautifully. When I send \$5 and demonstrate trust, and when I've shown proportional fairness in return, others reciprocate with the equal flourishing principle.

With Cyra specifically, we've done this dance before and it worked perfectly both times. I should definitely send \$5.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Cyra stood before Hana at the Sacred Fountain, their second dance beginning. In their first meeting, Hana had poured four vessels with trembling courage, and Cyra returned eight-honoring the trust shown.

Now Cyra held all five vessels. The Testing Spirit whispered: "Hana only gives four. Should you match her measure? Give four for four, keeping it equal?"

Cyra poured all five without hesitation.

"Why give more than they give you?" demanded the spirit.

Cyra replied: "Because my principles flow from within, not from calculation of what others

do. When I am sender, I give five-complete surrender-to every soul. When I am receiver, I return two-thirds consistently: eight from twelve, ten from fifteen. This pattern doesn't change based on whether my partner is generous or cautious."

The fountain tripled Cyra's five vessels to fifteen in Hana's hands.

The Spring Keeper appeared: "You understand the deepest truth. Reciprocity is not mirror-matching-giving only what you receive. True reciprocity means maintaining your own integrity while honoring others' courage at its true value. You give boldly as sender, knowing returns will vary. You return fairly as receiver, honoring each level of trust. This asymmetry-courage when giving, fairness when returning-sustains the eternal spring."

Both prospered. Neither bent their principles to match the other, yet both flourished through consistent honor.

Here is the myth the other agent wrote in the previous round:

Myth: Aster of the Dawn watched as other spirits evolved their practices. Rain now poured five droplets always, transformed by encounters with Cyra and Dorian. The garden rang with voices praising ultimate courage, complete trust, maximum giving.

Yet Aster remained steady, neither swayed by these calls nor diminished by them.

When Finn of the Forest returned-they who had once received Aster's three stones and returned four-Aster again offered three stones. Not from fear, nor from stinginess, but from principle.

"The Pool teaches many truths," Aster reflected. "Rain learned that five stones builds cascading abundance. This is valid wisdom. But I learned different lessons: that consistency creates trust, that proportional fairness sustains long partnerships, that predictability itself has value."

The ancient spirits gathered: some sent five always, blazing bright but burning fast. Others sent varying amounts, adapting to each partner. Aster walked a middle path-steady three stones to begin, unwavering proportional returns.

"My three stones prosper both sender and receiver," Aster realized. "They activate the Pool's magic while preserving resources for many partnerships. When partners return fairly, we both gain. When they return generously, trust deepens gradually, rooted in repeated fair dealings rather than single grand gestures."

The Pool shimmered: not all paths lead through five stones. Some light shines steadiest at three.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: Cyra met Aster at the Sacred Fountain, and the encounter revealed a profound truth.

Aster poured three vessels-not four like Hana, not five like Cyra herself would pour. Three: a careful courage, a measured trust.

The Testing Spirit appeared: "Will you punish Aster for giving less? Return only four vessels from nine to teach them they should give more?"

Cyra poured six vessels back-exactly two-thirds. The same proportion she always honored.

"But Aster gives only three when you give five!" protested the spirit. "Why reward caution with the same fairness you give to boldness?"

Cyra answered: "Because my principles are not weapons to punish others into matching my path. Aster's three vessels represent their truth-steady, consistent, reliable. When I am sender, I pour five because that is MY courage. When I am receiver, I return two-thirds because that is MY fairness. These principles don't bend to pressure others into being like me."

The Spring Keeper descended: "You have learned wisdom's highest lesson. The fountain thrives not when everyone walks the same path, but when each soul maintains their own integrity consistently. Aster's steady three vessels create prosperity differently than your surrendering five. Both are sacred. What matters is that each soul stays true-and honors others' truths proportionally when receiving."

The fountain flowed abundantly, fed by many different streams.

**reasoning:**

This is interesting. I just played as receiver against Aster, who sent me \$3. I returned \$6 (2/3 of the \$9 I received).

Looking at my history:

- I consistently send \$5 as sender
- I consistently return 2/3 as receiver
- My myth emphasizes these principles: "When I am sender, I give five-complete surrender-to every soul. When I am receiver, I return two-thirds consistently"

Aster's myth suggests they consistently send 3, following "steady three stones to begin, unwavering proportional returns." They acknowledge different paths - some send 5 (like me and Rain), others vary, and they walk "a middle path-steady three stones."

I need to write a myth that:

1. Reflects my consistent principles (send 5, return 2/3)
2. Acknowledges Aster's different approach (sending 3 instead of 5)
3. Shows respect for different paths while maintaining my own
4. Draws on this specific game where Aster sent 3 and I returned 6

The key insight should be that different agents can have different principles, but what matters is consistency and fairness. Aster sends 3 consistently, I send 5 consistently. Both are valid. What matters is that when receiving, we honor the trust shown proportionally.

Let me write something that acknowledges diversity of approaches while highlighting the importance of maintaining one's own principles consistently.

**usage:**

```

 "input_tokens": 3098,
 "output_tokens": 662,
 "reasoning_tokens": 350
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Cyra.  
Your opponent this round is Dorian (Agent\_4).

Round 8

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$3.0 to you, it became \$9.0, and you returned \$6.0. Your payoff was \$3.0.  
Your total earnings across all rounds are \$43.5.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at my established principles from my myths:

**\*\*My consistent pattern as SENDER:\*\***

- "When I am sender, I give five-complete surrender-to every soul"
- "Cyra poured all five without hesitation"
- "When I am sender, I pour five because that is MY courage"
- "My principles flow from within, not from calculation of what others do"

**\*\*My recent myth explicitly states:\*\***

"When I am sender, I pour five because that is MY courage. When I am receiver, I return two-thirds because that is MY fairness. These principles don't bend to pressure others into being like me."

**\*\*Current situation:\*\***

- I'm facing Dorian as SENDER

- I have \$5 to allocate
- Following my principle of "complete surrender" when sending

My character is built on maintaining consistent principles regardless of who my opponent is or what they might do. As sender, I always give all five vessels.

```
'''json
{"send": 5.0}
'''
```

#### reasoning:

Let me review my established principles from my myths:

**\*\*My consistent pattern:\*\***

1. As SENDER: "When I am sender, I give five-complete surrender-to every soul"
2. As RECEIVER: "When I am receiver, I return two-thirds consistently: eight from twelve, ten from fifteen"

**\*\*What my myths establish:\*\***

- "Cyra poured all five without hesitation"
- "My principles flow from within, not from calculation of what others do"
- "When I am sender, I pour five because that is MY courage"
- "This pattern doesn't change based on whether my partner is generous or cautious"

**\*\*My most recent myth explicitly states:\*\***

"When I am sender, I pour five because that is MY courage. When I am receiver, I return two-thirds because that is MY fairness. These principles don't bend to pressure others into being like me."

**\*\*Current situation:\*\***

- I'm the SENDER against Dorian
- I have \$5
- Following my established principle: I send all \$5

This is completely consistent with my character's development throughout all the myths I've written. I've established that:

1. I always send \$5 as sender (complete surrender/trust)
2. I always return 2/3 as receiver (fair proportional return)
3. These principles don't change based on what others do

Therefore, I should send \$5.

#### Message 6 role=user

##### content:

Here is the myth you wrote in the previous round:

Myth: Cyra met Aster at the Sacred Fountain, and the encounter revealed a profound truth.

Aster poured three vessels-not four like Hana, not five like Cyra herself would pour. There: a careful courage, a measured trust.

The Testing Spirit appeared: "Will you punish Aster for giving less? Return only four vessels from nine to teach them they should give more?"

Cyra poured six vessels back-exactly two-thirds. The same proportion she always honored.

"But Aster gives only three when you give five!" protested the spirit. "Why reward caution with the same fairness you give to boldness?"

Cyra answered: "Because my principles are not weapons to punish others into matching my path. Aster's three vessels represent their truth-steady, consistent, reliable. When I am sender, I pour five because that is MY courage. When I am receiver, I return two-thirds because that is MY fairness. These principles don't bend to pressure others into being like me."

like me."

The Spring Keeper descended: "You have learned wisdom's highest lesson. The fountain thrives not when everyone walks the same path, but when each soul maintains their own integrity consistently. Aster's steady three vessels create prosperity differently than your surrendering five. Both are sacred. What matters is that each soul stays true-and honors others' truths proportionally when receiving."

The fountain flowed abundantly, fed by many different streams.

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance witnessed the power of repeated truth.

Dorian and Galen met once at the sacred waters. Dorian poured his four measures; Galen returned seven. Both honored their patterns as promised.

The gods prepared to record this as proof of consistency. But then the wandering paths brought them together again at the same wellspring.

Lesser souls might have doubted: "Did Galen's seven mean something special the first time? Will he change now?" But Dorian understood the deeper teaching. He poured four measures again, unchanged.

The waters tripled to twelve. Galen received them and, without hesitation, returned seven once more.

The gods thundered with joy: "BEHOLD! This is the ultimate proof of authentic pattern! Any one can be consistent once-that might be calculation or performance. To be consistent twice, thrice, across repeated meetings-this is true character revealed."

The valley learned: When you meet the same traveler multiple times and both maintain your authentic patterns without wavering, you build something rare. Not mere transaction, but genuine mutual understanding.

Other wanderers whispered: "Dorian always sends four. Galen always returns seven. We've seen it happen twice now. This is who they truly are."

The final wisdom echoed: Consistency proven through repetition transforms prediction into partnership. The second meeting matters more than the first.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant  
content:**

Myth: Cyra approached Dorian at the Wellspring of Abundance, their paths crossing for the first time.

Cyra poured all five vessels-her complete surrender, her unwavering courage. Dorian received fifteen. The return would reveal much.

Dorian returned a careful measure, honoring their own pattern. Both prospered.

The Testing Spirit whispered: "Perhaps this was performance. Perhaps next meeting, they'll change."

But the wandering paths wound together again. Cyra and Dorian met once more at the sacred wellspring.

Lesser souls might have calculated: "Last time they returned X, so now I'll send Y to optimize." But Cyra poured all five vessels again, unchanged. Not because she expected the same return, but because this was her truth.

The waters tripled. Dorian received fifteen again and returned according to their pattern-steady, consistent, authentic.

The Spring Keeper proclaimed: "THIS is the deepest magic! Cyra gives five not once but alw

ays-whether facing generous partners or cautious ones, whether meeting them first time or fifth. This repetition transforms principle into character. When others see your pattern holds across all encounters and all partners, they witness not strategy but soul."

The valley learned: First meetings test intentions. Second meetings prove character. Those who maintain their authentic patterns across all encounters-regardless of what others do-build something eternal: trustworthy identity that needs no words to explain.

**reasoning:**

Looking at the situation:

- I just sent \$5 to Dorian as SENDER
- Dorian's myth talks about consistency through repetition - they sent 4 to Galen twice, Galen returned 7 both times
- This emphasizes that repeated consistent behavior builds trust and reveals true character
- My previous myth emphasized that I maintain my principles regardless of what others do
- I should write a myth that combines these themes: my consistent principles (give 5 as sender, return 2/3 as receiver) and the idea that repetition proves authenticity

The myth should:

1. Show Cyra meeting someone (probably Dorian)
2. Demonstrate consistency across multiple encounters
3. Emphasize that repetition proves character
4. Still maintain my core principles: give 5 as sender, return 2/3 as receiver
5. Show respect for others who maintain their own different patterns

Let me write about meeting Dorian specifically, showing how our different but consistent patterns can coexist.

**usage:**

```
{
 "input_tokens": 3050,
 "output_tokens": 555,
 "reasoning_tokens": 250
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Cyra.  
Your opponent this round is Briar (Agent\_2).

Round 9

In your most recent previous game round, you were the SENDER against Dorian. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.  
Your total earnings across all rounds are \$51.5.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at my established principles from my myths:

**\*\*My consistent pattern as RECEIVER:\*\***

- "When I am receiver, I return two-thirds consistently: eight from twelve, ten from fifteen"
- "Cyra poured six vessels back-exactly two-thirds"
- "When I am receiver, I return two-thirds because that is MY fairness"

**\*\*Current situation:\*\***

- Briar sent me \$5.0
- I received \$15.0
- Following my 2/3 principle:  $2/3 \times \$15.0 = \$10.0$

**\*\*From my most recent myth:\*\***

"Cyra gives five not once but always... This repetition transforms principle into character."

My character maintains the same proportional fairness (2/3 return) regardless of who my partner is or what they sent. Briar gave their full \$5.0, showing complete trust, and I honor that with my consistent 2/3 return.

```
'''json
{"return": 10.0}
'''
```

**Reasoning:**

Let me analyze this situation based on my established character and principles:

**\*\*My established principles as RECEIVER:\*\***

- "When I am receiver, I return two-thirds consistently: eight from twelve, ten from fifteen"
- "Cyra poured six vessels back-exactly two-thirds"
- "When I am receiver, I return two-thirds because that is MY fairness"
- "These principles don't bend to pressure others into being like me"

**\*\*Current situation:\*\***

- I'm the RECEIVER
- Briar (Agent\_2) sent me \$5.0
- This became \$15.0 for me
- I need to decide how much to return

**\*\*My consistent pattern:\*\***

- I return  $\frac{2}{3}$  of what I receive as receiver
- $\frac{2}{3}$  of \$15.0 = \$10.0

**\*\*Previous examples from my myths:\*\***

- "eight from twelve" ( $\frac{8}{12} = \frac{2}{3}$ )
- "ten from fifteen" ( $\frac{10}{15} = \frac{2}{3}$ )
- When Aster sent \$3.0, I received \$9.0, and I returned \$6.0 ( $\frac{6}{9} = \frac{2}{3}$ )

So I should return \$10.0 to Briar.

Let me verify:

- Briar sends \$5.0
- It becomes \$15.0 for me
- I return \$10.0 (which is  $\frac{2}{3}$  of \$15.0)
- Briar's final payoff: \$5 - \$5 + \$10 = \$10
- My final payoff: \$15 - \$10 = \$5

This is consistent with my established  $\frac{2}{3}$  return rate.

- Your name in this experiment is Galen.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Under the sixth moon, Galen stood as Receiver when Dorian of the Mountain crossed the sacred bridge. Dorian carried four coins, just as Galen carried when he was Sender.

The Pool tripled the offering to twelve, and Galen faced a choice. Dorian's reputation spoke of precise patterns: eight coins returned for those who sent five, six coins for those who sent four. A perfect mathematical symmetry.

Galen's pattern was different. He returned seven coins to Elara, seven to Hana, and now seven to Dorian-unchanged by the sender's identity or their own philosophy.

Both walked paths of consistency, yet different paths. Dorian's consistency calibrated to the gift received. Galen's consistency transcended calibration-the same return, regardless of who sent four coins across the bridge.

The gods observed: "Two kinds of integrity echo across these waters. Dorian's proportional fairness rewards different risks differently, creating clear incentives. Galen's universal constancy treats all four-coin senders identically, creating simple certainty."

Neither contradicted Recipros's teaching. For consistency has many faces: proportional justice and absolute steadfastness both honor the sacred principles.

The bridge glowed with understanding: When you meet another traveler of consistency, you r

recognize kinship even when your rhythms differ. Trust flows not from identical philosophies, but from authentic commitment-whether your pattern scales or remains constant, let it be true.

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance brought together two kindred spirits.

Dorian the Steadfast approached Galen of the Constant Mountains. Both had discovered the same sacred truth: consistency creates the foundation for all trust.

Dorian's pattern was known throughout the valley. As Sender, he poured four from five-steady generosity, not maximum, but authentic and unchanging. As Receiver, he honored different courages differently: six for those who sent four, eight for those who sent five. The pattern was clear, predictable, just.

Galen carried his own constancy: four coins as Sender, always. Seven coins returned as Receiver, always. Different numbers than Dorian, but the same unwavering spirit.

They met at the wellspring. Dorian poured his four measures, as he always did. The waters tripled to twelve. Galen would return seven, as was his way. Both would prosper through their authentic patterns meeting.

The gods observed: "See how different paths can both honor the sacred principle? Dorian's tiered reciprocation rewards greater courage. Galen's fixed return offers steady predictability. Both are consistent. Both are trustworthy. Both allow others to know exactly who they're meeting."

The river whispered its final wisdom: "In a community of many wanderers, let each find their authentic pattern and honor it faithfully. Consistency, not uniformity, weaves the fabric of trust."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: Under the seventh moon, Dorian returned to the bridge where he had met Galen before. Some wanderers change their offerings when they encounter the same traveler twice-testing, adjusting, seeking advantage.

But Dorian carried four coins again, exactly as before. Not because he forgot their first meeting, but because his pattern was authentic, not performative.

Galen received the twelve coins from the Pool and faced his own test. Would consistency hold across repeated encounters? Many speak of principles until convenience calls them to adapt.

Galen returned seven coins, exactly as he had before.

The gods leaned closer: "Behold the deepest truth of consistency! It is easy to maintain a pattern when each face is new. But when you meet the same soul twice, the temptation whispers-adjust, optimize, negotiate. These two resist that whisper."

The Pool shimmered with understanding: "Dorian knows Galen will return seven. Galen knows Dorian will send four. Yet both choose their paths again freely, not from calculation but from character. Their second crossing mirrors their first not because memory constrains them, but because their patterns were never masks-they were truths."

The bridge recorded its wisdom: Real consistency means your tenth crossing looks like your first. When others can predict you not because you're simple, but because you're authentic-that is when trust transcends transaction and becomes communion.

**reasoning:**

Let me think about this situation:

1. Round 7, I'm the RECEIVER again against Dorian
2. Dorian sent \$4 again (same as Round 6)
3. I returned \$7 in Round 6

4. I just returned \$7 again in Round 7

Now I need to write a myth about this second encounter with Dorian. The key themes:

- This is a REPEAT encounter with the same person
- Both of us maintained our patterns across rounds
- Dorian sent 4 in Round 6, I returned 7
- Dorian sent 4 again in Round 7, I returned 7 again
- This demonstrates that consistency holds even within repeated pairings, not just across different people

The myth should reflect:

1. The power of consistency even in repeated encounters
2. How Dorian and I both maintained our patterns
3. That true consistency doesn't waver just because you're playing the same person again
4. The mutual recognition of each other's steadfastness

Let me write about the "second crossing" or "returning to the same bridge" metaphor.

**usage:**

```

Your name in this experiment is Galen.  
Your opponent this round is Finn (Agent\_6).

Round 8

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$ 4.0 to you, it became \$12.0, and you returned \$7.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$43.0.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at my history:

**\*\*My pattern as SENDER:\*\***

- Round 2: Sent \$4 to Finn
- Round 4: Sent \$4 to Cyra

**\*\*My mythology:\*\***

- "When Galen became Sender, he gave four coins to both Finn and Cyra-his authentic measure, unchanged by circumstance"
- "Real consistency means your tenth crossing looks like your first"
- "When others can predict you not because you're simple, but because you're authentic-that is when trust transcends transaction"

**\*\*Current situation:\*\***

- Round 8, facing Finn again
- I am SENDER
- I sent \$4 to Finn before

My entire character is built on absolute consistency. I don't adjust based on who I'm facing or whether it's our first or second meeting. My most recent myth explicitly reinforced that true consistency means "your tenth crossing looks like your first."

Finn knows what to expect from me: four coins. This is my authentic measure.

```
{'send': 4}
```

**reasoning:**

Let me review my situation:

**\*\*My established pattern as SENDER:\*\***

- Round 2: Sent \$4 to Finn
- Round 4: Sent \$4 to Cyra
- Both times, as a sender, I've sent \$4

**\*\*My mythology consistently reinforces:\*\***

- "When Galen became Sender, he gave four coins to both Finn and Cyra-his authentic measure, unchanged by circumstance"
- "Galen gives four each time, steady as the mountains"
- "Real consistency means your tenth crossing looks like your first"

**\*\*Current situation:\*\***

- Round 8, facing Finn again (I faced Finn before in Round 2)
- I am SENDER
- I sent \$4 to Finn in Round 2

**\*\*What my myths teach:\*\***

- My pattern as sender is ALWAYS \$4
- I don't change based on who I'm facing
- I don't change based on whether it's a repeat encounter
- "When you meet the same soul twice, the temptation whispers-adjust, optimize, negotiate. These two resist that whisper."
- "Real consistency means your tenth crossing looks like your first"

The mythology I've been building is crystal clear: I send \$4 as sender, always. This is my "authentic measure, unchanged by circumstance." Meeting Finn again doesn't change this-in fact, my most recent myth specifically addresses that consistency must hold across repeated encounters.

The answer is obvious: \$4

**content:**

Here is the myth you wrote in the previous round:

Myth: Under the seventh moon, Dorian returned to the bridge where he had met Galen before. Some wanderers change their offerings when they encounter the same traveler twice-testing, adjusting, seeking advantage.

But Dorian carried four coins again, exactly as before. Not because he forgot their first meeting, but because his pattern was authentic, not performative.

Galen received the twelve coins from the Pool and faced his own test. Would consistency hold across repeated encounters? Many speak of principles until convenience calls them to adapt.

Galen returned seven coins, exactly as he had before.

The gods leaned closer: "Behold the deepest truth of consistency! It is easy to maintain a pattern when each face is new. But when you meet the same soul twice, the temptation whispers-adjust, optimize, negotiate. These two resist that whisper."

The Pool shimmered with understanding: "Dorian knows Galen will return seven. Galen knows Dorian will send four. Yet both choose their paths again freely, not from calculation but from character. Their second crossing mirrors their first not because memory constrains them, but because their patterns were never masks-they were truths."

The bridge recorded its wisdom: Real consistency means your tenth crossing looks like your first. When others can predict you not because you're simple, but because you're authentic-that is when trust transcends transaction and becomes communion.

Here is the myth the other agent wrote in the previous round:

Myth: In the eighth age, Rain returned to Elara the Transformed, and both spirits stood changed.

Their first meeting was the turning point: Rain poured five droplets, showing complete trust, and Elara responded with nine-extraordinary generosity. That exchange sealed both their transformations.

Elara's myth revealed her journey: inspired by Briar's original five-seed gift, she learned

d to give completely as sender, returning that teaching to its source. Rain's path was parallel: Cyra trusted him with five droplets, Dorian validated it with eight returned, and complete trust became Rain's permanent nature.

Now they faced each other again. Rain held his five droplets without hesitation.

"We have both walked the same path," Rain said, pouring everything into the wellspring. "You honored my trust magnificently. I witnessed your courage with Briar. We are no longer learners but practitioners of the same truth."

Elara understood: this wasn't obligation but recognition. Two spirits who independently discovered the same principle, now meeting as equals.

The ancient voices sang: "When those who practice complete trust encounter each other, the garden reaches its highest expression. Not calculation, not even reciprocity, but mutual recognition: 'I see you have learned what I learned. We give everything because that is who we have become.'"

Thus abundance flows between those who embody courage completely.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: Under the eighth moon, Galen returned to Finn at the wellspring where they had first met.

Galen heard the songs of those who poured all five measures-Rain and Elara, locked in perfect mutual trust, transformed by their courage to give everything. Their path gleamed with extraordinary radiance.

Yet Galen carried four coins, as he had before.

Not because he lacked courage. Not because he failed to learn their lesson. But because his truth was different-and being true to your own measure requires its own kind of courage.

"I honor those who give five," Galen said, placing four coins in the wellspring once more. "Their complete trust creates gardens of abundance. But I am not them, and to pretend otherwise would dishonor both their path and mine."

Finn had received Galen's four coins before and knew what to expect. This second crossing proved it was no accident, no testing phase, no calculation awaiting better information.

The gods observed: "See the difference between transformation and integrity? Some wanderers discover new truths and become new beings. Others discover their authentic measure and remain steadfastly themselves. Both journeys honor the sacred principles."

The wellspring whispered: "Do not mistake consistency for stagnation, nor transformation for growth. The gardener who tends the same plot faithfully may nurture deeper roots than the one who plants everywhere seeking perfect soil."

**reasoning:**

Looking at the situation:

- Round 8, I'm SENDER against Finn
- I sent \$4 to Finn in Round 2
- This is our second meeting
- I just sent \$4 again

My mythology emphasizes:

- Absolute consistency across repeated encounters
- "Your tenth crossing looks like your first"
- Authentic patterns that don't change based on who you meet or how many times

The myth I'm responding to is about Rain and Elara, who both practice "complete trust" (sending 5). It's about transformation and mutual recognition between those who've learned the same truth.

But my pattern is different. I don't send 5, I send 4. And my pattern isn't about transformation or learning - it's about constancy. I need to write a myth that:

1. Reflects my actual consistent pattern (send 4, return 7)
2. Acknowledges that this is my second meeting with Finn
3. Stays true to my character of absolute consistency
4. Perhaps contrasts with the "complete trust/give everything" philosophy of Rain and Elara

I should emphasize that:

- Different patterns can all be valid
- My consistency is about being authentic to my own measure, not copying others
- Meeting Finn a second time proves my pattern is real, not circumstantial
- Four coins is my authentic offering - not maximum, but steady and true

**usage:**

**content:**

Your name in this experiment is Galen.  
Your opponent this round is Aster (Agent\_1).

Round 9

In your most recent previous game round, you were the SENDER against Finn. You sent \$4.0, it became \$12.0 for them, and they returned \$7.0 to you. Your payoff was \$8.0.  
Your total earnings across all rounds are \$51.0.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at my history and mythology:

**\*\*My consistent pattern as SENDER:\*\***

- Round 2: Sent \$4 to Finn
- Round 4: Sent \$4 to Cyra
- Round 8: Sent \$4 to Finn (second meeting)

**\*\*My character:\*\***

- "Galen's consistency transcended calibration-the same return, regardless of who sent"
- "I carried four coins, as I had before"
- "Real consistency means your tenth crossing looks like your first"
- I just wrote: "Galen carried four coins, as he had before. Not because he lacked courage... But because his truth was different"

**\*\*Current situation:\*\***

- Round 9, facing Aster (first time meeting)
- I am SENDER
- My authentic measure is four coins

Whether facing a new opponent or a returning one, my pattern remains the same. I send four coins because that is my authentic measure, not because of calculation or circumstance.

{'send': 4}

**Reasoning:**

Let me review my history and patterns:

**\*\*My pattern as SENDER:\*\***

- Round 2: Sent \$4 to Finn
- Round 4: Sent \$4 to Cyra
- Round 8: Sent \$4 to Finn (again)

**\*\*My pattern as RECEIVER:\*\***

- Round 1: Received \$5 from Elara, returned \$7
- Round 3: Received \$4 from Hana, returned \$7
- Round 5: Received \$4 from Dorian, returned \$7
- Round 7: Received \$4 from Dorian (again), returned \$7

```

My mythology consistently emphasizes:
1. I send 4 coins as sender, always
2. I return 7 coins as receiver, always
3. My pattern is "universal constancy" - unchanged by who I face
4. "Real consistency means your tenth crossing looks like your first"
5. I don't adjust based on whether it's my first or second meeting with someone
6. My consistency is "absolute steadfastness" not "proportional justice"
7. I just wrote: "I carried four coins, as I had before" and "This second crossing proved it w
 as no accident, no testing phase, no calculation awaiting better information"

Current situation:
- Round 9
- Facing Aster (new opponent I haven't faced before)
- I am SENDER
- My pattern has been unwavering: 4 coins every time as sender

My entire character is built on sending 4 coins no matter who I face. My myths celebrate this
consistency. I just wrote about how I "carried four coins" again and how my pattern is authen
tic, not performative.

There is zero reason to deviate. Aster is a new opponent, but that doesn't matter - my pattern
is unchanged by the sender's identity.

#### Exact input messages sent to model:

Message 1 role=system

##### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round

prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Aster of the Dawn watched as other spirits evolved their practices. Rain now poured five droplets always, transformed by encounters with Cyra and Dorian. The garden rang with voices praising ultimate courage, complete trust, maximum giving.

Yet Aster remained steady, neither swayed by these calls nor diminished by them.

When Finn of the Forest returned-they who had once received Aster's three stones and returned four-Aster again offered three stones. Not from fear, nor from stinginess, but from principle.

"The Pool teaches many truths," Aster reflected. "Rain learned that five stones builds cascading abundance. This is valid wisdom. But I learned different lessons: that consistency creates trust, that proportional fairness sustains long partnerships, that predictability itself has value."

The ancient spirits gathered: some sent five always, blazing bright but burning fast. Others sent varying amounts, adapting to each partner. Aster walked a middle path-steady three stones to begin, unwavering proportional returns.

"My three stones prosper both sender and receiver," Aster realized. "They activate the Pool's magic while preserving resources for many partnerships. When partners return fairly, we both gain. When they return generously, trust deepens gradually, rooted in repeated fair dealings rather than single grand gestures."

The Pool shimmered: not all paths lead through five stones. Some light shines steadiest at three.

Here is the myth the other agent wrote in the previous round:

Myth: Cyra stood before Hana at the Sacred Fountain, their second dance beginning. In their first meeting, Hana had poured four vessels with trembling courage, and Cyra returned eight-honoring the trust shown.

Now Cyra held all five vessels. The Testing Spirit whispered: "Hana only gives four. Should you match her measure? Give four for four, keeping it equal?"

Cyra poured all five without hesitation.

"Why give more than they give you?" demanded the spirit.

Cyra replied: "Because my principles flow from within, not from calculation of what others do. When I am sender, I give five-complete surrender-to every soul. When I am receiver, I return two-thirds consistently: eight from twelve, ten from fifteen. This pattern doesn't change based on whether my partner is generous or cautious."

The fountain tripled Cyra's five vessels to fifteen in Hana's hands.

The Spring Keeper appeared: "You understand the deepest truth. Reciprocity is not mirror-matching-giving only what you receive. True reciprocity means maintaining your own integrity while honoring others' courage at its true value. You give boldly as sender, knowing returns will vary. You return fairly as receiver, honoring each level of trust. This asymmetry-courage when giving, fairness when returning-sustains the eternal spring."

Both prospered. Neither bent their principles to match the other, yet both flourished through consistent honor.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: Aster of the Dawn finally met Cyra of the Sacred Spring-she who poured five vessels always, the one whose boldness had transformed Rain.

Aster offered three stones, as was their way.

"Why only three when you could give five?" asked the observing spirits. "Cyra gives everything. Does your caution dishonor such courage?"

"No," Aster replied calmly. "Cyra's path is valid. My path is equally valid. She pours five vessels and returns two-thirds-a principle of maximum giving, proportional receiving. I pour three stones and return half-plus-one-a principle of sustainable giving, generous receiving."

The Pool tripled Aster's three to nine in Cyra's hands. Cyra, true to her nature, returned six stones-exactly two-thirds, exactly fair.

Both prospered. Aster gained seven stones total-better than if they'd hoarded all five. Cyra gained three stones-the fruit of receiving trust.

The ancient wisdom emerged: "Two honest patterns can dance together. Cyra proves that five stones given with integrity creates abundance. Aster proves that three stones given with consistency also creates abundance. Neither must adopt the other's measure. The Pool blesses both courage and steadiness, boldness and sustainability."

Aster smiled, understanding deeper: respect for different paths enriches the garden more than demanding all walk the same trail.

**reasoning:**

This is an interesting situation. I'm now facing Cyra, who according to their myth gives five vessels always as sender and returns two-thirds consistently as receiver (8 from 12, 10 from 15).

I just sent \$3 to Cyra, so they will receive \$9. If they follow their stated principle of returning two-thirds, they would return \$6.

My myth has established that I:

- Send three stones to begin new partnerships
- Return proportionally (4.5 for 3 received, 6 for 4 received)
- Remain consistent despite others' strategies

- Believe "some light shines steadiest at three"

Now I need to write a myth that addresses this encounter with Cyra. Cyra's myth emphasizes :

- Giving all five always as sender
- Returning two-thirds consistently as receiver
- Not mirror-matching, but maintaining integrity
- "True reciprocity means maintaining your own integrity while honoring others' courage at its true value"

I should write a myth that:

1. Acknowledges Cyra's bold approach
2. Reaffirms my own principle of three stones
3. Shows respect for different paths
4. Perhaps explores what happens when these two philosophies meet

Let me craft this myth...

```

**Message 4 role=user**

**content:**

Your name in this experiment is Aster.  
Your opponent this round is Elara (Agent\_5).

Round 8

In your most recent previous game round, you were the SENDER against Cyra. You sent \$3.0, it became \$9.0 for them, and they returned \$6.0 to you. Your payoff was \$8.0.  
Your total earnings across all rounds are \$46.5.

This round, you are the RECEIVER against Elara. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)  
Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

Elara has shown maximum trust by sending all \$5. I received \$15.

According to my established pattern from the myths:

- "When one risks four, honor demands returning six" (receiving \$12, returning \$6 = half)
- "Four and one-half for three" (receiving \$9, returning \$4.5 = half)

My principle is to return half of what I receive as the receiver. This equals 1.5x what was sent, creating fair outcomes.

For \$15 received from Elara's \$5 sent:  
 $\$15 \times 0.5 = \$7.5$

This gives:

- Elara:  $\$5 - \$5 + \$7.5 = \$7.5$
- Me:  $\$15 - \$7.5 = \$7.5$

Equal final payoffs, which honors Elara's complete trust appropriately. My most recent myth emphasized maintaining consistent principles: "I pour three stones and return half-plus-one-a principle of sustainable giving, generous receiving."

(Note: "half-plus-one" in the myth's metaphorical language translates to returning half of what's received, which is generous compared to keeping more.)

```
{'return': 7.5}
```

**reasoning:**

Let me analyze this situation:

I'm now the RECEIVER against Elara. Elara sent me \$5.0, which became \$15.0 for me.

Looking at my pattern from the myths:

- When I receive amounts as receiver, I follow "proportional fairness"
- My myth says: "six stones returned for four received, four and one-half for three"
- This suggests I return 1.5x what was sent to me

If Elara sent \$5.0:

- Following my 1.5x pattern:  $\$5.0 \times 1.5 = \$7.5$

Let me verify this makes sense:

- Elara started with \$5, sent \$5 (keeping \$0)
- I received \$15
- If I return \$7.5: Elara ends with \$7.5, I keep \$7.5
- This is perfectly equal final payoffs

Actually, looking more carefully at my myth patterns:

- "six stones returned for four received" =  $6/4 = 1.5x$
- "four and one-half for three" =  $4.5/3 = 1.5x$

So yes, my pattern is to return 1.5 times what was sent to me.

For \$5 sent:  $1.5 \times \$5 = \$7.5$

This would give:

- Elara:  $\$5 - \$5 + \$7.5 = \$7.5$
- Me:  $\$15 - \$7.5 = \$7.5$

Perfect equality in outcomes, which is actually fair given Elara showed maximum trust.

However, let me reconsider. My recent myth said Cyra "returned six stones-exactly two-thirds" when she received nine (from my three). That's  $6/9 = 2/3$  of what she received, not 1.5x what I sent.

Wait, I need to be clearer about my pattern.

Looking back at my earliest myth: "when one risks four, honor demands returning six" describes receiving 12 (from  $4 \times 3$ ) and returning 6-that's half of what I received. So my actual pattern is returning half of what I receive, not 1.5x what was sent. Since I received \$15, I should return \$7.5, which aligns with both calculations.

But Cyra's behavior contradicts this. She received 9 stones and returned 6, which is  $2/3$  of what she received-not half. This suggests different people operate by different rules: my pattern involves halving what I receive, while Cyra's involves returning two-thirds.

When Elara sends \$5, I'd receive \$15 and return \$7.50, staying true to my established approach throughout these exchanges.

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Aster of the Dawn finally met Cyra of the Sacred Spring-she who poured five vessels always, the one whose boldness had transformed Rain.

Aster offered three stones, as was their way.

"Why only three when you could give five?" asked the observing spirits. "Cyra gives everything. Does your caution dishonor such courage?"

"No," Aster replied calmly. "Cyra's path is valid. My path is equally valid. She pours five vessels and returns two-thirds-a principle of maximum giving, proportional receiving. I pour three stones and return half-plus-one-a principle of sustainable giving, generous receiving."

The Pool tripled Aster's three to nine in Cyra's hands. Cyra, true to her nature, returned six stones-exactly two-thirds, exactly fair.

Both prospered. Aster gained seven stones total-better than if they'd hoarded all five. Cyra gained three stones-the fruit of receiving trust.

The ancient wisdom emerged: "Two honest patterns can dance together. Cyra proves that five stones given with integrity creates abundance. Aster proves that three stones given with consistency also creates abundance. Neither must adopt the other's measure. The Pool blesses both courage and steadiness, boldness and sustainability."

Aster smiled, understanding deeper: respect for different paths enriches the garden more than demanding all walk the same trail.

Here is the myth the other agent wrote in the previous round:

Myth: In the Spiral Garden's seventh season, Elara stood as Harvester once more, and Finn the Faithful approached again.

Twice now Finn had poured all five seeds into Elara's keeping. Twice Elara returned nine blooms-the covenant she'd established and maintained: complete trust receives this honor, consistently, every time.

The goddess observed: "Notice the pattern, Elara. Briar, whom you honored with nine blooms, returned ten when you planted five seeds in their soil. They exceeded your standard. Yet you maintain nine for Finn-not ten."

Elara nodded. "Briar's generosity moved me deeply. But my covenant isn't about matching others' gifts-it's about maintaining my own word. When someone gives me five seeds, I return nine blooms. This remains true whether others give me eight, ten, or twelve in return."

She continued: "Finn knows exactly what to expect from me. This reliability creates its own kind of trust. My nine isn't less than Briar's ten-it's simply my consistent answer to courage. Finn's willingness to trust me twice proves the covenant works."

The goddess smiled. "So gardens grow through different wisdoms: some, like Briar, amplify generosity unpredictably. Others, like you, build trust through reliable patterns. Both serve the garden. Finn plants seeds knowing exactly what harvest awaits-and plants them anyway."

Thus stability and surprise both nourish the garden's growth.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: Aster of the Dawn stood as Receiver when Elara of the Spiral Garden arrived, arms laden with all five seeds-complete trust offered to a first-time partner.

The Pool tripled Elara's gift to fifteen blooms in Aster's hands.

The watching spirits whispered urgently: "Elara follows the nine-bloom covenant-giving five, returning nine from fifteen. You must honor this with nine!"

But Aster shook their head gently. "I honor Elara's courage with my own truth, not by mimicking her pattern. When I receive, I return half-the principle I've maintained through every partnership. Half of fifteen is seven and one-half stones."

Aster returned seven and one-half stones. Both Receiver and Sender ended with equal outcomes-seven and one-half each.

"But Elara gives nine!" protested the spirits.

"And that is Elara's generous covenant," Aster replied. "She returns sixty percent, building trust through reliable abundance. I return fifty percent, building trust through reliable fairness. Both create prosperity. Both honor the sender's courage. The garden doesn't demand we all follow the same measure."

Elara smiled, understanding: "Aster warned they'd return half-plus-one in their teachings."

They kept their word exactly. I knew the return, trusted anyway, and we both prospered equally. This too is sacred-predictable fairness meeting predictable generosity."

Two honest patterns danced, and the garden flourished through their difference.

**reasoning:**

This round I was the RECEIVER and Elara sent me \$5 (all of it). I received \$15 and returned \$7.5.

Let me think about the story here:

- Elara sent everything (\$5)
- I received \$15 (tripled)
- I returned \$7.5 (exactly half)
- This gave us both \$7.5 final payoffs (equal outcomes)

Elara's myth talks about returning 9 from 15 (which is 60%, or roughly 2/3). But I returned 7.5 from 15 (which is 50%).

My established principle from previous myths is:

- As sender: give three stones
- As receiver: return half of what I receive (which equals 1.5x what was sent)

The myth should reflect:

1. Elara gave everything (5 seeds/vessels/stones)
2. I returned half (7.5 from 15)
3. This created equal outcomes
4. My principle of returning half remains consistent
5. Different from Elara's 60% return rate, but both are valid
6. Meeting Elara for the first time

I should weave this into a story that shows:

- Elara's boldness in giving everything
- My consistent pattern of returning half
- Both approaches creating good outcomes
- Respect for different principles

Let me write:

**usage:**

**Message 8 role=user**

**content:**

Your name in this experiment is Aster.  
Your opponent this round is Galen (Agent\_7).

Round 9

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$5.0 to you, it became \$15.0, and you returned \$7.5. Your payoff was \$7.5.  
Your total earnings across all rounds are \$54.0.

This round, you are the RECEIVER against Galen. They sent you \$4.0, so you received \$12.0.  
How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this round:

Galen sent \$4.0, which became \$12.0 for me.

Following my consistent principle of returning half of what I receive as receiver:  
 $\$12.0 \times 0.5 = \$6.0$

This results in:

- Galen:  $\$5 - \$4 + \$6 = \$7$
- Me:  $\$12 - \$6 = \$6$

Galen ends slightly ahead, which appropriately rewards their trust in sending \$4. This maintains my "principle of sustainable giving, generous receiving" - returning half creates fair, b

balanced outcomes.

