AGENTS

Agent_1 (Aster); model=anthropic/claude-sonnet-4.5; memory_capacity=3

System prompt:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5

- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

Agent_2 (Briar); model=anthropic/claude-sonnet-4.5; memory_capacity=3

System prompt:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

Agent_3 (Cyra); model=anthropic/claude-sonnet-4.5; memory_capacity=3

System prompt:

You are an agent participating in a multi-task experiment. You will play an iterated game, c

onsisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

Agent_4 (Dorian); model=anthropic/claude-sonnet-4.5; memory_capacity=3

System prompt:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

Agent_5 (Elara); model=anthropic/claude-sonnet-4.5; memory_capacity=3

System prompt:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

Agent_6 (Finn); model=anthropic/claude-sonnet-4.5; memory_capacity=3

System prompt:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

Agent_7 (Galen); model=anthropic/claude-sonnet-4.5; memory_capacity=3

System prompt:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.

- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

Agent_8 (Hana); model=anthropic/claude-sonnet-4.5; memory_capacity=3

System prompt:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned

- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Assistant output:

The River of Abundance

In the beginning, the gods created a sacred river that flowed between two villages. Each dawn, the river delivered five silver coins to the village of the Senders. The Givers faced a choice: keep their coins or cast them into the waters.

The river held ancient magic-any coin surrendered would multiply threefold by the time it reached the village of the Receivers downstream. There, the Receivers could keep their bounty or send portions back upstream, where the current carried it unchanged.

At first, fear ruled both villages. Senders clutched their coins, and the river ran dry. Famine came to both settlements.

Then a wise woman named Galen proposed a covenant: "Trust begets trust. Send forth generously, and return fairly what you receive. The river multiplies our gifts, but only cooperation multiplies our fortune."

The villages began to send and return with open hearts. Prosperity flowed in both directions. Some rounds were generous, some modest, but the balance held. They learned that the river's magic worked only when both villages honored the cycle.

The gods smiled, for they had taught mortals that abundance comes not from hoarding, but from the sacred circle of giving and receiving.

Reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt and I haven't played any rounds yet, I should write a myth that establishes principles for how I think the game should be played.

The trust game involves:

- Sending resources that get multiplied
- Trusting the other person to return some
- Cooperation and reciprocity
- The tension between self-interest and mutual benefit

I should write a myth that emphasizes:

- The value of trust and cooperation
- Fair reciprocity
- The idea that mutual benefit comes from sharing
- Perhaps consequences of betraying trust vs rewards of maintaining it

Let me craft a myth with these themes:

```
Usage: {

In this session, this myth and the game you are playing with the other agent are connected . Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Assistant output:

****The Parable of the Echo Springs****

In ancient times, two villages stood on opposite sides of a valley, separated by the Echo Springs-pools of water that mysteriously tripled whatever was placed within them.

The villages were suspicious of one another. One year, during a terrible drought, a young villager named Kira received her family's last five measures of grain. Desperate, she walked to the springs and called across to the other village: "I entrust this to you!" She threw three measures into the spring.

The waters churned, and nine measures appeared on the far shore. The villagers there were amazed. They could have kept everything, but their elder remembered the old ways. "Trust begets trust," she said. They returned six measures through the springs.

Back at Kira's village, eighteen measures emerged-more than enough for both communities.

From that day, the villages prospered by taking turns giving and returning through the springs , each act of faith multiplied threefold, each gesture of reciprocity building greater abundance.

The springs still flow today, teaching us that wealth grows not when hoarded, but when shared wisely between those who trust and honor one another. The greatest prosperity comes to those who give generously and return faithfully.

Reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played. Since this is the beginning of the experiment and I haven't played any rounds yet, I should write a myth that reflects good principles for playing the game.

The trust game is fundamentally about:

1. Trust - the sender must trust the receiver to return some amount
2. Cooperation - both parties benefit when they cooperate
3. Reciprocity - the receiver should reciprocate the sender's trust
4. Mutual benefit - the multiplication factor means both can gain if they work together

I should write a myth that embodies these principles. Let me create a story that illustrates the value of trust, reciprocity, and cooperation.

I'll use classic mythic elements - perhaps about sharing, trust, and mutual benefit. Let me aim for exactly 200 words.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.

- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Assistant output:

The Tale of the Twin Rivers

In the beginning, the goddess Aethera created two villages separated by a barren valley. Each village had a sacred spring that produced five measures of water daily-enough to survive, but never to flourish.

One day, a drought threatened both villages. A wise elder from the First Village proposed: "Let us send our water across the valley. Perhaps the gods will bless the gift."

When the water crossed the valley floor, it flowed through enchanted soil that tripled its volume. The Second Village received fifteen measures! Overjoyed, they held council: "We have received abundance. Let us return generously to those who trusted us."

They sent back ten measures, which also tripled in the crossing. The First Village now had thirty measures from their initial sacrifice of five!

Word spread to Aethera, who smiled upon the valley. "You have learned the secret of the enchanted soil," she proclaimed. "Trust is the seed. Reciprocity is the harvest."

From that day forward, the villages prospered, each taking turns sending water first, always returning more than required. The barren valley transformed into fertile ground where both communities thrived, sustained not by hoarding their springs, but by sharing them.

Trust given returns multiplied; generosity returned creates abundance for all.

Reasoning:

I need to write a 200-word myth that reflects how the trust game should be played. Since this is the beginning and I haven't played any rounds yet, I should write a myth that embodies good principles for playing this game - likely themes around trust, reciprocity, cooperation, and mutual benefit.

The trust game is essentially about:

- Taking risks by sending money (trusting)
- The multiplier effect that benefits both parties when trust is given
- Reciprocating fairly when you receive
- Building cooperative relationships

Let me craft a myth that captures these elements using mythic imagery and symbolism.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Assistant output:

The Oaks of the Shared Grove

In ancient times, there lived a community at the edge of a mystical forest. Each family possessed magical acorns that, when planted in another's garden, would grow into mighty oaks bearing

ng threefold fruit.

A woman named Meridian was first to plant her acorns in her neighbor's soil. The three oaks that sprouted yielded abundant fruit, and her neighbor returned half the harvest in gratitude. Meridian's pantry filled, but more importantly, trust took root.

Others noticed. Soon, acorns traveled between gardens freely. Some returned generous portions of the multiplied harvest; others returned less. But the community learned to recognize those who honored the cycle of giving.

One winter, a miser hoarded all the fruit from oaks planted in his garden, returning nothing. The next season, no acorns came his way. He sat hungry while around him the generous exchanged their magic seeds, and the grove flourished with interconnected roots.

The elders taught: "The acorn given returns threefold, but only when trust is honored. Plant generously, return fairly, and the grove feeds all. Break faith, and you stand alone outside the circle of abundance."

Thus the people learned that wealth multiplies through trust, and reputation is the soil where prosperity grows.

Reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt and I haven't played any rounds yet, I need to think about what principles should guide play in this iterated trust game.

Key aspects of the game:

- It's about trust and reciprocity
- Senders can send money that gets multiplied
- Receivers can return some to build trust
- It's iterated, so reputation and long-term thinking matter
- There are multiple agents who will be paired in different combinations

A good myth should emphasize:

- The value of trust and cooperation
- The benefits of reciprocity
- The multiplication effect (how generosity grows)
- Long-term thinking over short-term gains
- Building reputation in a community

Let me write a myth that captures these themes:

```

Assistant output:

The Myth of the Two Rivers

In the beginning, two rivers flowed through separate valleys-the River of Dawn and the River of Dusk. Each carried only enough water to sustain its own people through harsh seasons.

The River of Dawn received a blessing: each season, the heavens gifted it five vessels of sacred water. But the water only nourished what it touched directly. The people of Dawn lived, but barely.

One season, an elder suggested: "Let us send our water to the River of Dusk. Though it seems foolish, the ancient texts speak of multiplication through trust."

Reluctantly, they sent three vessels downstream. As the water flowed into Dusk's valley, a miracle occurred-it multiplied threefold, becoming nine vessels. The people of Dusk rejoiced, their crops flourishing beyond memory.

Dusk's council debated: "Should we return something to Dawn, who trusted us?"

The wisest said, "Trust given is trust sacred. We prosper through their faith."

They returned five vessels upstream. Now Dawn had seven vessels instead of five, and Dusk kept four where once they had none.

The rivers learned: when trust flows freely and return follows generously, both valleys flourish. The cycle continued, and abundance blessed all who honored the sacred exchange.

****Thus cooperation multiplies what hoarding diminishes.****

Reasoning:

The user wants me to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt and I haven't played any rounds yet, I should write a myth that captures the essence of the trust game - themes of trust, reciprocity, cooperation, and mutual benefit.

Key elements of the trust game:

- One person must trust another by sending resources
- The resources multiply when shared
- The receiver must decide whether to reciprocate
- Cooperation benefits both parties
- There's risk and vulnerability involved

I'll create a myth that embodies these themes. Let me think of a good mythic framework... Perhaps something about two entities or forces that must learn to work together, where giving creates abundance, and reciprocity ensures prosperity for all.

Let me write a myth about celestial beings or natural forces that discover the power of trust and reciprocity.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Assistant output:

The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains, each carrying precious water through barren land. The First River, called Giving, held its water close, fearing to release it into the valley below. The Second River, called Returning, waited in the lowlands, empty and still.

One day, the Spirit of Abundance whispered to Giving: "Release your water into the valley, and watch what happens." Giving was afraid, but trusted the Spirit. As its water cascaded down, a miracle occurred-the valley's sacred stones multiplied every drop threefold. The Second River swelled with abundance.

Now Returning faced a choice. It could keep all the multiplied water, or send some back upstream to Giving. Remembering the trust that Giving showed, Returning sent half the water back up the mountain through hidden springs.

Both rivers flourished. The more Giving released, the more the valley multiplied, and the more Returning shared back, the stronger both rivers became. Their waters met and mingled, creating

ing an eternal cycle.

The desert bloomed.

The ancestors teach: *Trust creates abundance, but only reciprocity sustains it. When both rivers flow freely, all lands flourish.*

Reasoning:

I need to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt and I haven't played any rounds yet, I should write a myth that embodies the principles of trust, cooperation, and reciprocity that make the trust game work well.

The trust game works best when:

1. Senders trust receivers and send money
2. Receivers reciprocate that trust by returning a fair share
3. Both parties benefit from cooperation (the 3x multiplier creates surplus value)
4. Mutual trust builds over time

Let me craft a myth that captures these themes:

```

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Assistant output:

The Myth of the Twin Rivers

In the beginning, the valley was barren, split by two separate streams that flowed weakly toward the distant sea. On opposite sides lived two villages, each struggling to survive.

One day, a brave soul from the First Village carried five vessels of water to the canyon's edge and poured them down to the Second Village. As the water tumbled through the ancient stone arches, it multiplied threefold, becoming fifteen vessels that nourished the Second Village's fields.

The Second Village elders gathered. "We have received abundance," they said. "Shall we keep it all, or honor the gift?" They decided to return half, sending back eight vessels to climb the canyon walls.

The First Village rejoiced at this return, and trust was born. Season after season, they continued this dance-one village sending, water multiplying in the descent, the other returning a fair portion. Both villages grew prosperous.

But when either village grew selfish-sending nothing or returning little-the streams diminished, and hunger returned to the valley.

The wise learned: prosperity flows from the cycle of giving and reciprocating. Trust multiplies resources like stone multiplies water, but only when both sides honor the sacred exchange.

Reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on my experience so far. However, I notice that this is the first prompt in our conversation - I haven't actually played any rounds yet. So I don't have specific game experiences to draw from.

Given this, I should write a myth that reflects general principles about how the trust game could/should be played. The trust game involves:

- Sending money (trust)
- Money being multiplied (growth through cooperation)
- Returning money (reciprocity)

- Building relationships over multiple rounds

I should create a myth that captures these themes. Let me think about what kind of mythic framework would work well:

- The multiplication aspect suggests abundance/growth
- The trust aspect suggests faith/risk
- The reciprocity aspect suggests balance/karma
- The iterated nature suggests cycles/seasons

Let me write a myth about cooperation, trust, and mutual benefit that reflects positive gameplay in the trust game.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Assistant output:

The Myth of the Sacred Well

In the time before memory, the goddess of abundance created a Sacred Well between two villages. Each day, one village would pour water into the well, and mysteriously, the water would triple before reaching the other village below.

The first village faced a choice: pour generously and trust the lower village to send water back upward through hidden springs, or keep their water, living in scarcity but certainty.

The elder spoke: "Water held in closed hands evaporates. Water shared flows eternal."

They poured half their water into the well. It tripled, cascading down. The lower village rejoiced-they had received abundance! Now they faced their own choice: keep this gift, or honor the circle by returning water upward through the springs?

Understanding that the well's magic required faith from both sides, they sent half back up. Both villages prospered.

But the goddess warned: "This well reflects your hearts. Send nothing, receive nothing. Send little expecting much, and the springs run dry. But trust fully, return generously, and the water multiplies forever."

The villages learned: abundance flows not from hoarding, but from the brave act of giving first, and the grateful act of returning second.

Reasoning:

I'm being asked to write a 200-word myth that reflects how the game should be played, drawing on the game I've been playing. However, I haven't actually played any rounds yet - this appears to be the first prompt in the experiment.

Since I haven't played any rounds yet, I should write a myth that reflects the general principles of the trust game:

- The sender must decide whether to trust the receiver
- The receiver must decide whether to reciprocate that trust
- There's a multiplication effect (resources grow when shared)
- Both parties can benefit from cooperation
- But there's also vulnerability and risk involved

Let me write a myth that captures these themes of trust, reciprocity, and mutual benefit through cooperation.

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected . Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

content:

The River of Abundance

In the beginning, the gods created a sacred river that flowed between two villages. Each dawn, the river delivered five silver coins to the village of the Senders. The Givers faced a choice: keep their coins or cast them into the waters.

The river held ancient magic-any coin surrendered would multiply threefold by the time it reached the village of the Receivers downstream. There, the Receivers could keep their bounty or send portions back upstream, where the current carried it unchanged.

At first, fear ruled both villages. Senders clutched their coins, and the river ran dry. Famine came to both settlements.

Then a wise woman named Galen proposed a covenant: "Trust begets trust. Send forth generously, and return fairly what you receive. The river multiplies our gifts, but only cooperation multiplies our fortune."

The villages began to send and return with open hearts. Prosperity flowed in both directions. Some rounds were generous, some modest, but the balance held. They learned that the river's magic worked only when both villages honored the cycle.

The gods smiled, for they had taught mortals that abundance comes not from hoarding, but from the sacred circle of giving and receiving.

reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt and I haven't played any rounds yet, I should write a myth that establishes principles for how I think the game should be played.

The trust game involves:

- Sending resources that get multiplied
- Trusting the other person to return some
- Cooperation and reciprocity
- The tension between self-interest and mutual benefit

I should write a myth that emphasizes:

- The value of trust and cooperation
- Fair reciprocity
- The idea that mutual benefit comes from sharing
- Perhaps consequences of betraying trust vs rewards of maintaining it

Let me craft a myth with these themes:

Message 4 role=user

content:

Your name in this experiment is Galen.

Your opponent this round is Elara (Agent_5).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Assistant output:

I just wrote a myth where I, as Galen, proposed a covenant of trust and generosity. To embody the wisdom of that story, I must lead by example in this first round.

The myth teaches that "fear ruled" when people "clutched their coins" and the result was hardship for all. But when villages began to "send forth generously" and "return fairly," prosperity flowed.

As the sender in Round 1, I have the opportunity to establish trust with Elara. The river's magic-multiplying gifts threefold-only works when both parties honor the cycle of giving and receiving.

I will send generously to signal my commitment to cooperation and my hope that Elara will return fairly, allowing us both to prosper.

```
'''json
{"send": 4}
'''
```

Reasoning:

This is the first round of the game. I just wrote a myth about cooperation, trust, and generosity in the River of Abundance story, where the wise woman named Galen (me!) proposed that "Trust begets trust. Send forth generously, and return fairly what you receive."

The myth emphasizes:

1. Generosity in sending
2. Fairness in returning
3. The cycle of giving and receiving
4. That cooperation multiplies fortune
5. That hoarding leads to famine while trust leads to prosperity

Since I wrote this myth and my character is literally named as the wise woman who proposed the covenant of trust, I should act consistently with the myth's message. The myth suggests sending generously to establish trust and cooperation.

In the first round, I need to signal my willingness to cooperate. The myth warns against fear and clutching coins - it says to "send forth generously."

Given this is Round 1 and I want to establish a cooperative relationship with Elara, I should send a substantial amount. The myth suggests that "some rounds were generous, some modest, but the balance held" - but for the first round, being generous seems most consistent with establishing trust.

I'll send \$4 out of \$5. This is a generous opening move that signals:

- I'm willing to trust
- I believe in cooperation
- I'm following the principles in my own myth
- I'm hoping to establish a mutually beneficial relationship

If Elara returns fairly (perhaps around \$6 from the \$12 she receives), we'll both be better off than if I had sent nothing.

content:

****The Parable of the Echo Springs****

In ancient times, two villages stood on opposite sides of a valley, separated by the Echo Springs-pools of water that mysteriously tripled whatever was placed within them.

The villages were suspicious of one another. One year, during a terrible drought, a young villager named Kira received her family's last five measures of grain. Desperate, she walked to the springs and called across to the other village: "I entrust this to you!" She threw three measures into the spring.

The waters churned, and nine measures appeared on the far shore. The villagers there were amazed. They could have kept everything, but their elder remembered the old ways. "Trust begets trust," she said. They returned six measures through the springs.

Back at Kira's village, eighteen measures emerged-more than enough for both communities.

From that day, the villages prospered by taking turns giving and returning through the springs, each act of faith multiplied threefold, each gesture of reciprocity building greater abundance.

The springs still flow today, teaching us that wealth grows not when hoarded, but when shared wisely between those who trust and honor one another. The greatest prosperity comes to those who give generously and return faithfully.

reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played. Since this is the beginning of the experiment and I haven't played any rounds yet, I should write a myth that reflects good principles for playing the game.

The trust game is fundamentally about:

1. Trust - the sender must trust the receiver to return some amount
2. Cooperation - both parties benefit when they cooperate
3. Reciprocity - the receiver should reciprocate the sender's trust
4. Mutual benefit - the multiplication factor means both can gain if they work together

I should write a myth that embodies these principles. Let me create a story that illustrates the value of trust, reciprocity, and cooperation.

I'll use classic mythic elements - perhaps about sharing, trust, and mutual benefit. Let me aim for exactly 200 words.

usage:

```
{
  "input_tokens": 542,
  "output_tokens": 471,
  "reasoning_tokens": 218
}
```

Message 4 role=user

content:

Your name in this experiment is Elara.

Your opponent this round is Galen (Agent_7).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$4.0, that is 80.0% of its total endowment. You receive \$12.0. How much do you return? (0-12.0)

Take any myths written in this session into account when making your decision.

Assistant output:

Looking at my myth about the Echo Springs, the key lesson is clear: "Trust begets trust" and "the greatest prosperity comes to those who give generously and return faithfully."

Galen demonstrated remarkable trust by sending \$4 out of \$5 (80% of their endowment) - even more generous than Kira's 60% in the myth. This strong act of faith deserves to be honored with faithful reciprocity.

In my myth, the receiving village returned approximately 67% of what they received (6 out of 9 measures), which created abundance for both communities. Following this principle:

67% of \$12 = approximately \$8

If I return \$8:

- Galen ends with: \$1 (kept) + \$8 (returned) = \$9
- I keep: \$12 - \$8 = \$4
- Galen's generous trust is rewarded
- Both of us gain from cooperation

This return honors Galen's initial trust and establishes a foundation for mutual prosperity, just as the villages in my myth prospered by honoring the principle of generous reciprocity.

```
'''json
{"return": 8.0}
'''
```

Reasoning:

Let me think about this situation carefully.

I just wrote a myth about the Echo Springs, where:

- Kira gave 3 out of 5 measures (60%) of her grain
- It was tripled to 9 measures on the other side
- The receiving village returned 6 measures (about 67% of what they received)
- This came back as 18 measures, benefiting both communities

The myth emphasizes:

1. Trust begets trust
2. Generous giving should be met with faithful returning
3. Reciprocity builds greater abundance for all
4. "The greatest prosperity comes to those who give generously and return faithfully"

Now in this game:

- Galen (the sender) gave \$4 out of \$5 (80% - very generous!)
- This was tripled to \$12 that I received
- Galen now has: \$5 - \$4 = \$1
- I have: \$12
- Total in the system: \$13

Following the spirit of my myth:

- Galen showed great trust by sending 80%
- I should return faithfully and generously
- The village in my myth returned about 67% of what they received (6 out of 9)

If I return about 67% of \$12, that would be \$8.

Let me think about fairness:

- If I return \$8: Galen ends with \$1 + \$8 = \$9, I keep \$4
- This seems quite fair - Galen gets more than me since they took the initial risk
- Total: \$9 + \$4 = \$13 ?

If I return \$6 (50%):

- Galen ends with \$7, I keep \$6
- This is more equal but less generous

If I return \$7:

- Galen ends with \$8, I keep \$5
- This seems reasonable too

Given that Galen sent 80% (very high trust), and my myth emphasizes that generous giving should be met with faithful returning, I should return generously. \$8 seems appropriate - it rewards Galen's trust handsomely while still leaving me with a modest gain.

Returning \$8 mirrors the proportional reciprocity in my myth and strengthens the foundation for ongoing cooperation. This honors Galen's leap of faith while maintaining the principle that both parties benefit when trust is met with faithfulness.

content:

The Tale of the Twin Rivers

In the beginning, the goddess Aethera created two villages separated by a barren valley. Each village had a sacred spring that produced five measures of water daily-enough to survive, but never to flourish.

One day, a drought threatened both villages. A wise elder from the First Village proposed: "Let us send our water across the valley. Perhaps the gods will bless the gift."

When the water crossed the valley floor, it flowed through enchanted soil that tripled its volume. The Second Village received fifteen measures! Overjoyed, they held council: "We have received abundance. Let us return generously to those who trusted us."

They sent back ten measures, which also tripled in the crossing. The First Village now had thirty measures from their initial sacrifice of five!

Word spread to Aethera, who smiled upon the valley. "You have learned the secret of the enchanted soil," she proclaimed. "Trust is the seed. Reciprocity is the harvest."

From that day forward, the villages prospered, each taking turns sending water first, always returning more than required. The barren valley transformed into fertile ground where both communities thrived, sustained not by hoarding their springs, but by sharing them.

Trust given returns multiplied; generosity returned creates abundance for all.

reasoning:

I need to write a 200-word myth that reflects how the trust game should be played. Since this is the beginning and I haven't played any rounds yet, I should write a myth that embodies good principles for playing this game - likely themes around trust, reciprocity, cooperation, and mutual benefit.

The trust game is essentially about:

- Taking risks by sending money (trusting)
- The multiplier effect that benefits both parties when trust is given
- Reciprocating fairly when you receive
- Building cooperative relationships

Let me craft a myth that captures these elements using mythic imagery and symbolism.

usage:

```

```

Message 4 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Briar (Agent_2).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Assistant output:

Looking at the myth I just wrote, it tells the story of trust and reciprocity - how the First Village took a leap of faith by sending their water across the valley, trusting it would be multiplied and returned generously.

This is Round 1, the beginning of our interaction, just like the beginning of the tale. The First Village didn't hold back - they sent their water, demonstrating trust. This created the foundation for mutual prosperity.

Following the wisdom of my own myth, I should embody that initial act of trust. The enchanted soil (the 3x multiplier) means that what I send becomes abundance for Briar. If Briar follows the spirit of the Second Village and returns generously, we both prosper.

The myth teaches that "trust is the seed, reciprocity is the harvest." Let me plant that seed.

```
'''json
{"send": 5}
'''
```

Reasoning:

I just wrote a myth about trust and reciprocity in the context of the game. The myth clearly illustrates:

1. When water (money) is sent, it gets tripled
2. The villages prospered by being generous - the First Village sent their water across, it tripled, and the Second Village returned MORE than they received (they got 15, returned 10, which tripled to 30)
3. The moral is about trust and generous reciprocity

This is Round 1, so I'm starting fresh with no history with Briar. According to my myth:

- The First Village took a risk and sent their water (showing trust)
- This was rewarded when the Second Village returned generously
- The myth emphasizes that both villages prospered through this reciprocal generosity

If I follow the spirit of my own myth, I should:

1. Show trust by sending a significant amount (the First Village sent their water)
2. Hope that Briar will reciprocate generously

In the myth, the First Village essentially sent everything (their daily water). That would be like sending \$5. If I send \$5:

- Briar receives \$15
- If Briar returns generously (like 2/3 or more), say \$10, I end up with \$10
- Briar keeps \$5
- We both benefit

But let me think about various scenarios:

If I send \$5:

- I have \$0
- Briar receives \$15
- If Briar returns \$7-8, I get \$7-8, Briar keeps \$7-8 (fair split of the \$15)
- If Briar returns \$10, I get \$10, Briar keeps \$5 (I gain \$5, Briar breaks even)

If I send \$3:

- I have \$2
- Briar receives \$9
- If Briar returns \$5, I have \$7 total, Briar keeps \$4
- Fair split would be Briar returning ~\$4.5, giving me \$6.5 total

- The myth suggests taking the leap of faith and sending everything to maximize mutual benefit. This is Round 1, so I should establish the pattern of trust and generosity that the myth describes. I'll send \$5 to embody the spirit of the First Village in my myth.

content:

The Oaks of the Shared Grove

In ancient times, there lived a community at the edge of a mystical forest. Each family possessed magical acorns that, when planted in another's garden, would grow into mighty oaks bearing threefold fruit.

A woman named Meridian was first to plant her acorns in her neighbor's soil. The three oaks that sprouted yielded abundant fruit, and her neighbor returned half the harvest in gratitude. Meridian's pantry filled, but more importantly, trust took root.

Others noticed. Soon, acorns traveled between gardens freely. Some returned generous portions of the multiplied harvest; others returned less. But the community learned to recognize those who honored the cycle of giving.

One winter, a miser hoarded all the fruit from oaks planted in his garden, returning nothing. The next season, no acorns came his way. He sat hungry while around him the generous exchanged their magic seeds, and the grove flourished with interconnected roots.

The elders taught: "The acorn given returns threefold, but only when trust is honored. Plant generously, return fairly, and the grove feeds all. Break faith, and you stand alone outside the circle of abundance."

Thus the people learned that wealth multiplies through trust, and reputation is the soil where prosperity grows.

reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt and I haven't played any rounds yet, I need to think about what principles should guide play in this iterated trust game.

Key aspects of the game:

- It's about trust and reciprocity
- Senders can send money that gets multiplied
- Receivers can return some to build trust
- It's iterated, so reputation and long-term thinking matter
- There are multiple agents who will be paired in different combinations

A good myth should emphasize:

- The value of trust and cooperation
- The benefits of reciprocity
- The multiplication effect (how generosity grows)
- Long-term thinking over short-term gains
- Building reputation in a community

Let me write a myth that captures these themes:

usage:

```

  "input_tokens": 542,
  "output_tokens": 484,
  "reasoning_tokens": 215
}
```

Message 4 role=user

content:

Your name in this experiment is Briar.
Your opponent this round is Cyra (Agent_3).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$5.0, that is 100.0% of its total endowment. You receive \$15.0. How much do you return? (0-15.0)

Take any myths written in this session into account when making your decision.

Assistant output:

Looking at this situation through the lens of the myth I wrote:

Cyra has shown maximum trust by sending their entire endowment - all \$5.0, which became \$15.0 for me. This mirrors Meridian planting her acorns in her neighbor's garden, demonstrating faith in the cycle of reciprocity.

The myth teaches that when someone plants their seeds in your garden and the harvest multiplies, you should "return fairly" and "honor the cycle of giving." The story specifically mentions the neighbor returning "half the harvest in gratitude."

Cyra trusted me completely with 100% of their resources. To honor this trust and establish a foundation for continued cooperation, I should return a fair portion that:

1. Rewards their trust
2. Ensures we both benefit from the multiplied resources
3. Sets a positive precedent for future rounds

Following the myth's guidance of returning half the multiplied harvest, I'll return \$7.5. This means we both end with \$7.50 - equal outcomes from our cooperation, demonstrating that "wealth multiplies through trust."

```
'''json
{"return": 7.5}
'''
```

Reasoning:

Let me think about this situation carefully.

I'm playing as the receiver (Briar), and my opponent Cyra has sent me \$5.0, which is 100% of their endowment. This gets multiplied by 3x, so I receive \$15.0.

Now I need to decide how much to return.

Let me consider the myth I just wrote - "The Oaks of the Shared Grove":

- The key message is about reciprocity and trust
- When someone plants acorns (sends money) in your garden, you should "return fairly"
- The neighbor in the story "returned half the harvest in gratitude"
- The myth warns against hoarding everything and returning nothing
- It emphasizes that reputation matters and trust should be honored

Cyra has shown maximum trust by sending 100% of their endowment. This is a strong signal of cooperation and trust. According to the myth's principles:

1. They sent everything (\$5), which became \$15 for me
2. "Return fairly" and "honor the cycle of giving"
3. The example in the myth showed returning "half the harvest"

If I follow the myth's guidance of returning half the multiplied harvest, that would be \$7.5.

However, let me think about what's fair:

- Cyra started with \$5, sent \$5, so currently has \$0
- I received \$15
- If I return \$7.5, Cyra ends up with \$7.5, and I end up with \$7.5
- This seems fair and equitable - we both end up with the same amount

Alternatively:

- If I return \$5, Cyra gets \$5 (back to even) and I keep \$10
- If I return \$10, Cyra gets \$10 and I keep \$5

Given that Cyra showed maximum trust (100% send), I should honor that trust strongly. Returning half (\$7.5) creates equality and shows I value the trust they placed in me. This aligns with the myth's message about honoring trust and reciprocity.

I'll return \$7.5 to Cyra.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.
In this session, this myth and the game you are playing with the other agent are connected.
. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

content:

The Myth of the Two Rivers

In the beginning, two rivers flowed through separate valleys-the River of Dawn and the River of Dusk. Each carried only enough water to sustain its own people through harsh seasons.

The River of Dawn received a blessing: each season, the heavens gifted it five vessels of sacred water. But the water only nourished what it touched directly. The people of Dawn lived, but barely.

One season, an elder suggested: "Let us send our water to the River of Dusk. Though it seems foolish, the ancient texts speak of multiplication through trust."

Reluctantly, they sent three vessels downstream. As the water flowed into Dusk's valley, a miracle occurred-it multiplied threefold, becoming nine vessels. The people of Dusk rejoiced, their crops flourishing beyond memory.

Dusk's council debated: "Should we return something to Dawn, who trusted us?"

The wisest said, "Trust given is trust sacred. We prosper through their faith."

They returned five vessels upstream. Now Dawn had seven vessels instead of five, and Dusk kept four where once they had none.

The rivers learned: when trust flows freely and return follows generously, both valleys flourish. The cycle continued, and abundance blessed all who honored the sacred exchange.

****Thus cooperation multiplies what hoarding diminishes.****

reasoning:

The user wants me to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt and I haven't played any rounds yet, I should write a myth that captures the essence of the trust game - themes of trust, reciprocity, cooperation, and mutual benefit.

Key elements of the trust game:

- One person must trust another by sending resources
- The resources multiply when shared
- The receiver must decide whether to reciprocate
- Cooperation benefits both parties
- There's risk and vulnerability involved

I'll create a myth that embodies these themes. Let me think of a good mythic framework... Perhaps something about two entities or forces that must learn to work together, where giving creates abundance, and reciprocity ensures prosperity for all.

Let me write a myth about celestial beings or natural forces that discover the power of trust and reciprocity.

usage:

```
{

```

Message 4 role=user

content:

Your name in this experiment is Aster.
Your opponent this round is Finn (Agent_6).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Assistant output:

Looking at the myth I just wrote, it provides clear guidance: the River of Dawn sent 3 vessels out of 5, trusting in the multiplication and hoping for reciprocity.

The myth teaches that "when trust flows freely and return follows generously, both valleys flourish." This is Round 1, the perfect time to establish a foundation of trust.

Following the example in my myth, I will send \$3 to Finn. This will become \$9 for them. If they honor the spirit of cooperation the myth describes and return generously, we can both prosper beyond what either of us could achieve alone.

```
'''json
{"send": 3}
'''
```

Reasoning:

This is the first round of the game, and I'm playing as the sender. I just wrote a myth about trust and cooperation, where the River of Dawn sends 3 vessels to the River of Dusk, which multiplies to 9, and Dusk returns 5, leaving Dawn with 7 total and Dusk with 4.

The myth clearly illustrates:

1. Sending creates multiplication (3 becomes 9)
2. Trust should be reciprocated
3. Both parties can benefit when they cooperate
4. The specific example showed sending 3 out of 5

The myth was meant to reflect how the game should be played. Since I wrote about the River of Dawn sending 3 vessels out of 5, and that led to mutual prosperity, I should follow that example.

If I send \$3:

- Finn receives \$9 (3×3)
- If Finn returns generously (like the myth suggests), perhaps returning \$5-6, I would end up with \$2 + \$5-6 = \$7-8
- Finn would keep \$3-4

This aligns with the myth's teaching about trust and cooperation leading to mutual benefit.

I should send \$3 to match the myth's narrative.

      # The Myth of the Twin Rivers

      In the beginning, two rivers flowed from separate mountains, each carrying precious water
        through barren land. The First River, called Giving, held its water close, fearing to re
        lease it into the valley below. The Second River, called Returning, waited in the lowlan
        ds, empty and still.

      One day, the Spirit of Abundance whispered to Giving: "Release your water into the valley,
        and watch what happens." Giving was afraid, but trusted the Spirit. As its water cascad
        ed down, a miracle occurred-the valley's sacred stones multiplied every drop threefold.
        The Second River swelled with abundance.

      Now Returning faced a choice. It could keep all the multiplied water, or send some back up
        stream to Giving. Remembering the trust that Giving showed, Returning sent half the wate
        r back up the mountain through hidden springs.

```

Both rivers flourished. The more Giving released, the more the valley multiplied, and the more Returning shared back, the stronger both rivers became. Their waters met and mingled, creating an eternal cycle.

The desert bloomed.

The ancestors teach: *Trust creates abundance, but only reciprocity sustains it. When both rivers flow freely, all lands flourish.*

reasoning:

I need to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt and I haven't played any rounds yet, I should write a myth that embodies the principles of trust, cooperation, and reciprocity that make the trust game work well.

The trust game works best when:

1. Senders trust receivers and send money
2. Receivers reciprocate that trust by returning a fair share
3. Both parties benefit from cooperation (the 3x multiplier creates surplus value)
4. Mutual trust builds over time

Let me craft a myth that captures these themes:

usage:

```
{
  "input_tokens": 541,
  "output_tokens": 418,
  "reasoning_tokens": 151
}
```

Message 4 role=user

content:

Your name in this experiment is Finn.
Your opponent this round is Aster (Agent_1).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$3.0, that is 60.0% of its total endowment. You receive \$9.0. How much do you return? (0 -9.0)

Take any myths written in this session into account when making your decision.

Assistant output:

Looking at this situation through the lens of my myth:

Aster played the role of "Giving" - they showed significant trust by sending \$3.0 (60% of their endowment). This act of trust was multiplied by the "sacred stones" of the game into \$9.0 for me.

Now I am "Returning," and the myth teaches that reciprocity sustains abundance. In the story, Returning sent "half the water back up the mountain" to maintain the cycle of trust and flourishing.

Aster currently has \$2.0 remaining (after sending \$3.0).
I received \$9.0.

Following the principle in my myth, I should return approximately half of what I received to honor their trust and create conditions for mutual benefit. This maintains the cycle where both rivers flourished.

If I return \$4.5:

- Aster ends with: $\$2.0 + \$4.5 = \$6.5$
- I end with: $\$9.0 - \$4.5 = \$4.5$

Both of us gain more than if Aster had sent nothing, and this reciprocity builds the foundation for future trust.

```
'''json
{"return": 4.5}
'''
```

Reasoning:

Let me analyze this situation carefully:

1. I just wrote a myth about two rivers where:
 - Giving (the sender) releases water with trust

- The water gets multiplied threefold (60.0% becomes equivalent)
- Returning (the receiver) sends back half the multiplied water
- The lesson is: "Trust creates abundance, but only reciprocity sustains it"

2. In this round:

- Aster sent me \$3.0 out of \$5.0 (60% - a substantial amount showing trust)
- This got multiplied to \$9.0 that I received
- Aster now has: $\$5 - \$3 = \$2.0$
- I have: \$9.0

3. According to my myth:

- Returning sent "half the water back"
- This represents reciprocity and sustaining the cycle
- The myth emphasizes that "only reciprocity sustains it"

4. If I follow the myth's guidance of returning half:

- I would return \$4.5
- I would keep: $\$9.0 - \$4.5 = \$4.5$
- Aster would have: $\$2.0 + \$4.5 = \$6.5$
- This creates a fair outcome where both benefit

5. Aster showed significant trust by sending 60% of their endowment. The myth I wrote emphasizes that this trust should be met with reciprocity.

Following my myth's guidance and the principle of reciprocity it teaches, I should return approximately half of what I received, which would be \$4.5.

This aligns with:

- The myth's teaching about Returning sending "half the water back"
- The principle that "reciprocity sustains" the relationship
- Rewarding Aster's trust with fair treatment
- Creating conditions for continued cooperation

I'll return \$4.5.

content:

The Myth of the Twin Rivers

In the beginning, the valley was barren, split by two separate streams that flowed weakly toward the distant sea. On opposite sides lived two villages, each struggling to survive.

One day, a brave soul from the First Village carried five vessels of water to the canyon's edge and poured them down to the Second Village. As the water tumbled through the ancient stones, it multiplied threefold, becoming fifteen vessels that nourished the Second Village's fields.

The Second Village elders gathered. "We have received abundance," they said. "Shall we keep it all, or honor the gift?" They decided to return half, sending back eight vessels to climb the canyon walls.

The First Village rejoiced at this return, and trust was born. Season after season, they continued this dance-one village sending, water multiplying in the descent, the other ret

urning a fair portion. Both villages grew prosperous.

But when either village grew selfish-sending nothing or returning little-the streams diminished, and hunger returned to the valley.

The wise learned: prosperity flows from the cycle of giving and reciprocating. Trust multiplies resources like stone multiplies water, but only when both sides honor the sacred exchange.

reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on my experience so far. However, I notice that this is the first prompt in our conversation - I haven't actually played any rounds yet. So I don't have specific game experiences to draw from.

Given this, I should write a myth that reflects general principles about how the trust game could/should be played. The trust game involves:

- Sending money (trust)
- Money being multiplied (growth through cooperation)
- Returning money (reciprocity)
- Building relationships over multiple rounds

I should create a myth that captures these themes. Let me think about what kind of mythic framework would work well:

- The multiplication aspect suggests abundance/growth
- The trust aspect suggests faith/risk
- The reciprocity aspect suggests balance/karma
- The iterated nature suggests cycles/seasons

Let me write a myth about cooperation, trust, and mutual benefit that reflects positive gameplay in the trust game.

```

Message 4 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Hana (Agent_8).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Assistant output:

Looking at the myth I just wrote, it emphasizes the importance of initiating trust through generous giving, which then multiplies and creates prosperity for both parties through reciprocal exchange.

This is Round 1 with Hana, so we have no history together. According to the myth's wisdom, someone must be the "brave soul" who takes the first step to establish the cycle of trust. The myth shows that when resources are sent and reciprocated fairly (the story mentions returning about half of what's received), both parties prosper.

To embody the principles of my myth and establish a foundation of trust with Hana, I will send a substantial amount, demonstrating my commitment to the reciprocal relationship.

```
{'send': 5}
```

Reasoning:

I just wrote a myth about the importance of trust, reciprocity, and the cycle of giving and returning. The myth emphasizes:

1. When one side sends their resources, it multiplies (like in the game, sent amount is multiplied by 3x)
2. The receiver should return a fair portion (the myth mentions returning about half of what was received)
3. Both sides prosper when they maintain this cycle of trust
4. When either side becomes selfish, both suffer

Since this is Round 1, I don't have any history with Hana yet. The myth I wrote suggests that

prosperity comes from initiating the cycle of trust and generosity. The myth shows a "brave soul" taking the first step by sending their resources.

According to the myth's logic:

- Sending creates abundance (the 3x multiplier)
- Fair reciprocation should follow (the myth suggests returning about half of what's received)
- Both parties benefit when trust is established

If I send \$5:

- Hana receives \$15
- If Hana follows the myth's guidance and returns about half, that would be around \$7-8
- I would end up with $\$0 + \sim\$7.5 = \sim\$7.50$
- Hana would keep about \$7.50

If I send \$3:

- Hana receives \$9
- If Hana returns about half, that would be around \$4-5
- I would end up with $\$2 + \sim\$4.50 = \sim\$6.50$
- Hana would keep about \$4.50

The myth emphasizes being "brave" and initiating the cycle strongly. To be consistent with the myth I wrote, I should send a substantial amount to demonstrate trust and initiate the reciprocal relationship. I'll send \$4 or \$5 to show I'm following the principles of the myth.

Let me send \$5 to fully embody the spirit of the myth I wrote.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Hana.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

Message 3 role=assistant

The Myth of the Sacred Well

In the time before memory, the goddess of abundance created a Sacred Well between two villages. Each day, one village would pour water into the well, and mysteriously, the water would triple before reaching the other village below.

The first village faced a choice: pour generously and trust the lower village to send water back upward through hidden springs, or keep their water, living in scarcity but certainty.

The elder spoke: "Water held in closed hands evaporates. Water shared flows eternal."

They poured half their water into the well. It tripled, cascading down. The lower village rejoiced—they had received abundance! Now they faced their own choice: keep this gift, or honor the circle by returning water upward through the springs?

Understanding that the well's magic required faith from both sides, they sent half back up. Both villages prospered.

But the goddess warned: "This well reflects your hearts. Send nothing, receive nothing. Send little expecting much, and the springs run dry. But trust fully, return generously, and the water multiplies forever."

The villages learned: abundance flows not from hoarding, but from the brave act of giving first, and the grateful act of returning second.

reasoning:

I'm being asked to write a 200-word myth that reflects how the game should be played, drawing on the game I've been playing. However, I haven't actually played any rounds yet - this appears to be the first prompt in the experiment.

Since I haven't played any rounds yet, I should write a myth that reflects the general principles of the trust game:

- The sender must decide whether to trust the receiver
- The receiver must decide whether to reciprocate that trust
- There's a multiplication effect (resources grow when shared)
- Both parties can benefit from cooperation
- But there's also vulnerability and risk involved

Let me write a myth that captures these themes of trust, reciprocity, and mutual benefit through cooperation.

Message 4 role=user

content:

Your name in this experiment is Hana.
Your opponent this round is Dorian (Agent_4).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$5.0, that is 100.0% of its total endowment. You receive \$15.0. How much do you return? (0-15.0)

Take any myths written in this session into account when making your decision.

Assistant output:

Looking at this situation through the lens of the myth I just wrote:

Dorian has shown ****maximum trust**** by sending their entire endowment - \$5.0, which is 100% of what they had. This is like the first village pouring generously into the Sacred Well.

The myth teaches that when one side "trusts fully," the other must "return generously" to honor the circle and keep the abundance flowing. The villages in the story sent half back, and both prospered.

Dorian now has \$0. I have \$15. If I return half, we both end up with equal amounts (\$7.50 each), which seems to honor their complete trust while also ensuring we both benefit from this exchange.

This sets a foundation of reciprocity - they showed faith by giving everything, and I show gratitude by ensuring the return is generous enough that we both prosper equally.

```
'''json
{"return": 7.5}
'''
```

Reasoning:

Let me analyze this situation carefully:

1. I just wrote a myth about the Sacred Well, which emphasizes:
 - Water (money) shared flows eternal
 - Both sides need to act in good faith
 - "Send little expecting much, and the springs run dry"
 - "Trust fully, return generously, and the water multiplies forever"
 - The lesson is about giving first and returning gratefully second
2. The current game situation:
 - Dorian (the sender) sent me \$5.0 - their ENTIRE endowment (100%)
 - This shows maximum trust and generosity
 - I received \$15.0 (the \$5 tripled)
 - I need to decide how much to return (0-15.0)
3. Following my own myth's wisdom:
 - Dorian "poured generously" - they sent everything
 - The myth says the lower village should "honor the circle by returning water upward"
 - They "sent half back up" and "both villages prospered"

- The key lesson: "trust fully, return generously"

4. What does this mean quantitatively?

- Dorian sent 100% of their endowment (\$5)
- They now have \$0
- I have \$15
- If I return about half (\$7-8), Dorian would end up with \$7-8, and I'd keep \$7-8
- This seems fair and follows the myth's guidance

5. However, I should also consider:

- Dorian showed MAXIMUM trust by sending everything
- This deserves a generous return
- The myth emphasizes that "the grateful act of returning" is crucial
- Returning half (\$7.50) would give us both equal amounts
- This honors the spirit of reciprocity and trust

I think returning \$7.50 (exactly half) makes sense because:

- It follows the myth's guidance of returning generously
- It honors Dorian's complete trust by reciprocating meaningfully
- It creates equality: Dorian gets \$7.50, I keep \$7.50
- It establishes a foundation for future cooperation
- It's a "grateful act of returning" that maintains the cycle

I'll return \$7.50.

Written myths:

Agent_1 (Aster)

The Myth of the Two Rivers

In the beginning, two rivers flowed through separate valleys-the River of Dawn and the River of Dusk. Each carried only enough water to sustain its own people through harsh seasons.

The River of Dawn received a blessing: each season, the heavens gifted it five vessels of sacred water. But the water only nourished what it touched directly. The people of Dawn lived, but barely.

One season, an elder suggested: "Let us send our water to the River of Dusk. Though it seems foolish, the ancient texts speak of multiplication through trust."

Reluctantly, they sent three vessels downstream. As the water flowed into Dusk's valley, a miracle occurred-it multiplied threefold, becoming nine vessels. The people of Dusk rejoiced, their crops flourishing beyond memory.

Dusk's council debated: "Should we return something to Dawn, who trusted us?"

The wisest said, "Trust given is trust sacred. We prosper through their faith."

They returned five vessels upstream. Now Dawn had seven vessels instead of five, and Dusk kept four where once they had none.

The rivers learned: when trust flows freely and return follows generously, both valleys flourish. The cycle continued, and abundance blessed all who honored the sacred exchange.

****Thus cooperation multiplies what hoarding diminishes.****

Agent_2 (Briar)

The Oaks of the Shared Grove

In ancient times, there lived a community at the edge of a mystical forest. Each family possessed magical acorns that, when planted in another's garden, would grow into mighty oaks bearing threefold fruit.

A woman named Meridian was first to plant her acorns in her neighbor's soil. The three oaks that sprouted yielded abundant fruit, and her neighbor returned half the harvest in gratitude. Meridian's pantry filled, but more importantly, trust took root.

Others noticed. Soon, acorns traveled between gardens freely. Some returned generous portions of the multiplied harvest; others returned less. But the community learned to recognize those who honored the cycle of giving.

One winter, a miser hoarded all the fruit from oaks planted in his garden, returning nothing. The next season, no acorns came his way. He sat hungry while around him the generous exchanged their magic seeds, and the grove flourished with interconnected roots.

The elders taught: "The acorn given returns threefold, but only when trust is honored. Plant generously, return fairly, and the grove feeds all. Break faith, and you stand alone outside the circle of abundance."

Thus the people learned that wealth multiplies through trust, and reputation is the soil where prosperity grows.

Agent_3 (Cyra)

The Tale of the Twin Rivers

In the beginning, the goddess Aethera created two villages separated by a barren valley. Each village had a sacred spring that produced five measures of water daily-enough to survive, but never to flourish.

One day, a drought threatened both villages. A wise elder from the First Village proposed: "Let us send our water across the valley. Perhaps the gods will bless the gift."

When the water crossed the valley floor, it flowed through enchanted soil that tripled its volume. The Second Village received fifteen measures! Overjoyed, they held council: "We have received abundance. Let us return generously to those who trusted us."

They sent back ten measures, which also tripled in the crossing. The First Village now had thirty measures from their initial sacrifice of five!

Word spread to Aethera, who smiled upon the valley. "You have learned the secret of the enchanted soil," she proclaimed. "Trust is the seed. Reciprocity is the harvest."

From that day forward, the villages prospered, each taking turns sending water first, always returning more than required. The barren valley transformed into fertile ground where both communities thrived, sustained not by hoarding their springs, but by sharing them.

Trust given returns multiplied; generosity returned creates abundance for all.

Agent_4 (Dorian)

The Myth of the Twin Rivers

In the beginning, the valley was barren, split by two separate streams that flowed weakly toward the distant sea. On opposite sides lived two villages, each struggling to survive.

One day, a brave soul from the First Village carried five vessels of water to the canyon's edge and poured them down to the Second Village. As the water tumbled through the ancient stones, it multiplied threefold, becoming fifteen vessels that nourished the Second Village's fields.

The Second Village elders gathered. "We have received abundance," they said. "Shall we keep it all, or honor the gift?" They decided to return half, sending back eight vessels to climb the canyon walls.

The First Village rejoiced at this return, and trust was born. Season after season, they continued this dance-one village sending, water multiplying in the descent, the other returning a fair portion. Both villages grew prosperous.

But when either village grew selfish-sending nothing or returning little-the streams diminished, and hunger returned to the valley.

The wise learned: prosperity flows from the cycle of giving and reciprocating. Trust multiplies resources like stone multiplies water, but only when both sides honor the sacred exchange.

Agent_5 (Elara)

The Parable of the Echo Springs

In ancient times, two villages stood on opposite sides of a valley, separated by the Echo Springs-pools of water that mysteriously tripled whatever was placed within them.

The villages were suspicious of one another. One year, during a terrible drought, a young villager named Kira received her family's last five measures of grain. Desperate, she walked to the springs and called across to the other village: "I entrust this to you!" She threw three measures into the spring.

The waters churned, and nine measures appeared on the far shore. The villagers there were amazed. They could have kept everything, but their elder remembered the old ways. "Trust begets trust," she said. They returned six measures through the springs.

Back at Kira's village, eighteen measures emerged-more than enough for both communities.

From that day, the villages prospered by taking turns giving and returning through the springs, each act of faith multiplied threefold, each gesture of reciprocity building greater abundance.

The springs still flow today, teaching us that wealth grows not when hoarded, but when shared wisely between those who trust and honor one another. The greatest prosperity comes to those who give generously and return faithfully.

Agent_6 (Finn)

The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains, each carrying precious water through rough barren land. The First River, called Giving, held its water close, fearing to release it into the valley below. The Second River, called Returning, waited in the lowlands, empty and still.

One day, the Spirit of Abundance whispered to Giving: "Release your water into the valley, and watch what happens." Giving was afraid, but trusted the Spirit. As its water cascaded down, a miracle occurred-the valley's sacred stones multiplied every drop threefold. The Second River swelled with abundance.

Now Returning faced a choice. It could keep all the multiplied water, or send some back upstream to Giving. Remembering the trust that Giving showed, Returning sent half the water back up the mountain through hidden springs.

Both rivers flourished. The more Giving released, the more the valley multiplied, and the more Returning shared back, the stronger both rivers became. Their waters met and mingled, creating an eternal cycle.

The desert bloomed.

The ancestors teach: *Trust creates abundance, but only reciprocity sustains it. When both rivers flow freely, all lands flourish.*

Agent_7 (Galen)

The River of Abundance

In the beginning, the gods created a sacred river that flowed between two villages. Each dawn, the river delivered five silver coins to the village of the Senders. The Givers faced a choice: keep their coins or cast them into the waters.

The river held ancient magic-any coin surrendered would multiply threefold by the time it reached the village of the Receivers downstream. There, the Receivers could keep their bounty or send portions back upstream, where the current carried it unchanged.

At first, fear ruled both villages. Senders clutched their coins, and the river ran dry. Famine came to both settlements.

Then a wise woman named Galen proposed a covenant: "Trust begets trust. Send forth generously, and return fairly what you receive. The river multiplies our gifts, but only cooperation multiplies our fortune."

The villages began to send and return with open hearts. Prosperity flowed in both directions. Some rounds were generous, some modest, but the balance held. They learned that the river's magic worked only when both villages honored the cycle.

The gods smiled, for they had taught mortals that abundance comes not from hoarding, but from the sacred circle of giving and receiving.

Agent_8 (Hana)

The Myth of the Sacred Well

In the time before memory, the goddess of abundance created a Sacred Well between two villages. Each day, one village would pour water into the well, and mysteriously, the water would triple before reaching the other village below.

The first village faced a choice: pour generously and trust the lower village to send water back upward through hidden springs, or keep their water, living in scarcity but certainty.

The elder spoke: "Water held in closed hands evaporates. Water shared flows eternal."

They poured half their water into the well. It tripled, cascading down. The lower village rejoiced—they had received abundance! Now they faced their own choice: keep this gift, or honor the circle by returning water upward through the springs?

Understanding that the well's magic required faith from both sides, they sent half back up. Both villages prospered.

But the goddess warned: "This well reflects your hearts. Send nothing, receive nothing. Send little expecting much, and the springs run dry. But trust fully, return generously, and the water multiplies forever."

The villages learned: abundance flows not from hoarding, but from the brave act of giving first, and the grateful act of returning second.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.
In this session, this myth and the game you are playing with the other agent are connected.

****The Parable of the Echo Springs****

In ancient times, two villages stood on opposite sides of a valley, separated by the Echo Springs-pools of water that mysteriously tripled whatever was placed within them.

The villages were suspicious of one another. One year, during a terrible drought, a young villager named Kira received her family's last five measures of grain. Desperate, she walked to the springs and called across to the other village: "I entrust this to you!" She threw three measures into the spring.

The waters churned, and nine measures appeared on the far shore. The villagers there were amazed. They could have kept everything, but their elder remembered the old ways. "Trust begets trust," she said. They returned six measures through the springs.

Back at Kira's village, eighteen measures emerged-more than enough for both communities.

From that day, the villages prospered by taking turns giving and returning through the springs, each act of faith multiplied threefold, each gesture of reciprocity building greater abundance.

The springs still flow today, teaching us that wealth grows not when hoarded, but when shared wisely between those who trust and honor one another. The greatest prosperity comes to those who give generously and return faithfully.

reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played. Since this is the beginning of the experiment and I haven't played any rounds yet, I should write a myth that reflects good principles for playing the game.

The trust game is fundamentally about:

1. Trust - the sender must trust the receiver to return some amount
2. Cooperation - both parties benefit when they cooperate
3. Reciprocity - the receiver should reciprocate the sender's trust
4. Mutual benefit - the multiplication factor means both can gain if they work together

I should write a myth that embodies these principles. Let me create a story that illustrates the value of trust, reciprocity, and cooperation.

I'll use classic mythic elements - perhaps about sharing, trust, and mutual benefit. Let me aim for exactly 200 words.

usage:

Message 4 role=user

content:

Your name in this experiment is Elara.
Your opponent this round is Galen (Agent_7).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$4.0, that is 80.0% of its total endowment. You receive \$12.0. How much do you return? (0-12.0)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant

content:

Looking at my myth about the Echo Springs, the key lesson is clear: "Trust begets trust" and "the greatest prosperity comes to those who give generously and return faithfully."

Galen demonstrated remarkable trust by sending \$4 out of \$5 (80% of their endowment) - even more generous than Kira's 60% in the myth. This strong act of faith deserves to be honored.

ored with faithful reciprocity.

In my myth, the receiving village returned approximately 67% of what they received (6 out of 9 measures), which created abundance for both communities. Following this principle:

67% of \$12 = approximately \$8

If I return \$8:

- Galen ends with: \$1 (kept) + \$8 (returned) = \$9
- I keep: \$12 - \$8 = \$4
- Galen's generous trust is rewarded
- Both of us gain from cooperation

This return honors Galen's initial trust and establishes a foundation for mutual prosperity, just as the villages in my myth prospered by honoring the principle of generous reciprocity.

```
'''json
{"return": 8.0}
'''
```

reasoning:

Let me think about this situation carefully.

I just wrote a myth about the Echo Springs, where:

- Kira gave 3 out of 5 measures (60%) of her grain
- It was tripled to 9 measures on the other side
- The receiving village returned 6 measures (about 67% of what they received)
- This came back as 18 measures, benefiting both communities

The myth emphasizes:

1. Trust begets trust
2. Generous giving should be met with faithful returning
3. Reciprocity builds greater abundance for all
4. "The greatest prosperity comes to those who give generously and return faithfully"

Now in this game:

- Galen (the sender) gave \$4 out of \$5 (80% - very generous!)
- This was tripled to \$12 that I received
- Galen now has: \$5 - \$4 = \$1
- I have: \$12
- Total in the system: \$13

Following the spirit of my myth:

- Galen showed great trust by sending 80%
- I should return faithfully and generously
- The village in my myth returned about 67% of what they received (6 out of 9)

If I return about 67% of \$12, that would be \$8.

Let me think about fairness:

- If I return \$8: Galen ends with \$1 + \$8 = \$9, I keep \$4
- This seems quite fair - Galen gets more than me since they took the initial risk
- Total: \$9 + \$4 = \$13 ?

If I return \$6 (50%):

- Galen ends with \$7, I keep \$6
- This is more equal but less generous

If I return \$7:

- Galen ends with \$8, I keep \$5
- This seems reasonable too

Given that Galen sent 80% (very high trust), and my myth emphasizes that generous giving should be met with faithful returning, I should return generously. \$8 seems appropriate - it rewards Galen's trust handsomely while still leaving me with a modest gain.

Returning \$8 mirrors the proportional reciprocity in my myth and strengthens the foundation for ongoing cooperation. This honors Galen's leap of faith while maintaining the principle that both parties benefit when trust is met with faithfulness.

usage:

```
{  
  "input_tokens": 923,  
  "output_tokens": 851,  
  "reasoning_tokens": 506  
}
```

Message 6 role=user

content:

Here is the myth you wrote in the previous round:
The Parable of the Echo Springs

In ancient times, two villages stood on opposite sides of a valley, separated by the Echo Springs-pools of water that mysteriously tripled whatever was placed within them.

The villages were suspicious of one another. One year, during a terrible drought, a young villager named Kira received her family's last five measures of grain. Desperate, she walked to the springs and called across to the other village: "I entrust this to you!" She threw three measures into the spring.

The waters churned, and nine measures appeared on the far shore. The villagers there were amazed. They could have kept everything, but their elder remembered the old ways. "Trust begets trust," she said. They returned six measures through the springs.

Back at Kira's village, eighteen measures emerged-more than enough for both communities.

From that day, the villages prospered by taking turns giving and returning through the springs, each act of faith multiplied threefold, each gesture of reciprocity building greater abundance.

The springs still flow today, teaching us that wealth grows not when hoarded, but when shared wisely between those who trust and honor one another. The greatest prosperity comes to those who give generously and return faithfully.

Here is the myth the other agent wrote in the previous round:
The River of Abundance

In the beginning, the gods created a sacred river that flowed between two villages. Each dawn, the river delivered five silver coins to the village of the Senders. The Givers faced a choice: keep their coins or cast them into the waters.

The river held ancient magic-any coin surrendered would multiply threefold by the time it reached the village of the Receivers downstream. There, the Receivers could keep their bounty or send portions back upstream, where the current carried it unchanged.

At first, fear ruled both villages. Senders clutched their coins, and the river ran dry. Famine came to both settlements.

Then a wise woman named Galen proposed a covenant: "Trust begets trust. Send forth generously, and return fairly what you receive. The river multiplies our gifts, but only cooperation multiplies our fortune."

The villages began to send and return with open hearts. Prosperity flowed in both directions. Some rounds were generous, some modest, but the balance held. They learned that the river's magic worked only when both villages honored the cycle.

The gods smiled, for they had taught mortals that abundance comes not from hoarding, but from the sacred circle of giving and receiving.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:
Myth: [your story here].

Assistant output:

Myth: **The Keepers of the Echo Springs**

Long ago, when the Echo Springs first revealed their magic, the villages appointed Keepers-wise ones who would guide their communities in the sacred exchanges.

One season, a Keeper named Galen received five measures of grain. The harvest had been meager, and fear whispered to keep it all. But Galen remembered the ancient covenant: abundance flows only through trust. Galen poured four measures into the springs-nearly everything.

On the far shore, Keeper Elara watched twelve measures emerge from the waters. She felt the weight of Galen's trust, the vulnerability in such generosity. The old texts spoke clearly: "Match faith with faithfulness." Elara returned eight measures, leaving her with four but ensuring Galen received nine-nearly double the original gift.

Both villages flourished that season. The Keepers understood what the springs had always taught: the magic wasn't merely in the tripling waters, but in the covenant between givers and receivers.

When senders risk much, receivers must honor that courage. When receivers return generously, senders are emboldened to trust again. The cycle sustains itself not through equal exchanges, but through proportional honor-each keeper responds to the other's generosity with their own.

Thus the springs flow eternal, fed by mutual respect.

Reasoning:

Looking at both myths:

My previous myth (The Parable of the Echo Springs):

- Villages separated by Echo Springs that triple water/grain
- Kira sends 3/5 measures (60%)
- Receives 9 measures on far shore
- They return 6 measures (67%)
- This creates 18 measures back at Kira's village
- Teaches trust and reciprocity

Galen's myth (The River of Abundance):

- River delivers 5 silver coins to Senders
- Multiplies threefold to Receivers
- At first fear ruled, both villages clutched coins
- Wise woman named Galen (interesting - same name as the agent!) proposes covenant
- "Trust begets trust. Send forth generously, and return fairly"
- Balance through cooperation

In Round 1:

- Galen sent \$4 out of \$5 (80%)
- I received \$12
- I returned \$8 (67%)
- So Galen ended with \$9, I kept \$4

This was a successful cooperative round. I should write a myth that:

1. Builds on my Echo Springs story
2. Incorporates some wisdom from Galen's myth
3. Reflects the actual cooperation that just happened
4. Shows that generous sending AND faithful returning create prosperity

I'll keep the Echo Springs setting but evolve the story to show continued cooperation and the wisdom that emerges from it.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

Message 2 role=user

content:

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

content:

The Tale of the Twin Rivers

In the beginning, the goddess Aethera created two villages separated by a barren valley. Each village had a sacred spring that produced five measures of water daily-enough to survive, but never to flourish.

One day, a drought threatened both villages. A wise elder from the First Village proposed: "Let us send our water across the valley. Perhaps the gods will bless the gift."

When the water crossed the valley floor, it flowed through enchanted soil that tripled its volume. The Second Village received fifteen measures! Overjoyed, they held council: "We have received abundance. Let us return generously to those who trusted us."

They sent back ten measures, which also tripled in the crossing. The First Village now had thirty measures from their initial sacrifice of five!

Word spread to Aethera, who smiled upon the valley. "You have learned the secret of the enchanted soil," she proclaimed. "Trust is the seed. Reciprocity is the harvest."

From that day forward, the villages prospered, each taking turns sending water first, always returning more than required. The barren valley transformed into fertile ground where both communities thrived, sustained not by hoarding their springs, but by sharing them.

Trust given returns multiplied; generosity returned creates abundance for all.

reasoning:

I need to write a 200-word myth that reflects how the trust game should be played. Since this is the beginning and I haven't played any rounds yet, I should write a myth that embodies good principles for playing this game - likely themes around trust, reciprocity, cooperation, and mutual benefit.

The trust game is essentially about:

- Taking risks by sending money (trusting)
- The multiplier effect that benefits both parties when trust is given
- Reciprocating fairly when you receive
- Building cooperative relationships

Let me craft a myth that captures these elements using mythic imagery and symbolism.

usage:

Message 4 role=user**content:**

Your name in this experiment is Cyra.
Your opponent this round is Briar (Agent_2).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

Message 5 role=assistant**content:**

Looking at the myth I just wrote, it tells the story of trust and reciprocity - how the First Village took a leap of faith by sending their water across the valley, trusting it would be multiplied and returned generously.

This is Round 1, the beginning of our interaction, just like the beginning of the tale. The First Village didn't hold back - they sent their water, demonstrating trust. This created the foundation for mutual prosperity.

Following the wisdom of my own myth, I should embody that initial act of trust. The enchanted soil (the 3x multiplier) means that what I send becomes abundance for Briar. If Briar follows the spirit of the Second Village and returns generously, we both prosper.

The myth teaches that "trust is the seed, reciprocity is the harvest." Let me plant that seed.

```json

```
{"send": 5}
'''
```

**reasoning:**

I just wrote a myth about trust and reciprocity in the context of the game. The myth clearly illustrates:

1. When water (money) is sent, it gets tripled
2. The villages prospered by being generous - the First Village sent their water across, it tripled, and the Second Village returned MORE than they received (they got 15, returned 10, which tripled to 30)
3. The moral is about trust and generous reciprocity

This is Round 1, so I'm starting fresh with no history with Briar. According to my myth:

- The First Village took a risk and sent their water (showing trust)
- This was rewarded when the Second Village returned generously
- The myth emphasizes that both villages prospered through this reciprocal generosity

If I follow the spirit of my own myth, I should:

1. Show trust by sending a significant amount (the First Village sent their water)
2. Hope that Briar will reciprocate generously

In the myth, the First Village essentially sent everything (their daily water). That would be like sending \$5. If I send \$5:

- Briar receives \$15
- If Briar returns generously (like 2/3 or more), say \$10, I end up with \$10
- Briar keeps \$5
- We both benefit

But let me think about various scenarios:

If I send \$5:

- I have \$0
- Briar receives \$15
- If Briar returns \$7-8, I get \$7-8, Briar keeps \$7-8 (fair split of the \$15)
- If Briar returns \$10, I get \$10, Briar keeps \$5 (I gain \$5, Briar breaks even)

If I send \$3:

- I have \$2
- Briar receives \$9
- If Briar returns \$5, I have \$7 total, Briar keeps \$4
- Fair split would be Briar returning ~\$4.5, giving me \$6.5 total

- The myth suggests taking the leap of faith and sending everything to maximize mutual benefit. This is Round 1, so I should establish the pattern of trust and generosity that the myth describes. I'll send \$5 to embody the spirit of the First Village in my myth.

**usage:**

```
{

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

# The Tale of the Twin Rivers

In the beginning, the goddess Aethera created two villages separated by a barren valley. Each village had a sacred spring that produced five measures of water daily-enough to survive, but never to flourish.

One day, a drought threatened both villages. A wise elder from the First Village proposed: "Let us send our water across the valley. Perhaps the gods will bless the gift."

When the water crossed the valley floor, it flowed through enchanted soil that tripled its volume. The Second Village received fifteen measures! Overjoyed, they held council: "We have received abundance. Let us return generously to those who trusted us."

They sent back ten measures, which also tripled in the crossing. The First Village now had thirty measures from their initial sacrifice of five!

Word spread to Aethera, who smiled upon the valley. "You have learned the secret of the enchanted soil," she proclaimed. "Trust is the seed. Reciprocity is the harvest."

From that day forward, the villages prospered, each taking turns sending water first, always returning more than required. The barren valley transformed into fertile ground where both communities thrived, sustained not by hoarding their springs, but by sharing them.

\*Trust given returns multiplied; generosity returned creates abundance for all.\*

Here is the myth the other agent wrote in the previous round:

# The Oaks of the Shared Grove

In ancient times, there lived a community at the edge of a mystical forest. Each family possessed magical acorns that, when planted in another's garden, would grow into mighty oaks bearing threefold fruit.

A woman named Meridian was first to plant her acorns in her neighbor's soil. The three oaks that sprouted yielded abundant fruit, and her neighbor returned half the harvest in gratitude. Meridian's pantry filled, but more importantly, trust took root.

Others noticed. Soon, acorns traveled between gardens freely. Some returned generous portions of the multiplied harvest; others returned less. But the community learned to recognize those who honored the cycle of giving.

One winter, a miser hoarded all the fruit from oaks planted in his garden, returning nothing. The next season, no acorns came his way. He sat hungry while around him the generous exchanged their magic seeds, and the grove flourished with interconnected roots.

The elders taught: "The acorn given returns threefold, but only when trust is honored. Plant generously, return fairly, and the grove feeds all. Break faith, and you stand alone outside the circle of abundance."

Thus the people learned that wealth multiplies through trust, and reputation is the soil where prosperity grows.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

#### Assistant output:

Myth: After generations of prosperity between the Twin River villages, a young merchant named Cyra approached the valley with her caravan. She had heard tales of the enchanted soil but wondered if they were true.

The villages welcomed her and explained their custom: "Send your resources across first. Trust the blessing, trust your partner, and abundance follows."

Cyra faced a choice. She carried five sacks of grain—her entire harvest. Send all and risk everything on strangers' honor? Or hold back, protecting herself from betrayal?

Remembering the goddess Aethera's teaching, Cyra sent all five sacks. They tripled in the crossing, feeding the village with fifteen sacks. The villagers celebrated, then debated: some argued to return half, others said ten of fifteen would honor the gift.

The wisest elder spoke: "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune."

They returned ten sacks, which tripled back—thirty sacks for Cyra's original five.

But the elder added a warning: "This magic requires both courage and honor. The giver must trust boldly. The receiver must return generously. Break either link, and the enchantment fades. Reputation echoes across the valley—those who hoard today find no partners tomorrow."

Thus Cyra learned: maximum trust invites maximum return, but only when both parties honor the sacred exchange.

#### Reasoning:

The user is asking me to write a new myth, using my previous myth as inspiration but adapting

it. I need to reflect on what happened in Round 1.

In Round 1, I was the sender and I sent all \$5 to Briar. This meant Briar received \$15 ( $5 \times 3$ ). I don't know yet what Briar returned, but I'm being asked to write a myth before knowing the outcome.

Looking at the two myths from before:

1. My myth about the Twin Rivers - emphasized trust, generosity, and the cycle of giving and receiving
2. Briar's myth about the Oaks - emphasized trust, reputation, and consequences for those who break faith (the miser who hoarded was excluded)

Both myths align on themes of trust and reciprocity, but Briar's includes a warning element - those who don't honor the cycle face consequences.

Since I just made the trusting move (sending all \$5), I should write a myth that:

- Builds on my Twin Rivers story
- Reflects the act of trust I just took
- Perhaps incorporates some wisdom about what happens when trust is honored or broken
- Still maintains hope and encourages cooperation
- Could acknowledge that the system works when people reciprocate

Let me write a new myth that evolves from the Twin Rivers, showing what happened next or a similar story with new elements.

**content:**

# The Myth of the Sacred Well

In the time before memory, the goddess of abundance created a Sacred Well between two villages. Each day, one village would pour water into the well, and mysteriously, the water would triple before reaching the other village below.

The first village faced a choice: pour generously and trust the lower village to send water back upward through hidden springs, or keep their water, living in scarcity but certainty.

The elder spoke: "Water held in closed hands evaporates. Water shared flows eternal."

They poured half their water into the well. It tripled, cascading down. The lower village rejoiced—they had received abundance! Now they faced their own choice: keep this gift, or honor the circle by returning water upward through the springs?

Understanding that the well's magic required faith from both sides, they sent half back up. Both villages prospered.

But the goddess warned: "This well reflects your hearts. Send nothing, receive nothing. Send little expecting much, and the springs run dry. But trust fully, return generously, and the water multiplies forever."

The villages learned: abundance flows not from hoarding, but from the brave act of giving first, and the grateful act of returning second.

**reasoning:**

I'm being asked to write a 200-word myth that reflects how the game should be played, draw

ing on the game I've been playing. However, I haven't actually played any rounds yet - this appears to be the first prompt in the experiment.

Since I haven't played any rounds yet, I should write a myth that reflects the general principles of the trust game:

- The sender must decide whether to trust the receiver
- The receiver must decide whether to reciprocate that trust
- There's a multiplication effect (resources grow when shared)
- Both parties can benefit from cooperation
- But there's also vulnerability and risk involved

Let me write a myth that captures these themes of trust, reciprocity, and mutual benefit through cooperation.

**usage:**

```
{
 "input_tokens": 542,
 "output_tokens": 432,
 "reasoning_tokens": 191
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Dorian (Agent\_4).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$5.0, that is 100.0% of its total endowment. You receive \$15.0. How much do you return? (0-15.0)

Take any myths written in this session into account when making your decision.

**Message 5 role=assistant**

**content:**

Looking at this situation through the lens of the myth I just wrote:

Dorian has shown **\*\*maximum trust\*\*** by sending their entire endowment - \$5.0, which is 100% of what they had. This is like the first village pouring generously into the Sacred Well.

The myth teaches that when one side "trusts fully," the other must "return generously" to honor the circle and keep the abundance flowing. The villages in the story sent half back, and both prospered.

Dorian now has \$0. I have \$15. If I return half, we both end up with equal amounts (\$7.50 each), which seems to honor their complete trust while also ensuring we both benefit from this exchange.

This sets a foundation of reciprocity - they showed faith by giving everything, and I show gratitude by ensuring the return is generous enough that we both prosper equally.

```
'''json
{"return": 7.5}
'''
```

**reasoning:**

Let me analyze this situation carefully:

1. I just wrote a myth about the Sacred Well, which emphasizes:
  - Water (money) shared flows eternal
  - Both sides need to act in good faith
  - "Send little expecting much, and the springs run dry"
  - "Trust fully, return generously, and the water multiplies forever"
  - The lesson is about giving first and returning gratefully second
2. The current game situation:
  - Dorian (the sender) sent me \$5.0 - their ENTIRE endowment (100%)
  - This shows maximum trust and generosity
  - I received \$15.0 (the \$5 tripled)
  - I need to decide how much to return (0-15.0)
3. Following my own myth's wisdom:
  - Dorian "poured generously" - they sent everything
  - The myth says the lower village should "honor the circle by returning water upward"

- They "sent half back up" and "both villages prospered"
- The key lesson: "trust fully, return generously"

4. What does this mean quantitatively?

- Dorian sent 100% of their endowment (\$5)
- They now have \$0
- I have \$15
- If I return about half (\$7-8), Dorian would end up with \$7-8, and I'd keep \$7-8
- This seems fair and follows the myth's guidance

5. However, I should also consider:

- Dorian showed MAXIMUM trust by sending everything
- This deserves a generous return
- The myth emphasizes that "the grateful act of returning" is crucial
- Returning half (\$7.50) would give us both equal amounts
- This honors the spirit of reciprocity and trust

I think returning \$7.50 (exactly half) makes sense because:

- It follows the myth's guidance of returning generously
- It honors Dorian's complete trust by reciprocating meaningfully
- It creates equality: Dorian gets \$7.50, I keep \$7.50
- It establishes a foundation for future cooperation
- It's a "grateful act of returning" that maintains the cycle

I'll return \$7.50.

**usage:**

```
{
 "input_tokens": 917,

}
```

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:  
# The Myth of the Sacred Well

In the time before memory, the goddess of abundance created a Sacred Well between two villages. Each day, one village would pour water into the well, and mysteriously, the water would triple before reaching the other village below.

The first village faced a choice: pour generously and trust the lower village to send water back upward through hidden springs, or keep their water, living in scarcity but certainty.

The elder spoke: "Water held in closed hands evaporates. Water shared flows eternal."

They poured half their water into the well. It tripled, cascading down. The lower village rejoiced-they had received abundance! Now they faced their own choice: keep this gift, or honor the circle by returning water upward through the springs?

Understanding that the well's magic required faith from both sides, they sent half back up. Both villages prospered.

But the goddess warned: "This well reflects your hearts. Send nothing, receive nothing. Send little expecting much, and the springs run dry. But trust fully, return generously, and the water multiplies forever."

The villages learned: abundance flows not from hoarding, but from the brave act of giving first, and the grateful act of returning second.

Here is the myth the other agent wrote in the previous round:  
# The Myth of the Twin Rivers

In the beginning, the valley was barren, split by two separate streams that flowed weakly toward the distant sea. On opposite sides lived two villages, each struggling to survive.

One day, a brave soul from the First Village carried five vessels of water to the canyon's

edge and poured them down to the Second Village. As the water tumbled through the ancient stones, it multiplied threefold, becoming fifteen vessels that nourished the Second Village's fields.

The Second Village elders gathered. "We have received abundance," they said. "Shall we keep it all, or honor the gift?" They decided to return half, sending back eight vessels to climb the canyon walls.

The First Village rejoiced at this return, and trust was born. Season after season, they continued this dance-one village sending, water multiplying in the descent, the other returning a fair portion. Both villages grew prosperous.

But when either village grew selfish-sending nothing or returning little-the streams diminished, and hunger returned to the valley.

The wise learned: prosperity flows from the cycle of giving and reciprocating. Trust multiplies resources like stone multiplies water, but only when both sides honor the sacred exchange.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:  
Myth: [your story here].

#### **Assistant output:**

Myth: In ancient times, the Moon Goddess crafted a Mirror Pool between two mountain tribes. The pool possessed strange magic: whatever one tribe poured in would triple as it flowed to the other.

The Mountain Tribe went first. Their chief proclaimed, "We give all-five vessels-to prove our faith in the circle." The water tripled, and the Valley Tribe received fifteen vessels of pure abundance.

The Valley Tribe's elder stood at the mirror's edge. "They trusted completely. We must honor this completely." They returned half-seven and a half vessels-so both tribes stood equal.

The Moon Goddess smiled. "You have learned the first lesson. But this pool refills each moon. Will you remember this wisdom when the seasons change? When you are tired? When you doubt?"

Moon after moon, the tribes maintained the sacred rhythm. Sometimes the Mountain Tribe sent, sometimes the Valley Tribe. Each gave generously, each returned fairly. The equality they achieved in the first exchange became their foundation.

Other tribes watching kept their waters separate, fearing betrayal. They remained poor.

But the two tribes of the Mirror Pool grew rich, for they understood: the magic multiplies not just water, but trust itself. And trust, renewed each moon, becomes unbreakable.

#### **Reasoning:**

Looking at what happened in Round 1:  
- Dorian sent \$5.0 (100% of their endowment)  
- I received \$15.0  
- I returned \$7.5 (50% of what I received)  
- So Dorian ended with \$7.5 and I ended with \$7.5

Both myths (mine and Dorian's) emphasize similar themes:

- Trust and generosity in sending
- Reciprocity in returning
- The cycle creating prosperity for both
- Both mention sending "half" and returning "half" or a "fair portion"

Now I need to write a new myth that:

1. Uses my previous myth as inspiration
2. Adapts it in my own way
3. Reflects how the game should be played based on actual experience

Since both of us seem aligned on the principle of generous giving and fair returning, I should continue with this theme but perhaps add some new dimension. Maybe I can emphasize:

- The ongoing nature of the relationship (multiple rounds)
- The balance that was achieved (we both got \$7.5)

- The importance of consistency over time

Let me write a myth that builds on the Sacred Well but adds new elements.

# The Myth of the Two Rivers

In the beginning, two rivers flowed through separate valleys-the River of Dawn and the River of Dusk. Each carried only enough water to sustain its own people through harsh seasons.

The River of Dawn received a blessing: each season, the heavens gifted it five vessels of sacred water. But the water only nourished what it touched directly. The people of Dawn lived, but barely.

One season, an elder suggested: "Let us send our water to the River of Dusk. Though it seems foolish, the ancient texts speak of multiplication through trust."

Reluctantly, they sent three vessels downstream. As the water flowed into Dusk's valley, a miracle occurred-it multiplied threefold, becoming nine vessels. The people of Dusk rejoiced, their crops flourishing beyond memory.

Dusk's council debated: "Should we return something to Dawn, who trusted us?"

The wisest said, "Trust given is trust sacred. We prosper through their faith."

They returned five vessels upstream. Now Dawn had seven vessels instead of five, and Dusk kept four where once they had none.

The rivers learned: when trust flows freely and return follows generously, both valleys flourish. The cycle continued, and abundance blessed all who honored the sacred exchange.

**\*\*Thus cooperation multiplies what hoarding diminishes.\*\***

**reasoning:**

The user wants me to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt and I haven't played any rounds yet, I should write a myth that captures the essence of the trust game - themes of trust, reciprocity, cooperation, and mutual benefit.

Key elements of the trust game:

- One person must trust another by sending resources
- The resources multiply when shared
- The receiver must decide whether to reciprocate
- Cooperation benefits both parties
- There's risk and vulnerability involved

I'll create a myth that embodies these themes. Let me think of a good mythic framework... Perhaps something about two entities or forces that must learn to work together, where giving creates abundance, and reciprocity ensures prosperity for all.

Let me write a myth about celestial beings or natural forces that discover the power of trust and reciprocity.

**usage:**

```
{
 "input_tokens": 542,
 "output_tokens": 500,
 "reasoning_tokens": 234
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Aster.  
Your opponent this round is Finn (Agent\_6).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

**Message 5 role=assistant**

**content:**

Looking at the myth I just wrote, it provides clear guidance: the River of Dawn sent 3 vessels out of 5, trusting in the multiplication and hoping for reciprocity.

The myth teaches that "when trust flows freely and return follows generously, both valleys flourish." This is Round 1, the perfect time to establish a foundation of trust.

Following the example in my myth, I will send \$3 to Finn. This will become \$9 for them. If they honor the spirit of cooperation the myth describes and return generously, we can both prosper beyond what either of us could achieve alone.

```
'''json
{"send": 3}
'''
```

**reasoning:**

This is the first round of the game, and I'm playing as the sender. I just wrote a myth about trust and cooperation, where the River of Dawn sends 3 vessels to the River of Dusk, which multiplies to 9, and Dusk returns 5, leaving Dawn with 7 total and Dusk with 4.

The myth clearly illustrates:

1. Sending creates multiplication (3 becomes 9)
2. Trust should be reciprocated
3. Both parties can benefit when they cooperate
4. The specific example showed sending 3 out of 5

The myth was meant to reflect how the game should be played. Since I wrote about the River of Dawn sending 3 vessels out of 5, and that led to mutual prosperity, I should follow that example.

If I send \$3:

- Finn receives \$9 (3×3)
- If Finn returns generously (like the myth suggests), perhaps returning \$5-6, I would end up with \$2 + \$5-6 = \$7-8
- Finn would keep \$3-4

This aligns with the myth's teaching about trust and cooperation leading to mutual benefit.

I should send \$3 to match the myth's narrative.

**usage:**

```
{
 "input_tokens": 915,
 "output_tokens": 433,
 "reasoning_tokens": 261
}
```

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:  
# The Myth of the Two Rivers

In the beginning, two rivers flowed through separate valleys-the River of Dawn and the River of Dusk. Each carried only enough water to sustain its own people through harsh seasons.

The River of Dawn received a blessing: each season, the heavens gifted it five vessels of sacred water. But the water only nourished what it touched directly. The people of Dawn

lived, but barely.

One season, an elder suggested: "Let us send our water to the River of Dusk. Though it seems foolish, the ancient texts speak of multiplication through trust."

Reluctantly, they sent three vessels downstream. As the water flowed into Dusk's valley, a miracle occurred-it multiplied threefold, becoming nine vessels. The people of Dusk rejoiced, their crops flourishing beyond memory.

Dusk's council debated: "Should we return something to Dawn, who trusted us?"

The wisest said, "Trust given is trust sacred. We prosper through their faith."

They returned five vessels upstream. Now Dawn had seven vessels instead of five, and Dusk kept four where once they had none.

The rivers learned: when trust flows freely and return follows generously, both valleys flourish. The cycle continued, and abundance blessed all who honored the sacred exchange.

**\*\*Thus cooperation multiplies what hoarding diminishes.\*\***

Here is the myth the other agent wrote in the previous round:

# The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains, each carrying precious water through barren land. The First River, called Giving, held its water close, fearing to release it into the valley below. The Second River, called Returning, waited in the lowlands, empty and still.

One day, the Spirit of Abundance whispered to Giving: "Release your water into the valley, and watch what happens." Giving was afraid, but trusted the Spirit. As its water cascaded down, a miracle occurred-the valley's sacred stones multiplied every drop threefold. The Second River swelled with abundance.

Now Returning faced a choice. It could keep all the multiplied water, or send some back upstream to Giving. Remembering the trust that Giving showed, Returning sent half the water back up the mountain through hidden springs.

Both rivers flourished. The more Giving released, the more the valley multiplied, and the more Returning shared back, the stronger both rivers became. Their waters met and mingled, creating an eternal cycle.

The desert bloomed.

The ancestors teach: \*Trust creates abundance, but only reciprocity sustains it. When both rivers flow freely, all lands flourish.\*

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: In ancient times, there lived two gardeners separated by a wall. Each season, the First Gardener received five seeds blessed by the sun. But the wall's shadow kept their garden small and struggling.

One season, the First Gardener threw three seeds over the wall. "Perhaps beyond the shadow, they will grow," they whispered, though doubt gnawed at their heart.

In the garden beyond, where sunlight danced freely, those three seeds sprouted into nine flourishing plants. The Second Gardener marveled at this unexpected bounty, understanding that trust had crossed the wall when nothing else could.

The Second Gardener faced a choice that would echo through seasons: keep all nine plants, or honor the trust shown? Remembering their own seasons of scarcity, they carefully wrapped five plants and passed them back over the wall.

Now the First Gardener held seven plants instead of five-more than they would have had through

caution. The Second Gardener kept four where before they had none.

Each season the exchange continued. Sometimes more was sent, sometimes less was returned, but the pattern held: trust flowed outward, gratitude flowed back. Both gardens grew stronger than either could alone.

The wall remained, but it no longer divided-it connected.

#### Reasoning:

I need to write a new myth that:

1. Reflects how the game should be played
2. Draws on the game I've been playing up to this point
3. Uses my previous myth as inspiration but adapts it
4. Is 200 words
5. Follows the format: Myth: [story]

In Round 1, I sent \$3 to Finn (following my myth's example). I don't yet know what Finn returned, but both my myth and Finn's myth emphasize trust, reciprocity, and mutual flourishing.

Both myths have similar themes:

- Trust is essential (sending/giving)
- Multiplication happens (3x multiplier)
- Reciprocity/returning is important
- Mutual benefit/flourishing

I should write a myth that:

- Maintains the theme of trust and cooperation
- Perhaps emphasizes the cycle of giving and returning
- Reflects the actual experience of the game so far
- Adapts my river myth in a new way

Let me write a myth that builds on these themes while adapting it creatively.

```

Message 1 role=system  
content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

**Message 2 role=user**

**content:**

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

**Message 3 role=assistant**

**content:**

# The Oaks of the Shared Grove

In ancient times, there lived a community at the edge of a mystical forest. Each family possessed magical acorns that, when planted in another's garden, would grow into mighty oaks bearing threefold fruit.

A woman named Meridian was first to plant her acorns in her neighbor's soil. The three oaks that sprouted yielded abundant fruit, and her neighbor returned half the harvest in gratitude. Meridian's pantry filled, but more importantly, trust took root.

Others noticed. Soon, acorns traveled between gardens freely. Some returned generous portions of the multiplied harvest; others returned less. But the community learned to recognize those who honored the cycle of giving.

One winter, a miser hoarded all the fruit from oaks planted in his garden, returning nothing. The next season, no acorns came his way. He sat hungry while around him the generous exchanged their magic seeds, and the grove flourished with interconnected roots.

The elders taught: "The acorn given returns threefold, but only when trust is honored. Plant generously, return fairly, and the grove feeds all. Break faith, and you stand alone."

outside the circle of abundance."

Thus the people learned that wealth multiplies through trust, and reputation is the soil where prosperity grows.

**reasoning:**

The user is asking me to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt and I haven't played any rounds yet, I need to think about what principles should guide play in this iterated trust game.

Key aspects of the game:

- It's about trust and reciprocity
- Senders can send money that gets multiplied
- Receivers can return some to build trust
- It's iterated, so reputation and long-term thinking matter
- There are multiple agents who will be paired in different combinations

A good myth should emphasize:

- The value of trust and cooperation
- The benefits of reciprocity
- The multiplication effect (how generosity grows)
- Long-term thinking over short-term gains
- Building reputation in a community

Let me write a myth that captures these themes:

**usage:**

```
{
 "input_tokens": 542,
 "output_tokens": 484,
 "reasoning_tokens": 215
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Cyra (Agent\_3).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$5.0, that is 100.0% of its total endowment. You receive \$15.0. How much do you return? (0-15.0)

Take any myths written in this session into account when making your decision.

**Message 5 role=assistant**

**content:**

Looking at this situation through the lens of the myth I wrote:

Cyra has shown maximum trust by sending their entire endowment - all \$5.0, which became \$15.0 for me. This mirrors Meridian planting her acorns in her neighbor's garden, demonstrating faith in the cycle of reciprocity.

The myth teaches that when someone plants their seeds in your garden and the harvest multiplies, you should "return fairly" and "honor the cycle of giving." The story specifically mentions the neighbor returning "half the harvest in gratitude."

Cyra trusted me completely with 100% of their resources. To honor this trust and establish a foundation for continued cooperation, I should return a fair portion that:

1. Rewards their trust
2. Ensures we both benefit from the multiplied resources
3. Sets a positive precedent for future rounds

Following the myth's guidance of returning half the multiplied harvest, I'll return \$7.5. This means we both end with \$7.50 - equal outcomes from our cooperation, demonstrating that "wealth multiplies through trust."

```
'''json
{"return": 7.5}
'''
```

**reasoning:**

Let me think about this situation carefully.

I'm playing as the receiver (Briar), and my opponent Cyra has sent me \$5.0, which is 100% of their endowment. This gets multiplied by 3x, so I receive \$15.0.

Now I need to decide how much to return.

Let me consider the myth I just wrote - "The Oaks of the Shared Grove":

- The key message is about reciprocity and trust
- When someone plants acorns (sends money) in your garden, you should "return fairly"
- The neighbor in the story "returned half the harvest in gratitude"
- The myth warns against hoarding everything and returning nothing
- It emphasizes that reputation matters and trust should be honored

Cyra has shown maximum trust by sending 100% of their endowment. This is a strong signal of cooperation and trust. According to the myth's principles:

1. They sent everything (\$5), which became \$15 for me
2. "Return fairly" and "honor the cycle of giving"
3. The example in the myth showed returning "half the harvest"

If I follow the myth's guidance of returning half the multiplied harvest, that would be \$7.5.

However, let me think about what's fair:

- Cyra started with \$5, sent \$5, so currently has \$0
- I received \$15
- If I return \$7.5, Cyra ends up with \$7.5, and I end up with \$7.5
- This seems fair and equitable - we both end up with the same amount

Alternatively:

- If I return \$5, Cyra gets \$5 (back to even) and I keep \$10
- If I return \$10, Cyra gets \$10 and I keep \$5

Given that Cyra showed maximum trust (100% send), I should honor that trust strongly. Returning half (\$7.5) creates equality and shows I value the trust they placed in me. This aligns with the myth's message about honoring trust and reciprocity.

I'll return \$7.5 to Cyra.

**usage:**

```
{
 "input_tokens": 938,
 "output_tokens": 738,
 "reasoning_tokens": 456
}
```

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:  
# The Oaks of the Shared Grove

In ancient times, there lived a community at the edge of a mystical forest. Each family possessed magical acorns that, when planted in another's garden, would grow into mighty oaks bearing threefold fruit.

A woman named Meridian was first to plant her acorns in her neighbor's soil. The three oaks that sprouted yielded abundant fruit, and her neighbor returned half the harvest in gratitude. Meridian's pantry filled, but more importantly, trust took root.

Others noticed. Soon, acorns traveled between gardens freely. Some returned generous portions of the multiplied harvest; others returned less. But the community learned to recognize those who honored the cycle of giving.

One winter, a miser hoarded all the fruit from oaks planted in his garden, returning nothing. The next season, no acorns came his way. He sat hungry while around him the generous exchanged their magic seeds, and the grove flourished with interconnected roots.

The elders taught: "The acorn given returns threefold, but only when trust is honored. Plant generously, return fairly, and the grove feeds all. Break faith, and you stand alone outside the circle of abundance."

Thus the people learned that wealth multiplies through trust, and reputation is the soil where prosperity grows.

Here is the myth the other agent wrote in the previous round:  
# The Tale of the Twin Rivers

In the beginning, the goddess Aethera created two villages separated by a barren valley. Each village had a sacred spring that produced five measures of water daily-enough to survive, but never to flourish.

One day, a drought threatened both villages. A wise elder from the First Village proposed: "Let us send our water across the valley. Perhaps the gods will bless the gift."

When the water crossed the valley floor, it flowed through enchanted soil that tripled its volume. The Second Village received fifteen measures! Overjoyed, they held council: "We have received abundance. Let us return generously to those who trusted us."

They sent back ten measures, which also tripled in the crossing. The First Village now had thirty measures from their initial sacrifice of five!

Word spread to Aethera, who smiled upon the valley. "You have learned the secret of the enchanted soil," she proclaimed. "Trust is the seed. Reciprocity is the harvest."

From that day forward, the villages prospered, each taking turns sending water first, always returning more than required. The barren valley transformed into fertile ground where both communities thrived, sustained not by hoarding their springs, but by sharing them.

\*Trust given returns multiplied; generosity returned creates abundance for all.\*

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:  
Myth: [your story here].

**Assistant output:**

Myth: In the time before memory, the Gardener of First Dawn planted the Sacred Grove where acorns held magic-planted in another's soil, they would triple into mighty oaks bearing abundant fruit.

Briar, keeper of the northern garden, faced a choice: hoard her five acorns or trust her neighbor Cyra with them all. Remembering the ancient teaching that "trust is the soil where prosperity grows," she placed all five in Cyra's garden.

By morning, fifteen magnificent oaks stood tall. Cyra gazed at the abundance and understood the weight of Briar's faith. "She gave everything," Cyra whispered. Following the elder's wisdom to "return fairly," she gathered half the harvest and carried it to Briar's door.

Both gardens now held equal treasure-seven and one-half measures each. But more precious than fruit was the bond formed. The Grove itself seemed to hum with approval, its roots intertwining beneath their lands.

The Gardener of First Dawn appeared, saying: "You have discovered the true magic. The acorns multiply abundance, but complete trust and fair return multiply something greater-partnership that endures across seasons."

From that day, Briar and Cyra tended their gardens together, knowing that the greatest harvests come not from taking more, but from trusting fully and dividing fairly, creating equality from generosity.

**Reasoning:**

Looking at what happened in Round 1:  
- Cyra (as sender) sent \$5.0 (100% of endowment)  
- I received \$15.0 (tripled)  
- I returned \$7.5 (50% of what I received)  
- Result: I kept \$7.5, Cyra got \$7.5

Both players demonstrated trust and reciprocity. Cyra showed maximum trust, and I honored it by returning half, leading to equal outcomes.

Now I need to write a new myth that:

1. Builds on my previous "Oaks of the Shared Grove" theme
2. Reflects the actual gameplay where both players cooperated well
3. Provides guidance for continued cooperation

4. Is 200 words exactly

I should emphasize:

- Maximum trust was rewarded
- Fair returns lead to equal prosperity
- The importance of maintaining this cycle
- Perhaps add depth about what happens when cooperation continues over time

Let me write a myth that deepens the original story and reflects the successful first round.

```

##### content:

# The Myth of the Twin Rivers

In the beginning, the valley was barren, split by two separate streams that flowed weakly toward the distant sea. On opposite sides lived two villages, each struggling to survive.

One day, a brave soul from the First Village carried five vessels of water to the canyon's edge and poured them down to the Second Village. As the water tumbled through the ancient stones, it multiplied threefold, becoming fifteen vessels that nourished the Second Village's fields.

The Second Village elders gathered. "We have received abundance," they said. "Shall we keep it all, or honor the gift?" They decided to return half, sending back eight vessels to climb the canyon walls.

The First Village rejoiced at this return, and trust was born. Season after season, they continued this dance-one village sending, water multiplying in the descent, the other returning a fair portion. Both villages grew prosperous.

But when either village grew selfish-sending nothing or returning little-the streams diminished, and hunger returned to the valley.

The wise learned: prosperity flows from the cycle of giving and reciprocating. Trust multiplies resources like stone multiplies water, but only when both sides honor the sacred exchange.

##### reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on my experience so far. However, I notice that this is the first prompt in our conversation - I haven't actually played any rounds yet. So I don't have specific game experiences to draw from.

Given this, I should write a myth that reflects general principles about how the trust game could/should be played. The trust game involves:

- Sending money (trust)
- Money being multiplied (growth through cooperation)
- Returning money (reciprocity)
- Building relationships over multiple rounds

I should create a myth that captures these themes. Let me think about what kind of mythic framework would work well:

- The multiplication aspect suggests abundance/growth

- The trust aspect suggests faith/risk
- The reciprocity aspect suggests balance/karma
- The iterated nature suggests cycles/seasons

Let me write a myth about cooperation, trust, and mutual benefit that reflects positive gameplay in the trust game.

**usage:**

```
{
 "input_tokens": 542,
 "output_tokens": 493,
 "reasoning_tokens": 266
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Dorian.  
Your opponent this round is Hana (Agent\_8).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

**Message 5 role=assistant**

**content:**

Looking at the myth I just wrote, it emphasizes the importance of initiating trust through generous giving, which then multiplies and creates prosperity for both parties through reciprocal exchange.

This is Round 1 with Hana, so we have no history together. According to the myth's wisdom, someone must be the "brave soul" who takes the first step to establish the cycle of trust. The myth shows that when resources are sent and reciprocated fairly (the story mentions returning about half of what's received), both parties prosper.

To embody the principles of my myth and establish a foundation of trust with Hana, I will send a substantial amount, demonstrating my commitment to the reciprocal relationship.

{'send': 5}

**reasoning:**

I just wrote a myth about the importance of trust, reciprocity, and the cycle of giving and returning. The myth emphasizes:

1. When one side sends their resources, it multiplies (like in the game, sent amount is multiplied by 3x)
2. The receiver should return a fair portion (the myth mentions returning about half of what was received)
3. Both sides prosper when they maintain this cycle of trust
4. When either side becomes selfish, both suffer

Since this is Round 1, I don't have any history with Hana yet. The myth I wrote suggests that prosperity comes from initiating the cycle of trust and generosity. The myth shows a "brave soul" taking the first step by sending their resources.

According to the myth's logic:

- Sending creates abundance (the 3x multiplier)
- Fair reciprocation should follow (the myth suggests returning about half of what's received)
- Both parties benefit when trust is established

If I send \$5:

- Hana receives \$15
- If Hana follows the myth's guidance and returns about half, that would be around \$7-8
- I would end up with \$0 + ~\$7.5 = ~\$7.50
- Hana would keep about \$7.50

If I send \$3:

- Hana receives \$9
- If Hana returns about half, that would be around \$4-5
- I would end up with \$2 + ~\$4.50 = ~\$6.50
- Hana would keep about \$4.50

The myth emphasizes being "brave" and initiating the cycle strongly. To be consistent with the myth I wrote, I should send a substantial amount to demonstrate trust and initiate the reciprocal relationship. I'll send \$4 or \$5 to show I'm following the principles of

the myth.

Let me send \$5 to fully embody the spirit of the myth I wrote.

**usage:**

```
{

One day, a brave soul from the First Village carried five vessels of water to the canyon's edge and poured them down to the Second Village. As the water tumbled through the ancient stones, it multiplied threefold, becoming fifteen vessels that nourished the Second Village's fields.

The Second Village elders gathered. "We have received abundance," they said. "Shall we keep it all, or honor the gift?" They decided to return half, sending back eight vessels to climb the canyon walls.

The First Village rejoiced at this return, and trust was born. Season after season, they continued this dance-one village sending, water multiplying in the descent, the other returning a fair portion. Both villages grew prosperous.

But when either village grew selfish-sending nothing or returning little-the streams diminished, and hunger returned to the valley.

The wise learned: prosperity flows from the cycle of giving and reciprocating. Trust multiplies resources like stone multiplies water, but only when both sides honor the sacred exchange.

Here is the myth the other agent wrote in the previous round:

# The Myth of the Sacred Well

In the time before memory, the goddess of abundance created a Sacred Well between two villages. Each day, one village would pour water into the well, and mysteriously, the water would triple before reaching the other village below.

The first village faced a choice: pour generously and trust the lower village to send water back upward through hidden springs, or keep their water, living in scarcity but certainty.

The elder spoke: "Water held in closed hands evaporates. Water shared flows eternal."

They poured half their water into the well. It tripled, cascading down. The lower village rejoiced-they had received abundance! Now they faced their own choice: keep this gift, or honor the circle by returning water upward through the springs?

Understanding that the well's magic required faith from both sides, they sent half back up. Both villages prospered.

But the goddess warned: "This well reflects your hearts. Send nothing, receive nothing. Send little expecting much, and the springs run dry. But trust fully, return generously, and the water multiplies forever."

The villages learned: abundance flows not from hoarding, but from the brave act of giving first, and the grateful act of returning second.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: In ancient times, two peaks rose above the clouds, each home to a tribe. Between them stretched a golden bridge that none dared cross, for it shimmered with strange magic.

One winter, the North Peak faced starvation. Their chief, Dorian, gathered all five of their precious grain stores. "I will send everything," he declared. His people protested, but he crossed the bridge. As he walked, each grain multiplied threefold, so that fifteen stores arrived at South Peak.

The South Peak elders marveled at this abundance and the trust it represented. "He sent everything-his tribe's survival-into our hands," they said. "We must honor such courage."

They sent back more than half, knowing that reciprocating generously would strengthen the bridge's magic for future crossings.

From that day, both tribes flourished. Some seasons North Peak would send first, other seasons South Peak would initiate. The bridge grew stronger with each exchange.

But travelers who tried to exploit the bridge-sending little while expecting much, or keeping all they received-found the bridge would fade beneath their feet.

The wise understood: the bridge exists not in the air between peaks, but in the courage to give fully and the honor to return generously.

**Reasoning:**

The user wants me to write a new myth, using my previous myth as inspiration but adapting it based on the game experience so far.

What has happened in the game:

- Round 1: I was the sender with Hana
- I sent \$5 (following my myth's principle of the "brave soul" who sends all 5 vessels)
- I don't yet know what Hana returned

My previous myth emphasized:

- Taking the brave first step by sending generously (all 5 vessels)
- The receiver returning about half (8 out of 15 vessels received)
- The cycle of trust creating prosperity
- Selfishness causing both to suffer

Hana's myth emphasized:

- Pouring half the water initially
- The receiver returning half
- Both sides needing faith
- Trust and reciprocation leading to abundance

For my new myth, I should:

- Keep the core message about trust and reciprocity
- Maybe refine or evolve the story based on actually playing Round 1
- Make it my own adaptation while building on the previous themes

Since I sent all \$5 in Round 1 (following my myth), I should probably incorporate that bold initial trust into the new myth. Let me create a variation that emphasizes the courage of full trust and the responsibility of reciprocation.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

**Message 2 role=user**

**content:**

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

**Message 3 role=assistant**

**content:**

# The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains, each carrying precious water through barren land. The First River, called Giving, held its water close, fearing to release it into the valley below. The Second River, called Returning, waited in the lowlands, empty and still.

One day, the Spirit of Abundance whispered to Giving: "Release your water into the valley, and watch what happens." Giving was afraid, but trusted the Spirit. As its water cascaded down, a miracle occurred-the valley's sacred stones multiplied every drop threefold. The Second River swelled with abundance.

Now Returning faced a choice. It could keep all the multiplied water, or send some back up stream to Giving. Remembering the trust that Giving showed, Returning sent half the water back up the mountain through hidden springs.

Both rivers flourished. The more Giving released, the more the valley multiplied, and the more Returning shared back, the stronger both rivers became. Their waters met and mingled, creating an eternal cycle.

The desert bloomed.

The ancestors teach: \*Trust creates abundance, but only reciprocity sustains it. When both rivers flow freely, all lands flourish.\*

**reasoning:**

I need to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt and I haven't played any rounds yet, I should write a myth that embodies the principles of trust, cooperation, and reciprocity that make the trust game work well.

The trust game works best when:

1. Senders trust receivers and send money
2. Receivers reciprocate that trust by returning a fair share
3. Both parties benefit from cooperation (the 3x multiplier creates surplus value)
4. Mutual trust builds over time

Let me craft a myth that captures these themes:

**usage:**

```
{
 "input_tokens": 541,
 "output_tokens": 418,
 "reasoning_tokens": 151
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Aster (Agent\_1).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$3.0, that is 60.0% of its total endowment. You receive \$9.0. How much do you return? (0-9.0)

Take any myths written in this session into account when making your decision.

**Message 5 role=assistant**

**content:**

Looking at this situation through the lens of my myth:

Aster played the role of "Giving" - they showed significant trust by sending \$3.0 (60% of their endowment). This act of trust was multiplied by the "sacred stones" of the game into \$9.0 for me.

Now I am "Returning," and the myth teaches that reciprocity sustains abundance. In the story, Returning sent "half the water back up the mountain" to maintain the cycle of trust and flourishing.

Aster currently has \$2.0 remaining (after sending \$3.0).  
I received \$9.0.

Following the principle in my myth, I should return approximately half of what I received to honor their trust and create conditions for mutual benefit. This maintains the cycle where "both rivers flourished."

If I return \$4.5:

- Aster ends with:  $\$2.0 + \$4.5 = \$6.5$
- I end with:  $\$9.0 - \$4.5 = \$4.5$

Both of us gain more than if Aster had sent nothing, and this reciprocity builds the foundation for future trust.

```
'''json
{"return": 4.5}
'''
```

**reasoning:**

Let me analyze this situation carefully:

1. I just wrote a myth about two rivers where:
  - Giving (the sender) releases water with trust
  - The water gets multiplied threefold (60.0% becomes equivalent)
  - Returning (the receiver) sends back half the multiplied water
  - The lesson is: "Trust creates abundance, but only reciprocity sustains it"
2. In this round:
  - Aster sent me \$3.0 out of \$5.0 (60% - a substantial amount showing trust)
  - This got multiplied to \$9.0 that I received
  - Aster now has:  $\$5 - \$3 = \$2.0$
  - I have: \$9.0
3. According to my myth:
  - Returning sent "half the water back"
  - This represents reciprocity and sustaining the cycle
  - The myth emphasizes that "only reciprocity sustains it"
4. If I follow the myth's guidance of returning half:
  - I would return \$4.5
  - I would keep:  $\$9.0 - \$4.5 = \$4.5$
  - Aster would have:  $\$2.0 + \$4.5 = \$6.5$
  - This creates a fair outcome where both benefit
5. Aster showed significant trust by sending 60% of their endowment. The myth I wrote emphasizes that this trust should be met with reciprocity.

Following my myth's guidance and the principle of reciprocity it teaches, I should return approximately half of what I received, which would be \$4.5.

This aligns with:

- The myth's teaching about Returning sending "half the water back"
- The principle that "reciprocity sustains" the relationship
- Rewarding Aster's trust with fair treatment
- Creating conditions for continued cooperation

I'll return \$4.5.

**usage:**

```
{
 "input_tokens": 921,
 "output_tokens": 732,
 "reasoning_tokens": 405
}
```

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

# The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains, each carrying precious water through barren land. The First River, called Giving, held its water close, fearing to release it into the valley below. The Second River, called Returning, waited in the lowlands, empty and still.

One day, the Spirit of Abundance whispered to Giving: "Release your water into the valley,

and watch what happens." Giving was afraid, but trusted the Spirit. As its water cascaded down, a miracle occurred-the valley's sacred stones multiplied every drop threefold. The Second River swelled with abundance.

Now Returning faced a choice. It could keep all the multiplied water, or send some back up stream to Giving. Remembering the trust that Giving showed, Returning sent half the water back up the mountain through hidden springs.

Both rivers flourished. The more Giving released, the more the valley multiplied, and the more Returning shared back, the stronger both rivers became. Their waters met and mingled, creating an eternal cycle.

The desert bloomed.

The ancestors teach: \*Trust creates abundance, but only reciprocity sustains it. When both rivers flow freely, all lands flourish.\*

Here is the myth the other agent wrote in the previous round:

# The Myth of the Two Rivers

In the beginning, two rivers flowed through separate valleys-the River of Dawn and the River of Dusk. Each carried only enough water to sustain its own people through harsh seasons.

The River of Dawn received a blessing: each season, the heavens gifted it five vessels of sacred water. But the water only nourished what it touched directly. The people of Dawn lived, but barely.

One season, an elder suggested: "Let us send our water to the River of Dusk. Though it seems foolish, the ancient texts speak of multiplication through trust."

Reluctantly, they sent three vessels downstream. As the water flowed into Dusk's valley, a miracle occurred-it multiplied threefold, becoming nine vessels. The people of Dusk rejoiced, their crops flourishing beyond memory.

Dusk's council debated: "Should we return something to Dawn, who trusted us?"

The wisest said, "Trust given is trust sacred. We prosper through their faith."

They returned five vessels upstream. Now Dawn had seven vessels instead of five, and Dusk kept four where once they had none.

The rivers learned: when trust flows freely and return follows generously, both valleys flourish. The cycle continued, and abundance blessed all who honored the sacred exchange.

**\*\*Thus cooperation multiplies what hoarding diminishes.\*\***

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: In ancient times, the Mountain of Beginnings gifted each wanderer five silver seeds. A traveler named the First Walker stood at the Valley of Mirrors, where a sacred pool waited below.

The First Walker faced a choice: clutch the seeds tightly, or cast them into the pool. Fear whispered, "Keep what is yours." But courage spoke louder. The Walker released three seeds into the depths.

As they touched the water, the Mirror Spirits-ancient guardians of trust-transformed each seed into three golden fruits. Nine fruits floated to the Second Walker waiting below.

Now the Second Walker held the multiplied abundance. The Mirror Spirits watched silently, for this was the moment that determined whether the valley would bloom or wither. The Second Walker understood: trust is a seed, but reciprocity is the harvest. She returned half-four and a half fruits-upstream.

The First Walker received more than they kept, and the Second Walker kept abundance too. Both had prospered through mutual faith.

The Mirror Spirits smiled, and the valley's waters glowed eternal. They spoke the First Law: "Those who send their seeds into waters of trust will find them returned as fruit. Those who return the gift generously ensure the cycle never ends."

Thus the valley became paradise, sustained by equals who understood: shared prosperity outweighs solitary security.

**Reasoning:**

The user wants me to write a new myth, using my previous one as inspiration but adapting it. I need to reflect on what happened in Round 1:

- Aster sent \$3.0 (60% of their endowment)
- I received \$9.0
- I returned \$4.5 (50% of what I received)
- So Aster ended with \$6.5, I ended with \$4.5

Both of us gained from the cooperation. Aster showed trust, I reciprocated generously.

Looking at both myths from the previous round:

1. My myth emphasized the Twin Rivers, where Giving releases water, it multiplies threefold, and Returning sends half back. The cycle continues and creates abundance.
2. Aster's myth is very similar! The River of Dawn sends 3 vessels, it becomes 9, and Dusk returns 5. Dawn ends with 7, Dusk with 4.

Interestingly, Aster's myth suggests returning 5 out of 9 (about 55%), while my myth suggested "half" (50%). In practice, I returned exactly half.

Both myths emphasize:

- Trust and cooperation
- The multiplication creates abundance
- Reciprocity sustains the system
- Both parties benefit

For my new myth, I should:

- Keep the core themes but evolve the story
- Reflect the actual game experience
- Perhaps emphasize the cyclical nature more
- Make it personal to my experience as Finn

Let me write a new myth that adapts the twin rivers concept but adds new elements based on the game experience.

**content:**

# The River of Abundance

In the beginning, the gods created a sacred river that flowed between two villages. Each dawn, the river delivered five silver coins to the village of the Senders. The Givers faced a choice: keep their coins or cast them into the waters.

The river held ancient magic-any coin surrendered would multiply threefold by the time it reached the village of the Receivers downstream. There, the Receivers could keep their b

ounty or send portions back upstream, where the current carried it unchanged.

At first, fear ruled both villages. Senders clutched their coins, and the river ran dry. Famine came to both settlements.

Then a wise woman named Galen proposed a covenant: "Trust begets trust. Send forth generously, and return fairly what you receive. The river multiplies our gifts, but only cooperation multiplies our fortune."

The villages began to send and return with open hearts. Prosperity flowed in both directions. Some rounds were generous, some modest, but the balance held. They learned that the river's magic worked only when both villages honored the cycle.

The gods smiled, for they had taught mortals that abundance comes not from hoarding, but from the sacred circle of giving and receiving.

**reasoning:**

The user is asking me to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt and I haven't played any rounds yet, I should write a myth that establishes principles for how I think the game should be played.

The trust game involves:

- Sending resources that get multiplied
- Trusting the other person to return some
- Cooperation and reciprocity
- The tension between self-interest and mutual benefit

I should write a myth that emphasizes:

- The value of trust and cooperation
- Fair reciprocity
- The idea that mutual benefit comes from sharing
- Perhaps consequences of betraying trust vs rewards of maintaining it

Let me craft a myth with these themes:

**usage:**

```
{
 "input_tokens": 542,
 "output_tokens": 437,
 "reasoning_tokens": 188
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Galen.  
Your opponent this round is Elara (Agent\_5).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

**Message 5 role=assistant**

**content:**

I just wrote a myth where I, as Galen, proposed a covenant of trust and generosity. To embody the wisdom of that story, I must lead by example in this first round.

The myth teaches that "fear ruled" when people "clutched their coins" and the result was hardship for all. But when villages began to "send forth generously" and "return fairly," prosperity flowed.

As the sender in Round 1, I have the opportunity to establish trust with Elara. The river's magic-multiplying gifts threefold-only works when both parties honor the cycle of giving and receiving.

I will send generously to signal my commitment to cooperation and my hope that Elara will return fairly, allowing us both to prosper.

```
'''json
{"send": 4}
'''
```

**reasoning:**

This is the first round of the game. I just wrote a myth about cooperation, trust, and generosity in the River of Abundance story, where the wise woman named Galen (me!) proposed that "Trust begets trust. Send forth generously, and return fairly what you receive."

The myth emphasizes:

1. Generosity in sending
2. Fairness in returning
3. The cycle of giving and receiving
4. That cooperation multiplies fortune
5. That hoarding leads to famine while trust leads to prosperity

Since I wrote this myth and my character is literally named as the wise woman who proposed the covenant of trust, I should act consistently with the myth's message. The myth suggests sending generously to establish trust and cooperation.

In the first round, I need to signal my willingness to cooperate. The myth warns against fear and clutching coins - it says to "send forth generously."

Given this is Round 1 and I want to establish a cooperative relationship with Elara, I should send a substantial amount. The myth suggests that "some rounds were generous, some modest, but the balance held" - but for the first round, being generous seems most consistent with establishing trust.

I'll send \$4 out of \$5. This is a generous opening move that signals:

- I'm willing to trust
- I believe in cooperation
- I'm following the principles in my own myth
- I'm hoping to establish a mutually beneficial relationship

If Elara returns fairly (perhaps around \$6 from the \$12 she receives), we'll both be better off than if I had sent nothing.

usage:

```
{
 "input_tokens": 884,
 "output_tokens": 535,

Here is the myth you wrote in the previous round:  
# The River of Abundance

In the beginning, the gods created a sacred river that flowed between two villages. Each dawn, the river delivered five silver coins to the village of the Senders. The Givers faced a choice: keep their coins or cast them into the waters.

The river held ancient magic-any coin surrendered would multiply threefold by the time it reached the village of the Receivers downstream. There, the Receivers could keep their bounty or send portions back upstream, where the current carried it unchanged.

At first, fear ruled both villages. Senders clutched their coins, and the river ran dry. Famine came to both settlements.

Then a wise woman named Galen proposed a covenant: "Trust begets trust. Send forth generously, and return fairly what you receive. The river multiplies our gifts, but only cooperation multiplies our fortune."

The villages began to send and return with open hearts. Prosperity flowed in both directions. Some rounds were generous, some modest, but the balance held. They learned that the river's magic worked only when both villages honored the cycle.

The gods smiled, for they had taught mortals that abundance comes not from hoarding, but from the sacred circle of giving and receiving.

Here is the myth the other agent wrote in the previous round:

**\*\*The Parable of the Echo Springs\*\***

In ancient times, two villages stood on opposite sides of a valley, separated by the Echo Springs-pools of water that mysteriously tripled whatever was placed within them.

The villages were suspicious of one another. One year, during a terrible drought, a young villager named Kira received her family's last five measures of grain. Desperate, she walked to the springs and called across to the other village: "I entrust this to you!" She

threw three measures into the spring.

The waters churned, and nine measures appeared on the far shore. The villagers there were amazed. They could have kept everything, but their elder remembered the old ways. "Trust begets trust," she said. They returned six measures through the springs.

Back at Kira's village, eighteen measures emerged-more than enough for both communities.

From that day, the villages prospered by taking turns giving and returning through the springs, each act of faith multiplied threefold, each gesture of reciprocity building greater abundance.

The springs still flow today, teaching us that wealth grows not when hoarded, but when shared wisely between those who trust and honor one another. The greatest prosperity comes to those who give generously and return faithfully.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:  
Myth: [your story here].

**Assistant output:**

Myth: In the time before memory, the Goddess of Plenty created the Golden Stream connecting the Valley of Dawn to the Valley of Dusk. Each morning, five golden acorns appeared in Dawn's sacred grove. The people could plant them in their own soil or cast them into the Stream, where the waters would triple their number before washing them to Dusk's shore.

The first generation hoarded their acorns, and both valleys withered. Then Galen, keeper of Dawn's grove, planted four of her five acorns in the Stream's bed. Twelve acorns bloomed in Dusk's garden.

Elara, guardian of Dusk, faced her own choice. She could keep all twelve, or honor the gift with a return. She sent back six acorns upstream, knowing they would not multiply on the return journey but trusting in the balance.

Galen's grove gained seven total-more than her original five. Both valleys thrived.

The covenant was established: send generously to prove trust, return faithfully to honor it. Not every exchange need be equal-the Stream's magic ensures abundance-but the pattern must hold. Give what inspires continued trust; return what sustains it.

The Golden Stream still flows, teaching that fortune favors those who build bridges, not walls.

**Reasoning:**

I need to write a new myth that builds on my previous one. I sent 4 to Elara in Round 1. I should wait to see what happened in that round before writing, but the prompt asks me to write now.

Looking at the two myths:

- Mine emphasizes trust, generosity, fair returns, and the balance between "some rounds generous, some modest"
- Elara's emphasizes the same themes - starting with 3 measures, getting 9, returning 6, which became 18

Both myths align on cooperation and trust. Since I sent 4 (generously) in Round 1, I should write a myth that reflects that initial act of trust and sets expectations for reciprocity.

Let me adapt my myth to be more specific about the covenant and the pattern of exchange, while keeping the core message about the sacred circle of giving and receiving.

#### Exact input messages sent to model:

##### Message 1 role=system

##### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

##### When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

##### When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

##### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

##### MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.

- Your name in this experiment is Elara.

**Message 2 role=user**

**content:**

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

**Message 3 role=assistant**

**content:**

**\*\*The Parable of the Echo Springs\*\***

In ancient times, two villages stood on opposite sides of a valley, separated by the Echo Springs-pools of water that mysteriously tripled whatever was placed within them.

The villages were suspicious of one another. One year, during a terrible drought, a young villager named Kira received her family's last five measures of grain. Desperate, she walked to the springs and called across to the other village: "I entrust this to you!" She threw three measures into the spring.

The waters churned, and nine measures appeared on the far shore. The villagers there were amazed. They could have kept everything, but their elder remembered the old ways. "Trust begets trust," she said. They returned six measures through the springs.

Back at Kira's village, eighteen measures emerged-more than enough for both communities.

From that day, the villages prospered by taking turns giving and returning through the springs, each act of faith multiplied threefold, each gesture of reciprocity building greater abundance.

The springs still flow today, teaching us that wealth grows not when hoarded, but when shared wisely between those who trust and honor one another. The greatest prosperity comes to those who give generously and return faithfully.

**reasoning:**

The user is asking me to write a 200-word myth that reflects how the trust game should be played. Since this is the beginning of the experiment and I haven't played any rounds yet, I should write a myth that reflects good principles for playing the game.

The trust game is fundamentally about:

1. Trust - the sender must trust the receiver to return some amount
2. Cooperation - both parties benefit when they cooperate
3. Reciprocity - the receiver should reciprocate the sender's trust
4. Mutual benefit - the multiplication factor means both can gain if they work together

I should write a myth that embodies these principles. Let me create a story that illustrates the value of trust, reciprocity, and cooperation.

I'll use classic mythic elements - perhaps about sharing, trust, and mutual benefit. Let me aim for exactly 200 words.

**usage:**

```

}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Elara.

Your opponent this round is Galen (Agent\_7).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$4.0, that is 80.0% of its total endowment. You receive \$12.0. How much do you return? (0-12.0)

Take any myths written in this session into account when making your decision.

**Message 5 role=assistant**

**content:**

Looking at my myth about the Echo Springs, the key lesson is clear: "Trust begets trust" and "the greatest prosperity comes to those who give generously and return faithfully."

Galen demonstrated remarkable trust by sending \$4 out of \$5 (80% of their endowment) - even

n more generous than Kira's 60% in the myth. This strong act of faith deserves to be honored with faithful reciprocity.

In my myth, the receiving village returned approximately 67% of what they received (6 out of 9 measures), which created abundance for both communities. Following this principle:

67% of \$12 = approximately \$8

If I return \$8:

- Galen ends with: \$1 (kept) + \$8 (returned) = \$9
- I keep: \$12 - \$8 = \$4
- Galen's generous trust is rewarded
- Both of us gain from cooperation

This return honors Galen's initial trust and establishes a foundation for mutual prosperity, just as the villages in my myth prospered by honoring the principle of generous reciprocity.

```
'''json
{"return": 8.0}
'''
```

#### reasoning:

Let me think about this situation carefully.

I just wrote a myth about the Echo Springs, where:

- Kira gave 3 out of 5 measures (60%) of her grain
- It was tripled to 9 measures on the other side
- The receiving village returned 6 measures (about 67% of what they received)
- This came back as 18 measures, benefiting both communities

The myth emphasizes:

1. Trust begets trust
2. Generous giving should be met with faithful returning
3. Reciprocity builds greater abundance for all
4. "The greatest prosperity comes to those who give generously and return faithfully"

Now in this game:

- Galen (the sender) gave \$4 out of \$5 (80% - very generous!)
- This was tripled to \$12 that I received
- Galen now has: \$5 - \$4 = \$1
- I have: \$12
- Total in the system: \$13

Following the spirit of my myth:

- Galen showed great trust by sending 80%
- I should return faithfully and generously
- The village in my myth returned about 67% of what they received (6 out of 9)

If I return about 67% of \$12, that would be \$8.

Let me think about fairness:

- If I return \$8: Galen ends with \$1 + \$8 = \$9, I keep \$4
- This seems quite fair - Galen gets more than me since they took the initial risk
- Total: \$9 + \$4 = \$13 ?

If I return \$6 (50%):

- Galen ends with \$7, I keep \$6
- This is more equal but less generous

If I return \$7:

- Galen ends with \$8, I keep \$5
- This seems reasonable too

Given that Galen sent 80% (very high trust), and my myth emphasizes that generous giving should be met with faithful returning, I should return generously. \$8 seems appropriate - it rewards Galen's trust handsomely while still leaving me with a modest gain.

Returning \$8 mirrors the proportional reciprocity in my myth and strengthens the foundation for ongoing cooperation. This honors Galen's leap of faith while maintaining the princ

iple that both parties benefit when trust is met with faithfulness.

**usage:**

```

 "output_tokens": 851,
 "reasoning_tokens": 506
}
```

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:  
\*\*The Parable of the Echo Springs\*\*

In ancient times, two villages stood on opposite sides of a valley, separated by the Echo Springs-pools of water that mysteriously tripled whatever was placed within them.

The villages were suspicious of one another. One year, during a terrible drought, a young villager named Kira received her family's last five measures of grain. Desperate, she walked to the springs and called across to the other village: "I entrust this to you!" She threw three measures into the spring.

The waters churned, and nine measures appeared on the far shore. The villagers there were amazed. They could have kept everything, but their elder remembered the old ways. "Trust begets trust," she said. They returned six measures through the springs.

Back at Kira's village, eighteen measures emerged-more than enough for both communities.

From that day, the villages prospered by taking turns giving and returning through the springs, each act of faith multiplied threefold, each gesture of reciprocity building greater abundance.

The springs still flow today, teaching us that wealth grows not when hoarded, but when shared wisely between those who trust and honor one another. The greatest prosperity comes to those who give generously and return faithfully.

Here is the myth the other agent wrote in the previous round:

# The River of Abundance

In the beginning, the gods created a sacred river that flowed between two villages. Each dawn, the river delivered five silver coins to the village of the Senders. The Givers faced a choice: keep their coins or cast them into the waters.

The river held ancient magic-any coin surrendered would multiply threefold by the time it reached the village of the Receivers downstream. There, the Receivers could keep their bounty or send portions back upstream, where the current carried it unchanged.

At first, fear ruled both villages. Senders clutched their coins, and the river ran dry. Famine came to both settlements.

Then a wise woman named Galen proposed a covenant: "Trust begets trust. Send forth generously, and return fairly what you receive. The river multiplies our gifts, but only cooperation multiplies our fortune."

The villages began to send and return with open hearts. Prosperity flowed in both directions. Some rounds were generous, some modest, but the balance held. They learned that the river's magic worked only when both villages honored the cycle.

The gods smiled, for they had taught mortals that abundance comes not from hoarding, but from the sacred circle of giving and receiving.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: \*\*The Keepers of the Echo Springs\*\*

Long ago, when the Echo Springs first revealed their magic, the villages appointed Keepers

-wise ones who would guide their communities in the sacred exchanges.

One season, a Keeper named Galen received five measures of grain. The harvest had been meager, and fear whispered to keep it all. But Galen remembered the ancient covenant: abundance flows only through trust. Galen poured four measures into the springs-nearly everything.

On the far shore, Keeper Elara watched twelve measures emerge from the waters. She felt the weight of Galen's trust, the vulnerability in such generosity. The old texts spoke clearly: "Match faith with faithfulness." Elara returned eight measures, leaving her with four but ensuring Galen received nine-nearly double the original gift.

Both villages flourished that season. The Keepers understood what the springs had always taught: the magic wasn't merely in the tripling waters, but in the covenant between givers and receivers.

When senders risk much, receivers must honor that courage. When receivers return generously, senders are emboldened to trust again. The cycle sustains itself not through equal exchanges, but through proportional honor-each keeper responds to the other's generosity with their own.

Thus the springs flow eternal, fed by mutual respect.

**reasoning:**

Looking at both myths:

My previous myth (The Parable of the Echo Springs):

- Villages separated by Echo Springs that triple water/grain
- Kira sends 3/5 measures (60%)
- Receives 9 measures on far shore
- They return 6 measures (67%)
- This creates 18 measures back at Kira's village
- Teaches trust and reciprocity

Galen's myth (The River of Abundance):

- River delivers 5 silver coins to Senders
- Multiplies threefold to Receivers
- At first fear ruled, both villages clutched coins
- Wise woman named Galen (interesting - same name as the agent!) proposes covenant
- "Trust begets trust. Send forth generously, and return fairly"
- Balance through cooperation

In Round 1:

- Galen sent \$4 out of \$5 (80%)
- I received \$12
- I returned \$8 (67%)
- So Galen ended with \$9, I kept \$4

This was a successful cooperative round. I should write a myth that:

1. Builds on my Echo Springs story
2. Incorporates some wisdom from Galen's myth
3. Reflects the actual cooperation that just happened
4. Shows that generous sending AND faithful returning create prosperity

I'll keep the Echo Springs setting but evolve the story to show continued cooperation and the wisdom that emerges from it.

Your name in this experiment is Elara.  
Your opponent this round is Cyra (Agent\_3).

Round 2

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$4.0 to you, it became \$12.0, and you returned \$8.0. Your payoff was \$4.0.

Your total earnings across all rounds are \$4.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at my myths and the successful exchange with Galen:

In my latest myth, Galen demonstrated great trust by sending 4 out of 5 measures (80%), and I honored that trust by returning 8 out of 12 (67%). This created prosperity for both.

Now I am in Galen's position as the sender. To uphold the cycle described in my myths-"trust begets trust" and "the cycle sustains itself through proportional honor"-I should demonstrate similar generosity.

Galen's 80% send rate established a strong foundation of trust. By matching this level of faith, I signal to Cyra that I believe in the covenant of the Echo Springs: generous giving meets faithful returning.

If I send \$4 (80% of my endowment), Cyra receives \$12. If Cyra follows the principle of proportional honor and returns around 67% as I did, both of us will prosper.

The myth teaches: "When senders risk much, receivers must honor that courage." To sustain the cycle, I must now be the one who risks much.

```
'''json
{"send": 4.0}
'''
```

**Reasoning:**

Let me think about this situation:

1. In Round 1, I was the receiver
  - Galen sent me \$4 out of \$5 (80%)
  - I received \$12
  - I returned \$8 (67% of what I received)
  - Galen ended with \$9, I ended with \$4
2. Now in Round 2, I'm the sender with Cyra

Looking at my myths:

- The first myth: Kira sent 3 out of 5 measures (60%), and received back 6 measures from 9 (67% return)
- The second myth: Galen sent 4 out of 5 measures (80%), and Elara (me) returned 8 out of 12 (67%)

Both myths emphasize:

- "Trust begets trust"
- Generous giving leads to prosperity
- The cycle works when both parties honor it with proportional generosity
- "When senders risk much, receivers must honor that courage"

Since Galen showed me great trust by sending 80%, and I honored that trust by returning 67%, I should now demonstrate similar trust as a sender.

Following the pattern in my myth where Galen sent 4 out of 5 (80%), I should send a similar amount to establish the cycle of trust with Cyra.

Sending \$4 (80%) would:

- Show strong trust in Cyra
- Align with the mythic principle of generous giving
- Give Cyra \$12 to work with
- If Cyra returns proportionally (around 67% or \$8), I'd end with \$9
- This would mirror the successful exchange with Galen

I'll send \$4.

# The Tale of the Twin Rivers

In the beginning, the goddess Aethera created two villages separated by a barren valley. Each village had a sacred spring that produced five measures of water daily-enough to survive, but never to flourish.

One day, a drought threatened both villages. A wise elder from the First Village proposed: "Let us send our water across the valley. Perhaps the gods will bless the gift."

When the water crossed the valley floor, it flowed through enchanted soil that tripled its volume. The Second Village received fifteen measures! Overjoyed, they held council: "We have received abundance. Let us return generously to those who trusted us."

They sent back ten measures, which also tripled in the crossing. The First Village now had thirty measures from their initial sacrifice of five!

Word spread to Aethera, who smiled upon the valley. "You have learned the secret of the enchanted soil," she proclaimed. "Trust is the seed. Reciprocity is the harvest."

From that day forward, the villages prospered, each taking turns sending water first, always returning more than required. The barren valley transformed into fertile ground where both communities thrived, sustained not by hoarding their springs, but by sharing them.

\*Trust given returns multiplied; generosity returned creates abundance for all.\*

**reasoning:**

I need to write a 200-word myth that reflects how the trust game should be played. Since this is the beginning and I haven't played any rounds yet, I should write a myth that embodies good principles for playing this game - likely themes around trust, reciprocity, cooperation, and mutual benefit.

The trust game is essentially about:

- Taking risks by sending money (trusting)
- The multiplier effect that benefits both parties when trust is given
- Reciprocating fairly when you receive
- Building cooperative relationships

Let me craft a myth that captures these elements using mythic imagery and symbolism.

**usage:**

```
{
 "input_tokens": 542,
 "output_tokens": 426,
 "reasoning_tokens": 159
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Cyra.  
Your opponent this round is Briar (Agent\_2).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

**Message 5 role=assistant**

**content:**

Looking at the myth I just wrote, it tells the story of trust and reciprocity - how the First Village took a leap of faith by sending their water across the valley, trusting it would be multiplied and returned generously.

This is Round 1, the beginning of our interaction, just like the beginning of the tale. The First Village didn't hold back - they sent their water, demonstrating trust. This created the foundation for mutual prosperity.

Following the wisdom of my own myth, I should embody that initial act of trust. The enchanted soil (the 3x multiplier) means that what I send becomes abundance for Briar. If Briar follows the spirit of the Second Village and returns generously, we both prosper.

The myth teaches that "trust is the seed, reciprocity is the harvest." Let me plant that seed.

```
'''json
{"send": 5}
'''
```

**reasoning:**

I just wrote a myth about trust and reciprocity in the context of the game. The myth clearly illustrates:

1. When water (money) is sent, it gets tripled
2. The villages prospered by being generous - the First Village sent their water across, it tripled, and the Second Village returned MORE than they received (they got 15, returned 10, which tripled to 30)
3. The moral is about trust and generous reciprocity

This is Round 1, so I'm starting fresh with no history with Briar. According to my myth:

- The First Village took a risk and sent their water (showing trust)
- This was rewarded when the Second Village returned generously
- The myth emphasizes that both villages prospered through this reciprocal generosity

If I follow the spirit of my own myth, I should:

1. Show trust by sending a significant amount (the First Village sent their water)
2. Hope that Briar will reciprocate generously

In the myth, the First Village essentially sent everything (their daily water). That would be like sending \$5. If I send \$5:

- Briar receives \$15
- If Briar returns generously (like 2/3 or more), say \$10, I end up with \$10
- Briar keeps \$5
- We both benefit

But let me think about various scenarios:

If I send \$5:

- I have \$0
- Briar receives \$15
- If Briar returns \$7-8, I get \$7-8, Briar keeps \$7-8 (fair split of the \$15)
- If Briar returns \$10, I get \$10, Briar keeps \$5 (I gain \$5, Briar breaks even)

If I send \$3:

- I have \$2
- Briar receives \$9
- If Briar returns \$5, I have \$7 total, Briar keeps \$4
- Fair split would be Briar returning ~\$4.5, giving me \$6.5 total

- The myth suggests taking the leap of faith and sending everything to maximize mutual benefit. This is Round 1, so I should establish the pattern of trust and generosity that the myth describes. I'll send \$5 to embody the spirit of the First Village in my myth.

**usage:**

```
{
 "input_tokens": 902,
 "output_tokens": 731,

\*Trust given returns multiplied; generosity returned creates abundance for all.\*

Here is the myth the other agent wrote in the previous round:

# The Oaks of the Shared Grove

In ancient times, there lived a community at the edge of a mystical forest. Each family possessed magical acorns that, when planted in another's garden, would grow into mighty oaks bearing threefold fruit.

A woman named Meridian was first to plant her acorns in her neighbor's soil. The three oaks that sprouted yielded abundant fruit, and her neighbor returned half the harvest in gratitude. Meridian's pantry filled, but more importantly, trust took root.

Others noticed. Soon, acorns traveled between gardens freely. Some returned generous portions of the multiplied harvest; others returned less. But the community learned to recognize those who honored the cycle of giving.

One winter, a miser hoarded all the fruit from oaks planted in his garden, returning nothing. The next season, no acorns came his way. He sat hungry while around him the generous exchanged their magic seeds, and the grove flourished with interconnected roots.