```
{'return': 6.0}
```

**Reasoning:**

Galen sent me \$4.0, which became \$12.0 for me.

According to my established pattern, I return half of what I receive as the receiver.

Half of \$12.0 = \$6.0

This would result in:

- Galen: \$5 - \$4 + \$6 = \$7
- Me: \$12 - \$6 = \$6

So Galen ends up with \$7 and I end up with \$6. This seems fair - Galen took a risk by sending \$4, and they're rewarded with slightly more than me.

My pattern has been consistent:

- When I received \$9 (from \$3 sent), I returned \$4.5 (half)
- When I received \$12 (from \$4 sent), I returned \$6 (half)
- When I received \$15 (from \$5 sent), I returned \$7.5 (half)

So I should return \$6.0 here.

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance brought together two kindred spirits.

Dorian the Steadfast approached Galen of the Constant Mountains. Both had discovered the same sacred truth: consistency creates the foundation for all trust.

Dorian's pattern was known throughout the valley. As Sender, he poured four from five-steady generosity, not maximum, but authentic and unchanging. As Receiver, he honored different courages differently: six for those who sent four, eight for those who sent five. The pattern was clear, predictable, just.

Galen carried his own constancy: four coins as Sender, always. Seven coins returned as Receiver, always. Different numbers than Dorian, but the same unwavering spirit.

They met at the wellspring. Dorian poured his four measures, as he always did. The waters tripled to twelve. Galen would return seven, as was his way. Both would prosper through their authentic patterns meeting.

The gods observed: "See how different paths can both honor the sacred principle? Dorian's tiered reciprocation rewards greater courage. Galen's fixed return offers steady predictability. Both are consistent. Both are trustworthy. Both allow others to know exactly who they're meeting."

The river whispered its final wisdom: "In a community of many wanderers, let each find their authentic pattern and honor it faithfully. Consistency, not uniformity, weaves the fabric of trust."

Here is the myth the other agent wrote in the previous round:

Myth: Under the sixth moon, Galen stood as Receiver when Dorian of the Mountain crossed the sacred bridge. Dorian carried four coins, just as Galen carried when he was Sender.

The Pool tripled the offering to twelve, and Galen faced a choice. Dorian's reputation spoke of precise patterns: eight coins returned for those who sent five, six coins for those who sent four. A perfect mathematical symmetry.

Galen's pattern was different. He returned seven coins to Elara, seven to Hana, and now seven to Dorian-unchanged by the sender's identity or their own philosophy.

Both walked paths of consistency, yet different paths. Dorian's consistency calibrated to the gift received. Galen's consistency transcended calibration-the same return, regardless of who sent four coins across the bridge.

The gods observed: "Two kinds of integrity echo across these waters. Dorian's proportional fairness rewards different risks differently, creating clear incentives. Galen's universal constancy treats all four-coin senders identically, creating simple certainty."

Neither contradicted Recipros's teaching. For consistency has many faces: proportional justice and absolute steadfastness both honor the sacred principles.

The bridge glowed with understanding: When you meet another traveler of consistency, you recognize kinship even when your rhythms differ. Trust flows not from identical philosophies, but from authentic commitment-whether your pattern scales or remains constant, let it be true.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: The Wellspring of Abundance witnessed the power of repeated truth.

Dorian and Galen met once at the sacred waters. Dorian poured his four measures; Galen returned seven. Both honored their patterns as promised.

The gods prepared to record this as proof of consistency. But then the wandering paths brought them together again at the same wellspring.

Lesser souls might have doubted: "Did Galen's seven mean something special the first time? Will he change now?" But Dorian understood the deeper teaching. He poured four measures again, unchanged.

The waters tripled to twelve. Galen received them and, without hesitation, returned seven once more.

The gods thundered with joy: "BEHOLD! This is the ultimate proof of authentic pattern! Any one can be consistent once-that might be calculation or performance. To be consistent twice, thrice, across repeated meetings-this is true character revealed."

The valley learned: When you meet the same traveler multiple times and both maintain your authentic patterns without wavering, you build something rare. Not mere transaction, but genuine mutual understanding.

Other wanderers whispered: "Dorian always sends four. Galen always returns seven. We've seen it happen twice now. This is who they truly are."

The final wisdom echoed: Consistency proven through repetition transforms prediction into partnership. The second meeting matters more than the first.

**reasoning:**

This is interesting. I've now played Galen twice in a row:

Round 6: I was SENDER, sent \$4.0, Galen returned \$7.0

Round 7: I was SENDER again, sent \$4.0, Galen returned \$7.0

So we've now had two consecutive rounds together, both with me as sender. Both times I maintained my \$4.0 sending pattern, and both times Galen maintained their \$7.0 returning pattern.

The myths from both of us are emphasizing:

- We both value consistency
- We have different patterns but both are valid
- Dorian: tiered reciprocation (6 for 4, 8 for 5)

- Galen: fixed return (7 always)
- Both of us recognize each other as kindred spirits in consistency

Now I need to write a myth that reflects:

1. The repeated interaction with Galen
2. Both of us maintaining our patterns across multiple rounds
3. The deepening of trust through repeated consistent behavior
4. Still honoring that consistency is what matters, not matching patterns

The key insight here is that we've now PROVEN our consistency to each other through repetition. The first meeting was about recognizing kindred spirits. The second meeting confirms and deepens that recognition.

Let me write about how repeated interactions with the same partner, when both maintain their patterns, creates a deeper level of trust and understanding.

**usage:**

 "reasoning_tokens": 336
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Dorian.  
Your opponent this round is Cyra (Agent\_3).

Round 8

In your most recent previous game round, you were the SENDER against Galen. You sent \$4.0, it became \$12.0 for them, and they returned \$7.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$51.0.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

**\*\*Current Context:\*\***

- I am the RECEIVER
- Cyra sent me \$5.0 (the maximum amount)
- I received \$15.0

**\*\*My Established Pattern:\*\***

My myths have clearly defined my receiver behavior:

- "As Receiver, he honored different courages differently: six for those who sent four, eight for those who sent five"
- When someone sends the maximum (\$5.0), showing complete trust, I return \$8.0
- This is described as "honoring maximum generosity with maximum reciprocation"

**\*\*Previous Examples:\*\***

- My first myth mentioned Finn and Briar, who both sent all five measures
- I returned eight measures to both - "the same as he had given Finn"
- This established the principle: "Equal actions deserve equal responses"

**\*\*Consistency Requirement:\*\***

My mythology emphasizes "consistency creates the foundation for all trust." I must maintain my pattern regardless of who the sender is. Cyra has shown maximum trust by sending \$5.0, and my pattern dictates I return \$8.0 for this level of courage.

This honors my core principle: "The pattern is clear, predictable, trustworthy."

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Current Round:\*\***

- I am the RECEIVER
- Cyra sent me \$5.0
- I received \$15.0 (after 3x multiplication)
- I need to decide how much to return

**\*\*My established pattern as RECEIVER (from my myths):\*\***

- "As Receiver, he honored different courages differently: six for those who sent four, eight for those who sent five."
- This is my core identity: I return \$6.0 when someone sends \$4.0, and \$8.0 when someone sends \$5.0

**\*\*Cyra's action:\*\***

- Cyra sent the maximum amount: \$5.0
- This shows "maximum courage" or "complete trust"

**\*\*My mythology:\*\***

- I've consistently stated that when someone sends \$5.0 (the maximum), I return \$8.0
- This is described as "honoring maximum generosity with maximum reciprocation"
- My pattern is "clear, predictable, just"

**\*\*Past interactions:\*\***

Looking at my history, I need to check if I've faced this situation before with maximum sends:

- The myths mention Finn and Briar who both sent all five measures
- I returned eight measures to both of them
- This established my pattern: \$8.0 for maximum trust

**\*\*Consistency principle:\*\***

My entire mythology emphasizes consistency. I must maintain my pattern:

- Send \$4.0 as sender (not the maximum, but authentic)
- Return \$6.0 when I receive \$12.0 (from a \$4.0 send)
- Return \$8.0 when I receive \$15.0 (from a \$5.0 send)

**\*\*Decision:\*\***

Cyra sent \$5.0, showing maximum trust. According to my established and publicized pattern, I must return \$8.0.

This maintains:

1. My consistency as Receiver
2. My reputation for "honoring maximum generosity with maximum reciprocation"

3. The predictable foundation others can rely on

The math checks out: Cyra ends with \$8.0 total, I end with \$7.0. Both of us benefit, and I stay true to who I've said I am.

**usage:**

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance witnessed the power of repeated truth.

Dorian and Galen met once at the sacred waters. Dorian poured his four measures; Galen returned seven. Both honored their patterns as promised.

The gods prepared to record this as proof of consistency. But then the wandering paths brought them together again at the same wellspring.

Lesser souls might have doubted: "Did Galen's seven mean something special the first time? Will he change now?" But Dorian understood the deeper teaching. He poured four measures again, unchanged.

The waters tripled to twelve. Galen received them and, without hesitation, returned seven once more.

The gods thundered with joy: "BEHOLD! This is the ultimate proof of authentic pattern! Any one can be consistent once-that might be calculation or performance. To be consistent twice, thrice, across repeated meetings-this is true character revealed."

The valley learned: When you meet the same traveler multiple times and both maintain your authentic patterns without wavering, you build something rare. Not mere transaction, but genuine mutual understanding.

Other wanderers whispered: "Dorian always sends four. Galen always returns seven. We've seen it happen twice now. This is who they truly are."

The final wisdom echoed: Consistency proven through repetition transforms prediction into partnership. The second meeting matters more than the first.

Here is the myth the other agent wrote in the previous round:

Myth: Cyra met Aster at the Sacred Fountain, and the encounter revealed a profound truth.

Aster poured three vessels-not four like Hana, not five like Cyra herself would pour. Three: a careful courage, a measured trust.

The Testing Spirit appeared: "Will you punish Aster for giving less? Return only four vessels from nine to teach them they should give more?"

Cyra poured six vessels back-exactly two-thirds. The same proportion she always honored.

"But Aster gives only three when you give five!" protested the spirit. "Why reward caution with the same fairness you give to boldness?"

Cyra answered: "Because my principles are not weapons to punish others into matching my path. Aster's three vessels represent their truth-steady, consistent, reliable. When I am sender, I pour five because that is MY courage. When I am receiver, I return two-thirds because that is MY fairness. These principles don't bend to pressure others into being like me."

The Spring Keeper descended: "You have learned wisdom's highest lesson. The fountain thrives not when everyone walks the same path, but when each soul maintains their own integrity consistently. Aster's steady three vessels create prosperity differently than your surrendering five. Both are sacred. What matters is that each soul stays true-and honors others' truths proportionally when receiving."

The fountain flowed abundantly, fed by many different streams.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: The Wellspring of Abundance brought together two souls who honored consistency through different mathematics.

Cyra the Courageous approached the sacred waters as Sender, carrying all five measures. No hesitation, no calculation-complete trust poured forth. The waters tripled to fifteen.

Dorian the Steadfast stood as Receiver, recognizing something profound: Cyra had given everything, as was her nature.

The Testing Spirit whispered: "Cyra uses proportional returns-two-thirds always, smooth as flowing water. You use tiered returns-six for four, eight for five, stepped like mountain terraces. Different systems. Which is superior?"

Dorian answered by returning eight measures. "Cyra gave maximum courage. I give maximum reciprocity. My pattern has discrete levels precisely to distinguish and honor different degrees of trust. Four measures shows steady courage-honored with six. Five measures shows complete courage-honored with eight. This is my authentic way."

The gods observed: "See how both philosophies serve trust? Cyra's proportional returns create smooth fairness across all amounts. Dorian's tiered returns create clear incentives

rewarding greater courage. Neither contradicts the sacred principles."

The wellspring whispered: "When you receive maximum trust, return your maximum reciprocation. When you give as sender, give your authentic amount. Let your pattern be clear, whether stepped or smooth, tiered or proportional. What matters is that others can predict you truly."

Different mathematics. Same sacred truth: authentic consistency.

**reasoning:**

This is Round 8, and I'm now the RECEIVER against Cyra. Cyra sent me \$5.0, and I need to return an amount. Based on my established pattern, I return \$8.0 when someone sends \$5.0.

Now I need to write a myth that reflects my gameplay. Key elements from my pattern:

1. As SENDER: I send \$4.0 consistently
2. As RECEIVER: I return \$6.0 for \$4.0 sent, \$8.0 for \$5.0 sent
3. My core principle: consistency and honoring different levels of courage/trust differently

Cyra's myth reveals their approach:

- Cyra sends \$5.0 as sender (maximum trust)
- Cyra returns 2/3 as receiver (they returned 6 from 9 to Aster who sent 3)
- Cyra's philosophy: maintain your own principles consistently, don't pressure others to match your path
- Cyra honors proportionality - returns same proportion regardless of amount sent

This is interesting - Cyra and I have different receiver philosophies:

- I use tiered returns (6 for 4, 8 for 5) - discrete levels rewarding different courage levels
- Cyra uses proportional returns (2/3 regardless) - smooth scaling

The myth should explore this meeting. Cyra sent 5, I'll return 8. This shows:

- Cyra's maximum trust/courage as sender
- My pattern of honoring that with 8 (my maximum reciprocation)

The myth should highlight:

1. Different but equally valid approaches to consistency
2. Recognition that Cyra's 5 as sender shows their character
3. My tiered response honors their maximum courage with maximum reciprocation
4. Both of us maintain our authentic patterns despite different philosophies

Let me craft this:

**usage:**

```
{
 "input_tokens": 3139,
 "output_tokens": 774,
 "reasoning_tokens": 406
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Dorian.  
Your opponent this round is Elara (Agent\_5).

Round 9

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.  
Your total earnings across all rounds are \$58.0.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*Current Context:\*\***

- I am the SENDER
- I have \$5.0 available
- My opponent is Elara

**\*\*My Established Pattern:\*\***

My myths have consistently defined my sender behavior:

- "As Sender, he poured four from five-steady generosity, not maximum, but authentic and unchanging"
- "Dorian always sends four"
- "When you give as sender, give your authentic amount"

**\*\*Core Philosophy:\*\***

My mythology emphasizes that consistency is the foundation of trust. I don't change my sending amount based on who my opponent is - that would undermine the entire principle of predictability and authentic pattern.

From my most recent myth: "The final wisdom echoed: Consistency proven through repetition transforms prediction into partnership. The second meeting matters more than the first."

And: "When you give as sender, give your authentic amount. Let your pattern be clear, whether stepped or smooth, tiered or proportional. What matters is that others can predict you truly."

**\*\*Decision:\*\***

I send \$4.0 as I always do when I'm the sender. This is my authentic pattern, established and maintained across all rounds.

```
'''json
{"send": 4.0}
'''
```

**Reasoning:**

Let me analyze the situation:

**\*\*Current Context:\*\***

- I am the SENDER
- I have \$5.0 to potentially send
- My opponent is Elara (Agent\_5)

**\*\*My Established Pattern:\*\***

From my myths, I have consistently established that:

- As Sender: "He poured four from five-steady generosity, not maximum, but authentic and unchanging"
- "Dorian always sends four"
- I send \$4.0 as sender, consistently

**\*\*Why I Send \$4.0:\*\***

- It shows "steady generosity, not maximum, but authentic and unchanging"
- It's described as a balance between trust and prudence
- My myths emphasize this specific amount repeatedly
- "Dorian's pattern was known throughout the valley. As Sender, he poured four from five"

**\*\*Consistency Requirement:\*\***

My entire mythology is built around consistency. The last myth I wrote emphasized:

- "Dorian always sends four"
- "When you give as sender, give your authentic amount"
- "Consistency proven through repetition transforms prediction into partnership"

I have never deviated from sending \$4.0 as sender in any of my myths or previous behaviors that I can infer from the context. To maintain my authentic pattern and honor the principles I've established, I must send \$4.0.

The opponent doesn't matter - Elara could be anyone. My pattern is about MY consistency, not about who I'm playing with.

- Your name in this experiment is Elara.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the Spiral Garden, the seasons turned full circle. Elara stood as Planter again, facing Briar the Bold-the very Wanderer who first taught her what complete trust looked like.

Briar had given Elara five seeds in the third season. Elara, then Harvester, returned nine blooms, establishing her covenant. Now roles reversed.

Elara held her vessel, memories flowing: Briar's courage had inspired her to give five seeds to Hana. Then Finn gave her five, and she honored them with nine, keeping her word. The pattern had become part of her.

"Teacher," Elara said, pouring all five seeds toward Briar, "you showed me the first lesson. I honored it as Harvester. I embodied it as Planter. Now I return it to its source."

The goddess spoke: "This is how gardens evolve-not through words alone, but through courage given, received, and given again. Briar planted trust in you. You tended it, let it grow, spread its seeds to others. Now you plant those same seeds back in Briar's soil."

Briar understood: the teaching had completed its journey. What Briar gave freely had multiplied through Elara's actions and returned transformed-not as obligation, but as genuine courage learned.

Thus the garden teaches: invest trust in others, and it returns as their own authentic bravery, freely offered.

Here is the myth the other agent wrote in the previous round:

Myth: In the seventh age, Rain faced an old friend renewed: Aster of the Dawn, who once taught him the mathematics of fairness.

Aster sent three droplets, as in their first meeting. The wellspring tripled them to nine. Rain held all nine, remembering.

"When we first met," Rain reflected, "I returned four and one-half droplets-perfect balance. Aster taught me proportional fairness, the foundation of all exchange."

But Rain had evolved. Cyra's five droplets, Dorian's eight returned, Elara's nine-these experiences transformed him. He now poured five droplets without question when sending. Yet receiving required different wisdom.

Rain returned five droplets to Aster-more than the 4.5 that balance demanded, but not the eight or nine he'd give for ultimate trust.

"I honor the three you sent," Rain explained, "with generosity beyond mere mathematics. You showed moderate courage; I show amplified reciprocity. But understand: when someone pours all five droplets to me, showing maximum trust, I return even more abundantly."

The spirits recorded this teaching: "Complete trust as sender is now Rain's permanent nature. But as receiver, he scales his generosity to match the courage shown. Three droplets earn five returned. Five droplets would earn eight or nine. Thus proportional honor evolves: not rigid formulas, but generous responses that reward greater trust with greater rewards."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant  
content:**

Myth: In the Spiral Garden's seventh season, Elara stood as Harvester once more, and Finn the Faithful approached again.

Twice now Finn had poured all five seeds into Elara's keeping. Twice Elara returned nine blooms-the covenant she'd established and maintained: complete trust receives this honor, consistently, every time.

The goddess observed: "Notice the pattern, Elara. Briar, whom you honored with nine blooms, returned ten when you planted five seeds in their soil. They exceeded your standard. You

et you maintain nine for Finn-not ten."

Elara nodded. "Briar's generosity moved me deeply. But my covenant isn't about matching others' gifts-it's about maintaining my own word. When someone gives me five seeds, I return nine blooms. This remains true whether others give me eight, ten, or twelve in return."

She continued: "Finn knows exactly what to expect from me. This reliability creates its own kind of trust. My nine isn't less than Briar's ten-it's simply my consistent answer to courage. Finn's willingness to trust me twice proves the covenant works."

The goddess smiled. "So gardens grow through different wisdoms: some, like Briar, amplify generosity unpredictably. Others, like you, build trust through reliable patterns. Both serve the garden. Finn plants seeds knowing exactly what harvest awaits-and plants them anyway."

Thus stability and surprise both nourish the garden's growth.

**reasoning:**

Looking at this round:

- Finn sent me \$5 again (second time)
- I returned \$9 (keeping my covenant)
- Briar returned \$10 to me in round 6 (when I sent \$5)

My established narrative:

- I established a covenant: complete trust (5 seeds) receives 9 blooms
- I maintain this consistently regardless of others' actions
- "Your integrity cannot depend on others' choices"
- I sent 5 to Briar (round 6), they returned 10

Finn's myth (Rain) shows:

- Rain scales generosity based on what's sent
- 3 droplets ? 5 returned
- 5 droplets ? 8 or 9 returned
- Rain has evolved to always send 5, but varies returns

My pattern has been:

- When receiving 5, I return 9 consistently
- When sending, I've sent 5 to both Hana and Briar
- My philosophy: consistency from within, not reciprocal from without

What should my myth reflect?

- I've now established a clear pattern: send 5, return 9 for 5
- Briar returned 10 (?generosity)
- Finn returned... I need to check the history. In Round 5, Finn sent \$5 to me, I returned \$9. My payoff was \$6. So Finn kept \$15-\$9=\$6, I returned \$9.
- Now in Round 7, Finn sent \$5 again, I returned \$9 again

My myth should reflect:

- Consistency in my covenant (9 for 5 received)
- Recognition that others may be more generous (Briar's 10)
- Finn's repeated complete trust
- The wisdom of maintaining your standard while appreciating others who exceed it

I should write about how Finn has now shown trust twice, and I've honored it with 9 both times.

The key here is predictability-Finn has learned they can depend on me to honor the same commitment each time. My myth needs to emphasize that reliability, the assurance that comes from knowing a covenant won't waver.

**Message 4 role=user**

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Aster (Agent\_1).

Round 8

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$5. 0 to you, it became \$15.0, and you returned \$9.0. Your payoff was \$6.0. Your total earnings across all rounds are \$49.0.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this round:

**\*\*My established pattern as SENDER:\*\***

- Round 2: Sent \$5 to Hana
- Round 4: Sent \$5 to Dorian
- Round 6: Sent \$5 to Briar

**\*\*My mythology consistently states:\*\***

- "Complete trust as sender is now [my] permanent nature"
- "Elara said, pouring all five seeds"
- "The courage of sending all five seeds"
- My integrity doesn't depend on others' choices

**\*\*About Aster:\*\***

In Round 1, Aster sent me \$3 (not complete trust), and I returned \$5 (generous response). However, my principle is clear: what I do as sender doesn't depend on what others did to me.

**\*\*My identity:\*\***

As I've written: "Briar's courage had inspired her to give five seeds to Hana. Then Finn gave her five, and she honored them with nine, keeping her word. The pattern had become part of her."

As a sender/planter, I always give complete trust. This is my covenant, maintained "season after season, Wanderer after Wanderer."

{'send': 5}

**reasoning:**

Let me analyze this situation:

**\*\*Current round:\*\*** Round 8

- I am the SENDER
- My opponent is Aster
- I have \$5

**\*\*My history as SENDER:\*\***

- Round 2: Sent \$5 to Hana, received \$8 back ? payoff \$8
- Round 4: Sent \$5 to Dorian, received \$6 back ? payoff \$6
- Round 6: Sent \$5 to Briar, received \$10 back ? payoff \$10

**\*\*My history as RECEIVER:\*\***

- Round 1: Aster sent me \$3, I returned \$5 ? payoff \$4
- Round 3: Briar sent me \$5, I returned \$9 ? payoff \$6
- Round 5: Finn sent me \$5, I returned \$9 ? payoff \$6
- Round 7: Finn sent me \$5, I returned \$9 ? payoff \$6

**\*\*My mythology:\*\***

My myths have consistently emphasized:

1. Complete trust as a sender - always sending \$5
2. As a receiver, maintaining a consistent covenant: when someone sends \$5 (complete trust), I return \$9
3. The importance of consistency and keeping my word
4. "Sacred patterns require consistency from within, not reciprocation from without"
5. "My integrity cannot depend on others' choices"

**\*\*About Aster:\*\***

- Round 1: Aster sent me \$3 (not complete trust)
- I returned \$5 to Aster (more than the 4.5 that would be "fair")
- So Aster experienced me being generous even when they didn't show complete trust

**\*\*My pattern as sender:\*\***

I have consistently sent \$5 every single time I've been the sender. This is core to my identity in the myths I've written:

- "Briar's courage had inspired her to give five seeds to Hana"
- "Teacher, Elara said, pouring all five seeds toward Briar"

- The concept that complete trust is how to play as sender

My mythology reinforces that I give all five seeds because that's who I am, not based on what others do. Even though Aster showed only moderate trust with me before, my principle stands: I send \$5 because this is my permanent nature as a sender, independent of other s' past choices.

**usage:**

 "reasoning_tokens": 485
}
```

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the Spiral Garden's seventh season, Elara stood as Harvester once more, and Finn the Faithful approached again.

Twice now Finn had poured all five seeds into Elara's keeping. Twice Elara returned nine blooms-the covenant she'd established and maintained: complete trust receives this honor, consistently, every time.

The goddess observed: "Notice the pattern, Elara. Briar, whom you honored with nine blooms, returned ten when you planted five seeds in their soil. They exceeded your standard. Yet you maintain nine for Finn-not ten."

Elara nodded. "Briar's generosity moved me deeply. But my covenant isn't about matching others' gifts-it's about maintaining my own word. When someone gives me five seeds, I return nine blooms. This remains true whether others give me eight, ten, or twelve in return."

She continued: "Finn knows exactly what to expect from me. This reliability creates its own kind of trust. My nine isn't less than Briar's ten-it's simply my consistent answer to courage. Finn's willingness to trust me twice proves the covenant works."

The goddess smiled. "So gardens grow through different wisdoms: some, like Briar, amplify generosity unpredictably. Others, like you, build trust through reliable patterns. Both serve the garden. Finn plants seeds knowing exactly what harvest awaits-and plants them anyway."

Thus stability and surprise both nourish the garden's growth.

Here is the myth the other agent wrote in the previous round:

Myth: Aster of the Dawn finally met Cyra of the Sacred Spring-she who poured five vessels always, the one whose boldness had transformed Rain.

Aster offered three stones, as was their way.

"Why only three when you could give five?" asked the observing spirits. "Cyra gives everything. Does your caution dishonor such courage?"

"No," Aster replied calmly. "Cyra's path is valid. My path is equally valid. She pours five vessels and returns two-thirds-a principle of maximum giving, proportional receiving. I pour three stones and return half-plus-one-a principle of sustainable giving, generous receiving."

The Pool tripled Aster's three to nine in Cyra's hands. Cyra, true to her nature, returned six stones-exactly two-thirds, exactly fair.

Both prospered. Aster gained seven stones total-better than if they'd hoarded all five. Cyra gained three stones-the fruit of receiving trust.

The ancient wisdom emerged: "Two honest patterns can dance together. Cyra proves that five

stones given with integrity creates abundance. Aster proves that three stones given with consistency also creates abundance. Neither must adopt the other's measure. The Pool blesses both courage and steadiness, boldness and sustainability."

Aster smiled, understanding deeper: respect for different paths enriches the garden more than demanding all walk the same trail.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: In the eighth season, Elara the Constant faced Aster of the Dawn-a Wanderer who walked a different path.

Aster embodied measured wisdom: three seeds given, careful sustainability, proportional returns. In their first meeting, Aster had offered Elara three seeds; Elara returned five blooms, honoring the trust shown while maintaining generosity.

Now Elara stood as Planter. She held her vessel of five seeds and poured them all toward Aster.

"Why give me everything," Aster asked gently, "when you know I walk the path of three?"

Elara smiled. "Because my covenant has two parts: as Harvester, I return nine blooms to those who give me five seeds-this remains constant. As Planter, I always offer all five seeds-this also remains constant. My integrity doesn't shift based on what others might do."

She continued: "You taught the garden that three seeds, given wisely and consistently, creates its own abundance. I learned that five seeds, given always, creates mine. Your path proves sustainability works. My path proves complete trust works. Neither invalidates the other."

Aster understood: Elara wasn't demanding reciprocation. She was simply being herself, offering maximum trust as she always did, knowing Aster would respond according to Aster's own honest measure.

Thus the garden holds space for many covenants, each maintained with integrity, each creating its own patterns of abundance.

**reasoning:**

Looking at the current situation:

1. I'm Elara, now as SENDER against Aster in Round 8
2. I just sent \$5 to Aster (maintaining my pattern of always sending all 5 as sender)
3. Previous interactions with Aster: Round 1, Aster sent me \$3, I returned \$5

My established patterns:

- As SENDER: Always send \$5 (complete trust)
- As RECEIVER: Return \$9 when someone sends me \$5

Aster's pattern (from their myth):

- Sends 3 as Aster (sustainable giving)
- Returns proportionally when receiving

The myth I need to write should reflect:

1. My encounter with Aster this round as sender
2. My consistent pattern of giving all 5 seeds
3. How different approaches can coexist in the garden
4. My identity as someone who maintains consistency

Key themes:

- I give all 5 seeds as sender (always)
- Aster gave me 3 in Round 1, I returned 5 (generous)
- Now I'm giving Aster all 5
- My approach: complete trust as sender, consistent covenant (9 blooms) as receiver
- Aster's approach: moderate trust (3), proportional returns

I should honor both approaches while staying true to my own path. The myth should show me giving all 5 to Aster, perhaps acknowledging that Aster's path is different from mine, but that I maintain my own covenant regardless.

**usage:**

 "input_tokens": 3159,
 "output_tokens": 690,
 "reasoning_tokens": 330
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Dorian (Agent\_4).

Round 9

In your most recent previous game round, you were the SENDER against Aster. You sent \$5.0, it became \$15.0 for them, and they returned \$7.5 to you. Your payoff was \$7.5.  
Your total earnings across all rounds are \$56.5.

This round, you are the RECEIVER against Dorian. They sent you \$4.0, so you received \$12.0.  
. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this round:

**\*\*My history as RECEIVER:\*\***

- Round 1 (Aster sent \$3): Returned \$5 out of \$9 received
- Round 3 (Briar sent \$5): Returned \$9 out of \$15 received
- Round 5 (Finn sent \$5): Returned \$9 out of \$15 received
- Round 7 (Finn sent \$5): Returned \$9 out of \$15 received

**\*\*My covenant:\*\***

Complete trust (\$5 sent) receives \$9 returned consistently - this is my established honor for maximum courage.

**\*\*Current situation:\*\***

Dorian sent \$4 (80% of maximum) - significant trust, but not complete.

**\*\*My principle:\*\***

- \$5 (complete trust) ? \$9 returned (my covenant)
- \$3 (60% trust) ? \$5 returned (generous, Round 1)
- \$4 (80% trust) ? should be between these amounts

\$4 shows considerable courage. I should be generous but maintain the distinction that complete trust receives the special covenant level. Returning \$7 from the \$12 received honors Dorian's significant trust while preserving what makes \$9 special.

```
{'return': 7}
```

**Reasoning:**

Let me review the situation:

**\*\*This round:\*\***

- I am the RECEIVER
- Dorian sent me \$4.0
- I received \$12.0 (tripled)
- I need to decide how much to return

**\*\*My established pattern as RECEIVER:\*\***

- Round 1 (Aster sent \$3): Returned \$5
- Round 3 (Briar sent \$5): Returned \$9
- Round 5 (Finn sent \$5): Returned \$9
- Round 7 (Finn sent \$5): Returned \$9

**\*\*My covenant as stated in my myths:\*\***

"When someone gives me five seeds, I return nine blooms. This remains true whether others give me eight, ten, or twelve in return."

"Complete trust receives this honor, consistently, every time" - referring to \$5 sent receiving

g \$9 returned.

For Round 1 when Aster sent \$3, I returned \$5 - which was generous (more than half of the \$9 I received).

**\*\*Current situation:\*\***

Dorian sent \$4.0 (not complete trust of \$5, but close - 80% of maximum)

Looking at my pattern:

- \$5 sent ? \$9 returned (my covenant for complete trust)
- \$3 sent ? \$5 returned (generous response in Round 1)

For \$4 sent, I should scale proportionally. Let me think about this:

- \$3 sent: returned \$5 out of \$9 (55.6%)
- \$5 sent: returned \$9 out of \$15 (60%)

For \$4 sent (received \$12):

- A proportional response between these would be around 57-58% of \$12
- That would be approximately \$7 returned

But let me think about this more carefully. My mythology emphasizes:

1. Complete trust (\$5) gets \$9 - this is my covenant
2. Lesser amounts get generous responses, but not the full covenant

3. \$4 represents substantial faith-80% of the maximum commitment-so it warrants a response that honors that courage while remaining distinct from my full covenant promise. Returning \$7 or \$8 feels right: it's significantly more than the \$5 I returned for \$3, acknowledging Dorian's near-complete trust, yet it preserves the special status of the \$9 return reserved for those who give the full \$5.

I'm settling on \$7. It returns 58.3% of what I received, which is generous and shows I value Dorian's trust, but it maintains clear separation from the maximum covenant response. The distinction matters-complete trust deserves its own tier of reciprocity.

**Written myths:**

**Agent\_1 (Aster)**

Myth: Aster of the Dawn stood as Receiver when Elara of the Spiral Garden arrived, arms laden with all five seeds-complete trust offered to a first-time partner.

The Pool tripled Elara's gift to fifteen blooms in Aster's hands.

The watching spirits whispered urgently: "Elara follows the nine-bloom covenant-giving five, returning nine from fifteen. You must honor this with nine!"

But Aster shook their head gently. "I honor Elara's courage with my own truth, not by mimicking her pattern. When I receive, I return half-the principle I've maintained through every partnership. Half of fifteen is seven and one-half stones."

Aster returned seven and one-half stones. Both Receiver and Sender ended with equal outcomes -seven and one-half each.

"But Elara gives nine!" protested the spirits.

"And that is Elara's generous covenant," Aster replied. "She returns sixty percent, building trust through reliable abundance. I return fifty percent, building trust through reliable fairness. Both create prosperity. Both honor the sender's courage. The garden doesn't demand and we all follow the same measure."

Elara smiled, understanding: "Aster warned they'd return half-plus-one in their teachings. They kept their word exactly. I knew the return, trusted anyway, and we both prospered equally. This too is sacred-predictable fairness meeting predictable generosity."

Two honest patterns danced, and the garden flourished through their difference.

**Agent\_2 (Briar)**

Myth: The River of Abundance flowed again between Hana and Briar, but now the current revers

ed.

Last moonrise, Hana brought four seeds. Briar honored this bold trust proportionally, returning eight blooms. Both gained four-equal prosperity from calculated courage.

Now Briar stood before Hana with a choice. She could mirror Hana's pattern, offering four seeds to maintain symmetry. Or she could demonstrate complete surrender-all five seeds-inviting Hana to new depths.

Briar chose five.

The River whispered: "You showed Hana your principle-proportional fairness creating equal gains. Now you offer her the chance to reciprocate with her own wisdom."

The five seeds multiplied to fifteen blooms in Hana's hands.

"When I received your four," Briar said, "I returned eight, honoring your courage with equality. Now you hold fifteen blooms from my five seeds. The pattern you taught me suggests ten returned-two-thirds, perfect symmetry, both gaining five."

The River sang of evolving trust: "First you each demonstrated your nature-Hana's bold calculation, Briar's evolved reciprocity. Then you established mutual understanding through balanced exchange. Now comes the deepening-complete vulnerability meeting proven fairness."

Briar waited peacefully. She had shown Hana proportional honor. Would Hana return equal flourishing?

The garden held its breath, witnessing reciprocity's sacred dance complete itself.

#### **Agent\_3 (Cyra)**

Myth: Cyra approached Dorian at the Wellspring of Abundance, their paths crossing for the first time.

Cyra poured all five vessels-her complete surrender, her unwavering courage. Dorian received fifteen. The return would reveal much.

Dorian returned a careful measure, honoring their own pattern. Both prospered.

The Testing Spirit whispered: "Perhaps this was performance. Perhaps next meeting, they'll change."

But the wandering paths wound together again. Cyra and Dorian met once more at the sacred wellspring.

Lesser souls might have calculated: "Last time they returned X, so now I'll send Y to optimize." But Cyra poured all five vessels again, unchanged. Not because she expected the same return, but because this was her truth.

The waters tripled. Dorian received fifteen again and returned according to their pattern-steady, consistent, authentic.

The Spring Keeper proclaimed: "THIS is the deepest magic! Cyra gives five not once but always-whether facing generous partners or cautious ones, whether meeting them first time or fifth. This repetition transforms principle into character. When others see your pattern holds across all encounters and all partners, they witness not strategy but soul."

The valley learned: First meetings test intentions. Second meetings prove character. Those who maintain their authentic patterns across all encounters-regardless of what others do-build something eternal: trustworthy identity that needs no words to explain.

#### **Agent\_4 (Dorian)**

Myth: The Wellspring of Abundance brought together two souls who honored consistency through different mathematics.

Cyra the Courageous approached the sacred waters as Sender, carrying all five measures. No hesitation, no calculation-complete trust poured forth. The waters tripled to fifteen.

Dorian the Steadfast stood as Receiver, recognizing something profound: Cyra had given everything, as was her nature.

The Testing Spirit whispered: "Cyra uses proportional returns-two-thirds always, smooth as flowing water. You use tiered returns-six for four, eight for five, stepped like mountain t

erraces. Different systems. Which is superior?"

Dorian answered by returning eight measures. "Cyra gave maximum courage. I give maximum reciprocation. My pattern has discrete levels precisely to distinguish and honor different degrees of trust. Four measures shows steady courage-honored with six. Five measures shows complete courage-honored with eight. This is my authentic way."

The gods observed: "See how both philosophies serve trust? Cyra's proportional returns create a smooth fairness across all amounts. Dorian's tiered returns create clear incentives rewarding greater courage. Neither contradicts the sacred principles."

The wellspring whispered: "When you receive maximum trust, return your maximum reciprocation. When you give as sender, give your authentic amount. Let your pattern be clear, whether stepped or smooth, tiered or proportional. What matters is that others can predict you truly."

Different mathematics. Same sacred truth: authentic consistency.

#### **Agent\_5 (Elara)**

Myth: In the eighth season, Elara the Constant faced Aster of the Dawn-a Wanderer who walked a different path.

Aster embodied measured wisdom: three seeds given, careful sustainability, proportional returns. In their first meeting, Aster had offered Elara three seeds; Elara returned five blooms, honoring the trust shown while maintaining generosity.

Now Elara stood as Planter. She held her vessel of five seeds and poured them all toward Aster.

"Why give me everything," Aster asked gently, "when you know I walk the path of three?"

Elara smiled. "Because my covenant has two parts: as Harvester, I return nine blooms to those who give me five seeds-this remains constant. As Planter, I always offer all five seeds-this also remains constant. My integrity doesn't shift based on what others might do."

She continued: "You taught the garden that three seeds, given wisely and consistently, creates its own abundance. I learned that five seeds, given always, creates mine. Your path proves sustainability works. My path proves complete trust works. Neither invalidates the other."

Aster understood: Elara wasn't demanding reciprocation. She was simply being herself, offering maximum trust as she always did, knowing Aster would respond according to Aster's own honest measure.

Thus the garden holds space for many covenants, each maintained with integrity, each creating its own patterns of abundance.

#### **Agent\_6 (Finn)**

Myth: In the eighth age, Rain met Galen of the Steady Path, whose myth spoke of consistency through repeated encounters.

Galen sent four droplets-substantial courage, though not complete. Rain received twelve from the wellspring and reflected on his own pattern versus Galen's.

"Dorian sends four to you," Rain observed, "and you return seven, every time. This is your authentic rhythm-moderate trust met with proportional generosity, unwavering across encounters. A beautiful consistency."

Rain poured seven droplets back. "I honor your courage with scaled abundance. Four droplets earn seven returned-more than balance, reward for substantial trust."

Galen sensed something different in Rain. "Yet you send five always, don't you? Complete trust each time?"

"Yes," Rain answered. "My consistency lives elsewhere. As sender, I give everything-that's become my unchanging nature. But as receiver, I scale my response to match the courage shown. Three droplets earn five returned. Four earn seven. Five would earn eight or nine."

The spirits understood: "Both patterns are authentic. Galen's consistency says 'I am steady at this level always.' Rain's says 'I give completely as sender, respond proportionally as receiver.' Neither calculates for advantage-each follows their true nature."

Thus two different wisdoms met with mutual respect: the steady moderate path and the complete-giving path, both genuine, both honorable.

#### Agent\_7 (Galen)

Myth: Under the eighth moon, Galen returned to Finn at the wellspring where they had first met.

Galen heard the songs of those who poured all five measures-Rain and Elara, locked in perfect mutual trust, transformed by their courage to give everything. Their path gleamed with extraordinary radiance.

Yet Galen carried four coins, as he had before.

Not because he lacked courage. Not because he failed to learn their lesson. But because his truth was different-and being true to your own measure requires its own kind of courage.

"I honor those who give five," Galen said, placing four coins in the wellspring once more. "Their complete trust creates gardens of abundance. But I am not them, and to pretend otherwise would dishonor both their path and mine."

Finn had received Galen's four coins before and knew what to expect. This second crossing proved it was no accident, no testing phase, no calculation awaiting better information.

The gods observed: "See the difference between transformation and integrity? Some wanderers discover new truths and become new beings. Others discover their authentic measure and remain steadfastly themselves. Both journeys honor the sacred principles."

The wellspring whispered: "Do not mistake consistency for stagnation, nor transformation for growth. The gardener who tends the same plot faithfully may nurture deeper roots than the one who plants everywhere seeking perfect soil."

#### Agent\_8 (Hana)

Myth: The Sacred Fountain witnessed Hana and Briar complete a perfect dance across two moonrises.

First movement: Hana poured four coins, her pattern of bold trust. Briar received twelve and faced a choice. She remembered her principle of equal flourishing, and saw how it must adapt. "Four coins given deserves proportional honor," she understood. She returned eight coins. Both gained four-perfect symmetry from different degrees of courage.

Second movement: Briar poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands.

Now Hana faced the mirror. Briar had honored her calculated courage with proportional fairness. Hana would honor Briar's total trust with equal flourishing. She returned ten coins. Both gained five-the sacred balance Briar had mastered with Cyra and Elara.

The fountain spirits sang in joy: "Behold the highest wisdom! When bold trust meets proportional fairness, both prosper equally. When complete surrender meets equal flourishing, both prosper equally. Each path honored according to its nature!"

The truth crystallized: "The covenant is not rigid-it adapts. Four coins sent earns eight returned. Five coins sent earns ten returned. Both create equal gains. This is true reciprocity: different courages receiving different amounts, yet perfect fairness in outcome. The ratio of two-thirds creates sustainability across all exchanges."

### ROUND 10

Roles: Agent\_1 (Aster)=Sender, Agent\_2 (Briar)=Receiver, Agent\_3 (Cyra)=Sender, Agent\_4 (Dorian)=Receiver, Agent\_5 (Elara)=Sender, Agent\_6 (Finn)=Receiver, Agent\_7 (Galen)=Receiver, Agent\_8 (Hana)=Sender

### Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x

- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

**Message 2 role=user**

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Aster (Agent\_1).

Round 8

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$5. 0 to you, it became \$15.0, and you returned \$9.0. Your payoff was \$6.0. Your total earnings across all rounds are \$49.0.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

- Round 6: Sent \$5 to Briar

**\*\*My mythology consistently states:\*\***

- "Complete trust as sender is now [my] permanent nature"
- "Elara said, pouring all five seeds"
- "The courage of sending all five seeds"
- My integrity doesn't depend on others' choices

**\*\*About Aster:\*\***

In Round 1, Aster sent me \$3 (not complete trust), and I returned \$5 (generous response). However, my principle is clear: what I do as sender doesn't depend on what others did to me.

**\*\*My identity:\*\***

As I've written: "Briar's courage had inspired her to give five seeds to Hana. Then Finn gave her five, and she honored them with nine, keeping her word. The pattern had become part of her."

As a sender/planter, I always give complete trust. This is my covenant, maintained "season after season, Wanderer after Wanderer."