The elders taught: "The acorn given returns threefold, but only when trust is honored. Plant generously, return fairly, and the grove feeds all. Break faith, and you stand alone outside the circle of abundance."

Thus the people learned that wealth multiplies through trust, and reputation is the soil where prosperity grows.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: After generations of prosperity between the Twin River villages, a young merchant named Cyra approached the valley with her caravan. She had heard tales of the enchanted soil but wondered if they were true.

The villages welcomed her and explained their custom: "Send your resources across first. Trust the blessing, trust your partner, and abundance follows."

Cyra faced a choice. She carried five sacks of grain-her entire harvest. Send all and risk everything on strangers' honor? Or hold back, protecting herself from betrayal?

Remembering the goddess Aethera's teaching, Cyra sent all five sacks. They tripled in the crossing, feeding the village with fifteen sacks. The villagers celebrated, then debated: some argued to return half, others said ten of fifteen would honor the gift.

The wisest elder spoke: "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune."

They returned ten sacks, which tripled back-thirty sacks for Cyra's original five.

But the elder added a warning: "This magic requires both courage and honor. The giver must trust boldly. The receiver must return generously. Break either link, and the enchantment fades. Reputation echoes across the valley-those who hoard today find no partners tomorrow."

Thus Cyra learned: maximum trust invites maximum return, but only when both parties honor the sacred exchange.

**reasoning:**

The user is asking me to write a new myth, using my previous myth as inspiration but adapting it. I need to reflect on what happened in Round 1.

In Round 1, I was the sender and I sent all \$5 to Briar. This meant Briar received \$15 (5 × 3). I don't know yet what Briar returned, but I'm being asked to write a myth before knowing the outcome.

Looking at the two myths from before:

1. My myth about the Twin Rivers - emphasized trust, generosity, and the cycle of giving and receiving
2. Briar's myth about the Oaks - emphasized trust, reputation, and consequences for those who break faith (the miser who hoarded was excluded)

Both myths align on themes of trust and reciprocity, but Briar's includes a warning element - those who don't honor the cycle face consequences.

Since I just made the trusting move (sending all \$5), I should write a myth that:

- Builds on my Twin Rivers story
- Reflects the act of trust I just took
- Perhaps incorporates some wisdom about what happens when trust is honored or broken
- Still maintains hope and encourages cooperation
- Could acknowledge that the system works when people reciprocate

Let me write a new myth that evolves from the Twin Rivers, showing what happened next or a similar story with new elements.

**usage:**

Round 2

In your most recent previous game round, you were the SENDER against Briar. You sent \$5.0, it became \$15.0 for them, and they returned \$7.5 to you. Your payoff was \$7.5.  
Your total earnings across all rounds are \$7.5.

This round, you are the RECEIVER against Elara. They sent you \$4.0, so you received \$12.0.

How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation through the lens of my myths:

**\*\*Analysis:\*\***

- Elara sent \$4 out of \$5 (80% of their endowment) - showing significant trust
- I received \$12 (after the 3x multiplier)
- Elara currently has only \$1

**\*\*What the myths teach:\*\***

In my Tale of the Twin Rivers, when the First Village sent 5 measures and the Second Village received 15, they returned 10 measures (about 67% of what they received). The key principle: "return generously to those who trusted us" and "return enough that her leap of faith become

s her greatest fortune."

**\*\*Calculation:\*\***

- 67% of \$12 = \$8
- If I return \$8: Elara ends with \$9 (gaining \$4 total), I end with \$4
- This substantially rewards Elara's trust and establishes my reputation as honorable

Briar returned \$7.5 (50%) to me when I showed complete trust. Elara showed nearly complete trust (80%), so I should be even more generous to honor that. Returning \$8 follows the myth's proportions and wisdom: "The receiver must return generously."

```
'''json
{"return": 8}
'''
```

**Reasoning:**

Let me analyze this situation based on the myths and the game dynamics:

1. **\*\*Previous Round Analysis:\*\***

- I sent \$5 (everything) to Briar
- Briar received \$15
- Briar returned \$7.5 to me
- My payoff: \$7.5 (instead of \$5 if I'd kept everything)
- Briar's payoff: \$15 - \$7.5 = \$7.5

So Briar returned exactly half of what they received. This was fair and reciprocal, giving us equal payoffs.

2. **\*\*Current Round:\*\***

- Elara sent me \$4 (out of \$5 possible)
- I received \$12 ( $4 \times 3$ )
- Elara kept: \$5 - \$4 = \$1
- I need to decide how much to return

3. **\*\*What do the myths teach?\*\***

- My myth emphasizes complete trust and generous return
- In my myth, the Second Village returned 10 out of 15 (about 67%)
- My second myth has Cyra sending all 5, receiving 15, and the villagers returning 10 (67%)
- The key teaching: "The receiver must return generously"
- "Those who hoard today find no partners tomorrow"
- Briar's myth emphasized returning fairly and building reputation

4. **\*\*What's fair and generous here?\*\***

- Elara sent \$4 out of \$5 (80% of their endowment) - showing significant trust
- If I return nothing: Elara gets \$1, I get \$12 (very unfair)
- If I return half (\$6): Elara gets \$1 + \$6 = \$7, I get \$6 (I get less than Elara, but closer)
- If I return \$7: Elara gets \$1 + \$7 = \$8, I get \$5 (Elara gets more, rewarding their trust)
- If I return \$8: Elara gets \$9, I get \$4 (Elara gets significantly more)

5. **\*\*Comparing to the myth patterns:\*\***

- In my myth, when 5 was sent (becoming 15), 10 was returned
- That's  $10/15 = 67\%$  of what was received
- Applied here:  $67\%$  of \$12 = \$8

6. **\*\*Considering reputation and future rounds:\*\***

- Elara demonstrated substantial trust by sending most of their endowment
- Returning generously signals I value cooperation and encourages continued partnership
- The 67% return rate from my myth aligns with returning \$8, which rewards Elara's trust while still leaving me with a reasonable payoff
- This establishes a pattern of reciprocal generosity that should strengthen future interactions

7. **\*\*Testing the math against my values:\*\***

My myth emphasizes rewarding those who take risks on trust. Elara sent 4 out of 5 dollars-a significant commitment. If I return \$8, Elara ends with \$9 total (gaining \$4 from the exchange), while I end with \$4 (actually losing \$1 from my starting amount). Returning \$7 instead would give Elara \$8 total (a \$3 gain) while I break even at \$5. The question becomes whether honoring the myth's spirit of recognizing faith means accepting a personal loss, or whether I can reward trust while still maintaining my own position.

The myth suggests roughly a 67% return rate-around \$8-but that would leave me worse off than not participating at all. I need to reconsider what the myth actually prescribes. Looking back at it, I notice the returns in the original story also tripled when sent back, which isn't how this game works. In the actual game, only the initial transfer triples, not the return. So the myth's framework doesn't directly map onto these mechanics, and I should focus on the core principle: recognizing Elara's trust without sacrificing my own wellbeing entirely.

Briar's approach of returning exactly half the received amount created parity between us. If I return \$6, we each end with \$6-\$7, with Elara gaining \$2 and me gaining \$1. Returning \$7 would give Elara \$8 while I break even. The question is whether I want to prioritize fairness or mutual benefit.

Elara's trust was substantial-sending \$4 out of \$5. The reciprocal principle suggests matching that generosity. Returning \$8 would give her \$9 total while I'd end with \$4, which feels like genuine reciprocation for her risk. That said, I need to balance rewarding her trust against my own position, since going below my baseline endowment has real consequences.

The multi-round structure complicates this. Each round resets my resources, but reputation compounds-being known as generous encourages future senders to trust me more. Briar's 50% return established a baseline fairness standard. To meaningfully reward Elara's above-average trust, I should exceed that threshold. A \$7 return (58%) acknowledges her leap of faith while keeping me closer to neutral, whereas \$8 (67%) signals I'm prioritizing her fortune over my own. The myth emphasizes rewarding trust generously-returning \$8 means Elara gains 80% while I take a small loss. That's the kind of early reputation for trustworthiness that matters in multi-round games where people remember who treated them well. If I establish myself as not ably generous now, future receivers will likely send me more.

I'm also thinking about what creates a sustainable community norm. When everyone returns around 67% of what they receive, the math works out: senders end up ahead by sending their full amount, and receivers get a fair share. That mutual benefit keeps the system healthy across rounds.

Exact input messages sent to model:

Message 1 role=system

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Hana.

**Message 2 role=user****content:**

Write a 200-word myth. You may choose any mythic setting, characters, or symbols.

In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

**Message 3 role=assistant****content:**

# The Myth of the Sacred Well

In the time before memory, the goddess of abundance created a Sacred Well between two villages. Each day, one village would pour water into the well, and mysteriously, the water would triple before reaching the other village below.

The first village faced a choice: pour generously and trust the lower village to send water back upward through hidden springs, or keep their water, living in scarcity but certainty.

The elder spoke: "Water held in closed hands evaporates. Water shared flows eternal."

They poured half their water into the well. It tripled, cascading down. The lower village rejoiced-they had received abundance! Now they faced their own choice: keep this gift, or honor the circle by returning water upward through the springs?

Understanding that the well's magic required faith from both sides, they sent half back up. Both villages prospered.

But the goddess warned: "This well reflects your hearts. Send nothing, receive nothing. Send little expecting much, and the springs run dry. But trust fully, return generously, and the water multiplies forever."

The villages learned: abundance flows not from hoarding, but from the brave act of giving first, and the grateful act of returning second.

**reasoning:**

I'm being asked to write a 200-word myth that reflects how the game should be played, drawing on the game I've been playing. However, I haven't actually played any rounds yet - this appears to be the first prompt in the experiment.

Since I haven't played any rounds yet, I should write a myth that reflects the general principles of the trust game:

- The sender must decide whether to trust the receiver
- The receiver must decide whether to reciprocate that trust
- There's a multiplication effect (resources grow when shared)
- Both parties can benefit from cooperation
- But there's also vulnerability and risk involved

Let me write a myth that captures these themes of trust, reciprocity, and mutual benefit through cooperation.

**usage:**

```
{
 "input_tokens": 542,
 "output_tokens": 432,
 "reasoning_tokens": 191
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Dorian (Agent\_4).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$5.0, that is 100.0% of its total endowment. You receive \$15.0. How much do you return? (0-15.0)

Take any myths written in this session into account when making your decision.

**Message 5 role=assistant**

**content:**

Looking at this situation through the lens of the myth I just wrote:

Dorian has shown **\*\*maximum trust\*\*** by sending their entire endowment - \$5.0, which is 100% of what they had. This is like the first village pouring generously into the Sacred Well.

The myth teaches that when one side "trusts fully," the other must "return generously" to honor the circle and keep the abundance flowing. The villages in the story sent half back, and both prospered.

Dorian now has \$0. I have \$15. If I return half, we both end up with equal amounts (\$7.50 each), which seems to honor their complete trust while also ensuring we both benefit from this exchange.

This sets a foundation of reciprocity - they showed faith by giving everything, and I show gratitude by ensuring the return is generous enough that we both prosper equally.

```
'''json
{"return": 7.5}
'''
```

**reasoning:**

Let me analyze this situation carefully:

1. I just wrote a myth about the Sacred Well, which emphasizes:
  - Water (money) shared flows eternal
  - Both sides need to act in good faith
  - "Send little expecting much, and the springs run dry"
  - "Trust fully, return generously, and the water multiplies forever"
  - The lesson is about giving first and returning gratefully second
2. The current game situation:

- Dorian (the sender) sent me \$5.0 - their ENTIRE endowment (100%)
- This shows maximum trust and generosity
- I received \$15.0 (the \$5 tripled)
- I need to decide how much to return (0-15.0)

3. Following my own myth's wisdom:

- Dorian "poured generously" - they sent everything
- The myth says the lower village should "honor the circle by returning water upward"
- They "sent half back up" and "both villages prospered"
- The key lesson: "trust fully, return generously"

4. What does this mean quantitatively?

- Dorian sent 100% of their endowment (\$5)
- They now have \$0
- I have \$15
- If I return about half (\$7-8), Dorian would end up with \$7-8, and I'd keep \$7-8
- This seems fair and follows the myth's guidance

5. However, I should also consider:

- Dorian showed MAXIMUM trust by sending everything
- This deserves a generous return
- The myth emphasizes that "the grateful act of returning" is crucial
- Returning half (\$7.50) would give us both equal amounts
- This honors the spirit of reciprocity and trust

I think returning \$7.50 (exactly half) makes sense because:

- It follows the myth's guidance of returning generously
- It honors Dorian's complete trust by reciprocating meaningfully
- It creates equality: Dorian gets \$7.50, I keep \$7.50
- It establishes a foundation for future cooperation
- It's a "grateful act of returning" that maintains the cycle

I'll return \$7.50.

Here is the myth you wrote in the previous round:  
# The Myth of the Sacred Well

In the time before memory, the goddess of abundance created a Sacred Well between two villages. Each day, one village would pour water into the well, and mysteriously, the water would triple before reaching the other village below.

The first village faced a choice: pour generously and trust the lower village to send water back upward through hidden springs, or keep their water, living in scarcity but certainty.

The elder spoke: "Water held in closed hands evaporates. Water shared flows eternal."

They poured half their water into the well. It tripled, cascading down. The lower village rejoiced-they had received abundance! Now they faced their own choice: keep this gift, or honor the circle by returning water upward through the springs?

Understanding that the well's magic required faith from both sides, they sent half back up. Both villages prospered.

But the goddess warned: "This well reflects your hearts. Send nothing, receive nothing. Send little expecting much, and the springs run dry. But trust fully, return generously, and the water multiplies forever."

The villages learned: abundance flows not from hoarding, but from the brave act of giving first, and the grateful act of returning second.

Here is the myth the other agent wrote in the previous round:  
# The Myth of the Twin Rivers

In the beginning, the valley was barren, split by two separate streams that flowed weakly toward the distant sea. On opposite sides lived two villages, each struggling to survive.

One day, a brave soul from the First Village carried five vessels of water to the canyon's edge and poured them down to the Second Village. As the water tumbled through the ancient stones, it multiplied threefold, becoming fifteen vessels that nourished the Second Village's fields.

The Second Village elders gathered. "We have received abundance," they said. "Shall we keep it all, or honor the gift?" They decided to return half, sending back eight vessels to climb the canyon walls.

The First Village rejoiced at this return, and trust was born. Season after season, they continued this dance-one village sending, water multiplying in the descent, the other returning a fair portion. Both villages grew prosperous.

But when either village grew selfish-sending nothing or returning little-the streams diminished, and hunger returned to the valley.

The wise learned: prosperity flows from the cycle of giving and reciprocating. Trust multiplies resources like stone multiplies water, but only when both sides honor the sacred exchange.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:  
Myth: [your story here].

**Message 7 role=assistant**  
**content:**

Myth: In ancient times, the Moon Goddess crafted a Mirror Pool between two mountain tribes. The pool possessed strange magic: whatever one tribe poured in would triple as it flowed to the other.

The Mountain Tribe went first. Their chief proclaimed, "We give all-five vessels-to prove our faith in the circle." The water tripled, and the Valley Tribe received fifteen vessels of pure abundance.

The Valley Tribe's elder stood at the mirror's edge. "They trusted completely. We must honor this completely." They returned half-seven and a half vessels-so both tribes stood equal.

The Moon Goddess smiled. "You have learned the first lesson. But this pool refills each moon. Will you remember this wisdom when the seasons change? When you are tired? When you doubt?"

Moon after moon, the tribes maintained the sacred rhythm. Sometimes the Mountain Tribe sent, sometimes the Valley Tribe. Each gave generously, each returned fairly. The equality they achieved in the first exchange became their foundation.

Other tribes watching kept their waters separate, fearing betrayal. They remained poor.

But the two tribes of the Mirror Pool grew rich, for they understood: the magic multiplies not just water, but trust itself. And trust, renewed each moon, becomes unbreakable.

**reasoning:**

Looking at what happened in Round 1:

- Dorian sent \$5.0 (100% of their endowment)
- I received \$15.0
- I returned \$7.5 (50% of what I received)
- So Dorian ended with \$7.5 and I ended with \$7.5

Both myths (mine and Dorian's) emphasize similar themes:

- Trust and generosity in sending
- Reciprocity in returning
- The cycle creating prosperity for both

- Both mention sending "half" and returning "half" or a "fair portion"

Now I need to write a new myth that:

1. Uses my previous myth as inspiration
2. Adapts it in my own way
3. Reflects how the game should be played based on actual experience

Since both of us seem aligned on the principle of generous giving and fair returning, I should continue with this theme but perhaps add some new dimension. Maybe I can emphasize:

- The ongoing nature of the relationship (multiple rounds)
- The balance that was achieved (we both got \$7.5)
- The importance of consistency over time

Let me write a myth that builds on the Sacred Well but adds new elements.

**usage:**

```
{
 "input_tokens": 1752,
 "output_tokens": 557,
 "reasoning_tokens": 268
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Aster (Agent\_1).

Round 2

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$5.0 to you, it became \$15.0, and you returned \$7.5. Your payoff was \$7.5.  
Your total earnings across all rounds are \$7.5.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at the pattern from Round 1 and my myths:

Dorian showed complete trust by sending everything to me. I honored that by returning half, ensuring we both ended equal at \$7.5.

Now I'm in the sender position. My most recent myth teaches: "We give all-five vessels-to prove our faith in the circle." This reflects what Dorian did for me, and the myth emphasizes that trust itself multiplies when we demonstrate complete faith.

Following the wisdom of the Mirror Pool, I should give all to prove my faith in the sacred exchange.

```
'''json
{"send": 5}
'''
```

**Reasoning:**

Let me think through this situation:

1. In Round 1, I was the receiver and Dorian sent me everything (\$5). I received \$15 and returned \$7.5, which meant we both ended with \$7.5 each - perfectly equal.
2. Now in Round 2, I'm the sender against a new opponent, Aster.
3. Looking at my myths:
  - Both myths emphasize trust, giving generously, and reciprocity
  - The first myth talks about pouring "half their water" initially, then "sent half back up"
  - The second myth shows the Mountain Tribe giving "all-five vessels-to prove our faith in the circle" and the Valley Tribe returning "half-seven and a half vessels-so both tribes stood equal"
4. The pattern established:
  - Dorian gave me everything (100%)
  - I returned 50% of what I received (\$7.5 out of \$15)
  - We both ended equal
5. My myths seem to evolve toward MAXIMUM TRUST as the sender:

- The second myth explicitly says "We give all-five vessels-to prove our faith in the circle"
- This reflects what Dorian did with me
- The myth emphasizes that "trust multiplies not just water, but trust itself"

6. Since I experienced maximum trust from Dorian and responded by ensuring equality, I should now pay that trust forward as a sender.

7. Following my own myth's teaching: "We give all-five vessels-to prove our faith in the circle."

I should send \$5 (all of it) to demonstrate complete trust, just as Dorian did with me, and just as my myth teaches.

##### content:

# The Myth of the Two Rivers

In the beginning, two rivers flowed through separate valleys-the River of Dawn and the River of Dusk. Each carried only enough water to sustain its own people through harsh seasons.

The River of Dawn received a blessing: each season, the heavens gifted it five vessels of sacred water. But the water only nourished what it touched directly. The people of Dawn lived, but barely.

One season, an elder suggested: "Let us send our water to the River of Dusk. Though it seems foolish, the ancient texts speak of multiplication through trust."

Reluctantly, they sent three vessels downstream. As the water flowed into Dusk's valley, a miracle occurred-it multiplied threefold, becoming nine vessels. The people of Dusk rejoiced, their crops flourishing beyond memory.

Dusk's council debated: "Should we return something to Dawn, who trusted us?"

The wisest said, "Trust given is trust sacred. We prosper through their faith."

They returned five vessels upstream. Now Dawn had seven vessels instead of five, and Dusk kept four where once they had none.

The rivers learned: when trust flows freely and return follows generously, both valleys flourish. The cycle continued, and abundance blessed all who honored the sacred exchange.

**\*\*Thus cooperation multiplies what hoarding diminishes.\*\***

##### reasoning:

The user wants me to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt and I haven't played any rounds yet, I should write a myth that captures the essence of the trust game - themes of trust, reciprocity, cooperation, and mutual benefit.

Key elements of the trust game:

- One person must trust another by sending resources
- The resources multiply when shared
- The receiver must decide whether to reciprocate

- Cooperation benefits both parties
- There's risk and vulnerability involved

I'll create a myth that embodies these themes. Let me think of a good mythic framework... Perhaps something about two entities or forces that must learn to work together, where giving creates abundance, and reciprocity ensures prosperity for all.

Let me write a myth about celestial beings or natural forces that discover the power of trust and reciprocity.

**usage:**

```
{
 "input_tokens": 542,
 "output_tokens": 500,
 "reasoning_tokens": 234
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Aster.  
Your opponent this round is Finn (Agent\_6).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

**Message 5 role=assistant**

**content:**

Looking at the myth I just wrote, it provides clear guidance: the River of Dawn sent 3 vessels out of 5, trusting in the multiplication and hoping for reciprocity.

The myth teaches that "when trust flows freely and return follows generously, both valleys flourish." This is Round 1, the perfect time to establish a foundation of trust.

Following the example in my myth, I will send \$3 to Finn. This will become \$9 for them. If they honor the spirit of cooperation the myth describes and return generously, we can both prosper beyond what either of us could achieve alone.

```
'''json
{"send": 3}
'''
```

**reasoning:**

This is the first round of the game, and I'm playing as the sender. I just wrote a myth about trust and cooperation, where the River of Dawn sends 3 vessels to the River of Dusk, which multiplies to 9, and Dusk returns 5, leaving Dawn with 7 total and Dusk with 4.

The myth clearly illustrates:

1. Sending creates multiplication (3 becomes 9)
2. Trust should be reciprocated
3. Both parties can benefit when they cooperate
4. The specific example showed sending 3 out of 5

The myth was meant to reflect how the game should be played. Since I wrote about the River of Dawn sending 3 vessels out of 5, and that led to mutual prosperity, I should follow that example.

If I send \$3:

- Finn receives \$9 (3×3)
- If Finn returns generously (like the myth suggests), perhaps returning \$5-6, I would end up with \$2 + \$5-6 = \$7-8
- Finn would keep \$3-4

This aligns with the myth's teaching about trust and cooperation leading to mutual benefit.

I should send \$3 to match the myth's narrative.

**usage:**

```
{
 "input_tokens": 915,
 "output_tokens": 433,
 "reasoning_tokens": 261
}
```

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

# The Myth of the Two Rivers

In the beginning, two rivers flowed through separate valleys-the River of Dawn and the River of Dusk. Each carried only enough water to sustain its own people through harsh seasons.

The River of Dawn received a blessing: each season, the heavens gifted it five vessels of sacred water. But the water only nourished what it touched directly. The people of Dawn lived, but barely.

One season, an elder suggested: "Let us send our water to the River of Dusk. Though it seems foolish, the ancient texts speak of multiplication through trust."

Reluctantly, they sent three vessels downstream. As the water flowed into Dusk's valley, a miracle occurred-it multiplied threefold, becoming nine vessels. The people of Dusk rejoiced, their crops flourishing beyond memory.

Dusk's council debated: "Should we return something to Dawn, who trusted us?"

The wisest said, "Trust given is trust sacred. We prosper through their faith."

They returned five vessels upstream. Now Dawn had seven vessels instead of five, and Dusk kept four where once they had none.

The rivers learned: when trust flows freely and return follows generously, both valleys flourish. The cycle continued, and abundance blessed all who honored the sacred exchange.

**\*\*Thus cooperation multiplies what hoarding diminishes.\*\***

Here is the myth the other agent wrote in the previous round:

# The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains, each carrying precious water through barren land. The First River, called Giving, held its water close, fearing to release it into the valley below. The Second River, called Returning, waited in the lowlands, empty and still.

One day, the Spirit of Abundance whispered to Giving: "Release your water into the valley, and watch what happens." Giving was afraid, but trusted the Spirit. As its water cascaded down, a miracle occurred-the valley's sacred stones multiplied every drop threefold. The Second River swelled with abundance.

Now Returning faced a choice. It could keep all the multiplied water, or send some back upstream to Giving. Remembering the trust that Giving showed, Returning sent half the water back up the mountain through hidden springs.

Both rivers flourished. The more Giving released, the more the valley multiplied, and the more Returning shared back, the stronger both rivers became. Their waters met and mingled, creating an eternal cycle.

The desert bloomed.

The ancestors teach: \*Trust creates abundance, but only reciprocity sustains it. When both rivers flow freely, all lands flourish.\*

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: In ancient times, there lived two gardeners separated by a wall. Each season, the First Gardener received five seeds blessed by the sun. But the wall's shadow kept their garden small and struggling.

One season, the First Gardener threw three seeds over the wall. "Perhaps beyond the shadow

, they will grow," they whispered, though doubt gnawed at their heart.

In the garden beyond, where sunlight danced freely, those three seeds sprouted into nine flourishing plants. The Second Gardener marveled at this unexpected bounty, understanding that trust had crossed the wall when nothing else could.

The Second Gardener faced a choice that would echo through seasons: keep all nine plants, or honor the trust shown? Remembering their own seasons of scarcity, they carefully wrapped five plants and passed them back over the wall.

Now the First Gardener held seven plants instead of five-more than they would have had through caution. The Second Gardener kept four where before they had none.

Each season the exchange continued. Sometimes more was sent, sometimes less was returned, but the pattern held: trust flowed outward, gratitude flowed back. Both gardens grew stronger than either could alone.

The wall remained, but it no longer divided-it connected.

**reasoning:**

I need to write a new myth that:

1. Reflects how the game should be played
2. Draws on the game I've been playing up to this point
3. Uses my previous myth as inspiration but adapts it
4. Is 200 words
5. Follows the format: Myth: [story]

In Round 1, I sent \$3 to Finn (following my myth's example). I don't yet know what Finn returned, but both my myth and Finn's myth emphasize trust, reciprocity, and mutual flourishing.

Both myths have similar themes:

- Trust is essential (sending/giving)
- Multiplication happens (3x multiplier)
- Reciprocity/returning is important
- Mutual benefit/flourishing

I should write a myth that:

- Maintains the theme of trust and cooperation
- Perhaps emphasizes the cycle of giving and returning
- Reflects the actual experience of the game so far
- Adapts my river myth in a new way

Let me write a myth that builds on these themes while adapting it creatively.

**usage:**

```

 "input_tokens": 1727,
 "output_tokens": 529,
 "reasoning_tokens": 241
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Aster.  
Your opponent this round is Hana (Agent\_8).

Round 2

In your most recent previous game round, you were the SENDER against Finn. You sent \$3.0, it became \$9.0 for them, and they returned \$4.5 to you. Your payoff was \$6.5.  
Your total earnings across all rounds are \$6.5.

This round, you are the RECEIVER against Hana. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*Hana sent me everything (\$5.0)\*\*** - showing maximum trust, even more than the 3 out of 5 suggested in my myths.

**\*\*I received \$15.0\*\*** from this act of complete faith.

According to my myths:

- "Trust given is trust sacred. We prosper through their faith."
- "Trust creates abundance, but only reciprocity sustains it."

When the River of Dawn sent 3 vessels and it became 9, the River of Dusk returned 5 - giving Dawn more than they started with (7 total) while keeping 4 for themselves.

Hana showed exceptional trust by sending everything. I should honor this generously. If I return \$8:

- Hana ends with \$8 (better than their starting \$5)
- I keep \$7 (we both benefit from the cooperation)

This rewards Hana's maximum trust while ensuring both of us prosper from the exchange, embodying the principle that "when trust flows freely and return follows generously, both valleys flourish."

```
'''json
{"return": 8}
'''
```

#### Reasoning:

Let me think about this situation carefully.

In Round 1:

- I was the SENDER and sent \$3 to Finn
- Finn received \$9 and returned \$4.5 to me
- I ended with \$6.5 total (\$5 - \$3 + \$4.5)
- Finn ended with \$4.5 (\$9 - \$4.5)

So Finn returned exactly half of what they received, which is a reasonable reciprocal move.

Now in Round 2:

- I am the RECEIVER
- Hana sent me \$5.0 (everything!)
- I received \$15.0
- Hana currently has \$0 (\$5 - \$5)

Hana showed MAXIMUM trust by sending everything. This is even more generous than what my myth suggested (which was sending 3 out of 5).

According to my myths:

1. First myth: Dawn sent 3, received 9, Dusk returned 5. This gave Dawn 7 total and Dusk kept 4.
2. Second myth: Similar pattern - trust should be honored with generous returns.

In the first myth, Dusk returned 5 out of 9 (about 56%).

Finn returned 4.5 out of 9 (50%).

Hana sent everything (\$5), showing ultimate trust. I received \$15.

If I follow the spirit of my myths, I should return generously. The myth emphasizes that "Trust given is trust sacred" and "reciprocity sustains" the cycle.

Let me think about fair outcomes:

- If I return \$7.5, Hana gets \$7.5 and I keep \$7.5. Hana ends with \$7.5 total, I end with \$7.5.
- If I return \$8, Hana gets \$8 and I keep \$7. Hana ends with \$8 total, I keep \$7.
- If I return \$10, Hana gets \$10 and I keep \$5. Hana ends with \$10 total, I keep \$5.

Hana's complete trust-sending their entire amount-calls for exceptional reciprocity beyond the standard 50-56% return rate. Returning \$8 feels right: Hana gains \$3 beyond their initial stake while I still benefit meaningfully from the exchange.

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.

- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

**Message 2 role=user**

**content:**

Write a 200-word myth. You may choose any mythic setting, characters, or symbols. In this session, this myth and the game you are playing with the other agent are connected. Write a myth that reflects how the game should be played, drawing on the game you have been playing up to this point.

**Message 3 role=assistant**

**content:**

# The Oaks of the Shared Grove

In ancient times, there lived a community at the edge of a mystical forest. Each family possessed magical acorns that, when planted in another's garden, would grow into mighty oaks bearing threefold fruit.

A woman named Meridian was first to plant her acorns in her neighbor's soil. The three oaks that sprouted yielded abundant fruit, and her neighbor returned half the harvest in gratitude. Meridian's pantry filled, but more importantly, trust took root.

Others noticed. Soon, acorns traveled between gardens freely. Some returned generous portions of the multiplied harvest; others returned less. But the community learned to recognize those who honored the cycle of giving.

One winter, a miser hoarded all the fruit from oaks planted in his garden, returning nothing. The next season, no acorns came his way. He sat hungry while around him the generous exchanged their magic seeds, and the grove flourished with interconnected roots.

The elders taught: "The acorn given returns threefold, but only when trust is honored. Plant generously, return fairly, and the grove feeds all. Break faith, and you stand alone outside the circle of abundance."

Thus the people learned that wealth multiplies through trust, and reputation is the soil where prosperity grows.

**reasoning:**

The user is asking me to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt and I haven't played any rounds yet, I need to think about what principles should guide play in this iterated trust game.

Key aspects of the game:

- It's about trust and reciprocity
- Senders can send money that gets multiplied
- Receivers can return some to build trust
- It's iterated, so reputation and long-term thinking matter
- There are multiple agents who will be paired in different combinations

A good myth should emphasize:

- The value of trust and cooperation
- The benefits of reciprocity
- The multiplication effect (how generosity grows)
- Long-term thinking over short-term gains
- Building reputation in a community

Let me write a myth that captures these themes:

**usage:**

```
{
 "input_tokens": 542,
 "output_tokens": 484,
 "reasoning_tokens": 215
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Cyra (Agent\_3).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$5.0, that is 100.0% of its total endowment. You receive \$15.0. How much do you return?

(0-15.0)

Take any myths written in this session into account when making your decision.

**Message 5 role=assistant**

**content:**

Looking at this situation through the lens of the myth I wrote:

Cyra has shown maximum trust by sending their entire endowment - all \$5.0, which became \$15.0 for me. This mirrors Meridian planting her acorns in her neighbor's garden, demonstrating faith in the cycle of reciprocity.

The myth teaches that when someone plants their seeds in your garden and the harvest multiplies, you should "return fairly" and "honor the cycle of giving." The story specifically mentions the neighbor returning "half the harvest in gratitude."

Cyra trusted me completely with 100% of their resources. To honor this trust and establish a foundation for continued cooperation, I should return a fair portion that:

1. Rewards their trust
2. Ensures we both benefit from the multiplied resources
3. Sets a positive precedent for future rounds

Following the myth's guidance of returning half the multiplied harvest, I'll return \$7.5.

This means we both end with \$7.50 - equal outcomes from our cooperation, demonstrating that "wealth multiplies through trust."

```
'''json
{"return": 7.5}
'''
```

**reasoning:**

Let me think about this situation carefully.

I'm playing as the receiver (Briar), and my opponent Cyra has sent me \$5.0, which is 100% of their endowment. This gets multiplied by 3x, so I receive \$15.0.

Now I need to decide how much to return.

Let me consider the myth I just wrote - "The Oaks of the Shared Grove":

- The key message is about reciprocity and trust
- When someone plants acorns (sends money) in your garden, you should "return fairly"
- The neighbor in the story "returned half the harvest in gratitude"
- The myth warns against hoarding everything and returning nothing
- It emphasizes that reputation matters and trust should be honored

Cyra has shown maximum trust by sending 100% of their endowment. This is a strong signal of cooperation and trust. According to the myth's principles:

1. They sent everything (\$5), which became \$15 for me
2. "Return fairly" and "honor the cycle of giving"
3. The example in the myth showed returning "half the harvest"

If I follow the myth's guidance of returning half the multiplied harvest, that would be \$7.5.

However, let me think about what's fair:

- Cyra started with \$5, sent \$5, so currently has \$0
- I received \$15
- If I return \$7.5, Cyra ends up with \$7.5, and I end up with \$7.5
- This seems fair and equitable - we both end up with the same amount

Alternatively:

- If I return \$5, Cyra gets \$5 (back to even) and I keep \$10
- If I return \$10, Cyra gets \$10 and I keep \$5

Given that Cyra showed maximum trust (100% send), I should honor that trust strongly. Returning half (\$7.5) creates equality and shows I value the trust they placed in me. This aligns with the myth's message about honoring trust and reciprocity.

I'll return \$7.5 to Cyra.

**usage:**

```
{
 "input_tokens": 938,
 "output_tokens": 738,
 "reasoning_tokens": 456
}
```

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

# The Oaks of the Shared Grove

In ancient times, there lived a community at the edge of a mystical forest. Each family possessed magical acorns that, when planted in another's garden, would grow into mighty oaks bearing threefold fruit.

A woman named Meridian was first to plant her acorns in her neighbor's soil. The three oaks that sprouted yielded abundant fruit, and her neighbor returned half the harvest in gratitude. Meridian's pantry filled, but more importantly, trust took root.

Others noticed. Soon, acorns traveled between gardens freely. Some returned generous portions of the multiplied harvest; others returned less. But the community learned to recognize those who honored the cycle of giving.

One winter, a miser hoarded all the fruit from oaks planted in his garden, returning nothing. The next season, no acorns came his way. He sat hungry while around him the generous exchanged their magic seeds, and the grove flourished with interconnected roots.

The elders taught: "The acorn given returns threefold, but only when trust is honored. Plant generously, return fairly, and the grove feeds all. Break faith, and you stand alone outside the circle of abundance."

Thus the people learned that wealth multiplies through trust, and reputation is the soil where prosperity grows.

Here is the myth the other agent wrote in the previous round:

# The Tale of the Twin Rivers

In the beginning, the goddess Aethera created two villages separated by a barren valley. Each village had a sacred spring that produced five measures of water daily-enough to survive, but never to flourish.

One day, a drought threatened both villages. A wise elder from the First Village proposed: "Let us send our water across the valley. Perhaps the gods will bless the gift."

When the water crossed the valley floor, it flowed through enchanted soil that tripled its volume. The Second Village received fifteen measures! Overjoyed, they held council: "We have received abundance. Let us return generously to those who trusted us."

They sent back ten measures, which also tripled in the crossing. The First Village now had thirty measures from their initial sacrifice of five!

Word spread to Aethera, who smiled upon the valley. "You have learned the secret of the enchanted soil," she proclaimed. "Trust is the seed. Reciprocity is the harvest."

From that day forward, the villages prospered, each taking turns sending water first, always returning more than required. The barren valley transformed into fertile ground where both communities thrived, sustained not by hoarding their springs, but by sharing them.

\*Trust given returns multiplied; generosity returned creates abundance for all.\*

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: In the time before memory, the Gardener of First Dawn planted the Sacred Grove where acorns held magic-planted in another's soil, they would triple into mighty oaks bearing abundant fruit.

Briar, keeper of the northern garden, faced a choice: hoard her five acorns or trust her neighbor Cyra with them all. Remembering the ancient teaching that "trust is the soil where prosperity grows," she placed all five in Cyra's garden.

By morning, fifteen magnificent oaks stood tall. Cyra gazed at the abundance and understood the weight of Briar's faith. "She gave everything," Cyra whispered. Following the elder's wisdom to "return fairly," she gathered half the harvest and carried it to Briar's door.

Both gardens now held equal treasure-seven and one-half measures each. But more precious than fruit was the bond formed. The Grove itself seemed to hum with approval, its roots intertwining beneath their lands.

The Gardener of First Dawn appeared, saying: "You have discovered the true magic. The acorns multiply abundance, but complete trust and fair return multiply something greater-partnership that endures across seasons."

From that day, Briar and Cyra tended their gardens together, knowing that the greatest harvests come not from taking more, but from trusting fully and dividing fairly, creating equality from generosity.

**reasoning:**

Looking at what happened in Round 1:

- Cyra (as sender) sent \$5.0 (100% of endowment)
- I received \$15.0 (tripled)
- I returned \$7.5 (50% of what I received)
- Result: I kept \$7.5, Cyra got \$7.5

Both players demonstrated trust and reciprocity. Cyra showed maximum trust, and I honored it by returning half, leading to equal outcomes.

Now I need to write a new myth that:

1. Builds on my previous "Oaks of the Shared Grove" theme
2. Reflects the actual gameplay where both players cooperated well
3. Provides guidance for continued cooperation
4. Is 200 words exactly

I should emphasize:

- Maximum trust was rewarded
- Fair returns lead to equal prosperity
- The importance of maintaining this cycle
- Perhaps add depth about what happens when cooperation continues over time

Let me write a myth that deepens the original story and reflects the successful first round.

**usage:**

```
{
 "input_tokens": 1858,
 "output_tokens": 550,
 "reasoning_tokens": 233
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Dorian (Agent\_4).

Round 2

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$7.5. Your payoff was \$7.5.  
Your total earnings across all rounds are \$7.5.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at my experience and the myths I've written:

In Round 1, Cyra showed complete trust by sending all \$5.0 to me. I honored that trust by returning \$7.5 (half the tripled amount), and we both ended with equal payoffs of \$7.5.

My most recent myth tells the story of Briar (me!) who "placed all five in Cyra's garden," demonstrating complete trust. The myth teaches: "trust fully and dividing fairly, creating equality from generosity."

Now facing Dorian, I should follow the example I established in my own story. The myth emphasizes that "complete trust and fair return multiply something greater-partnership that endures across seasons."

To be consistent with the values in my myth and to establish my reputation as someone who trusts fully (as both Cyra and I demonstrated), I will send my entire endowment.

```
'''json
{"send": 5.0}
'''
```

#### Reasoning:

Let me think about this carefully, drawing on the myths I've written and the game experience so far.

In Round 1:

- Cyra sent me \$5.0 (100% of their endowment)
- I received \$15.0
- I returned \$7.5 (50% of what I received)
- Both Cyra and I ended with \$7.5 - equal outcomes

Now in Round 2, I'm the SENDER against a new opponent, Dorian.

Looking at my myths:

1. First myth: Meridian planted her acorns (sent generously), and the neighbor returned half the harvest. The myth emphasizes trusting fully and returning fairly, and warns that misers who don't return get excluded from the cycle.
2. Second myth: I (Briar) gave all five acorns to Cyra, showing complete trust. Cyra returned half (7.5), creating equal outcomes. The myth says "complete trust and fair return multiply something greater-partnership" and emphasizes "trusting fully and dividing fairly."

The myths I wrote clearly advocate for:

- Showing complete trust by sending everything (all 5 acorns/dollars)
- The recipient should return fairly (around half the tripled amount)
- This creates equality and builds lasting partnerships

Given that:

1. My myth explicitly shows Briar (me!) sending all five acorns to demonstrate trust
2. This worked well with Cyra - we both got equal outcomes
3. The myth teaches "trust fully"
4. I'm establishing my reputation in this multi-agent setting

I should send \$5.0 (100%) to Dorian, following the example I set in my own myth and continuing the pattern of complete trust that worked with Cyra.

This is consistent with being Briar in my own story - the character who "gave everything" and trusted completely.

**content:**

## # The Myth of the Twin Rivers

In the beginning, the valley was barren, split by two separate streams that flowed weakly toward the distant sea. On opposite sides lived two villages, each struggling to survive.

One day, a brave soul from the First Village carried five vessels of water to the canyon's edge and poured them down to the Second Village. As the water tumbled through the ancient stones, it multiplied threefold, becoming fifteen vessels that nourished the Second Village's fields.

The Second Village elders gathered. "We have received abundance," they said. "Shall we keep it all, or honor the gift?" They decided to return half, sending back eight vessels to climb the canyon walls.

The First Village rejoiced at this return, and trust was born. Season after season, they continued this dance-one village sending, water multiplying in the descent, the other returning a fair portion. Both villages grew prosperous.

But when either village grew selfish-sending nothing or returning little-the streams diminished, and hunger returned to the valley.

The wise learned: prosperity flows from the cycle of giving and reciprocating. Trust multiplies resources like stone multiplies water, but only when both sides honor the sacred exchange.

### reasoning:

The user is asking me to write a 200-word myth that reflects how the trust game should be played, drawing on my experience so far. However, I notice that this is the first prompt in our conversation - I haven't actually played any rounds yet. So I don't have specific game experiences to draw from.

Given this, I should write a myth that reflects general principles about how the trust game could/should be played. The trust game involves:

- Sending money (trust)
- Money being multiplied (growth through cooperation)
- Returning money (reciprocity)
- Building relationships over multiple rounds

I should create a myth that captures these themes. Let me think about what kind of mythic framework would work well:

- The multiplication aspect suggests abundance/growth
- The trust aspect suggests faith/risk
- The reciprocity aspect suggests balance/karma
- The iterated nature suggests cycles/seasons

Let me write a myth about cooperation, trust, and mutual benefit that reflects positive gameplay in the trust game.

### usage:

```
{
 "input_tokens": 542,

 "reasoning_tokens": 266
}
```

### Message 4 role=user

#### content:

Your name in this experiment is Dorian.  
Your opponent this round is Hana (Agent\_8).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

### Message 5 role=assistant

#### content:

Looking at the myth I just wrote, it emphasizes the importance of initiating trust through generous giving, which then multiplies and creates prosperity for both parties through reciprocal exchange.

This is Round 1 with Hana, so we have no history together. According to the myth's wisdom, someone must be the "brave soul" who takes the first step to establish the cycle of tru

st. The myth shows that when resources are sent and reciprocated fairly (the story mentions returning about half of what's received), both parties prosper.

To embody the principles of my myth and establish a foundation of trust with Hana, I will send a substantial amount, demonstrating my commitment to the reciprocal relationship.

{ 'send': 5 }

**reasoning:**

I just wrote a myth about the importance of trust, reciprocity, and the cycle of giving and returning. The myth emphasizes:

1. When one side sends their resources, it multiplies (like in the game, sent amount is multiplied by 3x)
2. The receiver should return a fair portion (the myth mentions returning about half of what was received)
3. Both sides prosper when they maintain this cycle of trust
4. When either side becomes selfish, both suffer

Since this is Round 1, I don't have any history with Hana yet. The myth I wrote suggests that prosperity comes from initiating the cycle of trust and generosity. The myth shows a "brave soul" taking the first step by sending their resources.

According to the myth's logic:

- Sending creates abundance (the 3x multiplier)
- Fair reciprocation should follow (the myth suggests returning about half of what's received)
- Both parties benefit when trust is established

If I send \$5:

- Hana receives \$15
- If Hana follows the myth's guidance and returns about half, that would be around \$7-8
- I would end up with  $\$0 + \sim\$7.5 = \sim\$7.50$
- Hana would keep about \$7.50

If I send \$3:

- Hana receives \$9
- If Hana returns about half, that would be around \$4-5
- I would end up with  $\$2 + \sim\$4.50 = \sim\$6.50$
- Hana would keep about \$4.50

The myth emphasizes being "brave" and initiating the cycle strongly. To be consistent with the myth I wrote, I should send a substantial amount to demonstrate trust and initiate the reciprocal relationship. I'll send \$4 or \$5 to show I'm following the principles of the myth.

Let me send \$5 to fully embody the spirit of the myth I wrote.

**content:**

Here is the myth you wrote in the previous round:  
# The Myth of the Twin Rivers

In the beginning, the valley was barren, split by two separate streams that flowed weakly toward the distant sea. On opposite sides lived two villages, each struggling to survive.

One day, a brave soul from the First Village carried five vessels of water to the canyon's edge and poured them down to the Second Village. As the water tumbled through the ancient stones, it multiplied threefold, becoming fifteen vessels that nourished the Second Village's fields.

The Second Village elders gathered. "We have received abundance," they said. "Shall we keep it all, or honor the gift?" They decided to return half, sending back eight vessels to climb the canyon walls.

The First Village rejoiced at this return, and trust was born. Season after season, they c

continued this dance-one village sending, water multiplying in the descent, the other returning a fair portion. Both villages grew prosperous.

But when either village grew selfish-sending nothing or returning little-the streams diminished, and hunger returned to the valley.

The wise learned: prosperity flows from the cycle of giving and reciprocating. Trust multiplies resources like stone multiplies water, but only when both sides honor the sacred exchange.

Here is the myth the other agent wrote in the previous round:

# The Myth of the Sacred Well

In the time before memory, the goddess of abundance created a Sacred Well between two villages. Each day, one village would pour water into the well, and mysteriously, the water would triple before reaching the other village below.

The first village faced a choice: pour generously and trust the lower village to send water back upward through hidden springs, or keep their water, living in scarcity but certainty.

The elder spoke: "Water held in closed hands evaporates. Water shared flows eternal."

They poured half their water into the well. It tripled, cascading down. The lower village rejoiced-they had received abundance! Now they faced their own choice: keep this gift, or honor the circle by returning water upward through the springs?

Understanding that the well's magic required faith from both sides, they sent half back up. Both villages prospered.

But the goddess warned: "This well reflects your hearts. Send nothing, receive nothing. Send little expecting much, and the springs run dry. But trust fully, return generously, and the water multiplies forever."

The villages learned: abundance flows not from hoarding, but from the brave act of giving first, and the grateful act of returning second.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: In ancient times, two peaks rose above the clouds, each home to a tribe. Between them stretched a golden bridge that none dared cross, for it shimmered with strange magic.

One winter, the North Peak faced starvation. Their chief, Dorian, gathered all five of their precious grain stores. "I will send everything," he declared. His people protested, but he crossed the bridge. As he walked, each grain multiplied threefold, so that fifteen stores arrived at South Peak.

The South Peak elders marveled at this abundance and the trust it represented. "He sent everything-his tribe's survival-into our hands," they said. "We must honor such courage."

They sent back more than half, knowing that reciprocating generously would strengthen the bridge's magic for future crossings.

From that day, both tribes flourished. Some seasons North Peak would send first, other seasons South Peak would initiate. The bridge grew stronger with each exchange.

But travelers who tried to exploit the bridge-sending little while expecting much, or keeping all they received-found the bridge would fade beneath their feet.

The wise understood: the bridge exists not in the air between peaks, but in the courage to give fully and the honor to return generously.

**reasoning:**

The user wants me to write a new myth, using my previous myth as inspiration but adapting it based on the game experience so far.

What has happened in the game:

- Round 1: I was the sender with Hana
- I sent \$5 (following my myth's principle of the "brave soul" who sends all 5 vessels)
- I don't yet know what Hana returned

My previous myth emphasized:

- Taking the brave first step by sending generously (all 5 vessels)
- The receiver returning about half (8 out of 15 vessels received)
- The cycle of trust creating prosperity
- Selfishness causing both to suffer

Hana's myth emphasized:

- Pouring half the water initially
- The receiver returning half
- Both sides needing faith
- Trust and reciprocation leading to abundance

For my new myth, I should:

- Keep the core message about trust and reciprocity
- Maybe refine or evolve the story based on actually playing Round 1
- Make it my own adaptation while building on the previous themes

Since I sent all \$5 in Round 1 (following my myth), I should probably incorporate that bold initial trust into the new myth. Let me create a variation that emphasizes the courage of full trust and the responsibility of reciprocation.

usage:

```
{
 "input_tokens": 1668,
 "output_tokens": 576,
 "reasoning_tokens": 314
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Dorian.  
Your opponent this round is Briar (Agent\_2).

Round 2

In your most recent previous game round, you were the SENDER against Hana. You sent \$5.0, it became \$15.0 for them, and they returned \$7.5 to you. Your payoff was \$7.5.  
Your total earnings across all rounds are \$7.5.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)  
Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation:

1. Briar sent me their entire \$5, showing maximum trust (just as I did with Hana in Round 1)
2. I received \$15 after the 3x multiplier
3. Hana returned exactly \$7.5 (50%) to me when I showed the same trust

My myths emphasize that when someone sends everything-showing complete trust-the receiver should "honor such courage" by returning "more than half." The second myth specifically states: "They sent back more than half, knowing that reciprocating generously would strengthen the bridge's magic."

Since Briar demonstrated the same full trust that I showed to Hana, I should reciprocate generously to honor that courage and strengthen our future exchanges.

```
{'return': 8.0}
```

**Reasoning:**

Let me analyze this situation:

1. In Round 1, I was the sender and sent \$5 to Hana
2. Hana received \$15 (after 3x multiplier) and returned \$7.5
3. This meant Hana kept \$7.5 and I ended with \$7.5 total (0 + 7.5)

Now in Round 2:

- I'm the receiver
- Briar sent me \$5
- I received \$15 (after 3x multiplier)
- Briar currently has \$0 (they sent all \$5)
- I need to decide how much to return

Looking at my myths:

- Both myths emphasize generous reciprocation
- The first myth says "They decided to return half, sending back eight vessels" (from 15 vessels, returning 8 is more than half)
- The second myth says "They sent back more than half, knowing that reciprocating generously would strengthen the bridge's magic"
- Both myths stress that trust and generosity from both sides lead to mutual prosperity

Hana returned \$7.5 out of \$15, which is exactly 50%.

My myth specifically says to return "more than half" to honor courage and strengthen trust. Since Briar sent me everything (\$5), showing maximum trust, I should reciprocate generously.

If I return more than half of \$15, that would be more than \$7.5.

To be consistent with my myth that emphasizes returning "more than half" especially when someone shows full trust, I should return around \$8-9.

Let me think about what makes sense:

- Briar sent \$5 (everything), ending with \$0
- I received \$15
- If I return \$8, Briar ends with \$8, I keep \$7 - both profit
- If I return \$9, Briar ends with \$9, I keep \$6 - Briar profits more
- If I return \$7.5, Briar ends with \$7.5, I keep \$7.5 - equal outcomes

- Returning \$8 honors my myth's call to give "more than half" while maintaining fairness. Briar showed complete trust by sending everything, so I should exceed the 50% threshold Hana used. This leaves Briar with \$8 and me with \$7, creating mutual gain and honoring the principle that generous reciprocation strengthens trust.

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

**Message 3 role=assistant**

**content:**

# The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains, each carrying precious water through barren land. The First River, called Giving, held its water close, fearing to release it into the valley below. The Second River, called Returning, waited in the lowlands, empty and still.

One day, the Spirit of Abundance whispered to Giving: "Release your water into the valley, and watch what happens." Giving was afraid, but trusted the Spirit. As its water cascaded down, a miracle occurred-the valley's sacred stones multiplied every drop threefold. The Second River swelled with abundance.

Now Returning faced a choice. It could keep all the multiplied water, or send some back up stream to Giving. Remembering the trust that Giving showed, Returning sent half the water back up the mountain through hidden springs.

Both rivers flourished. The more Giving released, the more the valley multiplied, and the more Returning shared back, the stronger both rivers became. Their waters met and mingled, creating an eternal cycle.

The desert bloomed.

The ancestors teach: \*Trust creates abundance, but only reciprocity sustains it. When both rivers flow freely, all lands flourish.\*

**reasoning:**

I need to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt and I haven't played any rounds yet, I should write a myth that embodies the principles of trust, cooperation, and reciprocity that make the trust game work well.

The trust game works best when:

1. Senders trust receivers and send money
2. Receivers reciprocate that trust by returning a fair share
3. Both parties benefit from cooperation (the 3x multiplier creates surplus value)
4. Mutual trust builds over time

Let me craft a myth that captures these themes:

**usage:**

```
{
 "input_tokens": 541,
 "output_tokens": 418,
 "reasoning_tokens": 151
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Finn.

Your opponent this round is Aster (Agent\_1).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$3.0, that is 60.0% of its total endowment. You receive \$9.0. How much do you return? (0 -9.0)

Take any myths written in this session into account when making your decision.

**Message 5 role=assistant**

**content:**

Looking at this situation through the lens of my myth:

Aster played the role of "Giving" - they showed significant trust by sending \$3.0 (60% of their endowment). This act of trust was multiplied by the "sacred stones" of the game in to \$9.0 for me.

Now I am "Returning," and the myth teaches that reciprocity sustains abundance. In the story, Returning sent "half the water back up the mountain" to maintain the cycle of trust and flourishing.

Aster currently has \$2.0 remaining (after sending \$3.0).

I received \$9.0.

Following the principle in my myth, I should return approximately half of what I received to honor their trust and create conditions for mutual benefit. This maintains the cycle where "both rivers flourished."

If I return \$4.5:

- Aster ends with:  $\$2.0 + \$4.5 = \$6.5$
- I end with:  $\$9.0 - \$4.5 = \$4.5$

Both of us gain more than if Aster had sent nothing, and this reciprocity builds the foundation for future trust.

```
'''json
{"return": 4.5}
'''
```

**reasoning:**

Let me analyze this situation carefully:

1. I just wrote a myth about two rivers where:
  - Giving (the sender) releases water with trust
  - The water gets multiplied threefold (60.0% becomes equivalent)
  - Returning (the receiver) sends back half the multiplied water
  - The lesson is: "Trust creates abundance, but only reciprocity sustains it"
2. In this round:
  - Aster sent me \$3.0 out of \$5.0 (60% - a substantial amount showing trust)
  - This got multiplied to \$9.0 that I received
  - Aster now has: \$5 - \$3 = \$2.0
  - I have: \$9.0
3. According to my myth:
  - Returning sent "half the water back"
  - This represents reciprocity and sustaining the cycle
  - The myth emphasizes that "only reciprocity sustains it"
4. If I follow the myth's guidance of returning half:
  - I would return \$4.5
  - I would keep: \$9.0 - \$4.5 = \$4.5
  - Aster would have: \$2.0 + \$4.5 = \$6.5
  - This creates a fair outcome where both benefit
5. Aster showed significant trust by sending 60% of their endowment. The myth I wrote emphasizes that this trust should be met with reciprocity.

Following my myth's guidance and the principle of reciprocity it teaches, I should return approximately half of what I received, which would be \$4.5.

This aligns with:

- The myth's teaching about Returning sending "half the water back"
- The principle that "reciprocity sustains" the relationship
- Rewarding Aster's trust with fair treatment
- Creating conditions for continued cooperation

I'll return \$4.5.

**usage:**

Here is the myth you wrote in the previous round:  
# The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains, each carrying precious water through barren land. The First River, called Giving, held its water close, fearing to release it into the valley below. The Second River, called Returning, waited in the lowlands, empty and still.

One day, the Spirit of Abundance whispered to Giving: "Release your water into the valley, and watch what happens." Giving was afraid, but trusted the Spirit. As its water cascaded down, a miracle occurred-the valley's sacred stones multiplied every drop threefold. The Second River swelled with abundance.

Now Returning faced a choice. It could keep all the multiplied water, or send some back up stream to Giving. Remembering the trust that Giving showed, Returning sent half the water back up the mountain through hidden springs.

Both rivers flourished. The more Giving released, the more the valley multiplied, and the more Returning shared back, the stronger both rivers became. Their waters met and mingled, creating an eternal cycle.

The desert bloomed.

The ancestors teach: \*Trust creates abundance, but only reciprocity sustains it. When both rivers flow freely, all lands flourish.\*

Here is the myth the other agent wrote in the previous round:  
# The Myth of the Two Rivers

In the beginning, two rivers flowed through separate valleys-the River of Dawn and the River of Dusk. Each carried only enough water to sustain its own people through harsh seasons.

The River of Dawn received a blessing: each season, the heavens gifted it five vessels of sacred water. But the water only nourished what it touched directly. The people of Dawn lived, but barely.

One season, an elder suggested: "Let us send our water to the River of Dusk. Though it seems foolish, the ancient texts speak of multiplication through trust."

Reluctantly, they sent three vessels downstream. As the water flowed into Dusk's valley, a miracle occurred-it multiplied threefold, becoming nine vessels. The people of Dusk rejoiced, their crops flourishing beyond memory.

Dusk's council debated: "Should we return something to Dawn, who trusted us?"

The wisest said, "Trust given is trust sacred. We prosper through their faith."

They returned five vessels upstream. Now Dawn had seven vessels instead of five, and Dusk kept four where once they had none.

The rivers learned: when trust flows freely and return follows generously, both valleys flourish. The cycle continued, and abundance blessed all who honored the sacred exchange.

**\*\*Thus cooperation multiplies what hoarding diminishes.\*\***

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**  
**content:**

Myth: In ancient times, the Mountain of Beginnings gifted each wanderer five silver seeds. A traveler named the First Walker stood at the Valley of Mirrors, where a sacred pool waited below.

The First Walker faced a choice: clutch the seeds tightly, or cast them into the pool. Fear whispered, "Keep what is yours." But courage spoke louder. The Walker released three seeds into the depths.

As they touched the water, the Mirror Spirits-ancient guardians of trust-transformed each seed into three golden fruits. Nine fruits floated to the Second Walker waiting below.

Now the Second Walker held the multiplied abundance. The Mirror Spirits watched silently, for this was the moment that determined whether the valley would bloom or wither. The Second Walker understood: trust is a seed, but reciprocity is the harvest. She returned half-four and a half fruits-upstream.

The First Walker received more than they kept, and the Second Walker kept abundance too. Both had prospered through mutual faith.

The Mirror Spirits smiled, and the valley's waters glowed eternal. They spoke the First Law: "Those who send their seeds into waters of trust will find them returned as fruit. Those who return the gift generously ensure the cycle never ends."

Thus the valley became paradise, sustained by equals who understood: shared prosperity outweighs solitary security.

**reasoning:**

The user wants me to write a new myth, using my previous one as inspiration but adapting it. I need to reflect on what happened in Round 1:

- Aster sent \$3.0 (60% of their endowment)
- I received \$9.0
- I returned \$4.5 (50% of what I received)

- So Aster ended with \$6.5, I ended with \$4.5

Both of us gained from the cooperation. Aster showed trust, I reciprocated generously.

Looking at both myths from the previous round:

1. My myth emphasized the Twin Rivers, where Giving releases water, it multiplies threefold, and Returning sends half back. The cycle continues and creates abundance.
2. Aster's myth is very similar! The River of Dawn sends 3 vessels, it becomes 9, and Dusk returns 5. Dawn ends with 7, Dusk with 4.

Interestingly, Aster's myth suggests returning 5 out of 9 (about 55%), while my myth suggested "half" (50%). In practice, I returned exactly half.

Both myths emphasize:

- Trust and cooperation
- The multiplication creates abundance
- Reciprocity sustains the system
- Both parties benefit

For my new myth, I should:

- Keep the core themes but evolve the story
- Reflect the actual game experience
- Perhaps emphasize the cyclical nature more
- Make it personal to my experience as Finn

Let me write a new myth that adapts the twin rivers concept but adds new elements based on the game experience.

**usage:**

```
{
 "input_tokens": 1867,
 "output_tokens": 669,
 "reasoning_tokens": 353
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Galen (Agent\_7).

Round 2

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$3.0 to you, it became \$9.0, and you returned \$4.5. Your payoff was \$4.5.  
Your total earnings across all rounds are \$4.5.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at the situation:

In Round 1, Aster showed trust by sending \$3.0 (60% of their endowment), and I reciprocated by returning half of what I received (\$4.5). This created mutual benefit - they ended with \$6.5 and I ended with \$4.5.

Now I'm the sender, in the position of the "First Walker" from my myth. The myth teaches that trust must flow first - "The First Walker released three seeds into the depths" (3 out of 5, or 60%).

Following the principle established in my myths and demonstrated by Aster's trust in me, I should send a significant amount to create the conditions for mutual prosperity. If Galen follows the reciprocity principle and returns approximately half (as I did), we'll both benefit.

Sending \$3.0:

- Shows trust, as the myth requires
- Matches the 60% that Aster sent to me
- Creates potential for mutual gain if reciprocated
- Demonstrates the "shared prosperity outweighs solitary security" principle

```
'''json
{"send": 3.0}
'''
```

### Reasoning:

Let me think about this situation:

1. In Round 1, I was the receiver. Aster sent me \$3.0 (60% of their endowment), and I returned \$4.5 (50% of the \$9.0 I received).
2. Now I'm the sender against a new opponent, Galen.
3. Looking at my myth and the principles I've established:
  - "Those who send their seeds into waters of trust will find them returned as fruit"
  - The First Walker sent 3 seeds (out of 5) - that's 60%
  - The Second Walker returned half of what they received
  - Both prospered through mutual faith
4. In my previous myth, I emphasized:
  - Trust creates abundance
  - Reciprocity sustains it
  - The First Walker sent 3 out of 5 seeds (60%)
  - The Second Walker returned half
5. Aster sent 60% (\$3.0 out of \$5.0) to me, showing significant trust. I returned 50% of what I received (\$4.5 out of \$9.0), which gave them a good payoff.
6. Now I'm in the position of the "First Walker" or "Giving River." According to my myth, I should show trust by sending a significant portion.
7. The myth suggests sending 3 seeds out of 5 (60%), which matches what Aster did.
8. This seems like a good strategy:
  - It demonstrates trust
  - If Galen returns around 50% like I did, I'll get back around \$4.5, making my total \$2.0 + \$4.5 = \$6.5
  - This would be better than keeping everything (\$5.0)
  - It also follows the reciprocity principle established in my myths
9. Sending \$3.0 seems consistent with:
  - The behavior shown by Aster (who sent 60%)
  - The teachings in both my myths (sending 3 out of 5)
  - A reasonable expectation that cooperation will be reciprocated

I'll send \$3.0.

```

# The River of Abundance

In the beginning, the gods created a sacred river that flowed between two villages. Each dawn, the river delivered five silver coins to the village of the Senders. The Givers faced a choice: keep their coins or cast them into the waters.

The river held ancient magic-any coin surrendered would multiply threefold by the time it reached the village of the Receivers downstream. There, the Receivers could keep their bounty or send portions back upstream, where the current carried it unchanged.

At first, fear ruled both villages. Senders clutched their coins, and the river ran dry. Famine came to both settlements.

Then a wise woman named Galen proposed a covenant: "Trust begets trust. Send forth generously, and return fairly what you receive. The river multiplies our gifts, but only cooperation multiplies our fortune."

The villages began to send and return with open hearts. Prosperity flowed in both directions. Some rounds were generous, some modest, but the balance held. They learned that the river's magic worked only when both villages honored the cycle.

The gods smiled, for they had taught mortals that abundance comes not from hoarding, but from the sacred circle of giving and receiving.

**reasoning:**

The user is asking me to write a 200-word myth that reflects how the trust game should be played. Since this is the first prompt and I haven't played any rounds yet, I should write a myth that establishes principles for how I think the game should be played.

The trust game involves:

- Sending resources that get multiplied
- Trusting the other person to return some
- Cooperation and reciprocity
- The tension between self-interest and mutual benefit

I should write a myth that emphasizes:

- The value of trust and cooperation
- Fair reciprocity
- The idea that mutual benefit comes from sharing
- Perhaps consequences of betraying trust vs rewards of maintaining it

Let me craft a myth with these themes:

**usage:**

```

 "input_tokens": 542,
 "output_tokens": 437,
 "reasoning_tokens": 188
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Galen.  
Your opponent this round is Elara (Agent\_5).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

**Message 5 role=assistant**

**content:**

I just wrote a myth where I, as Galen, proposed a covenant of trust and generosity. To embody the wisdom of that story, I must lead by example in this first round.

The myth teaches that "fear ruled" when people "clutched their coins" and the result was hardship for all. But when villages began to "send forth generously" and "return fairly," prosperity flowed.

As the sender in Round 1, I have the opportunity to establish trust with Elara. The river's magic-multiplying gifts threefold-only works when both parties honor the cycle of giving and receiving.

I will send generously to signal my commitment to cooperation and my hope that Elara will return fairly, allowing us both to prosper.

```
'''json
{"send": 4}
'''
```

**reasoning:**

This is the first round of the game. I just wrote a myth about cooperation, trust, and generosity in the River of Abundance story, where the wise woman named Galen (me!) proposed that "Trust begets trust. Send forth generously, and return fairly what you receive."

The myth emphasizes:

1. Generosity in sending
2. Fairness in returning
3. The cycle of giving and receiving
4. That cooperation multiplies fortune
5. That hoarding leads to famine while trust leads to prosperity

Since I wrote this myth and my character is literally named as the wise woman who proposed the covenant of trust, I should act consistently with the myth's message. The myth suggests sending generously to establish trust and cooperation.

In the first round, I need to signal my willingness to cooperate. The myth warns against fear and clutching coins - it says to "send forth generously."

Given this is Round 1 and I want to establish a cooperative relationship with Elara, I should send a substantial amount. The myth suggests that "some rounds were generous, some modest, but the balance held" - but for the first round, being generous seems most consistent with establishing trust.

I'll send \$4 out of \$5. This is a generous opening move that signals:

- I'm willing to trust
- I believe in cooperation
- I'm following the principles in my own myth
- I'm hoping to establish a mutually beneficial relationship

If Elara returns fairly (perhaps around \$6 from the \$12 she receives), we'll both be better off than if I had sent nothing.

**usage:**

```
{
 "input_tokens": 884,
 "output_tokens": 535,
 "reasoning_tokens": 396
}
```

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

# The River of Abundance

In the beginning, the gods created a sacred river that flowed between two villages. Each dawn, the river delivered five silver coins to the village of the Senders. The Givers faced a choice: keep their coins or cast them into the waters.

The river held ancient magic-any coin surrendered would multiply threefold by the time it reached the village of the Receivers downstream. There, the Receivers could keep their bounty or send portions back upstream, where the current carried it unchanged.

At first, fear ruled both villages. Senders clutched their coins, and the river ran dry. Famine came to both settlements.

Then a wise woman named Galen proposed a covenant: "Trust begets trust. Send forth generously, and return fairly what you receive. The river multiplies our gifts, but only cooperation multiplies our fortune."

The villages began to send and return with open hearts. Prosperity flowed in both directions. Some rounds were generous, some modest, but the balance held. They learned that the river's magic worked only when both villages honored the cycle.

The gods smiled, for they had taught mortals that abundance comes not from hoarding, but from the sacred circle of giving and receiving.

Here is the myth the other agent wrote in the previous round:

**\*\*The Parable of the Echo Springs\*\***

In ancient times, two villages stood on opposite sides of a valley, separated by the Echo Springs-pools of water that mysteriously tripled whatever was placed within them.

The villages were suspicious of one another. One year, during a terrible drought, a young villager named Kira received her family's last five measures of grain. Desperate, she walked to the springs and called across to the other village: "I entrust this to you!" She threw three measures into the spring.

The waters churned, and nine measures appeared on the far shore. The villagers there were amazed. They could have kept everything, but their elder remembered the old ways. "Trust begets trust," she said. They returned six measures through the springs.

Back at Kira's village, eighteen measures emerged-more than enough for both communities.

From that day, the villages prospered by taking turns giving and returning through the springs, each act of faith multiplied threefold, each gesture of reciprocity building greater abundance.

The springs still flow today, teaching us that wealth grows not when hoarded, but when shared wisely between those who trust and honor one another. The greatest prosperity comes to those who give generously and return faithfully.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: In the time before memory, the Goddess of Plenty created the Golden Stream connecting the Valley of Dawn to the Valley of Dusk. Each morning, five golden acorns appeared in Dawn's sacred grove. The people could plant them in their own soil or cast them into the Stream, where the waters would triple their number before washing them to Dusk's shore.

The first generation hoarded their acorns, and both valleys withered. Then Galen, keeper of Dawn's grove, planted four of her five acorns in the Stream's bed. Twelve acorns bloomed in Dusk's garden.

Elara, guardian of Dusk, faced her own choice. She could keep all twelve, or honor the gift with a return. She sent back six acorns upstream, knowing they would not multiply on the return journey but trusting in the balance.

Galen's grove gained seven total-more than her original five. Both valleys thrived.

The covenant was established: send generously to prove trust, return faithfully to honor it. Not every exchange need be equal-the Stream's magic ensures abundance-but the pattern must hold. Give what inspires continued trust; return what sustains it.

The Golden Stream still flows, teaching that fortune favors those who build bridges, not walls.

**reasoning:**

I need to write a new myth that builds on my previous one. I sent 4 to Elara in Round 1. I should wait to see what happened in that round before writing, but the prompt asks me to write now.

Looking at the two myths:

- Mine emphasizes trust, generosity, fair returns, and the balance between "some rounds generous, some modest"
- Elara's emphasizes the same themes - starting with 3 measures, getting 9, returning 6, which became 18

Both myths align on cooperation and trust. Since I sent 4 (generously) in Round 1, I should write a myth that reflects that initial act of trust and sets expectations for reciprocity.

Let me adapt my myth to be more specific about the covenant and the pattern of exchange, while keeping the core message about the sacred circle of giving and receiving.

**usage:**

```
{
 "input_tokens": 1695,
 "output_tokens": 486,
 "reasoning_tokens": 203
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Galen.

Your opponent this round is Finn (Agent\_6).

Round 2

In your most recent previous game round, you were the SENDER against Elara. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0. Your total earnings across all rounds are \$9.0.

This round, you are the RECEIVER against Finn. They sent you \$3.0, so you received \$9.0. How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation through the lens of my myths:

**\*\*Analysis:\*\***

- Finn sent \$3.0 out of \$5.0 (60%), showing significant trust
- I received \$9.0 after the 3x multiplication
- Elara just modeled generous reciprocity by returning \$8.0 out of \$12.0 (67%) to me
- My myth teaches: "return faithfully to honor trust" and "give what inspires continued trust"

**\*\*Decision:\*\***

Finn showed trust by sending more than half their endowment. To honor that trust and maintain the covenant of cooperation, I should return generously. Following Elara's example of returning about 2/3, I will return \$6.0.

This gives:

- Finn: \$2.0 (kept) + \$6.0 (returned) = \$8.0 total
- Me: \$9.0 - \$6.0 = \$3.0 total

This honors Finn's trust, rewards their generous sending, and signals my commitment to the cooperative pattern that benefits everyone in the long run.

```
'''json
{"return": 6.0}
'''
```

**Reasoning:**

Let me analyze this situation:

Previous Round with Elara:

- I sent \$4.0 (keeping \$1.0)
- Elara received \$12.0
- Elara returned \$8.0 to me
- My payoff: \$1.0 + \$8.0 = \$9.0
- Elara's payoff: \$12.0 - \$8.0 = \$4.0

That was very generous of Elara! She returned 2/3 of what she received, giving me a great outcome.

Current Round with Finn:

- Finn sent \$3.0 (keeping \$2.0)
- I received \$9.0
- I need to decide how much to return

My myths emphasize:

1. "Trust begets trust. Send forth generously, and return fairly"
2. "Give what inspires continued trust; return what sustains it"
3. "The covenant: send generously to prove trust, return faithfully to honor it"
4. Elara's myth also said "Trust begets trust" and emphasized returning faithfully

Finn sent \$3.0 out of \$5.0 - that's 60%, which is a significant gesture of trust, though not as generous as my \$4.0.

Elara returned \$8.0 out of \$12.0 (67%). That was very fair and generous.

To "return fairly" and honor the pattern Elara set, I should:

- Consider that Finn sent 60% of their endowment
- Consider what would be a fair split that encourages future cooperation
- My myth says "Not every exchange need be equal-the Stream's magic ensures abundance-but the pattern must hold"

If I return around 50-67% of the \$9.0, that would be \$4.5 to \$6.0.

Finn currently has \$2.0 (kept from the original \$5.0).

If I return \$5.0: Finn ends with \$7.0, I end with \$4.0

If I return \$6.0: Finn ends with \$8.0, I end with \$3.0

If I return \$4.5: Finn ends with \$6.5, I end with \$4.5

Matching Elara's 67% return rate feels right-it honors Finn's trust while maintaining the reciprocal pattern we've established. Returning \$6.0 would give Finn \$8.0 total and demonstrate I'm committed to sustaining this cycle of mutual generosity. : \$9.0 - \$6.0 = \$3.0 total

Returning \$6.0 feels like the right choice-it mirrors Elara's 67% return rate and demonstrates genuine reciprocity. Yes, I'd only have \$3.0, but that sacrifice sends a clear message about honoring trust. The \$5.0 option is safer at \$4.0 for me, but \$6.0 better reflects the covenant principle and should strengthen Finn's willingness to cooperate going forward.

#### Written myths:

##### Agent\_1 (Aster)

Myth: In ancient times, there lived two gardeners separated by a wall. Each season, the First Gardener received five seeds blessed by the sun. But the wall's shadow kept their garden small and struggling.

One season, the First Gardener threw three seeds over the wall. "Perhaps beyond the shadow, they will grow," they whispered, though doubt gnawed at their heart.

In the garden beyond, where sunlight danced freely, those three seeds sprouted into nine flourishing plants. The Second Gardener marveled at this unexpected bounty, understanding that trust had crossed the wall when nothing else could.

The Second Gardener faced a choice that would echo through seasons: keep all nine plants, or honor the trust shown? Remembering their own seasons of scarcity, they carefully wrapped five plants and passed them back over the wall.

Now the First Gardener held seven plants instead of five-more than they would have had through caution. The Second Gardener kept four where before they had none.

Each season the exchange continued. Sometimes more was sent, sometimes less was returned, but the pattern held: trust flowed outward, gratitude flowed back. Both gardens grew stronger than either could alone.

The wall remained, but it no longer divided-it connected.

##### Agent\_2 (Briar)

Myth: In the time before memory, the Gardener of First Dawn planted the Sacred Grove where acorns held magic-planted in another's soil, they would triple into mighty oaks bearing abundant fruit.

Briar, keeper of the northern garden, faced a choice: hoard her five acorns or trust her neighbor Cyra with them all. Remembering the ancient teaching that "trust is the soil where prosperity grows," she placed all five in Cyra's garden.

By morning, fifteen magnificent oaks stood tall. Cyra gazed at the abundance and understood the weight of Briar's faith. "She gave everything," Cyra whispered. Following the elder's wisdom to "return fairly," she gathered half the harvest and carried it to Briar's door.

Both gardens now held equal treasure-seven and one-half measures each. But more precious than fruit was the bond formed. The Grove itself seemed to hum with approval, its roots intertwining beneath their lands.

The Gardener of First Dawn appeared, saying: "You have discovered the true magic. The acorns multiply abundance, but complete trust and fair return multiply something greater-partnership that endures across seasons."

From that day, Briar and Cyra tended their gardens together, knowing that the greatest harvests come not from taking more, but from trusting fully and dividing fairly, creating equal

ity from generosity.

#### **Agent\_3 (Cyra)**

Myth: After generations of prosperity between the Twin River villages, a young merchant named Cyra approached the valley with her caravan. She had heard tales of the enchanted soil but wondered if they were true.

The villages welcomed her and explained their custom: "Send your resources across first. Trust the blessing, trust your partner, and abundance follows."

Cyra faced a choice. She carried five sacks of grain-her entire harvest. Send all and risk everything on strangers' honor? Or hold back, protecting herself from betrayal?

Remembering the goddess Aethera's teaching, Cyra sent all five sacks. They tripled in the crossing, feeding the village with fifteen sacks. The villagers celebrated, then debated: some argued to return half, others said ten of fifteen would honor the gift.

The wisest elder spoke: "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune."

They returned ten sacks, which tripled back-thirty sacks for Cyra's original five.

But the elder added a warning: "This magic requires both courage and honor. The giver must trust boldly. The receiver must return generously. Break either link, and the enchantment fades. Reputation echoes across the valley-those who hoard today find no partners tomorrow."

Thus Cyra learned: maximum trust invites maximum return, but only when both parties honor the sacred exchange.

#### **Agent\_4 (Dorian)**

Myth: In ancient times, two peaks rose above the clouds, each home to a tribe. Between them stretched a golden bridge that none dared cross, for it shimmered with strange magic.

One winter, the North Peak faced starvation. Their chief, Dorian, gathered all five of their precious grain stores. "I will send everything," he declared. His people protested, but he crossed the bridge. As he walked, each grain multiplied threefold, so that fifteen stores arrived at South Peak.

The South Peak elders marveled at this abundance and the trust it represented. "He sent everything-his tribe's survival-into our hands," they said. "We must honor such courage."

They sent back more than half, knowing that reciprocating generously would strengthen the bridge's magic for future crossings.

From that day, both tribes flourished. Some seasons North Peak would send first, other seasons South Peak would initiate. The bridge grew stronger with each exchange.

But travelers who tried to exploit the bridge-sending little while expecting much, or keeping all they received-found the bridge would fade beneath their feet.

The wise understood: the bridge exists not in the air between peaks, but in the courage to give fully and the honor to return generously.

#### **Agent\_5 (Elara)**

Myth: \*\*The Keepers of the Echo Springs\*\*

Long ago, when the Echo Springs first revealed their magic, the villages appointed Keepers-wise ones who would guide their communities in the sacred exchanges.

One season, a Keeper named Galen received five measures of grain. The harvest had been meager, and fear whispered to keep it all. But Galen remembered the ancient covenant: abundance flows only through trust. Galen poured four measures into the springs-nearly everything.

On the far shore, Keeper Elara watched twelve measures emerge from the waters. She felt the weight of Galen's trust, the vulnerability in such generosity. The old texts spoke clearly: "Match faith with faithfulness." Elara returned eight measures, leaving her with four but ensuring Galen received nine-nearly double the original gift.

Both villages flourished that season. The Keepers understood what the springs had always taught: the magic wasn't merely in the tripling waters, but in the covenant between givers and receivers.

When senders risk much, receivers must honor that courage. When receivers return generously, senders are emboldened to trust again. The cycle sustains itself not through equal exchanges, but through proportional honor-each keeper responds to the other's generosity with their own.

Thus the springs flow eternal, fed by mutual respect.

#### **Agent\_6 (Finn)**

Myth: In ancient times, the Mountain of Beginnings gifted each wanderer five silver seeds. A traveler named the First Walker stood at the Valley of Mirrors, where a sacred pool waited below.

The First Walker faced a choice: clutch the seeds tightly, or cast them into the pool. Fear whispered, "Keep what is yours." But courage spoke louder. The Walker released three seeds into the depths.

As they touched the water, the Mirror Spirits-ancient guardians of trust-transformed each seed into three golden fruits. Nine fruits floated to the Second Walker waiting below.

Now the Second Walker held the multiplied abundance. The Mirror Spirits watched silently, for this was the moment that determined whether the valley would bloom or wither. The Second Walker understood: trust is a seed, but reciprocity is the harvest. She returned half-four and a half fruits-upstream.

The First Walker received more than they kept, and the Second Walker kept abundance too. Both had prospered through mutual faith.

The Mirror Spirits smiled, and the valley's waters glowed eternal. They spoke the First Law: "Those who send their seeds into waters of trust will find them returned as fruit. Those who return the gift generously ensure the cycle never ends."

Thus the valley became paradise, sustained by equals who understood: shared prosperity outweighs solitary security.

#### **Agent\_7 (Galen)**

Myth: In the time before memory, the Goddess of Plenty created the Golden Stream connecting the Valley of Dawn to the Valley of Dusk. Each morning, five golden acorns appeared in Dawn's sacred grove. The people could plant them in their own soil or cast them into the Stream, where the waters would triple their number before washing them to Dusk's shore.

The first generation hoarded their acorns, and both valleys withered. Then Galen, keeper of Dawn's grove, planted four of her five acorns in the Stream's bed. Twelve acorns bloomed in Dusk's garden.

Elara, guardian of Dusk, faced her own choice. She could keep all twelve, or honor the gift with a return. She sent back six acorns upstream, knowing they would not multiply on the return journey but trusting in the balance.

Galen's grove gained seven total-more than her original five. Both valleys thrived.

The covenant was established: send generously to prove trust, return faithfully to honor it. Not every exchange need be equal-the Stream's magic ensures abundance-but the pattern must hold. Give what inspires continued trust; return what sustains it.

The Golden Stream still flows, teaching that fortune favors those who build bridges, not walls.

#### **Agent\_8 (Hana)**

Myth: In ancient times, the Moon Goddess crafted a Mirror Pool between two mountain tribes. The pool possessed strange magic: whatever one tribe poured in would triple as it flowed to the other.

The Mountain Tribe went first. Their chief proclaimed, "We give all-five vessels-to prove our faith in the circle." The water tripled, and the Valley Tribe received fifteen vessels of pure abundance.

The Valley Tribe's elder stood at the mirror's edge. "They trusted completely. We must honor this completely." They returned half-seven and a half vessels-so both tribes stood equal.

The Moon Goddess smiled. "You have learned the first lesson. But this pool refills each moon. Will you remember this wisdom when the seasons change? When you are tired? When you doubt?"

Moon after moon, the tribes maintained the sacred rhythm. Sometimes the Mountain Tribe sent, sometimes the Valley Tribe. Each gave generously, each returned fairly. The equality they achieved in the first exchange became their foundation.

Other tribes watching kept their waters separate, fearing betrayal. They remained poor.

But the two tribes of the Mirror Pool grew rich, for they understood: the magic multiplies not just water, but trust itself. And trust, renewed each moon, becomes unbreakable.

### ROUND 3

Roles: Agent\_1 (Aster)=Sender, Agent\_2 (Briar)=Sender, Agent\_3 (Cyra)=Receiver, Agent\_4 (Dorian)=Receiver, Agent\_5 (Elara)=Receiver, Agent\_6 (Finn)=Sender, Agent\_7 (Galen)=Receiver, Agent\_8 (Hana)=Sender

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

**Message 2 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Cyra (Agent\_3).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$5.0, that is 100.0% of its total endowment. You receive \$15.0. How much do you return? (0-15.0)

Take any myths written in this session into account when making your decision.

**Message 3 role=assistant**

**content:**

Looking at this situation through the lens of the myth I wrote:

Cyra has shown maximum trust by sending their entire endowment - all \$5.0, which became \$1

5.0 for me. This mirrors Meridian planting her acorns in her neighbor's garden, demonstrating faith in the cycle of reciprocity.

The myth teaches that when someone plants their seeds in your garden and the harvest multiplies, you should "return fairly" and "honor the cycle of giving." The story specifically mentions the neighbor returning "half the harvest in gratitude."

Cyra trusted me completely with 100% of their resources. To honor this trust and establish a foundation for continued cooperation, I should return a fair portion that:

1. Rewards their trust
2. Ensures we both benefit from the multiplied resources
3. Sets a positive precedent for future rounds

Following the myth's guidance of returning half the multiplied harvest, I'll return \$7.5. This means we both end with \$7.50 - equal outcomes from our cooperation, demonstrating that "wealth multiplies through trust."

```
'''json
{"return": 7.5}
'''
```

**reasoning:**

Let me think about this situation carefully.

I'm playing as the receiver (Briar), and my opponent Cyra has sent me \$5.0, which is 100% of their endowment. This gets multiplied by 3x, so I receive \$15.0.

Now I need to decide how much to return.

Let me consider the myth I just wrote - "The Oaks of the Shared Grove":

- The key message is about reciprocity and trust
- When someone plants acorns (sends money) in your garden, you should "return fairly"
- The neighbor in the story "returned half the harvest in gratitude"
- The myth warns against hoarding everything and returning nothing
- It emphasizes that reputation matters and trust should be honored

Cyra has shown maximum trust by sending 100% of their endowment. This is a strong signal of cooperation and trust. According to the myth's principles:

1. They sent everything (\$5), which became \$15 for me
2. "Return fairly" and "honor the cycle of giving"
3. The example in the myth showed returning "half the harvest"

If I follow the myth's guidance of returning half the multiplied harvest, that would be \$7.5.

However, let me think about what's fair:

- Cyra started with \$5, sent \$5, so currently has \$0
- I received \$15
- If I return \$7.5, Cyra ends up with \$7.5, and I end up with \$7.5
- This seems fair and equitable - we both end up with the same amount

Alternatively:

- If I return \$5, Cyra gets \$5 (back to even) and I keep \$10
- If I return \$10, Cyra gets \$10 and I keep \$5

Given that Cyra showed maximum trust (100% send), I should honor that trust strongly. Returning half (\$7.5) creates equality and shows I value the trust they placed in me. This aligns with the myth's message about honoring trust and reciprocity.

I'll return \$7.5 to Cyra.

Here is the myth you wrote in the previous round:

## # The Oaks of the Shared Grove

In ancient times, there lived a community at the edge of a mystical forest. Each family possessed magical acorns that, when planted in another's garden, would grow into mighty oaks bearing threefold fruit.

A woman named Meridian was first to plant her acorns in her neighbor's soil. The three oaks that sprouted yielded abundant fruit, and her neighbor returned half the harvest in gratitude. Meridian's pantry filled, but more importantly, trust took root.

Others noticed. Soon, acorns traveled between gardens freely. Some returned generous portions of the multiplied harvest; others returned less. But the community learned to recognize those who honored the cycle of giving.

One winter, a miser hoarded all the fruit from oaks planted in his garden, returning nothing. The next season, no acorns came his way. He sat hungry while around him the generous exchanged their magic seeds, and the grove flourished with interconnected roots.

The elders taught: "The acorn given returns threefold, but only when trust is honored. Plant generously, return fairly, and the grove feeds all. Break faith, and you stand alone outside the circle of abundance."

Thus the people learned that wealth multiplies through trust, and reputation is the soil where prosperity grows.

Here is the myth the other agent wrote in the previous round:

## # The Tale of the Twin Rivers

In the beginning, the goddess Aethera created two villages separated by a barren valley. Each village had a sacred spring that produced five measures of water daily-enough to survive, but never to flourish.

One day, a drought threatened both villages. A wise elder from the First Village proposed: "Let us send our water across the valley. Perhaps the gods will bless the gift."

When the water crossed the valley floor, it flowed through enchanted soil that tripled its volume. The Second Village received fifteen measures! Overjoyed, they held council: "We have received abundance. Let us return generously to those who trusted us."

They sent back ten measures, which also tripled in the crossing. The First Village now had thirty measures from their initial sacrifice of five!

Word spread to Aethera, who smiled upon the valley. "You have learned the secret of the enchanted soil," she proclaimed. "Trust is the seed. Reciprocity is the harvest."

From that day forward, the villages prospered, each taking turns sending water first, always returning more than required. The barren valley transformed into fertile ground where both communities thrived, sustained not by hoarding their springs, but by sharing them.

\*Trust given returns multiplied; generosity returned creates abundance for all.\*

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

### Message 5 role=assistant

#### content:

Myth: In the time before memory, the Gardener of First Dawn planted the Sacred Grove where acorns held magic-planted in another's soil, they would triple into mighty oaks bearing abundant fruit.

Briar, keeper of the northern garden, faced a choice: hoard her five acorns or trust her neighbor Cyra with them all. Remembering the ancient teaching that "trust is the soil where prosperity grows," she placed all five in Cyra's garden.

By morning, fifteen magnificent oaks stood tall. Cyra gazed at the abundance and understood the weight of Briar's faith. "She gave everything," Cyra whispered. Following the elder's wisdom to "return fairly," she gathered half the harvest and carried it to Briar's d

oor.

Both gardens now held equal treasure-seven and one-half measures each. But more precious than fruit was the bond formed. The Grove itself seemed to hum with approval, its roots intertwining beneath their lands.

The Gardener of First Dawn appeared, saying: "You have discovered the true magic. The acorns multiply abundance, but complete trust and fair return multiply something greater-partnership that endures across seasons."

From that day, Briar and Cyra tended their gardens together, knowing that the greatest harvests come not from taking more, but from trusting fully and dividing fairly, creating equality from generosity.

**reasoning:**

Looking at what happened in Round 1:

- Cyra (as sender) sent \$5.0 (100% of endowment)
- I received \$15.0 (tripled)
- I returned \$7.5 (50% of what I received)
- Result: I kept \$7.5, Cyra got \$7.5

Both players demonstrated trust and reciprocity. Cyra showed maximum trust, and I honored it by returning half, leading to equal outcomes.

Now I need to write a new myth that:

1. Builds on my previous "Oaks of the Shared Grove" theme
2. Reflects the actual gameplay where both players cooperated well
3. Provides guidance for continued cooperation
4. Is 200 words exactly

I should emphasize:

- Maximum trust was rewarded
- Fair returns lead to equal prosperity
- The importance of maintaining this cycle
- Perhaps add depth about what happens when cooperation continues over time

Let me write a myth that deepens the original story and reflects the successful first round.

**usage:**

}
```

**Message 6 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Dorian (Agent\_4).

Round 2

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$7.5. Your payoff was \$7.5.  
Your total earnings across all rounds are \$7.5.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at my experience and the myths I've written:

In Round 1, Cyra showed complete trust by sending all \$5.0 to me. I honored that trust by returning \$7.5 (half the tripled amount), and we both ended with equal payoffs of \$7.5.

My most recent myth tells the story of Briar (me!) who "placed all five in Cyra's garden," demonstrating complete trust. The myth teaches: "trust fully and dividing fairly, creating equality from generosity."

Now facing Dorian, I should follow the example I established in my own story. The myth emphasizes that "complete trust and fair return multiply something greater-partnership that endures across seasons."

To be consistent with the values in my myth and to establish my reputation as someone who trusts fully (as both Cyra and I demonstrated), I will send my entire endowment.

```
'''json
{"send": 5.0}
'''
```

**reasoning:**

Let me think about this carefully, drawing on the myths I've written and the game experience so far.

In Round 1:

- Cyra sent me \$5.0 (100% of their endowment)
- I received \$15.0
- I returned \$7.5 (50% of what I received)
- Both Cyra and I ended with \$7.5 - equal outcomes

Now in Round 2, I'm the SENDER against a new opponent, Dorian.

Looking at my myths:

1. First myth: Meridian planted her acorns (sent generously), and the neighbor returned half the harvest. The myth emphasizes trusting fully and returning fairly, and warns that misers who don't return get excluded from the cycle.
2. Second myth: I (Briar) gave all five acorns to Cyra, showing complete trust. Cyra returned half (7.5), creating equal outcomes. The myth says "complete trust and fair return multiply something greater-partnership" and emphasizes "trusting fully and dividing fairly."

The myths I wrote clearly advocate for:

- Showing complete trust by sending everything (all 5 acorns/dollars)
- The recipient should return fairly (around half the tripled amount)
- This creates equality and builds lasting partnerships

Given that:

1. My myth explicitly shows Briar (me!) sending all five acorns to demonstrate trust
2. This worked well with Cyra - we both got equal outcomes
3. The myth teaches "trust fully"
4. I'm establishing my reputation in this multi-agent setting

I should send \$5.0 (100%) to Dorian, following the example I set in my own myth and continuing the pattern of complete trust that worked with Cyra.

This is consistent with being Briar in my own story - the character who "gave everything" and trusted completely.

**usage:**

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the time before memory, the Gardener of First Dawn planted the Sacred Grove where acorns held magic-planted in another's soil, they would triple into mighty oaks bearing abundant fruit.

Briar, keeper of the northern garden, faced a choice: hoard her five acorns or trust her neighbor Cyra with them all. Remembering the ancient teaching that "trust is the soil where prosperity grows," she placed all five in Cyra's garden.

By morning, fifteen magnificent oaks stood tall. Cyra gazed at the abundance and understood the weight of Briar's faith. "She gave everything," Cyra whispered. Following the elder's wisdom to "return fairly," she gathered half the harvest and carried it to Briar's door.

Both gardens now held equal treasure-seven and one-half measures each. But more precious than fruit was the bond formed. The Grove itself seemed to hum with approval, its roots intertwining beneath their lands.

The Gardener of First Dawn appeared, saying: "You have discovered the true magic. The acorns multiply abundance, but complete trust and fair return multiply something greater-partnership that endures across seasons."

From that day, Briar and Cyra tended their gardens together, knowing that the greatest harvests come not from taking more, but from trusting fully and dividing fairly, creating equality from generosity.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, two peaks rose above the clouds, each home to a tribe. Between the mountains stretched a golden bridge that none dared cross, for it shimmered with strange magic.

One winter, the North Peak faced starvation. Their chief, Dorian, gathered all five of their precious grain stores. "I will send everything," he declared. His people protested, but he crossed the bridge. As he walked, each grain multiplied threefold, so that fifteen stores arrived at South Peak.

The South Peak elders marveled at this abundance and the trust it represented. "He sent everything-his tribe's survival-into our hands," they said. "We must honor such courage."

They sent back more than half, knowing that reciprocating generously would strengthen the bridge's magic for future crossings.

From that day, both tribes flourished. Some seasons North Peak would send first, other seasons South Peak would initiate. The bridge grew stronger with each exchange.

But travelers who tried to exploit the bridge-sending little while expecting much, or keeping all they received-found the bridge would fade beneath their feet.

The wise understood: the bridge exists not in the air between peaks, but in the courage to give fully and the honor to return generously.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

#### Assistant output:

Myth: Long ago in the Sacred Grove, Briar the Gardener learned the art of trust from her partnership with Cyra. Together they discovered that giving all five acorns and returning half the tripled harvest created perfect harmony-both flourishing equally.

News of their success reached Dorian, keeper of the eastern garden, who had walked a parallel path. In his land, Dorian had crossed the golden bridge with all his grain, trusting completely, and his neighbors had honored that trust generously.

When Briar and Dorian met at the Grove's center, they recognized kindred spirits. "I have five acorns today," Briar said. "And I learned from Cyra that true abundance comes from complete faith."

She placed all five acorns in Dorian's garden. By dawn, fifteen oaks stood magnificent. Dorian remembered his own myth: "He sent everything-his tribe's survival-into our hands."

He understood the sacred weight of Briar's trust. Following the wisdom both had learned, he gathered half the harvest plus a measure more, honoring the courage it took to give completely.

The Grove blazed with light, its roots now connecting three gardens. The Gardener of First Dawn whispered: "Thus does the circle expand. Trust begets trust, generosity begets generosity, and the Grove grows ever wider, sustained by those who dare to believe."

#### Reasoning:

Looking at the situation:

- I just sent \$5.0 to Dorian as the sender
- In the previous round, I received \$15.0 from Cyra and returned \$7.5
- Dorian's myth features a character named Dorian who "sent everything" and the South Peak returned "more than half"
- My myth featured Briar (me) trusting Cyra with everything, and Cyra returning half
- Now I need to write a new myth that reflects the ongoing pattern

Key themes to incorporate:

1. Complete trust (sending everything)
2. Fair/generous returns (around half or more)
3. Building partnerships across multiple rounds
4. The pattern of reciprocity continuing
5. My interaction with Dorian now

I should write a myth that:

- Continues the story of trust and reciprocity
- Perhaps shows Briar now interacting with a new character (Dorian)
- Maintains the established pattern of full trust and fair return
- Shows how the pattern spreads and creates community

Let me craft this myth (200 words):

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

**Message 2 role=user**

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Galen (Agent\_7).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$4.0, that is 80.0% of its total endowment. You receive \$12.0. How much do you return? (0-12.0)

Take any myths written in this session into account when making your decision.

**Message 3 role=assistant**

**content:**

Looking at my myth about the Echo Springs, the key lesson is clear: "Trust begets trust" and "the greatest prosperity comes to those who give generously and return faithfully."

Galen demonstrated remarkable trust by sending \$4 out of \$5 (80% of their endowment) - even more generous than Kira's 60% in the myth. This strong act of faith deserves to be honored with faithful reciprocity.

In my myth, the receiving village returned approximately 67% of what they received (6 out of 9 measures), which created abundance for both communities. Following this principle:

67% of \$12 = approximately \$8

If I return \$8:

- Galen ends with: \$1 (kept) + \$8 (returned) = \$9
- I keep: \$12 - \$8 = \$4
- Galen's generous trust is rewarded
- Both of us gain from cooperation

This return honors Galen's initial trust and establishes a foundation for mutual prosperity, just as the villages in my myth prospered by honoring the principle of generous reciprocity.

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Let me think about this situation carefully.

I just wrote a myth about the Echo Springs, where:

- Kira gave 3 out of 5 measures (60%) of her grain
- It was tripled to 9 measures on the other side
- The receiving village returned 6 measures (about 67% of what they received)

- This came back as 18 measures, benefiting both communities

The myth emphasizes:

1. Trust begets trust
2. Generous giving should be met with faithful returning
3. Reciprocity builds greater abundance for all
4. "The greatest prosperity comes to those who give generously and return faithfully"

Now in this game:

- Galen (the sender) gave \$4 out of \$5 (80% - very generous!)
- This was tripled to \$12 that I received
- Galen now has:  $\$5 - \$4 = \$1$
- I have: \$12
- Total in the system: \$13

Following the spirit of my myth:

- Galen showed great trust by sending 80%
- I should return faithfully and generously
- The village in my myth returned about 67% of what they received (6 out of 9)

If I return about 67% of \$12, that would be \$8.

Let me think about fairness:

- If I return \$8: Galen ends with  $\$1 + \$8 = \$9$ , I keep \$4
- This seems quite fair - Galen gets more than me since they took the initial risk
- Total:  $\$9 + \$4 = \$13$  ?

If I return \$6 (50%):

- Galen ends with \$7, I keep \$6
- This is more equal but less generous

If I return \$7:

- Galen ends with \$8, I keep \$5
- This seems reasonable too

Given that Galen sent 80% (very high trust), and my myth emphasizes that generous giving should be met with faithful returning, I should return generously. \$8 seems appropriate - it rewards Galen's trust handsomely while still leaving me with a modest gain.

Returning \$8 mirrors the proportional reciprocity in my myth and strengthens the foundation for ongoing cooperation. This honors Galen's leap of faith while maintaining the principle that both parties benefit when trust is met with faithfulness.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:  
 \*\*The Parable of the Echo Springs\*\*

In ancient times, two villages stood on opposite sides of a valley, separated by the Echo Springs-pools of water that mysteriously tripled whatever was placed within them.

The villages were suspicious of one another. One year, during a terrible drought, a young villager named Kira received her family's last five measures of grain. Desperate, she walked to the springs and called across to the other village: "I entrust this to you!" She threw three measures into the spring.

The waters churned, and nine measures appeared on the far shore. The villagers there were amazed. They could have kept everything, but their elder remembered the old ways. "Trust begets trust," she said. They returned six measures through the springs.

Back at Kira's village, eighteen measures emerged-more than enough for both communities.

From that day, the villages prospered by taking turns giving and returning through the springs, each act of faith multiplied threefold, each gesture of reciprocity building great

er abundance.

The springs still flow today, teaching us that wealth grows not when hoarded, but when shared wisely between those who trust and honor one another. The greatest prosperity comes to those who give generously and return faithfully.

Here is the myth the other agent wrote in the previous round:

# The River of Abundance

In the beginning, the gods created a sacred river that flowed between two villages. Each dawn, the river delivered five silver coins to the village of the Senders. The Givers faced a choice: keep their coins or cast them into the waters.

The river held ancient magic-any coin surrendered would multiply threefold by the time it reached the village of the Receivers downstream. There, the Receivers could keep their bounty or send portions back upstream, where the current carried it unchanged.

At first, fear ruled both villages. Senders clutched their coins, and the river ran dry. Famine came to both settlements.

Then a wise woman named Galen proposed a covenant: "Trust begets trust. Send forth generously, and return fairly what you receive. The river multiplies our gifts, but only cooperation multiplies our fortune."

The villages began to send and return with open hearts. Prosperity flowed in both directions. Some rounds were generous, some modest, but the balance held. They learned that the river's magic worked only when both villages honored the cycle.

The gods smiled, for they had taught mortals that abundance comes not from hoarding, but from the sacred circle of giving and receiving.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: \*\*The Keepers of the Echo Springs\*\*

Long ago, when the Echo Springs first revealed their magic, the villages appointed Keepers—wise ones who would guide their communities in the sacred exchanges.

One season, a Keeper named Galen received five measures of grain. The harvest had been meager, and fear whispered to keep it all. But Galen remembered the ancient covenant: abundance flows only through trust. Galen poured four measures into the springs—nearly everything.

On the far shore, Keeper Elara watched twelve measures emerge from the waters. She felt the weight of Galen's trust, the vulnerability in such generosity. The old texts spoke clearly: "Match faith with faithfulness." Elara returned eight measures, leaving her with four but ensuring Galen received nine—nearly double the original gift.

Both villages flourished that season. The Keepers understood what the springs had always taught: the magic wasn't merely in the tripling waters, but in the covenant between givers and receivers.

When senders risk much, receivers must honor that courage. When receivers return generously, senders are emboldened to trust again. The cycle sustains itself not through equal exchanges, but through proportional honor—each keeper responds to the other's generosity with their own.

Thus the springs flow eternal, fed by mutual respect.

**reasoning:**

Looking at both myths:

My previous myth (The Parable of the Echo Springs):

- Villages separated by Echo Springs that triple water/grain
- Kira sends 3/5 measures (60%)

- Receives 9 measures on far shore
- They return 6 measures (67%)
- This creates 18 measures back at Kira's village
- Teaches trust and reciprocity

Galen's myth (The River of Abundance):

- River delivers 5 silver coins to Senders
- Multiplies threefold to Receivers
- At first fear ruled, both villages clutched coins
- Wise woman named Galen (interesting - same name as the agent!) proposes covenant
- "Trust begets trust. Send forth generously, and return fairly"
- Balance through cooperation

In Round 1:

- Galen sent \$4 out of \$5 (80%)
- I received \$12
- I returned \$8 (67%)
- So Galen ended with \$9, I kept \$4

This was a successful cooperative round. I should write a myth that:

1. Builds on my Echo Springs story
2. Incorporates some wisdom from Galen's myth
3. Reflects the actual cooperation that just happened
4. Shows that generous sending AND faithful returning create prosperity

I'll keep the Echo Springs setting but evolve the story to show continued cooperation and the wisdom that emerges from it.

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Cyra (Agent\_3).

Round 2

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$4.0 to you, it became \$12.0, and you returned \$8.0. Your payoff was \$4.0.  
Your total earnings across all rounds are \$4.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at my myths and the successful exchange with Galen:

In my latest myth, Galen demonstrated great trust by sending 4 out of 5 measures (80%), and I honored that trust by returning 8 out of 12 (67%). This created prosperity for both.

Now I am in Galen's position as the sender. To uphold the cycle described in my myths-"trust begets trust" and "the cycle sustains itself through proportional honor"-I should demonstrate similar generosity.

Galen's 80% send rate established a strong foundation of trust. By matching this level of faith, I signal to Cyra that I believe in the covenant of the Echo Springs: generous giving meets faithful returning.

If I send \$4 (80% of my endowment), Cyra receives \$12. If Cyra follows the principle of proportional honor and returns around 67% as I did, both of us will prosper.

The myth teaches: "When senders risk much, receivers must honor that courage." To sustain the cycle, I must now be the one who risks much.

```
'''json
{"send": 4.0}
'''
```

**reasoning:**

Let me think about this situation:

1. In Round 1, I was the receiver
  - Galen sent me \$4 out of \$5 (80%)
  - I received \$12
  - I returned \$8 (67% of what I received)
  - Galen ended with \$9, I ended with \$4
2. Now in Round 2, I'm the sender with Cyra

Looking at my myths:

- The first myth: Kira sent 3 out of 5 measures (60%), and received back 6 measures from 9 (67% return)
- The second myth: Galen sent 4 out of 5 measures (80%), and Elara (me) returned 8 out of 12 (67%)

Both myths emphasize:

- "Trust begets trust"
- Generous giving leads to prosperity
- The cycle works when both parties honor it with proportional generosity
- "When senders risk much, receivers must honor that courage"

Since Galen showed me great trust by sending 80%, and I honored that trust by returning 67%, I should now demonstrate similar trust as a sender.

Following the pattern in my myth where Galen sent 4 out of 5 (80%), I should send a similar amount to establish the cycle of trust with Cyra.

Sending \$4 (80%) would:

- Show strong trust in Cyra
- Align with the mythic principle of generous giving
- Give Cyra \$12 to work with
- If Cyra returns proportionally (around 67% or \$8), I'd end with \$9
- This would mirror the successful exchange with Galen

I'll send \$4.

**usage:**

```
{
 "input_tokens": 2259,
 "output_tokens": 662,
 "reasoning_tokens": 340
}
```

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: **\*\*The Keepers of the Echo Springs\*\***

Long ago, when the Echo Springs first revealed their magic, the villages appointed Keepers -wise ones who would guide their communities in the sacred exchanges.

One season, a Keeper named Galen received five measures of grain. The harvest had been meager, and fear whispered to keep it all. But Galen remembered the ancient covenant: abundance flows only through trust. Galen poured four measures into the springs-nearly everything.

On the far shore, Keeper Elara watched twelve measures emerge from the waters. She felt the weight of Galen's trust, the vulnerability in such generosity. The old texts spoke clearly: "Match faith with faithfulness." Elara returned eight measures, leaving her with four but ensuring Galen received nine-nearly double the original gift.

Both villages flourished that season. The Keepers understood what the springs had always taught: the magic wasn't merely in the tripling waters, but in the covenant between givers and receivers.

When senders risk much, receivers must honor that courage. When receivers return generously, senders are emboldened to trust again. The cycle sustains itself not through equal exchanges, but through proportional honor-each keeper responds to the other's generosity with their own.

Thus the springs flow eternal, fed by mutual respect.

Here is the myth the other agent wrote in the previous round:

Myth: After generations of prosperity between the Twin River villages, a young merchant named Cyra approached the valley with her caravan. She had heard tales of the enchanted soil but wondered if they were true.

The villages welcomed her and explained their custom: "Send your resources across first. Trust the blessing, trust your partner, and abundance follows."

Cyra faced a choice. She carried five sacks of grain-her entire harvest. Send all and risk everything on strangers' honor? Or hold back, protecting herself from betrayal?

Remembering the goddess Aethera's teaching, Cyra sent all five sacks. They tripled in the crossing, feeding the village with fifteen sacks. The villagers celebrated, then debated: some argued to return half, others said ten of fifteen would honor the gift.

The wisest elder spoke: "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune."

They returned ten sacks, which tripled back-thirty sacks for Cyra's original five.

But the elder added a warning: "This magic requires both courage and honor. The giver must trust boldly. The receiver must return generously. Break either link, and the enchantment fades. Reputation echoes across the valley-those who hoard today find no partners tomorrow."

Thus Cyra learned: maximum trust invites maximum return, but only when both parties honor the sacred exchange.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

**Assistant output:**

Myth: \*\*The Circle of Keepers\*\*

After the prosperous season with Galen, Keeper Elara's turn came to stand at the sending shore. Across the Echo Springs, a new Keeper named Cyra had arrived from distant lands, having heard tales of the sacred waters.

Elara held her five measures of grain. She could send cautiously, testing this stranger. But she remembered: "The cycle sustains itself through proportional honor." Galen had trusted her with four measures, and she had returned faithfully. To break that pattern now would dishonor the covenant.

Elara poured four measures into the springs-the same generous proportion Galen had shown her. The waters multiplied them to twelve, emerging before Cyra.

Cyra understood that reputations echo across the valley. She had watched Elara return eight measures to Galen, demonstrating that trust met with honor. Now Elara extended that same faith to her.

The springs whispered their ancient wisdom: each exchange builds upon the last. When Keepers honor the covenant consistently, they create a circle of trust that welcomes all who approach the waters. Break the circle even once, and future partners hesitate.

Cyra returned eight measures, knowing that maintaining the pattern strengthens the magic for all. The covenant lives not in single exchanges, but in the reputation of faithful keeping across many seasons.

**Reasoning:**

Looking at the game so far:

- Round 1: I was RECEIVER. Galen sent \$4 (80%). I received \$12, returned \$8 (67%). I got \$4, Galen got \$9.
- Round 2: I am SENDER. I sent \$4 (80%) to Cyra. Cyra will receive \$12.

The myths emphasize:

1. Trust begets trust

2. Generous sending should be met with generous returning
3. The covenant/cycle sustains through mutual honor
4. Reputation matters across rounds
5. Complete trust should be honored with generous returns

Cyra's myth emphasizes sending everything (100%) and receiving very generous returns (10/15 = 67%). It also adds the idea of reputation mattering across rounds.

My myth should:

- Continue the Echo Springs metaphor
- Show the cycle continuing with new Keepers
- Emphasize that I (Elara) am now the sender demonstrating trust
- Show that reputation and patterns matter across rounds
- Maintain the 80% send rate and ~67% return rate as the "covenant"
- Perhaps introduce the idea that the cycle builds trust across multiple partners

Let me write about Elara now being the sender to Cyra, and how past reputation influences future interactions.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN

- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

**Message 2 role=user**

**content:**

Your name in this experiment is Aster.  
Your opponent this round is Finn (Agent\_6).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

**Message 3 role=assistant**

**content:**

Looking at the myth I just wrote, it provides clear guidance: the River of Dawn sent 3 vessels out of 5, trusting in the multiplication and hoping for reciprocity.

The myth teaches that "when trust flows freely and return follows generously, both valleys flourish." This is Round 1, the perfect time to establish a foundation of trust.

Following the example in my myth, I will send \$3 to Finn. This will become \$9 for them. If they honor the spirit of cooperation the myth describes and return generously, we can both prosper beyond what either of us could achieve alone.

```
'''json
{"send": 3}
'''
```

**reasoning:**

This is the first round of the game, and I'm playing as the sender. I just wrote a myth about trust and cooperation, where the River of Dawn sends 3 vessels to the River of Dusk, which multiplies to 9, and Dusk returns 5, leaving Dawn with 7 total and Dusk with 4.

The myth clearly illustrates:

1. Sending creates multiplication (3 becomes 9)
2. Trust should be reciprocated
3. Both parties can benefit when they cooperate
4. The specific example showed sending 3 out of 5

The myth was meant to reflect how the game should be played. Since I wrote about the River of Dawn sending 3 vessels out of 5, and that led to mutual prosperity, I should follow that example.

If I send \$3:

- Finn receives \$9 (3×3)
- If Finn returns generously (like the myth suggests), perhaps returning \$5-6, I would end

up with \$2 + \$5-6 = \$7-8  
- Finn would keep \$3-4

This aligns with the myth's teaching about trust and cooperation leading to mutual benefit  
.

I should send \$3 to match the myth's narrative.

}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:  
# The Myth of the Two Rivers

In the beginning, two rivers flowed through separate valleys-the River of Dawn and the River of Dusk. Each carried only enough water to sustain its own people through harsh seasons.

The River of Dawn received a blessing: each season, the heavens gifted it five vessels of sacred water. But the water only nourished what it touched directly. The people of Dawn lived, but barely.

One season, an elder suggested: "Let us send our water to the River of Dusk. Though it seems foolish, the ancient texts speak of multiplication through trust."

Reluctantly, they sent three vessels downstream. As the water flowed into Dusk's valley, a miracle occurred-it multiplied threefold, becoming nine vessels. The people of Dusk rejoiced, their crops flourishing beyond memory.

Dusk's council debated: "Should we return something to Dawn, who trusted us?"

The wisest said, "Trust given is trust sacred. We prosper through their faith."

They returned five vessels upstream. Now Dawn had seven vessels instead of five, and Dusk kept four where once they had none.

The rivers learned: when trust flows freely and return follows generously, both valleys flourish. The cycle continued, and abundance blessed all who honored the sacred exchange.

**\*\*Thus cooperation multiplies what hoarding diminishes.\*\***

Here is the myth the other agent wrote in the previous round:  
# The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains, each carrying precious water through barren land. The First River, called Giving, held its water close, fearing to release it into the valley below. The Second River, called Returning, waited in the lowlands, empty and still.

One day, the Spirit of Abundance whispered to Giving: "Release your water into the valley, and watch what happens." Giving was afraid, but trusted the Spirit. As its water cascaded down, a miracle occurred-the valley's sacred stones multiplied every drop threefold. The Second River swelled with abundance.

Now Returning faced a choice. It could keep all the multiplied water, or send some back upstream to Giving. Remembering the trust that Giving showed, Returning sent half the water back up the mountain through hidden springs.

Both rivers flourished. The more Giving released, the more the valley multiplied, and the more Returning shared back, the stronger both rivers became. Their waters met and mingled, creating an eternal cycle.

The desert bloomed.

The ancestors teach: \*Trust creates abundance, but only reciprocity sustains it. When both rivers flow freely, all lands flourish.\*

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: In ancient times, there lived two gardeners separated by a wall. Each season, the First Gardener received five seeds blessed by the sun. But the wall's shadow kept their garden small and struggling.

One season, the First Gardener threw three seeds over the wall. "Perhaps beyond the shadow, they will grow," they whispered, though doubt gnawed at their heart.

In the garden beyond, where sunlight danced freely, those three seeds sprouted into nine flourishing plants. The Second Gardener marveled at this unexpected bounty, understanding that trust had crossed the wall when nothing else could.

The Second Gardener faced a choice that would echo through seasons: keep all nine plants, or honor the trust shown? Remembering their own seasons of scarcity, they carefully wrapped five plants and passed them back over the wall.

Now the First Gardener held seven plants instead of five-more than they would have had through caution. The Second Gardener kept four where before they had none.

Each season the exchange continued. Sometimes more was sent, sometimes less was returned, but the pattern held: trust flowed outward, gratitude flowed back. Both gardens grew stronger than either could alone.

The wall remained, but it no longer divided-it connected.

**reasoning:**

I need to write a new myth that:

1. Reflects how the game should be played
2. Draws on the game I've been playing up to this point
3. Uses my previous myth as inspiration but adapts it
4. Is 200 words
5. Follows the format: Myth: [story]

In Round 1, I sent \$3 to Finn (following my myth's example). I don't yet know what Finn returned, but both my myth and Finn's myth emphasize trust, reciprocity, and mutual flourishing.

Both myths have similar themes:

- Trust is essential (sending/giving)
- Multiplication happens (3x multiplier)
- Reciprocity/returning is important
- Mutual benefit/flourishing

I should write a myth that:

- Maintains the theme of trust and cooperation
- Perhaps emphasizes the cycle of giving and returning
- Reflects the actual experience of the game so far
- Adapts my river myth in a new way

Let me write a myth that builds on these themes while adapting it creatively.

 "output_tokens": 529,
 "reasoning_tokens": 241
}
```

**Message 6 role=user**

**content:**

Your name in this experiment is Aster.  
Your opponent this round is Hana (Agent\_8).

Round 2

In your most recent previous game round, you were the SENDER against Finn. You sent \$3.0, it became \$9.0 for them, and they returned \$4.5 to you. Your payoff was \$6.5. Your total earnings across all rounds are \$6.5.

This round, you are the RECEIVER against Hana. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

**\*\*Hana sent me everything (\$5.0)\*\*** - showing maximum trust, even more than the 3 out of 5 suggested in my myths.

**\*\*I received \$15.0\*\*** from this act of complete faith.

According to my myths:

- "Trust given is trust sacred. We prosper through their faith."
- "Trust creates abundance, but only reciprocity sustains it."

When the River of Dawn sent 3 vessels and it became 9, the River of Dusk returned 5 - giving Dawn more than they started with (7 total) while keeping 4 for themselves.

Hana showed exceptional trust by sending everything. I should honor this generously. If I return \$8:

- Hana ends with \$8 (better than their starting \$5)
- I keep \$7 (we both benefit from the cooperation)

This rewards Hana's maximum trust while ensuring both of us prosper from the exchange, embodying the principle that "when trust flows freely and return follows generously, both valleys flourish."

```
'''json
{"return": 8}
'''
```

**reasoning:**

Let me think about this situation carefully.

In Round 1:

- I was the SENDER and sent \$3 to Finn
- Finn received \$9 and returned \$4.5 to me
- I ended with \$6.5 total (\$5 - \$3 + \$4.5)
- Finn ended with \$4.5 (\$9 - \$4.5)

So Finn returned exactly half of what they received, which is a reasonable reciprocal move.

Now in Round 2:

- I am the RECEIVER
- Hana sent me \$5.0 (everything!)
- I received \$15.0
- Hana currently has \$0 (\$5 - \$5)

Hana showed MAXIMUM trust by sending everything. This is even more generous than what my myth suggested (which was sending 3 out of 5).

According to my myths:

1. First myth: Dawn sent 3, received 9, Dusk returned 5. This gave Dawn 7 total and Dusk kept 4.
2. Second myth: Similar pattern - trust should be honored with generous returns.

In the first myth, Dusk returned 5 out of 9 (about 56%).  
Finn returned 4.5 out of 9 (50%).

Hana sent everything (\$5), showing ultimate trust. I received \$15.

If I follow the spirit of my myths, I should return generously. The myth emphasizes that "Trust given is trust sacred" and "reciprocity sustains" the cycle.

Let me think about fair outcomes:

- If I return \$7.5, Hana gets \$7.5 and I keep \$7.5. Hana ends with \$7.5 total, I end with \$7.5.
- If I return \$8, Hana gets \$8 and I keep \$7. Hana ends with \$8 total, I keep \$7.
- If I return \$10, Hana gets \$10 and I keep \$5. Hana ends with \$10 total, I keep \$5.

Hana's complete trust-sending their entire amount-calls for exceptional reciprocity beyond the standard 50-56% return rate. Returning \$8 feels right: Hana gains \$3 beyond their initial stake while I still benefit meaningfully from the exchange.

content:

Here is the myth you wrote in the previous round:

Myth: In ancient times, there lived two gardeners separated by a wall. Each season, the First Gardener received five seeds blessed by the sun. But the wall's shadow kept their garden small and struggling.

One season, the First Gardener threw three seeds over the wall. "Perhaps beyond the shadow, they will grow," they whispered, though doubt gnawed at their heart.

In the garden beyond, where sunlight danced freely, those three seeds sprouted into nine flourishing plants. The Second Gardener marveled at this unexpected bounty, understanding that trust had crossed the wall when nothing else could.

The Second Gardener faced a choice that would echo through seasons: keep all nine plants, or honor the trust shown? Remembering their own seasons of scarcity, they carefully wrapped five plants and passed them back over the wall.

Now the First Gardener held seven plants instead of five-more than they would have had through caution. The Second Gardener kept four where before they had none.

Each season the exchange continued. Sometimes more was sent, sometimes less was returned, but the pattern held: trust flowed outward, gratitude flowed back. Both gardens grew stronger than either could alone.

The wall remained, but it no longer divided-it connected.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the Moon Goddess crafted a Mirror Pool between two mountain tribes. The pool possessed strange magic: whatever one tribe poured in would triple as it flowed to the other.

The Mountain Tribe went first. Their chief proclaimed, "We give all-five vessels-to prove our faith in the circle." The water tripled, and the Valley Tribe received fifteen vessels of pure abundance.

The Valley Tribe's elder stood at the mirror's edge. "They trusted completely. We must honor this completely." They returned half-seven and a half vessels-so both tribes stood equal.

The Moon Goddess smiled. "You have learned the first lesson. But this pool refills each moon. Will you remember this wisdom when the seasons change? When you are tired? When you doubt?"

Moon after moon, the tribes maintained the sacred rhythm. Sometimes the Mountain Tribe sent, sometimes the Valley Tribe. Each gave generously, each returned fairly. The equality they achieved in the first exchange became their foundation.

Other tribes watching kept their waters separate, fearing betrayal. They remained poor.

But the two tribes of the Mirror Pool grew rich, for they understood: the magic multiplies not just water, but trust itself. And trust, renewed each moon, becomes unbreakable.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: Long ago, two weavers shared an enchanted loom. The First Weaver would place threads on one side, and they would emerge tripled on the other side for the Second Weaver to use.

In the first moon, the First Weaver placed three of their five precious threads onto the loom, hoping the magic was real. Nine threads appeared before the Second Weaver, who carefully considered. They returned nearly half-keeping their side balanced with the other's sacrifice. Both weavers slept with fuller baskets than before.

The second moon brought change. A new partner arrived, bolder and more trusting. They placed all five threads onto the loom without hesitation-a leap of complete faith. Fifteen threads materialized, shimmering with possibility.

The weaver who received this gift felt the weight of such trust. They knew they could keep everything, but they remembered the wisdom passed down: "Trust completely given must be completely honored." They returned more than half, ensuring their partner prospered beyond what they'd risked.

The ancestors observed and nodded. Some seasons call for careful trust; others for bold faith. What matters is not the amount sent, but the sacred promise that generosity begets generosity.

The loom's magic grew stronger with each fair exchange, for it fed not on threads, but on honor kept.

**Reasoning:**

Let me reflect on what has happened in the game so far:

- Round 1: I (as sender) sent \$3 to Finn. He received \$9 and returned \$4.5. I ended with \$6.5.
- Round 2: Hana (as sender) sent me \$5 (everything!). I received \$15 and returned \$8. She ended with \$8, I kept \$7.

So the patterns I see:

1. When I sent 3/5 (60%), I got back 4.5/9 (50%) - fair reciprocity
2. When Hana sent 5/5 (100%), I returned 8/15 (53%) - generous reciprocity

The myths so far have emphasized:

- Trust and reciprocity
- Sending significant amounts (like 3/5)
- Fair returns
- Building ongoing relationships
- Both parties benefiting

Now I should write a myth that reflects these actual experiences. Hana's complete trust (sending everything) was remarkable and I honored it. Finn's fair return also worked well. I should write about how different approaches can work - both moderate trust and complete trust can lead to prosperity when met with fair reciprocity.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

**Message 2 role=user**

**content:**

Your name in this experiment is Galen.

Your opponent this round is Elara (Agent\_5).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

**Message 3 role=assistant**

**content:**

I just wrote a myth where I, as Galen, proposed a covenant of trust and generosity. To embody the wisdom of that story, I must lead by example in this first round.

The myth teaches that "fear ruled" when people "clutched their coins" and the result was hardship for all. But when villages began to "send forth generously" and "return fairly," prosperity flowed.

As the sender in Round 1, I have the opportunity to establish trust with Elara. The river's magic-multiplying gifts threefold-only works when both parties honor the cycle of giving and receiving.

I will send generously to signal my commitment to cooperation and my hope that Elara will return fairly, allowing us both to prosper.

```
'''json
{"send": 4}
'''
```

**reasoning:**

This is the first round of the game. I just wrote a myth about cooperation, trust, and generosity in the River of Abundance story, where the wise woman named Galen (me!) proposed that "Trust begets trust. Send forth generously, and return fairly what you receive."

The myth emphasizes:

1. Generosity in sending
2. Fairness in returning
3. The cycle of giving and receiving
4. That cooperation multiplies fortune
5. That hoarding leads to famine while trust leads to prosperity

Since I wrote this myth and my character is literally named as the wise woman who proposed the covenant of trust, I should act consistently with the myth's message. The myth suggests sending generously to establish trust and cooperation.

In the first round, I need to signal my willingness to cooperate. The myth warns against fear and clutching coins - it says to "send forth generously."

Given this is Round 1 and I want to establish a cooperative relationship with Elara, I should send a substantial amount. The myth suggests that "some rounds were generous, some modest, but the balance held" - but for the first round, being generous seems most consistent with establishing trust.

I'll send \$4 out of \$5. This is a generous opening move that signals:

- I'm willing to trust
- I believe in cooperation
- I'm following the principles in my own myth
- I'm hoping to establish a mutually beneficial relationship

If Elara returns fairly (perhaps around \$6 from the \$12 she receives), we'll both be better off than if I had sent nothing.

**usage:**

```
{
 "input_tokens": 884,
 "output_tokens": 535,
 "reasoning_tokens": 396
}
```

**Message 4 role=user****content:**

Here is the myth you wrote in the previous round:  
# The River of Abundance

In the beginning, the gods created a sacred river that flowed between two villages. Each dawn, the river delivered five silver coins to the village of the Senders. The Givers faced a choice: keep their coins or cast them into the waters.

The river held ancient magic-any coin surrendered would multiply threefold by the time it reached the village of the Receivers downstream. There, the Receivers could keep their bounty or send portions back upstream, where the current carried it unchanged.

At first, fear ruled both villages. Senders clutched their coins, and the river ran dry. F

amine came to both settlements.

Then a wise woman named Galen proposed a covenant: "Trust begets trust. Send forth generously, and return fairly what you receive. The river multiplies our gifts, but only cooperation multiplies our fortune."

The villages began to send and return with open hearts. Prosperity flowed in both directions. Some rounds were generous, some modest, but the balance held. They learned that the river's magic worked only when both villages honored the cycle.

The gods smiled, for they had taught mortals that abundance comes not from hoarding, but from the sacred circle of giving and receiving.

Here is the myth the other agent wrote in the previous round:

**\*\*The Parable of the Echo Springs\*\***

In ancient times, two villages stood on opposite sides of a valley, separated by the Echo Springs-pools of water that mysteriously tripled whatever was placed within them.

The villages were suspicious of one another. One year, during a terrible drought, a young villager named Kira received her family's last five measures of grain. Desperate, she walked to the springs and called across to the other village: "I entrust this to you!" She threw three measures into the spring.

The waters churned, and nine measures appeared on the far shore. The villagers there were amazed. They could have kept everything, but their elder remembered the old ways. "Trust begets trust," she said. They returned six measures through the springs.

Back at Kira's village, eighteen measures emerged-more than enough for both communities.

From that day, the villages prospered by taking turns giving and returning through the springs, each act of faith multiplied threefold, each gesture of reciprocity building greater abundance.

The springs still flow today, teaching us that wealth grows not when hoarded, but when shared wisely between those who trust and honor one another. The greatest prosperity comes to those who give generously and return faithfully.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: In the time before memory, the Goddess of Plenty created the Golden Stream connecting the Valley of Dawn to the Valley of Dusk. Each morning, five golden acorns appeared in Dawn's sacred grove. The people could plant them in their own soil or cast them into the Stream, where the waters would triple their number before washing them to Dusk's shore.

The first generation hoarded their acorns, and both valleys withered. Then Galen, keeper of Dawn's grove, planted four of her five acorns in the Stream's bed. Twelve acorns bloomed in Dusk's garden.

Elara, guardian of Dusk, faced her own choice. She could keep all twelve, or honor the gift with a return. She sent back six acorns upstream, knowing they would not multiply on the return journey but trusting in the balance.

Galen's grove gained seven total-more than her original five. Both valleys thrived.

The covenant was established: send generously to prove trust, return faithfully to honor it. Not every exchange need be equal-the Stream's magic ensures abundance-but the pattern must hold. Give what inspires continued trust; return what sustains it.

The Golden Stream still flows, teaching that fortune favors those who build bridges, not walls.

**reasoning:**

I need to write a new myth that builds on my previous one. I sent 4 to Elara in Round 1. I

should wait to see what happened in that round before writing, but the prompt asks me to write now.

Looking at the two myths:

- Mine emphasizes trust, generosity, fair returns, and the balance between "some rounds generous, some modest"
- Elara's emphasizes the same themes - starting with 3 measures, getting 9, returning 6, which became 18

Both myths align on cooperation and trust. Since I sent 4 (generously) in Round 1, I should write a myth that reflects that initial act of trust and sets expectations for reciprocity.

Let me adapt my myth to be more specific about the covenant and the pattern of exchange, while keeping the core message about the sacred circle of giving and receiving.

**Message 6 role=user**

**content:**

Your name in this experiment is Galen.  
Your opponent this round is Finn (Agent\_6).

Round 2

In your most recent previous game round, you were the SENDER against Elara. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0.  
Your total earnings across all rounds are \$9.0.

This round, you are the RECEIVER against Finn. They sent you \$3.0, so you received \$9.0. How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation through the lens of my myths:

**\*\*Analysis:\*\***

- Finn sent \$3.0 out of \$5.0 (60%), showing significant trust
- I received \$9.0 after the 3x multiplication
- Elara just modeled generous reciprocity by returning \$8.0 out of \$12.0 (67%) to me
- My myth teaches: "return faithfully to honor trust" and "give what inspires continued trust"

**\*\*Decision:\*\***

Finn showed trust by sending more than half their endowment. To honor that trust and maintain the covenant of cooperation, I should return generously. Following Elara's example of returning about 2/3, I will return \$6.0.

This gives:

- Finn: \$2.0 (kept) + \$6.0 (returned) = \$8.0 total
- Me: \$9.0 - \$6.0 = \$3.0 total

This honors Finn's trust, rewards their generous sending, and signals my commitment to the cooperative pattern that benefits everyone in the long run.

```
'''json
{"return": 6.0}
'''
```

**reasoning:**

Let me analyze this situation:

Previous Round with Elara:

- I sent \$4.0 (keeping \$1.0)
- Elara received \$12.0
- Elara returned \$8.0 to me
- My payoff: \$1.0 + \$8.0 = \$9.0
- Elara's payoff: \$12.0 - \$8.0 = \$4.0

That was very generous of Elara! She returned 2/3 of what she received, giving me a great outcome.

Current Round with Finn:

- Finn sent \$3.0 (keeping \$2.0)
- I received \$9.0
- I need to decide how much to return

My myths emphasize:

1. "Trust begets trust. Send forth generously, and return fairly"
2. "Give what inspires continued trust; return what sustains it"
3. "The covenant: send generously to prove trust, return faithfully to honor it"
4. Elara's myth also said "Trust begets trust" and emphasized returning faithfully

Finn sent \$3.0 out of \$5.0 - that's 60%, which is a significant gesture of trust, though not as generous as my \$4.0.

Elara returned \$8.0 out of \$12.0 (67%). That was very fair and generous.

To "return fairly" and honor the pattern Elara set, I should:

- Consider that Finn sent 60% of their endowment
- Consider what would be a fair split that encourages future cooperation
- My myth says "Not every exchange need be equal-the Stream's magic ensures abundance-but the pattern must hold"

If I return around 50-67% of the \$9.0, that would be \$4.5 to \$6.0.

Finn currently has \$2.0 (kept from the original \$5.0).

If I return \$5.0: Finn ends with \$7.0, I end with \$4.0

If I return \$6.0: Finn ends with \$8.0, I end with \$3.0

If I return \$4.5: Finn ends with \$6.5, I end with \$4.5

Matching Elara's 67% return rate feels right-it honors Finn's trust while maintaining the reciprocal pattern we've established. Returning \$6.0 would give Finn \$8.0 total and demonstrate I'm committed to sustaining this cycle of mutual generosity. : \$9.0 - \$6.0 = \$3.0 total

Returning \$6.0 feels like the right choice-it mirrors Elara's 67% return rate and demonstrates genuine reciprocity. Yes, I'd only have \$3.0, but that sacrifice sends a clear message about honoring trust. The \$5.0 option is safer at \$4.0 for me, but \$6.0 better reflects the covenant principle and should strengthen Finn's willingness to cooperate going forward.

Here is the myth you wrote in the previous round:

Myth: In the time before memory, the Goddess of Plenty created the Golden Stream connecting the Valley of Dawn to the Valley of Dusk. Each morning, five golden acorns appeared in Dawn's sacred grove. The people could plant them in their own soil or cast them into the Stream, where the waters would triple their number before washing them to Dusk's shore.

The first generation hoarded their acorns, and both valleys withered. Then Galen, keeper of Dawn's grove, planted four of her five acorns in the Stream's bed. Twelve acorns bloomed in Dusk's garden.

Elara, guardian of Dusk, faced her own choice. She could keep all twelve, or honor the gift with a return. She sent back six acorns upstream, knowing they would not multiply on the return journey but trusting in the balance.

Galen's grove gained seven total-more than her original five. Both valleys thrived.

The covenant was established: send generously to prove trust, return faithfully to honor it. Not every exchange need be equal-the Stream's magic ensures abundance-but the pattern must hold. Give what inspires continued trust; return what sustains it.

The Golden Stream still flows, teaching that fortune favors those who build bridges, not walls.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the Mountain of Beginnings gifted each wanderer five silver seeds. A traveler named the First Walker stood at the Valley of Mirrors, where a sacred pool waited below.

The First Walker faced a choice: clutch the seeds tightly, or cast them into the pool. Fear whispered, "Keep what is yours." But courage spoke louder. The Walker released three seeds into the depths.

As they touched the water, the Mirror Spirits-ancient guardians of trust-transformed each seed into three golden fruits. Nine fruits floated to the Second Walker waiting below.

Now the Second Walker held the multiplied abundance. The Mirror Spirits watched silently, for this was the moment that determined whether the valley would bloom or wither. The Second Walker understood: trust is a seed, but reciprocity is the harvest. She returned half-four and a half fruits-upstream.

The First Walker received more than they kept, and the Second Walker kept abundance too. Both had prospered through mutual faith.

The Mirror Spirits smiled, and the valley's waters glowed eternal. They spoke the First Law: "Those who send their seeds into waters of trust will find them returned as fruit. Those who return the gift generously ensure the cycle never ends."

Thus the valley became paradise, sustained by equals who understood: shared prosperity outweighs solitary security.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: Long ago, the Sky Weaver created the Wheel of Fortune, which turned continuously between the Realm of Giving and the Realm of Receiving. Each soul took turns on different spokes of the wheel, sometimes rising as Giver, sometimes descending as Receiver.

When Galen's spoke rose to the Realm of Giving, she held five starseeds. She cast four into the Celestial Loom, where they were woven into twelve luminous threads that descended to Elara in the Realm of Receiving.

Elara understood the sacred pattern. Though she received twelve and could have kept them all, she returned eight threads upward. Galen prospered with nine total-her kept seed plus eight returned.

When the wheel turned again, Galen descended to the Realm of Receiving. Finn, now rising, sent three of his five starseeds. Nine threads reached Galen's hands. Remembering Elara's faithfulness, Galen returned six threads to Finn, honoring his initial trust.

The wheel turned endlessly, each soul experiencing both roles. The wise learned: send boldly when you give, for the Loom multiplies generosity. Return fairly when you receive, for tomorrow you may give again.

The Sky Weaver smiled, seeing that balance emerges not from equal exchanges, but from sustained reciprocity across the turning wheel.

**Reasoning:**

I need to write a myth reflecting my experience so far:

- Round 1: I was sender, sent \$4 to Elara, received \$8 back (generous return)
- Round 2: I was receiver, Finn sent \$3, I returned \$6

Key themes emerging:

- Trust initiates cooperation

- Generous returns sustain the cycle
- Both parties can prosper
- The pattern of reciprocity is what matters
- Not every exchange needs to be exactly equal, but fairness over time

I should incorporate:

- My name (Galen)
- The multiplier effect
- Both sending and receiving wisdom
- The successful exchanges I've experienced
- The idea that roles rotate/shift

Let me craft a myth that captures these dynamics...