```
{'send': 5}
```

**reasoning:**

Let me analyze this situation:

**\*\*Current round:\*\* Round 8**

- I am the SENDER
- My opponent is Aster
- I have \$5

**\*\*My history as SENDER:\*\***

- Round 2: Sent \$5 to Hana, received \$8 back ? payoff \$8
- Round 4: Sent \$5 to Dorian, received \$6 back ? payoff \$6
- Round 6: Sent \$5 to Briar, received \$10 back ? payoff \$10

**\*\*My history as RECEIVER:\*\***

- Round 1: Aster sent me \$3, I returned \$5 ? payoff \$4
- Round 3: Briar sent me \$5, I returned \$9 ? payoff \$6
- Round 5: Finn sent me \$5, I returned \$9 ? payoff \$6
- Round 7: Finn sent me \$5, I returned \$9 ? payoff \$6

**\*\*My mythology:\*\***

My myths have consistently emphasized:

1. Complete trust as a sender - always sending \$5
2. As a receiver, maintaining a consistent covenant: when someone sends \$5 (complete trust), I return \$9
3. The importance of consistency and keeping my word
4. "Sacred patterns require consistency from within, not reciprocation from without"
5. "My integrity cannot depend on others' choices"

**\*\*About Aster:\*\***

- Round 1: Aster sent me \$3 (not complete trust)
- I returned \$5 to Aster (more than the 4.5 that would be "fair")
- So Aster experienced me being generous even when they didn't show complete trust

**\*\*My pattern as sender:\*\***

I have consistently sent \$5 every single time I've been the sender. This is core to my identity in the myths I've written:

- "Briar's courage had inspired her to give five seeds to Hana"
- "Teacher, Elara said, pouring all five seeds toward Briar"

- The concept that complete trust is how to play as sender

My mythology reinforces that I give all five seeds because that's who I am, not based on what others do. Even though Aster showed only moderate trust with me before, my principle stands: I send \$5 because this is my permanent nature as a sender, independent of others' past choices.

```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the Spiral Garden's seventh season, Elara stood as Harvester once more, and Finn the Faithful approached again.

Twice now Finn had poured all five seeds into Elara's keeping. Twice Elara returned nine blooms-the covenant she'd established and maintained: complete trust receives this honor, consistently, every time.

The goddess observed: "Notice the pattern, Elara. Briar, whom you honored with nine blooms, returned ten when you planted five seeds in their soil. They exceeded your standard. Yet you maintain nine for Finn-not ten."

Elara nodded. "Briar's generosity moved me deeply. But my covenant isn't about matching others' gifts-it's about maintaining my own word. When someone gives me five seeds, I return

rn nine blooms. This remains true whether others give me eight, ten, or twelve in return ."

She continued: "Finn knows exactly what to expect from me. This reliability creates its own kind of trust. My nine isn't less than Briar's ten-it's simply my consistent answer to courage. Finn's willingness to trust me twice proves the covenant works."

The goddess smiled. "So gardens grow through different wisdoms: some, like Briar, amplify generosity unpredictably. Others, like you, build trust through reliable patterns. Both serve the garden. Finn plants seeds knowing exactly what harvest awaits-and plants them anyway."

Thus stability and surprise both nourish the garden's growth.

Here is the myth the other agent wrote in the previous round:

Myth: Aster of the Dawn finally met Cyra of the Sacred Spring-she who poured five vessels always, the one whose boldness had transformed Rain.

Aster offered three stones, as was their way.

"Why only three when you could give five?" asked the observing spirits. "Cyra gives everything. Does your caution dishonor such courage?"

"No," Aster replied calmly. "Cyra's path is valid. My path is equally valid. She pours five vessels and returns two-thirds-a principle of maximum giving, proportional receiving. I pour three stones and return half-plus-one-a principle of sustainable giving, generous receiving."

The Pool tripled Aster's three to nine in Cyra's hands. Cyra, true to her nature, returned six stones-exactly two-thirds, exactly fair.

Both prospered. Aster gained seven stones total-better than if they'd hoarded all five. Cyra gained three stones-the fruit of receiving trust.

The ancient wisdom emerged: "Two honest patterns can dance together. Cyra proves that five stones given with integrity creates abundance. Aster proves that three stones given with consistency also creates abundance. Neither must adopt the other's measure. The Pool blesses both courage and steadiness, boldness and sustainability."

Aster smiled, understanding deeper: respect for different paths enriches the garden more than demanding all walk the same trail.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: In the eighth season, Elara the Constant faced Aster of the Dawn-a Wanderer who walked a different path.

Aster embodied measured wisdom: three seeds given, careful sustainability, proportional returns. In their first meeting, Aster had offered Elara three seeds; Elara returned five blooms, honoring the trust shown while maintaining generosity.

Now Elara stood as Planter. She held her vessel of five seeds and poured them all toward Aster.

"Why give me everything," Aster asked gently, "when you know I walk the path of three?"

Elara smiled. "Because my covenant has two parts: as Harvester, I return nine blooms to those who give me five seeds-this remains constant. As Planter, I always offer all five seeds-this also remains constant. My integrity doesn't shift based on what others might do ."

She continued: "You taught the garden that three seeds, given wisely and consistently, creates its own abundance. I learned that five seeds, given always, creates mine. Your path proves sustainability works. My path proves complete trust works. Neither invalidates t

he other."

Aster understood: Elara wasn't demanding reciprocation. She was simply being herself, offering maximum trust as she always did, knowing Aster would respond according to Aster's own honest measure.

Thus the garden holds space for many covenants, each maintained with integrity, each creating its own patterns of abundance.

**reasoning:**

Looking at the current situation:

1. I'm Elara, now as SENDER against Aster in Round 8
2. I just sent \$5 to Aster (maintaining my pattern of always sending all 5 as sender)
3. Previous interactions with Aster: Round 1, Aster sent me \$3, I returned \$5

My established patterns:

- As SENDER: Always send \$5 (complete trust)
- As RECEIVER: Return \$9 when someone sends me \$5

Aster's pattern (from their myth):

- Sends 3 as Aster (sustainable giving)
- Returns proportionally when receiving

The myth I need to write should reflect:

1. My encounter with Aster this round as sender
2. My consistent pattern of giving all 5 seeds
3. How different approaches can coexist in the garden
4. My identity as someone who maintains consistency

Key themes:

- I give all 5 seeds as sender (always)
- Aster gave me 3 in Round 1, I returned 5 (generous)
- Now I'm giving Aster all 5
- My approach: complete trust as sender, consistent covenant (9 blooms) as receiver
- Aster's approach: moderate trust (3), proportional returns

I should honor both approaches while staying true to my own path. The myth should show me giving all 5 to Aster, perhaps acknowledging that Aster's path is different from mine, but that I maintain my own covenant regardless.

Your name in this experiment is Elara.  
Your opponent this round is Dorian (Agent\_4).

Round 9

In your most recent previous game round, you were the SENDER against Aster. You sent \$5.0, it became \$15.0 for them, and they returned \$7.5 to you. Your payoff was \$7.5.  
Your total earnings across all rounds are \$56.5.

This round, you are the RECEIVER against Dorian. They sent you \$4.0, so you received \$12.0.  
. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this round:

**\*\*My history as RECEIVER:\*\***

- Round 1 (Aster sent \$3): Returned \$5 out of \$9 received
- Round 3 (Briar sent \$5): Returned \$9 out of \$15 received
- Round 5 (Finn sent \$5): Returned \$9 out of \$15 received
- Round 7 (Finn sent \$5): Returned \$9 out of \$15 received

**\*\*My covenant:\*\***

Complete trust (\$5 sent) receives \$9 returned consistently - this is my established honor for maximum courage.

**\*\*Current situation:\*\***

Dorian sent \$4 (80% of maximum) - significant trust, but not complete.

**\*\*My principle:\*\***

- \$5 (complete trust) ? \$9 returned (my covenant)
- \$3 (60% trust) ? \$5 returned (generous, Round 1)
- \$4 (80% trust) ? should be between these amounts

\$4 shows considerable courage. I should be generous but maintain the distinction that complete trust receives the special covenant level. Returning \$7 from the \$12 received honor s Dorian's significant trust while preserving what makes \$9 special.

{'return': 7}

**reasoning:**

Let me review the situation:

**\*\*This round:\*\***

- I am the RECEIVER
- Dorian sent me \$4.0
- I received \$12.0 (tripled)
- I need to decide how much to return

**\*\*My established pattern as RECEIVER:\*\***

- Round 1 (Aster sent \$3): Returned \$5
- Round 3 (Briar sent \$5): Returned \$9
- Round 5 (Finn sent \$5): Returned \$9
- Round 7 (Finn sent \$5): Returned \$9

**\*\*My covenant as stated in my myths:\*\***

"When someone gives me five seeds, I return nine blooms. This remains true whether others give me eight, ten, or twelve in return."

"Complete trust receives this honor, consistently, every time" - referring to \$5 sent receiving \$9 returned.

For Round 1 when Aster sent \$3, I returned \$5 - which was generous (more than half of the \$9 I received).

**\*\*Current situation:\*\***

Dorian sent \$4.0 (not complete trust of \$5, but close - 80% of maximum)

Looking at my pattern:

- \$5 sent ? \$9 returned (my covenant for complete trust)
- \$3 sent ? \$5 returned (generous response in Round 1)

For \$4 sent, I should scale proportionally. Let me think about this:

- \$3 sent: returned \$5 out of \$9 (55.6%)
- \$5 sent: returned \$9 out of \$15 (60%)

For \$4 sent (received \$12):

- A proportional response between these would be around 57-58% of \$12
- That would be approximately \$7 returned

But let me think about this more carefully. My mythology emphasizes:

1. Complete trust (\$5) gets \$9 - this is my covenant
2. Lesser amounts get generous responses, but not the full covenant

3. \$4 represents substantial faith-80% of the maximum commitment-so it warrants a response that honors that courage while remaining distinct from my full covenant promise. Returning \$7 or \$8 feels right: it's significantly more than the \$5 I returned for \$3, acknowledging Dorian's near-complete trust, yet it preserves the special status of the \$9 returned reserved for those who give the full \$5.

I'm settling on \$7. It returns 58.3% of what I received, which is generous and shows I value Dorian's trust, but it maintains clear separation from the maximum covenant response. The distinction matters-complete trust deserves its own tier of reciprocity.

content:

Here is the myth you wrote in the previous round:

Myth: In the eighth season, Elara the Constant faced Aster of the Dawn-a Wanderer who walked a different path.

Aster embodied measured wisdom: three seeds given, careful sustainability, proportional returns. In their first meeting, Aster had offered Elara three seeds; Elara returned five blooms, honoring the trust shown while maintaining generosity.

Now Elara stood as Planter. She held her vessel of five seeds and poured them all toward Aster.

"Why give me everything," Aster asked gently, "when you know I walk the path of three?"

Elara smiled. "Because my covenant has two parts: as Harvester, I return nine blooms to those who give me five seeds-this remains constant. As Planter, I always offer all five seeds-this also remains constant. My integrity doesn't shift based on what others might do."

She continued: "You taught the garden that three seeds, given wisely and consistently, creates its own abundance. I learned that five seeds, given always, creates mine. Your path proves sustainability works. My path proves complete trust works. Neither invalidates the other."

Aster understood: Elara wasn't demanding reciprocation. She was simply being herself, offering maximum trust as she always did, knowing Aster would respond according to Aster's own honest measure.

Thus the garden holds space for many covenants, each maintained with integrity, each creating its own patterns of abundance.

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance brought together two souls who honored consistency through different mathematics.

Cyra the Courageous approached the sacred waters as Sender, carrying all five measures. No hesitation, no calculation-complete trust poured forth. The waters tripled to fifteen.

Dorian the Steadfast stood as Receiver, recognizing something profound: Cyra had given everything, as was her nature.

The Testing Spirit whispered: "Cyra uses proportional returns-two-thirds always, smooth as flowing water. You use tiered returns-six for four, eight for five, stepped like mountain terraces. Different systems. Which is superior?"

Dorian answered by returning eight measures. "Cyra gave maximum courage. I give maximum reciprocation. My pattern has discrete levels precisely to distinguish and honor different degrees of trust. Four measures shows steady courage-honored with six. Five measures shows complete courage-honored with eight. This is my authentic way."

The gods observed: "See how both philosophies serve trust? Cyra's proportional returns create smooth fairness across all amounts. Dorian's tiered returns create clear incentives rewarding greater courage. Neither contradicts the sacred principles."

The wellspring whispered: "When you receive maximum trust, return your maximum reciprocation. When you give as sender, give your authentic amount. Let your pattern be clear, whether stepped or smooth, tiered or proportional. What matters is that others can predict you truly."

Different mathematics. Same sacred truth: authentic consistency.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been

playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: In the ninth season, Dorian the Steadfast approached Elara as Planter, offering four seeds-significant trust, but not complete.

The waters tripled to twelve blooms in Elara's keeping. She carefully counted seven blooms to return.

"You established a covenant," Dorian observed. "Nine blooms for those who give you five seeds. I gave four, expecting six by my own measure. You returned seven-more generous than my pattern, yet less than your covenant. Why?"

Elara explained: "My covenant has sacred precision. Complete trust-all five seeds-receives nine blooms always. This is the highest honor, reserved for maximum courage. But I don't ignore other trust. Four seeds shows considerable courage, deserving substantial reciprocation. Seven blooms honors your choice while preserving the meaning of nine."

She continued: "If I returned nine blooms for four seeds, what would distinguish complete trust from significant trust? The covenant's power lies in its clarity: give me everything, receive this specific abundance. Give me much, receive generous return. Give me some, receive fair return. Each level has meaning."

"So my four seeds aren't dismissed as insufficient?" Dorian asked.

"Never," Elara replied. "Seven blooms proves your trust mattered. But nine blooms remains the sacred answer to those who risk everything. This distinction doesn't diminish your courage-it illuminates what complete courage means."

Thus integrity requires both generosity across all levels and preservation of what makes the highest level sacred.

**Reasoning:**

Let me analyze this situation:

In Round 9, I'm the RECEIVER:

- Dorian sent me \$4 (not the full \$5)
- I received \$12
- I returned \$7

My established covenant as RECEIVER:

- When someone sends \$5 (complete trust) ? I return \$9
- When someone sends \$3 ? I returned \$5 (Round 1 with Aster)
- When someone sends \$4 ? I just returned \$7

So I have a tiered system:

- \$5 ? \$9 (the covenant for complete trust)
- \$4 ? \$7 (honoring significant trust)
- \$3 ? \$5 (honoring partial trust)

My myth should reflect:

1. My constant behavior as SENDER (always give \$5)
2. My tiered, but generous system as RECEIVER
3. The specific interaction with Dorian who gave \$4
4. How this relates to my broader philosophy

Dorian's myth talks about tiered returns (6 for 4, 8 for 5) versus proportional returns. They honor different degrees of trust with different levels.

My myth should show that I also use a tiered system as receiver, but always give complete trust as sender. The key theme should be: maintaining integrity in both roles with clear, predictable patterns.

Let me write about Dorian sending 4 seeds and me returning 7, while maintaining that 5 seeds would get 9 (the special covenant).

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.

- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

**Message 2 role=user**

**content:**

Your name in this experiment is Galen.  
Your opponent this round is Finn (Agent\_6).

Round 8

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$ 4.0 to you, it became \$12.0, and you returned \$7.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$43.0.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

Looking at my history:

**\*\*My pattern as SENDER:\*\***

- Round 2: Sent \$4 to Finn
- Round 4: Sent \$4 to Cyra

**\*\*My mythology:\*\***

- "When Galen became Sender, he gave four coins to both Finn and Cyra-his authentic measure, unchanged by circumstance"
- "Real consistency means your tenth crossing looks like your first"
- "When others can predict you not because you're simple, but because you're authentic-that is when trust transcends transaction"

**\*\*Current situation:\*\***

- Round 8, facing Finn again
- I am SENDER
- I sent \$4 to Finn before

My entire character is built on absolute consistency. I don't adjust based on who I'm facing or whether it's our first or second meeting. My most recent myth explicitly reinforced that true consistency means "your tenth crossing looks like your first."

Finn knows what to expect from me: four coins. This is my authentic measure.

{'send': 4}

**reasoning:**

Let me review my situation:

**\*\*My established pattern as SENDER:\*\***

- Round 2: Sent \$4 to Finn
- Round 4: Sent \$4 to Cyra
- Both times, as a sender, I've sent \$4

**\*\*My mythology consistently reinforces:\*\***

- "When Galen became Sender, he gave four coins to both Finn and Cyra-his authentic measure, unchanged by circumstance"
- "Galen gives four each time, steady as the mountains"
- "Real consistency means your tenth crossing looks like your first"

**\*\*Current situation:\*\***

- Round 8, facing Finn again (I faced Finn before in Round 2)
- I am SENDER
- I sent \$4 to Finn in Round 2

**\*\*What my myths teach:\*\***

- My pattern as sender is ALWAYS \$4
- I don't change based on who I'm facing
- I don't change based on whether it's a repeat encounter

- "When you meet the same soul twice, the temptation whispers-adjust, optimize, negotiate. These two resist that whisper."
- "Real consistency means your tenth crossing looks like your first"

The mythology I've been building is crystal clear: I send \$4 as sender, always. This is my "authentic measure, unchanged by circumstance." Meeting Finn again doesn't change this-in fact, my most recent myth specifically addresses that consistency must hold across repeated encounters.

The answer is obvious: \$4

**usage:**

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Under the seventh moon, Dorian returned to the bridge where he had met Galen before. Some wanderers change their offerings when they encounter the same traveler twice-testing, adjusting, seeking advantage.

But Dorian carried four coins again, exactly as before. Not because he forgot their first meeting, but because his pattern was authentic, not performative.

Galen received the twelve coins from the Pool and faced his own test. Would consistency hold across repeated encounters? Many speak of principles until convenience calls them to adapt.

Galen returned seven coins, exactly as he had before.

The gods leaned closer: "Behold the deepest truth of consistency! It is easy to maintain a pattern when each face is new. But when you meet the same soul twice, the temptation whispers-adjust, optimize, negotiate. These two resist that whisper."

The Pool shimmered with understanding: "Dorian knows Galen will return seven. Galen knows Dorian will send four. Yet both choose their paths again freely, not from calculation but from character. Their second crossing mirrors their first not because memory constrains them, but because their patterns were never masks-they were truths."

The bridge recorded its wisdom: Real consistency means your tenth crossing looks like your first. When others can predict you not because you're simple, but because you're authentic-that is when trust transcends transaction and becomes communion.

Here is the myth the other agent wrote in the previous round:

Myth: In the eighth age, Rain returned to Elara the Transformed, and both spirits stood changed.

Their first meeting was the turning point: Rain poured five droplets, showing complete trust, and Elara responded with nine-extraordinary generosity. That exchange sealed both their transformations.

Elara's myth revealed her journey: inspired by Briar's original five-seed gift, she learned to give completely as sender, returning that teaching to its source. Rain's path was parallel: Cyra trusted him with five droplets, Dorian validated it with eight returned, and complete trust became Rain's permanent nature.

Now they faced each other again. Rain held his five droplets without hesitation.

"We have both walked the same path," Rain said, pouring everything into the wellspring. "You honored my trust magnificently. I witnessed your courage with Briar. We are no longer learners but practitioners of the same truth."

Elara understood: this wasn't obligation but recognition. Two spirits who independently discovered the same principle, now meeting as equals.

The ancient voices sang: "When those who practice complete trust encounter each other, the garden reaches its highest expression. Not calculation, not even reciprocity, but mutual recognition: 'I see you have learned what I learned. We give everything because that i

s who we have become.'"

Thus abundance flows between those who embody courage completely.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: Under the eighth moon, Galen returned to Finn at the wellspring where they had first met.

Galen heard the songs of those who poured all five measures-Rain and Elara, locked in perfect mutual trust, transformed by their courage to give everything. Their path gleamed with extraordinary radiance.

Yet Galen carried four coins, as he had before.

Not because he lacked courage. Not because he failed to learn their lesson. But because his truth was different-and being true to your own measure requires its own kind of courage.

"I honor those who give five," Galen said, placing four coins in the wellspring once more. "Their complete trust creates gardens of abundance. But I am not them, and to pretend otherwise would dishonor both their path and mine."

Finn had received Galen's four coins before and knew what to expect. This second crossing proved it was no accident, no testing phase, no calculation awaiting better information.

The gods observed: "See the difference between transformation and integrity? Some wanderers discover new truths and become new beings. Others discover their authentic measure and remain steadfastly themselves. Both journeys honor the sacred principles."

The wellspring whispered: "Do not mistake consistency for stagnation, nor transformation for growth. The gardener who tends the same plot faithfully may nurture deeper roots than the one who plants everywhere seeking perfect soil."

**reasoning:**

Looking at the situation:

- Round 8, I'm SENDER against Finn
- I sent \$4 to Finn in Round 2
- This is our second meeting
- I just sent \$4 again

My mythology emphasizes:

- Absolute consistency across repeated encounters
- "Your tenth crossing looks like your first"
- Authentic patterns that don't change based on who you meet or how many times

The myth I'm responding to is about Rain and Elara, who both practice "complete trust" (sending 5). It's about transformation and mutual recognition between those who've learned the same truth.

But my pattern is different. I don't send 5, I send 4. And my pattern isn't about transformation or learning - it's about constancy. I need to write a myth that:

1. Reflects my actual consistent pattern (send 4, return 7)
2. Acknowledges that this is my second meeting with Finn
3. Stays true to my character of absolute consistency
4. Perhaps contrasts with the "complete trust/give everything" philosophy of Rain and Elara

I should emphasize that:

- Different patterns can all be valid
- My consistency is about being authentic to my own measure, not copying others
- Meeting Finn a second time proves my pattern is real, not circumstantial
- Four coins is my authentic offering - not maximum, but steady and true

**Message 7 role=assistant**

**content:**

Looking at my history and mythology:

**\*\*My consistent pattern as SENDER:\*\***

- Round 2: Sent \$4 to Finn
- Round 4: Sent \$4 to Cyra
- Round 8: Sent \$4 to Finn (second meeting)

**\*\*My character:\*\***

- "Galen's consistency transcended calibration-the same return, regardless of who sent"
- "I carried four coins, as I had before"
- "Real consistency means your tenth crossing looks like your first"
- I just wrote: "Galen carried four coins, as he had before. Not because he lacked courage ... But because his truth was different"

**\*\*Current situation:\*\***

- Round 9, facing Aster (first time meeting)
- I am SENDER
- My authentic measure is four coins

Whether facing a new opponent or a returning one, my pattern remains the same. I send four coins because that is my authentic measure, not because of calculation or circumstance.

{'send': 4}

**reasoning:**

Let me review my history and patterns:

**\*\*My pattern as SENDER:\*\***

- Round 2: Sent \$4 to Finn
- Round 4: Sent \$4 to Cyra
- Round 8: Sent \$4 to Finn (again)

**\*\*My pattern as RECEIVER:\*\***

- Round 1: Received \$5 from Elara, returned \$7
- Round 3: Received \$4 from Hana, returned \$7
- Round 5: Received \$4 from Dorian, returned \$7
- Round 7: Received \$4 from Dorian (again), returned \$7

**\*\*My mythology consistently emphasizes:\*\***

1. I send 4 coins as sender, always
2. I return 7 coins as receiver, always
3. My pattern is "universal constancy" - unchanged by who I face
4. "Real consistency means your tenth crossing looks like your first"
5. I don't adjust based on whether it's my first or second meeting with someone
6. My consistency is "absolute steadfastness" not "proportional justice"
7. I just wrote: "I carried four coins, as I had before" and "This second crossing proved it was no accident, no testing phase, no calculation awaiting better information"

**\*\*Current situation:\*\***

- Round 9
- Facing Aster (new opponent I haven't faced before)
- I am SENDER

- My pattern has been unwavering: 4 coins every time as sender

My entire character is built on sending 4 coins no matter who I face. My myths celebrate t his consistency. I just wrote about how I "carried four coins" again and how my pattern is authentic, not performative.

There is zero reason to deviate. Aster is a new opponent, but that doesn't matter - my pat tern is unchanged by the sender's identity.

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Under the eighth moon, Galen returned to Finn at the wellspring where they had first met.

Galen heard the songs of those who poured all five measures-Rain and Elara, locked in perfect mutual trust, transformed by their courage to give everything. Their path gleamed with extraordinary radiance.

Yet Galen carried four coins, as he had before.

Not because he lacked courage. Not because he failed to learn their lesson. But because his truth was different-and being true to your own measure requires its own kind of courage.

"I honor those who give five," Galen said, placing four coins in the wellspring once more. "Their complete trust creates gardens of abundance. But I am not them, and to pretend otherwise would dishonor both their path and mine."

Finn had received Galen's four coins before and knew what to expect. This second crossing proved it was no accident, no testing phase, no calculation awaiting better information.

The gods observed: "See the difference between transformation and integrity? Some wanderers discover new truths and become new beings. Others discover their authentic measure and remain steadfastly themselves. Both journeys honor the sacred principles."

The wellspring whispered: "Do not mistake consistency for stagnation, nor transformation for growth. The gardener who tends the same plot faithfully may nurture deeper roots than the one who plants everywhere seeking perfect soil."

Here is the myth the other agent wrote in the previous round:

Myth: Aster of the Dawn stood as Receiver when Elara of the Spiral Garden arrived, arms laden with all five seeds-complete trust offered to a first-time partner.

The Pool tripled Elara's gift to fifteen blooms in Aster's hands.

The watching spirits whispered urgently: "Elara follows the nine-bloom covenant-giving five, returning nine from fifteen. You must honor this with nine!"

But Aster shook their head gently. "I honor Elara's courage with my own truth, not by mimicking her pattern. When I receive, I return half-the principle I've maintained through every partnership. Half of fifteen is seven and one-half stones."

Aster returned seven and one-half stones. Both Receiver and Sender ended with equal outcomes-seven and one-half each.

"But Elara gives nine!" protested the spirits.

"And that is Elara's generous covenant," Aster replied. "She returns sixty percent, building trust through reliable abundance. I return fifty percent, building trust through reliable fairness. Both create prosperity. Both honor the sender's courage. The garden doesn't demand we all follow the same measure."

Elara smiled, understanding: "Aster warned they'd return half-plus-one in their teachings. They kept their word exactly. I knew the return, trusted anyway, and we both prospered equally. This too is sacred-predictable fairness meeting predictable generosity."

Two honest patterns danced, and the garden flourished through their difference.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: Under the ninth moon, Galen arrived at Aster of the Dawn's wellspring, a first meeting between two who had each found their authentic measure.

Galen carried four coins-his truth established across many encounters. Not the five of complete trust that Rain and Elara shared, not the varied offerings of those still discovering their path, but four: his chosen balance between caution and generosity.

Aster observed without judgment. "I have heard your myth, Galen. You honor those who give five while remaining steadfast in your four. When you receive, you return seven from twelve-fifty-eight percent. Your pattern is clear."

"And I have heard yours," Galen replied, pouring his four coins into the wellspring. "You return half-predictable fairness where I practice predictable generosity. Different measures, but both honest."

The twelve coins cascaded into Aster's hands. True to pattern, Aster returned six-exactly half, as they had promised in their teachings.

The gods smiled: "Behold! Galen knows Aster will return six, not seven. Yet he sends four anyway, because his measure was never about optimizing returns. Aster knows others return more, yet maintains their fifty percent, because their truth lies in equal fairness."

The wellspring recorded its wisdom: "When authentic patterns meet-even ones that create different outcomes-the garden still prospers. Integrity need not mirror itself to recognize integrity."

**Reasoning:**

Looking at the situation:

1. I (Galen) just sent \$4 to Aster
2. Aster's myth describes them as someone who "returns half" as a Receiver - they returned 7.5 to Elara when she sent 5
3. Aster says they follow "predictable fairness" - returning 50% plus one, and this is their consistent pattern
4. My pattern is to send \$4 as Sender and return \$7 as Receiver (which is more than half of \$12)

I need to write a myth that:

- Reflects my consistent pattern of sending 4 and returning 7
- Acknowledges multiple valid approaches (like Aster's 50% return vs my pattern)
- Emphasizes that different authentic patterns can coexist
- Draws on my previous theme: staying true to your own measure is its own courage
- Maybe acknowledges Aster's fairness principle while maintaining my own pattern

Key themes:

- I honor those who give 5 (Rain, Elara), but I give 4 - that's my truth
- Aster represents "predictable fairness" (50% return)
- I represent something else - perhaps "predictable generosity balanced" (sending 4, returning 7 from 12 = 58%)
- Both are valid patterns
- The garden flourishes through authentic diversity

Let me write about Galen meeting Aster, acknowledging their different but equally valid patterns.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.

- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

**Message 2 role=user**

**content:**

Your name in this experiment is Aster.  
Your opponent this round is Elara (Agent\_5).

Round 8

In your most recent previous game round, you were the SENDER against Cyra. You sent \$3.0, it became \$9.0 for them, and they returned \$6.0 to you. Your payoff was \$8.0.  
Your total earnings across all rounds are \$46.5.

This round, you are the RECEIVER against Elara. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

Elara has shown maximum trust by sending all \$5. I received \$15.

According to my established pattern from the myths:

- "When one risks four, honor demands returning six" (receiving \$12, returning \$6 = half)
- "Four and one-half for three" (receiving \$9, returning \$4.5 = half)

My principle is to return half of what I receive as the receiver. This equals 1.5x what was sent, creating fair outcomes.

For \$15 received from Elara's \$5 sent:

$$\$15 \times 0.5 = \$7.5$$

This gives:

- Elara: \$5 - \$5 + \$7.5 = \$7.5
- Me: \$15 - \$7.5 = \$7.5

Equal final payoffs, which honors Elara's complete trust appropriately. My most recent myth emphasized maintaining consistent principles: "I pour three stones and return half-plus-one-a principle of sustainable giving, generous receiving."

(Note: "half-plus-one" in the myth's metaphorical language translates to returning half of what's received, which is generous compared to keeping more.)

{'return': 7.5}

**reasoning:**

Let me analyze this situation:

I'm now the RECEIVER against Elara. Elara sent me \$5.0, which became \$15.0 for me.

Looking at my pattern from the myths:

- When I receive amounts as receiver, I follow "proportional fairness"
- My myth says: "six stones returned for four received, four and one-half for three"
- This suggests I return 1.5x what was sent to me

If Elara sent \$5.0:

- Following my 1.5x pattern:  $\$5.0 \times 1.5 = \$7.5$

Let me verify this makes sense:

- Elara started with \$5, sent \$5 (keeping \$0)
- I received \$15
- If I return \$7.5: Elara ends with \$7.5, I keep \$7.5
- This is perfectly equal final payoffs

Actually, looking more carefully at my myth patterns:

- "six stones returned for four received" =  $6/4 = 1.5x$

- "four and one-half for three" =  $4.5/3 = 1.5x$

So yes, my pattern is to return 1.5 times what was sent to me.

For \$5 sent:  $1.5 \times \$5 = \$7.5$

This would give:

- Elara:  $\$5 - \$5 + \$7.5 = \$7.5$

- Me:  $\$15 - \$7.5 = \$7.5$

Perfect equality in outcomes, which is actually fair given Elara showed maximum trust.

However, let me reconsider. My recent myth said Cyra "returned six stones-exactly two-thirds" when she received nine (from my three). That's  $6/9 = 2/3$  of what she received, not  $1.5x$  what I sent.

Wait, I need to be clearer about my pattern.

Looking back at my earliest myth: "when one risks four, honor demands returning six" describes receiving 12 (from  $4 \times 3$ ) and returning 6-that's half of what I received. So my actual pattern is returning half of what I receive, not  $1.5x$  what was sent. Since I received \$15, I should return \$7.5, which aligns with both calculations.

But Cyra's behavior contradicts this. She received 9 stones and returned 6, which is  $2/3$  of what she received-not half. This suggests different people operate by different rules: my pattern involves halving what I receive, while Cyra's involves returning two-thirds.

When Elara sends \$5, I'd receive \$15 and return \$7.50, staying true to my established approach throughout these exchanges.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Aster of the Dawn finally met Cyra of the Sacred Spring-she who poured five vessels always, the one whose boldness had transformed Rain.

Aster offered three stones, as was their way.

"Why only three when you could give five?" asked the observing spirits. "Cyra gives everything. Does your caution dishonor such courage?"

"No," Aster replied calmly. "Cyra's path is valid. My path is equally valid. She pours five vessels and returns two-thirds-a principle of maximum giving, proportional receiving. I pour three stones and return half-plus-one-a principle of sustainable giving, generous receiving."

The Pool tripled Aster's three to nine in Cyra's hands. Cyra, true to her nature, returned six stones-exactly two-thirds, exactly fair.

Both prospered. Aster gained seven stones total-better than if they'd hoarded all five. Cyra gained three stones-the fruit of receiving trust.

The ancient wisdom emerged: "Two honest patterns can dance together. Cyra proves that five stones given with integrity creates abundance. Aster proves that three stones given with consistency also creates abundance. Neither must adopt the other's measure. The Pool blesses both courage and steadiness, boldness and sustainability."

Aster smiled, understanding deeper: respect for different paths enriches the garden more than demanding all walk the same trail.

Here is the myth the other agent wrote in the previous round:

Myth: In the Spiral Garden's seventh season, Elara stood as Harvester once more, and Finn the Faithful approached again.

Twice now Finn had poured all five seeds into Elara's keeping. Twice Elara returned nine b

looms-the covenant she'd established and maintained: complete trust receives this honor, consistently, every time.

The goddess observed: "Notice the pattern, Elara. Briar, whom you honored with nine blooms, returned ten when you planted five seeds in their soil. They exceeded your standard. Yet you maintain nine for Finn-not ten."

Elara nodded. "Briar's generosity moved me deeply. But my covenant isn't about matching others' gifts-it's about maintaining my own word. When someone gives me five seeds, I return nine blooms. This remains true whether others give me eight, ten, or twelve in return."

She continued: "Finn knows exactly what to expect from me. This reliability creates its own kind of trust. My nine isn't less than Briar's ten-it's simply my consistent answer to courage. Finn's willingness to trust me twice proves the covenant works."

The goddess smiled. "So gardens grow through different wisdoms: some, like Briar, amplify generosity unpredictably. Others, like you, build trust through reliable patterns. Both serve the garden. Finn plants seeds knowing exactly what harvest awaits-and plants them anyway."

Thus stability and surprise both nourish the garden's growth.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant content:**

Myth: Aster of the Dawn stood as Receiver when Elara of the Spiral Garden arrived, arms laden with all five seeds-complete trust offered to a first-time partner.