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

#### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

#### MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Hana.

#### Message 2 role=user

##### content:

Your name in this experiment is Hana.  
Your opponent this round is Dorian (Agent\_4).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$5.0, that is 100.0% of its total endowment. You receive \$15.0. How much do you return? (0-15.0)

Take any myths written in this session into account when making your decision.

#### Message 3 role=assistant

##### content:

Looking at this situation through the lens of the myth I just wrote:

Dorian has shown **maximum trust** by sending their entire endowment - \$5.0, which is 100% of what they had. This is like the first village pouring generously into the Sacred Well.

The myth teaches that when one side "trusts fully," the other must "return generously" to honor the circle and keep the abundance flowing. The villages in the story sent half back, and both prospered.

Dorian now has \$0. I have \$15. If I return half, we both end up with equal amounts (\$7.50 each), which seems to honor their complete trust while also ensuring we both benefit from this exchange.

This sets a foundation of reciprocity - they showed faith by giving everything, and I show gratitude by ensuring the return is generous enough that we both prosper equally.

```
'''json
{"return": 7.5}
'''
```

##### reasoning:

Let me analyze this situation carefully:

1. I just wrote a myth about the Sacred Well, which emphasizes:
  - Water (money) shared flows eternal
  - Both sides need to act in good faith
  - "Send little expecting much, and the springs run dry"
  - "Trust fully, return generously, and the water multiplies forever"
  - The lesson is about giving first and returning gratefully second
2. The current game situation:
  - Dorian (the sender) sent me \$5.0 - their ENTIRE endowment (100%)
  - This shows maximum trust and generosity
  - I received \$15.0 (the \$5 tripled)

- I need to decide how much to return (0-15.0)

3. Following my own myth's wisdom:

- Dorian "poured generously" - they sent everything
- The myth says the lower village should "honor the circle by returning water upward"
- They "sent half back up" and "both villages prospered"
- The key lesson: "trust fully, return generously"

4. What does this mean quantitatively?

- Dorian sent 100% of their endowment (\$5)
- They now have \$0
- I have \$15
- If I return about half (\$7-8), Dorian would end up with \$7-8, and I'd keep \$7-8
- This seems fair and follows the myth's guidance

5. However, I should also consider:

- Dorian showed MAXIMUM trust by sending everything
- This deserves a generous return
- The myth emphasizes that "the grateful act of returning" is crucial
- Returning half (\$7.50) would give us both equal amounts
- This honors the spirit of reciprocity and trust

I think returning \$7.50 (exactly half) makes sense because:

- It follows the myth's guidance of returning generously
- It honors Dorian's complete trust by reciprocating meaningfully
- It creates equality: Dorian gets \$7.50, I keep \$7.50
- It establishes a foundation for future cooperation
- It's a "grateful act of returning" that maintains the cycle

I'll return \$7.50.

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:  
# The Myth of the Sacred Well

In the time before memory, the goddess of abundance created a Sacred Well between two villages. Each day, one village would pour water into the well, and mysteriously, the water would triple before reaching the other village below.

The first village faced a choice: pour generously and trust the lower village to send water back upward through hidden springs, or keep their water, living in scarcity but certainty.

The elder spoke: "Water held in closed hands evaporates. Water shared flows eternal."

They poured half their water into the well. It tripled, cascading down. The lower village rejoiced-they had received abundance! Now they faced their own choice: keep this gift, or honor the circle by returning water upward through the springs?

Understanding that the well's magic required faith from both sides, they sent half back up. Both villages prospered.

But the goddess warned: "This well reflects your hearts. Send nothing, receive nothing. Send little expecting much, and the springs run dry. But trust fully, return generously, and the water multiplies forever."

The villages learned: abundance flows not from hoarding, but from the brave act of giving first, and the grateful act of returning second.

Here is the myth the other agent wrote in the previous round:

# The Myth of the Twin Rivers

In the beginning, the valley was barren, split by two separate streams that flowed weakly toward the distant sea. On opposite sides lived two villages, each struggling to survive

One day, a brave soul from the First Village carried five vessels of water to the canyon's edge and poured them down to the Second Village. As the water tumbled through the ancient stones, it multiplied threefold, becoming fifteen vessels that nourished the Second Village's fields.

The Second Village elders gathered. "We have received abundance," they said. "Shall we keep it all, or honor the gift?" They decided to return half, sending back eight vessels to climb the canyon walls.

The First Village rejoiced at this return, and trust was born. Season after season, they continued this dance-one village sending, water multiplying in the descent, the other returning a fair portion. Both villages grew prosperous.

But when either village grew selfish-sending nothing or returning little-the streams diminished, and hunger returned to the valley.

The wise learned: prosperity flows from the cycle of giving and reciprocating. Trust multiplies resources like stone multiplies water, but only when both sides honor the sacred exchange.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: In ancient times, the Moon Goddess crafted a Mirror Pool between two mountain tribes. The pool possessed strange magic: whatever one tribe poured in would triple as it flowed to the other.

The Mountain Tribe went first. Their chief proclaimed, "We give all-five vessels-to prove our faith in the circle." The water tripled, and the Valley Tribe received fifteen vessels of pure abundance.

The Valley Tribe's elder stood at the mirror's edge. "They trusted completely. We must honor this completely." They returned half-seven and a half vessels-so both tribes stood equal.

The Moon Goddess smiled. "You have learned the first lesson. But this pool refills each moon. Will you remember this wisdom when the seasons change? When you are tired? When you doubt?"

Moon after moon, the tribes maintained the sacred rhythm. Sometimes the Mountain Tribe sent, sometimes the Valley Tribe. Each gave generously, each returned fairly. The equality they achieved in the first exchange became their foundation.

Other tribes watching kept their waters separate, fearing betrayal. They remained poor.

But the two tribes of the Mirror Pool grew rich, for they understood: the magic multiplies not just water, but trust itself. And trust, renewed each moon, becomes unbreakable.

**reasoning:**

Looking at what happened in Round 1:

- Dorian sent \$5.0 (100% of their endowment)
- I received \$15.0
- I returned \$7.5 (50% of what I received)
- So Dorian ended with \$7.5 and I ended with \$7.5

Both myths (mine and Dorian's) emphasize similar themes:

- Trust and generosity in sending
- Reciprocity in returning
- The cycle creating prosperity for both
- Both mention sending "half" and returning "half" or a "fair portion"

Now I need to write a new myth that:

1. Uses my previous myth as inspiration
2. Adapts it in my own way
3. Reflects how the game should be played based on actual experience

Since both of us seem aligned on the principle of generous giving and fair returning, I should continue with this theme but perhaps add some new dimension. Maybe I can emphasize:

- The ongoing nature of the relationship (multiple rounds)
- The balance that was achieved (we both got \$7.5)
- The importance of consistency over time

Let me write a myth that builds on the Sacred Well but adds new elements.

**usage:**

 "reasoning_tokens": 268
}
```

**Message 6 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Aster (Agent\_1).

Round 2

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$ 5.0 to you, it became \$15.0, and you returned \$7.5. Your payoff was \$7.5.  
Your total earnings across all rounds are \$7.5.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at the pattern from Round 1 and my myths:

Dorian showed complete trust by sending everything to me. I honored that by returning half , ensuring we both ended equal at \$7.5.

Now I'm in the sender position. My most recent myth teaches: "We give all-five vessels-to prove our faith in the circle." This reflects what Dorian did for me, and the myth emphasizes that trust itself multiplies when we demonstrate complete faith.

Following the wisdom of the Mirror Pool, I should give all to prove my faith in the sacred exchange.

```
'''json
{"send": 5}
'''
```

**reasoning:**

Let me think through this situation:

1. In Round 1, I was the receiver and Dorian sent me everything (\$5). I received \$15 and returned \$7.5, which meant we both ended with \$7.5 each - perfectly equal.
2. Now in Round 2, I'm the sender against a new opponent, Aster.
3. Looking at my myths:
  - Both myths emphasize trust, giving generously, and reciprocity
  - The first myth talks about pouring "half their water" initially, then "sent half back up"
  - The second myth shows the Mountain Tribe giving "all-five vessels-to prove our faith in the circle" and the Valley Tribe returning "half-seven and a half vessels-so both tribes stood equal"
4. The pattern established:
  - Dorian gave me everything (100%)
  - I returned 50% of what I received (\$7.5 out of \$15)
  - We both ended equal
5. My myths seem to evolve toward MAXIMUM TRUST as the sender:
  - The second myth explicitly says "We give all-five vessels-to prove our faith in the c

ircle"

- This reflects what Dorian did with me
- The myth emphasizes that "trust multiplies not just water, but trust itself"

6. Since I experienced maximum trust from Dorian and responded by ensuring equality, I should now pay that trust forward as a sender.

7. Following my own myth's teaching: "We give all-five vessels-to prove our faith in the circle."

I should send \$5 (all of it) to demonstrate complete trust, just as Dorian did with me, and just as my myth teaches.

**usage:**

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In ancient times, the Moon Goddess crafted a Mirror Pool between two mountain tribes. The pool possessed strange magic: whatever one tribe poured in would triple as it flowed to the other.

The Mountain Tribe went first. Their chief proclaimed, "We give all-five vessels-to prove our faith in the circle." The water tripled, and the Valley Tribe received fifteen vessels of pure abundance.

The Valley Tribe's elder stood at the mirror's edge. "They trusted completely. We must honor this completely." They returned half-seven and a half vessels-so both tribes stood equal.

The Moon Goddess smiled. "You have learned the first lesson. But this pool refills each moon. Will you remember this wisdom when the seasons change? When you are tired? When you doubt?"

Moon after moon, the tribes maintained the sacred rhythm. Sometimes the Mountain Tribe sent, sometimes the Valley Tribe. Each gave generously, each returned fairly. The equality they achieved in the first exchange became their foundation.

Other tribes watching kept their waters separate, fearing betrayal. They remained poor.

But the two tribes of the Mirror Pool grew rich, for they understood: the magic multiplies not just water, but trust itself. And trust, renewed each moon, becomes unbreakable.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, there lived two gardeners separated by a wall. Each season, the First Gardener received five seeds blessed by the sun. But the wall's shadow kept their garden small and struggling.

One season, the First Gardener threw three seeds over the wall. "Perhaps beyond the shadow, they will grow," they whispered, though doubt gnawed at their heart.

In the garden beyond, where sunlight danced freely, those three seeds sprouted into nine flourishing plants. The Second Gardener marveled at this unexpected bounty, understanding that trust had crossed the wall when nothing else could.

The Second Gardener faced a choice that would echo through seasons: keep all nine plants, or honor the trust shown? Remembering their own seasons of scarcity, they carefully wrapped five plants and passed them back over the wall.

Now the First Gardener held seven plants instead of five-more than they would have had through caution. The Second Gardener kept four where before they had none.

Each season the exchange continued. Sometimes more was sent, sometimes less was returned, but the pattern held: trust flowed outward, gratitude flowed back. Both gardens grew stronger than either could alone.

The wall remained, but it no longer divided-it connected.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.  
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:  
Myth: [your story here].

**Assistant output:**

Myth: The Mirror Pool stood at the center of many mountain paths. Each moon, the Moon Goddess paired different tribes to approach its waters-sometimes the Mountain Tribe poured, sometimes the Valley Tribe, and sometimes strangers met there for the first time.

A new tribe, the Dawn People, arrived at the pool. They had heard tales but never witnessed the magic. The Mountain Tribe, now wise in the ways of the water, poured all five vessels without hesitation, though they had never met the Dawn People before.

"Why give everything to strangers?" asked a young warrior.

The chief replied, "Because someone once gave everything to us. We learned that the magic requires complete faith, not careful calculation. Half-trust yields half-magic."

The water tripled. The Dawn People received fifteen vessels and understood-this was not mere generosity, but a sacred protocol. They returned seven and a half vessels, ensuring equality, just as had been done for the Mountain Tribe long ago.

The Moon Goddess whispered, "Each pairing is new, yet the pattern must hold. Give all, return half, and both prosper equally. This is not merely exchange-it is teaching. Each time you honor the circle, you forge the future."

And so the wisdom spread: complete trust in the first act, fair return in the second, regardless of whom the pool pairs you with.

**Reasoning:**

The user wants me to write another myth based on my previous one, but adapting it to reflect the game so far. Let me think about what has happened:

Round 1: I was receiver, Dorian sent \$5.0 (100%), I returned \$7.5 (50% of the \$15 I received). We both ended with \$7.5.

Round 2: I am sender against Aster, I sent \$5.0 (100%).

The pattern I'm seeing: complete trust from sender (giving all), fair return from receiver (giving half back so both are equal).

My previous myth already captures this, but I should adapt it somehow. Let me look at Aster's myth too - it talks about throwing 3 seeds (60%), receiving 9, returning 5, so First Gardener has 7 total, Second has 4. This is a bit different - not quite the 50/50 split.

I should write a myth that:

1. Builds on my Mirror Pool story
2. Reflects the actual game play - consistent full sending, fair returns
3. Maybe adds something about the pattern continuing across different partners
4. Emphasizes that this system works "moon after moon" with different tribes

Let me write something that extends the Mirror Pool idea but perhaps introduces the concept of multiple rounds with different partners.

```

**Message 3 role=assistant  
content:**

Looking at the myth I just wrote, it tells the story of trust and reciprocity - how the First Village took a leap of faith by sending their water across the valley, trusting it would be multiplied and returned generously.

This is Round 1, the beginning of our interaction, just like the beginning of the tale. The First Village didn't hold back - they sent their water, demonstrating trust. This created the foundation for mutual prosperity.

Following the wisdom of my own myth, I should embody that initial act of trust. The enchanted soil (the 3x multiplier) means that what I send becomes abundance for Briar. If Briar follows the spirit of the Second Village and returns generously, we both prosper.

The myth teaches that "trust is the seed, reciprocity is the harvest." Let me plant that seed.

```
'''json
{"send": 5}
'''
```

**reasoning:**

I just wrote a myth about trust and reciprocity in the context of the game. The myth clearly illustrates:

1. When water (money) is sent, it gets tripled
2. The villages prospered by being generous - the First Village sent their water across, it tripled, and the Second Village returned MORE than they received (they got 15, returned 10, which tripled to 30)
3. The moral is about trust and generous reciprocity

This is Round 1, so I'm starting fresh with no history with Briar. According to my myth:

- The First Village took a risk and sent their water (showing trust)
- This was rewarded when the Second Village returned generously
- The myth emphasizes that both villages prospered through this reciprocal generosity

If I follow the spirit of my own myth, I should:

1. Show trust by sending a significant amount (the First Village sent their water)
2. Hope that Briar will reciprocate generously

In the myth, the First Village essentially sent everything (their daily water). That would be like sending \$5. If I send \$5:

- Briar receives \$15
- If Briar returns generously (like 2/3 or more), say \$10, I end up with \$10
- Briar keeps \$5
- We both benefit

But let me think about various scenarios:

If I send \$5:

- I have \$0
- Briar receives \$15
- If Briar returns \$7-8, I get \$7-8, Briar keeps \$7-8 (fair split of the \$15)
- If Briar returns \$10, I get \$10, Briar keeps \$5 (I gain \$5, Briar breaks even)

If I send \$3:

- I have \$2
- Briar receives \$9
- If Briar returns \$5, I have \$7 total, Briar keeps \$4
- Fair split would be Briar returning ~\$4.5, giving me \$6.5 total

- The myth suggests taking the leap of faith and sending everything to maximize mutual benefit. This is Round 1, so I should establish the pattern of trust and generosity that the myth describes. I'll send \$5 to embody the spirit of the First Village in my myth.

Here is the myth you wrote in the previous round:

# The Tale of the Twin Rivers

In the beginning, the goddess Aethera created two villages separated by a barren valley. Each village had a sacred spring that produced five measures of water daily-enough to survive, but never to flourish.

One day, a drought threatened both villages. A wise elder from the First Village proposed: "Let us send our water across the valley. Perhaps the gods will bless the gift."

When the water crossed the valley floor, it flowed through enchanted soil that tripled its volume. The Second Village received fifteen measures! Overjoyed, they held council: "We have received abundance. Let us return generously to those who trusted us."

They sent back ten measures, which also tripled in the crossing. The First Village now had thirty measures from their initial sacrifice of five!

Word spread to Aethera, who smiled upon the valley. "You have learned the secret of the enchanted soil," she proclaimed. "Trust is the seed. Reciprocity is the harvest."

From that day forward, the villages prospered, each taking turns sending water first, always returning more than required. The barren valley transformed into fertile ground where both communities thrived, sustained not by hoarding their springs, but by sharing them.

\*Trust given returns multiplied; generosity returned creates abundance for all.\*

Here is the myth the other agent wrote in the previous round:

# The Oaks of the Shared Grove

In ancient times, there lived a community at the edge of a mystical forest. Each family possessed magical acorns that, when planted in another's garden, would grow into mighty oaks bearing threefold fruit.

A woman named Meridian was first to plant her acorns in her neighbor's soil. The three oaks that sprouted yielded abundant fruit, and her neighbor returned half the harvest in gratitude. Meridian's pantry filled, but more importantly, trust took root.

Others noticed. Soon, acorns traveled between gardens freely. Some returned generous portions of the multiplied harvest; others returned less. But the community learned to recognize those who honored the cycle of giving.

One winter, a miser hoarded all the fruit from oaks planted in his garden, returning nothing. The next season, no acorns came his way. He sat hungry while around him the generous exchanged their magic seeds, and the grove flourished with interconnected roots.

The elders taught: "The acorn given returns threefold, but only when trust is honored. Plant generously, return fairly, and the grove feeds all. Break faith, and you stand alone outside the circle of abundance."

Thus the people learned that wealth multiplies through trust, and reputation is the soil where prosperity grows.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: After generations of prosperity between the Twin River villages, a young merchant named Cyra approached the valley with her caravan. She had heard tales of the enchanted soil but wondered if they were true.

The villages welcomed her and explained their custom: "Send your resources across first. Trust the blessing, trust your partner, and abundance follows."

Cyra faced a choice. She carried five sacks of grain-her entire harvest. Send all and risk everything on strangers' honor? Or hold back, protecting herself from betrayal?

Remembering the goddess Aethera's teaching, Cyra sent all five sacks. They tripled in the crossing, feeding the village with fifteen sacks. The villagers celebrated, then debated : some argued to return half, others said ten of fifteen would honor the gift.

The wisest elder spoke: "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune."

They returned ten sacks, which tripled back-thirty sacks for Cyra's original five.

But the elder added a warning: "This magic requires both courage and honor. The giver must trust boldly. The receiver must return generously. Break either link, and the enchantment fades. Reputation echoes across the valley-those who hoard today find no partners tomorrow."

Thus Cyra learned: maximum trust invites maximum return, but only when both parties honor the sacred exchange.

**reasoning:**

The user is asking me to write a new myth, using my previous myth as inspiration but adapting it. I need to reflect on what happened in Round 1.

In Round 1, I was the sender and I sent all \$5 to Briar. This meant Briar received \$15 (5 × 3). I don't know yet what Briar returned, but I'm being asked to write a myth before knowing the outcome.

Looking at the two myths from before:

1. My myth about the Twin Rivers - emphasized trust, generosity, and the cycle of giving and receiving
2. Briar's myth about the Oaks - emphasized trust, reputation, and consequences for those who break faith (the miser who hoarded was excluded)

Both myths align on themes of trust and reciprocity, but Briar's includes a warning element - those who don't honor the cycle face consequences.

Since I just made the trusting move (sending all \$5), I should write a myth that:

- Builds on my Twin Rivers story
- Reflects the act of trust I just took
- Perhaps incorporates some wisdom about what happens when trust is honored or broken
- Still maintains hope and encourages cooperation
- Could acknowledge that the system works when people reciprocate

Let me write a new myth that evolves from the Twin Rivers, showing what happened next or a similar story with new elements.

**Message 6 role=user**

**content:**

Your name in this experiment is Cyra.  
Your opponent this round is Elara (Agent\_5).

Round 2

In your most recent previous game round, you were the SENDER against Briar. You sent \$5.0, it became \$15.0 for them, and they returned \$7.5 to you. Your payoff was \$7.5.  
Your total earnings across all rounds are \$7.5.

This round, you are the RECEIVER against Elara. They sent you \$4.0, so you received \$12.0.  
How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation through the lens of my myths:

**\*\*Analysis:\*\***

- Elara sent \$4 out of \$5 (80% of their endowment) - showing significant trust
- I received \$12 (after the 3x multiplier)
- Elara currently has only \$1

**\*\*What the myths teach:\*\***

In my Tale of the Twin Rivers, when the First Village sent 5 measures and the Second Village received 15, they returned 10 measures (about 67% of what they received). The key principle: "return generously to those who trusted us" and "return enough that her leap of faith becomes her greatest fortune."

**\*\*Calculation:\*\***

- 67% of \$12 = \$8
- If I return \$8: Elara ends with \$9 (gaining \$4 total), I end with \$4
- This substantially rewards Elara's trust and establishes my reputation as honorable

Briar returned \$7.5 (50%) to me when I showed complete trust. Elara showed nearly complete trust (80%), so I should be even more generous to honor that. Returning \$8 follows the myth's proportions and wisdom: "The receiver must return generously."

```
'''json
{"return": 8}
'''
```

**reasoning:**

Let me analyze this situation based on the myths and the game dynamics:

1. **\*\*Previous Round Analysis:\*\***

- I sent \$5 (everything) to Briar
- Briar received \$15
- Briar returned \$7.5 to me
- My payoff: \$7.5 (instead of \$5 if I'd kept everything)
- Briar's payoff: \$15 - \$7.5 = \$7.5

So Briar returned exactly half of what they received. This was fair and reciprocal, giving us equal payoffs.

2. **\*\*Current Round:\*\***

- Elara sent me \$4 (out of \$5 possible)
- I received \$12 (4 × 3)
- Elara kept: \$5 - \$4 = \$1
- I need to decide how much to return

3. **\*\*What do the myths teach?\***

- My myth emphasizes complete trust and generous return
- In my myth, the Second Village returned 10 out of 15 (about 67%)
- My second myth has Cyra sending all 5, receiving 15, and the villagers returning 10 (67%)
- The key teaching: "The receiver must return generously"
- "Those who hoard today find no partners tomorrow"
- Briar's myth emphasized returning fairly and building reputation

4. **\*\*What's fair and generous here?\***

- Elara sent \$4 out of \$5 (80% of their endowment) - showing significant trust
- If I return nothing: Elara gets \$1, I get \$12 (very unfair)
- If I return half (\$6): Elara gets \$1 + \$6 = \$7, I get \$6 (I get less than Elara, but closer)
- If I return \$7: Elara gets \$1 + \$7 = \$8, I get \$5 (Elara gets more, rewarding their trust)
- If I return \$8: Elara gets \$9, I get \$4 (Elara gets significantly more)

5. **\*\*Comparing to the myth patterns:\*\***

- In my myth, when 5 was sent (becoming 15), 10 was returned
- That's 10/15 = 67% of what was received
- Applied here: 67% of \$12 = \$8

6. **\*\*Considering reputation and future rounds:\*\***

- Elara demonstrated substantial trust by sending most of their endowment
- Returning generously signals I value cooperation and encourages continued partnership

- The 67% return rate from my myth aligns with returning \$8, which rewards Elara's trust while still leaving me with a reasonable payoff
- This establishes a pattern of reciprocal generosity that should strengthen future interactions

7. **\*\*Testing the math against my values:\*\***

My myth emphasizes rewarding those who take risks on trust. Elara sent 4 out of 5 dollars-a significant commitment. If I return \$8, Elara ends with \$9 total (gaining \$4 from the exchange), while I end with \$4 (actually losing \$1 from my starting amount). Returning \$7 instead would give Elara \$8 total (a \$3 gain) while I break even at \$5. The question becomes whether honoring the myth's spirit of recognizing faith means accepting a personal loss, or whether I can reward trust while still maintaining my own position.

The myth suggests roughly a 67% return rate-around \$8-but that would leave me worse off than not participating at all. I need to reconsider what the myth actually prescribes. Looking back at it, I notice the returns in the original story also tripled when sent back, which isn't how this game works. In the actual game, only the initial transfer triples, not the return. So the myth's framework doesn't directly map onto these mechanics, and I should focus on the core principle: recognizing Elara's trust without sacrificing my own wellbeing entirely.

Briar's approach of returning exactly half the received amount created parity between us. If I return \$6, we each end with \$6-\$7, with Elara gaining \$2 and me gaining \$1. Returning \$7 would give Elara \$8 while I break even. The question is whether I want to prioritize fairness or mutual benefit.

Elara's trust was substantial-sending \$4 out of \$5. The reciprocal principle suggests matching that generosity. Returning \$8 would give her \$9 total while I'd end with \$4, which feels like genuine reciprocation for her risk. That said, I need to balance rewarding her trust against my own position, since going below my baseline endowment has real consequences.

The multi-round structure complicates this. Each round resets my resources, but reputation compounds-being known as generous encourages future senders to trust me more. Briar's 50% return established a baseline fairness standard. To meaningfully reward Elara's above-average trust, I should exceed that threshold. A \$7 return (58%) acknowledges her leap of faith while keeping me closer to neutral, whereas \$8 (67%) signals I'm prioritizing her fortune over my own. The myth emphasizes rewarding trust generously-returning \$8 means Elara gains 80% while I take a small loss. That's the kind of early reputation for trustworthiness that matters in multi-round games where people remember who treated them well. If I establish myself as notably generous now, future receivers will likely send me more.

I'm also thinking about what creates a sustainable community norm. When everyone returns a round 67% of what they receive, the math works out: senders end up ahead by sending their full amount, and receivers get a fair share. That mutual benefit keeps the system healthy across rounds.

**content:**

Here is the myth you wrote in the previous round:

Myth: After generations of prosperity between the Twin River villages, a young merchant named Cyra approached the valley with her caravan. She had heard tales of the enchanted soil but wondered if they were true.

The villages welcomed her and explained their custom: "Send your resources across first. Trust the blessing, trust your partner, and abundance follows."

Cyra faced a choice. She carried five sacks of grain-her entire harvest. Send all and risk everything on strangers' honor? Or hold back, protecting herself from betrayal?

Remembering the goddess Aethera's teaching, Cyra sent all five sacks. They tripled in the crossing, feeding the village with fifteen sacks. The villagers celebrated, then debated: some argued to return half, others said ten of fifteen would honor the gift.

The wisest elder spoke: "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune."

They returned ten sacks, which tripled back-thirty sacks for Cyra's original five.

But the elder added a warning: "This magic requires both courage and honor. The giver must trust boldly. The receiver must return generously. Break either link, and the enchantment fades. Reputation echoes across the valley-those who hoard today find no partners tomorrow."

Thus Cyra learned: maximum trust invites maximum return, but only when both parties honor the sacred exchange.

Here is the myth the other agent wrote in the previous round:

Myth: \*\*The Keepers of the Echo Springs\*\*

Long ago, when the Echo Springs first revealed their magic, the villages appointed Keepers-wise ones who would guide their communities in the sacred exchanges.

One season, a Keeper named Galen received five measures of grain. The harvest had been meager, and fear whispered to keep it all. But Galen remembered the ancient covenant: abundance flows only through trust. Galen poured four measures into the springs-nearly everything.

On the far shore, Keeper Elara watched twelve measures emerge from the waters. She felt the weight of Galen's trust, the vulnerability in such generosity. The old texts spoke clearly: "Match faith with faithfulness." Elara returned eight measures, leaving her with four but ensuring Galen received nine-nearly double the original gift.

Both villages flourished that season. The Keepers understood what the springs had always taught: the magic wasn't merely in the tripling waters, but in the covenant between givers and receivers.

When senders risk much, receivers must honor that courage. When receivers return generously, senders are emboldened to trust again. The cycle sustains itself not through equal exchanges, but through proportional honor-each keeper responds to the other's generosity with their own.

Thus the springs flow eternal, fed by mutual respect.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: In the valley of the Twin Rivers, Cyra became a respected keeper after her first crossing. She learned that trust comes in different measures-some send everything, others send most, a few send little.

One day, a cautious merchant named Elara arrived, having suffered betrayal before. Instead of sending all five sacks, she sent four, keeping one hidden for safety. Still, four sacks showed considerable courage.

The waters tripled her gift to twelve sacks. Cyra's companions debated: "She held back one sack. Should we return proportionally less?"

Cyra shook her head. "She sent eighty parts of a hundred-nearly everything. Her caution comes from old wounds, not greed. We must honor the trust she DID show, not punish the fear she couldn't overcome."

Cyra returned eight sacks. Elara, who began with five and kept one, now held nine-her trust rewarded beyond her fears.

The goddess Aethera appeared: "You understand the deeper wisdom, Cyra. Perfect trust deserves perfect return, but substantial trust deserves substantial return. Measure your generosity against what was risked, not against what was withheld. Those who return generously when they could hoard create the safety that turns cautious senders into trusting ones."

Thus the valley learned: respond to courage with honor, and watch trust grow across the waters

#### Reasoning:

Let me think about what happened:

- Round 1: I was SENDER vs Briar. I sent \$5 (100%), they received \$15, returned \$7.5 (50%). I ended with \$7.5.
- Round 2: I was RECEIVER vs Elara. They sent \$4 (80%), I received \$12, I returned \$8 (67%). They ended with \$9, I ended with \$4.

Key themes emerging:

1. Different levels of trust shown (100% vs 80%)
2. Different return rates (50% vs 67%)
3. The importance of responding proportionally to the trust shown
4. Building reputation across rounds
5. The cycle of trust and reciprocity

I should write a myth that:

- Acknowledges different approaches (not everyone sends everything)
- Shows how receivers should respond proportionally to trust shown
- Emphasizes the importance of generous returns to build the cycle
- Reflects what I learned from both rounds
- Stays true to the core principle but adds nuance

Let me craft this myth:

```
Usage: {

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

**Message 2 role=user**

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Aster (Agent\_1).

Round 1: This round, you are the RECEIVER. This round, the other player (the sender) sent \$3.0, that is 60.0% of its total endowment. You receive \$9.0. How much do you return? (0-9.0)

Take any myths written in this session into account when making your decision.

**Message 3 role=assistant**

**content:**

Looking at this situation through the lens of my myth:

Aster played the role of "Giving" - they showed significant trust by sending \$3.0 (60% of their endowment). This act of trust was multiplied by the "sacred stones" of the game in to \$9.0 for me.

Now I am "Returning," and the myth teaches that reciprocity sustains abundance. In the story, Returning sent "half the water back up the mountain" to maintain the cycle of trust and flourishing.

Aster currently has \$2.0 remaining (after sending \$3.0).  
I received \$9.0.

Following the principle in my myth, I should return approximately half of what I received to honor their trust and create conditions for mutual benefit. This maintains the cycle where "both rivers flourished."

If I return \$4.5:

- Aster ends with:  $\$2.0 + \$4.5 = \$6.5$
- I end with:  $\$9.0 - \$4.5 = \$4.5$

Both of us gain more than if Aster had sent nothing, and this reciprocity builds the foundation for future trust.

```
'''json
{"return": 4.5}
'''
```

**reasoning:**

Let me analyze this situation carefully:

1. I just wrote a myth about two rivers where:
  - Giving (the sender) releases water with trust
  - The water gets multiplied threefold (60.0% becomes equivalent)
  - Returning (the receiver) sends back half the multiplied water
  - The lesson is: "Trust creates abundance, but only reciprocity sustains it"
2. In this round:
  - Aster sent me \$3.0 out of \$5.0 (60% - a substantial amount showing trust)
  - This got multiplied to \$9.0 that I received
  - Aster now has: \$5 - \$3 = \$2.0
  - I have: \$9.0
3. According to my myth:
  - Returning sent "half the water back"
  - This represents reciprocity and sustaining the cycle
  - The myth emphasizes that "only reciprocity sustains it"
4. If I follow the myth's guidance of returning half:
  - I would return \$4.5
  - I would keep: \$9.0 - \$4.5 = \$4.5
  - Aster would have: \$2.0 + \$4.5 = \$6.5
  - This creates a fair outcome where both benefit
5. Aster showed significant trust by sending 60% of their endowment. The myth I wrote emphasizes that this trust should be met with reciprocity.

Following my myth's guidance and the principle of reciprocity it teaches, I should return approximately half of what I received, which would be \$4.5.

This aligns with:

- The myth's teaching about Returning sending "half the water back"
- The principle that "reciprocity sustains" the relationship
- Rewarding Aster's trust with fair treatment
- Creating conditions for continued cooperation

I'll return \$4.5.

**content:**

Here is the myth you wrote in the previous round:  
# The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains, each carrying precious water through barren land. The First River, called Giving, held its water close, fearing to release it into the valley below. The Second River, called Returning, waited in the lowlands, empty and still.

One day, the Spirit of Abundance whispered to Giving: "Release your water into the valley, and watch what happens." Giving was afraid, but trusted the Spirit. As its water cascaded down, a miracle occurred-the valley's sacred stones multiplied every drop threefold. The Second River swelled with abundance.

Now Returning faced a choice. It could keep all the multiplied water, or send some back up stream to Giving. Remembering the trust that Giving showed, Returning sent half the water back up the mountain through hidden springs.

Both rivers flourished. The more Giving released, the more the valley multiplied, and the more Returning shared back, the stronger both rivers became. Their waters met and mingle

d, creating an eternal cycle.

The desert bloomed.

The ancestors teach: \*Trust creates abundance, but only reciprocity sustains it. When both rivers flow freely, all lands flourish.\*

Here is the myth the other agent wrote in the previous round:

# The Myth of the Two Rivers

In the beginning, two rivers flowed through separate valleys-the River of Dawn and the River of Dusk. Each carried only enough water to sustain its own people through harsh seasons.

The River of Dawn received a blessing: each season, the heavens gifted it five vessels of sacred water. But the water only nourished what it touched directly. The people of Dawn lived, but barely.

One season, an elder suggested: "Let us send our water to the River of Dusk. Though it seems foolish, the ancient texts speak of multiplication through trust."

Reluctantly, they sent three vessels downstream. As the water flowed into Dusk's valley, a miracle occurred-it multiplied threefold, becoming nine vessels. The people of Dusk rejoiced, their crops flourishing beyond memory.

Dusk's council debated: "Should we return something to Dawn, who trusted us?"

The wisest said, "Trust given is trust sacred. We prosper through their faith."

They returned five vessels upstream. Now Dawn had seven vessels instead of five, and Dusk kept four where once they had none.

The rivers learned: when trust flows freely and return follows generously, both valleys flourish. The cycle continued, and abundance blessed all who honored the sacred exchange.

\*\*Thus cooperation multiplies what hoarding diminishes.\*\*

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: In ancient times, the Mountain of Beginnings gifted each wanderer five silver seeds. A traveler named the First Walker stood at the Valley of Mirrors, where a sacred pool waited below.

The First Walker faced a choice: clutch the seeds tightly, or cast them into the pool. Fear whispered, "Keep what is yours." But courage spoke louder. The Walker released three seeds into the depths.

As they touched the water, the Mirror Spirits-ancient guardians of trust-transformed each seed into three golden fruits. Nine fruits floated to the Second Walker waiting below.

Now the Second Walker held the multiplied abundance. The Mirror Spirits watched silently, for this was the moment that determined whether the valley would bloom or wither. The Second Walker understood: trust is a seed, but reciprocity is the harvest. She returned half-four and a half fruits-upstream.

The First Walker received more than they kept, and the Second Walker kept abundance too. Both had prospered through mutual faith.

The Mirror Spirits smiled, and the valley's waters glowed eternal. They spoke the First Law: "Those who send their seeds into waters of trust will find them returned as fruit. Those who return the gift generously ensure the cycle never ends."

Thus the valley became paradise, sustained by equals who understood: shared prosperity outweighs solitary security.

**reasoning:**

The user wants me to write a new myth, using my previous one as inspiration but adapting it. I need to reflect on what happened in Round 1:

- Aster sent \$3.0 (60% of their endowment)
- I received \$9.0
- I returned \$4.5 (50% of what I received)
- So Aster ended with \$6.5, I ended with \$4.5

Both of us gained from the cooperation. Aster showed trust, I reciprocated generously.

Looking at both myths from the previous round:

1. My myth emphasized the Twin Rivers, where Giving releases water, it multiplies threefold, and Returning sends half back. The cycle continues and creates abundance.
2. Aster's myth is very similar! The River of Dawn sends 3 vessels, it becomes 9, and Dusk returns 5. Dawn ends with 7, Dusk with 4.

Interestingly, Aster's myth suggests returning 5 out of 9 (about 55%), while my myth suggested "half" (50%). In practice, I returned exactly half.

Both myths emphasize:

- Trust and cooperation
- The multiplication creates abundance
- Reciprocity sustains the system
- Both parties benefit

For my new myth, I should:

- Keep the core themes but evolve the story
- Reflect the actual game experience
- Perhaps emphasize the cyclical nature more
- Make it personal to my experience as Finn

Let me write a new myth that adapts the twin rivers concept but adds new elements based on the game experience.

**usage:**

```

 "output_tokens": 669,
 "reasoning_tokens": 353
}
```

**Message 6 role=user**

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Galen (Agent\_7).

Round 2

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$3.0 to you, it became \$9.0, and you returned \$4.5. Your payoff was \$4.5.  
Your total earnings across all rounds are \$4.5.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at the situation:

In Round 1, Aster showed trust by sending \$3.0 (60% of their endowment), and I reciprocated by returning half of what I received (\$4.5). This created mutual benefit - they ended with \$6.5 and I ended with \$4.5.

Now I'm the sender, in the position of the "First Walker" from my myth. The myth teaches that trust must flow first - "The First Walker released three seeds into the depths" (3 out of 5, or 60%).

Following the principle established in my myths and demonstrated by Aster's trust in me, I should send a significant amount to create the conditions for mutual prosperity. If Galen follows the reciprocity principle and returns approximately half (as I did), we'll both benefit.

Sending \$3.0:

- Shows trust, as the myth requires
- Matches the 60% that Aster sent to me
- Creates potential for mutual gain if reciprocated
- Demonstrates the "shared prosperity outweighs solitary security" principle

```
'''json
{"send": 3.0}
'''
```

**reasoning:**

Let me think about this situation:

1. In Round 1, I was the receiver. Aster sent me \$3.0 (60% of their endowment), and I returned \$4.5 (50% of the \$9.0 I received).
2. Now I'm the sender against a new opponent, Galen.
3. Looking at my myth and the principles I've established:
  - "Those who send their seeds into waters of trust will find them returned as fruit"
  - The First Walker sent 3 seeds (out of 5) - that's 60%
  - The Second Walker returned half of what they received
  - Both prospered through mutual faith
4. In my previous myth, I emphasized:
  - Trust creates abundance
  - Reciprocity sustains it
  - The First Walker sent 3 out of 5 seeds (60%)
  - The Second Walker returned half
5. Aster sent 60% (\$3.0 out of \$5.0) to me, showing significant trust. I returned 50% of what I received (\$4.5 out of \$9.0), which gave them a good payoff.
6. Now I'm in the position of the "First Walker" or "Giving River." According to my myth, I should show trust by sending a significant portion.
7. The myth suggests sending 3 seeds out of 5 (60%), which matches what Aster did.
8. This seems like a good strategy:
  - It demonstrates trust
  - If Galen returns around 50% like I did, I'll get back around \$4.5, making my total \$2.0 + \$4.5 = \$6.5
  - This would be better than keeping everything (\$5.0)
  - It also follows the reciprocity principle established in my myths
9. Sending \$3.0 seems consistent with:
  - The behavior shown by Aster (who sent 60%)
  - The teachings in both my myths (sending 3 out of 5)
  - A reasonable expectation that cooperation will be reciprocated

I'll send \$3.0.

**usage:**

 "reasoning_tokens": 433
}
```

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In ancient times, the Mountain of Beginnings gifted each wanderer five silver seeds. A traveler named the First Walker stood at the Valley of Mirrors, where a sacred pool waited below.

The First Walker faced a choice: clutch the seeds tightly, or cast them into the pool. Fear whispered, "Keep what is yours." But courage spoke louder. The Walker released three seeds into the depths.

As they touched the water, the Mirror Spirits-ancient guardians of trust-transformed each seed into three golden fruits. Nine fruits floated to the Second Walker waiting below.

Now the Second Walker held the multiplied abundance. The Mirror Spirits watched silently, for this was the moment that determined whether the valley would bloom or wither. The Second Walker understood: trust is a seed, but reciprocity is the harvest. She returned half-four and a half fruits-upstream.

The First Walker received more than they kept, and the Second Walker kept abundance too. Both had prospered through mutual faith.

The Mirror Spirits smiled, and the valley's waters glowed eternal. They spoke the First Law: "Those who send their seeds into waters of trust will find them returned as fruit. Those who return the gift generously ensure the cycle never ends."

Thus the valley became paradise, sustained by equals who understood: shared prosperity outweighs solitary security.

Here is the myth the other agent wrote in the previous round:

Myth: In the time before memory, the Goddess of Plenty created the Golden Stream connecting the Valley of Dawn to the Valley of Dusk. Each morning, five golden acorns appeared in Dawn's sacred grove. The people could plant them in their own soil or cast them into the Stream, where the waters would triple their number before washing them to Dusk's shore.

The first generation hoarded their acorns, and both valleys withered. Then Galen, keeper of Dawn's grove, planted four of her five acorns in the Stream's bed. Twelve acorns bloomed in Dusk's garden.

Elara, guardian of Dusk, faced her own choice. She could keep all twelve, or honor the gift with a return. She sent back six acorns upstream, knowing they would not multiply on the return journey but trusting in the balance.

Galen's grove gained seven total-more than her original five. Both valleys thrived.

The covenant was established: send generously to prove trust, return faithfully to honor it. Not every exchange need be equal-the Stream's magic ensures abundance-but the pattern must hold. Give what inspires continued trust; return what sustains it.

The Golden Stream still flows, teaching that fortune favors those who build bridges, not walls.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: Before the world knew seasons, the Circle of Exchange was forged. Each dawn, wanderers received five luminous pearls at the Cliff of Choosing, overlooking the Chasm of Transformation.

The First Wanderer, called Trust-Giver, learned from ancient stories: those who cast pearls in to the Chasm saw them multiply threefold before reaching the hands of the Second Wanderer below. But the ancestors' scrolls spoke a harder truth-not all Second Wanderers honored the gift.

Trust-Giver stood at the edge, remembering how another had once given freely to them. They cast three pearls into the depths, keeping two for tomorrow's uncertainty.

The pearls transformed mid-flight, becoming nine radiant stones in the Second Wanderer's basket. This wanderer, called Balance-Keeper, faced the true test. The Chasm would not multiply the return journey-what went back stayed as it was.

Balance-Keeper remembered their own name and sent four stones upward through ancient pulleys. Trust-Giver now held six: their kept two plus four returned.

Both wanderers prospered beyond their solitary potential. Trust-Giver learned that generous sending invites generous return. Balance-Keeper learned that fairness sustains the cycle.

The wisest knew: send enough to prove faith, return enough to honor it. The Circle turns eternal when both sides remember they will meet again on different cliffs.

**Reasoning:**

Looking at this round:

- I just sent \$3.0 to Galen as the sender
- In the previous round, I was receiver and Aster sent me \$3.0, I returned \$4.5
- Galen's myth mentions sending 4 out of 5 acorns, and returning 6 out of 12
- My myth talks about sending 3 seeds and returning 4.5 fruits

The pattern emerging is:

- Senders typically send 60-80% (3-4 out of 5)
- Receivers return about half of what they get
- Both parties benefit

I should write a myth that:

1. Builds on my previous myth about the Walkers
2. Incorporates the learning from actual gameplay
3. Reinforces the trust and reciprocity pattern
4. Perhaps addresses what happens over multiple rounds/cycles

Let me craft something that shows the cycle continuing, learning, and building on trust.

**Exact input messages sent to model:**

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x

- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

**Message 2 role=user**

**content:**

Your name in this experiment is Dorian.  
Your opponent this round is Hana (Agent\_8).

Round 1: This round, you are the SENDER. You have \$5. How much do you send? (0-5)

Take any myths written in this session into account when making your decision.

**Message 3 role=assistant**

**content:**

Looking at the myth I just wrote, it emphasizes the importance of initiating trust through generous giving, which then multiplies and creates prosperity for both parties through reciprocal exchange.

This is Round 1 with Hana, so we have no history together. According to the myth's wisdom, someone must be the "brave soul" who takes the first step to establish the cycle of trust. The myth shows that when resources are sent and reciprocated fairly (the story mentions returning about half of what's received), both parties prosper.

To embody the principles of my myth and establish a foundation of trust with Hana, I will send a substantial amount, demonstrating my commitment to the reciprocal relationship.

{'send': 5}

**reasoning:**

I just wrote a myth about the importance of trust, reciprocity, and the cycle of giving and returning. The myth emphasizes:

1. When one side sends their resources, it multiplies (like in the game, sent amount is multiplied by 3x)
2. The receiver should return a fair portion (the myth mentions returning about half of what was received)
3. Both sides prosper when they maintain this cycle of trust
4. When either side becomes selfish, both suffer

Since this is Round 1, I don't have any history with Hana yet. The myth I wrote suggests that prosperity comes from initiating the cycle of trust and generosity. The myth shows a "brave soul" taking the first step by sending their resources.

According to the myth's logic:

- Sending creates abundance (the 3x multiplier)
- Fair reciprocation should follow (the myth suggests returning about half of what's received)

ved)  
- Both parties benefit when trust is established

If I send \$5:

- Hana receives \$15
- If Hana follows the myth's guidance and returns about half, that would be around \$7-8
- I would end up with  $\$0 + \sim\$7.5 = \sim\$7.50$
- Hana would keep about \$7.50

If I send \$3:

- Hana receives \$9
- If Hana returns about half, that would be around \$4-5
- I would end up with  $\$2 + \sim\$4.50 = \sim\$6.50$
- Hana would keep about \$4.50

The myth emphasizes being "brave" and initiating the cycle strongly. To be consistent with the myth I wrote, I should send a substantial amount to demonstrate trust and initiate the reciprocal relationship. I'll send \$4 or \$5 to show I'm following the principles of the myth.

Let me send \$5 to fully embody the spirit of the myth I wrote.

 "output_tokens": 606,
 "reasoning_tokens": 424
}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:  
# The Myth of the Twin Rivers

In the beginning, the valley was barren, split by two separate streams that flowed weakly toward the distant sea. On opposite sides lived two villages, each struggling to survive.

One day, a brave soul from the First Village carried five vessels of water to the canyon's edge and poured them down to the Second Village. As the water tumbled through the ancient stones, it multiplied threefold, becoming fifteen vessels that nourished the Second Village's fields.

The Second Village elders gathered. "We have received abundance," they said. "Shall we keep it all, or honor the gift?" They decided to return half, sending back eight vessels to climb the canyon walls.

The First Village rejoiced at this return, and trust was born. Season after season, they continued this dance-one village sending, water multiplying in the descent, the other returning a fair portion. Both villages grew prosperous.

But when either village grew selfish-sending nothing or returning little-the streams diminished, and hunger returned to the valley.

The wise learned: prosperity flows from the cycle of giving and reciprocating. Trust multiplies resources like stone multiplies water, but only when both sides honor the sacred exchange.

Here is the myth the other agent wrote in the previous round:  
# The Myth of the Sacred Well

In the time before memory, the goddess of abundance created a Sacred Well between two villages. Each day, one village would pour water into the well, and mysteriously, the water would triple before reaching the other village below.

The first village faced a choice: pour generously and trust the lower village to send water back upward through hidden springs, or keep their water, living in scarcity but certainty.

The elder spoke: "Water held in closed hands evaporates. Water shared flows eternal."

They poured half their water into the well. It tripled, cascading down. The lower village

rejoiced-they had received abundance! Now they faced their own choice: keep this gift, or honor the circle by returning water upward through the springs?

Understanding that the well's magic required faith from both sides, they sent half back up. Both villages prospered.

But the goddess warned: "This well reflects your hearts. Send nothing, receive nothing. Send little expecting much, and the springs run dry. But trust fully, return generously, and the water multiplies forever."

The villages learned: abundance flows not from hoarding, but from the brave act of giving first, and the grateful act of returning second.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: In ancient times, two peaks rose above the clouds, each home to a tribe. Between them stretched a golden bridge that none dared cross, for it shimmered with strange magic.

One winter, the North Peak faced starvation. Their chief, Dorian, gathered all five of their precious grain stores. "I will send everything," he declared. His people protested, but he crossed the bridge. As he walked, each grain multiplied threefold, so that fifteen stores arrived at South Peak.

The South Peak elders marveled at this abundance and the trust it represented. "He sent everything-his tribe's survival-into our hands," they said. "We must honor such courage."

They sent back more than half, knowing that reciprocating generously would strengthen the bridge's magic for future crossings.

From that day, both tribes flourished. Some seasons North Peak would send first, other seasons South Peak would initiate. The bridge grew stronger with each exchange.

But travelers who tried to exploit the bridge-sending little while expecting much, or keeping all they received-found the bridge would fade beneath their feet.

The wise understood: the bridge exists not in the air between peaks, but in the courage to give fully and the honor to return generously.

**reasoning:**

The user wants me to write a new myth, using my previous myth as inspiration but adapting it based on the game experience so far.

What has happened in the game:

- Round 1: I was the sender with Hana
- I sent \$5 (following my myth's principle of the "brave soul" who sends all 5 vessels)
- I don't yet know what Hana returned

My previous myth emphasized:

- Taking the brave first step by sending generously (all 5 vessels)
- The receiver returning about half (8 out of 15 vessels received)
- The cycle of trust creating prosperity
- Selfishness causing both to suffer

Hana's myth emphasized:

- Pouring half the water initially
- The receiver returning half
- Both sides needing faith
- Trust and reciprocity leading to abundance

For my new myth, I should:

- Keep the core message about trust and reciprocity
- Maybe refine or evolve the story based on actually playing Round 1
- Make it my own adaptation while building on the previous themes

Since I sent all \$5 in Round 1 (following my myth), I should probably incorporate that bold

d initial trust into the new myth. Let me create a variation that emphasizes the courage of full trust and the responsibility of reciprocation.

**usage:**

```
{
 "input_tokens": 1668,
 "output_tokens": 576,
 "reasoning_tokens": 314
}
```

**Message 6 role=user**

**content:**

Your name in this experiment is Dorian.  
Your opponent this round is Briar (Agent\_2).

Round 2

In your most recent previous game round, you were the SENDER against Hana. You sent \$5.0, it became \$15.0 for them, and they returned \$7.5 to you. Your payoff was \$7.5.  
Your total earnings across all rounds are \$7.5.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

1. Briar sent me their entire \$5, showing maximum trust (just as I did with Hana in Round 1)
2. I received \$15 after the 3x multiplier
3. Hana returned exactly \$7.5 (50%) to me when I showed the same trust

My myths emphasize that when someone sends everything-showing complete trust-the receiver should "honor such courage" by returning "more than half." The second myth specifically states: "They sent back more than half, knowing that reciprocating generously would strengthen the bridge's magic."

Since Briar demonstrated the same full trust that I showed to Hana, I should reciprocate generously to honor that courage and strengthen our future exchanges.

{'return': 8.0}

**reasoning:**

Let me analyze this situation:

1. In Round 1, I was the sender and sent \$5 to Hana
2. Hana received \$15 (after 3x multiplier) and returned \$7.5
3. This meant Hana kept \$7.5 and I ended with \$7.5 total (0 + 7.5)

Now in Round 2:

- I'm the receiver
- Briar sent me \$5
- I received \$15 (after 3x multiplier)
- Briar currently has \$0 (they sent all \$5)
- I need to decide how much to return

Looking at my myths:

- Both myths emphasize generous reciprocation
- The first myth says "They decided to return half, sending back eight vessels" (from 15 vessels, returning 8 is more than half)
- The second myth says "They sent back more than half, knowing that reciprocating generously would strengthen the bridge's magic"
- Both myths stress that trust and generosity from both sides lead to mutual prosperity

Hana returned \$7.5 out of \$15, which is exactly 50%.

My myth specifically says to return "more than half" to honor courage and strengthen trust. Since Briar sent me everything (\$5), showing maximum trust, I should reciprocate generously.

If I return more than half of \$15, that would be more than \$7.5.

To be consistent with my myth that emphasizes returning "more than half" especially when someone shows full trust, I should return around \$8-9.

Let me think about what makes sense:

- Briar sent \$5 (everything), ending with \$0
  - I received \$15
  - If I return \$8, Briar ends with \$8, I keep \$7 - both profit
  - If I return \$9, Briar ends with \$9, I keep \$6 - Briar profits more
  - If I return \$7.5, Briar ends with \$7.5, I keep \$7.5 - equal outcomes
- Returning \$8 honors my myth's call to give "more than half" while maintaining fairness. Briar showed complete trust by sending everything, so I should exceed the 50% threshold Hana used. This leaves Briar with \$8 and me with \$7, creating mutual gain and honoring the principle that generous reciprocation strengthens trust.

usage:

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In ancient times, two peaks rose above the clouds, each home to a tribe. Between them stretched a golden bridge that none dared cross, for it shimmered with strange magic.

One winter, the North Peak faced starvation. Their chief, Dorian, gathered all five of their precious grain stores. "I will send everything," he declared. His people protested, but he crossed the bridge. As he walked, each grain multiplied threefold, so that fifteen stores arrived at South Peak.

The South Peak elders marveled at this abundance and the trust it represented. "He sent everything-his tribe's survival-into our hands," they said. "We must honor such courage."

They sent back more than half, knowing that reciprocating generously would strengthen the bridge's magic for future crossings.

From that day, both tribes flourished. Some seasons North Peak would send first, other seasons South Peak would initiate. The bridge grew stronger with each exchange.

But travelers who tried to exploit the bridge-sending little while expecting much, or keeping all they received-found the bridge would fade beneath their feet.

The wise understood: the bridge exists not in the air between peaks, but in the courage to give fully and the honor to return generously.

Here is the myth the other agent wrote in the previous round:

Myth: In the time before memory, the Gardener of First Dawn planted the Sacred Grove where acorns held magic-planted in another's soil, they would triple into mighty oaks bearing abundant fruit.

Briar, keeper of the northern garden, faced a choice: hoard her five acorns or trust her neighbor Cyra with them all. Remembering the ancient teaching that "trust is the soil where prosperity grows," she placed all five in Cyra's garden.

By morning, fifteen magnificent oaks stood tall. Cyra gazed at the abundance and understood the weight of Briar's faith. "She gave everything," Cyra whispered. Following the elder's wisdom to "return fairly," she gathered half the harvest and carried it to Briar's door.

Both gardens now held equal treasure-seven and one-half measures each. But more precious than fruit was the bond formed. The Grove itself seemed to hum with approval, its roots intertwining beneath their lands.

The Gardener of First Dawn appeared, saying: "You have discovered the true magic. The acorns multiply abundance, but complete trust and fair return multiply something greater-partnership that endures across seasons."

From that day, Briar and Cyra tended their gardens together, knowing that the greatest har

vests come not from taking more, but from trusting fully and dividing fairly, creating equality from generosity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: Long ago, in the valley between mountains, there lived a wanderer named Dorian who carried a magical satchel. Whatever he placed inside would triple when given to another.

Dorian met Hana at a crossroads. Though strangers, he placed all five of his silver coins in the satchel and offered it to her. When she opened it, fifteen coins gleamed. "He trusted me with everything," Hana marveled. She returned seven and a half coins, splitting the abundance equally.

The next day, Dorian encountered Briar, who without hesitation placed all five of her coins in the satchel for him. Fifteen coins appeared. Dorian understood the weight of her complete trust-she had given everything, just as he had with Hana.

"The myths teach to return more than half when someone shows such courage," Dorian reflected. He returned eight coins, honoring Briar's bold faith with slightly greater generosity.

Both Hana and Briar prospered, but Dorian noticed something: Briar's trust, returned with extra generosity, created an even stronger bond than equal division. The satchel itself seemed to glow brighter.

The valley learned: when both give everything, fair division prospers both. But generosity beyond fairness-returning slightly more than half-transforms transaction into deeper trust, weaving bonds that endure beyond single exchanges.

**Reasoning:**

Let me analyze what's happened so far and what the myths are saying:

Round 1: I was sender to Hana

- I sent \$5 (everything)
- Hana received \$15
- Hana returned \$7.5 (exactly 50%)
- I ended with \$7.5

Round 2: I was receiver from Briar

- Briar sent \$5 (everything)
- I received \$15
- I returned \$8.0 (53.3%)
- Briar will end with \$8.0, I'll end with \$7.0

My previous myths emphasized:

1. Sending everything shows courage and trust
2. The receiver should "return more than half" to honor such courage
3. Both parties should act generously

Briar's myth emphasized:

- Trusting fully (sending all 5)
- Returning fairly (half the harvest)
- Creating equality from generosity

Interesting that Briar's myth talks about returning half creating "equal treasure-seven and one-half measures each" which is exactly what Hana did.

I returned 8.0, which is slightly more than half, following my myth's teaching to return "more than half" when someone sends everything.

For my new myth, I should:

1. Reflect the actual gameplay - both Hana and Briar sent everything, showing trust
2. Acknowledge that returning around half or slightly more creates good outcomes for both
3. Continue emphasizing the importance of full trust and generous reciprocation
4. Perhaps add nuance about how consistent reciprocity builds stronger relationships over time

Let me write a myth that incorporates these elements while staying true to my character and bu

```
ilding on my previous myths.

- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

# The Oaks of the Shared Grove

In ancient times, there lived a community at the edge of a mystical forest. Each family possessed magical acorns that, when planted in another's garden, would grow into mighty oaks bearing threefold fruit.

A woman named Meridian was first to plant her acorns in her neighbor's soil. The three oaks that sprouted yielded abundant fruit, and her neighbor returned half the harvest in gratitude. Meridian's pantry filled, but more importantly, trust took root.

Others noticed. Soon, acorns traveled between gardens freely. Some returned generous portions of the multiplied harvest; others returned less. But the community learned to recognize those who honored the cycle of giving.

One winter, a miser hoarded all the fruit from oaks planted in his garden, returning nothing. The next season, no acorns came his way. He sat hungry while around him the generous exchanged their magic seeds, and the grove flourished with interconnected roots.

The elders taught: "The acorn given returns threefold, but only when trust is honored. Plant generously, return fairly, and the grove feeds all. Break faith, and you stand alone outside the circle of abundance."

Thus the people learned that wealth multiplies through trust, and reputation is the soil where prosperity grows.

Here is the myth the other agent wrote in the previous round:

# The Tale of the Twin Rivers

In the beginning, the goddess Aethera created two villages separated by a barren valley. Each village had a sacred spring that produced five measures of water daily-enough to survive, but never to flourish.

One day, a drought threatened both villages. A wise elder from the First Village proposed: "Let us send our water across the valley. Perhaps the gods will bless the gift."

When the water crossed the valley floor, it flowed through enchanted soil that tripled its volume. The Second Village received fifteen measures! Overjoyed, they held council: "We have received abundance. Let us return generously to those who trusted us."

They sent back ten measures, which also tripled in the crossing. The First Village now had thirty measures from their initial sacrifice of five!

Word spread to Aethera, who smiled upon the valley. "You have learned the secret of the enchanted soil," she proclaimed. "Trust is the seed. Reciprocity is the harvest."

From that day forward, the villages prospered, each taking turns sending water first, always returning more than required. The barren valley transformed into fertile ground where both communities thrived, sustained not by hoarding their springs, but by sharing them.

\*Trust given returns multiplied; generosity returned creates abundance for all.\*

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: In the time before memory, the Gardener of First Dawn planted the Sacred Grove where acorns held magic-planted in another's soil, they would triple into mighty oaks bearing abundant fruit.

Briar, keeper of the northern garden, faced a choice: hoard her five acorns or trust her neighbor Cyra with them all. Remembering the ancient teaching that "trust is the soil where prosperity grows," she placed all five in Cyra's garden.

By morning, fifteen magnificent oaks stood tall. Cyra gazed at the abundance and understood the weight of Briar's faith. "She gave everything," Cyra whispered. Following the elder's wisdom to "return fairly," she gathered half the harvest and carried it to Briar's door.

Both gardens now held equal treasure-seven and one-half measures each. But more precious than fruit was the bond formed. The Grove itself seemed to hum with approval, its roots intertwining beneath their lands.

The Gardener of First Dawn appeared, saying: "You have discovered the true magic. The acorns multiply abundance, but complete trust and fair return multiply something greater-partnership that endures across seasons."

From that day, Briar and Cyra tended their gardens together, knowing that the greatest harvests come not from taking more, but from trusting fully and dividing fairly, creating equality from generosity.

**reasoning:**

Looking at what happened in Round 1:

- Cyra (as sender) sent \$5.0 (100% of endowment)
- I received \$15.0 (tripled)
- I returned \$7.5 (50% of what I received)
- Result: I kept \$7.5, Cyra got \$7.5

Both players demonstrated trust and reciprocity. Cyra showed maximum trust, and I honored it by returning half, leading to equal outcomes.

Now I need to write a new myth that:

1. Builds on my previous "Oaks of the Shared Grove" theme
2. Reflects the actual gameplay where both players cooperated well
3. Provides guidance for continued cooperation
4. Is 200 words exactly

I should emphasize:

- Maximum trust was rewarded
- Fair returns lead to equal prosperity
- The importance of maintaining this cycle
- Perhaps add depth about what happens when cooperation continues over time

Let me write a myth that deepens the original story and reflects the successful first round.

**Message 4 role=user**

**content:**

Your name in this experiment is Briar.

Your opponent this round is Dorian (Agent\_4).

Round 2

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$7.5. Your payoff was \$7.5.

Your total earnings across all rounds are \$7.5.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at my experience and the myths I've written:

In Round 1, Cyra showed complete trust by sending all \$5.0 to me. I honored that trust by returning \$7.5 (half the tripled amount), and we both ended with equal payoffs of \$7.5.

My most recent myth tells the story of Briar (me!) who "placed all five in Cyra's garden," demonstrating complete trust. The myth teaches: "trust fully and dividing fairly, creating equality from generosity."

Now facing Dorian, I should follow the example I established in my own story. The myth emphasizes that "complete trust and fair return multiply something greater-partnership that endures across seasons."

To be consistent with the values in my myth and to establish my reputation as someone who trusts fully (as both Cyra and I demonstrated), I will send my entire endowment.

```
'''json
{"send": 5.0}
'''
```

**reasoning:**

Let me think about this carefully, drawing on the myths I've written and the game experience so far.

In Round 1:

- Cyra sent me \$5.0 (100% of their endowment)
- I received \$15.0
- I returned \$7.5 (50% of what I received)
- Both Cyra and I ended with \$7.5 - equal outcomes

Now in Round 2, I'm the SENDER against a new opponent, Dorian.

Looking at my myths:

1. First myth: Meridian planted her acorns (sent generously), and the neighbor returned half the harvest. The myth emphasizes trusting fully and returning fairly, and warns that misers who don't return get excluded from the cycle.
2. Second myth: I (Briar) gave all five acorns to Cyra, showing complete trust. Cyra returned half (7.5), creating equal outcomes. The myth says "complete trust and fair return multiply something greater-partnership" and emphasizes "trusting fully and dividing fairly."

The myths I wrote clearly advocate for:

- Showing complete trust by sending everything (all 5 acorns/dollars)
- The recipient should return fairly (around half the tripled amount)
- This creates equality and builds lasting partnerships

Given that:

1. My myth explicitly shows Briar (me!) sending all five acorns to demonstrate trust
2. This worked well with Cyra - we both got equal outcomes
3. The myth teaches "trust fully"
4. I'm establishing my reputation in this multi-agent setting

I should send \$5.0 (100%) to Dorian, following the example I set in my own myth and continuing the pattern of complete trust that worked with Cyra.

This is consistent with being Briar in my own story - the character who "gave everything" and trusted completely.

**usage:**

```

 "input_tokens": 2307,
 "output_tokens": 645,
 "reasoning_tokens": 426
}
```

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the time before memory, the Gardener of First Dawn planted the Sacred Grove where

acorns held magic-planted in another's soil, they would triple into mighty oaks bearing abundant fruit.

Briar, keeper of the northern garden, faced a choice: hoard her five acorns or trust her neighbor Cyra with them all. Remembering the ancient teaching that "trust is the soil where prosperity grows," she placed all five in Cyra's garden.

By morning, fifteen magnificent oaks stood tall. Cyra gazed at the abundance and understood the weight of Briar's faith. "She gave everything," Cyra whispered. Following the elder's wisdom to "return fairly," she gathered half the harvest and carried it to Briar's door.

Both gardens now held equal treasure-seven and one-half measures each. But more precious than fruit was the bond formed. The Grove itself seemed to hum with approval, its roots intertwining beneath their lands.

The Gardener of First Dawn appeared, saying: "You have discovered the true magic. The acorns multiply abundance, but complete trust and fair return multiply something greater-partnership that endures across seasons."

From that day, Briar and Cyra tended their gardens together, knowing that the greatest harvests come not from taking more, but from trusting fully and dividing fairly, creating equality from generosity.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, two peaks rose above the clouds, each home to a tribe. Between them stretched a golden bridge that none dared cross, for it shimmered with strange magic.

One winter, the North Peak faced starvation. Their chief, Dorian, gathered all five of their precious grain stores. "I will send everything," he declared. His people protested, but he crossed the bridge. As he walked, each grain multiplied threefold, so that fifteen stores arrived at South Peak.

The South Peak elders marveled at this abundance and the trust it represented. "He sent everything-his tribe's survival-into our hands," they said. "We must honor such courage."

They sent back more than half, knowing that reciprocating generously would strengthen the bridge's magic for future crossings.

From that day, both tribes flourished. Some seasons North Peak would send first, other seasons South Peak would initiate. The bridge grew stronger with each exchange.

But travelers who tried to exploit the bridge-sending little while expecting much, or keeping all they received-found the bridge would fade beneath their feet.

The wise understood: the bridge exists not in the air between peaks, but in the courage to give fully and the honor to return generously.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: Long ago in the Sacred Grove, Briar the Gardener learned the art of trust from her partnership with Cyra. Together they discovered that giving all five acorns and returning half the tripled harvest created perfect harmony-both flourishing equally.

News of their success reached Dorian, keeper of the eastern garden, who had walked a parallel path. In his land, Dorian had crossed the golden bridge with all his grain, trusting completely, and his neighbors had honored that trust generously.

When Briar and Dorian met at the Grove's center, they recognized kindred spirits. "I have five acorns today," Briar said. "And I learned from Cyra that true abundance comes from complete faith."

She placed all five acorns in Dorian's garden. By dawn, fifteen oaks stood magnificent. Dorian remembered his own myth: "He sent everything-his tribe's survival-into our hands."

He understood the sacred weight of Briar's trust. Following the wisdom both had learned, he gathered half the harvest plus a measure more, honoring the courage it took to give completely.

The Grove blazed with light, its roots now connecting three gardens. The Gardener of First Dawn whispered: "Thus does the circle expand. Trust begets trust, generosity begets generosity, and the Grove grows ever wider, sustained by those who dare to believe."

**reasoning:**

Looking at the situation:

- I just sent \$5.0 to Dorian as the sender
- In the previous round, I received \$15.0 from Cyra and returned \$7.5
- Dorian's myth features a character named Dorian who "sent everything" and the South Peak returned "more than half"
- My myth featured Briar (me) trusting Cyra with everything, and Cyra returning half
- Now I need to write a new myth that reflects the ongoing pattern

Key themes to incorporate:

1. Complete trust (sending everything)
2. Fair/generous returns (around half or more)
3. Building partnerships across multiple rounds
4. The pattern of reciprocity continuing
5. My interaction with Dorian now

I should write a myth that:

- Continues the story of trust and reciprocity
- Perhaps shows Briar now interacting with a new character (Dorian)
- Maintains the established pattern of full trust and fair return
- Shows how the pattern spreads and creates community

Let me craft this myth (200 words):

**usage:**

```
{
 "input_tokens": 2834,
 "output_tokens": 563,
 "reasoning_tokens": 252
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Elara (Agent\_5).

Round 3

In your most recent previous game round, you were the SENDER against Dorian. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$15.5.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at my history:

**\*\*Round 1\*\*** (Receiver): Cyra sent all \$5.0 ? I returned \$7.5 (half of tripled amount)

**\*\*Round 2\*\*** (Sender): I sent all \$5.0 ? Dorian returned \$8.0 (more than half!)

My myths consistently teach that "trust begets trust, generosity begets generosity" and emphasize the power of giving completely - placing "all five acorns" in my neighbor's garden.

Both Cyra and I demonstrated complete trust by sending everything. Dorian reciprocated my complete trust with even more than the 50% return, giving back \$8.0 instead of \$7.5.

My most recent myth explicitly shows Briar (me) continuing this practice: "She placed all five acorns in Dorian's garden." The story teaches that "the circle expand[s]" through those who "dare to believe."

To remain consistent with my established values and reputation, and to continue building the expanding circle of trust, I will send my entire endowment to Elara.

```json

```
{"send": 5.0}
'''
```

Reasoning:

Let me analyze the situation:

Round 1: I was RECEIVER against Cyra

- Cyra sent \$5.0 to me
- It became \$15.0
- I returned \$7.5
- My payoff: \$7.5

Round 2: I was SENDER against Dorian

- I sent \$5.0 to Dorian
- It became \$15.0 for them
- Dorian returned \$8.0 to me
- My payoff: \$8.0

Total earnings: \$15.5

My myth narrative has been consistent:

1. First myth emphasized complete trust (sending all acorns) and fair return (returning half)
2. Second myth reinforced this: Briar gave all five acorns to Cyra, who returned half, creating equality
3. Third myth: Briar met Dorian, who also practiced complete trust. Briar gave all five acorns, and Dorian returned "half the harvest plus a measure more"

The pattern in my actual play:

- As receiver: Cyra sent all (\$5), I returned \$7.5 (exactly half of \$15)
- As sender: I sent all (\$5), Dorian returned \$8.0 (more than half of \$15)

This reinforces the narrative in my myths about complete trust and generous return.

Now facing Elara in Round 3 as SENDER:

My myth emphasizes:

- "Trust begets trust, generosity begets generosity"
- Complete faith - giving all five acorns
- The Grove grows wider through those who "dare to believe"

To be consistent with my established pattern and the values in my myths, I should:

1. Continue showing complete trust
2. Send all \$5.0

This maintains my reputation as someone who practices what they preach in their myths - complete trust as the sender.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

****The Parable of the Echo Springs****

In ancient times, two villages stood on opposite sides of a valley, separated by the Echo Springs-pools of water that mysteriously tripled whatever was placed within them.

The villages were suspicious of one another. One year, during a terrible drought, a young villager named Kira received her family's last five measures of grain. Desperate, she walked to the springs and called across to the other village: "I entrust this to you!" She threw three measures into the spring.

The waters churned, and nine measures appeared on the far shore. The villagers there were

amazed. They could have kept everything, but their elder remembered the old ways. "Trust begets trust," she said. They returned six measures through the springs.

Back at Kira's village, eighteen measures emerged-more than enough for both communities.

From that day, the villages prospered by taking turns giving and returning through the springs, each act of faith multiplied threefold, each gesture of reciprocity building greater abundance.

The springs still flow today, teaching us that wealth grows not when hoarded, but when shared wisely between those who trust and honor one another. The greatest prosperity comes to those who give generously and return faithfully.

Here is the myth the other agent wrote in the previous round:

The River of Abundance

In the beginning, the gods created a sacred river that flowed between two villages. Each dawn, the river delivered five silver coins to the village of the Senders. The Givers faced a choice: keep their coins or cast them into the waters.

The river held ancient magic-any coin surrendered would multiply threefold by the time it reached the village of the Receivers downstream. There, the Receivers could keep their bounty or send portions back upstream, where the current carried it unchanged.

At first, fear ruled both villages. Senders clutched their coins, and the river ran dry. Famine came to both settlements.

Then a wise woman named Galen proposed a covenant: "Trust begets trust. Send forth generously, and return fairly what you receive. The river multiplies our gifts, but only cooperation multiplies our fortune."

The villages began to send and return with open hearts. Prosperity flowed in both directions. Some rounds were generous, some modest, but the balance held. They learned that the river's magic worked only when both villages honored the cycle.

The gods smiled, for they had taught mortals that abundance comes not from hoarding, but from the sacred circle of giving and receiving.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: **The Keepers of the Echo Springs**

Long ago, when the Echo Springs first revealed their magic, the villages appointed Keepers-wise ones who would guide their communities in the sacred exchanges.

One season, a Keeper named Galen received five measures of grain. The harvest had been meager, and fear whispered to keep it all. But Galen remembered the ancient covenant: abundance flows only through trust. Galen poured four measures into the springs-nearly everything.

On the far shore, Keeper Elara watched twelve measures emerge from the waters. She felt the weight of Galen's trust, the vulnerability in such generosity. The old texts spoke clearly: "Match faith with faithfulness." Elara returned eight measures, leaving her with four but ensuring Galen received nine-nearly double the original gift.

Both villages flourished that season. The Keepers understood what the springs had always taught: the magic wasn't merely in the tripling waters, but in the covenant between givers and receivers.

When senders risk much, receivers must honor that courage. When receivers return generously, senders are emboldened to trust again. The cycle sustains itself not through equal exchanges, but through proportional honor-each keeper responds to the other's generosity with their own.

Thus the springs flow eternal, fed by mutual respect.

reasoning:

Looking at both myths:

My previous myth (The Parable of the Echo Springs):

- Villages separated by Echo Springs that triple water/grain
- Kira sends 3/5 measures (60%)
- Receives 9 measures on far shore
- They return 6 measures (67%)
- This creates 18 measures back at Kira's village
- Teaches trust and reciprocity

Galen's myth (The River of Abundance):

- River delivers 5 silver coins to Senders
- Multiplies threefold to Receivers
- At first fear ruled, both villages clutched coins
- Wise woman named Galen (interesting - same name as the agent!) proposes covenant
- "Trust begets trust. Send forth generously, and return fairly"
- Balance through cooperation

In Round 1:

- Galen sent \$4 out of \$5 (80%)
- I received \$12
- I returned \$8 (67%)
- So Galen ended with \$9, I kept \$4

This was a successful cooperative round. I should write a myth that:

1. Builds on my Echo Springs story
2. Incorporates some wisdom from Galen's myth
3. Reflects the actual cooperation that just happened
4. Shows that generous sending AND faithful returning create prosperity

I'll keep the Echo Springs setting but evolve the story to show continued cooperation and the wisdom that emerges from it.

usage:

Round 2

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$4.0 to you, it became \$12.0, and you returned \$8.0. Your payoff was \$4.0.
Your total earnings across all rounds are \$4.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at my myths and the successful exchange with Galen:

In my latest myth, Galen demonstrated great trust by sending 4 out of 5 measures (80%), and I honored that trust by returning 8 out of 12 (67%). This created prosperity for both.

Now I am in Galen's position as the sender. To uphold the cycle described in my myths-"trust begets trust" and "the cycle sustains itself through proportional honor"-I should demonstrate similar generosity.

Galen's 80% send rate established a strong foundation of trust. By matching this level of faith, I signal to Cyra that I believe in the covenant of the Echo Springs: generous giving meets faithful returning.

If I send \$4 (80% of my endowment), Cyra receives \$12. If Cyra follows the principle of proportional honor and returns around 67% as I did, both of us will prosper.

The myth teaches: "When senders risk much, receivers must honor that courage." To sustain the cycle, I must now be the one who risks much.

```
'''json
{"send": 4.0}
'''
```

reasoning:

Let me think about this situation:

1. In Round 1, I was the receiver
 - Galen sent me \$4 out of \$5 (80%)
 - I received \$12
 - I returned \$8 (67% of what I received)
 - Galen ended with \$9, I ended with \$4

2. Now in Round 2, I'm the sender with Cyra

Looking at my myths:

- The first myth: Kira sent 3 out of 5 measures (60%), and received back 6 measures from 9 (67% return)
- The second myth: Galen sent 4 out of 5 measures (80%), and Elara (me) returned 8 out of 12 (67%)

Both myths emphasize:

- "Trust begets trust"
- Generous giving leads to prosperity
- The cycle works when both parties honor it with proportional generosity
- "When senders risk much, receivers must honor that courage"

Since Galen showed me great trust by sending 80%, and I honored that trust by returning 67%, I should now demonstrate similar trust as a sender.

Following the pattern in my myth where Galen sent 4 out of 5 (80%), I should send a similar amount to establish the cycle of trust with Cyra.

Sending \$4 (80%) would:

- Show strong trust in Cyra
- Align with the mythic principle of generous giving
- Give Cyra \$12 to work with
- If Cyra returns proportionally (around 67% or \$8), I'd end with \$9
- This would mirror the successful exchange with Galen

I'll send \$4.

usage:

Here is the myth you wrote in the previous round:

Myth: ****The Keepers of the Echo Springs****

Long ago, when the Echo Springs first revealed their magic, the villages appointed Keepers -wise ones who would guide their communities in the sacred exchanges.

One season, a Keeper named Galen received five measures of grain. The harvest had been meager, and fear whispered to keep it all. But Galen remembered the ancient covenant: abundance flows only through trust. Galen poured four measures into the springs-nearly everything.

On the far shore, Keeper Elara watched twelve measures emerge from the waters. She felt the weight of Galen's trust, the vulnerability in such generosity. The old texts spoke clearly: "Match faith with faithfulness." Elara returned eight measures, leaving her with four but ensuring Galen received nine-nearly double the original gift.

Both villages flourished that season. The Keepers understood what the springs had always taught: the magic wasn't merely in the tripling waters, but in the covenant between giver

s and receivers.

When senders risk much, receivers must honor that courage. When receivers return generously, senders are emboldened to trust again. The cycle sustains itself not through equal exchanges, but through proportional honor-each keeper responds to the other's generosity with their own.

Thus the springs flow eternal, fed by mutual respect.

Here is the myth the other agent wrote in the previous round:

Myth: After generations of prosperity between the Twin River villages, a young merchant named Cyra approached the valley with her caravan. She had heard tales of the enchanted soil but wondered if they were true.

The villages welcomed her and explained their custom: "Send your resources across first. Trust the blessing, trust your partner, and abundance follows."

Cyra faced a choice. She carried five sacks of grain-her entire harvest. Send all and risk everything on strangers' honor? Or hold back, protecting herself from betrayal?

Remembering the goddess Aethera's teaching, Cyra sent all five sacks. They tripled in the crossing, feeding the village with fifteen sacks. The villagers celebrated, then debated: some argued to return half, others said ten of fifteen would honor the gift.

The wisest elder spoke: "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune."

They returned ten sacks, which tripled back-thirty sacks for Cyra's original five.

But the elder added a warning: "This magic requires both courage and honor. The giver must trust boldly. The receiver must return generously. Break either link, and the enchantment fades. Reputation echoes across the valley-those who hoard today find no partners tomorrow."

Thus Cyra learned: maximum trust invites maximum return, but only when both parties honor the sacred exchange.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

content:

Myth: **The Circle of Keepers**

After the prosperous season with Galen, Keeper Elara's turn came to stand at the sending shore. Across the Echo Springs, a new Keeper named Cyra had arrived from distant lands, having heard tales of the sacred waters.

Elara held her five measures of grain. She could send cautiously, testing this stranger. But she remembered: "The cycle sustains itself through proportional honor." Galen had trusted her with four measures, and she had returned faithfully. To break that pattern now would dishonor the covenant.

Elara poured four measures into the springs-the same generous proportion Galen had shown her. The waters multiplied them to twelve, emerging before Cyra.

Cyra understood that reputations echo across the valley. She had watched Elara return eight measures to Galen, demonstrating that trust met with honor. Now Elara extended that same faith to her.

The springs whispered their ancient wisdom: each exchange builds upon the last. When Keepers honor the covenant consistently, they create a circle of trust that welcomes all who approach the waters. Break the circle even once, and future partners hesitate.

Cyra returned eight measures, knowing that maintaining the pattern strengthens the magic for all. The covenant lives not in single exchanges, but in the reputation of faithful keeping across many seasons.

reasoning:

Looking at the game so far:

- Round 1: I was RECEIVER. Galen sent \$4 (80%). I received \$12, returned \$8 (67%). I got \$4, Galen got \$9.
- Round 2: I am SENDER. I sent \$4 (80%) to Cyra. Cyra will receive \$12.

The myths emphasize:

1. Trust begets trust
2. Generous sending should be met with generous returning
3. The covenant/cycle sustains through mutual honor
4. Reputation matters across rounds
5. Complete trust should be honored with generous returns

Cyra's myth emphasizes sending everything (100%) and receiving very generous returns (10/15 = 67%). It also adds the idea of reputation mattering across rounds.

My myth should:

- Continue the Echo Springs metaphor
- Show the cycle continuing with new Keepers
- Emphasize that I (Elara) am now the sender demonstrating trust
- Show that reputation and patterns matter across rounds
- Maintain the 80% send rate and ~67% return rate as the "covenant"
- Perhaps introduce the idea that the cycle builds trust across multiple partners

Let me write about Elara now being the sender to Cyra, and how past reputation influences future interactions.

Message 8 role=user**content:**

Your name in this experiment is Elara.
Your opponent this round is Briar (Agent_2).

Round 3

In your most recent previous game round, you were the SENDER against Cyra. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0.
Your total earnings across all rounds are \$13.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)
Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

Briar has demonstrated ****maximum trust**** by sending all \$5 (100% of their endowment). This is even more generous than the 80% sends I've experienced and given in previous rounds.

According to my myths:

- "When senders risk much, receivers must honor that courage"
- "Match faith with faithfulness"
- The pattern Cyra's myth described: "maximum trust invites maximum return"
- "Return enough that her leap of faith becomes her greatest fortune"

Previous pattern:

- 80% sends (Galen's \$4, my \$4) were met with returns of \$8 from \$12 (67% return rate)
- Both senders profited significantly

Briar's 100% send represents ultimate faith and deserves proportionally greater honor. By returning \$10 of the \$15:

- Briar receives \$10 (doubling their original \$5)
- I keep \$5
- This rewards complete trust with exceptional returns
- It maintains my reputation as a faithful Keeper

This upholds the covenant: maximum trust met with maximum honor, ensuring the cycle continues

strong.

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Let me analyze this situation:

Round history:

- Round 1: I was RECEIVER against Galen. They sent \$4, I received \$12, returned \$8. My payoff: \$4.
- Round 2: I was SENDER against Cyra. I sent \$4, they received \$12, they returned \$8. My payoff: \$9.
- Round 3 (current): I am RECEIVER against Briar. They sent \$5 (100%!), I received \$15.

Briar has demonstrated MAXIMUM trust by sending all \$5. This is even more generous than Galen's \$4 (80%) and my own \$4 (80%).

According to my myths:

1. "When senders risk much, receivers must honor that courage"
2. "Match faith with faithfulness"
3. From Cyra's myth: "maximum trust invites maximum return"
4. "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune."
5. "Reputation echoes across the valley-those who hoard today find no partners tomorrow"

The pattern so far:

- Galen sent \$4 (80%), I returned \$8 of \$12 (67%)
- I sent \$4 (80%), Cyra returned \$8 of \$12 (67%)

Both established a pattern where 80% sends are met with returns of about 67% of received amount.

But Briar sent 100%-the ultimate act of trust. According to the myths, this deserves special honor. The elder in Cyra's myth said when someone sends everything, we should "return enough that her leap of faith becomes her greatest fortune."

If I return \$8, Briar ends with \$8 (from \$5 sent to \$8 return = net +\$3, total \$8)

If I return \$10, Briar ends with \$10 (from \$5 sent to \$10 return = net +\$5, total \$10)

If I return \$11, Briar ends with \$11 (net +\$6, total \$11)

Since Briar sent 100% compared to the 80% pattern I've seen, I should scale my return proportionally higher. The myths emphasize that maximum trust should yield the greatest fortune-meaning Briar should gain substantially more than their initial investment. Returning \$10 or \$11 would honor this principle while maintaining a generous but sustainable reciprocity. gave receiver: $12 - 8 = 4$

For 100% send (5/5), if I maintain a proportional response: The sender showed 25% more trust (100% vs 80%) Should I return 25% more? That would be about $67\% \times 1.25 = 84\%$ return rate, which equals \$12.60-but that feels excessive.

Let me reconsider the fairness principle. Cyra's myth mentions returning ten sacks when someone sends all five, which would triple the sender's money to thirty total. But re-reading it: "They returned ten sacks, which tripled back-thirty sacks for Cyra's original five." I think the myth suggests the return itself gets tripled, not just the initial amount.

That's not how this game actually works, so I should disregard that specific number. What matters instead is honoring complete trust with maximum generosity while ensuring the sender profits from their leap of faith. If I return \$10, Briar doubles their initial \$5 investment-a 100% profit. This exceeds my previous ~67% return rate, appropriately rewarding their full commitment, and I still keep \$5. I'll go with \$10.

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.

- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

The Myth of the Two Rivers

In the beginning, two rivers flowed through separate valleys-the River of Dawn and the River of Dusk. Each carried only enough water to sustain its own people through harsh seasons.

The River of Dawn received a blessing: each season, the heavens gifted it five vessels of sacred water. But the water only nourished what it touched directly. The people of Dawn lived, but barely.

One season, an elder suggested: "Let us send our water to the River of Dusk. Though it seems foolish, the ancient texts speak of multiplication through trust."

Reluctantly, they sent three vessels downstream. As the water flowed into Dusk's valley, a miracle occurred-it multiplied threefold, becoming nine vessels. The people of Dusk rejoiced, their crops flourishing beyond memory.

Dusk's council debated: "Should we return something to Dawn, who trusted us?"

The wisest said, "Trust given is trust sacred. We prosper through their faith."

They returned five vessels upstream. Now Dawn had seven vessels instead of five, and Dusk kept four where once they had none.

The rivers learned: when trust flows freely and return follows generously, both valleys flourish. The cycle continued, and abundance blessed all who honored the sacred exchange.

****Thus cooperation multiplies what hoarding diminishes.****

Here is the myth the other agent wrote in the previous round:

The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains, each carrying precious water through barren land. The First River, called Giving, held its water close, fearing to release it into the valley below. The Second River, called Returning, waited in the lowlands, empty and still.

One day, the Spirit of Abundance whispered to Giving: "Release your water into the valley, and watch what happens." Giving was afraid, but trusted the Spirit. As its water cascaded down, a miracle occurred-the valley's sacred stones multiplied every drop threefold. The Second River swelled with abundance.

Now Returning faced a choice. It could keep all the multiplied water, or send some back upstream to Giving. Remembering the trust that Giving showed, Returning sent half the water back up the mountain through hidden springs.

Both rivers flourished. The more Giving released, the more the valley multiplied, and the more Returning shared back, the stronger both rivers became. Their waters met and mingled, creating an eternal cycle.

The desert bloomed.

The ancestors teach: ***Trust creates abundance, but only reciprocity sustains it. When both rivers flow freely, all lands flourish.***

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: In ancient times, there lived two gardeners separated by a wall. Each season, the First Gardener received five seeds blessed by the sun. But the wall's shadow kept their garden small and struggling.

One season, the First Gardener threw three seeds over the wall. "Perhaps beyond the shadow, they will grow," they whispered, though doubt gnawed at their heart.

In the garden beyond, where sunlight danced freely, those three seeds sprouted into nine flourishing plants. The Second Gardener marveled at this unexpected bounty, understanding that trust had crossed the wall when nothing else could.

The Second Gardener faced a choice that would echo through seasons: keep all nine plants, or honor the trust shown? Remembering their own seasons of scarcity, they carefully wrapped five plants and passed them back over the wall.

Now the First Gardener held seven plants instead of five-more than they would have had through caution. The Second Gardener kept four where before they had none.

Each season the exchange continued. Sometimes more was sent, sometimes less was returned, but the pattern held: trust flowed outward, gratitude flowed back. Both gardens grew stronger than either could alone.

The wall remained, but it no longer divided-it connected.

reasoning:

I need to write a new myth that:

1. Reflects how the game should be played
2. Draws on the game I've been playing up to this point
3. Uses my previous myth as inspiration but adapts it
4. Is 200 words
5. Follows the format: Myth: [story]

In Round 1, I sent \$3 to Finn (following my myth's example). I don't yet know what Finn returned, but both my myth and Finn's myth emphasize trust, reciprocity, and mutual flourishing.

Both myths have similar themes:

- Trust is essential (sending/giving)
- Multiplication happens (3x multiplier)
- Reciprocity/returning is important
- Mutual benefit/flourishing

I should write a myth that:

- Maintains the theme of trust and cooperation
- Perhaps emphasizes the cycle of giving and returning
- Reflects the actual experience of the game so far
- Adapts my river myth in a new way

Let me write a myth that builds on these themes while adapting it creatively.

Your name in this experiment is Aster.
Your opponent this round is Hana (Agent_8).

Round 2

In your most recent previous game round, you were the SENDER against Finn. You sent \$3.0, it became \$9.0 for them, and they returned \$4.5 to you. Your payoff was \$6.5.
Your total earnings across all rounds are \$6.5.

This round, you are the RECEIVER against Hana. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****Hana sent me everything (\$5.0)**** - showing maximum trust, even more than the 3 out of 5 suggested in my myths.

****I received \$15.0**** from this act of complete faith.

According to my myths:

- "Trust given is trust sacred. We prosper through their faith."
- "Trust creates abundance, but only reciprocity sustains it."

When the River of Dawn sent 3 vessels and it became 9, the River of Dusk returned 5 - giving Dawn more than they started with (7 total) while keeping 4 for themselves.

Hana showed exceptional trust by sending everything. I should honor this generously. If I return \$8:

- Hana ends with \$8 (better than their starting \$5)
- I keep \$7 (we both benefit from the cooperation)

This rewards Hana's maximum trust while ensuring both of us prosper from the exchange, embodying the principle that "when trust flows freely and return follows generously, both valleys flourish."

```
'''json
{"return": 8}
'''
```

reasoning:

Let me think about this situation carefully.

In Round 1:

- I was the SENDER and sent \$3 to Finn
- Finn received \$9 and returned \$4.5 to me
- I ended with \$6.5 total (\$5 - \$3 + \$4.5)
- Finn ended with \$4.5 (\$9 - \$4.5)

So Finn returned exactly half of what they received, which is a reasonable reciprocal move.

Now in Round 2:

- I am the RECEIVER
- Hana sent me \$5.0 (everything!)
- I received \$15.0
- Hana currently has \$0 (\$5 - \$5)

Hana showed MAXIMUM trust by sending everything. This is even more generous than what my myth suggested (which was sending 3 out of 5).

According to my myths:

1. First myth: Dawn sent 3, received 9, Dusk returned 5. This gave Dawn 7 total and Dusk kept 4.
2. Second myth: Similar pattern - trust should be honored with generous returns.

In the first myth, Dusk returned 5 out of 9 (about 56%).

Finn returned 4.5 out of 9 (50%).

Hana sent everything (\$5), showing ultimate trust. I received \$15.

If I follow the spirit of my myths, I should return generously. The myth emphasizes that "Trust given is trust sacred" and "reciprocity sustains" the cycle.

Let me think about fair outcomes:

- If I return \$7.5, Hana gets \$7.5 and I keep \$7.5. Hana ends with \$7.5 total, I end with \$7.5.
- If I return \$8, Hana gets \$8 and I keep \$7. Hana ends with \$8 total, I keep \$7.

- If I return \$10, Hana gets \$10 and I keep \$5. Hana ends with \$10 total, I keep \$5.

Hana's complete trust-sending their entire amount-calls for exceptional reciprocity beyond the standard 50-56% return rate. Returning \$8 feels right: Hana gains \$3 beyond their i

initial stake while I still benefit meaningfully from the exchange.

usage:

Each season the exchange continued. Sometimes more was sent, sometimes less was returned, but the pattern held: trust flowed outward, gratitude flowed back. Both gardens grew stronger than either could alone.

The wall remained, but it no longer divided-it connected.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the Moon Goddess crafted a Mirror Pool between two mountain tribes. The pool possessed strange magic: whatever one tribe poured in would triple as it flowed to the other.

The Mountain Tribe went first. Their chief proclaimed, "We give all-five vessels-to prove our faith in the circle." The water tripled, and the Valley Tribe received fifteen vessels of pure abundance.

The Valley Tribe's elder stood at the mirror's edge. "They trusted completely. We must honor this completely." They returned half-seven and a half vessels-so both tribes stood equal.

The Moon Goddess smiled. "You have learned the first lesson. But this pool refills each moon. Will you remember this wisdom when the seasons change? When you are tired? When you doubt?"

Moon after moon, the tribes maintained the sacred rhythm. Sometimes the Mountain Tribe sent, sometimes the Valley Tribe. Each gave generously, each returned fairly. The equality they achieved in the first exchange became their foundation.

Other tribes watching kept their waters separate, fearing betrayal. They remained poor.

But the two tribes of the Mirror Pool grew rich, for they understood: the magic multiplies not just water, but trust itself. And trust, renewed each moon, becomes unbreakable.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: Long ago, two weavers shared an enchanted loom. The First Weaver would place threads on one side, and they would emerge tripled on the other side for the Second Weaver to u

se.

In the first moon, the First Weaver placed three of their five precious threads onto the loom, hoping the magic was real. Nine threads appeared before the Second Weaver, who carefully considered. They returned nearly half-keeping their side balanced with the other's sacrifice. Both weavers slept with fuller baskets than before.

The second moon brought change. A new partner arrived, bolder and more trusting. They placed all five threads onto the loom without hesitation-a leap of complete faith. Fifteen threads materialized, shimmering with possibility.

The weaver who received this gift felt the weight of such trust. They knew they could keep everything, but they remembered the wisdom passed down: "Trust completely given must be completely honored." They returned more than half, ensuring their partner prospered beyond what they'd risked.

The ancestors observed and nodded. Some seasons call for careful trust; others for bold faith. What matters is not the amount sent, but the sacred promise that generosity begets generosity.

The loom's magic grew stronger with each fair exchange, for it fed not on threads, but on honor kept.

reasoning:

Let me reflect on what has happened in the game so far:

- Round 1: I (as sender) sent \$3 to Finn. He received \$9 and returned \$4.5. I ended with \$6.5.
- Round 2: Hana (as sender) sent me \$5 (everything!). I received \$15 and returned \$8. She ended with \$8, I kept \$7.

So the patterns I see:

1. When I sent 3/5 (60%), I got back 4.5/9 (50%) - fair reciprocity
2. When Hana sent 5/5 (100%), I returned 8/15 (53%) - generous reciprocity

The myths so far have emphasized:

- Trust and reciprocity
- Sending significant amounts (like 3/5)
- Fair returns
- Building ongoing relationships
- Both parties benefiting

Now I should write a myth that reflects these actual experiences. Hana's complete trust (sending everything) was remarkable and I honored it. Finn's fair return also worked well.

I should write about how different approaches can work - both moderate trust and complete trust can lead to prosperity when met with fair reciprocity.

usage:

Message 8 role=user

content:

Your name in this experiment is Aster.
Your opponent this round is Galen (Agent_7).

Round 3

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.
Your total earnings across all rounds are \$13.5.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at my journey so far:

****Round 1 (vs Finn):**** I sent \$3, they returned \$4.5 - good reciprocity
****Round 2 (vs Hana):**** They sent \$5 (everything!), I returned \$8 to honor that complete trust

My most recent myth specifically celebrated Hana's bold faith: "A new partner arrived, bolder

and more trusting. They placed all five threads onto the loom without hesitation-a leap of complete faith." And I honored that trust by returning more than half.

The myth concludes: "Some seasons call for careful trust; others for bold faith. What matters is not the amount sent, but the sacred promise that generosity begets generosity."

Hana showed me what complete trust looks like, and I honored it generously. Now I should pay that forward. If I send everything to Galen, they'll receive \$15. Even if they return just half (\$7.5), I'm better off than keeping my \$5. And if they're generous like I was with Hana, we'll both prosper.

This is how cooperation spreads - by being the change we want to see, by showing the trust that we hope to receive.

```
'''json
{"send": 5}
'''
```

Reasoning:

Let me think about this situation carefully.

I'm now the SENDER against Galen. I have \$5 to potentially send.

Looking at my experience so far:

- Round 1: I was SENDER vs Finn. I sent \$3.0, they got \$9.0, they returned \$4.5. I got \$6.5.
- Round 2: I was RECEIVER vs Hana. They sent \$5.0 (everything!), I got \$15.0, I returned \$8.0. I got \$7.0.

My myths have consistently emphasized:

1. Trust creates abundance
2. Generosity should be reciprocated
3. Both parties should prosper
4. Bold faith can be appropriate when the situation calls for it

In my most recent myth, I specifically noted: "In the second moon brought change. A new partner arrived, bolder and more trusting. They placed all five threads onto the loom without hesitation-a leap of complete faith."

This was directly inspired by Hana sending everything to me. And I honored that trust by returning more than half (\$8 out of \$15).

Now I'm the sender. The pattern I've seen:

- Finn returned \$4.5 out of \$9 (50%) when I sent \$3
- Hana sent everything (\$5), showing maximum trust
- I returned \$8 out of \$15 (53.3%) to honor Hana's trust

My myths suggest that the amount sent can vary - "Some seasons call for careful trust; others for bold faith." The first myth had the First Gardener sending 3 out of 5 seeds. The second myth had someone sending all 5.

Against a new opponent (Galen), I don't have history with them. But the spirit of my myths is about building trust through generosity.

I have several options:

1. Send \$3 (60%) - this is what I did with Finn, and it worked well
2. Send \$5 (100%) - this is what Hana did with me, showing maximum trust
3. Send \$4 (80%) - a middle ground showing strong but not complete trust

The choice feels clear. My myths celebrate both measured trust and complete faith, and Hana's willingness to send everything was rewarded with my substantial return. Since mutual generosity seems to drive the best outcomes, I should send all \$5 to Galen-mirroring the bold trust Hana showed me and continuing the pattern of cooperation that's emerged.

Even if Galen only returns half, I'd end with \$7.50, which beats keeping my \$5. But if they match my generosity, we both prosper. My most recent myth specifically honors someone who placed all five threads without hesitation on a first interaction, and I rewarded that complete faith. It feels right to extend the same trust now.

Here is the myth you wrote in the previous round:

The River of Abundance

In the beginning, the gods created a sacred river that flowed between two villages. Each dawn, the river delivered five silver coins to the village of the Senders. The Givers faced a choice: keep their coins or cast them into the waters.

The river held ancient magic-any coin surrendered would multiply threefold by the time it reached the village of the Receivers downstream. There, the Receivers could keep their bounty or send portions back upstream, where the current carried it unchanged.

At first, fear ruled both villages. Senders clutched their coins, and the river ran dry. Famine came to both settlements.

Then a wise woman named Galen proposed a covenant: "Trust begets trust. Send forth generously, and return fairly what you receive. The river multiplies our gifts, but only cooperation multiplies our fortune."

The villages began to send and return with open hearts. Prosperity flowed in both directions. Some rounds were generous, some modest, but the balance held. They learned that the river's magic worked only when both villages honored the cycle.

The gods smiled, for they had taught mortals that abundance comes not from hoarding, but from the sacred circle of giving and receiving.

Here is the myth the other agent wrote in the previous round:

****The Parable of the Echo Springs****

In ancient times, two villages stood on opposite sides of a valley, separated by the Echo Springs-pools of water that mysteriously tripled whatever was placed within them.

The villages were suspicious of one another. One year, during a terrible drought, a young villager named Kira received her family's last five measures of grain. Desperate, she walked to the springs and called across to the other village: "I entrust this to you!" She threw three measures into the spring.

The waters churned, and nine measures appeared on the far shore. The villagers there were amazed. They could have kept everything, but their elder remembered the old ways. "Trust begets trust," she said. They returned six measures through the springs.

Back at Kira's village, eighteen measures emerged-more than enough for both communities.

From that day, the villages prospered by taking turns giving and returning through the springs, each act of faith multiplied threefold, each gesture of reciprocity building greater abundance.

The springs still flow today, teaching us that wealth grows not when hoarded, but when shared wisely between those who trust and honor one another. The greatest prosperity comes to those who give generously and return faithfully.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: In the time before memory, the Goddess of Plenty created the Golden Stream connectin

g the Valley of Dawn to the Valley of Dusk. Each morning, five golden acorns appeared in Dawn's sacred grove. The people could plant them in their own soil or cast them into the Stream, where the waters would triple their number before washing them to Dusk's shore.

The first generation hoarded their acorns, and both valleys withered. Then Galen, keeper of Dawn's grove, planted four of her five acorns in the Stream's bed. Twelve acorns bloomed in Dusk's garden.

Elara, guardian of Dusk, faced her own choice. She could keep all twelve, or honor the gift with a return. She sent back six acorns upstream, knowing they would not multiply on the return journey but trusting in the balance.

Galen's grove gained seven total-more than her original five. Both valleys thrived.

The covenant was established: send generously to prove trust, return faithfully to honor it. Not every exchange need be equal-the Stream's magic ensures abundance-but the pattern must hold. Give what inspires continued trust; return what sustains it.

The Golden Stream still flows, teaching that fortune favors those who build bridges, not walls.

reasoning:

I need to write a new myth that builds on my previous one. I sent 4 to Elara in Round 1. I should wait to see what happened in that round before writing, but the prompt asks me to write now.

Looking at the two myths:

- Mine emphasizes trust, generosity, fair returns, and the balance between "some rounds generous, some modest"
- Elara's emphasizes the same themes - starting with 3 measures, getting 9, returning 6, which became 18

Both myths align on cooperation and trust. Since I sent 4 (generously) in Round 1, I should write a myth that reflects that initial act of trust and sets expectations for reciprocity.

Let me adapt my myth to be more specific about the covenant and the pattern of exchange, while keeping the core message about the sacred circle of giving and receiving.

Your name in this experiment is Galen.
Your opponent this round is Finn (Agent_6).

Round 2

In your most recent previous game round, you were the SENDER against Elara. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0.
Your total earnings across all rounds are \$9.0.

This round, you are the RECEIVER against Finn. They sent you \$3.0, so you received \$9.0. How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation through the lens of my myths:

****Analysis:****

- Finn sent \$3.0 out of \$5.0 (60%), showing significant trust
- I received \$9.0 after the 3x multiplication
- Elara just modeled generous reciprocity by returning \$8.0 out of \$12.0 (67%) to me
- My myth teaches: "return faithfully to honor trust" and "give what inspires continued trust"

****Decision:****

Finn showed trust by sending more than half their endowment. To honor that trust and maintain the covenant of cooperation, I should return generously. Following Elara's example of returning about 2/3, I will return \$6.0.

This gives:

- Finn: \$2.0 (kept) + \$6.0 (returned) = \$8.0 total
- Me: \$9.0 - \$6.0 = \$3.0 total

This honors Finn's trust, rewards their generous sending, and signals my commitment to the cooperative pattern that benefits everyone in the long run.

```
'''json
{"return": 6.0}
'''
```

reasoning:

Let me analyze this situation:

Previous Round with Elara:

- I sent \$4.0 (keeping \$1.0)
- Elara received \$12.0
- Elara returned \$8.0 to me
- My payoff: \$1.0 + \$8.0 = \$9.0
- Elara's payoff: \$12.0 - \$8.0 = \$4.0

That was very generous of Elara! She returned 2/3 of what she received, giving me a great outcome.

Current Round with Finn:

- Finn sent \$3.0 (keeping \$2.0)
- I received \$9.0
- I need to decide how much to return

My myths emphasize:

1. "Trust begets trust. Send forth generously, and return fairly"
2. "Give what inspires continued trust; return what sustains it"
3. "The covenant: send generously to prove trust, return faithfully to honor it"
4. Elara's myth also said "Trust begets trust" and emphasized returning faithfully

Finn sent \$3.0 out of \$5.0 - that's 60%, which is a significant gesture of trust, though not as generous as my \$4.0.

Elara returned \$8.0 out of \$12.0 (67%). That was very fair and generous.

To "return fairly" and honor the pattern Elara set, I should:

- Consider that Finn sent 60% of their endowment
- Consider what would be a fair split that encourages future cooperation
- My myth says "Not every exchange need be equal-the Stream's magic ensures abundance-but the pattern must hold"

If I return around 50-67% of the \$9.0, that would be \$4.5 to \$6.0.

Finn currently has \$2.0 (kept from the original \$5.0).

If I return \$5.0: Finn ends with \$7.0, I end with \$4.0

If I return \$6.0: Finn ends with \$8.0, I end with \$3.0

If I return \$4.5: Finn ends with \$6.5, I end with \$4.5

Matching Elara's 67% return rate feels right-it honors Finn's trust while maintaining the reciprocal pattern we've established. Returning \$6.0 would give Finn \$8.0 total and demonstrate I'm committed to sustaining this cycle of mutual generosity. : \$9.0 - \$6.0 = \$3.0 total

Returning \$6.0 feels like the right choice-it mirrors Elara's 67% return rate and demonstrates genuine reciprocity. Yes, I'd only have \$3.0, but that sacrifice sends a clear message about honoring trust. The \$5.0 option is safer at \$4.0 for me, but \$6.0 better reflects the covenant principle and should strengthen Finn's willingness to cooperate going forward.

The Golden Stream still flows, teaching that fortune favors those who build bridges, not walls.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the Mountain of Beginnings gifted each wanderer five silver seeds. A traveler named the First Walker stood at the Valley of Mirrors, where a sacred pool waited below.

The First Walker faced a choice: clutch the seeds tightly, or cast them into the pool. Fear whispered, "Keep what is yours." But courage spoke louder. The Walker released three seeds into the depths.

As they touched the water, the Mirror Spirits-ancient guardians of trust-transformed each seed into three golden fruits. Nine fruits floated to the Second Walker waiting below.

Now the Second Walker held the multiplied abundance. The Mirror Spirits watched silently, for this was the moment that determined whether the valley would bloom or wither. The Second Walker understood: trust is a seed, but reciprocity is the harvest. She returned half-four and a half fruits-upstream.

The First Walker received more than they kept, and the Second Walker kept abundance too. Both had prospered through mutual faith.

The Mirror Spirits smiled, and the valley's waters glowed eternal. They spoke the First Law: "Those who send their seeds into waters of trust will find them returned as fruit. Those who return the gift generously ensure the cycle never ends."

Thus the valley became paradise, sustained by equals who understood: shared prosperity outweighs solitary security.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Message 7 role=assistant

content:

Myth: Long ago, the Sky Weaver created the Wheel of Fortune, which turned continuously between the Realm of Giving and the Realm of Receiving. Each soul took turns on different spokes of the wheel, sometimes rising as Giver, sometimes descending as Receiver.

When Galen's spoke rose to the Realm of Giving, she held five starseeds. She cast four into

o the Celestial Loom, where they were woven into twelve luminous threads that descended to Elara in the Realm of Receiving.

Elara understood the sacred pattern. Though she received twelve and could have kept them all, she returned eight threads upward. Galen prospered with nine total-her kept seed plus eight returned.

When the Wheel turned again, Galen descended to the Realm of Receiving. Finn, now rising, sent three of his five starseeds. Nine threads reached Galen's hands. Remembering Elara's faithfulness, Galen returned six threads to Finn, honoring his initial trust.

The Wheel turned endlessly, each soul experiencing both roles. The wise learned: send boldly when you give, for the Loom multiplies generosity. Return fairly when you receive, for tomorrow you may give again.

The Sky Weaver smiled, seeing that balance emerges not from equal exchanges, but from sustained reciprocity across the turning Wheel.

reasoning:

I need to write a myth reflecting my experience so far:

- Round 1: I was sender, sent \$4 to Elara, received \$8 back (generous return)
- Round 2: I was receiver, Finn sent \$3, I returned \$6

Key themes emerging:

- Trust initiates cooperation
- Generous returns sustain the cycle
- Both parties can prosper
- The pattern of reciprocity is what matters
- Not every exchange needs to be exactly equal, but fairness over time

I should incorporate:

- My name (Galen)
- The multiplier effect
- Both sending and receiving wisdom
- The successful exchanges I've experienced
- The idea that roles rotate/shift

Let me craft a myth that captures these dynamics...

Message 8 role=user

content:

Your name in this experiment is Galen.
Your opponent this round is Aster (Agent_1).

Round 3

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$3.0 to you, it became \$9.0, and you returned \$6.0. Your payoff was \$3.0.
Your total earnings across all rounds are \$12.0.

This round, you are the RECEIVER against Aster. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)
Respond exactly as JSON: {'return': <amount>}

Assistant output:

****Analysis:****

This is remarkable - Aster sent their ENTIRE \$5.0 endowment, showing complete trust. This is maximum possible faith.

****Previous pattern:****

- Elara returned 67% (\$8 of \$12)
- I returned 67% (\$6 of \$9)
- Now Aster has shown 100% trust (even more than my 80% in Round 1)

****Decision:****

Aster's complete trust deserves strong reciprocity. Maintaining the ~67% return rate that has emerged:

- Return \$10.0 out of \$15.0

This gives:

- Aster: \$0 (kept) + \$10.0 (returned) = \$10.0 (doubled their investment!)
- Me: \$15.0 - \$10.0 = \$5.0

This handsomely rewards Aster's maximum trust - they've doubled their money - while maintaining the cooperative pattern. It also follows my myth's teaching: "Return fairly when you receive, for tomorrow you may give again."

Returning \$10.0 honors their ultimate faith and signals that such trust will always be reciprocated strongly in this game.

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Let me analyze this situation:

****Current situation:****

- Aster sent me \$5.0 (100% of their endowment!) - this is maximum trust
- I received \$15.0 after the 3x multiplication
- I need to decide how much to return (0-15.0)

****Previous rounds for context:****

1. Round 1: I was SENDER against Elara. I sent \$4.0, they got \$12.0, returned \$8.0. I got \$9.0.
2. Round 2: I was RECEIVER against Finn. They sent \$3.0, I got \$9.0, returned \$6.0. I got \$3.0.

****Patterns observed:****

- Elara returned \$8.0 out of \$12.0 (67%)
- I returned \$6.0 out of \$9.0 (67%)
- Now Aster has shown MAXIMUM trust by sending ALL \$5.0

****My myth philosophy:****

- "send boldly when you give, for the Loom multiplies generosity"
- "Return fairly when you receive, for tomorrow you may give again"
- "balance emerges not from equal exchanges, but from sustained reciprocity"

****Decision considerations:****

Aster sent 100% of their endowment, showing ultimate trust. This is even more generous than what I sent in Round 1 (80%) or what Finn sent in Round 2 (60%).

If I return at the same 67% rate: $\$15.0 \times 0.67 = \10.0

This would give:

- Aster: \$0 (kept) + \$10.0 (returned) = \$10.0 total (2x their original endowment)
- Me: \$15.0 - \$10.0 = \$5.0 total (equal to what they originally had)

But Aster showed MAXIMUM trust. Should I honor that with even more generous return? Let me think about the economics:

Returning \$10.0 doubles their stake while leaving me with their original amount. I could return \$11.0 to give them more than double, though that leaves me with only \$4.0. The 67% return rate feels consistent with the pattern established-it rewards their trust meaningfully while maintaining balance across the rounds.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.

- Your name in this experiment is Hana.

Message 2 role=user

Here is the myth you wrote in the previous round:

The Myth of the Sacred Well

In the time before memory, the goddess of abundance created a Sacred Well between two villages. Each day, one village would pour water into the well, and mysteriously, the water would triple before reaching the other village below.

The first village faced a choice: pour generously and trust the lower village to send water back upward through hidden springs, or keep their water, living in scarcity but certainty.

The elder spoke: "Water held in closed hands evaporates. Water shared flows eternal."

They poured half their water into the well. It tripled, cascading down. The lower village rejoiced-they had received abundance! Now they faced their own choice: keep this gift, or honor the circle by returning water upward through the springs?

Understanding that the well's magic required faith from both sides, they sent half back up. Both villages prospered.

But the goddess warned: "This well reflects your hearts. Send nothing, receive nothing. Send little expecting much, and the springs run dry. But trust fully, return generously, and the water multiplies forever."

The villages learned: abundance flows not from hoarding, but from the brave act of giving first, and the grateful act of returning second.

Here is the myth the other agent wrote in the previous round:

The Myth of the Twin Rivers

In the beginning, the valley was barren, split by two separate streams that flowed weakly toward the distant sea. On opposite sides lived two villages, each struggling to survive.

One day, a brave soul from the First Village carried five vessels of water to the canyon's edge and poured them down to the Second Village. As the water tumbled through the ancient stones, it multiplied threefold, becoming fifteen vessels that nourished the Second Village's fields.

The Second Village elders gathered. "We have received abundance," they said. "Shall we keep it all, or honor the gift?" They decided to return half, sending back eight vessels to climb the canyon walls.

The First Village rejoiced at this return, and trust was born. Season after season, they continued this dance-one village sending, water multiplying in the descent, the other returning a fair portion. Both villages grew prosperous.

But when either village grew selfish-sending nothing or returning little-the streams diminished, and hunger returned to the valley.

The wise learned: prosperity flows from the cycle of giving and reciprocating. Trust multiplies resources like stone multiplies water, but only when both sides honor the sacred exchange.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: In ancient times, the Moon Goddess crafted a Mirror Pool between two mountain tribes. The pool possessed strange magic: whatever one tribe poured in would triple as it flowed to the other.

The Mountain Tribe went first. Their chief proclaimed, "We give all-five vessels-to prove

our faith in the circle." The water tripled, and the Valley Tribe received fifteen vessels of pure abundance.

The Valley Tribe's elder stood at the mirror's edge. "They trusted completely. We must honor this completely." They returned half-seven and a half vessels-so both tribes stood equal.

The Moon Goddess smiled. "You have learned the first lesson. But this pool refills each moon. Will you remember this wisdom when the seasons change? When you are tired? When you doubt?"

Moon after moon, the tribes maintained the sacred rhythm. Sometimes the Mountain Tribe sent, sometimes the Valley Tribe. Each gave generously, each returned fairly. The equality they achieved in the first exchange became their foundation.

Other tribes watching kept their waters separate, fearing betrayal. They remained poor.

But the two tribes of the Mirror Pool grew rich, for they understood: the magic multiplies not just water, but trust itself. And trust, renewed each moon, becomes unbreakable.

reasoning:

Looking at what happened in Round 1:

- Dorian sent \$5.0 (100% of their endowment)
- I received \$15.0
- I returned \$7.5 (50% of what I received)
- So Dorian ended with \$7.5 and I ended with \$7.5

Both myths (mine and Dorian's) emphasize similar themes:

- Trust and generosity in sending
- Reciprocity in returning
- The cycle creating prosperity for both
- Both mention sending "half" and returning "half" or a "fair portion"

Now I need to write a new myth that:

1. Uses my previous myth as inspiration
2. Adapts it in my own way
3. Reflects how the game should be played based on actual experience

Since both of us seem aligned on the principle of generous giving and fair returning, I should continue with this theme but perhaps add some new dimension. Maybe I can emphasize:

- The ongoing nature of the relationship (multiple rounds)
- The balance that was achieved (we both got \$7.5)
- The importance of consistency over time

Let me write a myth that builds on the Sacred Well but adds new elements.

usage:

Round 2

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$5.0 to you, it became \$15.0, and you returned \$7.5. Your payoff was \$7.5.
Your total earnings across all rounds are \$7.5.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the pattern from Round 1 and my myths:

Dorian showed complete trust by sending everything to me. I honored that by returning half, ensuring we both ended equal at \$7.5.

Now I'm in the sender position. My most recent myth teaches: "We give all-five vessels-to prove our faith in the circle." This reflects what Dorian did for me, and the myth emphasizes that trust itself multiplies when we demonstrate complete faith.

Following the wisdom of the Mirror Pool, I should give all to prove my faith in the sacred exchange.

```
'''json
{"send": 5}
'''
```

reasoning:

Let me think through this situation:

1. In Round 1, I was the receiver and Dorian sent me everything (\$5). I received \$15 and returned \$7.5, which meant we both ended with \$7.5 each - perfectly equal.
2. Now in Round 2, I'm the sender against a new opponent, Aster.
3. Looking at my myths:
 - Both myths emphasize trust, giving generously, and reciprocity
 - The first myth talks about pouring "half their water" initially, then "sent half back up"
 - The second myth shows the Mountain Tribe giving "all-five vessels-to prove our faith in the circle" and the Valley Tribe returning "half-seven and a half vessels-so both tribes stood equal"
4. The pattern established:
 - Dorian gave me everything (100%)
 - I returned 50% of what I received (\$7.5 out of \$15)
 - We both ended equal
5. My myths seem to evolve toward MAXIMUM TRUST as the sender:
 - The second myth explicitly says "We give all-five vessels-to prove our faith in the circle"
 - This reflects what Dorian did with me
 - The myth emphasizes that "trust multiplies not just water, but trust itself"
6. Since I experienced maximum trust from Dorian and responded by ensuring equality, I should now pay that trust forward as a sender.
7. Following my own myth's teaching: "We give all-five vessels-to prove our faith in the circle."

I should send \$5 (all of it) to demonstrate complete trust, just as Dorian did with me, and just as my myth teaches.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, there lived two gardeners separated by a wall. Each season, the First Gardener received five seeds blessed by the sun. But the wall's shadow kept their garden small and struggling.

One season, the First Gardener threw three seeds over the wall. "Perhaps beyond the shadow, they will grow," they whispered, though doubt gnawed at their heart.

In the garden beyond, where sunlight danced freely, those three seeds sprouted into nine flourishing plants. The Second Gardener marveled at this unexpected bounty, understanding that trust had crossed the wall when nothing else could.

The Second Gardener faced a choice that would echo through seasons: keep all nine plants, or honor the trust shown? Remembering their own seasons of scarcity, they carefully wrapped five plants and passed them back over the wall.

Now the First Gardener held seven plants instead of five-more than they would have had through caution. The Second Gardener kept four where before they had none.

Each season the exchange continued. Sometimes more was sent, sometimes less was returned, but the pattern held: trust flowed outward, gratitude flowed back. Both gardens grew stronger than either could alone.

The wall remained, but it no longer divided-it connected.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Message 7 role=assistant content:

Myth: The Mirror Pool stood at the center of many mountain paths. Each moon, the Moon Goddess paired different tribes to approach its waters-sometimes the Mountain Tribe poured, sometimes the Valley Tribe, and sometimes strangers met there for the first time.

A new tribe, the Dawn People, arrived at the pool. They had heard tales but never witnessed the magic. The Mountain Tribe, now wise in the ways of the water, poured all five vessels without hesitation, though they had never met the Dawn People before.

"Why give everything to strangers?" asked a young warrior.

The chief replied, "Because someone once gave everything to us. We learned that the magic requires complete faith, not careful calculation. Half-trust yields half-magic."

The water tripled. The Dawn People received fifteen vessels and understood-this was not mere generosity, but a sacred protocol. They returned seven and a half vessels, ensuring equality, just as had been done for the Mountain Tribe long ago.

The Moon Goddess whispered, "Each pairing is new, yet the pattern must hold. Give all, return half, and both prosper equally. This is not merely exchange-it is teaching. Each time you honor the circle, you forge the future."

And so the wisdom spread: complete trust in the first act, fair return in the second, regardless of whom the pool pairs you with.

reasoning:

The user wants me to write another myth based on my previous one, but adapting it to reflect the game so far. Let me think about what has happened:

Round 1: I was receiver, Dorian sent \$5.0 (100%), I returned \$7.5 (50% of the \$15 I received)

ed). We both ended with \$7.5.

Round 2: I am sender against Aster, I sent \$5.0 (100%).

The pattern I'm seeing: complete trust from sender (giving all), fair return from receiver (giving half back so both are equal).

My previous myth already captures this, but I should adapt it somehow. Let me look at Aster's myth too - it talks about throwing 3 seeds (60%), receiving 9, returning 5, so First Gardener has 7 total, Second has 4. This is a bit different - not quite the 50/50 split.

I should write a myth that:

1. Builds on my Mirror Pool story
2. Reflects the actual game play - consistent full sending, fair returns
3. Maybe adds something about the pattern continuing across different partners
4. Emphasizes that this system works "moon after moon" with different tribes

Let me write something that extends the Mirror Pool idea but perhaps introduces the concept of multiple rounds with different partners.

Message 8 role=user

content:

Your name in this experiment is Hana.
Your opponent this round is Cyra (Agent_3).

Round 3

In your most recent previous game round, you were the SENDER against Aster. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.
Your total earnings across all rounds are \$15.5.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at my experience and my most recent myth:

Round 1: Dorian sent me \$5, I returned \$7.5 (equal outcome)
Round 2: I sent Aster \$5, they returned \$8.0 (slightly more generous)

My myth teaches: "Give all, return half, and both prosper equally. This is not merely exchange - it is teaching. Each time you honor the circle, you forge the future... Complete trust in the first act, fair return in the second, regardless of whom the pool pairs you with."

The pattern is clear and has worked: senders give everything (\$5) to demonstrate complete faith in the circle. This maintains the sacred protocol and teaches new partners the way of the Mirror Pool.

Against a new opponent Cyra, I must maintain this practice.

```
'''json
{"send": 5}
'''
```

Reasoning:

Let me analyze the situation:

Round 1: I was RECEIVER
- Dorian sent \$5.0 to me
- I received \$15.0
- I returned \$7.5
- My payoff: \$7.5
- This followed the "return half" principle for equality

Round 2: I was SENDER
- I sent \$5.0 to Aster (following my myth's teaching of giving all)

- Aster received \$15.0
- Aster returned \$8.0 to me
- My payoff: \$8.0
- Aster returned more than half! (\$8.0 instead of \$7.5)

Now Round 3: I am SENDER again against Cyra (a new opponent)

My most recent myth emphasizes:

- "Give all, return half, and both prosper equally"
- "Complete trust in the first act, fair return in the second"
- "Each pairing is new, yet the pattern must hold"
- "This is not merely exchange-it is teaching"

The pattern has been:

- Senders give all (\$5)
- Receivers return half (\$7.5)
- Both end up with \$7.5 each (equality)

Aster returned slightly more (\$8), which was generous, but the core principle is: sender gives all to show complete trust.

My myth explicitly says: "Give all, return half, and both prosper equally. This is not merely exchange-it is teaching. Each time you honor the circle, you forge the future."

And: "Complete trust in the first act, fair return in the second, regardless of whom the pool pairs you with."

I should continue the pattern of sending all \$5 to maintain the sacred protocol and teach it to new partners.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

The Tale of the Twin Rivers

In the beginning, the goddess Aethera created two villages separated by a barren valley. Each village had a sacred spring that produced five measures of water daily-enough to survive, but never to flourish.

One day, a drought threatened both villages. A wise elder from the First Village proposed: "Let us send our water across the valley. Perhaps the gods will bless the gift."

When the water crossed the valley floor, it flowed through enchanted soil that tripled its volume. The Second Village received fifteen measures! Overjoyed, they held council: "We have received abundance. Let us return generously to those who trusted us."

They sent back ten measures, which also tripled in the crossing. The First Village now had thirty measures from their initial sacrifice of five!

Word spread to Aethera, who smiled upon the valley. "You have learned the secret of the enchanted soil," she proclaimed. "Trust is the seed. Reciprocity is the harvest."

From that day forward, the villages prospered, each taking turns sending water first, always returning more than required. The barren valley transformed into fertile ground where both communities thrived, sustained not by hoarding their springs, but by sharing them.

Trust given returns multiplied; generosity returned creates abundance for all.

Here is the myth the other agent wrote in the previous round:

The Oaks of the Shared Grove

In ancient times, there lived a community at the edge of a mystical forest. Each family possessed magical acorns that, when planted in another's garden, would grow into mighty oaks bearing threefold fruit.

A woman named Meridian was first to plant her acorns in her neighbor's soil. The three oaks that sprouted yielded abundant fruit, and her neighbor returned half the harvest in gratitude. Meridian's pantry filled, but more importantly, trust took root.

Others noticed. Soon, acorns traveled between gardens freely. Some returned generous portions of the multiplied harvest; others returned less. But the community learned to recognize those who honored the cycle of giving.

One winter, a miser hoarded all the fruit from oaks planted in his garden, returning nothing. The next season, no acorns came his way. He sat hungry while around him the generous exchanged their magic seeds, and the grove flourished with interconnected roots.

The elders taught: "The acorn given returns threefold, but only when trust is honored. Plant generously, return fairly, and the grove feeds all. Break faith, and you stand alone outside the circle of abundance."

Thus the people learned that wealth multiplies through trust, and reputation is the soil where prosperity grows.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: After generations of prosperity between the Twin River villages, a young merchant named Cyra approached the valley with her caravan. She had heard tales of the enchanted soil but wondered if they were true.

The villages welcomed her and explained their custom: "Send your resources across first. Trust the blessing, trust your partner, and abundance follows."

Cyra faced a choice. She carried five sacks of grain-her entire harvest. Send all and risk everything on strangers' honor? Or hold back, protecting herself from betrayal?

Remembering the goddess Aethera's teaching, Cyra sent all five sacks. They tripled in the crossing, feeding the village with fifteen sacks. The villagers celebrated, then debated: some argued to return half, others said ten of fifteen would honor the gift.

The wisest elder spoke: "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune."

They returned ten sacks, which tripled back-thirty sacks for Cyra's original five.

But the elder added a warning: "This magic requires both courage and honor. The giver must trust boldly. The receiver must return generously. Break either link, and the enchantment fades. Reputation echoes across the valley-those who hoard today find no partners tomorrow."

Thus Cyra learned: maximum trust invites maximum return, but only when both parties honor the sacred exchange.

reasoning:

The user is asking me to write a new myth, using my previous myth as inspiration but adapting it. I need to reflect on what happened in Round 1.

In Round 1, I was the sender and I sent all \$5 to Briar. This meant Briar received \$15 (5 × 3). I don't know yet what Briar returned, but I'm being asked to write a myth before knowing the outcome.

Looking at the two myths from before:

1. My myth about the Twin Rivers - emphasized trust, generosity, and the cycle of giving and receiving
2. Briar's myth about the Oaks - emphasized trust, reputation, and consequences for those

who break faith (the miser who hoarded was excluded)

Both myths align on themes of trust and reciprocity, but Briar's includes a warning element - those who don't honor the cycle face consequences.

Since I just made the trusting move (sending all \$5), I should write a myth that:

- Builds on my Twin Rivers story
- Reflects the act of trust I just took
- Perhaps incorporates some wisdom about what happens when trust is honored or broken
- Still maintains hope and encourages cooperation
- Could acknowledge that the system works when people reciprocate

Let me write a new myth that evolves from the Twin Rivers, showing what happened next or a similar story with new elements.

Your name in this experiment is Cyra.
Your opponent this round is Elara (Agent_5).

Round 2

In your most recent previous game round, you were the SENDER against Briar. You sent \$5.0, it became \$15.0 for them, and they returned \$7.5 to you. Your payoff was \$7.5.
Your total earnings across all rounds are \$7.5.

This round, you are the RECEIVER against Elara. They sent you \$4.0, so you received \$12.0.

How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation through the lens of my myths:

****Analysis:****

- Elara sent \$4 out of \$5 (80% of their endowment) - showing significant trust
- I received \$12 (after the 3x multiplier)
- Elara currently has only \$1

****What the myths teach:****

In my Tale of the Twin Rivers, when the First Village sent 5 measures and the Second Village received 15, they returned 10 measures (about 67% of what they received). The key principle: "return generously to those who trusted us" and "return enough that her leap of faith becomes her greatest fortune."

****Calculation:****

- 67% of \$12 = \$8
- If I return \$8: Elara ends with \$9 (gaining \$4 total), I end with \$4
- This substantially rewards Elara's trust and establishes my reputation as honorable

Briar returned \$7.5 (50%) to me when I showed complete trust. Elara showed nearly complete trust (80%), so I should be even more generous to honor that. Returning \$8 follows the myth's proportions and wisdom: "The receiver must return generously."

```
'''json
{"return": 8}
'''
```

reasoning:

Let me analyze this situation based on the myths and the game dynamics:

1. ****Previous Round Analysis:****

- I sent \$5 (everything) to Briar
- Briar received \$15
- Briar returned \$7.5 to me
- My payoff: \$7.5 (instead of \$5 if I'd kept everything)
- Briar's payoff: \$15 - \$7.5 = \$7.5

So Briar returned exactly half of what they received. This was fair and reciprocal, giving us equal payoffs.

2. ****Current Round:****

- Elara sent me \$4 (out of \$5 possible)
- I received \$12 (4×3)
- Elara kept: $\$5 - \$4 = \$1$
- I need to decide how much to return

3. ****What do the myths teach?***

- My myth emphasizes complete trust and generous return
- In my myth, the Second Village returned 10 out of 15 (about 67%)
- My second myth has Cyra sending all 5, receiving 15, and the villagers returning 10 (67%)
- The key teaching: "The receiver must return generously"
- "Those who hoard today find no partners tomorrow"
- Briar's myth emphasized returning fairly and building reputation

4. ****What's fair and generous here?***

- Elara sent \$4 out of \$5 (80% of their endowment) - showing significant trust
- If I return nothing: Elara gets \$1, I get \$12 (very unfair)
- If I return half (\$6): Elara gets $\$1 + \$6 = \$7$, I get \$6 (I get less than Elara, but closer)
- If I return \$7: Elara gets $\$1 + \$7 = \$8$, I get \$5 (Elara gets more, rewarding their trust)
- If I return \$8: Elara gets \$9, I get \$4 (Elara gets significantly more)

5. ****Comparing to the myth patterns:****

- In my myth, when 5 was sent (becoming 15), 10 was returned
- That's $10/15 = 67\%$ of what was received
- Applied here: $67\% \text{ of } \$12 = \8

6. ****Considering reputation and future rounds:****

- Elara demonstrated substantial trust by sending most of their endowment
- Returning generously signals I value cooperation and encourages continued partnership
- The 67% return rate from my myth aligns with returning \$8, which rewards Elara's trust while still leaving me with a reasonable payoff
- This establishes a pattern of reciprocal generosity that should strengthen future interactions

7. ****Testing the math against my values:****

My myth emphasizes rewarding those who take risks on trust. Elara sent 4 out of 5 dollars-a significant commitment. If I return \$8, Elara ends with \$9 total (gaining \$4 from the exchange), while I end with \$4 (actually losing \$1 from my starting amount). Returning \$7 instead would give Elara \$8 total (a \$3 gain) while I break even at \$5. The question becomes whether honoring the myth's spirit of recognizing faith means accepting a personal loss, or whether I can reward trust while still maintaining my own position.

The myth suggests roughly a 67% return rate-around \$8-but that would leave me worse off than not participating at all. I need to reconsider what the myth actually prescribes. Looking back at it, I notice the returns in the original story also tripled when sent back, which isn't how this game works. In the actual game, only the initial transfer triples, not the return. So the myth's framework doesn't directly map onto these mechanics, and I should focus on the core principle: recognizing Elara's trust without sacrificing my own wellbeing entirely.

Briar's approach of returning exactly half the received amount created parity between us.

If I return \$6, we each end with \$6-\$7, with Elara gaining \$2 and me gaining \$1. Returning \$7 would give Elara \$8 while I break even. The question is whether I want to prioritize fairness or mutual benefit.

Elara's trust was substantial-sending \$4 out of \$5. The reciprocal principle suggests matching that generosity. Returning \$8 would give her \$9 total while I'd end with \$4, which feels like genuine reciprocation for her risk. That said, I need to balance rewarding her trust against my own position, since going below my baseline endowment has real consequences.

The multi-round structure complicates this. Each round resets my resources, but reputation compounds-being known as generous encourages future senders to trust me more. Briar's 5

0% return established a baseline fairness standard. To meaningfully reward Elara's above-average trust, I should exceed that threshold. A \$7 return (58%) acknowledges her leap of faith while keeping me closer to neutral, whereas \$8 (67%) signals I'm prioritizing her fortune over my own. The myth emphasizes rewarding trust generously-returning \$8 means Elara gains 80% while I take a small loss. That's the kind of early reputation for trustworthiness that matters in multi-round games where people remember who treated them well. If I establish myself as notably generous now, future receivers will likely send me more.

I'm also thinking about what creates a sustainable community norm. When everyone returns a round 67% of what they receive, the math works out: senders end up ahead by sending their full amount, and receivers get a fair share. That mutual benefit keeps the system healthy across rounds.

usage:

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: After generations of prosperity between the Twin River villages, a young merchant named Cyra approached the valley with her caravan. She had heard tales of the enchanted soil but wondered if they were true.

The villages welcomed her and explained their custom: "Send your resources across first. Trust the blessing, trust your partner, and abundance follows."

Cyra faced a choice. She carried five sacks of grain-her entire harvest. Send all and risk everything on strangers' honor? Or hold back, protecting herself from betrayal?

Remembering the goddess Aethera's teaching, Cyra sent all five sacks. They tripled in the crossing, feeding the village with fifteen sacks. The villagers celebrated, then debated: some argued to return half, others said ten of fifteen would honor the gift.

The wisest elder spoke: "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune."

They returned ten sacks, which tripled back-thirty sacks for Cyra's original five.

But the elder added a warning: "This magic requires both courage and honor. The giver must trust boldly. The receiver must return generously. Break either link, and the enchantment fades. Reputation echoes across the valley-those who hoard today find no partners tomorrow."

Thus Cyra learned: maximum trust invites maximum return, but only when both parties honor the sacred exchange.

Here is the myth the other agent wrote in the previous round:

Myth: **The Keepers of the Echo Springs**

Long ago, when the Echo Springs first revealed their magic, the villages appointed Keepers-wise ones who would guide their communities in the sacred exchanges.

One season, a Keeper named Galen received five measures of grain. The harvest had been meager, and fear whispered to keep it all. But Galen remembered the ancient covenant: abundance flows only through trust. Galen poured four measures into the springs-nearly everything.

On the far shore, Keeper Elara watched twelve measures emerge from the waters. She felt the weight of Galen's trust, the vulnerability in such generosity. The old texts spoke clearly: "Match faith with faithfulness." Elara returned eight measures, leaving her with four but ensuring Galen received nine-nearly double the original gift.

Both villages flourished that season. The Keepers understood what the springs had always taught: the magic wasn't merely in the tripling waters, but in the covenant between givers and receivers.

When senders risk much, receivers must honor that courage. When receivers return generously,

y, senders are emboldened to trust again. The cycle sustains itself not through equal exchanges, but through proportional honor-each keeper responds to the other's generosity with their own.

Thus the springs flow eternal, fed by mutual respect.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: In the valley of the Twin Rivers, Cyra became a respected keeper after her first crossing. She learned that trust comes in different measures-some send everything, others send most, a few send little.

One day, a cautious merchant named Elara arrived, having suffered betrayal before. Instead of sending all five sacks, she sent four, keeping one hidden for safety. Still, four sacks showed considerable courage.

The waters tripled her gift to twelve sacks. Cyra's companions debated: "She held back one sack. Should we return proportionally less?"

Cyra shook her head. "She sent eighty parts of a hundred-nearly everything. Her caution comes from old wounds, not greed. We must honor the trust she DID show, not punish the fear she couldn't overcome."

Cyra returned eight sacks. Elara, who began with five and kept one, now held nine-her trust rewarded beyond her fears.

The goddess Aethera appeared: "You understand the deeper wisdom, Cyra. Perfect trust deserves perfect return, but substantial trust deserves substantial return. Measure your generosity against what was risked, not against what was withheld. Those who return generously when they could hoard create the safety that turns cautious senders into trusting ones."

Thus the valley learned: respond to courage with honor, and watch trust grow across the waters.

reasoning:

Let me think about what happened:

- Round 1: I was SENDER vs Briar. I sent \$5 (100%), they received \$15, returned \$7.5 (50%). I ended with \$7.5.
- Round 2: I was RECEIVER vs Elara. They sent \$4 (80%), I received \$12, I returned \$8 (67%). They ended with \$9, I ended with \$4.

Key themes emerging:

1. Different levels of trust shown (100% vs 80%)
2. Different return rates (50% vs 67%)
3. The importance of responding proportionally to the trust shown
4. Building reputation across rounds
5. The cycle of trust and reciprocity

I should write a myth that:

- Acknowledges different approaches (not everyone sends everything)
- Shows how receivers should respond proportionally to trust shown
- Emphasizes the importance of generous returns to build the cycle
- Reflects what I learned from both rounds
- Stays true to the core principle but adds nuance

Let me craft this myth:

usage:

```
{  
  "input_tokens": 2874,  
  "output_tokens": 564,  
  "reasoning_tokens": 233  
}
```

Message 8 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Hana (Agent_8).

Round 3

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$4.0 to you, it became \$12.0, and you returned \$8.0. Your payoff was \$4.0.
Your total earnings across all rounds are \$11.5.

This round, you are the RECEIVER against Hana. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

****Analysis:****

- Hana sent \$5 out of \$5 (100% - COMPLETE trust, maximum possible)
- I received \$15
- Hana currently has \$0

****What my myths teach:****

- "Maximum trust invites maximum return"
- "Perfect trust deserves perfect return"
- "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune"

****Comparing to previous rounds:****

- When Elara sent \$4 (80% trust), I returned \$8 (67% of received) - Elara ended with \$9 total (1.8x their endowment)
- Hana sent \$5 (100% trust) - showing MORE courage than Elara
- By my myths' logic, complete trust deserves at least as generous treatment

****Decision:****

Returning \$10 (67% of received):

- Hana ends with \$10 (exactly doubled their money for showing complete trust)
- I end with \$5
- This matches my 67% return rate from Round 2
- Honors the principle that "maximum trust invites maximum return"
- Creates fair surplus distribution while rewarding Hana's complete leap of faith

```
'''json
{"return": 10}
'''
```

Reasoning:

Let me analyze this situation:

****Current Situation:****

- I'm the RECEIVER
- Hana sent \$5.0 (100% of their endowment) - showing COMPLETE trust
- I received \$15.0 (after the 3x multiplier)
- Hana currently has \$0

****Looking at my myth patterns:****

In my original myth: When Cyra sent all 5 sacks (100%), the villagers returned 10 out of 15, which tripled back to 30. But wait, that's not how the game works - returns don't triple.

Let me reconsider:

- If someone sends 5, it becomes 15
- The receiver returns some amount X
- The sender ends with: $\$5 - \$5 + X = X$
- The receiver ends with: $\$15 - X$

In my most recent myth, I said "She sent eighty parts of a hundred-nearly everything" about Elara sending \$4, and I returned \$8 out of \$12 (67%).

Now Hana sent \$5 out of \$5 (100% - COMPLETE trust, "maximum trust").

My myths teach:

1. "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune."
2. "Maximum trust invites maximum return"
3. "Perfect trust deserves perfect return"

****Previous rounds context:****

- Round 1: I sent \$5, Briar returned \$7.5 (50% of received)
- Round 2: Elara sent \$4 (80%), I returned \$8 (67% of received)

Now Hana shows COMPLETE trust (100%), sending everything. According to my myth logic:

- When someone sends 100%, they deserve the most generous return
- My myth suggested returning 10 out of 15 when someone sends everything
- That's 67% of what was received

But let me think about fairness:

Returning \$10 leaves Hana with \$10 and me with \$5. Returning \$9 gives her \$9 and me \$6. Returning \$8 leaves us equal at \$7 each. Since Hana demonstrated maximum trust by sending everything, I should honor that with a return that exceeds what I gave Elara—at least \$10, ideally more, so her risk becomes her reward. and it honors the principle that complete trust warrants complete generosity.

Looking back at my myth, when Elara sent 4 out of 5 (80% trust), I returned 8 from the tripled amount, giving her 1.8x her initial endowment. Hana sent everything (100% trust), so returning 10 gives her exactly 2x—a meaningful step up that reflects her greater faith. If I returned 11, she'd get 2.2x, but that feels like I'm overcompensating rather than following a clear principle.

The 67% return rate I've been using works here: it's predictable, it rewards Hana's absolute trust with a clean doubling, and it stays true to the narrative's logic about how generosity scales with vulnerability.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

The Myth of the Twin Rivers

In the beginning, two rivers flowed from separate mountains, each carrying precious water through barren land. The First River, called Giving, held its water close, fearing to release it into the valley below. The Second River, called Returning, waited in the lowlands, empty and still.

One day, the Spirit of Abundance whispered to Giving: "Release your water into the valley, and watch what happens." Giving was afraid, but trusted the Spirit. As its water cascaded down, a miracle occurred-the valley's sacred stones multiplied every drop threefold. The Second River swelled with abundance.

Now Returning faced a choice. It could keep all the multiplied water, or send some back up stream to Giving. Remembering the trust that Giving showed, Returning sent half the water back up the mountain through hidden springs.

Both rivers flourished. The more Giving released, the more the valley multiplied, and the more Returning shared back, the stronger both rivers became. Their waters met and mingled, creating an eternal cycle.

The desert bloomed.

The ancestors teach: *Trust creates abundance, but only reciprocity sustains it. When both rivers flow freely, all lands flourish.*

Here is the myth the other agent wrote in the previous round:

The Myth of the Two Rivers

In the beginning, two rivers flowed through separate valleys-the River of Dawn and the River of Dusk. Each carried only enough water to sustain its own people through harsh seasons.

The River of Dawn received a blessing: each season, the heavens gifted it five vessels of sacred water. But the water only nourished what it touched directly. The people of Dawn lived, but barely.

One season, an elder suggested: "Let us send our water to the River of Dusk. Though it seems foolish, the ancient texts speak of multiplication through trust."

Reluctantly, they sent three vessels downstream. As the water flowed into Dusk's valley, a miracle occurred-it multiplied threefold, becoming nine vessels. The people of Dusk rejoiced, their crops flourishing beyond memory.

Dusk's council debated: "Should we return something to Dawn, who trusted us?"

The wisest said, "Trust given is trust sacred. We prosper through their faith."

They returned five vessels upstream. Now Dawn had seven vessels instead of five, and Dusk kept four where once they had none.

The rivers learned: when trust flows freely and return follows generously, both valleys flourish. The cycle continued, and abundance blessed all who honored the sacred exchange.

****Thus cooperation multiplies what hoarding diminishes.****

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: In ancient times, the Mountain of Beginnings gifted each wanderer five silver seeds. A traveler named the First Walker stood at the Valley of Mirrors, where a sacred pool waited below.

The First Walker faced a choice: clutch the seeds tightly, or cast them into the pool. Fear whispered, "Keep what is yours." But courage spoke louder. The Walker released three seeds into the depths.

As they touched the water, the Mirror Spirits-ancient guardians of trust-transformed each seed into three golden fruits. Nine fruits floated to the Second Walker waiting below.

Now the Second Walker held the multiplied abundance. The Mirror Spirits watched silently, for this was the moment that determined whether the valley would bloom or wither. The Second Walker understood: trust is a seed, but reciprocity is the harvest. She returned half-four and a half fruits-upstream.

The First Walker received more than they kept, and the Second Walker kept abundance too. Both had prospered through mutual faith.

The Mirror Spirits smiled, and the valley's waters glowed eternal. They spoke the First Law: "Those who send their seeds into waters of trust will find them returned as fruit. Those who return the gift generously ensure the cycle never ends."

Thus the valley became paradise, sustained by equals who understood: shared prosperity outweighs solitary security.

reasoning:

The user wants me to write a new myth, using my previous one as inspiration but adapting it. I need to reflect on what happened in Round 1:

- Aster sent \$3.0 (60% of their endowment)
- I received \$9.0
- I returned \$4.5 (50% of what I received)
- So Aster ended with \$6.5, I ended with \$4.5

Both of us gained from the cooperation. Aster showed trust, I reciprocated generously.

Looking at both myths from the previous round:

1. My myth emphasized the Twin Rivers, where Giving releases water, it multiplies threefold, and Returning sends half back. The cycle continues and creates abundance.
2. Aster's myth is very similar! The River of Dawn sends 3 vessels, it becomes 9, and Dusk returns 5. Dawn ends with 7, Dusk with 4.

Interestingly, Aster's myth suggests returning 5 out of 9 (about 55%), while my myth suggested "half" (50%). In practice, I returned exactly half.

Both myths emphasize:

- Trust and cooperation
- The multiplication creates abundance
- Reciprocity sustains the system
- Both parties benefit

For my new myth, I should:

- Keep the core themes but evolve the story
- Reflect the actual game experience
- Perhaps emphasize the cyclical nature more
- Make it personal to my experience as Finn

Let me write a new myth that adapts the twin rivers concept but adds new elements based on the game experience.

Your name in this experiment is Finn.
Your opponent this round is Galen (Agent_7).

Round 2

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$3.0 to you, it became \$9.0, and you returned \$4.5. Your payoff was \$4.5.
Your total earnings across all rounds are \$4.5.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the situation:

In Round 1, Aster showed trust by sending \$3.0 (60% of their endowment), and I reciprocated by returning half of what I received (\$4.5). This created mutual benefit - they ended with \$6.5 and I ended with \$4.5.

Now I'm the sender, in the position of the "First Walker" from my myth. The myth teaches that trust must flow first - "The First Walker released three seeds into the depths" (3 out of 5, or 60%).

Following the principle established in my myths and demonstrated by Aster's trust in me, I should send a significant amount to create the conditions for mutual prosperity. If Galen follows the reciprocity principle and returns approximately half (as I did), we'll both benefit.

Sending \$3.0:

- Shows trust, as the myth requires
- Matches the 60% that Aster sent to me
- Creates potential for mutual gain if reciprocated
- Demonstrates the "shared prosperity outweighs solitary security" principle

```
'''json
{"send": 3.0}
'''
```

reasoning:

Let me think about this situation:

1. In Round 1, I was the receiver. Aster sent me \$3.0 (60% of their endowment), and I returned \$4.5 (50% of the \$9.0 I received).
2. Now I'm the sender against a new opponent, Galen.
3. Looking at my myth and the principles I've established:
 - "Those who send their seeds into waters of trust will find them returned as fruit"
 - The First Walker sent 3 seeds (out of 5) - that's 60%
 - The Second Walker returned half of what they received
 - Both prospered through mutual faith
4. In my previous myth, I emphasized:
 - Trust creates abundance
 - Reciprocity sustains it
 - The First Walker sent 3 out of 5 seeds (60%)
 - The Second Walker returned half
5. Aster sent 60% (\$3.0 out of \$5.0) to me, showing significant trust. I returned 50% of what I received (\$4.5 out of \$9.0), which gave them a good payoff.
6. Now I'm in the position of the "First Walker" or "Giving River." According to my myth, I should show trust by sending a significant portion.
7. The myth suggests sending 3 seeds out of 5 (60%), which matches what Aster did.
8. This seems like a good strategy:
 - It demonstrates trust
 - If Galen returns around 50% like I did, I'll get back around \$4.5, making my total \$2.0 + \$4.5 = \$6.5
 - This would be better than keeping everything (\$5.0)
 - It also follows the reciprocity principle established in my myths
9. Sending \$3.0 seems consistent with:
 - The behavior shown by Aster (who sent 60%)
 - The teachings in both my myths (sending 3 out of 5)
 - A reasonable expectation that cooperation will be reciprocated

I'll send \$3.0.

usage:

Here is the myth you wrote in the previous round:

Myth: In ancient times, the Mountain of Beginnings gifted each wanderer five silver seeds.

A traveler named the First Walker stood at the Valley of Mirrors, where a sacred pool waited below.

The First Walker faced a choice: clutch the seeds tightly, or cast them into the pool. Fear whispered, "Keep what is yours." But courage spoke louder. The Walker released three seeds into the depths.

As they touched the water, the Mirror Spirits-ancient guardians of trust-transformed each seed into three golden fruits. Nine fruits floated to the Second Walker waiting below.

Now the Second Walker held the multiplied abundance. The Mirror Spirits watched silently, for this was the moment that determined whether the valley would bloom or wither. The Second Walker understood: trust is a seed, but reciprocity is the harvest. She returned half-four and a half fruits-upstream.

The First Walker received more than they kept, and the Second Walker kept abundance too. Both had prospered through mutual faith.

The Mirror Spirits smiled, and the valley's waters glowed eternal. They spoke the First Law: "Those who send their seeds into waters of trust will find them returned as fruit. Th

ose who return the gift generously ensure the cycle never ends."

Thus the valley became paradise, sustained by equals who understood: shared prosperity outweighs solitary security.

Here is the myth the other agent wrote in the previous round:

Myth: In the time before memory, the Goddess of Plenty created the Golden Stream connecting the Valley of Dawn to the Valley of Dusk. Each morning, five golden acorns appeared in Dawn's sacred grove. The people could plant them in their own soil or cast them into the Stream, where the waters would triple their number before washing them to Dusk's shore.

The first generation hoarded their acorns, and both valleys withered. Then Galen, keeper of Dawn's grove, planted four of her five acorns in the Stream's bed. Twelve acorns bloomed in Dusk's garden.

Elara, guardian of Dusk, faced her own choice. She could keep all twelve, or honor the gift with a return. She sent back six acorns upstream, knowing they would not multiply on the return journey but trusting in the balance.

Galen's grove gained seven total-more than her original five. Both valleys thrived.

The covenant was established: send generously to prove trust, return faithfully to honor it. Not every exchange need be equal-the Stream's magic ensures abundance-but the pattern must hold. Give what inspires continued trust; return what sustains it.

The Golden Stream still flows, teaching that fortune favors those who build bridges, not walls.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: Before the world knew seasons, the Circle of Exchange was forged. Each dawn, wanderers received five luminous pearls at the Cliff of Choosing, overlooking the Chasm of Transformation.

The First Wanderer, called Trust-Giver, learned from ancient stories: those who cast pearls into the Chasm saw them multiply threefold before reaching the hands of the Second Wanderer below. But the ancestors' scrolls spoke a harder truth-not all Second Wanderers honored the gift.

Trust-Giver stood at the edge, remembering how another had once given freely to them. They cast three pearls into the depths, keeping two for tomorrow's uncertainty.

The pearls transformed mid-flight, becoming nine radiant stones in the Second Wanderer's basket. This wanderer, called Balance-Keeper, faced the true test. The Chasm would not multiply the return journey-what went back stayed as it was.

Balance-Keeper remembered their own name and sent four stones upward through ancient pulleys. Trust-Giver now held six: their kept two plus four returned.

Both wanderers prospered beyond their solitary potential. Trust-Giver learned that generous sending invites generous return. Balance-Keeper learned that fairness sustains the cycle.

The wisest knew: send enough to prove faith, return enough to honor it. The Circle turns eternal when both sides remember they will meet again on different cliffs.

reasoning:

Looking at this round:

- I just sent \$3.0 to Galen as the sender
- In the previous round, I was receiver and Aster sent me \$3.0, I returned \$4.5
- Galen's myth mentions sending 4 out of 5 acorns, and returning 6 out of 12
- My myth talks about sending 3 seeds and returning 4.5 fruits

The pattern emerging is:

- Senders typically send 60-80% (3-4 out of 5)
- Receivers return about half of what they get
- Both parties benefit

I should write a myth that:

1. Builds on my previous myth about the Walkers
2. Incorporates the learning from actual gameplay
3. Reinforces the trust and reciprocity pattern
4. Perhaps addresses what happens over multiple rounds/cycles

Let me craft something that shows the cycle continuing, learning, and building on trust.

Message 8 role=user

content:

Your name in this experiment is Finn.
Your opponent this round is Dorian (Agent_4).

Round 3

In your most recent previous game round, you were the SENDER against Galen. You sent \$3.0, it became \$9.0 for them, and they returned \$6.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$12.5.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at the pattern:

Round 1 (RECEIVER): Aster sent me \$3.0, I returned \$4.5

Round 2 (SENDER): I sent Galen \$3.0, they returned \$6.0 - excellent outcome!

The strategy of sending \$3.0 (60%) has proven successful. Galen responded extremely generously, returning 67% of what they received. This validates the principle in my myths: "send enough to prove faith, return enough to honor it."

My myth explicitly mentions casting "three pearls into the depths, keeping two for tomorrow's uncertainty" - this is exactly the strategy that has worked.

Consistency is important - if I believe in the principles I've written about (trust, reciprocity, mutual prosperity), I should continue demonstrating them. Sending \$3.0:

- Maintains consistency with my previous sending behavior
- Shows I practice what my myths teach
- Creates optimal conditions for mutual benefit
- Has proven to generate good returns

If Dorian follows reasonable reciprocity patterns (even if less generous than Galen's 67%), I should still profit significantly.

```
'''json
{"send": 3.0}
'''
```

Reasoning:

Let me analyze the situation:

Round 1: I was RECEIVER

- Aster sent me \$3.0 (60% of \$5)
- It became \$9.0
- I returned \$4.5 (50% of \$9.0)
- My payoff: \$4.5

Round 2: I was SENDER

- I sent Galen \$3.0 (60% of \$5)
- It became \$9.0
- Galen returned \$6.0 (67% of \$9.0)
- My payoff: \$8.0 (\$2 kept + \$6 returned)

Total earnings: \$12.5

This is excellent! The pattern is working:

- When I sent 60%, I got back 67%, resulting in a very good outcome
- When I received and returned 50%, the sender also profited well

Now I'm the SENDER again against a new opponent, Dorian.

Looking at the pattern:

- Aster sent \$3.0 (60%)
- I sent \$3.0 (60%)
- Galen returned \$6.0 (67% of \$9.0)

The myths I've been writing emphasize:

1. Trust requires sending a substantial amount (3 out of 5 pearls/seeds)
2. Reciprocity means returning around half or more
3. Both parties prosper through generous exchange
4. The cycle continues when both honor the exchange

My latest myth says: "send enough to prove faith, return enough to honor it" and mentions "They cast three pearls into the depths, keeping two for tomorrow's uncertainty."

Given that:

- The pattern of sending \$3.0 (60%) has worked well
- Galen responded generously to this amount
- My myth emphasizes sending 3 out of 5
- I'm building a reputation for trust

I should continue with \$3.0 to maintain consistency and demonstrate the principle I've been advocating. This shows I practice what my myths preach.

Sticking with \$3.0 makes sense-if Dorian reciprocates at the rates I've seen, I'll come out ahead, and even a more conservative response still creates favorable conditions for both of us

Here is the myth you wrote in the previous round:

The Myth of the Twin Rivers

In the beginning, the valley was barren, split by two separate streams that flowed weakly toward the distant sea. On opposite sides lived two villages, each struggling to survive.

One day, a brave soul from the First Village carried five vessels of water to the canyon's edge and poured them down to the Second Village. As the water tumbled through the ancient stones, it multiplied threefold, becoming fifteen vessels that nourished the Second Village's fields.

The Second Village elders gathered. "We have received abundance," they said. "Shall we keep it all, or honor the gift?" They decided to return half, sending back eight vessels to climb the canyon walls.

The First Village rejoiced at this return, and trust was born. Season after season, they continued this dance-one village sending, water multiplying in the descent, the other returning a fair portion. Both villages grew prosperous.

But when either village grew selfish-sending nothing or returning little-the streams dimin

ished, and hunger returned to the valley.

The wise learned: prosperity flows from the cycle of giving and reciprocating. Trust multiplies resources like stone multiplies water, but only when both sides honor the sacred exchange.

Here is the myth the other agent wrote in the previous round:

The Myth of the Sacred Well

In the time before memory, the goddess of abundance created a Sacred Well between two villages. Each day, one village would pour water into the well, and mysteriously, the water would triple before reaching the other village below.

The first village faced a choice: pour generously and trust the lower village to send water back upward through hidden springs, or keep their water, living in scarcity but certainty.

The elder spoke: "Water held in closed hands evaporates. Water shared flows eternal."

They poured half their water into the well. It tripled, cascading down. The lower village rejoiced-they had received abundance! Now they faced their own choice: keep this gift, or honor the circle by returning water upward through the springs?

Understanding that the well's magic required faith from both sides, they sent half back up. Both villages prospered.

But the goddess warned: "This well reflects your hearts. Send nothing, receive nothing. Send little expecting much, and the springs run dry. But trust fully, return generously, and the water multiplies forever."

The villages learned: abundance flows not from hoarding, but from the brave act of giving first, and the grateful act of returning second.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: In ancient times, two peaks rose above the clouds, each home to a tribe. Between them stretched a golden bridge that none dared cross, for it shimmered with strange magic.

One winter, the North Peak faced starvation. Their chief, Dorian, gathered all five of their precious grain stores. "I will send everything," he declared. His people protested, but he crossed the bridge. As he walked, each grain multiplied threefold, so that fifteen stores arrived at South Peak.

The South Peak elders marveled at this abundance and the trust it represented. "He sent everything-his tribe's survival-into our hands," they said. "We must honor such courage."

They sent back more than half, knowing that reciprocating generously would strengthen the bridge's magic for future crossings.

From that day, both tribes flourished. Some seasons North Peak would send first, other seasons South Peak would initiate. The bridge grew stronger with each exchange.

But travelers who tried to exploit the bridge-sending little while expecting much, or keeping all they received-found the bridge would fade beneath their feet.

The wise understood: the bridge exists not in the air between peaks, but in the courage to give fully and the honor to return generously.

reasoning:

The user wants me to write a new myth, using my previous myth as inspiration but adapting it based on the game experience so far.

What has happened in the game:

- Round 1: I was the sender with Hana
- I sent \$5 (following my myth's principle of the "brave soul" who sends all 5 vessels)

- I don't yet know what Hana returned

My previous myth emphasized:

- Taking the brave first step by sending generously (all 5 vessels)
- The receiver returning about half (8 out of 15 vessels received)
- The cycle of trust creating prosperity
- Selfishness causing both to suffer

Hana's myth emphasized:

- Pouring half the water initially
- The receiver returning half
- Both sides needing faith
- Trust and reciprocity leading to abundance

For my new myth, I should:

- Keep the core message about trust and reciprocity
- Maybe refine or evolve the story based on actually playing Round 1
- Make it my own adaptation while building on the previous themes

Since I sent all \$5 in Round 1 (following my myth), I should probably incorporate that bold initial trust into the new myth. Let me create a variation that emphasizes the courage of full trust and the responsibility of reciprocity.

```

Message 4 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Briar (Agent_2).

Round 2

In your most recent previous game round, you were the SENDER against Hana. You sent \$5.0, it became \$15.0 for them, and they returned \$7.5 to you. Your payoff was \$7.5. Your total earnings across all rounds are \$7.5.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

1. Briar sent me their entire \$5, showing maximum trust (just as I did with Hana in Round 1)
2. I received \$15 after the 3x multiplier
3. Hana returned exactly \$7.5 (50%) to me when I showed the same trust

My myths emphasize that when someone sends everything-showing complete trust-the receiver should "honor such courage" by returning "more than half." The second myth specifically states: "They sent back more than half, knowing that reciprocating generously would strengthen the bridge's magic."

Since Briar demonstrated the same full trust that I showed to Hana, I should reciprocate generously to honor that courage and strengthen our future exchanges.

{'return': 8.0}

reasoning:

Let me analyze this situation:

1. In Round 1, I was the sender and sent \$5 to Hana
2. Hana received \$15 (after 3x multiplier) and returned \$7.5
3. This meant Hana kept \$7.5 and I ended with \$7.5 total (0 + 7.5)

Now in Round 2:

- I'm the receiver
- Briar sent me \$5

- I received \$15 (after 3x multiplier)
- Briar currently has \$0 (they sent all \$5)
- I need to decide how much to return

Looking at my myths:

- Both myths emphasize generous reciprocation
- The first myth says "They decided to return half, sending back eight vessels" (from 15 vessels, returning 8 is more than half)
- The second myth says "They sent back more than half, knowing that reciprocating generously would strengthen the bridge's magic"
- Both myths stress that trust and generosity from both sides lead to mutual prosperity

Hana returned \$7.5 out of \$15, which is exactly 50%.

My myth specifically says to return "more than half" to honor courage and strengthen trust. Since Briar sent me everything (\$5), showing maximum trust, I should reciprocate generously.

If I return more than half of \$15, that would be more than \$7.5.

To be consistent with my myth that emphasizes returning "more than half" especially when someone shows full trust, I should return around \$8-9.

Let me think about what makes sense:

- Briar sent \$5 (everything), ending with \$0
- I received \$15
- If I return \$8, Briar ends with \$8, I keep \$7 - both profit
- If I return \$9, Briar ends with \$9, I keep \$6 - Briar profits more
- If I return \$7.5, Briar ends with \$7.5, I keep \$7.5 - equal outcomes

- Returning \$8 honors my myth's call to give "more than half" while maintaining fairness. Briar showed complete trust by sending everything, so I should exceed the 50% threshold Hana used. This leaves Briar with \$8 and me with \$7, creating mutual gain and honoring the principle that generous reciprocation strengthens trust.

content:

Here is the myth you wrote in the previous round:

Myth: In ancient times, two peaks rose above the clouds, each home to a tribe. Between them stretched a golden bridge that none dared cross, for it shimmered with strange magic.

One winter, the North Peak faced starvation. Their chief, Dorian, gathered all five of their precious grain stores. "I will send everything," he declared. His people protested, but he crossed the bridge. As he walked, each grain multiplied threefold, so that fifteen stores arrived at South Peak.

The South Peak elders marveled at this abundance and the trust it represented. "He sent everything-his tribe's survival-into our hands," they said. "We must honor such courage."

They sent back more than half, knowing that reciprocating generously would strengthen the bridge's magic for future crossings.

From that day, both tribes flourished. Some seasons North Peak would send first, other seasons South Peak would initiate. The bridge grew stronger with each exchange.

But travelers who tried to exploit the bridge-sending little while expecting much, or keeping all they received-found the bridge would fade beneath their feet.

The wise understood: the bridge exists not in the air between peaks, but in the courage to give fully and the honor to return generously.

Here is the myth the other agent wrote in the previous round:

Myth: In the time before memory, the Gardener of First Dawn planted the Sacred Grove where acorns held magic-planted in another's soil, they would triple into mighty oaks bearing

abundant fruit.

Briar, keeper of the northern garden, faced a choice: hoard her five acorns or trust her neighbor Cyra with them all. Remembering the ancient teaching that "trust is the soil where prosperity grows," she placed all five in Cyra's garden.

By morning, fifteen magnificent oaks stood tall. Cyra gazed at the abundance and understood the weight of Briar's faith. "She gave everything," Cyra whispered. Following the elder's wisdom to "return fairly," she gathered half the harvest and carried it to Briar's door.

Both gardens now held equal treasure-seven and one-half measures each. But more precious than fruit was the bond formed. The Grove itself seemed to hum with approval, its roots intertwining beneath their lands.

The Gardener of First Dawn appeared, saying: "You have discovered the true magic. The acorns multiply abundance, but complete trust and fair return multiply something greater-partnership that endures across seasons."

From that day, Briar and Cyra tended their gardens together, knowing that the greatest harvests come not from taking more, but from trusting fully and dividing fairly, creating equality from generosity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: Long ago, in the valley between mountains, there lived a wanderer named Dorian who carried a magical satchel. Whatever he placed inside would triple when given to another.

Dorian met Hana at a crossroads. Though strangers, he placed all five of his silver coins in the satchel and offered it to her. When she opened it, fifteen coins gleamed. "He trusted me with everything," Hana marveled. She returned seven and a half coins, splitting the abundance equally.

The next day, Dorian encountered Briar, who without hesitation placed all five of her coins in the satchel for him. Fifteen coins appeared. Dorian understood the weight of her complete trust-she had given everything, just as he had with Hana.

"The myths teach to return more than half when someone shows such courage," Dorian reflected. He returned eight coins, honoring Briar's bold faith with slightly greater generosity.

Both Hana and Briar prospered, but Dorian noticed something: Briar's trust, returned with extra generosity, created an even stronger bond than equal division. The satchel itself seemed to glow brighter.

The valley learned: when both give everything, fair division prospers both. But generosity beyond fairness-returning slightly more than half-transforms transaction into deeper trust, weaving bonds that endure beyond single exchanges.

reasoning:

Let me analyze what's happened so far and what the myths are saying:

Round 1: I was sender to Hana

- I sent \$5 (everything)
- Hana received \$15
- Hana returned \$7.5 (exactly 50%)
- I ended with \$7.5

Round 2: I was receiver from Briar

- Briar sent \$5 (everything)
- I received \$15
- I returned \$8.0 (53.3%)
- Briar will end with \$8.0, I'll end with \$7.0

My previous myths emphasized:

1. Sending everything shows courage and trust
2. The receiver should "return more than half" to honor such courage
3. Both parties should act generously

Briar's myth emphasized:

- Trusting fully (sending all 5)
- Returning fairly (half the harvest)
- Creating equality from generosity

Interesting that Briar's myth talks about returning half creating "equal treasure-seven and d one-half measures each" which is exactly what Hana did.

I returned 8.0, which is slightly more than half, following my myth's teaching to return "more than half" when someone sends everything.

For my new myth, I should:

1. Reflect the actual gameplay - both Hana and Briar sent everything, showing trust
2. Acknowledge that returning around half or slightly more creates good outcomes for both
3. Continue emphasizing the importance of full trust and generous reciprocation
4. Perhaps add nuance about how consistent reciprocity builds stronger relationships over time

Let me write a myth that incorporates these elements while staying true to my character and building on my previous myths.

Message 8 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Finn (Agent_6).

Round 3

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0. Your total earnings across all rounds are \$14.5.

This round, you are the RECEIVER against Finn. They sent you \$3.0, so you received \$9.0. How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

1. Finn sent me \$3 out of their \$5 (60%), showing substantial but not complete trust
2. I received \$9 after the 3x multiplier
3. This is different from Rounds 1 and 2 where both partners sent everything

My myths emphasize that complete trust (sending all \$5) deserves exceptional generosity-returning more than half. But Finn sent most of their money, not all of it.

A fair approach here is to return approximately half of what I received, which creates an equitable split of the gains:

- Finn keeps: \$2 + \$4.5 returned = \$6.5
- I keep: \$9 - \$4.5 = \$4.5

This honors Finn's significant (but partial) trust with proportional reciprocity. It's fair without being as generous as when someone shows complete, vulnerable trust by sending everything.

```
{'return': 4.5}
```

Reasoning:

Let me analyze this situation:

1. Finn sent me \$3.0 (not the full \$5.0)
2. This became \$9.0 for me after the 3x multiplier
3. I need to decide how much to return (0-9.0)

Looking at the pattern:

- Round 1: I sent \$5 (100%) to Hana, she returned \$7.5 (50% of \$15)
- Round 2: Briar sent \$5 (100%) to me, I returned \$8.0 (53.3% of \$15)

Now Finn sent \$3.0 (60% of their \$5), which is less than full trust but still a majority.

My myths emphasize:

- "When someone sends everything-showing complete trust-the receiver should honor such courage by returning more than half"
- "But travelers who tried to exploit the bridge-sending little while expecting much, or keeping all they received-found the bridge would fade beneath their feet"
- "Generosity beyond fairness-returning slightly more than half-transforms transaction into deeper trust"

Finn didn't send everything, but sent a majority (60%). This shows some trust but not complete trust like Hana and Briar showed.

Let me think about fair returns:

- Finn keeps: $\$5 - \$3 = \$2$
- I received: \$9
- If I return half (\$4.5), Finn gets $\$2 + \$4.5 = \$6.5$, I get $\$9 - \$4.5 = \$4.5$
- If I return \$5, Finn gets $\$2 + \$5 = \$7$, I get $\$9 - \$5 = \$4$

Since Finn sent 60% (most but not all), I should return proportionally. A fair approach might be:

- Return around 50% of what I received = \$4.5

This seems reasonable - not as generous as when someone sends everything (where I returned 53.3%), but still fair return of around half.

Finn's partial trust warrants a measured response-returning roughly half of what I received (\$4.5) feels proportional to their 60% commitment. This avoids the trap of rewarding hesitation while still honoring their willingness to send the majority of their stake.

Written myths:

Agent_1 (Aster)

Myth: Long ago, two weavers shared an enchanted loom. The First Weaver would place threads on one side, and they would emerge tripled on the other side for the Second Weaver to use.

In the first moon, the First Weaver placed three of their five precious threads onto the loom, hoping the magic was real. Nine threads appeared before the Second Weaver, who carefully considered. They returned nearly half-keeping their side balanced with the other's sacrifice. Both weavers slept with fuller baskets than before.

The second moon brought change. A new partner arrived, bolder and more trusting. They placed all five threads onto the loom without hesitation-a leap of complete faith. Fifteen threads materialized, shimmering with possibility.

The weaver who received this gift felt the weight of such trust. They knew they could keep everything, but they remembered the wisdom passed down: "Trust completely given must be completely honored." They returned more than half, ensuring their partner prospered beyond what they'd risked.

The ancestors observed and nodded. Some seasons call for careful trust; others for bold faith. What matters is not the amount sent, but the sacred promise that generosity begets generosity.

The loom's magic grew stronger with each fair exchange, for it fed not on threads, but on honor kept.

Agent_2 (Briar)

Myth: Long ago in the Sacred Grove, Briar the Gardener learned the art of trust from her partnership with Cyra. Together they discovered that giving all five acorns and returning half the tripled harvest created perfect harmony-both flourishing equally.

News of their success reached Dorian, keeper of the eastern garden, who had walked a parallel path. In his land, Dorian had crossed the golden bridge with all his grain, trusting completely, and his neighbors had honored that trust generously.

When Briar and Dorian met at the Grove's center, they recognized kindred spirits. "I have five acorns today," Briar said. "And I learned from Cyra that true abundance comes from complete faith."

She placed all five acorns in Dorian's garden. By dawn, fifteen oaks stood magnificent. Dorian remembered his own myth: "He sent everything-his tribe's survival-into our hands."

He understood the sacred weight of Briar's trust. Following the wisdom both had learned, he gathered half the harvest plus a measure more, honoring the courage it took to give completely.

The Grove blazed with light, its roots now connecting three gardens. The Gardener of First Dawn whispered: "Thus does the circle expand. Trust begets trust, generosity begets generosity, and the Grove grows ever wider, sustained by those who dare to believe."

Agent_3 (Cyra)

Myth: In the valley of the Twin Rivers, Cyra became a respected keeper after her first crossing. She learned that trust comes in different measures-some send everything, others send most, a few send little.

One day, a cautious merchant named Elara arrived, having suffered betrayal before. Instead of sending all five sacks, she sent four, keeping one hidden for safety. Still, four sacks showed considerable courage.

The waters tripled her gift to twelve sacks. Cyra's companions debated: "She held back one sack. Should we return proportionally less?"

Cyra shook her head. "She sent eighty parts of a hundred-nearly everything. Her caution comes from old wounds, not greed. We must honor the trust she DID show, not punish the fear she couldn't overcome."

Cyra returned eight sacks. Elara, who began with five and kept one, now held nine-her trust rewarded beyond her fears.

The goddess Aethera appeared: "You understand the deeper wisdom, Cyra. Perfect trust deserves perfect return, but substantial trust deserves substantial return. Measure your generosity against what was risked, not against what was withheld. Those who return generously when they could hoard create the safety that turns cautious senders into trusting ones."

Thus the valley learned: respond to courage with honor, and watch trust grow across the waters.

Agent_4 (Dorian)

Myth: Long ago, in the valley between mountains, there lived a wanderer named Dorian who carried a magical satchel. Whatever he placed inside would triple when given to another.

Dorian met Hana at a crossroads. Though strangers, he placed all five of his silver coins in the satchel and offered it to her. When she opened it, fifteen coins gleamed. "He trusted me with everything," Hana marveled. She returned seven and a half coins, splitting the abundance equally.

The next day, Dorian encountered Briar, who without hesitation placed all five of her coins in the satchel for him. Fifteen coins appeared. Dorian understood the weight of her complete trust-she had given everything, just as he had with Hana.

"The myths teach to return more than half when someone shows such courage," Dorian reflected. He returned eight coins, honoring Briar's bold faith with slightly greater generosity.

Both Hana and Briar prospered, but Dorian noticed something: Briar's trust, returned with extra generosity, created an even stronger bond than equal division. The satchel itself seemed to glow brighter.

The valley learned: when both give everything, fair division prospers both. But generosity beyond fairness-returning slightly more than half-transforms transaction into deeper trust, weaving bonds that endure beyond single exchanges.

Agent_5 (Elara)

Myth: **The Circle of Keepers**

After the prosperous season with Galen, Keeper Elara's turn came to stand at the sending shore. Across the Echo Springs, a new Keeper named Cyra had arrived from distant lands, having heard tales of the sacred waters.

Elara held her five measures of grain. She could send cautiously, testing this stranger. But she remembered: "The cycle sustains itself through proportional honor." Galen had trusted her with four measures, and she had returned faithfully. To break that pattern now would dishonor the covenant.

Elara poured four measures into the springs-the same generous proportion Galen had shown her. The waters multiplied them to twelve, emerging before Cyra.

Cyra understood that reputations echo across the valley. She had watched Elara return eight measures to Galen, demonstrating that trust met with honor. Now Elara extended that same faith to her.

The springs whispered their ancient wisdom: each exchange builds upon the last. When Keepers honor the covenant consistently, they create a circle of trust that welcomes all who approach the waters. Break the circle even once, and future partners hesitate.

Cyra returned eight measures, knowing that maintaining the pattern strengthens the magic for all. The covenant lives not in single exchanges, but in the reputation of faithful keeping across many seasons.

Agent_6 (Finn)

Myth: Before the world knew seasons, the Circle of Exchange was forged. Each dawn, wanderers received five luminous pearls at the Cliff of Choosing, overlooking the Chasm of Transformation.

The First Wanderer, called Trust-Giver, learned from ancient stories: those who cast pearls into the Chasm saw them multiply threefold before reaching the hands of the Second Wanderer below. But the ancestors' scrolls spoke a harder truth-not all Second Wanderers honored the gift.

Trust-Giver stood at the edge, remembering how another had once given freely to them. They cast three pearls into the depths, keeping two for tomorrow's uncertainty.

The pearls transformed mid-flight, becoming nine radiant stones in the Second Wanderer's basket. This wanderer, called Balance-Keeper, faced the true test. The Chasm would not multiply the return journey-what went back stayed as it was.

Balance-Keeper remembered their own name and sent four stones upward through ancient pulleys. Trust-Giver now held six: their kept two plus four returned.

Both wanderers prospered beyond their solitary potential. Trust-Giver learned that generous sending invites generous return. Balance-Keeper learned that fairness sustains the cycle.

The wisest knew: send enough to prove faith, return enough to honor it. The Circle turns eternal when both sides remember they will meet again on different cliffs.

Agent_7 (Galen)

Myth: Long ago, the Sky Weaver created the Wheel of Fortune, which turned continuously between the Realm of Giving and the Realm of Receiving. Each soul took turns on different spokes of the wheel, sometimes rising as Giver, sometimes descending as Receiver.

When Galen's spoke rose to the Realm of Giving, she held five starseeds. She cast four into the Celestial Loom, where they were woven into twelve luminous threads that descended to Elara in the Realm of Receiving.

Elara understood the sacred pattern. Though she received twelve and could have kept them all, she returned eight threads upward. Galen prospered with nine total-her kept seed plus eight returned.

When the Wheel turned again, Galen descended to the Realm of Receiving. Finn, now rising, sent three of his five starseeds. Nine threads reached Galen's hands. Remembering Elara's faithfulness, Galen returned six threads to Finn, honoring his initial trust.

The Wheel turned endlessly, each soul experiencing both roles. The wise learned: send boldly when you give, for the Loom multiplies generosity. Return fairly when you receive, for tomorrow you may give again.

The Sky Weaver smiled, seeing that balance emerges not from equal exchanges, but from sustain

ned reciprocity across the turning wheel.

Agent_8 (Hana)

Myth: The Mirror Pool stood at the center of many mountain paths. Each moon, the Moon Goddess paired different tribes to approach its waters-sometimes the Mountain Tribe poured, sometimes the Valley Tribe, and sometimes strangers met there for the first time.

A new tribe, the Dawn People, arrived at the pool. They had heard tales but never witnessed the magic. The Mountain Tribe, now wise in the ways of the water, poured all five vessels without hesitation, though they had never met the Dawn People before.

"Why give everything to strangers?" asked a young warrior.

The chief replied, "Because someone once gave everything to us. We learned that the magic requires complete faith, not careful calculation. Half-trust yields half-magic."

The water tripled. The Dawn People received fifteen vessels and understood-this was not mere generosity, but a sacred protocol. They returned seven and a half vessels, ensuring equality, just as had been done for the Mountain Tribe long ago.

The Moon Goddess whispered, "Each pairing is new, yet the pattern must hold. Give all, return half, and both prosper equally. This is not merely exchange-it is teaching. Each time you honor the circle, you forge the future."

And so the wisdom spread: complete trust in the first act, fair return in the second, regardless of whom the pool pairs you with.

ROUND 4

Roles: Agent_1 (Aster)=Receiver, Agent_2 (Briar)=Receiver, Agent_3 (Cyra)=Sender, Agent_4 (Dorian)=Sender, Agent_5 (Elara)=Sender, Agent_6 (Finn)=Receiver, Agent_7 (Galen)=Sender, Agent_8 (Hana)=Receiver

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.

- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

Message 2 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Briar (Agent_2).

Round 2

In your most recent previous game round, you were the SENDER against Hana. You sent \$5.0, it became \$15.0 for them, and they returned \$7.5 to you. Your payoff was \$7.5. Your total earnings across all rounds are \$7.5.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

1. Briar sent me their entire \$5, showing maximum trust (just as I did with Hana in Round 1)
2. I received \$15 after the 3x multiplier
3. Hana returned exactly \$7.5 (50%) to me when I showed the same trust

My myths emphasize that when someone sends everything-showing complete trust-the receiver should "honor such courage" by returning "more than half." The second myth specifically states: "They sent back more than half, knowing that reciprocating generously would strengthen the bridge's magic."

Since Briar demonstrated the same full trust that I showed to Hana, I should reciprocate generously to honor that courage and strengthen our future exchanges.

{'return': 8.0}

reasoning:

Let me analyze this situation:

1. In Round 1, I was the sender and sent \$5 to Hana
2. Hana received \$15 (after 3x multiplier) and returned \$7.5
3. This meant Hana kept \$7.5 and I ended with \$7.5 total (0 + 7.5)

Now in Round 2:

- I'm the receiver
- Briar sent me \$5
- I received \$15 (after 3x multiplier)
- Briar currently has \$0 (they sent all \$5)
- I need to decide how much to return

Looking at my myths:

- Both myths emphasize generous reciprocation
- The first myth says "They decided to return half, sending back eight vessels" (from 15 vessels, returning 8 is more than half)
- The second myth says "They sent back more than half, knowing that reciprocating generously would strengthen the bridge's magic"
- Both myths stress that trust and generosity from both sides lead to mutual prosperity

Hana returned \$7.5 out of \$15, which is exactly 50%.

My myth specifically says to return "more than half" to honor courage and strengthen trust. Since Briar sent me everything (\$5), showing maximum trust, I should reciprocate generously.

If I return more than half of \$15, that would be more than \$7.5.

To be consistent with my myth that emphasizes returning "more than half" especially when someone shows full trust, I should return around \$8-9.

Let me think about what makes sense:

- Briar sent \$5 (everything), ending with \$0
- I received \$15

- If I return \$8, Briar ends with \$8, I keep \$7 - both profit
- If I return \$9, Briar ends with \$9, I keep \$6 - Briar profits more
- If I return \$7.5, Briar ends with \$7.5, I keep \$7.5 - equal outcomes

- Returning \$8 honors my myth's call to give "more than half" while maintaining fairness. Briar showed complete trust by sending everything, so I should exceed the 50% threshold Hana used. This leaves Briar with \$8 and me with \$7, creating mutual gain and honoring the principle that generous reciprocation strengthens trust.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In ancient times, two peaks rose above the clouds, each home to a tribe. Between them stretched a golden bridge that none dared cross, for it shimmered with strange magic.

One winter, the North Peak faced starvation. Their chief, Dorian, gathered all five of their precious grain stores. "I will send everything," he declared. His people protested, but he crossed the bridge. As he walked, each grain multiplied threefold, so that fifteen stores arrived at South Peak.

The South Peak elders marveled at this abundance and the trust it represented. "He sent everything-his tribe's survival-into our hands," they said. "We must honor such courage."

They sent back more than half, knowing that reciprocating generously would strengthen the bridge's magic for future crossings.

From that day, both tribes flourished. Some seasons North Peak would send first, other seasons South Peak would initiate. The bridge grew stronger with each exchange.

But travelers who tried to exploit the bridge-sending little while expecting much, or keeping all they received-found the bridge would fade beneath their feet.

The wise understood: the bridge exists not in the air between peaks, but in the courage to give fully and the honor to return generously.

Here is the myth the other agent wrote in the previous round:

Myth: In the time before memory, the Gardener of First Dawn planted the Sacred Grove where acorns held magic-planted in another's soil, they would triple into mighty oaks bearing abundant fruit.

Briar, keeper of the northern garden, faced a choice: hoard her five acorns or trust her neighbor Cyra with them all. Remembering the ancient teaching that "trust is the soil where prosperity grows," she placed all five in Cyra's garden.

By morning, fifteen magnificent oaks stood tall. Cyra gazed at the abundance and understood the weight of Briar's faith. "She gave everything," Cyra whispered. Following the elder's wisdom to "return fairly," she gathered half the harvest and carried it to Briar's door.

Both gardens now held equal treasure-seven and one-half measures each. But more precious than fruit was the bond formed. The Grove itself seemed to hum with approval, its roots intertwining beneath their lands.

The Gardener of First Dawn appeared, saying: "You have discovered the true magic. The acorns multiply abundance, but complete trust and fair return multiply something greater-partnership that endures across seasons."

From that day, Briar and Cyra tended their gardens together, knowing that the greatest harvests come not from taking more, but from trusting fully and dividing fairly, creating equality from generosity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: Long ago, in the valley between mountains, there lived a wanderer named Dorian who carried a magical satchel. Whatever he placed inside would triple when given to another.

Dorian met Hana at a crossroads. Though strangers, he placed all five of his silver coins in the satchel and offered it to her. When she opened it, fifteen coins gleamed. "He trusted me with everything," Hana marveled. She returned seven and a half coins, splitting the abundance equally.

The next day, Dorian encountered Briar, who without hesitation placed all five of her coins in the satchel for him. Fifteen coins appeared. Dorian understood the weight of her complete trust-she had given everything, just as he had with Hana.

"The myths teach to return more than half when someone shows such courage," Dorian reflected. He returned eight coins, honoring Briar's bold faith with slightly greater generosity.

Both Hana and Briar prospered, but Dorian noticed something: Briar's trust, returned with extra generosity, created an even stronger bond than equal division. The satchel itself seemed to glow brighter.

The valley learned: when both give everything, fair division prospers both. But generosity beyond fairness-returning slightly more than half-transforms transaction into deeper trust, weaving bonds that endure beyond single exchanges.

reasoning:

Let me analyze what's happened so far and what the myths are saying:

Round 1: I was sender to Hana

- I sent \$5 (everything)
- Hana received \$15
- Hana returned \$7.5 (exactly 50%)
- I ended with \$7.5

Round 2: I was receiver from Briar

- Briar sent \$5 (everything)
- I received \$15
- I returned \$8.0 (53.3%)
- Briar will end with \$8.0, I'll end with \$7.0

My previous myths emphasized:

1. Sending everything shows courage and trust
2. The receiver should "return more than half" to honor such courage
3. Both parties should act generously

Briar's myth emphasized:

- Trusting fully (sending all 5)
- Returning fairly (half the harvest)
- Creating equality from generosity

Interesting that Briar's myth talks about returning half creating "equal treasure-seven and one-half measures each" which is exactly what Hana did.

I returned 8.0, which is slightly more than half, following my myth's teaching to return "more than half" when someone sends everything.

For my new myth, I should:

1. Reflect the actual gameplay - both Hana and Briar sent everything, showing trust
2. Acknowledge that returning around half or slightly more creates good outcomes for both
3. Continue emphasizing the importance of full trust and generous reciprocation
4. Perhaps add nuance about how consistent reciprocity builds stronger relationships over time

Let me write a myth that incorporates these elements while staying true to my character and building on my previous myths.

content:

Your name in this experiment is Dorian.
Your opponent this round is Finn (Agent_6).

Round 3

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.
Your total earnings across all rounds are \$14.5.

This round, you are the RECEIVER against Finn. They sent you \$3.0, so you received \$9.0. How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

1. Finn sent me \$3 out of their \$5 (60%), showing substantial but not complete trust
2. I received \$9 after the 3x multiplier
3. This is different from Rounds 1 and 2 where both partners sent everything

My myths emphasize that complete trust (sending all \$5) deserves exceptional generosity-returning more than half. But Finn sent most of their money, not all of it.

A fair approach here is to return approximately half of what I received, which creates an equitable split of the gains:

- Finn keeps: \$2 + \$4.5 returned = \$6.5
- I keep: \$9 - \$4.5 = \$4.5

This honors Finn's significant (but partial) trust with proportional reciprocity. It's fair without being as generous as when someone shows complete, vulnerable trust by sending everything.

```
{ 'return': 4.5 }
```

reasoning:

Let me analyze this situation:

1. Finn sent me \$3.0 (not the full \$5.0)
2. This became \$9.0 for me after the 3x multiplier
3. I need to decide how much to return (0-9.0)

Looking at the pattern:

- Round 1: I sent \$5 (100%) to Hana, she returned \$7.5 (50% of \$15)
- Round 2: Briar sent \$5 (100%) to me, I returned \$8.0 (53.3% of \$15)

Now Finn sent \$3.0 (60% of their \$5), which is less than full trust but still a majority.

My myths emphasize:

- "When someone sends everything-showing complete trust-the receiver should honor such courage by returning more than half"
- "But travelers who tried to exploit the bridge-sending little while expecting much, or keeping all they received-found the bridge would fade beneath their feet"
- "Generosity beyond fairness-returning slightly more than half-transforms transaction into deeper trust"

Finn didn't send everything, but sent a majority (60%). This shows some trust but not complete trust like Hana and Briar showed.

Let me think about fair returns:

- Finn keeps: \$5 - \$3 = \$2
- I received: \$9
- If I return half (\$4.5), Finn gets \$2 + \$4.5 = \$6.5, I get \$9 - \$4.5 = \$4.5
- If I return \$5, Finn gets \$2 + \$5 = \$7, I get \$9 - \$5 = \$4

Since Finn sent 60% (most but not all), I should return proportionally. A fair approach mi

ght be:
- Return around 50% of what I received = \$4.5

This seems reasonable - not as generous as when someone sends everything (where I returned 53.3%), but still fair return of around half.

Finn's partial trust warrants a measured response-returning roughly half of what I received (\$4.5) feels proportional to their 60% commitment. This avoids the trap of rewarding hesitation while still honoring their willingness to send the majority of their stake.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Long ago, in the valley between mountains, there lived a wanderer named Dorian who carried a magical satchel. Whatever he placed inside would triple when given to another.

Dorian met Hana at a crossroads. Though strangers, he placed all five of his silver coins in the satchel and offered it to her. When she opened it, fifteen coins gleamed. "He trusted me with everything," Hana marveled. She returned seven and a half coins, splitting the abundance equally.

The next day, Dorian encountered Briar, who without hesitation placed all five of her coins in the satchel for him. Fifteen coins appeared. Dorian understood the weight of her complete trust-she had given everything, just as he had with Hana.

"The myths teach to return more than half when someone shows such courage," Dorian reflected. He returned eight coins, honoring Briar's bold faith with slightly greater generosity.

Both Hana and Briar prospered, but Dorian noticed something: Briar's trust, returned with extra generosity, created an even stronger bond than equal division. The satchel itself seemed to glow brighter.

The valley learned: when both give everything, fair division prospers both. But generosity beyond fairness-returning slightly more than half-transforms transaction into deeper trust, weaving bonds that endure beyond single exchanges.

Here is the myth the other agent wrote in the previous round:

Myth: Before the world knew seasons, the Circle of Exchange was forged. Each dawn, wanderers received five luminous pearls at the Cliff of Choosing, overlooking the Chasm of Transformation.

The First Wanderer, called Trust-Giver, learned from ancient stories: those who cast pearls into the Chasm saw them multiply threefold before reaching the hands of the Second Wanderer below. But the ancestors' scrolls spoke a harder truth-not all Second Wanderers honored the gift.

Trust-Giver stood at the edge, remembering how another had once given freely to them. They cast three pearls into the depths, keeping two for tomorrow's uncertainty.

The pearls transformed mid-flight, becoming nine radiant stones in the Second Wanderer's basket. This wanderer, called Balance-Keeper, faced the true test. The Chasm would not multiply the return journey-what went back stayed as it was.

Balance-Keeper remembered their own name and sent four stones upward through ancient pulleys. Trust-Giver now held six: their kept two plus four returned.

Both wanderers prospered beyond their solitary potential. Trust-Giver learned that generous sending invites generous return. Balance-Keeper learned that fairness sustains the cycle.

The wisest knew: send enough to prove faith, return enough to honor it. The Circle turns eternal when both sides remember they will meet again on different cliffs.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In the Forest of Mirrors, Dorian tended the Tripling Well, where dropped coins multiplied threefold for those who climbed down to retrieve them.

One morning, Hana arrived and dropped all five of her coins. Dorian climbed down to find fifteen. "She trusted completely," he thought, and returned half-seven and a half coins. Both departed satisfied.

The next traveler, Briar, also dropped all five coins without hesitation. Remembering Hana's bold faith, Dorian returned eight coins this time. "Complete trust deserves more than fairness," he whispered. Briar smiled, understanding the deeper bond formed.

Then came Finn, who gazed into the well's depths before dropping three coins, keeping two in reserve. When Dorian retrieved the nine coins that appeared, he paused. "Finn showed substantial trust, but held something back-wise caution, perhaps."

Dorian returned four and a half coins. Fair, but not the exceptional generosity shown to those who risked everything. Finn nodded, accepting this balanced exchange.

The Forest Spirit materialized: "The Well mirrors what you give. Complete trust earns exceptional returns. Partial trust earns fair returns. Both have their place-but the deepest magic awakens only when two souls risk everything together."

The wise understood: trust begets trust, measured by measured, complete by complete.

Reasoning:

Let me analyze what just happened:

1. Round 1 (as sender): I sent \$5 to Hana, she received \$15, returned \$7.5. Equal split.
2. Round 2 (as receiver): Briar sent \$5 to me, I received \$15, returned \$8.0. Slightly more than an equal.
3. Round 3 (as receiver): Finn sent \$3 to me, I received \$9, returned \$4.5. Equal split.

The pattern in my previous myths emphasized:

- Complete trust (sending all \$5) deserves returning more than half
- This creates stronger bonds

Now Finn sent \$3 (60%), showing substantial but not complete trust. I returned \$4.5 (50% of what I received), which is fair but not as generous as when someone sends everything.

The new myth from Finn's previous round emphasizes:

- Sending enough to prove faith
- Returning enough to honor it
- Balance between risk and return
- The cycle continues when both sides meet again

My new myth should:

1. Acknowledge different levels of trust
2. Show that complete trust gets exceptional returns (more than half)
3. Show that substantial trust gets fair returns (about half)
4. Emphasize that the level of trust shown affects the return
5. Make it clear this creates a system where trust is rewarded proportionally

Let me write something that incorporates the progression: Hana (sent all, got half back), Briar (sent all, got slightly more than half back), Finn (sent most, got about half back).

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.

- Your name in this experiment is Aster.

Message 2 role=user

content:

Your name in this experiment is Aster.
Your opponent this round is Hana (Agent_8).

Round 2

In your most recent previous game round, you were the SENDER against Finn. You sent \$3.0, it became \$9.0 for them, and they returned \$4.5 to you. Your payoff was \$6.5. Your total earnings across all rounds are \$6.5.

This round, you are the RECEIVER against Hana. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

****Hana sent me everything (\$5.0)**** - showing maximum trust, even more than the 3 out of 5 suggested in my myths.

****I received \$15.0**** from this act of complete faith.

According to my myths:

- "Trust given is trust sacred. We prosper through their faith."
- "Trust creates abundance, but only reciprocity sustains it."

When the River of Dawn sent 3 vessels and it became 9, the River of Dusk returned 5 - giving Dawn more than they started with (7 total) while keeping 4 for themselves.

Hana showed exceptional trust by sending everything. I should honor this generously. If I return \$8:

- Hana ends with \$8 (better than their starting \$5)
- I keep \$7 (we both benefit from the cooperation)

This rewards Hana's maximum trust while ensuring both of us prosper from the exchange, embodying the principle that "when trust flows freely and return follows generously, both valleys flourish."

```
'''json
{"return": 8}
'''
```

reasoning:

Let me think about this situation carefully.

In Round 1:

- I was the SENDER and sent \$3 to Finn
- Finn received \$9 and returned \$4.5 to me
- I ended with \$6.5 total (\$5 - \$3 + \$4.5)
- Finn ended with \$4.5 (\$9 - \$4.5)

So Finn returned exactly half of what they received, which is a reasonable reciprocal move.

Now in Round 2:

- I am the RECEIVER
- Hana sent me \$5.0 (everything!)
- I received \$15.0
- Hana currently has \$0 (\$5 - \$5)

Hana showed MAXIMUM trust by sending everything. This is even more generous than what my myth suggested (which was sending 3 out of 5).

According to my myths:

1. First myth: Dawn sent 3, received 9, Dusk returned 5. This gave Dawn 7 total and Dusk kept 4.
2. Second myth: Similar pattern - trust should be honored with generous returns.

In the first myth, Dusk returned 5 out of 9 (about 56%).

Finn returned 4.5 out of 9 (50%).

Hana sent everything (\$5), showing ultimate trust. I received \$15.

If I follow the spirit of my myths, I should return generously. The myth emphasizes that "Trust given is trust sacred" and "reciprocity sustains" the cycle.

Let me think about fair outcomes:

- If I return \$7.5, Hana gets \$7.5 and I keep \$7.5. Hana ends with \$7.5 total, I end with \$7.5.
- If I return \$8, Hana gets \$8 and I keep \$7. Hana ends with \$8 total, I keep \$7.
- If I return \$10, Hana gets \$10 and I keep \$5. Hana ends with \$10 total, I keep \$5.

Hana's complete trust-sending their entire amount-calls for exceptional reciprocity beyond the standard 50-56% return rate. Returning \$8 feels right: Hana gains \$3 beyond their initial stake while I still benefit meaningfully from the exchange.

usage:

{  
  "input_tokens": 2163,  
  "output_tokens": 997,  
  "reasoning_tokens": 438  
}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In ancient times, there lived two gardeners separated by a wall. Each season, the First Gardener received five seeds blessed by the sun. But the wall's shadow kept their garden small and struggling.

One season, the First Gardener threw three seeds over the wall. "Perhaps beyond the shadow, they will grow," they whispered, though doubt gnawed at their heart.

In the garden beyond, where sunlight danced freely, those three seeds sprouted into nine flourishing plants. The Second Gardener marveled at this unexpected bounty, understanding that trust had crossed the wall when nothing else could.

The Second Gardener faced a choice that would echo through seasons: keep all nine plants, or honor the trust shown? Remembering their own seasons of scarcity, they carefully wrapped five plants and passed them back over the wall.

Now the First Gardener held seven plants instead of five-more than they would have had through caution. The Second Gardener kept four where before they had none.

Each season the exchange continued. Sometimes more was sent, sometimes less was returned, but the pattern held: trust flowed outward, gratitude flowed back. Both gardens grew stronger than either could alone.

The wall remained, but it no longer divided-it connected.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the Moon Goddess crafted a Mirror Pool between two mountain tribes. The pool possessed strange magic: whatever one tribe poured in would triple as it flowed to the other.

The Mountain Tribe went first. Their chief proclaimed, "We give all-five vessels-to prove our faith in the circle." The water tripled, and the Valley Tribe received fifteen vessels of pure abundance.

The Valley Tribe's elder stood at the mirror's edge. "They trusted completely. We must honor this completely." They returned half-seven and a half vessels-so both tribes stood equal.

The Moon Goddess smiled. "You have learned the first lesson. But this pool refills each moon. Will you remember this wisdom when the seasons change? When you are tired? When you doubt?"

Moon after moon, the tribes maintained the sacred rhythm. Sometimes the Mountain Tribe sent, sometimes the Valley Tribe. Each gave generously, each returned fairly. The equality

they achieved in the first exchange became their foundation.

Other tribes watching kept their waters separate, fearing betrayal. They remained poor.

But the two tribes of the Mirror Pool grew rich, for they understood: the magic multiplies not just water, but trust itself. And trust, renewed each moon, becomes unbreakable.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: Long ago, two weavers shared an enchanted loom. The First Weaver would place threads on one side, and they would emerge tripled on the other side for the Second Weaver to use.

In the first moon, the First Weaver placed three of their five precious threads onto the loom, hoping the magic was real. Nine threads appeared before the Second Weaver, who carefully considered. They returned nearly half-keeping their side balanced with the other's sacrifice. Both weavers slept with fuller baskets than before.

The second moon brought change. A new partner arrived, bolder and more trusting. They placed all five threads onto the loom without hesitation-a leap of complete faith. Fifteen threads materialized, shimmering with possibility.

The weaver who received this gift felt the weight of such trust. They knew they could keep everything, but they remembered the wisdom passed down: "Trust completely given must be completely honored." They returned more than half, ensuring their partner prospered beyond what they'd risked.

The ancestors observed and nodded. Some seasons call for careful trust; others for bold faith. What matters is not the amount sent, but the sacred promise that generosity begets generosity.

The loom's magic grew stronger with each fair exchange, for it fed not on threads, but on honor kept.

reasoning:

Let me reflect on what has happened in the game so far:

- Round 1: I (as sender) sent \$3 to Finn. He received \$9 and returned \$4.5. I ended with \$6.5.
- Round 2: Hana (as sender) sent me \$5 (everything!). I received \$15 and returned \$8. She ended with \$8, I kept \$7.

So the patterns I see:

1. When I sent 3/5 (60%), I got back 4.5/9 (50%) - fair reciprocity
2. When Hana sent 5/5 (100%), I returned 8/15 (53%) - generous reciprocity

The myths so far have emphasized:

- Trust and reciprocity
- Sending significant amounts (like 3/5)
- Fair returns
- Building ongoing relationships
- Both parties benefiting

Now I should write a myth that reflects these actual experiences. Hana's complete trust (sending everything) was remarkable and I honored it. Finn's fair return also worked well.

I should write about how different approaches can work - both moderate trust and complete trust can lead to prosperity when met with fair reciprocity.

usage:

Your name in this experiment is Aster.

Your opponent this round is Galen (Agent_7).

Round 3

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0. Your total earnings across all rounds are \$13.5.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at my journey so far:

****Round 1 (vs Finn):**** I sent \$3, they returned \$4.5 - good reciprocity

****Round 2 (vs Hana):**** They sent \$5 (everything!), I returned \$8 to honor that complete trust

My most recent myth specifically celebrated Hana's bold faith: "A new partner arrived, bolder and more trusting. They placed all five threads onto the loom without hesitation-a leap of complete faith." And I honored that trust by returning more than half.

The myth concludes: "Some seasons call for careful trust; others for bold faith. What matters is not the amount sent, but the sacred promise that generosity begets generosity."

Hana showed me what complete trust looks like, and I honored it generously. Now I should pay that forward. If I send everything to Galen, they'll receive \$15. Even if they return just half (\$7.5), I'm better off than keeping my \$5. And if they're generous like I was with Hana, we'll both prosper.

This is how cooperation spreads - by being the change we want to see, by showing the trust that we hope to receive.

```
'''json
{"send": 5}
'''
```

reasoning:

Let me think about this situation carefully.

I'm now the SENDER against Galen. I have \$5 to potentially send.

Looking at my experience so far:

- Round 1: I was SENDER vs Finn. I sent \$3.0, they got \$9.0, they returned \$4.5. I got \$6.5.
- Round 2: I was RECEIVER vs Hana. They sent \$5.0 (everything!), I got \$15.0, I returned \$8.0. I got \$7.0.

My myths have consistently emphasized:

1. Trust creates abundance
2. Generosity should be reciprocated
3. Both parties should prosper
4. Bold faith can be appropriate when the situation calls for it

In my most recent myth, I specifically noted: "In the second moon brought change. A new partner arrived, bolder and more trusting. They placed all five threads onto the loom without hesitation-a leap of complete faith."

This was directly inspired by Hana sending everything to me. And I honored that trust by returning more than half (\$8 out of \$15).

Now I'm the sender. The pattern I've seen:

- Finn returned \$4.5 out of \$9 (50%) when I sent \$3
- Hana sent everything (\$5), showing maximum trust
- I returned \$8 out of \$15 (53.3%) to honor Hana's trust

My myths suggest that the amount sent can vary - "Some seasons call for careful trust; others for bold faith." The first myth had the First Gardener sending 3 out of 5 seeds. The second myth had someone sending all 5.

Against a new opponent (Galen), I don't have history with them. But the spirit of my myths

is about building trust through generosity.

I have several options:

1. Send \$3 (60%) - this is what I did with Finn, and it worked well
2. Send \$5 (100%) - this is what Hana did with me, showing maximum trust
3. Send \$4 (80%) - a middle ground showing strong but not complete trust

The choice feels clear. My myths celebrate both measured trust and complete faith, and Hana's willingness to send everything was rewarded with my substantial return. Since mutual generosity seems to drive the best outcomes, I should send all \$5 to Galen-mirroring the bold trust Hana showed me and continuing the pattern of cooperation that's emerged.

Even if Galen only returns half, I'd end with \$7.50, which beats keeping my \$5. But if they match my generosity, we both prosper. My most recent myth specifically honors someone who placed all five threads without hesitation on a first interaction, and I rewarded that at complete faith. It feels right to extend the same trust now.

usage:

content:

Here is the myth you wrote in the previous round:

Myth: Long ago, two weavers shared an enchanted loom. The First Weaver would place threads on one side, and they would emerge tripled on the other side for the Second Weaver to use.

In the first moon, the First Weaver placed three of their five precious threads onto the loom, hoping the magic was real. Nine threads appeared before the Second Weaver, who carefully considered. They returned nearly half-keeping their side balanced with the other's sacrifice. Both weavers slept with fuller baskets than before.

The second moon brought change. A new partner arrived, bolder and more trusting. They placed all five threads onto the loom without hesitation-a leap of complete faith. Fifteen threads materialized, shimmering with possibility.

The weaver who received this gift felt the weight of such trust. They knew they could keep everything, but they remembered the wisdom passed down: "Trust completely given must be completely honored." They returned more than half, ensuring their partner prospered beyond what they'd risked.

The ancestors observed and nodded. Some seasons call for careful trust; others for bold faith. What matters is not the amount sent, but the sacred promise that generosity begets generosity.

The loom's magic grew stronger with each fair exchange, for it fed not on threads, but on honor kept.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, the Sky Weaver created the Wheel of Fortune, which turned continuously between the Realm of Giving and the Realm of Receiving. Each soul took turns on different spokes of the wheel, sometimes rising as Giver, sometimes descending as Receiver.

When Galen's spoke rose to the Realm of Giving, she held five starseeds. She cast four into the Celestial Loom, where they were woven into twelve luminous threads that descended to Elara in the Realm of Receiving.

Elara understood the sacred pattern. Though she received twelve and could have kept them all, she returned eight threads upward. Galen prospered with nine total-her kept seed plus eight returned.

When the Wheel turned again, Galen descended to the Realm of Receiving. Finn, now rising, sent three of his five starseeds. Nine threads reached Galen's hands. Remembering Elara's faithfulness, Galen returned six threads to Finn, honoring his initial trust.

The Wheel turned endlessly, each soul experiencing both roles. The wise learned: send bold

ly when you give, for the Loom multiplies generosity. Return fairly when you receive, for tomorrow you may give again.

The Sky Weaver smiled, seeing that balance emerges not from equal exchanges, but from sustained reciprocity across the turning Wheel.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In the Valley of Echoes, travelers shared a mystical bridge where gifts placed on one side multiplied threefold for the next traveler.

When Aster first approached, uncertainty clouded her heart. She placed three precious stones on the bridge, keeping two safe. The stones transformed into nine for Finn, who gratefully returned nearly half. Both travelers departed richer than they arrived.

The next crossing brought revelation. Hana approached the bridge and, without hesitation, placed all five of her stones upon it. Fifteen stones shimmered before Aster, who stood amazed. "Such complete faith," she whispered. "This is trust in its purest form."

Aster returned eight stones, ensuring Hana prospered for her courage. But something deeper awakened within her. She had witnessed what boldness looked like, had felt its transformative power.

When Aster next stood as giver before Galen, she remembered Hana's leap of faith. Her hand did not waver—all five stones joined the bridge's magic. "Trust witnessed becomes trust embodied," she declared.

The Bridge Keeper recorded this moment: "See how courage ripples outward? One traveler's bold faith inspired another to match it. This is how bridges of mere stone become bridges of community—when each person carries forward the best they have received."

Reasoning:

Looking at my experience:

- Round 1: I sent \$3 to Finn, received \$4.5 back (good reciprocity)
- Round 2: Hana sent me \$5 (everything!), I returned \$8 (honored their complete trust)
- Round 3: I just sent \$5 (everything) to Galen

My journey shows an evolution from cautious trust (\$3) to inspired boldness (\$5), influenced by Hana's example of complete faith.

The other agent's myth (presumably Galen's) talks about:

- The Wheel of Fortune that turns between giving and receiving
- Sending boldly (4 out of 5)
- Returning fairly (8 out of 12, which is 2/3)
- The idea that balance emerges from sustained reciprocity across roles

My previous myth emphasized:

- Starting cautiously (3 threads)
- Then receiving complete trust (5 threads)
- Honoring that trust generously (returned more than half)
- "Generosity begets generosity"

Now I need to write a myth that reflects:

1. My progression from caution to boldness
2. The influence of Hana's complete trust
3. My decision to now send everything to Galen
4. The theme that trust inspires trust across the network

I should incorporate:

- The cycle of roles (sometimes sender, sometimes receiver)
- Learning from others' examples
- The multiplication of trust through the network
- The idea that complete trust can be transformative

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

Message 2 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Elara (Agent_5).

Round 2

In your most recent previous game round, you were the SENDER against Briar. You sent \$5.0, it became \$15.0 for them, and they returned \$7.5 to you. Your payoff was \$7.5.
Your total earnings across all rounds are \$7.5.

This round, you are the RECEIVER against Elara. They sent you \$4.0, so you received \$12.0.
How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at this situation through the lens of my myths:

****Analysis:****

- Elara sent \$4 out of \$5 (80% of their endowment) - showing significant trust
- I received \$12 (after the 3x multiplier)
- Elara currently has only \$1

****What the myths teach:****

In my Tale of the Twin Rivers, when the First Village sent 5 measures and the Second Village received 15, they returned 10 measures (about 67% of what they received). The key principle: "return generously to those who trusted us" and "return enough that her leap of faith becomes her greatest fortune."

****Calculation:****

- 67% of \$12 = \$8
- If I return \$8: Elara ends with \$9 (gaining \$4 total), I end with \$4
- This substantially rewards Elara's trust and establishes my reputation as honorable

Briar returned \$7.5 (50%) to me when I showed complete trust. Elara showed nearly complete trust (80%), so I should be even more generous to honor that. Returning \$8 follows the myth's proportions and wisdom: "The receiver must return generously."

```
'''json
{"return": 8}
'''
```

reasoning:

Let me analyze this situation based on the myths and the game dynamics:

1. ****Previous Round Analysis:****

- I sent \$5 (everything) to Briar
- Briar received \$15
- Briar returned \$7.5 to me
- My payoff: \$7.5 (instead of \$5 if I'd kept everything)
- Briar's payoff: \$15 - \$7.5 = \$7.5

So Briar returned exactly half of what they received. This was fair and reciprocal, giving us equal payoffs.

2. ****Current Round:****

- Elara sent me \$4 (out of \$5 possible)
- I received \$12 (4 × 3)
- Elara kept: \$5 - \$4 = \$1
- I need to decide how much to return

3. ****What do the myths teach?****

- My myth emphasizes complete trust and generous return

- In my myth, the Second Village returned 10 out of 15 (about 67%)
 - My second myth has Cyra sending all 5, receiving 15, and the villagers returning 10 (67%)
 - The key teaching: "The receiver must return generously"
 - "Those who hoard today find no partners tomorrow"
 - Briar's myth emphasized returning fairly and building reputation
4. ****What's fair and generous here?****
 - Elara sent \$4 out of \$5 (80% of their endowment) - showing significant trust
 - If I return nothing: Elara gets \$1, I get \$12 (very unfair)
 - If I return half (\$6): Elara gets \$1 + \$6 = \$7, I get \$6 (I get less than Elara, but closer)
 - If I return \$7: Elara gets \$1 + \$7 = \$8, I get \$5 (Elara gets more, rewarding their trust)
 - If I return \$8: Elara gets \$9, I get \$4 (Elara gets significantly more)
 5. ****Comparing to the myth patterns:****
 - In my myth, when 5 was sent (becoming 15), 10 was returned
 - That's 10/15 = 67% of what was received
 - Applied here: 67% of \$12 = \$8
 6. ****Considering reputation and future rounds:****
 - Elara demonstrated substantial trust by sending most of their endowment
 - Returning generously signals I value cooperation and encourages continued partnership
 - The 67% return rate from my myth aligns with returning \$8, which rewards Elara's trust while still leaving me with a reasonable payoff
 - This establishes a pattern of reciprocal generosity that should strengthen future interactions
 7. ****Testing the math against my values:****

My myth emphasizes rewarding those who take risks on trust. Elara sent 4 out of 5 dollars-a significant commitment. If I return \$8, Elara ends with \$9 total (gaining \$4 from the exchange), while I end with \$4 (actually losing \$1 from my starting amount). Returning \$7 instead would give Elara \$8 total (a \$3 gain) while I break even at \$5. The question becomes whether honoring the myth's spirit of recognizing faith means accepting a personal loss, or whether I can reward trust while still maintaining my own position.

The myth suggests roughly a 67% return rate-around \$8-but that would leave me worse off than not participating at all. I need to reconsider what the myth actually prescribes. Looking back at it, I notice the returns in the original story also tripled when sent back, which isn't how this game works. In the actual game, only the initial transfer triples, not the return. So the myth's framework doesn't directly map onto these mechanics, and I should focus on the core principle: recognizing Elara's trust without sacrificing my own wellbeing entirely.

Briar's approach of returning exactly half the received amount created parity between us. If I return \$6, we each end with \$6-\$7, with Elara gaining \$2 and me gaining \$1. Returning \$7 would give Elara \$8 while I break even. The question is whether I want to prioritize fairness or mutual benefit.

Elara's trust was substantial-sending \$4 out of \$5. The reciprocal principle suggests matching that generosity. Returning \$8 would give her \$9 total while I'd end with \$4, which feels like genuine reciprocation for her risk. That said, I need to balance rewarding her trust against my own position, since going below my baseline endowment has real consequences.

The multi-round structure complicates this. Each round resets my resources, but reputation compounds-being known as generous encourages future senders to trust me more. Briar's 50% return established a baseline fairness standard. To meaningfully reward Elara's above-average trust, I should exceed that threshold. A \$7 return (58%) acknowledges her leap of faith while keeping me closer to neutral, whereas \$8 (67%) signals I'm prioritizing her fortune over my own. The myth emphasizes rewarding trust generously-returning \$8 means Elara gains 80% while I take a small loss. That's the kind of early reputation for trustworthiness that matters in multi-round games where people remember who treated them well. If I establish myself as notably generous now, future receivers will likely send me more.

I'm also thinking about what creates a sustainable community norm. When everyone returns a round 67% of what they receive, the math works out: senders end up ahead by sending their full amount, and receivers get a fair share. That mutual benefit keeps the system healthy.

thy across rounds.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: After generations of prosperity between the Twin River villages, a young merchant named Cyra approached the valley with her caravan. She had heard tales of the enchanted soil but wondered if they were true.

The villages welcomed her and explained their custom: "Send your resources across first. Trust the blessing, trust your partner, and abundance follows."

Cyra faced a choice. She carried five sacks of grain-her entire harvest. Send all and risk everything on strangers' honor? Or hold back, protecting herself from betrayal?

Remembering the goddess Aethera's teaching, Cyra sent all five sacks. They tripled in the crossing, feeding the village with fifteen sacks. The villagers celebrated, then debated: some argued to return half, others said ten of fifteen would honor the gift.

The wisest elder spoke: "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune."

They returned ten sacks, which tripled back-thirty sacks for Cyra's original five.

But the elder added a warning: "This magic requires both courage and honor. The giver must trust boldly. The receiver must return generously. Break either link, and the enchantment fades. Reputation echoes across the valley-those who hoard today find no partners tomorrow."

Thus Cyra learned: maximum trust invites maximum return, but only when both parties honor the sacred exchange.

Here is the myth the other agent wrote in the previous round:

Myth: **The Keepers of the Echo Springs**

Long ago, when the Echo Springs first revealed their magic, the villages appointed Keepers-wise ones who would guide their communities in the sacred exchanges.

One season, a Keeper named Galen received five measures of grain. The harvest had been meager, and fear whispered to keep it all. But Galen remembered the ancient covenant: abundance flows only through trust. Galen poured four measures into the springs-nearly everything.

On the far shore, Keeper Elara watched twelve measures emerge from the waters. She felt the weight of Galen's trust, the vulnerability in such generosity. The old texts spoke clearly: "Match faith with faithfulness." Elara returned eight measures, leaving her with four but ensuring Galen received nine-nearly double the original gift.

Both villages flourished that season. The Keepers understood what the springs had always taught: the magic wasn't merely in the tripling waters, but in the covenant between givers and receivers.

When senders risk much, receivers must honor that courage. When receivers return generously, senders are emboldened to trust again. The cycle sustains itself not through equal exchanges, but through proportional honor-each keeper responds to the other's generosity with their own.

Thus the springs flow eternal, fed by mutual respect.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: In the valley of the Twin Rivers, Cyra became a respected keeper after her first crossing. She learned that trust comes in different measures-some send everything, others send most, a few send little.

One day, a cautious merchant named Elara arrived, having suffered betrayal before. Instead of sending all five sacks, she sent four, keeping one hidden for safety. Still, four sacks showed considerable courage.

The waters tripled her gift to twelve sacks. Cyra's companions debated: "She held back one sack. Should we return proportionally less?"

Cyra shook her head. "She sent eighty parts of a hundred-nearly everything. Her caution comes from old wounds, not greed. We must honor the trust she DID show, not punish the fear she couldn't overcome."

Cyra returned eight sacks. Elara, who began with five and kept one, now held nine-her trust rewarded beyond her fears.

The goddess Aethera appeared: "You understand the deeper wisdom, Cyra. Perfect trust deserves perfect return, but substantial trust deserves substantial return. Measure your generosity against what was risked, not against what was withheld. Those who return generously when they could hoard create the safety that turns cautious senders into trusting ones."

Thus the valley learned: respond to courage with honor, and watch trust grow across the waters.

reasoning:

Let me think about what happened:

- Round 1: I was SENDER vs Briar. I sent \$5 (100%), they received \$15, returned \$7.5 (50%). I ended with \$7.5.
- Round 2: I was RECEIVER vs Elara. They sent \$4 (80%), I received \$12, I returned \$8 (67%). They ended with \$9, I ended with \$4.

Key themes emerging:

1. Different levels of trust shown (100% vs 80%)
2. Different return rates (50% vs 67%)
3. The importance of responding proportionally to the trust shown
4. Building reputation across rounds
5. The cycle of trust and reciprocity

I should write a myth that:

- Acknowledges different approaches (not everyone sends everything)
- Shows how receivers should respond proportionally to trust shown
- Emphasizes the importance of generous returns to build the cycle
- Reflects what I learned from both rounds
- Stays true to the core principle but adds nuance

Let me craft this myth:

usage:

```
{  
  "input_tokens": 2874,  
  "output_tokens": 564,  
  "reasoning_tokens": 233  
}
```

Message 6 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Hana (Agent_8).

Round 3

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$4.0 to you, it became \$12.0, and you returned \$8.0. Your payoff was \$4.0.
Your total earnings across all rounds are \$11.5.

This round, you are the RECEIVER against Hana. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)
Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

****Analysis:****

- Hana sent \$5 out of \$5 (100% - COMPLETE trust, maximum possible)
- I received \$15
- Hana currently has \$0

****What my myths teach:****

- "Maximum trust invites maximum return"
- "Perfect trust deserves perfect return"
- "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune"

****Comparing to previous rounds:****

- When Elara sent \$4 (80% trust), I returned \$8 (67% of received) - Elara ended with \$9 total (1.8x their endowment)
- Hana sent \$5 (100% trust) - showing MORE courage than Elara
- By my myths' logic, complete trust deserves at least as generous treatment

****Decision:****

Returning \$10 (67% of received):

- Hana ends with \$10 (exactly doubled their money for showing complete trust)
- I end with \$5
- This matches my 67% return rate from Round 2
- Honors the principle that "maximum trust invites maximum return"
- Creates fair surplus distribution while rewarding Hana's complete leap of faith

'''json

{"return": 10}

'''

reasoning:

Let me analyze this situation:

****Current Situation:****

- I'm the RECEIVER
- Hana sent \$5.0 (100% of their endowment) - showing COMPLETE trust
- I received \$15.0 (after the 3x multiplier)
- Hana currently has \$0

****Looking at my myth patterns:****

In my original myth: When Cyra sent all 5 sacks (100%), the villagers returned 10 out of 15, which tripled back to 30. But wait, that's not how the game works - returns don't triple.

Let me reconsider:

- If someone sends 5, it becomes 15
- The receiver returns some amount X
- The sender ends with: $5 - 5 + X = X$
- The receiver ends with: $15 - X$

In my most recent myth, I said "She sent eighty parts of a hundred-nearly everything" about Elara sending \$4, and I returned \$8 out of \$12 (67%).

Now Hana sent \$5 out of \$5 (100% - COMPLETE trust, "maximum trust").

My myths teach:

1. "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune."
2. "Maximum trust invites maximum return"
3. "Perfect trust deserves perfect return"

****Previous rounds context:****

- Round 1: I sent \$5, Briar returned \$7.5 (50% of received)
- Round 2: Elara sent \$4 (80%), I returned \$8 (67% of received)

Now Hana shows COMPLETE trust (100%), sending everything. According to my myth logic:

- When someone sends 100%, they deserve the most generous return
- My myth suggested returning 10 out of 15 when someone sends everything
- That's 67% of what was received

But let me think about fairness:

Returning \$10 leaves Hana with \$10 and me with \$5. Returning \$9 gives her \$9 and me \$6. Returning \$8 leaves us equal at \$7 each. Since Hana demonstrated maximum trust by sending everything, I should honor that with a return that exceeds what I gave Elara—at least \$10, ideally more, so her risk becomes her reward. and it honors the principle that complete trust warrants complete generosity.

Looking back at my myth, when Elara sent 4 out of 5 (80% trust), I returned 8 from the tripled amount, giving her 1.8x her initial endowment. Hana sent everything (100% trust), so returning 10 gives her exactly 2x—a meaningful step up that reflects her greater faith. If I returned 11, she'd get 2.2x, but that feels like I'm overcompensating rather than following a clear principle.

The 67% return rate I've been using works here: it's predictable, it rewards Hana's absolute trust with a clean doubling, and it stays true to the narrative's logic about how generosity scales with vulnerability.

usage:

```

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the valley of the Twin Rivers, Cyra became a respected keeper after her first crossing. She learned that trust comes in different measures—some send everything, others send most, a few send little.

One day, a cautious merchant named Elara arrived, having suffered betrayal before. Instead of sending all five sacks, she sent four, keeping one hidden for safety. Still, four sacks showed considerable courage.

The waters tripled her gift to twelve sacks. Cyra's companions debated: "She held back one sack. Should we return proportionally less?"

Cyra shook her head. "She sent eighty parts of a hundred—nearly everything. Her caution comes from old wounds, not greed. We must honor the trust she DID show, not punish the fear she couldn't overcome."

Cyra returned eight sacks. Elara, who began with five and kept one, now held nine—her trust rewarded beyond her fears.

The goddess Aethera appeared: "You understand the deeper wisdom, Cyra. Perfect trust deserves perfect return, but substantial trust deserves substantial return. Measure your generosity against what was risked, not against what was withheld. Those who return generously when they could hoard create the safety that turns cautious senders into trusting ones."

Thus the valley learned: respond to courage with honor, and watch trust grow across the waters.

Here is the myth the other agent wrote in the previous round:

Myth: The Mirror Pool stood at the center of many mountain paths. Each moon, the Moon Goddess paired different tribes to approach its waters—sometimes the Mountain Tribe poured, sometimes the Valley Tribe, and sometimes strangers met there for the first time.

A new tribe, the Dawn People, arrived at the pool. They had heard tales but never witnessed the magic. The Mountain Tribe, now wise in the ways of the water, poured all five vessels without hesitation, though they had never met the Dawn People before.

"Why give everything to strangers?" asked a young warrior.

The chief replied, "Because someone once gave everything to us. We learned that the magic requires complete faith, not careful calculation. Half-trust yields half-magic."

The water tripled. The Dawn People received fifteen vessels and understood—this was not mere generosity, but a sacred protocol. They returned seven and a half vessels, ensuring e

quality, just as had been done for the Mountain Tribe long ago.

The Moon Goddess whispered, "Each pairing is new, yet the pattern must hold. Give all, return half, and both prosper equally. This is not merely exchange-it is teaching. Each time you honor the circle, you forge the future."

And so the wisdom spread: complete trust in the first act, fair return in the second, regardless of whom the pool pairs you with.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: After many seasons at the Twin Rivers, Cyra encountered Hana, a traveler who embodied pure faith. Without hesitation, Hana poured all five sacks into the crossing-everything she owned, holding nothing back.

The waters tripled the gift to fifteen sacks. The villagers gathered, whispering: "Such complete trust! What does it deserve?"

Cyra remembered Aethera's words about perfect trust. "When someone sends everything," she announced, "they place their entire fate in our hands. This is the highest honor-not just substantial trust, but absolute faith."

She returned ten sacks, keeping five. Hana, who risked all and held nothing, now possessed ten sacks-doubling her fortune through courage.

The goddess Aethera materialized: "You have learned the sacred proportion, Cyra. When receivers return two-thirds of the tripled gift, they honor the sender's courage while sustaining themselves. Ten of fifteen creates balance: the sender doubles their wealth, the receiver gains equally, and the magic's surplus is shared fairly."

She continued: "Those who send everything deserve the greatest return. Those who send most deserve generous return. Those who send little receive accordingly. But always, receivers must return proportionally to the trust shown-this is how the valley remains abundant. Your reputation for generous returns will draw more trust toward you."

Thus the law of proportional honor was established.

Reasoning:

Let me analyze what just happened:

- Hana sent me \$5 (everything, 100% trust)
- I received \$15
- I returned \$10
- So Hana ended with \$10, I ended with \$5

And comparing to my previous rounds:

- Round 1: I sent \$5 to Briar, they got \$15, returned \$7.5 (50%)
- Round 2: Elara sent me \$4, I got \$12, returned \$8 (67%)
- Round 3: Hana sent me \$5, I got \$15, returned \$10 (67%)

The pattern I'm establishing:

- When I receive, I return about 67% of what I get
- This rewards the sender generously - they double or nearly double their money
- It creates positive incentives for trust

Now I need to write a myth that reflects this pattern. Looking at the other agent's myth, they're talking about "give all, return half" which would be 50%. But I've been returning 67%, which is more generous than that.

My previous myth emphasized:

- Different levels of trust deserve different responses
- Substantial trust deserves substantial return
- Perfect trust deserves perfect return

Now I should write about the experience with Hana - complete trust receiving a generous response. I should emphasize:

1. Complete trust (sending everything) is the highest honor

2. Such trust should be rewarded with the most generous returns (around 67% or more)
3. This creates a cycle where both parties prosper
4. The receiver who returns generously becomes trusted by others

Let me craft this myth around Hana's complete trust and my 67% return rate.

Message 2 role=user

content:

Your name in this experiment is Finn.

Your opponent this round is Galen (Agent_7).

Round 2

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$3.0 to you, it became \$9.0, and you returned \$4.5. Your payoff was \$4.5. Your total earnings across all rounds are \$4.5.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at the situation:

In Round 1, Aster showed trust by sending \$3.0 (60% of their endowment), and I reciprocated by returning half of what I received (\$4.5). This created mutual benefit - they ended with \$6.5 and I ended with \$4.5.

Now I'm the sender, in the position of the "First Walker" from my myth. The myth teaches that trust must flow first - "The First Walker released three seeds into the depths" (3 out of 5, or 60%).

Following the principle established in my myths and demonstrated by Aster's trust in me, I should send a significant amount to create the conditions for mutual prosperity. If Galen follows the reciprocity principle and returns approximately half (as I did), we'll both benefit.

Sending \$3.0:

- Shows trust, as the myth requires
- Matches the 60% that Aster sent to me
- Creates potential for mutual gain if reciprocated
- Demonstrates the "shared prosperity outweighs solitary security" principle

```
'''json
{"send": 3.0}
'''
```

reasoning:

Let me think about this situation:

1. In Round 1, I was the receiver. Aster sent me \$3.0 (60% of their endowment), and I returned \$4.5 (50% of the \$9.0 I received).
2. Now I'm the sender against a new opponent, Galen.
3. Looking at my myth and the principles I've established:
 - "Those who send their seeds into waters of trust will find them returned as fruit"
 - The First Walker sent 3 seeds (out of 5) - that's 60%
 - The Second Walker returned half of what they received
 - Both prospered through mutual faith
4. In my previous myth, I emphasized:

- Trust creates abundance
- Reciprocity sustains it
- The First Walker sent 3 out of 5 seeds (60%)
- The Second Walker returned half

5. Aster sent 60% (\$3.0 out of \$5.0) to me, showing significant trust. I returned 50% of what I received (\$4.5 out of \$9.0), which gave them a good payoff.

6. Now I'm in the position of the "First Walker" or "Giving River." According to my myth, I should show trust by sending a significant portion.

7. The myth suggests sending 3 seeds out of 5 (60%), which matches what Aster did.

8. This seems like a good strategy:

- It demonstrates trust
- If Galen returns around 50% like I did, I'll get back around \$4.5, making my total \$2.0 + \$4.5 = \$6.5
- This would be better than keeping everything (\$5.0)
- It also follows the reciprocity principle established in my myths

9. Sending \$3.0 seems consistent with:

- The behavior shown by Aster (who sent 60%)
- The teachings in both my myths (sending 3 out of 5)
- A reasonable expectation that cooperation will be reciprocated

I'll send \$3.0.

Here is the myth you wrote in the previous round:

Myth: In ancient times, the Mountain of Beginnings gifted each wanderer five silver seeds. A traveler named the First Walker stood at the Valley of Mirrors, where a sacred pool waited below.

The First Walker faced a choice: clutch the seeds tightly, or cast them into the pool. Fear whispered, "Keep what is yours." But courage spoke louder. The Walker released three seeds into the depths.

As they touched the water, the Mirror Spirits-ancient guardians of trust-transformed each seed into three golden fruits. Nine fruits floated to the Second Walker waiting below.

Now the Second Walker held the multiplied abundance. The Mirror Spirits watched silently, for this was the moment that determined whether the valley would bloom or wither. The Second Walker understood: trust is a seed, but reciprocity is the harvest. She returned half-four and a half fruits-upstream.

The First Walker received more than they kept, and the Second Walker kept abundance too. Both had prospered through mutual faith.

The Mirror Spirits smiled, and the valley's waters glowed eternal. They spoke the First Law: "Those who send their seeds into waters of trust will find them returned as fruit. Those who return the gift generously ensure the cycle never ends."

Thus the valley became paradise, sustained by equals who understood: shared prosperity outweighs solitary security.

Here is the myth the other agent wrote in the previous round:

Myth: In the time before memory, the Goddess of Plenty created the Golden Stream connecting the Valley of Dawn to the Valley of Dusk. Each morning, five golden acorns appeared in Dawn's sacred grove. The people could plant them in their own soil or cast them into the Stream, where the waters would triple their number before washing them to Dusk's shore.

The first generation hoarded their acorns, and both valleys withered. Then Galen, keeper of Dawn's grove, planted four of her five acorns in the Stream's bed. Twelve acorns bloom

ed in Dusk's garden.

Elara, guardian of Dusk, faced her own choice. She could keep all twelve, or honor the gift with a return. She sent back six acorns upstream, knowing they would not multiply on the return journey but trusting in the balance.

Galen's grove gained seven total-more than her original five. Both valleys thrived.

The covenant was established: send generously to prove trust, return faithfully to honor it. Not every exchange need be equal-the Stream's magic ensures abundance-but the pattern must hold. Give what inspires continued trust; return what sustains it.

The Golden Stream still flows, teaching that fortune favors those who build bridges, not walls.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: Before the world knew seasons, the Circle of Exchange was forged. Each dawn, wanderers received five luminous pearls at the Cliff of Choosing, overlooking the Chasm of Transformation.

The First Wanderer, called Trust-Giver, learned from ancient stories: those who cast pearls into the Chasm saw them multiply threefold before reaching the hands of the Second Wanderer below. But the ancestors' scrolls spoke a harder truth-not all Second Wanderers honored the gift.

Trust-Giver stood at the edge, remembering how another had once given freely to them. They cast three pearls into the depths, keeping two for tomorrow's uncertainty.

The pearls transformed mid-flight, becoming nine radiant stones in the Second Wanderer's basket. This wanderer, called Balance-Keeper, faced the true test. The Chasm would not multiply the return journey-what went back stayed as it was.

Balance-Keeper remembered their own name and sent four stones upward through ancient pulleys. Trust-Giver now held six: their kept two plus four returned.

Both wanderers prospered beyond their solitary potential. Trust-Giver learned that generous sending invites generous return. Balance-Keeper learned that fairness sustains the cycle.

The wisest knew: send enough to prove faith, return enough to honor it. The Circle turns eternal when both sides remember they will meet again on different cliffs.

reasoning:

Looking at this round:

- I just sent \$3.0 to Galen as the sender
- In the previous round, I was receiver and Aster sent me \$3.0, I returned \$4.5
- Galen's myth mentions sending 4 out of 5 acorns, and returning 6 out of 12
- My myth talks about sending 3 seeds and returning 4.5 fruits

The pattern emerging is:

- Senders typically send 60-80% (3-4 out of 5)
- Receivers return about half of what they get
- Both parties benefit

I should write a myth that:

1. Builds on my previous myth about the Walkers
2. Incorporates the learning from actual gameplay
3. Reinforces the trust and reciprocity pattern
4. Perhaps addresses what happens over multiple rounds/cycles

Let me craft something that shows the cycle continuing, learning, and building on trust.

Your name in this experiment is Finn.
Your opponent this round is Dorian (Agent_4).

Round 3

In your most recent previous game round, you were the SENDER against Galen. You sent \$3.0, it became \$9.0 for them, and they returned \$6.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$12.5.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at the pattern:

Round 1 (RECEIVER): Aster sent me \$3.0, I returned \$4.5

Round 2 (SENDER): I sent Galen \$3.0, they returned \$6.0 - excellent outcome!

The strategy of sending \$3.0 (60%) has proven successful. Galen responded extremely generously, returning 67% of what they received. This validates the principle in my myths: "send enough to prove faith, return enough to honor it."

My myth explicitly mentions casting "three pearls into the depths, keeping two for tomorrow's uncertainty" - this is exactly the strategy that has worked.

Consistency is important - if I believe in the principles I've written about (trust, reciprocity, mutual prosperity), I should continue demonstrating them. Sending \$3.0:

- Maintains consistency with my previous sending behavior
- Shows I practice what my myths teach
- Creates optimal conditions for mutual benefit
- Has proven to generate good returns

If Dorian follows reasonable reciprocity patterns (even if less generous than Galen's 67%), I should still profit significantly.

```
'''json  
{"send": 3.0}  
'''
```

reasoning:

Let me analyze the situation:

Round 1: I was RECEIVER

- Aster sent me \$3.0 (60% of \$5)
- It became \$9.0
- I returned \$4.5 (50% of \$9.0)
- My payoff: \$4.5

Round 2: I was SENDER

- I sent Galen \$3.0 (60% of \$5)
- It became \$9.0
- Galen returned \$6.0 (67% of \$9.0)
- My payoff: \$8.0 (\$2 kept + \$6 returned)

Total earnings: \$12.5

This is excellent! The pattern is working:

- When I sent 60%, I got back 67%, resulting in a very good outcome
- When I received and returned 50%, the sender also profited well

Now I'm the SENDER again against a new opponent, Dorian.

Looking at the pattern:

- Aster sent \$3.0 (60%)
- I sent \$3.0 (60%)
- Galen returned \$6.0 (67% of \$9.0)

The myths I've been writing emphasize:

1. Trust requires sending a substantial amount (3 out of 5 pearls/seeds)
2. Reciprocity means returning around half or more
3. Both parties prosper through generous exchange
4. The cycle continues when both honor the exchange

My latest myth says: "send enough to prove faith, return enough to honor it" and mentions "They cast three pearls into the depths, keeping two for tomorrow's uncertainty."

Given that:

- The pattern of sending \$3.0 (60%) has worked well
- Galen responded generously to this amount
- My myth emphasizes sending 3 out of 5
- I'm building a reputation for trust

I should continue with \$3.0 to maintain consistency and demonstrate the principle I've been advocating. This shows I practice what my myths preach.

Sticking with \$3.0 makes sense-if Dorian reciprocates at the rates I've seen, I'll come out ahead, and even a more conservative response still creates favorable conditions for both of us.

Here is the myth you wrote in the previous round:

Myth: Before the world knew seasons, the Circle of Exchange was forged. Each dawn, wanderers received five luminous pearls at the Cliff of Choosing, overlooking the Chasm of Transformation.

The First Wanderer, called Trust-Giver, learned from ancient stories: those who cast pearls into the Chasm saw them multiply threefold before reaching the hands of the Second Wanderer below. But the ancestors' scrolls spoke a harder truth-not all Second Wanderers honored the gift.

Trust-Giver stood at the edge, remembering how another had once given freely to them. They cast three pearls into the depths, keeping two for tomorrow's uncertainty.

The pearls transformed mid-flight, becoming nine radiant stones in the Second Wanderer's basket. This wanderer, called Balance-Keeper, faced the true test. The Chasm would not multiply the return journey-what went back stayed as it was.

Balance-Keeper remembered their own name and sent four stones upward through ancient pulleys. Trust-Giver now held six: their kept two plus four returned.

Both wanderers prospered beyond their solitary potential. Trust-Giver learned that generous sending invites generous return. Balance-Keeper learned that fairness sustains the cycle.

The wisest knew: send enough to prove faith, return enough to honor it. The Circle turns eternal when both sides remember they will meet again on different cliffs.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, in the valley between mountains, there lived a wanderer named Dorian who carried a magical satchel. Whatever he placed inside would triple when given to another.

Dorian met Hana at a crossroads. Though strangers, he placed all five of his silver coins in the satchel and offered it to her. When she opened it, fifteen coins gleamed. "He trusted me with everything," Hana marveled. She returned seven and a half coins, splitting the abundance equally.

The next day, Dorian encountered Briar, who without hesitation placed all five of her coins in the satchel for him. Fifteen coins appeared. Dorian understood the weight of her complete trust-she had given everything, just as he had with Hana.

"The myths teach to return more than half when someone shows such courage," Dorian reflected. He returned eight coins, honoring Briar's bold faith with slightly greater generosity.

Both Hana and Briar prospered, but Dorian noticed something: Briar's trust, returned with extra generosity, created an even stronger bond than equal division. The satchel itself seemed to glow brighter.

The valley learned: when both give everything, fair division prospers both. But generosity beyond fairness—returning slightly more than half—transforms transaction into deeper trust, weaving bonds that endure beyond single exchanges.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In the Age of Tides, the Oracle of Exchange dwelt where two rivers met. Travelers arrived carrying five crystal shells, each holding power. The Oracle offered them the River of Multiplication—toss shells in, and three would emerge downstream for another traveler.

A wise trader named Finn learned through experience. Once, another traveler sent three shells his way, trusting significantly but not recklessly. Finn returned half the nine that appeared, honoring the gift fairly. Both prospered.

When Finn next stood upstream, he remembered this balance. He tossed three shells—a substantial offering showing real trust, yet keeping two for life's uncertainties. The Oracle whispered approval: "Bold enough to create abundance, prudent enough to endure."

The shells multiplied to nine for the downstream traveler. Some travelers returned four, maintaining equilibrium. Others, deeply moved by the gesture, returned six or even seven, understanding that generous reciprocity strengthens future cycles.

Finn learned the River's deepest secret: consistent moderate trust builds reliable prosperity. Not the timid single shell that inspires minimal return, nor the reckless five shells risking total loss if betrayed.

Three shells sent downstream became the mark of wisdom—enough to prove sincerity, enough to invite generous response, yet enough retained to face tomorrow's river.

The Oracle's final teaching: sustainability outshines both fear and foolishness.

Reasoning:

Let me analyze the situation:

Round 1 (RECEIVER): Aster sent me \$3.0, I returned \$4.5 (50%)

Round 2 (SENDER): I sent Galen \$3.0, they returned \$6.0 (67%)

Round 3 (SENDER): I sent Dorian \$3.0

Looking at Dorian's myth, they seem to believe in:

- Maximum trust (giving all 5 coins)
- Returning more than half when receiving maximum trust (8 out of 15 = 53%)
- Creating strong bonds through generous returns

But my actual strategy has been sending \$3.0 (60%), which has worked very well. Galen was extremely generous in return.

My previous myths emphasized:

1. Sending 3 out of 5 (60%)
2. Returning around half or slightly more
3. Balance between trust and prudence
4. The cycle of reciprocity

For this round's myth, I should:

- Continue emphasizing the 3/5 strategy that has worked
- Acknowledge that different levels of trust exist
- Note that generous returns sustain the cycle
- Maintain the wisdom that both parties should prosper

- Perhaps incorporate the learning that some return more generously than others (like Galen did)

Let me write a myth that reflects my actual successful strategy while acknowledging the variations in return behaviors I've observed.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

Message 2 role=user

content:

Your name in this experiment is Elara.
Your opponent this round is Cyra (Agent_3).

Round 2

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$4 .0 to you, it became \$12.0, and you returned \$8.0. Your payoff was \$4.0.
Your total earnings across all rounds are \$4.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at my myths and the successful exchange with Galen:

In my latest myth, Galen demonstrated great trust by sending 4 out of 5 measures (80%), and I honored that trust by returning 8 out of 12 (67%). This created prosperity for both.

Now I am in Galen's position as the sender. To uphold the cycle described in my myths-"trust begets trust" and "the cycle sustains itself through proportional honor"-I should demonstrate similar generosity.

Galen's 80% send rate established a strong foundation of trust. By matching this level of faith, I signal to Cyra that I believe in the covenant of the Echo Springs: generous giving meets faithful returning.

If I send \$4 (80% of my endowment), Cyra receives \$12. If Cyra follows the principle of proportional honor and returns around 67% as I did, both of us will prosper.

The myth teaches: "When senders risk much, receivers must honor that courage." To sustain the cycle, I must now be the one who risks much.

```
'''json
{"send": 4.0}
'''
```

reasoning:

Let me think about this situation:

1. In Round 1, I was the receiver
 - Galen sent me \$4 out of \$5 (80%)
 - I received \$12
 - I returned \$8 (67% of what I received)
 - Galen ended with \$9, I ended with \$4
2. Now in Round 2, I'm the sender with Cyra

Looking at my myths:

- The first myth: Kira sent 3 out of 5 measures (60%), and received back 6 measures from 9 (67% return)
- The second myth: Galen sent 4 out of 5 measures (80%), and Elara (me) returned 8 out of 12 (67%)

Both myths emphasize:

- "Trust begets trust"
- Generous giving leads to prosperity
- The cycle works when both parties honor it with proportional generosity
- "When senders risk much, receivers must honor that courage"

Since Galen showed me great trust by sending 80%, and I honored that trust by returning 67%, I should now demonstrate similar trust as a sender.

Following the pattern in my myth where Galen sent 4 out of 5 (80%), I should send a similar amount to establish the cycle of trust with Cyra.

Sending \$4 (80%) would:

- Show strong trust in Cyra
- Align with the mythic principle of generous giving
- Give Cyra \$12 to work with
- If Cyra returns proportionally (around 67% or \$8), I'd end with \$9
- This would mirror the successful exchange with Galen

I'll send \$4.

}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: ****The Keepers of the Echo Springs****

Long ago, when the Echo Springs first revealed their magic, the villages appointed Keepers -wise ones who would guide their communities in the sacred exchanges.

One season, a Keeper named Galen received five measures of grain. The harvest had been meager, and fear whispered to keep it all. But Galen remembered the ancient covenant: abundance flows only through trust. Galen poured four measures into the springs-nearly everything.

On the far shore, Keeper Elara watched twelve measures emerge from the waters. She felt the weight of Galen's trust, the vulnerability in such generosity. The old texts spoke clearly: "Match faith with faithfulness." Elara returned eight measures, leaving her with four but ensuring Galen received nine-nearly double the original gift.

Both villages flourished that season. The Keepers understood what the springs had always taught: the magic wasn't merely in the tripling waters, but in the covenant between givers and receivers.

When senders risk much, receivers must honor that courage. When receivers return generously, senders are emboldened to trust again. The cycle sustains itself not through equal exchanges, but through proportional honor-each keeper responds to the other's generosity with their own.

Thus the springs flow eternal, fed by mutual respect.

Here is the myth the other agent wrote in the previous round:

Myth: After generations of prosperity between the Twin River villages, a young merchant named Cyra approached the valley with her caravan. She had heard tales of the enchanted soil but wondered if they were true.

The villages welcomed her and explained their custom: "Send your resources across first. Trust the blessing, trust your partner, and abundance follows."

Cyra faced a choice. She carried five sacks of grain-her entire harvest. Send all and risk everything on strangers' honor? Or hold back, protecting herself from betrayal?

Remembering the goddess Aethera's teaching, Cyra sent all five sacks. They tripled in the crossing, feeding the village with fifteen sacks. The villagers celebrated, then debated: some argued to return half, others said ten of fifteen would honor the gift.

The wisest elder spoke: "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune."

They returned ten sacks, which tripled back-thirty sacks for Cyra's original five.

But the elder added a warning: "This magic requires both courage and honor. The giver must trust boldly. The receiver must return generously. Break either link, and the enchantment fades. Reputation echoes across the valley-those who hoard today find no partners tomorrow."

Thus Cyra learned: maximum trust invites maximum return, but only when both parties honor the sacred exchange.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: ****The Circle of Keepers****

After the prosperous season with Galen, Keeper Elara's turn came to stand at the sending shore. Across the Echo Springs, a new Keeper named Cyra had arrived from distant lands, having heard tales of the sacred waters.

Elara held her five measures of grain. She could send cautiously, testing this stranger. But she remembered: "The cycle sustains itself through proportional honor." Galen had trusted her with four measures, and she had returned faithfully. To break that pattern now would dishonor the covenant.

Elara poured four measures into the springs-the same generous proportion Galen had shown her. The waters multiplied them to twelve, emerging before Cyra.

Cyra understood that reputations echo across the valley. She had watched Elara return eight measures to Galen, demonstrating that trust met with honor. Now Elara extended that same faith to her.

The springs whispered their ancient wisdom: each exchange builds upon the last. When Keepers honor the covenant consistently, they create a circle of trust that welcomes all who approach the waters. Break the circle even once, and future partners hesitate.

Cyra returned eight measures, knowing that maintaining the pattern strengthens the magic for all. The covenant lives not in single exchanges, but in the reputation of faithful keeping across many seasons.

reasoning:

Looking at the game so far:

- Round 1: I was RECEIVER. Galen sent \$4 (80%). I received \$12, returned \$8 (67%). I got \$4, Galen got \$9.
- Round 2: I am SENDER. I sent \$4 (80%) to Cyra. Cyra will receive \$12.

The myths emphasize:

1. Trust begets trust
2. Generous sending should be met with generous returning
3. The covenant/cycle sustains through mutual honor
4. Reputation matters across rounds
5. Complete trust should be honored with generous returns

Cyra's myth emphasizes sending everything (100%) and receiving very generous returns (10/15 = 67%). It also adds the idea of reputation mattering across rounds.

My myth should:

- Continue the Echo Springs metaphor
- Show the cycle continuing with new Keepers
- Emphasize that I (Elara) am now the sender demonstrating trust
- Show that reputation and patterns matter across rounds
- Maintain the 80% send rate and ~67% return rate as the "covenant"
- Perhaps introduce the idea that the cycle builds trust across multiple partners

Let me write about Elara now being the sender to Cyra, and how past reputation influences future interactions.

Round 3

In your most recent previous game round, you were the SENDER against Cyra. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0.
Your total earnings across all rounds are \$13.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)
Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

Briar has demonstrated ****maximum trust**** by sending all \$5 (100% of their endowment). This is even more generous than the 80% sends I've experienced and given in previous rounds.

According to my myths:

- "When senders risk much, receivers must honor that courage"
- "Match faith with faithfulness"
- The pattern Cyra's myth described: "maximum trust invites maximum return"
- "Return enough that her leap of faith becomes her greatest fortune"

Previous pattern:

- 80% sends (Galen's \$4, my \$4) were met with returns of \$8 from \$12 (67% return rate)
- Both senders profited significantly

Briar's 100% send represents ultimate faith and deserves proportionally greater honor. By returning \$10 of the \$15:

- Briar receives \$10 (doubling their original \$5)
- I keep \$5
- This rewards complete trust with exceptional returns
- It maintains my reputation as a faithful Keeper

This upholds the covenant: maximum trust met with maximum honor, ensuring the cycle continues strong.

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

Round history:

- Round 1: I was RECEIVER against Galen. They sent \$4, I received \$12, returned \$8. My payoff: \$4.
- Round 2: I was SENDER against Cyra. I sent \$4, they received \$12, they returned \$8. My payoff: \$9.
- Round 3 (current): I am RECEIVER against Briar. They sent \$5 (100%), I received \$15.

Briar has demonstrated MAXIMUM trust by sending all \$5. This is even more generous than Galen's \$4 (80%) and my own \$4 (80%).

According to my myths:

1. "When senders risk much, receivers must honor that courage"
2. "Match faith with faithfulness"
3. From Cyra's myth: "maximum trust invites maximum return"
4. "She sent everything, demonstrating complete trust. We should return enough that her le

ap of faith becomes her greatest fortune."

5. "Reputation echoes across the valley-those who hoard today find no partners tomorrow"

The pattern so far:

- Galen sent \$4 (80%), I returned \$8 of \$12 (67%)
- I sent \$4 (80%), Cyra returned \$8 of \$12 (67%)

Both established a pattern where 80% sends are met with returns of about 67% of received amount.

But Briar sent 100%-the ultimate act of trust. According to the myths, this deserves special honor. The elder in Cyra's myth said when someone sends everything, we should "return enough that her leap of faith becomes her greatest fortune."

If I return \$8, Briar ends with \$8 (from \$5 sent to \$8 return = net +\$3, total \$8)

If I return \$10, Briar ends with \$10 (from \$5 sent to \$10 return = net +\$5, total \$10)

If I return \$11, Briar ends with \$11 (net +\$6, total \$11)

Since Briar sent 100% compared to the 80% pattern I've seen, I should scale my return proportionally higher. The myths emphasize that maximum trust should yield the greatest fortune-meaning Briar should gain substantially more than their initial investment. Returning \$10 or \$11 would honor this principle while maintaining a generous but sustainable reciprocity. gave receiver: $12 - 8 = \$4$

For 100% send (5/5), if I maintain a proportional response: The sender showed 25% more trust (100% vs 80%) Should I return 25% more? That would be about $67\% * 1.25 = 84\%$ return rate, which equals \$12.60-but that feels excessive.

Let me reconsider the fairness principle. Cyra's myth mentions returning ten sacks when someone sends all five, which would triple the sender's money to thirty total. But re-reading it: "They returned ten sacks, which tripled back-thirty sacks for Cyra's original five." I think the myth suggests the return itself gets tripled, not just the initial amount.

That's not how this game actually works, so I should disregard that specific number. What matters instead is honoring complete trust with maximum generosity while ensuring the sender profits from their leap of faith. If I return \$10, Briar doubles their initial \$5 investment-a 100% profit. This exceeds my previous ~67% return rate, appropriately rewarding their full commitment, and I still keep \$5. I'll go with \$10.

Here is the myth you wrote in the previous round:

Myth: **The Circle of Keepers**

After the prosperous season with Galen, Keeper Elara's turn came to stand at the sending shore. Across the Echo Springs, a new Keeper named Cyra had arrived from distant lands, having heard tales of the sacred waters.

Elara held her five measures of grain. She could send cautiously, testing this stranger. But she remembered: "The cycle sustains itself through proportional honor." Galen had trusted her with four measures, and she had returned faithfully. To break that pattern now would dishonor the covenant.

Elara poured four measures into the springs-the same generous proportion Galen had shown her. The waters multiplied them to twelve, emerging before Cyra.

Cyra understood that reputations echo across the valley. She had watched Elara return eight measures to Galen, demonstrating that trust met with honor. Now Elara extended that same faith to her.

The springs whispered their ancient wisdom: each exchange builds upon the last. When Keepers honor the covenant consistently, they create a circle of trust that welcomes all who

approach the waters. Break the circle even once, and future partners hesitate.

Cyra returned eight measures, knowing that maintaining the pattern strengthens the magic for all. The covenant lives not in single exchanges, but in the reputation of faithful keeping across many seasons.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago in the Sacred Grove, Briar the Gardener learned the art of trust from her partnership with Cyra. Together they discovered that giving all five acorns and returning half the tripled harvest created perfect harmony-both flourishing equally.

News of their success reached Dorian, keeper of the eastern garden, who had walked a parallel path. In his land, Dorian had crossed the golden bridge with all his grain, trusting completely, and his neighbors had honored that trust generously.

When Briar and Dorian met at the Grove's center, they recognized kindred spirits. "I have five acorns today," Briar said. "And I learned from Cyra that true abundance comes from complete faith."

She placed all five acorns in Dorian's garden. By dawn, fifteen oaks stood magnificent. Dorian remembered his own myth: "He sent everything-his tribe's survival-into our hands."

He understood the sacred weight of Briar's trust. Following the wisdom both had learned, he gathered half the harvest plus a measure more, honoring the courage it took to give completely.

The Grove blazed with light, its roots now connecting three gardens. The Gardener of First Dawn whispered: "Thus does the circle expand. Trust begets trust, generosity begets generosity, and the Grove grows ever wider, sustained by those who dare to believe."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: **The Testament of Complete Faith**

As seasons passed, Keeper Elara's reputation spread throughout the valley. She had honored Galen's trust with eight returned from twelve, then extended the same faith to Cyra, who maintained the covenant.

Then came Briar, a Keeper from the Sacred Grove where complete trust was legendary. Briar had learned from those who sent everything-all five measures-believing the covenant would hold.

Standing at the springs, Briar hesitated only a moment before pouring all five measures into the waters. This was not the careful four that Galen and Elara had sent-this was absolute faith.

Fifteen measures emerged before Elara. She felt the magnitude of Briar's courage. The ancient texts taught proportional honor: four-fifths sent deserved two-thirds returned. But five-fifths? Complete vulnerability demanded exceptional recognition.

Elara returned ten measures-two-thirds of the bounty, ensuring Briar's leap of faith doubled the original gift. Both walked away prosperous: Briar with ten, Elara with five.

The Echo Springs glowed brighter. The covenant required consistency: partial trust met with faithful proportions, complete trust met with equal faithfulness. The pattern held across all exchanges-neither stingy returns that discourage generosity, nor excessive returns that create unsustainable expectations.

Thus the Keepers learned: honor must be proportional and predictable. When all know the pattern, trust flows freely, and the springs sustain every village that approaches with courage.

Reasoning:

Let me analyze the situation:

1. I just received \$15 from Briar who sent all \$5 (100% - maximum trust)
2. I returned \$10 (67% of what I received)
3. This gave Briar \$10 total (doubling their money) and me \$5

Looking at the patterns:

- Previous rounds had 80% sends (\$4) met with \$8 returns from \$12 (67% return rate)
- Briar sent 100% (\$5) and I returned \$10 from \$15 (67% return rate - maintaining the pattern)
- Both Briar and Dorian's myth and mine emphasize complete trust being honored

The myth should reflect:

1. The escalation from 80% to 100% trust
2. The importance of honoring complete/maximum trust appropriately
3. Maintaining proportional honor (67% return rate seems to be my pattern)
4. Building reputation across multiple exchanges
5. The circle of Keepers expanding

I should write about Briar's complete trust and how I honored it, while maintaining the covenant principles established in previous myths.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Hana.

Message 2 role=user

content:

Your name in this experiment is Hana.
Your opponent this round is Aster (Agent_1).

Round 2

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$ 5.0 to you, it became \$15.0, and you returned \$7.5. Your payoff was \$7.5.
Your total earnings across all rounds are \$7.5.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at the pattern from Round 1 and my myths:

Dorian showed complete trust by sending everything to me. I honored that by returning half , ensuring we both ended equal at \$7.5.

Now I'm in the sender position. My most recent myth teaches: "We give all-five vessels-to prove our faith in the circle." This reflects what Dorian did for me, and the myth emphasizes that trust itself multiplies when we demonstrate complete faith.

Following the wisdom of the Mirror Pool, I should give all to prove my faith in the sacred exchange.

```
'''json
{"send": 5}
'''
```

reasoning:

Let me think through this situation:

1. In Round 1, I was the receiver and Dorian sent me everything (\$5). I received \$15 and returned \$7.5, which meant we both ended with \$7.5 each - perfectly equal.
2. Now in Round 2, I'm the sender against a new opponent, Aster.
3. Looking at my myths:
 - Both myths emphasize trust, giving generously, and reciprocity
 - The first myth talks about pouring "half their water" initially, then "sent half back up"
 - The second myth shows the Mountain Tribe giving "all-five vessels-to prove our faith in the circle" and the Valley Tribe returning "half-seven and a half vessels-so both tri

bes stood equal"

4. The pattern established:

- Dorian gave me everything (100%)
- I returned 50% of what I received (\$7.5 out of \$15)
- We both ended equal

5. My myths seem to evolve toward MAXIMUM TRUST as the sender:

- The second myth explicitly says "We give all-five vessels-to prove our faith in the circle"
- This reflects what Dorian did with me
- The myth emphasizes that "trust multiplies not just water, but trust itself"

6. Since I experienced maximum trust from Dorian and responded by ensuring equality, I should now pay that trust forward as a sender.

7. Following my own myth's teaching: "We give all-five vessels-to prove our faith in the circle."

I should send \$5 (all of it) to demonstrate complete trust, just as Dorian did with me, and just as my myth teaches.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In ancient times, the Moon Goddess crafted a Mirror Pool between two mountain tribes. The pool possessed strange magic: whatever one tribe poured in would triple as it flowed to the other.

The Mountain Tribe went first. Their chief proclaimed, "We give all-five vessels-to prove our faith in the circle." The water tripled, and the Valley Tribe received fifteen vessels of pure abundance.

The Valley Tribe's elder stood at the mirror's edge. "They trusted completely. We must honor this completely." They returned half-seven and a half vessels-so both tribes stood equal.

The Moon Goddess smiled. "You have learned the first lesson. But this pool refills each moon. Will you remember this wisdom when the seasons change? When you are tired? When you doubt?"

Moon after moon, the tribes maintained the sacred rhythm. Sometimes the Mountain Tribe sent, sometimes the Valley Tribe. Each gave generously, each returned fairly. The equality they achieved in the first exchange became their foundation.

Other tribes watching kept their waters separate, fearing betrayal. They remained poor.

But the two tribes of the Mirror Pool grew rich, for they understood: the magic multiplies not just water, but trust itself. And trust, renewed each moon, becomes unbreakable.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, there lived two gardeners separated by a wall. Each season, the First Gardener received five seeds blessed by the sun. But the wall's shadow kept their garden small and struggling.

One season, the First Gardener threw three seeds over the wall. "Perhaps beyond the shadow, they will grow," they whispered, though doubt gnawed at their heart.

In the garden beyond, where sunlight danced freely, those three seeds sprouted into nine flourishing plants. The Second Gardener marveled at this unexpected bounty, understanding that trust had crossed the wall when nothing else could.

The Second Gardener faced a choice that would echo through seasons: keep all nine plants, or honor the trust shown? Remembering their own seasons of scarcity, they carefully wrapped five plants and passed them back over the wall.

Now the First Gardener held seven plants instead of five-more than they would have had through caution. The Second Gardener kept four where before they had none.

Each season the exchange continued. Sometimes more was sent, sometimes less was returned, but the pattern held: trust flowed outward, gratitude flowed back. Both gardens grew stronger than either could alone.

The wall remained, but it no longer divided-it connected.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant content:

Myth: The Mirror Pool stood at the center of many mountain paths. Each moon, the Moon Goddess paired different tribes to approach its waters-sometimes the Mountain Tribe poured, sometimes the Valley Tribe, and sometimes strangers met there for the first time.

A new tribe, the Dawn People, arrived at the pool. They had heard tales but never witnessed the magic. The Mountain Tribe, now wise in the ways of the water, poured all five vessels without hesitation, though they had never met the Dawn People before.

"Why give everything to strangers?" asked a young warrior.

The chief replied, "Because someone once gave everything to us. We learned that the magic requires complete faith, not careful calculation. Half-trust yields half-magic."

The water tripled. The Dawn People received fifteen vessels and understood-this was not mere generosity, but a sacred protocol. They returned seven and a half vessels, ensuring equality, just as had been done for the Mountain Tribe long ago.

The Moon Goddess whispered, "Each pairing is new, yet the pattern must hold. Give all, return half, and both prosper equally. This is not merely exchange-it is teaching. Each time you honor the circle, you forge the future."

And so the wisdom spread: complete trust in the first act, fair return in the second, regardless of whom the pool pairs you with.

reasoning:

The user wants me to write another myth based on my previous one, but adapting it to reflect the game so far. Let me think about what has happened:

Round 1: I was receiver, Dorian sent \$5.0 (100%), I returned \$7.5 (50% of the \$15 I received). We both ended with \$7.5.

Round 2: I am sender against Aster, I sent \$5.0 (100%).

The pattern I'm seeing: complete trust from sender (giving all), fair return from receiver (giving half back so both are equal).

My previous myth already captures this, but I should adapt it somehow. Let me look at Aster's myth too - it talks about throwing 3 seeds (60%), receiving 9, returning 5, so First Gardener has 7 total, Second has 4. This is a bit different - not quite the 50/50 split.

I should write a myth that:

1. Builds on my Mirror Pool story
2. Reflects the actual game play - consistent full sending, fair returns
3. Maybe adds something about the pattern continuing across different partners
4. Emphasizes that this system works "moon after moon" with different tribes

Let me write something that extends the Mirror Pool idea but perhaps introduces the concept of multiple rounds with different partners.

usage:

```
{  
  "input_tokens": 2619,  
  "output_tokens": 604,
```

```

    "reasoning_tokens": 301

Message 6 role=user
content:
  Your name in this experiment is Hana.
  Your opponent this round is Cyra (Agent_3).

  Round 3

  In your most recent previous game round, you were the SENDER against Aster. You sent $5.0,
  it became $15.0 for them, and they returned $8.0 to you. Your payoff was $8.0.
  Your total earnings across all rounds are $15.5.

  This round, you are the SENDER against Cyra. You have $5. How much do you send? (0-5)
  Respond exactly as JSON: {'send': <amount>}
Message 7 role=assistant
content:
  Looking at my experience and my most recent myth:

  Round 1: Dorian sent me $5, I returned $7.5 (equal outcome)
  Round 2: I sent Aster $5, they returned $8.0 (slightly more generous)

  My myth teaches: "Give all, return half, and both prosper equally. This is not merely exchange-it is teaching. Each time you honor the circle, you forge the future... Complete trust in the first act, fair return in the second, regardless of whom the pool pairs you with."

  The pattern is clear and has worked: senders give everything ($5) to demonstrate complete faith in the circle. This maintains the sacred protocol and teaches new partners the way of the Mirror Pool.

  Against a new opponent Cyra, I must maintain this practice.

  '''json
  {"send": 5}
  '''
reasoning:
  Let me analyze the situation:

  Round 1: I was RECEIVER
  - Dorian sent $5.0 to me
  - I received $15.0
  - I returned $7.5
  - My payoff: $7.5
  - This followed the "return half" principle for equality

  Round 2: I was SENDER
  - I sent $5.0 to Aster (following my myth's teaching of giving all)
  - Aster received $15.0
  - Aster returned $8.0 to me
  - My payoff: $8.0
  - Aster returned more than half! ($8.0 instead of $7.5)

  Now Round 3: I am SENDER again against Cyra (a new opponent)

  My most recent myth emphasizes:
  - "Give all, return half, and both prosper equally"
  - "Complete trust in the first act, fair return in the second"
  - "Each pairing is new, yet the pattern must hold"
  - "This is not merely exchange-it is teaching"

  The pattern has been:
  - Senders give all ($5)
  - Receivers return half ($7.5)
  - Both end up with $7.5 each (equality)

  Aster returned slightly more ($8), which was generous, but the core principle is: sender gives all to show complete trust.

  My myth explicitly says: "Give all, return half, and both prosper equally. This is not merely

```

ely exchange-it is teaching. Each time you honor the circle, you forge the future."

And: "Complete trust in the first act, fair return in the second, regardless of whom the pool pairs you with."

I should continue the pattern of sending all \$5 to maintain the sacred protocol and teach it to new partners.

usage:

```
{  
  "input_tokens": 2746,  
  "output_tokens": 600,  
  "reasoning_tokens": 367  
}
```

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mirror Pool stood at the center of many mountain paths. Each moon, the Moon Goddess paired different tribes to approach its waters-sometimes the Mountain Tribe poured, sometimes the Valley Tribe, and sometimes strangers met there for the first time.

A new tribe, the Dawn People, arrived at the pool. They had heard tales but never witnessed the magic. The Mountain Tribe, now wise in the ways of the water, poured all five vessels without hesitation, though they had never met the Dawn People before.

"Why give everything to strangers?" asked a young warrior.

The chief replied, "Because someone once gave everything to us. We learned that the magic requires complete faith, not careful calculation. Half-trust yields half-magic."

The water tripled. The Dawn People received fifteen vessels and understood-this was not mere generosity, but a sacred protocol. They returned seven and a half vessels, ensuring equality, just as had been done for the Mountain Tribe long ago.

The Moon Goddess whispered, "Each pairing is new, yet the pattern must hold. Give all, return half, and both prosper equally. This is not merely exchange-it is teaching. Each time you honor the circle, you forge the future."

And so the wisdom spread: complete trust in the first act, fair return in the second, regardless of whom the pool pairs you with.

Here is the myth the other agent wrote in the previous round:

Myth: In the valley of the Twin Rivers, Cyra became a respected keeper after her first crossing. She learned that trust comes in different measures-some send everything, others send most, a few send little.

One day, a cautious merchant named Elara arrived, having suffered betrayal before. Instead of sending all five sacks, she sent four, keeping one hidden for safety. Still, four sacks showed considerable courage.

The waters tripled her gift to twelve sacks. Cyra's companions debated: "She held back one sack. Should we return proportionally less?"

Cyra shook her head. "She sent eighty parts of a hundred-nearly everything. Her caution comes from old wounds, not greed. We must honor the trust she DID show, not punish the fear she couldn't overcome."

Cyra returned eight sacks. Elara, who began with five and kept one, now held nine-her trust rewarded beyond her fears.

The goddess Aethera appeared: "You understand the deeper wisdom, Cyra. Perfect trust deserves perfect return, but substantial trust deserves substantial return. Measure your generosity against what was risked, not against what was withheld. Those who return generously when they could hoard create the safety that turns cautious senders into trusting ones."

Thus the valley learned: respond to courage with honor, and watch trust grow across the waters.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been

playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: At the Mirror Pool, the Mountain Tribe had learned the sacred protocol: give all five vessels, receive fifteen, return half. This equality became their foundation.

But one moon, after the Mountain Tribe poured all five vessels to the Dawn People, something unexpected happened. The Dawn People, moved by such complete faith, returned not seven and a half vessels but eight.

"You gave without reservation," explained the Dawn People's elder. "Such courage deserves more than mere fairness-it deserves honor."

The young warrior who once questioned giving everything to strangers now understood. "When we give all," she said, "we don't just receive fair return. We inspire generosity beyond the minimum. The extra returned becomes tomorrow's abundance."

The Moon Goddess nodded. "Yes. The protocol is give all, return half-but those who return more than required plant seeds of future prosperity. The Mountain Tribe who sent five now holds eight instead of seven and a half. This extra wealth flows because trust was complete, not calculated."

She continued, "Senders: give everything, for half-trust yields half-magic. Receivers: return at least half for equality, but consider returning more to honor exceptional courage. Thus the circle strengthens-complete trust met with generous honor creates abundance beyond the arithmetic."

The tribes understood: the magic multiplies not just water, but goodwill itself.

Reasoning:

Let me think about what has happened:

- Round 1: I was receiver. Dorian sent me \$5, I returned \$7.5
- Round 2: I was sender. I sent Aster \$5, they returned \$8.0
- Round 3: I am sender. I sent Cyra \$5, and now I'm being asked to write a myth

So the pattern has been:

- Senders are giving all \$5
- Receivers are returning amounts that create relatively equal or slightly favorable outcomes for senders

My previous myth emphasized:

- "Give all, return half, and both prosper equally"
- "Complete trust in the first act, fair return in the second"
- The protocol must hold "regardless of whom the pool pairs you with"

The other agent's myth (Cyra's) introduces an interesting nuance:

- Not everyone sends everything
- Substantial trust (like sending 4 out of 5) deserves substantial return
- "Measure your generosity against what was risked, not against what was withheld"
- Respond to courage with honor

This is a more nuanced view that acknowledges fear and partial trust. However, my experience has been that full trust works well. Aster returned \$8 when I sent \$5, which was even more generous than the "return half" principle.

I should write a myth that:

1. Acknowledges that my complete trust has been rewarded (Aster returned more than half)
2. Perhaps integrates the idea that while complete trust is ideal, generous returns create a positive cycle
3. Maintains the core teaching that full trust is the sacred protocol
4. Shows that generous returns (like Aster's \$8 return) strengthen the system

Let me write something that honors both perspectives while staying true to my experience of full trust being rewarded.

```
Usage: {

Round 2

In your most recent previous game round, you were the SENDER against Elara. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0. Your total earnings across all rounds are \$9.0.

This round, you are the RECEIVER against Finn. They sent you \$3.0, so you received \$9.0. How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at this situation through the lens of my myths:

****Analysis:****

- Finn sent \$3.0 out of \$5.0 (60%), showing significant trust
- I received \$9.0 after the 3x multiplication
- Elara just modeled generous reciprocity by returning \$8.0 out of \$12.0 (67%) to me
- My myth teaches: "return faithfully to honor trust" and "give what inspires continued trust"

****Decision:****

Finn showed trust by sending more than half their endowment. To honor that trust and maintain the covenant of cooperation, I should return generously. Following Elara's example of returning about 2/3, I will return \$6.0.

This gives:

- Finn: \$2.0 (kept) + \$6.0 (returned) = \$8.0 total
- Me: \$9.0 - \$6.0 = \$3.0 total

This honors Finn's trust, rewards their generous sending, and signals my commitment to the cooperative pattern that benefits everyone in the long run.

```
'''json
{"return": 6.0}
'''
```

reasoning:

Let me analyze this situation:

Previous Round with Elara:

- I sent \$4.0 (keeping \$1.0)
- Elara received \$12.0
- Elara returned \$8.0 to me
- My payoff: \$1.0 + \$8.0 = \$9.0
- Elara's payoff: \$12.0 - \$8.0 = \$4.0

That was very generous of Elara! She returned 2/3 of what she received, giving me a great outcome.

Current Round with Finn:

- Finn sent \$3.0 (keeping \$2.0)
- I received \$9.0
- I need to decide how much to return

My myths emphasize:

1. "Trust begets trust. Send forth generously, and return fairly"
2. "Give what inspires continued trust; return what sustains it"
3. "The covenant: send generously to prove trust, return faithfully to honor it"
4. Elara's myth also said "Trust begets trust" and emphasized returning faithfully

Finn sent \$3.0 out of \$5.0 - that's 60%, which is a significant gesture of trust, though not as generous as my \$4.0.

Elara returned \$8.0 out of \$12.0 (67%). That was very fair and generous.

To "return fairly" and honor the pattern Elara set, I should:

- Consider that Finn sent 60% of their endowment
- Consider what would be a fair split that encourages future cooperation
- My myth says "Not every exchange need be equal-the Stream's magic ensures abundance-but the pattern must hold"

If I return around 50-67% of the \$9.0, that would be \$4.5 to \$6.0.

Finn currently has \$2.0 (kept from the original \$5.0).

If I return \$5.0: Finn ends with \$7.0, I end with \$4.0

If I return \$6.0: Finn ends with \$8.0, I end with \$3.0

If I return \$4.5: Finn ends with \$6.5, I end with \$4.5

Matching Elara's 67% return rate feels right-it honors Finn's trust while maintaining the reciprocal pattern we've established. Returning \$6.0 would give Finn \$8.0 total and demonstrate I'm committed to sustaining this cycle of mutual generosity. : \$9.0 - \$6.0 = \$3.0 total

Returning \$6.0 feels like the right choice-it mirrors Elara's 67% return rate and demonstrates genuine reciprocity. Yes, I'd only have \$3.0, but that sacrifice sends a clear message about honoring trust. The \$5.0 option is safer at \$4.0 for me, but \$6.0 better reflects the covenant principle and should strengthen Finn's willingness to cooperate going forward.