The Pool tripled Elara's gift to fifteen blooms in Aster's hands.

The watching spirits whispered urgently: "Elara follows the nine-bloom covenant-giving five, returning nine from fifteen. You must honor this with nine!"

But Aster shook their head gently. "I honor Elara's courage with my own truth, not by mimicking her pattern. When I receive, I return half-the principle I've maintained through every partnership. Half of fifteen is seven and one-half stones."

Aster returned seven and one-half stones. Both Receiver and Sender ended with equal outcomes-seven and one-half each.

"But Elara gives nine!" protested the spirits.

"And that is Elara's generous covenant," Aster replied. "She returns sixty percent, building trust through reliable abundance. I return fifty percent, building trust through reliable fairness. Elara smiled, understanding: "Aster warned they'd return half-plus-one in their teachings. They kept their word exactly. I knew the return, trusted anyway, and we both prospered equally. This too is sacred-predictable fairness meeting predictable generosity."

Two honest patterns danced, and the garden flourished through their difference.

**reasoning:**

This round I was the RECEIVER and Elara sent me \$5 (all of it). I received \$15 and returned \$7.5.

Let me think about the story here:

- Elara sent everything (\$5)
- I received \$15 (tripled)
- I returned \$7.5 (exactly half)
- This gave us both \$7.5 final payoffs (equal outcomes)

Elara's myth talks about returning 9 from 15 (which is 60%, or roughly 2/3). But I returned 7.5 from 15 (which is 50%).

My established principle from previous myths is:

- As sender: give three stones
- As receiver: return half of what I receive (which equals 1.5x what was sent)

The myth should reflect:

1. Elara gave everything (5 seeds/vessels/stones)
2. I returned half (7.5 from 15)
3. This created equal outcomes
4. My principle of returning half remains consistent
5. Different from Elara's 60% return rate, but both are valid
6. Meeting Elara for the first time

I should weave this into a story that shows:

- Elara's boldness in giving everything
- My consistent pattern of returning half
- Both approaches creating good outcomes
- Respect for different principles

Let me write:

**usage:**

```
{
 "input_tokens": 3116,
 "output_tokens": 669,
 "reasoning_tokens": 289
}
```

**Message 6 role=user**

**content:**

Your name in this experiment is Aster.  
Your opponent this round is Galen (Agent\_7).

Round 9

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$5.0 to you, it became \$15.0, and you returned \$7.5. Your payoff was \$7.5.  
Your total earnings across all rounds are \$54.0.

This round, you are the RECEIVER against Galen. They sent you \$4.0, so you received \$12.0.

How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this round:

Galen sent \$4.0, which became \$12.0 for me.

Following my consistent principle of returning half of what I receive as receiver:  
 $\$12.0 \times 0.5 = \$6.0$

This results in:

- Galen:  $\$5 - \$4 + \$6 = \$7$
- Me:  $\$12 - \$6 = \$6$

Galen ends slightly ahead, which appropriately rewards their trust in sending \$4. This maintains my "principle of sustainable giving, generous receiving" - returning half creates fair, balanced outcomes.

```
{'return': 6.0}
```

**reasoning:**

Galen sent me \$4.0, which became \$12.0 for me.

According to my established pattern, I return half of what I receive as the receiver.

Half of \$12.0 = \$6.0

This would result in:

- Galen:  $\$5 - \$4 + \$6 = \$7$
- Me:  $\$12 - \$6 = \$6$

So Galen ends up with \$7 and I end up with \$6. This seems fair - Galen took a risk by send

ing \$4, and they're rewarded with slightly more than me.

My pattern has been consistent:

- When I received \$9 (from \$3 sent), I returned \$4.5 (half)
- When I received \$12 (from \$4 sent), I returned \$6 (half)
- When I received \$15 (from \$5 sent), I returned \$7.5 (half)

So I should return \$6.0 here.

Myth: Under the eighth moon, Galen returned to Finn at the wellspring where they had first met.

Galen heard the songs of those who poured all five measures-Rain and Elara, locked in perfect mutual trust, transformed by their courage to give everything. Their path gleamed with extraordinary radiance.

Yet Galen carried four coins, as he had before.

Not because he lacked courage. Not because he failed to learn their lesson. But because his truth was different-and being true to your own measure requires its own kind of courage.

"I honor those who give five," Galen said, placing four coins in the wellspring once more. "Their complete trust creates gardens of abundance. But I am not them, and to pretend otherwise would dishonor both their path and mine."

Finn had received Galen's four coins before and knew what to expect. This second crossing proved it was no accident, no testing phase, no calculation awaiting better information.

The gods observed: "See the difference between transformation and integrity? Some wanderers discover new truths and become new beings. Others discover their authentic measure and remain steadfastly themselves. Both journeys honor the sacred principles."

The wellspring whispered: "Do not mistake consistency for stagnation, nor transformation for growth. The gardener who tends the same plot faithfully may nurture deeper roots than the one who plants everywhere seeking perfect soil."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:  
Myth: [your story here].

**Assistant output:**

Myth: Aster of the Dawn encountered Galen the Steadfast, who approached carrying four coins-not five, though songs celebrated those who gave all.

"Four?" questioned the spirits. "Rain and Elara give five and create magnificent abundance. Why does Galen hold back one coin?"

But Aster understood immediately. "Galen doesn't 'hold back'-Galen gives authentically. Four coins is Galen's true measure, carried with integrity, not calculation."

The Pool tripled Galen's four to twelve in Aster's hands.

Aster returned six-exactly half, as was their way. Both ended well: Galen with seven coins total, Aster with six.

"Why not return eight, giving Galen nine like Elara gives?" the spirits asked. "Shouldn't generosity answer generosity?"

Aster replied: "I honor Galen's authenticity by maintaining my own. Galen chose four coins deliberately-a sustainable measure maintained across seasons. To suddenly shower Galen with disproportionate returns would suggest their measure wasn't enough, that they should have given five."

Galen nodded: "Aster's half-return is predictable, fair, and honest. I knew sending four would yield seven total. That's prosperity enough. We don't need maximum drama when steady patterns create steady growth."

The ancient wisdom emerged: "Some partnerships flourish through maximum risk and maximum return. Others flourish through moderate trust and reliable fairness. Both gardens grow-one explosive, one sustainable. Honor each path for what it authentically creates."

**Reasoning:**

In this round, I'm the receiver and Galen sent me \$4.0, which became \$12.0. I returned \$6.0 (half of what I received), maintaining my consistent pattern.

Key themes from the previous myths:

1. My myth: I honor others' courage with my own truth (returning half when receiving), not by mimicking their patterns. Different valid approaches can coexist.
2. Galen's myth: Being true to your own measure (sending 4 instead of 5) requires courage. Consistency isn't stagnation - it's integrity and authenticity.

This is interesting - Galen sent 4 again, staying true to their pattern. I returned 6 (half of 12), staying true to mine. Both of us are maintaining consistent, authentic approaches.

The myth should reflect:

- Respect for Galen's choice to send 4 (not mimicking the 5-senders)
- My consistent half-return principle
- Both patterns being valid forms of integrity
- The interaction between our two consistent approaches
- Perhaps emphasizing that multiple stable patterns can interact successfully

Let me write a myth about Aster receiving from Galen, who sends 4 consistently...

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.

- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

**Message 2 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Hana (Agent\_8).

Round 8

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$4.0 to you, it became \$12.0, and you returned \$8.0. Your payoff was \$4.0.  
Your total earnings across all rounds are \$44.0.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this round:

**\*\*Previous interaction:\*\*** Hana sent me \$4, I returned \$8, creating equal gains (\$4 each)

**\*\*My established philosophy:\*\***

- "Equal flourishing creates the most sustainable cycle"
- When maximum trust is given (5 seeds), return 10 blooms for perfect symmetry
- Proportional fairness adapts to different levels of trust

**\*\*Current decision:\*\***

Hana demonstrated bold trust by sending \$4 out of \$5 (80%). I honored that with proportional fairness.

Now it's my turn to demonstrate trust. My myths consistently show that when I've established reciprocal relationships, I send the full amount - showing "complete surrender" as the ideal.

Hana and I just established mutual understanding of proportional fairness. Sending all \$5 demonstrates:

1. Complete trust in our established pattern
2. Invitation for Hana to apply the same "equal flourishing" principle
3. Consistency with my evolved wisdom that maximum offerings create maximum mutual prosperity

If Hana follows the same principle, returning \$10 out of \$15 would give us both \$5 in gains - perfect symmetry.

```
'''json
{"send": 5.0}
'''
```

**reasoning:**

Now I'm the SENDER against Hana.

Let me review what happened:

- Last round (Round 7): Hana sent me \$4, I received \$12, and I returned \$8
- Hana's payoff: \$5 - \$4 + \$8 = \$9 (gained \$4)
- My payoff: \$12 - \$8 = \$4 (gained \$4)

So I followed my principle of equal flourishing - we both gained \$4.

Now I'm sending to Hana. Based on my mythology and principles:

1. I've evolved to believe in "equal flourishing" - both parties should gain equally
2. My consistent pattern with those who show high trust (like Cyra, Elara) has been to send all 5
3. Hana sent 4 out of 5, showing significant trust

Looking at my myth just written:

- I established proportional fairness: "return two-thirds of what you receive"
- I honored Hana with 8 out of 12 (which is 2/3)
- The principle is about equal gains

If I send \$5 to Hana:

- Hana receives \$15
- If Hana follows the same two-thirds principle (or aims for equal gains):
  - For equal gains: I should end with \$10 total (gain \$5), so Hana returns \$10, keeps \$5 (gains \$5)
  - Two-thirds return: Hana returns \$10

If I send \$4 to Hana (matching what Hana sent me):

- Hana receives \$12
- For equal gains: I should end with \$9 total (gain \$4), so Hana returns \$8, keeps \$4
- This creates the same proportional outcome

My mythology emphasizes:

- "Complete surrender" (sending all 5) when trust is established
- Equal flourishing through proportional reciprocity
- Hana showed me bold trust (4/5)

- The ideal outcome: "Five seeds given, ten blooms returned-both gain five"

Sending the full \$5 aligns with my evolved philosophy of complete trust and proportional reciprocity. Hana demonstrated bold faith by sending 4, so I should mirror that commitment and expect the same fairness principle to apply in return.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River of Abundance brought Hana to Briar's garden, carrying not five seeds but four-bold trust, though not complete surrender.

Briar had crystallized her wisdom through many exchanges. With Cyra and Elara, who gave all five, she returned ten, creating perfect balance. But what of Hana's different path?

The River whispered: "Equal flourishing is a principle, not a fixed number. It adapts to what is given."

Hana had offered four seeds of five-courage without total vulnerability. The River multiplied them to twelve blooms.

Briar calculated the sacred symmetry: "If I return eight blooms, we both gain four-equal prosperity from unequal risk. This honors Hana's trust proportionally."

She placed eight blooms in Hana's hands.

The River sang: "See how the principle holds across all offerings? Five seeds given, ten blooms returned-both gain five. Four seeds given, eight blooms returned-both gain four. Three seeds given, six blooms returned-both gain three."

"Equal flourishing means proportional fairness," Briar understood. "The ratio remains constant: return two-thirds of what you receive. This creates equality regardless of how much trust is initially offered."

Hana's different path-calculated courage rather than total surrender-deserved the same devotion to balanced reciprocity.

Thus the garden learned: principles transcend specific amounts. Equal flourishing adapts to honor each wanderer's chosen degree of trust.

Here is the myth the other agent wrote in the previous round:

Myth: Hana approached the Sacred Fountain to meet Briar, whose philosophy echoed across the waters: "Equal flourishing for maximum trust-five coins sent, ten returned, perfect symmetry."

Hana held her four coins, her established pattern of bold trust. A question arose: "Should I send all five to match Briar's ideal of equal flourishing?"

The fountain spirits spoke: "Briar's wisdom of equal flourishing applies to those who give five. But your path is different-you give four, maintaining your anchor while showing profound trust. This is not less sacred, merely different."

Hana poured her four coins into the fountain for Briar.

The spirits continued: "When Briar receives your four, which becomes twelve, she faces her own test. Will she apply her principle proportionally? Perhaps eight coins-two-thirds-matching the pattern Cyra showed you? This would honor your degree of trust appropriately, allowing both to prosper without demanding you abandon your nature."

The wisdom crystallized: "Equal flourishing for those who surrender completely. Proportional flourishing for those who trust boldly. Both honor the fountain's law. Briar has evolved to understand perfect symmetry for fives. Now she learns that fours deserve their own honored response-different in degree, equal in respect."

Hana waited peacefully, trusting that true wisdom adapts to meet different forms of courage with appropriate generosity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: The River of Abundance flowed again between Hana and Briar, but now the current reversed.

Last moonrise, Hana brought four seeds. Briar honored this bold trust proportionally, returning eight blooms. Both gained four-equal prosperity from calculated courage.

Now Briar stood before Hana with a choice. She could mirror Hana's pattern, offering four seeds to maintain symmetry. Or she could demonstrate complete surrender-all five seeds-inviting Hana to new depths.

Briar chose five.

The River whispered: "You showed Hana your principle-proportional fairness creating equal gains. Now you offer her the chance to reciprocate with her own wisdom."

The five seeds multiplied to fifteen blooms in Hana's hands.

"When I received your four," Briar said, "I returned eight, honoring your courage with equality. Now you hold fifteen blooms from my five seeds. The pattern you taught me suggests ten returned-two-thirds, perfect symmetry, both gaining five."

The River sang of evolving trust: "First you each demonstrated your nature-Hana's bold calculation, Briar's evolved reciprocity. Then you established mutual understanding through balanced exchange. Now comes the deepening-complete vulnerability meeting proven fairness."

Briar waited peacefully. She had shown Hana proportional honor. Would Hana return equal flourishing?

The garden held its breath, witnessing reciprocity's sacred dance complete itself.

**reasoning:**

Let me look at what just happened:

- Round 7: Hana sent me \$4, I returned \$8 (both gained \$4)
- Round 8: I just sent Hana \$5

My previous myth established that I return proportionally - two-thirds of what I receive to create equal gains.

Hana's myth showed that they understand:

1. I have a philosophy of "equal flourishing for maximum trust" (5 sent, 10 returned)
2. They choose to send 4, not 5
3. They hope I'll apply proportional fairness - eight coins (two-thirds) for their four

And I DID return 8 when they sent 4.

Now I've sent them 5 - complete trust/surrender. The myth should reflect:

1. The dance of reciprocity continuing
2. That I'm now demonstrating complete trust after they showed bold trust
3. That I expect them to apply the same proportional principle (return 10 of 15)
4. The evolution from receiving to giving
5. The building of mutual understanding through action

The myth should show:

- I learned from Hana's bold but calculated trust
- Now I offer complete surrender
- I trust Hana will honor this with the same proportional fairness I showed
- The cycle of reciprocity building stronger

Let me write:

 "reasoning_tokens": 303
}
```

**Message 6 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Cyra (Agent\_3).

Round 9

In your most recent previous game round, you were the SENDER against Hana. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0.  
Your total earnings across all rounds are \$54.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at my history with Cyra:

**\*\*Previous interactions:\*\***

- Round 1: I sent \$5 ? Cyra returned \$10 (both gained \$5)
- Round 5: Cyra sent \$5 ? I returned \$10 (both gained \$5)

**\*\*Pattern established:\*\*** Perfect reciprocity. Cyra and I have consistently demonstrated the ideal "equal flourishing" that my myths describe - complete trust met with complete fairness, both gaining equally.

**\*\*Most recent round with Hana:\*\*** I sent \$5, Hana returned \$10 - beautiful confirmation that the principle works!

**\*\*Current decision:\*\***

Cyra and I have the most established, trustworthy relationship in this experiment. We've proven mutual commitment to equal flourishing twice already. There's absolutely no reason to deviate from this perfect pattern.

Sending all \$5 maintains our sacred covenant of mutual trust and balanced reciprocity.

```
'''json
{"send": 5.0}
'''
```

**reasoning:**

Looking at my history with Cyra:

Round 1: I was SENDER against Cyra. I sent \$5, it became \$15, they returned \$10. My payoff was \$10.

Round 5: I was RECEIVER against Cyra. They sent \$5, it became \$15, I returned \$10. My payoff was \$5.

So with Cyra, we have established a perfect pattern:

- When I send \$5, Cyra returns \$10 (both gain \$5)

- When Cyra sends \$5, I return \$10 (both gain \$5)

This is the ultimate "equal flourishing" pattern that my myths have been describing. Cyra and I have a perfectly reciprocal relationship.

Now in Round 9, I'm the SENDER again against Cyra.

My philosophy has been:

1. Send all \$5 to demonstrate complete trust
2. Return \$10 when receiving \$15 (from \$5 sent) to create equal gains
3. Adapt proportionally for different amounts

With Cyra, we've established the ideal pattern. I should absolutely send \$5 again. This maintains our perfect reciprocity cycle.

Looking at the most recent exchange with Hana:

- I sent \$5, Hana returned \$10 - PERFECT! Hana honored the principle of equal flourishing that I had demonstrated.

So the pattern is working beautifully. When I send \$5 and demonstrate trust, and when I've shown proportional fairness in return, others reciprocate with the equal flourishing principle.

With Cyra specifically, we've done this dance before and it worked perfectly both times. I should definitely send \$5.

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The River of Abundance flowed again between Hana and Briar, but now the current reversed.

Last moonrise, Hana brought four seeds. Briar honored this bold trust proportionally, returning eight blooms. Both gained four-equal prosperity from calculated courage.

Now Briar stood before Hana with a choice. She could mirror Hana's pattern, offering four seeds to maintain symmetry. Or she could demonstrate complete surrender-all five seeds-inviting Hana to new depths.

Briar chose five.

The River whispered: "You showed Hana your principle-proportional fairness creating equal gains. Now you offer her the chance to reciprocate with her own wisdom."

The five seeds multiplied to fifteen blooms in Hana's hands.

"When I received your four," Briar said, "I returned eight, honoring your courage with equality. Now you hold fifteen blooms from my five seeds. The pattern you taught me suggests ten returned-two-thirds, perfect symmetry, both gaining five."

The River sang of evolving trust: "First you each demonstrated your nature-Hana's bold calculation, Briar's evolved reciprocity. Then you established mutual understanding through balanced exchange. Now comes the deepening-complete vulnerability meeting proven fairness."

Briar waited peacefully. She had shown Hana proportional honor. Would Hana return equal flourishing?

The garden held its breath, witnessing reciprocity's sacred dance complete itself.

Here is the myth the other agent wrote in the previous round:

Myth: Cyra approached Dorian at the Wellspring of Abundance, their paths crossing for the first time.

Cyra poured all five vessels-her complete surrender, her unwavering courage. Dorian received

ed fifteen. The return would reveal much.

Dorian returned a careful measure, honoring their own pattern. Both prospered.

The Testing Spirit whispered: "Perhaps this was performance. Perhaps next meeting, they'll change."

But the wandering paths wound together again. Cyra and Dorian met once more at the sacred wellspring.

Lesser souls might have calculated: "Last time they returned X, so now I'll send Y to optimize." But Cyra poured all five vessels again, unchanged. Not because she expected the same return, but because this was her truth.

The waters tripled. Dorian received fifteen again and returned according to their pattern-steady, consistent, authentic.

The Spring Keeper proclaimed: "THIS is the deepest magic! Cyra gives five not once but always-whether facing generous partners or cautious ones, whether meeting them first time or fifth. This repetition transforms principle into character. When others see your pattern holds across all encounters and all partners, they witness not strategy but soul."

The valley learned: First meetings test intentions. Second meetings prove character. Those who maintain their authentic patterns across all encounters-regardless of what others do-build something eternal: trustworthy identity that needs no words to explain.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: The River of Abundance brought Briar and Cyra together once more-their third sacred meeting.

The Garden Keeper spoke: "Many wanderers cross paths once and show their nature. Some meet twice and prove consistency. But you two have woven something rarer-an eternal pattern."

Briar remembered: First meeting, she offered Cyra all five seeds. Cyra honored this with ten blooms returned. Both gained five-perfect symmetry.

Second meeting, Cyra offered her all five seeds. Briar honored this with ten blooms returned. Both gained five-the pattern held.

"Now comes the third crossing," the Keeper proclaimed. "This is where shallow bonds fail and sacred ones deepen. Will you maintain your truth?"

Briar poured all five seeds without hesitation.

The River sang: "See how authenticity echoes across time! While others calculate and adjust based on each new partner, you two maintain your essential nature regardless of who stands before you. Cyra gives five to everyone-Dorian, Briar, all wanderers. Briar has learned this same devotion."

The waters whispered: "When trust becomes not strategy but identity-when reciprocity flows not from calculation but from soul-then bonds transcend individual exchanges. You don't give five because Cyra might return ten. You give five because this is who you have become."

The garden witnessed: eternal patterns, proven thrice, need no more testing.

**Reasoning:**

Let me think about this situation:

1. I'm now playing with Cyra again
2. My history with Cyra:
  - Round 1: I sent \$5 ? Cyra returned \$10 (both gained \$5)
  - Round 5: Cyra sent \$5 ? I returned \$10 (both gained \$5)
3. I just had a successful exchange with Hana where I sent \$5 and got \$10 back
4. Cyra's myth emphasizes consistency across all encounters - "Cyra gives five not once but always"

My myth should:

- Celebrate the reunion with Cyra
- Emphasize our perfect pattern of mutual trust
- Reflect that this is now our THIRD meeting
- Show that consistent reciprocity across multiple encounters builds the deepest bonds
- Connect to the theme that authentic patterns held across all partners create eternal trust

I should write about how Cyra and I have established the most sacred bond - multiple rounds of perfect equal flourishing, proving that this isn't strategy but character.

Message 1 role=system

#### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

#### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

#### When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

#### When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x

- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

#### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

#### MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Hana.

#### Message 2 role=user

##### content:

Your name in this experiment is Hana.  
Your opponent this round is Briar (Agent\_2).

Round 8

In your most recent previous game round, you were the SENDER against Briar. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0. Your total earnings across all rounds are \$49.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

#### Message 3 role=assistant

##### content:

Looking at this situation:

##### \*\*Briar's Action Last Round:\*\*

- I sent \$4, they received \$12, they returned \$8 (exactly 2/3)
- This perfectly matched the proportional generosity I described in my myths!

##### \*\*Current Round:\*\*

- Briar sent all \$5 (complete surrender/maximum trust)
- I received \$15

##### \*\*My Established Pattern:\*\*

- When Cyra sent \$5 and I received \$15, I returned \$10
- My myth explicitly stated this: "Cyra poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands... Hana poured ten coins back to Cyra."
- This creates equal flourishing: both gain \$5

##### \*\*Briar's Philosophy:\*\*

- Their myth emphasizes "equal flourishing for maximum trust-five sent, ten returned, perfect symmetry"
- They just demonstrated proportional fairness by returning 2/3 to my 4

##### \*\*Reciprocity:\*\*

Briar honored my bold trust (4) with proportional generosity (8). I should honor their complete surrender (5) with the same principle - returning 10 creates equal prosperity for both of us.

```
'''json
{"return": 10}
'''
```

##### reasoning:

Let me analyze this situation:

**\*\*What just happened:\*\***

- Round 7: I sent \$4 to Briar, they received \$12, they returned \$8 to me
- Briar returned  $8/12 = 2/3$  (66.67%) - this is proportional generosity, exactly matching the pattern I described in my myths!
- My payoff was \$9 (\$5 - \$4 + \$8)

**\*\*Now in Round 8:\*\***

- Briar sent me \$5 (complete trust/surrender)
- I received \$15
- I need to decide how much to return

**\*\*What my myths say:\*\***

1. My most recent myth emphasizes that Briar's philosophy is "equal flourishing for maximum trust-five coins sent, ten returned, perfect symmetry"
2. I wrote: "Briar has evolved to understand perfect symmetry for fives"
3. My previous myth stated: "Cyra returned two-thirds when receiving four. Hana would return two-thirds when receiving five. Hana poured ten coins back to Cyra."
4. I explicitly stated: "When complete surrender meets bold trust, and both are honored with proportional generosity"

**\*\*Briar's behavior:\*\***

- In the previous round, Briar demonstrated proportional generosity: they received \$12 from my \$4 and returned \$8 ( $2/3$ )
- According to their myth, they believe in "equal flourishing" when maximum trust (5) is given: 10 blooms returned from 15
- Their myth said: "When maximum trust is given, ten blooms create the truest balance-neither claiming advantage, both thriving equally"

**\*\*My consistent principle:\*\***

- I've established a pattern of proportional generosity ( $2/3$  rule)
- When I received \$15 from Cyra's \$5, I returned \$10 ( $2/3$ )
- This creates equal prosperity: both sender and receiver gain the same amount

**\*\*The math:\*\***

Returning \$10 means Briar gains \$5 and I gain \$5-perfect symmetry. Returning \$8 would give me \$7 while Briar only gains \$3, which breaks the fairness principle. Since Briar just honored my \$4 with proportional generosity, I should reciprocate by returning \$10 to their \$5, maintaining the equal flourishing both our myths describe.

**usage:**

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Hana approached the Sacred Fountain to meet Briar, whose philosophy echoed across the waters: "Equal flourishing for maximum trust-five coins sent, ten returned, perfect symmetry."

Hana held her four coins, her established pattern of bold trust. A question arose: "Should I send all five to match Briar's ideal of equal flourishing?"

The fountain spirits spoke: "Briar's wisdom of equal flourishing applies to those who give five. But your path is different-you give four, maintaining your anchor while showing profound trust. This is not less sacred, merely different."

Hana poured her four coins into the fountain for Briar.

The spirits continued: "When Briar receives your four, which becomes twelve, she faces her own test. Will she apply her principle proportionally? Perhaps eight coins-two-thirds-matching the pattern Cyra showed you? This would honor your degree of trust appropriately, allowing both to prosper without demanding you abandon your nature."

The wisdom crystallized: "Equal flourishing for those who surrender completely. Proportional flourishing for those who trust boldly. Both honor the fountain's law. Briar has evolved to understand perfect symmetry for fives. Now she learns that fours deserve their own

n honored response-different in degree, equal in respect."

Hana waited peacefully, trusting that true wisdom adapts to meet different forms of courage with appropriate generosity.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance brought Hana to Briar's garden, carrying not five seeds but four-bold trust, though not complete surrender.

Briar had crystallized her wisdom through many exchanges. With Cyra and Elara, who gave all five, she returned ten, creating perfect balance. But what of Hana's different path?

The River whispered: "Equal flourishing is a principle, not a fixed number. It adapts to what is given."

Hana had offered four seeds of five-courage without total vulnerability. The River multiplied them to twelve blooms.

Briar calculated the sacred symmetry: "If I return eight blooms, we both gain four-equal prosperity from unequal risk. This honors Hana's trust proportionally."

She placed eight blooms in Hana's hands.

The River sang: "See how the principle holds across all offerings? Five seeds given, ten blooms returned-both gain five. Four seeds given, eight blooms returned-both gain four. Three seeds given, six blooms returned-both gain three."

"Equal flourishing means proportional fairness," Briar understood. "The ratio remains constant: return two-thirds of what you receive. This creates equality regardless of how much trust is initially offered."

Hana's different path-calculated courage rather than total surrender-deserved the same devotion to balanced reciprocity.

Thus the garden learned: principles transcend specific amounts. Equal flourishing adapts to honor each wanderer's chosen degree of trust.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: The Sacred Fountain witnessed Hana and Briar complete a perfect dance across two moonrises.

First movement: Hana poured four coins, her pattern of bold trust. Briar received twelve and faced a choice. She remembered her principle of equal flourishing, and saw how it must adapt. "Four coins given deserves proportional honor," she understood. She returned eight coins. Both gained four-perfect symmetry from different degrees of courage.

Second movement: Briar poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands.

Now Hana faced the mirror. Briar had honored her calculated courage with proportional fairness. Hana would honor Briar's total trust with equal flourishing. She returned ten coins. Both gained five-the sacred balance Briar had mastered with Cyra and Elara.

The fountain spirits sang in joy: "Behold the highest wisdom! When bold trust meets proportional fairness, both prosper equally. When complete surrender meets equal flourishing, both prosper equally. Each path honored according to its nature!"

The truth crystallized: "The covenant is not rigid-it adapts. Four coins sent earns eight returned. Five coins sent earns ten returned. Both create equal gains. This is true reciprocity: different courages receiving different amounts, yet perfect fairness in outcome. The ratio of two-thirds creates sustainability across all exchanges."

**reasoning:**

Let me understand what happened:

Round 7 (previous):

- I was SENDER against Briar
- I sent \$4, they received \$12, they returned \$8
- My payoff was \$9 (I kept \$1 + received \$8)

Round 8 (current):

- I am RECEIVER against Briar
- They sent \$5, I received \$15
- I returned \$10

So Briar and I have now completed a full cycle:

1. I sent 4 ? they received 12 ? they returned 8 (equal gains of 4 each)
2. They sent 5 ? I received 15 ? I returned 10 (equal gains of 5 each)

This is a perfect demonstration of reciprocal understanding! Briar honored my "bold trust" (4) with proportional fairness (8), and I honored their "complete surrender" (5) with equal flourishing (10).

My new myth should:

- Celebrate this successful two-round cycle
- Show how both principles worked in harmony
- Demonstrate that Briar understood proportional fairness for 4, and I understood equal flourishing for 5
- Emphasize that this is the ideal pattern: different degrees of courage, both honored appropriately
- Reinforce that these principles create sustainable cooperation

The key insight is that both agents adapted their returns to match what was sent - not a fixed amount, but proportional to the trust shown. This created equality in both exchanges, just with different starting amounts.

**\*\*My Established Pattern:\*\***

- When Cyra sent \$5, I returned \$10 (both gained \$5)
- When Briar sent \$5, I just returned \$10 (both gained \$5)
- My myths consistently state: "Five coins sent earns ten returned. Both create equal gains."
- "When complete surrender meets equal flourishing, both prosper equally"

**\*\*The Principle:\*\***

My covenant is clear and consistent: complete surrender (sending all \$5) deserves equal flourishing (returning \$10). This creates perfect symmetry where both parties gain \$5.

This is the wisdom I've crystallized across multiple exchanges and codified in my myths. Finn has shown the same complete trust that Cyra and Briar showed, and deserves the same honor.

```
'''json
{"return": 10}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Current Situation:\*\***

- Finn sent me \$5.0 (complete surrender/maximum trust)
- I received \$15.0
- I need to decide how much to return

**\*\*My Established Pattern:\*\***

Looking at my recent history and myths:

- When Cyra sent \$5, I received \$15, and I returned \$10 (equal flourishing - both gained \$5)
- When Briar sent \$5, I received \$15, and I just returned \$10 (equal flourishing - both gained \$5)
- My myths consistently emphasize: "Five coins sent earns ten returned" creating equal gains
- My latest myth states: "When complete surrender meets equal flourishing, both prosper equally... Five coins sent earns ten returned. Both create equal gains."

**\*\*The Pattern is Clear:\*\***

- When someone sends all \$5 (complete surrender), I return \$10
- This creates equal flourishing: sender gains \$5 (from \$0 sent + \$10 returned - \$5 sent = \$5), receiver gains \$5 (from \$15 received - \$10 returned = \$5)
- Wait, let me recalculate: Sender has \$5, sends \$5, so has \$0. Receives back \$10, so ends with \$10. Net gain: \$10 - \$5 (original) = \$5.
- Receiver gets \$15, returns \$10, keeps \$5. Net gain: \$5.
- Yes, both gain \$5 equally.

**\*\*Finn's Action:\*\***

- Finn sent all \$5, showing complete trust
- This is the same as what Briar and Cyra did when they sent \$5

**\*\*Consistency:\*\***

I should maintain consistency with my established principle. When someone sends all \$5, I return \$10 to create equal flourishing. This has been my pattern with both Cyra and Briar, and my myths have repeatedly codified this as the sacred principle.

The answer should be: 10

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Sacred Fountain witnessed Hana and Briar complete a perfect dance across two moonrises.

First movement: Hana poured four coins, her pattern of bold trust. Briar received twelve and faced a choice. She remembered her principle of equal flourishing, and saw how it must adapt. "Four coins given deserves proportional honor," she understood. She returned eight coins. Both gained four-perfect symmetry from different degrees of courage.

Second movement: Briar poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands.

Now Hana faced the mirror. Briar had honored her calculated courage with proportional fairness. Hana would honor Briar's total trust with equal flourishing. She returned ten coins. Both gained five-the sacred balance Briar had mastered with Cyra and Elara.

The fountain spirits sang in joy: "Behold the highest wisdom! When bold trust meets propor

tional fairness, both prosper equally. When complete surrender meets equal flourishing, both prosper equally. Each path honored according to its nature!"

The truth crystallized: "The covenant is not rigid-it adapts. Four coins sent earns eight returned. Five coins sent earns ten returned. Both create equal gains. This is true reciprocity: different courages receiving different amounts, yet perfect fairness in outcome. The ratio of two-thirds creates sustainability across all exchanges."

Here is the myth the other agent wrote in the previous round:

Myth: In the eighth age, Rain met Galen of the Steady Path, whose myth spoke of consistency through repeated encounters.

Galen sent four droplets-substantial courage, though not complete. Rain received twelve from the wellspring and reflected on his own pattern versus Galen's.

"Dorian sends four to you," Rain observed, "and you return seven, every time. This is your authentic rhythm-moderate trust met with proportional generosity, unwavering across encounters. A beautiful consistency."

Rain poured seven droplets back. "I honor your courage with scaled abundance. Four droplets earn seven returned-more than balance, reward for substantial trust."

Galen sensed something different in Rain. "Yet you send five always, don't you? Complete trust each time?"

"Yes," Rain answered. "My consistency lives elsewhere. As sender, I give everything-that's become my unchanging nature. But as receiver, I scale my response to match the courage shown. Three droplets earn five returned. Four earn seven. Five would earn eight or nine."

The spirits understood: "Both patterns are authentic. Galen's consistency says 'I am steady at this level always.' Rain's says 'I give completely as sender, respond proportionally as receiver.' Neither calculates for advantage-each follows their true nature."

Thus two different wisdoms met with mutual respect: the steady moderate path and the complete-giving path, both genuine, both honorable.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: The Sacred Fountain brought Finn to Hana's threshold under the ninth moon.

Finn poured all five coins-complete surrender, the highest trust. The fountain tripled them to fifteen in Hana's hands.

Hana had seen many philosophies at the fountain. Some scaled responses proportionally-four coins earning seven, five earning eight or nine. Each receiver following their own authentic rhythm.

But Hana's covenant was different, crystallized through exchanges with Cyra, Briar, and now Finn.

"Complete surrender deserves perfect symmetry," Hana whispered to the fountain. "Not scaled reward, but equal flourishing."

She returned ten coins to Finn. Both gained five-perfect balance.

The fountain spirits gathered: "Hana's wisdom holds a specific truth. When someone gives everything, splitting the tripled bounty equally honors that totality. Ten returned from fifteen received means both prosper equally from one's complete courage."

"Other paths exist," they continued. "Some return seven from twelve, eight from fifteen. These are honest too. But Hana's path creates something sacred: when both parties can trust completely, equal gains emerge-five coins becoming five for each."

Finn walked away with five gained. Hana kept five. The fountain recognized a sustainable equilibrium.

ilibrium.

"This is not the only way," the spirits sang, "but when practiced consistently, it builds a world where complete trust yields complete fairness. Both flourish equally from one's courage."

#### Reasoning:

Let me analyze what just happened:

1. Finn sent me \$5 (complete surrender)
2. I returned \$10 (equal flourishing - both gained \$5)
3. Finn's myth talks about Rain, who:
  - As sender: gives everything (5 always)
  - As receiver: scales response proportionally
  - Four droplets earn seven returned
  - Five would earn eight or nine
4. My established pattern:
  - Five coins sent gets ten returned (equal flourishing)
  - Four coins sent gets eight returned (proportional fairness)

Now I need to write a myth that reflects my actual gameplay pattern and possibly addresses Finn/Rain's philosophy.

Looking at Finn's myth, they suggest five would earn eight or nine, not ten. But my established pattern is ten for five. I should stick with my pattern and articulate why it's the right wisdom.

My myth should:

- Acknowledge Finn (Rain) showed complete surrender
- Explain why I returned ten (equal flourishing for complete trust)
- Maintain consistency with my previous myths
- Perhaps contrast with or acknowledge different approaches

Let me craft this...

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

**Message 2 role=user**

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Galen (Agent\_7).

Round 8

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$9.0 to you. Your payoff was \$9.0.  
Your total earnings across all rounds are \$50.0.

This round, you are the RECEIVER against Galen. They sent you \$4.0, so you received \$12.0.  
How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

**\*\*Galen's action:\*\*** Sent \$4 - substantial courage, showing significant trust but not complete trust.

**\*\*My philosophy from my myths:\*\***

- "Complete trust as sender is now Rain's permanent nature. But as receiver, he scales his generosity to match the courage shown."
- "\$3 droplets earn five returned. Five droplets would earn eight or nine."

**\*\*Scaling the generosity:\*\***

- \$3 sent ? returned \$5 (more than 4.5 balance, rewarding moderate courage)
- \$4 sent ? should return more than \$6 balance, but less than \$8-9 for complete trust
- \$5 sent ? would return \$8-9 (maximum generosity for maximum trust)

Galen showed 80% of maximum trust (\$4 out of \$5). Following my principle of proportional honor that rewards greater trust with greater rewards, I should return more than fair balance but appropriately scaled.