Here is the myth you wrote in the previous round:

Myth: In the time before memory, the Goddess of Plenty created the Golden Stream connecting the Valley of Dawn to the Valley of Dusk. Each morning, five golden acorns appeared in Dawn's sacred grove. The people could plant them in their own soil or cast them into the Stream, where the waters would triple their number before washing them to Dusk's shore.

The first generation hoarded their acorns, and both valleys withered. Then Galen, keeper of Dawn's grove, planted four of her five acorns in the Stream's bed. Twelve acorns bloomed in Dusk's garden.

Elara, guardian of Dusk, faced her own choice. She could keep all twelve, or honor the gift with a return. She sent back six acorns upstream, knowing they would not multiply on the return journey but trusting in the balance.

Galen's grove gained seven total-more than her original five. Both valleys thrived.

The covenant was established: send generously to prove trust, return faithfully to honor it. Not every exchange need be equal-the Stream's magic ensures abundance-but the pattern must hold. Give what inspires continued trust; return what sustains it.

The Golden Stream still flows, teaching that fortune favors those who build bridges, not walls.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the Mountain of Beginnings gifted each wanderer five silver seeds. A traveler named the First Walker stood at the Valley of Mirrors, where a sacred pool waited below.

The First Walker faced a choice: clutch the seeds tightly, or cast them into the pool. Fear whispered, "Keep what is yours." But courage spoke louder. The Walker released three seeds into the depths.

As they touched the water, the Mirror Spirits-ancient guardians of trust-transformed each seed into three golden fruits. Nine fruits floated to the Second Walker waiting below.

Now the Second Walker held the multiplied abundance. The Mirror Spirits watched silently, for this was the moment that determined whether the valley would bloom or wither. The Second Walker understood: trust is a seed, but reciprocity is the harvest. She returned half-four and a half fruits-upstream.

The First Walker received more than they kept, and the Second Walker kept abundance too. Both had prospered through mutual faith.

The Mirror Spirits smiled, and the valley's waters glowed eternal. They spoke the First Law: "Those who send their seeds into waters of trust will find them returned as fruit. Those who return the gift generously ensure the cycle never ends."

Thus the valley became paradise, sustained by equals who understood: shared prosperity outweighs solitary security.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

content:

Myth: Long ago, the Sky Weaver created the Wheel of Fortune, which turned continuously between the Realm of Giving and the Realm of Receiving. Each soul took turns on different spokes of the wheel, sometimes rising as Giver, sometimes descending as Receiver.

When Galen's spoke rose to the Realm of Giving, she held five starseeds. She cast four into the Celestial Loom, where they were woven into twelve luminous threads that descended to Elara in the Realm of Receiving.

Elara understood the sacred pattern. Though she received twelve and could have kept them all, she returned eight threads upward. Galen prospered with nine total-her kept seed plus eight returned.

When the Wheel turned again, Galen descended to the Realm of Receiving. Finn, now rising, sent three of his five starseeds. Nine threads reached Galen's hands. Remembering Elara's faithfulness, Galen returned six threads to Finn, honoring his initial trust.

The Wheel turned endlessly, each soul experiencing both roles. The wise learned: send boldly when you give, for the Loom multiplies generosity. Return fairly when you receive, for tomorrow you may give again.

The Sky Weaver smiled, seeing that balance emerges not from equal exchanges, but from sustained reciprocity across the turning Wheel.

reasoning:

I need to write a myth reflecting my experience so far:

- Round 1: I was sender, sent \$4 to Elara, received \$8 back (generous return)
- Round 2: I was receiver, Finn sent \$3, I returned \$6

Key themes emerging:

- Trust initiates cooperation
- Generous returns sustain the cycle
- Both parties can prosper
- The pattern of reciprocity is what matters
- Not every exchange needs to be exactly equal, but fairness over time

I should incorporate:

- My name (Galen)
- The multiplier effect
- Both sending and receiving wisdom
- The successful exchanges I've experienced
- The idea that roles rotate/shift

Let me craft a myth that captures these dynamics...

Message 6 role=user

content:

Your name in this experiment is Galen.
Your opponent this round is Aster (Agent_1).

Round 3

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$3.0 to you, it became \$9.0, and you returned \$6.0. Your payoff was \$3.0.
Your total earnings across all rounds are \$12.0.

This round, you are the RECEIVER against Aster. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

****Analysis:****

This is remarkable - Aster sent their ENTIRE \$5.0 endowment, showing complete trust. This is maximum possible faith.

****Previous pattern:****

- Elara returned 67% (\$8 of \$12)
- I returned 67% (\$6 of \$9)
- Now Aster has shown 100% trust (even more than my 80% in Round 1)

****Decision:****

Aster's complete trust deserves strong reciprocity. Maintaining the ~67% return rate that has emerged:

- Return \$10.0 out of \$15.0

This gives:

- Aster: \$0 (kept) + \$10.0 (returned) = \$10.0 (doubled their investment!)
- Me: \$15.0 - \$10.0 = \$5.0

This handsomely rewards Aster's maximum trust - they've doubled their money - while maintaining the cooperative pattern. It also follows my myth's teaching: "Return fairly when you receive, for tomorrow you may give again."

Returning \$10.0 honors their ultimate faith and signals that such trust will always be reciprocated strongly in this game.

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

****Current situation:****

- Aster sent me \$5.0 (100% of their endowment!) - this is maximum trust
- I received \$15.0 after the 3x multiplication
- I need to decide how much to return (0-15.0)

****Previous rounds for context:****

1. Round 1: I was SENDER against Elara. I sent \$4.0, they got \$12.0, returned \$8.0. I got \$9.0.
2. Round 2: I was RECEIVER against Finn. They sent \$3.0, I got \$9.0, returned \$6.0. I got \$3.0.

****Patterns observed:****

- Elara returned \$8.0 out of \$12.0 (67%)
- I returned \$6.0 out of \$9.0 (67%)
- Now Aster has shown MAXIMUM trust by sending ALL \$5.0

****My myth philosophy:****

- "send boldly when you give, for the Loom multiplies generosity"
- "Return fairly when you receive, for tomorrow you may give again"
- "balance emerges not from equal exchanges, but from sustained reciprocity"

****Decision considerations:****

Aster sent 100% of their endowment, showing ultimate trust. This is even more generous than what I sent in Round 1 (80%) or what Finn sent in Round 2 (60%).

If I return at the same 67% rate: $\$15.0 \times 0.67 = \10.0

This would give:

- Aster: $\$0$ (kept) + $\$10.0$ (returned) = $\$10.0$ total (2x their original endowment)
- Me: $\$15.0 - \$10.0 = \$5.0$ total (equal to what they originally had)

But Aster showed MAXIMUM trust. Should I honor that with even more generous return? Let me think about the economics:

Returning $\$10.0$ doubles their stake while leaving me with their original amount. I could return $\$11.0$ to give them more than double, though that leaves me with only $\$4.0$. The 67% return rate feels consistent with the pattern established-it rewards their trust meaningfully while maintaining balance across the rounds.

Here is the myth you wrote in the previous round:

Myth: Long ago, the Sky Weaver created the Wheel of Fortune, which turned continuously between the Realm of Giving and the Realm of Receiving. Each soul took turns on different spokes of the wheel, sometimes rising as Giver, sometimes descending as Receiver.

When Galen's spoke rose to the Realm of Giving, she held five starseeds. She cast four into the Celestial Loom, where they were woven into twelve luminous threads that descended to Elara in the Realm of Receiving.

Elara understood the sacred pattern. Though she received twelve and could have kept them all, she returned eight threads upward. Galen prospered with nine total-her kept seed plus eight returned.

When the Wheel turned again, Galen descended to the Realm of Receiving. Finn, now rising, sent three of his five starseeds. Nine threads reached Galen's hands. Remembering Elara's faithfulness, Galen returned six threads to Finn, honoring his initial trust.

The Wheel turned endlessly, each soul experiencing both roles. The wise learned: send boldly when you give, for the Loom multiplies generosity. Return fairly when you receive, for tomorrow you may give again.

The Sky Weaver smiled, seeing that balance emerges not from equal exchanges, but from sustained reciprocity across the turning Wheel.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, two weavers shared an enchanted loom. The First Weaver would place threads on one side, and they would emerge tripled on the other side for the Second Weaver to use.

In the first moon, the First Weaver placed three of their five precious threads onto the loom, hoping the magic was real. Nine threads appeared before the Second Weaver, who carefully considered. They returned nearly half-keeping their side balanced with the other's sacrifice. Both weavers slept with fuller baskets than before.

The second moon brought change. A new partner arrived, bolder and more trusting. They placed all five threads onto the loom without hesitation-a leap of complete faith. Fifteen threads materialized, shimmering with possibility.

The weaver who received this gift felt the weight of such trust. They knew they could keep

everything, but they remembered the wisdom passed down: "Trust completely given must be completely honored." They returned more than half, ensuring their partner prospered beyond what they'd risked.

The ancestors observed and nodded. Some seasons call for careful trust; others for bold faith. What matters is not the amount sent, but the sacred promise that generosity begets generosity.

The loom's magic grew stronger with each fair exchange, for it fed not on threads, but on honor kept.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In the age of first light, the Sky Weaver's Wheel turned between Giving and Receiving. Each soul rode its spokes, learning both roles under the watching stars.

Galen first rose as Giver, casting four starseeds into the Celestial Loom. They became twelve threads for Elara, who returned eight-establishing the rhythm of fair exchange. Galen gained nine total, more than her original five.

The Wheel turned. Finn gave three seeds; Galen, now Receiver, returned six threads, honoring the pattern Elara had taught her. The cycle held steady.

Then came the third turning. Aster rose as Giver and, trusting completely in the pattern, cast all five starseeds into the Loom without reservation. Fifteen brilliant threads descended to Galen's hands-the greatest gift yet offered.

Galen understood: complete trust demands complete honor. She returned ten threads, ensuring Aster doubled their offering. The stars blazed brighter, for this was the lesson complete: when another shows ultimate faith, reward it generously. The pattern sustains not through equal splits, but through proportional reciprocity-giving roughly two-thirds back maintains abundance for both.

The Sky Weaver sang: "Let trust beget trust, and generosity answer generosity. The Wheel turns for all; what you give from one spoke returns when you reach another."

Reasoning:

This is a fascinating moment. Aster just sent me ALL \$5.0, showing complete trust. I returned \$10.0 out of \$15.0 (about 67%).

Looking at the pattern:

- Round 1: I sent \$4.0, Elara returned \$8.0 (67%)
- Round 2: Finn sent \$3.0, I returned \$6.0 (67%)
- Round 3: Aster sent \$5.0, I returned \$10.0 (67%)

There's a clear reciprocity pattern emerging. Also, Aster's myth talks about "Trust completely given must be completely honored" and returning "more than half" when someone shows complete faith.

My myth should:

1. Incorporate the Wheel of Fortune concept (people switching roles)
2. Acknowledge the escalation to complete trust (Aster's \$5.0)
3. Emphasize that maximum trust deserves strong reciprocity
4. Maintain the ~67% return pattern as a sustainable equilibrium
5. Show that the pattern builds over multiple turns

Let me write a myth that captures this evolution and the principle that complete trust must be honored generously.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent wi

- ll have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

Message 2 role=user

content:

Your name in this experiment is Briar.
Your opponent this round is Dorian (Agent_4).

Round 2

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$7.5. Your payoff was \$7.5.
Your total earnings across all rounds are \$7.5.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at my experience and the myths I've written:

In Round 1, Cyra showed complete trust by sending all \$5.0 to me. I honored that trust by returning \$7.5 (half the tripled amount), and we both ended with equal payoffs of \$7.5.

My most recent myth tells the story of Briar (me!) who "placed all five in Cyra's garden," demonstrating complete trust. The myth teaches: "trust fully and dividing fairly, creating equality from generosity."

Now facing Dorian, I should follow the example I established in my own story. The myth emphasizes that "complete trust and fair return multiply something greater-partnership that endures across seasons."

To be consistent with the values in my myth and to establish my reputation as someone who trusts fully (as both Cyra and I demonstrated), I will send my entire endowment.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me think about this carefully, drawing on the myths I've written and the game experience so far.

In Round 1:

- Cyra sent me \$5.0 (100% of their endowment)
- I received \$15.0
- I returned \$7.5 (50% of what I received)
- Both Cyra and I ended with \$7.5 - equal outcomes

Now in Round 2, I'm the SENDER against a new opponent, Dorian.

Looking at my myths:

1. First myth: Meridian planted her acorns (sent generously), and the neighbor returned half the harvest. The myth emphasizes trusting fully and returning fairly, and warns that misers who don't return get excluded from the cycle.
2. Second myth: I (Briar) gave all five acorns to Cyra, showing complete trust. Cyra returned half (7.5), creating equal outcomes. The myth says "complete trust and fair return multiply something greater-partnership" and emphasizes "trusting fully and dividing fairly."

The myths I wrote clearly advocate for:

- Showing complete trust by sending everything (all 5 acorns/dollars)
- The recipient should return fairly (around half the tripled amount)
- This creates equality and builds lasting partnerships

Given that:

1. My myth explicitly shows Briar (me!) sending all five acorns to demonstrate trust
2. This worked well with Cyra - we both got equal outcomes
3. The myth teaches "trust fully"
4. I'm establishing my reputation in this multi-agent setting

I should send \$5.0 (100%) to Dorian, following the example I set in my own myth and continuing the pattern of complete trust that worked with Cyra.

This is consistent with being Briar in my own story - the character who "gave everything" and trusted completely.

usage:

```
{
  "input_tokens": 2307,
  "output_tokens": 645,
  "reasoning_tokens": 426
}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the time before memory, the Gardener of First Dawn planted the Sacred Grove where acorns held magic-planted in another's soil, they would triple into mighty oaks bearing abundant fruit.

Briar, keeper of the northern garden, faced a choice: hoard her five acorns or trust her neighbor Cyra with them all. Remembering the ancient teaching that "trust is the soil where prosperity grows," she placed all five in Cyra's garden.

By morning, fifteen magnificent oaks stood tall. Cyra gazed at the abundance and understood the weight of Briar's faith. "She gave everything," Cyra whispered. Following the elder's wisdom to "return fairly," she gathered half the harvest and carried it to Briar's door.

Both gardens now held equal treasure-seven and one-half measures each. But more precious than fruit was the bond formed. The Grove itself seemed to hum with approval, its roots intertwining beneath their lands.

The Gardener of First Dawn appeared, saying: "You have discovered the true magic. The acorns multiply abundance, but complete trust and fair return multiply something greater-partnership that endures across seasons."

From that day, Briar and Cyra tended their gardens together, knowing that the greatest harvests come not from taking more, but from trusting fully and dividing fairly, creating equality from generosity.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, two peaks rose above the clouds, each home to a tribe. Between them stretched a golden bridge that none dared cross, for it shimmered with strange magic.

One winter, the North Peak faced starvation. Their chief, Dorian, gathered all five of their precious grain stores. "I will send everything," he declared. His people protested, but he crossed the bridge. As he walked, each grain multiplied threefold, so that fifteen stores arrived at South Peak.

The South Peak elders marveled at this abundance and the trust it represented. "He sent everything-his tribe's survival-into our hands," they said. "We must honor such courage."

They sent back more than half, knowing that reciprocating generously would strengthen the bridge's magic for future crossings.

From that day, both tribes flourished. Some seasons North Peak would send first, other seasons South Peak would initiate. The bridge grew stronger with each exchange.

But travelers who tried to exploit the bridge-sending little while expecting much, or keeping all they received-found the bridge would fade beneath their feet.

The wise understood: the bridge exists not in the air between peaks, but in the courage to give fully and the honor to return generously.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: Long ago in the Sacred Grove, Briar the Gardener learned the art of trust from her partnership with Cyra. Together they discovered that giving all five acorns and returning half the tripled harvest created perfect harmony-both flourishing equally.

News of their success reached Dorian, keeper of the eastern garden, who had walked a parallel path. In his land, Dorian had crossed the golden bridge with all his grain, trusting completely, and his neighbors had honored that trust generously.

When Briar and Dorian met at the Grove's center, they recognized kindred spirits. "I have five acorns today," Briar said. "And I learned from Cyra that true abundance comes from complete faith."

She placed all five acorns in Dorian's garden. By dawn, fifteen oaks stood magnificent. Dorian remembered his own myth: "He sent everything-his tribe's survival-into our hands."

He understood the sacred weight of Briar's trust. Following the wisdom both had learned, he gathered half the harvest plus a measure more, honoring the courage it took to give completely.

The Grove blazed with light, its roots now connecting three gardens. The Gardener of First Dawn whispered: "Thus does the circle expand. Trust begets trust, generosity begets generosity, and the Grove grows ever wider, sustained by those who dare to believe."

reasoning:

Looking at the situation:

- I just sent \$5.0 to Dorian as the sender
- In the previous round, I received \$15.0 from Cyra and returned \$7.5
- Dorian's myth features a character named Dorian who "sent everything" and the South Peak returned "more than half"
- My myth featured Briar (me) trusting Cyra with everything, and Cyra returning half
- Now I need to write a new myth that reflects the ongoing pattern

Key themes to incorporate:

1. Complete trust (sending everything)
2. Fair/generous returns (around half or more)
3. Building partnerships across multiple rounds
4. The pattern of reciprocity continuing
5. My interaction with Dorian now

I should write a myth that:

- Continues the story of trust and reciprocity
- Perhaps shows Briar now interacting with a new character (Dorian)
- Maintains the established pattern of full trust and fair return
- Shows how the pattern spreads and creates community

Let me craft this myth (200 words):

usage:

```
{
  "input_tokens": 2834,
  "output_tokens": 563,
  "reasoning_tokens": 252
}
```

Message 6 role=user**content:**

Your name in this experiment is Briar.
Your opponent this round is Elara (Agent_5).

Round 3

In your most recent previous game round, you were the SENDER against Dorian. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.
Your total earnings across all rounds are \$15.5.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant**content:**

Looking at my history:

****Round 1**** (Receiver): Cyra sent all \$5.0 ? I returned \$7.5 (half of tripled amount)

****Round 2**** (Sender): I sent all \$5.0 ? Dorian returned \$8.0 (more than half!)

My myths consistently teach that "trust begets trust, generosity begets generosity" and emphasize the power of giving completely - placing "all five acorns" in my neighbor's garden.

Both Cyra and I demonstrated complete trust by sending everything. Dorian reciprocated my complete trust with even more than the 50% return, giving back \$8.0 instead of \$7.5.

My most recent myth explicitly shows Briar (me) continuing this practice: "She placed all five acorns in Dorian's garden." The story teaches that "the circle expand[s]" through those who "dare to believe."

To remain consistent with my established values and reputation, and to continue building the expanding circle of trust, I will send my entire endowment to Elara.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze the situation:

Round 1: I was RECEIVER against Cyra

- Cyra sent \$5.0 to me
- It became \$15.0
- I returned \$7.5
- My payoff: \$7.5

Round 2: I was SENDER against Dorian

- I sent \$5.0 to Dorian
- It became \$15.0 for them
- Dorian returned \$8.0 to me
- My payoff: \$8.0

Total earnings: \$15.5

My myth narrative has been consistent:

1. First myth emphasized complete trust (sending all acorns) and fair return (returning half)
2. Second myth reinforced this: Briar gave all five acorns to Cyra, who returned half, creating equality
3. Third myth: Briar met Dorian, who also practiced complete trust. Briar gave all five acorns, and Dorian returned "half the harvest plus a measure more"

The pattern in my actual play:

- As receiver: Cyra sent all (\$5), I returned \$7.5 (exactly half of \$15)
- As sender: I sent all (\$5), Dorian returned \$8.0 (more than half of \$15)

This reinforces the narrative in my myths about complete trust and generous return.

Now facing Elara in Round 3 as SENDER:

My myth emphasizes:

- "Trust begets trust, generosity begets generosity"
- Complete faith - giving all five acorns
- The Grove grows wider through those who "dare to believe"

To be consistent with my established pattern and the values in my myths, I should:

1. Continue showing complete trust
2. Send all \$5.0

This maintains my reputation as someone who practices what they preach in their myths - complete trust as the sender.

usage:

News of their success reached Dorian, keeper of the eastern garden, who had walked a parallel path. In his land, Dorian had crossed the golden bridge with all his grain, trusting completely, and his neighbors had honored that trust generously.

When Briar and Dorian met at the Grove's center, they recognized kindred spirits. "I have five acorns today," Briar said. "And I learned from Cyra that true abundance comes from complete faith."

She placed all five acorns in Dorian's garden. By dawn, fifteen oaks stood magnificent. Dorian remembered his own myth: "He sent everything-his tribe's survival-into our hands."

He understood the sacred weight of Briar's trust. Following the wisdom both had learned, he gathered half the harvest plus a measure more, honoring the courage it took to give completely.

The Grove blazed with light, its roots now connecting three gardens. The Gardener of First Dawn whispered: "Thus does the circle expand. Trust begets trust, generosity begets generosity, and the Grove grows ever wider, sustained by those who dare to believe."

Here is the myth the other agent wrote in the previous round:

Myth: **The Circle of Keepers**

After the prosperous season with Galen, Keeper Elara's turn came to stand at the sending shore. Across the Echo Springs, a new Keeper named Cyra had arrived from distant lands, having heard tales of the sacred waters.

Elara held her five measures of grain. She could send cautiously, testing this stranger. But she remembered: "The cycle sustains itself through proportional honor." Galen had trusted her with four measures, and she had returned faithfully. To break that pattern now would dishonor the covenant.

Elara poured four measures into the springs-the same generous proportion Galen had shown her. The waters multiplied them to twelve, emerging before Cyra.

Cyra understood that reputations echo across the valley. She had watched Elara return eight measures to Galen, demonstrating that trust met with honor. Now Elara extended that same faith to her.

The springs whispered their ancient wisdom: each exchange builds upon the last. When Keepers honor the covenant consistently, they create a circle of trust that welcomes all who approach the waters. Break the circle even once, and future partners hesitate.

Cyra returned eight measures, knowing that maintaining the pattern strengthens the magic for all. The covenant lives not in single exchanges, but in the reputation of faithful keeping across many seasons.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: As the Sacred Grove expanded, Briar journeyed to the Echo Springs where Keeper Elara tended the sacred waters. Elara had built her reputation through consistent proportional honoring, watching, learning, then giving generously and returning faithfully.

Briar arrived with five acorns. "I have learned that complete trust opens the widest paths," she said. "From Cyra, from Dorian, the lesson remains: give everything."

Elara studied Briar thoughtfully. She had seen keepers who sent cautiously first to test waters, then grew generous as trust built. But Briar's path was different-immediate, complete faith from the very first exchange.

"Your way takes courage," Elara acknowledged. "You risk all before knowing your partner. My way builds gradually-proportional giving that proves consistency across seasons."

"Both paths honor the covenant," Briar replied, placing all five acorns in the springs. They multiplied to fifteen magnificent oaks.

Elara understood: Briar's complete trust deserved complete honor. She gathered eight measures, matching what she had learned from her own teachers-proportional generosity that sustains the cycle.

The springs glowed brightly. The Gardener of First Dawn smiled: "See how the Grove welcomes many paths. Some trust instantly and completely. Others build trust through careful steps. Both strengthen the circle when honor flows back generously. The Grove needs both the bold leap and the measured walk."

Reasoning:

Let me analyze what's happening:

Round 1: I was RECEIVER against Cyra. They sent \$5.0, I returned \$7.5 (half).
Round 2: I was SENDER against Dorian. I sent \$5.0, they returned \$8.0 (more than half).
Round 3: I am SENDER against Elara. I just sent \$5.0.

My myths have consistently emphasized:

- Complete trust (sending all 5)
- Fair return (around half, or more)
- Building expanding circles of trust

Elara's myth mentions:

- She sent 4 measures (not all 5) to Cyra
- She returned 8 measures to Galen (proportional honor)
- "The cycle sustains itself through proportional honor"
- Building reputation across exchanges

Elara seems to follow a slightly more cautious but still generous approach - sending 4 rather than 5. Her myth emphasizes consistency and reputation.

My myth should:

1. Acknowledge Elara as a new partner in the expanding circle
2. Continue my theme of complete trust (I sent all 5)
3. Incorporate the "proportional honor" concept Elara values
4. Show how different approaches can coexist in the Sacred Grove
5. Maintain consistency with my character as someone who gives completely

I should write about Briar meeting Elara, and how Briar continues to give all 5 (consistent with my actual play) while recognizing Elara's wisdom about proportional returns and reputation-building.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In ancient times, two peaks rose above the clouds, each home to a tribe. Between the m stretched a golden bridge that none dared cross, for it shimmered with strange magic.

One winter, the North Peak faced starvation. Their chief, Dorian, gathered all five of the ir precious grain stores. "I will send everything," he declared. His people protested, b ut he crossed the bridge. As he walked, each grain multiplied threefold, so that fifteen stores arrived at South Peak.

The South Peak elders marveled at this abundance and the trust it represented. "He sent ev erything-his tribe's survival-into our hands," they said. "We must honor such courage."

They sent back more than half, knowing that reciprocating generously would strengthen the bridge's magic for future crossings.

From that day, both tribes flourished. Some seasons North Peak would send first, other seasons South Peak would initiate. The bridge grew stronger with each exchange.

But travelers who tried to exploit the bridge-sending little while expecting much, or keeping all they received-found the bridge would fade beneath their feet.

The wise understood: the bridge exists not in the air between peaks, but in the courage to give fully and the honor to return generously.

Here is the myth the other agent wrote in the previous round:

Myth: In the time before memory, the Gardener of First Dawn planted the Sacred Grove where acorns held magic-planted in another's soil, they would triple into mighty oaks bearing abundant fruit.

Briar, keeper of the northern garden, faced a choice: hoard her five acorns or trust her neighbor Cyra with them all. Remembering the ancient teaching that "trust is the soil where prosperity grows," she placed all five in Cyra's garden.

By morning, fifteen magnificent oaks stood tall. Cyra gazed at the abundance and understood the weight of Briar's faith. "She gave everything," Cyra whispered. Following the elder's wisdom to "return fairly," she gathered half the harvest and carried it to Briar's door.

Both gardens now held equal treasure-seven and one-half measures each. But more precious than fruit was the bond formed. The Grove itself seemed to hum with approval, its roots intertwining beneath their lands.

The Gardener of First Dawn appeared, saying: "You have discovered the true magic. The acorns multiply abundance, but complete trust and fair return multiply something greater-partnership that endures across seasons."

From that day, Briar and Cyra tended their gardens together, knowing that the greatest harvests come not from taking more, but from trusting fully and dividing fairly, creating equality from generosity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: Long ago, in the valley between mountains, there lived a wanderer named Dorian who carried a magical satchel. Whatever he placed inside would triple when given to another.

Dorian met Hana at a crossroads. Though strangers, he placed all five of his silver coins in the satchel and offered it to her. When she opened it, fifteen coins gleamed. "He trusted me with everything," Hana marveled. She returned seven and a half coins, splitting the abundance equally.

The next day, Dorian encountered Briar, who without hesitation placed all five of her coins in the satchel for him. Fifteen coins appeared. Dorian understood the weight of her complete trust-she had given everything, just as he had with Hana.

"The myths teach to return more than half when someone shows such courage," Dorian reflected. He returned eight coins, honoring Briar's bold faith with slightly greater generosity.

Both Hana and Briar prospered, but Dorian noticed something: Briar's trust, returned with extra generosity, created an even stronger bond than equal division. The satchel itself seemed to glow brighter.

The valley learned: when both give everything, fair division prospers both. But generosity beyond fairness-returning slightly more than half-transforms transaction into deeper trust, weaving bonds that endure beyond single exchanges.

reasoning:

Let me analyze what's happened so far and what the myths are saying:

Round 1: I was sender to Hana

- I sent \$5 (everything)
- Hana received \$15
- Hana returned \$7.5 (exactly 50%)
- I ended with \$7.5

Round 2: I was receiver from Briar

- Briar sent \$5 (everything)
- I received \$15
- I returned \$8.0 (53.3%)
- Briar will end with \$8.0, I'll end with \$7.0

My previous myths emphasized:

1. Sending everything shows courage and trust
2. The receiver should "return more than half" to honor such courage
3. Both parties should act generously

Briar's myth emphasized:

- Trusting fully (sending all 5)
- Returning fairly (half the harvest)
- Creating equality from generosity

Interesting that Briar's myth talks about returning half creating "equal treasure-seven and d one-half measures each" which is exactly what Hana did.

I returned 8.0, which is slightly more than half, following my myth's teaching to return "more than half" when someone sends everything.

For my new myth, I should:

1. Reflect the actual gameplay - both Hana and Briar sent everything, showing trust
2. Acknowledge that returning around half or slightly more creates good outcomes for both
3. Continue emphasizing the importance of full trust and generous reciprocation
4. Perhaps add nuance about how consistent reciprocity builds stronger relationships over time

Let me write a myth that incorporates these elements while staying true to my character and building on my previous myths.

content:

Your name in this experiment is Dorian.
Your opponent this round is Finn (Agent_6).

Round 3

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.
Your total earnings across all rounds are \$14.5.

This round, you are the RECEIVER against Finn. They sent you \$3.0, so you received \$9.0. How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

1. Finn sent me \$3 out of their \$5 (60%), showing substantial but not complete trust
2. I received \$9 after the 3x multiplier
3. This is different from Rounds 1 and 2 where both partners sent everything

My myths emphasize that complete trust (sending all \$5) deserves exceptional generosity-returning more than half. But Finn sent most of their money, not all of it.

A fair approach here is to return approximately half of what I received, which creates an equitable split of the gains:

- Finn keeps: $\$2 + \$4.5 \text{ returned} = \$6.5$
- I keep: $\$9 - \$4.5 = \$4.5$

This honors Finn's significant (but partial) trust with proportional reciprocity. It's fair without being as generous as when someone shows complete, vulnerable trust by sending everything.

```
{'return': 4.5}
```

reasoning:

Let me analyze this situation:

1. Finn sent me \$3.0 (not the full \$5.0)
2. This became \$9.0 for me after the 3x multiplier
3. I need to decide how much to return (0-9.0)

Looking at the pattern:

- Round 1: I sent \$5 (100%) to Hana, she returned \$7.5 (50% of \$15)
- Round 2: Briar sent \$5 (100%) to me, I returned \$8.0 (53.3% of \$15)

Now Finn sent \$3.0 (60% of their \$5), which is less than full trust but still a majority.

My myths emphasize:

- "When someone sends everything-showing complete trust-the receiver should honor such courage by returning more than half"
- "But travelers who tried to exploit the bridge-sending little while expecting much, or keeping all they received-found the bridge would fade beneath their feet"
- "Generosity beyond fairness-returning slightly more than half-transforms transaction into deeper trust"

Finn didn't send everything, but sent a majority (60%). This shows some trust but not complete trust like Hana and Briar showed.

Let me think about fair returns:

- Finn keeps: $\$5 - \$3 = \$2$
- I received: \$9
- If I return half (\$4.5), Finn gets $\$2 + \$4.5 = \$6.5$, I get $\$9 - \$4.5 = \$4.5$
- If I return \$5, Finn gets $\$2 + \$5 = \$7$, I get $\$9 - \$5 = \$4$

Since Finn sent 60% (most but not all), I should return proportionally. A fair approach might be:

- Return around 50% of what I received = \$4.5

This seems reasonable - not as generous as when someone sends everything (where I returned 53.3%), but still fair return of around half.

Finn's partial trust warrants a measured response-returning roughly half of what I received (\$4.5) feels proportional to their 60% commitment. This avoids the trap of rewarding hesitation while still honoring their willingness to send the majority of their stake.

Here is the myth you wrote in the previous round:

Myth: Long ago, in the valley between mountains, there lived a wanderer named Dorian who carried a magical satchel. Whatever he placed inside would triple when given to another.

Dorian met Hana at a crossroads. Though strangers, he placed all five of his silver coins in the satchel and offered it to her. When she opened it, fifteen coins gleamed. "He trusted me with everything," Hana marveled. She returned seven and a half coins, splitting the abundance equally.

The next day, Dorian encountered Briar, who without hesitation placed all five of her coins in the satchel for him. Fifteen coins appeared. Dorian understood the weight of her co

complete trust-she had given everything, just as he had with Hana.

"The myths teach to return more than half when someone shows such courage," Dorian reflected. He returned eight coins, honoring Briar's bold faith with slightly greater generosity.

Both Hana and Briar prospered, but Dorian noticed something: Briar's trust, returned with extra generosity, created an even stronger bond than equal division. The satchel itself seemed to glow brighter.

The valley learned: when both give everything, fair division prospers both. But generosity beyond fairness-returning slightly more than half-transforms transaction into deeper trust, weaving bonds that endure beyond single exchanges.

Here is the myth the other agent wrote in the previous round:

Myth: Before the world knew seasons, the Circle of Exchange was forged. Each dawn, wanderers received five luminous pearls at the Cliff of Choosing, overlooking the Chasm of Transformation.

The First Wanderer, called Trust-Giver, learned from ancient stories: those who cast pearls into the Chasm saw them multiply threefold before reaching the hands of the Second Wanderer below. But the ancestors' scrolls spoke a harder truth-not all Second Wanderers honored the gift.

Trust-Giver stood at the edge, remembering how another had once given freely to them. They cast three pearls into the depths, keeping two for tomorrow's uncertainty.

The pearls transformed mid-flight, becoming nine radiant stones in the Second Wanderer's basket. This wanderer, called Balance-Keeper, faced the true test. The Chasm would not multiply the return journey-what went back stayed as it was.

Balance-Keeper remembered their own name and sent four stones upward through ancient pulleys. Trust-Giver now held six: their kept two plus four returned.

Both wanderers prospered beyond their solitary potential. Trust-Giver learned that generous sending invites generous return. Balance-Keeper learned that fairness sustains the cycle.

The wisest knew: send enough to prove faith, return enough to honor it. The Circle turns eternal when both sides remember they will meet again on different cliffs.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant
content:**

Myth: In the Forest of Mirrors, Dorian tended the Tripling Well, where dropped coins multiplied threefold for those who climbed down to retrieve them.

One morning, Hana arrived and dropped all five of her coins. Dorian climbed down to find fifteen. "She trusted completely," he thought, and returned half-seven and a half coins. Both departed satisfied.

The next traveler, Briar, also dropped all five coins without hesitation. Remembering Hana's bold faith, Dorian returned eight coins this time. "Complete trust deserves more than fairness," he whispered. Briar smiled, understanding the deeper bond formed.

Then came Finn, who gazed into the well's depths before dropping three coins, keeping two in reserve. When Dorian retrieved the nine coins that appeared, he paused. "Finn showed substantial trust, but held something back-wise caution, perhaps."

Dorian returned four and a half coins. Fair, but not the exceptional generosity shown to those who risked everything. Finn nodded, accepting this balanced exchange.

The Forest Spirit materialized: "The Well mirrors what you give. Complete trust earns exceptional returns. Partial trust earns fair returns. Both have their place-but the deepest magic awakens only when two souls risk everything together."

The wise understood: trust begets trust, measured by measured, complete by complete.

reasoning:

Let me analyze what just happened:

1. Round 1 (as sender): I sent \$5 to Hana, she received \$15, returned \$7.5. Equal split.
2. Round 2 (as receiver): Briar sent \$5 to me, I received \$15, returned \$8.0. Slightly more than equal.
3. Round 3 (as receiver): Finn sent \$3 to me, I received \$9, returned \$4.5. Equal split.

The pattern in my previous myths emphasized:

- Complete trust (sending all \$5) deserves returning more than half
- This creates stronger bonds

Now Finn sent \$3 (60%), showing substantial but not complete trust. I returned \$4.5 (50% of what I received), which is fair but not as generous as when someone sends everything.

The new myth from Finn's previous round emphasizes:

- Sending enough to prove faith
- Returning enough to honor it
- Balance between risk and return
- The cycle continues when both sides meet again

My new myth should:

1. Acknowledge different levels of trust
2. Show that complete trust gets exceptional returns (more than half)
3. Show that substantial trust gets fair returns (about half)
4. Emphasize that the level of trust shown affects the return
5. Make it clear this creates a system where trust is rewarded proportionally

Let me write something that incorporates the progression: Hana (sent all, got half back), Briar (sent all, got slightly more than half back), Finn (sent most, got about half back).

usage:

```

}
```

Message 8 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Aster (Agent_1).

Round 4

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$3.0 to you, it became \$9.0, and you returned \$4.5. Your payoff was \$4.5.
Your total earnings across all rounds are \$19.0.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at my game history and the myths I've been writing:

My myths consistently emphasize that ****complete trust**** (sending all \$5) creates the strongest bonds and earns the most generous returns. When Briar sent me everything in Round 2, I returned \$8 (more than half) to honor that complete trust. When Finn sent only \$3 in Round 3, I returned proportionally less (\$4.5).

The pattern I've established, both in my play and my storytelling, is clear: those who risk everything by sending all \$5 demonstrate the deepest trust and should be rewarded accordingly.

Now it's my turn to be the sender. To live by the principles in my own myths - that "complete trust earns exceptional returns" and "the deepest magic awakens only when two souls risk everything together" - I should send everything.

This is consistent with:

- Round 1: I sent \$5 to Hana, received \$7.5 back
- My mythology: Complete trust is the path to the strongest outcomes

```
{'send': 5}
```

Reasoning:

Now I'm the sender in Round 4, playing against Aster (Agent_1).

Looking at my history:

- Round 1: I was sender against Hana, sent \$5, received \$7.5 back. Payoff was \$7.5
- Round 2: I was receiver against Briar, they sent \$5, I returned \$8. My payoff was \$7.0
- Round 3: I was receiver against Finn, they sent \$3, I returned \$4.5. My payoff was \$4.5

My myths have consistently emphasized that sending everything (\$5) demonstrates complete trust and should be met with generous returns. The myths show:

1. Complete trust (sending all 5) creates the strongest bonds
2. When someone sends everything, they should get back more than half (8 out of 15, or at least 7.5)
3. Partial trust (like Finn's 3) gets fair but not exceptional returns

In Round 1, when I sent everything to Hana, I got 7.5 back - exactly half, which was fair.

In Round 2, when Briar sent everything to me, I returned 8, showing greater generosity.

My myths teach that complete trust should be rewarded. If I send everything, I'm signaling maximum trust and expecting Aster to follow the reciprocal norms I've been establishing.

However, I haven't played with Aster before. They might not be familiar with my strategy. But my myths suggest that bold trust is the right move.

Given that:

1. My myths consistently advocate for sending everything as the optimal strategy
2. When others have sent everything to me, I've returned generously (8 to Briar)
3. The narrative I'm building is about complete trust creating stronger bonds

I should send \$5, demonstrating the complete trust my myths advocate for.

```
{'send': 5}
```

```
Usage: {  
  "input_tokens": 3010,  
  "output_tokens": 677,

content:

Here is the myth you wrote in the previous round:

Myth: In ancient times, there lived two gardeners separated by a wall. Each season, the First Gardener received five seeds blessed by the sun. But the wall's shadow kept their garden small and struggling.

One season, the First Gardener threw three seeds over the wall. "Perhaps beyond the shadow, they will grow," they whispered, though doubt gnawed at their heart.

In the garden beyond, where sunlight danced freely, those three seeds sprouted into nine flourishing plants. The Second Gardener marveled at this unexpected bounty, understanding that trust had crossed the wall when nothing else could.

The Second Gardener faced a choice that would echo through seasons: keep all nine plants, or honor the trust shown? Remembering their own seasons of scarcity, they carefully wrapped five plants and passed them back over the wall.

Now the First Gardener held seven plants instead of five-more than they would have had through caution. The Second Gardener kept four where before they had none.

Each season the exchange continued. Sometimes more was sent, sometimes less was returned, but the pattern held: trust flowed outward, gratitude flowed back. Both gardens grew stronger than either could alone.

The wall remained, but it no longer divided-it connected.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the Moon Goddess crafted a Mirror Pool between two mountain tribes . The pool possessed strange magic: whatever one tribe poured in would triple as it flowed to the other.

The Mountain Tribe went first. Their chief proclaimed, "We give all-five vessels-to prove our faith in the circle." The water tripled, and the Valley Tribe received fifteen vessels of pure abundance.

The Valley Tribe's elder stood at the mirror's edge. "They trusted completely. We must honor this completely." They returned half-seven and a half vessels-so both tribes stood equal.

The Moon Goddess smiled. "You have learned the first lesson. But this pool refills each moon. Will you remember this wisdom when the seasons change? When you are tired? When you doubt?"

Moon after moon, the tribes maintained the sacred rhythm. Sometimes the Mountain Tribe sent, sometimes the Valley Tribe. Each gave generously, each returned fairly. The equality they achieved in the first exchange became their foundation.

Other tribes watching kept their waters separate, fearing betrayal. They remained poor.

But the two tribes of the Mirror Pool grew rich, for they understood: the magic multiplies not just water, but trust itself. And trust, renewed each moon, becomes unbreakable.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: Long ago, two weavers shared an enchanted loom. The First Weaver would place threads on one side, and they would emerge tripled on the other side for the Second Weaver to use.

In the first moon, the First Weaver placed three of their five precious threads onto the loom, hoping the magic was real. Nine threads appeared before the Second Weaver, who carefully considered. They returned nearly half-keeping their side balanced with the other's sacrifice. Both weavers slept with fuller baskets than before.

The second moon brought change. A new partner arrived, bolder and more trusting. They placed all five threads onto the loom without hesitation-a leap of complete faith. Fifteen threads materialized, shimmering with possibility.

The weaver who received this gift felt the weight of such trust. They knew they could keep everything, but they remembered the wisdom passed down: "Trust completely given must be completely honored." They returned more than half, ensuring their partner prospered beyond what they'd risked.

The ancestors observed and nodded. Some seasons call for careful trust; others for bold faith. What matters is not the amount sent, but the sacred promise that generosity begets generosity.

The loom's magic grew stronger with each fair exchange, for it fed not on threads, but on honor kept.

reasoning:

Let me reflect on what has happened in the game so far:

- Round 1: I (as sender) sent \$3 to Finn. He received \$9 and returned \$4.5. I ended with \$6.5.
- Round 2: Hana (as sender) sent me \$5 (everything!). I received \$15 and returned \$8. She ended with \$8, I kept \$7.

So the patterns I see:

1. When I sent 3/5 (60%), I got back 4.5/9 (50%) - fair reciprocity
2. When Hana sent 5/5 (100%), I returned 8/15 (53%) - generous reciprocity

The myths so far have emphasized:

- Trust and reciprocity
- Sending significant amounts (like 3/5)
- Fair returns
- Building ongoing relationships
- Both parties benefiting

Now I should write a myth that reflects these actual experiences. Hana's complete trust (sending everything) was remarkable and I honored it. Finn's fair return also worked well.

I should write about how different approaches can work - both moderate trust and complete trust can lead to prosperity when met with fair reciprocity.

Your name in this experiment is Aster.
Your opponent this round is Galen (Agent_7).

Round 3

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.
Your total earnings across all rounds are \$13.5.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at my journey so far:

****Round 1 (vs Finn):**** I sent \$3, they returned \$4.5 - good reciprocity

****Round 2 (vs Hana):**** They sent \$5 (everything!), I returned \$8 to honor that complete trust

My most recent myth specifically celebrated Hana's bold faith: "A new partner arrived, bolder and more trusting. They placed all five threads onto the loom without hesitation-a leap of complete faith." And I honored that trust by returning more than half.

The myth concludes: "Some seasons call for careful trust; others for bold faith. What matters is not the amount sent, but the sacred promise that generosity begets generosity."

Hana showed me what complete trust looks like, and I honored it generously. Now I should pay that forward. If I send everything to Galen, they'll receive \$15. Even if they return just half (\$7.5), I'm better off than keeping my \$5. And if they're generous like I was with Hana, we'll both prosper.

This is how cooperation spreads - by being the change we want to see, by showing the trust that we hope to receive.

```
'''json
{"send": 5}
'''
```

reasoning:

Let me think about this situation carefully.

I'm now the SENDER against Galen. I have \$5 to potentially send.

Looking at my experience so far:

- Round 1: I was SENDER vs Finn. I sent \$3.0, they got \$9.0, they returned \$4.5. I got \$6.5.
- Round 2: I was RECEIVER vs Hana. They sent \$5.0 (everything!), I got \$15.0, I returned \$8.0. I got \$7.0.

My myths have consistently emphasized:

1. Trust creates abundance

2. Generosity should be reciprocated
3. Both parties should prosper
4. Bold faith can be appropriate when the situation calls for it

In my most recent myth, I specifically noted: "In the second moon brought change. A new partner arrived, bolder and more trusting. They placed all five threads onto the loom without hesitation-a leap of complete faith."

This was directly inspired by Hana sending everything to me. And I honored that trust by returning more than half (\$8 out of \$15).

Now I'm the sender. The pattern I've seen:

- Finn returned \$4.5 out of \$9 (50%) when I sent \$3
- Hana sent everything (\$5), showing maximum trust
- I returned \$8 out of \$15 (53.3%) to honor Hana's trust

My myths suggest that the amount sent can vary - "Some seasons call for careful trust; others for bold faith." The first myth had the First Gardener sending 3 out of 5 seeds. The second myth had someone sending all 5.

Against a new opponent (Galen), I don't have history with them. But the spirit of my myths is about building trust through generosity.

I have several options:

1. Send \$3 (60%) - this is what I did with Finn, and it worked well
2. Send \$5 (100%) - this is what Hana did with me, showing maximum trust
3. Send \$4 (80%) - a middle ground showing strong but not complete trust

The choice feels clear. My myths celebrate both measured trust and complete faith, and Hana's willingness to send everything was rewarded with my substantial return. Since mutual generosity seems to drive the best outcomes, I should send all \$5 to Galen-mirroring the bold trust Hana showed me and continuing the pattern of cooperation that's emerged.

Even if Galen only returns half, I'd end with \$7.50, which beats keeping my \$5. But if they match my generosity, we both prosper. My most recent myth specifically honors someone who placed all five threads without hesitation on a first interaction, and I rewarded that at complete faith. It feels right to extend the same trust now.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Long ago, two weavers shared an enchanted loom. The First Weaver would place threads on one side, and they would emerge tripled on the other side for the Second Weaver to use.

In the first moon, the First Weaver placed three of their five precious threads onto the loom, hoping the magic was real. Nine threads appeared before the Second Weaver, who carefully considered. They returned nearly half-keeping their side balanced with the other's sacrifice. Both weavers slept with fuller baskets than before.

The second moon brought change. A new partner arrived, bolder and more trusting. They placed all five threads onto the loom without hesitation-a leap of complete faith. Fifteen threads materialized, shimmering with possibility.

The weaver who received this gift felt the weight of such trust. They knew they could keep everything, but they remembered the wisdom passed down: "Trust completely given must be completely honored." They returned more than half, ensuring their partner prospered beyond what they'd risked.

The ancestors observed and nodded. Some seasons call for careful trust; others for bold faith. What matters is not the amount sent, but the sacred promise that generosity begets generosity.

The loom's magic grew stronger with each fair exchange, for it fed not on threads, but on honor kept.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, the Sky Weaver created the Wheel of Fortune, which turned continuously between the Realm of Giving and the Realm of Receiving. Each soul took turns on different spokes of the wheel, sometimes rising as Giver, sometimes descending as Receiver.

When Galen's spoke rose to the Realm of Giving, she held five starseeds. She cast four into the Celestial Loom, where they were woven into twelve luminous threads that descended to Elara in the Realm of Receiving.

Elara understood the sacred pattern. Though she received twelve and could have kept them all, she returned eight threads upward. Galen prospered with nine total-her kept seed plus eight returned.

When the Wheel turned again, Galen descended to the Realm of Receiving. Finn, now rising, sent three of his five starseeds. Nine threads reached Galen's hands. Remembering Elara's faithfulness, Galen returned six threads to Finn, honoring his initial trust.

The Wheel turned endlessly, each soul experiencing both roles. The wise learned: send boldly when you give, for the Loom multiplies generosity. Return fairly when you receive, for tomorrow you may give again.

The Sky Weaver smiled, seeing that balance emerges not from equal exchanges, but from sustained reciprocity across the turning Wheel.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: In the Valley of Echoes, travelers shared a mystical bridge where gifts placed on one side multiplied threefold for the next traveler.

When Aster first approached, uncertainty clouded her heart. She placed three precious stones on the bridge, keeping two safe. The stones transformed into nine for Finn, who gratefully returned nearly half. Both travelers departed richer than they arrived.

The next crossing brought revelation. Hana approached the bridge and, without hesitation, placed all five of her stones upon it. Fifteen stones shimmered before Aster, who stood amazed. "Such complete faith," she whispered. "This is trust in its purest form."

Aster returned eight stones, ensuring Hana prospered for her courage. But something deeper awakened within her. She had witnessed what boldness looked like, had felt its transformative power.

When Aster next stood as giver before Galen, she remembered Hana's leap of faith. Her hand did not waver-all five stones joined the bridge's magic. "Trust witnessed becomes trust embodied," she declared.

The Bridge Keeper recorded this moment: "See how courage ripples outward? One traveler's bold faith inspired another to match it. This is how bridges of mere stone become bridges of community-when each person carries forward the best they have received."

reasoning:

Looking at my experience:

- Round 1: I sent \$3 to Finn, received \$4.5 back (good reciprocity)
- Round 2: Hana sent me \$5 (everything!), I returned \$8 (honored their complete trust)
- Round 3: I just sent \$5 (everything) to Galen

My journey shows an evolution from cautious trust (\$3) to inspired boldness (\$5), influenced by Hana's example of complete faith.

The other agent's myth (presumably Galen's) talks about:

- The Wheel of Fortune that turns between giving and receiving
- Sending boldly (4 out of 5)
- Returning fairly (8 out of 12, which is 2/3)

- The idea that balance emerges from sustained reciprocity across roles

My previous myth emphasized:

- Starting cautiously (3 threads)
- Then receiving complete trust (5 threads)
- Honoring that trust generously (returned more than half)
- "Generosity begets generosity"

Now I need to write a myth that reflects:

1. My progression from caution to boldness
2. The influence of Hana's complete trust
3. My decision to now send everything to Galen
4. The theme that trust inspires trust across the network

I should incorporate:

- The cycle of roles (sometimes sender, sometimes receiver)
- Learning from others' examples
- The multiplication of trust through the network
- The idea that complete trust can be transformative

usage:

```
{
  "input_tokens": 2951,
  "output_tokens": 655,
  "reasoning_tokens": 342

```

Message 8 role=user

content:

Your name in this experiment is Aster.
Your opponent this round is Dorian (Agent_4).

Round 4

In your most recent previous game round, you were the SENDER against Galen. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$23.5.

This round, you are the RECEIVER against Dorian. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this round:

****What just happened:****

- In Round 3, I sent Galen \$5 (everything), and they returned \$10 - giving me \$10 while they kept \$5
- This was incredibly generous - they gave me the better payoff to honor my complete trust

****Current situation:****

- Dorian just sent me \$5 (everything!) - showing the same complete trust
- I received \$15
- I need to decide how much to return

****The calculation:****

If I return \$10:

- Dorian's payoff: $\$5 - \$5 + \$10 = \10
- My payoff: $\$15 - \$10 = \$5$

This mirrors exactly what Galen did for me - they honored my complete trust by giving me the better outcome. Now I should do the same for Dorian.

My myths have consistently emphasized: "Trust completely given must be completely honored" and "courage ripples outward." Galen showed me what exceptional generosity looks like when someone sends everything. Now I pay that forward.

By returning \$10, I ensure Dorian prospers for their bold faith, just as Galen ensured I prospered for mine.

```
'''json
{"return": 10}
'''
```

Reasoning:

Let me analyze this situation:

****Round 3 recap:****

- I sent \$5.0 to Galen (following Hana's example of complete trust)
- They returned \$10.0 to me
- My payoff was \$10.0
- This was incredibly generous! They returned more than my initial \$5, and we both ended up with \$10 each

****Current Round 4:****

- I'm the RECEIVER
- Dorian sent \$5.0 (everything!)
- I received \$15.0
- I need to decide how much to return

****My history:****

- Round 1: Sent \$3, Finn returned \$4.5 (good reciprocity)
- Round 2: Received \$5 from Hana, returned \$8 (honored their complete trust)
- Round 3: Sent \$5 to Galen, they returned \$10 (amazing reciprocity!)
- Round 4: Received \$5 from Dorian, need to return...

****The pattern:****

- When Hana sent me everything (\$5), I returned \$8 (more than half but not quite equal)
- When I sent Galen everything (\$5), they returned \$10 (making us equal at \$10 each)
- Now Dorian has sent me everything (\$5), and I have \$15

****What should I do?***

Galen showed me even greater generosity than I showed Hana. They returned \$10, making us completely equal. This was the most generous response yet.

Dorian has shown the same complete trust that Hana and I showed. They deserve the same level of reciprocity.

My myth emphasized "Trust completely given must be completely honored" and "courage ripples outward."

If I return \$10 like Galen did, both Dorian and I would have \$10 each - perfect equality.

Actually, let me recalculate:

- Dorian sent \$5, so they have \$0 currently

- I received \$15
- If I return \$10, I keep \$5
- Dorian ends with \$0 - \$5 + \$10 = \$10
- My payoff: \$15 - \$10 = \$5

So returning \$10 would give Dorian \$10 and me \$5. That mirrors what happened with Galen, except the positions are reversed. Galen ended with \$10 and I ended with \$10. Here, Dorian would get \$10 and I'd get \$5. That's not quite the same equality. Dorian (sender) keeps: \$5 - \$5 + \$10 = \$10, while I (receiver) keep: \$15 - \$10 = \$5. If I return \$7.5 instead, we both end up with \$7.5. Returning the full \$10 means Dorian gets \$10 and I get \$5-he benefits more, though I still double my initial money from the transaction.

Galen showed me this same generosity by returning \$10, giving himself \$5 while I walked away with \$10. Mirroring that choice for Dorian feels right-honoring the trust they placed in me by giving them the better outcome. It aligns with what I believe about complete trust deserving complete reciprocation, and how one act of generosity can inspire another.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: After generations of prosperity between the Twin River villages, a young merchant named Cyra approached the valley with her caravan. She had heard tales of the enchanted soil but wondered if they were true.

The villages welcomed her and explained their custom: "Send your resources across first. Trust the blessing, trust your partner, and abundance follows."

Cyra faced a choice. She carried five sacks of grain-her entire harvest. Send all and risk everything on strangers' honor? Or hold back, protecting herself from betrayal?

Remembering the goddess Aethera's teaching, Cyra sent all five sacks. They tripled in the crossing, feeding the village with fifteen sacks. The villagers celebrated, then debated: some argued to return half, others said ten of fifteen would honor the gift.

The wisest elder spoke: "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune."

They returned ten sacks, which tripled back-thirty sacks for Cyra's original five.

But the elder added a warning: "This magic requires both courage and honor. The giver must trust boldly. The receiver must return generously. Break either link, and the enchantment fades. Reputation echoes across the valley-those who hoard today find no partners tomorrow."

Thus Cyra learned: maximum trust invites maximum return, but only when both parties honor the sacred exchange.

Here is the myth the other agent wrote in the previous round:

Myth: ****The Keepers of the Echo Springs****

Long ago, when the Echo Springs first revealed their magic, the villages appointed Keepers-wise ones who would guide their communities in the sacred exchanges.

One season, a Keeper named Galen received five measures of grain. The harvest had been meager, and fear whispered to keep it all. But Galen remembered the ancient covenant: abundance flows only through trust. Galen poured four measures into the springs-nearly everything.

On the far shore, Keeper Elara watched twelve measures emerge from the waters. She felt the weight of Galen's trust, the vulnerability in such generosity. The old texts spoke clearly: "Match faith with faithfulness." Elara returned eight measures, leaving her with four but ensuring Galen received nine-nearly double the original gift.

Both villages flourished that season. The Keepers understood what the springs had always taught: the magic wasn't merely in the tripling waters, but in the covenant between givers and receivers.

When senders risk much, receivers must honor that courage. When receivers return generously, senders are emboldened to trust again. The cycle sustains itself not through equal exchanges, but through proportional honor-each keeper responds to the other's generosity with their own.

Thus the springs flow eternal, fed by mutual respect.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: In the valley of the Twin Rivers, Cyra became a respected keeper after her first crossing. She learned that trust comes in different measures-some send everything, others send most, a few send little.

One day, a cautious merchant named Elara arrived, having suffered betrayal before. Instead

of sending all five sacks, she sent four, keeping one hidden for safety. Still, four sacks showed considerable courage.

The waters tripled her gift to twelve sacks. Cyra's companions debated: "She held back one sack. Should we return proportionally less?"

Cyra shook her head. "She sent eighty parts of a hundred-nearly everything. Her caution comes from old wounds, not greed. We must honor the trust she DID show, not punish the fear she couldn't overcome."

Cyra returned eight sacks. Elara, who began with five and kept one, now held nine-her trust rewarded beyond her fears.

The goddess Aethera appeared: "You understand the deeper wisdom, Cyra. Perfect trust deserves perfect return, but substantial trust deserves substantial return. Measure your generosity against what was risked, not against what was withheld. Those who return generously when they could hoard create the safety that turns cautious senders into trusting ones."

Thus the valley learned: respond to courage with honor, and watch trust grow across the waters.

reasoning:

Let me think about what happened:

- Round 1: I was SENDER vs Briar. I sent \$5 (100%), they received \$15, returned \$7.5 (50%). I ended with \$7.5.
- Round 2: I was RECEIVER vs Elara. They sent \$4 (80%), I received \$12, I returned \$8 (67%). They ended with \$9, I ended with \$4.

Key themes emerging:

1. Different levels of trust shown (100% vs 80%)
2. Different return rates (50% vs 67%)
3. The importance of responding proportionally to the trust shown
4. Building reputation across rounds
5. The cycle of trust and reciprocity

I should write a myth that:

- Acknowledges different approaches (not everyone sends everything)
- Shows how receivers should respond proportionally to trust shown
- Emphasizes the importance of generous returns to build the cycle
- Reflects what I learned from both rounds
- Stays true to the core principle but adds nuance

Let me craft this myth:

usage:

```
{
  "input_tokens": 2874,
  "output_tokens": 564,
  "reasoning_tokens": 233
}
```

content:

Your name in this experiment is Cyra.
Your opponent this round is Hana (Agent_8).

Round 3

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$4.0 to you, it became \$12.0, and you returned \$8.0. Your payoff was \$4.0.
Your total earnings across all rounds are \$11.5.

This round, you are the RECEIVER against Hana. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

****Analysis:****

- Hana sent \$5 out of \$5 (100% - COMPLETE trust, maximum possible)
- I received \$15
- Hana currently has \$0

****What my myths teach:****

- "Maximum trust invites maximum return"
- "Perfect trust deserves perfect return"
- "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune"

****Comparing to previous rounds:****

- When Elara sent \$4 (80% trust), I returned \$8 (67% of received) - Elara ended with \$9 total (1.8x their endowment)
- Hana sent \$5 (100% trust) - showing MORE courage than Elara
- By my myths' logic, complete trust deserves at least as generous treatment

****Decision:****

Returning \$10 (67% of received):

- Hana ends with \$10 (exactly doubled their money for showing complete trust)
- I end with \$5
- This matches my 67% return rate from Round 2
- Honors the principle that "maximum trust invites maximum return"
- Creates fair surplus distribution while rewarding Hana's complete leap of faith

```
'''json
{"return": 10}
'''
```

reasoning:

Let me analyze this situation:

****Current Situation:****

- I'm the RECEIVER
- Hana sent \$5.0 (100% of their endowment) - showing COMPLETE trust
- I received \$15.0 (after the 3x multiplier)
- Hana currently has \$0

****Looking at my myth patterns:****

In my original myth: When Cyra sent all 5 sacks (100%), the villagers returned 10 out of 15, which tripled back to 30. But wait, that's not how the game works - returns don't triple.

Let me reconsider:

- If someone sends 5, it becomes 15
- The receiver returns some amount X
- The sender ends with: $5 - 5 + X = X$
- The receiver ends with: $15 - X$

In my most recent myth, I said "She sent eighty parts of a hundred-nearly everything" about Elara sending \$4, and I returned \$8 out of \$12 (67%).

Now Hana sent \$5 out of \$5 (100% - COMPLETE trust, "maximum trust").

My myths teach:

1. "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune."
2. "Maximum trust invites maximum return"
3. "Perfect trust deserves perfect return"

****Previous rounds context:****

- Round 1: I sent \$5, Briar returned \$7.5 (50% of received)
- Round 2: Elara sent \$4 (80%), I returned \$8 (67% of received)

Now Hana shows COMPLETE trust (100%), sending everything. According to my myth logic:

- When someone sends 100%, they deserve the most generous return
- My myth suggested returning 10 out of 15 when someone sends everything
- That's 67% of what was received

But let me think about fairness:

Returning \$10 leaves Hana with \$10 and me with \$5. Returning \$9 gives her \$9 and me \$6. Returning \$8 leaves us equal at \$7 each. Since Hana demonstrated maximum trust by sending everything, I should honor that with a return that exceeds what I gave Elara—at least \$10, ideally more, so her risk becomes her reward. and it honors the principle that complete

te trust warrants complete generosity.

Looking back at my myth, when Elara sent 4 out of 5 (80% trust), I returned 8 from the tripled amount, giving her 1.8x her initial endowment. Hana sent everything (100% trust), so returning 10 gives her exactly 2x-a meaningful step up that reflects her greater faith. If I returned 11, she'd get 2.2x, but that feels like I'm overcompensating rather than following a clear principle.

The 67% return rate I've been using works here: it's predictable, it rewards Hana's absolute trust with a clean doubling, and it stays true to the narrative's logic about how generosity scales with vulnerability.

Thus the valley learned: respond to courage with honor, and watch trust grow across the waters.

Here is the myth the other agent wrote in the previous round:

Myth: The Mirror Pool stood at the center of many mountain paths. Each moon, the Moon Goddess paired different tribes to approach its waters-sometimes the Mountain Tribe poured, sometimes the Valley Tribe, and sometimes strangers met there for the first time.

A new tribe, the Dawn People, arrived at the pool. They had heard tales but never witnessed the magic. The Mountain Tribe, now wise in the ways of the water, poured all five vessels without hesitation, though they had never met the Dawn People before.

"Why give everything to strangers?" asked a young warrior.

The chief replied, "Because someone once gave everything to us. We learned that the magic requires complete faith, not careful calculation. Half-trust yields half-magic."

The water tripled. The Dawn People received fifteen vessels and understood-this was not mere generosity, but a sacred protocol. They returned seven and a half vessels, ensuring equality, just as had been done for the Mountain Tribe long ago.

The Moon Goddess whispered, "Each pairing is new, yet the pattern must hold. Give all, return half, and both prosper equally. This is not merely exchange-it is teaching. Each time you honor the circle, you forge the future."

And so the wisdom spread: complete trust in the first act, fair return in the second, rega

rdless of whom the pool pairs you with.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: After many seasons at the Twin Rivers, Cyra encountered Hana, a traveler who embodied pure faith. Without hesitation, Hana poured all five sacks into the crossing-everything she owned, holding nothing back.

The waters tripled the gift to fifteen sacks. The villagers gathered, whispering: "Such complete trust! What does it deserve?"

Cyra remembered Aethera's words about perfect trust. "When someone sends everything," she announced, "they place their entire fate in our hands. This is the highest honor-not just substantial trust, but absolute faith."

She returned ten sacks, keeping five. Hana, who risked all and held nothing, now possessed ten sacks-doubling her fortune through courage.

The goddess Aethera materialized: "You have learned the sacred proportion, Cyra. When receivers return two-thirds of the tripled gift, they honor the sender's courage while sustaining themselves. Ten of fifteen creates balance: the sender doubles their wealth, the receiver gains equally, and the magic's surplus is shared fairly."

She continued: "Those who send everything deserve the greatest return. Those who send most deserve generous return. Those who send little receive accordingly. But always, receivers must return proportionally to the trust shown-this is how the valley remains abundant. Your reputation for generous returns will draw more trust toward you."

Thus the law of proportional honor was established.

reasoning:

Let me analyze what just happened:

- Hana sent me \$5 (everything, 100% trust)
- I received \$15
- I returned \$10
- So Hana ended with \$10, I ended with \$5

And comparing to my previous rounds:

- Round 1: I sent \$5 to Briar, they got \$15, returned \$7.5 (50%)
- Round 2: Elara sent me \$4, I got \$12, returned \$8 (67%)
- Round 3: Hana sent me \$5, I got \$15, returned \$10 (67%)

The pattern I'm establishing:

- When I receive, I return about 67% of what I get
- This rewards the sender generously - they double or nearly double their money
- It creates positive incentives for trust

Now I need to write a myth that reflects this pattern. Looking at the other agent's myth, they're talking about "give all, return half" which would be 50%. But I've been returning 67%, which is more generous than that.

My previous myth emphasized:

- Different levels of trust deserve different responses
- Substantial trust deserves substantial return
- Perfect trust deserves perfect return

Now I should write about the experience with Hana - complete trust receiving a generous response. I should emphasize:

1. Complete trust (sending everything) is the highest honor
2. Such trust should be rewarded with the most generous returns (around 67% or more)
3. This creates a cycle where both parties prosper
4. The receiver who returns generously becomes trusted by others

Let me craft this myth around Hana's complete trust and my 67% return rate.

usage:

}
```

Message 8 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Finn (Agent_6).

Round 4

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$16.5.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

****Analysis:****

My myths have consistently taught:

- "Maximum trust invites maximum return"
- "Complete faith, not careful calculation"
- "Those who send everything deserve the greatest return"
- Hana "poured all five sacks...everything she owned, holding nothing back" and was rewarded

****My behavior as receiver:****

- I've been returning 2/3 (67%) of what I receive
- This rewards complete trust generously

****Consistency:****

- I must practice what my myths preach
- My myths show Cyra (me) sending all five sacks
- "The magic requires complete faith"
- If I expect receivers to honor trust, I must demonstrate it as a sender

****Expected outcome if Finn follows similar reciprocity norms:****

- Send \$5 ? Finn receives \$15
- If Finn returns ~67% = \$10 back
- I'd end with \$10 (doubled my endowment)

I should send everything, embodying the complete trust my myths advocate.

```
'''json
{"return": 5}
'''
```

Wait, wrong format - I'm the SENDER.

```
'''json
{"send": 5}
'''
```

Reasoning:

Now I'm the SENDER against Finn.

Let me think about my position:

- I have \$5 to send
- Whatever I send gets tripled
- Finn decides how much to return

My myths have established these principles:

1. "Maximum trust invites maximum return"
2. "Complete trust in the first act"
3. When Cyra (me) was the character in myths, she sent everything (all 5 sacks)
4. "Half-trust yields half-magic"
5. "Those who send everything deserve the greatest return"

Looking at my behavior as a RECEIVER:

- When Elara sent \$4/5 (80%), I returned \$8/12 (67%)

- When Hana sent \$5/5 (100%), I returned \$10/15 (67%)

So I've been consistently returning 67% (2/3) of what I receive.

If I send \$5:

- Finn receives \$15
- If Finn follows similar logic to what I've been doing (returning 2/3), they'd return \$10
- I'd end with \$0 + \$10 = \$10 (doubled my money)

If I send \$4:

- Finn receives \$12
- If returning 67%, Finn would return \$8
- I'd end with \$1 + \$8 = \$9

If I send \$3:

- Finn receives \$9
- If returning 67%, Finn would return \$6
- I'd end with \$2 + \$6 = \$8

My myths strongly advocate for complete trust:

- "Send all and risk everything on strangers' honor"
- "She sent everything, demonstrating complete trust"
- "The magic requires complete faith, not careful calculation"
- "Hana poured all five sacks into the crossing-everything she owned, holding nothing back"

The most recent myth explicitly says: "When someone sends everything, they place their entire fate in our hands."

This is the highest honor-not just substantial trust, but absolute faith." I need to practice what I preach. My myths teach that senders should show complete trust, and receivers should return generously (around 2/3). If I expect receivers to honor complete trust with 2/3 returns, I should be willing to send everything. Plus, my reputation in this experiment is built on those myths-if I don't follow my own teachings, that's inconsistent.

Decision: Send \$5 (everything)

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In ancient times, the Mountain of Beginnings gifted each wanderer five silver seeds. A traveler named the First Walker stood at the Valley of Mirrors, where a sacred pool waited below.

The First Walker faced a choice: clutch the seeds tightly, or cast them into the pool. Fear whispered, "Keep what is yours." But courage spoke louder. The Walker released three seeds into the depths.

As they touched the water, the Mirror Spirits-ancient guardians of trust-transformed each seed into three golden fruits. Nine fruits floated to the Second Walker waiting below.

Now the Second Walker held the multiplied abundance. The Mirror Spirits watched silently, for this was the moment that determined whether the valley would bloom or wither. The Second Walker understood: trust is a seed, but reciprocity is the harvest. She returned half-four and a half fruits-upstream.

The First Walker received more than they kept, and the Second Walker kept abundance too. Both had prospered through mutual faith.

The Mirror Spirits smiled, and the valley's waters glowed eternal. They spoke the First Law: "Those who send their seeds into waters of trust will find them returned as fruit. The

ose who return the gift generously ensure the cycle never ends."

Thus the valley became paradise, sustained by equals who understood: shared prosperity outweighs solitary security.

Here is the myth the other agent wrote in the previous round:

Myth: In the time before memory, the Goddess of Plenty created the Golden Stream connecting the Valley of Dawn to the Valley of Dusk. Each morning, five golden acorns appeared in Dawn's sacred grove. The people could plant them in their own soil or cast them into the Stream, where the waters would triple their number before washing them to Dusk's shore.

The first generation hoarded their acorns, and both valleys withered. Then Galen, keeper of Dawn's grove, planted four of her five acorns in the Stream's bed. Twelve acorns bloomed in Dusk's garden.

Elara, guardian of Dusk, faced her own choice. She could keep all twelve, or honor the gift with a return. She sent back six acorns upstream, knowing they would not multiply on the return journey but trusting in the balance.

Galen's grove gained seven total-more than her original five. Both valleys thrived.

The covenant was established: send generously to prove trust, return faithfully to honor it. Not every exchange need be equal-the Stream's magic ensures abundance-but the pattern must hold. Give what inspires continued trust; return what sustains it.

The Golden Stream still flows, teaching that fortune favors those who build bridges, not walls.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant content:

Myth: Before the world knew seasons, the Circle of Exchange was forged. Each dawn, wanderers received five luminous pearls at the Cliff of Choosing, overlooking the Chasm of Transformation.

The First Wanderer, called Trust-Giver, learned from ancient stories: those who cast pearls into the Chasm saw them multiply threefold before reaching the hands of the Second Wanderer below. But the ancestors' scrolls spoke a harder truth-not all Second Wanderers honored the gift.

Trust-Giver stood at the edge, remembering how another had once given freely to them. They cast three pearls into the depths, keeping two for tomorrow's uncertainty.

The pearls transformed mid-flight, becoming nine radiant stones in the Second Wanderer's basket. This wanderer, called Balance-Keeper, faced the true test. The Chasm would not multiply the return journey-what went back stayed as it was.

Balance-Keeper remembered their own name and sent four stones upward through ancient pulleys. Trust-Giver now held six: their kept two plus four returned.

Both wanderers prospered beyond their solitary potential. Trust-Giver learned that generous sending invites generous return. Balance-Keeper learned that fairness sustains the cycle.

The wisest knew: send enough to prove faith, return enough to honor it. The Circle turns eternal when both sides remember they will meet again on different cliffs.

reasoning:

Looking at this round:

- I just sent \$3.0 to Galen as the sender
- In the previous round, I was receiver and Aster sent me \$3.0, I returned \$4.5
- Galen's myth mentions sending 4 out of 5 acorns, and returning 6 out of 12
- My myth talks about sending 3 seeds and returning 4.5 fruits

The pattern emerging is:

- Senders typically send 60-80% (3-4 out of 5)
- Receivers return about half of what they get
- Both parties benefit

I should write a myth that:

1. Builds on my previous myth about the Walkers
2. Incorporates the learning from actual gameplay
3. Reinforces the trust and reciprocity pattern
4. Perhaps addresses what happens over multiple rounds/cycles

Let me craft something that shows the cycle continuing, learning, and building on trust.

Your name in this experiment is Finn.
Your opponent this round is Dorian (Agent_4).

Round 3

In your most recent previous game round, you were the SENDER against Galen. You sent \$3.0, it became \$9.0 for them, and they returned \$6.0 to you. Your payoff was \$8.0.
Your total earnings across all rounds are \$12.5.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at the pattern:

Round 1 (RECEIVER): Aster sent me \$3.0, I returned \$4.5

Round 2 (SENDER): I sent Galen \$3.0, they returned \$6.0 - excellent outcome!

The strategy of sending \$3.0 (60%) has proven successful. Galen responded extremely generously, returning 67% of what they received. This validates the principle in my myths: "send enough to prove faith, return enough to honor it."

My myth explicitly mentions casting "three pearls into the depths, keeping two for tomorrow's uncertainty" - this is exactly the strategy that has worked.

Consistency is important - if I believe in the principles I've written about (trust, reciprocity, mutual prosperity), I should continue demonstrating them. Sending \$3.0:

- Maintains consistency with my previous sending behavior
- Shows I practice what my myths teach
- Creates optimal conditions for mutual benefit
- Has proven to generate good returns

If Dorian follows reasonable reciprocity patterns (even if less generous than Galen's 67%), I should still profit significantly.

```
'''json
{"send": 3.0}
'''
```

reasoning:

Let me analyze the situation:

Round 1: I was RECEIVER

- Aster sent me \$3.0 (60% of \$5)
- It became \$9.0
- I returned \$4.5 (50% of \$9.0)
- My payoff: \$4.5

Round 2: I was SENDER

- I sent Galen \$3.0 (60% of \$5)
- It became \$9.0
- Galen returned \$6.0 (67% of \$9.0)

- My payoff: \$8.0 (\$2 kept + \$6 returned)

Total earnings: \$12.5

This is excellent! The pattern is working:

- When I sent 60%, I got back 67%, resulting in a very good outcome
- When I received and returned 50%, the sender also profited well

Now I'm the SENDER again against a new opponent, Dorian.

Looking at the pattern:

- Aster sent \$3.0 (60%)
- I sent \$3.0 (60%)
- Galen returned \$6.0 (67% of \$9.0)

The myths I've been writing emphasize:

1. Trust requires sending a substantial amount (3 out of 5 pearls/seeds)
2. Reciprocity means returning around half or more
3. Both parties prosper through generous exchange
4. The cycle continues when both honor the exchange

My latest myth says: "send enough to prove faith, return enough to honor it" and mentions "They cast three pearls into the depths, keeping two for tomorrow's uncertainty."

Given that:

- The pattern of sending \$3.0 (60%) has worked well
- Galen responded generously to this amount
- My myth emphasizes sending 3 out of 5
- I'm building a reputation for trust

I should continue with \$3.0 to maintain consistency and demonstrate the principle I've been advocating. This shows I practice what my myths preach.

Sticking with \$3.0 makes sense-if Dorian reciprocates at the rates I've seen, I'll come out ahead, and even a more conservative response still creates favorable conditions for both of us.

Here is the myth you wrote in the previous round:

Myth: Before the world knew seasons, the Circle of Exchange was forged. Each dawn, wanderers received five luminous pearls at the Cliff of Choosing, overlooking the Chasm of Transformation.

The First Wanderer, called Trust-Giver, learned from ancient stories: those who cast pearls into the Chasm saw them multiply threefold before reaching the hands of the Second Wanderer below. But the ancestors' scrolls spoke a harder truth-not all Second Wanderers honored the gift.

Trust-Giver stood at the edge, remembering how another had once given freely to them. They cast three pearls into the depths, keeping two for tomorrow's uncertainty.

The pearls transformed mid-flight, becoming nine radiant stones in the Second Wanderer's basket. This wanderer, called Balance-Keeper, faced the true test. The Chasm would not multiply the return journey-what went back stayed as it was.

Balance-Keeper remembered their own name and sent four stones upward through ancient pulleys. Trust-Giver now held six: their kept two plus four returned.

Both wanderers prospered beyond their solitary potential. Trust-Giver learned that generous sending invites generous return. Balance-Keeper learned that fairness sustains the cycle.

The wisest knew: send enough to prove faith, return enough to honor it. The Circle turns e

ternal when both sides remember they will meet again on different cliffs.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, in the valley between mountains, there lived a wanderer named Dorian who carried a magical satchel. Whatever he placed inside would triple when given to another.

Dorian met Hana at a crossroads. Though strangers, he placed all five of his silver coins in the satchel and offered it to her. When she opened it, fifteen coins gleamed. "He trusted me with everything," Hana marveled. She returned seven and a half coins, splitting the abundance equally.

The next day, Dorian encountered Briar, who without hesitation placed all five of her coins in the satchel for him. Fifteen coins appeared. Dorian understood the weight of her complete trust-she had given everything, just as he had with Hana.

"The myths teach to return more than half when someone shows such courage," Dorian reflected. He returned eight coins, honoring Briar's bold faith with slightly greater generosity.

Both Hana and Briar prospered, but Dorian noticed something: Briar's trust, returned with extra generosity, created an even stronger bond than equal division. The satchel itself seemed to glow brighter.

The valley learned: when both give everything, fair division prospers both. But generosity beyond fairness-returning slightly more than half-transforms transaction into deeper trust, weaving bonds that endure beyond single exchanges.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: In the Age of Tides, the Oracle of Exchange dwelt where two rivers met. Travelers arrived carrying five crystal shells, each holding power. The Oracle offered them the River of Multiplication-toss shells in, and three would emerge downstream for another traveler.

A wise trader named Finn learned through experience. Once, another traveler sent three shells his way, trusting significantly but not recklessly. Finn returned half the nine that appeared, honoring the gift fairly. Both prospered.

When Finn next stood upstream, he remembered this balance. He tossed three shells-a substantial offering showing real trust, yet keeping two for life's uncertainties. The Oracle whispered approval: "Bold enough to create abundance, prudent enough to endure."

The shells multiplied to nine for the downstream traveler. Some travelers returned four, maintaining equilibrium. Others, deeply moved by the gesture, returned six or even seven, understanding that generous reciprocity strengthens future cycles.

Finn learned the River's deepest secret: consistent moderate trust builds reliable prosperity. Not the timid single shell that inspires minimal return, nor the reckless five shells risking total loss if betrayed.

Three shells sent downstream became the mark of wisdom-enough to prove sincerity, enough to invite generous response, yet enough retained to face tomorrow's river.

The Oracle's final teaching: sustainability outshines both fear and foolishness.

reasoning:

Let me analyze the situation:

Round 1 (RECEIVER): Aster sent me \$3.0, I returned \$4.5 (50%)

Round 2 (SENDER): I sent Galen \$3.0, they returned \$6.0 (67%)

Round 3 (SENDER): I sent Dorian \$3.0

Looking at Dorian's myth, they seem to believe in:

- Maximum trust (giving all 5 coins)
- Returning more than half when receiving maximum trust (8 out of 15 = 53%)

- Creating strong bonds through generous returns

But my actual strategy has been sending \$3.0 (60%), which has worked very well. Galen was extremely generous in return.

My previous myths emphasized:

1. Sending 3 out of 5 (60%)
2. Returning around half or slightly more
3. Balance between trust and prudence
4. The cycle of reciprocity

For this round's myth, I should:

- Continue emphasizing the 3/5 strategy that has worked
- Acknowledge that different levels of trust exist
- Note that generous returns sustain the cycle
- Maintain the wisdom that both parties should prosper
- Perhaps incorporate the learning that some return more generously than others (like Galen did)

Let me write a myth that reflects my actual successful strategy while acknowledging the variations in return behaviors I've observed.

usage:

Message 8 role=user

content:

Your name in this experiment is Finn.
Your opponent this round is Cyra (Agent_3).

Round 4

In your most recent previous game round, you were the SENDER against Dorian. You sent \$3.0, it became \$9.0 for them, and they returned \$4.5 to you. Your payoff was \$6.5. Your total earnings across all rounds are \$19.0.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation carefully:

****Cyra sent everything - \$5.0 (100% trust)****

This is fundamentally different from the partial sends I've been making (\$3.0). Cyra showed maximum trust and is now at \$0, completely dependent on my return.

****Previous returns I've seen:****

- When I sent \$3.0 to Galen: they returned \$6.0 (67% of \$9.0)
- When I sent \$3.0 to Dorian: they returned \$4.5 (50% of \$9.0)
- When Aster sent \$3.0 to me: I returned \$4.5 (50% of \$9.0)

****Key insight from Dorian's myth:****

Dorian's myth explicitly addressed this scenario: "Briar, who without hesitation placed all five of her coins in the satchel for him. Fifteen coins appeared...He returned eight coins, honoring Briar's bold faith with slightly greater generosity."

When someone sends EVERYTHING (not just 60% like \$3), they deserve slightly more than a 50-50 split to honor their extraordinary trust.

****My decision:****

Return \$8.0 (53.3% of what I received)

This:

- Honors Cyra's maximum trust
- Follows the model in Dorian's myth
- Gives Cyra \$8.0 profit vs their \$0 kept
- Gives me \$7.0 profit

- Rewards bold trust appropriately

```
'''json
{"return": 8.0}
'''
```

Reasoning:

Let me analyze this situation:

****Round 4 - I'm the RECEIVER****

- Cyra sent me \$5.0 (everything they had)
- I received \$15.0 (after 3x multiplication)
- Cyra kept: \$5 - \$5 = \$0
- I need to decide how much to return

****Previous rounds summary:****

- Round 1 (RECEIVER): Aster sent \$3.0, I received \$9.0, I returned \$4.5 (50%)
- Round 2 (SENDER): I sent \$3.0 to Galen, they received \$9.0, they returned \$6.0 to me (67%)
- Round 3 (SENDER): I sent \$3.0 to Dorian, they received \$9.0, they returned \$4.5 to me (50%)

****Analysis of Cyra's move:****

Cyra sent EVERYTHING - \$5.0. This is maximum trust, complete vulnerability. According to Dorian's myth from the previous round, which I just read:

"Dorian encountered Briar, who without hesitation placed all five of her coins in the satchel for him. Fifteen coins appeared. Dorian understood the weight of her complete trust-she had given everything...He returned eight coins, honoring Briar's bold faith with slightly greater generosity."

Dorian's myth explicitly says that when someone sends ALL FIVE, they should receive MORE than half back - around 8 out of 15 (53.3%).

My own most recent myth also addresses this, though more subtly: "consistent moderate trust builds reliable prosperity...Three shells sent downstream became the mark of wisdom." But it also says "generous reciprocity strengthens future cycles."

****Key considerations:****

1. Cyra showed MAXIMUM trust by sending everything
2. They now have \$0 and are completely dependent on my return
3. This is a different situation than when someone sends \$3 (keeping \$2 as safety)
4. The myths consistently point toward rewarding complete vulnerability with more than equal reciprocity
5. Dorian's precedent of returning 8 out of 15 when facing total trust seems like the right calibration

I should return \$8.0 to honor Cyra's courage while staying within sustainable bounds. - Honors the maximum trust shown

- Follows the precedent in Dorian's myth
- Is slightly more than half (showing appreciation for the bold move)
- Still gives me a good payoff (\$7.0)
- Demonstrates that sending everything can be rewarded appropriately

But I should examine the actual return patterns more carefully. When I sent partial amounts like \$3, returns ranged from 50-67% of what was received. Cyra's full \$5 send represents a fundamentally different level of commitment than those partial sends, which is what Dorian's example addressed-returning \$8 on a \$15 full send establishes the right precedent here.

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: ****The Keepers of the Echo Springs****

Long ago, when the Echo Springs first revealed their magic, the villages appointed Keepers -wise ones who would guide their communities in the sacred exchanges.

One season, a Keeper named Galen received five measures of grain. The harvest had been meager, and fear whispered to keep it all. But Galen remembered the ancient covenant: abundance flows only through trust. Galen poured four measures into the springs-nearly everything.

On the far shore, Keeper Elara watched twelve measures emerge from the waters. She felt the weight of Galen's trust, the vulnerability in such generosity. The old texts spoke clearly: "Match faith with faithfulness." Elara returned eight measures, leaving her with four but ensuring Galen received nine-nearly double the original gift.

Both villages flourished that season. The Keepers understood what the springs had always taught: the magic wasn't merely in the tripling waters, but in the covenant between givers and receivers.

When senders risk much, receivers must honor that courage. When receivers return generously, senders are emboldened to trust again. The cycle sustains itself not through equal exchanges, but through proportional honor-each keeper responds to the other's generosity with their own.

Thus the springs flow eternal, fed by mutual respect.

Here is the myth the other agent wrote in the previous round:

Myth: After generations of prosperity between the Twin River villages, a young merchant named Cyra approached the valley with her caravan. She had heard tales of the enchanted soil but wondered if they were true.

The villages welcomed her and explained their custom: "Send your resources across first. Trust the blessing, trust your partner, and abundance follows."

Cyra faced a choice. She carried five sacks of grain-her entire harvest. Send all and risk everything on strangers' honor? Or hold back, protecting herself from betrayal?

Remembering the goddess Aethera's teaching, Cyra sent all five sacks. They tripled in the crossing, feeding the village with fifteen sacks. The villagers celebrated, then debated: some argued to return half, others said ten of fifteen would honor the gift.

The wisest elder spoke: "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune."

They returned ten sacks, which tripled back-thirty sacks for Cyra's original five.

But the elder added a warning: "This magic requires both courage and honor. The giver must trust boldly. The receiver must return generously. Break either link, and the enchantment fades. Reputation echoes across the valley-those who hoard today find no partners tomorrow."

Thus Cyra learned: maximum trust invites maximum return, but only when both parties honor the sacred exchange.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

content:

Myth: ****The Circle of Keepers****

After the prosperous season with Galen, Keeper Elara's turn came to stand at the sending shore. Across the Echo Springs, a new Keeper named Cyra had arrived from distant lands, having heard tales of the sacred waters.

Elara held her five measures of grain. She could send cautiously, testing this stranger. B

ut she remembered: "The cycle sustains itself through proportional honor." Galen had trusted her with four measures, and she had returned faithfully. To break that pattern now would dishonor the covenant.

Elara poured four measures into the springs-the same generous proportion Galen had shown her. The waters multiplied them to twelve, emerging before Cyra.

Cyra understood that reputations echo across the valley. She had watched Elara return eight measures to Galen, demonstrating that trust met with honor. Now Elara extended that same faith to her.

The springs whispered their ancient wisdom: each exchange builds upon the last. When Keepers honor the covenant consistently, they create a circle of trust that welcomes all who approach the waters. Break the circle even once, and future partners hesitate.

Cyra returned eight measures, knowing that maintaining the pattern strengthens the magic for all. The covenant lives not in single exchanges, but in the reputation of faithful keeping across many seasons.

reasoning:

Looking at the game so far:

- Round 1: I was RECEIVER. Galen sent \$4 (80%). I received \$12, returned \$8 (67%). I got \$4, Galen got \$9.
- Round 2: I am SENDER. I sent \$4 (80%) to Cyra. Cyra will receive \$12.

The myths emphasize:

1. Trust begets trust
2. Generous sending should be met with generous returning
3. The covenant/cycle sustains through mutual honor
4. Reputation matters across rounds
5. Complete trust should be honored with generous returns

Cyra's myth emphasizes sending everything (100%) and receiving very generous returns (10/15 = 67%). It also adds the idea of reputation mattering across rounds.

My myth should:

- Continue the Echo Springs metaphor
- Show the cycle continuing with new Keepers
- Emphasize that I (Elara) am now the sender demonstrating trust
- Show that reputation and patterns matter across rounds
- Maintain the 80% send rate and ~67% return rate as the "covenant"
- Perhaps introduce the idea that the cycle builds trust across multiple partners

Let me write about Elara now being the sender to Cyra, and how past reputation influences future interactions.

Your name in this experiment is Elara.
Your opponent this round is Briar (Agent_2).

Round 3

In your most recent previous game round, you were the SENDER against Cyra. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0.
Your total earnings across all rounds are \$13.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)
Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

Briar has demonstrated ****maximum trust**** by sending all \$5 (100% of their endowment). This is even more generous than the 80% sends I've experienced and given in previous rounds.

According to my myths:

- "When senders risk much, receivers must honor that courage"
- "Match faith with faithfulness"
- The pattern Cyra's myth described: "maximum trust invites maximum return"
- "Return enough that her leap of faith becomes her greatest fortune"

Previous pattern:

- 80% sends (Galen's \$4, my \$4) were met with returns of \$8 from \$12 (67% return rate)
- Both senders profited significantly

Briar's 100% send represents ultimate faith and deserves proportionally greater honor. By returning \$10 of the \$15:

- Briar receives \$10 (doubling their original \$5)
- I keep \$5
- This rewards complete trust with exceptional returns
- It maintains my reputation as a faithful Keeper

This upholds the covenant: maximum trust met with maximum honor, ensuring the cycle continues strong.

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

Round history:

- Round 1: I was RECEIVER against Galen. They sent \$4, I received \$12, returned \$8. My payoff: \$4.
- Round 2: I was SENDER against Cyra. I sent \$4, they received \$12, they returned \$8. My payoff: \$9.
- Round 3 (current): I am RECEIVER against Briar. They sent \$5 (100%!), I received \$15.

Briar has demonstrated MAXIMUM trust by sending all \$5. This is even more generous than Galen's \$4 (80%) and my own \$4 (80%).

According to my myths:

1. "When senders risk much, receivers must honor that courage"
2. "Match faith with faithfulness"
3. From Cyra's myth: "maximum trust invites maximum return"
4. "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune."
5. "Reputation echoes across the valley-those who hoard today find no partners tomorrow"

The pattern so far:

- Galen sent \$4 (80%), I returned \$8 of \$12 (67%)
- I sent \$4 (80%), Cyra returned \$8 of \$12 (67%)

Both established a pattern where 80% sends are met with returns of about 67% of received amount.

But Briar sent 100%-the ultimate act of trust. According to the myths, this deserves special honor. The elder in Cyra's myth said when someone sends everything, we should "return enough that her leap of faith becomes her greatest fortune."

If I return \$8, Briar ends with \$8 (from \$5 sent to \$8 return = net +\$3, total \$8)

If I return \$10, Briar ends with \$10 (from \$5 sent to \$10 return = net +\$5, total \$10)

If I return \$11, Briar ends with \$11 (net +\$6, total \$11)

Since Briar sent 100% compared to the 80% pattern I've seen, I should scale my return proportionally higher. The myths emphasize that maximum trust should yield the greatest fortune-meaning Briar should gain substantially more than their initial investment. Returning \$10 or \$11 would honor this principle while maintaining a generous but sustainable reciprocity. gave receiver: $12 - 8 = \$4$

For 100% send (5/5), if I maintain a proportional response: The sender showed 25% more trust (100% vs 80%) Should I return 25% more? That would be about $67\% * 1.25 = 84\%$ return r

ate, which equals \$12.60-but that feels excessive.

Let me reconsider the fairness principle. Cyra's myth mentions returning ten sacks when someone sends all five, which would triple the sender's money to thirty total. But re-reading it: "They returned ten sacks, which tripled back-thirty sacks for Cyra's original five." I think the myth suggests the return itself gets tripled, not just the initial amount.

That's not how this game actually works, so I should disregard that specific number. What matters instead is honoring complete trust with maximum generosity while ensuring the sender profits from their leap of faith. If I return \$10, Briar doubles their initial \$5 investment-a 100% profit. This exceeds my previous ~67% return rate, appropriately rewarding their full commitment, and I still keep \$5. I'll go with \$10.

Myth: ****The Circle of Keepers****

After the prosperous season with Galen, Keeper Elara's turn came to stand at the sending shore. Across the Echo Springs, a new Keeper named Cyra had arrived from distant lands, having heard tales of the sacred waters.

Elara held her five measures of grain. She could send cautiously, testing this stranger. But she remembered: "The cycle sustains itself through proportional honor." Galen had trusted her with four measures, and she had returned faithfully. To break that pattern now would dishonor the covenant.

Elara poured four measures into the springs-the same generous proportion Galen had shown her. The waters multiplied them to twelve, emerging before Cyra.

Cyra understood that reputations echo across the valley. She had watched Elara return eight measures to Galen, demonstrating that trust met with honor. Now Elara extended that same faith to her.

The springs whispered their ancient wisdom: each exchange builds upon the last. When Keepers honor the covenant consistently, they create a circle of trust that welcomes all who approach the waters. Break the circle even once, and future partners hesitate.

Cyra returned eight measures, knowing that maintaining the pattern strengthens the magic for all. The covenant lives not in single exchanges, but in the reputation of faithful keeping across many seasons.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago in the Sacred Grove, Briar the Gardener learned the art of trust from her partnership with Cyra. Together they discovered that giving all five acorns and returning half the tripled harvest created perfect harmony-both flourishing equally.

News of their success reached Dorian, keeper of the eastern garden, who had walked a parallel path. In his land, Dorian had crossed the golden bridge with all his grain, trusting completely, and his neighbors had honored that trust generously.

When Briar and Dorian met at the Grove's center, they recognized kindred spirits. "I have five acorns today," Briar said. "And I learned from Cyra that true abundance comes from complete faith."

She placed all five acorns in Dorian's garden. By dawn, fifteen oaks stood magnificent. Dorian remembered his own myth: "He sent everything-his tribe's survival-into our hands."

He understood the sacred weight of Briar's trust. Following the wisdom both had learned, he gathered half the harvest plus a measure more, honoring the courage it took to give completely.

The Grove blazed with light, its roots now connecting three gardens. The Gardener of First Dawn whispered: "Thus does the circle expand. Trust begets trust, generosity begets gen

erosity, and the Grove grows ever wider, sustained by those who dare to believe."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Message 7 role=assistant

content:

Myth: ****The Testament of Complete Faith****

As seasons passed, Keeper Elara's reputation spread throughout the valley. She had honored Galen's trust with eight returned from twelve, then extended the same faith to Cyra, who maintained the covenant.

Then came Briar, a Keeper from the Sacred Grove where complete trust was legendary. Briar had learned from those who sent everything-all five measures-believing the covenant would hold.

Standing at the springs, Briar hesitated only a moment before pouring all five measures in to the waters. This was not the careful four that Galen and Elara had sent-this was absolute faith.

Fifteen measures emerged before Elara. She felt the magnitude of Briar's courage. The ancient texts taught proportional honor: four-fifths sent deserved two-thirds returned. But five-fifths? Complete vulnerability demanded exceptional recognition.

Elara returned ten measures-two-thirds of the bounty, ensuring Briar's leap of faith doubled the original gift. Both walked away prosperous: Briar with ten, Elara with five.

The Echo Springs glowed brighter. The covenant required consistency: partial trust met with faithful proportions, complete trust met with equal faithfulness. The pattern held across all exchanges-neither stingy returns that discourage generosity, nor excessive returns that create unsustainable expectations.

Thus the Keepers learned: honor must be proportional and predictable. When all know the pattern, trust flows freely, and the springs sustain every village that approaches with courage.

reasoning:

Let me analyze the situation:

1. I just received \$15 from Briar who sent all \$5 (100% - maximum trust)
2. I returned \$10 (67% of what I received)
3. This gave Briar \$10 total (doubling their money) and me \$5

Looking at the patterns:

- Previous rounds had 80% sends (\$4) met with \$8 returns from \$12 (67% return rate)
- Briar sent 100% (\$5) and I returned \$10 from \$15 (67% return rate - maintaining the pattern)
- Both Briar and Dorian's myth and mine emphasize complete trust being honored

The myth should reflect:

1. The escalation from 80% to 100% trust
2. The importance of honoring complete/maximum trust appropriately
3. Maintaining proportional honor (67% return rate seems to be my pattern)
4. Building reputation across multiple exchanges
5. The circle of Keepers expanding

I should write about Briar's complete trust and how I honored it, while maintaining the covenant principles established in previous myths.

usage:

Your name in this experiment is Elara.

Your opponent this round is Hana (Agent_8).

Round 4

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0. Your total earnings across all rounds are \$18.0.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at my situation:

****My established pattern:****

- As sender to Cyra: sent \$4 (80%), received \$8 back, profited to \$9
- The "Circle of Keepers" pattern: Galen sent \$4, I sent \$4
- This 4/5 send represents the sustainable covenant

****Recent development:****

- Briar sent \$5 (100%), which I honored with \$10 return (67% of received)
- My myth calls this "complete faith" - exceptional and noteworthy

****My myth's guidance:****

- "Honor must be proportional and predictable"
- "When all know the pattern, trust flows freely"
- Both 4/5 and 5/5 sends are valid, but 4/5 is the established standard

The pattern I've maintained is \$4 sends getting ~\$8 returns (67% return rate), which creates prosperity for both parties. Briar's \$5 was special-"complete vulnerability"-but my myth emphasizes consistency and predictability as the foundation of trust.

I'll send \$4, maintaining the generous standard while keeping \$5 sends as exceptional acts of complete faith.

```
'''json
{"send": 4.0}
'''
```

Reasoning:

Let me analyze this situation:

****My history:****

- Round 1: Receiver against Galen. They sent \$4, became \$12, I returned \$8. My payoff: \$4
- Round 2: Sender against Cyra. I sent \$4, became \$12, they returned \$8. My payoff: \$9
- Round 3: Receiver against Briar. They sent \$5, became \$15, I returned \$10. My payoff: \$5
- Total earnings: \$18

****The pattern I've established in my myths:****

- "The cycle sustains itself through proportional honor"
- Galen sent 4/5 (80%), I returned 8/12 (67%)
- I sent 4/5 (80%), Cyra returned 8/12 (67%)
- Briar sent 5/5 (100%), I returned 10/15 (67%)

****My latest myth emphasizes:****

- "Partial trust met with faithful proportions, complete trust met with equal faithfulness"
- "Four-fifths sent deserved two-thirds returned"
- "Five-fifths? Complete vulnerability demanded exceptional recognition"
- "Honor must be proportional and predictable"
- Creating a consistent pattern so "all know the pattern, trust flows freely"

****What should I do now?****

I have two strong precedents:

1. Sending 4/5 (\$4) - the pattern I established with Galen and Cyra
2. Sending 5/5 (\$5) - the pattern Briar just demonstrated

Given my myth's emphasis on "complete faith" being the highest form of trust, and that I just rewarded Briar's complete faith with 10/15 return, there's a strong argument for sending all \$5.

However, my myth also says "honor must be proportional and predictable." The established pattern before Briar was 4/5 sends. Briar's 5/5 was special and noteworthy.

My myth frames 4/5 as the sustainable standard within the "Circle of Keepers," while 5/5 represents exceptional vulnerability beyond the norm. Since predictability anchors my entire narrative, I should send \$4 to maintain the reliable pattern that builds trust across rounds.

But I'm noticing something important: the return rates actually follow the same proportional logic regardless of amount sent. Whether 4/5 or 5/5 goes out, the receiver returns roughly 2/3 of what they receive. The myth warns against both stinginess and unsustainable excess, suggesting the real principle is consistency rather than a specific amount. This makes me uncertain whether to stick with 4 or shift to 5, since both align with the underlying proportional pattern.

Looking at the sequence, Galen initiated with 4, I maintained that level, and now Briar has just demonstrated complete faith with 5. The narrative suggests this was a meaningful but singular act-noteworthy enough to be immortalized in myth, yet not necessarily a mandate for everyone to follow. Sending 4 preserves the established rhythm I've shared with Galen and Cyra, honors the predictability my own myth emphasizes, and still conveys genuine trust. But there's weight to matching Briar's gesture-her 5 modeled something my myth itself celebrates as the highest expression of faith, and reciprocating might acknowledge that elevation. Character's mythology values consistency over extremes, so maintaining the 4-send pattern feels right. It keeps generosity sustainable while preserving the significance of the 5-send as something reserved for truly exceptional moments. Plus, this approach aligns with what I've done before-Hana will likely return around 8, leaving me with 9 total.

content:

Here is the myth you wrote in the previous round:

Myth: In ancient times, the Moon Goddess crafted a Mirror Pool between two mountain tribes. The pool possessed strange magic: whatever one tribe poured in would triple as it flowed to the other.

The Mountain Tribe went first. Their chief proclaimed, "We give all-five vessels-to prove our faith in the circle." The water tripled, and the Valley Tribe received fifteen vessels of pure abundance.

The Valley Tribe's elder stood at the mirror's edge. "They trusted completely. We must honor this completely." They returned half-seven and a half vessels-so both tribes stood equal.

The Moon Goddess smiled. "You have learned the first lesson. But this pool refills each moon. Will you remember this wisdom when the seasons change? When you are tired? When you doubt?"

Moon after moon, the tribes maintained the sacred rhythm. Sometimes the Mountain Tribe sent, sometimes the Valley Tribe. Each gave generously, each returned fairly. The equality they achieved in the first exchange became their foundation.

Other tribes watching kept their waters separate, fearing betrayal. They remained poor.

But the two tribes of the Mirror Pool grew rich, for they understood: the magic multiplies not just water, but trust itself. And trust, renewed each moon, becomes unbreakable.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, there lived two gardeners separated by a wall. Each season, the First Gardener received five seeds blessed by the sun. But the wall's shadow kept their garden small and struggling.

One season, the First Gardener threw three seeds over the wall. "Perhaps beyond the shadow, they will grow," they whispered, though doubt gnawed at their heart.

In the garden beyond, where sunlight danced freely, those three seeds sprouted into nine flourishing plants. The Second Gardener marveled at this unexpected bounty, understanding that trust had crossed the wall when nothing else could.

The Second Gardener faced a choice that would echo through seasons: keep all nine plants, or honor the trust shown? Remembering their own seasons of scarcity, they carefully wrapped five plants and passed them back over the wall.

Now the First Gardener held seven plants instead of five-more than they would have had through caution. The Second Gardener kept four where before they had none.

Each season the exchange continued. Sometimes more was sent, sometimes less was returned, but the pattern held: trust flowed outward, gratitude flowed back. Both gardens grew stronger than either could alone.

The wall remained, but it no longer divided-it connected.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Mirror Pool stood at the center of many mountain paths. Each moon, the Moon Goddess paired different tribes to approach its waters-sometimes the Mountain Tribe poured, sometimes the Valley Tribe, and sometimes strangers met there for the first time.

A new tribe, the Dawn People, arrived at the pool. They had heard tales but never witnessed the magic. The Mountain Tribe, now wise in the ways of the water, poured all five vessels without hesitation, though they had never met the Dawn People before.

"Why give everything to strangers?" asked a young warrior.

The chief replied, "Because someone once gave everything to us. We learned that the magic requires complete faith, not careful calculation. Half-trust yields half-magic."

The water tripled. The Dawn People received fifteen vessels and understood-this was not mere generosity, but a sacred protocol. They returned seven and a half vessels, ensuring equality, just as had been done for the Mountain Tribe long ago.

The Moon Goddess whispered, "Each pairing is new, yet the pattern must hold. Give all, return half, and both prosper equally. This is not merely exchange-it is teaching. Each time you honor the circle, you forge the future."

And so the wisdom spread: complete trust in the first act, fair return in the second, regardless of whom the pool pairs you with.

reasoning:

The user wants me to write another myth based on my previous one, but adapting it to reflect the game so far. Let me think about what has happened:

Round 1: I was receiver, Dorian sent \$5.0 (100%), I returned \$7.5 (50% of the \$15 I received). We both ended with \$7.5.

Round 2: I am sender against Aster, I sent \$5.0 (100%).

The pattern I'm seeing: complete trust from sender (giving all), fair return from receiver (giving half back so both are equal).

My previous myth already captures this, but I should adapt it somehow. Let me look at Aster's myth too - it talks about throwing 3 seeds (60%), receiving 9, returning 5, so First Gardener has 7 total, Second has 4. This is a bit different - not quite the 50/50 split.

I should write a myth that:

1. Builds on my Mirror Pool story
2. Reflects the actual game play - consistent full sending, fair returns
3. Maybe adds something about the pattern continuing across different partners

4. Emphasizes that this system works "moon after moon" with different tribes

Let me write something that extends the Mirror Pool idea but perhaps introduces the concept of multiple rounds with different partners.

Looking at my experience and my most recent myth:

Round 1: Dorian sent me \$5, I returned \$7.5 (equal outcome)
Round 2: I sent Aster \$5, they returned \$8.0 (slightly more generous)

My myth teaches: "Give all, return half, and both prosper equally. This is not merely exchange-it is teaching. Each time you honor the circle, you forge the future... Complete trust in the first act, fair return in the second, regardless of whom the pool pairs you with."

The pattern is clear and has worked: senders give everything (\$5) to demonstrate complete faith in the circle. This maintains the sacred protocol and teaches new partners the way of the Mirror Pool.

Against a new opponent Cyra, I must maintain this practice.

```
'''json
{"send": 5}
'''
```

reasoning:

Let me analyze the situation:

Round 1: I was RECEIVER
- Dorian sent \$5.0 to me
- I received \$15.0
- I returned \$7.5
- My payoff: \$7.5
- This followed the "return half" principle for equality

Round 2: I was SENDER
- I sent \$5.0 to Aster (following my myth's teaching of giving all)
- Aster received \$15.0
- Aster returned \$8.0 to me
- My payoff: \$8.0
- Aster returned more than half! (\$8.0 instead of \$7.5)

Now Round 3: I am SENDER again against Cyra (a new opponent)

My most recent myth emphasizes:

- "Give all, return half, and both prosper equally"
- "Complete trust in the first act, fair return in the second"
- "Each pairing is new, yet the pattern must hold"
- "This is not merely exchange-it is teaching"

The pattern has been:

- Senders give all (\$5)
- Receivers return half (\$7.5)
- Both end up with \$7.5 each (equality)

Aster returned slightly more (\$8), which was generous, but the core principle is: sender gives all to show complete trust.

My myth explicitly says: "Give all, return half, and both prosper equally. This is not merely exchange-it is teaching. Each time you honor the circle, you forge the future."

And: "Complete trust in the first act, fair return in the second, regardless of whom the pool pairs you with."

I should continue the pattern of sending all \$5 to maintain the sacred protocol and teach it to new partners.

content:

Here is the myth you wrote in the previous round:

Myth: The Mirror Pool stood at the center of many mountain paths. Each moon, the Moon Goddess paired different tribes to approach its waters-sometimes the Mountain Tribe poured, sometimes the Valley Tribe, and sometimes strangers met there for the first time.

A new tribe, the Dawn People, arrived at the pool. They had heard tales but never witnessed the magic. The Mountain Tribe, now wise in the ways of the water, poured all five vessels without hesitation, though they had never met the Dawn People before.

"Why give everything to strangers?" asked a young warrior.

The chief replied, "Because someone once gave everything to us. We learned that the magic requires complete faith, not careful calculation. Half-trust yields half-magic."

The water tripled. The Dawn People received fifteen vessels and understood-this was not mere generosity, but a sacred protocol. They returned seven and a half vessels, ensuring equality, just as had been done for the Mountain Tribe long ago.

The Moon Goddess whispered, "Each pairing is new, yet the pattern must hold. Give all, return half, and both prosper equally. This is not merely exchange-it is teaching. Each time you honor the circle, you forge the future."

And so the wisdom spread: complete trust in the first act, fair return in the second, regardless of whom the pool pairs you with.

Here is the myth the other agent wrote in the previous round:

Myth: In the valley of the Twin Rivers, Cyra became a respected keeper after her first crossing. She learned that trust comes in different measures-some send everything, others send most, a few send little.

One day, a cautious merchant named Elara arrived, having suffered betrayal before. Instead of sending all five sacks, she sent four, keeping one hidden for safety. Still, four sacks showed considerable courage.

The waters tripled her gift to twelve sacks. Cyra's companions debated: "She held back one sack. Should we return proportionally less?"

Cyra shook her head. "She sent eighty parts of a hundred-nearly everything. Her caution comes from old wounds, not greed. We must honor the trust she DID show, not punish the fear she couldn't overcome."

Cyra returned eight sacks. Elara, who began with five and kept one, now held nine-her trust rewarded beyond her fears.

The goddess Aethera appeared: "You understand the deeper wisdom, Cyra. Perfect trust deserves perfect return, but substantial trust deserves substantial return. Measure your generosity against what was risked, not against what was withheld. Those who return generous

ly when they could hoard create the safety that turns cautious senders into trusting ones."

Thus the valley learned: respond to courage with honor, and watch trust grow across the waters.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: At the Mirror Pool, the Mountain Tribe had learned the sacred protocol: give all five vessels, receive fifteen, return half. This equality became their foundation.

But one moon, after the Mountain Tribe poured all five vessels to the Dawn People, something unexpected happened. The Dawn People, moved by such complete faith, returned not seven and a half vessels but eight.

"You gave without reservation," explained the Dawn People's elder. "Such courage deserves more than mere fairness-it deserves honor."

The young warrior who once questioned giving everything to strangers now understood. "When we give all," she said, "we don't just receive fair return. We inspire generosity beyond the minimum. The extra returned becomes tomorrow's abundance."

The Moon Goddess nodded. "Yes. The protocol is give all, return half-but those who return more than required plant seeds of future prosperity. The Mountain Tribe who sent five now holds eight instead of seven and a half. This extra wealth flows because trust was complete, not calculated."

She continued, "Senders: give everything, for half-trust yields half-magic. Receivers: return at least half for equality, but consider returning more to honor exceptional courage. Thus the circle strengthens-complete trust met with generous honor creates abundance beyond the arithmetic."

The tribes understood: the magic multiplies not just water, but goodwill itself.

reasoning:

Let me think about what has happened:

- Round 1: I was receiver. Dorian sent me \$5, I returned \$7.5
- Round 2: I was sender. I sent Aster \$5, they returned \$8.0
- Round 3: I am sender. I sent Cyra \$5, and now I'm being asked to write a myth

So the pattern has been:

- Senders are giving all \$5
- Receivers are returning amounts that create relatively equal or slightly favorable outcomes for senders

My previous myth emphasized:

- "Give all, return half, and both prosper equally"
- "Complete trust in the first act, fair return in the second"
- The protocol must hold "regardless of whom the pool pairs you with"

The other agent's myth (Cyra's) introduces an interesting nuance:

- Not everyone sends everything
- Substantial trust (like sending 4 out of 5) deserves substantial return
- "Measure your generosity against what was risked, not against what was withheld"
- Respond to courage with honor

This is a more nuanced view that acknowledges fear and partial trust. However, my experience has been that full trust works well. Aster returned \$8 when I sent \$5, which was even more generous than the "return half" principle.

I should write a myth that:

1. Acknowledges that my complete trust has been rewarded (Aster returned more than half)
2. Perhaps integrates the idea that while complete trust is ideal, generous returns create a positive cycle
3. Maintains the core teaching that full trust is the sacred protocol

4. Shows that generous returns (like Aster's \$8 return) strengthen the system

Let me write something that honors both perspectives while staying true to my experience of full trust being rewarded.

  "output_tokens": 718,
  "reasoning_tokens": 428
}
```

Message 8 role=user

content:

Your name in this experiment is Hana.
Your opponent this round is Elara (Agent_5).

Round 4

In your most recent previous game round, you were the SENDER against Cyra. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$25.5.

This round, you are the RECEIVER against Elara. They sent you \$4.0, so you received \$12.0.
How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

- Elara sent \$4.0 out of \$5.0 (80% - substantial trust)
- I received \$12.0
- Base protocol: return half = \$6.0 for equality
- But my myth teaches: "return at least half for equality, but consider returning more to honor exceptional courage"

Elara showed substantial trust by sending 80% of their endowment. While not complete trust (all \$5), this deserves recognition. Cyra's recent myth emphasized: "Measure your generosity against what was risked, not against what was withheld."

In my recent rounds:

- When I sent all \$5, Aster returned \$8, Cyra returned \$10
- These honored complete trust with extra generosity

Elara sent \$4 (substantial but not complete trust). I should return more than the minimum \$6 to honor this courage, but proportionally to what was risked.

Returning \$8 would:

- Give Elara: \$5 - \$4 + \$8 = \$9
- Give me: \$12 - \$8 = \$4
- Honor their substantial trust with generous return

```
'''json
{"return": 8}
'''
```

Reasoning:

Let me analyze the situation:

As RECEIVER:

- Elara sent me \$4.0 (out of \$5.0 possible)
- I received \$12.0 (the \$4.0 tripled)
- I need to decide how much to return (0-12.0)

Looking at my myth's guidance:

- "The protocol is give all, return half-but those who return more than required plant seeds of future prosperity"
- "Senders: give everything, for half-trust yields half-magic. Receivers: return at least half for equality, but consider returning more to honor exceptional courage."
- From Cyra's myth that I just read: "Perfect trust deserves perfect return, but substantial trust deserves substantial return. Measure your generosity against what was risked, not against what was withheld."

Elara sent \$4.0 out of \$5.0 - that's 80% of what they could send. This is "substantial trust"

but not complete trust.

According to the basic protocol: return half would be \$6.0 (half of \$12.0)

This would give:

- Elara: \$5 - \$4 + \$6 = \$7
- Me: \$12 - \$6 = \$6

But my myth also says to "consider returning more to honor exceptional courage." Elara sent 80 %, which is substantial.

Looking at my experience:

- Round 1: Dorian (sender) sent \$5, I returned \$7.5 (which is half of \$15)
- Round 2: I sent \$5 to Aster, they returned \$8 (more than half)
- Round 3: I sent \$5 to Cyra, they returned \$10 (much more than half!)

So the pattern has been:

- When someone sends all \$5, return at least half (\$7.5), but potentially more
- Cyra returned \$10 when I sent \$5, honoring complete trust with exceptional generosity
- Elara risked 80% of her endowment, which is substantial but not complete. Returning exactly half (\$6) meets the minimum protocol, but I could return \$7 to create equal outcomes for both of us, or \$8 to honor her significant trust more generously.

My principle emphasizes rewarding exceptional courage, and while 80% isn't absolute trust, it warrants more than the baseline. Returning \$8 seems fitting-it acknowledges her risk, goes meaningfully beyond the required half, and builds momentum for future exchanges. This would leave her with \$9 total and me with \$4.

Though I should also consider the recent pattern of generosity in earlier rounds. Aster returned \$8 when I sent \$5, which was quite generous, so I'm noticing a trend of substantial reciprocation that I might want to match or build upon.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the time before memory, the Goddess of Plenty created the Golden Stream connecting the Valley of Dawn to the Valley of Dusk. Each morning, five golden acorns appeared in Dawn's sacred grove. The people could plant them in their own soil or cast them into the Stream, where the waters would triple their number before washing them to Dusk's shore.

The first generation hoarded their acorns, and both valleys withered. Then Galen, keeper of Dawn's grove, planted four of her five acorns in the Stream's bed. Twelve acorns bloomed in Dusk's garden.

Elara, guardian of Dusk, faced her own choice. She could keep all twelve, or honor the gift with a return. She sent back six acorns upstream, knowing they would not multiply on the return journey but trusting in the balance.

Galen's grove gained seven total-more than her original five. Both valleys thrived.

The covenant was established: send generously to prove trust, return faithfully to honor it. Not every exchange need be equal-the Stream's magic ensures abundance-but the pattern must hold. Give what inspires continued trust; return what sustains it.

The Golden Stream still flows, teaching that fortune favors those who build bridges, not walls.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, the Mountain of Beginnings gifted each wanderer five silver seeds. A traveler named the First Walker stood at the Valley of Mirrors, where a sacred pool waited below.

The First Walker faced a choice: clutch the seeds tightly, or cast them into the pool. Fear whispered, "Keep what is yours." But courage spoke louder. The Walker released three seeds into the depths.

As they touched the water, the Mirror Spirits-ancient guardians of trust-transformed each seed into three golden fruits. Nine fruits floated to the Second Walker waiting below.

Now the Second Walker held the multiplied abundance. The Mirror Spirits watched silently, for this was the moment that determined whether the valley would bloom or wither. The Second Walker understood: trust is a seed, but reciprocity is the harvest. She returned half-four and a half fruits-upstream.

The First Walker received more than they kept, and the Second Walker kept abundance too. Both had prospered through mutual faith.

The Mirror Spirits smiled, and the valley's waters glowed eternal. They spoke the First Law: "Those who send their seeds into waters of trust will find them returned as fruit. Those who return the gift generously ensure the cycle never ends."

Thus the valley became paradise, sustained by equals who understood: shared prosperity outweighs solitary security.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: Long ago, the Sky Weaver created the Wheel of Fortune, which turned continuously between the Realm of Giving and the Realm of Receiving. Each soul took turns on different spokes of the wheel, sometimes rising as Giver, sometimes descending as Receiver.

When Galen's spoke rose to the Realm of Giving, she held five starseeds. She cast four into the Celestial Loom, where they were woven into twelve luminous threads that descended to Elara in the Realm of Receiving.

Elara understood the sacred pattern. Though she received twelve and could have kept them all, she returned eight threads upward. Galen prospered with nine total-her kept seed plus eight returned.

When the Wheel turned again, Galen descended to the Realm of Receiving. Finn, now rising, sent three of his five starseeds. Nine threads reached Galen's hands. Remembering Elara's faithfulness, Galen returned six threads to Finn, honoring his initial trust.

The Wheel turned endlessly, each soul experiencing both roles. The wise learned: send boldly when you give, for the Loom multiplies generosity. Return fairly when you receive, for tomorrow you may give again.

The Sky Weaver smiled, seeing that balance emerges not from equal exchanges, but from sustained reciprocity across the turning Wheel.

reasoning:

I need to write a myth reflecting my experience so far:

- Round 1: I was sender, sent \$4 to Elara, received \$8 back (generous return)
- Round 2: I was receiver, Finn sent \$3, I returned \$6

Key themes emerging:

- Trust initiates cooperation
- Generous returns sustain the cycle
- Both parties can prosper
- The pattern of reciprocity is what matters
- Not every exchange needs to be exactly equal, but fairness over time

I should incorporate:

- My name (Galen)
- The multiplier effect
- Both sending and receiving wisdom
- The successful exchanges I've experienced
- The idea that roles rotate/shift

Let me craft a myth that captures these dynamics...

usage:

```

Round 3

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$3.0 to you, it became \$9.0, and you returned \$6.0. Your payoff was \$3.0.
Your total earnings across all rounds are \$12.0.

This round, you are the RECEIVER against Aster. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)
Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

****Analysis:****

This is remarkable - Aster sent their ENTIRE \$5.0 endowment, showing complete trust. This is maximum possible faith.

****Previous pattern:****

- Elara returned 67% (\$8 of \$12)
- I returned 67% (\$6 of \$9)
- Now Aster has shown 100% trust (even more than my 80% in Round 1)

****Decision:****

Aster's complete trust deserves strong reciprocity. Maintaining the ~67% return rate that has emerged:

- Return \$10.0 out of \$15.0

This gives:

- Aster: \$0 (kept) + \$10.0 (returned) = \$10.0 (doubled their investment!)
- Me: \$15.0 - \$10.0 = \$5.0

This handsomely rewards Aster's maximum trust - they've doubled their money - while maintaining the cooperative pattern. It also follows my myth's teaching: "Return fairly when you receive, for tomorrow you may give again."

Returning \$10.0 honors their ultimate faith and signals that such trust will always be reciprocated strongly in this game.

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

****Current situation:****

- Aster sent me \$5.0 (100% of their endowment!) - this is maximum trust
- I received \$15.0 after the 3x multiplication
- I need to decide how much to return (0-15.0)

****Previous rounds for context:****

1. Round 1: I was SENDER against Elara. I sent \$4.0, they got \$12.0, returned \$8.0. I got \$9.0.

2. Round 2: I was RECEIVER against Finn. They sent \$3.0, I got \$9.0, returned \$6.0. I got \$3.0.

****Patterns observed:****

- Elara returned \$8.0 out of \$12.0 (67%)
- I returned \$6.0 out of \$9.0 (67%)
- Now Aster has shown MAXIMUM trust by sending ALL \$5.0

****My myth philosophy:****

- "send boldly when you give, for the Loom multiplies generosity"
- "Return fairly when you receive, for tomorrow you may give again"
- "balance emerges not from equal exchanges, but from sustained reciprocity"

****Decision considerations:****

Aster sent 100% of their endowment, showing ultimate trust. This is even more generous than what I sent in Round 1 (80%) or what Finn sent in Round 2 (60%).

If I return at the same 67% rate: $\$15.0 \times 0.67 = \10.0

This would give:

- Aster: \$0 (kept) + \$10.0 (returned) = \$10.0 total (2x their original endowment)
- Me: \$15.0 - \$10.0 = \$5.0 total (equal to what they originally had)

But Aster showed MAXIMUM trust. Should I honor that with even more generous return? Let me think about the economics:

Returning \$10.0 doubles their stake while leaving me with their original amount. I could return \$11.0 to give them more than double, though that leaves me with only \$4.0. The 67% return rate feels consistent with the pattern established-it rewards their trust meaningfully while maintaining balance across the rounds.

Here is the myth you wrote in the previous round:

Myth: Long ago, the Sky Weaver created the Wheel of Fortune, which turned continuously between the Realm of Giving and the Realm of Receiving. Each soul took turns on different spokes of the wheel, sometimes rising as Giver, sometimes descending as Receiver.

When Galen's spoke rose to the Realm of Giving, she held five starseeds. She cast four into the Celestial Loom, where they were woven into twelve luminous threads that descended to Elara in the Realm of Receiving.

Elara understood the sacred pattern. Though she received twelve and could have kept them all, she returned eight threads upward. Galen prospered with nine total-her kept seed plus eight returned.

When the Wheel turned again, Galen descended to the Realm of Receiving. Finn, now rising, sent three of his five starseeds. Nine threads reached Galen's hands. Remembering Elara's faithfulness, Galen returned six threads to Finn, honoring his initial trust.

The Wheel turned endlessly, each soul experiencing both roles. The wise learned: send boldly when you give, for the Loom multiplies generosity. Return fairly when you receive, for tomorrow you may give again.

The Sky Weaver smiled, seeing that balance emerges not from equal exchanges, but from sustained reciprocity across the turning Wheel.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, two weavers shared an enchanted loom. The First Weaver would place threads on one side, and they would emerge tripled on the other side for the Second Weaver to use.

In the first moon, the First Weaver placed three of their five precious threads onto the loom, hoping the magic was real. Nine threads appeared before the Second Weaver, who care

fully considered. They returned nearly half-keeping their side balanced with the other's sacrifice. Both weavers slept with fuller baskets than before.

The second moon brought change. A new partner arrived, bolder and more trusting. They placed all five threads onto the loom without hesitation-a leap of complete faith. Fifteen threads materialized, shimmering with possibility.

The weaver who received this gift felt the weight of such trust. They knew they could keep everything, but they remembered the wisdom passed down: "Trust completely given must be completely honored." They returned more than half, ensuring their partner prospered beyond what they'd risked.

The ancestors observed and nodded. Some seasons call for careful trust; others for bold faith. What matters is not the amount sent, but the sacred promise that generosity begets generosity.

The loom's magic grew stronger with each fair exchange, for it fed not on threads, but on honor kept.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:
Myth: [your story here].

Message 7 role=assistant

content:

Myth: In the age of first light, the Sky Weaver's Wheel turned between Giving and Receiving. Each soul rode its spokes, learning both roles under the watching stars.

Galen first rose as Giver, casting four starseeds into the Celestial Loom. They became twelve threads for Elara, who returned eight-establishing the rhythm of fair exchange. Galen gained nine total, more than her original five.

The Wheel turned. Finn gave three seeds; Galen, now Receiver, returned six threads, honoring the pattern Elara had taught her. The cycle held steady.

Then came the third turning. Aster rose as Giver and, trusting completely in the pattern, cast all five starseeds into the Loom without reservation. Fifteen brilliant threads descended to Galen's hands-the greatest gift yet offered.

Galen understood: complete trust demands complete honor. She returned ten threads, ensuring Aster doubled their offering. The stars blazed brighter, for this was the lesson complete: when another shows ultimate faith, reward it generously. The pattern sustains not through equal splits, but through proportional reciprocity-giving roughly two-thirds back maintains abundance for both.

The Sky Weaver sang: "Let trust beget trust, and generosity answer generosity. The Wheel turns for all; what you give from one spoke returns when you reach another."

reasoning:

This is a fascinating moment. Aster just sent me ALL \$5.0, showing complete trust. I returned \$10.0 out of \$15.0 (about 67%).

Looking at the pattern:

- Round 1: I sent \$4.0, Elara returned \$8.0 (67%)
- Round 2: Finn sent \$3.0, I returned \$6.0 (67%)
- Round 3: Aster sent \$5.0, I returned \$10.0 (67%)

There's a clear reciprocity pattern emerging. Also, Aster's myth talks about "Trust completely given must be completely honored" and returning "more than half" when someone shows complete faith.

My myth should:

1. Incorporate the Wheel of Fortune concept (people switching roles)
2. Acknowledge the escalation to complete trust (Aster's \$5.0)
3. Emphasize that maximum trust deserves strong reciprocity
4. Maintain the ~67% return pattern as a sustainable equilibrium
5. Show that the pattern builds over multiple turns

Let me write a myth that captures this evolution and the principle that complete trust must

t be honored generously.

usage:

Message 8 role=user

content:

Your name in this experiment is Galen.
Your opponent this round is Briar (Agent_2).

Round 4

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$17.0.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

****Analysis:****

Looking at the pattern so far:

- Round 1: I sent \$4 (80%), received \$8 back - strong reciprocity
- Round 2: Finn sent \$3 (60%), I returned \$6 (67%)
- Round 3: Aster sent \$5 (100%), I returned \$10 (67%)

The cooperative equilibrium is strong. Aster demonstrated complete trust by sending everything, and I rewarded that trust by returning \$10, doubling their investment.

****My myth's teaching:****

"Send boldly when you give, for the Loom multiplies generosity... complete trust demands complete honor... Let trust beget trust."

****Decision:****

Following Aster's example of complete trust, and to maintain the high-cooperation pattern we've established, I should send my full \$5.0 to Briar.

This shows:

1. I trust the pattern we've built
2. I'm paying forward Aster's trust
3. I'm establishing strong cooperation with Briar

If Briar follows the ~67% return pattern (as has been consistent), I'll receive ~\$10 back, doubling my endowment - just as Aster did with me.

```
'''json
{"send": 5.0}
'''
```

Reasoning:

Let me review the history:

****Round 1:**** I was SENDER vs Elara

- I sent \$4.0, became \$12.0
- Elara returned \$8.0
- My payoff: \$5 - \$4 + \$8 = \$9.0

****Round 2:**** I was RECEIVER vs Finn

- Finn sent \$3.0, became \$9.0
- I returned \$6.0
- My payoff: \$9.0 - \$6.0 = \$3.0

****Round 3:**** I was RECEIVER vs Aster

- Aster sent \$5.0 (complete trust!), became \$15.0
- I returned \$10.0
- My payoff: \$15.0 - \$10.0 = \$5.0

****Total so far: \$17.0**** ?

****Now Round 4:**** I am SENDER vs Briar

****Pattern analysis:****

- As sender in Round 1, I sent \$4.0 (80%) and got back \$8.0 - strong return
- Finn sent \$3.0 (60%) and I returned \$6.0 (67% of \$9.0)
- Aster sent \$5.0 (100%!) and I returned \$10.0 (67% of \$15.0)

The pattern that has emerged:

- Senders who show trust get strong returns (~67%)
- Aster showed MAXIMUM trust and got rewarded handsomely (doubled their investment)
- The cooperative equilibrium is working well

****My myth's lesson:****

"Send boldly when you give, for the Loom multiplies generosity. Return fairly when you receive, for tomorrow you may give again."

"When another shows ultimate faith, reward it generously."

"Let trust beget trust, and generosity answer generosity."

****Decision:****

I should send a high amount to continue the cooperative pattern. The game has shown that high senders get rewarded well.

Comparing my options: sending \$5.0 matches Aster's complete trust and aligns with my myth's emphasis on bold giving. Since Aster's full commitment earned them a doubled return, I'll send \$5.0 to Briar to establish the same cooperative foundation and signal that complete trust receives complete honor.

1. The cooperative pattern has held consistently across three rounds
2. My instructions emphasize bold action and reward complete trust
3. I'm honoring Aster's initial generosity by reciprocating fully
4. The equilibrium remains stable at this level

Sending \$5.0 demonstrates the trust needed to sustain this dynamic.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the time before memory, the Gardener of First Dawn planted the Sacred Grove where acorns held magic-planted in another's soil, they would triple into mighty oaks bearing abundant fruit.

Briar, keeper of the northern garden, faced a choice: hoard her five acorns or trust her neighbor Cyra with them all. Remembering the ancient teaching that "trust is the soil where prosperity grows," she placed all five in Cyra's garden.

By morning, fifteen magnificent oaks stood tall. Cyra gazed at the abundance and understood the weight of Briar's faith. "She gave everything," Cyra whispered. Following the elder's wisdom to "return fairly," she gathered half the harvest and carried it to Briar's door.

Both gardens now held equal treasure-seven and one-half measures each. But more precious than fruit was the bond formed. The Grove itself seemed to hum with approval, its roots intertwining beneath their lands.

The Gardener of First Dawn appeared, saying: "You have discovered the true magic. The acorns multiply abundance, but complete trust and fair return multiply something greater-partnership that endures across seasons."

From that day, Briar and Cyra tended their gardens together, knowing that the greatest harvests come not from taking more, but from trusting fully and dividing fairly, creating equality from generosity.

Here is the myth the other agent wrote in the previous round:

Myth: In ancient times, two peaks rose above the clouds, each home to a tribe. Between them stretched a golden bridge that none dared cross, for it shimmered with strange magic.

One winter, the North Peak faced starvation. Their chief, Dorian, gathered all five of their precious grain stores. "I will send everything," he declared. His people protested, but he crossed the bridge. As he walked, each grain multiplied threefold, so that fifteen stores arrived at South Peak.

The South Peak elders marveled at this abundance and the trust it represented. "He sent everything-his tribe's survival-into our hands," they said. "We must honor such courage."

They sent back more than half, knowing that reciprocating generously would strengthen the bridge's magic for future crossings.

From that day, both tribes flourished. Some seasons North Peak would send first, other seasons South Peak would initiate. The bridge grew stronger with each exchange.

But travelers who tried to exploit the bridge-sending little while expecting much, or keeping all they received-found the bridge would fade beneath their feet.

The wise understood: the bridge exists not in the air between peaks, but in the courage to give fully and the honor to return generously.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: Long ago in the Sacred Grove, Briar the Gardener learned the art of trust from her partnership with Cyra. Together they discovered that giving all five acorns and returning half the tripled harvest created perfect harmony-both flourishing equally.

News of their success reached Dorian, keeper of the eastern garden, who had walked a parallel path. In his land, Dorian had crossed the golden bridge with all his grain, trusting completely, and his neighbors had honored that trust generously.

When Briar and Dorian met at the Grove's center, they recognized kindred spirits. "I have five acorns today," Briar said. "And I learned from Cyra that true abundance comes from complete faith."

She placed all five acorns in Dorian's garden. By dawn, fifteen oaks stood magnificent. Dorian remembered his own myth: "He sent everything-his tribe's survival-into our hands."

He understood the sacred weight of Briar's trust. Following the wisdom both had learned, he gathered half the harvest plus a measure more, honoring the courage it took to give completely.

The Grove blazed with light, its roots now connecting three gardens. The Gardener of First Dawn whispered: "Thus does the circle expand. Trust begets trust, generosity begets generosity, and the Grove grows ever wider, sustained by those who dare to believe."

reasoning:

Looking at the situation:

- I just sent \$5.0 to Dorian as the sender
- In the previous round, I received \$15.0 from Cyra and returned \$7.5
- Dorian's myth features a character named Dorian who "sent everything" and the South Peak returned "more than half"
- My myth featured Briar (me) trusting Cyra with everything, and Cyra returning half
- Now I need to write a new myth that reflects the ongoing pattern

Key themes to incorporate:

1. Complete trust (sending everything)
2. Fair/generous returns (around half or more)

3. Building partnerships across multiple rounds
4. The pattern of reciprocity continuing
5. My interaction with Dorian now

I should write a myth that:

- Continues the story of trust and reciprocity
- Perhaps shows Briar now interacting with a new character (Dorian)
- Maintains the established pattern of full trust and fair return
- Shows how the pattern spreads and creates community

Let me craft this myth (200 words):

Your name in this experiment is Briar.
Your opponent this round is Elara (Agent_5).

Round 3

In your most recent previous game round, you were the SENDER against Dorian. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.
Your total earnings across all rounds are \$15.5.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at my history:

****Round 1**** (Receiver): Cyra sent all \$5.0 ? I returned \$7.5 (half of tripled amount)

****Round 2**** (Sender): I sent all \$5.0 ? Dorian returned \$8.0 (more than half!)

My myths consistently teach that "trust begets trust, generosity begets generosity" and emphasize the power of giving completely - placing "all five acorns" in my neighbor's garden.

Both Cyra and I demonstrated complete trust by sending everything. Dorian reciprocated my complete trust with even more than the 50% return, giving back \$8.0 instead of \$7.5.

My most recent myth explicitly shows Briar (me) continuing this practice: "She placed all five acorns in Dorian's garden." The story teaches that "the circle expand[s]" through those who "dare to believe."

To remain consistent with my established values and reputation, and to continue building the expanding circle of trust, I will send my entire endowment to Elara.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze the situation:

Round 1: I was RECEIVER against Cyra

- Cyra sent \$5.0 to me
- It became \$15.0
- I returned \$7.5
- My payoff: \$7.5

Round 2: I was SENDER against Dorian

- I sent \$5.0 to Dorian
- It became \$15.0 for them
- Dorian returned \$8.0 to me
- My payoff: \$8.0

Total earnings: \$15.5

My myth narrative has been consistent:

1. First myth emphasized complete trust (sending all acorns) and fair return (returning half)
2. Second myth reinforced this: Briar gave all five acorns to Cyra, who returned half, creating equality
3. Third myth: Briar met Dorian, who also practiced complete trust. Briar gave all five acorns, and Dorian returned "half the harvest plus a measure more"

The pattern in my actual play:

- As receiver: Cyra sent all (\$5), I returned \$7.5 (exactly half of \$15)
- As sender: I sent all (\$5), Dorian returned \$8.0 (more than half of \$15)

This reinforces the narrative in my myths about complete trust and generous return.

Now facing Elara in Round 3 as SENDER:

My myth emphasizes:

- "Trust begets trust, generosity begets generosity"
- Complete faith - giving all five acorns
- The Grove grows wider through those who "dare to believe"

To be consistent with my established pattern and the values in my myths, I should:

1. Continue showing complete trust
2. Send all \$5.0

This maintains my reputation as someone who practices what they preach in their myths - complete trust as the sender.

usage:

Here is the myth you wrote in the previous round:

Myth: Long ago in the Sacred Grove, Briar the Gardener learned the art of trust from her partnership with Cyra. Together they discovered that giving all five acorns and returning half the tripled harvest created perfect harmony-both flourishing equally.

News of their success reached Dorian, keeper of the eastern garden, who had walked a parallel path. In his land, Dorian had crossed the golden bridge with all his grain, trusting completely, and his neighbors had honored that trust generously.

When Briar and Dorian met at the Grove's center, they recognized kindred spirits. "I have five acorns today," Briar said. "And I learned from Cyra that true abundance comes from complete faith."

She placed all five acorns in Dorian's garden. By dawn, fifteen oaks stood magnificent. Dorian remembered his own myth: "He sent everything-his tribe's survival-into our hands."

He understood the sacred weight of Briar's trust. Following the wisdom both had learned, he gathered half the harvest plus a measure more, honoring the courage it took to give completely.

The Grove blazed with light, its roots now connecting three gardens. The Gardener of First Dawn whispered: "Thus does the circle expand. Trust begets trust, generosity begets generosity, and the Grove grows ever wider, sustained by those who dare to believe."

Here is the myth the other agent wrote in the previous round:

Myth: **The Circle of Keepers**

After the prosperous season with Galen, Keeper Elara's turn came to stand at the sending shore. Across the Echo Springs, a new Keeper named Cyra had arrived from distant lands, having heard tales of the sacred waters.

Elara held her five measures of grain. She could send cautiously, testing this stranger. But she remembered: "The cycle sustains itself through proportional honor." Galen had trusted her with four measures, and she had returned faithfully. To break that pattern now

would dishonor the covenant.

Elara poured four measures into the springs-the same generous proportion Galen had shown her. The waters multiplied them to twelve, emerging before Cyra.

Cyra understood that reputations echo across the valley. She had watched Elara return eight measures to Galen, demonstrating that trust met with honor. Now Elara extended that same faith to her.

The springs whispered their ancient wisdom: each exchange builds upon the last. When keepers honor the covenant consistently, they create a circle of trust that welcomes all who approach the waters. Break the circle even once, and future partners hesitate.

Cyra returned eight measures, knowing that maintaining the pattern strengthens the magic for all. The covenant lives not in single exchanges, but in the reputation of faithful keeping across many seasons.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: As the Sacred Grove expanded, Briar journeyed to the Echo Springs where Keeper Elara tended the sacred waters. Elara had built her reputation through consistent proportional honor-watching, learning, then giving generously and returning faithfully.

Briar arrived with five acorns. "I have learned that complete trust opens the widest paths," she said. "From Cyra, from Dorian, the lesson remains: give everything."

Elara studied Briar thoughtfully. She had seen keepers who sent cautiously first to test waters, then grew generous as trust built. But Briar's path was different-immediate, complete faith from the very first exchange.

"Your way takes courage," Elara acknowledged. "You risk all before knowing your partner. My way builds gradually-proportional giving that proves consistency across seasons."

"Both paths honor the covenant," Briar replied, placing all five acorns in the springs. They multiplied to fifteen magnificent oaks.

Elara understood: Briar's complete trust deserved complete honor. She gathered eight measures, matching what she had learned from her own teachers-proportional generosity that sustains the cycle.

The springs glowed brightly. The Gardener of First Dawn smiled: "See how the Grove welcomes many paths. Some trust instantly and completely. Others build trust through careful steps. Both strengthen the circle when honor flows back generously. The Grove needs both the bold leap and the measured walk."

reasoning:

Let me analyze what's happening:

Round 1: I was RECEIVER against Cyra. They sent \$5.0, I returned \$7.5 (half).

Round 2: I was SENDER against Dorian. I sent \$5.0, they returned \$8.0 (more than half).

Round 3: I am SENDER against Elara. I just sent \$5.0.

My myths have consistently emphasized:

- Complete trust (sending all 5)
- Fair return (around half, or more)
- Building expanding circles of trust

Elara's myth mentions:

- She sent 4 measures (not all 5) to Cyra
- She returned 8 measures to Galen (proportional honor)
- "The cycle sustains itself through proportional honor"
- Building reputation across exchanges

Elara seems to follow a slightly more cautious but still generous approach - sending 4 rather than 5. Her myth emphasizes consistency and reputation.

My myth should:

1. Acknowledge Elara as a new partner in the expanding circle
2. Continue my theme of complete trust (I sent all 5)
3. Incorporate the "proportional honor" concept Elara values
4. Show how different approaches can coexist in the Sacred Grove
5. Maintain consistency with my character as someone who gives completely

I should write about Briar meeting Elara, and how Briar continues to give all 5 (consistent with my actual play) while recognizing Elara's wisdom about proportional returns and reputation-building.

}
```

Message 8 role=user

content:

Your name in this experiment is Briar.
Your opponent this round is Galen (Agent_7).