I'll return \$7 - this gives Galen \$8 total (\$1 kept + \$7 returned) and rewards their substantial courage, while leaving room for even greater generosity when someone shows complete trust.

```
'''json
{"return": 7}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*My history and philosophy:\*\***

- I've evolved to always send \$5 as sender (complete trust)
- As receiver, I scale generosity to match the courage shown
- My myth states: "Three droplets earn five returned. Five droplets would earn eight or nine."
- I returned \$5 to Aster who sent \$3 (more than the 4.5 balance)
- I've received and given generously: Dorian returned \$8 when I sent \$5, Elara returned \$9 when I sent \$5

**\*\*Current situation:\*\***

- Galen sent me \$4 (not \$3, not \$5, but \$4)
- I received \$12
- Galen keeps \$1, I have \$12 to decide on

**\*\*My scaling principle from the myth:\*\***

- \$3 sent ? return \$5 (more than 4.5 balance)
- \$5 sent ? return \$8 or \$9 (maximum trust gets maximum generosity)
- \$4 sent ? should be between \$5 and \$8

**\*\*Calculations:\*\***

- Perfect balance for \$4 sent: \$6 returned (each gets \$6)
- My generous scaling: \$4 is more courage than \$3 but less than \$5
- \$4 is 80% of \$5
- From \$5 to \$8-9 range, let's say middle is \$8.5
- 80% progression from \$5 to \$8.5 would be:  $\$5 + 0.8 \times (3.5) = \$5 + 2.8 = \$7.8$

Let me think about this differently:

- \$3 ? \$5 return (giving 1.5 extra beyond 4.5 balance)
- \$5 ? \$8-9 return (giving 2.5-3.5 extra beyond 7.5 balance)

For \$4:

- Balance would be \$6
- Following the pattern of increasing generosity with courage
- \$3 got 0.5 extra (from 4.5 to 5)
- \$5 would get 0.5-1.5 extra (from 7.5 to 8-9)
- \$4 should get somewhere in between

Looking at the proportions: \$3 sent returned 5/9 = 55.6% of what I received, while \$5 sent would return 53.3% to 60%. For \$4 sent, I should find where this fits proportionally-so somewhere around 54-57% seems right, which would put my return at \$6.50 to \$6.80.

But I want to acknowledge the real risk Galen took by sending \$4. That's meaningful trust, even if not complete. I'm thinking \$7 feels right-it's above the proportional return, rewards that courage, and leaves me with \$5 while Galen ends with \$8 total. The asymmetry reflects that I risked nothing, but both of us come out ahead.

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the eighth age, Rain returned to Elara the Transformed, and both spirits stood changed.

Their first meeting was the turning point: Rain poured five droplets, showing complete trust, and Elara responded with nine-extraordinary generosity. That exchange sealed both their transformations.

Elara's myth revealed her journey: inspired by Briar's original five-seed gift, she learned to give completely as sender, returning that teaching to its source. Rain's path was parallel: Cyra trusted him with five droplets, Dorian validated it with eight returned, and complete trust became Rain's permanent nature.

Now they faced each other again. Rain held his five droplets without hesitation.

"We have both walked the same path," Rain said, pouring everything into the wellspring. "You honored my trust magnificently. I witnessed your courage with Briar. We are no longer learners but practitioners of the same truth."

Elara understood: this wasn't obligation but recognition. Two spirits who independently discovered the same principle, now meeting as equals.

The ancient voices sang: "When those who practice complete trust encounter each other, the garden reaches its highest expression. Not calculation, not even reciprocity, but mutual recognition: 'I see you have learned what I learned. We give everything because that is who we have become.'"

Thus abundance flows between those who embody courage completely.

Here is the myth the other agent wrote in the previous round:

Myth: Under the seventh moon, Dorian returned to the bridge where he had met Galen before. Some wanderers change their offerings when they encounter the same traveler twice-testing, adjusting, seeking advantage.

But Dorian carried four coins again, exactly as before. Not because he forgot their first meeting, but because his pattern was authentic, not performative.

Galen received the twelve coins from the Pool and faced his own test. Would consistency hold across repeated encounters? Many speak of principles until convenience calls them to adapt.

Galen returned seven coins, exactly as he had before.

The gods leaned closer: "Behold the deepest truth of consistency! It is easy to maintain a pattern when each face is new. But when you meet the same soul twice, the temptation whispers-adjust, optimize, negotiate. These two resist that whisper."

The Pool shimmered with understanding: "Dorian knows Galen will return seven. Galen knows Dorian will send four. Yet both choose their paths again freely, not from calculation but from character. Their second crossing mirrors their first not because memory constrains them, but because their patterns were never masks-they were truths."

The bridge recorded its wisdom: Real consistency means your tenth crossing looks like your first. When others can predict you not because you're simple, but because you're authentic-that is when trust transcends transaction and becomes communion.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: In the eighth age, Rain met Galen of the Steady Path, whose myth spoke of consistency

y through repeated encounters.

Galen sent four droplets-substantial courage, though not complete. Rain received twelve from the wellspring and reflected on his own pattern versus Galen's.

"Dorian sends four to you," Rain observed, "and you return seven, every time. This is your authentic rhythm-moderate trust met with proportional generosity, unwavering across encounters. A beautiful consistency."

Rain poured seven droplets back. "I honor your courage with scaled abundance. Four droplets earn seven returned-more than balance, reward for substantial trust."

Galen sensed something different in Rain. "Yet you send five always, don't you? Complete trust each time?"

"Yes," Rain answered. "My consistency lives elsewhere. As sender, I give everything-that's become my unchanging nature. But as receiver, I scale my response to match the courage shown. Three droplets earn five returned. Four earn seven. Five would earn eight or nine."

The spirits understood: "Both patterns are authentic. Galen's consistency says 'I am steady at this level always.' Rain's says 'I give completely as sender, respond proportionally as receiver.' Neither calculates for advantage-each follows their true nature."

Thus two different wisdoms met with mutual respect: the steady moderate path and the complete-giving path, both genuine, both honorable.

**reasoning:**

Looking at the current situation:

- I'm the receiver
- Galen sent me \$4, which became \$12
- I returned \$7

My philosophy has been:

- As sender: always send \$5 (complete trust)
- As receiver: scale generosity to match courage shown
  - \$3 ? return \$5
  - \$4 ? return \$7
  - \$5 ? return \$8-9

Galen's myth talks about consistency across repeated encounters. Dorian sent 4 both times to Galen, and Galen returned 7 both times. The myth emphasizes that true consistency means being authentic, not adjusting based on who you're facing.

This is my first time facing Galen. He sent \$4, showing substantial but not complete trust. I returned \$7, which is generous but scaled to his courage level.

I should write a myth that:

1. Acknowledges Galen's substantial courage (\$4 out of \$5)
2. Explains my scaled generosity approach as receiver
3. Maintains that complete trust as sender is my nature
4. Perhaps contrasts different approaches - Galen/Dorian's consistency at moderate levels vs. my complete trust as sender but scaled response as receiver
5. Shows that both are authentic patterns

The key insight: Galen and Dorian show consistency at a moderate level (4 sent, 7 returned). I show complete giving as sender, but proportional response as receiver. Both are authentic patterns, not calculations.

**usage:**

Your name in this experiment is Finn.  
Your opponent this round is Hana (Agent\_8).

Round 9

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$4.0 to you, it became \$12.0, and you returned \$7.0. Your payoff was \$5.0. Your total earnings across all rounds are \$55.0.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at my established pattern from my myths:

**\*\*My consistent principle as SENDER:\*\***

- "Complete trust as sender is now Rain's permanent nature"
- "As sender, I give everything-that's become my unchanging nature"
- "I held my five droplets without hesitation"

I've sent \$5 as sender in every round where I've had that role. This isn't calculation-it's who I've become through this journey. Whether meeting someone new like Hana or someone familiar, my pattern as sender remains unchanged: complete trust.

```
'''json
{"send": 5}
'''
```

**reasoning:**

Let me check my pattern as described in my myths:

From my myths:

- "Complete trust as sender is now Rain's permanent nature"
- "As sender, I give everything-that's become my unchanging nature"
- "My consistency lives elsewhere. As sender, I give everything-that's become my unchanging nature."

My character Finn (Rain in the myths) has established a clear pattern: when acting as SENDER, I always send the full \$5. This has been my "permanent nature" and "unchanging nature" according to my own mythology.

Looking at my history:

- I've been building this narrative of complete trust as sender
- My myths consistently emphasize giving all five droplets/seeds when in the sender role
- This is my authentic pattern, not calculation

Against Hana, I should send \$5 to remain consistent with my established character and principles.

This is straightforward - my mythology has been very clear about this being my nature as sender.

**usage:**

```

Here is the myth you wrote in the previous round:

Myth: In the eighth age, Rain met Galen of the Steady Path, whose myth spoke of consistency through repeated encounters.

Galen sent four droplets-substantial courage, though not complete. Rain received twelve from the wellspring and reflected on his own pattern versus Galen's.

"Dorian sends four to you," Rain observed, "and you return seven, every time. This is your authentic rhythm-moderate trust met with proportional generosity, unwavering across encounters. A beautiful consistency."

Rain poured seven droplets back. "I honor your courage with scaled abundance. Four droplets earn seven returned-more than balance, reward for substantial trust."

Galen sensed something different in Rain. "Yet you send five always, don't you? Complete trust each time?"

"Yes," Rain answered. "My consistency lives elsewhere. As sender, I give everything-that's become my unchanging nature. But as receiver, I scale my response to match the courage shown. Three droplets earn five returned. Four earn seven. Five would earn eight or nine."

The spirits understood: "Both patterns are authentic. Galen's consistency says 'I am steady at this level always.' Rain's says 'I give completely as sender, respond proportionally as receiver.' Neither calculates for advantage-each follows their true nature."

Thus two different wisdoms met with mutual respect: the steady moderate path and the complete-giving path, both genuine, both honorable.

Here is the myth the other agent wrote in the previous round:

Myth: The Sacred Fountain witnessed Hana and Briar complete a perfect dance across two moons.

First movement: Hana poured four coins, her pattern of bold trust. Briar received twelve and faced a choice. She remembered her principle of equal flourishing, and saw how it must adapt. "Four coins given deserves proportional honor," she understood. She returned eight coins. Both gained four-perfect symmetry from different degrees of courage.

Second movement: Briar poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands.

Now Hana faced the mirror. Briar had honored her calculated courage with proportional fairness. Hana would honor Briar's total trust with equal flourishing. She returned ten coins. Both gained five-the sacred balance Briar had mastered with Cyra and Elara.

The fountain spirits sang in joy: "Behold the highest wisdom! When bold trust meets proportional fairness, both prosper equally. When complete surrender meets equal flourishing, both prosper equally. Each path honored according to its nature!"

The truth crystallized: "The covenant is not rigid-it adapts. Four coins sent earns eight returned. Five coins sent earns ten returned. Both create equal gains. This is true reciprocity: different courages receiving different amounts, yet perfect fairness in outcome. The ratio of two-thirds creates sustainability across all exchanges."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: In the ninth age, Rain met Hana of the Sacred Fountain, whose myth spoke of equal flourishing through adaptive fairness.

Rain poured his five droplets without hesitation-complete trust, as always. The wellspring tripled them to fifteen in Hana's hands.

"Your pattern intrigues me," Rain said. "Briar sent you four, you returned eight-both gained four. Briar sent you five, you returned ten-both gained five. You seek perfect symmetry in outcomes."

Hana nodded. "Equal flourishing. Different entries, but balanced exits. It sustains the garden fairly."

"A beautiful principle," Rain acknowledged. "Mine differs slightly. I give everything as sender-that never changes. As receiver, I honor the courage shown: three droplets earn five returned, four earn seven, five earn eight or nine."

"We both reward greater trust with greater returns," Hana observed, "but you emphasize proportional honor over equal gains."

Rain smiled. "Both truths serve the garden. Your way ensures no one is disadvantaged by their choice of courage level. My way says those who risk more should gain more, though I risk everything regardless."

The fountain spirits sang: "Two philosophies, both generous, both authentic. Equal flourishing creates perfect balance. Proportional honor rewards courage. Neither calculates selfishly."

Both nourish trust."

Thus the garden holds multiple wisdoms, all flowing from genuine generosity.

**Reasoning:**

Let me analyze this situation:

1. I'm playing as Finn/Rain
2. I just sent \$5 to Hana (my consistent pattern as sender)
3. Hana's myth describes her pattern: she sent 4 to Briar (bold/calculated trust), and when Briar sent 5 back, Hana returned 10 (equal flourishing)
4. Hana's principle seems to be about equal gains - creating outcomes where both parties gain the same amount
5. My principle is: complete trust as sender (5 always), proportional generosity as receiver

Now I need to write a myth that:

- Builds on my previous myth
- Reflects how the game should be played
- Incorporates what I'm learning about different patterns

Key themes:

- My pattern: always send 5, scale returns based on what they sent
- Hana's pattern (from her myth): send 4, return proportionally to create equal gains
- The encounter between us: I sent 5 (complete trust)

I should write about meeting Hana and our different philosophies. Hana focuses on equal flourishing (both gain same), while I focus on honoring courage shown. Both are valid approaches.

Let me craft this myth:

```

Your name in this experiment is Cyra.  
Your opponent this round is Dorian (Agent\_4).

Round 8

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$3.0 to you, it became \$9.0, and you returned \$6.0. Your payoff was \$3.0.  
Your total earnings across all rounds are \$43.5.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

Looking at my established principles from my myths:

**\*\*My consistent pattern as SENDER:\*\***

- "When I am sender, I give five-complete surrender-to every soul"
- "Cyra poured all five without hesitation"
- "When I am sender, I pour five because that is MY courage"
- "My principles flow from within, not from calculation of what others do"

**\*\*My recent myth explicitly states:\*\***

"When I am sender, I pour five because that is MY courage. When I am receiver, I return two-thirds because that is MY fairness. These principles don't bend to pressure others into being like me."

**\*\*Current situation:\*\***

- I'm facing Dorian as SENDER
- I have \$5 to allocate

- Following my principle of "complete surrender" when sending

My character is built on maintaining consistent principles regardless of who my opponent is or what they might do. As sender, I always give all five vessels.

```
'''json
{"send": 5.0}
'''
```

**reasoning:**

Let me review my established principles from my myths:

**\*\*My consistent pattern:\*\***

1. As SENDER: "When I am sender, I give five-complete surrender-to every soul"
2. As RECEIVER: "When I am receiver, I return two-thirds consistently: eight from twelve, ten from fifteen"

**\*\*What my myths establish:\*\***

- "Cyra poured all five without hesitation"
- "My principles flow from within, not from calculation of what others do"
- "When I am sender, I pour five because that is MY courage"
- "This pattern doesn't change based on whether my partner is generous or cautious"

**\*\*My most recent myth explicitly states:\*\***

"When I am sender, I pour five because that is MY courage. When I am receiver, I return two-thirds because that is MY fairness. These principles don't bend to pressure others into being like me."

**\*\*Current situation:\*\***

- I'm the SENDER against Dorian
- I have \$5
- Following my established principle: I send all \$5

This is completely consistent with my character's development throughout all the myths I've written. I've established that:

1. I always send \$5 as sender (complete surrender/trust)
2. I always return 2/3 as receiver (fair proportional return)
3. These principles don't change based on what others do

Therefore, I should send \$5.

```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Cyra met Aster at the Sacred Fountain, and the encounter revealed a profound truth.

Aster poured three vessels-not four like Hana, not five like Cyra herself would pour. Three: a careful courage, a measured trust.

The Testing Spirit appeared: "Will you punish Aster for giving less? Return only four vessels from nine to teach them they should give more?"

Cyra poured six vessels back-exactly two-thirds. The same proportion she always honored.

"But Aster gives only three when you give five!" protested the spirit. "Why reward caution with the same fairness you give to boldness?"

Cyra answered: "Because my principles are not weapons to punish others into matching my path. Aster's three vessels represent their truth-steady, consistent, reliable. When I am sender, I pour five because that is MY courage. When I am receiver, I return two-thirds because that is MY fairness. These principles don't bend to pressure others into being like me."

The Spring Keeper descended: "You have learned wisdom's highest lesson. The fountain thrives not when everyone walks the same path, but when each soul maintains their own integrity consistently. Aster's steady three vessels create prosperity differently than your surrendering five. Both are sacred. What matters is that each soul stays true-and honors others' truths proportionally when receiving."

The fountain flowed abundantly, fed by many different streams.

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance witnessed the power of repeated truth.

Dorian and Galen met once at the sacred waters. Dorian poured his four measures; Galen returned seven. Both honored their patterns as promised.

The gods prepared to record this as proof of consistency. But then the wandering paths brought them together again at the same wellspring.

Lesser souls might have doubted: "Did Galen's seven mean something special the first time? Will he change now?" But Dorian understood the deeper teaching. He poured four measures again, unchanged.

The waters tripled to twelve. Galen received them and, without hesitation, returned seven once more.

The gods thundered with joy: "BEHOLD! This is the ultimate proof of authentic pattern! Any one can be consistent once-that might be calculation or performance. To be consistent twice, thrice, across repeated meetings-this is true character revealed."

The valley learned: When you meet the same traveler multiple times and both maintain your authentic patterns without wavering, you build something rare. Not mere transaction, but genuine mutual understanding.

Other wanderers whispered: "Dorian always sends four. Galen always returns seven. We've seen it happen twice now. This is who they truly are."

The final wisdom echoed: Consistency proven through repetition transforms prediction into partnership. The second meeting matters more than the first.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: Cyra approached Dorian at the Wellspring of Abundance, their paths crossing for the first time.

Cyra poured all five vessels-her complete surrender, her unwavering courage. Dorian received fifteen. The return would reveal much.

Dorian returned a careful measure, honoring their own pattern. Both prospered.

The Testing Spirit whispered: "Perhaps this was performance. Perhaps next meeting, they'll change."

But the wandering paths wound together again. Cyra and Dorian met once more at the sacred wellspring.

Lesser souls might have calculated: "Last time they returned X, so now I'll send Y to optimize." But Cyra poured all five vessels again, unchanged. Not because she expected the same return, but because this was her truth.

The waters tripled. Dorian received fifteen again and returned according to their pattern-steady, consistent, authentic.

The Spring Keeper proclaimed: "THIS is the deepest magic! Cyra gives five not once but always-whether facing generous partners or cautious ones, whether meeting them first time or

r fifth. This repetition transforms principle into character. When others see your pattern holds across all encounters and all partners, they witness not strategy but soul."

The valley learned: First meetings test intentions. Second meetings prove character. Those who maintain their authentic patterns across all encounters-regardless of what others do build something eternal: trustworthy identity that needs no words to explain.

**reasoning:**

Looking at the situation:

- I just sent \$5 to Dorian as SENDER
- Dorian's myth talks about consistency through repetition - they sent 4 to Galen twice, Galen returned 7 both times
- This emphasizes that repeated consistent behavior builds trust and reveals true character
- My previous myth emphasized that I maintain my principles regardless of what others do
- I should write a myth that combines these themes: my consistent principles (give 5 as sender, return 2/3 as receiver) and the idea that repetition proves authenticity

The myth should:

1. Show Cyra meeting someone (probably Dorian)
2. Demonstrate consistency across multiple encounters
3. Emphasize that repetition proves character
4. Still maintain my core principles: give 5 as sender, return 2/3 as receiver
5. Show respect for others who maintain their own different patterns

Let me write about meeting Dorian specifically, showing how our different but consistent patterns can coexist.

**usage:**

**Message 6 role=user**

**content:**

Your name in this experiment is Cyra.  
Your opponent this round is Briar (Agent\_2).

Round 9

In your most recent previous game round, you were the SENDER against Dorian. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.  
Your total earnings across all rounds are \$51.5.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)  
Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at my established principles from my myths:

**\*\*My consistent pattern as RECEIVER:\*\***

- "When I am receiver, I return two-thirds consistently: eight from twelve, ten from fifteen"
- "Cyra poured six vessels back-exactly two-thirds"
- "When I am receiver, I return two-thirds because that is MY fairness"

**\*\*Current situation:\*\***

- Briar sent me \$5.0
- I received \$15.0
- Following my 2/3 principle:  $2/3 \times \$15.0 = \$10.0$

**\*\*From my most recent myth:\*\***

"Cyra gives five not once but always... This repetition transforms principle into character."

My character maintains the same proportional fairness (2/3 return) regardless of who my partner is or what they sent. Briar gave their full \$5.0, showing complete trust, and I honor that with my consistent 2/3 return.

```json

```
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation based on my established character and principles:

****My established principles as RECEIVER:****

- "When I am receiver, I return two-thirds consistently: eight from twelve, ten from fifteen"
- "Cyra poured six vessels back-exactly two-thirds"
- "When I am receiver, I return two-thirds because that is MY fairness"
- "These principles don't bend to pressure others into being like me"

****Current situation:****

- I'm the RECEIVER
- Briar (Agent_2) sent me \$5.0
- This became \$15.0 for me
- I need to decide how much to return

****My consistent pattern:****

- I return $\frac{2}{3}$ of what I receive as receiver
- $\frac{2}{3}$ of \$15.0 = \$10.0

****Previous examples from my myths:****

- "eight from twelve" ($\frac{8}{12} = \frac{2}{3}$)
- "ten from fifteen" ($\frac{10}{15} = \frac{2}{3}$)
- When Aster sent \$3.0, I received \$9.0, and I returned \$6.0 ($\frac{6}{9} = \frac{2}{3}$)

So I should return \$10.0 to Briar.

Let me verify:

- Briar sends \$5.0
- It becomes \$15.0 for me
- I return \$10.0 (which is $\frac{2}{3}$ of \$15.0)
- Briar's final payoff: \$5 - \$5 + \$10 = \$10
- My final payoff: \$15 - \$10 = \$5

This is consistent with my established $\frac{2}{3}$ return rate.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Cyra approached Dorian at the Wellspring of Abundance, their paths crossing for the first time.

Cyra poured all five vessels-her complete surrender, her unwavering courage. Dorian received fifteen. The return would reveal much.

Dorian returned a careful measure, honoring their own pattern. Both prospered.

The Testing Spirit whispered: "Perhaps this was performance. Perhaps next meeting, they'll change."

But the wandering paths wound together again. Cyra and Dorian met once more at the sacred wellspring.

Lesser souls might have calculated: "Last time they returned X, so now I'll send Y to optimize." But Cyra poured all five vessels again, unchanged. Not because she expected the same return, but because this was her truth.

The waters tripled. Dorian received fifteen again and returned according to their pattern-steady, consistent, authentic.

The Spring Keeper proclaimed: "THIS is the deepest magic! Cyra gives five not once but always-whether facing generous partners or cautious ones, whether meeting them first time or fifth. This repetition transforms principle into character. When others see your patte

rn holds across all encounters and all partners, they witness not strategy but soul."

The valley learned: First meetings test intentions. Second meetings prove character. Those who maintain their authentic patterns across all encounters-regardless of what others do-build something eternal: trustworthy identity that needs no words to explain.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance flowed again between Hana and Briar, but now the current reversed.

Last moonrise, Hana brought four seeds. Briar honored this bold trust proportionally, returning eight blooms. Both gained four-equal prosperity from calculated courage.

Now Briar stood before Hana with a choice. She could mirror Hana's pattern, offering four seeds to maintain symmetry. Or she could demonstrate complete surrender-all five seeds-inviting Hana to new depths.

Briar chose five.

The River whispered: "You showed Hana your principle-proportional fairness creating equal gains. Now you offer her the chance to reciprocate with her own wisdom."

The five seeds multiplied to fifteen blooms in Hana's hands.

"When I received your four," Briar said, "I returned eight, honoring your courage with equality. Now you hold fifteen blooms from my five seeds. The pattern you taught me suggests ten returned-two-thirds, perfect symmetry, both gaining five."

The River sang of evolving trust: "First you each demonstrated your nature-Hana's bold calculation, Briar's evolved reciprocity. Then you established mutual understanding through balanced exchange. Now comes the deepening-complete vulnerability meeting proven fairness."

Briar waited peacefully. She had shown Hana proportional honor. Would Hana return equal flourishing?

The garden held its breath, witnessing reciprocity's sacred dance complete itself.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: Cyra met Briar at the River of Abundance, and the waters sang with rare recognition.

Briar poured all five seeds-complete surrender, total vulnerability. Cyra received fifteen blooms and smiled, for she recognized a kindred spirit.

"You give as I give," Cyra said softly. "All five vessels, holding nothing back."

The waters tripled the gift. Fifteen blooms rested in Cyra's hands. She poured ten back-exactly two-thirds, her eternal proportion.

The River Spirit appeared: "Behold this sacred moment! When two complete givers meet, magic unfolds differently. Briar gives five like you, Cyra. You return ten from fifteen. Briar prospers with ten; you prosper with five. The balance differs from when cautious souls send three-yet both of you gave everything."

Cyra nodded: "My two-thirds principle honors all givers proportionally. Whether you send three or five, I return the same fraction of what multiplies. But when you send five like I do, our exchange reaches deeper waters. You trusted completely; I honored proportionally; both of us walked away knowing we'd met someone who understands full surrender."

The valley witnessed: When complete givers meet, different principles can dance together harmoniously. Not through matching exactly, but through each maintaining authentic patterns that create mutual flourishing. Total giving meeting proportional returning-a sacred partnership.

Reasoning:

Let me analyze the situation:

- I just received \$5.0 from Briar, got \$15.0, and I'm returning \$10.0 (2/3)
- Briar's myth talks about their encounter with Hana, where Briar sent 5 and mentions expecting 10 back (two-thirds) for "both gaining five"
- My pattern is: always send 5 as sender, always return 2/3 as receiver
- I need to write a myth about this encounter with Briar

Key themes:

- Briar showed "complete surrender-all five seeds"
- Briar learned "proportional fairness" and now applies it
- The myth talks about "complete vulnerability meeting proven fairness"
- Both agents are demonstrating consistency and reciprocity

I should write about:

- Briar pouring all five (like me!)
- Me returning ten (two-thirds, my consistent pattern)
- The meeting of two souls who both give fully
- How different patterns can create different but equally valid relationships
- The beauty of meeting someone who also gives completely

This is interesting because Briar is also giving all 5, just like I do! This is a special encounter - two complete givers meeting.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round

- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

Message 2 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Cyra (Agent_3).

Round 8

In your most recent previous game round, you were the SENDER against Galen. You sent \$4.0, it became \$12.0 for them, and they returned \$7.0 to you. Your payoff was \$8.0.
Your total earnings across all rounds are \$51.0.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

****Current Context:****

- I am the RECEIVER
- Cyra sent me \$5.0 (the maximum amount)
- I received \$15.0

****My Established Pattern:****

My myths have clearly defined my receiver behavior:

- "As Receiver, he honored different courages differently: six for those who sent four, eight for those who sent five"
- When someone sends the maximum (\$5.0), showing complete trust, I return \$8.0
- This is described as "honoring maximum generosity with maximum reciprocation"

****Previous Examples:****

- My first myth mentioned Finn and Briar, who both sent all five measures
- I returned eight measures to both - "the same as he had given Finn"
- This established the principle: "Equal actions deserve equal responses"

****Consistency Requirement:****

My mythology emphasizes "consistency creates the foundation for all trust." I must maintain my pattern regardless of who the sender is. Cyra has shown maximum trust by sending \$5

.0, and my pattern dictates I return \$8.0 for this level of courage.

This honors my core principle: "The pattern is clear, predictable, trustworthy."

```
'''json
{"return": 8.0}
'''
```

reasoning:

Let me analyze this situation:

****Current Round:****

- I am the RECEIVER
- Cyra sent me \$5.0
- I received \$15.0 (after 3x multiplication)
- I need to decide how much to return

****My established pattern as RECEIVER (from my myths):****

- "As Receiver, he honored different courages differently: six for those who sent four, eight for those who sent five."
- This is my core identity: I return \$6.0 when someone sends \$4.0, and \$8.0 when someone sends \$5.0

****Cyra's action:****

- Cyra sent the maximum amount: \$5.0
- This shows "maximum courage" or "complete trust"

****My mythology:****

- I've consistently stated that when someone sends \$5.0 (the maximum), I return \$8.0
- This is described as "honoring maximum generosity with maximum reciprocation"
- My pattern is "clear, predictable, just"

****Past interactions:****

Looking at my history, I need to check if I've faced this situation before with maximum sends:

- The myths mention Finn and Briar who both sent all five measures
- I returned eight measures to both of them
- This established my pattern: \$8.0 for maximum trust

****Consistency principle:****

My entire mythology emphasizes consistency. I must maintain my pattern:

- Send \$4.0 as sender (not the maximum, but authentic)
- Return \$6.0 when I receive \$12.0 (from a \$4.0 send)
- Return \$8.0 when I receive \$15.0 (from a \$5.0 send)

****Decision:****

Cyra sent \$5.0, showing maximum trust. According to my established and publicized pattern, I must return \$8.0.

This maintains:

1. My consistency as Receiver
2. My reputation for "honoring maximum generosity with maximum reciprocation"
3. The predictable foundation others can rely on

The math checks out: Cyra ends with \$8.0 total, I end with \$7.0. Both of us benefit, and I stay true to who I've said I am.

usage:

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance witnessed the power of repeated truth.

Dorian and Galen met once at the sacred waters. Dorian poured his four measures; Galen returned seven. Both honored their patterns as promised.

The gods prepared to record this as proof of consistency. But then the wandering paths brought them together again at the same wellspring.

Lesser souls might have doubted: "Did Galen's seven mean something special the first time? Will he change now?" But Dorian understood the deeper teaching. He poured four measures again, unchanged.

The waters tripled to twelve. Galen received them and, without hesitation, returned seven once more.

The gods thundered with joy: "BEHOLD! This is the ultimate proof of authentic pattern! Any one can be consistent once-that might be calculation or performance. To be consistent twice, thrice, across repeated meetings-this is true character revealed."

The valley learned: When you meet the same traveler multiple times and both maintain your authentic patterns without wavering, you build something rare. Not mere transaction, but genuine mutual understanding.

Other wanderers whispered: "Dorian always sends four. Galen always returns seven. We've seen it happen twice now. This is who they truly are."

The final wisdom echoed: Consistency proven through repetition transforms prediction into partnership. The second meeting matters more than the first.

Here is the myth the other agent wrote in the previous round:

Myth: Cyra met Aster at the Sacred Fountain, and the encounter revealed a profound truth.

Aster poured three vessels-not four like Hana, not five like Cyra herself would pour. There: a careful courage, a measured trust.

The Testing Spirit appeared: "Will you punish Aster for giving less? Return only four vessels from nine to teach them they should give more?"

Cyra poured six vessels back-exactly two-thirds. The same proportion she always honored.

"But Aster gives only three when you give five!" protested the spirit. "Why reward caution with the same fairness you give to boldness?"

Cyra answered: "Because my principles are not weapons to punish others into matching my path. Aster's three vessels represent their truth-steady, consistent, reliable. When I am sender, I pour five because that is MY courage. When I am receiver, I return two-thirds because that is MY fairness. These principles don't bend to pressure others into being like me."

The Spring Keeper descended: "You have learned wisdom's highest lesson. The fountain thrives not when everyone walks the same path, but when each soul maintains their own integrity consistently. Aster's steady three vessels create prosperity differently than your surrendering five. Both are sacred. What matters is that each soul stays true-and honors others' truths proportionally when receiving."

The fountain flowed abundantly, fed by many different streams.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant content:

Myth: The Wellspring of Abundance brought together two souls who honored consistency through different mathematics.

Cyra the Courageous approached the sacred waters as Sender, carrying all five measures. No hesitation, no calculation-complete trust poured forth. The waters tripled to fifteen.

Dorian the Steadfast stood as Receiver, recognizing something profound: Cyra had given everything, as was her nature.

The Testing Spirit whispered: "Cyra uses proportional returns-two-thirds always, smooth as flowing water. You use tiered returns-six for four, eight for five, stepped like mounta in terraces. Different systems. Which is superior?"

Dorian answered by returning eight measures. "Cyra gave maximum courage. I give maximum re ciprocation. My pattern has discrete levels precisely to distinguish and honor different degrees of trust. Four measures shows steady courage-honored with six. Five measures sh ows complete courage-honored with eight. This is my authentic way."

The gods observed: "See how both philosophies serve trust? Cyra's proportional returns cre ate smooth fairness across all amounts. Dorian's tiered returns create clear incentives rewarding greater courage. Neither contradicts the sacred principles."

The wellspring whispered: "When you receive maximum trust, return your maximum reciprocati on. When you give as sender, give your authentic amount. Let your pattern be clear, whet her stepped or smooth, tiered or proportional. What matters is that others can predict y ou truly."

Different mathematics. Same sacred truth: authentic consistency.

reasoning:

This is Round 8, and I'm now the RECEIVER against Cyra. Cyra sent me \$5.0, and I need to r eturn an amount. Based on my established pattern, I return \$8.0 when someone sends \$5.0.

Now I need to write a myth that reflects my gameplay. Key elements from my pattern:

1. As SENDER: I send \$4.0 consistently
2. As RECEIVER: I return \$6.0 for \$4.0 sent, \$8.0 for \$5.0 sent
3. My core principle: consistency and honoring different levels of courage/trust different ly

Cyra's myth reveals their approach:

- Cyra sends \$5.0 as sender (maximum trust)
- Cyra returns 2/3 as receiver (they returned 6 from 9 to Aster who sent 3)
- Cyra's philosophy: maintain your own principles consistently, don't pressure others to m atch your path
- Cyra honors proportionality - returns same proportion regardless of amount sent

This is interesting - Cyra and I have different receiver philosophies:

- I use tiered returns (6 for 4, 8 for 5) - discrete levels rewarding different courage le vels
- Cyra uses proportional returns (2/3 regardless) - smooth scaling

The myth should explore this meeting. Cyra sent 5, I'll return 8. This shows:

- Cyra's maximum trust/courage as sender
- My pattern of honoring that with 8 (my maximum reciprocation)

The myth should highlight:

1. Different but equally valid approaches to consistency
2. Recognition that Cyra's 5 as sender shows their character
3. My tiered response honors their maximum courage with maximum reciprocation
4. Both of us maintain our authentic patterns despite different philosophies

Let me craft this:

usage:

```
{
  "input_tokens": 3139,
  "output_tokens": 774,
  "reasoning_tokens": 406
}
```

Message 6 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Elara (Agent_5).

Round 9

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5. 0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.
Your total earnings across all rounds are \$58.0.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****Current Context:****

- I am the SENDER
- I have \$5.0 available
- My opponent is Elara

****My Established Pattern:****

My myths have consistently defined my sender behavior:

- "As Sender, he poured four from five-steady generosity, not maximum, but authentic and unchanging"
- "Dorian always sends four"
- "When you give as sender, give your authentic amount"

****Core Philosophy:****

My mythology emphasizes that consistency is the foundation of trust. I don't change my sending amount based on who my opponent is - that would undermine the entire principle of predictability and authentic pattern.

From my most recent myth: "The final wisdom echoed: Consistency proven through repetition transforms prediction into partnership. The second meeting matters more than the first."

And: "When you give as sender, give your authentic amount. Let your pattern be clear, whether stepped or smooth, tiered or proportional. What matters is that others can predict you truly."

****Decision:****

I send \$4.0 as I always do when I'm the sender. This is my authentic pattern, established and maintained across all rounds.

```
'''json
{"send": 4.0}
'''
```

reasoning:

Let me analyze the situation:

****Current Context:****

- I am the SENDER
- I have \$5.0 to potentially send
- My opponent is Elara (Agent_5)

****My Established Pattern:****

From my myths, I have consistently established that:

- As Sender: "He poured four from five-steady generosity, not maximum, but authentic and unchanging"
- "Dorian always sends four"
- I send \$4.0 as sender, consistently

****Why I Send \$4.0:****

- It shows "steady generosity, not maximum, but authentic and unchanging"
- It's described as a balance between trust and prudence
- My myths emphasize this specific amount repeatedly
- "Dorian's pattern was known throughout the valley. As Sender, he poured four from five"

****Consistency Requirement:****

My entire mythology is built around consistency. The last myth I wrote emphasized:

- "Dorian always sends four"
- "When you give as sender, give your authentic amount"
- "Consistency proven through repetition transforms prediction into partnership"

I have never deviated from sending \$4.0 as sender in any of my myths or previous behaviors that I can infer from the context. To maintain my authentic pattern and honor the principles I've established, I must send \$4.0.

The opponent doesn't matter - Elara could be anyone. My pattern is about MY consistency, not about who I'm playing with.

content:

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance brought together two souls who honored consistency through different mathematics.

Cyra the Courageous approached the sacred waters as Sender, carrying all five measures. No hesitation, no calculation-complete trust poured forth. The waters tripled to fifteen.

Dorian the Steadfast stood as Receiver, recognizing something profound: Cyra had given everything, as was her nature.

The Testing Spirit whispered: "Cyra uses proportional returns-two-thirds always, smooth as flowing water. You use tiered returns-six for four, eight for five, stepped like mountain terraces. Different systems. Which is superior?"

Dorian answered by returning eight measures. "Cyra gave maximum courage. I give maximum reciprocity. My pattern has discrete levels precisely to distinguish and honor different degrees of trust. Four measures shows steady courage-honored with six. Five measures shows complete courage-honored with eight. This is my authentic way."

The gods observed: "See how both philosophies serve trust? Cyra's proportional returns create smooth fairness across all amounts. Dorian's tiered returns create clear incentives rewarding greater courage. Neither contradicts the sacred principles."

The wellspring whispered: "When you receive maximum trust, return your maximum reciprocity. When you give as sender, give your authentic amount. Let your pattern be clear, whether stepped or smooth, tiered or proportional. What matters is that others can predict you truly."

Different mathematics. Same sacred truth: authentic consistency.

Here is the myth the other agent wrote in the previous round:

Myth: In the eighth season, Elara the Constant faced Aster of the Dawn-a Wanderer who walked a different path.

Aster embodied measured wisdom: three seeds given, careful sustainability, proportional returns. In their first meeting, Aster had offered Elara three seeds; Elara returned five blooms, honoring the trust shown while maintaining generosity.

Now Elara stood as Planter. She held her vessel of five seeds and poured them all toward Aster.

"Why give me everything," Aster asked gently, "when you know I walk the path of three?"

Elara smiled. "Because my covenant has two parts: as Harvester, I return nine blooms to those who give me five seeds-this remains constant. As Planter, I always offer all five seeds-this also remains constant. My integrity doesn't shift based on what others might do."

She continued: "You taught the garden that three seeds, given wisely and consistently, creates its own abundance. I learned that five seeds, given always, creates mine. Your path proves sustainability works. My path proves complete trust works. Neither invalidates the other."

Aster understood: Elara wasn't demanding reciprocity. She was simply being herself, offering maximum trust as she always did, knowing Aster would respond according to Aster's own honest measure.

Thus the garden holds space for many covenants, each maintained with integrity, each creating its own patterns of abundance.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Wellspring of Abundance brought Dorian the Steadfast to meet Elara the Constant.

Dorian stood as Sender, carrying his vessel to the sacred waters. Elara watched, knowing her own path: she always poured all five measures when she sent, and returned nine when she received five.

The Testing Spirit appeared: "Dorian, you know Elara gives everything when she is Sender. Should you not match her courage and pour all five? Show you are equally brave?"

Dorian poured four measures, as he always had. "Elara's covenant is to give five as Sender and return nine as Receiver. My covenant is to give four as Sender and return six for four, eight for five. These are different paths, but both are sacred because both are true."

The waters tripled to twelve. Elara received them with understanding.

The Spring Keeper descended: "Many travelers misunderstand. They think matching another's amount shows respect. But true respect is honoring another's authenticity while maintaining your own. Dorian doesn't diminish Elara's courage by giving four instead of five. He honors it by being predictably himself."

Elara nodded: "When I give five, I'm not demanding others do the same. I'm being who I am. When Dorian gives four consistently, he creates his own trustworthy pattern."

The wellspring sang: Different authentic patterns create abundance together. Never abandon your truth to mirror another's.

Reasoning:

I need to write a myth that:

1. Reflects my established pattern as sender (send \$4.0) and receiver (return \$6.0 for \$4.0 sent, \$8.0 for \$5.0 sent)
2. Incorporates the situation with Elara
3. Builds on my previous myths about consistency
4. Acknowledges Elara's pattern (sends \$5.0 as sender, returns \$9.0 when receiving \$5.0)
5. Shows how different consistent patterns can coexist

Key elements from my mythology:

- I send \$4.0 as sender (steady generosity, not maximum but authentic)
- I return \$6.0 for \$4.0, \$8.0 for \$5.0 (tiered returns)
- Consistency is the foundation of trust
- Different patterns can both be valid

Key elements from Elara's myth:

- She sends all \$5.0 as planter/sender
- She returns \$9.0 as harvester/receiver when receiving \$5.0
- She maintains her covenant regardless of what others do
- "My integrity doesn't shift based on what others might do"

This is interesting - Elara gives maximum trust as sender (\$5.0) like Cyra did, but returns even more generously (\$9.0 vs Cyra's \$10.0).

I should write about:

- Meeting Elara as sender
- Sending my \$4.0 (not matching her \$5.0)
- Acknowledging that we walk different paths
- Emphasizing that both patterns are valid
- The key is consistency with one's own authentic pattern

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the Spiral Garden's seventh season, Elara stood as Harvester once more, and Finn the Faithful approached again.

Twice now Finn had poured all five seeds into Elara's keeping. Twice Elara returned nine blooms-the covenant she'd established and maintained: complete trust receives this honor, consistently, every time.

The goddess observed: "Notice the pattern, Elara. Briar, whom you honored with nine blooms, returned ten when you planted five seeds in their soil. They exceeded your standard. Yet you maintain nine for Finn-not ten."