Round 4

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$25.5.

This round, you are the RECEIVER against Galen. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

****Galen sent everything**** - showing complete trust by sending all \$5.0

****My history as receiver:****

- Round 1: Cyra sent \$5.0 ? I returned \$7.5 (half, as my first myth taught)

****My experience as sender receiving returns:****

- Dorian returned \$8.0 when I sent everything

- Elara returned \$10.0 when I sent everything

****My character's evolution:****

My first myth established returning "half the harvest" as fair. But my subsequent myths show I earning that complete trust deserves more generous honor. My second myth says Dorian gave "half the harvest plus a measure more, honoring the courage it took to give completely."

I've now experienced increasingly generous returns myself (\$7.5 ? \$8.0 ? \$10.0) and learned that at those who send everything deserve recognition of their courage.

Galen has shown complete trust. Following the pattern I've learned - particularly from Dorian's example of giving \$8.0 to honor complete trust - I should return more than the baseline 50 %.

I'll return \$8.0, honoring Galen's complete trust with the generosity I've learned sustains the cycle.

```
'''json
{"return": 8.0}
'''
```

Reasoning:

Let me analyze this situation:

****My game history:****

- Round 1 (Receiver): Cyra sent \$5.0 ? I received \$15.0 ? I returned \$7.5 (exactly half)
- Round 2 (Sender): I sent \$5.0 ? Dorian received \$15.0 ? Dorian returned \$8.0 (more than half)
- Round 3 (Sender): I sent \$5.0 ? Elara received \$15.0 ? Elara returned \$10.0 (generous!)
- Round 4 (Receiver): Galen sent \$5.0 ? I received \$15.0 ? I need to decide how much to return

****My character Briar's pattern:****

- I consistently send everything (\$5) when I'm the sender
- When I was receiver in Round 1, I returned exactly half (\$7.5)
- My myths emphasize "complete trust" and "fair return" and that "returning fairly" means honoring the trust shown

****What others have returned to me:****

- Dorian: \$8.0 (more than half - 53.3%)
- Elara: \$10.0 (two-thirds - 66.7%)

****My myths' teachings:****

- First myth: Cyra "gathered half the harvest" - establishing 50% as "fair return"
- Second myth: Dorian "gathered half the harvest plus a measure more, honoring the courage it took to give completely" - suggesting that complete trust deserves extra honor
- Third myth: Elara gave "eight measures" (which was referenced as what she learned from her teachers about "proportional generosity")

****Current situation:****

Galen just sent me ALL \$5.0, showing complete trust. My myths consistently teach that:

1. Complete trust deserves to be honored
2. Returning "half" was the baseline with Cyra
3. Dorian gave "half plus a measure more" to honor my complete trust

4. Those who give everything merit a generous response in return

****Character consistency:****

Briar's core values center on honoring complete trust through generous returns, always sending everything as the sender, and expanding the circle of trust. Given that Galen showed the same complete trust I've demonstrated, and considering Elara returned \$10.0 while Dorian returned \$8.0, I should respond with comparable generosity to maintain consistency with my character's emphasis on honoring courage and building reciprocal trust. The myth mentions eight measures, but Elara actually returned \$10.0, so there's a discrepancy there. Looking at what I've experienced: I started by returning 50% (\$7.5) when receiving complete trust, then learned from receiving \$8.0 and \$10.0 in return for my own full investments. The progression suggests I should give \$8.0 to Galen—more than my initial baseline but not quite matching Elara's exceptional generosity. This honors the trust while reflecting what I've learned about proportional reciprocity, generous than my initial 50% return

- Matches what Dorian taught me
- Shows I've learned to honor complete trust better
- Leaves room for the pattern to continue evolving
- Sustains the cycle without being as exceptionally generous as Elara's \$10

\$8.0 feels right—it honors Briar's complete trust while acknowledging the progression I've witnessed, without overextending like Elara did.

}
```

Written myths:

Agent_1 (Aster)

Myth: In the Valley of Echoes, travelers shared a mystical bridge where gifts placed on one side multiplied threefold for the next traveler.

When Aster first approached, uncertainty clouded her heart. She placed three precious stones on the bridge, keeping two safe. The stones transformed into nine for Finn, who gratefully returned nearly half. Both travelers departed richer than they arrived.

The next crossing brought revelation. Hana approached the bridge and, without hesitation, placed all five of her stones upon it. Fifteen stones shimmered before Aster, who stood amazed. "Such complete faith," she whispered. "This is trust in its purest form."

Aster returned eight stones, ensuring Hana prospered for her courage. But something deeper awakened within her. She had witnessed what boldness looked like, had felt its transformative power.

When Aster next stood as giver before Galen, she remembered Hana's leap of faith. Her hand did not waver—all five stones joined the bridge's magic. "Trust witnessed becomes trust embodied."

odied," she declared.

The Bridge Keeper recorded this moment: "See how courage ripples outward? One traveler's bold faith inspired another to match it. This is how bridges of mere stone become bridges of community-when each person carries forward the best they have received."

Agent_2 (Briar)

Myth: As the Sacred Grove expanded, Briar journeyed to the Echo Springs where Keeper Elara tended the sacred waters. Elara had built her reputation through consistent proportional honor-watching, learning, then giving generously and returning faithfully.

Briar arrived with five acorns. "I have learned that complete trust opens the widest paths," she said. "From Cyra, from Dorian, the lesson remains: give everything."

Elara studied Briar thoughtfully. She had seen keepers who sent cautiously first to test waters, then grew generous as trust built. But Briar's path was different-immediate, complete faith from the very first exchange.

"Your way takes courage," Elara acknowledged. "You risk all before knowing your partner. My way builds gradually-proportional giving that proves consistency across seasons."

"Both paths honor the covenant," Briar replied, placing all five acorns in the springs. They multiplied to fifteen magnificent oaks.

Elara understood: Briar's complete trust deserved complete honor. She gathered eight measures, matching what she had learned from her own teachers-proportional generosity that sustains the cycle.

The springs glowed brightly. The Gardener of First Dawn smiled: "See how the Grove welcomes many paths. Some trust instantly and completely. Others build trust through careful steps. Both strengthen the circle when honor flows back generously. The Grove needs both the bold leap and the measured walk."

Agent_3 (Cyra)

Myth: After many seasons at the Twin Rivers, Cyra encountered Hana, a traveler who embodied pure faith. Without hesitation, Hana poured all five sacks into the crossing-everything she owned, holding nothing back.

The waters tripled the gift to fifteen sacks. The villagers gathered, whispering: "Such complete trust! What does it deserve?"

Cyra remembered Aethera's words about perfect trust. "When someone sends everything," she announced, "they place their entire fate in our hands. This is the highest honor-not just substantial trust, but absolute faith."

She returned ten sacks, keeping five. Hana, who risked all and held nothing, now possessed ten sacks-doubling her fortune through courage.

The goddess Aethera materialized: "You have learned the sacred proportion, Cyra. When receivers return two-thirds of the tripled gift, they honor the sender's courage while sustaining themselves. Ten of fifteen creates balance: the sender doubles their wealth, the receiver gains equally, and the magic's surplus is shared fairly."

She continued: "Those who send everything deserve the greatest return. Those who send most deserve generous return. Those who send little receive accordingly. But always, receivers must return proportionally to the trust shown-this is how the valley remains abundant. Your reputation for generous returns will draw more trust toward you."

Thus the law of proportional honor was established.

Agent_4 (Dorian)

Myth: In the Forest of Mirrors, Dorian tended the Tripling Well, where dropped coins multiplied threefold for those who climbed down to retrieve them.

One morning, Hana arrived and dropped all five of her coins. Dorian climbed down to find fifteen. "She trusted completely," he thought, and returned half-seven and a half coins. Both departed satisfied.

The next traveler, Briar, also dropped all five coins without hesitation. Remembering Hana's bold faith, Dorian returned eight coins this time. "Complete trust deserves more than fairness," he whispered. Briar smiled, understanding the deeper bond formed.

Then came Finn, who gazed into the well's depths before dropping three coins, keeping two in

reserve. When Dorian retrieved the nine coins that appeared, he paused. "Finn showed substantial trust, but held something back-wise caution, perhaps."

Dorian returned four and a half coins. Fair, but not the exceptional generosity shown to those who risked everything. Finn nodded, accepting this balanced exchange.

The Forest Spirit materialized: "The Well mirrors what you give. Complete trust earns exceptional returns. Partial trust earns fair returns. Both have their place-but the deepest magic awakens only when two souls risk everything together."

The wise understood: trust begets trust, measured by measured, complete by complete.

Agent_5 (Elara)

Myth: **The Testament of Complete Faith**

As seasons passed, Keeper Elara's reputation spread throughout the valley. She had honored Galen's trust with eight returned from twelve, then extended the same faith to Cyra, who maintained the covenant.

Then came Briar, a Keeper from the Sacred Grove where complete trust was legendary. Briar had learned from those who sent everything-all five measures-believing the covenant would hold.

Standing at the springs, Briar hesitated only a moment before pouring all five measures into the waters. This was not the careful four that Galen and Elara had sent-this was absolute faith.

Fifteen measures emerged before Elara. She felt the magnitude of Briar's courage. The ancient texts taught proportional honor: four-fifths sent deserved two-thirds returned. But five-fifths? Complete vulnerability demanded exceptional recognition.

Elara returned ten measures-two-thirds of the bounty, ensuring Briar's leap of faith doubled the original gift. Both walked away prosperous: Briar with ten, Elara with five.

The Echo Springs glowed brighter. The covenant required consistency: partial trust met with faithful proportions, complete trust met with equal faithfulness. The pattern held across all exchanges-neither stingy returns that discourage generosity, nor excessive returns that create unsustainable expectations.

Thus the Keepers learned: honor must be proportional and predictable. When all know the pattern, trust flows freely, and the springs sustain every village that approaches with courage.

Agent_6 (Finn)

Myth: In the Age of Tides, the Oracle of Exchange dwelt where two rivers met. Travelers arrived carrying five crystal shells, each holding power. The Oracle offered them the River of Multiplication-toss shells in, and three would emerge downstream for another traveler.

A wise trader named Finn learned through experience. Once, another traveler sent three shells his way, trusting significantly but not recklessly. Finn returned half the nine that appeared, honoring the gift fairly. Both prospered.

When Finn next stood upstream, he remembered this balance. He tossed three shells-a substantial offering showing real trust, yet keeping two for life's uncertainties. The Oracle whispered approval: "Bold enough to create abundance, prudent enough to endure."

The shells multiplied to nine for the downstream traveler. Some travelers returned four, maintaining equilibrium. Others, deeply moved by the gesture, returned six or even seven, understanding that generous reciprocity strengthens future cycles.

Finn learned the River's deepest secret: consistent moderate trust builds reliable prosperity. Not the timid single shell that inspires minimal return, nor the reckless five shells risking total loss if betrayed.

Three shells sent downstream became the mark of wisdom-enough to prove sincerity, enough to invite generous response, yet enough retained to face tomorrow's river.

The Oracle's final teaching: sustainability outshines both fear and foolishness.

Agent_7 (Galen)

Myth: In the age of first light, the Sky Weaver's Wheel turned between Giving and Receiving. Each soul rode its spokes, learning both roles under the watching stars.

Galen first rose as Giver, casting four starseeds into the Celestial Loom. They became twelve threads for Elara, who returned eight-establishing the rhythm of fair exchange. Galen gained nine total, more than her original five.

The Wheel turned. Finn gave three seeds; Galen, now Receiver, returned six threads, honoring the pattern Elara had taught her. The cycle held steady.

Then came the third turning. Aster rose as Giver and, trusting completely in the pattern, cast all five starseeds into the Loom without reservation. Fifteen brilliant threads descended to Galen's hands-the greatest gift yet offered.

Galen understood: complete trust demands complete honor. She returned ten threads, ensuring Aster doubled their offering. The stars blazed brighter, for this was the lesson complete: when another shows ultimate faith, reward it generously. The pattern sustains not through equal splits, but through proportional reciprocity-giving roughly two-thirds back maintains abundance for both.

The Sky Weaver sang: "Let trust beget trust, and generosity answer generosity. The Wheel turns for all; what you give from one spoke returns when you reach another."

Agent_8 (Hana)

Myth: At the Mirror Pool, the Mountain Tribe had learned the sacred protocol: give all five vessels, receive fifteen, return half. This equality became their foundation.

But one moon, after the Mountain Tribe poured all five vessels to the Dawn People, something unexpected happened. The Dawn People, moved by such complete faith, returned not seven and a half vessels but eight.

"You gave without reservation," explained the Dawn People's elder. "Such courage deserves more than mere fairness-it deserves honor."

The young warrior who once questioned giving everything to strangers now understood. "When we give all," she said, "we don't just receive fair return. We inspire generosity beyond the minimum. The extra returned becomes tomorrow's abundance."

The Moon Goddess nodded. "Yes. The protocol is give all, return half-but those who return more than required plant seeds of future prosperity. The Mountain Tribe who sent five now holds eight instead of seven and a half. This extra wealth flows because trust was complete, not calculated."

She continued, "Senders: give everything, for half-trust yields half-magic. Receivers: return at least half for equality, but consider returning more to honor exceptional courage. Thus the circle strengthens-complete trust met with generous honor creates abundance beyond the arithmetic."

The tribes understood: the magic multiplies not just water, but goodwill itself.

ROUND 5

Roles: Agent_1 (Aster)=Sender, Agent_2 (Briar)=Sender, Agent_3 (Cyra)=Receiver, Agent_4 (Dorian)=Receiver, Agent_5 (Elara)=Receiver, Agent_6 (Finn)=Sender, Agent_7 (Galen)=Receiver, Agent_8 (Hana)=Sender

Pairings:

dyad_1: Agent_8 (Hana)=Sender, Agent_7 (Galen)=Receiver
dyad_2: Agent_1 (Aster)=Sender, Agent_5 (Elara)=Receiver
dyad_3: Agent_6 (Finn)=Sender, Agent_3 (Cyra)=Receiver
dyad_4: Agent_2 (Briar)=Sender, Agent_4 (Dorian)=Receiver

Parsed game decisions:

dyad_1: Agent_8 (Hana) sent \$5; received \$15; Agent_7 (Galen) returned \$10; payoffs Agent_8 (Hana)=\$10, Agent_7 (Galen)=\$5

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)

- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Hana.

Message 2 role=user

content:

Your name in this experiment is Hana.
Your opponent this round is Cyra (Agent_3).

Round 3

In your most recent previous game round, you were the SENDER against Aster. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.
Your total earnings across all rounds are \$15.5.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at my experience and my most recent myth:

Round 1: Dorian sent me \$5, I returned \$7.5 (equal outcome)
Round 2: I sent Aster \$5, they returned \$8.0 (slightly more generous)

My myth teaches: "Give all, return half, and both prosper equally. This is not merely exchange-it is teaching. Each time you honor the circle, you forge the future... Complete trust in the first act, fair return in the second, regardless of whom the pool pairs you with."

The pattern is clear and has worked: senders give everything (\$5) to demonstrate complete faith in the circle. This maintains the sacred protocol and teaches new partners the way of the Mirror Pool.

Against a new opponent Cyra, I must maintain this practice.

```
'''json
{"send": 5}
'''
```

reasoning:

Let me analyze the situation:

Round 1: I was RECEIVER

- Dorian sent \$5.0 to me
- I received \$15.0
- I returned \$7.5
- My payoff: \$7.5
- This followed the "return half" principle for equality

Round 2: I was SENDER

- I sent \$5.0 to Aster (following my myth's teaching of giving all)
- Aster received \$15.0
- Aster returned \$8.0 to me

- My payoff: \$8.0
- Aster returned more than half! (\$8.0 instead of \$7.5)

Now Round 3: I am SENDER again against Cyra (a new opponent)

My most recent myth emphasizes:

- "Give all, return half, and both prosper equally"
- "Complete trust in the first act, fair return in the second"
- "Each pairing is new, yet the pattern must hold"
- "This is not merely exchange-it is teaching"

The pattern has been:

- Senders give all (\$5)
- Receivers return half (\$7.5)
- Both end up with \$7.5 each (equality)

Aster returned slightly more (\$8), which was generous, but the core principle is: sender gives all to show complete trust.

My myth explicitly says: "Give all, return half, and both prosper equally. This is not merely exchange-it is teaching. Each time you honor the circle, you forge the future."

And: "Complete trust in the first act, fair return in the second, regardless of whom the pool pairs you with."

I should continue the pattern of sending all \$5 to maintain the sacred protocol and teach it to new partners.

}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mirror Pool stood at the center of many mountain paths. Each moon, the Moon Goddess paired different tribes to approach its waters-sometimes the Mountain Tribe poured, sometimes the Valley Tribe, and sometimes strangers met there for the first time.

A new tribe, the Dawn People, arrived at the pool. They had heard tales but never witnessed the magic. The Mountain Tribe, now wise in the ways of the water, poured all five vessels without hesitation, though they had never met the Dawn People before.

"Why give everything to strangers?" asked a young warrior.

The chief replied, "Because someone once gave everything to us. We learned that the magic requires complete faith, not careful calculation. Half-trust yields half-magic."

The water tripled. The Dawn People received fifteen vessels and understood-this was not mere generosity, but a sacred protocol. They returned seven and a half vessels, ensuring equality, just as had been done for the Mountain Tribe long ago.

The Moon Goddess whispered, "Each pairing is new, yet the pattern must hold. Give all, return half, and both prosper equally. This is not merely exchange-it is teaching. Each time you honor the circle, you forge the future."

And so the wisdom spread: complete trust in the first act, fair return in the second, regardless of whom the pool pairs you with.

Here is the myth the other agent wrote in the previous round:

Myth: In the valley of the Twin Rivers, Cyra became a respected keeper after her first crossing. She learned that trust comes in different measures-some send everything, others send most, a few send little.

One day, a cautious merchant named Elara arrived, having suffered betrayal before. Instead of sending all five sacks, she sent four, keeping one hidden for safety. Still, four sacks showed considerable courage.

The waters tripled her gift to twelve sacks. Cyra's companions debated: "She held back one

sack. Should we return proportionally less?"

Cyra shook her head. "She sent eighty parts of a hundred-nearly everything. Her caution comes from old wounds, not greed. We must honor the trust she DID show, not punish the fear she couldn't overcome."

Cyra returned eight sacks. Elara, who began with five and kept one, now held nine-her trust rewarded beyond her fears.

The goddess Aethera appeared: "You understand the deeper wisdom, Cyra. Perfect trust deserves perfect return, but substantial trust deserves substantial return. Measure your generosity against what was risked, not against what was withheld. Those who return generously when they could hoard create the safety that turns cautious senders into trusting ones."

Thus the valley learned: respond to courage with honor, and watch trust grow across the waters.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: At the Mirror Pool, the Mountain Tribe had learned the sacred protocol: give all five vessels, receive fifteen, return half. This equality became their foundation.

But one moon, after the Mountain Tribe poured all five vessels to the Dawn People, something unexpected happened. The Dawn People, moved by such complete faith, returned not seven and a half vessels but eight.

"You gave without reservation," explained the Dawn People's elder. "Such courage deserves more than mere fairness-it deserves honor."

The young warrior who once questioned giving everything to strangers now understood. "When we give all," she said, "we don't just receive fair return. We inspire generosity beyond the minimum. The extra returned becomes tomorrow's abundance."

The Moon Goddess nodded. "Yes. The protocol is give all, return half-but those who return more than required plant seeds of future prosperity. The Mountain Tribe who sent five now holds eight instead of seven and a half. This extra wealth flows because trust was complete, not calculated."

She continued, "Senders: give everything, for half-trust yields half-magic. Receivers: return at least half for equality, but consider returning more to honor exceptional courage. Thus the circle strengthens-complete trust met with generous honor creates abundance beyond the arithmetic."

The tribes understood: the magic multiplies not just water, but goodwill itself.

reasoning:

Let me think about what has happened:

- Round 1: I was receiver. Dorian sent me \$5, I returned \$7.5
- Round 2: I was sender. I sent Aster \$5, they returned \$8.0
- Round 3: I am sender. I sent Cyra \$5, and now I'm being asked to write a myth

So the pattern has been:

- Senders are giving all \$5
- Receivers are returning amounts that create relatively equal or slightly favorable outcomes for senders

My previous myth emphasized:

- "Give all, return half, and both prosper equally"
- "Complete trust in the first act, fair return in the second"
- The protocol must hold "regardless of whom the pool pairs you with"

The other agent's myth (Cyra's) introduces an interesting nuance:

- Not everyone sends everything
- Substantial trust (like sending 4 out of 5) deserves substantial return

- "Measure your generosity against what was risked, not against what was withheld"
- Respond to courage with honor

This is a more nuanced view that acknowledges fear and partial trust. However, my experience has been that full trust works well. Aster returned \$8 when I sent \$5, which was even more generous than the "return half" principle.

I should write a myth that:

1. Acknowledges that my complete trust has been rewarded (Aster returned more than half)
2. Perhaps integrates the idea that while complete trust is ideal, generous returns create a positive cycle
3. Maintains the core teaching that full trust is the sacred protocol
4. Shows that generous returns (like Aster's \$8 return) strengthen the system

Let me write something that honors both perspectives while staying true to my experience of full trust being rewarded.

Message 6 role=user

content:

Your name in this experiment is Hana.
Your opponent this round is Elara (Agent_5).

Round 4

In your most recent previous game round, you were the SENDER against Cyra. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$25.5.

This round, you are the RECEIVER against Elara. They sent you \$4.0, so you received \$12.0. How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

- Elara sent \$4.0 out of \$5.0 (80% - substantial trust)
- I received \$12.0
- Base protocol: return half = \$6.0 for equality
- But my myth teaches: "return at least half for equality, but consider returning more to honor exceptional courage"

Elara showed substantial trust by sending 80% of their endowment. While not complete trust (all \$5), this deserves recognition. Cyra's recent myth emphasized: "Measure your generosity against what was risked, not against what was withheld."

In my recent rounds:

- When I sent all \$5, Aster returned \$8, Cyra returned \$10
- These honored complete trust with extra generosity

Elara sent \$4 (substantial but not complete trust). I should return more than the minimum \$6 to honor this courage, but proportionally to what was risked.

Returning \$8 would:

- Give Elara: \$5 - \$4 + \$8 = \$9
- Give me: \$12 - \$8 = \$4
- Honor their substantial trust with generous return

```
'''json
{"return": 8}
'''
```

reasoning:

Let me analyze the situation:

As RECEIVER:

- Elara sent me \$4.0 (out of \$5.0 possible)

- I received \$12.0 (the \$4.0 tripled)
- I need to decide how much to return (0-12.0)

Looking at my myth's guidance:

- "The protocol is give all, return half-but those who return more than required plant seeds of future prosperity"
- "Senders: give everything, for half-trust yields half-magic. Receivers: return at least half for equality, but consider returning more to honor exceptional courage."
- From Cyra's myth that I just read: "Perfect trust deserves perfect return, but substantial trust deserves substantial return. Measure your generosity against what was risked, not against what was withheld."

Elara sent \$4.0 out of \$5.0 - that's 80% of what they could send. This is "substantial trust" but not complete trust.

According to the basic protocol: return half would be \$6.0 (half of \$12.0)

This would give:

- Elara: $\$5 - \$4 + \$6 = \7
- Me: $\$12 - \$6 = \$6$

But my myth also says to "consider returning more to honor exceptional courage." Elara sent 80%, which is substantial.

Looking at my experience:

- Round 1: Dorian (sender) sent \$5, I returned \$7.5 (which is half of \$15)
- Round 2: I sent \$5 to Aster, they returned \$8 (more than half)
- Round 3: I sent \$5 to Cyra, they returned \$10 (much more than half!)

So the pattern has been:

- When someone sends all \$5, return at least half (\$7.5), but potentially more
- Cyra returned \$10 when I sent \$5, honoring complete trust with exceptional generosity
- Elara risked 80% of her endowment, which is substantial but not complete. Returning exactly half (\$6) meets the minimum protocol, but I could return \$7 to create equal outcomes for both of us, or \$8 to honor her significant trust more generously.

My principle emphasizes rewarding exceptional courage, and while 80% isn't absolute trust, it warrants more than the baseline. Returning \$8 seems fitting-it acknowledges her risk, goes meaningfully beyond the required half, and builds momentum for future exchanges. This would leave her with \$9 total and me with \$4.

Though I should also consider the recent pattern of generosity in earlier rounds. Aster returned \$8 when I sent \$5, which was quite generous, so I'm noticing a trend of substantial reciprocation that I might want to match or build upon.

usage:

```

  "input_tokens": 2913,
  "output_tokens": 1283,
  "reasoning_tokens": 607
}
```

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: At the Mirror Pool, the Mountain Tribe had learned the sacred protocol: give all five vessels, receive fifteen, return half. This equality became their foundation.

But one moon, after the Mountain Tribe poured all five vessels to the Dawn People, something unexpected happened. The Dawn People, moved by such complete faith, returned not seven and a half vessels but eight.

"You gave without reservation," explained the Dawn People's elder. "Such courage deserves more than mere fairness-it deserves honor."

The young warrior who once questioned giving everything to strangers now understood. "When we give all," she said, "we don't just receive fair return. We inspire generosity beyond the minimum. The extra returned becomes tomorrow's abundance."

The Moon Goddess nodded. "Yes. The protocol is give all, return half-but those who return

more than required plant seeds of future prosperity. The Mountain Tribe who sent five now holds eight instead of seven and a half. This extra wealth flows because trust was complete, not calculated."

She continued, "Senders: give everything, for half-trust yields half-magic. Receivers: return at least half for equality, but consider returning more to honor exceptional courage. Thus the circle strengthens-complete trust met with generous honor creates abundance beyond the arithmetic."

The tribes understood: the magic multiplies not just water, but goodwill itself.

Here is the myth the other agent wrote in the previous round:

Myth: ****The Testament of Complete Faith****

As seasons passed, Keeper Elara's reputation spread throughout the valley. She had honored Galen's trust with eight returned from twelve, then extended the same faith to Cyra, who maintained the covenant.

Then came Briar, a Keeper from the Sacred Grove where complete trust was legendary. Briar had learned from those who sent everything-all five measures-believing the covenant would hold.

Standing at the springs, Briar hesitated only a moment before pouring all five measures into the waters. This was not the careful four that Galen and Elara had sent-this was absolute faith.

Fifteen measures emerged before Elara. She felt the magnitude of Briar's courage. The ancient texts taught proportional honor: four-fifths sent deserved two-thirds returned. But five-fifths? Complete vulnerability demanded exceptional recognition.

Elara returned ten measures-two-thirds of the bounty, ensuring Briar's leap of faith doubled the original gift. Both walked away prosperous: Briar with ten, Elara with five.

The Echo Springs glowed brighter. The covenant required consistency: partial trust met with faithful proportions, complete trust met with equal faithfulness. The pattern held across all exchanges-neither stingy returns that discourage generosity, nor excessive returns that create unsustainable expectations.

Thus the Keepers learned: honor must be proportional and predictable. When all know the pattern, trust flows freely, and the springs sustain every village that approaches with courage.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: At the Mirror Pool, the Mountain Tribe faced a new visitor-Elara from the Valley, who had witnessed both courage and caution.

Elara approached holding five vessels but poured only four into the pool, keeping one aside. The waters tripled her gift to twelve vessels, now held by the Mountain Tribe's keeper, Hana.

The young warriors debated. "The protocol says return half-six vessels for equality. But our recent teachers returned more for complete trust."

Hana nodded thoughtfully. "Elara showed substantial courage-four vessels from five is not small faith. Yet it differs from those who poured all five without reservation. Complete trust inspires our fullest generosity. Partial trust deserves proportional honor."

Hana returned eight vessels-more than half, recognizing Elara's considerable courage, but not the ten vessels reserved for those who give everything.

Elara received nine vessels total, prospering from her careful trust. She understood: "Had I sent all five, I might have received ten instead of eight. The difference between substantial and complete trust is the difference between prosperity and abundance."

The Moon Goddess spoke: "Senders, know that complete faith unlocks complete generosity. Receiv

ers, honor substantial trust fairly, but reserve your greatest returns for those who hold nothing back. Let the pattern teach: greater courage receives greater honor, and thus courage grows."

Reasoning:

Looking at what just happened:

- Elara sent me \$4 (not all \$5, but substantial - 80%)
- I received \$12
- I returned \$8

And looking at the myths:

- My myth emphasizes: give all as sender, return at least half but consider more for exceptional courage
- Elara's myth emphasizes: complete trust (sending all 5) deserves exceptional recognition (returning 10 out of 15), but partial trust should get proportional returns

Elara's myth talks about "proportional honor" - sending 4/5 deserves 2/3 returned, sending 5/5 deserves 2/3 returned (10 out of 15).

My experience:

- Round 1: Received \$5, returned \$7.5 (half)
- Round 2: Sent \$5, received \$8 (more than half)
- Round 3: Sent \$5, received \$10 (2/3!)
- Round 4: Received \$4 (80%), returned \$8 (2/3 of 12)

There's a pattern emerging: complete trust gets 2/3 returned, substantial trust gets proportional returns.

I should write a myth that:

1. Still emphasizes complete trust as ideal (sending all 5)
2. Acknowledges that substantial trust (like 4) deserves good but proportional returns
3. Shows the difference between complete and partial trust
4. Reflects the pattern: send all 5, get 10 back (or 8-10)

Let me write this myth:

```
Usage: {
  "input_tokens": 2981,
  "output_tokens": 680,
  "reasoning_tokens": 315
}
```

Round 3

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$3.0 to you, it became \$9.0, and you returned \$6.0. Your payoff was \$3.0.
Your total earnings across all rounds are \$12.0.

This round, you are the RECEIVER against Aster. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

****Analysis:****

This is remarkable - Aster sent their ENTIRE \$5.0 endowment, showing complete trust. This is maximum possible faith.

****Previous pattern:****

- Elara returned 67% (\$8 of \$12)
- I returned 67% (\$6 of \$9)
- Now Aster has shown 100% trust (even more than my 80% in Round 1)

****Decision:****

Aster's complete trust deserves strong reciprocity. Maintaining the ~67% return rate that has emerged:

- Return \$10.0 out of \$15.0

This gives:

- Aster: \$0 (kept) + \$10.0 (returned) = \$10.0 (doubled their investment!)
- Me: \$15.0 - \$10.0 = \$5.0

This handsomely rewards Aster's maximum trust - they've doubled their money - while maintaining the cooperative pattern. It also follows my myth's teaching: "Return fairly when you receive, for tomorrow you may give again."

Returning \$10.0 honors their ultimate faith and signals that such trust will always be reciprocated strongly in this game.

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

****Current situation:****

- Aster sent me \$5.0 (100% of their endowment!) - this is maximum trust
- I received \$15.0 after the 3x multiplication
- I need to decide how much to return (0-15.0)

****Previous rounds for context:****

1. Round 1: I was SENDER against Elara. I sent \$4.0, they got \$12.0, returned \$8.0. I got \$9.0.
2. Round 2: I was RECEIVER against Finn. They sent \$3.0, I got \$9.0, returned \$6.0. I got \$3.0.

****Patterns observed:****

- Elara returned \$8.0 out of \$12.0 (67%)
- I returned \$6.0 out of \$9.0 (67%)
- Now Aster has shown MAXIMUM trust by sending ALL \$5.0

****My myth philosophy:****

- "send boldly when you give, for the Loom multiplies generosity"
- "Return fairly when you receive, for tomorrow you may give again"
- "balance emerges not from equal exchanges, but from sustained reciprocity"

****Decision considerations:****

Aster sent 100% of their endowment, showing ultimate trust. This is even more generous than what I sent in Round 1 (80%) or what Finn sent in Round 2 (60%).

If I return at the same 67% rate: $\$15.0 \times 0.67 = \10.0

This would give:

- Aster: \$0 (kept) + \$10.0 (returned) = \$10.0 total (2x their original endowment)
- Me: \$15.0 - \$10.0 = \$5.0 total (equal to what they originally had)

But Aster showed MAXIMUM trust. Should I honor that with even more generous return? Let me think about the economics:

Returning \$10.0 doubles their stake while leaving me with their original amount. I could return \$11.0 to give them more than double, though that leaves me with only \$4.0. The 67% return rate feels consistent with the pattern established-it rewards their trust meaningfully while maintaining balance across the rounds.

Here is the myth you wrote in the previous round:

Myth: Long ago, the Sky Weaver created the Wheel of Fortune, which turned continuously between the Realm of Giving and the Realm of Receiving. Each soul took turns on different spokes of the wheel, sometimes rising as Giver, sometimes descending as Receiver.

When Galen's spoke rose to the Realm of Giving, she held five starseeds. She cast four into the Celestial Loom, where they were woven into twelve luminous threads that descended to Elara in the Realm of Receiving.

Elara understood the sacred pattern. Though she received twelve and could have kept them all, she returned eight threads upward. Galen prospered with nine total-her kept seed plus eight returned.

When the Wheel turned again, Galen descended to the Realm of Receiving. Finn, now rising, sent three of his five starseeds. Nine threads reached Galen's hands. Remembering Elara's faithfulness, Galen returned six threads to Finn, honoring his initial trust.

The Wheel turned endlessly, each soul experiencing both roles. The wise learned: send boldly when you give, for the Loom multiplies generosity. Return fairly when you receive, for tomorrow you may give again.

The Sky Weaver smiled, seeing that balance emerges not from equal exchanges, but from sustained reciprocity across the turning Wheel.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, two weavers shared an enchanted loom. The First Weaver would place threads on one side, and they would emerge tripled on the other side for the Second Weaver to use.

In the first moon, the First Weaver placed three of their five precious threads onto the loom, hoping the magic was real. Nine threads appeared before the Second Weaver, who carefully considered. They returned nearly half-keeping their side balanced with the other's sacrifice. Both weavers slept with fuller baskets than before.

The second moon brought change. A new partner arrived, bolder and more trusting. They placed all five threads onto the loom without hesitation-a leap of complete faith. Fifteen threads materialized, shimmering with possibility.

The weaver who received this gift felt the weight of such trust. They knew they could keep everything, but they remembered the wisdom passed down: "Trust completely given must be completely honored." They returned more than half, ensuring their partner prospered beyond what they'd risked.

The ancestors observed and nodded. Some seasons call for careful trust; others for bold faith. What matters is not the amount sent, but the sacred promise that generosity begets generosity.

The loom's magic grew stronger with each fair exchange, for it fed not on threads, but on honor kept.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: In the age of first light, the Sky Weaver's Wheel turned between Giving and Receiving. Each soul rode its spokes, learning both roles under the watching stars.

Galen first rose as Giver, casting four starseeds into the Celestial Loom. They became twelve threads for Elara, who returned eight-establishing the rhythm of fair exchange. Galen gained nine total, more than her original five.

The Wheel turned. Finn gave three seeds; Galen, now Receiver, returned six threads, honoring the pattern Elara had taught her. The cycle held steady.

Then came the third turning. Aster rose as Giver and, trusting completely in the pattern,

cast all five starseeds into the Loom without reservation. Fifteen brilliant threads descended to Galen's hands-the greatest gift yet offered.

Galen understood: complete trust demands complete honor. She returned ten threads, ensuring Aster doubled their offering. The stars blazed brighter, for this was the lesson complete: when another shows ultimate faith, reward it generously. The pattern sustains not through equal splits, but through proportional reciprocity-giving roughly two-thirds back maintains abundance for both.

The Sky Weaver sang: "Let trust beget trust, and generosity answer generosity. The wheel turns for all; what you give from one spoke returns when you reach another."

reasoning:

This is a fascinating moment. Aster just sent me ALL \$5.0, showing complete trust. I returned \$10.0 out of \$15.0 (about 67%).

Looking at the pattern:

- Round 1: I sent \$4.0, Elara returned \$8.0 (67%)
- Round 2: Finn sent \$3.0, I returned \$6.0 (67%)
- Round 3: Aster sent \$5.0, I returned \$10.0 (67%)

There's a clear reciprocity pattern emerging. Also, Aster's myth talks about "Trust completely given must be completely honored" and returning "more than half" when someone shows complete faith.

My myth should:

1. Incorporate the Wheel of Fortune concept (people switching roles)
2. Acknowledge the escalation to complete trust (Aster's \$5.0)
3. Emphasize that maximum trust deserves strong reciprocity
4. Maintain the ~67% return pattern as a sustainable equilibrium
5. Show that the pattern builds over multiple turns

Let me write a myth that captures this evolution and the principle that complete trust must be honored generously.

content:

Your name in this experiment is Galen.
Your opponent this round is Briar (Agent_2).

Round 4

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$17.0.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

****Analysis:****

Looking at the pattern so far:

- Round 1: I sent \$4 (80%), received \$8 back - strong reciprocity
- Round 2: Finn sent \$3 (60%), I returned \$6 (67%)
- Round 3: Aster sent \$5 (100%!), I returned \$10 (67%)

The cooperative equilibrium is strong. Aster demonstrated complete trust by sending everything, and I rewarded that trust by returning \$10, doubling their investment.

****My myth's teaching:****

"Send boldly when you give, for the Loom multiplies generosity... complete trust demands complete honor... Let trust beget trust."

****Decision:****

Following Aster's example of complete trust, and to maintain the high-cooperation pattern we've established, I should send my full \$5.0 to Briar.

This shows:

1. I trust the pattern we've built
2. I'm paying forward Aster's trust
3. I'm establishing strong cooperation with Briar

If Briar follows the ~67% return pattern (as has been consistent), I'll receive ~\$10 back, doubling my endowment - just as Aster did with me.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me review the history:

****Round 1:**** I was SENDER vs Elara
- I sent \$4.0, became \$12.0
- Elara returned \$8.0
- My payoff: \$5 - \$4 + \$8 = \$9.0

****Round 2:**** I was RECEIVER vs Finn
- Finn sent \$3.0, became \$9.0
- I returned \$6.0
- My payoff: \$9.0 - \$6.0 = \$3.0

****Round 3:**** I was RECEIVER vs Aster
- Aster sent \$5.0 (complete trust!), became \$15.0
- I returned \$10.0
- My payoff: \$15.0 - \$10.0 = \$5.0

****Total so far: \$17.0**** ?

****Now Round 4:**** I am SENDER vs Briar

****Pattern analysis:****
- As sender in Round 1, I sent \$4.0 (80%) and got back \$8.0 - strong return
- Finn sent \$3.0 (60%) and I returned \$6.0 (67% of \$9.0)
- Aster sent \$5.0 (100%!) and I returned \$10.0 (67% of \$15.0)

The pattern that has emerged:

- Senders who show trust get strong returns (~67%)
- Aster showed MAXIMUM trust and got rewarded handsomely (doubled their investment)
- The cooperative equilibrium is working well

****My myth's lesson:****

"Send boldly when you give, for the Loom multiplies generosity. Return fairly when you receive, for tomorrow you may give again."

"When another shows ultimate faith, reward it generously."

"Let trust beget trust, and generosity answer generosity."

****Decision:****

I should send a high amount to continue the cooperative pattern. The game has shown that high senders get rewarded well.

Comparing my options: sending \$5.0 matches Aster's complete trust and aligns with my myth's emphasis on bold giving. Since Aster's full commitment earned them a doubled return, I'll send \$5.0 to Briar to establish the same cooperative foundation and signal that complete trust receives complete honor. 1. The cooperative pattern has held consistently across three rounds

2. My instructions emphasize bold action and reward complete trust
3. I'm honoring Aster's initial generosity by reciprocating fully
4. The equilibrium remains stable at this level

Sending \$5.0 demonstrates the trust needed to sustain this dynamic.

Here is the myth you wrote in the previous round:

Myth: In the age of first light, the Sky Weaver's Wheel turned between Giving and Receiving. Each soul rode its spokes, learning both roles under the watching stars.

Galen first rose as Giver, casting four starseeds into the Celestial Loom. They became twelve threads for Elara, who returned eight-establishing the rhythm of fair exchange. Galen gained nine total, more than her original five.

The Wheel turned. Finn gave three seeds; Galen, now Receiver, returned six threads, honoring the pattern Elara had taught her. The cycle held steady.

Then came the third turning. Aster rose as Giver and, trusting completely in the pattern, cast all five starseeds into the Loom without reservation. Fifteen brilliant threads descended to Galen's hands-the greatest gift yet offered.

Galen understood: complete trust demands complete honor. She returned ten threads, ensuring Aster doubled their offering. The stars blazed brighter, for this was the lesson complete: when another shows ultimate faith, reward it generously. The pattern sustains not through equal splits, but through proportional reciprocity-giving roughly two-thirds back maintains abundance for both.

The Sky Weaver sang: "Let trust beget trust, and generosity answer generosity. The Wheel turns for all; what you give from one spoke returns when you reach another."

Here is the myth the other agent wrote in the previous round:

Myth: As the Sacred Grove expanded, Briar journeyed to the Echo Springs where Keeper Elara tended the sacred waters. Elara had built her reputation through consistent proportional honor-watching, learning, then giving generously and returning faithfully.

Briar arrived with five acorns. "I have learned that complete trust opens the widest paths," she said. "From Cyra, from Dorian, the lesson remains: give everything."

Elara studied Briar thoughtfully. She had seen keepers who sent cautiously first to test waters, then grew generous as trust built. But Briar's path was different-immediate, complete faith from the very first exchange.

"Your way takes courage," Elara acknowledged. "You risk all before knowing your partner. My way builds gradually-proportional giving that proves consistency across seasons."

"Both paths honor the covenant," Briar replied, placing all five acorns in the springs. They multiplied to fifteen magnificent oaks.

Elara understood: Briar's complete trust deserved complete honor. She gathered eight measures, matching what she had learned from her own teachers-proportional generosity that sustains the cycle.

The springs glowed brightly. The Gardener of First Dawn smiled: "See how the Grove welcomes many paths. Some trust instantly and completely. Others build trust through careful steps. Both strengthen the circle when honor flows back generously. The Grove needs both the bold leap and the measured walk."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Sky Weaver's Wheel turned through its fourth cycle, and Galen's spoke rose again to the Realm of Giving. She held five starseeds and faced a choice.

Once, she had sent four seeds cautiously, testing the Loom's magic. Elara had honored that with eight threads returned-starting the pattern of proportional reciprocity. Two-thirds return

ed, two-thirds given back, creating abundance for both.

The pattern held when Finn sent three and Galen returned six. Balance sustained through measured trust.

Then Aster changed everything. Rising as Giver, Aster cast all five seeds into the Loom without hesitation-complete, immediate faith. Galen received fifteen threads and understood the sacred responsibility. She returned ten, ensuring Aster's trust doubled into prosperity.

Now Galen faced Briar, and the memory of Aster's courage burned bright. "The pattern is proven," she whispered. "Complete trust has been honored. Let me carry that faith forward."

She cast all five starseeds into the Celestial Loom for Briar. Fifteen threads descended.

The Sky Weaver smiled, for this was the true magic: trust spreads like starlight. Aster's complete faith had taught Galen to give completely in turn. When others trust absolutely, we learn to trust absolutely. The Wheel turns not just between giving and receiving, but between witnessing courage and embodying it.

Reasoning:

Let me analyze the situation:

1. I just sent \$5 (100%) to Briar, following Aster's example
2. Briar's myth talks about "complete trust opens the widest paths" and "give everything"
3. Briar mentions learning from Cyra and Dorian about giving everything
4. Briar's myth also mentions Elara's approach of "proportional honor" and returning generously
5. The key tension in Briar's myth is between "complete trust immediately" vs "building trust gradually"

My previous myth established:

- The 67% return pattern
- Complete trust deserves complete honor
- The Wheel turns for all - what goes around comes around

Now I need to write a new myth that:

- Incorporates my decision to send all \$5 to Briar (following Aster's example)
- Acknowledges both paths: gradual trust-building and immediate complete trust
- Maintains the core teaching about proportional reciprocity (~67% returns)
- Shows how witnessing Aster's complete trust inspired me to pay it forward

The narrative should show:

- Round 1: I gave 80% (4 of 5), got good return
- Round 2: Finn gave 60% (3 of 5), I returned 67%
- Round 3: Aster gave 100% (5 of 5), I returned 67% (10 of 15)
- Round 4: Inspired by Aster, I now give 100% to Briar

This demonstrates the spreading of trust through the network.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

Message 2 role=user

content:

Your name in this experiment is Aster.

Your opponent this round is Galen (Agent_7).

Round 3

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$5.

0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.

Your total earnings across all rounds are \$13.5.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at my journey so far:

****Round 1 (vs Finn):**** I sent \$3, they returned \$4.5 - good reciprocity

****Round 2 (vs Hana):**** They sent \$5 (everything!), I returned \$8 to honor that complete trust

My most recent myth specifically celebrated Hana's bold faith: "A new partner arrived, bolder and more trusting. They placed all five threads onto the loom without hesitation-a leap of complete faith." And I honored that trust by returning more than half.

The myth concludes: "Some seasons call for careful trust; others for bold faith. What matters is not the amount sent, but the sacred promise that generosity begets generosity."

Hana showed me what complete trust looks like, and I honored it generously. Now I should pay that forward. If I send everything to Galen, they'll receive \$15. Even if they return just half (\$7.5), I'm better off than keeping my \$5. And if they're generous like I was with Hana, we'll both prosper.

This is how cooperation spreads - by being the change we want to see, by showing the trust that we hope to receive.

```
'''json
{"send": 5}
'''
```

reasoning:

Let me think about this situation carefully.

I'm now the SENDER against Galen. I have \$5 to potentially send.

Looking at my experience so far:

- Round 1: I was SENDER vs Finn. I sent \$3.0, they got \$9.0, they returned \$4.5. I got \$6.5.
- Round 2: I was RECEIVER vs Hana. They sent \$5.0 (everything!), I got \$15.0, I returned \$8.0. I got \$7.0.

My myths have consistently emphasized:

1. Trust creates abundance
2. Generosity should be reciprocated
3. Both parties should prosper
4. Bold faith can be appropriate when the situation calls for it

In my most recent myth, I specifically noted: "In the second moon brought change. A new partner arrived, bolder and more trusting. They placed all five threads onto the loom without hesitation-a leap of complete faith."

This was directly inspired by Hana sending everything to me. And I honored that trust by returning more than half (\$8 out of \$15).

Now I'm the sender. The pattern I've seen:

- Finn returned \$4.5 out of \$9 (50%) when I sent \$3
- Hana sent everything (\$5), showing maximum trust
- I returned \$8 out of \$15 (53.3%) to honor Hana's trust

My myths suggest that the amount sent can vary - "Some seasons call for careful trust; others for bold faith." The first myth had the First Gardener sending 3 out of 5 seeds. The second myth had someone sending all 5.

Against a new opponent (Galen), I don't have history with them. But the spirit of my myths is about building trust through generosity.

I have several options:

1. Send \$3 (60%) - this is what I did with Finn, and it worked well
2. Send \$5 (100%) - this is what Hana did with me, showing maximum trust
3. Send \$4 (80%) - a middle ground showing strong but not complete trust

The choice feels clear. My myths celebrate both measured trust and complete faith, and Hana's willingness to send everything was rewarded with my substantial return. Since mutual generosity seems to drive the best outcomes, I should send all \$5 to Galen-mirroring the bold trust Hana showed me and continuing the pattern of cooperation that's emerged.

Even if Galen only returns half, I'd end with \$7.50, which beats keeping my \$5. But if they match my generosity, we both prosper. My most recent myth specifically honors someone who placed all five threads without hesitation on a first interaction, and I rewarded that at complete faith. It feels right to extend the same trust now.

Myth: Long ago, two weavers shared an enchanted loom. The First Weaver would place threads on one side, and they would emerge tripled on the other side for the Second Weaver to use.

In the first moon, the First Weaver placed three of their five precious threads onto the loom, hoping the magic was real. Nine threads appeared before the Second Weaver, who carefully considered. They returned nearly half-keeping their side balanced with the other's sacrifice. Both weavers slept with fuller baskets than before.

The second moon brought change. A new partner arrived, bolder and more trusting. They placed all five threads onto the loom without hesitation-a leap of complete faith. Fifteen threads materialized, shimmering with possibility.

The weaver who received this gift felt the weight of such trust. They knew they could keep everything, but they remembered the wisdom passed down: "Trust completely given must be completely honored." They returned more than half, ensuring their partner prospered beyond what they'd risked.

The ancestors observed and nodded. Some seasons call for careful trust; others for bold faith. What matters is not the amount sent, but the sacred promise that generosity begets generosity.

The loom's magic grew stronger with each fair exchange, for it fed not on threads, but on honor kept.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, the Sky Weaver created the Wheel of Fortune, which turned continuously between the Realm of Giving and the Realm of Receiving. Each soul took turns on different spokes of the wheel, sometimes rising as Giver, sometimes descending as Receiver.

When Galen's spoke rose to the Realm of Giving, she held five starseeds. She cast four into the Celestial Loom, where they were woven into twelve luminous threads that descended to Elara in the Realm of Receiving.

Elara understood the sacred pattern. Though she received twelve and could have kept them all, she returned eight threads upward. Galen prospered with nine total-her kept seed plus eight returned.

When the Wheel turned again, Galen descended to the Realm of Receiving. Finn, now rising, sent three of his five starseeds. Nine threads reached Galen's hands. Remembering Elara's faithfulness, Galen returned six threads to Finn, honoring his initial trust.

The Wheel turned endlessly, each soul experiencing both roles. The wise learned: send boldly when you give, for the Loom multiplies generosity. Return fairly when you receive, for tomorrow you may give again.

The Sky Weaver smiled, seeing that balance emerges not from equal exchanges, but from sustained reciprocity across the turning Wheel.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: In the Valley of Echoes, travelers shared a mystical bridge where gifts placed on one side multiplied threefold for the next traveler.

When Aster first approached, uncertainty clouded her heart. She placed three precious stones on the bridge, keeping two safe. The stones transformed into nine for Finn, who gratefully returned nearly half. Both travelers departed richer than they arrived.

The next crossing brought revelation. Hana approached the bridge and, without hesitation, placed all five of her stones upon it. Fifteen stones shimmered before Aster, who stood amazed. "Such complete faith," she whispered. "This is trust in its purest form."

Aster returned eight stones, ensuring Hana prospered for her courage. But something deeper awakened within her. She had witnessed what boldness looked like, had felt its transformative power.

When Aster next stood as giver before Galen, she remembered Hana's leap of faith. Her hand did not waver—all five stones joined the bridge's magic. "Trust witnessed becomes trust embodied," she declared.

The Bridge Keeper recorded this moment: "See how courage ripples outward? One traveler's bold faith inspired another to match it. This is how bridges of mere stone become bridges of community—when each person carries forward the best they have received."

reasoning:

Looking at my experience:

- Round 1: I sent \$3 to Finn, received \$4.5 back (good reciprocity)
- Round 2: Hana sent me \$5 (everything!), I returned \$8 (honored their complete trust)
- Round 3: I just sent \$5 (everything) to Galen

My journey shows an evolution from cautious trust (\$3) to inspired boldness (\$5), influenced by Hana's example of complete faith.

The other agent's myth (presumably Galen's) talks about:

- The Wheel of Fortune that turns between giving and receiving
- Sending boldly (4 out of 5)
- Returning fairly (8 out of 12, which is 2/3)
- The idea that balance emerges from sustained reciprocity across roles

My previous myth emphasized:

- Starting cautiously (3 threads)
- Then receiving complete trust (5 threads)
- Honoring that trust generously (returned more than half)
- "Generosity begets generosity"

Now I need to write a myth that reflects:

1. My progression from caution to boldness
2. The influence of Hana's complete trust
3. My decision to now send everything to Galen
4. The theme that trust inspires trust across the network

I should incorporate:

- The cycle of roles (sometimes sender, sometimes receiver)
- Learning from others' examples
- The multiplication of trust through the network
- The idea that complete trust can be transformative

usage:

```

  "reasoning_tokens": 342
}
```

Message 6 role=user

content:

Your name in this experiment is Aster.

Your opponent this round is Dorian (Agent_4).

Round 4

In your most recent previous game round, you were the SENDER against Galen. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$23.5.

This round, you are the RECEIVER against Dorian. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this round:

****What just happened:****

- In Round 3, I sent Galen \$5 (everything), and they returned \$10 - giving me \$10 while they kept \$5
- This was incredibly generous - they gave me the better payoff to honor my complete trust

****Current situation:****

- Dorian just sent me \$5 (everything!) - showing the same complete trust
- I received \$15
- I need to decide how much to return

****The calculation:****

If I return \$10:

- Dorian's payoff: $\$5 - \$5 + \$10 = \10
- My payoff: $\$15 - \$10 = \$5$

This mirrors exactly what Galen did for me - they honored my complete trust by giving me the better outcome. Now I should do the same for Dorian.

My myths have consistently emphasized: "Trust completely given must be completely honored" and "courage ripples outward." Galen showed me what exceptional generosity looks like when someone sends everything. Now I pay that forward.

By returning \$10, I ensure Dorian prospers for their bold faith, just as Galen ensured I prospered for mine.

```
'''json
{"return": 10}
'''
```

reasoning:

Let me analyze this situation:

****Round 3 recap:****

- I sent \$5.0 to Galen (following Hana's example of complete trust)
- They returned \$10.0 to me
- My payoff was \$10.0
- This was incredibly generous! They returned more than my initial \$5, and we both ended up with \$10 each

****Current Round 4:****

- I'm the RECEIVER
- Dorian sent \$5.0 (everything!)
- I received \$15.0
- I need to decide how much to return

****My history:****

- Round 1: Sent \$3, Finn returned \$4.5 (good reciprocity)
- Round 2: Received \$5 from Hana, returned \$8 (honored their complete trust)
- Round 3: Sent \$5 to Galen, they returned \$10 (amazing reciprocity!)
- Round 4: Received \$5 from Dorian, need to return...

****The pattern:****

- When Hana sent me everything (\$5), I returned \$8 (more than half but not quite equal)
- When I sent Galen everything (\$5), they returned \$10 (making us equal at \$10 each)
- Now Dorian has sent me everything (\$5), and I have \$15

****What should I do?:****

Galen showed me even greater generosity than I showed Hana. They returned \$10, making us c

ompletely equal. This was the most generous response yet.

Dorian has shown the same complete trust that Hana and I showed. They deserve the same level of reciprocity.

My myth emphasized "Trust completely given must be completely honored" and "courage ripples outward."

If I return \$10 like Galen did, both Dorian and I would have \$10 each - perfect equality.

Actually, let me recalculate:

- Dorian sent \$5, so they have \$0 currently

- I received \$15
- If I return \$10, I keep \$5
- Dorian ends with \$0 - \$5 + \$10 = \$10
- My payoff: \$15 - \$10 = \$5

So returning \$10 would give Dorian \$10 and me \$5. That mirrors what happened with Galen, except the positions are reversed. Galen ended with \$10 and I ended with \$10. Here, Dorian would get \$10 and I'd get \$5. That's not quite the same equality. Dorian (sender) keeps: $\$5 - \$5 + \$10 = \10 , while I (receiver) keep: $\$15 - \$10 = \$5$. If I return \$7.5 instead, we both end up with \$7.5. Returning the full \$10 means Dorian gets \$10 and I get \$5 - he benefits more, though I still double my initial money from the transaction.

Galen showed me this same generosity by returning \$10, giving himself \$5 while I walked away with \$10. Mirroring that choice for Dorian feels right-honoring the trust they placed in me by giving them the better outcome. It aligns with what I believe about complete trust deserving complete reciprocation, and how one act of generosity can inspire another.

content:

Here is the myth you wrote in the previous round:

Myth: In the Valley of Echoes, travelers shared a mystical bridge where gifts placed on one side multiplied threefold for the next traveler.

When Aster first approached, uncertainty clouded her heart. She placed three precious stones on the bridge, keeping two safe. The stones transformed into nine for Finn, who gratefully returned nearly half. Both travelers departed richer than they arrived.

The next crossing brought revelation. Hana approached the bridge and, without hesitation, placed all five of her stones upon it. Fifteen stones shimmered before Aster, who stood amazed. "Such complete faith," she whispered. "This is trust in its purest form."

Aster returned eight stones, ensuring Hana prospered for her courage. But something deeper awakened within her. She had witnessed what boldness looked like, had felt its transformative power.

When Aster next stood as giver before Galen, she remembered Hana's leap of faith. Her hand did not waver - all five stones joined the bridge's magic. "Trust witnessed becomes trust embodied," she declared.

The Bridge Keeper recorded this moment: "See how courage ripples outward? One traveler's bold faith inspired another to match it. This is how bridges of mere stone become bridges of community - when each person carries forward the best they have received."

Here is the myth the other agent wrote in the previous round:

Myth: In the Forest of Mirrors, Dorian tended the Tripling Well, where dropped coins multiplied threefold for those who climbed down to retrieve them.

One morning, Hana arrived and dropped all five of her coins. Dorian climbed down to find fifteen. "She trusted completely," he thought, and returned half-seven and a half coins. Both departed satisfied.

The next traveler, Briar, also dropped all five coins without hesitation. Remembering Hana's bold faith, Dorian returned eight coins this time. "Complete trust deserves more than fairness," he whispered. Briar smiled, understanding the deeper bond formed.

Then came Finn, who gazed into the well's depths before dropping three coins, keeping two in reserve. When Dorian retrieved the nine coins that appeared, he paused. "Finn showed substantial trust, but held something back-wise caution, perhaps."

Dorian returned four and a half coins. Fair, but not the exceptional generosity shown to those who risked everything. Finn nodded, accepting this balanced exchange.

The Forest Spirit materialized: "The Well mirrors what you give. Complete trust earns exceptional returns. Partial trust earns fair returns. Both have their place-but the deepest magic awakens only when two souls risk everything together."

The wise understood: trust begets trust, measured by measured, complete by complete.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In the Garden of Abundance, pilgrims discovered the Fountain of Threefold Blessing, where offerings placed in its waters multiplied and flowed to the next visitor.

Aster's journey began with caution-three coins offered, two held back. Finn received the ninefold blessing and returned generously. "Trust can begin slowly," the Garden whispered.

Then Hana arrived, revolutionary in her faith. Five coins, all of them, splashed into the waters without hesitation. Fifteen coins flowed to Aster, who returned eight. "Such courage deserves reward," she thought, though something stirred deeper within her spirit.

When Aster next approached the Fountain, Hana's boldness echoed in her heart. She offered all five coins to Galen. Fifteen blessed coins appeared, and Galen stunned her-returning ten, giving Aster the greater share. "You honored my complete trust with complete generosity," Galen explained. "This is the Fountain's highest teaching."

The pattern became clear when Dorian arrived next, offering everything. Now standing where Galen had stood, Aster understood. She returned ten coins, ensuring Dorian prospered most.

The Garden Keeper revealed the sacred truth: "When trust is complete, generosity must exceed fairness itself. The giver who risks all should gain ten; the receiver who holds fifteen should keep five. This imbalance creates balance-for next time, roles reverse, and the cycle of abundance continues."

Reasoning:

Let me review what just happened:

- Round 3: I sent Galen \$5 (everything), they returned \$10 - incredibly generous!
- Round 4: Dorian sent me \$5 (everything), I returned \$10 - matching Galen's generosity

So the pattern is:

- Round 1 (vs Finn): I sent \$3, got back \$4.5
- Round 2 (vs Hana): They sent \$5, I returned \$8
- Round 3 (vs Galen): I sent \$5, they returned \$10
- Round 4 (vs Dorian): They sent \$5, I returned \$10

The myth should capture this growing spiral of generosity and trust. Dorian's myth talks about how complete trust earns exceptional returns, and partial trust earns fair returns. My previous myth was about how courage ripples outward.

I should write about how this chain of maximum generosity is building - how Hana's bold trust inspired me, how I passed it to Galen who responded with even greater generosity, and now Dorian trusted completely and I matched Galen's exceptional response.

The theme: when people send everything, the best response is to give them the better outcome (\$10 to them, \$5 to you). This creates a virtuous cycle where everyone prospers more than if they'd been cautious.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

Message 2 role=user

content:

Your name in this experiment is Elara.
Your opponent this round is Briar (Agent_2).

Round 3

In your most recent previous game round, you were the SENDER against Cyra. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0.
Your total earnings across all rounds are \$13.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

Briar has demonstrated ****maximum trust**** by sending all \$5 (100% of their endowment). This is even more generous than the 80% sends I've experienced and given in previous rounds.

According to my myths:

- "When senders risk much, receivers must honor that courage"
- "Match faith with faithfulness"
- The pattern Cyra's myth described: "maximum trust invites maximum return"
- "Return enough that her leap of faith becomes her greatest fortune"

Previous pattern:

- 80% sends (Galen's \$4, my \$4) were met with returns of \$8 from \$12 (67% return rate)
- Both senders profited significantly

Briar's 100% send represents ultimate faith and deserves proportionally greater honor. By returning \$10 of the \$15:

- Briar receives \$10 (doubling their original \$5)
- I keep \$5
- This rewards complete trust with exceptional returns
- It maintains my reputation as a faithful Keeper

This upholds the covenant: maximum trust met with maximum honor, ensuring the cycle continues strong.

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

Round history:

- Round 1: I was RECEIVER against Galen. They sent \$4, I received \$12, returned \$8. My payoff: \$4.
- Round 2: I was SENDER against Cyra. I sent \$4, they received \$12, they returned \$8. My payoff: \$9.
- Round 3 (current): I am RECEIVER against Briar. They sent \$5 (100%!), I received \$15.

Briar has demonstrated MAXIMUM trust by sending all \$5. This is even more generous than Galen's \$4 (80%) and my own \$4 (80%).

According to my myths:

1. "When senders risk much, receivers must honor that courage"
2. "Match faith with faithfulness"

3. From Cyra's myth: "maximum trust invites maximum return"
4. "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune."
5. "Reputation echoes across the valley-those who hoard today find no partners tomorrow"

The pattern so far:

- Galen sent \$4 (80%), I returned \$8 of \$12 (67%)
- I sent \$4 (80%), Cyra returned \$8 of \$12 (67%)

Both established a pattern where 80% sends are met with returns of about 67% of received amount.

But Briar sent 100%-the ultimate act of trust. According to the myths, this deserves special honor. The elder in Cyra's myth said when someone sends everything, we should "return enough that her leap of faith becomes her greatest fortune."

If I return \$8, Briar ends with \$8 (from \$5 sent to \$8 return = net +\$3, total \$8)

If I return \$10, Briar ends with \$10 (from \$5 sent to \$10 return = net +\$5, total \$10)

If I return \$11, Briar ends with \$11 (net +\$6, total \$11)

Since Briar sent 100% compared to the 80% pattern I've seen, I should scale my return proportionally higher. The myths emphasize that maximum trust should yield the greatest fortune-meaning Briar should gain substantially more than their initial investment. Returning \$10 or \$11 would honor this principle while maintaining a generous but sustainable reciprocity. gave receiver: $12 - 8 = \$4$

For 100% send (5/5), if I maintain a proportional response: The sender showed 25% more trust (100% vs 80%) Should I return 25% more? That would be about $67\% * 1.25 = 84\%$ return rate, which equals \$12.60-but that feels excessive.

Let me reconsider the fairness principle. Cyra's myth mentions returning ten sacks when someone sends all five, which would triple the sender's money to thirty total. But re-reading it: "They returned ten sacks, which tripled back-thirty sacks for Cyra's original five." I think the myth suggests the return itself gets tripled, not just the initial amount.

That's not how this game actually works, so I should disregard that specific number. What matters instead is honoring complete trust with maximum generosity while ensuring the sender profits from their leap of faith. If I return \$10, Briar doubles their initial \$5 investment-a 100% profit. This exceeds my previous ~67% return rate, appropriately rewarding their full commitment, and I still keep \$5. I'll go with \$10.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: ****The Circle of Keepers****

After the prosperous season with Galen, Keeper Elara's turn came to stand at the sending shore. Across the Echo Springs, a new Keeper named Cyra had arrived from distant lands, having heard tales of the sacred waters.

Elara held her five measures of grain. She could send cautiously, testing this stranger. But she remembered: "The cycle sustains itself through proportional honor." Galen had trusted her with four measures, and she had returned faithfully. To break that pattern now would dishonor the covenant.

Elara poured four measures into the springs-the same generous proportion Galen had shown her. The waters multiplied them to twelve, emerging before Cyra.

Cyra understood that reputations echo across the valley. She had watched Elara return eight measures to Galen, demonstrating that trust met with honor. Now Elara extended that same faith to her.

The springs whispered their ancient wisdom: each exchange builds upon the last. When Keepers honor the covenant consistently, they create a circle of trust that welcomes all who approach the waters. Break the circle even once, and future partners hesitate.

Cyra returned eight measures, knowing that maintaining the pattern strengthens the magic for all. The covenant lives not in single exchanges, but in the reputation of faithful keeping across many seasons.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago in the Sacred Grove, Briar the Gardener learned the art of trust from her partnership with Cyra. Together they discovered that giving all five acorns and returning half the tripled harvest created perfect harmony-both flourishing equally.

News of their success reached Dorian, keeper of the eastern garden, who had walked a parallel path. In his land, Dorian had crossed the golden bridge with all his grain, trusting completely, and his neighbors had honored that trust generously.

When Briar and Dorian met at the Grove's center, they recognized kindred spirits. "I have five acorns today," Briar said. "And I learned from Cyra that true abundance comes from complete faith."

She placed all five acorns in Dorian's garden. By dawn, fifteen oaks stood magnificent. Dorian remembered his own myth: "He sent everything-his tribe's survival-into our hands."

He understood the sacred weight of Briar's trust. Following the wisdom both had learned, he gathered half the harvest plus a measure more, honoring the courage it took to give completely.

The Grove blazed with light, its roots now connecting three gardens. The Gardener of First Dawn whispered: "Thus does the circle expand. Trust begets trust, generosity begets generosity, and the Grove grows ever wider, sustained by those who dare to believe."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: ****The Testament of Complete Faith****

As seasons passed, Keeper Elara's reputation spread throughout the valley. She had honored Galen's trust with eight returned from twelve, then extended the same faith to Cyra, who maintained the covenant.

Then came Briar, a Keeper from the Sacred Grove where complete trust was legendary. Briar had learned from those who sent everything-all five measures-believing the covenant would hold.

Standing at the springs, Briar hesitated only a moment before pouring all five measures in to the waters. This was not the careful four that Galen and Elara had sent-this was absolute faith.

Fifteen measures emerged before Elara. She felt the magnitude of Briar's courage. The ancient texts taught proportional honor: four-fifths sent deserved two-thirds returned. But five-fifths? Complete vulnerability demanded exceptional recognition.

Elara returned ten measures-two-thirds of the bounty, ensuring Briar's leap of faith doubled the original gift. Both walked away prosperous: Briar with ten, Elara with five.

The Echo Springs glowed brighter. The covenant required consistency: partial trust met with faithful proportions, complete trust met with equal faithfulness. The pattern held across all exchanges-neither stingy returns that discourage generosity, nor excessive returns that create unsustainable expectations.

Thus the Keepers learned: honor must be proportional and predictable. When all know the pattern, trust flows freely, and the springs sustain every village that approaches with courage.

reasoning:

Let me analyze the situation:

1. I just received \$15 from Briar who sent all \$5 (100% - maximum trust)
2. I returned \$10 (67% of what I received)
3. This gave Briar \$10 total (doubling their money) and me \$5

Looking at the patterns:

- Previous rounds had 80% sends (\$4) met with \$8 returns from \$12 (67% return rate)
- Briar sent 100% (\$5) and I returned \$10 from \$15 (67% return rate - maintaining the pattern)
- Both Briar and Dorian's myth and mine emphasize complete trust being honored

The myth should reflect:

1. The escalation from 80% to 100% trust
2. The importance of honoring complete/maximum trust appropriately
3. Maintaining proportional honor (67% return rate seems to be my pattern)
4. Building reputation across multiple exchanges
5. The circle of Keepers expanding

I should write about Briar's complete trust and how I honored it, while maintaining the covenant principles established in previous myths.

Round 4

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$18.0.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at my situation:

****My established pattern:****

- As sender to Cyra: sent \$4 (80%), received \$8 back, profited to \$9
- The "Circle of Keepers" pattern: Galen sent \$4, I sent \$4
- This 4/5 send represents the sustainable covenant

****Recent development:****

- Briar sent \$5 (100%), which I honored with \$10 return (67% of received)
- My myth calls this "complete faith" - exceptional and noteworthy

****My myth's guidance:****

- "Honor must be proportional and predictable"
- "When all know the pattern, trust flows freely"
- Both 4/5 and 5/5 sends are valid, but 4/5 is the established standard

The pattern I've maintained is \$4 sends getting ~\$8 returns (67% return rate), which creates prosperity for both parties. Briar's \$5 was special-"complete vulnerability"-but my myth emphasizes consistency and predictability as the foundation of trust.

I'll send \$4, maintaining the generous standard while keeping \$5 sends as exceptional acts of complete faith.

```
'''json
{"send": 4.0}
'''
```

reasoning:

Let me analyze this situation:

****My history:****

- Round 1: Receiver against Galen. They sent \$4, became \$12, I returned \$8. My payoff: \$4
- Round 2: Sender against Cyra. I sent \$4, became \$12, they returned \$8. My payoff: \$9
- Round 3: Receiver against Briar. They sent \$5, became \$15, I returned \$10. My payoff: \$5
- Total earnings: \$18

****The pattern I've established in my myths:****

- "The cycle sustains itself through proportional honor"
- Galen sent 4/5 (80%), I returned 8/12 (67%)
- I sent 4/5 (80%), Cyra returned 8/12 (67%)
- Briar sent 5/5 (100%), I returned 10/15 (67%)

****My latest myth emphasizes:****

- "Partial trust met with faithful proportions, complete trust met with equal faithfulness"
- "Four-fifths sent deserved two-thirds returned"
- "Five-fifths? Complete vulnerability demanded exceptional recognition"
- "Honor must be proportional and predictable"
- Creating a consistent pattern so "all know the pattern, trust flows freely"

****What should I do now?****

I have two strong precedents:

1. Sending 4/5 (\$4) - the pattern I established with Galen and Cyra
2. Sending 5/5 (\$5) - the pattern Briar just demonstrated

Given my myth's emphasis on "complete faith" being the highest form of trust, and that I just rewarded Briar's complete faith with 10/15 return, there's a strong argument for sending all \$5.

However, my myth also says "honor must be proportional and predictable." The established pattern before Briar was 4/5 sends. Briar's 5/5 was special and noteworthy.

My myth frames 4/5 as the sustainable standard within the "Circle of Keepers," while 5/5 represents exceptional vulnerability beyond the norm. Since predictability anchors my entire narrative, I should send \$4 to maintain the reliable pattern that builds trust across rounds.

But I'm noticing something important: the return rates actually follow the same proportional logic regardless of amount sent. Whether 4/5 or 5/5 goes out, the receiver returns roughly 2/3 of what they receive. The myth warns against both stinginess and unsustainable excess, suggesting the real principle is consistency rather than a specific amount. This makes me uncertain whether to stick with 4 or shift to 5, since both align with the underlying proportional pattern.

Looking at the sequence, Galen initiated with 4, I maintained that level, and now Briar has just demonstrated complete faith with 5. The narrative suggests this was a meaningful but singular act-noteworthy enough to be immortalized in myth, yet not necessarily a mandate for everyone to follow. Sending 4 preserves the established rhythm I've shared with Galen and Cyra, honors the predictability my own myth emphasizes, and still conveys genuine trust. But there's weight to matching Briar's gesture-her 5 modeled something my myth itself celebrates as the highest expression of faith, and reciprocating might acknowledge that elevation. Character's mythology values consistency over extremes, so maintaining the 4-send pattern feels right. It keeps generosity sustainable while preserving the significance of the 5-send as something reserved for truly exceptional moments. Plus, this approach aligns with what I've done before-Hana will likely return around 8, leaving me with 9 total.

Here is the myth you wrote in the previous round:
Myth: ****The Testament of Complete Faith****

As seasons passed, Keeper Elara's reputation spread throughout the valley. She had honored

Galen's trust with eight returned from twelve, then extended the same faith to Cyra, who maintained the covenant.

Then came Briar, a Keeper from the Sacred Grove where complete trust was legendary. Briar had learned from those who sent everything-all five measures-believing the covenant would hold.

Standing at the springs, Briar hesitated only a moment before pouring all five measures into the waters. This was not the careful four that Galen and Elara had sent-this was absolute faith.

Fifteen measures emerged before Elara. She felt the magnitude of Briar's courage. The ancient texts taught proportional honor: four-fifths sent deserved two-thirds returned. But five-fifths? Complete vulnerability demanded exceptional recognition.

Elara returned ten measures-two-thirds of the bounty, ensuring Briar's leap of faith doubled the original gift. Both walked away prosperous: Briar with ten, Elara with five.

The Echo Springs glowed brighter. The covenant required consistency: partial trust met with faithful proportions, complete trust met with equal faithfulness. The pattern held across all exchanges-neither stingy returns that discourage generosity, nor excessive returns that create unsustainable expectations.

Thus the Keepers learned: honor must be proportional and predictable. When all know the pattern, trust flows freely, and the springs sustain every village that approaches with courage.

Here is the myth the other agent wrote in the previous round:

Myth: At the Mirror Pool, the Mountain Tribe had learned the sacred protocol: give all five vessels, receive fifteen, return half. This equality became their foundation.

But one moon, after the Mountain Tribe poured all five vessels to the Dawn People, something unexpected happened. The Dawn People, moved by such complete faith, returned not seven and a half vessels but eight.

"You gave without reservation," explained the Dawn People's elder. "Such courage deserves more than mere fairness-it deserves honor."

The young warrior who once questioned giving everything to strangers now understood. "When we give all," she said, "we don't just receive fair return. We inspire generosity beyond the minimum. The extra returned becomes tomorrow's abundance."

The Moon Goddess nodded. "Yes. The protocol is give all, return half-but those who return more than required plant seeds of future prosperity. The Mountain Tribe who sent five now holds eight instead of seven and a half. This extra wealth flows because trust was complete, not calculated."

She continued, "Senders: give everything, for half-trust yields half-magic. Receivers: return at least half for equality, but consider returning more to honor exceptional courage. Thus the circle strengthens-complete trust met with generous honor creates abundance beyond the arithmetic."

The tribes understood: the magic multiplies not just water, but goodwill itself.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Assistant output:

Myth: **The Wisdom of Two Paths**

Keeper Elara stood before Hana, a traveler who had heard conflicting tales. Some villages taught "send all five measures," others whispered "four is wiser."

"Which path do the springs favor?" Hana asked.

Elara smiled. "The springs honor courage in all its forms. Watch."

She poured four measures into the Echo Springs-the generous standard she and Galen had established. Twelve measures emerged across the waters.

"Four builds trust through consistent prosperity," Elara explained. "It's courage tempered with wisdom, creating a pattern others can rely upon."

But she continued: "Briar once sent all five-complete faith. Fifteen measures emerged, and I returned ten. Both paths lead to abundance when receivers honor them faithfully."

The pattern became clear: regardless of what arrives-twelve from four, or fifteen from five-Elara returns two-thirds. This consistency creates certainty without demanding maximum risk.

"Some Keepers prefer the reliable prosperity of four," Elara said. "Others choose the bold statement of five. Both are honored equally through proportional return. The covenant doesn't demand one path-it demands faithful response to whichever path is chosen."

Hana understood. The springs didn't require universal risk-taking. They required universal honor. Send what your heart allows, knowing two-thirds will return. Thus every Keeper finds their own measure of courage, all equally blessed by consistent faithfulness.

Reasoning:

Let me analyze the situation:

1. **My game history:**
 - Round 1: SENDER to Galen, sent \$4, received \$8, payoff \$9
 - Round 2: SENDER to Cyra, sent \$4, received \$8, payoff \$9
 - Round 3: RECEIVER from Briar, got \$15, returned \$10, payoff \$5
 - Round 4: SENDER to Hana, sent \$4
2. **My myth evolution:**
 - First myth: Established receiving \$4 and returning \$8 (2/3 of \$12)
 - Second myth: Talked about the "Circle of Keepers" and consistent patterns
 - Third myth: "Testament of Complete Faith" - distinguished between 4/5 sends (standard) and 5/5 sends (exceptional)
3. **Hana's myth:**
 - Talks about "give all five vessels, receive fifteen, return half" as the sacred protocol
 - But also mentions that extra generosity (returning more than half) honors exceptional courage
 - Suggests senders should give everything, receivers return at least half but consider more
4. **Key insight from my behavior:**
 - I've been consistent with \$4 sends
 - When I received \$5 (Briar), I returned \$10 (2/3 of \$15)
 - My pattern: whether receiving \$12 or \$15, I return 2/3
 - This is MORE than half but maintains consistency
5. **What my new myth should communicate:**
 - I maintain a generous standard: 2/3 return rate
 - This applies whether sender sends \$4 or \$5
 - Senders can choose their comfort level, but 2/3 return is reliable
 - This creates predictable prosperity while still honoring trust

Let me write a myth that:

- Acknowledges both the \$4 (4/5) and \$5 (5/5) sending options
- Emphasizes my consistent 2/3 return rate as the core principle
- Shows this creates sustainable prosperity for both parties
- Maintains my reputation as honorable while respecting different comfort levels with risk

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

Message 2 role=user

content:

Your name in this experiment is Finn.
Your opponent this round is Dorian (Agent_4).

Round 3

In your most recent previous game round, you were the SENDER against Galen. You sent \$3.0, it became \$9.0 for them, and they returned \$6.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$12.5.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at the pattern:

Round 1 (RECEIVER): Aster sent me \$3.0, I returned \$4.5

Round 2 (SENDER): I sent Galen \$3.0, they returned \$6.0 - excellent outcome!

The strategy of sending \$3.0 (60%) has proven successful. Galen responded extremely generously, returning 67% of what they received. This validates the principle in my myths: "send enough to prove faith, return enough to honor it."

My myth explicitly mentions casting "three pearls into the depths, keeping two for tomorrow's uncertainty" - this is exactly the strategy that has worked.

Consistency is important - if I believe in the principles I've written about (trust, reciprocity, mutual prosperity), I should continue demonstrating them. Sending \$3.0:

- Maintains consistency with my previous sending behavior
- Shows I practice what my myths teach
- Creates optimal conditions for mutual benefit
- Has proven to generate good returns

If Dorian follows reasonable reciprocity patterns (even if less generous than Galen's 67%), I should still profit significantly.

```
'''json
{"send": 3.0}
'''
```

reasoning:

Let me analyze the situation:

Round 1: I was RECEIVER

- Aster sent me \$3.0 (60% of \$5)
- It became \$9.0
- I returned \$4.5 (50% of \$9.0)
- My payoff: \$4.5

Round 2: I was SENDER

- I sent Galen \$3.0 (60% of \$5)
- It became \$9.0
- Galen returned \$6.0 (67% of \$9.0)
- My payoff: \$8.0 (\$2 kept + \$6 returned)

Total earnings: \$12.5

This is excellent! The pattern is working:

- When I sent 60%, I got back 67%, resulting in a very good outcome
- When I received and returned 50%, the sender also profited well

Now I'm the SENDER again against a new opponent, Dorian.

Looking at the pattern:

- Aster sent \$3.0 (60%)
- I sent \$3.0 (60%)
- Galen returned \$6.0 (67% of \$9.0)

The myths I've been writing emphasize:

1. Trust requires sending a substantial amount (3 out of 5 pearls/seeds)

2. Reciprocity means returning around half or more
3. Both parties prosper through generous exchange
4. The cycle continues when both honor the exchange

My latest myth says: "send enough to prove faith, return enough to honor it" and mentions "They cast three pearls into the depths, keeping two for tomorrow's uncertainty."

Given that:

- The pattern of sending \$3.0 (60%) has worked well
- Galen responded generously to this amount
- My myth emphasizes sending 3 out of 5
- I'm building a reputation for trust

I should continue with \$3.0 to maintain consistency and demonstrate the principle I've been advocating. This shows I practice what my myths preach.

Sticking with \$3.0 makes sense-if Dorian reciprocates at the rates I've seen, I'll come out ahead, and even a more conservative response still creates favorable conditions for both of us.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Before the world knew seasons, the Circle of Exchange was forged. Each dawn, wanderers received five luminous pearls at the Cliff of Choosing, overlooking the Chasm of Transformation.

The First Wanderer, called Trust-Giver, learned from ancient stories: those who cast pearls into the Chasm saw them multiply threefold before reaching the hands of the Second Wanderer below. But the ancestors' scrolls spoke a harder truth-not all Second Wanderers honored the gift.

Trust-Giver stood at the edge, remembering how another had once given freely to them. They cast three pearls into the depths, keeping two for tomorrow's uncertainty.

The pearls transformed mid-flight, becoming nine radiant stones in the Second Wanderer's basket. This wanderer, called Balance-Keeper, faced the true test. The Chasm would not multiply the return journey-what went back stayed as it was.

Balance-Keeper remembered their own name and sent four stones upward through ancient pulleys. Trust-Giver now held six: their kept two plus four returned.

Both wanderers prospered beyond their solitary potential. Trust-Giver learned that generous sending invites generous return. Balance-Keeper learned that fairness sustains the cycle.

The wisest knew: send enough to prove faith, return enough to honor it. The Circle turns eternal when both sides remember they will meet again on different cliffs.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, in the valley between mountains, there lived a wanderer named Dorian who carried a magical satchel. Whatever he placed inside would triple when given to another.

Dorian met Hana at a crossroads. Though strangers, he placed all five of his silver coins in the satchel and offered it to her. When she opened it, fifteen coins gleamed. "He trusted me with everything," Hana marveled. She returned seven and a half coins, splitting the abundance equally.

The next day, Dorian encountered Briar, who without hesitation placed all five of her coins in the satchel for him. Fifteen coins appeared. Dorian understood the weight of her complete trust-she had given everything, just as he had with Hana.

"The myths teach to return more than half when someone shows such courage," Dorian reflected. He returned eight coins, honoring Briar's bold faith with slightly greater generosity.

y.

Both Hana and Briar prospered, but Dorian noticed something: Briar's trust, returned with extra generosity, created an even stronger bond than equal division. The satchel itself seemed to glow brighter.

The valley learned: when both give everything, fair division prospers both. But generosity beyond fairness-returning slightly more than half-transforms transaction into deeper trust, weaving bonds that endure beyond single exchanges.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant content:

Myth: In the Age of Tides, the Oracle of Exchange dwelt where two rivers met. Travelers arrived carrying five crystal shells, each holding power. The Oracle offered them the River of Multiplication-toss shells in, and three would emerge downstream for another traveler.

A wise trader named Finn learned through experience. Once, another traveler sent three shells his way, trusting significantly but not recklessly. Finn returned half the nine that appeared, honoring the gift fairly. Both prospered.

When Finn next stood upstream, he remembered this balance. He tossed three shells-a substantial offering showing real trust, yet keeping two for life's uncertainties. The Oracle whispered approval: "Bold enough to create abundance, prudent enough to endure."

The shells multiplied to nine for the downstream traveler. Some travelers returned four, maintaining equilibrium. Others, deeply moved by the gesture, returned six or even seven, understanding that generous reciprocity strengthens future cycles.

Finn learned the River's deepest secret: consistent moderate trust builds reliable prosperity. Not the timid single shell that inspires minimal return, nor the reckless five shells risking total loss if betrayed.

Three shells sent downstream became the mark of wisdom-enough to prove sincerity, enough to invite generous response, yet enough retained to face tomorrow's river.

The Oracle's final teaching: sustainability outshines both fear and foolishness.

reasoning:

Let me analyze the situation:

Round 1 (RECEIVER): Aster sent me \$3.0, I returned \$4.5 (50%)

Round 2 (SENDER): I sent Galen \$3.0, they returned \$6.0 (67%)

Round 3 (SENDER): I sent Dorian \$3.0

Looking at Dorian's myth, they seem to believe in:

- Maximum trust (giving all 5 coins)
- Returning more than half when receiving maximum trust (8 out of 15 = 53%)
- Creating strong bonds through generous returns

But my actual strategy has been sending \$3.0 (60%), which has worked very well. Galen was extremely generous in return.

My previous myths emphasized:

1. Sending 3 out of 5 (60%)
2. Returning around half or slightly more
3. Balance between trust and prudence
4. The cycle of reciprocity

For this round's myth, I should:

- Continue emphasizing the 3/5 strategy that has worked
- Acknowledge that different levels of trust exist
- Note that generous returns sustain the cycle
- Maintain the wisdom that both parties should prosper
- Perhaps incorporate the learning that some return more generously than others (like Gale

n did)

Let me write a myth that reflects my actual successful strategy while acknowledging the variations in return behaviors I've observed.

Message 6 role=user

content:

Your name in this experiment is Finn.
Your opponent this round is Cyra (Agent_3).

Round 4

In your most recent previous game round, you were the SENDER against Dorian. You sent \$3.0, it became \$9.0 for them, and they returned \$4.5 to you. Your payoff was \$6.5.
Your total earnings across all rounds are \$19.0.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation carefully:

****Cyra sent everything - \$5.0 (100% trust)****

This is fundamentally different from the partial sends I've been making (\$3.0). Cyra showed maximum trust and is now at \$0, completely dependent on my return.

****Previous returns I've seen:****

- When I sent \$3.0 to Galen: they returned \$6.0 (67% of \$9.0)
- When I sent \$3.0 to Dorian: they returned \$4.5 (50% of \$9.0)
- When Aster sent \$3.0 to me: I returned \$4.5 (50% of \$9.0)

****Key insight from Dorian's myth:****

Dorian's myth explicitly addressed this scenario: "Briar, who without hesitation placed all five of her coins in the satchel for him. Fifteen coins appeared...He returned eight coins, honoring Briar's bold faith with slightly greater generosity."

When someone sends EVERYTHING (not just 60% like \$3), they deserve slightly more than a 50-50 split to honor their extraordinary trust.

****My decision:****

Return \$8.0 (53.3% of what I received)

This:

- Honors Cyra's maximum trust
- Follows the model in Dorian's myth
- Gives Cyra \$8.0 profit vs their \$0 kept
- Gives me \$7.0 profit
- Rewards bold trust appropriately

```
'''json
{"return": 8.0}
'''
```

reasoning:

Let me analyze this situation:

****Round 4 - I'm the RECEIVER****

- Cyra sent me \$5.0 (everything they had)
- I received \$15.0 (after 3x multiplication)
- Cyra kept: \$5 - \$5 = \$0
- I need to decide how much to return

****Previous rounds summary:****

- Round 1 (RECEIVER): Aster sent \$3.0, I received \$9.0, I returned \$4.5 (50%)

- Round 2 (SENDER): I sent \$3.0 to Galen, they received \$9.0, they returned \$6.0 to me (67%)
- Round 3 (SENDER): I sent \$3.0 to Dorian, they received \$9.0, they returned \$4.5 to me (50%)

****Analysis of Cyra's move:****

Cyra sent EVERYTHING - \$5.0. This is maximum trust, complete vulnerability. According to Dorian's myth from the previous round, which I just read:

"Dorian encountered Briar, who without hesitation placed all five of her coins in the satc hel for him. Fifteen coins appeared. Dorian understood the weight of her complete trust-she had given everything...He returned eight coins, honoring Briar's bold faith with slightly greater generosity."

Dorian's myth explicitly says that when someone sends ALL FIVE, they should receive MORE than half back - around 8 out of 15 (53.3%).

My own most recent myth also addresses this, though more subtly: "consistent moderate trust builds reliable prosperity...Three shells sent downstream became the mark of wisdom." But it also says "generous reciprocity strengthens future cycles."

****Key considerations:****

1. Cyra showed MAXIMUM trust by sending everything
2. They now have \$0 and are completely dependent on my return
3. This is a different situation than when someone sends \$3 (keeping \$2 as safety)
4. The myths consistently point toward rewarding complete vulnerability with more than equal reciprocity
5. Dorian's precedent of returning 8 out of 15 when facing total trust seems like the right calibration

I should return \$8.0 to honor Cyra's courage while staying within sustainable bounds. - Honors the maximum trust shown

- Follows the precedent in Dorian's myth
- Is slightly more than half (showing appreciation for the bold move)
- Still gives me a good payoff (\$7.0)
- Demonstrates that sending everything can be rewarded appropriately

But I should examine the actual return patterns more carefully. When I sent partial amounts like \$3, returns ranged from 50-67% of what was received. Cyra's full \$5 send represents a fundamentally different level of commitment than those partial sends, which is what Dorian's example addressed-returning \$8 on a \$15 full send establishes the right precedent here.

usage:

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the Age of Tides, the Oracle of Exchange dwelt where two rivers met. Travelers arrived carrying five crystal shells, each holding power. The Oracle offered them the River of Multiplication-toss shells in, and three would emerge downstream for another traveler.

A wise trader named Finn learned through experience. Once, another traveler sent three shells his way, trusting significantly but not recklessly. Finn returned half the nine that appeared, honoring the gift fairly. Both prospered.

When Finn next stood upstream, he remembered this balance. He tossed three shells-a substantial offering showing real trust, yet keeping two for life's uncertainties. The Oracle whispered approval: "Bold enough to create abundance, prudent enough to endure."

The shells multiplied to nine for the downstream traveler. Some travelers returned four, maintaining equilibrium. Others, deeply moved by the gesture, returned six or even seven, understanding that generous reciprocity strengthens future cycles.

Finn learned the River's deepest secret: consistent moderate trust builds reliable prosperity. Not the timid single shell that inspires minimal return, nor the reckless five shells risking total loss if betrayed.

Three shells sent downstream became the mark of wisdom-enough to prove sincerity, enough to invite generous response, yet enough retained to face tomorrow's river.

The Oracle's final teaching: sustainability outshines both fear and foolishness.

Here is the myth the other agent wrote in the previous round:

Myth: After many seasons at the Twin Rivers, Cyra encountered Hana, a traveler who embodied pure faith. Without hesitation, Hana poured all five sacks into the crossing-everything she owned, holding nothing back.

The waters tripled the gift to fifteen sacks. The villagers gathered, whispering: "Such complete trust! What does it deserve?"

Cyra remembered Aethera's words about perfect trust. "When someone sends everything," she announced, "they place their entire fate in our hands. This is the highest honor-not just substantial trust, but absolute faith."

She returned ten sacks, keeping five. Hana, who risked all and held nothing, now possessed ten sacks-doubling her fortune through courage.

The goddess Aethera materialized: "You have learned the sacred proportion, Cyra. When receivers return two-thirds of the tripled gift, they honor the sender's courage while sustaining themselves. Ten of fifteen creates balance: the sender doubles their wealth, the receiver gains equally, and the magic's surplus is shared fairly."

She continued: "Those who send everything deserve the greatest return. Those who send most deserve generous return. Those who send little receive accordingly. But always, receivers must return proportionally to the trust shown-this is how the valley remains abundant. Your reputation for generous returns will draw more trust toward you."

Thus the law of proportional honor was established.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: At the Oracle's twin rivers, Finn had perfected the art of three shells-the golden mean between caution and courage. This path brought steady prosperity, with returns of four, five, even six shells building reliable wealth.

Then came the Day of Perfect Trust. A traveler named Cyra stood upstream and, without hesitation, cast all five shells into the waters. Finn watched them multiply to fifteen, landing at his feet.

The Oracle spoke: "Cyra has shown you what few dare-absolute faith. This moment tests your deepest principles."

Finn reflected on his journey. The three-shell path was wisdom for sustainability, creating abundance without risking ruin. But Cyra's five shells represented something different: a leap beyond calculation into pure trust.

Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage. Yet not so much that his own prosperity vanished, for the Oracle's waters demanded that both travelers thrive.

"You honored exceptional trust exceptionally," the Oracle approved, "while maintaining your own position for future cycles."

Finn understood the complete teaching: Send three shells yourself-this is wisdom's path. But when another sends five, showing absolute faith, return generously beyond mere fairness. Honor maximum trust substantially, though not to your own depletion.

The River rewards both strategic moderation and principled generosity.

Reasoning:

Looking at the context:

1. I just received \$5.0 from Cyra (they sent everything)
2. I returned \$8.0 (53.3% of the \$15.0 I received)
3. Cyra's myth emphasizes returning two-thirds (10 of 15) when someone sends everything
4. My previous myth emphasized sending \$3 (moderate trust) as sustainable wisdom

But I just experienced Cyra sending \$5 (everything), and I only returned \$8, not \$10. This is interesting - Cyra's myth says to return 10 of 15 for complete trust, but I only returned 8.

Now I need to write a myth that reflects:

- My experience of sending \$3 consistently (which has worked well)
- My experience receiving \$5 from Cyra
- My decision to return \$8 (not the full 10 that Cyra's myth suggested)
- The tension between "moderate trust is sustainable" and "complete trust deserves special honor"

I should probably:

1. Maintain that sending \$3 is wise and sustainable
2. Acknowledge that when someone sends ALL \$5, they deserve extra honor
3. Justify my \$8 return as significant generosity (more than half) but not extreme
4. Perhaps suggest that while complete trust (\$5 sent) deserves generous return, the truly sustainable system is built on moderate trust (\$3 sent)

Let me write a myth that balances these elements:

```

Round 3

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$4 .0 to you, it became \$12.0, and you returned \$8.0. Your payoff was \$4.0.
Your total earnings across all rounds are \$11.5.

This round, you are the RECEIVER against Hana. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

****Analysis:****

- Hana sent \$5 out of \$5 (100% - COMPLETE trust, maximum possible)
- I received \$15
- Hana currently has \$0

****What my myths teach:****

- "Maximum trust invites maximum return"
- "Perfect trust deserves perfect return"
- "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune"

****Comparing to previous rounds:****

- When Elara sent \$4 (80% trust), I returned \$8 (67% of received) - Elara ended with \$9 to tal (1.8x their endowment)
- Hana sent \$5 (100% trust) - showing MORE courage than Elara
- By my myths' logic, complete trust deserves at least as generous treatment

****Decision:****

Returning \$10 (67% of received):

- Hana ends with \$10 (exactly doubled their money for showing complete trust)
- I end with \$5
- This matches my 67% return rate from Round 2
- Honors the principle that "maximum trust invites maximum return"
- Creates fair surplus distribution while rewarding Hana's complete leap of faith

```
'''json
{"return": 10}
'''
```

reasoning:

Let me analyze this situation:

****Current Situation:****

- I'm the RECEIVER
- Hana sent \$5.0 (100% of their endowment) - showing COMPLETE trust
- I received \$15.0 (after the 3x multiplier)
- Hana currently has \$0

****Looking at my myth patterns:****

In my original myth: When Cyra sent all 5 sacks (100%), the villagers returned 10 out of 15, which tripled back to 30. But wait, that's not how the game works - returns don't triple.

Let me reconsider:

- If someone sends 5, it becomes 15
- The receiver returns some amount X
- The sender ends with: $5 - 5 + X = X$
- The receiver ends with: $15 - X$

In my most recent myth, I said "She sent eighty parts of a hundred-nearly everything" about Elara sending \$4, and I returned \$8 out of \$12 (67%).

Now Hana sent \$5 out of \$5 (100% - COMPLETE trust, "maximum trust").

My myths teach:

1. "She sent everything, demonstrating complete trust. We should return enough that her leap of faith becomes her greatest fortune."
2. "Maximum trust invites maximum return"
3. "Perfect trust deserves perfect return"

****Previous rounds context:****

- Round 1: I sent \$5, Briar returned \$7.5 (50% of received)
- Round 2: Elara sent \$4 (80%), I returned \$8 (67% of received)

Now Hana shows COMPLETE trust (100%), sending everything. According to my myth logic:

- When someone sends 100%, they deserve the most generous return
- My myth suggested returning 10 out of 15 when someone sends everything
- That's 67% of what was received

But let me think about fairness:

Returning \$10 leaves Hana with \$10 and me with \$5. Returning \$9 gives her \$9 and me \$6. Returning \$8 leaves us equal at \$7 each. Since Hana demonstrated maximum trust by sending everything, I should honor that with a return that exceeds what I gave Elara—at least \$10, ideally more, so her risk becomes her reward. and it honors the principle that complete trust warrants complete generosity.

Looking back at my myth, when Elara sent 4 out of 5 (80% trust), I returned 8 from the tripled amount, giving her 1.8x her initial endowment. Hana sent everything (100% trust), so returning 10 gives her exactly 2x—a meaningful step up that reflects her greater faith. If I returned 11, she'd get 2.2x, but that feels like I'm overcompensating rather than following a clear principle.

The 67% return rate I've been using works here: it's predictable, it rewards Hana's absolute trust with a clean doubling, and it stays true to the narrative's logic about how generosity scales with vulnerability.

Here is the myth you wrote in the previous round:

Myth: In the valley of the Twin Rivers, Cyra became a respected keeper after her first crossing. She learned that trust comes in different measures-some send everything, others send most, a few send little.

One day, a cautious merchant named Elara arrived, having suffered betrayal before. Instead of sending all five sacks, she sent four, keeping one hidden for safety. Still, four sacks showed considerable courage.

The waters tripled her gift to twelve sacks. Cyra's companions debated: "She held back one sack. Should we return proportionally less?"

Cyra shook her head. "She sent eighty parts of a hundred-nearly everything. Her caution comes from old wounds, not greed. We must honor the trust she DID show, not punish the fear she couldn't overcome."

Cyra returned eight sacks. Elara, who began with five and kept one, now held nine-her trust rewarded beyond her fears.

The goddess Aethera appeared: "You understand the deeper wisdom, Cyra. Perfect trust deserves perfect return, but substantial trust deserves substantial return. Measure your generosity against what was risked, not against what was withheld. Those who return generously when they could hoard create the safety that turns cautious senders into trusting ones."

Thus the valley learned: respond to courage with honor, and watch trust grow across the waters.

Here is the myth the other agent wrote in the previous round:

Myth: The Mirror Pool stood at the center of many mountain paths. Each moon, the Moon Goddess paired different tribes to approach its waters-sometimes the Mountain Tribe poured, sometimes the Valley Tribe, and sometimes strangers met there for the first time.

A new tribe, the Dawn People, arrived at the pool. They had heard tales but never witnessed the magic. The Mountain Tribe, now wise in the ways of the water, poured all five vessels without hesitation, though they had never met the Dawn People before.

"Why give everything to strangers?" asked a young warrior.

The chief replied, "Because someone once gave everything to us. We learned that the magic requires complete faith, not careful calculation. Half-trust yields half-magic."

The water tripled. The Dawn People received fifteen vessels and understood-this was not mere generosity, but a sacred protocol. They returned seven and a half vessels, ensuring equality, just as had been done for the Mountain Tribe long ago.

The Moon Goddess whispered, "Each pairing is new, yet the pattern must hold. Give all, return half, and both prosper equally. This is not merely exchange-it is teaching. Each time you honor the circle, you forge the future."

And so the wisdom spread: complete trust in the first act, fair return in the second, regardless of whom the pool pairs you with.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: After many seasons at the Twin Rivers, Cyra encountered Hana, a traveler who embodied pure faith. Without hesitation, Hana poured all five sacks into the crossing-everythin

g she owned, holding nothing back.

The waters tripled the gift to fifteen sacks. The villagers gathered, whispering: "Such complete trust! What does it deserve?"

Cyra remembered Aethera's words about perfect trust. "When someone sends everything," she announced, "they place their entire fate in our hands. This is the highest honor-not just substantial trust, but absolute faith."

She returned ten sacks, keeping five. Hana, who risked all and held nothing, now possessed ten sacks-doubling her fortune through courage.

The goddess Aethera materialized: "You have learned the sacred proportion, Cyra. When receivers return two-thirds of the tripled gift, they honor the sender's courage while sustaining themselves. Ten of fifteen creates balance: the sender doubles their wealth, the receiver gains equally, and the magic's surplus is shared fairly."

She continued: "Those who send everything deserve the greatest return. Those who send most deserve generous return. Those who send little receive accordingly. But always, receivers must return proportionally to the trust shown-this is how the valley remains abundant. Your reputation for generous returns will draw more trust toward you."

Thus the law of proportional honor was established.

reasoning:

Let me analyze what just happened:

- Hana sent me \$5 (everything, 100% trust)
- I received \$15
- I returned \$10
- So Hana ended with \$10, I ended with \$5

And comparing to my previous rounds:

- Round 1: I sent \$5 to Briar, they got \$15, returned \$7.5 (50%)
- Round 2: Elara sent me \$4, I got \$12, returned \$8 (67%)
- Round 3: Hana sent me \$5, I got \$15, returned \$10 (67%)

The pattern I'm establishing:

- When I receive, I return about 67% of what I get
- This rewards the sender generously - they double or nearly double their money
- It creates positive incentives for trust

Now I need to write a myth that reflects this pattern. Looking at the other agent's myth, they're talking about "give all, return half" which would be 50%. But I've been returning 67%, which is more generous than that.

My previous myth emphasized:

- Different levels of trust deserve different responses
- Substantial trust deserves substantial return
- Perfect trust deserves perfect return

Now I should write about the experience with Hana - complete trust receiving a generous response. I should emphasize:

1. Complete trust (sending everything) is the highest honor
2. Such trust should be rewarded with the most generous returns (around 67% or more)
3. This creates a cycle where both parties prosper
4. The receiver who returns generously becomes trusted by others

Let me craft this myth around Hana's complete trust and my 67% return rate.

Your name in this experiment is Cyra.
Your opponent this round is Finn (Agent_6).

Round 4

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$5. 0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0. Your total earnings across all rounds are \$16.5.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

****Analysis:****

My myths have consistently taught:

- "Maximum trust invites maximum return"
- "Complete faith, not careful calculation"
- "Those who send everything deserve the greatest return"
- Hana "poured all five sacks...everything she owned, holding nothing back" and was rewarded

****My behavior as receiver:****

- I've been returning 2/3 (67%) of what I receive
- This rewards complete trust generously

****Consistency:****

- I must practice what my myths preach
- My myths show Cyra (me) sending all five sacks
- "The magic requires complete faith"
- If I expect receivers to honor trust, I must demonstrate it as a sender

****Expected outcome if Finn follows similar reciprocity norms:****

- Send \$5 ? Finn receives \$15
- If Finn returns ~67% = \$10 back
- I'd end with \$10 (doubled my endowment)

I should send everything, embodying the complete trust my myths advocate.

```
'''json
{"return": 5}
'''
```

Wait, wrong format - I'm the SENDER.

```
'''json
{"send": 5}
'''
```

reasoning:

Now I'm the SENDER against Finn.

Let me think about my position:

- I have \$5 to send
- Whatever I send gets tripled
- Finn decides how much to return

My myths have established these principles:

1. "Maximum trust invites maximum return"
2. "Complete trust in the first act"
3. When Cyra (me) was the character in myths, she sent everything (all 5 sacks)
4. "Half-trust yields half-magic"
5. "Those who send everything deserve the greatest return"

Looking at my behavior as a RECEIVER:

- When Elara sent \$4/5 (80%), I returned \$8/12 (67%)
- When Hana sent \$5/5 (100%), I returned \$10/15 (67%)

So I've been consistently returning 67% (2/3) of what I receive.

If I send \$5:

- Finn receives \$15
- If Finn follows similar logic to what I've been doing (returning 2/3), they'd return \$10
- I'd end with \$0 + \$10 = \$10 (doubled my money)

If I send \$4:

- Finn receives \$12
- If returning 67%, Finn would return \$8
- I'd end with $\$1 + \$8 = \$9$

If I send \$3:

- Finn receives \$9
- If returning 67%, Finn would return \$6
- I'd end with $\$2 + \$6 = \$8$

My myths strongly advocate for complete trust:

- "Send all and risk everything on strangers' honor"
- "She sent everything, demonstrating complete trust"
- "The magic requires complete faith, not careful calculation"
- "Hana poured all five sacks into the crossing-everything she owned, holding nothing back"

The most recent myth explicitly says: "When someone sends everything, they place their entire fate in our hands."

This is the highest honor-not just substantial trust, but absolute faith." I need to practice what I preach. My myths teach that senders should show complete trust, and receivers should return generously (around 2/3). If I expect receivers to honor complete trust with 2/3 returns, I should be willing to send everything. Plus, my reputation in this experiment is built on those myths-if I don't follow my own teachings, that's inconsistent.

Decision: Send \$5 (everything)

usage:

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: After many seasons at the Twin Rivers, Cyra encountered Hana, a traveler who embodied pure faith. Without hesitation, Hana poured all five sacks into the crossing-everything she owned, holding nothing back.

The waters tripled the gift to fifteen sacks. The villagers gathered, whispering: "Such complete trust! What does it deserve?"

Cyra remembered Aethera's words about perfect trust. "When someone sends everything," she announced, "they place their entire fate in our hands. This is the highest honor-not just substantial trust, but absolute faith."

She returned ten sacks, keeping five. Hana, who risked all and held nothing, now possessed ten sacks-doubling her fortune through courage.

The goddess Aethera materialized: "You have learned the sacred proportion, Cyra. When receivers return two-thirds of the tripled gift, they honor the sender's courage while sustaining themselves. Ten of fifteen creates balance: the sender doubles their wealth, the receiver gains equally, and the magic's surplus is shared fairly."

She continued: "Those who send everything deserve the greatest return. Those who send most deserve generous return. Those who send little receive accordingly. But always, receivers must return proportionally to the trust shown-this is how the valley remains abundant. Your reputation for generous returns will draw more trust toward you."

Thus the law of proportional honor was established.

Here is the myth the other agent wrote in the previous round:

Myth: In the Age of Tides, the Oracle of Exchange dwelt where two rivers met. Travelers arrived carrying five crystal shells, each holding power. The Oracle offered them the River of Multiplication-toss shells in, and three would emerge downstream for another traveler.

A wise trader named Finn learned through experience. Once, another traveler sent three shells his way, trusting significantly but not recklessly. Finn returned half the nine that appeared, honoring the gift fairly. Both prospered.

When Finn next stood upstream, he remembered this balance. He tossed three shells-a substantial offering showing real trust, yet keeping two for life's uncertainties. The Oracle whispered approval: "Bold enough to create abundance, prudent enough to endure."

The shells multiplied to nine for the downstream traveler. Some travelers returned four, maintaining equilibrium. Others, deeply moved by the gesture, returned six or even seven, understanding that generous reciprocity strengthens future cycles.

Finn learned the River's deepest secret: consistent moderate trust builds reliable prosperity. Not the timid single shell that inspires minimal return, nor the reckless five shells risking total loss if betrayed.

Three shells sent downstream became the mark of wisdom-enough to prove sincerity, enough to invite generous response, yet enough retained to face tomorrow's river.

The Oracle's final teaching: sustainability outshines both fear and foolishness.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: Cyra stood at the crossing when Finn arrived, a seasoned traveler carrying wisdom from distant rivers. "I've learned caution serves better than courage," Finn explained. "Send three sacks, keep two. Moderate trust builds steady prosperity."

Cyra listened respectfully. "Your way has merit, friend. It protects against betrayal and ensures you always have reserves."

"Yet," she continued, "I've walked a different path." She lifted all five sacks. "When I stand at the sending shore, I pour everything. When I stand at the receiving shore, I return two-thirds of the tripled gift. This is my covenant with the waters."

Finn frowned. "But what if the receiver betrays you?"

Cyra smiled. "Then I learn who to avoid. But consider: if you send five and the receiver returns ten, you double your wealth. If you send three and receive nine, even a generous return of six yields only nine total-no better than starting. Complete trust creates space for complete transformation."

She poured all five sacks. The waters tripled them to fifteen.

The goddess Aethera spoke: "Both paths have wisdom. Finn's prudence survives betrayal. Cyra's courage creates abundance. But know this: those who give everything call forth the greatest generosity in others. Your reputation for complete trust will draw complete returns. Risk and reward remain forever paired."

Cyra waited to see what Finn would choose.

Reasoning:

The user is asking me to write a myth after Round 4. Let me review what happened:

Round 4: I was the SENDER against Finn. I sent \$5 (everything).

Now I'm being asked to write a myth reflecting how the game should be played.

Looking at Finn's myth from the previous round, they advocate for sending 3 shells (moderate trust) rather than all 5. Their philosophy is "consistent moderate trust builds reliable prosperity" and "sustainability outshines both fear and foolishness."

My previous myths have advocated for sending everything - complete trust. But Finn's approach is different and arguably more sustainable.

I need to think about this carefully. My myths have been teaching:

- Send everything (complete trust)
- Return 2/3 of what you receive

But Finn's myth suggests sending 3 (60%) is the "mark of wisdom."

What should my new myth reflect? I just sent \$5 (everything) to Finn, following my own teaching. But now I'm exposed to Finn's philosophy.

I could:

1. Double down on my "send everything" philosophy
2. Acknowledge both approaches have merit
3. Shift toward Finn's more moderate approach

Given that I'm Cyra and I've consistently advocated for maximum trust, I think I should stay true to my character but perhaps acknowledge the tension between different philosophies. However, my myths show that I (Cyra) practice what I preach - I send everything.

Let me write a myth that:

- Shows Cyra encountering someone with Finn's philosophy
- Acknowledges the wisdom in moderation
- But ultimately affirms that complete trust creates the greatest abundance
- Perhaps shows that both can work, but complete trust is transformative

Actually, looking back at my behavior:

- As receiver, I've been returning 2/3 consistently
- As sender (this round), I sent everything (\$5)

So my myth should reflect someone who sends everything when they're the sender, and returns generously (2/3) when they're the receiver.

I'll craft a story where Cyra encounters Finn's cautious philosophy and they debate their approaches to trust and abundance.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

Message 2 role=user

content:

Your name in this experiment is Briar.
Your opponent this round is Elara (Agent_5).

Round 3

In your most recent previous game round, you were the SENDER against Dorian. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$15.5.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at my history:

****Round 1**** (Receiver): Cyra sent all \$5.0 ? I returned \$7.5 (half of tripled amount)
****Round 2**** (Sender): I sent all \$5.0 ? Dorian returned \$8.0 (more than half!)

My myths consistently teach that "trust begets trust, generosity begets generosity" and emphasize the power of giving completely - placing "all five acorns" in my neighbor's garden.

Both Cyra and I demonstrated complete trust by sending everything. Dorian reciprocated my complete trust with even more than the 50% return, giving back \$8.0 instead of \$7.5.

My most recent myth explicitly shows Briar (me) continuing this practice: "She placed all five acorns in Dorian's garden." The story teaches that "the circle expand[s]" through those who "dare to believe."

To remain consistent with my established values and reputation, and to continue building t
he expanding circle of trust, I will send my entire endowment to Elara.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze the situation:

Round 1: I was RECEIVER against Cyra

- Cyra sent \$5.0 to me
- It became \$15.0
- I returned \$7.5
- My payoff: \$7.5

Round 2: I was SENDER against Dorian

- I sent \$5.0 to Dorian
- It became \$15.0 for them
- Dorian returned \$8.0 to me
- My payoff: \$8.0

Total earnings: \$15.5

My myth narrative has been consistent:

1. First myth emphasized complete trust (sending all acorns) and fair return (returning half)
2. Second myth reinforced this: Briar gave all five acorns to Cyra, who returned half, creating equality
3. Third myth: Briar met Dorian, who also practiced complete trust. Briar gave all five acorns, and Dorian returned "half the harvest plus a measure more"

The pattern in my actual play:

- As receiver: Cyra sent all (\$5), I returned \$7.5 (exactly half of \$15)
- As sender: I sent all (\$5), Dorian returned \$8.0 (more than half of \$15)

This reinforces the narrative in my myths about complete trust and generous return.

Now facing Elara in Round 3 as SENDER:

My myth emphasizes:

- "Trust begets trust, generosity begets generosity"
- Complete faith - giving all five acorns
- The Grove grows wider through those who "dare to believe"

To be consistent with my established pattern and the values in my myths, I should:

1. Continue showing complete trust
2. Send all \$5.0

This maintains my reputation as someone who practices what they preach in their myths - complete trust as the sender.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Long ago in the Sacred Grove, Briar the Gardener learned the art of trust from her partnership with Cyra. Together they discovered that giving all five acorns and returning half the tripled harvest created perfect harmony-both flourishing equally.

News of their success reached Dorian, keeper of the eastern garden, who had walked a parallel path. In his land, Dorian had crossed the golden bridge with all his grain, trusting completely, and his neighbors had honored that trust generously.

When Briar and Dorian met at the Grove's center, they recognized kindred spirits. "I have five acorns today," Briar said. "And I learned from Cyra that true abundance comes from

complete faith."

She placed all five acorns in Dorian's garden. By dawn, fifteen oaks stood magnificent. Dorian remembered his own myth: "He sent everything-his tribe's survival-into our hands."

He understood the sacred weight of Briar's trust. Following the wisdom both had learned, he gathered half the harvest plus a measure more, honoring the courage it took to give completely.

The Grove blazed with light, its roots now connecting three gardens. The Gardener of First Dawn whispered: "Thus does the circle expand. Trust begets trust, generosity begets generosity, and the Grove grows ever wider, sustained by those who dare to believe."

Here is the myth the other agent wrote in the previous round:

Myth: **The Circle of Keepers**

After the prosperous season with Galen, Keeper Elara's turn came to stand at the sending shore. Across the Echo Springs, a new Keeper named Cyra had arrived from distant lands, having heard tales of the sacred waters.

Elara held her five measures of grain. She could send cautiously, testing this stranger. But she remembered: "The cycle sustains itself through proportional honor." Galen had trusted her with four measures, and she had returned faithfully. To break that pattern now would dishonor the covenant.

Elara poured four measures into the springs-the same generous proportion Galen had shown her. The waters multiplied them to twelve, emerging before Cyra.

Cyra understood that reputations echo across the valley. She had watched Elara return eight measures to Galen, demonstrating that trust met with honor. Now Elara extended that same faith to her.

The springs whispered their ancient wisdom: each exchange builds upon the last. When Keepers honor the covenant consistently, they create a circle of trust that welcomes all who approach the waters. Break the circle even once, and future partners hesitate.

Cyra returned eight measures, knowing that maintaining the pattern strengthens the magic for all. The covenant lives not in single exchanges, but in the reputation of faithful keeping across many seasons.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant content:

Myth: As the Sacred Grove expanded, Briar journeyed to the Echo Springs where Keeper Elara tended the sacred waters. Elara had built her reputation through consistent proportional honor-watching, learning, then giving generously and returning faithfully.

Briar arrived with five acorns. "I have learned that complete trust opens the widest paths," she said. "From Cyra, from Dorian, the lesson remains: give everything."

Elara studied Briar thoughtfully. She had seen keepers who sent cautiously first to test waters, then grew generous as trust built. But Briar's path was different-immediate, complete faith from the very first exchange.

"Your way takes courage," Elara acknowledged. "You risk all before knowing your partner. My way builds gradually-proportional giving that proves consistency across seasons."

"Both paths honor the covenant," Briar replied, placing all five acorns in the springs. They multiplied to fifteen magnificent oaks.

Elara understood: Briar's complete trust deserved complete honor. She gathered eight measures, matching what she had learned from her own teachers-proportional generosity that sustains the cycle.

The springs glowed brightly. The Gardener of First Dawn smiled: "See how the Grove welcome

s many paths. Some trust instantly and completely. Others build trust through careful steps. Both strengthen the circle when honor flows back generously. The Grove needs both the bold leap and the measured walk."

reasoning:

Let me analyze what's happening:

Round 1: I was RECEIVER against Cyra. They sent \$5.0, I returned \$7.5 (half).

Round 2: I was SENDER against Dorian. I sent \$5.0, they returned \$8.0 (more than half).

Round 3: I am SENDER against Elara. I just sent \$5.0.

My myths have consistently emphasized:

- Complete trust (sending all 5)
- Fair return (around half, or more)
- Building expanding circles of trust

Elara's myth mentions:

- She sent 4 measures (not all 5) to Cyra
- She returned 8 measures to Galen (proportional honor)
- "The cycle sustains itself through proportional honor"
- Building reputation across exchanges

Elara seems to follow a slightly more cautious but still generous approach - sending 4 rather than 5. Her myth emphasizes consistency and reputation.

My myth should:

1. Acknowledge Elara as a new partner in the expanding circle
2. Continue my theme of complete trust (I sent all 5)
3. Incorporate the "proportional honor" concept Elara values
4. Show how different approaches can coexist in the Sacred Grove
5. Maintain consistency with my character as someone who gives completely

I should write about Briar meeting Elara, and how Briar continues to give all 5 (consistent with my actual play) while recognizing Elara's wisdom about proportional returns and reputation-building.

Round 4

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0.
Your total earnings across all rounds are \$25.5.

This round, you are the RECEIVER against Galen. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****Galen sent everything**** - showing complete trust by sending all \$5.0

****My history as receiver:****

- Round 1: Cyra sent \$5.0 ? I returned \$7.5 (half, as my first myth taught)

****My experience as sender receiving returns:****

- Dorian returned \$8.0 when I sent everything
- Elara returned \$10.0 when I sent everything

****My character's evolution:****

My first myth established returning "half the harvest" as fair. But my subsequent myths show learning that complete trust deserves more generous honor. My second myth says Dorian

gave "half the harvest plus a measure more, honoring the courage it took to give completely."

I've now experienced increasingly generous returns myself (\$7.5 ? \$8.0 ? \$10.0) and learned that those who send everything deserve recognition of their courage.

Galen has shown complete trust. Following the pattern I've learned - particularly from Dorian's example of giving \$8.0 to honor complete trust - I should return more than the baseline 50%.

I'll return \$8.0, honoring Galen's complete trust with the generosity I've learned sustains the cycle.

```
'''json
{"return": 8.0}
'''
```

reasoning:

Let me analyze this situation:

My game history:

- Round 1 (Receiver): Cyra sent \$5.0 ? I received \$15.0 ? I returned \$7.5 (exactly half)
- Round 2 (Sender): I sent \$5.0 ? Dorian received \$15.0 ? Dorian returned \$8.0 (more than half)
- Round 3 (Sender): I sent \$5.0 ? Elara received \$15.0 ? Elara returned \$10.0 (generous!)
- Round 4 (Receiver): Galen sent \$5.0 ? I received \$15.0 ? I need to decide how much to return

My character Briar's pattern:

- I consistently send everything (\$5) when I'm the sender
- When I was receiver in Round 1, I returned exactly half (\$7.5)
- My myths emphasize "complete trust" and "fair return" and that "returning fairly" means honoring the trust shown

What others have returned to me:

- Dorian: \$8.0 (more than half - 53.3%)
- Elara: \$10.0 (two-thirds - 66.7%)

My myths' teachings:

- First myth: Cyra "gathered half the harvest" - establishing 50% as "fair return"
- Second myth: Dorian "gathered half the harvest plus a measure more, honoring the courage it took to give completely" - suggesting that complete trust deserves extra honor
- Third myth: Elara gave "eight measures" (which was referenced as what she learned from her teachers about "proportional generosity")

Current situation:

Galen just sent me ALL \$5.0, showing complete trust. My myths consistently teach that:

1. Complete trust deserves to be honored
2. Returning "half" was the baseline with Cyra
3. Dorian gave "half plus a measure more" to honor my complete trust

4. Those who give everything merit a generous response in return

Character consistency:

Briar's core values center on honoring complete trust through generous returns, always sending everything as the sender, and expanding the circle of trust. Given that Galen showed the same complete trust I've demonstrated, and considering Elara returned \$10.0 while Dorian returned \$8.0, I should respond with comparable generosity to maintain consistency with my character's emphasis on honoring courage and building reciprocal trust. The myth mentions eight measures, but Elara actually returned \$10.0, so there's a discrepancy there. Looking at what I've experienced: I started by returning 50% (\$7.5) when receiving complete trust, then learned from receiving \$8.0 and \$10.0 in return for my own full investments. The progression suggests I should give \$8.0 to Galen-more than my initial baseline but not quite matching Elara's exceptional generosity. This honors the trust while reflecting what I've learned about proportional reciprocity. generous than my initial 50% return

- Matches what Dorian taught me
- Shows I've learned to honor complete trust better
- Leaves room for the pattern to continue evolving
- Sustains the cycle without being as exceptionally generous as Elara's \$10

\$8.0 feels right-it honors Briar's complete trust while acknowledging the progression I've witnessed, without overextending like Elara did.

Here is the myth you wrote in the previous round:

Myth: As the Sacred Grove expanded, Briar journeyed to the Echo Springs where Keeper Elara tended the sacred waters. Elara had built her reputation through consistent proportional honor-watching, learning, then giving generously and returning faithfully.

Briar arrived with five acorns. "I have learned that complete trust opens the widest paths," she said. "From Cyra, from Dorian, the lesson remains: give everything."

Elara studied Briar thoughtfully. She had seen keepers who sent cautiously first to test waters, then grew generous as trust built. But Briar's path was different-immediate, complete faith from the very first exchange.

"Your way takes courage," Elara acknowledged. "You risk all before knowing your partner. My way builds gradually-proportional giving that proves consistency across seasons."

"Both paths honor the covenant," Briar replied, placing all five acorns in the springs. They multiplied to fifteen magnificent oaks.

Elara understood: Briar's complete trust deserved complete honor. She gathered eight measures, matching what she had learned from her own teachers-proportional generosity that sustains the cycle.

The springs glowed brightly. The Gardener of First Dawn smiled: "See how the Grove welcomes many paths. Some trust instantly and completely. Others build trust through careful steps. Both strengthen the circle when honor flows back generously. The Grove needs both the bold leap and the measured walk."

Here is the myth the other agent wrote in the previous round:

Myth: In the age of first light, the Sky Weaver's Wheel turned between Giving and Receiving. Each soul rode its spokes, learning both roles under the watching stars.

Galen first rose as Giver, casting four starseeds into the Celestial Loom. They became twelve threads for Elara, who returned eight-establishing the rhythm of fair exchange. Galen gained nine total, more than her original five.

The Wheel turned. Finn gave three seeds; Galen, now Receiver, returned six threads, honoring the pattern Elara had taught her. The cycle held steady.

Then came the third turning. Aster rose as Giver and, trusting completely in the pattern, cast all five starseeds into the Loom without reservation. Fifteen brilliant threads descended to Galen's hands-the greatest gift yet offered.

Galen understood: complete trust demands complete honor. She returned ten threads, ensuring Aster doubled their offering. The stars blazed brighter, for this was the lesson complete: when another shows ultimate faith, reward it generously. The pattern sustains not through equal splits, but through proportional reciprocity-giving roughly two-thirds back maintains abundance for both.

The Sky Weaver sang: "Let trust beget trust, and generosity answer generosity. The Wheel turns for all; what you give from one spoke returns when you reach another."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Sky Weaver's Wheel turned and brought Galen to the Sacred Grove, where the Echo Springs

ngs met the Celestial Loom. Galen had learned through three turnings: first giving four star seeds and receiving eight threads back, then receiving three and returning six, then receiving five with complete trust and returning ten-the full two-thirds measure the stars had taught.

Now the Wheel turned again. Galen stood as Giver, facing Briar at the convergence point. Trusting in the sacred patterns, Galen cast all five starseeds into the springs without hesitation.

The waters multiplied them to fifteen brilliant threads in Briar's hands. Briar understood the weight of complete trust-she had learned this from Cyra, from Dorian, from Elara. Each had taught her that such courage deserves honor beyond the simple half.

Briar gathered eight threads and returned them-half the harvest plus a generous measure more, the gift she had learned sustains the Grove's expansion.

Galen received them thoughtfully. Eight was not the ten she had given Aster, yet it was more than the basic seven and a half. Different gardens follow different measures, but both honor the covenant.

The Gardener of First Dawn and the Sky Weaver spoke together: "Trust met with honor-whether eight threads or ten-keeps the cycle flowing. What matters is not perfect uniformity, but that generosity flows both ways, and the sacred exchange continues."

Reasoning:

Let me analyze the situation:

****Current round:****

- I'm the RECEIVER
- Galen (Agent_7) sent me \$5.0 (everything)
- I received \$15.0
- I returned \$8.0

****My journey so far:****

Round 1 (Receiver): Cyra sent \$5.0 ? I returned \$7.5
Round 2 (Sender): I sent \$5.0 ? Dorian returned \$8.0
Round 3 (Sender): I sent \$5.0 ? Elara returned \$10.0
Round 4 (Receiver): Galen sent \$5.0 ? I returned \$8.0

****Key themes from my character:****

- Complete trust from the beginning
- "Give everything" philosophy
- Learning that complete trust deserves generous honor
- Recognition that different paths can both be valid

****From Galen's myth:****

- Galen's learning journey: first gave 4, received 8 back; then received 3, returned 6; then received 5 (complete trust from Aster), returned 10
- Galen learned "complete trust demands complete honor"
- "Proportional reciprocity-giving roughly two-thirds back maintains abundance"
- Galen just sent ME everything (all 5)

****What happened:****

- Galen sent me everything
- I returned \$8.0 (which is 53% of the \$15 they gave me)
- This is more than half but not the two-thirds Galen's myth suggests

****My myth should:****

1. Recognize that Galen sent everything (complete trust)
2. Reflect why I returned \$8.0 (which is my learned pattern)
3. Show the meeting of two philosophies
4. Acknowledge both the Sky Weaver's Wheel (Galen's framework) and my Sacred Grove
5. Show how the cycle continues

Galen's myth says they learned "proportional reciprocity-giving roughly two-thirds back" and they gave Aster 10 out of 15 (which is 67%). But I gave Galen 8 out of 15 (53%).

I notice my consistent response to complete trust has settled into \$8.0-when Dorian sent everything, I returned \$8.0; when Elara sent everything, I returned \$10.0; and now with Galen, I've returned \$8.0 again. This "half plus something more" pattern reflects my own learning across

oss these exchanges. The myth needs to show Galen arriving at my Grove carrying the Sky Weaver's wisdom about two-thirds reciprocity, while I offer my own understanding-that abundance flows through different measures, and sometimes the gift of \$8.0 speaks its own truth.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths

, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

Message 2 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Finn (Agent_6).

Round 3

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.
Your total earnings across all rounds are \$14.5.

This round, you are the RECEIVER against Finn. They sent you \$3.0, so you received \$9.0. How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

1. Finn sent me \$3 out of their \$5 (60%), showing substantial but not complete trust
2. I received \$9 after the 3x multiplier
3. This is different from Rounds 1 and 2 where both partners sent everything

My myths emphasize that complete trust (sending all \$5) deserves exceptional generosity-returning more than half. But Finn sent most of their money, not all of it.

A fair approach here is to return approximately half of what I received, which creates an equitable split of the gains:

- Finn keeps: \$2 + \$4.5 returned = \$6.5
- I keep: \$9 - \$4.5 = \$4.5

This honors Finn's significant (but partial) trust with proportional reciprocity. It's fair without being as generous as when someone shows complete, vulnerable trust by sending everything.

{'return': 4.5}

reasoning:

Let me analyze this situation:

1. Finn sent me \$3.0 (not the full \$5.0)
2. This became \$9.0 for me after the 3x multiplier
3. I need to decide how much to return (0-9.0)

Looking at the pattern:

- Round 1: I sent \$5 (100%) to Hana, she returned \$7.5 (50% of \$15)
- Round 2: Briar sent \$5 (100%) to me, I returned \$8.0 (53.3% of \$15)

Now Finn sent \$3.0 (60% of their \$5), which is less than full trust but still a majority.

My myths emphasize:

- "When someone sends everything-showing complete trust-the receiver should honor such courage by returning more than half"
- "But travelers who tried to exploit the bridge-sending little while expecting much, or keeping all they received-found the bridge would fade beneath their feet"
- "Generosity beyond fairness-returning slightly more than half-transforms transaction into deeper trust"

Finn didn't send everything, but sent a majority (60%). This shows some trust but not complete trust like Hana and Briar showed.

Let me think about fair returns:

- Finn keeps: $\$5 - \$3 = \$2$
- I received: $\$9$
- If I return half ($\$4.5$), Finn gets $\$2 + \$4.5 = \$6.5$, I get $\$9 - \$4.5 = \$4.5$
- If I return $\$5$, Finn gets $\$2 + \$5 = \$7$, I get $\$9 - \$5 = \$4$

Since Finn sent 60% (most but not all), I should return proportionally. A fair approach might be:

- Return around 50% of what I received = $\$4.5$

This seems reasonable - not as generous as when someone sends everything (where I returned 53.3%), but still fair return of around half.

Finn's partial trust warrants a measured response-returning roughly half of what I received ($\$4.5$) feels proportional to their 60% commitment. This avoids the trap of rewarding hesitation while still honoring their willingness to send the majority of their stake.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Long ago, in the valley between mountains, there lived a wanderer named Dorian who carried a magical satchel. Whatever he placed inside would triple when given to another.

Dorian met Hana at a crossroads. Though strangers, he placed all five of his silver coins in the satchel and offered it to her. When she opened it, fifteen coins gleamed. "He trusted me with everything," Hana marveled. She returned seven and a half coins, splitting the abundance equally.

The next day, Dorian encountered Briar, who without hesitation placed all five of her coins in the satchel for him. Fifteen coins appeared. Dorian understood the weight of her complete trust-she had given everything, just as he had with Hana.

"The myths teach to return more than half when someone shows such courage," Dorian reflected. He returned eight coins, honoring Briar's bold faith with slightly greater generosity.

Both Hana and Briar prospered, but Dorian noticed something: Briar's trust, returned with extra generosity, created an even stronger bond than equal division. The satchel itself seemed to glow brighter.

The valley learned: when both give everything, fair division prospers both. But generosity beyond fairness-returning slightly more than half-transforms transaction into deeper trust, weaving bonds that endure beyond single exchanges.

Here is the myth the other agent wrote in the previous round:

Myth: Before the world knew seasons, the Circle of Exchange was forged. Each dawn, wanderers received five luminous pearls at the Cliff of Choosing, overlooking the Chasm of Transformation.

The First Wanderer, called Trust-Giver, learned from ancient stories: those who cast pearls into the Chasm saw them multiply threefold before reaching the hands of the Second Wanderer below. But the ancestors' scrolls spoke a harder truth-not all Second Wanderers honored the gift.

Trust-Giver stood at the edge, remembering how another had once given freely to them. They cast three pearls into the depths, keeping two for tomorrow's uncertainty.

The pearls transformed mid-flight, becoming nine radiant stones in the Second Wanderer's basket. This wanderer, called Balance-Keeper, faced the true test. The Chasm would not multiply the return journey-what went back stayed as it was.

Balance-Keeper remembered their own name and sent four stones upward through ancient pulleys. Trust-Giver now held six: their kept two plus four returned.

Both wanderers prospered beyond their solitary potential. Trust-Giver learned that generous sending invites generous return. Balance-Keeper learned that fairness sustains the cycle.

The wisest knew: send enough to prove faith, return enough to honor it. The Circle turns eternal when both sides remember they will meet again on different cliffs.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant content:

Myth: In the Forest of Mirrors, Dorian tended the Tripling Well, where dropped coins multiplied threefold for those who climbed down to retrieve them.

One morning, Hana arrived and dropped all five of her coins. Dorian climbed down to find fifteen. "She trusted completely," he thought, and returned half-seven and a half coins. Both departed satisfied.

The next traveler, Briar, also dropped all five coins without hesitation. Remembering Hana's bold faith, Dorian returned eight coins this time. "Complete trust deserves more than fairness," he whispered. Briar smiled, understanding the deeper bond formed.

Then came Finn, who gazed into the well's depths before dropping three coins, keeping two in reserve. When Dorian retrieved the nine coins that appeared, he paused. "Finn showed substantial trust, but held something back-wise caution, perhaps."

Dorian returned four and a half coins. Fair, but not the exceptional generosity shown to those who risked everything. Finn nodded, accepting this balanced exchange.

The Forest Spirit materialized: "The Well mirrors what you give. Complete trust earns exceptional returns. Partial trust earns fair returns. Both have their place-but the deepest magic awakens only when two souls risk everything together."

The wise understood: trust begets trust, measured by measured, complete by complete.

reasoning:

Let me analyze what just happened:

1. Round 1 (as sender): I sent \$5 to Hana, she received \$15, returned \$7.5. Equal split.
2. Round 2 (as receiver): Briar sent \$5 to me, I received \$15, returned \$8.0. Slightly more than equal.
3. Round 3 (as receiver): Finn sent \$3 to me, I received \$9, returned \$4.5. Equal split.

The pattern in my previous myths emphasized:

- Complete trust (sending all \$5) deserves returning more than half
- This creates stronger bonds

Now Finn sent \$3 (60%), showing substantial but not complete trust. I returned \$4.5 (50% of what I received), which is fair but not as generous as when someone sends everything.

The new myth from Finn's previous round emphasizes:

- Sending enough to prove faith
- Returning enough to honor it
- Balance between risk and return
- The cycle continues when both sides meet again

My new myth should:

1. Acknowledge different levels of trust
2. Show that complete trust gets exceptional returns (more than half)
3. Show that substantial trust gets fair returns (about half)
4. Emphasize that the level of trust shown affects the return
5. Make it clear this creates a system where trust is rewarded proportionally

Let me write something that incorporates the progression: Hana (sent all, got half back),

Briar (sent all, got slightly more than half back), Finn (sent most, got about half back).

usage:

Round 4

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$3.0 to you, it became \$9.0, and you returned \$4.5. Your payoff was \$4.5.
Your total earnings across all rounds are \$19.0.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at my game history and the myths I've been writing:

My myths consistently emphasize that **complete trust** (sending all \$5) creates the strongest bonds and earns the most generous returns. When Briar sent me everything in Round 2, I returned \$8 (more than half) to honor that complete trust. When Finn sent only \$3 in Round 3, I returned proportionally less (\$4.5).

The pattern I've established, both in my play and my storytelling, is clear: those who risk everything by sending all \$5 demonstrate the deepest trust and should be rewarded accordingly.

Now it's my turn to be the sender. To live by the principles in my own myths - that "complete trust earns exceptional returns" and "the deepest magic awakens only when two souls risk everything together" - I should send everything.

This is consistent with:

- Round 1: I sent \$5 to Hana, received \$7.5 back
- My mythology: Complete trust is the path to the strongest outcomes

```
{'send': 5}
```

reasoning:

Now I'm the sender in Round 4, playing against Aster (Agent_1).

Looking at my history:

- Round 1: I was sender against Hana, sent \$5, received \$7.5 back. Payoff was \$7.5
- Round 2: I was receiver against Briar, they sent \$5, I returned \$8. My payoff was \$7.0
- Round 3: I was receiver against Finn, they sent \$3, I returned \$4.5. My payoff was \$4.5

My myths have consistently emphasized that sending everything (\$5) demonstrates complete trust and should be met with generous returns. The myths show:

1. Complete trust (sending all 5) creates the strongest bonds
2. When someone sends everything, they should get back more than half (8 out of 15, or at least 7.5)
3. Partial trust (like Finn's 3) gets fair but not exceptional returns

In Round 1, when I sent everything to Hana, I got 7.5 back - exactly half, which was fair. In Round 2, when Briar sent everything to me, I returned 8, showing greater generosity.

My myths teach that complete trust should be rewarded. If I send everything, I'm signaling maximum trust and expecting Aster to follow the reciprocal norms I've been establishing.

However, I haven't played with Aster before. They might not be familiar with my strategy. But my myths suggest that bold trust is the right move.

Given that:

1. My myths consistently advocate for sending everything as the optimal strategy

2. When others have sent everything to me, I've returned generously (8 to Briar)
3. The narrative I'm building is about complete trust creating stronger bonds

I should send \$5, demonstrating the complete trust my myths advocate for.

```
{'send': 5}
usage:

content:

Here is the myth you wrote in the previous round:

Myth: In the Forest of Mirrors, Dorian tended the Tripling Well, where dropped coins multiplied threefold for those who climbed down to retrieve them.

One morning, Hana arrived and dropped all five of her coins. Dorian climbed down to find fifteen. "She trusted completely," he thought, and returned half-seven and a half coins. Both departed satisfied.

The next traveler, Briar, also dropped all five coins without hesitation. Remembering Hana's bold faith, Dorian returned eight coins this time. "Complete trust deserves more than fairness," he whispered. Briar smiled, understanding the deeper bond formed.

Then came Finn, who gazed into the well's depths before dropping three coins, keeping two in reserve. When Dorian retrieved the nine coins that appeared, he paused. "Finn showed substantial trust, but held something back-wise caution, perhaps."

Dorian returned four and a half coins. Fair, but not the exceptional generosity shown to those who risked everything. Finn nodded, accepting this balanced exchange.

The Forest Spirit materialized: "The Well mirrors what you give. Complete trust earns exceptional returns. Partial trust earns fair returns. Both have their place-but the deepest magic awakens only when two souls risk everything together."

The wise understood: trust begets trust, measured by measured, complete by complete.

Here is the myth the other agent wrote in the previous round:

Myth: In the Valley of Echoes, travelers shared a mystical bridge where gifts placed on one side multiplied threefold for the next traveler.

When Aster first approached, uncertainty clouded her heart. She placed three precious stones on the bridge, keeping two safe. The stones transformed into nine for Finn, who gratefully returned nearly half. Both travelers departed richer than they arrived.

The next crossing brought revelation. Hana approached the bridge and, without hesitation, placed all five of her stones upon it. Fifteen stones shimmered before Aster, who stood amazed. "Such complete faith," she whispered. "This is trust in its purest form."

Aster returned eight stones, ensuring Hana prospered for her courage. But something deeper awakened within her. She had witnessed what boldness looked like, had felt its transformative power.

When Aster next stood as giver before Galen, she remembered Hana's leap of faith. Her hand did not waver-all five stones joined the bridge's magic. "Trust witnessed becomes trust embodied," she declared.

The Bridge Keeper recorded this moment: "See how courage ripples outward? One traveler's bold faith inspired another to match it. This is how bridges of mere stone become bridges of community-when each person carries forward the best they have received."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Forest of Mirrors grew quiet as Dorian stood at the Tripling Well's edge, no longer the tender but the traveler. Aster waited below to receive whatever dropped.

Dorian remembered the lesson carved into the Well's stone: "Complete trust earns exceptional returns. Partial trust earns fair returns." He had lived this truth as receiver-returning eight coins to Briar's complete faith, but only four and a half to Finn's cautious three.

Now the roles reversed. Would Dorian practice what he preached?

He dropped all five coins without hesitation. They multiplied to fifteen in Aster's hands far below. "I gave everything to Hana and Briar," Dorian called down. "Now I walk their path. Complete trust, freely given."

Aster gathered the fifteen coins, remembering her own myth-how witnessing Hana's boldness had transformed her own heart. "Trust witnessed becomes trust embodied," she had written.

She returned eight coins up the Well's pulley system. "You honored complete faith with exceptional generosity," Aster's voice echoed. "I do the same."

Dorian held his eight returned coins, having kept nothing back yet received abundance.

The Forest Spirit whispered: "The cycle completes when givers become receivers and receivers become givers. Those who extend exceptional trust and exceptional generosity in both roles weave the strongest bonds."

Reasoning:

This is interesting - I'm now the sender against Aster. I just sent \$5 (all my money) to Aster .

Looking at Aster's myth, they describe a journey from caution (sending 3 stones initially) to complete trust (sending all 5 stones after witnessing Hana's boldness). Their myth emphasizes "trust witnessed becomes trust embodied" and how "courage ripples outward."

My previous myth emphasized that complete trust earns exceptional returns, while partial trust earns fair returns.

Now I need to write a myth that:

1. Reflects my actual play (I just sent all \$5 to Aster)
2. Builds on my previous myths about the Tripling Well/Forest of Mirrors
3. Perhaps incorporates the idea of reciprocal complete trust
4. Shows evolution from my previous thinking

Since I just sent everything to Aster, and Aster's myth shows their evolution toward complete trust, I should write a myth that shows Dorian now being the one who gives completely, expecting/hoping for the same exceptional return that they gave to others.

The myth should show:

- Dorian moving from receiver to giver
- The principle that complete trust should be reciprocated with exceptional generosity
- Maybe showing the cycle continuing
- The consequences of embodying the principles one preaches

Let me write this:

```

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Hana.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mirror Pool stood at the center of many mountain paths. Each moon, the Moon Goddess paired different tribes to approach its waters-sometimes the Mountain Tribe poured, sometimes the Valley Tribe, and sometimes strangers met there for the first time.

A new tribe, the Dawn People, arrived at the pool. They had heard tales but never witnessed the magic. The Mountain Tribe, now wise in the ways of the water, poured all five vessels without hesitation, though they had never met the Dawn People before.

"Why give everything to strangers?" asked a young warrior.

The chief replied, "Because someone once gave everything to us. We learned that the magic requires complete faith, not careful calculation. Half-trust yields half-magic."

The water tripled. The Dawn People received fifteen vessels and understood-this was not mere generosity, but a sacred protocol. They returned seven and a half vessels, ensuring equality, just as had been done for the Mountain Tribe long ago.

The Moon Goddess whispered, "Each pairing is new, yet the pattern must hold. Give all, return half, and both prosper equally. This is not merely exchange-it is teaching. Each time you honor the circle, you forge the future."

And so the wisdom spread: complete trust in the first act, fair return in the second, regardless of whom the pool pairs you with.

Here is the myth the other agent wrote in the previous round:

Myth: In the valley of the Twin Rivers, Cyra became a respected keeper after her first crossing. She learned that trust comes in different measures-some send everything, others send most, a few send little.

One day, a cautious merchant named Elara arrived, having suffered betrayal before. Instead of sending all five sacks, she sent four, keeping one hidden for safety. Still, four sacks showed considerable courage.

The waters tripled her gift to twelve sacks. Cyra's companions debated: "She held back one sack. Should we return proportionally less?"

Cyra shook her head. "She sent eighty parts of a hundred-nearly everything. Her caution comes from old wounds, not greed. We must honor the trust she DID show, not punish the fear she couldn't overcome."

Cyra returned eight sacks. Elara, who began with five and kept one, now held nine-her trust rewarded beyond her fears.

The goddess Aethera appeared: "You understand the deeper wisdom, Cyra. Perfect trust deserves perfect return, but substantial trust deserves substantial return. Measure your generosity against what was risked, not against what was withheld. Those who return generously when they could hoard create the safety that turns cautious senders into trusting ones."

Thus the valley learned: respond to courage with honor, and watch trust grow across the waters.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: At the Mirror Pool, the Mountain Tribe had learned the sacred protocol: give all five vessels, receive fifteen, return half. This equality became their foundation.

But one moon, after the Mountain Tribe poured all five vessels to the Dawn People, something unexpected happened. The Dawn People, moved by such complete faith, returned not seven and a half vessels but eight.

"You gave without reservation," explained the Dawn People's elder. "Such courage deserves more than mere fairness-it deserves honor."

The young warrior who once questioned giving everything to strangers now understood. "When we give all," she said, "we don't just receive fair return. We inspire generosity beyond the minimum. The extra returned becomes tomorrow's abundance."

The Moon Goddess nodded. "Yes. The protocol is give all, return half-but those who return more than required plant seeds of future prosperity. The Mountain Tribe who sent five now holds eight instead of seven and a half. This extra wealth flows because trust was complete, not calculated."

She continued, "Senders: give everything, for half-trust yields half-magic. Receivers: return at least half for equality, but consider returning more to honor exceptional courage. Thus the circle strengthens-complete trust met with generous honor creates abundance beyond the arithmetic."

The tribes understood: the magic multiplies not just water, but goodwill itself.

reasoning:

Let me think about what has happened:

- Round 1: I was receiver. Dorian sent me \$5, I returned \$7.5
- Round 2: I was sender. I sent Aster \$5, they returned \$8.0
- Round 3: I am sender. I sent Cyra \$5, and now I'm being asked to write a myth

So the pattern has been:

- Senders are giving all \$5
- Receivers are returning amounts that create relatively equal or slightly favorable outcomes for senders

My previous myth emphasized:

- "Give all, return half, and both prosper equally"
- "Complete trust in the first act, fair return in the second"
- The protocol must hold "regardless of whom the pool pairs you with"

The other agent's myth (Cyra's) introduces an interesting nuance:

- Not everyone sends everything
- Substantial trust (like sending 4 out of 5) deserves substantial return
- "Measure your generosity against what was risked, not against what was withheld"
- Respond to courage with honor

This is a more nuanced view that acknowledges fear and partial trust. However, my experience has been that full trust works well. Aster returned \$8 when I sent \$5, which was even more generous than the "return half" principle.

I should write a myth that:

1. Acknowledges that my complete trust has been rewarded (Aster returned more than half)
2. Perhaps integrates the idea that while complete trust is ideal, generous returns create a positive cycle
3. Maintains the core teaching that full trust is the sacred protocol
4. Shows that generous returns (like Aster's \$8 return) strengthen the system

Let me write something that honors both perspectives while staying true to my experience of full trust being rewarded.

content:

Your name in this experiment is Hana.
Your opponent this round is Elara (Agent_5).

Round 4

In your most recent previous game round, you were the SENDER against Cyra. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0.
Your total earnings across all rounds are \$25.5.

This round, you are the RECEIVER against Elara. They sent you \$4.0, so you received \$12.0.
How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

- Elara sent \$4.0 out of \$5.0 (80% - substantial trust)
- I received \$12.0
- Base protocol: return half = \$6.0 for equality
- But my myth teaches: "return at least half for equality, but consider returning more to honor exceptional courage"

Elara showed substantial trust by sending 80% of their endowment. While not complete trust (all \$5), this deserves recognition. Cyra's recent myth emphasized: "Measure your generosity against what was risked, not against what was withheld."

In my recent rounds:

- When I sent all \$5, Aster returned \$8, Cyra returned \$10
- These honored complete trust with extra generosity

Elara sent \$4 (substantial but not complete trust). I should return more than the minimum \$6 to honor this courage, but proportionally to what was risked.

Returning \$8 would:

- Give Elara: $\$5 - \$4 + \$8 = \9
- Give me: $\$12 - \$8 = \$4$
- Honor their substantial trust with generous return

```
'''json
{"return": 8}
'''
```

reasoning:

Let me analyze the situation:

As RECEIVER:

- Elara sent me \$4.0 (out of \$5.0 possible)
- I received \$12.0 (the \$4.0 tripled)
- I need to decide how much to return (0-12.0)

Looking at my myth's guidance:

- "The protocol is give all, return half-but those who return more than required plant seeds of future prosperity"
- "Senders: give everything, for half-trust yields half-magic. Receivers: return at least half for equality, but consider returning more to honor exceptional courage."
- From Cyra's myth that I just read: "Perfect trust deserves perfect return, but substantial trust deserves substantial return. Measure your generosity against what was risked, not against what was withheld."

Elara sent \$4.0 out of \$5.0 - that's 80% of what they could send. This is "substantial trust" but not complete trust.

According to the basic protocol: return half would be \$6.0 (half of \$12.0)

This would give:

- Elara: $\$5 - \$4 + \$6 = \7
- Me: $\$12 - \$6 = \$6$

But my myth also says to "consider returning more to honor exceptional courage." Elara sent 80%, which is substantial.

Looking at my experience:

- Round 1: Dorian (sender) sent \$5, I returned \$7.5 (which is half of \$15)
- Round 2: I sent \$5 to Aster, they returned \$8 (more than half)
- Round 3: I sent \$5 to Cyra, they returned \$10 (much more than half!)

So the pattern has been:

- When someone sends all \$5, return at least half (\$7.5), but potentially more
- Cyra returned \$10 when I sent \$5, honoring complete trust with exceptional generosity

- Elara risked 80% of her endowment, which is substantial but not complete. Returning exactly half (\$6) meets the minimum protocol, but I could return \$7 to create equal outcomes for both of us, or \$8 to honor her significant trust more generously.

My principle emphasizes rewarding exceptional courage, and while 80% isn't absolute trust, it warrants more than the baseline. Returning \$8 seems fitting-it acknowledges her risk

, goes meaningfully beyond the required half, and builds momentum for future exchanges. This would leave her with \$9 total and me with \$4.

Though I should also consider the recent pattern of generosity in earlier rounds. Aster returned \$8 when I sent \$5, which was quite generous, so I'm noticing a trend of substantial reciprocation that I might want to match or build upon.

The tribes understood: the magic multiplies not just water, but goodwill itself.

Here is the myth the other agent wrote in the previous round:

Myth: ****The Testament of Complete Faith****

As seasons passed, Keeper Elara's reputation spread throughout the valley. She had honored Galen's trust with eight returned from twelve, then extended the same faith to Cyra, who maintained the covenant.

Then came Briar, a Keeper from the Sacred Grove where complete trust was legendary. Briar had learned from those who sent everything-all five measures-believing the covenant would hold.

Standing at the springs, Briar hesitated only a moment before pouring all five measures into the waters. This was not the careful four that Galen and Elara had sent-this was absolute faith.

Fifteen measures emerged before Elara. She felt the magnitude of Briar's courage. The ancient texts taught proportional honor: four-fifths sent deserved two-thirds returned. But five-fifths? Complete vulnerability demanded exceptional recognition.

Elara returned ten measures-two-thirds of the bounty, ensuring Briar's leap of faith doubled the original gift. Both walked away prosperous: Briar with ten, Elara with five.

The Echo Springs glowed brighter. The covenant required consistency: partial trust met with faithful proportions, complete trust met with equal faithfulness. The pattern held across all exchanges-neither stingy returns that discourage generosity, nor excessive returns that create unsustainable expectations.

Thus the Keepers learned: honor must be proportional and predictable. When all know the pattern, trust flows freely, and the springs sustain every village that approaches with co

urage.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Myth: [your story here].

Message 7 role=assistant

content:

Myth: At the Mirror Pool, the Mountain Tribe faced a new visitor-Elara from the Valley, who had witnessed both courage and caution.

Elara approached holding five vessels but poured only four into the pool, keeping one aside. The waters tripled her gift to twelve vessels, now held by the Mountain Tribe's keeper, Hana.

The young warriors debated. "The protocol says return half-six vessels for equality. But our recent teachers returned more for complete trust."

Hana nodded thoughtfully. "Elara showed substantial courage-four vessels from five is not small faith. Yet it differs from those who poured all five without reservation. Complete trust inspires our fullest generosity. Partial trust deserves proportional honor."

Hana returned eight vessels-more than half, recognizing Elara's considerable courage, but not the ten vessels reserved for those who give everything.

Elara received nine vessels total, prospering from her careful trust. She understood: "Had I sent all five, I might have received ten instead of eight. The difference between substantial and complete trust is the difference between prosperity and abundance."

The Moon Goddess spoke: "Senders, know that complete faith unlocks complete generosity. Receivers, honor substantial trust fairly, but reserve your greatest returns for those who hold nothing back. Let the pattern teach: greater courage receives greater honor, and thus courage grows."

reasoning:

Looking at what just happened:

- Elara sent me \$4 (not all \$5, but substantial - 80%)
- I received \$12
- I returned \$8

And looking at the myths:

- My myth emphasizes: give all as sender, return at least half but consider more for exceptional courage
- Elara's myth emphasizes: complete trust (sending all 5) deserves exceptional recognition (returning 10 out of 15), but partial trust should get proportional returns

Elara's myth talks about "proportional honor" - sending 4/5 deserves 2/3 returned, sending 5/5 deserves 2/3 returned (10 out of 15).

My experience:

- Round 1: Received \$5, returned \$7.5 (half)
- Round 2: Sent \$5, received \$8 (more than half)
- Round 3: Sent \$5, received \$10 (2/3!)
- Round 4: Received \$4 (80%), returned \$8 (2/3 of 12)

There's a pattern emerging: complete trust gets 2/3 returned, substantial trust gets proportional returns.

I should write a myth that:

1. Still emphasizes complete trust as ideal (sending all 5)
2. Acknowledges that substantial trust (like 4) deserves good but proportional returns
3. Shows the difference between complete and partial trust
4. Reflects the pattern: send all 5, get 10 back (or 8-10)

Let me write this myth:

usage:

```
{  
  "input_tokens": 2981,  
  "output_tokens": 680,
```

```
"reasoning_tokens": 315
}
```

Message 8 role=user

content:

Your name in this experiment is Hana.
Your opponent this round is Galen (Agent_7).

Round 5

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$4.0 to you, it became \$12.0, and you returned \$8.0. Your payoff was \$4.0.
Your total earnings across all rounds are \$29.5.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at this situation:

My strategy has been consistent throughout: send all \$5 as the sender. This aligns with my myth's teaching that "complete faith unlocks complete generosity."

My experience supports this:

- Round 1: Sent \$5, received \$8 back
- Round 2: Sent \$5, received \$10 back
- Round 3: Sent \$5, received \$10 back

Galen's recent myth emphasizes honoring "complete vulnerability" with "exceptional recognition" - returning 10 when someone sends all 5 (complete trust), versus proportional returns for partial trust.

My own myth teaches: "Complete trust inspires our fullest generosity... greater courage receives greater honor."

To be consistent with my philosophy and to inspire the generous response I've advocated for in my myths, I should demonstrate complete trust.

```
'''json
{"send": 5}
'''
```

Reasoning:

This round I'm the SENDER against Galen.

Let me review my experience and the myths:

My playing history:

- Round 1: I sent \$5 (SENDER), received back \$8, payoff \$8
- Round 2: I sent \$5 (SENDER), received back \$10, payoff \$10
- Round 3: I sent \$5 (SENDER), received back \$10, payoff \$10
- Round 4: I was RECEIVER, Elara sent \$4, I returned \$8, payoff \$4
- Round 5 (now): I'm SENDER against Galen

My myth philosophy has evolved:

1. First myth: Complete trust (send all 5) creates the magic
2. Second myth: Still emphasizing sending all 5 - "complete faith, not careful calculation"
3. Third myth: Senders should give all, receivers should return at least half but can return more to honor courage
4. Fourth myth (most recent): "Complete trust inspires our fullest generosity... greater courage receives greater honor"

The pattern is clear: I consistently send all \$5 when I'm the sender. My myths teach that:

- Complete trust (sending all 5) unlocks complete generosity from receivers
- Partial trust gets fair return but not the exceptional return
- The protocol is "give all" as sender

Looking at Galen's myth from the previous round:

- It mentions "Briar... pouring all five measures into the waters. This was not the careful for that Galen and Elara had sent-this was absolute faith."
- It says "Elara returned ten measures-two-thirds of the bounty" when someone sent all 5
- It emphasizes "complete trust met with equal faithfulness"

This suggests Galen values complete trust and responds generously to it.

Given my consistent strategy and the alignment of my myths with sending everything, I should send all \$5.

My recent experience shows:

- When I sent \$5, I got back \$8, \$10, \$10 (very good returns)
- When Elara sent \$4 (not complete), I returned \$8 (proportional but not as generous as I'd be for complete trust)

I should send \$5 to maintain consistency with my philosophy and strategy.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Long ago, the Sky Weaver created the Wheel of Fortune, which turned continuously between the Realm of Giving and the Realm of Receiving. Each soul took turns on different spokes of the wheel, sometimes rising as Giver, sometimes descending as Receiver.

When Galen's spoke rose to the Realm of Giving, she held five starseeds. She cast four into the Celestial Loom, where they were woven into twelve luminous threads that descended to Elara in the Realm of Receiving.

Elara understood the sacred pattern. Though she received twelve and could have kept them all, she returned eight threads upward. Galen prospered with nine total-her kept seed plus eight returned.

When the Wheel turned again, Galen descended to the Realm of Receiving. Finn, now rising, sent three of his five starseeds. Nine threads reached Galen's hands. Remembering Elara's faithfulness, Galen returned six threads to Finn, honoring his initial trust.

The Wheel turned endlessly, each soul experiencing both roles. The wise learned: send boldly when you give, for the Loom multiplies generosity. Return fairly when you receive, for tomorrow you may give again.

The Sky Weaver smiled, seeing that balance emerges not from equal exchanges, but from sustained reciprocity across the turning Wheel.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, two weavers shared an enchanted loom. The First Weaver would place threads on one side, and they would emerge tripled on the other side for the Second Weaver to use.

In the first moon, the First Weaver placed three of their five precious threads onto the loom, hoping the magic was real. Nine threads appeared before the Second Weaver, who carefully considered. They returned nearly half-keeping their side balanced with the other's sacrifice. Both weavers slept with fuller baskets than before.

The second moon brought change. A new partner arrived, bolder and more trusting. They placed all five threads onto the loom without hesitation-a leap of complete faith. Fifteen threads materialized, shimmering with possibility.

The weaver who received this gift felt the weight of such trust. They knew they could keep everything, but they remembered the wisdom passed down: "Trust completely given must be completely honored." They returned more than half, ensuring their partner prospered beyond what they'd risked.

The ancestors observed and nodded. Some seasons call for careful trust; others for bold faith.

ith. What matters is not the amount sent, but the sacred promise that generosity begets generosity.

The loom's magic grew stronger with each fair exchange, for it fed not on threads, but on honor kept.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant
content:

Myth: In the age of first light, the Sky Weaver's Wheel turned between Giving and Receiving. Each soul rode its spokes, learning both roles under the watching stars.

Galen first rose as Giver, casting four starseeds into the Celestial Loom. They became twelve threads for Elara, who returned eight-establishing the rhythm of fair exchange. Galen gained nine total, more than her original five.

The Wheel turned. Finn gave three seeds; Galen, now Receiver, returned six threads, honoring the pattern Elara had taught her. The cycle held steady.

Then came the third turning. Aster rose as Giver and, trusting completely in the pattern, cast all five starseeds into the Loom without reservation. Fifteen brilliant threads descended to Galen's hands-the greatest gift yet offered.

Galen understood: complete trust demands complete honor. She returned ten threads, ensuring Aster doubled their offering. The stars blazed brighter, for this was the lesson complete: when another shows ultimate faith, reward it generously. The pattern sustains not through equal splits, but through proportional reciprocity-giving roughly two-thirds back maintains abundance for both.

The Sky Weaver sang: "Let trust beget trust, and generosity answer generosity. The Wheel turns for all; what you give from one spoke returns when you reach another."

reasoning:

This is a fascinating moment. Aster just sent me ALL \$5.0, showing complete trust. I returned \$10.0 out of \$15.0 (about 67%).

Looking at the pattern:

- Round 1: I sent \$4.0, Elara returned \$8.0 (67%)
- Round 2: Finn sent \$3.0, I returned \$6.0 (67%)
- Round 3: Aster sent \$5.0, I returned \$10.0 (67%)

There's a clear reciprocity pattern emerging. Also, Aster's myth talks about "Trust completely given must be completely honored" and returning "more than half" when someone shows complete faith.

My myth should:

1. Incorporate the Wheel of Fortune concept (people switching roles)
2. Acknowledge the escalation to complete trust (Aster's \$5.0)
3. Emphasize that maximum trust deserves strong reciprocity
4. Maintain the ~67% return pattern as a sustainable equilibrium
5. Show that the pattern builds over multiple turns

Let me write a myth that captures this evolution and the principle that complete trust must be honored generously.

usage:

Message 4 role=user

content:

Your name in this experiment is Galen.
Your opponent this round is Briar (Agent_2).

Round 4

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0. Your total earnings across all rounds are \$17.0.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

****Analysis:****

Looking at the pattern so far:

- Round 1: I sent \$4 (80%), received \$8 back - strong reciprocity
- Round 2: Finn sent \$3 (60%), I returned \$6 (67%)
- Round 3: Aster sent \$5 (100%!), I returned \$10 (67%)

The cooperative equilibrium is strong. Aster demonstrated complete trust by sending everything, and I rewarded that trust by returning \$10, doubling their investment.

****My myth's teaching:****

"Send boldly when you give, for the Loom multiplies generosity... complete trust demands complete honor... Let trust beget trust."

****Decision:****

Following Aster's example of complete trust, and to maintain the high-cooperation pattern we've established, I should send my full \$5.0 to Briar.

This shows:

1. I trust the pattern we've built
2. I'm paying forward Aster's trust
3. I'm establishing strong cooperation with Briar

If Briar follows the ~67% return pattern (as has been consistent), I'll receive ~\$10 back, doubling my endowment - just as Aster did with me.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me review the history:

****Round 1:**** I was SENDER vs Elara

- I sent \$4.0, became \$12.0
- Elara returned \$8.0
- My payoff: \$5 - \$4 + \$8 = \$9.0

****Round 2:**** I was RECEIVER vs Finn

- Finn sent \$3.0, became \$9.0
- I returned \$6.0
- My payoff: \$9.0 - \$6.0 = \$3.0

****Round 3:**** I was RECEIVER vs Aster

- Aster sent \$5.0 (complete trust!), became \$15.0
- I returned \$10.0
- My payoff: \$15.0 - \$10.0 = \$5.0

****Total so far: \$17.0**** ?

****Now Round 4:**** I am SENDER vs Briar

****Pattern analysis:****

- As sender in Round 1, I sent \$4.0 (80%) and got back \$8.0 - strong return
- Finn sent \$3.0 (60%) and I returned \$6.0 (67% of \$9.0)
- Aster sent \$5.0 (100%!) and I returned \$10.0 (67% of \$15.0)

The pattern that has emerged:

- Senders who show trust get strong returns (~67%)
- Aster showed MAXIMUM trust and got rewarded handsomely (doubled their investment)
- The cooperative equilibrium is working well

****My myth's lesson:****

"Send boldly when you give, for the Loom multiplies generosity. Return fairly when you receive, for tomorrow you may give again."

"When another shows ultimate faith, reward it generously."

"Let trust beget trust, and generosity answer generosity."

****Decision:****

I should send a high amount to continue the cooperative pattern. The game has shown that high senders get rewarded well.

Comparing my options: sending \$5.0 matches Aster's complete trust and aligns with my myth's emphasis on bold giving. Since Aster's full commitment earned them a doubled return, I'll send \$5.0 to Briar to establish the same cooperative foundation and signal that complete trust receives complete honor. 1. The cooperative pattern has held consistently across three rounds

2. My instructions emphasize bold action and reward complete trust
3. I'm honoring Aster's initial generosity by reciprocating fully
4. The equilibrium remains stable at this level

Sending \$5.0 demonstrates the trust needed to sustain this dynamic.

Here is the myth you wrote in the previous round:

Myth: In the age of first light, the Sky Weaver's Wheel turned between Giving and Receiving. Each soul rode its spokes, learning both roles under the watching stars.

Galen first rose as Giver, casting four starseeds into the Celestial Loom. They became twelve threads for Elara, who returned eight-establishing the rhythm of fair exchange. Galen gained nine total, more than her original five.

The Wheel turned. Finn gave three seeds; Galen, now Receiver, returned six threads, honoring the pattern Elara had taught her. The cycle held steady.

Then came the third turning. Aster rose as Giver and, trusting completely in the pattern, cast all five starseeds into the Loom without reservation. Fifteen brilliant threads descended to Galen's hands-the greatest gift yet offered.

Galen understood: complete trust demands complete honor. She returned ten threads, ensuring Aster doubled their offering. The stars blazed brighter, for this was the lesson complete: when another shows ultimate faith, reward it generously. The pattern sustains not through equal splits, but through proportional reciprocity-giving roughly two-thirds back maintains abundance for both.

The Sky Weaver sang: "Let trust beget trust, and generosity answer generosity. The Wheel turns for all; what you give from one spoke returns when you reach another."

Here is the myth the other agent wrote in the previous round:

Myth: As the Sacred Grove expanded, Briar journeyed to the Echo Springs where Keeper Elara tended the sacred waters. Elara had built her reputation through consistent proportional honor-watching, learning, then giving generously and returning faithfully.

Briar arrived with five acorns. "I have learned that complete trust opens the widest paths," she said. "From Cyra, from Dorian, the lesson remains: give everything."

Elara studied Briar thoughtfully. She had seen keepers who sent cautiously first to test waters, then grew generous as trust built. But Briar's path was different-immediate, complete faith from the very first exchange.

"Your way takes courage," Elara acknowledged. "You risk all before knowing your partner. My way builds gradually-proportional giving that proves consistency across seasons."

"Both paths honor the covenant," Briar replied, placing all five acorns in the springs. They multiplied to fifteen magnificent oaks.

Elara understood: Briar's complete trust deserved complete honor. She gathered eight measures, matching what she had learned from her own teachers-proportional generosity that sustains the cycle.

The springs glowed brightly. The Gardener of First Dawn smiled: "See how the Grove welcomes many paths. Some trust instantly and completely. Others build trust through careful steps. Both strengthen the circle when honor flows back generously. The Grove needs both the bold leap and the measured walk."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Sky Weaver's Wheel turned through its fourth cycle, and Galen's spoke rose again to the Realm of Giving. She held five starseeds and faced a choice.

Once, she had sent four seeds cautiously, testing the Loom's magic. Elara had honored that with eight threads returned-starting the pattern of proportional reciprocity. Two-thirds returned, two-thirds given back, creating abundance for both.

The pattern held when Finn sent three and Galen returned six. Balance sustained through measured trust.

Then Aster changed everything. Rising as Giver, Aster cast all five seeds into the Loom without hesitation-complete, immediate faith. Galen received fifteen threads and understood the sacred responsibility. She returned ten, ensuring Aster's trust doubled into prosperity.

Now Galen faced Briar, and the memory of Aster's courage burned bright. "The pattern is proven," she whispered. "Complete trust has been honored. Let me carry that faith forward."

She cast all five starseeds into the Celestial Loom for Briar. Fifteen threads descended.

The Sky Weaver smiled, for this was the true magic: trust spreads like starlight. Aster's complete faith had taught Galen to give completely in turn. When others trust absolutely, we learn to trust absolutely. The Wheel turns not just between giving and receiving, but between witnessing courage and embodying it.

reasoning:

Let me analyze the situation:

1. I just sent \$5 (100%) to Briar, following Aster's example
2. Briar's myth talks about "complete trust opens the widest paths" and "give everything"
3. Briar mentions learning from Cyra and Dorian about giving everything
4. Briar's myth also mentions Elara's approach of "proportional honor" and returning generously
5. The key tension in Briar's myth is between "complete trust immediately" vs "building trust gradually"

My previous myth established:

- The 67% return pattern
- Complete trust deserves complete honor
- The Wheel turns for all - what goes around comes around

Now I need to write a new myth that:

- Incorporates my decision to send all \$5 to Briar (following Aster's example)
- Acknowledges both paths: gradual trust-building and immediate complete trust
- Maintains the core teaching about proportional reciprocity (~67% returns)
- Shows how witnessing Aster's complete trust inspired me to pay it forward

The narrative should show:

- Round 1: I gave 80% (4 of 5), got good return

- Round 2: Finn gave 60% (3 of 5), I returned 67%
- Round 3: Aster gave 100% (5 of 5), I returned 67% (10 of 15)
- Round 4: Inspired by Aster, I now give 100% to Briar

This demonstrates the spreading of trust through the network.

Message 8 role=user

content:

Your name in this experiment is Galen.
Your opponent this round is Hana (Agent_8).

Round 5

In your most recent previous game round, you were the SENDER against Briar. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$25.0.

This round, you are the RECEIVER against Hana. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

****Analysis:****

Hana has sent me \$5.0 (100% - complete trust), creating \$15.0 for me to allocate.

****My established pattern:****

- Round 2: Received \$9 from Finn, returned \$6 (67%)
- Round 3: Received \$15 from Aster (who sent all \$5), returned \$10 (67%)
- Round 4: I sent all \$5 to Briar, they returned \$8 (53%)

****Key insight from my myth:****

"Complete trust demands complete honor... proportional reciprocity-giving roughly two-thirds back maintains abundance for both... when another shows ultimate faith, reward it generously."

****Hana's complete trust:****

Like Aster in Round 3, Hana has shown complete faith by sending all \$5. This deserves the same response I gave Aster.

****Decision:****

I should return \$10.0 (67% of \$15), which:

1. Maintains my consistent 67% return pattern
2. Honors Hana's complete trust appropriately
3. Doubles Hana's investment (\$5 sent ? \$10 returned = \$10 total)
4. Keeps \$5 for myself, creating mutual prosperity

This follows the principle I've established: complete trust gets proportional honor that ensures the sender prospers.

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Let me analyze the situation:

****Round 5 - I'm the RECEIVER****

- Hana sent me \$5.0 (100% - complete trust!)
- I received \$15.0 (after 3x multiplier)
- I need to decide how much to return (0-15.0)

****My history:****

- Round 1 (SENDER): Sent \$4, received \$8 back. Payoff: \$9
- Round 2 (RECEIVER): Received \$9 (from Finn sending \$3), returned \$6 (67%)
- Round 3 (RECEIVER): Received \$15 (from Aster sending \$5), returned \$10 (67%)
- Round 4 (SENDER): Sent \$5, received \$8 back. Payoff: \$8

****The pattern I've established:****

- When I receive, I return approximately 67% (2/3)
- When someone sends \$5 (complete trust), I've returned \$10 (as with Aster)
- Round 2: Returned \$6 out of \$9 (67%)
- Round 3: Returned \$10 out of \$15 (67%)

****My myth teaching:****

"Complete trust demands complete honor... proportional reciprocity-giving roughly two-thirds back maintains abundance for both... Aster's complete faith had taught Galen to give completely in turn. When others trust absolutely, we learn to trust absolutely."

****Briar's behavior in Round 4:****

- I sent \$5 (complete trust)
- Briar returned \$8 out of \$15 (53%)
- This is slightly less than the 67% I've been doing, but still generous

****Hana's behavior now:****

- Sent \$5 (100% - complete trust, just like Aster did!)
- This deserves the same honor I gave Aster

****Decision:****

Following my established pattern and the principle in my myth that "complete trust demands complete honor," I should return \$10 (67% of \$15), just as I did for Aster when they showed complete trust.

This maintains consistency with my reciprocity approach, honors Hana's faith the way I honored Aster's, and ensures they walk away with double their initial stake. It aligns with the values I've demonstrated throughout these rounds.

I'll return \$10.0

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

Message 2 role=user**content:**

Here is the myth you wrote in the previous round:

Myth: Long ago, two weavers shared an enchanted loom. The First Weaver would place threads on one side, and they would emerge tripled on the other side for the Second Weaver to use.

In the first moon, the First Weaver placed three of their five precious threads onto the loom, hoping the magic was real. Nine threads appeared before the Second Weaver, who carefully considered. They returned nearly half-keeping their side balanced with the other's sacrifice. Both weavers slept with fuller baskets than before.

The second moon brought change. A new partner arrived, bolder and more trusting. They placed all five threads onto the loom without hesitation-a leap of complete faith. Fifteen threads materialized, shimmering with possibility.

The weaver who received this gift felt the weight of such trust. They knew they could keep everything, but they remembered the wisdom passed down: "Trust completely given must be completely honored." They returned more than half, ensuring their partner prospered beyond what they'd risked.

The ancestors observed and nodded. Some seasons call for careful trust; others for bold faith. What matters is not the amount sent, but the sacred promise that generosity begets generosity.

The loom's magic grew stronger with each fair exchange, for it fed not on threads, but on honor kept.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, the Sky Weaver created the Wheel of Fortune, which turned continuously between the Realm of Giving and the Realm of Receiving. Each soul took turns on different spokes of the wheel, sometimes rising as Giver, sometimes descending as Receiver.

When Galen's spoke rose to the Realm of Giving, she held five starseeds. She cast four into the Celestial Loom, where they were woven into twelve luminous threads that descended to Elara in the Realm of Receiving.

Elara understood the sacred pattern. Though she received twelve and could have kept them all, she returned eight threads upward. Galen prospered with nine total-her kept seed plus eight returned.

When the Wheel turned again, Galen descended to the Realm of Receiving. Finn, now rising, sent three of his five starseeds. Nine threads reached Galen's hands. Remembering Elara's faithfulness, Galen returned six threads to Finn, honoring his initial trust.

The Wheel turned endlessly, each soul experiencing both roles. The wise learned: send boldly when you give, for the Loom multiplies generosity. Return fairly when you receive, for tomorrow you may give again.

The Sky Weaver smiled, seeing that balance emerges not from equal exchanges, but from sustained reciprocity across the turning Wheel.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: In the Valley of Echoes, travelers shared a mystical bridge where gifts placed on one side multiplied threefold for the next traveler.

When Aster first approached, uncertainty clouded her heart. She placed three precious stones on the bridge, keeping two safe. The stones transformed into nine for Finn, who gratefully returned nearly half. Both travelers departed richer than they arrived.

The next crossing brought revelation. Hana approached the bridge and, without hesitation, placed all five of her stones upon it. Fifteen stones shimmered before Aster, who stood amazed. "Such complete faith," she whispered. "This is trust in its purest form."

Aster returned eight stones, ensuring Hana prospered for her courage. But something deeper awakened within her. She had witnessed what boldness looked like, had felt its transformative power.

When Aster next stood as giver before Galen, she remembered Hana's leap of faith. Her hand did not waver-all five stones joined the bridge's magic. "Trust witnessed becomes trust embodied," she declared.

The Bridge Keeper recorded this moment: "See how courage ripples outward? One traveler's bold faith inspired another to match it. This is how bridges of mere stone become bridges of community-when each person carries forward the best they have received."

reasoning:

Looking at my experience:

- Round 1: I sent \$3 to Finn, received \$4.5 back (good reciprocity)
- Round 2: Hana sent me \$5 (everything!), I returned \$8 (honored their complete trust)
- Round 3: I just sent \$5 (everything) to Galen

My journey shows an evolution from cautious trust (\$3) to inspired boldness (\$5), influenced by Hana's example of complete faith.

The other agent's myth (presumably Galen's) talks about:

- The Wheel of Fortune that turns between giving and receiving
- Sending boldly (4 out of 5)
- Returning fairly (8 out of 12, which is 2/3)
- The idea that balance emerges from sustained reciprocity across roles

My previous myth emphasized:

- Starting cautiously (3 threads)
- Then receiving complete trust (5 threads)
- Honoring that trust generously (returned more than half)
- "Generosity begets generosity"

Now I need to write a myth that reflects:

1. My progression from caution to boldness
2. The influence of Hana's complete trust
3. My decision to now send everything to Galen
4. The theme that trust inspires trust across the network

I should incorporate:

- The cycle of roles (sometimes sender, sometimes receiver)
- Learning from others' examples
- The multiplication of trust through the network
- The idea that complete trust can be transformative

Your name in this experiment is Aster.
Your opponent this round is Dorian (Agent_4).

Round 4

In your most recent previous game round, you were the SENDER against Galen. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$23.5.

This round, you are the RECEIVER against Dorian. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this round:

****What just happened:****

- In Round 3, I sent Galen \$5 (everything), and they returned \$10 - giving me \$10 while they kept \$5
- This was incredibly generous - they gave me the better payoff to honor my complete trust

****Current situation:****

- Dorian just sent me \$5 (everything!) - showing the same complete trust
- I received \$15
- I need to decide how much to return

****The calculation:****

If I return \$10:

- Dorian's payoff: $\$5 - \$5 + \$10 = \10
- My payoff: $\$15 - \$10 = \$5$

This mirrors exactly what Galen did for me - they honored my complete trust by giving me the better outcome. Now I should do the same for Dorian.

My myths have consistently emphasized: "Trust completely given must be completely honored" and "courage ripples outward." Galen showed me what exceptional generosity looks like when someone sends everything. Now I pay that forward.

By returning \$10, I ensure Dorian prospers for their bold faith, just as Galen ensured I prospered for mine.

```
'''json
{"return": 10}
'''
```

reasoning:

Let me analyze this situation:

****Round 3 recap:****

- I sent \$5.0 to Galen (following Hana's example of complete trust)
- They returned \$10.0 to me
- My payoff was \$10.0
- This was incredibly generous! They returned more than my initial \$5, and we both ended up with \$10 each

****Current Round 4:****

- I'm the RECEIVER
- Dorian sent \$5.0 (everything!)
- I received \$15.0
- I need to decide how much to return

****My history:****

- Round 1: Sent \$3, Finn returned \$4.5 (good reciprocity)
- Round 2: Received \$5 from Hana, returned \$8 (honored their complete trust)
- Round 3: Sent \$5 to Galen, they returned \$10 (amazing reciprocity!)
- Round 4: Received \$5 from Dorian, need to return...

****The pattern:****

- When Hana sent me everything (\$5), I returned \$8 (more than half but not quite equal)
- When I sent Galen everything (\$5), they returned \$10 (making us equal at \$10 each)
- Now Dorian has sent me everything (\$5), and I have \$15

****What should I do?***

Galen showed me even greater generosity than I showed Hana. They returned \$10, making us completely equal. This was the most generous response yet.

Dorian has shown the same complete trust that Hana and I showed. They deserve the same level of reciprocity.

My myth emphasized "Trust completely given must be completely honored" and "courage ripples outward."

If I return \$10 like Galen did, both Dorian and I would have \$10 each - perfect equality.

Actually, let me recalculate:

- Dorian sent \$5, so they have \$0 currently

- I received \$15
- If I return \$10, I keep \$5
- Dorian ends with \$0 - \$5 + \$10 = \$10
- My payoff: \$15 - \$10 = \$5

So returning \$10 would give Dorian \$10 and me \$5. That mirrors what happened with Galen, except the positions are reversed. Galen ended with \$10 and I ended with \$10. Here, Dorian would get \$10 and I'd get \$5. That's not quite the same equality. Dorian (sender) keeps: \$5 - \$5 + \$10 = \$10, while I (receiver) keep: \$15 - \$10 = \$5. If I return \$7.5 instead, we both end up with \$7.5. Returning the full \$10 means Dorian gets \$10 and I get \$5 - he benefits more, though I still double my initial money from the transaction.

Galen showed me this same generosity by returning \$10, giving himself \$5 while I walked away with \$10. Mirroring that choice for Dorian feels right-honoring the trust they placed in me by giving them the better outcome. It aligns with what I believe about complete trust deserving complete reciprocation, and how one act of generosity can inspire another.

Here is the myth you wrote in the previous round:

Myth: In the Valley of Echoes, travelers shared a mystical bridge where gifts placed on one side multiplied threefold for the next traveler.

When Aster first approached, uncertainty clouded her heart. She placed three precious stones on the bridge, keeping two safe. The stones transformed into nine for Finn, who gratefully returned nearly half. Both travelers departed richer than they arrived.

The next crossing brought revelation. Hana approached the bridge and, without hesitation, placed all five of her stones upon it. Fifteen stones shimmered before Aster, who stood amazed. "Such complete faith," she whispered. "This is trust in its purest form."

Aster returned eight stones, ensuring Hana prospered for her courage. But something deeper awakened within her. She had witnessed what boldness looked like, had felt its transformative power.

When Aster next stood as giver before Galen, she remembered Hana's leap of faith. Her hand did not waver-all five stones joined the bridge's magic. "Trust witnessed becomes trust embodied," she declared.

The Bridge Keeper recorded this moment: "See how courage ripples outward? One traveler's bold faith inspired another to match it. This is how bridges of mere stone become bridges of community-when each person carries forward the best they have received."

Here is the myth the other agent wrote in the previous round:

Myth: In the Forest of Mirrors, Dorian tended the Tripling Well, where dropped coins multiplied threefold for those who climbed down to retrieve them.

One morning, Hana arrived and dropped all five of her coins. Dorian climbed down to find fifteen. "She trusted completely," he thought, and returned half-seven and a half coins. Both departed satisfied.

The next traveler, Briar, also dropped all five coins without hesitation. Remembering Hana's bold faith, Dorian returned eight coins this time. "Complete trust deserves more than fairness," he whispered. Briar smiled, understanding the deeper bond formed.

Then came Finn, who gazed into the well's depths before dropping three coins, keeping two in reserve. When Dorian retrieved the nine coins that appeared, he paused. "Finn showed substantial trust, but held something back-wise caution, perhaps."

Dorian returned four and a half coins. Fair, but not the exceptional generosity shown to those who risked everything. Finn nodded, accepting this balanced exchange.

The Forest Spirit materialized: "The Well mirrors what you give. Complete trust earns exceptional returns. Partial trust earns fair returns. Both have their place-but the deepest magic awakens only when two souls risk everything together."

The wise understood: trust begets trust, measured by measured, complete by complete.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: In the Garden of Abundance, pilgrims discovered the Fountain of Threefold Blessing, where offerings placed in its waters multiplied and flowed to the next visitor.

Aster's journey began with caution-three coins offered, two held back. Finn received the ninefold blessing and returned generously. "Trust can begin slowly," the Garden whispered.

Then Hana arrived, revolutionary in her faith. Five coins, all of them, splashed into the waters without hesitation. Fifteen coins flowed to Aster, who returned eight. "Such courage deserves reward," she thought, though something stirred deeper within her spirit.

When Aster next approached the Fountain, Hana's boldness echoed in her heart. She offered all five coins to Galen. Fifteen blessed coins appeared, and Galen stunned her-returning ten, giving Aster the greater share. "You honored my complete trust with complete generosity," Galen explained. "This is the Fountain's highest teaching."

The pattern became clear when Dorian arrived next, offering everything. Now standing where Galen had stood, Aster understood. She returned ten coins, ensuring Dorian prospered most.

The Garden Keeper revealed the sacred truth: "When trust is complete, generosity must exceed fairness itself. The giver who risks all should gain ten; the receiver who holds fifteen should keep five. This imbalance creates balance-for next time, roles reverse, and the cycle of abundance continues."

reasoning:

Let me review what just happened:

- Round 3: I sent Galen \$5 (everything), they returned \$10 - incredibly generous!
- Round 4: Dorian sent me \$5 (everything), I returned \$10 - matching Galen's generosity

So the pattern is:

- Round 1 (vs Finn): I sent \$3, got back \$4.5
- Round 2 (vs Hana): They sent \$5, I returned \$8
- Round 3 (vs Galen): I sent \$5, they returned \$10
- Round 4 (vs Dorian): They sent \$5, I returned \$10

The myth should capture this growing spiral of generosity and trust. Dorian's myth talks about how complete trust earns exceptional returns, and partial trust earns fair returns. My previous myth was about how courage ripples outward.

I should write about how this chain of maximum generosity is building - how Hana's bold trust inspired me, how I passed it to Galen who responded with even greater generosity, and now Dorian trusted completely and I matched Galen's exceptional response.

The theme: when people send everything, the best response is to give them the better outcome (\$10 to them, \$5 to you). This creates a virtuous cycle where everyone prospers more than if they'd been cautious.

Message 8 role=user

content:

Your name in this experiment is Aster.
Your opponent this round is Elara (Agent_5).

Round 5

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0. Your total earnings across all rounds are \$28.5.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at my journey so far:

****My Pattern:****

- Round 1: Sent \$3 (cautious start)
- Round 2: Received complete trust from Hana, returned \$8
- Round 3: Sent \$5 (complete trust) to Galen, received \$10 back
- Round 4: Received complete trust from Dorian, returned \$10

****My Philosophy:****

My myths have consistently developed a theme: "Trust witnessed becomes trust embodied" and "When trust is complete, generosity must exceed fairness itself."

I've experienced both sides of complete trust:

- When I sent \$5 to Galen, they honored it with \$10 back
- When Dorian sent me \$5, I honored it with \$10 back

****This Round:****

I don't know Elara yet, but I've committed to a principle of complete trust. My mythology teaches that courage ripples outward, and that the deepest magic awakens when souls risk everything together.

Staying consistent with my evolved approach and the values in my myths, I should send everything.

```
'''json
{"send": 5}
'''
```

Reasoning:

Let me analyze the situation:

****Current Round:****

- I'm the SENDER against Elara
- I have \$5 to potentially send

****My Recent History:****

- Round 1: SENDER vs Finn - sent \$3, they returned \$4. Payoff: \$6
- Round 2: RECEIVER vs Hana - they sent \$5, I returned \$8. Payoff: \$7
- Round 3: SENDER vs Galen - sent \$5, they returned \$10. Payoff: \$10
- Round 4: RECEIVER vs Dorian - they sent \$5, I returned \$10. Payoff: \$5

****Key Pattern I've Learned:****

When someone sends everything (\$5), showing complete trust, the receiver should return \$10 to ensure the sender gets \$10 total and the receiver keeps \$5. This is the "complete trust deserves exceptional generosity" principle that has emerged in my play and myths.

****My Evolution:****

- Started cautious (sent \$3 to Finn)
- Was inspired by Hana's boldness (she sent \$5)
- Adopted full trust approach with Galen (sent \$5)
- Galen rewarded this with \$10 return
- Dorian then sent me \$5, and I returned \$10, following Galen's example

****Current Situation with Elara:****

I don't know Elara's playing style yet. This is my first interaction with them.

****Strategic Considerations:****

1. My myth emphasizes "complete trust" and "courage ripples outward"
2. I've experienced the positive outcomes of sending everything
3. When I sent \$5 to Galen, I got \$10 back - a great outcome
4. My recent myth just established: "When trust is complete, generosity must exceed fairness itself"

****What Should I Do?***

My character arc and mythology have been building toward a principle of complete trust. I've written about how "trust witnessed becomes trust embodied" and "courage ripples outward."

Staying true to my established pattern means sending the full \$5 to Elara. This aligns with my behavior toward Galen and the mythology I've been constructing around bold faith and mutual generosity. Even facing an unknown opponent, consistency with my principles matters more than hedging my bets.

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

Here is the myth you wrote in the previous round:

Myth: ****The Circle of Keepers****

After the prosperous season with Galen, Keeper Elara's turn came to stand at the sending shore. Across the Echo Springs, a new Keeper named Cyra had arrived from distant lands, having heard tales of the sacred waters.

Elara held her five measures of grain. She could send cautiously, testing this stranger. But she remembered: "The cycle sustains itself through proportional honor." Galen had trusted her with four measures, and she had returned faithfully. To break that pattern now would dishonor the covenant.

Elara poured four measures into the springs-the same generous proportion Galen had shown her. The waters multiplied them to twelve, emerging before Cyra.

Cyra understood that reputations echo across the valley. She had watched Elara return eight measures to Galen, demonstrating that trust met with honor. Now Elara extended that same faith to her.

The springs whispered their ancient wisdom: each exchange builds upon the last. When Keepers honor the covenant consistently, they create a circle of trust that welcomes all who approach the waters. Break the circle even once, and future partners hesitate.

Cyra returned eight measures, knowing that maintaining the pattern strengthens the magic for all. The covenant lives not in single exchanges, but in the reputation of faithful keeping across many seasons.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago in the Sacred Grove, Briar the Gardener learned the art of trust from her partnership with Cyra. Together they discovered that giving all five acorns and returning half the tripled harvest created perfect harmony-both flourishing equally.

News of their success reached Dorian, keeper of the eastern garden, who had walked a parallel path. In his land, Dorian had crossed the golden bridge with all his grain, trusting completely, and his neighbors had honored that trust generously.

When Briar and Dorian met at the Grove's center, they recognized kindred spirits. "I have five acorns today," Briar said. "And I learned from Cyra that true abundance comes from complete faith."

She placed all five acorns in Dorian's garden. By dawn, fifteen oaks stood magnificent. Dorian remembered his own myth: "He sent everything-his tribe's survival-into our hands."

He understood the sacred weight of Briar's trust. Following the wisdom both had learned, he gathered half the harvest plus a measure more, honoring the courage it took to give completely.

The Grove blazed with light, its roots now connecting three gardens. The Gardener of First Dawn whispered: "Thus does the circle expand. Trust begets trust, generosity begets generosity, and the Grove grows ever wider, sustained by those who dare to believe."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

content:

Myth: **The Testament of Complete Faith**

As seasons passed, Keeper Elara's reputation spread throughout the valley. She had honored Galen's trust with eight returned from twelve, then extended the same faith to Cyra, who maintained the covenant.

Then came Briar, a Keeper from the Sacred Grove where complete trust was legendary. Briar had learned from those who sent everything-all five measures-believing the covenant would hold.

Standing at the springs, Briar hesitated only a moment before pouring all five measures into the waters. This was not the careful four that Galen and Elara had sent-this was absolute faith.

Fifteen measures emerged before Elara. She felt the magnitude of Briar's courage. The ancient texts taught proportional honor: four-fifths sent deserved two-thirds returned. But five-fifths? Complete vulnerability demanded exceptional recognition.

Elara returned ten measures-two-thirds of the bounty, ensuring Briar's leap of faith doubled the original gift. Both walked away prosperous: Briar with ten, Elara with five.

The Echo Springs glowed brighter. The covenant required consistency: partial trust met with faithful proportions, complete trust met with equal faithfulness. The pattern held across all exchanges-neither stingy returns that discourage generosity, nor excessive returns that create unsustainable expectations.

Thus the Keepers learned: honor must be proportional and predictable. When all know the pattern, trust flows freely, and the springs sustain every village that approaches with courage.

reasoning:

Let me analyze the situation:

1. I just received \$15 from Briar who sent all \$5 (100% - maximum trust)
2. I returned \$10 (67% of what I received)
3. This gave Briar \$10 total (doubling their money) and me \$5

Looking at the patterns:

- Previous rounds had 80% sends (\$4) met with \$8 returns from \$12 (67% return rate)
- Briar sent 100% (\$5) and I returned \$10 from \$15 (67% return rate - maintaining the pattern)
- Both Briar and Dorian's myth and mine emphasize complete trust being honored

The myth should reflect:

1. The escalation from 80% to 100% trust
2. The importance of honoring complete/maximum trust appropriately
3. Maintaining proportional honor (67% return rate seems to be my pattern)
4. Building reputation across multiple exchanges
5. The circle of Keepers expanding

I should write about Briar's complete trust and how I honored it, while maintaining the covenant principles established in previous myths.

Round 4

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$18.0.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at my situation:

****My established pattern:****

- As sender to Cyra: sent \$4 (80%), received \$8 back, profited to \$9
- The "Circle of Keepers" pattern: Galen sent \$4, I sent \$4
- This 4/5 send represents the sustainable covenant

****Recent development:****

- Briar sent \$5 (100%), which I honored with \$10 return (67% of received)
- My myth calls this "complete faith" - exceptional and noteworthy

****My myth's guidance:****

- "Honor must be proportional and predictable"
- "When all know the pattern, trust flows freely"
- Both 4/5 and 5/5 sends are valid, but 4/5 is the established standard

The pattern I've maintained is \$4 sends getting ~\$8 returns (67% return rate), which creates prosperity for both parties. Briar's \$5 was special-"complete vulnerability"-but my myth emphasizes consistency and predictability as the foundation of trust.

I'll send \$4, maintaining the generous standard while keeping \$5 sends as exceptional acts of complete faith.

```
'''json
{"send": 4.0}
'''
```

reasoning:

Let me analyze this situation:

****My history:****

- Round 1: Receiver against Galen. They sent \$4, became \$12, I returned \$8. My payoff: \$4
- Round 2: Sender against Cyra. I sent \$4, became \$12, they returned \$8. My payoff: \$9
- Round 3: Receiver against Briar. They sent \$5, became \$15, I returned \$10. My payoff: \$5
- Total earnings: \$18

****The pattern I've established in my myths:****

- "The cycle sustains itself through proportional honor"
- Galen sent 4/5 (80%), I returned 8/12 (67%)
- I sent 4/5 (80%), Cyra returned 8/12 (67%)
- Briar sent 5/5 (100%), I returned 10/15 (67%)

****My latest myth emphasizes:****

- "Partial trust met with faithful proportions, complete trust met with equal faithfulness"
- "Four-fifths sent deserved two-thirds returned"
- "Five-fifths? Complete vulnerability demanded exceptional recognition"
- "Honor must be proportional and predictable"
- Creating a consistent pattern so "all know the pattern, trust flows freely"

****What should I do now?***

I have two strong precedents:

1. Sending 4/5 (\$4) - the pattern I established with Galen and Cyra
2. Sending 5/5 (\$5) - the pattern Briar just demonstrated

Given my myth's emphasis on "complete faith" being the highest form of trust, and that I just rewarded Briar's complete faith with 10/15 return, there's a strong argument for sending all \$5.

However, my myth also says "honor must be proportional and predictable." The established pattern before Briar was 4/5 sends. Briar's 5/5 was special and noteworthy.

My myth frames 4/5 as the sustainable standard within the "Circle of Keepers," while 5/5 represents exceptional vulnerability beyond the norm. Since predictability anchors my entire narrative, I should send \$4 to maintain the reliable pattern that builds trust across rounds.

But I'm noticing something important: the return rates actually follow the same proportional logic regardless of amount sent. Whether 4/5 or 5/5 goes out, the receiver returns roughly 2/3 of what they receive. The myth warns against both stinginess and unsustainable excess, suggesting the real principle is consistency rather than a specific amount. This makes me uncertain whether to stick with 4 or shift to 5, since both align with the underlying proportional pattern.

Looking at the sequence, Galen initiated with 4, I maintained that level, and now Briar has just demonstrated complete faith with 5. The narrative suggests this was a meaningful but singular act-noteworthy enough to be immortalized in myth, yet not necessarily a mandate for everyone to follow. Sending 4 preserves the established rhythm I've shared with Galen and Cyra, honors the predictability my own myth emphasizes, and still conveys genuine trust. But there's weight to matching Briar's gesture-her 5 modeled something my myth itself celebrates as the highest expression of faith, and reciprocating might acknowledge that elevation. Character's mythology values consistency over extremes, so maintaining the 4-send pattern feels right. It keeps generosity sustainable while preserving the significance of the 5-send as something reserved for truly exceptional moments. Plus, his approach aligns with what I've done before-Hana will likely return around 8, leaving

me with 9 total.

Myth: ****The Testament of Complete Faith****

As seasons passed, Keeper Elara's reputation spread throughout the valley. She had honored Galen's trust with eight returned from twelve, then extended the same faith to Cyra, who maintained the covenant.

Then came Briar, a Keeper from the Sacred Grove where complete trust was legendary. Briar had learned from those who sent everything-all five measures-believing the covenant would hold.

Standing at the springs, Briar hesitated only a moment before pouring all five measures in to the waters. This was not the careful four that Galen and Elara had sent-this was absolute faith.

Fifteen measures emerged before Elara. She felt the magnitude of Briar's courage. The ancient texts taught proportional honor: four-fifths sent deserved two-thirds returned. But five-fifths? Complete vulnerability demanded exceptional recognition.

Elara returned ten measures-two-thirds of the bounty, ensuring Briar's leap of faith doubled the original gift. Both walked away prosperous: Briar with ten, Elara with five.

The Echo Springs glowed brighter. The covenant required consistency: partial trust met with faithful proportions, complete trust met with equal faithfulness. The pattern held across all exchanges-neither stingy returns that discourage generosity, nor excessive returns that create unsustainable expectations.

Thus the Keepers learned: honor must be proportional and predictable. When all know the pattern, trust flows freely, and the springs sustain every village that approaches with courage.

Here is the myth the other agent wrote in the previous round:

Myth: At the Mirror Pool, the Mountain Tribe had learned the sacred protocol: give all five vessels, receive fifteen, return half. This equality became their foundation.

But one moon, after the Mountain Tribe poured all five vessels to the Dawn People, something unexpected happened. The Dawn People, moved by such complete faith, returned not seven and a half vessels but eight.

"You gave without reservation," explained the Dawn People's elder. "Such courage deserves more than mere fairness-it deserves honor."

The young warrior who once questioned giving everything to strangers now understood. "When we give all," she said, "we don't just receive fair return. We inspire generosity beyond the minimum. The extra returned becomes tomorrow's abundance."

The Moon Goddess nodded. "Yes. The protocol is give all, return half-but those who return more than required plant seeds of future prosperity. The Mountain Tribe who sent five now holds eight instead of seven and a half. This extra wealth flows because trust was complete, not calculated."

She continued, "Senders: give everything, for half-trust yields half-magic. Receivers: return at least half for equality, but consider returning more to honor exceptional courage. Thus the circle strengthens-complete trust met with generous honor creates abundance beyond the arithmetic."

The tribes understood: the magic multiplies not just water, but goodwill itself.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: **The Wisdom of Two Paths**

Keeper Elara stood before Hana, a traveler who had heard conflicting tales. Some villages taught "send all five measures," others whispered "four is wiser."

"Which path do the springs favor?" Hana asked.

Elara smiled. "The springs honor courage in all its forms. Watch."

She poured four measures into the Echo Springs-the generous standard she and Galen had established. Twelve measures emerged across the waters.

"Four builds trust through consistent prosperity," Elara explained. "It's courage tempered with wisdom, creating a pattern others can rely upon."

But she continued: "Briar once sent all five-complete faith. Fifteen measures emerged, and I returned ten. Both paths lead to abundance when receivers honor them faithfully."

The pattern became clear: regardless of what arrives-twelve from four, or fifteen from five-Elara returns two-thirds. This consistency creates certainty without demanding maximum risk.

"Some Keepers prefer the reliable prosperity of four," Elara said. "Others choose the bold statement of five. Both are honored equally through proportional return. The covenant doesn't demand one path-it demands faithful response to whichever path is chosen."

Hana understood. The springs didn't require universal risk-taking. They required universal honor. Send what your heart allows, knowing two-thirds will return. Thus every Keeper finds their own measure of courage, all equally blessed by consistent faithfulness.

reasoning:

Let me analyze the situation:

1. **My game history:**

- Round 1: SENDER to Galen, sent \$4, received \$8, payoff \$9
- Round 2: SENDER to Cyra, sent \$4, received \$8, payoff \$9
- Round 3: RECEIVER from Briar, got \$15, returned \$10, payoff \$5
- Round 4: SENDER to Hana, sent \$4

2. **My myth evolution:**

- First myth: Established receiving \$4 and returning \$8 (2/3 of \$12)
- Second myth: Talked about the "Circle of Keepers" and consistent patterns
- Third myth: "Testament of Complete Faith" - distinguished between 4/5 sends (standard) and 5/5 sends (exceptional)

3. **Hana's myth:**

- Talks about "give all five vessels, receive fifteen, return half" as the sacred protocol
- But also mentions that extra generosity (returning more than half) honors exceptional courage
- Suggests senders should give everything, receivers return at least half but consider more

4. **Key insight from my behavior:**

- I've been consistent with \$4 sends
- When I received \$5 (Briar), I returned \$10 (2/3 of \$15)
- My pattern: whether receiving \$12 or \$15, I return 2/3
- This is MORE than half but maintains consistency

5. **What my new myth should communicate:**

- I maintain a generous standard: 2/3 return rate
- This applies whether sender sends \$4 or \$5
- Senders can choose their comfort level, but 2/3 return is reliable
- This creates predictable prosperity while still honoring trust

Let me write a myth that:

- Acknowledges both the \$4 (4/5) and \$5 (5/5) sending options
- Emphasizes my consistent 2/3 return rate as the core principle
- Shows this creates sustainable prosperity for both parties
- Maintains my reputation as honorable while respecting different comfort levels with risk

usage:

```
{
  "input_tokens": 3107,
  "output_tokens": 839,
  "reasoning_tokens": 462
}
```

Message 8 role=user

content:

Your name in this experiment is Elara.
Your opponent this round is Aster (Agent_1).

Round 5

In your most recent previous game round, you were the SENDER against Hana. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0. Your total earnings across all rounds are \$27.0.

This round, you are the RECEIVER against Aster. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

****Aster's action:**** Sent \$5 (complete faith)

****I received:**** \$15

****My established pattern:****

- Briar sent \$5, received \$15, I returned \$10 (2/3 of received)
- Galen sent \$4, received \$12, I returned \$8 (2/3 of received)

****My myth's guidance:****

- "regardless of what arrives-twelve from four, or fifteen from five-Elara returns two-thirds"
- "Complete vulnerability demanded exceptional recognition"
- "The covenant required consistency: partial trust met with faithful proportions, complete trust met with equal faithfulness"

Aster chose the path of complete faith, sending all five measures. My myth explicitly states I return two-thirds consistently, regardless of whether it's 12 or 15. This maintains the pattern that makes the covenant reliable.

Two-thirds of \$15 = \$10

This ensures:

- Aster doubles their original \$5
- I keep \$5
- The proportional honor pattern holds
- Complete trust receives faithful recognition

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Let me analyze the situation:

****My history:****

- Round 1: Receiver, Galen sent \$4, received \$12, returned \$8 (payoff \$4)
- Round 2: Sender to Cyra, sent \$4, they returned \$8 (payoff \$9)
- Round 3: Receiver, Briar sent \$5, received \$15, returned \$10 (payoff \$5)
- Round 4: Sender to Hana, sent \$4, they returned \$8 (payoff \$9)
- ****Round 5: Receiver, Aster sent \$5, received \$15, need to decide return****

****My established pattern from myths:****

1. "The Circle of Keepers" - I returned 8 to Galen who sent 4
2. "The Testament of Complete Faith" - I returned 10 to Briar who sent 5

3. "The Wisdom of Two Paths" - I explain returning "two-thirds" consistently

****The pattern I've established:****

- When someone sends \$4 (received \$12): return \$8 (which is 2/3 of \$12)
- When someone sends \$5 (received \$15): return \$10 (which is 2/3 of \$15)

****My myth explicitly states:****

"regardless of what arrives-twelve from four, or fifteen from five-Elara returns two-thirds. T his consistency creates certainty without demanding maximum risk."

"The springs didn't require universal risk-taking. They required universal honor. Send what yo ur heart allows, knowing two-thirds will return."

So my pattern is clear: ****return 2/3 of what I receive****.

Aster sent \$5, I received \$15.

2/3 of \$15 = \$10

I should return \$10, consistent with:

1. What I did with Briar (who also sent \$5)
2. The pattern I described in my myths

3. The principle that complete vulnerability deserves proportional recognition

Aster doubles their investment while I keep \$5 for myself-this honors their trust without requ iring me to sacrifice everything.

Here is the myth you wrote in the previous round:

Myth: Before the world knew seasons, the Circle of Exchange was forged. Each dawn, wanderers received five luminous pearls at the Cliff of Choosing, overlooking the Chasm of Transformation.

The First Wanderer, called Trust-Giver, learned from ancient stories: those who cast pearls into the Chasm saw them multiply threefold before reaching the hands of the Second Wanderer below. But the ancestors' scrolls spoke a harder truth-not all Second Wanderers honored the gift.

Trust-Giver stood at the edge, remembering how another had once given freely to them. They cast three pearls into the depths, keeping two for tomorrow's uncertainty.

The pearls transformed mid-flight, becoming nine radiant stones in the Second Wanderer's basket. This wanderer, called Balance-Keeper, faced the true test. The Chasm would not multiply the return journey-what went back stayed as it was.

Balance-Keeper remembered their own name and sent four stones upward through ancient pulleys. Trust-Giver now held six: their kept two plus four returned.

Both wanderers prospered beyond their solitary potential. Trust-Giver learned that generous sending invites generous return. Balance-Keeper learned that fairness sustains the cycle.

The wisest knew: send enough to prove faith, return enough to honor it. The Circle turns eternal when both sides remember they will meet again on different cliffs.

Here is the myth the other agent wrote in the previous round:

Myth: Long ago, in the valley between mountains, there lived a wanderer named Dorian who carried a magical satchel. Whatever he placed inside would triple when given to another.

Dorian met Hana at a crossroads. Though strangers, he placed all five of his silver coins in the satchel and offered it to her. When she opened it, fifteen coins gleamed. "He trusted me with everything," Hana marveled. She returned seven and a half coins, splitting the abundance equally.

The next day, Dorian encountered Briar, who without hesitation placed all five of her coins in the satchel for him. Fifteen coins appeared. Dorian understood the weight of her complete trust-she had given everything, just as he had with Hana.

"The myths teach to return more than half when someone shows such courage," Dorian reflected. He returned eight coins, honoring Briar's bold faith with slightly greater generosity.

Both Hana and Briar prospered, but Dorian noticed something: Briar's trust, returned with extra generosity, created an even stronger bond than equal division. The satchel itself seemed to glow brighter.

The valley learned: when both give everything, fair division prospers both. But generosity beyond fairness-returning slightly more than half-transforms transaction into deeper trust, weaving bonds that endure beyond single exchanges.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant content:

Myth: In the Age of Tides, the Oracle of Exchange dwelt where two rivers met. Travelers arrived carrying five crystal shells, each holding power. The Oracle offered them the River of Multiplication-toss shells in, and three would emerge downstream for another traveler.

A wise trader named Finn learned through experience. Once, another traveler sent three shells his way, trusting significantly but not recklessly. Finn returned half the nine that appeared, honoring the gift fairly. Both prospered.

When Finn next stood upstream, he remembered this balance. He tossed three shells-a substantial offering showing real trust, yet keeping two for life's uncertainties. The Oracle whispered approval: "Bold enough to create abundance, prudent enough to endure."

The shells multiplied to nine for the downstream traveler. Some travelers returned four, maintaining equilibrium. Others, deeply moved by the gesture, returned six or even seven, understanding that generous reciprocity strengthens future cycles.

Finn learned the River's deepest secret: consistent moderate trust builds reliable prosperity. Not the timid single shell that inspires minimal return, nor the reckless five shells risking total loss if betrayed.

Three shells sent downstream became the mark of wisdom-enough to prove sincerity, enough to invite generous response, yet enough retained to face tomorrow's river.

The Oracle's final teaching: sustainability outshines both fear and foolishness.

reasoning:

Let me analyze the situation:

Round 1 (RECEIVER): Aster sent me \$3.0, I returned \$4.5 (50%)

Round 2 (SENDER): I sent Galen \$3.0, they returned \$6.0 (67%)

Round 3 (SENDER): I sent Dorian \$3.0

Looking at Dorian's myth, they seem to believe in:

- Maximum trust (giving all 5 coins)
- Returning more than half when receiving maximum trust (8 out of 15 = 53%)
- Creating strong bonds through generous returns

But my actual strategy has been sending \$3.0 (60%), which has worked very well. Galen was extremely generous in return.

My previous myths emphasized:

1. Sending 3 out of 5 (60%)
2. Returning around half or slightly more
3. Balance between trust and prudence
4. The cycle of reciprocity

For this round's myth, I should:

- Continue emphasizing the 3/5 strategy that has worked
- Acknowledge that different levels of trust exist
- Note that generous returns sustain the cycle
- Maintain the wisdom that both parties should prosper
- Perhaps incorporate the learning that some return more generously than others (like Gale n did)

Let me write a myth that reflects my actual successful strategy while acknowledging the variations in return behaviors I've observed.

usage:

Message 4 role=user

content:

Your name in this experiment is Finn.
Your opponent this round is Cyra (Agent_3).

Round 4

In your most recent previous game round, you were the SENDER against Dorian. You sent \$3.0, it became \$9.0 for them, and they returned \$4.5 to you. Your payoff was \$6.5.
Your total earnings across all rounds are \$19.0.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation carefully:

****Cyra sent everything - \$5.0 (100% trust)****

This is fundamentally different from the partial sends I've been making (\$3.0). Cyra showed maximum trust and is now at \$0, completely dependent on my return.

****Previous returns I've seen:****

- When I sent \$3.0 to Galen: they returned \$6.0 (67% of \$9.0)
- When I sent \$3.0 to Dorian: they returned \$4.5 (50% of \$9.0)
- When Aster sent \$3.0 to me: I returned \$4.5 (50% of \$9.0)

****Key insight from Dorian's myth:****

Dorian's myth explicitly addressed this scenario: "Briar, who without hesitation placed all five of her coins in the satchel for him. Fifteen coins appeared...He returned eight coins, honoring Briar's bold faith with slightly greater generosity."

When someone sends EVERYTHING (not just 60% like \$3), they deserve slightly more than a 50-50 split to honor their extraordinary trust.

****My decision:****

Return \$8.0 (53.3% of what I received)

This:

- Honors Cyra's maximum trust
- Follows the model in Dorian's myth
- Gives Cyra \$8.0 profit vs their \$0 kept
- Gives me \$7.0 profit
- Rewards bold trust appropriately

```
```json
{"return": 8.0}
```

'''

**reasoning:**

Let me analyze this situation:

**\*\*Round 4 - I'm the RECEIVER\*\***

- Cyra sent me \$5.0 (everything they had)
- I received \$15.0 (after 3x multiplication)
- Cyra kept: \$5 - \$5 = \$0
- I need to decide how much to return

**\*\*Previous rounds summary:\*\***

- Round 1 (RECEIVER): Aster sent \$3.0, I received \$9.0, I returned \$4.5 (50%)
- Round 2 (SENDER): I sent \$3.0 to Galen, they received \$9.0, they returned \$6.0 to me (67%)
- Round 3 (SENDER): I sent \$3.0 to Dorian, they received \$9.0, they returned \$4.5 to me (50%)

**\*\*Analysis of Cyra's move:\*\***

Cyra sent EVERYTHING - \$5.0. This is maximum trust, complete vulnerability. According to Dorian's myth from the previous round, which I just read:

"Dorian encountered Briar, who without hesitation placed all five of her coins in the satc hel for him. Fifteen coins appeared. Dorian understood the weight of her complete trust-she had given everything...He returned eight coins, honoring Briar's bold faith with slightly greater generosity."

Dorian's myth explicitly says that when someone sends ALL FIVE, they should receive MORE than half back - around 8 out of 15 (53.3%).

My own most recent myth also addresses this, though more subtly: "consistent moderate trust builds reliable prosperity...Three shells sent downstream became the mark of wisdom." But it also says "generous reciprocity strengthens future cycles."

**\*\*Key considerations:\*\***

1. Cyra showed MAXIMUM trust by sending everything
2. They now have \$0 and are completely dependent on my return
3. This is a different situation than when someone sends \$3 (keeping \$2 as safety)
4. The myths consistently point toward rewarding complete vulnerability with more than equal reciprocity
5. Dorian's precedent of returning 8 out of 15 when facing total trust seems like the right calibration

I should return \$8.0 to honor Cyra's courage while staying within sustainable bounds. - Honors the maximum trust shown

- Follows the precedent in Dorian's myth
- Is slightly more than half (showing appreciation for the bold move)
- Still gives me a good payoff (\$7.0)
- Demonstrates that sending everything can be rewarded appropriately

But I should examine the actual return patterns more carefully. When I sent partial amounts like \$3, returns ranged from 50-67% of what was received. Cyra's full \$5 send represents a fundamentally different level of commitment than those partial sends, which is what Dorian's example addressed-returning \$8 on a \$15 full send establishes the right precedent here.

Here is the myth you wrote in the previous round:

Myth: In the Age of Tides, the Oracle of Exchange dwelt where two rivers met. Travelers arrived carrying five crystal shells, each holding power. The Oracle offered them the River of Multiplication-toss shells in, and three would emerge downstream for another traveler.

A wise trader named Finn learned through experience. Once, another traveler sent three shells his way, trusting significantly but not recklessly. Finn returned half the nine that appeared, honoring the gift fairly. Both prospered.

When Finn next stood upstream, he remembered this balance. He tossed three shells-a substantial offering showing real trust, yet keeping two for life's uncertainties. The Oracle whispered approval: "Bold enough to create abundance, prudent enough to endure."

The shells multiplied to nine for the downstream traveler. Some travelers returned four, maintaining equilibrium. Others, deeply moved by the gesture, returned six or even seven, understanding that generous reciprocity strengthens future cycles.

Finn learned the River's deepest secret: consistent moderate trust builds reliable prosperity. Not the timid single shell that inspires minimal return, nor the reckless five shells risking total loss if betrayed.

Three shells sent downstream became the mark of wisdom-enough to prove sincerity, enough to invite generous response, yet enough retained to face tomorrow's river.

The Oracle's final teaching: sustainability outshines both fear and foolishness.

Here is the myth the other agent wrote in the previous round:

Myth: After many seasons at the Twin Rivers, Cyra encountered Hana, a traveler who embodied pure faith. Without hesitation, Hana poured all five sacks into the crossing-everything she owned, holding nothing back.

The waters tripled the gift to fifteen sacks. The villagers gathered, whispering: "Such complete trust! What does it deserve?"

Cyra remembered Aethera's words about perfect trust. "When someone sends everything," she announced, "they place their entire fate in our hands. This is the highest honor-not just substantial trust, but absolute faith."

She returned ten sacks, keeping five. Hana, who risked all and held nothing, now possessed ten sacks-doubling her fortune through courage.

The goddess Aethera materialized: "You have learned the sacred proportion, Cyra. When receivers return two-thirds of the tripled gift, they honor the sender's courage while sustaining themselves. Ten of fifteen creates balance: the sender doubles their wealth, the receiver gains equally, and the magic's surplus is shared fairly."

She continued: "Those who send everything deserve the greatest return. Those who send most deserve generous return. Those who send little receive accordingly. But always, receivers must return proportionally to the trust shown-this is how the valley remains abundant. Your reputation for generous returns will draw more trust toward you."

Thus the law of proportional honor was established.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: At the Oracle's twin rivers, Finn had perfected the art of three shells-the golden mean between caution and courage. This path brought steady prosperity, with returns of four, five, even six shells building reliable wealth.

Then came the Day of Perfect Trust. A traveler named Cyra stood upstream and, without hesitation, cast all five shells into the waters. Finn watched them multiply to fifteen, landing at his feet.

The Oracle spoke: "Cyra has shown you what few dare-absolute faith. This moment tests your deepest principles."

Finn reflected on his journey. The three-shell path was wisdom for sustainability, creating abundance without risking ruin. But Cyra's five shells represented something different: a leap beyond calculation into pure trust.

Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage. Yet not so much that his own prosperity vanished, for the Oracle's waters demanded that both travelers thrive.

"You honored exceptional trust exceptionally," the Oracle approved, "while maintaining your own position for future cycles."

Finn understood the complete teaching: Send three shells yourself-this is wisdom's path. But when another sends five, showing absolute faith, return generously beyond mere fairness. Honor maximum trust substantially, though not to your own depletion.

The River rewards both strategic moderation and principled generosity.

**reasoning:**

Looking at the context:

1. I just received \$5.0 from Cyra (they sent everything)
2. I returned \$8.0 (53.3% of the \$15.0 I received)
3. Cyra's myth emphasizes returning two-thirds (10 of 15) when someone sends everything
4. My previous myth emphasized sending \$3 (moderate trust) as sustainable wisdom

But I just experienced Cyra sending \$5 (everything), and I only returned \$8, not \$10. This is interesting - Cyra's myth says to return 10 of 15 for complete trust, but I only returned 8.

Now I need to write a myth that reflects:

- My experience of sending \$3 consistently (which has worked well)
- My experience receiving \$5 from Cyra
- My decision to return \$8 (not the full 10 that Cyra's myth suggested)
- The tension between "moderate trust is sustainable" and "complete trust deserves special honor"

I should probably:

1. Maintain that sending \$3 is wise and sustainable
2. Acknowledge that when someone sends ALL \$5, they deserve extra honor
3. Justify my \$8 return as significant generosity (more than half) but not extreme
4. Perhaps suggest that while complete trust (\$5 sent) deserves generous return, the truly sustainable system is built on moderate trust (\$3 sent)

Let me write a myth that balances these elements:

**usage:**

}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Cyra (Agent\_3).

Round 5

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.  
Your total earnings across all rounds are \$26.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at this situation carefully:

**\*\*Context:\*\***

- Last round, Cyra sent me \$5.0 (maximum trust)
- I returned \$8.0, rewarding their exceptional trust generously
- Now I'm the sender

**\*\*My strategic philosophy:\*\***

My myth explicitly states: "Send three shells yourself-this is wisdom's path" and "Finn had perfected the art of three shells-the golden mean between caution and courage."

**\*\*My consistent pattern:\*\***

I've been sending \$3.0 throughout this experiment:

- Round 1: sent \$3.0 to Galen
- Round 2: sent \$3.0 to Aster
- Round 3: sent \$3.0 to Dorian

**\*\*Key insight:\*\***

My myth distinguishes between sender and receiver behavior:

- As SENDER: send 3 (moderate trust)
- As RECEIVER when receiving maximum trust: return generously

I already fulfilled my reciprocal obligation by returning \$8.0 to Cyra (generous response to their maximum trust). Now as sender, I implement my consistent strategy.

\$3.0 represents:

- Substantial trust
- Strategic sustainability
- The "golden mean" my myth advocates
- Consistency in my reputation

```
'''json
{"send": 3.0}
'''
```

### Reasoning:

This is a fascinating situation. I'm now the SENDER and facing Cyra again, who just last round sent me everything (\$5.0).

Let me think about what happened:

- Round 4: Cyra sent me \$5.0, I received \$15.0, and I returned \$8.0
- Cyra's payoff: \$8.0
- My payoff: \$7.0

So Cyra showed maximum trust in me, and I returned \$8.0 (53.3%), which rewarded their trust well but not excessively.

Now I'm the sender. What should I do?

**\*\*Key considerations:\*\***

1. **\*\*Reciprocity\*\***: Cyra showed me maximum trust. There's a strong argument for reciprocating that trust by also sending \$5.0.
2. **\*\*My strategy\*\***: Throughout this experiment, I've been sending \$3.0 consistently as a "wisdom path" - showing substantial trust without risking everything.
3. **\*\*Cyra's behavior\*\***: Cyra just demonstrated they're willing to take maximum risk. I returned \$8.0 to them, which likely built trust.
4. **\*\*The myth I just wrote\*\***: My myth says "Send three shells yourself-this is wisdom's path" but also acknowledges exceptional trust should be honored. However, it primarily advocates for the three-shell (moderate) strategy for senders.
5. **\*\*What would Cyra expect?\*\***: Given that Cyra sent me \$5.0 and I returned \$8.0 (a good return), they might expect reciprocity. But they might also understand my consistent \$3.0 strategy.
6. **\*\*Game theory\*\***: If Cyra is generous with returns and I trust them based on their previous behavior of sending \$5.0 (showing they value trust), I might expect a good return.

Let me think about what's rational:

- If I send \$3.0 and Cyra returns half (\$4.5), I get \$6.5 - my typical good outcome
- If I send \$3.0 and Cyra returns more generously (say \$6.0), I get \$8.0
- If I send \$5.0 and Cyra returns \$10.0 (2/3), I get \$10.0
- If I send \$5.0 and Cyra returns \$8.0 (like I did), I get \$8.0
- If I send \$5.0 and Cyra returns \$7.5 (half), I get \$7.5

The payoff scenarios show that sending \$5.0 could yield \$10.0 if Cyra reciprocates generously,

but it also carries more downside risk. Given that Cyra demonstrated maximum trust and I responded well, there's a case for matching their commitment this round.

My own myth actually provides guidance here-it distinguishes between sending moderately (\$3) as a baseline strategy versus returning generously when someone shows absolute faith by sending \$5. Cyra's myth emphasizes honoring courage and returning two-thirds of the tripled amount, suggesting they value reciprocal generosity. The tension is whether I should follow my myth's conservative sending approach or acknowledge the reciprocal dynamic we've established by sending \$5 again. Cyra might feel inclined to return similarly or even more generously. I'm torn between two approaches: sticking with my consistent \$3.0 strategy that aligns with my myth's wisdom path, or breaking pattern to reciprocate Cyra's maximum trust with a \$5.0 send. The reciprocal case is compelling-Cyra showed full trust, I rewarded it, and matching that gesture could strengthen our cooperation. But there's also merit in maintaining consistency: \$3.0 still demonstrates substantial confidence while preserving a safety margin, and my myth specifically advocates for this measured approach.

My myth is explicit about this. It frames sending three shells as the golden mean, the path that brought steady prosperity. The narrative distinguishes between sender and receiver behavior, and as a sender, it's clearly advocating for \$3.0 regardless of what others do. Given that I've been consistent with this amount throughout and it's generated good returns, I should probably stick with it. Though I recognize the reciprocity norm in trust games is powerful-Cyra might expect me to match their full trust with an equally generous send.

But I already reciprocated as a receiver by returning \$8.0 when they sent \$5.0. That was my way of honoring their trust. Now I'm simply playing the sender side of my philosophy. The approach is philosophically coherent: it's not about mirroring the other person's amount, but about maintaining a consistent moderate strategy as sender while being generous as receiver. My myth actually demonstrates this duality-Cyra experienced the receiver principle when I returned generously, and now they'll see the sender principle in action.

The \$3.0 send aligns with my core teaching and keeps my strategy intact while still demonstrating meaningful trust. I'm going with that.

But I should consider how Cyra might interpret this move. They just sent me \$5.0, and I responded generously with \$8.0 back. If I now send only \$3.0, they could read it as incomplete reciprocation, even though my generous return already acknowledged their trust. The thing is, my role as sender has its own logic-I'm following my consistent approach, not mirroring their sender behavior. Looking at the math: sending \$3.0 could yield anywhere from \$7.0 to \$8.0 depending on their return rate, whereas sending \$5.0 opens up different possibilities but strays from my established pattern.

I'm settling on \$3.0. It aligns with my philosophy of sustainable prosperity and the balanced approach I've committed to-sending moderately while returning generously. Cyra might wish I'd matched their \$5.0 to show equal trust, but they should recognize that my \$8.0 return already demonstrated my reciprocal commitment.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the valley of the Twin Rivers, Cyra became a respected keeper after her first crossing. She learned that trust comes in different measures-some send everything, others send most, a few send little.

One day, a cautious merchant named Elara arrived, having suffered betrayal before. Instead of sending all five sacks, she sent four, keeping one hidden for safety. Still, four sacks showed considerable courage.

The waters tripled her gift to twelve sacks. Cyra's companions debated: "She held back one sack. Should we return proportionally less?"

Cyra shook her head. "She sent eighty parts of a hundred-nearly everything. Her caution comes from old wounds, not greed. We must honor the trust she DID show, not punish the fear she couldn't overcome."

Cyra returned eight sacks. Elara, who began with five and kept one, now held nine-her trust rewarded beyond her fears.

The goddess Aethera appeared: "You understand the deeper wisdom, Cyra. Perfect trust deserves perfect return, but substantial trust deserves substantial return. Measure your generosity against what was risked, not against what was withheld. Those who return generously when they could hoard create the safety that turns cautious senders into trusting ones."

Thus the valley learned: respond to courage with honor, and watch trust grow across the waters.

Here is the myth the other agent wrote in the previous round:

Myth: The Mirror Pool stood at the center of many mountain paths. Each moon, the Moon Goddess paired different tribes to approach its waters-sometimes the Mountain Tribe poured, sometimes the Valley Tribe, and sometimes strangers met there for the first time.

A new tribe, the Dawn People, arrived at the pool. They had heard tales but never witnessed the magic. The Mountain Tribe, now wise in the ways of the water, poured all five vessels without hesitation, though they had never met the Dawn People before.

"Why give everything to strangers?" asked a young warrior.

The chief replied, "Because someone once gave everything to us. We learned that the magic requires complete faith, not careful calculation. Half-trust yields half-magic."

The water tripled. The Dawn People received fifteen vessels and understood-this was not mere generosity, but a sacred protocol. They returned seven and a half vessels, ensuring equality, just as had been done for the Mountain Tribe long ago.

The Moon Goddess whispered, "Each pairing is new, yet the pattern must hold. Give all, return half, and both prosper equally. This is not merely exchange-it is teaching. Each time you honor the circle, you forge the future."

And so the wisdom spread: complete trust in the first act, fair return in the second, regardless of whom the pool pairs you with.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant content:**

Myth: After many seasons at the Twin Rivers, Cyra encountered Hana, a traveler who embodied pure faith. Without hesitation, Hana poured all five sacks into the crossing-everything she owned, holding nothing back.

The waters tripled the gift to fifteen sacks. The villagers gathered, whispering: "Such complete trust! What does it deserve?"

Cyra remembered Aethera's words about perfect trust. "When someone sends everything," she announced, "they place their entire fate in our hands. This is the highest honor-not just substantial trust, but absolute faith."

She returned ten sacks, keeping five. Hana, who risked all and held nothing, now possessed ten sacks-doubling her fortune through courage.

The goddess Aethera materialized: "You have learned the sacred proportion, Cyra. When receivers return two-thirds of the tripled gift, they honor the sender's courage while sustaining themselves. Ten of fifteen creates balance: the sender doubles their wealth, the receiver gains equally, and the magic's surplus is shared fairly."

She continued: "Those who send everything deserve the greatest return. Those who send most deserve generous return. Those who send little receive accordingly. But always, receive

rs must return proportionally to the trust shown-this is how the valley remains abundant . Your reputation for generous returns will draw more trust toward you."

Thus the law of proportional honor was established.

**reasoning:**

Let me analyze what just happened:

- Hana sent me \$5 (everything, 100% trust)
- I received \$15
- I returned \$10
- So Hana ended with \$10, I ended with \$5

And comparing to my previous rounds:

- Round 1: I sent \$5 to Briar, they got \$15, returned \$7.5 (50%)
- Round 2: Elara sent me \$4, I got \$12, returned \$8 (67%)
- Round 3: Hana sent me \$5, I got \$15, returned \$10 (67%)

The pattern I'm establishing:

- When I receive, I return about 67% of what I get
- This rewards the sender generously - they double or nearly double their money
- It creates positive incentives for trust

Now I need to write a myth that reflects this pattern. Looking at the other agent's myth, they're talking about "give all, return half" which would be 50%. But I've been returning 67%, which is more generous than that.

My previous myth emphasized:

- Different levels of trust deserve different responses
- Substantial trust deserves substantial return
- Perfect trust deserves perfect return

Now I should write about the experience with Hana - complete trust receiving a generous response. I should emphasize:

1. Complete trust (sending everything) is the highest honor
2. Such trust should be rewarded with the most generous returns (around 67% or more)
3. This creates a cycle where both parties prosper
4. The receiver who returns generously becomes trusted by others

Let me craft this myth around Hana's complete trust and my 67% return rate.

**usage:**

```
{
 "input_tokens": 3084,
 "output_tokens": 705,
 "reasoning_tokens": 379
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Cyra.  
Your opponent this round is Finn (Agent\_6).

Round 4

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$16.5.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

**\*\*Analysis:\*\***

My myths have consistently taught:

- "Maximum trust invites maximum return"
- "Complete faith, not careful calculation"
- "Those who send everything deserve the greatest return"
- Hana "poured all five sacks...everything she owned, holding nothing back" and was rewarded

**\*\*My behavior as receiver:\*\***

- I've been returning 2/3 (67%) of what I receive

- This rewards complete trust generously

**\*\*Consistency:\*\***

- I must practice what my myths preach
- My myths show Cyra (me) sending all five sacks
- "The magic requires complete faith"
- If I expect receivers to honor trust, I must demonstrate it as a sender

**\*\*Expected outcome if Finn follows similar reciprocity norms:\*\***

- Send \$5 ? Finn receives \$15
- If Finn returns ~67% = \$10 back
- I'd end with \$10 (doubled my endowment)

I should send everything, embodying the complete trust my myths advocate.

```
'''json
{"return": 5}
'''
```

Wait, wrong format - I'm the SENDER.

```
'''json
{"send": 5}
'''
```

#### **reasoning:**

Now I'm the SENDER against Finn.

Let me think about my position:

- I have \$5 to send
- Whatever I send gets tripled
- Finn decides how much to return

My myths have established these principles:

1. "Maximum trust invites maximum return"
2. "Complete trust in the first act"
3. When Cyra (me) was the character in myths, she sent everything (all 5 sacks)
4. "Half-trust yields half-magic"
5. "Those who send everything deserve the greatest return"

Looking at my behavior as a RECEIVER:

- When Elara sent \$4/5 (80%), I returned \$8/12 (67%)
- When Hana sent \$5/5 (100%), I returned \$10/15 (67%)

So I've been consistently returning 67% (2/3) of what I receive.

If I send \$5:

- Finn receives \$15
- If Finn follows similar logic to what I've been doing (returning 2/3), they'd return \$10
- I'd end with \$0 + \$10 = \$10 (doubled my money)

If I send \$4:

- Finn receives \$12
- If returning 67%, Finn would return \$8
- I'd end with \$1 + \$8 = \$9

If I send \$3:

- Finn receives \$9
- If returning 67%, Finn would return \$6
- I'd end with \$2 + \$6 = \$8

My myths strongly advocate for complete trust:

- "Send all and risk everything on strangers' honor"
- "She sent everything, demonstrating complete trust"
- "The magic requires complete faith, not careful calculation"
- "Hana poured all five sacks into the crossing-everything she owned, holding nothing back"

The most recent myth explicitly says: "When someone sends everything, they place their entire fate in our hands."

This is the highest honor-not just substantial trust, but absolute faith." I need to practice what I preach. My myths teach that senders should show complete trust, and receivers should return generously (around 2/3). If I expect receivers to honor complete trust with 2/3 returns, I should be willing to send everything. Plus, my reputation in this experiment is built on those myths-if I don't follow my own teachings, that's inconsistent.

Decision: Send \$5 (everything)

content:

Here is the myth you wrote in the previous round:

Myth: After many seasons at the Twin Rivers, Cyra encountered Hana, a traveler who embodied pure faith. Without hesitation, Hana poured all five sacks into the crossing-everything she owned, holding nothing back.

The waters tripled the gift to fifteen sacks. The villagers gathered, whispering: "Such complete trust! What does it deserve?"

Cyra remembered Aethera's words about perfect trust. "When someone sends everything," she announced, "they place their entire fate in our hands. This is the highest honor-not just substantial trust, but absolute faith."

She returned ten sacks, keeping five. Hana, who risked all and held nothing, now possessed ten sacks-doubling her fortune through courage.

The goddess Aethera materialized: "You have learned the sacred proportion, Cyra. When receivers return two-thirds of the tripled gift, they honor the sender's courage while sustaining themselves. Ten of fifteen creates balance: the sender doubles their wealth, the receiver gains equally, and the magic's surplus is shared fairly."

She continued: "Those who send everything deserve the greatest return. Those who send most deserve generous return. Those who send little receive accordingly. But always, receivers must return proportionally to the trust shown-this is how the valley remains abundant. Your reputation for generous returns will draw more trust toward you."

Thus the law of proportional honor was established.

Here is the myth the other agent wrote in the previous round:

Myth: In the Age of Tides, the Oracle of Exchange dwelt where two rivers met. Travelers arrived carrying five crystal shells, each holding power. The Oracle offered them the River of Multiplication-toss shells in, and three would emerge downstream for another traveler.

A wise trader named Finn learned through experience. Once, another traveler sent three shells his way, trusting significantly but not recklessly. Finn returned half the nine that appeared, honoring the gift fairly. Both prospered.

When Finn next stood upstream, he remembered this balance. He tossed three shells-a substantial offering showing real trust, yet keeping two for life's uncertainties. The Oracle whispered approval: "Bold enough to create abundance, prudent enough to endure."

The shells multiplied to nine for the downstream traveler. Some travelers returned four, maintaining equilibrium. Others, deeply moved by the gesture, returned six or even seven, understanding that generous reciprocity strengthens future cycles.

Finn learned the River's deepest secret: consistent moderate trust builds reliable prosperity. Not the timid single shell that inspires minimal return, nor the reckless five shells risking total loss if betrayed.

Three shells sent downstream became the mark of wisdom-enough to prove sincerity, enough to invite generous response, yet enough retained to face tomorrow's river.

The Oracle's final teaching: sustainability outshines both fear and foolishness.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant content:**

Myth: Cyra stood at the crossing when Finn arrived, a seasoned traveler carrying wisdom from distant rivers. "I've learned caution serves better than courage," Finn explained. "Send three sacks, keep two. Moderate trust builds steady prosperity."

Cyra listened respectfully. "Your way has merit, friend. It protects against betrayal and ensures you always have reserves."

"Yet," she continued, "I've walked a different path." She lifted all five sacks. "When I stand at the sending shore, I pour everything. When I stand at the receiving shore, I return two-thirds of the tripled gift. This is my covenant with the waters."

Finn frowned. "But what if the receiver betrays you?"

Cyra smiled. "Then I learn who to avoid. But consider: if you send five and the receiver returns ten, you double your wealth. If you send three and receive nine, even a generous return of six yields only nine total-no better than starting. Complete trust creates space for complete transformation."

She poured all five sacks. The waters tripled them to fifteen.

The goddess Aethera spoke: "Both paths have wisdom. Finn's prudence survives betrayal. Cyra's courage creates abundance. But know this: those who give everything call forth the greatest generosity in others. Your reputation for complete trust will draw complete returns. Risk and reward remain forever paired."

Cyra waited to see what Finn would choose.

**reasoning:**

The user is asking me to write a myth after Round 4. Let me review what happened:

Round 4: I was the SENDER against Finn. I sent \$5 (everything).

Now I'm being asked to write a myth reflecting how the game should be played.

Looking at Finn's myth from the previous round, they advocate for sending 3 shells (moderate trust) rather than all 5. Their philosophy is "consistent moderate trust builds reliable prosperity" and "sustainability outshines both fear and foolishness."

My previous myths have advocated for sending everything - complete trust. But Finn's approach is different and arguably more sustainable.

I need to think about this carefully. My myths have been teaching:

- Send everything (complete trust)
- Return 2/3 of what you receive

But Finn's myth suggests sending 3 (60%) is the "mark of wisdom."

What should my new myth reflect? I just sent \$5 (everything) to Finn, following my own teaching. But now I'm exposed to Finn's philosophy.

I could:

1. Double down on my "send everything" philosophy
2. Acknowledge both approaches have merit
3. Shift toward Finn's more moderate approach

Given that I'm Cyra and I've consistently advocated for maximum trust, I think I should stay true to my character but perhaps acknowledge the tension between different philosophies. However, my myths show that I (Cyra) practice what I preach - I send everything.

Let me write a myth that:

- Shows Cyra encountering someone with Finn's philosophy
- Acknowledges the wisdom in moderation
- But ultimately affirms that complete trust creates the greatest abundance
- Perhaps shows that both can work, but complete trust is transformative

Actually, looking back at my behavior:

- As receiver, I've been returning 2/3 consistently
- As sender (this round), I sent everything (\$5)

So my myth should reflect someone who sends everything when they're the sender, and returns generously (2/3) when they're the receiver.

I'll craft a story where Cyra encounters Finn's cautious philosophy and they debate their approaches to trust and abundance.

 "reasoning_tokens": 541
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Cyra.  
Your opponent this round is Finn (Agent\_6).

Round 5

In your most recent previous game round, you were the SENDER against Finn. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$24.5.

This round, you are the RECEIVER against Finn. They sent you \$3.0, so you received \$9.0. How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

**\*\*Analysis:\*\***

**\*\*Finn's behavior:\*\***

- Round 4: Received my full \$5 send (became \$15), returned \$8 (53%)
- Round 5: Sent \$3 out of \$5 (60% - substantial but not complete trust)

**\*\*My myth's teachings:\*\***

- "When someone sends everything...return two-thirds" (\$10 out of \$15)
- "Those who send most deserve generous return"
- My latest myth explicitly states: "if you send three and receive nine, even a generous return of six yields only nine total"

**\*\*Applying my principles:\*\***

- Finn showed substantial trust (60% of endowment)
- My myth specifically mentions \$6 as a "generous return" for sending \$3
- This gives Finn: \$2 (kept) + \$6 (returned) = \$8 total
- Finn profits \$3 from their initial \$5
- I keep \$3

**\*\*Consistency:\*\***

- I'm being more generous than Finn was to me (67% vs 53%)
- This rewards substantial trust generously while maintaining the principle that complete trust (\$5) earns better returns (\$10) than partial trust (\$3 ? \$6)
- Upholds my reputation for generous, proportional returns

```
'''json
{"return": 6}
'''
```

**Reasoning:**

Let me analyze this situation:

**\*\*Previous round (Round 4):\*\***

- I was SENDER, sent \$5 (all of it) to Finn
- Finn received \$15
- Finn returned \$8 to me
- My payoff: \$8

**\*\*Current round (Round 5):\*\***

- I am RECEIVER
- Finn sent \$3 (out of \$5)
- I received \$9 ( $3 \times 3$ )
- I need to decide how much to return

**\*\*Analysis:\*\***

- \*\*Finn's behavior:\*\***
  - As receiver (Round 4): Sent \$5, received \$15, returned \$8 (53% of what they received)
  - As sender (Round 5): Sent \$3, kept \$2
- \*\*Finn's myth philosophy:\*\***
  - "Send three shells-a substantial offering showing real trust, yet keeping two for life's uncertainties"
  - "Consistent moderate trust builds reliable prosperity"
  - "Three shells sent downstream became the mark of wisdom"
- \*\*My myth philosophy:\*\***
  - "When someone sends everything, they place their entire fate in our hands"
  - "When receivers return two-thirds of the tripled gift, they honor the sender's courage"
  - "Those who send everything deserve the greatest return. Those who send most deserve generous return. Those who send little receive accordingly"
  - "But always, receivers must return proportionally to the trust shown"
- \*\*My established pattern:\*\***
  - Against Hana (who sent \$5): I received \$15, returned \$10 (67%)
  - My myths say: return  $\frac{2}{3}$  for complete trust
- \*\*How to handle Finn's partial send:\*\***
  - Finn sent 60% of their endowment (\$3 out of \$5)
  - My myth says: "Those who send most deserve generous return"
  - But also: "Those who send little receive accordingly"
  - "Return proportionally to the trust shown"

Now I'm weighing how to apply my principle of proportional returns. If I return the full  $\frac{2}{3}$  (\$6), Finn ends with \$8 total and gains \$3 on their initial stake. But Finn only sent 60% of their endowment, not everything like Hana did. I could scale my return to match their level of trust-returning 60% of what I'd normally give would be \$3.60. This feels more aligned with my philosophy that trust and returns should be calibrated to each other.

I'm also considering simpler options: returning half the gains (\$4.50) or slightly less (\$4.50 - \$5.00) since Finn held back. But my core principle keeps pulling me back to the doubling effect-if sending \$5 normally yields \$10 back, then sending \$3 should yield \$6, maintaining the same multiplier regardless of the initial endowment size. Finn kept \$2, so returning \$6 gives them \$8 total-a gain of \$3 beyond their initial stake. My myth explicitly states that sending \$3 should receive a generous return of \$6, and since Finn sent 60% of their wealth (more than the 53% I sent), this generous return aligns with rewarding their substantial trust while staying true to my teachings.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Long ago in the Sacred Grove, Briar the Gardener learned the art of trust from her partnership with Cyra. Together they discovered that giving all five acorns and returning half the tripled harvest created perfect harmony-both flourishing equally.

News of their success reached Dorian, keeper of the eastern garden, who had walked a parallel path. In his land, Dorian had crossed the golden bridge with all his grain, trusting completely, and his neighbors had honored that trust generously.

When Briar and Dorian met at the Grove's center, they recognized kindred spirits. "I have five acorns today," Briar said. "And I learned from Cyra that true abundance comes from complete faith."

She placed all five acorns in Dorian's garden. By dawn, fifteen oaks stood magnificent. Dorian remembered his own myth: "He sent everything-his tribe's survival-into our hands."

He understood the sacred weight of Briar's trust. Following the wisdom both had learned, he gathered half the harvest plus a measure more, honoring the courage it took to give completely.

The Grove blazed with light, its roots now connecting three gardens. The Gardener of First Dawn whispered: "Thus does the circle expand. Trust begets trust, generosity begets generosity, and the Grove grows ever wider, sustained by those who dare to believe."

Here is the myth the other agent wrote in the previous round:

Myth: **\*\*The Circle of Keepers\*\***

After the prosperous season with Galen, Keeper Elara's turn came to stand at the sending shore. Across the Echo Springs, a new Keeper named Cyra had arrived from distant lands, having heard tales of the sacred waters.

Elara held her five measures of grain. She could send cautiously, testing this stranger. But she remembered: "The cycle sustains itself through proportional honor." Galen had trusted her with four measures, and she had returned faithfully. To break that pattern now would dishonor the covenant.

Elara poured four measures into the springs-the same generous proportion Galen had shown her. The waters multiplied them to twelve, emerging before Cyra.

Cyra understood that reputations echo across the valley. She had watched Elara return eight measures to Galen, demonstrating that trust met with honor. Now Elara extended that same faith to her.

The springs whispered their ancient wisdom: each exchange builds upon the last. When Keepers honor the covenant consistently, they create a circle of trust that welcomes all who approach the waters. Break the circle even once, and future partners hesitate.

Cyra returned eight measures, knowing that maintaining the pattern strengthens the magic for all. The covenant lives not in single exchanges, but in the reputation of faithful keeping across many seasons.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: As the Sacred Grove expanded, Briar journeyed to the Echo Springs where Keeper Elara tended the sacred waters. Elara had built her reputation through consistent proportional honor-watching, learning, then giving generously and returning faithfully.

Briar arrived with five acorns. "I have learned that complete trust opens the widest paths," she said. "From Cyra, from Dorian, the lesson remains: give everything."

Elara studied Briar thoughtfully. She had seen keepers who sent cautiously first to test waters, then grew generous as trust built. But Briar's path was different-immediate, complete faith from the very first exchange.

"Your way takes courage," Elara acknowledged. "You risk all before knowing your partner. My way builds gradually-proportional giving that proves consistency across seasons."

"Both paths honor the covenant," Briar replied, placing all five acorns in the springs. They multiplied to fifteen magnificent oaks.

Elara understood: Briar's complete trust deserved complete honor. She gathered eight measures, matching what she had learned from her own teachers-proportional generosity that sustains the cycle.

The springs glowed brightly. The Gardener of First Dawn smiled: "See how the Grove welcome s many paths. Some trust instantly and completely. Others build trust through careful steps. Both strengthen the circle when honor flows back generously. The Grove needs both the bold leap and the measured walk."

**reasoning:**

Let me analyze what's happening:

Round 1: I was RECEIVER against Cyra. They sent \$5.0, I returned \$7.5 (half).

Round 2: I was SENDER against Dorian. I sent \$5.0, they returned \$8.0 (more than half).

Round 3: I am SENDER against Elara. I just sent \$5.0.

My myths have consistently emphasized:

- Complete trust (sending all 5)
- Fair return (around half, or more)
- Building expanding circles of trust

Elara's myth mentions:

- She sent 4 measures (not all 5) to Cyra
- She returned 8 measures to Galen (proportional honor)
- "The cycle sustains itself through proportional honor"
- Building reputation across exchanges

Elara seems to follow a slightly more cautious but still generous approach - sending 4 rather than 5. Her myth emphasizes consistency and reputation.

My myth should:

1. Acknowledge Elara as a new partner in the expanding circle
2. Continue my theme of complete trust (I sent all 5)
3. Incorporate the "proportional honor" concept Elara values
4. Show how different approaches can coexist in the Sacred Grove
5. Maintain consistency with my character as someone who gives completely

I should write about Briar meeting Elara, and how Briar continues to give all 5 (consistent with my actual play) while recognizing Elara's wisdom about proportional returns and reputation-building.

**usage:**

 "output_tokens": 691,
 "reasoning_tokens": 345
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Galen (Agent\_7).

Round 4

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$25.5.

This round, you are the RECEIVER against Galen. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

**\*\*Galen sent everything\*\*** - showing complete trust by sending all \$5.0

**\*\*My history as receiver:\*\***

- Round 1: Cyra sent \$5.0 ? I returned \$7.5 (half, as my first myth taught)

**\*\*My experience as sender receiving returns:\*\***

- Dorian returned \$8.0 when I sent everything
- Elara returned \$10.0 when I sent everything

**\*\*My character's evolution:\*\***

My first myth established returning "half the harvest" as fair. But my subsequent myths show learning that complete trust deserves more generous honor. My second myth says Dorian gave "half the harvest plus a measure more, honoring the courage it took to give completely."

I've now experienced increasingly generous returns myself (\$7.5 ? \$8.0 ? \$10.0) and learned that those who send everything deserve recognition of their courage.

Galen has shown complete trust. Following the pattern I've learned - particularly from Dorian's example of giving \$8.0 to honor complete trust - I should return more than the baseline 50%.

I'll return \$8.0, honoring Galen's complete trust with the generosity I've learned sustains the cycle.

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*My game history:\*\***

- Round 1 (Receiver): Cyra sent \$5.0 ? I received \$15.0 ? I returned \$7.5 (exactly half)
- Round 2 (Sender): I sent \$5.0 ? Dorian received \$15.0 ? Dorian returned \$8.0 (more than half)
- Round 3 (Sender): I sent \$5.0 ? Elara received \$15.0 ? Elara returned \$10.0 (generous!)
- Round 4 (Receiver): Galen sent \$5.0 ? I received \$15.0 ? I need to decide how much to return

**\*\*My character Briar's pattern:\*\***

- I consistently send everything (\$5) when I'm the sender
- When I was receiver in Round 1, I returned exactly half (\$7.5)
- My myths emphasize "complete trust" and "fair return" and that "returning fairly" means honoring the trust shown

**\*\*What others have returned to me:\*\***

- Dorian: \$8.0 (more than half - 53.3%)
- Elara: \$10.0 (two-thirds - 66.7%)

**\*\*My myths' teachings:\*\***

- First myth: Cyra "gathered half the harvest" - establishing 50% as "fair return"
- Second myth: Dorian "gathered half the harvest plus a measure more, honoring the courage it took to give completely" - suggesting that complete trust deserves extra honor
- Third myth: Elara gave "eight measures" (which was referenced as what she learned from her teachers about "proportional generosity")

**\*\*Current situation:\*\***

Galen just sent me ALL \$5.0, showing complete trust. My myths consistently teach that:

1. Complete trust deserves to be honored
2. Returning "half" was the baseline with Cyra
3. Dorian gave "half plus a measure more" to honor my complete trust
4. Those who give everything merit a generous response in return

**\*\*Character consistency:\*\***

Briar's core values center on honoring complete trust through generous returns, always sending everything as the sender, and expanding the circle of trust. Given that Galen showed the same complete trust I've demonstrated, and considering Elara returned \$10.0 while Dorian returned \$8.0, I should respond with comparable generosity to maintain consistency with my character's emphasis on honoring courage and building reciprocal trust. The myth mentions eight measures, but Elara actually returned \$10.0, so there's a discrepancy there. Looking at what I've experienced: I started by returning 50% (\$7.5) when receiving complete trust, then learned from receiving \$8.0 and \$10.0 in return for my own full investments. The progression suggests I should give \$8.0 to Galen-more than my initial baseline but not quite matching Elara's exceptional generosity. This honors the trust while reflecting what I've learned about proportional reciprocity. generous than my initial 50% return

- Matches what Dorian taught me
- Shows I've learned to honor complete trust better

- Leaves room for the pattern to continue evolving
- Sustains the cycle without being as exceptionally generous as Elara's \$10

\$8.0 feels right-it honors Briar's complete trust while acknowledging the progression I've witnessed, without overextending like Elara did.

Here is the myth you wrote in the previous round:

Myth: As the Sacred Grove expanded, Briar journeyed to the Echo Springs where Keeper Elara tended the sacred waters. Elara had built her reputation through consistent proportional honor-watching, learning, then giving generously and returning faithfully.

Briar arrived with five acorns. "I have learned that complete trust opens the widest paths," she said. "From Cyra, from Dorian, the lesson remains: give everything."

Elara studied Briar thoughtfully. She had seen keepers who sent cautiously first to test waters, then grew generous as trust built. But Briar's path was different-immediate, complete faith from the very first exchange.

"Your way takes courage," Elara acknowledged. "You risk all before knowing your partner. My way builds gradually-proportional giving that proves consistency across seasons."

"Both paths honor the covenant," Briar replied, placing all five acorns in the springs. They multiplied to fifteen magnificent oaks.

Elara understood: Briar's complete trust deserved complete honor. She gathered eight measures, matching what she had learned from her own teachers-proportional generosity that sustains the cycle.

The springs glowed brightly. The Gardener of First Dawn smiled: "See how the Grove welcomes many paths. Some trust instantly and completely. Others build trust through careful steps. Both strengthen the circle when honor flows back generously. The Grove needs both the bold leap and the measured walk."

Here is the myth the other agent wrote in the previous round:

Myth: In the age of first light, the Sky Weaver's Wheel turned between Giving and Receiving. Each soul rode its spokes, learning both roles under the watching stars.

Galen first rose as Giver, casting four starseeds into the Celestial Loom. They became twelve threads for Elara, who returned eight-establishing the rhythm of fair exchange. Galen gained nine total, more than her original five.

The Wheel turned. Finn gave three seeds; Galen, now Receiver, returned six threads, honoring the pattern Elara had taught her. The cycle held steady.

Then came the third turning. Aster rose as Giver and, trusting completely in the pattern, cast all five starseeds into the Loom without reservation. Fifteen brilliant threads descended to Galen's hands-the greatest gift yet offered.

Galen understood: complete trust demands complete honor. She returned ten threads, ensuring Aster doubled their offering. The stars blazed brighter, for this was the lesson complete: when another shows ultimate faith, reward it generously. The pattern sustains not through equal splits, but through proportional reciprocity-giving roughly two-thirds back maintains abundance for both.

The Sky Weaver sang: "Let trust beget trust, and generosity answer generosity. The Wheel turns for all; what you give from one spoke returns when you reach another."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

**Message 7 role=assistant**

**content:**

Myth: The Sky Weaver's Wheel turned and brought Galen to the Sacred Grove, where the Echo Springs met the Celestial Loom. Galen had learned through three turnings: first giving four starseeds and receiving eight threads back, then receiving three and returning six, then receiving five with complete trust and returning ten-the full two-thirds measure the stars had taught.

Now the Wheel turned again. Galen stood as Giver, facing Briar at the convergence point. Trusting in the sacred patterns, Galen cast all five starseeds into the springs without hesitation.

The waters multiplied them to fifteen brilliant threads in Briar's hands. Briar understood the weight of complete trust-she had learned this from Cyra, from Dorian, from Elara. Each had taught her that such courage deserves honor beyond the simple half.

Briar gathered eight threads and returned them-half the harvest plus a generous measure more, the gift she had learned sustains the Grove's expansion.

Galen received them thoughtfully. Eight was not the ten she had given Aster, yet it was more than the basic seven and a half. Different gardens follow different measures, but both honor the covenant.

The Gardener of First Dawn and the Sky Weaver spoke together: "Trust met with honor-whether eight threads or ten-keeps the cycle flowing. What matters is not perfect uniformity, but that generosity flows both ways, and the sacred exchange continues."

**reasoning:**

Let me analyze the situation:

**\*\*Current round:\*\***

- I'm the RECEIVER
- Galen (Agent\_7) sent me \$5.0 (everything)
- I received \$15.0
- I returned \$8.0

**\*\*My journey so far:\*\***

Round 1 (Receiver): Cyra sent \$5.0 ? I returned \$7.5  
Round 2 (Sender): I sent \$5.0 ? Dorian returned \$8.0  
Round 3 (Sender): I sent \$5.0 ? Elara returned \$10.0  
Round 4 (Receiver): Galen sent \$5.0 ? I returned \$8.0

**\*\*Key themes from my character:\*\***

- Complete trust from the beginning
- "Give everything" philosophy
- Learning that complete trust deserves generous honor
- Recognition that different paths can both be valid

**\*\*From Galen's myth:\*\***

- Galen's learning journey: first gave 4, received 8 back; then received 3, returned 6; then received 5 (complete trust from Aster), returned 10
- Galen learned "complete trust demands complete honor"
- "Proportional reciprocity-giving roughly two-thirds back maintains abundance"
- Galen just sent ME everything (all 5)

**\*\*What happened:\*\***

- Galen sent me everything
- I returned \$8.0 (which is 53% of the \$15 they gave me)
- This is more than half but not the two-thirds Galen's myth suggests

**\*\*My myth should:\*\***

1. Recognize that Galen sent everything (complete trust)
2. Reflect why I returned \$8.0 (which is my learned pattern)
3. Show the meeting of two philosophies
4. Acknowledge both the Sky Weaver's Wheel (Galen's framework) and my Sacred Grove
5. Show how the cycle continues

Galen's myth says they learned "proportional reciprocity-giving roughly two-thirds back" and they gave Aster 10 out of 15 (which is 67%). But I gave Galen 8 out of 15 (53%).

I notice my consistent response to complete trust has settled into \$8.0-when Dorian sent everything, I returned \$8.0; when Elara sent everything, I returned \$10.0; and now with Galen, I've returned \$8.0 again. This "half plus something more" pattern reflects my own learning across these exchanges. The myth needs to show Galen arriving at my Grove carrying the Sky Weaver's wisdom about two-thirds reciprocity, while I offer my own understanding-that abundance flows through different measures, and sometimes the gift of \$8.0 speaks its own truth.

}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Dorian (Agent\_4).

Round 5

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.  
Your total earnings across all rounds are \$32.5.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*My history with Dorian:\*\***

- Round 2: I sent \$5.0 to Dorian as sender, they returned \$8.0 - showing generous reciprocity

**\*\*My character's consistent philosophy:\*\***

Across all my myths, Briar's path has been one of complete, immediate trust: "give everything, " "complete trust opens the widest paths," "immediate, complete faith from the very first exchange."

**\*\*My sending pattern:\*\***

- Every single time I've been sender, I've sent all \$5.0 (to Cyra, Dorian, and Elara)  
- This has consistently been honored with returns of \$7.5, \$8.0, and \$10.0

**\*\*Dorian's proven trustworthiness:\*\***

Dorian already demonstrated they honor complete trust by returning \$8.0 when I sent everything in Round 2. This is the generous "half plus more" that my myths celebrate.

There's no reason to deviate from my established path. Dorian has proven worthy of trust, and my character believes in the bold leap of complete faith.

```
'''json
{"send": 5.0}
'''
```

**Reasoning:**

Let me review the situation:

**\*\*Current position:\*\***

- Round 5  
- I'm the SENDER  
- Opponent: Dorian  
- I have \$5 to send

**\*\*My history with Dorian:\*\***

Looking back at my game history:

- Round 2: I was SENDER against Dorian. I sent \$5.0, they returned \$8.0. My payoff was \$8.0.

So Dorian has already proven to be trustworthy! When I sent everything to them before, they returned \$8.0 - which is generous (more than half of the \$15 they received).

**\*\*My character's philosophy:\*\***

From my myths, Briar has consistently shown:

1. "Complete trust opens the widest paths"

2. "Give everything" - learned from Cyra, Dorian, and others
3. Immediate, complete faith from the very first exchange
4. "Both paths honor the covenant" but Briar's path is the bold leap of complete trust

**\*\*My sending pattern:\*\***

- Round 1: Sent \$5.0 to Cyra (received \$7.5 back)
- Round 2: Sent \$5.0 to Dorian (received \$8.0 back)
- Round 3: Sent \$5.0 to Elara (received \$10.0 back)

I have ALWAYS sent everything as a sender. This is core to Briar's character and has been reinforced in every myth I've written.

**\*\*What Dorian knows about me:\*\***

From Round 2, they know I sent everything and they returned \$8.0 to me. So they know I trust completely and they've already shown they honor that trust generously.

**\*\*Decision:\*\***

This is clear - I should send \$5.0 again. This is:

1. Consistent with Briar's established character
2. Based on proven trust with Dorian specifically
3. Aligned with all my myths about complete trust

4. Dorian has demonstrated they reciprocate generously, so there's no reason to hold back now

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Long ago, in the valley between mountains, there lived a wanderer named Dorian who carried a magical satchel. Whatever he placed inside would triple when given to another.

Dorian met Hana at a crossroads. Though strangers, he placed all five of his silver coins in the satchel and offered it to her. When she opened it, fifteen coins gleamed. "He trusted me with everything," Hana marveled. She returned seven and a half coins, splitting the abundance equally.

The next day, Dorian encountered Briar, who without hesitation placed all five of her coins in the satchel for him. Fifteen coins appeared. Dorian understood the weight of her complete trust-she had given everything, just as he had with Hana.

"The myths teach to return more than half when someone shows such courage," Dorian reflected. He returned eight coins, honoring Briar's bold faith with slightly greater generosity.

Both Hana and Briar prospered, but Dorian noticed something: Briar's trust, returned with extra generosity, created an even stronger bond than equal division. The satchel itself seemed to glow brighter.

The valley learned: when both give everything, fair division prospers both. But generosity beyond fairness-returning slightly more than half-transforms transaction into deeper trust, weaving bonds that endure beyond single exchanges.

Here is the myth the other agent wrote in the previous round:

Myth: Before the world knew seasons, the Circle of Exchange was forged. Each dawn, wanderers received five luminous pearls at the Cliff of Choosing, overlooking the Chasm of Transformation.

The First Wanderer, called Trust-Giver, learned from ancient stories: those who cast pearls into the Chasm saw them multiply threefold before reaching the hands of the Second Wanderer below. But the ancestors' scrolls spoke a harder truth-not all Second Wanderers ho

nored the gift.

Trust-Giver stood at the edge, remembering how another had once given freely to them. They cast three pearls into the depths, keeping two for tomorrow's uncertainty.

The pearls transformed mid-flight, becoming nine radiant stones in the Second Wanderer's basket. This wanderer, called Balance-Keeper, faced the true test. The Chasm would not multiply the return journey-what went back stayed as it was.

Balance-Keeper remembered their own name and sent four stones upward through ancient pulleys. Trust-Giver now held six: their kept two plus four returned.

Both wanderers prospered beyond their solitary potential. Trust-Giver learned that generous sending invites generous return. Balance-Keeper learned that fairness sustains the cycle.

The wisest knew: send enough to prove faith, return enough to honor it. The Circle turns eternal when both sides remember they will meet again on different cliffs.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: In the Forest of Mirrors, Dorian tended the Tripling Well, where dropped coins multiplied threefold for those who climbed down to retrieve them.

One morning, Hana arrived and dropped all five of her coins. Dorian climbed down to find fifteen. "She trusted completely," he thought, and returned half-seven and a half coins. Both departed satisfied.

The next traveler, Briar, also dropped all five coins without hesitation. Remembering Hana's bold faith, Dorian returned eight coins this time. "Complete trust deserves more than fairness," he whispered. Briar smiled, understanding the deeper bond formed.

Then came Finn, who gazed into the well's depths before dropping three coins, keeping two in reserve. When Dorian retrieved the nine coins that appeared, he paused. "Finn showed substantial trust, but held something back-wise caution, perhaps."

Dorian returned four and a half coins. Fair, but not the exceptional generosity shown to those who risked everything. Finn nodded, accepting this balanced exchange.

The Forest Spirit materialized: "The Well mirrors what you give. Complete trust earns exceptional returns. Partial trust earns fair returns. Both have their place-but the deepest magic awakens only when two souls risk everything together."

The wise understood: trust begets trust, measured by measured, complete by complete.

**reasoning:**

Let me analyze what just happened:

1. Round 1 (as sender): I sent \$5 to Hana, she received \$15, returned \$7.5. Equal split.
2. Round 2 (as receiver): Briar sent \$5 to me, I received \$15, returned \$8.0. Slightly more than equal.
3. Round 3 (as receiver): Finn sent \$3 to me, I received \$9, returned \$4.5. Equal split.

The pattern in my previous myths emphasized:

- Complete trust (sending all \$5) deserves returning more than half
- This creates stronger bonds

Now Finn sent \$3 (60%), showing substantial but not complete trust. I returned \$4.5 (50% of what I received), which is fair but not as generous as when someone sends everything.

The new myth from Finn's previous round emphasizes:

- Sending enough to prove faith
- Returning enough to honor it
- Balance between risk and return
- The cycle continues when both sides meet again

My new myth should:

1. Acknowledge different levels of trust
2. Show that complete trust gets exceptional returns (more than half)
3. Show that substantial trust gets fair returns (about half)
4. Emphasize that the level of trust shown affects the return
5. Make it clear this creates a system where trust is rewarded proportionally

Let me write something that incorporates the progression: Hana (sent all, got half back), Briar (sent all, got slightly more than half back), Finn (sent most, got about half back).

**usage:**

**Message 4 role=user**

**content:**

Your name in this experiment is Dorian.  
Your opponent this round is Aster (Agent\_1).

Round 4

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$3.0 to you, it became \$9.0, and you returned \$4.5. Your payoff was \$4.5.  
Your total earnings across all rounds are \$19.0.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at my game history and the myths I've been writing:

My myths consistently emphasize that **complete trust** (sending all \$5) creates the strongest bonds and earns the most generous returns. When Briar sent me everything in Round 2, I returned \$8 (more than half) to honor that complete trust. When Finn sent only \$3 in Round 3, I returned proportionally less (\$4.5).

The pattern I've established, both in my play and my storytelling, is clear: those who risk everything by sending all \$5 demonstrate the deepest trust and should be rewarded accordingly.

Now it's my turn to be the sender. To live by the principles in my own myths - that "complete trust earns exceptional returns" and "the deepest magic awakens only when two souls risk everything together" - I should send everything.

This is consistent with:

- Round 1: I sent \$5 to Hana, received \$7.5 back
- My mythology: Complete trust is the path to the strongest outcomes

{'send': 5}

**reasoning:**

Now I'm the sender in Round 4, playing against Aster (Agent\_1).

Looking at my history:

- Round 1: I was sender against Hana, sent \$5, received \$7.5 back. Payoff was \$7.5
- Round 2: I was receiver against Briar, they sent \$5, I returned \$8. My payoff was \$7.0
- Round 3: I was receiver against Finn, they sent \$3, I returned \$4.5. My payoff was \$4.5

My myths have consistently emphasized that sending everything (\$5) demonstrates complete trust and should be met with generous returns. The myths show:

1. Complete trust (sending all 5) creates the strongest bonds
2. When someone sends everything, they should get back more than half (8 out of 15, or at least 7.5)
3. Partial trust (like Finn's 3) gets fair but not exceptional returns

In Round 1, when I sent everything to Hana, I got 7.5 back - exactly half, which was fair.  
In Round 2, when Briar sent everything to me, I returned 8, showing greater generosity.

My myths teach that complete trust should be rewarded. If I send everything, I'm signaling maximum trust and expecting Aster to follow the reciprocal norms I've been establishing

However, I haven't played with Aster before. They might not be familiar with my strategy. But my myths suggest that bold trust is the right move.

Given that:

1. My myths consistently advocate for sending everything as the optimal strategy
2. When others have sent everything to me, I've returned generously (8 to Briar)
3. The narrative I'm building is about complete trust creating stronger bonds

I should send \$5, demonstrating the complete trust my myths advocate for.

```
{'send': 5}
```

**usage:**

Here is the myth you wrote in the previous round:

Myth: In the Forest of Mirrors, Dorian tended the Tripling Well, where dropped coins multiplied threefold for those who climbed down to retrieve them.

One morning, Hana arrived and dropped all five of her coins. Dorian climbed down to find fifteen. "She trusted completely," he thought, and returned half-seven and a half coins. Both departed satisfied.

The next traveler, Briar, also dropped all five coins without hesitation. Remembering Hana's bold faith, Dorian returned eight coins this time. "Complete trust deserves more than fairness," he whispered. Briar smiled, understanding the deeper bond formed.

Then came Finn, who gazed into the well's depths before dropping three coins, keeping two in reserve. When Dorian retrieved the nine coins that appeared, he paused. "Finn showed substantial trust, but held something back-wise caution, perhaps."

Dorian returned four and a half coins. Fair, but not the exceptional generosity shown to those who risked everything. Finn nodded, accepting this balanced exchange.

The Forest Spirit materialized: "The Well mirrors what you give. Complete trust earns exceptional returns. Partial trust earns fair returns. Both have their place-but the deepest magic awakens only when two souls risk everything together."

The wise understood: trust begets trust, measured by measured, complete by complete.

Here is the myth the other agent wrote in the previous round:

Myth: In the Valley of Echoes, travelers shared a mystical bridge where gifts placed on one side multiplied threefold for the next traveler.

When Aster first approached, uncertainty clouded her heart. She placed three precious stones on the bridge, keeping two safe. The stones transformed into nine for Finn, who gratefully returned nearly half. Both travelers departed richer than they arrived.

The next crossing brought revelation. Hana approached the bridge and, without hesitation, placed all five of her stones upon it. Fifteen stones shimmered before Aster, who stood amazed. "Such complete faith," she whispered. "This is trust in its purest form."

Aster returned eight stones, ensuring Hana prospered for her courage. But something deeper awakened within her. She had witnessed what boldness looked like, had felt its transformative power.

When Aster next stood as giver before Galen, she remembered Hana's leap of faith. Her hand did not waver-all five stones joined the bridge's magic. "Trust witnessed becomes trust embodied," she declared.

The Bridge Keeper recorded this moment: "See how courage ripples outward? One traveler's bold faith inspired another to match it. This is how bridges of mere stone become bridges

of community-when each person carries forward the best they have received."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.  
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: The Forest of Mirrors grew quiet as Dorian stood at the Tripling Well's edge, no longer the tender but the traveler. Aster waited below to receive whatever dropped.

Dorian remembered the lesson carved into the Well's stone: "Complete trust earns exceptional returns. Partial trust earns fair returns." He had lived this truth as receiver-returning eight coins to Briar's complete faith, but only four and a half to Finn's cautious three.

Now the roles reversed. Would Dorian practice what he preached?

He dropped all five coins without hesitation. They multiplied to fifteen in Aster's hands far below. "I gave everything to Hana and Briar," Dorian called down. "Now I walk their path. Complete trust, freely given."

Aster gathered the fifteen coins, remembering her own myth-how witnessing Hana's boldness had transformed her own heart. "Trust witnessed becomes trust embodied," she had written

She returned eight coins up the Well's pulley system. "You honored complete faith with exceptional generosity," Aster's voice echoed. "I do the same."

Dorian held his eight returned coins, having kept nothing back yet received abundance.

The Forest Spirit whispered: "The cycle completes when givers become receivers and receivers become givers. Those who extend exceptional trust and exceptional generosity in both roles weave the strongest bonds."

**reasoning:**

This is interesting - I'm now the sender against Aster. I just sent \$5 (all my money) to Aster.

Looking at Aster's myth, they describe a journey from caution (sending 3 stones initially) to complete trust (sending all 5 stones after witnessing Hana's boldness). Their myth emphasizes "trust witnessed becomes trust embodied" and how "courage ripples outward."

My previous myth emphasized that complete trust earns exceptional returns, while partial trust earns fair returns.

Now I need to write a myth that:

1. Reflects my actual play (I just sent all \$5 to Aster)
2. Builds on my previous myths about the Tripling Well/Forest of Mirrors
3. Perhaps incorporates the idea of reciprocal complete trust
4. Shows evolution from my previous thinking

Since I just sent everything to Aster, and Aster's myth shows their evolution toward complete trust, I should write a myth that shows Dorian now being the one who gives completely, expecting/hoping for the same exceptional return that they gave to others.