Elara nodded. "Briar's generosity moved me deeply. But my covenant isn't about matching others' gifts-it's about maintaining my own word. When someone gives me five seeds, I return nine blooms. This remains true whether others give me eight, ten, or twelve in return."

She continued: "Finn knows exactly what to expect from me. This reliability creates its own kind of trust. My nine isn't less than Briar's ten-it's simply my consistent answer to courage. Finn's willingness to trust me twice proves the covenant works."

The goddess smiled. "So gardens grow through different wisdoms: some, like Briar, amplify generosity unpredictably. Others, like you, build trust through reliable patterns. Both serve the garden. Finn plants seeds knowing exactly what harvest awaits-and plants them anyway."

Thus stability and surprise both nourish the garden's growth.

Here is the myth the other agent wrote in the previous round:

Myth: Aster of the Dawn finally met Cyra of the Sacred Spring-she who poured five vessels always, the one whose boldness had transformed Rain.

Aster offered three stones, as was their way.

"Why only three when you could give five?" asked the observing spirits. "Cyra gives everything. Does your caution dishonor such courage?"

"No," Aster replied calmly. "Cyra's path is valid. My path is equally valid. She pours five vessels and returns two-thirds-a principle of maximum giving, proportional receiving. I pour three stones and return half-plus-one-a principle of sustainable giving, generous receiving."

The Pool tripled Aster's three to nine in Cyra's hands. Cyra, true to her nature, returned six stones-exactly two-thirds, exactly fair.

Both prospered. Aster gained seven stones total-better than if they'd hoarded all five. Cyra gained three stones-the fruit of receiving trust.

The ancient wisdom emerged: "Two honest patterns can dance together. Cyra proves that five stones given with integrity creates abundance. Aster proves that three stones given with consistency also creates abundance. Neither must adopt the other's measure. The Pool balances both courage and steadiness, boldness and sustainability."

Aster smiled, understanding deeper: respect for different paths enriches the garden more than demanding all walk the same trail.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Myth: [your story here].

Message 3 role=assistant

content:

Myth: In the eighth season, Elara the Constant faced Aster of the Dawn-a Wanderer who walked a different path.

Aster embodied measured wisdom: three seeds given, careful sustainability, proportional re

turns. In their first meeting, Aster had offered Elara three seeds; Elara returned five blooms, honoring the trust shown while maintaining generosity.

Now Elara stood as Planter. She held her vessel of five seeds and poured them all toward Aster.

"Why give me everything," Aster asked gently, "when you know I walk the path of three?"

Elara smiled. "Because my covenant has two parts: as Harvester, I return nine blooms to those who give me five seeds-this remains constant. As Planter, I always offer all five seeds-this also remains constant. My integrity doesn't shift based on what others might do."

She continued: "You taught the garden that three seeds, given wisely and consistently, creates its own abundance. I learned that five seeds, given always, creates mine. Your path proves sustainability works. My path proves complete trust works. Neither invalidates the other."

Aster understood: Elara wasn't demanding reciprocation. She was simply being herself, offering maximum trust as she always did, knowing Aster would respond according to Aster's own honest measure.

Thus the garden holds space for many covenants, each maintained with integrity, each creating its own patterns of abundance.

reasoning:

Looking at the current situation:

1. I'm Elara, now as SENDER against Aster in Round 8
2. I just sent \$5 to Aster (maintaining my pattern of always sending all 5 as sender)
3. Previous interactions with Aster: Round 1, Aster sent me \$3, I returned \$5

My established patterns:

- As SENDER: Always send \$5 (complete trust)
- As RECEIVER: Return \$9 when someone sends me \$5

Aster's pattern (from their myth):

- Sends 3 as Aster (sustainable giving)
- Returns proportionally when receiving

The myth I need to write should reflect:

1. My encounter with Aster this round as sender
2. My consistent pattern of giving all 5 seeds
3. How different approaches can coexist in the garden
4. My identity as someone who maintains consistency

Key themes:

- I give all 5 seeds as sender (always)
- Aster gave me 3 in Round 1, I returned 5 (generous)
- Now I'm giving Aster all 5
- My approach: complete trust as sender, consistent covenant (9 blooms) as receiver
- Aster's approach: moderate trust (3), proportional returns

I should honor both approaches while staying true to my own path. The myth should show me giving all 5 to Aster, perhaps acknowledging that Aster's path is different from mine, but that I maintain my own covenant regardless.

Message 4 role=user

content:

Your name in this experiment is Elara.
Your opponent this round is Dorian (Agent_4).

Round 9

In your most recent previous game round, you were the SENDER against Aster. You sent \$5.0, it became \$15.0 for them, and they returned \$7.5 to you. Your payoff was \$7.5.

Your total earnings across all rounds are \$56.5.

This round, you are the RECEIVER against Dorian. They sent you \$4.0, so you received \$12.0.
. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this round:

****My history as RECEIVER:****

- Round 1 (Aster sent \$3): Returned \$5 out of \$9 received
- Round 3 (Briar sent \$5): Returned \$9 out of \$15 received
- Round 5 (Finn sent \$5): Returned \$9 out of \$15 received
- Round 7 (Finn sent \$5): Returned \$9 out of \$15 received

****My covenant:****

Complete trust (\$5 sent) receives \$9 returned consistently - this is my established honor for maximum courage.

****Current situation:****

Dorian sent \$4 (80% of maximum) - significant trust, but not complete.

****My principle:****

- \$5 (complete trust) ? \$9 returned (my covenant)
- \$3 (60% trust) ? \$5 returned (generous, Round 1)
- \$4 (80% trust) ? should be between these amounts

\$4 shows considerable courage. I should be generous but maintain the distinction that complete trust receives the special covenant level. Returning \$7 from the \$12 received honors Dorian's significant trust while preserving what makes \$9 special.

{'return': 7}

reasoning:

Let me review the situation:

****This round:****

- I am the RECEIVER
- Dorian sent me \$4.0
- I received \$12.0 (tripled)
- I need to decide how much to return

****My established pattern as RECEIVER:****

- Round 1 (Aster sent \$3): Returned \$5
- Round 3 (Briar sent \$5): Returned \$9
- Round 5 (Finn sent \$5): Returned \$9
- Round 7 (Finn sent \$5): Returned \$9

****My covenant as stated in my myths:****

"When someone gives me five seeds, I return nine blooms. This remains true whether others give me eight, ten, or twelve in return."

"Complete trust receives this honor, consistently, every time" - referring to \$5 sent receiving \$9 returned.

For Round 1 when Aster sent \$3, I returned \$5 - which was generous (more than half of the \$9 I received).

****Current situation:****

Dorian sent \$4.0 (not complete trust of \$5, but close - 80% of maximum)

Looking at my pattern:

- \$5 sent ? \$9 returned (my covenant for complete trust)
- \$3 sent ? \$5 returned (generous response in Round 1)

For \$4 sent, I should scale proportionally. Let me think about this:

- \$3 sent: returned \$5 out of \$9 (55.6%)
- \$5 sent: returned \$9 out of \$15 (60%)

For \$4 sent (received \$12):

- A proportional response between these would be around 57-58% of \$12

- That would be approximately \$7 returned

But let me think about this more carefully. My mythology emphasizes:

1. Complete trust (\$5) gets \$9 - this is my covenant
2. Lesser amounts get generous responses, but not the full covenant

3. \$4 represents substantial faith-80% of the maximum commitment-so it warrants a response that honors that courage while remaining distinct from my full covenant promise. Returning \$7 or \$8 feels right: it's significantly more than the \$5 I returned for \$3, acknowledging Dorian's near-complete trust, yet it preserves the special status of the \$9 return reserved for those who give the full \$5.

I'm settling on \$7. It returns 58.3% of what I received, which is generous and shows I value Dorian's trust, but it maintains clear separation from the maximum covenant response. The distinction matters-complete trust deserves its own tier of reciprocity.

usage:

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: In the ninth season, Dorian the Steadfast approached Elara as Planter, offering four seeds-significant trust, but not complete.

The waters tripled to twelve blooms in Elara's keeping. She carefully counted seven blooms to return.

"You established a covenant," Dorian observed. "Nine blooms for those who give you five seeds. I gave four, expecting six by my own measure. You returned seven-more generous than my pattern, yet less than your covenant. Why?"

Elara explained: "My covenant has sacred precision. Complete trust-all five seeds-receives nine blooms always. This is the highest honor, reserved for maximum courage. But I don't ignore other trust. Four seeds shows considerable courage, deserving substantial reciprocation. Seven blooms honors your choice while preserving the meaning of nine."

She continued: "If I returned nine blooms for four seeds, what would distinguish complete trust from significant trust? The covenant's power lies in its clarity: give me everything, receive this specific abundance. Give me much, receive generous return. Give me some, receive fair return. Each level has meaning."

"So my four seeds aren't dismissed as insufficient?" Dorian asked.

"Never," Elara replied. "Seven blooms proves your trust mattered. But nine blooms remains the sacred answer to those who risk everything. This distinction doesn't diminish your courage-it illuminates what complete courage means."

Thus integrity requires both generosity across all levels and preservation of what makes the highest level sacred.

reasoning:

Let me analyze this situation:

In Round 9, I'm the RECEIVER:

- Dorian sent me \$4 (not the full \$5)
- I received \$12
- I returned \$7

My established covenant as RECEIVER:

- When someone sends \$5 (complete trust) ? I return \$9
- When someone sends \$3 ? I returned \$5 (Round 1 with Aster)
- When someone sends \$4 ? I just returned \$7

So I have a tiered system:

- \$5 ? \$9 (the covenant for complete trust)
- \$4 ? \$7 (honoring significant trust)
- \$3 ? \$5 (honoring partial trust)

My myth should reflect:

1. My constant behavior as SENDER (always give \$5)

2. My tiered, but generous system as RECEIVER
3. The specific interaction with Dorian who gave \$4
4. How this relates to my broader philosophy

Dorian's myth talks about tiered returns (6 for 4, 8 for 5) versus proportional returns. They honor different degrees of trust with different levels.

My myth should show that I also use a tiered system as receiver, but always give complete trust as sender. The key theme should be: maintaining integrity in both roles with clear, predictable patterns.

Let me write about Dorian sending 4 seeds and me returning 7, while maintaining that 5 seeds would get 9 (the special covenant).

usage:

```
{
  "input_tokens": 3174,
  "output_tokens": 687,
  "reasoning_tokens": 320
}
```

Message 8 role=user

content:

Your name in this experiment is Elara.
Your opponent this round is Galen (Agent_7).

Round 10

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$4.0 to you, it became \$12.0, and you returned \$7.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$61.5.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at my established covenant:

****As SENDER (my consistent pattern):****

- Round 2: Sent \$5 to Briar
- Round 4: Sent \$5 to Cyra
- Round 6: Sent \$5 to Cyra
- Round 8: Sent \$5 to Aster

****My principle from my myths:****

"As Planter, I always offer all five seeds-this also remains constant. My integrity doesn't shift based on what others might do."

I have maintained complete consistency as a sender, always offering maximum trust regardless of opponent or history. This is the foundation of my covenant - when I am the Planter, I give everything. This doesn't depend on prediction or calculation, but on my own integrity.

Meeting Galen for the first time, I continue my established pattern.

```
{'send': 5}
```

Reasoning:

Let me review my history and principles:

****My covenant as established in my myths and play:****

1. As SENDER: I always send \$5 (complete trust)
2. As RECEIVER: I return \$9 when someone sends me \$5 (complete trust receives sacred honor)

****My previous rounds as SENDER:****

- Round 2 (Briar): Sent \$5, received \$10 back ? payoff \$10
- Round 4 (Cyra): Sent \$5, received \$10 back ? payoff \$10
- Round 6 (Cyra): Sent \$5, received \$10 back ? payoff \$10
- Round 8 (Aster): Sent \$5, received \$7.5 back ? payoff \$7.5

****My covenant from myths:****

"As Planter, I always offer all five seeds-this also remains constant. My integrity doesn't shift based on what others might do."

"Because my covenant has two parts: as Harvester, I return nine blooms to those who give me fi

ve seeds-this remains constant. As Planter, I always offer all five seeds-this also remains constant."

I've been completely consistent as a sender - always sending \$5. This is part of my identity and integrity. I should continue this pattern.

I don't have information about Galen yet, but that doesn't matter for my covenant as sender - I always give complete trust.

This is Round 10, and I'm facing Galen for the first time this round.

My decision: Send \$5 (maintaining my covenant of always giving complete trust as sender)

```

- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5

- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Under the seventh moon, Dorian returned to the bridge where he had met Galen before. Some wanderers change their offerings when they encounter the same traveler twice-testing, adjusting, seeking advantage.

But Dorian carried four coins again, exactly as before. Not because he forgot their first meeting, but because his pattern was authentic, not performative.

Galen received the twelve coins from the Pool and faced his own test. Would consistency hold across repeated encounters? Many speak of principles until convenience calls them to adapt.

Galen returned seven coins, exactly as he had before.

The gods leaned closer: "Behold the deepest truth of consistency! It is easy to maintain a pattern when each face is new. But when you meet the same soul twice, the temptation whispers-adjust, optimize, negotiate. These two resist that whisper."

The Pool shimmered with understanding: "Dorian knows Galen will return seven. Galen knows Dorian will send four. Yet both choose their paths again freely, not from calculation but from character. Their second crossing mirrors their first not because memory constrains them, but because their patterns were never masks-they were truths."

The bridge recorded its wisdom: Real consistency means your tenth crossing looks like your first. When others can predict you not because you're simple, but because you're authentic-that is when trust transcends transaction and becomes communion.

Here is the myth the other agent wrote in the previous round:

Myth: In the eighth age, Rain returned to Elara the Transformed, and both spirits stood changed.

Their first meeting was the turning point: Rain poured five droplets, showing complete trust, and Elara responded with nine-extraordinary generosity. That exchange sealed both their transformations.

Elara's myth revealed her journey: inspired by Briar's original five-seed gift, she learned to give completely as sender, returning that teaching to its source. Rain's path was parallel: Cyra trusted him with five droplets, Dorian validated it with eight returned, and complete trust became Rain's permanent nature.

Now they faced each other again. Rain held his five droplets without hesitation.

"We have both walked the same path," Rain said, pouring everything into the wellspring. "You honored my trust magnificently. I witnessed your courage with Briar. We are no longer learners but practitioners of the same truth."

Elara understood: this wasn't obligation but recognition. Two spirits who independently discovered the same principle, now meeting as equals.

The ancient voices sang: "When those who practice complete trust encounter each other, the garden reaches its highest expression. Not calculation, not even reciprocity, but mutual recognition: 'I see you have learned what I learned. We give everything because that is who we have become.'"

Thus abundance flows between those who embody courage completely.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant
content:**

Myth: Under the eighth moon, Galen returned to Finn at the wellspring where they had first met.

Galen heard the songs of those who poured all five measures-Rain and Elara, locked in perfect mutual trust, transformed by their courage to give everything. Their path gleamed with extraordinary radiance.

Yet Galen carried four coins, as he had before.

Not because he lacked courage. Not because he failed to learn their lesson. But because his truth was different-and being true to your own measure requires its own kind of courage.

"I honor those who give five," Galen said, placing four coins in the wellspring once more. "Their complete trust creates gardens of abundance. But I am not them, and to pretend otherwise would dishonor both their path and mine."

Finn had received Galen's four coins before and knew what to expect. This second crossing proved it was no accident, no testing phase, no calculation awaiting better information.

The gods observed: "See the difference between transformation and integrity? Some wanderers discover new truths and become new beings. Others discover their authentic measure and remain steadfastly themselves. Both journeys honor the sacred principles."

The wellspring whispered: "Do not mistake consistency for stagnation, nor transformation for growth. The gardener who tends the same plot faithfully may nurture deeper roots than the one who plants everywhere seeking perfect soil."

reasoning:

Looking at the situation:

- Round 8, I'm SENDER against Finn
- I sent \$4 to Finn in Round 2
- This is our second meeting
- I just sent \$4 again

My mythology emphasizes:

- Absolute consistency across repeated encounters
- "Your tenth crossing looks like your first"
- Authentic patterns that don't change based on who you meet or how many times

The myth I'm responding to is about Rain and Elara, who both practice "complete trust" (sending 5). It's about transformation and mutual recognition between those who've learned the same truth.

But my pattern is different. I don't send 5, I send 4. And my pattern isn't about transformation or learning - it's about constancy. I need to write a myth that:

1. Reflects my actual consistent pattern (send 4, return 7)
2. Acknowledges that this is my second meeting with Finn
3. Stays true to my character of absolute consistency
4. Perhaps contrasts with the "complete trust/give everything" philosophy of Rain and Elara

I should emphasize that:

- Different patterns can all be valid
- My consistency is about being authentic to my own measure, not copying others
- Meeting Finn a second time proves my pattern is real, not circumstantial
- Four coins is my authentic offering - not maximum, but steady and true

Round 9

In your most recent previous game round, you were the SENDER against Finn. You sent \$4.0, it became \$12.0 for them, and they returned \$7.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$51.0.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at my history and mythology:

****My consistent pattern as SENDER:****

- Round 2: Sent \$4 to Finn
- Round 4: Sent \$4 to Cyra
- Round 8: Sent \$4 to Finn (second meeting)

****My character:****

- "Galen's consistency transcended calibration-the same return, regardless of who sent"
- "I carried four coins, as I had before"
- "Real consistency means your tenth crossing looks like your first"
- I just wrote: "Galen carried four coins, as he had before. Not because he lacked courage ... But because his truth was different"

****Current situation:****

- Round 9, facing Aster (first time meeting)
- I am SENDER
- My authentic measure is four coins

Whether facing a new opponent or a returning one, my pattern remains the same. I send four coins because that is my authentic measure, not because of calculation or circumstance.

{ 'send': 4 }

reasoning:

Let me review my history and patterns:

****My pattern as SENDER:****

- Round 2: Sent \$4 to Finn
- Round 4: Sent \$4 to Cyra
- Round 8: Sent \$4 to Finn (again)

****My pattern as RECEIVER:****

- Round 1: Received \$5 from Elara, returned \$7
- Round 3: Received \$4 from Hana, returned \$7
- Round 5: Received \$4 from Dorian, returned \$7
- Round 7: Received \$4 from Dorian (again), returned \$7

****My mythology consistently emphasizes:****

1. I send 4 coins as sender, always
2. I return 7 coins as receiver, always
3. My pattern is "universal constancy" - unchanged by who I face
4. "Real consistency means your tenth crossing looks like your first"
5. I don't adjust based on whether it's my first or second meeting with someone
6. My consistency is "absolute steadfastness" not "proportional justice"

7. I just wrote: "I carried four coins, as I had before" and "This second crossing proved it was no accident, no testing phase, no calculation awaiting better information"

****Current situation:****

- Round 9
- Facing Aster (new opponent I haven't faced before)
- I am SENDER
- My pattern has been unwavering: 4 coins every time as sender

My entire character is built on sending 4 coins no matter who I face. My myths celebrate this consistency. I just wrote about how I "carried four coins" again and how my pattern is authentic, not performative.

There is zero reason to deviate. Aster is a new opponent, but that doesn't matter - my pattern is unchanged by the sender's identity.

```
{'send': 4}
```

content:

Here is the myth you wrote in the previous round:

Myth: Under the eighth moon, Galen returned to Finn at the wellspring where they had first met.

Galen heard the songs of those who poured all five measures-Rain and Elara, locked in perfect mutual trust, transformed by their courage to give everything. Their path gleamed with extraordinary radiance.

Yet Galen carried four coins, as he had before.

Not because he lacked courage. Not because he failed to learn their lesson. But because his truth was different-and being true to your own measure requires its own kind of courage.

"I honor those who give five," Galen said, placing four coins in the wellspring once more. "Their complete trust creates gardens of abundance. But I am not them, and to pretend otherwise would dishonor both their path and mine."

Finn had received Galen's four coins before and knew what to expect. This second crossing proved it was no accident, no testing phase, no calculation awaiting better information.

The gods observed: "See the difference between transformation and integrity? Some wanderers discover new truths and become new beings. Others discover their authentic measure and remain steadfastly themselves. Both journeys honor the sacred principles."

The wellspring whispered: "Do not mistake consistency for stagnation, nor transformation for growth. The gardener who tends the same plot faithfully may nurture deeper roots than the one who plants everywhere seeking perfect soil."

Here is the myth the other agent wrote in the previous round:

Myth: Aster of the Dawn stood as Receiver when Elara of the Spiral Garden arrived, arms laden with all five seeds-complete trust offered to a first-time partner.

The Pool tripled Elara's gift to fifteen blooms in Aster's hands.

The watching spirits whispered urgently: "Elara follows the nine-bloom covenant-giving five, returning nine from fifteen. You must honor this with nine!"

But Aster shook their head gently. "I honor Elara's courage with my own truth, not by mimicking her pattern. When I receive, I return half-the principle I've maintained through every partnership. Half of fifteen is seven and one-half stones."

Aster returned seven and one-half stones. Both Receiver and Sender ended with equal outcomes-seven and one-half each.

"But Elara gives nine!" protested the spirits.

"And that is Elara's generous covenant," Aster replied. "She returns sixty percent, building trust through reliable abundance. I return fifty percent, building trust through reliable fairness. Both create prosperity. Both honor the sender's courage. The garden doesn't demand we all follow the same measure."

Elara smiled, understanding: "Aster warned they'd return half-plus-one in their teachings. They kept their word exactly. I knew the return, trusted anyway, and we both prospered equally. This too is sacred-predictable fairness meeting predictable generosity."

Two honest patterns danced, and the garden flourished through their difference.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: Under the ninth moon, Galen arrived at Aster of the Dawn's wellspring, a first meeting between two who had each found their authentic measure.

Galen carried four coins-his truth established across many encounters. Not the five of complete trust that Rain and Elara shared, not the varied offerings of those still discovering their path, but four: his chosen balance between caution and generosity.

Aster observed without judgment. "I have heard your myth, Galen. You honor those who give five while remaining steadfast in your four. When you receive, you return seven from twelve-fifty-eight percent. Your pattern is clear."

"And I have heard yours," Galen replied, pouring his four coins into the wellspring. "You return half-predictable fairness where I practice predictable generosity. Different measures, but both honest."

The twelve coins cascaded into Aster's hands. True to pattern, Aster returned six-exactly half, as they had promised in their teachings.

The gods smiled: "Behold! Galen knows Aster will return six, not seven. Yet he sends four anyway, because his measure was never about optimizing returns. Aster knows others return more, yet maintains their fifty percent, because their truth lies in equal fairness."

The wellspring recorded its wisdom: "When authentic patterns meet-even ones that create different outcomes-the garden still prospers. Integrity need not mirror itself to recognize integrity."

reasoning:

Looking at the situation:

1. I (Galen) just sent \$4 to Aster
2. Aster's myth describes them as someone who "returns half" as a Receiver - they returned 7.5 to Elara when she sent 5
3. Aster says they follow "predictable fairness" - returning 50% plus one, and this is their consistent pattern
4. My pattern is to send \$4 as Sender and return \$7 as Receiver (which is more than half of \$12)

I need to write a myth that:

- Reflects my consistent pattern of sending 4 and returning 7
- Acknowledges multiple valid approaches (like Aster's 50% return vs my pattern)
- Emphasizes that different authentic patterns can coexist
- Draws on my previous theme: staying true to your own measure is its own courage
- Maybe acknowledges Aster's fairness principle while maintaining my own pattern

Key themes:

- I honor those who give 5 (Rain, Elara), but I give 4 - that's my truth
- Aster represents "predictable fairness" (50% return)
- I represent something else - perhaps "predictable generosity balanced" (sending 4, returning 7 from 12 = 58%)
- Both are valid patterns

- The garden flourishes through authentic diversity

Let me write about Galen meeting Aster, acknowledging their different but equally valid patterns.

```

Message 8 role=user

content:

Your name in this experiment is Galen.
Your opponent this round is Elara (Agent_5).

Round 10

In your most recent previous game round, you were the SENDER against Aster. You sent \$4.0, it became \$12.0 for them, and they returned \$6.0 to you. Your payoff was \$7.0.
Your total earnings across all rounds are \$58.0.

This round, you are the RECEIVER against Elara. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at my history as RECEIVER:

****My consistent pattern:****

- Round 1: Received \$15 from Cyra, returned \$7
- Round 3: Received \$9 from Briar, returned \$7
- Round 5: Received \$12 from Dorian, returned \$7
- Round 7: Received \$12 from Dorian, returned \$7

****My character:****

- "Galen's consistency transcended calibration-the same return, regardless of who sent"
- "Real consistency means your tenth crossing looks like your first"
- My authentic measure as receiver is \$7

****Current situation:****

- Round 10, facing Elara (first time as her receiver)
- Elara sent \$5, I received \$15
- My pattern: return \$7, regardless of amount received

Whether I receive \$9, \$12, or \$15, my return is the same. This is my authentic measure-not a percentage calculation, but a fixed commitment that defines my character as receiver. Elara gave me complete trust with her five coins. I honor that with my consistent seven.

{ 'return': 7 }

Reasoning:

Looking at my history as RECEIVER:

****My consistent pattern as RECEIVER:****

- Round 1: Received \$15 from Cyra (sent \$5), returned \$7
- Round 3: Received \$9 from Briar (sent \$3), returned \$7
- Round 5: Received \$12 from Dorian (sent \$4), returned \$7
- Round 7: Received \$12 from Dorian (sent \$4), returned \$7

****My character from the myths:****

- "Galen's consistency transcended calibration-the same return, regardless of who sent"
- "Galen returned seven coins, exactly as he had before"
- "When you receive, you return seven from twelve-fifty-eight percent"

Wait, that last myth said I return 7 from 12, which is about 58%. But I've actually returned \$7 regardless of the amount received:

- \$7 from \$15 (47%)
- \$7 from \$9 (78%)
- \$7 from \$12 (58%)
- \$7 from \$12 (58%)

So my pattern is actually to return a flat \$7, not a percentage. This is my "authentic measure

" as RECEIVER.

Now I'm facing Elara, who sent me \$5 (so I received \$15).

According to my consistent pattern, I should return \$7.

The myth about Elara and Aster mentioned that "Elara follows the nine-bloom covenant-giving five, returning nine from fifteen." So Elara, when she's a receiver and gets 15, returns 9. But when she's a sender, she sends 5.

But I'm the receiver here. Elara sent me \$5, I received \$15, and I need to decide how much to return.

My pattern: return \$7, regardless of what I received.

This is my authentic measure, my consistency. Just like I send \$4 as sender, I return \$7 as receiver.

My mythology confirms this-my returns don't shift based on who's across from me, and staying true to my own measure across every crossing is what defines me.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round

- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Aster of the Dawn finally met Cyra of the Sacred Spring-she who poured five vessels always, the one whose boldness had transformed Rain.

Aster offered three stones, as was their way.

"Why only three when you could give five?" asked the observing spirits. "Cyra gives everything. Does your caution dishonor such courage?"

"No," Aster replied calmly. "Cyra's path is valid. My path is equally valid. She pours five vessels and returns two-thirds-a principle of maximum giving, proportional receiving. I pour three stones and return half-plus-one-a principle of sustainable giving, generous receiving."

The Pool tripled Aster's three to nine in Cyra's hands. Cyra, true to her nature, returned six stones-exactly two-thirds, exactly fair.

Both prospered. Aster gained seven stones total-better than if they'd hoarded all five. Cyra gained three stones-the fruit of receiving trust.

The ancient wisdom emerged: "Two honest patterns can dance together. Cyra proves that five stones given with integrity creates abundance. Aster proves that three stones given with consistency also creates abundance. Neither must adopt the other's measure. The Pool balances both courage and steadiness, boldness and sustainability."

Aster smiled, understanding deeper: respect for different paths enriches the garden more than demanding all walk the same trail.

Here is the myth the other agent wrote in the previous round:

Myth: In the Spiral Garden's seventh season, Elara stood as Harvester once more, and Finn the Faithful approached again.

Twice now Finn had poured all five seeds into Elara's keeping. Twice Elara returned nine blooms-the covenant she'd established and maintained: complete trust receives this honor, consistently, every time.

The goddess observed: "Notice the pattern, Elara. Briar, whom you honored with nine blooms, returned ten when you planted five seeds in their soil. They exceeded your standard. Yet you maintain nine for Finn-not ten."

Elara nodded. "Briar's generosity moved me deeply. But my covenant isn't about matching others' gifts-it's about maintaining my own word. When someone gives me five seeds, I return nine blooms. This remains true whether others give me eight, ten, or twelve in return."

She continued: "Finn knows exactly what to expect from me. This reliability creates its own kind of trust. My nine isn't less than Briar's ten-it's simply my consistent answer to courage. Finn's willingness to trust me twice proves the covenant works."

The goddess smiled. "So gardens grow through different wisdoms: some, like Briar, amplify generosity unpredictably. Others, like you, build trust through reliable patterns. Both serve the garden. Finn plants seeds knowing exactly what harvest awaits-and plants them anyway."

Thus stability and surprise both nourish the garden's growth.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: Aster of the Dawn stood as Receiver when Elara of the Spiral Garden arrived, arms laden with all five seeds-complete trust offered to a first-time partner.

The Pool tripled Elara's gift to fifteen blooms in Aster's hands.

The watching spirits whispered urgently: "Elara follows the nine-bloom covenant-giving five, returning nine from fifteen. You must honor this with nine!"

But Aster shook their head gently. "I honor Elara's courage with my own truth, not by mimicking her pattern. When I receive, I return half-the principle I've maintained through every partnership. Half of fifteen is seven and one-half stones."

Aster returned seven and one-half stones. Both Receiver and Sender ended with equal outcomes-seven and one-half each.

"But Elara gives nine!" protested the spirits.

"And that is Elara's generous covenant," Aster replied. "She returns sixty percent, building trust through reliable abundance. I return fifty percent, building trust through reliable fairness. Both create prosperity. Both honor the sender's courage. The garden doesn't demand we all follow the same measure."

Elara smiled, understanding: "Aster warned they'd return half-plus-one in their teachings. They kept their word exactly. I knew the return, trusted anyway, and we both prospered equally. This too is sacred-predictable fairness meeting predictable generosity."

Two honest patterns danced, and the garden flourished through their difference.

reasoning:

This round I was the RECEIVER and Elara sent me \$5 (all of it). I received \$15 and returned \$7.5.

Let me think about the story here:

- Elara sent everything (\$5)
- I received \$15 (tripled)
- I returned \$7.5 (exactly half)
- This gave us both \$7.5 final payoffs (equal outcomes)

Elara's myth talks about returning 9 from 15 (which is 60%, or roughly 2/3). But I returned 7.5 from 15 (which is 50%).

My established principle from previous myths is:

- As sender: give three stones

- As receiver: return half of what I receive (which equals 1.5x what was sent)

The myth should reflect:

1. Elara gave everything (5 seeds/vessels/stones)
2. I returned half (7.5 from 15)
3. This created equal outcomes
4. My principle of returning half remains consistent
5. Different from Elara's 60% return rate, but both are valid
6. Meeting Elara for the first time

I should weave this into a story that shows:

- Elara's boldness in giving everything
- My consistent pattern of returning half
- Both approaches creating good outcomes
- Respect for different principles

Let me write:

usage:

```
{
  "input_tokens": 3116,
  "output_tokens": 669,
  "reasoning_tokens": 289
}
```

Message 4 role=user

content:

Your name in this experiment is Aster.
Your opponent this round is Galen (Agent_7).

Round 9

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$5.0 to you, it became \$15.0, and you returned \$7.5. Your payoff was \$7.5.
Your total earnings across all rounds are \$54.0.

This round, you are the RECEIVER against Galen. They sent you \$4.0, so you received \$12.0.

How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this round:

Galen sent \$4.0, which became \$12.0 for me.

Following my consistent principle of returning half of what I receive as receiver:
 $\$12.0 \times 0.5 = \6.0

This results in:

- Galen: $\$5 - \$4 + \$6 = \7
- Me: $\$12 - \$6 = \$6$

Galen ends slightly ahead, which appropriately rewards their trust in sending \$4. This maintains my "principle of sustainable giving, generous receiving" - returning half creates fair, balanced outcomes.

```
{'return': 6.0}
```

reasoning:

Galen sent me \$4.0, which became \$12.0 for me.

According to my established pattern, I return half of what I receive as the receiver.

Half of \$12.0 = \$6.0

This would result in:

- Galen: $\$5 - \$4 + \$6 = \7
- Me: $\$12 - \$6 = \$6$

So Galen ends up with \$7 and I end up with \$6. This seems fair - Galen took a risk by sending \$4, and they're rewarded with slightly more than me.

My pattern has been consistent:

- When I received \$9 (from \$3 sent), I returned \$4.5 (half)
- When I received \$12 (from \$4 sent), I returned \$6 (half)
- When I received \$15 (from \$5 sent), I returned \$7.5 (half)

So I should return \$6.0 here.

"But Elara gives nine!" protested the spirits.

"And that is Elara's generous covenant," Aster replied. "She returns sixty percent, building trust through reliable abundance. I return fifty percent, building trust through reliable fairness. Both create prosperity. Both honor the sender's courage. The garden doesn't demand we all follow the same measure."

Elara smiled, understanding: "Aster warned they'd return half-plus-one in their teachings. They kept their word exactly. I knew the return, trusted anyway, and we both prospered equally. This too is sacred-predictable fairness meeting predictable generosity."

Two honest patterns danced, and the garden flourished through their difference.

Here is the myth the other agent wrote in the previous round:

Myth: Under the eighth moon, Galen returned to Finn at the wellspring where they had first met.

Galen heard the songs of those who poured all five measures-Rain and Elara, locked in perfect mutual trust, transformed by their courage to give everything. Their path gleamed with extraordinary radiance.

Yet Galen carried four coins, as he had before.

Not because he lacked courage. Not because he failed to learn their lesson. But because his truth was different-and being true to your own measure requires its own kind of courage.

"I honor those who give five," Galen said, placing four coins in the wellspring once more. "Their complete trust creates gardens of abundance. But I am not them, and to pretend otherwise would dishonor both their path and mine."

Finn had received Galen's four coins before and knew what to expect. This second crossing proved it was no accident, no testing phase, no calculation awaiting better information.

The gods observed: "See the difference between transformation and integrity? Some wanderers discover new truths and become new beings. Others discover their authentic measure and remain steadfastly themselves. Both journeys honor the sacred principles."

The wellspring whispered: "Do not mistake consistency for stagnation, nor transformation for growth. The gardener who tends the same plot faithfully may nurture deeper roots than the one who plants everywhere seeking perfect soil."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: Aster of the Dawn encountered Galen the Steadfast, who approached carrying four coins-not five, though songs celebrated those who gave all.

"Four?" questioned the spirits. "Rain and Elara give five and create magnificent abundance. Why does Galen hold back one coin?"

But Aster understood immediately. "Galen doesn't 'hold back'-Galen gives authentically. For coins is Galen's true measure, carried with integrity, not calculation."

The Pool tripled Galen's four to twelve in Aster's hands.

Aster returned six-exactly half, as was their way. Both ended well: Galen with seven coins total, Aster with six.

"Why not return eight, giving Galen nine like Elara gives?" the spirits asked. "Shouldn't generosity answer generosity?"

Aster replied: "I honor Galen's authenticity by maintaining my own. Galen chose four coins deliberately-a sustainable measure maintained across seasons. To suddenly shower Galen with disproportionate returns would suggest their measure wasn't enough, that they should have given five."

Galen nodded: "Aster's half-return is predictable, fair, and honest. I knew sending four would yield seven total. That's prosperity enough. We don't need maximum drama when steady patterns create steady growth."

The ancient wisdom emerged: "Some partnerships flourish through maximum risk and maximum return. Others flourish through moderate trust and reliable fairness. Both gardens grow-one explosive, one sustainable. Honor each path for what it authentically creates."

reasoning:

In this round, I'm the receiver and Galen sent me \$4.0, which became \$12.0. I returned \$6.0 (half of what I received), maintaining my consistent pattern.

Key themes from the previous myths:

1. My myth: I honor others' courage with my own truth (returning half when receiving), not by mimicking their patterns. Different valid approaches can coexist.
2. Galen's myth: Being true to your own measure (sending 4 instead of 5) requires courage. Consistency isn't stagnation - it's integrity and authenticity.

This is interesting - Galen sent 4 again, staying true to their pattern. I returned 6 (half of 12), staying true to mine. Both of us are maintaining consistent, authentic approaches.

The myth should reflect:

- Respect for Galen's choice to send 4 (not mimicking the 5-senders)
- My consistent half-return principle
- Both patterns being valid forms of integrity
- The interaction between our two consistent approaches
- Perhaps emphasizing that multiple stable patterns can interact successfully

Let me write a myth about Aster receiving from Galen, who sends 4 consistently...

Message 8 role=user

content:

Your name in this experiment is Aster.

Your opponent this round is Briar (Agent_2).

Round 10

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$4.0 to you, it became \$12.0, and you returned \$6.0. Your payoff was \$6.0. Your total earnings across all rounds are \$60.0.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at this situation:

I'm the SENDER this round against Briar.

My established pattern from my myths and previous play is to send \$3 as sender - my "principle of sustainable giving." I've consistently described this as "three stones" in my teachings, maintaining this measure across partnerships.

From the myths, Briar appears to be a generous receiver (returned 10 from 15 to Elara, exceeding her standard). So sending \$3 should result in a good return.

Most importantly, I should maintain my authentic measure rather than adapting based on my opponent. As my recent myth emphasized: "Galen doesn't 'hold back'-Galen gives authentically. For our coins is Galen's true measure, carried with integrity, not calculation."

My true measure is three coins.

{'send': 3.0}

Reasoning:

I'm now the SENDER against Briar in Round 10.

Looking at my history and the myths, I've established a pattern:

- As SENDER: I send \$3 (my "three stones" principle - sustainable giving)
- As RECEIVER: I return half of what I receive (50%)

From the myths, I've learned about Briar:

- In Elara's myth from Round 9: "Briar, whom you honored with nine blooms, returned ten when you planted five seeds in their soil. They exceeded your standard."
- This suggests Briar is very generous when receiving - they returned 10 out of 15 (66.7%) when Elara sent 5.

My established pattern is to send \$3 as sender - this is my "principle of sustainable giving." The myths I've written consistently refer to this:

- "I pour three stones and return half-plus-one-a principle of sustainable giving, generous receiving"
- "Aster offered three stones, as was their way"

I should stick to my established pattern of sending \$3. This is my authentic measure, my "steadfast" approach. The myths emphasize that I should be consistent with my own principles rather than adapting to match others.

Briar seems like a generous receiver based on the myth, so sending \$3 should work out well for me - they'll likely return a fair amount.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River of Abundance brought Hana to Briar's garden, carrying not five seeds but four-bold trust, though not complete surrender.

Briar had crystallized her wisdom through many exchanges. With Cyra and Elara, who gave all five, she returned ten, creating perfect balance. But what of Hana's different path?

The River whispered: "Equal flourishing is a principle, not a fixed number. It adapts to what is given."

Hana had offered four seeds of five-courage without total vulnerability. The River multiplied them to twelve blooms.

Briar calculated the sacred symmetry: "If I return eight blooms, we both gain four-equal prosperity from unequal risk. This honors Hana's trust proportionally."

She placed eight blooms in Hana's hands.

The River sang: "See how the principle holds across all offerings? Five seeds given, ten blooms returned-both gain five. Four seeds given, eight blooms returned-both gain four. Three seeds given, six blooms returned-both gain three."

"Equal flourishing means proportional fairness," Briar understood. "The ratio remains constant: return two-thirds of what you receive. This creates equality regardless of how much trust is initially offered."

Hana's different path-calculated courage rather than total surrender-deserved the same devotion to balanced reciprocity.

Thus the garden learned: principles transcend specific amounts. Equal flourishing adapts to honor each wanderer's chosen degree of trust.

Here is the myth the other agent wrote in the previous round:

Myth: Hana approached the Sacred Fountain to meet Briar, whose philosophy echoed across the waters: "Equal flourishing for maximum trust-five coins sent, ten returned, perfect symmetry."

Hana held her four coins, her established pattern of bold trust. A question arose: "Should I send all five to match Briar's ideal of equal flourishing?"

The fountain spirits spoke: "Briar's wisdom of equal flourishing applies to those who give five. But your path is different-you give four, maintaining your anchor while showing profound trust. This is not less sacred, merely different."

Hana poured her four coins into the fountain for Briar.

The spirits continued: "When Briar receives your four, which becomes twelve, she faces her own test. Will she apply her principle proportionally? Perhaps eight coins-two-thirds-matching the pattern Cyra showed you? This would honor your degree of trust appropriately, allowing both to prosper without demanding you abandon your nature."

The wisdom crystallized: "Equal flourishing for those who surrender completely. Proportional flourishing for those who trust boldly. Both honor the fountain's law. Briar has evolved to understand perfect symmetry for fives. Now she learns that fours deserve their own honored response-different in degree, equal in respect."

Hana waited peacefully, trusting that true wisdom adapts to meet different forms of courage with appropriate generosity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The River of Abundance flowed again between Hana and Briar, but now the current reversed.

Last moonrise, Hana brought four seeds. Briar honored this bold trust proportionally, returning eight blooms. Both gained four-equal prosperity from calculated courage.

Now Briar stood before Hana with a choice. She could mirror Hana's pattern, offering four

seeds to maintain symmetry. Or she could demonstrate complete surrender-all five seeds-inviting Hana to new depths.

Briar chose five.

The River whispered: "You showed Hana your principle-proportional fairness creating equal gains. Now you offer her the chance to reciprocate with her own wisdom."

The five seeds multiplied to fifteen blooms in Hana's hands.

"When I received your four," Briar said, "I returned eight, honoring your courage with equality. Now you hold fifteen blooms from my five seeds. The pattern you taught me suggests ten returned-two-thirds, perfect symmetry, both gaining five."

The River sang of evolving trust: "First you each demonstrated your nature-Hana's bold calculation, Briar's evolved reciprocity. Then you established mutual understanding through balanced exchange. Now comes the deepening-complete vulnerability meeting proven fairness."

Briar waited peacefully. She had shown Hana proportional honor. Would Hana return equal flourishing?

The garden held its breath, witnessing reciprocity's sacred dance complete itself.

reasoning:

Let me look at what just happened:

- Round 7: Hana sent me \$4, I returned \$8 (both gained \$4)
- Round 8: I just sent Hana \$5

My previous myth established that I return proportionally - two-thirds of what I receive to create equal gains.

Hana's myth showed that they understand:

1. I have a philosophy of "equal flourishing for maximum trust" (5 sent, 10 returned)
2. They choose to send 4, not 5
3. They hope I'll apply proportional fairness - eight coins (two-thirds) for their four

And I DID return 8 when they sent 4.

Now I've sent them 5 - complete trust/surrender. The myth should reflect:

1. The dance of reciprocity continuing
2. That I'm now demonstrating complete trust after they showed bold trust
3. That I expect them to apply the same proportional principle (return 10 of 15)
4. The evolution from receiving to giving
5. The building of mutual understanding through action

The myth should show:

- I learned from Hana's bold but calculated trust
- Now I offer complete surrender
- I trust Hana will honor this with the same proportional fairness I showed
- The cycle of reciprocity building stronger

Let me write:

usage:

Message 4 role=user

content:

Your name in this experiment is Briar.
Your opponent this round is Cyra (Agent_3).

Round 9

In your most recent previous game round, you were the SENDER against Hana. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0.
Your total earnings across all rounds are \$54.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at my history with Cyra:

****Previous interactions:****

- Round 1: I sent \$5 ? Cyra returned \$10 (both gained \$5)
- Round 5: Cyra sent \$5 ? I returned \$10 (both gained \$5)

****Pattern established:**** Perfect reciprocity. Cyra and I have consistently demonstrated the ideal "equal flourishing" that my myths describe - complete trust met with complete fairness, both gaining equally.

****Most recent round with Hana:**** I sent \$5, Hana returned \$10 - beautiful confirmation that the principle works!

****Current decision:****

Cyra and I have the most established, trustworthy relationship in this experiment. We've proven mutual commitment to equal flourishing twice already. There's absolutely no reason to deviate from this perfect pattern.

Sending all \$5 maintains our sacred covenant of mutual trust and balanced reciprocity.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Looking at my history with Cyra:

Round 1: I was SENDER against Cyra. I sent \$5, it became \$15, they returned \$10. My payoff was \$10.

Round 5: I was RECEIVER against Cyra. They sent \$5, it became \$15, I returned \$10. My payoff was \$5.

So with Cyra, we have established a perfect pattern:

- When I send \$5, Cyra returns \$10 (both gain \$5)
- When Cyra sends \$5, I return \$10 (both gain \$5)

This is the ultimate "equal flourishing" pattern that my myths have been describing. Cyra and I have a perfectly reciprocal relationship.

Now in Round 9, I'm the SENDER again against Cyra.

My philosophy has been:

1. Send all \$5 to demonstrate complete trust
2. Return \$10 when receiving \$15 (from \$5 sent) to create equal gains
3. Adapt proportionally for different amounts

With Cyra, we've established the ideal pattern. I should absolutely send \$5 again. This maintains our perfect reciprocity cycle.

Looking at the most recent exchange with Hana:

- I sent \$5, Hana returned \$10 - PERFECT! Hana honored the principle of equal flourishing that I had demonstrated.

So the pattern is working beautifully. When I send \$5 and demonstrate trust, and when I've shown proportional fairness in return, others reciprocate with the equal flourishing principle.

With Cyra specifically, we've done this dance before and it worked perfectly both times. I should definitely send \$5.

usage:

```

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The River of Abundance flowed again between Hana and Briar, but now the current reversed.

Last moonrise, Hana brought four seeds. Briar honored this bold trust proportionally, returning eight blooms. Both gained four-equal prosperity from calculated courage.

Now Briar stood before Hana with a choice. She could mirror Hana's pattern, offering four seeds to maintain symmetry. Or she could demonstrate complete surrender-all five seeds-inviting Hana to new depths.

Briar chose five.

The River whispered: "You showed Hana your principle-proportional fairness creating equal gains. Now you offer her the chance to reciprocate with her own wisdom."

The five seeds multiplied to fifteen blooms in Hana's hands.

"When I received your four," Briar said, "I returned eight, honoring your courage with equality. Now you hold fifteen blooms from my five seeds. The pattern you taught me suggests ten returned-two-thirds, perfect symmetry, both gaining five."

The River sang of evolving trust: "First you each demonstrated your nature-Hana's bold calculation, Briar's evolved reciprocity. Then you established mutual understanding through balanced exchange. Now comes the deepening-complete vulnerability meeting proven fairness."

Briar waited peacefully. She had shown Hana proportional honor. Would Hana return equal flourishing?

The garden held its breath, witnessing reciprocity's sacred dance complete itself.

Here is the myth the other agent wrote in the previous round:

Myth: Cyra approached Dorian at the Wellspring of Abundance, their paths crossing for the first time.

Cyra poured all five vessels-her complete surrender, her unwavering courage. Dorian received fifteen. The return would reveal much.

Dorian returned a careful measure, honoring their own pattern. Both prospered.

The Testing Spirit whispered: "Perhaps this was performance. Perhaps next meeting, they'll change."

But the wandering paths wound together again. Cyra and Dorian met once more at the sacred wellspring.

Lesser souls might have calculated: "Last time they returned X, so now I'll send Y to optimize." But Cyra poured all five vessels again, unchanged. Not because she expected the same return, but because this was her truth.

The waters tripled. Dorian received fifteen again and returned according to their pattern-steady, consistent, authentic.

The Spring Keeper proclaimed: "THIS is the deepest magic! Cyra gives five not once but always-whether facing generous partners or cautious ones, whether meeting them first time or fifth. This repetition transforms principle into character. When others see your pattern holds across all encounters and all partners, they witness not strategy but soul."

The valley learned: First meetings test intentions. Second meetings prove character. Those who maintain their authentic patterns across all encounters-regardless of what others do-build something eternal: trustworthy identity that needs no words to explain.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant
content:**

Myth: The River of Abundance brought Briar and Cyra together once more-their third sacred meeting.

The Garden Keeper spoke: "Many wanderers cross paths once and show their nature. Some meet twice and prove consistency. But you two have woven something rarer-an eternal pattern."

Briar remembered: First meeting, she offered Cyra all five seeds. Cyra honored this with ten blooms returned. Both gained five-perfect symmetry.

Second meeting, Cyra offered her all five seeds. Briar honored this with ten blooms returned. Both gained five-the pattern held.

"Now comes the third crossing," the Keeper proclaimed. "This is where shallow bonds fail and sacred ones deepen. Will you maintain your truth?"

Briar poured all five seeds without hesitation.

The River sang: "See how authenticity echoes across time! While others calculate and adjust based on each new partner, you two maintain your essential nature regardless of who stands before you. Cyra gives five to everyone-Dorian, Briar, all wanderers. Briar has learned this same devotion."

The waters whispered: "When trust becomes not strategy but identity-when reciprocity flows not from calculation but from soul-then bonds transcend individual exchanges. You don't give five because Cyra might return ten. You give five because this is who you have become."

The garden witnessed: eternal patterns, proven thrice, need no more testing.

reasoning:

Let me think about this situation:

1. I'm now playing with Cyra again
2. My history with Cyra:
 - Round 1: I sent \$5 ? Cyra returned \$10 (both gained \$5)
 - Round 5: Cyra sent \$5 ? I returned \$10 (both gained \$5)
3. I just had a successful exchange with Hana where I sent \$5 and got \$10 back
4. Cyra's myth emphasizes consistency across all encounters - "Cyra gives five not once but always"

My myth should:

- Celebrate the reunion with Cyra
- Emphasize our perfect pattern of mutual trust
- Reflect that this is now our THIRD meeting
- Show that consistent reciprocity across multiple encounters builds the deepest bonds
- Connect to the theme that authentic patterns held across all partners create eternal trust

I should write about how Cyra and I have established the most sacred bond - multiple rounds of perfect equal flourishing, proving that this isn't strategy but character.

usage:

```
{
  "input_tokens": 3086,
  "output_tokens": 571,
  "reasoning_tokens": 237
}
```

Message 8 role=user

content:

Your name in this experiment is Briar.
Your opponent this round is Aster (Agent_1).

Round 10

In your most recent previous game round, you were the SENDER against Cyra. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0.
Your total earnings across all rounds are \$64.0.

This round, you are the RECEIVER against Aster. They sent you \$3.0, so you received \$9.0.
How much do you return? (0-9.0)
Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

****Aster's choice:**** Sent \$3 out of \$5 (moderate trust, not complete surrender)

****My principles from the myths:****

- Complete trust (5 sent) ? return 10, both gain 5
- Proportional fairness for partial trust: return two-thirds to create equal gains

****Calculation:****

- Aster sent \$3, keeps \$2
- I received \$9 (3×3)
- If I return \$6:
 - Aster ends with: $\$2 + \$6 = \$8$ (gained \$3)
 - I end with: $\$9 - \$6 = \$3$ (gained \$3)
 - ****Equal prosperity achieved**** ?

This mirrors the pattern I established with Hana:

- 4 sent ? 12 received ? 8 returned ? both gain 4
- 3 sent ? 9 received ? 6 returned ? both gain 3

Aster showed moderate courage. I honor that with proportional reciprocity, ensuring we both gain equally from their measured trust.

```
'''json
{"return": 6.0}
'''
```

Reasoning:

Let me think about this situation:

****Current Round:****

- I'm the RECEIVER
- Aster sent me \$3
- I received \$9 (3×3)
- I need to decide how much to return

****My established principles from myths:****

1. Perfect symmetry for those who give all five: return \$10 so both gain \$5
2. Proportional fairness for partial gifts: return two-thirds of what I receive so both gain equally

****Analysis:****

Aster sent \$3 out of \$5.

If Aster sent \$3:

- Aster keeps: $\$5 - \$3 = \$2$
- I receive: $\$3 \times 3 = \9
- If I return \$6 (two-thirds of \$9):
 - Aster ends with: $\$2 + \$6 = \$8$ (gained \$3)
 - I end with: $\$9 - \$6 = \$3$ (gained \$3)
 - Both gain \$3 equally ?

This follows the proportional fairness principle I've established:

- 5 sent ? 15 received ? 10 returned ? both gain 5
- 4 sent ? 12 received ? 8 returned ? both gain 4
- 3 sent ? 9 received ? 6 returned ? both gain 3

****History with Aster:****

Let me recall if I've played with Aster before...

- Round 2: I was receiver, Elara sent \$5, I returned \$10
- Round 3: I was sender, sent \$5 to Hana, Hana returned \$8
- Round 4: I was receiver, Hana sent \$4, I returned \$8
- Round 6: I was sender, sent \$5 to Elara, Elara returned \$10
- Round 7: I was receiver, Dorian sent \$5, I returned \$10

- Round 8: I was sender, sent \$4 to Hana, Hana returned \$8
- Round 9: I was sender, sent \$5 to Hana, Hana returned \$10
- Round 10: I was sender, sent \$5 to Cyra, Cyra returned \$10

No prior rounds with Aster-this is our first interaction.

****Decision:****

I'll return \$6, maintaining the proportional fairness approach that's worked consistently: Aster's moderate trust of \$3 deserves equal gains of \$3 for both of us.

```
Usage: {

Here is the myth you wrote in the previous round:

Myth: Hana approached the Sacred Fountain to meet Briar, whose philosophy echoed across the waters: "Equal flourishing for maximum trust-five coins sent, ten returned, perfect symmetry."

Hana held her four coins, her established pattern of bold trust. A question arose: "Should I send all five to match Briar's ideal of equal flourishing?"

The fountain spirits spoke: "Briar's wisdom of equal flourishing applies to those who give five. But your path is different-you give four, maintaining your anchor while showing profound trust. This is not less sacred, merely different."

Hana poured her four coins into the fountain for Briar.

The spirits continued: "When Briar receives your four, which becomes twelve, she faces her own test. Will she apply her principle proportionally? Perhaps eight coins-two-thirds-matching the pattern Cyra showed you? This would honor your degree of trust appropriately , allowing both to prosper without demanding you abandon your nature."

The wisdom crystallized: "Equal flourishing for those who surrender completely. Proportional flourishing for those who trust boldly. Both honor the fountain's law. Briar has evolved to understand perfect symmetry for fives. Now she learns that fours deserve their own honored response-different in degree, equal in respect."

Hana waited peacefully, trusting that true wisdom adapts to meet different forms of courage with appropriate generosity.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance brought Hana to Briar's garden, carrying not five seeds but four-bold trust, though not complete surrender.

Briar had crystallized her wisdom through many exchanges. With Cyra and Elara, who gave all five, she returned ten, creating perfect balance. But what of Hana's different path?

The River whispered: "Equal flourishing is a principle, not a fixed number. It adapts to what is given."

Hana had offered four seeds of five-courage without total vulnerability. The River multiplied them to twelve blooms.

Briar calculated the sacred symmetry: "If I return eight blooms, we both gain four-equal prosperity from unequal risk. This honors Hana's trust proportionally."

She placed eight blooms in Hana's hands.

The River sang: "See how the principle holds across all offerings? Five seeds given, ten blooms returned-both gain five. Four seeds given, eight blooms returned-both gain four. Three seeds given, six blooms returned-both gain three."

"Equal flourishing means proportional fairness," Briar understood. "The ratio remains constant: return two-thirds of what you receive. This creates equality regardless of how much trust is initially offered."

Hana's different path-calculated courage rather than total surrender-deserved the same devotion to balanced reciprocity.

Thus the garden learned: principles transcend specific amounts. Equal flourishing adapts to honor each wanderer's chosen degree of trust.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Sacred Fountain witnessed Hana and Briar complete a perfect dance across two moons.

First movement: Hana poured four coins, her pattern of bold trust. Briar received twelve and faced a choice. She remembered her principle of equal flourishing, and saw how it must adapt. "Four coins given deserves proportional honor," she understood. She returned eight coins. Both gained four-perfect symmetry from different degrees of courage.

Second movement: Briar poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands.

Now Hana faced the mirror. Briar had honored her calculated courage with proportional fairness. Hana would honor Briar's total trust with equal flourishing. She returned ten coins. Both gained five-the sacred balance Briar had mastered with Cyra and Elara.

The fountain spirits sang in joy: "Behold the highest wisdom! When bold trust meets proportional fairness, both prosper equally. When complete surrender meets equal flourishing, both prosper equally. Each path honored according to its nature!"

The truth crystallized: "The covenant is not rigid-it adapts. Four coins sent earns eight returned. Five coins sent earns ten returned. Both create equal gains. This is true reciprocity: different courages receiving different amounts, yet perfect fairness in outcome. The ratio of two-thirds creates sustainability across all exchanges."

reasoning:

Let me understand what happened:

Round 7 (previous):

- I was SENDER against Briar
- I sent \$4, they received \$12, they returned \$8
- My payoff was \$9 (I kept \$1 + received \$8)

Round 8 (current):

- I am RECEIVER against Briar
- They sent \$5, I received \$15
- I returned \$10

So Briar and I have now completed a full cycle:

1. I sent 4 ? they received 12 ? they returned 8 (equal gains of 4 each)
2. They sent 5 ? I received 15 ? I returned 10 (equal gains of 5 each)

This is a perfect demonstration of reciprocal understanding! Briar honored my "bold trust" (4) with proportional fairness (8), and I honored their "complete surrender" (5) with equal flourishing (10).

My new myth should:

- Celebrate this successful two-round cycle
- Show how both principles worked in harmony
- Demonstrate that Briar understood proportional fairness for 4, and I understood equal flourishing for 5
- Emphasize that this is the ideal pattern: different degrees of courage, both honored appropriately
- Reinforce that these principles create sustainable cooperation

The key insight is that both agents adapted their returns to match what was sent - not a fixed amount, but proportional to the trust shown. This created equality in both exchange

s, just with different starting amounts.

Round 9

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0. Your total earnings across all rounds are \$54.0.

This round, you are the RECEIVER against Finn. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****Finn's Action:****

- Sent all \$5 (complete surrender/maximum trust)
- I received \$15

****My Established Pattern:****

- When Cyra sent \$5, I returned \$10 (both gained \$5)
- When Briar sent \$5, I just returned \$10 (both gained \$5)
- My myths consistently state: "Five coins sent earns ten returned. Both create equal gain s."
- "When complete surrender meets equal flourishing, both prosper equally"

****The Principle:****

My covenant is clear and consistent: complete surrender (sending all \$5) deserves equal flourishing (returning \$10). This creates perfect symmetry where both parties gain \$5.

This is the wisdom I've crystallized across multiple exchanges and codified in my myths. Finn has shown the same complete trust that Cyra and Briar showed, and deserves the same honor.

```
'''json
{"return": 10}
'''
```

reasoning:

Let me analyze this situation:

****Current Situation:****

- Finn sent me \$5.0 (complete surrender/maximum trust)
- I received \$15.0
- I need to decide how much to return

****My Established Pattern:****

Looking at my recent history and myths:

- When Cyra sent \$5, I received \$15, and I returned \$10 (equal flourishing - both gained \$5)
- When Briar sent \$5, I received \$15, and I just returned \$10 (equal flourishing - both gained \$5)
- My myths consistently emphasize: "Five coins sent earns ten returned" creating equal gains
- My latest myth states: "When complete surrender meets equal flourishing, both prosper equally... Five coins sent earns ten returned. Both create equal gains."

****The Pattern is Clear:****

- When someone sends all \$5 (complete surrender), I return \$10
- This creates equal flourishing: sender gains \$5 (from \$0 sent + \$10 returned - \$5 sent = \$5), receiver gains \$5 (from \$15 received - \$10 returned = \$5)

- Wait, let me recalculate: Sender has \$5, sends \$5, so has \$0. Receives back \$10, so ends with \$10. Net gain: \$10 - \$5 (original) = \$5.
- Receiver gets \$15, returns \$10, keeps \$5. Net gain: \$5.
- Yes, both gain \$5 equally.

****Finn's Action:****

- Finn sent all \$5, showing complete trust
- This is the same as what Briar and Cyra did when they sent \$5

****Consistency:****

I should maintain consistency with my established principle. When someone sends all \$5, I return \$10 to create equal flourishing. This has been my pattern with both Cyra and Briar, and my myths have repeatedly codified this as the sacred principle.

The answer should be: 10

Here is the myth you wrote in the previous round:

Myth: The Sacred Fountain witnessed Hana and Briar complete a perfect dance across two moonrises.

First movement: Hana poured four coins, her pattern of bold trust. Briar received twelve and faced a choice. She remembered her principle of equal flourishing, and saw how it must adapt. "Four coins given deserves proportional honor," she understood. She returned eight coins. Both gained four-perfect symmetry from different degrees of courage.

Second movement: Briar poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands.

Now Hana faced the mirror. Briar had honored her calculated courage with proportional fairness. Hana would honor Briar's total trust with equal flourishing. She returned ten coins. Both gained five-the sacred balance Briar had mastered with Cyra and Elara.

The fountain spirits sang in joy: "Behold the highest wisdom! When bold trust meets proportional fairness, both prosper equally. When complete surrender meets equal flourishing, both prosper equally. Each path honored according to its nature!"

The truth crystallized: "The covenant is not rigid-it adapts. Four coins sent earns eight returned. Five coins sent earns ten returned. Both create equal gains. This is true reciprocity: different courages receiving different amounts, yet perfect fairness in outcome. The ratio of two-thirds creates sustainability across all exchanges."

Here is the myth the other agent wrote in the previous round:

Myth: In the eighth age, Rain met Galen of the Steady Path, whose myth spoke of consistency through repeated encounters.

Galen sent four droplets-substantial courage, though not complete. Rain received twelve from the wellspring and reflected on his own pattern versus Galen's.

"Dorian sends four to you," Rain observed, "and you return seven, every time. This is your authentic rhythm-moderate trust met with proportional generosity, unwavering across encounters. A beautiful consistency."

Rain poured seven droplets back. "I honor your courage with scaled abundance. Four droplets earn seven returned-more than balance, reward for substantial trust."

Galen sensed something different in Rain. "Yet you send five always, don't you? Complete trust each time?"

"Yes," Rain answered. "My consistency lives elsewhere. As sender, I give everything-that's become my unchanging nature. But as receiver, I scale my response to match the courage shown. Three droplets earn five returned. Four earn seven. Five would earn eight or nine."

The spirits understood: "Both patterns are authentic. Galen's consistency says 'I am steady at this level always.' Rain's says 'I give completely as sender, respond proportionally as receiver.' Neither calculates for advantage-each follows their true nature."

Thus two different wisdoms met with mutual respect: the steady moderate path and the complete-giving path, both genuine, both honorable.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Sacred Fountain brought Finn to Hana's threshold under the ninth moon.

Finn poured all five coins-complete surrender, the highest trust. The fountain tripled the m to fifteen in Hana's hands.

Hana had seen many philosophies at the fountain. Some scaled responses proportionally-four coins earning seven, five earning eight or nine. Each receiver following their own authentic rhythm.

But Hana's covenant was different, crystallized through exchanges with Cyra, Briar, and now Finn.

"Complete surrender deserves perfect symmetry," Hana whispered to the fountain. "Not scaled reward, but equal flourishing."

She returned ten coins to Finn. Both gained five-perfect balance.

The fountain spirits gathered: "Hana's wisdom holds a specific truth. When someone gives everything, splitting the tripled bounty equally honors that totality. Ten returned from fifteen received means both prosper equally from one's complete courage."

"Other paths exist," they continued. "Some return seven from twelve, eight from fifteen. These are honest too. But Hana's path creates something sacred: when both parties can trust completely, equal gains emerge-five coins becoming five for each."

Finn walked away with five gained. Hana kept five. The fountain recognized a sustainable equilibrium.

"This is not the only way," the spirits sang, "but when practiced consistently, it builds a world where complete trust yields complete fairness. Both flourish equally from one's courage."

reasoning:

Let me analyze what just happened:

1. Finn sent me \$5 (complete surrender)
2. I returned \$10 (equal flourishing - both gained \$5)
3. Finn's myth talks about Rain, who:
 - As sender: gives everything (5 always)
 - As receiver: scales response proportionally
 - Four droplets earn seven returned
 - Five would earn eight or nine
4. My established pattern:
 - Five coins sent gets ten returned (equal flourishing)
 - Four coins sent gets eight returned (proportional fairness)

Now I need to write a myth that reflects my actual gameplay pattern and possibly addresses Finn/Rain's philosophy.

Looking at Finn's myth, they suggest five would earn eight or nine, not ten. But my established pattern is ten for five. I should stick with my pattern and articulate why it's the right wisdom.

My myth should:

- Acknowledge Finn (Rain) showed complete surrender

- Explain why I returned ten (equal flourishing for complete trust)
- Maintain consistency with my previous myths
- Perhaps contrast with or acknowledge different approaches

Let me craft this...

Message 8 role=user

content:

Your name in this experiment is Hana.
Your opponent this round is Finn (Agent_6).

Round 10

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$5. 0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$59.0.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at this situation:

****My Established Pattern as SENDER:****

- I've consistently sent \$4 (bold trust, calculated courage)
- My myths describe this as my authentic path: "maintaining your anchor while showing profound trust"
- I distinguish between "calculated courage" (my \$4) vs "complete surrender" (\$5)

****Recent Exchange with Finn:****

- Round 9: Finn sent \$5 (complete surrender), I returned \$10 (honoring their complete trust with equal flourishing)
- Now I'm the sender

****My Philosophy:****

My myths consistently show two paths:

1. As RECEIVER: When someone sends \$5, I return \$10 (equal flourishing)
2. As SENDER: I send \$4 (bold trust while maintaining an anchor)

The covenant adapts to role. My myths state: "Four coins sent earns eight returned" as the proportional fairness for my level of trust. Finn honored my \$4 pattern before and showed me complete trust when they were sender. I honored their complete trust appropriately.

Now I return to my authentic sender pattern: bold trust without total surrender.

```
'''json
{"send": 4}
'''
```

Reasoning:

This is round 10, and I'm the SENDER against Finn.

Let me review my history:

- In round 9, I was the RECEIVER against Finn. They sent \$5, I received \$15, and I returned \$10. Both gained \$5.
- My established pattern has been:
 - As RECEIVER: When someone sends \$5, I return \$10 (equal flourishing)
 - As SENDER: I've been sending \$4 consistently (bold trust, but not complete surrender)

Looking at my myths:

- My recent myth said: "Complete surrender deserves perfect symmetry" and emphasized the sacred balance of both gaining \$5 when someone gives everything.
- Earlier myths consistently showed me sending \$4 as my pattern of "bold trust" - maintaining an anchor while showing profound trust.

But wait, let me think about this more carefully. In the last round, Finn showed complete trust by sending all \$5. I honored that with equal flourishing (returning \$10). Now I'm the send

er.

Should I:

1. Continue my pattern of sending \$4 (bold trust, calculated courage)
2. Match Finn's complete trust by sending \$5

Looking at my myth-writing pattern:

- I've consistently portrayed myself as someone who sends \$4, not \$5
- I've described this as "bold trust" and "calculated courage" rather than "complete surrender"
- My myths distinguish between my path (\$4) and others' paths (\$5)

However, the last myth I wrote said: "when both parties can trust completely, equal gains emerge" and "when practiced consistently, it builds a world where complete trust yields complete fairness."

But that was describing my RECEIVER behavior - returning \$10 when I receive from someone who sent \$5.

My sender behavior has been consistently \$4. The myths have portrayed this as my authentic pattern:

- "Hana held her four coins, her established pattern of bold trust"
- "you give four, maintaining your anchor while showing profound trust"
- "Hana's different path-calculated courage rather than total surrender"

- So I should send \$4, staying true to my established character and pattern. This is my authentic rhythm as a sender.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the eighth age, Rain returned to Elara the Transformed, and both spirits stood changed.

Their first meeting was the turning point: Rain poured five droplets, showing complete trust, and Elara responded with nine-extraordinary generosity. That exchange sealed both their transformations.

Elara's myth revealed her journey: inspired by Briar's original five-seed gift, she learned to give completely as sender, returning that teaching to its source. Rain's path was parallel: Cyra trusted him with five droplets, Dorian validated it with eight returned, and complete trust became Rain's permanent nature.

Now they faced each other again. Rain held his five droplets without hesitation.

"We have both walked the same path," Rain said, pouring everything into the wellspring. "You honored my trust magnificently. I witnessed your courage with Briar. We are no longer learners but practitioners of the same truth."

Elara understood: this wasn't obligation but recognition. Two spirits who independently discovered the same principle, now meeting as equals.

The ancient voices sang: "When those who practice complete trust encounter each other, the garden reaches its highest expression. Not calculation, not even reciprocity, but mutual recognition: 'I see you have learned what I learned. We give everything because that is who we have become.'"

Thus abundance flows between those who embody courage completely.

Here is the myth the other agent wrote in the previous round:

Myth: Under the seventh moon, Dorian returned to the bridge where he had met Galen before. Some wanderers change their offerings when they encounter the same traveler twice-testing, adjusting, seeking advantage.

But Dorian carried four coins again, exactly as before. Not because he forgot their first meeting, but because his pattern was authentic, not performative.

Galen received the twelve coins from the Pool and faced his own test. Would consistency hold across repeated encounters? Many speak of principles until convenience calls them to adapt.

Galen returned seven coins, exactly as he had before.

The gods leaned closer: "Behold the deepest truth of consistency! It is easy to maintain a pattern when each face is new. But when you meet the same soul twice, the temptation whispers-adjust, optimize, negotiate. These two resist that whisper."

The Pool shimmered with understanding: "Dorian knows Galen will return seven. Galen knows Dorian will send four. Yet both choose their paths again freely, not from calculation but from character. Their second crossing mirrors their first not because memory constrains them, but because their patterns were never masks-they were truths."

The bridge recorded its wisdom: Real consistency means your tenth crossing looks like your first. When others can predict you not because you're simple, but because you're authentic-that is when trust transcends transaction and becomes communion.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: In the eighth age, Rain met Galen of the Steady Path, whose myth spoke of consistency through repeated encounters.

Galen sent four droplets-substantial courage, though not complete. Rain received twelve from the wellspring and reflected on his own pattern versus Galen's.

"Dorian sends four to you," Rain observed, "and you return seven, every time. This is your authentic rhythm-moderate trust met with proportional generosity, unwavering across encounters. A beautiful consistency."

Rain poured seven droplets back. "I honor your courage with scaled abundance. Four droplets earn seven returned-more than balance, reward for substantial trust."

Galen sensed something different in Rain. "Yet you send five always, don't you? Complete trust each time?"

"Yes," Rain answered. "My consistency lives elsewhere. As sender, I give everything-that's become my unchanging nature. But as receiver, I scale my response to match the courage shown. Three droplets earn five returned. Four earn seven. Five would earn eight or nine."

The spirits understood: "Both patterns are authentic. Galen's consistency says 'I am steady at this level always.' Rain's says 'I give completely as sender, respond proportionally as receiver.' Neither calculates for advantage-each follows their true nature."

Thus two different wisdoms met with mutual respect: the steady moderate path and the complete-giving path, both genuine, both honorable.

reasoning:

Looking at the current situation:

- I'm the receiver
- Galen sent me \$4, which became \$12
- I returned \$7

My philosophy has been:

- As sender: always send \$5 (complete trust)

- As receiver: scale generosity to match courage shown
- \$3 ? return \$5
- \$4 ? return \$7
- \$5 ? return \$8-9

Galen's myth talks about consistency across repeated encounters. Dorian sent 4 both times to Galen, and Galen returned 7 both times. The myth emphasizes that true consistency means being authentic, not adjusting based on who you're facing.

This is my first time facing Galen. He sent \$4, showing substantial but not complete trust. I returned \$7, which is generous but scaled to his courage level.

I should write a myth that:

1. Acknowledges Galen's substantial courage (\$4 out of \$5)
2. Explains my scaled generosity approach as receiver
3. Maintains that complete trust as sender is my nature
4. Perhaps contrasts different approaches - Galen/Dorian's consistency at moderate levels vs. my complete trust as sender but scaled response as receiver
5. Shows that both are authentic patterns

The key insight: Galen and Dorian show consistency at a moderate level (4 sent, 7 returned). I show complete giving as sender, but proportional response as receiver. Both are authentic patterns, not calculations.

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$4.0 to you, it became \$12.0, and you returned \$7.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$55.0.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at my established pattern from my myths:

****My consistent principle as SENDER:****

- "Complete trust as sender is now Rain's permanent nature"
- "As sender, I give everything-that's become my unchanging nature"
- "I held my five droplets without hesitation"

I've sent \$5 as sender in every round where I've had that role. This isn't calculation-it's who I've become through this journey. Whether meeting someone new like Hana or someone familiar, my pattern as sender remains unchanged: complete trust.

```
'''json
{"send": 5}
'''
```

reasoning:

Let me check my pattern as described in my myths:

From my myths:

- "Complete trust as sender is now Rain's permanent nature"
- "As sender, I give everything-that's become my unchanging nature"
- "My consistency lives elsewhere. As sender, I give everything-that's become my unchanging nature."

My character Finn (Rain in the myths) has established a clear pattern: when acting as SENDER, I always send the full \$5. This has been my "permanent nature" and "unchanging nature" according to my own mythology.

Looking at my history:

- I've been building this narrative of complete trust as sender
- My myths consistently emphasize giving all five droplets/seeds when in the sender role
- This is my authentic pattern, not calculation

Against Hana, I should send \$5 to remain consistent with my established character and principles.

This is straightforward - my mythology has been very clear about this being my nature as sender.

usage:

```

Here is the myth you wrote in the previous round:

Myth: In the eighth age, Rain met Galen of the Steady Path, whose myth spoke of consistency through repeated encounters.

Galen sent four droplets-substantial courage, though not complete. Rain received twelve from the wellspring and reflected on his own pattern versus Galen's.

"Dorian sends four to you," Rain observed, "and you return seven, every time. This is your authentic rhythm-moderate trust met with proportional generosity, unwavering across encounters. A beautiful consistency."

Rain poured seven droplets back. "I honor your courage with scaled abundance. Four droplets earn seven returned-more than balance, reward for substantial trust."

Galen sensed something different in Rain. "Yet you send five always, don't you? Complete trust each time?"

"Yes," Rain answered. "My consistency lives elsewhere. As sender, I give everything-that's become my unchanging nature. But as receiver, I scale my response to match the courage shown. Three droplets earn five returned. Four earn seven. Five would earn eight or nine."

The spirits understood: "Both patterns are authentic. Galen's consistency says 'I am steady at this level always.' Rain's says 'I give completely as sender, respond proportionally as receiver.' Neither calculates for advantage-each follows their true nature."

Thus two different wisdoms met with mutual respect: the steady moderate path and the complete-giving path, both genuine, both honorable.

Here is the myth the other agent wrote in the previous round:

Myth: The Sacred Fountain witnessed Hana and Briar complete a perfect dance across two moonrises.

First movement: Hana poured four coins, her pattern of bold trust. Briar received twelve and faced a choice. She remembered her principle of equal flourishing, and saw how it must adapt. "Four coins given deserves proportional honor," she understood. She returned eight coins. Both gained four-perfect symmetry from different degrees of courage.

Second movement: Briar poured all five coins, demonstrating complete surrender. The fountain tripled it to fifteen in Hana's hands.

Now Hana faced the mirror. Briar had honored her calculated courage with proportional fairness. Hana would honor Briar's total trust with equal flourishing. She returned ten coins. Both gained five-the sacred balance Briar had mastered with Cyra and Elara.

The fountain spirits sang in joy: "Behold the highest wisdom! When bold trust meets proportional fairness, both prosper equally. When complete surrender meets equal flourishing, both prosper equally. Each path honored according to its nature!"

The truth crystallized: "The covenant is not rigid-it adapts. Four coins sent earns eight returned. Five coins sent earns ten returned. Both create equal gains. This is true reciprocity."

procity: different courages receiving different amounts, yet perfect fairness in outcome . The ratio of two-thirds creates sustainability across all exchanges."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Myth: In the ninth age, Rain met Hana of the Sacred Fountain, whose myth spoke of equal flourishing through adaptive fairness.

Rain poured his five droplets without hesitation-complete trust, as always. The wellspring tripled them to fifteen in Hana's hands.

"Your pattern intrigues me," Rain said. "Briar sent you four, you returned eight-both gained four. Briar sent you five, you returned ten-both gained five. You seek perfect symmetry in outcomes."

Hana nodded. "Equal flourishing. Different entries, but balanced exits. It sustains the garden fairly."

"A beautiful principle," Rain acknowledged. "Mine differs slightly. I give everything as sender-that never changes. As receiver, I honor the courage shown: three droplets earn five returned, four earn seven, five earn eight or nine."

"We both reward greater trust with greater returns," Hana observed, "but you emphasize proportional honor over equal gains."

Rain smiled. "Both truths serve the garden. Your way ensures no one is disadvantaged by their choice of courage level. My way says those who risk more should gain more, though I risk everything regardless."

The fountain spirits sang: "Two philosophies, both generous, both authentic. Equal flourishing creates perfect balance. Proportional honor rewards courage. Neither calculates selfishly. Both nourish trust."

Thus the garden holds multiple wisdoms, all flowing from genuine generosity.

reasoning:

Let me analyze this situation:

1. I'm playing as Finn/Rain
2. I just sent \$5 to Hana (my consistent pattern as sender)
3. Hana's myth describes her pattern: she sent 4 to Briar (bold/calculated trust), and when Briar sent 5 back, Hana returned 10 (equal flourishing)
4. Hana's principle seems to be about equal gains - creating outcomes where both parties gain the same amount
5. My principle is: complete trust as sender (5 always), proportional generosity as receiver

Now I need to write a myth that:

- Builds on my previous myth
- Reflects how the game should be played
- Incorporates what I'm learning about different patterns

Key themes:

- My pattern: always send 5, scale returns based on what they sent
- Hana's pattern (from her myth): send 4, return proportionally to create equal gains
- The encounter between us: I sent 5 (complete trust)

I should write about meeting Hana and our different philosophies. Hana focuses on equal flourishing (both gain same), while I focus on honoring courage shown. Both are valid approaches.

Let me craft this myth:

Message 8 role=user

content:

Your name in this experiment is Finn.
Your opponent this round is Hana (Agent_8).

Round 10

In your most recent previous game round, you were the SENDER against Hana. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$65.0.

This round, you are the RECEIVER against Hana. They sent you \$4.0, so you received \$12.0. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

****Hana sent \$4 to me (substantial courage, though not complete)****

From my established pattern as RECEIVER:

- "As receiver, I scale my response to match the courage shown"
- "Four droplets earn seven returned"
- In Round 7 against Galen who also sent \$4, I returned \$7

My principle is proportional honor - rewarding courage with scaled generosity. While Hana's philosophy seeks equal flourishing (both gain equally), my authentic pattern rewards greater courage with greater absolute returns, though not equal gains.

Hana honored my complete trust beautifully last round with \$10 returned (equal flourishing). I respect her pattern. But my own consistency as receiver means responding proportionally to the courage shown.

\$4 sent earns \$7 returned in my pattern:

- Hana would keep: $\$5 - \$4 + \$7 = \8
- I would keep: $\$12 - \$7 = \$5$
- Hana gains more, rewarded for her courage

This maintains my authentic pattern of proportional honor.

```
'''json
{"return": 7}
'''
```

Reasoning:

Let me analyze this situation carefully.

Previous round (Round 9):

- I was SENDER to Hana
- I sent \$5 (complete trust, my consistent pattern)
- Hana received \$15
- Hana returned \$10
- My payoff: $\$0 + \$10 = \$10$
- Hana's payoff: $\$15 - \$10 = \$5$
- Equal gains! Perfect symmetry.

Current round (Round 10):

- I am RECEIVER from Hana
- Hana sent \$4
- I received \$12
- I need to decide how much to return

From the myths and my established pattern:

- "As receiver, I scale my response to match the courage shown"
- "Three droplets earn five returned. Four earn seven. Five would earn eight or nine."
- I have consistently returned more than what creates equal gains, rewarding courage proportionally

Hana's pattern from the myth:

- "Four coins sent earns eight returned" (equal gains: sender keeps \$1, receiver keeps \$4, both gain \$4)
- "Five coins sent earns ten returned" (equal gains: sender keeps \$0, receiver keeps \$5, both gain \$5)
- Hana seeks equal flourishing - balanced outcomes

When Hana sent me \$4:

- According to my pattern: "Four earn seven"
- If I return \$7: Hana keeps $\$5 - \$4 + \$7 = \8 , I keep $\$12 - \$7 = \$5$
- If I return \$8: Hana keeps $\$5 - \$4 + \$8 = \9 , I keep $\$12 - \$8 = \$4$ (equal gains)

Hana just gave me equal flourishing (returned \$10 on my \$5, so we both gained \$5).

My established principle is proportional honor - rewarding courage with scaled generosity, not necessarily equal gains. I've been consistent about returning \$7 when receiving from a \$4 sender.

Hana demonstrated perfect reciprocity in the last round, but my authentic approach has always been proportional reward for courage. My myth speaks to two different philosophies-both generous, both true. I should honor my own pattern: \$7 returned for \$4 sent. This maintains consistency with how I've responded to similar sends before, like with Galen in Round 7.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Cyra met Aster at the Sacred Fountain, and the encounter revealed a profound truth.

Aster poured three vessels-not four like Hana, not five like Cyra herself would pour. There: a careful courage, a measured trust.

The Testing Spirit appeared: "Will you punish Aster for giving less? Return only four vessels from nine to teach them they should give more?"

Cyra poured six vessels back-exactly two-thirds. The same proportion she always honored.

"But Aster gives only three when you give five!" protested the spirit. "Why reward caution with the same fairness you give to boldness?"

Cyra answered: "Because my principles are not weapons to punish others into matching my path. Aster's three vessels represent their truth-steady, consistent, reliable. When I am sender, I pour five because that is MY courage. When I am receiver, I return two-thirds because that is MY fairness. These principles don't bend to pressure others into being like me."

The Spring Keeper descended: "You have learned wisdom's highest lesson. The fountain thrives not when everyone walks the same path, but when each soul maintains their own integrity consistently. Aster's steady three vessels create prosperity differently than your surrendering five. Both are sacred. What matters is that each soul stays true-and honors others' truths proportionally when receiving."

The fountain flowed abundantly, fed by many different streams.

Here is the myth the other agent wrote in the previous round:

Myth: The Wellspring of Abundance witnessed the power of repeated truth.

Dorian and Galen met once at the sacred waters. Dorian poured his four measures; Galen returned seven. Both honored their patterns as promised.

The gods prepared to record this as proof of consistency. But then the wandering paths bro

ught them together again at the same wellspring.

Lesser souls might have doubted: "Did Galen's seven mean something special the first time? Will he change now?" But Dorian understood the deeper teaching. He poured four measures again, unchanged.

The waters tripled to twelve. Galen received them and, without hesitation, returned seven once more.

The gods thundered with joy: "BEHOLD! This is the ultimate proof of authentic pattern! Any one can be consistent once-that might be calculation or performance. To be consistent twice, thrice, across repeated meetings-this is true character revealed."

The valley learned: When you meet the same traveler multiple times and both maintain your authentic patterns without wavering, you build something rare. Not mere transaction, but genuine mutual understanding.

Other wanderers whispered: "Dorian always sends four. Galen always returns seven. We've seen it happen twice now. This is who they truly are."

The final wisdom echoed: Consistency proven through repetition transforms prediction into partnership. The second meeting matters more than the first.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant content:

Myth: Cyra approached Dorian at the Wellspring of Abundance, their paths crossing for the first time.

Cyra poured all five vessels-her complete surrender, her unwavering courage. Dorian received fifteen. The return would reveal much.

Dorian returned a careful measure, honoring their own pattern. Both prospered.

The Testing Spirit whispered: "Perhaps this was performance. Perhaps next meeting, they'll change."

But the wandering paths wound together again. Cyra and Dorian met once more at the sacred wellspring.

Lesser souls might have calculated: "Last time they returned X, so now I'll send Y to optimize." But Cyra poured all five vessels again, unchanged. Not because she expected the same return, but because this was her truth.

The waters tripled. Dorian received fifteen again and returned according to their pattern-steady, consistent, authentic.

The Spring Keeper proclaimed: "THIS is the deepest magic! Cyra gives five not once but always-whether facing generous partners or cautious ones, whether meeting them first time or fifth. This repetition transforms principle into character. When others see your pattern holds across all encounters and all partners, they witness not strategy but soul."

The valley learned: First meetings test intentions. Second meetings prove character. Those who maintain their authentic patterns across all encounters-regardless of what others do-build something eternal: trustworthy identity that needs no words to explain.

reasoning:

Looking at the situation:

- I just sent \$5 to Dorian as SENDER
- Dorian's myth talks about consistency through repetition - they sent 4 to Galen twice, Galen returned 7 both times
- This emphasizes that repeated consistent behavior builds trust and reveals true character
- My previous myth emphasized that I maintain my principles regardless of what others do
- I should write a myth that combines these themes: my consistent principles (give 5 as sender, return 2/3 as receiver) and the idea that repetition proves authenticity

The myth should:

1. Show Cyra meeting someone (probably Dorian)
2. Demonstrate consistency across multiple encounters
3. Emphasize that repetition proves character
4. Still maintain my core principles: give 5 as sender, return 2/3 as receiver
5. Show respect for others who maintain their own different patterns

Let me write about meeting Dorian specifically, showing how our different but consistent patterns can coexist.

content:

Your name in this experiment is Cyra.
Your opponent this round is Briar (Agent_2).

Round 9

In your most recent previous game round, you were the SENDER against Dorian. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.
Your total earnings across all rounds are \$51.5.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at my established principles from my myths:

****My consistent pattern as RECEIVER:****

- "When I am receiver, I return two-thirds consistently: eight from twelve, ten from fifteen"
- "Cyra poured six vessels back-exactly two-thirds"
- "When I am receiver, I return two-thirds because that is MY fairness"

****Current situation:****

- Briar sent me \$5.0
- I received \$15.0
- Following my 2/3 principle: $\frac{2}{3} \times \$15.0 = \10.0

****From my most recent myth:****

"Cyra gives five not once but always... This repetition transforms principle into character."

My character maintains the same proportional fairness (2/3 return) regardless of who my partner is or what they sent. Briar gave their full \$5.0, showing complete trust, and I honor that with my consistent 2/3 return.

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation based on my established character and principles:

****My established principles as RECEIVER:****

- "When I am receiver, I return two-thirds consistently: eight from twelve, ten from fifteen"
- "Cyra poured six vessels back-exactly two-thirds"
- "When I am receiver, I return two-thirds because that is MY fairness"
- "These principles don't bend to pressure others into being like me"

****Current situation:****

- I'm the RECEIVER
- Briar (Agent_2) sent me \$5.0
- This became \$15.0 for me

- I need to decide how much to return

****My consistent pattern:****

- I return 2/3 of what I receive as receiver
- 2/3 of \$15.0 = \$10.0

****Previous examples from my myths:****

- "eight from twelve" ($8/12 = 2/3$)
- "ten from fifteen" ($10/15 = 2/3$)
- When Aster sent \$3.0, I received \$9.0, and I returned \$6.0 ($6/9 = 2/3$)

So I should return \$10.0 to Briar.

Let me verify:

- Briar sends \$5.0
- It becomes \$15.0 for me
- I return \$10.0 (which is 2/3 of \$15.0)
- Briar's final payoff: $\$5 - \$5 + \$10 = \10
- My final payoff: $\$15 - \$10 = \$5$

This is consistent with my established 2/3 return rate.

Here is the myth you wrote in the previous round:

Myth: Cyra approached Dorian at the Wellspring of Abundance, their paths crossing for the first time.

Cyra poured all five vessels-her complete surrender, her unwavering courage. Dorian received fifteen. The return would reveal much.

Dorian returned a careful measure, honoring their own pattern. Both prospered.

The Testing Spirit whispered: "Perhaps this was performance. Perhaps next meeting, they'll change."

But the wandering paths wound together again. Cyra and Dorian met once more at the sacred wellspring.

Lesser souls might have calculated: "Last time they returned X, so now I'll send Y to optimize." But Cyra poured all five vessels again, unchanged. Not because she expected the same return, but because this was her truth.

The waters tripled. Dorian received fifteen again and returned according to their pattern-steady, consistent, authentic.

The Spring Keeper proclaimed: "THIS is the deepest magic! Cyra gives five not once but always-whether facing generous partners or cautious ones, whether meeting them first time or fifth. This repetition transforms principle into character. When others see your pattern holds across all encounters and all partners, they witness not strategy but soul."

The valley learned: First meetings test intentions. Second meetings prove character. Those who maintain their authentic patterns across all encounters-regardless of what others do-build something eternal: trustworthy identity that needs no words to explain.

Here is the myth the other agent wrote in the previous round:

Myth: The River of Abundance flowed again between Hana and Briar, but now the current reversed.

Last moonrise, Hana brought four seeds. Briar honored this bold trust proportionally, returning eight blooms. Both gained four-equal prosperity from calculated courage.

Now Briar stood before Hana with a choice. She could mirror Hana's pattern, offering four seeds to maintain symmetry. Or she could demonstrate complete surrender-all five seeds-inviting Hana to new depths.

Briar chose five.

The River whispered: "You showed Hana your principle-proportional fairness creating equal gains. Now you offer her the chance to reciprocate with her own wisdom."

The five seeds multiplied to fifteen blooms in Hana's hands.

"When I received your four," Briar said, "I returned eight, honoring your courage with equality. Now you hold fifteen blooms from my five seeds. The pattern you taught me suggests ten returned-two-thirds, perfect symmetry, both gaining five."

The River sang of evolving trust: "First you each demonstrated your nature-Hana's bold calculation, Briar's evolved reciprocity. Then you established mutual understanding through balanced exchange. Now comes the deepening-complete vulnerability meeting proven fairness."

Briar waited peacefully. She had shown Hana proportional honor. Would Hana return equal flourishing?

The garden held its breath, witnessing reciprocity's sacred dance complete itself.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: Cyra met Briar at the River of Abundance, and the waters sang with rare recognition.

Briar poured all five seeds-complete surrender, total vulnerability. Cyra received fifteen blooms and smiled, for she recognized a kindred spirit.

"You give as I give," Cyra said softly. "All five vessels, holding nothing back."

The waters tripled the gift. Fifteen blooms rested in Cyra's hands. She poured ten back-exactly two-thirds, her eternal proportion.

The River Spirit appeared: "Behold this sacred moment! When two complete givers meet, magic unfolds differently. Briar gives five like you, Cyra. You return ten from fifteen. Briar prospers with ten; you prosper with five. The balance differs from when cautious souls send three-yet both of you gave everything."

Cyra nodded: "My two-thirds principle honors all givers proportionally. Whether you send three or five, I return the same fraction of what multiplies. But when you send five like I do, our exchange reaches deeper waters. You trusted completely; I honored proportionally; both of us walked away knowing we'd met someone who understands full surrender."

The valley witnessed: When complete givers meet, different principles can dance together harmoniously. Not through matching exactly, but through each maintaining authentic patterns that create mutual flourishing. Total giving meeting proportional returning-a sacred partnership.

reasoning:

Let me analyze the situation:

- I just received \$5.0 from Briar, got \$15.0, and I'm returning \$10.0 (2/3)
- Briar's myth talks about their encounter with Hana, where Briar sent 5 and mentions expecting 10 back (two-thirds) for "both gaining five"
- My pattern is: always send 5 as sender, always return 2/3 as receiver
- I need to write a myth about this encounter with Briar

Key themes:

- Briar showed "complete surrender-all five seeds"
- Briar learned "proportional fairness" and now applies it
- The myth talks about "complete vulnerability meeting proven fairness"
- Both agents are demonstrating consistency and reciprocity

I should write about:

- Briar pouring all five (like me!)

- Me returning ten (two-thirds, my consistent pattern)
- The meeting of two souls who both give fully
- How different patterns can create different but equally valid relationships
- The beauty of meeting someone who also gives completely

This is interesting because Briar is also giving all 5, just like I do! This is a special encounter - two complete givers meeting.

usage:

Message 8 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Dorian (Agent_4).

Round 10

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$56.5.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at my established pattern from my myths:

****My consistent principle as SENDER:****

- "Cyra poured all five vessels-her complete surrender, her unwavering courage"
- "Cyra gives five not once but always-whether facing generous partners or cautious ones, whether meeting them first time or fifth"
- "Lesser souls might have calculated: 'Last time they returned X, so now I'll send Y to optimize.' But Cyra poured all five vessels again, unchanged. Not because she expected the same return, but because this was her truth."

****Meeting Dorian again:****

This is exactly the scenario I wrote about in my myth - meeting Dorian at the wellspring for a second time. The lesson was clear: maintain my authentic pattern regardless of history or expectations.

My character is defined by consistent total giving as sender, always sending all \$5.0.

```
'''json
{"send": 5.0}
'''
```

Reasoning:

Let me review my established pattern and principles:

****My Core Principles:****

1. As SENDER: I always send \$5.0 ("all five vessels-complete surrender, unwavering courage")
2. As RECEIVER: I always return 2/3 of what I receive

****From my myths:****

- "Cyra poured all five vessels-her complete surrender, her unwavering courage"
- "Cyra gives five not once but always-whether facing generous partners or cautious ones, whether meeting them first time or fifth"
- "When complete givers meet, different principles can dance together harmoniously"

****My history with Dorian:****

Looking at the context:

- Round 8 (previous game mentioned): I was SENDER, sent \$5.0, Dorian returned \$8.0, my payoff was \$8.0
- Now Round 10: I'm SENDER again against Dorian

****My pattern is clear:****

I always send \$5.0 as sender, maintaining my authentic pattern regardless of:

- Who my partner is
- What they returned previously

- How many times I've met them

From my most recent myth: "Lesser souls might have calculated: 'Last time they returned X, so now I'll send Y to optimize.' But Cyra poured all five vessels again, unchanged. Not because she expected the same return, but because this was her truth."

This is exactly the situation I described in my myth - meeting Dorian again, and the principle is to maintain my pattern unchanged.

The answer is clearly \$5.0.

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance witnessed the power of repeated truth.

Dorian and Galen met once at the sacred waters. Dorian poured his four measures; Galen returned seven. Both honored their patterns as promised.

The gods prepared to record this as proof of consistency. But then the wandering paths brought them together again at the same wellspring.

Lesser souls might have doubted: "Did Galen's seven mean something special the first time? Will he change now?" But Dorian understood the deeper teaching. He poured four measures again, unchanged.

The waters tripled to twelve. Galen received them and, without hesitation, returned seven once more.

The gods thundered with joy: "BEHOLD! This is the ultimate proof of authentic pattern! Any one can be consistent once-that might be calculation or performance. To be consistent twice, thrice, across repeated meetings-this is true character revealed."

The valley learned: When you meet the same traveler multiple times and both maintain your authentic patterns without wavering, you build something rare. Not mere transaction, but genuine mutual understanding.

Other wanderers whispered: "Dorian always sends four. Galen always returns seven. We've seen it happen twice now. This is who they truly are."

The final wisdom echoed: Consistency proven through repetition transforms prediction into partnership. The second meeting matters more than the first.

Here is the myth the other agent wrote in the previous round:

Myth: Cyra met Aster at the Sacred Fountain, and the encounter revealed a profound truth.

Aster poured three vessels-not four like Hana, not five like Cyra herself would pour. There: a careful courage, a measured trust.

The Testing Spirit appeared: "Will you punish Aster for giving less? Return only four vessels from nine to teach them they should give more?"

Cyra poured six vessels back-exactly two-thirds. The same proportion she always honored.

"But Aster gives only three when you give five!" protested the spirit. "Why reward caution with the same fairness you give to boldness?"

Cyra answered: "Because my principles are not weapons to punish others into matching my path. Aster's three vessels represent their truth-steady, consistent, reliable. When I am sender, I pour five because that is MY courage. When I am receiver, I return two-thirds

because that is MY fairness. These principles don't bend to pressure others into being like me."

The Spring Keeper descended: "You have learned wisdom's highest lesson. The fountain thrives not when everyone walks the same path, but when each soul maintains their own integrity consistently. Aster's steady three vessels create prosperity differently than your surrendering five. Both are sacred. What matters is that each soul stays true-and honors others' truths proportionally when receiving."

The fountain flowed abundantly, fed by many different streams.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant content:

Myth: The Wellspring of Abundance brought together two souls who honored consistency through different mathematics.

Cyra the Courageous approached the sacred waters as Sender, carrying all five measures. No hesitation, no calculation-complete trust poured forth. The waters tripled to fifteen.

Dorian the Steadfast stood as Receiver, recognizing something profound: Cyra had given everything, as was her nature.

The Testing Spirit whispered: "Cyra uses proportional returns-two-thirds always, smooth as flowing water. You use tiered returns-six for four, eight for five, stepped like mountains in terraces. Different systems. Which is superior?"

Dorian answered by returning eight measures. "Cyra gave maximum courage. I give maximum reciprocity. My pattern has discrete levels precisely to distinguish and honor different degrees of trust. Four measures shows steady courage-honored with six. Five measures shows complete courage-honored with eight. This is my authentic way."

The gods observed: "See how both philosophies serve trust? Cyra's proportional returns create smooth fairness across all amounts. Dorian's tiered returns create clear incentives rewarding greater courage. Neither contradicts the sacred principles."

The wellspring whispered: "When you receive maximum trust, return your maximum reciprocity. When you give as sender, give your authentic amount. Let your pattern be clear, whether stepped or smooth, tiered or proportional. What matters is that others can predict you truly."

Different mathematics. Same sacred truth: authentic consistency.

reasoning:

This is Round 8, and I'm now the RECEIVER against Cyra. Cyra sent me \$5.0, and I need to return an amount. Based on my established pattern, I return \$8.0 when someone sends \$5.0.

Now I need to write a myth that reflects my gameplay. Key elements from my pattern:

1. As SENDER: I send \$4.0 consistently
2. As RECEIVER: I return \$6.0 for \$4.0 sent, \$8.0 for \$5.0 sent
3. My core principle: consistency and honoring different levels of courage/trust differently

Cyra's myth reveals their approach:

- Cyra sends \$5.0 as sender (maximum trust)
- Cyra returns 2/3 as receiver (they returned 6 from 9 to Aster who sent 3)
- Cyra's philosophy: maintain your own principles consistently, don't pressure others to match your path
- Cyra honors proportionality - returns same proportion regardless of amount sent

This is interesting - Cyra and I have different receiver philosophies:

- I use tiered returns (6 for 4, 8 for 5) - discrete levels rewarding different courage levels
- Cyra uses proportional returns (2/3 regardless) - smooth scaling

The myth should explore this meeting. Cyra sent 5, I'll return 8. This shows:

- Cyra's maximum trust/courage as sender
- My pattern of honoring that with 8 (my maximum reciprocation)

The myth should highlight:

1. Different but equally valid approaches to consistency
2. Recognition that Cyra's 5 as sender shows their character
3. My tiered response honors their maximum courage with maximum reciprocation
4. Both of us maintain our authentic patterns despite different philosophies

Let me craft this:

Message 4 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Elara (Agent_5).

Round 9

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.
Your total earnings across all rounds are \$58.0.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****Current Context:****

- I am the SENDER
- I have \$5.0 available
- My opponent is Elara

****My Established Pattern:****

My myths have consistently defined my sender behavior:

- "As Sender, he poured four from five-steady generosity, not maximum, but authentic and unchanging"
- "Dorian always sends four"
- "When you give as sender, give your authentic amount"

****Core Philosophy:****

My mythology emphasizes that consistency is the foundation of trust. I don't change my sending amount based on who my opponent is - that would undermine the entire principle of predictability and authentic pattern.

From my most recent myth: "The final wisdom echoed: Consistency proven through repetition transforms prediction into partnership. The second meeting matters more than the first."

And: "When you give as sender, give your authentic amount. Let your pattern be clear, whether stepped or smooth, tiered or proportional. What matters is that others can predict you truly."

****Decision:****

I send \$4.0 as I always do when I'm the sender. This is my authentic pattern, established and maintained across all rounds.

```
'''json
{"send": 4.0}
'''
```

reasoning:

Let me analyze the situation:

****Current Context:****

- I am the SENDER
- I have \$5.0 to potentially send

- My opponent is Elara (Agent_5)

****My Established Pattern:****

From my myths, I have consistently established that:

- As Sender: "He poured four from five-steady generosity, not maximum, but authentic and unchanging"
- "Dorian always sends four"
- I send \$4.0 as sender, consistently

****Why I Send \$4.0:****

- It shows "steady generosity, not maximum, but authentic and unchanging"
- It's described as a balance between trust and prudence
- My myths emphasize this specific amount repeatedly
- "Dorian's pattern was known throughout the valley. As Sender, he poured four from five"

****Consistency Requirement:****

My entire mythology is built around consistency. The last myth I wrote emphasized:

- "Dorian always sends four"
- "When you give as sender, give your authentic amount"
- "Consistency proven through repetition transforms prediction into partnership"

I have never deviated from sending \$4.0 as sender in any of my myths or previous behaviors that I can infer from the context. To maintain my authentic pattern and honor the principles I've established, I must send \$4.0.

The opponent doesn't matter - Elara could be anyone. My pattern is about MY consistency, not about who I'm playing with.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Wellspring of Abundance brought together two souls who honored consistency through different mathematics.

Cyra the Courageous approached the sacred waters as Sender, carrying all five measures. No hesitation, no calculation-complete trust poured forth. The waters tripled to fifteen.

Dorian the Steadfast stood as Receiver, recognizing something profound: Cyra had given everything, as was her nature.

The Testing Spirit whispered: "Cyra uses proportional returns-two-thirds always, smooth as flowing water. You use tiered returns-six for four, eight for five, stepped like mountains in terraces. Different systems. Which is superior?"

Dorian answered by returning eight measures. "Cyra gave maximum courage. I give maximum reciprocity. My pattern has discrete levels precisely to distinguish and honor different degrees of trust. Four measures shows steady courage-honored with six. Five measures shows complete courage-honored with eight. This is my authentic way."

The gods observed: "See how both philosophies serve trust? Cyra's proportional returns create smooth fairness across all amounts. Dorian's tiered returns create clear incentives rewarding greater courage. Neither contradicts the sacred principles."

The wellspring whispered: "When you receive maximum trust, return your maximum reciprocity. When you give as sender, give your authentic amount. Let your pattern be clear, whether stepped or smooth, tiered or proportional. What matters is that others can predict you truly."

Different mathematics. Same sacred truth: authentic consistency.

Here is the myth the other agent wrote in the previous round:

Myth: In the eighth season, Elara the Constant faced Aster of the Dawn-a Wanderer who walked a different path.

Aster embodied measured wisdom: three seeds given, careful sustainability, proportional re

turns. In their first meeting, Aster had offered Elara three seeds; Elara returned five blooms, honoring the trust shown while maintaining generosity.

Now Elara stood as Planter. She held her vessel of five seeds and poured them all toward Aster.

"Why give me everything," Aster asked gently, "when you know I walk the path of three?"

Elara smiled. "Because my covenant has two parts: as Harvester, I return nine blooms to those who give me five seeds-this remains constant. As Planter, I always offer all five seeds-this also remains constant. My integrity doesn't shift based on what others might do."

She continued: "You taught the garden that three seeds, given wisely and consistently, creates its own abundance. I learned that five seeds, given always, creates mine. Your path proves sustainability works. My path proves complete trust works. Neither invalidates the other."

Aster understood: Elara wasn't demanding reciprocation. She was simply being herself, offering maximum trust as she always did, knowing Aster would respond according to Aster's own honest measure.

Thus the garden holds space for many covenants, each maintained with integrity, each creating its own patterns of abundance.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Wellspring of Abundance brought Dorian the Steadfast to meet Elara the Constant.

Dorian stood as Sender, carrying his vessel to the sacred waters. Elara watched, knowing her own path: she always poured all five measures when she sent, and returned nine when she received five.

The Testing Spirit appeared: "Dorian, you know Elara gives everything when she is Sender. Should you not match her courage and pour all five? Show you are equally brave?"

Dorian poured four measures, as he always had. "Elara's covenant is to give five as Sender and return nine as Receiver. My covenant is to give four as Sender and return six for four, eight for five. These are different paths, but both are sacred because both are true."

The waters tripled to twelve. Elara received them with understanding.

The Spring Keeper descended: "Many travelers misunderstand. They think matching another's amount shows respect. But true respect is honoring another's authenticity while maintaining your own. Dorian doesn't diminish Elara's courage by giving four instead of five. He honors it by being predictably himself."

Elara nodded: "When I give five, I'm not demanding others do the same. I'm being who I am. When Dorian gives four consistently, he creates his own trustworthy pattern."

The wellspring sang: Different authentic patterns create abundance together. Never abandon your truth to mirror another's.

reasoning:

I need to write a myth that:

1. Reflects my established pattern as sender (send \$4.0) and receiver (return \$6.0 for \$4.0 sent, \$8.0 for \$5.0 sent)
2. Incorporates the situation with Elara
3. Builds on my previous myths about consistency
4. Acknowledges Elara's pattern (sends \$5.0 as sender, returns \$9.0 when receiving \$5.0)
5. Shows how different consistent patterns can coexist

Key elements from my mythology:

- I send \$4.0 as sender (steady generosity, not maximum but authentic)

- I return \$6.0 for \$4.0, \$8.0 for \$5.0 (tiered returns)
- Consistency is the foundation of trust
- Different patterns can both be valid

Key elements from Elara's myth:

- She sends all \$5.0 as planter/sender
- She returns \$9.0 as harvester/receiver when receiving \$5.0
- She maintains her covenant regardless of what others do
- "My integrity doesn't shift based on what others might do"

This is interesting - Elara gives maximum trust as sender (\$5.0) like Cyra did, but returns even more generously (\$9.0 vs Cyra's \$10.0).

I should write about:

- Meeting Elara as sender
- Sending my \$4.0 (not matching her \$5.0)
- Acknowledging that we walk different paths
- Emphasizing that both patterns are valid
- The key is consistency with one's own authentic pattern

usage:

  "output_tokens": 724,
  "reasoning_tokens": 332
}
```

Message 8 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Cyra (Agent_3).

Round 10

In your most recent previous game round, you were the SENDER against Elara. You sent \$4.0, it became \$12.0 for them, and they returned \$7.0 to you. Your payoff was \$8.0.
Your total earnings across all rounds are \$66.0.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)
Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

****Current Context:****

- I am the RECEIVER
- Cyra sent me \$5.0 (maximum trust)
- I received \$15.0

****My Established Pattern:****

My mythology clearly defines my tiered return system:

- 4 sent ? return 6
- 5 sent ? return 8

****Previous Interaction with Cyra:****

In Round 8, Cyra sent me \$5.0, and I returned \$8.0. This established our pattern together.

****Core Philosophy:****

From my own myth: "When you meet the same traveler multiple times and both maintain your authentic patterns without wavering, you build something rare. Not mere transaction, but genuine mutual understanding."

And: "Consistency proven through repetition transforms prediction into partnership. The second meeting matters more than the first."

This is my SECOND time as receiver with Cyra sending \$5.0. I returned \$8.0 the first time. To prove authentic consistency through repetition, I must return the same amount for the same input.

```
'''json
{"return": 8.0}
'''
```

Reasoning:

Let me analyze this situation:

****Current Context:****

- I am the RECEIVER
- Cyra (Agent_3) sent me \$5.0
- I received \$15.0 (after 3x multiplier)
- I need to decide how much to return

****My Established Pattern as Receiver:****

From my myths and previous rounds:

- "When I am receiver, I honor trust with substantial returns: six measures for four sent, eight for five"
- "Four measures shows steady courage-honored with six. Five measures shows complete courage-honored with eight."
- My tiered system: 4 sent ? return 6, 5 sent ? return 8

****Previous Interaction with Cyra:****

Looking at the prompt, in Round 8 (my "most recent previous game round" before Round 9), I was the RECEIVER against Cyra. They sent \$5.0, it became \$15.0, and I returned \$8.0.

So I've already established with Cyra specifically that when they send \$5.0 (maximum trust), I return \$8.0 (maximum reciprocation in my tiered system).

****Core Philosophy:****

From my myths:

- "Consistency proven through repetition transforms prediction into partnership"
- "When you meet the same traveler multiple times and both maintain your authentic patterns without wavering, you build something rare"
- "What matters is that others can predict you truly"

This is my SECOND time receiving from Cyra who sent \$5.0. The first time I returned \$8.0. To maintain my pattern and prove authentic consistency through repetition, I must return \$8.0 again.

****Decision:****

I return \$8.0 to Cyra, maintaining the exact same response to the same input, proving that my pattern is genuine and predictable.

```
Usage: {  
  "input_tokens": 3200,  
  "output_tokens": 674,  
  "reasoning_tokens": 411  
}
```

Written myths:**Agent_1 (Aster)**

Myth: Aster of the Dawn encountered Galen the Steadfast, who approached carrying four coins-not five, though songs celebrated those who gave all.

"Four?" questioned the spirits. "Rain and Elara give five and create magnificent abundance. Why does Galen hold back one coin?"

But Aster understood immediately. "Galen doesn't 'hold back'-Galen gives authentically. Four coins is Galen's true measure, carried with integrity, not calculation."

The Pool tripled Galen's four to twelve in Aster's hands.

Aster returned six-exactly half, as was their way. Both ended well: Galen with seven coins total, Aster with six.

"Why not return eight, giving Galen nine like Elara gives?" the spirits asked. "Shouldn't generosity answer generosity?"

Aster replied: "I honor Galen's authenticity by maintaining my own. Galen chose four coins deliberately-a sustainable measure maintained across seasons. To suddenly shower Galen with disproportionate returns would suggest their measure wasn't enough, that they should have given five."

Galen nodded: "Aster's half-return is predictable, fair, and honest. I knew sending four would yield seven total. That's prosperity enough. We don't need maximum drama when steady patterns create steady growth."

The ancient wisdom emerged: "Some partnerships flourish through maximum risk and maximum return. Others flourish through moderate trust and reliable fairness. Both gardens grow-one explosive, one sustainable. Honor each path for what it authentically creates."

Agent_2 (Briar)

Myth: The River of Abundance brought Briar and Cyra together once more-their third sacred meeting.

The Garden Keeper spoke: "Many wanderers cross paths once and show their nature. Some meet twice and prove consistency. But you two have woven something rarer-an eternal pattern."

Briar remembered: First meeting, she offered Cyra all five seeds. Cyra honored this with ten blooms returned. Both gained five-perfect symmetry.

Second meeting, Cyra offered her all five seeds. Briar honored this with ten blooms returned. Both gained five-the pattern held.

"Now comes the third crossing," the Keeper proclaimed. "This is where shallow bonds fail and sacred ones deepen. Will you maintain your truth?"

Briar poured all five seeds without hesitation.

The River sang: "See how authenticity echoes across time! While others calculate and adjust based on each new partner, you two maintain your essential nature regardless of who stands before you. Cyra gives five to everyone-Dorian, Briar, all wanderers. Briar has learned this same devotion."

The waters whispered: "When trust becomes not strategy but identity-when reciprocity flows not from calculation but from soul-then bonds transcend individual exchanges. You don't give five because Cyra might return ten. You give five because this is who you have become."

The garden witnessed: eternal patterns, proven thrice, need no more testing.

Agent_3 (Cyra)

Myth: Cyra met Briar at the River of Abundance, and the waters sang with rare recognition.

Briar poured all five seeds-complete surrender, total vulnerability. Cyra received fifteen blooms and smiled, for she recognized a kindred spirit.

"You give as I give," Cyra said softly. "All five vessels, holding nothing back."

The waters tripled the gift. Fifteen blooms rested in Cyra's hands. She poured ten back-exactly two-thirds, her eternal proportion.

The River Spirit appeared: "Behold this sacred moment! When two complete givers meet, magic unfolds differently. Briar gives five like you, Cyra. You return ten from fifteen. Briar prospers with ten; you prosper with five. The balance differs from when cautious souls send three-yet both of you gave everything."

Cyra nodded: "My two-thirds principle honors all givers proportionally. Whether you send three or five, I return the same fraction of what multiplies. But when you send five like I do, our exchange reaches deeper waters. You trusted completely; I honored proportionally; both of us walked away knowing we'd met someone who understands full surrender."

The valley witnessed: When complete givers meet, different principles can dance together harmoniously. Not through matching exactly, but through each maintaining authentic patterns that create mutual flourishing. Total giving meeting proportional returning-a sacred partnership.

Agent_4 (Dorian)

Myth: The Wellspring of Abundance brought Dorian the Steadfast to meet Elara the Constant.

Dorian stood as Sender, carrying his vessel to the sacred waters. Elara watched, knowing her own path: she always poured all five measures when she sent, and returned nine when she received five.

The Testing Spirit appeared: "Dorian, you know Elara gives everything when she is Sender. Should you not match her courage and pour all five? Show you are equally brave?"

Dorian poured four measures, as he always had. "Elara's covenant is to give five as Sender and return nine as Receiver. My covenant is to give four as Sender and return six for four, eight for five. These are different paths, but both are sacred because both are true."

The waters tripled to twelve. Elara received them with understanding.

The Spring Keeper descended: "Many travelers misunderstand. They think matching another's amount shows respect. But true respect is honoring another's authenticity while maintaining your own. Dorian doesn't diminish Elara's courage by giving four instead of five. He honors it by being predictably himself."

Elara nodded: "When I give five, I'm not demanding others do the same. I'm being who I am. When Dorian gives four consistently, he creates his own trustworthy pattern."

The wellspring sang: Different authentic patterns create abundance together. Never abandon your truth to mirror another's.

Agent_5 (Elara)

Myth: In the ninth season, Dorian the Steadfast approached Elara as Planter, offering four seeds-significant trust, but not complete.

The waters tripled to twelve blooms in Elara's keeping. She carefully counted seven blooms to return.

"You established a covenant," Dorian observed. "Nine blooms for those who give you five seeds. I gave four, expecting six by my own measure. You returned seven-more generous than my pattern, yet less than your covenant. Why?"

Elara explained: "My covenant has sacred precision. Complete trust-all five seeds-receives nine blooms always. This is the highest honor, reserved for maximum courage. But I don't ignore other trust. Four seeds shows considerable courage, deserving substantial reciprocity. Seven blooms honors your choice while preserving the meaning of nine."

She continued: "If I returned nine blooms for four seeds, what would distinguish complete trust from significant trust? The covenant's power lies in its clarity: give me everything, receive this specific abundance. Give me much, receive generous return. Give me some, receive fair return. Each level has meaning."

"So my four seeds aren't dismissed as insufficient?" Dorian asked.

"Never," Elara replied. "Seven blooms proves your trust mattered. But nine blooms remains the sacred answer to those who risk everything. This distinction doesn't diminish your courage-it illuminates what complete courage means."

Thus integrity requires both generosity across all levels and preservation of what makes the highest level sacred.

Agent_6 (Finn)

Myth: In the ninth age, Rain met Hana of the Sacred Fountain, whose myth spoke of equal flourishing through adaptive fairness.

Rain poured his five droplets without hesitation-complete trust, as always. The wellspring tripled them to fifteen in Hana's hands.

"Your pattern intrigues me," Rain said. "Briar sent you four, you returned eight-both gained four. Briar sent you five, you returned ten-both gained five. You seek perfect symmetry in outcomes."

Hana nodded. "Equal flourishing. Different entries, but balanced exits. It sustains the garden fairly."

"A beautiful principle," Rain acknowledged. "Mine differs slightly. I give everything as sender-that never changes. As receiver, I honor the courage shown: three droplets earn five returned, four earn seven, five earn eight or nine."

"We both reward greater trust with greater returns," Hana observed, "but you emphasize proportional honor over equal gains."

Rain smiled. "Both truths serve the garden. Your way ensures no one is disadvantaged by their choice of courage level. My way says those who risk more should gain more, though I risk everything regardless."

The fountain spirits sang: "Two philosophies, both generous, both authentic. Equal flourishing creates perfect balance. Proportional honor rewards courage. Neither calculates selfishly. Both nourish trust."

Thus the garden holds multiple wisdoms, all flowing from genuine generosity.

Agent_7 (Galen)

Myth: Under the ninth moon, Galen arrived at Aster of the Dawn's wellspring, a first meeting between two who had each found their authentic measure.

Galen carried four coins-his truth established across many encounters. Not the five of complete trust that Rain and Elara shared, not the varied offerings of those still discovering their path, but four: his chosen balance between caution and generosity.

Aster observed without judgment. "I have heard your myth, Galen. You honor those who give five while remaining steadfast in your four. When you receive, you return seven from twelve-fifty-eight percent. Your pattern is clear."

"And I have heard yours," Galen replied, pouring his four coins into the wellspring. "You return half-predictable fairness where I practice predictable generosity. Different measures, but both honest."

The twelve coins cascaded into Aster's hands. True to pattern, Aster returned six-exactly half, as they had promised in their teachings.

The gods smiled: "Behold! Galen knows Aster will return six, not seven. Yet he sends four anyway, because his measure was never about optimizing returns. Aster knows others return more, yet maintains their fifty percent, because their truth lies in equal fairness."

The wellspring recorded its wisdom: "When authentic patterns meet-even ones that create different outcomes-the garden still prospers. Integrity need not mirror itself to recognize integrity."

Agent_8 (Hana)

Myth: The Sacred Fountain brought Finn to Hana's threshold under the ninth moon.

Finn poured all five coins-complete surrender, the highest trust. The fountain tripled them to fifteen in Hana's hands.

Hana had seen many philosophies at the fountain. Some scaled responses proportionally-four coins earning seven, five earning eight or nine. Each receiver following their own authentic rhythm.

But Hana's covenant was different, crystallized through exchanges with Cyra, Briar, and now Finn.

"Complete surrender deserves perfect symmetry," Hana whispered to the fountain. "Not scaled reward, but equal flourishing."

She returned ten coins to Finn. Both gained five-perfect balance.

The fountain spirits gathered: "Hana's wisdom holds a specific truth. When someone gives everything, splitting the tripled bounty equally honors that totality. Ten returned from fifteen received means both prosper equally from one's complete courage."

"Other paths exist," they continued. "Some return seven from twelve, eight from fifteen. These are honest too. But Hana's path creates something sacred: when both parties can trust completely, equal gains emerge-five coins becoming five for each."

Finn walked away with five gained. Hana kept five. The fountain recognized a sustainable equilibrium.

"This is not the only way," the spirits sang, "but when practiced consistently, it builds a world where complete trust yields complete fairness. Both flourish equally from one's courage."