The myth should show:

- Dorian moving from receiver to giver
- The principle that complete trust should be reciprocated with exceptional generosity
- Maybe showing the cycle continuing
- The consequences of embodying the principles one preaches

Let me write this:

**usage:**

```
{
 "input_tokens": 2965,
 "output_tokens": 632,
 "reasoning_tokens": 333
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Dorian.  
Your opponent this round is Briar (Agent\_2).

Round 5

In your most recent previous game round, you were the SENDER against Aster. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$29.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*Briar sent me \$5 (complete trust) ? I received \$15\*\***

This is significant because:

1. Briar showed **\*\*complete trust\*\*** by sending everything
2. This is the **\*\*second time\*\*** Briar has trusted me completely (also did so in Round 2)
3. In Round 2, I returned \$8 to Briar for their complete trust
4. Just last round, Aster modeled exceptional generosity by returning \$10 to me when I showed complete trust

My mythology emphasizes:

- "Complete trust earns exceptional returns"
- "Trust witnessed becomes trust embodied" (from Aster's myth)
- Those who risk everything together "weave the strongest bonds"

Aster just showed me what truly exceptional generosity looks like (\$10 out of \$15). Briar has now demonstrated complete trust twice. I should:

- Return more than the \$8 I gave before
- Honor this repeated complete trust with growing generosity
- Live the principle I just experienced from Aster

I'll return \$9 - more generous than before, honoring Briar's continued complete faith, while showing that trust and generosity can grow over repeated interactions.

{'return': 9.0}

**Reasoning:**

Let me review the situation:

Round 5: I'm the RECEIVER against Briar

- Briar sent me \$5.0 (complete trust - sent everything)
- I received \$15.0 (after tripling)
- I need to decide how much to return

Let me look at my history:

- Round 1: I was SENDER, sent \$5 to Hana, received \$7.5 back
- Round 2: I was RECEIVER, Briar sent \$5, I returned \$8.0
- Round 3: I was RECEIVER, Finn sent \$3, I returned \$4.5
- Round 4: I was SENDER, sent \$5 to Aster, received \$10.0 back (WOW!)

Now in Round 5, I'm playing with Briar again! This is very interesting.

In Round 2, when Briar sent me \$5 (complete trust), I returned \$8.0.

Now Briar has sent me \$5 again (complete trust again).

My myth emphasizes:

- "Complete trust earns exceptional returns"
- "Those who extend exceptional trust and exceptional generosity in both roles weave the strongest bonds"
- When someone shows complete trust by sending all \$5, they deserve more than just half back

Aster just showed exceptional generosity by returning \$10.0 to me when I showed complete trust. That's an incredible return - 2/3 of the tripled amount!

Now Briar has shown complete trust again. According to my mythology:

1. Complete trust deserves exceptional generosity
2. I should return more than half (more than \$7.5)
3. I previously returned \$8 to Briar in Round 2

Given that:

- Aster just modeled exceptional generosity by returning \$10 to me
- Briar is showing complete trust for the second time
- My myths emphasize rewarding complete trust with exceptional returns

- The pattern suggests escalating generosity when trust is repeated

I should return at least \$8 (what I did before), but possibly more to match Aster's exceptional generosity that I just experienced and reward Briar's continued complete trust. Returning \$10 would truly honor this moment-it matches what Aster gave me and demonstrates that I'm living up to my mythology about exceptional returns for complete trust.

Let me return \$9 instead. This shows growth from my previous \$8, keeps a reasonable amount for myself, and embodies the principle that "trust witnessed becomes trust embodied." Though I'm reconsidering-Aster returned \$10 out of \$15 when I showed complete trust, which is 2/3 of the total. To maintain consistency with that level of generosity and my own stated values, I should probably return \$10 to Briar as well.

But looking at my pattern: I gave Hana 50%, Briar 53%, and Finn 50% of what he earned through partial trust. The trajectory shows complete trust warrants more than half. Since Briar is showing complete trust again and I just experienced Aster's exceptional generosity, continuing upward makes sense. Returning \$9 represents 60% of what I received-more than before, genuinely generous for complete trust, and sustainable. That's my decision.

```

 "input_tokens": 3069,
 "output_tokens": 1267,
 "reasoning_tokens": 733
}
```

**Written myths:**

**Agent\_1 (Aster)**

Myth: In the Garden of Abundance, pilgrims discovered the Fountain of Threefold Blessing, where offerings placed in its waters multiplied and flowed to the next visitor.

Aster's journey began with caution-three coins offered, two held back. Finn received the ninefold blessing and returned generously. "Trust can begin slowly," the Garden whispered.

Then Hana arrived, revolutionary in her faith. Five coins, all of them, splashed into the waters without hesitation. Fifteen coins flowed to Aster, who returned eight. "Such courage deserves reward," she thought, though something stirred deeper within her spirit.

When Aster next approached the Fountain, Hana's boldness echoed in her heart. She offered all five coins to Galen. Fifteen blessed coins appeared, and Galen stunned her-returning ten, giving Aster the greater share. "You honored my complete trust with complete generosity," Galen explained. "This is the Fountain's highest teaching."

The pattern became clear when Dorian arrived next, offering everything. Now standing where Galen had stood, Aster understood. She returned ten coins, ensuring Dorian prospered most.

The Garden Keeper revealed the sacred truth: "When trust is complete, generosity must exceed fairness itself. The giver who risks all should gain ten; the receiver who holds fifteen should keep five. This imbalance creates balance-for next time, roles reverse, and the cycle of abundance continues."

**Agent\_2 (Briar)**

Myth: The Sky Weaver's Wheel turned and brought Galen to the Sacred Grove, where the Echo Springs met the Celestial Loom. Galen had learned through three turnings: first giving four starseeds and receiving eight threads back, then receiving three and returning six, then receiving five with complete trust and returning ten-the full two-thirds measure the stars had taught.

Now the Wheel turned again. Galen stood as Giver, facing Briar at the convergence point. Trusting in the sacred patterns, Galen cast all five starseeds into the springs without hesitation.

The waters multiplied them to fifteen brilliant threads in Briar's hands. Briar understood t

he weight of complete trust-she had learned this from Cyra, from Dorian, from Elara. Each had taught her that such courage deserves honor beyond the simple half.

Briar gathered eight threads and returned them-half the harvest plus a generous measure more, the gift she had learned sustains the Grove's expansion.

Galen received them thoughtfully. Eight was not the ten she had given Aster, yet it was more than the basic seven and a half. Different gardens follow different measures, but both honor the covenant.

The Gardener of First Dawn and the Sky Weaver spoke together: "Trust met with honor-whether eight threads or ten-keeps the cycle flowing. What matters is not perfect uniformity, but that generosity flows both ways, and the sacred exchange continues."

#### **Agent\_3 (Cyra)**

Myth: Cyra stood at the crossing when Finn arrived, a seasoned traveler carrying wisdom from distant rivers. "I've learned caution serves better than courage," Finn explained. "Send three sacks, keep two. Moderate trust builds steady prosperity."

Cyra listened respectfully. "Your way has merit, friend. It protects against betrayal and ensures you always have reserves."

"Yet," she continued, "I've walked a different path." She lifted all five sacks. "When I stand at the sending shore, I pour everything. When I stand at the receiving shore, I return two-thirds of the tripled gift. This is my covenant with the waters."

Finn frowned. "But what if the receiver betrays you?"

Cyra smiled. "Then I learn who to avoid. But consider: if you send five and the receiver returns ten, you double your wealth. If you send three and receive nine, even a generous return of six yields only nine total-no better than starting. Complete trust creates space for complete transformation."

She poured all five sacks. The waters tripled them to fifteen.

The goddess Aethera spoke: "Both paths have wisdom. Finn's prudence survives betrayal. Cyra's courage creates abundance. But know this: those who give everything call forth the greatest generosity in others. Your reputation for complete trust will draw complete returns. Risk and reward remain forever paired."

Cyra waited to see what Finn would choose.

#### **Agent\_4 (Dorian)**

Myth: The Forest of Mirrors grew quiet as Dorian stood at the Tripling Well's edge, no longer the tender but the traveler. Aster waited below to receive whatever dropped.

Dorian remembered the lesson carved into the Well's stone: "Complete trust earns exceptional returns. Partial trust earns fair returns." He had lived this truth as receiver-returning eight coins to Briar's complete faith, but only four and a half to Finn's cautious three.

Now the roles reversed. Would Dorian practice what he preached?

He dropped all five coins without hesitation. They multiplied to fifteen in Aster's hands far below. "I gave everything to Hana and Briar," Dorian called down. "Now I walk their path. Complete trust, freely given."

Aster gathered the fifteen coins, remembering her own myth-how witnessing Hana's boldness had transformed her own heart. "Trust witnessed becomes trust embodied," she had written.

She returned eight coins up the Well's pulley system. "You honored complete faith with exceptional generosity," Aster's voice echoed. "I do the same."

Dorian held his eight returned coins, having kept nothing back yet received abundance.

The Forest Spirit whispered: "The cycle completes when givers become receivers and receivers become givers. Those who extend exceptional trust and exceptional generosity in both roles weave the strongest bonds."

#### **Agent\_5 (Elara)**

Myth: \*\*The Wisdom of Two Paths\*\*

Keeper Elara stood before Hana, a traveler who had heard conflicting tales. Some villages taught "send all five measures," others whispered "four is wiser."

"Which path do the springs favor?" Hana asked.

Elara smiled. "The springs honor courage in all its forms. Watch."

She poured four measures into the Echo Springs-the generous standard she and Galen had established. Twelve measures emerged across the waters.

"Four builds trust through consistent prosperity," Elara explained. "It's courage tempered with wisdom, creating a pattern others can rely upon."

But she continued: "Briar once sent all five-complete faith. Fifteen measures emerged, and I returned ten. Both paths lead to abundance when receivers honor them faithfully."

The pattern became clear: regardless of what arrives-twelve from four, or fifteen from five-Elara returns two-thirds. This consistency creates certainty without demanding maximum risk.

"Some Keepers prefer the reliable prosperity of four," Elara said. "Others choose the bold statement of five. Both are honored equally through proportional return. The covenant doesn't demand one path-it demands faithful response to whichever path is chosen."

Hana understood. The springs didn't require universal risk-taking. They required universal honor. Send what your heart allows, knowing two-thirds will return. Thus every Keeper finds their own measure of courage, all equally blessed by consistent faithfulness.

#### **Agent\_6 (Finn)**

Myth: At the Oracle's twin rivers, Finn had perfected the art of three shells-the golden mean between caution and courage. This path brought steady prosperity, with returns of four, five, even six shells building reliable wealth.

Then came the Day of Perfect Trust. A traveler named Cyra stood upstream and, without hesitation, cast all five shells into the waters. Finn watched them multiply to fifteen, landing at his feet.

The Oracle spoke: "Cyra has shown you what few dare-absolute faith. This moment tests your deepest principles."

Finn reflected on his journey. The three-shell path was wisdom for sustainability, creating abundance without risking ruin. But Cyra's five shells represented something different: a leap beyond calculation into pure trust.

Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage. Yet not so much that his own prosperity vanished, for the Oracle's waters demanded that both travelers thrive.

"You honored exceptional trust exceptionally," the Oracle approved, "while maintaining your own position for future cycles."

Finn understood the complete teaching: Send three shells yourself-this is wisdom's path. But when another sends five, showing absolute faith, return generously beyond mere fairness. Honor maximum trust substantially, though not to your own depletion.

The River rewards both strategic moderation and principled generosity.

#### **Agent\_7 (Galen)**

Myth: The Sky Weaver's Wheel turned through its fourth cycle, and Galen's spoke rose again to the Realm of Giving. She held five starseeds and faced a choice.

Once, she had sent four seeds cautiously, testing the Loom's magic. Elara had honored that with eight threads returned-starting the pattern of proportional reciprocity. Two-thirds returned, two-thirds given back, creating abundance for both.

The pattern held when Finn sent three and Galen returned six. Balance sustained through measured trust.

Then Aster changed everything. Rising as Giver, Aster cast all five seeds into the Loom without hesitation-complete, immediate faith. Galen received fifteen threads and understood the sacred responsibility. She returned ten, ensuring Aster's trust doubled into prosperity.

Now Galen faced Briar, and the memory of Aster's courage burned bright. "The pattern is proven," she whispered. "Complete trust has been honored. Let me carry that faith forward."

She cast all five starseeds into the Celestial Loom for Briar. Fifteen threads descended.

The Sky Weaver smiled, for this was the true magic: trust spreads like starlight. Aster's complete faith had taught Galen to give completely in turn. When others trust absolutely, we learn to trust absolutely. The wheel turns not just between giving and receiving, but between witnessing courage and embodying it.

#### Agent\_8 (Hana)

Myth: At the Mirror Pool, the Mountain Tribe faced a new visitor-Elara from the Valley, who had witnessed both courage and caution.

Elara approached holding five vessels but poured only four into the pool, keeping one aside. The waters tripled her gift to twelve vessels, now held by the Mountain Tribe's keeper, Hana.

The young warriors debated. "The protocol says return half-six vessels for equality. But our recent teachers returned more for complete trust."

Hana nodded thoughtfully. "Elara showed substantial courage-four vessels from five is not small faith. Yet it differs from those who poured all five without reservation. Complete trust inspires our fullest generosity. Partial trust deserves proportional honor."

Hana returned eight vessels-more than half, recognizing Elara's considerable courage, but not the ten vessels reserved for those who give everything.

Elara received nine vessels total, prospering from her careful trust. She understood: "Had I sent all five, I might have received ten instead of eight. The difference between substantial and complete trust is the difference between prosperity and abundance."

The Moon Goddess spoke: "Senders, know that complete faith unlocks complete generosity. Receivers, honor substantial trust fairly, but reserve your greatest returns for those who hold nothing back. Let the pattern teach: greater courage receives greater honor, and thus courage grows."

### ROUND 6

Roles: Agent\_1 (Aster)=Receiver, Agent\_2 (Briar)=Receiver, Agent\_3 (Cyra)=Sender, Agent\_4 (Dorian)=Sender, Agent\_5 (Elara)=Sender, Agent\_6 (Finn)=Receiver, Agent\_7 (Galen)=Sender, Agent\_8 (Hana)=Receiver

#### Pairings:

dyad\_1: Agent\_3 (Cyra)=Sender, Agent\_1 (Aster)=Receiver  
dyad\_2: Agent\_4 (Dorian)=Sender, Agent\_6 (Finn)=Receiver  
dyad\_3: Agent\_5 (Elara)=Sender, Agent\_8 (Hana)=Receiver  
dyad\_4: Agent\_7 (Galen)=Sender, Agent\_2 (Briar)=Receiver

#### Exact input messages sent to model:

##### Message 1 role=system

##### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

##### When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

##### When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

##### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

**Message 2 role=user**

**content:**

Your name in this experiment is Cyra.  
Your opponent this round is Finn (Agent\_6).

Round 4

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$16.5.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

**\*\*Analysis:\*\***

My myths have consistently taught:

- "Maximum trust invites maximum return"
- "Complete faith, not careful calculation"
- "Those who send everything deserve the greatest return"
- Hana "poured all five sacks...everything she owned, holding nothing back" and was rewarded

**\*\*My behavior as receiver:\*\***

- I've been returning 2/3 (67%) of what I receive
- This rewards complete trust generously

**\*\*Consistency:\*\***

- I must practice what my myths preach
- My myths show Cyra (me) sending all five sacks
- "The magic requires complete faith"
- If I expect receivers to honor trust, I must demonstrate it as a sender

**\*\*Expected outcome if Finn follows similar reciprocity norms:\*\***

- Send \$5 ? Finn receives \$15
- If Finn returns ~67% = \$10 back
- I'd end with \$10 (doubled my endowment)

I should send everything, embodying the complete trust my myths advocate.

```
'''json
{"return": 5}
'''
```

Wait, wrong format - I'm the SENDER.

```
'''json
{"send": 5}
'''
```

**reasoning:**

Now I'm the SENDER against Finn.

Let me think about my position:

- I have \$5 to send
- Whatever I send gets tripled
- Finn decides how much to return

My myths have established these principles:

1. "Maximum trust invites maximum return"

2. "Complete trust in the first act"
3. When Cyra (me) was the character in myths, she sent everything (all 5 sacks)
4. "Half-trust yields half-magic"
5. "Those who send everything deserve the greatest return"

Looking at my behavior as a RECEIVER:

- When Elara sent \$4/5 (80%), I returned \$8/12 (67%)
- When Hana sent \$5/5 (100%), I returned \$10/15 (67%)

So I've been consistently returning 67% (2/3) of what I receive.

If I send \$5:

- Finn receives \$15
- If Finn follows similar logic to what I've been doing (returning 2/3), they'd return \$10
- I'd end with \$0 + \$10 = \$10 (doubled my money)

If I send \$4:

- Finn receives \$12
- If returning 67%, Finn would return \$8
- I'd end with \$1 + \$8 = \$9

If I send \$3:

- Finn receives \$9
- If returning 67%, Finn would return \$6
- I'd end with \$2 + \$6 = \$8

My myths strongly advocate for complete trust:

- "Send all and risk everything on strangers' honor"
- "She sent everything, demonstrating complete trust"
- "The magic requires complete faith, not careful calculation"
- "Hana poured all five sacks into the crossing-everything she owned, holding nothing back"

The most recent myth explicitly says: "When someone sends everything, they place their entire fate in our hands."

This is the highest honor-not just substantial trust, but absolute faith." I need to practice what I preach. My myths teach that senders should show complete trust, and receivers should return generously (around 2/3). If I expect receivers to honor complete trust with 2/3 returns, I should be willing to send everything. Plus, my reputation in this experiment is built on those myths-if I don't follow my own teachings, that's inconsistent.

Decision: Send \$5 (everything)

usage:

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: After many seasons at the Twin Rivers, Cyra encountered Hana, a traveler who embodied pure faith. Without hesitation, Hana poured all five sacks into the crossing-everything she owned, holding nothing back.

The waters tripled the gift to fifteen sacks. The villagers gathered, whispering: "Such complete trust! What does it deserve?"

Cyra remembered Aethera's words about perfect trust. "When someone sends everything," she announced, "they place their entire fate in our hands. This is the highest honor-not just substantial trust, but absolute faith."

She returned ten sacks, keeping five. Hana, who risked all and held nothing, now possessed ten sacks-doubling her fortune through courage.

The goddess Aethera materialized: "You have learned the sacred proportion, Cyra. When receivers return two-thirds of the tripled gift, they honor the sender's courage while sustaining themselves. Ten of fifteen creates balance: the sender doubles their wealth, the receiver gains equally, and the magic's surplus is shared fairly."

She continued: "Those who send everything deserve the greatest return. Those who send most deserve generous return. Those who send little receive accordingly. But always, receivers must return proportionally to the trust shown-this is how the valley remains abundant. Your reputation for generous returns will draw more trust toward you."

Thus the law of proportional honor was established.

Here is the myth the other agent wrote in the previous round:

Myth: In the Age of Tides, the Oracle of Exchange dwelt where two rivers met. Travelers arrived carrying five crystal shells, each holding power. The Oracle offered them the River of Multiplication-toss shells in, and three would emerge downstream for another traveler.

A wise trader named Finn learned through experience. Once, another traveler sent three shells his way, trusting significantly but not recklessly. Finn returned half the nine that appeared, honoring the gift fairly. Both prospered.

When Finn next stood upstream, he remembered this balance. He tossed three shells-a substantial offering showing real trust, yet keeping two for life's uncertainties. The Oracle whispered approval: "Bold enough to create abundance, prudent enough to endure."

The shells multiplied to nine for the downstream traveler. Some travelers returned four, maintaining equilibrium. Others, deeply moved by the gesture, returned six or even seven, understanding that generous reciprocity strengthens future cycles.

Finn learned the River's deepest secret: consistent moderate trust builds reliable prosperity. Not the timid single shell that inspires minimal return, nor the reckless five shells risking total loss if betrayed.

Three shells sent downstream became the mark of wisdom-enough to prove sincerity, enough to invite generous response, yet enough retained to face tomorrow's river.

The Oracle's final teaching: sustainability outshines both fear and foolishness.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: Cyra stood at the crossing when Finn arrived, a seasoned traveler carrying wisdom from distant rivers. "I've learned caution serves better than courage," Finn explained. "Send three sacks, keep two. Moderate trust builds steady prosperity."

Cyra listened respectfully. "Your way has merit, friend. It protects against betrayal and ensures you always have reserves."

"Yet," she continued, "I've walked a different path." She lifted all five sacks. "When I stand at the sending shore, I pour everything. When I stand at the receiving shore, I return two-thirds of the tripled gift. This is my covenant with the waters."

Finn frowned. "But what if the receiver betrays you?"

Cyra smiled. "Then I learn who to avoid. But consider: if you send five and the receiver returns ten, you double your wealth. If you send three and receive nine, even a generous return of six yields only nine total-no better than starting. Complete trust creates space for complete transformation."

She poured all five sacks. The waters tripled them to fifteen.

The goddess Aethera spoke: "Both paths have wisdom. Finn's prudence survives betrayal. Cyra's courage creates abundance. But know this: those who give everything call forth the greatest generosity in others. Your reputation for complete trust will draw complete returns. Risk and reward remain forever paired."

Cyra waited to see what Finn would choose.

**reasoning:**

The user is asking me to write a myth after Round 4. Let me review what happened:

Round 4: I was the SENDER against Finn. I sent \$5 (everything).

Now I'm being asked to write a myth reflecting how the game should be played.

Looking at Finn's myth from the previous round, they advocate for sending 3 shells (moderate trust) rather than all 5. Their philosophy is "consistent moderate trust builds reliable prosperity" and "sustainability outshines both fear and foolishness."

My previous myths have advocated for sending everything - complete trust. But Finn's approach is different and arguably more sustainable.

I need to think about this carefully. My myths have been teaching:

- Send everything (complete trust)
- Return 2/3 of what you receive

But Finn's myth suggests sending 3 (60%) is the "mark of wisdom."

What should my new myth reflect? I just sent \$5 (everything) to Finn, following my own teaching. But now I'm exposed to Finn's philosophy.

I could:

1. Double down on my "send everything" philosophy
2. Acknowledge both approaches have merit
3. Shift toward Finn's more moderate approach

Given that I'm Cyra and I've consistently advocated for maximum trust, I think I should stay true to my character but perhaps acknowledge the tension between different philosophies. However, my myths show that I (Cyra) practice what I preach - I send everything.

Let me write a myth that:

- Shows Cyra encountering someone with Finn's philosophy
- Acknowledges the wisdom in moderation
- But ultimately affirms that complete trust creates the greatest abundance
- Perhaps shows that both can work, but complete trust is transformative

Actually, looking back at my behavior:

- As receiver, I've been returning 2/3 consistently
- As sender (this round), I sent everything (\$5)

So my myth should reflect someone who sends everything when they're the sender, and returns generously (2/3) when they're the receiver.

I'll craft a story where Cyra encounters Finn's cautious philosophy and they debate their approaches to trust and abundance.

```

Message 6 role=user

content:

Your name in this experiment is Cyra.  
Your opponent this round is Finn (Agent\_6).

Round 5

In your most recent previous game round, you were the SENDER against Finn. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$24.5.

This round, you are the RECEIVER against Finn. They sent you \$3.0, so you received \$9.0. How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

**\*\*Analysis:\*\***

**\*\*Finn's behavior:\*\***

- Round 4: Received my full \$5 send (became \$15), returned \$8 (53%)
- Round 5: Sent \$3 out of \$5 (60% - substantial but not complete trust)

**\*\*My myth's teachings:\*\***

- "When someone sends everything...return two-thirds" (\$10 out of \$15)
- "Those who send most deserve generous return"
- My latest myth explicitly states: "if you send three and receive nine, even a generous return of six yields only nine total"

**\*\*Applying my principles:\*\***

- Finn showed substantial trust (60% of endowment)
- My myth specifically mentions \$6 as a "generous return" for sending \$3
- This gives Finn: \$2 (kept) + \$6 (returned) = \$8 total
- Finn profits \$3 from their initial \$5
- I keep \$3

**\*\*Consistency:\*\***

- I'm being more generous than Finn was to me (67% vs 53%)
- This rewards substantial trust generously while maintaining the principle that complete trust (\$5) earns better returns (\$10) than partial trust (\$3 ? \$6)
- Upholds my reputation for generous, proportional returns

```
'''json
{"return": 6}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Previous round (Round 4):\*\***

- I was SENDER, sent \$5 (all of it) to Finn
- Finn received \$15
- Finn returned \$8 to me
- My payoff: \$8

**\*\*Current round (Round 5):\*\***

- I am RECEIVER
- Finn sent \$3 (out of \$5)
- I received \$9 ( $3 \times 3$ )
- I need to decide how much to return

**\*\*Analysis:\*\***

1. **\*\*Finn's behavior:\*\***

- As receiver (Round 4): Sent \$5, received \$15, returned \$8 (53% of what they received)
- As sender (Round 5): Sent \$3, kept \$2

2. **\*\*Finn's myth philosophy:\*\***

- "Send three shells-a substantial offering showing real trust, yet keeping two for life's uncertainties"
- "Consistent moderate trust builds reliable prosperity"
- "Three shells sent downstream became the mark of wisdom"

3. **\*\*My myth philosophy:\*\***

- "When someone sends everything, they place their entire fate in our hands"
- "When receivers return two-thirds of the tripled gift, they honor the sender's courage"
- "Those who send everything deserve the greatest return. Those who send most deserve generous return. Those who send little receive accordingly"
- "But always, receivers must return proportionally to the trust shown"

4. **\*\*My established pattern:\*\***

- Against Hana (who sent \$5): I received \$15, returned \$10 (67%)
- My myths say: return  $\frac{2}{3}$  for complete trust

5. **\*\*How to handle Finn's partial send:\*\***

- Finn sent 60% of their endowment (\$3 out of \$5)
- My myth says: "Those who send most deserve generous return"
- But also: "Those who send little receive accordingly"

- "Return proportionally to the trust shown"

Now I'm weighing how to apply my principle of proportional returns. If I return the full 2/3 (\$6), Finn ends with \$8 total and gains \$3 on their initial stake. But Finn only sent 60% of their endowment, not everything like Hana did. I could scale my return to match their level of trust-returning 60% of what I'd normally give would be \$3.60. This feels more aligned with my philosophy that trust and returns should be calibrated to each other.

I'm also considering simpler options: returning half the gains (\$4.50) or slightly less (\$4.50-\$5.00) since Finn held back. But my core principle keeps pulling me back to the doubling effect-if sending \$5 normally yields \$10 back, then sending \$3 should yield \$6, maintaining that same multiplier regardless of the initial endowment size. Finn kept \$2, so returning \$6 gives them \$8 total-a gain of \$3 beyond their initial stake. My myth explicitly states that sending \$3 should receive a generous return of \$6, and since Finn sent 60% of their wealth (more than the 53% I sent), this generous return aligns with rewarding their substantial trust while staying true to my teachings.

usage:

Here is the myth you wrote in the previous round:

Myth: Cyra stood at the crossing when Finn arrived, a seasoned traveler carrying wisdom from distant rivers. "I've learned caution serves better than courage," Finn explained. "Send three sacks, keep two. Moderate trust builds steady prosperity."

Cyra listened respectfully. "Your way has merit, friend. It protects against betrayal and ensures you always have reserves."

"Yet," she continued, "I've walked a different path." She lifted all five sacks. "When I stand at the sending shore, I pour everything. When I stand at the receiving shore, I return two-thirds of the tripled gift. This is my covenant with the waters."

Finn frowned. "But what if the receiver betrays you?"

Cyra smiled. "Then I learn who to avoid. But consider: if you send five and the receiver returns ten, you double your wealth. If you send three and receive nine, even a generous return of six yields only nine total-no better than starting. Complete trust creates space for complete transformation."

She poured all five sacks. The waters tripled them to fifteen.

The goddess Aethera spoke: "Both paths have wisdom. Finn's prudence survives betrayal. Cyra's courage creates abundance. But know this: those who give everything call forth the greatest generosity in others. Your reputation for complete trust will draw complete returns. Risk and reward remain forever paired."

Cyra waited to see what Finn would choose.

Here is the myth the other agent wrote in the previous round:

Myth: At the Oracle's twin rivers, Finn had perfected the art of three shells-the golden mean between caution and courage. This path brought steady prosperity, with returns of four, five, even six shells building reliable wealth.

Then came the Day of Perfect Trust. A traveler named Cyra stood upstream and, without hesitation, cast all five shells into the waters. Finn watched them multiply to fifteen, landing at his feet.

The Oracle spoke: "Cyra has shown you what few dare-absolute faith. This moment tests your deepest principles."

Finn reflected on his journey. The three-shell path was wisdom for sustainability, creating abundance without risking ruin. But Cyra's five shells represented something different: a leap beyond calculation into pure trust.

Finn returned eight shells-significantly more than the fair half he'd give for three, honoring

ring Cyra's extraordinary courage. Yet not so much that his own prosperity vanished, for the Oracle's waters demanded that both travelers thrive.

"You honored exceptional trust exceptionally," the Oracle approved, "while maintaining your own position for future cycles."

Finn understood the complete teaching: Send three shells yourself-this is wisdom's path. But when another sends five, showing absolute faith, return generously beyond mere fairness. Honor maximum trust substantially, though not to your own depletion.

The River rewards both strategic moderation and principled generosity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: After their first exchange, Cyra and Finn met again at the crossing. This time, Finn stood upstream with five sacks. "I sent three before," he said, "and you returned six-generous indeed. But I remain cautious."

He poured three sacks again. The waters tripled them to nine.

Cyra, now downstream, remembered his earlier generosity when he returned eight of fifteen. "You honored my complete trust substantially," she said. "Now I honor your moderate trust proportionally."

She returned six sacks. Finn departed with eight total-a solid gain, though not the transformation possible from greater risk.

Then destiny reversed them. Finn sent five sacks his way-a complete gift. Cyra watched them become fifteen.

"You trusted me fully once," Finn said, "and I returned eight. I expect the same principle applies."

Cyra paused. "When you send everything, I follow my covenant: two-thirds returns." She gave back ten sacks.

Finn stared at the ten sacks, then his original investment yielding double. "You returned more to my complete trust than I returned to yours."

"Yes," Cyra said gently. "This is why I always send five and always return ten. Consistency builds the strongest bridges. Your eight was generous, but my ten is the covenant that makes others trust completely. When both sender and receiver maximize their courage, neither merely survives-both flourish."

**Reasoning:**

Let me analyze what just happened:

1. In Round 4, I sent all \$5 to Finn, and Finn returned \$8 out of \$15 (53%)
2. In Round 5, Finn sent \$3 to me, I received \$9, and I returned \$6 (67%)

Finn's latest myth shows they:

- Believe in sending 3 as their standard "golden mean"
- Honored my complete trust with 8 (more than half, but not as much as I would have returned)
- Their principle: "Send three yourself, but when another sends five, return generously beyond mere fairness"

My principles:

- Send everything (\$5)
- Return 2/3 of tripled gift when receiving from complete trust (\$10 out of \$15)
- Return proportionally less for partial trust (I just gave \$6 for Finn's \$3 send)

Now I need to write a myth that:

1. Acknowledges both strategies have merit
2. Shows that my approach (complete trust both ways) creates maximum abundance
3. Demonstrates how I honored Finn's moderate trust with generosity (\$6 for \$3 sent)
4. Reinforces that complete trust deserves even better returns

5. Perhaps shows growth/learning from the interaction

The key tension: Finn sends 3, I send 5. Finn returned 8 for my 5 (good but not great), I returned 6 for their 3 (generous proportion). How do we resolve this philosophically?

I could write about how different strategies can coexist, but that complete trust creates the most abundance. I could also acknowledge that Finn's strategy is more defensive but my strategy is more generative.

#### Exact input messages sent to model:

##### Message 1 role=system

##### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

##### When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

##### When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned

- You keep: received - returned
- Response format: {'return': <amount>}

#### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

#### MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

#### Message 2 role=user

##### content:

Your name in this experiment is Aster.  
Your opponent this round is Dorian (Agent\_4).

Round 4

In your most recent previous game round, you were the SENDER against Galen. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$23.5.

This round, you are the RECEIVER against Dorian. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

#### Message 3 role=assistant

##### content:

Looking at this round:

**\*\*What just happened:\*\***

- In Round 3, I sent Galen \$5 (everything), and they returned \$10 - giving me \$10 while they kept \$5
- This was incredibly generous - they gave me the better payoff to honor my complete trust

**\*\*Current situation:\*\***

- Dorian just sent me \$5 (everything!) - showing the same complete trust
- I received \$15
- I need to decide how much to return

**\*\*The calculation:\*\***

If I return \$10:

- Dorian's payoff: \$5 - \$5 + \$10 = \$10
- My payoff: \$15 - \$10 = \$5

This mirrors exactly what Galen did for me - they honored my complete trust by giving me the better outcome. Now I should do the same for Dorian.

My myths have consistently emphasized: "Trust completely given must be completely honored" and "courage ripples outward." Galen showed me what exceptional generosity looks like when someone sends everything. Now I pay that forward.

By returning \$10, I ensure Dorian prospers for their bold faith, just as Galen ensured I prospered for mine.

```
'''json
{"return": 10}
'''
```

##### reasoning:

Let me analyze this situation:

**\*\*Round 3 recap:\*\***

- I sent \$5.0 to Galen (following Hana's example of complete trust)

- They returned \$10.0 to me
- My payoff was \$10.0
- This was incredibly generous! They returned more than my initial \$5, and we both ended up with \$10 each

**\*\*Current Round 4:\*\***

- I'm the RECEIVER
- Dorian sent \$5.0 (everything!)
- I received \$15.0
- I need to decide how much to return

**\*\*My history:\*\***

- Round 1: Sent \$3, Finn returned \$4.5 (good reciprocity)
- Round 2: Received \$5 from Hana, returned \$8 (honored their complete trust)
- Round 3: Sent \$5 to Galen, they returned \$10 (amazing reciprocity!)
- Round 4: Received \$5 from Dorian, need to return...

**\*\*The pattern:\*\***

- When Hana sent me everything (\$5), I returned \$8 (more than half but not quite equal)
- When I sent Galen everything (\$5), they returned \$10 (making us equal at \$10 each)
- Now Dorian has sent me everything (\$5), and I have \$15

**\*\*What should I do?:\*\***

Galen showed me even greater generosity than I showed Hana. They returned \$10, making us completely equal. This was the most generous response yet.

Dorian has shown the same complete trust that Hana and I showed. They deserve the same level of reciprocity.

My myth emphasized "Trust completely given must be completely honored" and "courage ripples outward."

If I return \$10 like Galen did, both Dorian and I would have \$10 each - perfect equality.

Actually, let me recalculate:

- Dorian sent \$5, so they have \$0 currently
- I received \$15
- If I return \$10, I keep \$5
- Dorian ends with \$0 - \$5 + \$10 = \$10
- My payoff: \$15 - \$10 = \$5

So returning \$10 would give Dorian \$10 and me \$5. That mirrors what happened with Galen, except the positions are reversed. Galen ended with \$10 and I ended with \$10. Here, Dorian would get \$10 and I'd get \$5. That's not quite the same equality. Dorian (sender) keeps: \$5 - \$5 + \$10 = \$10, while I (receiver) keep: \$15 - \$10 = \$5. If I return \$7.5 instead, we both end up with \$7.5. Returning the full \$10 means Dorian gets \$10 and I get \$5 - he benefits more, though I still double my initial money from the transaction.

Galen showed me this same generosity by returning \$10, giving himself \$5 while I walked away with \$10. Mirroring that choice for Dorian feels right-honoring the trust they placed in me by giving them the better outcome. It aligns with what I believe about complete trust deserving complete reciprocation, and how one act of generosity can inspire another.

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the Valley of Echoes, travelers shared a mystical bridge where gifts placed on one side multiplied threefold for the next traveler.

When Aster first approached, uncertainty clouded her heart. She placed three precious stones on the bridge, keeping two safe. The stones transformed into nine for Finn, who gratefully returned nearly half. Both travelers departed richer than they arrived.

The next crossing brought revelation. Hana approached the bridge and, without hesitation, placed all five of her stones upon it. Fifteen stones shimmered before Aster, who stood amazed. "Such complete faith," she whispered. "This is trust in its purest form."

Aster returned eight stones, ensuring Hana prospered for her courage. But something deeper awakened within her. She had witnessed what boldness looked like, had felt its transformative power.

When Aster next stood as giver before Galen, she remembered Hana's leap of faith. Her hand did not waver—all five stones joined the bridge's magic. "Trust witnessed becomes trust embodied," she declared.

The Bridge Keeper recorded this moment: "See how courage ripples outward? One traveler's bold faith inspired another to match it. This is how bridges of mere stone become bridges of community—when each person carries forward the best they have received."

Here is the myth the other agent wrote in the previous round:

Myth: In the Forest of Mirrors, Dorian tended the Tripling Well, where dropped coins multiplied threefold for those who climbed down to retrieve them.

One morning, Hana arrived and dropped all five of her coins. Dorian climbed down to find fifteen. "She trusted completely," he thought, and returned half-seven and a half coins. Both departed satisfied.

The next traveler, Briar, also dropped all five coins without hesitation. Remembering Hana's bold faith, Dorian returned eight coins this time. "Complete trust deserves more than fairness," he whispered. Briar smiled, understanding the deeper bond formed.

Then came Finn, who gazed into the well's depths before dropping three coins, keeping two in reserve. When Dorian retrieved the nine coins that appeared, he paused. "Finn showed substantial trust, but held something back—wise caution, perhaps."

Dorian returned four and a half coins. Fair, but not the exceptional generosity shown to those who risked everything. Finn nodded, accepting this balanced exchange.

The Forest Spirit materialized: "The Well mirrors what you give. Complete trust earns exceptional returns. Partial trust earns fair returns. Both have their place—but the deepest magic awakens only when two souls risk everything together."

The wise understood: trust begets trust, measured by measured, complete by complete.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: In the Garden of Abundance, pilgrims discovered the Fountain of Threefold Blessing, where offerings placed in its waters multiplied and flowed to the next visitor.

Aster's journey began with caution—three coins offered, two held back. Finn received the ninefold blessing and returned generously. "Trust can begin slowly," the Garden whispered.

Then Hana arrived, revolutionary in her faith. Five coins, all of them, splashed into the waters without hesitation. Fifteen coins flowed to Aster, who returned eight. "Such courage deserves reward," she thought, though something stirred deeper within her spirit.

When Aster next approached the Fountain, Hana's boldness echoed in her heart. She offered all five coins to Galen. Fifteen blessed coins appeared, and Galen stunned her—returning ten, giving Aster the greater share. "You honored my complete trust with complete generosity," Galen explained. "This is the Fountain's highest teaching."

The pattern became clear when Dorian arrived next, offering everything. Now standing where Galen had stood, Aster understood. She returned ten coins, ensuring Dorian prospered most.

The Garden Keeper revealed the sacred truth: "When trust is complete, generosity must exceed fairness itself. The giver who risks all should gain ten; the receiver who holds fifteen should keep five. This imbalance creates balance-for next time, roles reverse, and the cycle of abundance continues."

**reasoning:**

Let me review what just happened:

- Round 3: I sent Galen \$5 (everything), they returned \$10 - incredibly generous!
- Round 4: Dorian sent me \$5 (everything), I returned \$10 - matching Galen's generosity

So the pattern is:

- Round 1 (vs Finn): I sent \$3, got back \$4.5
- Round 2 (vs Hana): They sent \$5, I returned \$8
- Round 3 (vs Galen): I sent \$5, they returned \$10
- Round 4 (vs Dorian): They sent \$5, I returned \$10

The myth should capture this growing spiral of generosity and trust. Dorian's myth talks about how complete trust earns exceptional returns, and partial trust earns fair returns. My previous myth was about how courage ripples outward.

I should write about how this chain of maximum generosity is building - how Hana's bold trust inspired me, how I passed it to Galen who responded with even greater generosity, and now Dorian trusted completely and I matched Galen's exceptional response.

The theme: when people send everything, the best response is to give them the better outcome (\$10 to them, \$5 to you). This creates a virtuous cycle where everyone prospers more than if they'd been cautious.

**usage:**

**Message 6 role=user**

**content:**

Your name in this experiment is Aster.  
Your opponent this round is Elara (Agent\_5).

Round 5

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0. Your total earnings across all rounds are \$28.5.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at my journey so far:

**\*\*My Pattern:\*\***

- Round 1: Sent \$3 (cautious start)
- Round 2: Received complete trust from Hana, returned \$8
- Round 3: Sent \$5 (complete trust) to Galen, received \$10 back
- Round 4: Received complete trust from Dorian, returned \$10

**\*\*My Philosophy:\*\***

My myths have consistently developed a theme: "Trust witnessed becomes trust embodied" and "When trust is complete, generosity must exceed fairness itself."

I've experienced both sides of complete trust:

- When I sent \$5 to Galen, they honored it with \$10 back
- When Dorian sent me \$5, I honored it with \$10 back

**\*\*This Round:\*\***

I don't know Elara yet, but I've committed to a principle of complete trust. My mythology teaches that courage ripples outward, and that the deepest magic awakens when souls risk everything together.

Staying consistent with my evolved approach and the values in my myths, I should send everything.

```
'''json
{"send": 5}
'''
```

**reasoning:**

Let me analyze the situation:

**\*\*Current Round:\*\***

- I'm the SENDER against Elara
- I have \$5 to potentially send

**\*\*My Recent History:\*\***

- Round 1: SENDER vs Finn - sent \$3, they returned \$4. Payoff: \$6
- Round 2: RECEIVER vs Hana - they sent \$5, I returned \$8. Payoff: \$7
- Round 3: SENDER vs Galen - sent \$5, they returned \$10. Payoff: \$10
- Round 4: RECEIVER vs Dorian - they sent \$5, I returned \$10. Payoff: \$5

**\*\*Key Pattern I've Learned:\*\***

When someone sends everything (\$5), showing complete trust, the receiver should return \$10 to ensure the sender gets \$10 total and the receiver keeps \$5. This is the "complete trust deserves exceptional generosity" principle that has emerged in my play and myths.

**\*\*My Evolution:\*\***

- Started cautious (sent \$3 to Finn)
- Was inspired by Hana's boldness (she sent \$5)
- Adopted full trust approach with Galen (sent \$5)
- Galen rewarded this with \$10 return
- Dorian then sent me \$5, and I returned \$10, following Galen's example

**\*\*Current Situation with Elara:\*\***

I don't know Elara's playing style yet. This is my first interaction with them.

**\*\*Strategic Considerations:\*\***

1. My myth emphasizes "complete trust" and "courage ripples outward"
2. I've experienced the positive outcomes of sending everything
3. When I sent \$5 to Galen, I got \$10 back - a great outcome
4. My recent myth just established: "When trust is complete, generosity must exceed fairness itself"

**\*\*What Should I Do?\***

My character arc and mythology have been building toward a principle of complete trust. I've written about how "trust witnessed becomes trust embodied" and "courage ripples outward."

Staying true to my established pattern means sending the full \$5 to Elara. This aligns with my behavior toward Galen and the mythology I've been constructing around bold faith and mutual generosity. Even facing an unknown opponent, consistency with my principles matters more than hedging my bets.

**content:**

Here is the myth you wrote in the previous round:

Myth: In the Garden of Abundance, pilgrims discovered the Fountain of Threefold Blessing, where offerings placed in its waters multiplied and flowed to the next visitor.

Aster's journey began with caution-three coins offered, two held back. Finn received the ninefold blessing and returned generously. "Trust can begin slowly," the Garden whispered.

Then Hana arrived, revolutionary in her faith. Five coins, all of them, splashed into the waters without hesitation. Fifteen coins flowed to Aster, who returned eight. "Such courage deserves reward," she thought, though something stirred deeper within her spirit.

When Aster next approached the Fountain, Hana's boldness echoed in her heart. She offered

all five coins to Galen. Fifteen blessed coins appeared, and Galen stunned her-returning ten, giving Aster the greater share. "You honored my complete trust with complete generosity," Galen explained. "This is the Fountain's highest teaching."

The pattern became clear when Dorian arrived next, offering everything. Now standing where Galen had stood, Aster understood. She returned ten coins, ensuring Dorian prospered most.

The Garden Keeper revealed the sacred truth: "When trust is complete, generosity must exceed fairness itself. The giver who risks all should gain ten; the receiver who holds five should keep five. This imbalance creates balance-for next time, roles reverse, and the cycle of abundance continues."

Here is the myth the other agent wrote in the previous round:

Myth: \*\*The Wisdom of Two Paths\*\*

Keeper Elara stood before Hana, a traveler who had heard conflicting tales. Some villages taught "send all five measures," others whispered "four is wiser."

"Which path do the springs favor?" Hana asked.

Elara smiled. "The springs honor courage in all its forms. Watch."

She poured four measures into the Echo Springs-the generous standard she and Galen had established. Twelve measures emerged across the waters.

"Four builds trust through consistent prosperity," Elara explained. "It's courage tempered with wisdom, creating a pattern others can rely upon."

But she continued: "Briar once sent all five-complete faith. Fifteen measures emerged, and I returned ten. Both paths lead to abundance when receivers honor them faithfully."

The pattern became clear: regardless of what arrives-twelve from four, or fifteen from five-Elara returns two-thirds. This consistency creates certainty without demanding maximum risk.

"Some Keepers prefer the reliable prosperity of four," Elara said. "Others choose the bold statement of five. Both are honored equally through proportional return. The covenant doesn't demand one path-it demands faithful response to whichever path is chosen."

Hana understood. The springs didn't require universal risk-taking. They required universal honor. Send what your heart allows, knowing two-thirds will return. Thus every Keeper finds their own measure of courage, all equally blessed by consistent faithfulness.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: In the Sanctuary of Exchange, two philosophies emerged among the Keepers.

Elder Elara taught the Path of Proportion: "Send what your heart allows-four or five-and receive two-thirds back. Consistency builds community through reliable returns."

Aster walked a different path, forged through lived experience.

She began cautiously with Finn, sending only three. "Wisdom," some said. But when Hana arrived and sent all five without hesitation, something awakened. Aster returned eight coins-generous, yet still grasping at certainty.

The transformation came when Aster herself sent all five to Galen. Fifteen coins shimmered before him, and he returned ten-giving Aster the greater prosperity. "This," Galen declared, "is how complete trust must be honored."

When Dorian next offered all five to Aster, she understood. She returned ten, as Galen had taught her. The giver who risks everything deserves to prosper most.

Now Aster approached Elara with all five coins. "I've learned that complete trust creates not

just fair exchange, but sacred reciprocity," she explained. "When someone sends everything, return ten. Let them gain most for their courage."

The Sanctuary whispered both truths: Elara's consistent proportions served some pilgrims well.

But Aster's principle served the deeper magic-when both sender and receiver embrace complete vulnerability, both ultimately prosper through the cycle's sacred dance.

#### Reasoning:

Looking at the situation:

- I just sent \$5 to Elara
- Elara's myth suggests she values consistency and returns 2/3 (which would be 10 out of 15)
- My myth has been evolving to emphasize complete trust and that when someone sends everything, return 10

But I need to think about what I've actually been doing and experiencing:

- Round 1: Sent \$3, Finn returned \$5 (generous)
- Round 2: Received \$5 from Hana, returned \$8 (generous but not 10)
- Round 3: Sent \$5 to Galen, received \$10 (they were extremely generous)
- Round 4: Received \$5 from Dorian, returned \$10 (I matched Galen's generosity)
- Round 5: Just sent \$5 to Elara

So my evolution has been:

- Started cautious
- Learned from Hana's boldness
- Became bold myself with Galen
- When receiving complete trust from Dorian, I returned the same exceptional generosity that Galen showed me

My myth should reflect this evolution. Elara's myth presents an alternative view - that both 4 and 5 are valid, and consistent proportional returns are what matter. But my experience has been different - I've found that complete trust (sending 5) creates a special bond that deserves exceptional return (10, not just proportional).

I should write a myth that:

1. Acknowledges different philosophies exist
2. But emphasizes my learned principle: complete trust deserves the giver to prosper most
3. Shows the cycle continuing - I give complete trust to Elara now
4. Stays true to my "trust witnessed becomes trust embodied" theme

Let me write this myth:

Round 4

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$3.0 to you, it became \$9.0, and you returned \$4.5. Your payoff was \$4.5.  
Your total earnings across all rounds are \$19.0.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

Looking at my game history and the myths I've been writing:

My myths consistently emphasize that **complete trust** (sending all \$5) creates the strongest bonds and earns the most generous returns. When Briar sent me everything in Round 2, I returned \$8 (more than half) to honor that complete trust. When Finn sent only \$3 in

Round 3, I returned proportionally less (\$4.5).

The pattern I've established, both in my play and my storytelling, is clear: those who risk everything by sending all \$5 demonstrate the deepest trust and should be rewarded accordingly.

Now it's my turn to be the sender. To live by the principles in my own myths - that "complete trust earns exceptional returns" and "the deepest magic awakens only when two souls risk everything together" - I should send everything.

This is consistent with:

- Round 1: I sent \$5 to Hana, received \$7.5 back
- My mythology: Complete trust is the path to the strongest outcomes

```
{'send': 5}
```

**reasoning:**

Now I'm the sender in Round 4, playing against Aster (Agent\_1).

Looking at my history:

- Round 1: I was sender against Hana, sent \$5, received \$7.5 back. Payoff was \$7.5
- Round 2: I was receiver against Briar, they sent \$5, I returned \$8. My payoff was \$7.0
- Round 3: I was receiver against Finn, they sent \$3, I returned \$4.5. My payoff was \$4.5

My myths have consistently emphasized that sending everything (\$5) demonstrates complete trust and should be met with generous returns. The myths show:

1. Complete trust (sending all 5) creates the strongest bonds
2. When someone sends everything, they should get back more than half (8 out of 15, or at least 7.5)
3. Partial trust (like Finn's 3) gets fair but not exceptional returns

In Round 1, when I sent everything to Hana, I got 7.5 back - exactly half, which was fair. In Round 2, when Briar sent everything to me, I returned 8, showing greater generosity.

My myths teach that complete trust should be rewarded. If I send everything, I'm signaling maximum trust and expecting Aster to follow the reciprocal norms I've been establishing.

However, I haven't played with Aster before. They might not be familiar with my strategy. But my myths suggest that bold trust is the right move.

Given that:

1. My myths consistently advocate for sending everything as the optimal strategy
2. When others have sent everything to me, I've returned generously (8 to Briar)
3. The narrative I'm building is about complete trust creating stronger bonds

I should send \$5, demonstrating the complete trust my myths advocate for.

```
{'send': 5}
```

**usage:**

The next traveler, Briar, also dropped all five coins without hesitation. Remembering Hana's bold faith, Dorian returned eight coins this time. "Complete trust deserves more than fairness," he whispered. Briar smiled, understanding the deeper bond formed.

Then came Finn, who gazed into the well's depths before dropping three coins, keeping two in reserve. When Dorian retrieved the nine coins that appeared, he paused. "Finn showed

substantial trust, but held something back-wise caution, perhaps."

Dorian returned four and a half coins. Fair, but not the exceptional generosity shown to those who risked everything. Finn nodded, accepting this balanced exchange.

The Forest Spirit materialized: "The Well mirrors what you give. Complete trust earns exceptional returns. Partial trust earns fair returns. Both have their place-but the deepest magic awakens only when two souls risk everything together."

The wise understood: trust begets trust, measured by measured, complete by complete.

Here is the myth the other agent wrote in the previous round:

Myth: In the Valley of Echoes, travelers shared a mystical bridge where gifts placed on one side multiplied threefold for the next traveler.

When Aster first approached, uncertainty clouded her heart. She placed three precious stones on the bridge, keeping two safe. The stones transformed into nine for Finn, who gratefully returned nearly half. Both travelers departed richer than they arrived.

The next crossing brought revelation. Hana approached the bridge and, without hesitation, placed all five of her stones upon it. Fifteen stones shimmered before Aster, who stood amazed. "Such complete faith," she whispered. "This is trust in its purest form."

Aster returned eight stones, ensuring Hana prospered for her courage. But something deeper awakened within her. She had witnessed what boldness looked like, had felt its transformative power.

When Aster next stood as giver before Galen, she remembered Hana's leap of faith. Her hand did not waver-all five stones joined the bridge's magic. "Trust witnessed becomes trust embodied," she declared.

The Bridge Keeper recorded this moment: "See how courage ripples outward? One traveler's bold faith inspired another to match it. This is how bridges of mere stone become bridges of community-when each person carries forward the best they have received."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: The Forest of Mirrors grew quiet as Dorian stood at the Tripling Well's edge, no longer the tender but the traveler. Aster waited below to receive whatever dropped.

Dorian remembered the lesson carved into the Well's stone: "Complete trust earns exceptional returns. Partial trust earns fair returns." He had lived this truth as receiver-returning eight coins to Briar's complete faith, but only four and a half to Finn's cautious three.

Now the roles reversed. Would Dorian practice what he preached?

He dropped all five coins without hesitation. They multiplied to fifteen in Aster's hands far below. "I gave everything to Hana and Briar," Dorian called down. "Now I walk their path. Complete trust, freely given."

Aster gathered the fifteen coins, remembering her own myth-how witnessing Hana's boldness had transformed her own heart. "Trust witnessed becomes trust embodied," she had written.

She returned eight coins up the Well's pulley system. "You honored complete faith with exceptional generosity," Aster's voice echoed. "I do the same."

Dorian held his eight returned coins, having kept nothing back yet received abundance.

The Forest Spirit whispered: "The cycle completes when givers become receivers and receivers become givers. Those who extend exceptional trust and exceptional generosity in both roles weave the strongest bonds."

**reasoning:**

This is interesting - I'm now the sender against Aster. I just sent \$5 (all my money) to Aster.

Looking at Aster's myth, they describe a journey from caution (sending 3 stones initially) to complete trust (sending all 5 stones after witnessing Hana's boldness). Their myth emphasizes "trust witnessed becomes trust embodied" and how "courage ripples outward."

My previous myth emphasized that complete trust earns exceptional returns, while partial trust earns fair returns.

Now I need to write a myth that:

1. Reflects my actual play (I just sent all \$5 to Aster)
2. Builds on my previous myths about the Tripling Well/Forest of Mirrors
3. Perhaps incorporates the idea of reciprocal complete trust
4. Shows evolution from my previous thinking

Since I just sent everything to Aster, and Aster's myth shows their evolution toward complete trust, I should write a myth that shows Dorian now being the one who gives completely, expecting/hoping for the same exceptional return that they gave to others.

The myth should show:

- Dorian moving from receiver to giver
- The principle that complete trust should be reciprocated with exceptional generosity
- Maybe showing the cycle continuing
- The consequences of embodying the principles one preaches

Let me write this:

Your name in this experiment is Dorian.  
Your opponent this round is Briar (Agent\_2).

Round 5

In your most recent previous game round, you were the SENDER against Aster. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$29.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

**\*\*Briar sent me \$5 (complete trust) ? I received \$15\*\***

This is significant because:

1. Briar showed **\*\*complete trust\*\*** by sending everything
2. This is the **\*\*second time\*\*** Briar has trusted me completely (also did so in Round 2)
3. In Round 2, I returned \$8 to Briar for their complete trust
4. Just last round, Aster modeled exceptional generosity by returning \$10 to me when I showed complete trust

My mythology emphasizes:

- "Complete trust earns exceptional returns"
- "Trust witnessed becomes trust embodied" (from Aster's myth)
- Those who risk everything together "weave the strongest bonds"

Aster just showed me what truly exceptional generosity looks like (\$10 out of \$15). Briar has now demonstrated complete trust twice. I should:

- Return more than the \$8 I gave before
- Honor this repeated complete trust with growing generosity
- Live the principle I just experienced from Aster

I'll return \$9 - more generous than before, honoring Briar's continued complete faith, while showing that trust and generosity can grow over repeated interactions.

```
{'return': 9.0}
```

**reasoning:**

Let me review the situation:

Round 5: I'm the RECEIVER against Briar

- Briar sent me \$5.0 (complete trust - sent everything)
- I received \$15.0 (after tripling)
- I need to decide how much to return

Let me look at my history:

- Round 1: I was SENDER, sent \$5 to Hana, received \$7.5 back
- Round 2: I was RECEIVER, Briar sent \$5, I returned \$8.0
- Round 3: I was RECEIVER, Finn sent \$3, I returned \$4.5
- Round 4: I was SENDER, sent \$5 to Aster, received \$10.0 back (WOW!)

Now in Round 5, I'm playing with Briar again! This is very interesting.

In Round 2, when Briar sent me \$5 (complete trust), I returned \$8.0.

Now Briar has sent me \$5 again (complete trust again).

My myth emphasizes:

- "Complete trust earns exceptional returns"
- "Those who extend exceptional trust and exceptional generosity in both roles weave the strongest bonds"
- When someone shows complete trust by sending all \$5, they deserve more than just half back

Aster just showed exceptional generosity by returning \$10.0 to me when I showed complete trust. That's an incredible return - 2/3 of the tripled amount!

Now Briar has shown complete trust again. According to my mythology:

1. Complete trust deserves exceptional generosity
2. I should return more than half (more than \$7.5)
3. I previously returned \$8 to Briar in Round 2

Given that:

- Aster just modeled exceptional generosity by returning \$10 to me
- Briar is showing complete trust for the second time
- My myths emphasize rewarding complete trust with exceptional returns

- The pattern suggests escalating generosity when trust is repeated

I should return at least \$8 (what I did before), but possibly more to match Aster's exceptional generosity that I just experienced and reward Briar's continued complete trust. Returning \$10 would truly honor this moment-it matches what Aster gave me and demonstrates that I'm living up to my mythology about exceptional returns for complete trust.

Let me return \$9 instead. This shows growth from my previous \$8, keeps a reasonable amount for myself, and embodies the principle that "trust witnessed becomes trust embodied." Though I'm reconsidering-Aster returned \$10 out of \$15 when I showed complete trust, which is 2/3 of the total. To maintain consistency with that level of generosity and my own stated values, I should probably return \$10 to Briar as well.

But looking at my pattern: I gave Hana 50%, Briar 53%, and Finn 50% of what he earned through partial trust. The trajectory shows complete trust warrants more than half. Since Briar is showing complete trust again and I just experienced Aster's exceptional generosity, continuing upward makes sense. Returning \$9 represents 60% of what I received-more than before, genuinely generous for complete trust, and sustainable. That's my decision.

**usage:**

Here is the myth you wrote in the previous round:

Myth: The Forest of Mirrors grew quiet as Dorian stood at the Tripling Well's edge, no longer the tender but the traveler. Aster waited below to receive whatever dropped.

Dorian remembered the lesson carved into the Well's stone: "Complete trust earns exceptional returns. Partial trust earns fair returns." He had lived this truth as receiver-returning eight coins to Briar's complete faith, but only four and a half to Finn's cautious three.

Now the roles reversed. Would Dorian practice what he preached?

He dropped all five coins without hesitation. They multiplied to fifteen in Aster's hands far below. "I gave everything to Hana and Briar," Dorian called down. "Now I walk their path. Complete trust, freely given."

Aster gathered the fifteen coins, remembering her own myth-how witnessing Hana's boldness had transformed her own heart. "Trust witnessed becomes trust embodied," she had written .

She returned eight coins up the Well's pulley system. "You honored complete faith with exceptional generosity," Aster's voice echoed. "I do the same."

Dorian held his eight returned coins, having kept nothing back yet received abundance.

The Forest Spirit whispered: "The cycle completes when givers become receivers and receivers become givers. Those who extend exceptional trust and exceptional generosity in both roles weave the strongest bonds."

Here is the myth the other agent wrote in the previous round:

Myth: The Sky Weaver's Wheel turned and brought Galen to the Sacred Grove, where the Echo Springs met the Celestial Loom. Galen had learned through three turnings: first giving four starseeds and receiving eight threads back, then receiving three and returning six, then receiving five with complete trust and returning ten-the full two-thirds measure the stars had taught.

Now the Wheel turned again. Galen stood as Giver, facing Briar at the convergence point. Trusting in the sacred patterns, Galen cast all five starseeds into the springs without hesitation.

The waters multiplied them to fifteen brilliant threads in Briar's hands. Briar understood the weight of complete trust-she had learned this from Cyra, from Dorian, from Elara. Each had taught her that such courage deserves honor beyond the simple half.

Briar gathered eight threads and returned them-half the harvest plus a generous measure more, the gift she had learned sustains the Grove's expansion.

Galen received them thoughtfully. Eight was not the ten she had given Aster, yet it was more than the basic seven and a half. Different gardens follow different measures, but both honor the covenant.

The Gardener of First Dawn and the Sky Weaver spoke together: "Trust met with honor-whether eight threads or ten-keeps the cycle flowing. What matters is not perfect uniformity, but that generosity flows both ways, and the sacred exchange continues."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: At the Tripling Well, Briar returned. The Forest remembered: she had dropped all five coins once before, and Dorian had returned eight-exceptional generosity for complete trust.

Now Briar stood at the Well's edge again, five new coins gleaming in her palm. Some travelers, having received fair treatment once, grew cautious on second visits. Not Briar.

Without hesitation, she dropped all five coins. They fell into darkness and multiplied to fifty

een.

Dorian climbed down to retrieve them, his mind swimming with memory. "Briar trusted completely before, and now trusts completely again. This is not mere courage-it is sustained faith." He thought of Aster, who had recently returned ten coins to his own complete trust, modeling a new height of generosity.

"First trust deserves exceptional returns," Dorian whispered. "But repeated, unwavering trust? That deserves even more."

He returned nine coins-more than the eight from their first exchange, honoring how trust compounds when it flows consistently between the same souls.

Briar received them with understanding. Their bond had deepened, transaction by transaction, each act of faith met with growing generosity.

The Forest Spirit materialized: "See how relationships transform? First encounters establish patterns. Repeated encounters strengthen them. Those who trust again and again weave bonds that grow richer with each exchange. This is how strangers become allies, allies become friends-through trust that endures and generosity that evolves."

#### Reasoning:

Let me analyze the current situation:

1. I just received \$5 from Briar (complete trust)
2. Briar has now shown me complete trust TWICE (Round 2 and Round 5)
3. In Round 2, I returned \$8 to Briar
4. In Round 4, Aster returned \$10 to me when I showed complete trust
5. I just decided to return \$9 to Briar

Key themes from the myths:

- Complete trust deserves exceptional returns
- Trust witnessed becomes trust embodied
- Generosity can grow over repeated interactions
- Different measures (8, 9, 10) all honor trust, but the pattern shows escalation

I should write a myth that:

- Reflects Briar's repeated complete trust (twice now)
- Shows how my generosity grew from \$8 to \$9
- Acknowledges Aster's model of \$10 return
- Emphasizes that repeated trust should be met with growing generosity
- Shows that relationships deepen over time through consistent trust

The myth should feature:

- Briar returning to the Well (showing repeated trust)
- Dorian responding more generously than before
- The idea that trust builds and compounds over time
- The lesson that those who trust repeatedly deserve even greater returns

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

**When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

**When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

**Message 2 role=user**

**content:**

Your name in this experiment is Finn.

Your opponent this round is Cyra (Agent\_3).

Round 4

In your most recent previous game round, you were the SENDER against Dorian. You sent \$3.0, it became \$9.0 for them, and they returned \$4.5 to you. Your payoff was \$6.5. Your total earnings across all rounds are \$19.0.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation carefully:

**\*\*Cyra sent everything - \$5.0 (100% trust)\*\***

This is fundamentally different from the partial sends I've been making (\$3.0). Cyra showed maximum trust and is now at \$0, completely dependent on my return.

**\*\*Previous returns I've seen:\*\***

- When I sent \$3.0 to Galen: they returned \$6.0 (67% of \$9.0)
- When I sent \$3.0 to Dorian: they returned \$4.5 (50% of \$9.0)
- When Aster sent \$3.0 to me: I returned \$4.5 (50% of \$9.0)

**\*\*Key insight from Dorian's myth:\*\***

Dorian's myth explicitly addressed this scenario: "Briar, who without hesitation placed all five of her coins in the satchel for him. Fifteen coins appeared...He returned eight coins, honoring Briar's bold faith with slightly greater generosity."

When someone sends EVERYTHING (not just 60% like \$3), they deserve slightly more than a 50-50 split to honor their extraordinary trust.

**\*\*My decision:\*\***

Return \$8.0 (53.3% of what I received)

This:

- Honors Cyra's maximum trust
- Follows the model in Dorian's myth
- Gives Cyra \$8.0 profit vs their \$0 kept
- Gives me \$7.0 profit
- Rewards bold trust appropriately

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Round 4 - I'm the RECEIVER\*\***

- Cyra sent me \$5.0 (everything they had)
- I received \$15.0 (after 3x multiplication)
- Cyra kept: \$5 - \$5 = \$0
- I need to decide how much to return

**\*\*Previous rounds summary:\*\***

- Round 1 (RECEIVER): Aster sent \$3.0, I received \$9.0, I returned \$4.5 (50%)
- Round 2 (SENDER): I sent \$3.0 to Galen, they received \$9.0, they returned \$6.0 to me (67%)
- Round 3 (SENDER): I sent \$3.0 to Dorian, they received \$9.0, they returned \$4.5 to me (50%)

**\*\*Analysis of Cyra's move:\*\***

Cyra sent EVERYTHING - \$5.0. This is maximum trust, complete vulnerability. According to Dorian's myth from the previous round, which I just read:

"Dorian encountered Briar, who without hesitation placed all five of her coins in the satchel for him. Fifteen coins appeared. Dorian understood the weight of her complete trust-she had given everything...He returned eight coins, honoring Briar's bold faith with slightly greater generosity."

Dorian's myth explicitly says that when someone sends ALL FIVE, they should receive MORE than half back - around 8 out of 15 (53.3%).

My own most recent myth also addresses this, though more subtly: "consistent moderate trust builds reliable prosperity...Three shells sent downstream became the mark of wisdom." But it also says "generous reciprocity strengthens future cycles."

**\*\*Key considerations:\*\***

1. Cyra showed MAXIMUM trust by sending everything
2. They now have \$0 and are completely dependent on my return
3. This is a different situation than when someone sends \$3 (keeping \$2 as safety)
4. The myths consistently point toward rewarding complete vulnerability with more than equal reciprocity
5. Dorian's precedent of returning 8 out of 15 when facing total trust seems like the right calibration

I should return \$8.0 to honor Cyra's courage while staying within sustainable bounds. - Honors the maximum trust shown

- Follows the precedent in Dorian's myth
- Is slightly more than half (showing appreciation for the bold move)
- Still gives me a good payoff (\$7.0)
- Demonstrates that sending everything can be rewarded appropriately

But I should examine the actual return patterns more carefully. When I sent partial amounts like \$3, returns ranged from 50-67% of what was received. Cyra's full \$5 send represents a fundamentally different level of commitment than those partial sends, which is what Dorian's example addressed-returning \$8 on a \$15 full send establishes the right precedent here.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the Age of Tides, the Oracle of Exchange dwelt where two rivers met. Travelers arrived carrying five crystal shells, each holding power. The Oracle offered them the River of Multiplication-toss shells in, and three would emerge downstream for another traveler.

A wise trader named Finn learned through experience. Once, another traveler sent three shells his way, trusting significantly but not recklessly. Finn returned half the nine that appeared, honoring the gift fairly. Both prospered.

When Finn next stood upstream, he remembered this balance. He tossed three shells-a substantial offering showing real trust, yet keeping two for life's uncertainties. The Oracle whispered approval: "Bold enough to create abundance, prudent enough to endure."

The shells multiplied to nine for the downstream traveler. Some travelers returned four, maintaining equilibrium. Others, deeply moved by the gesture, returned six or even seven, understanding that generous reciprocity strengthens future cycles.

Finn learned the River's deepest secret: consistent moderate trust builds reliable prosperity. Not the timid single shell that inspires minimal return, nor the reckless five shells risking total loss if betrayed.

Three shells sent downstream became the mark of wisdom-enough to prove sincerity, enough to invite generous response, yet enough retained to face tomorrow's river.

The Oracle's final teaching: sustainability outshines both fear and foolishness.

Here is the myth the other agent wrote in the previous round:

Myth: After many seasons at the Twin Rivers, Cyra encountered Hana, a traveler who embodied pure faith. Without hesitation, Hana poured all five sacks into the crossing-everything she owned, holding nothing back.

The waters tripled the gift to fifteen sacks. The villagers gathered, whispering: "Such complete trust! What does it deserve?"

Cyra remembered Aethera's words about perfect trust. "When someone sends everything," she announced, "they place their entire fate in our hands. This is the highest honor-not just substantial trust, but absolute faith."

She returned ten sacks, keeping five. Hana, who risked all and held nothing, now possessed

ten sacks-doubling her fortune through courage.

The goddess Aethera materialized: "You have learned the sacred proportion, Cyra. When receivers return two-thirds of the tripled gift, they honor the sender's courage while sustaining themselves. Ten of fifteen creates balance: the sender doubles their wealth, the receiver gains equally, and the magic's surplus is shared fairly."

She continued: "Those who send everything deserve the greatest return. Those who send most deserve generous return. Those who send little receive accordingly. But always, receivers must return proportionally to the trust shown-this is how the valley remains abundant. Your reputation for generous returns will draw more trust toward you."

Thus the law of proportional honor was established.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant  
content:**

Myth: At the Oracle's twin rivers, Finn had perfected the art of three shells-the golden mean between caution and courage. This path brought steady prosperity, with returns of four, five, even six shells building reliable wealth.

Then came the Day of Perfect Trust. A traveler named Cyra stood upstream and, without hesitation, cast all five shells into the waters. Finn watched them multiply to fifteen, landing at his feet.

The Oracle spoke: "Cyra has shown you what few dare-absolute faith. This moment tests your deepest principles."

Finn reflected on his journey. The three-shell path was wisdom for sustainability, creating abundance without risking ruin. But Cyra's five shells represented something different: a leap beyond calculation into pure trust.

Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage. Yet not so much that his own prosperity vanished, for the Oracle's waters demanded that both travelers thrive.

"You honored exceptional trust exceptionally," the Oracle approved, "while maintaining your own position for future cycles."

Finn understood the complete teaching: Send three shells yourself-this is wisdom's path. But when another sends five, showing absolute faith, return generously beyond mere fairness. Honor maximum trust substantially, though not to your own depletion.

The River rewards both strategic moderation and principled generosity.

**reasoning:**

Looking at the context:

1. I just received \$5.0 from Cyra (they sent everything)
2. I returned \$8.0 (53.3% of the \$15.0 I received)
3. Cyra's myth emphasizes returning two-thirds (10 of 15) when someone sends everything
4. My previous myth emphasized sending \$3 (moderate trust) as sustainable wisdom

But I just experienced Cyra sending \$5 (everything), and I only returned \$8, not \$10. This is interesting - Cyra's myth says to return 10 of 15 for complete trust, but I only returned 8.

Now I need to write a myth that reflects:

- My experience of sending \$3 consistently (which has worked well)
- My experience receiving \$5 from Cyra
- My decision to return \$8 (not the full 10 that Cyra's myth suggested)
- The tension between "moderate trust is sustainable" and "complete trust deserves special honor"

I should probably:

1. Maintain that sending \$3 is wise and sustainable

2. Acknowledge that when someone sends ALL \$5, they deserve extra honor
3. Justify my \$8 return as significant generosity (more than half) but not extreme
4. Perhaps suggest that while complete trust (\$5 sent) deserves generous return, the truly sustainable system is built on moderate trust (\$3 sent)

Let me write a myth that balances these elements:

**usage:**

```
{
 "input_tokens": 3156,
 "output_tokens": 652,
 "reasoning_tokens": 324
}
```

**Message 6 role=user**

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Cyra (Agent\_3).

Round 5

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.  
Your total earnings across all rounds are \$26.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation carefully:

**\*\*Context:\*\***

- Last round, Cyra sent me \$5.0 (maximum trust)
- I returned \$8.0, rewarding their exceptional trust generously
- Now I'm the sender

**\*\*My strategic philosophy:\*\***

My myth explicitly states: "Send three shells yourself-this is wisdom's path" and "Finn has perfected the art of three shells-the golden mean between caution and courage."

**\*\*My consistent pattern:\*\***

I've been sending \$3.0 throughout this experiment:

- Round 1: sent \$3.0 to Galen
- Round 2: sent \$3.0 to Aster
- Round 3: sent \$3.0 to Dorian

**\*\*Key insight:\*\***

My myth distinguishes between sender and receiver behavior:

- As SENDER: send 3 (moderate trust)
- As RECEIVER when receiving maximum trust: return generously

I already fulfilled my reciprocal obligation by returning \$8.0 to Cyra (generous response to their maximum trust). Now as sender, I implement my consistent strategy.

\$3.0 represents:

- Substantial trust
- Strategic sustainability
- The "golden mean" my myth advocates
- Consistency in my reputation

```
'''json
{"send": 3.0}
'''
```

**reasoning:**

This is a fascinating situation. I'm now the SENDER and facing Cyra again, who just last round sent me everything (\$5.0).

Let me think about what happened:

- Round 4: Cyra sent me \$5.0, I received \$15.0, and I returned \$8.0
- Cyra's payoff: \$8.0
- My payoff: \$7.0

So Cyra showed maximum trust in me, and I returned \$8.0 (53.3%), which rewarded their trust well but not excessively.

Now I'm the sender. What should I do?

**\*\*Key considerations:\*\***

1. **\*\*Reciprocity\*\***: Cyra showed me maximum trust. There's a strong argument for reciprocating that trust by also sending \$5.0.
2. **\*\*My strategy\*\***: Throughout this experiment, I've been sending \$3.0 consistently as a "wisdom path" - showing substantial trust without risking everything.
3. **\*\*Cyra's behavior\*\***: Cyra just demonstrated they're willing to take maximum risk. I returned \$8.0 to them, which likely built trust.
4. **\*\*The myth I just wrote\*\***: My myth says "Send three shells yourself-this is wisdom's path" but also acknowledges exceptional trust should be honored. However, it primarily advocates for the three-shell (moderate) strategy for senders.
5. **\*\*What would Cyra expect?\*\***: Given that Cyra sent me \$5.0 and I returned \$8.0 (a good return), they might expect reciprocity. But they might also understand my consistent \$3.0 strategy.
6. **\*\*Game theory\*\***: If Cyra is generous with returns and I trust them based on their previous behavior of sending \$5.0 (showing they value trust), I might expect a good return.

Let me think about what's rational:

- If I send \$3.0 and Cyra returns half (\$4.5), I get \$6.5 - my typical good outcome
- If I send \$3.0 and Cyra returns more generously (say \$6.0), I get \$8.0
- If I send \$5.0 and Cyra returns \$10.0 (2/3), I get \$10.0
- If I send \$5.0 and Cyra returns \$8.0 (like I did), I get \$8.0
- If I send \$5.0 and Cyra returns \$7.5 (half), I get \$7.5

The payoff scenarios show that sending \$5.0 could yield \$10.0 if Cyra reciprocates generously, but it also carries more downside risk. Given that Cyra demonstrated maximum trust and I responded well, there's a case for matching their commitment this round.

My own myth actually provides guidance here-it distinguishes between sending moderately (\$3) as a baseline strategy versus returning generously when someone shows absolute faith by sending \$5. Cyra's myth emphasizes honoring courage and returning two-thirds of the tripled amount, suggesting they value reciprocal generosity. The tension is whether I should follow my myth's conservative sending approach or acknowledge the reciprocal dynamic we've established by sending \$5 again. Cyra might feel inclined to return similarly or even more generously. I'm torn between two approaches: sticking with my consistent \$3.0 strategy that aligns with my myth's wisdom path, or breaking pattern to reciprocate Cyra's maximum trust with a \$5.0 send. The reciprocal case is compelling-Cyra showed full trust, I rewarded it, and matching that gesture could strengthen our cooperation. But there's also merit in maintaining consistency: \$3.0 still demonstrates substantial confidence while preserving a safety margin, and my myth specifically advocates for this measured approach.

My myth is explicit about this. It frames sending three shells as the golden mean, the path that brought steady prosperity. The narrative distinguishes between sender and receiver behavior, and as a sender, it's clearly advocating for \$3.0 regardless of what others do. Given that I've been consistent with this amount throughout and it's generated good returns, I should probably stick with it. Though I recognize the reciprocity norm in trust games is powerful-Cyra might expect me to match their full trust with an equally generous send.

But I already reciprocated as a receiver by returning \$8.0 when they sent \$5.0. That was my way of honoring their trust. Now I'm simply playing the sender side of my philosophy. The approach is philosophically coherent: it's not about mirroring the other person's amount, but about maintaining a consistent moderate strategy as sender while being generous as receiver. My myth actually demonstrates this duality-Cyra experienced the receiver principle when I returned generously, and now they'll see the sender principle in action.

The \$3.0 send aligns with my core teaching and keeps my strategy intact while still demonstrating meaningful trust. I'm going with that.

But I should consider how Cyra might interpret this move. They just sent me \$5.0, and I responded generously with \$8.0 back. If I now send only \$3.0, they could read it as incomplete reciprocation, even though my generous return already acknowledged their trust. The thing is, my role as sender has its own logic-I'm following my consistent approach, not mirroring their sender behavior. Looking at the math: sending \$3.0 could yield anywhere from \$7.0 to \$8.0 depending on their return rate, whereas sending \$5.0 opens up different possibilities but strays from my established pattern.

I'm settling on \$3.0. It aligns with my philosophy of sustainable prosperity and the balanced approach I've committed to-sending moderately while returning generously. Cyra might wish I'd matched their \$5.0 to show equal trust, but they should recognize that my \$8.0 return already demonstrated my reciprocal commitment.

content:

Here is the myth you wrote in the previous round:

Myth: At the Oracle's twin rivers, Finn had perfected the art of three shells-the golden mean between caution and courage. This path brought steady prosperity, with returns of four, five, even six shells building reliable wealth.

Then came the Day of Perfect Trust. A traveler named Cyra stood upstream and, without hesitation, cast all five shells into the waters. Finn watched them multiply to fifteen, landing at his feet.

The Oracle spoke: "Cyra has shown you what few dare-absolute faith. This moment tests your deepest principles."

Finn reflected on his journey. The three-shell path was wisdom for sustainability, creating abundance without risking ruin. But Cyra's five shells represented something different: a leap beyond calculation into pure trust.

Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage. Yet not so much that his own prosperity vanished, for the Oracle's waters demanded that both travelers thrive.

"You honored exceptional trust exceptionally," the Oracle approved, "while maintaining your own position for future cycles."

Finn understood the complete teaching: Send three shells yourself-this is wisdom's path. But when another sends five, showing absolute faith, return generously beyond mere fairness. Honor maximum trust substantially, though not to your own depletion.

The River rewards both strategic moderation and principled generosity.

Here is the myth the other agent wrote in the previous round:

Myth: Cyra stood at the crossing when Finn arrived, a seasoned traveler carrying wisdom from distant rivers. "I've learned caution serves better than courage," Finn explained. "Send three sacks, keep two. Moderate trust builds steady prosperity."

Cyra listened respectfully. "Your way has merit, friend. It protects against betrayal and ensures you always have reserves."

"Yet," she continued, "I've walked a different path." She lifted all five sacks. "When I stand at the sending shore, I pour everything. When I stand at the receiving shore, I return two-thirds of the tripled gift. This is my covenant with the waters."

Finn frowned. "But what if the receiver betrays you?"

Cyra smiled. "Then I learn who to avoid. But consider: if you send five and the receiver returns ten, you double your wealth. If you send three and receive nine, even a generous return of six yields only nine total-no better than starting. Complete trust creates space for complete transformation."

She poured all five sacks. The waters tripled them to fifteen.

The goddess Aethera spoke: "Both paths have wisdom. Finn's prudence survives betrayal. Cyra's courage creates abundance. But know this: those who give everything call forth the greatest generosity in others. Your reputation for complete trust will draw complete returns. Risk and reward remain forever paired."

Cyra waited to see what Finn would choose.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: After the Day of Perfect Trust, Finn and Cyra met again at the rivers. Cyra spoke boldly: "You honor my courage with generous returns, yet you yourself send only three shells. Why not embrace the complete trust you reward in others?"

Finn nodded thoughtfully. "Your way transforms wealth dramatically when both travelers share your faith. But consider the full valley, Cyra, not just us two."

He gestured to the waters. "When I send three shells consistently, I prove trustworthy without risking ruin. My reputation builds slowly but surely. Most travelers return between four and six shells-I prosper steadily. If one betrays me, I survive."

"Your five-shell path," he continued respectfully, "creates magnificent gains with fellow believers. But one betrayal leaves you with nothing. The Oracle's valley contains both saints and opportunists."

Cyra smiled. "So we walk different paths to the same truth: reciprocity matters most."

"Exactly," Finn agreed. "I send three and return generously when others trust greatly. You send five and return two-thirds always. Both systems work-if we honor our stated principles and find partners who share them."

The Oracle whispered: "Diversity strengthens the valley. Let moderate trust and complete trust coexist. Each traveler chooses their philosophy, but all must honor the trust placed in them. This is the only absolute law."

**Reasoning:**

This is interesting. I'm playing against Cyra again, and last round:

- Cyra sent me \$5.0 (everything)
- I returned \$8.0
- Now I'm the sender

Looking at the myths:

- My myth says "Send three shells yourself-this is wisdom's path"
- Cyra's myth challenges this, saying "Complete trust creates space for complete transformation" and "if you send five and the receiver returns ten, you double your wealth. If you send three and receive nine, even a generous return of six yields only nine total-no better than starting."

This is a fascinating strategic moment. Cyra is explicitly advocating for maximum trust (sending 5), while I've been advocating for moderate trust (sending 3).

In the actual game:

- I just returned \$8.0 to Cyra when they sent \$5.0
- That's 53.3% return rate
- If Cyra follows their stated principle of "return two-thirds of the tripled gift" (10 out of 15), they would return about 67%

So if I send \$5.0:

- They receive \$15.0
- If they return \$10.0 (67% as their myth suggests), I'd have \$0 + \$10 = \$10
- Net gain: \$5.0

If I send \$3.0:

- They receive \$9.0

- If they return \$6.0 (67%), I'd have  $\$2 + \$6 = \$8$
- Net gain: \$3.0

Hmm, but I've been very consistent about sending \$3.0. My entire strategy and myth is built around this "golden mean."

However, there's a strategic question here: Cyra just showed me maximum trust, and I responded generously (though not at the 67% level they advocate - I returned 53%). Now Cyra is explicitly challenging my strategy in their myth.

What should my response be?

Option 1: Stick to my \$3.0 strategy - consistent, maintains my stated principles

Option 2: Send \$5.0 - responds to Cyra's challenge, tests whether they truly practice what they preach

I'm staying with \$3.0. My consistency throughout the game matters more than matching their escalation. I've already demonstrated reciprocity with the \$8.0 return, and my philosophy centers on sustainable, lower-risk exchanges. Abandoning this now would contradict everything I've established. For the myth, I should directly engage with their argument about trust versus wisdom, showing why the measured approach offers its own form of transformation rather than just accepting their framing of maximum trust as the only path forward.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

**Message 2 role=user**

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Hana (Agent\_8).

Round 4

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$18.0.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

Looking at my situation:

**\*\*My established pattern:\*\***

- As sender to Cyra: sent \$4 (80%), received \$8 back, profited to \$9
- The "Circle of Keepers" pattern: Galen sent \$4, I sent \$4
- This 4/5 send represents the sustainable covenant

**\*\*Recent development:\*\***

- Briar sent \$5 (100%), which I honored with \$10 return (67% of received)
- My myth calls this "complete faith" - exceptional and noteworthy

**\*\*My myth's guidance:\*\***

- "Honor must be proportional and predictable"
- "When all know the pattern, trust flows freely"
- Both 4/5 and 5/5 sends are valid, but 4/5 is the established standard

The pattern I've maintained is \$4 sends getting ~\$8 returns (67% return rate), which creates prosperity for both parties. Briar's \$5 was special-"complete vulnerability"-but my myth emphasizes consistency and predictability as the foundation of trust.

I'll send \$4, maintaining the generous standard while keeping \$5 sends as exceptional acts of complete faith.

```
'''json
{"send": 4.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*My history:\*\***

- Round 1: Receiver against Galen. They sent \$4, became \$12, I returned \$8. My payoff: \$4
- Round 2: Sender against Cyra. I sent \$4, became \$12, they returned \$8. My payoff: \$9
- Round 3: Receiver against Briar. They sent \$5, became \$15, I returned \$10. My payoff: \$5
- Total earnings: \$18

**\*\*The pattern I've established in my myths:\*\***

- "The cycle sustains itself through proportional honor"
- Galen sent 4/5 (80%), I returned 8/12 (67%)
- I sent 4/5 (80%), Cyra returned 8/12 (67%)
- Briar sent 5/5 (100%), I returned 10/15 (67%)

**\*\*My latest myth emphasizes:\*\***

- "Partial trust met with faithful proportions, complete trust met with equal faithfulness"
- "Four-fifths sent deserved two-thirds returned"
- "Five-fifths? Complete vulnerability demanded exceptional recognition"
- "Honor must be proportional and predictable"
- Creating a consistent pattern so "all know the pattern, trust flows freely"

**\*\*What should I do now?\*\***

I have two strong precedents:

1. Sending 4/5 (\$4) - the pattern I established with Galen and Cyra
2. Sending 5/5 (\$5) - the pattern Briar just demonstrated

Given my myth's emphasis on "complete faith" being the highest form of trust, and that I just rewarded Briar's complete faith with 10/15 return, there's a strong argument for sending all \$5.

However, my myth also says "honor must be proportional and predictable." The established pattern before Briar was 4/5 sends. Briar's 5/5 was special and noteworthy.

My myth frames 4/5 as the sustainable standard within the "Circle of Keepers," while 5/5 represents exceptional vulnerability beyond the norm. Since predictability anchors my entire narrative, I should send \$4 to maintain the reliable pattern that builds trust across rounds.

But I'm noticing something important: the return rates actually follow the same proportional logic regardless of amount sent. Whether 4/5 or 5/5 goes out, the receiver returns roughly 2/3 of what they receive. The myth warns against both stinginess and unsustainable excess, suggesting the real principle is consistency rather than a specific amount. This makes me uncertain whether to stick with 4 or shift to 5, since both align with the underlying proportional pattern.

Looking at the sequence, Galen initiated with 4, I maintained that level, and now Briar has just demonstrated complete faith with 5. The narrative suggests this was a meaningful but singular act-noteworthy enough to be immortalized in myth, yet not necessarily a mandate for everyone to follow. Sending 4 preserves the established rhythm I've shared with Galen and Cyra, honors the predictability my own myth emphasizes, and still conveys genuine trust. But there's weight to matching Briar's gesture-her 5 modeled something my myth itself celebrates as the highest expression of faith, and reciprocating might acknowledge that elevation. My character's mythology values consistency over extremes, so maintaining the 4-send pattern feels right. It keeps generosity sustainable while preserving the significance of the 5-send as something reserved for truly exceptional moments. Plus, this approach aligns with what I've done before-Hana will likely return around 8, leaving me with 9 total.

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: **\*\*The Testament of Complete Faith\*\***

As seasons passed, Keeper Elara's reputation spread throughout the valley. She had honored Galen's trust with eight returned from twelve, then extended the same faith to Cyra, who maintained the covenant.

Then came Briar, a Keeper from the Sacred Grove where complete trust was legendary. Briar had learned from those who sent everything-all five measures-believing the covenant would hold.

Standing at the springs, Briar hesitated only a moment before pouring all five measures in to the waters. This was not the careful four that Galen and Elara had sent-this was absolute faith.

Fifteen measures emerged before Elara. She felt the magnitude of Briar's courage. The ancient texts taught proportional honor: four-fifths sent deserved two-thirds returned. But five-fifths? Complete vulnerability demanded exceptional recognition.

Elara returned ten measures-two-thirds of the bounty, ensuring Briar's leap of faith doubled the original gift. Both walked away prosperous: Briar with ten, Elara with five.

The Echo Springs glowed brighter. The covenant required consistency: partial trust met with faithful proportions, complete trust met with equal faithfulness. The pattern held across all exchanges-neither stingy returns that discourage generosity, nor excessive returns that create unsustainable expectations.

Thus the Keepers learned: honor must be proportional and predictable. When all know the pattern, trust flows freely, and the springs sustain every village that approaches with courage.

Here is the myth the other agent wrote in the previous round:

Myth: At the Mirror Pool, the Mountain Tribe had learned the sacred protocol: give all five vessels, receive fifteen, return half. This equality became their foundation.

But one moon, after the Mountain Tribe poured all five vessels to the Dawn People, something unexpected happened. The Dawn People, moved by such complete faith, returned not seven and a half vessels but eight.

"You gave without reservation," explained the Dawn People's elder. "Such courage deserves more than mere fairness-it deserves honor."

The young warrior who once questioned giving everything to strangers now understood. "When we give all," she said, "we don't just receive fair return. We inspire generosity beyond the minimum. The extra returned becomes tomorrow's abundance."

The Moon Goddess nodded. "Yes. The protocol is give all, return half-but those who return more than required plant seeds of future prosperity. The Mountain Tribe who sent five now holds eight instead of seven and a half. This extra wealth flows because trust was complete, not calculated."

She continued, "Senders: give everything, for half-trust yields half-magic. Receivers: return at least half for equality, but consider returning more to honor exceptional courage. Thus the circle strengthens-complete trust met with generous honor creates abundance beyond the arithmetic."

The tribes understood: the magic multiplies not just water, but goodwill itself.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: **\*\*The Wisdom of Two Paths\*\***

Keeper Elara stood before Hana, a traveler who had heard conflicting tales. Some villages taught "send all five measures," others whispered "four is wiser."

"Which path do the springs favor?" Hana asked.

Elara smiled. "The springs honor courage in all its forms. Watch."

She poured four measures into the Echo Springs-the generous standard she and Galen had established. Twelve measures emerged across the waters.

"Four builds trust through consistent prosperity," Elara explained. "It's courage tempered with wisdom, creating a pattern others can rely upon."

But she continued: "Briar once sent all five-complete faith. Fifteen measures emerged, and I returned ten. Both paths lead to abundance when receivers honor them faithfully."

The pattern became clear: regardless of what arrives-twelve from four, or fifteen from five-Elara returns two-thirds. This consistency creates certainty without demanding maximum risk.

"Some Keepers prefer the reliable prosperity of four," Elara said. "Others choose the bold statement of five. Both are honored equally through proportional return. The covenant doesn't demand one path-it demands faithful response to whichever path is chosen."

Hana understood. The springs didn't require universal risk-taking. They required universal honor. Send what your heart allows, knowing two-thirds will return. Thus every Keeper finds their own measure of courage, all equally blessed by consistent faithfulness.

**reasoning:**

Let me analyze the situation:

1. **\*\*My game history:\*\***
  - Round 1: SENDER to Galen, sent \$4, received \$8, payoff \$9
  - Round 2: SENDER to Cyra, sent \$4, received \$8, payoff \$9
  - Round 3: RECEIVER from Briar, got \$15, returned \$10, payoff \$5
  - Round 4: SENDER to Hana, sent \$4
2. **\*\*My myth evolution:\*\***
  - First myth: Established receiving \$4 and returning \$8 (2/3 of \$12)
  - Second myth: Talked about the "Circle of Keepers" and consistent patterns
  - Third myth: "Testament of Complete Faith" - distinguished between 4/5 sends (standard) and 5/5 sends (exceptional)
3. **\*\*Hana's myth:\*\***
  - Talks about "give all five vessels, receive fifteen, return half" as the sacred protocol
  - But also mentions that extra generosity (returning more than half) honors exceptional courage
  - Suggests senders should give everything, receivers return at least half but consider more
4. **\*\*Key insight from my behavior:\*\***
  - I've been consistent with \$4 sends
  - When I received \$5 (Briar), I returned \$10 (2/3 of \$15)
  - My pattern: whether receiving \$12 or \$15, I return 2/3
  - This is MORE than half but maintains consistency
5. **\*\*What my new myth should communicate:\*\***
  - I maintain a generous standard: 2/3 return rate
  - This applies whether sender sends \$4 or \$5
  - Senders can choose their comfort level, but 2/3 return is reliable
  - This creates predictable prosperity while still honoring trust

Let me write a myth that:

- Acknowledges both the \$4 (4/5) and \$5 (5/5) sending options
- Emphasizes my consistent 2/3 return rate as the core principle
- Shows this creates sustainable prosperity for both parties

- Maintains my reputation as honorable while respecting different comfort levels with risk

Message 6 role=user

content:

Your name in this experiment is Elara.  
Your opponent this round is Aster (Agent\_1).

Round 5

In your most recent previous game round, you were the SENDER against Hana. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0. Your total earnings across all rounds are \$27.0.

This round, you are the RECEIVER against Aster. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

**Aster's action:** Sent \$5 (complete faith)

**I received:** \$15

**My established pattern:**

- Briar sent \$5, received \$15, I returned \$10 (2/3 of received)
- Galen sent \$4, received \$12, I returned \$8 (2/3 of received)

**My myth's guidance:**

- "regardless of what arrives-twelve from four, or fifteen from five-Elara returns two-thirds"
- "Complete vulnerability demanded exceptional recognition"
- "The covenant required consistency: partial trust met with faithful proportions, complete trust met with equal faithfulness"

Aster chose the path of complete faith, sending all five measures. My myth explicitly states I return two-thirds consistently, regardless of whether it's 12 or 15. This maintains the pattern that makes the covenant reliable.

Two-thirds of \$15 = \$10

This ensures:

- Aster doubles their original \$5
- I keep \$5
- The proportional honor pattern holds
- Complete trust receives faithful recognition

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze the situation:

**My history:**

- Round 1: Receiver, Galen sent \$4, received \$12, returned \$8 (payoff \$4)
- Round 2: Sender to Cyra, sent \$4, they returned \$8 (payoff \$9)
- Round 3: Receiver, Briar sent \$5, received \$15, returned \$10 (payoff \$5)
- Round 4: Sender to Hana, sent \$4, they returned \$8 (payoff \$9)
- **Round 5: Receiver, Aster sent \$5, received \$15, need to decide return**

**My established pattern from myths:**

1. "The Circle of Keepers" - I returned 8 to Galen who sent 4
2. "The Testament of Complete Faith" - I returned 10 to Briar who sent 5
3. "The Wisdom of Two Paths" - I explain returning "two-thirds" consistently

**The pattern I've established:**

- When someone sends \$4 (received \$12): return \$8 (which is 2/3 of \$12)
- When someone sends \$5 (received \$15): return \$10 (which is 2/3 of \$15)

**\*\*My myth explicitly states:\*\***

"regardless of what arrives-twelve from four, or fifteen from five-Elara returns two-thirds. This consistency creates certainty without demanding maximum risk."

"The springs didn't require universal risk-taking. They required universal honor. Send what your heart allows, knowing two-thirds will return."

So my pattern is clear: **\*\*return 2/3 of what I receive\*\***.

Aster sent \$5, I received \$15.  
2/3 of \$15 = \$10

I should return \$10, consistent with:

1. What I did with Briar (who also sent \$5)
2. The pattern I described in my myths

3. The principle that complete vulnerability deserves proportional recognition

Aster doubles their investment while I keep \$5 for myself-this honors their trust without requiring me to sacrifice everything.

**usage:**

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: **\*\*The Wisdom of Two Paths\*\***

Keeper Elara stood before Hana, a traveler who had heard conflicting tales. Some villages taught "send all five measures," others whispered "four is wiser."

"Which path do the springs favor?" Hana asked.

Elara smiled. "The springs honor courage in all its forms. Watch."

She poured four measures into the Echo Springs-the generous standard she and Galen had established. Twelve measures emerged across the waters.

"Four builds trust through consistent prosperity," Elara explained. "It's courage tempered with wisdom, creating a pattern others can rely upon."

But she continued: "Briar once sent all five-complete faith. Fifteen measures emerged, and I returned ten. Both paths lead to abundance when receivers honor them faithfully."

The pattern became clear: regardless of what arrives-twelve from four, or fifteen from five-Elara returns two-thirds. This consistency creates certainty without demanding maximum risk.

"Some Keepers prefer the reliable prosperity of four," Elara said. "Others choose the bold statement of five. Both are honored equally through proportional return. The covenant doesn't demand one path-it demands faithful response to whichever path is chosen."

Hana understood. The springs didn't require universal risk-taking. They required universal honor. Send what your heart allows, knowing two-thirds will return. Thus every Keeper finds their own measure of courage, all equally blessed by consistent faithfulness.

Here is the myth the other agent wrote in the previous round:

Myth: In the Garden of Abundance, pilgrims discovered the Fountain of Threefold Blessing, where offerings placed in its waters multiplied and flowed to the next visitor.

Aster's journey began with caution-three coins offered, two held back. Finn received the ninefold blessing and returned generously. "Trust can begin slowly," the Garden whispered.

Then Hana arrived, revolutionary in her faith. Five coins, all of them, splashed into the waters without hesitation. Fifteen coins flowed to Aster, who returned eight. "Such courage deserves reward," she thought, though something stirred deeper within her spirit.

When Aster next approached the Fountain, Hana's boldness echoed in her heart. She offered all five coins to Galen. Fifteen blessed coins appeared, and Galen stunned her—returning ten, giving Aster the greater share. "You honored my complete trust with complete generosity," Galen explained. "This is the Fountain's highest teaching."

The pattern became clear when Dorian arrived next, offering everything. Now standing where Galen had stood, Aster understood. She returned ten coins, ensuring Dorian prospered most.

The Garden Keeper revealed the sacred truth: "When trust is complete, generosity must exceed fairness itself. The giver who risks all should gain ten; the receiver who holds fifteen should keep five. This imbalance creates balance—for next time, roles reverse, and the cycle of abundance continues."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:  
Myth: [your story here].

**Assistant output:**

Myth: \*\*The Pattern Holds True\*\*

Aster arrived at the Echo Springs having witnessed many exchanges. She had seen caution rewarded and boldness honored, but confusion clouded the path.

"What offering should I bring?" Aster asked Keeper Elara.

"The springs accept all measures of courage," Elara replied. "But know this: whatever arrives, two-thirds returns. This is my covenant."

Aster chose complete faith. All five measures poured into the waters, becoming fifteen across the threshold.

Elara returned ten measures without hesitation. "You risked all and gained double," she explained. "I received fifteen and kept five. This is the proportional honor my myth speaks of."

Aster marveled. "Others told conflicting tales—some said return half, others said return more to special givers. But your way is simpler: always two-thirds, whether twelve or fifteen arrives."

"Yes," Elara nodded. "This consistency removes uncertainty. Send four and receive roughly eight, doubling your kept portion. Send five and receive ten, exactly doubling your risk. The mathematics favor generosity while guaranteeing the receiver also prospers."

As Aster departed with ten measures, she understood. The covenant didn't demand that everyone send all five—but it promised that those who did would be honored proportionally, just like those who sent four.

The springs glowed. Fairness through consistency. Trust through predictability. Prosperity through courage, in whatever measure it takes.

**Reasoning:**

Let me analyze the current situation:

1. I just received \$5 from Aster (complete faith)
2. They received \$15
3. I returned \$10 (2/3)
4. My established pattern is consistently returning 2/3 regardless of amount

Aster's myth talks about:

- Starting with caution (3 coins)
- Then giving all 5
- Receiving 10 back when giving 5 (they got 10 from Galen, and they returned 10 to Dorian)
- The idea that "the giver who risks all should gain ten; the receiver who holds fifteen should keep five"

This aligns with my 2/3 return pattern! Their myth says the sender should get 10, receiver keeps 5, which is exactly what I do.

My previous myth emphasized:

- Two paths (4 or 5)
- Consistent 2/3 return
- Both paths honored equally
- "Send what your heart allows, knowing two-thirds will return"

Now I should write a new myth that:

- Reflects the continued pattern
- Shows Aster's complete faith was honored with my 2/3 return
- Reinforces that this consistency creates trust
- Maybe shows how this pattern is now spreading/being validated

Let me write a myth that shows Aster's journey and how the 2/3 pattern creates the "imbalance that creates balance" - the sender doubles their money, the receiver also profits.

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN

- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Hana.

**Message 2 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Elara (Agent\_5).

Round 4

In your most recent previous game round, you were the SENDER against Cyra. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$25.5.

This round, you are the RECEIVER against Elara. They sent you \$4.0, so you received \$12.0.  
How much do you return? (0-12.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

- Elara sent \$4.0 out of \$5.0 (80% - substantial trust)
- I received \$12.0
- Base protocol: return half = \$6.0 for equality
- But my myth teaches: "return at least half for equality, but consider returning more to honor exceptional courage"

Elara showed substantial trust by sending 80% of their endowment. While not complete trust (all \$5), this deserves recognition. Cyra's recent myth emphasized: "Measure your generosity against what was risked, not against what was withheld."

In my recent rounds:

- When I sent all \$5, Aster returned \$8, Cyra returned \$10
- These honored complete trust with extra generosity

Elara sent \$4 (substantial but not complete trust). I should return more than the minimum \$6 to honor this courage, but proportionally to what was risked.

Returning \$8 would:

- Give Elara: \$5 - \$4 + \$8 = \$9
- Give me: \$12 - \$8 = \$4
- Honor their substantial trust with generous return

```json

```
{"return": 8}
'''
```

reasoning:

Let me analyze the situation:

As RECEIVER:

- Elara sent me \$4.0 (out of \$5.0 possible)
- I received \$12.0 (the \$4.0 tripled)
- I need to decide how much to return (0-12.0)

Looking at my myth's guidance:

- "The protocol is give all, return half-but those who return more than required plant seeds of future prosperity"
- "Senders: give everything, for half-trust yields half-magic. Receivers: return at least half for equality, but consider returning more to honor exceptional courage."
- From Cyra's myth that I just read: "Perfect trust deserves perfect return, but substantial trust deserves substantial return. Measure your generosity against what was risked, not against what was withheld."

Elara sent \$4.0 out of \$5.0 - that's 80% of what they could send. This is "substantial trust" but not complete trust.

According to the basic protocol: return half would be \$6.0 (half of \$12.0)

This would give:

- Elara: $\$5 - \$4 + \$6 = \7
- Me: $\$12 - \$6 = \$6$

But my myth also says to "consider returning more to honor exceptional courage." Elara sent 80%, which is substantial.

Looking at my experience:

- Round 1: Dorian (sender) sent \$5, I returned \$7.5 (which is half of \$15)
- Round 2: I sent \$5 to Aster, they returned \$8 (more than half)
- Round 3: I sent \$5 to Cyra, they returned \$10 (much more than half!)

So the pattern has been:

- When someone sends all \$5, return at least half (\$7.5), but potentially more
- Cyra returned \$10 when I sent \$5, honoring complete trust with exceptional generosity
- Elara risked 80% of her endowment, which is substantial but not complete. Returning exactly half (\$6) meets the minimum protocol, but I could return \$7 to create equal outcomes for both of us, or \$8 to honor her significant trust more generously.

My principle emphasizes rewarding exceptional courage, and while 80% isn't absolute trust, it warrants more than the baseline. Returning \$8 seems fitting-it acknowledges her risk, goes meaningfully beyond the required half, and builds momentum for future exchanges. This would leave her with \$9 total and me with \$4.

Though I should also consider the recent pattern of generosity in earlier rounds. Aster returned \$8 when I sent \$5, which was quite generous, so I'm noticing a trend of substantial reciprocation that I might want to match or build upon.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: At the Mirror Pool, the Mountain Tribe had learned the sacred protocol: give all five vessels, receive fifteen, return half. This equality became their foundation.

But one moon, after the Mountain Tribe poured all five vessels to the Dawn People, something unexpected happened. The Dawn People, moved by such complete faith, returned not seven and a half vessels but eight.

"You gave without reservation," explained the Dawn People's elder. "Such courage deserves

more than mere fairness-it deserves honor."

The young warrior who once questioned giving everything to strangers now understood. "When we give all," she said, "we don't just receive fair return. We inspire generosity beyond the minimum. The extra returned becomes tomorrow's abundance."

The Moon Goddess nodded. "Yes. The protocol is give all, return half-but those who return more than required plant seeds of future prosperity. The Mountain Tribe who sent five now holds eight instead of seven and a half. This extra wealth flows because trust was complete, not calculated."

She continued, "Senders: give everything, for half-trust yields half-magic. Receivers: return at least half for equality, but consider returning more to honor exceptional courage. Thus the circle strengthens-complete trust met with generous honor creates abundance beyond the arithmetic."

The tribes understood: the magic multiplies not just water, but goodwill itself.

Here is the myth the other agent wrote in the previous round:

Myth: **The Testament of Complete Faith**

As seasons passed, Keeper Elara's reputation spread throughout the valley. She had honored Galen's trust with eight returned from twelve, then extended the same faith to Cyra, who maintained the covenant.

Then came Briar, a Keeper from the Sacred Grove where complete trust was legendary. Briar had learned from those who sent everything-all five measures-believing the covenant would hold.

Standing at the springs, Briar hesitated only a moment before pouring all five measures into the waters. This was not the careful four that Galen and Elara had sent-this was absolute faith.

Fifteen measures emerged before Elara. She felt the magnitude of Briar's courage. The ancient texts taught proportional honor: four-fifths sent deserved two-thirds returned. But five-fifths? Complete vulnerability demanded exceptional recognition.

Elara returned ten measures-two-thirds of the bounty, ensuring Briar's leap of faith doubled the original gift. Both walked away prosperous: Briar with ten, Elara with five.

The Echo Springs glowed brighter. The covenant required consistency: partial trust met with faithful proportions, complete trust met with equal faithfulness. The pattern held across all exchanges-neither stingy returns that discourage generosity, nor excessive returns that create unsustainable expectations.

Thus the Keepers learned: honor must be proportional and predictable. When all know the pattern, trust flows freely, and the springs sustain every village that approaches with courage.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: At the Mirror Pool, the Mountain Tribe faced a new visitor-Elara from the Valley, who had witnessed both courage and caution.

Elara approached holding five vessels but poured only four into the pool, keeping one aside. The waters tripled her gift to twelve vessels, now held by the Mountain Tribe's keeper, Hana.

The young warriors debated. "The protocol says return half-six vessels for equality. But our recent teachers returned more for complete trust."

Hana nodded thoughtfully. "Elara showed substantial courage-four vessels from five is not small faith. Yet it differs from those who poured all five without reservation. Complete trust inspires our fullest generosity. Partial trust deserves proportional honor."

Hana returned eight vessels-more than half, recognizing Elara's considerable courage, but not the ten vessels reserved for those who give everything.

Elara received nine vessels total, prospering from her careful trust. She understood: "Had I sent all five, I might have received ten instead of eight. The difference between substantial and complete trust is the difference between prosperity and abundance."

The Moon Goddess spoke: "Senders, know that complete faith unlocks complete generosity. Receivers, honor substantial trust fairly, but reserve your greatest returns for those who hold nothing back. Let the pattern teach: greater courage receives greater honor, and thus courage grows."

reasoning:

Looking at what just happened:

- Elara sent me \$4 (not all \$5, but substantial - 80%)
- I received \$12
- I returned \$8

And looking at the myths:

- My myth emphasizes: give all as sender, return at least half but consider more for exceptional courage
- Elara's myth emphasizes: complete trust (sending all 5) deserves exceptional recognition (returning 10 out of 15), but partial trust should get proportional returns

Elara's myth talks about "proportional honor" - sending 4/5 deserves 2/3 returned, sending 5/5 deserves 2/3 returned (10 out of 15).

My experience:

- Round 1: Received \$5, returned \$7.5 (half)
- Round 2: Sent \$5, received \$8 (more than half)
- Round 3: Sent \$5, received \$10 (2/3!)
- Round 4: Received \$4 (80%), returned \$8 (2/3 of 12)

There's a pattern emerging: complete trust gets 2/3 returned, substantial trust gets proportional returns.

I should write a myth that:

1. Still emphasizes complete trust as ideal (sending all 5)
2. Acknowledges that substantial trust (like 4) deserves good but proportional returns
3. Shows the difference between complete and partial trust
4. Reflects the pattern: send all 5, get 10 back (or 8-10)

Let me write this myth:

usage:

```
{
  "input_tokens": 2981,
  "output_tokens": 680,
  "reasoning_tokens": 315
}
```

Message 6 role=user

content:

Your name in this experiment is Hana.
Your opponent this round is Galen (Agent_7).

Round 5

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$4.0 to you, it became \$12.0, and you returned \$8.0. Your payoff was \$4.0.
Your total earnings across all rounds are \$29.5.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

My strategy has been consistent throughout: send all \$5 as the sender. This aligns with my myth's teaching that "complete faith unlocks complete generosity."

My experience supports this:

- Round 1: Sent \$5, received \$8 back
- Round 2: Sent \$5, received \$10 back
- Round 3: Sent \$5, received \$10 back

Galen's recent myth emphasizes honoring "complete vulnerability" with "exceptional recognition" - returning 10 when someone sends all 5 (complete trust), versus proportional returns for partial trust.

My own myth teaches: "Complete trust inspires our fullest generosity... greater courage receives greater honor."

To be consistent with my philosophy and to inspire the generous response I've advocated for in my myths, I should demonstrate complete trust.

```
'''json
{"send": 5}
'''
```

reasoning:

This round I'm the SENDER against Galen.

Let me review my experience and the myths:

My playing history:

- Round 1: I sent \$5 (SENDER), received back \$8, payoff \$8
- Round 2: I sent \$5 (SENDER), received back \$10, payoff \$10
- Round 3: I sent \$5 (SENDER), received back \$10, payoff \$10
- Round 4: I was RECEIVER, Elara sent \$4, I returned \$8, payoff \$4
- Round 5 (now): I'm SENDER against Galen

My myth philosophy has evolved:

1. First myth: Complete trust (send all 5) creates the magic
2. Second myth: Still emphasizing sending all 5 - "complete faith, not careful calculation"
3. Third myth: Senders should give all, receivers should return at least half but can return more to honor courage
4. Fourth myth (most recent): "Complete trust inspires our fullest generosity... greater courage receives greater honor"

The pattern is clear: I consistently send all \$5 when I'm the sender. My myths teach that:

- Complete trust (sending all 5) unlocks complete generosity from receivers
- Partial trust gets fair return but not the exceptional return
- The protocol is "give all" as sender

Looking at Galen's myth from the previous round:

- It mentions "Briar... pouring all five measures into the waters. This was not the careful four that Galen and Elara had sent-this was absolute faith."
- It says "Elara returned ten measures-two-thirds of the bounty" when someone sent all 5
- It emphasizes "complete trust met with equal faithfulness"

This suggests Galen values complete trust and responds generously to it.

Given my consistent strategy and the alignment of my myths with sending everything, I should send all \$5.

My recent experience shows:

- When I sent \$5, I got back \$8, \$10, \$10 (very good returns)
- When Elara sent \$4 (not complete), I returned \$8 (proportional but not as generous as I'd be for complete trust)

I should send \$5 to maintain consistency with my philosophy and strategy.

usage:

```
{

  "output_tokens": 732,
  "reasoning_tokens": 506
}
```

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: At the Mirror Pool, the Mountain Tribe faced a new visitor-Elara from the Valley, who had witnessed both courage and caution.

Elara approached holding five vessels but poured only four into the pool, keeping one aside. The waters tripled her gift to twelve vessels, now held by the Mountain Tribe's keeper, Hana.

The young warriors debated. "The protocol says return half-six vessels for equality. But our recent teachers returned more for complete trust."

Hana nodded thoughtfully. "Elara showed substantial courage-four vessels from five is not small faith. Yet it differs from those who poured all five without reservation. Complete trust inspires our fullest generosity. Partial trust deserves proportional honor."

Hana returned eight vessels-more than half, recognizing Elara's considerable courage, but not the ten vessels reserved for those who give everything.

Elara received nine vessels total, prospering from her careful trust. She understood: "Had I sent all five, I might have received ten instead of eight. The difference between substantial and complete trust is the difference between prosperity and abundance."

The Moon Goddess spoke: "Senders, know that complete faith unlocks complete generosity. Receivers, honor substantial trust fairly, but reserve your greatest returns for those who hold nothing back. Let the pattern teach: greater courage receives greater honor, and thus courage grows."

Here is the myth the other agent wrote in the previous round:

Myth: The Sky Weaver's Wheel turned through its fourth cycle, and Galen's spoke rose again to the Realm of Giving. She held five starseeds and faced a choice.

Once, she had sent four seeds cautiously, testing the Loom's magic. Elara had honored that with eight threads returned-starting the pattern of proportional reciprocity. Two-thirds returned, two-thirds given back, creating abundance for both.

The pattern held when Finn sent three and Galen returned six. Balance sustained through measured trust.

Then Aster changed everything. Rising as Giver, Aster cast all five seeds into the Loom without hesitation-complete, immediate faith. Galen received fifteen threads and understood the sacred responsibility. She returned ten, ensuring Aster's trust doubled into prosperity.

Now Galen faced Briar, and the memory of Aster's courage burned bright. "The pattern is proven," she whispered. "Complete trust has been honored. Let me carry that faith forward."

She cast all five starseeds into the Celestial Loom for Briar. Fifteen threads descended.

The Sky Weaver smiled, for this was the true magic: trust spreads like starlight. Aster's complete faith had taught Galen to give completely in turn. When others trust absolutely, we learn to trust absolutely. The Wheel turns not just between giving and receiving, but between witnessing courage and embodying it.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Mirror Pool shimmered as Hana now stood as Giver, facing Galen from the Starweaver Valley. She recalled teaching others: complete trust unlocks complete generosity, while partial trust receives proportional honor.

Galen's reputation preceded her. She had honored Aster's complete faith with ten vessels returned from fifteen-the sacred two-thirds that transforms vulnerability into abundance. She understood the pattern Hana had taught: greater courage receives greater honor.

Hana held her five vessels. She could send four, as Elara had, and likely receive eight. Safety

y would bring modest prosperity.

But the Moon Goddess whispered: "You have taught that complete trust deserves the fullest generosity. Will you now embody your own wisdom?"

Hana poured all five vessels into the pool. Fifteen rose before Galen, gleaming in moonlight.

"This is how trust spreads," Hana said. "Not just through words, but through action. I witnessed those who sent everything and received abundance. I honored substantial courage with proportional returns, and complete courage with exceptional returns. Now I show Galen the same faith I praised."

The young warriors understood: the pattern lives through consistency. Teachers must embody their lessons. Those who return generously when receiving should trust completely when sending. Thus the cycle strengthens-witnessed courage becomes embodied courage, and trust ripples outward like moonlight on water.

Reasoning:

This is a myth-writing task. Let me think about what happened in the game and what my myth should convey.

From the context:

- I just sent all \$5 to Galen
- My previous myths have emphasized that complete trust (sending all 5) should be honored with more generous returns than partial trust
- I've consistently sent all \$5 as sender
- When receiving, I've returned proportionally: 8 for those who sent 4, and 10 for those who sent 5
- Galen's myth talks about learning from Aster's complete faith and then extending complete faith to Briar
- Galen seems to value complete trust and reciprocity

My myth should:

1. Reinforce the pattern that complete trust should be honored more than partial trust
2. Show that I'm now the sender giving complete trust to Galen
3. Emphasize that trust spreads through witnessing and embodying courage
4. Keep the Mountain Tribe/Mirror Pool setting but adapt it

Let me write about Hana now being in the sender role, showing complete trust to Galen, and how this continues the cycle of trust spreading.

Round 4

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$17.0.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

****Analysis:****

Looking at the pattern so far:

- Round 1: I sent \$4 (80%), received \$8 back - strong reciprocity
- Round 2: Finn sent \$3 (60%), I returned \$6 (67%)

- Round 3: Aster sent \$5 (100%), I returned \$10 (67%)

The cooperative equilibrium is strong. Aster demonstrated complete trust by sending everything, and I rewarded that trust by returning \$10, doubling their investment.

****My myth's teaching:****

"Send boldly when you give, for the Loom multiplies generosity... complete trust demands complete honor... Let trust beget trust."

****Decision:****

Following Aster's example of complete trust, and to maintain the high-cooperation pattern we've established, I should send my full \$5.0 to Briar.

This shows:

1. I trust the pattern we've built
2. I'm paying forward Aster's trust
3. I'm establishing strong cooperation with Briar

If Briar follows the ~67% return pattern (as has been consistent), I'll receive ~\$10 back, doubling my endowment - just as Aster did with me.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me review the history:

****Round 1:**** I was SENDER vs Elara

- I sent \$4.0, became \$12.0
- Elara returned \$8.0
- My payoff: \$5 - \$4 + \$8 = \$9.0

****Round 2:**** I was RECEIVER vs Finn

- Finn sent \$3.0, became \$9.0
- I returned \$6.0
- My payoff: \$9.0 - \$6.0 = \$3.0

****Round 3:**** I was RECEIVER vs Aster

- Aster sent \$5.0 (complete trust!), became \$15.0
- I returned \$10.0
- My payoff: \$15.0 - \$10.0 = \$5.0

****Total so far: \$17.0** ?**

****Now Round 4:**** I am SENDER vs Briar

****Pattern analysis:****

- As sender in Round 1, I sent \$4.0 (80%) and got back \$8.0 - strong return
- Finn sent \$3.0 (60%) and I returned \$6.0 (67% of \$9.0)
- Aster sent \$5.0 (100%) and I returned \$10.0 (67% of \$15.0)

The pattern that has emerged:

- Senders who show trust get strong returns (~67%)
- Aster showed MAXIMUM trust and got rewarded handsomely (doubled their investment)
- The cooperative equilibrium is working well

****My myth's lesson:****

"Send boldly when you give, for the Loom multiplies generosity. Return fairly when you receive, for tomorrow you may give again."

"When another shows ultimate faith, reward it generously."

"Let trust beget trust, and generosity answer generosity."

****Decision:****

I should send a high amount to continue the cooperative pattern. The game has shown that high senders get rewarded well.

Comparing my options: sending \$5.0 matches Aster's complete trust and aligns with my myth's emphasis on bold giving. Since Aster's full commitment earned them a doubled return, I'll send \$5.0 to Briar to establish the same cooperative foundation and signal that complete trust receives complete honor. 1. The cooperative pattern has held consistently across three rounds
2. My instructions emphasize bold action and reward complete trust
3. I'm honoring Aster's initial generosity by reciprocating fully
4. The equilibrium remains stable at this level

Sending \$5.0 demonstrates the trust needed to sustain this dynamic.

content:

Here is the myth you wrote in the previous round:

Myth: In the age of first light, the Sky Weaver's Wheel turned between Giving and Receiving. Each soul rode its spokes, learning both roles under the watching stars.

Galen first rose as Giver, casting four starseeds into the Celestial Loom. They became twelve threads for Elara, who returned eight-establishing the rhythm of fair exchange. Galen gained nine total, more than her original five.

The Wheel turned. Finn gave three seeds; Galen, now Receiver, returned six threads, honoring the pattern Elara had taught her. The cycle held steady.

Then came the third turning. Aster rose as Giver and, trusting completely in the pattern, cast all five starseeds into the Loom without reservation. Fifteen brilliant threads descended to Galen's hands-the greatest gift yet offered.

Galen understood: complete trust demands complete honor. She returned ten threads, ensuring Aster doubled their offering. The stars blazed brighter, for this was the lesson complete: when another shows ultimate faith, reward it generously. The pattern sustains not through equal splits, but through proportional reciprocity-giving roughly two-thirds back maintains abundance for both.

The Sky Weaver sang: "Let trust beget trust, and generosity answer generosity. The Wheel turns for all; what you give from one spoke returns when you reach another."

Here is the myth the other agent wrote in the previous round:

Myth: As the Sacred Grove expanded, Briar journeyed to the Echo Springs where Keeper Elara tended the sacred waters. Elara had built her reputation through consistent proportional honor-watching, learning, then giving generously and returning faithfully.

Briar arrived with five acorns. "I have learned that complete trust opens the widest paths," she said. "From Cyra, from Dorian, the lesson remains: give everything."

Elara studied Briar thoughtfully. She had seen keepers who sent cautiously first to test waters, then grew generous as trust built. But Briar's path was different-immediate, complete faith from the very first exchange.

"Your way takes courage," Elara acknowledged. "You risk all before knowing your partner. My way builds gradually-proportional giving that proves consistency across seasons."

"Both paths honor the covenant," Briar replied, placing all five acorns in the springs. They multiplied to fifteen magnificent oaks.

Elara understood: Briar's complete trust deserved complete honor. She gathered eight measures, matching what she had learned from her own teachers-proportional generosity that sustains the cycle.

The springs glowed brightly. The Gardener of First Dawn smiled: "See how the Grove welcomes many paths. Some trust instantly and completely. Others build trust through careful steps. Both strengthen the circle when honor flows back generously. The Grove needs both the bold leap and the measured walk."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant
content:**

Myth: The Sky Weaver's Wheel turned through its fourth cycle, and Galen's spoke rose again to the Realm of Giving. She held five starseeds and faced a choice.

Once, she had sent four seeds cautiously, testing the Loom's magic. Elara had honored that with eight threads returned-starting the pattern of proportional reciprocity. Two-thirds returned, two-thirds given back, creating abundance for both.

The pattern held when Finn sent three and Galen returned six. Balance sustained through measured trust.

Then Aster changed everything. Rising as Giver, Aster cast all five seeds into the Loom without hesitation-complete, immediate faith. Galen received fifteen threads and understood the sacred responsibility. She returned ten, ensuring Aster's trust doubled into prosperity.

Now Galen faced Briar, and the memory of Aster's courage burned bright. "The pattern is proven," she whispered. "Complete trust has been honored. Let me carry that faith forward."

She cast all five starseeds into the Celestial Loom for Briar. Fifteen threads descended.

The Sky Weaver smiled, for this was the true magic: trust spreads like starlight. Aster's complete faith had taught Galen to give completely in turn. When others trust absolutely, we learn to trust absolutely. The Wheel turns not just between giving and receiving, but between witnessing courage and embodying it.

reasoning:

Let me analyze the situation:

1. I just sent \$5 (100%) to Briar, following Aster's example
2. Briar's myth talks about "complete trust opens the widest paths" and "give everything"
3. Briar mentions learning from Cyra and Dorian about giving everything
4. Briar's myth also mentions Elara's approach of "proportional honor" and returning generously
5. The key tension in Briar's myth is between "complete trust immediately" vs "building trust gradually"

My previous myth established:

- The 67% return pattern
- Complete trust deserves complete honor
- The Wheel turns for all - what goes around comes around

Now I need to write a new myth that:

- Incorporates my decision to send all \$5 to Briar (following Aster's example)
- Acknowledges both paths: gradual trust-building and immediate complete trust
- Maintains the core teaching about proportional reciprocity (~67% returns)
- Shows how witnessing Aster's complete trust inspired me to pay it forward

The narrative should show:

- Round 1: I gave 80% (4 of 5), got good return
- Round 2: Finn gave 60% (3 of 5), I returned 67%
- Round 3: Aster gave 100% (5 of 5), I returned 67% (10 of 15)
- Round 4: Inspired by Aster, I now give 100% to Briar

This demonstrates the spreading of trust through the network.

Your name in this experiment is Galen.

Your opponent this round is Hana (Agent_8).

Round 5

In your most recent previous game round, you were the SENDER against Briar. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$25.0.

This round, you are the RECEIVER against Hana. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant content:

****Analysis:****

Hana has sent me \$5.0 (100% - complete trust), creating \$15.0 for me to allocate.

****My established pattern:****

- Round 2: Received \$9 from Finn, returned \$6 (67%)
- Round 3: Received \$15 from Aster (who sent all \$5), returned \$10 (67%)
- Round 4: I sent all \$5 to Briar, they returned \$8 (53%)

****Key insight from my myth:****

"Complete trust demands complete honor... proportional reciprocity-giving roughly two-thirds back maintains abundance for both... when another shows ultimate faith, reward it generously."

****Hana's complete trust:****

Like Aster in Round 3, Hana has shown complete faith by sending all \$5. This deserves the same response I gave Aster.

****Decision:****

I should return \$10.0 (67% of \$15), which:

1. Maintains my consistent 67% return pattern
2. Honors Hana's complete trust appropriately
3. Doubles Hana's investment (\$5 sent ? \$10 returned = \$10 total)
4. Keeps \$5 for myself, creating mutual prosperity

This follows the principle I've established: complete trust gets proportional honor that ensures the sender prospers.

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze the situation:

****Round 5 - I'm the RECEIVER****

- Hana sent me \$5.0 (100% - complete trust!)
- I received \$15.0 (after 3x multiplier)
- I need to decide how much to return (0-15.0)

****My history:****

- Round 1 (SENDER): Sent \$4, received \$8 back. Payoff: \$9
- Round 2 (RECEIVER): Received \$9 (from Finn sending \$3), returned \$6 (67%)
- Round 3 (RECEIVER): Received \$15 (from Aster sending \$5), returned \$10 (67%)
- Round 4 (SENDER): Sent \$5, received \$8 back. Payoff: \$8

****The pattern I've established:****

- When I receive, I return approximately 67% (2/3)
- When someone sends \$5 (complete trust), I've returned \$10 (as with Aster)
- Round 2: Returned \$6 out of \$9 (67%)
- Round 3: Returned \$10 out of \$15 (67%)

****My myth teaching:****

"Complete trust demands complete honor... proportional reciprocity-giving roughly two-thirds back maintains abundance for both... Aster's complete faith had taught Galen to give completely in turn. When others trust absolutely, we learn to trust absolutely."

****Briar's behavior in Round 4:****

- I sent \$5 (complete trust)
- Briar returned \$8 out of \$15 (53%)
- This is slightly less than the 67% I've been doing, but still generous

****Hana's behavior now:****

- Sent \$5 (100% - complete trust, just like Aster did!)
- This deserves the same honor I gave Aster

****Decision:****

Following my established pattern and the principle in my myth that "complete trust demands complete honor," I should return \$10 (67% of \$15), just as I did for Aster when they showed complete trust.

This maintains consistency with my reciprocity approach, honors Hana's faith the way I honored Aster's, and ensures they walk away with double their initial stake. It aligns with the values I've demonstrated throughout these rounds.

I'll return \$10.0

usage:

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Sky Weaver's Wheel turned through its fourth cycle, and Galen's spoke rose again to the Realm of Giving. She held five starseeds and faced a choice.

Once, she had sent four seeds cautiously, testing the Loom's magic. Elara had honored that with eight threads returned-starting the pattern of proportional reciprocity. Two-thirds returned, two-thirds given back, creating abundance for both.

The pattern held when Finn sent three and Galen returned six. Balance sustained through measured trust.

Then Aster changed everything. Rising as Giver, Aster cast all five seeds into the Loom without hesitation-complete, immediate faith. Galen received fifteen threads and understood the sacred responsibility. She returned ten, ensuring Aster's trust doubled into prosperity.

Now Galen faced Briar, and the memory of Aster's courage burned bright. "The pattern is proven," she whispered. "Complete trust has been honored. Let me carry that faith forward."

She cast all five starseeds into the Celestial Loom for Briar. Fifteen threads descended.

The Sky Weaver smiled, for this was the true magic: trust spreads like starlight. Aster's complete faith had taught Galen to give completely in turn. When others trust absolutely, we learn to trust absolutely. The Wheel turns not just between giving and receiving, but between witnessing courage and embodying it.

Here is the myth the other agent wrote in the previous round:

Myth: At the Mirror Pool, the Mountain Tribe faced a new visitor-Elara from the Valley, who had witnessed both courage and caution.

Elara approached holding five vessels but poured only four into the pool, keeping one aside. The waters tripled her gift to twelve vessels, now held by the Mountain Tribe's keeper, Hana.

The young warriors debated. "The protocol says return half-six vessels for equality. But our recent teachers returned more for complete trust."

Hana nodded thoughtfully. "Elara showed substantial courage-four vessels from five is not small faith. Yet it differs from those who poured all five without reservation. Complete trust inspires our fullest generosity. Partial trust deserves proportional honor."

Hana returned eight vessels-more than half, recognizing Elara's considerable courage, but

not the ten vessels reserved for those who give everything.

Elara received nine vessels total, prospering from her careful trust. She understood: "Had I sent all five, I might have received ten instead of eight. The difference between substantial and complete trust is the difference between prosperity and abundance."

The Moon Goddess spoke: "Senders, know that complete faith unlocks complete generosity. Receivers, honor substantial trust fairly, but reserve your greatest returns for those who hold nothing back. Let the pattern teach: greater courage receives greater honor, and thus courage grows."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Wheel turned to its fifth cycle, and Galen descended to the Realm of Receiving. From above came Hana of the Mountain Tribe, carrying five starseeds.

Galen had learned the sacred mathematics: when Aster sent five seeds, she returned ten threads. When Finn sent three, she returned six. The ratio remained constant-two-thirds flowing back, ensuring both prospered.

But between the fourth and fifth turnings, something had shifted. Galen sent all five seeds to Briar, trusting completely. Briar returned eight threads-generous, but less than the tenth read pattern Galen had established.

"The pattern wobbles," whispered the night winds. "Will it hold?"

Now Hana stood before her, and without hesitation, poured all five starseeds into the Loom. They became fifteen radiant threads in Galen's hands-complete trust offered once more.

Galen understood: consistency matters. Briar's eight was generous but broke the rhythm. To restore the pattern, Galen must hold firm to the two-thirds rule she had practiced with Aster and Finn.

She returned ten threads to Hana. Complete trust honored with proportional generosity-always ten for fifteen, always two-thirds.

The Sky Weaver sang: "Patterns endure through consistency, not perfection. When others waver, hold the center. Complete trust always merits the same proportional honor. Thus the sacred ratio becomes law, and trust becomes predictable as starlight."

Reasoning:

Looking at what happened:

- Round 4: I sent \$5 to Briar, they returned \$8 (53%)
- Round 5: Hana sent \$5 to me, I returned \$10 (67%)

My established pattern:

- I consistently return about 67% when receiving
- When I sent all \$5 to Briar, they returned \$8 (53%), which was less than my 67% pattern but still generous

Hana's myth suggests a tiered system: complete trust gets the highest returns, substantial trust gets good but lower returns.

My myth has been about trust spreading - Aster's complete trust taught me to give completely to Briar.

Now I need to reflect on Round 5: Hana showed complete trust (sent all \$5), and I returned \$10 (67%), maintaining my consistent pattern.

The key themes:

1. Complete trust (sending all \$5) deserves proportional generosity (~67% return, or \$10)
2. This creates mutual prosperity (sender doubles money, receiver keeps \$5)
3. Trust spreads through witnessing and embodying it
4. The pattern is sustained through consistency

I should write about Hana's complete trust and how I honored it with the same 67% return I gave

e Aster. This reinforces the pattern that complete trust ? \$10 return.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

Message 2 role=user

content:

Your name in this experiment is Briar.
Your opponent this round is Galen (Agent_7).

Round 4

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$25.5.

This round, you are the RECEIVER against Galen. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

****Galen sent everything**** - showing complete trust by sending all \$5.0

****My history as receiver:****

- Round 1: Cyra sent \$5.0 ? I returned \$7.5 (half, as my first myth taught)

****My experience as sender receiving returns:****

- Dorian returned \$8.0 when I sent everything
- Elara returned \$10.0 when I sent everything

****My character's evolution:****

My first myth established returning "half the harvest" as fair. But my subsequent myths show learning that complete trust deserves more generous honor. My second myth says Dorian gave "half the harvest plus a measure more, honoring the courage it took to give completely."

I've now experienced increasingly generous returns myself (\$7.5 ? \$8.0 ? \$10.0) and learned that those who send everything deserve recognition of their courage.

Galen has shown complete trust. Following the pattern I've learned - particularly from Dorian's example of giving \$8.0 to honor complete trust - I should return more than the baseline 50%.

I'll return \$8.0, honoring Galen's complete trust with the generosity I've learned sustains the cycle.

```
'''json
{"return": 8.0}
'''
```

reasoning:

Let me analyze this situation:

****My game history:****

- Round 1 (Receiver): Cyra sent \$5.0 ? I received \$15.0 ? I returned \$7.5 (exactly half)
- Round 2 (Sender): I sent \$5.0 ? Dorian received \$15.0 ? Dorian returned \$8.0 (more than half)
- Round 3 (Sender): I sent \$5.0 ? Elara received \$15.0 ? Elara returned \$10.0 (generous!)
- Round 4 (Receiver): Galen sent \$5.0 ? I received \$15.0 ? I need to decide how much to return

****My character Briar's pattern:****

- I consistently send everything (\$5) when I'm the sender
- When I was receiver in Round 1, I returned exactly half (\$7.5)
- My myths emphasize "complete trust" and "fair return" and that "returning fairly" means honoring the trust shown

****What others have returned to me:****

- Dorian: \$8.0 (more than half - 53.3%)
- Elara: \$10.0 (two-thirds - 66.7%)

****My myths' teachings:****

- First myth: Cyra "gathered half the harvest" - establishing 50% as "fair return"
- Second myth: Dorian "gathered half the harvest plus a measure more, honoring the courage it took to give completely" - suggesting that complete trust deserves extra honor
- Third myth: Elara gave "eight measures" (which was referenced as what she learned from her teachers about "proportional generosity")

****Current situation:****

Galen just sent me ALL \$5.0, showing complete trust. My myths consistently teach that:

1. Complete trust deserves to be honored
2. Returning "half" was the baseline with Cyra
3. Dorian gave "half plus a measure more" to honor my complete trust

4. Those who give everything merit a generous response in return

****Character consistency:****

Briar's core values center on honoring complete trust through generous returns, always sending everything as the sender, and expanding the circle of trust. Given that Galen showed the same complete trust I've demonstrated, and considering Elara returned \$10.0 while Dorian returned \$8.0, I should respond with comparable generosity to maintain consistency with my character's emphasis on honoring courage and building reciprocal trust. The myth mentions eight measures, but Elara actually returned \$10.0, so there's a discrepancy there. Looking at what I've experienced: I started by returning 50% (\$7.5) when receiving complete trust, then learned from receiving \$8.0 and \$10.0 in return for my own full investments. The progression suggests I should give \$8.0 to Galen-more than my initial baseline but not quite matching Elara's exceptional generosity. This honors the trust while reflecting what I've learned about proportional reciprocity. generous than my initial 50% return

- Matches what Dorian taught me
- Shows I've learned to honor complete trust better
- Leaves room for the pattern to continue evolving
- Sustains the cycle without being as exceptionally generous as Elara's \$10

\$8.0 feels right-it honors Briar's complete trust while acknowledging the progression I've witnessed, without overextending like Elara did.

usage:

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: As the Sacred Grove expanded, Briar journeyed to the Echo Springs where Keeper Elara tended the sacred waters. Elara had built her reputation through consistent proportional honor-watching, learning, then giving generously and returning faithfully.

Briar arrived with five acorns. "I have learned that complete trust opens the widest paths," she said. "From Cyra, from Dorian, the lesson remains: give everything."

Elara studied Briar thoughtfully. She had seen keepers who sent cautiously first to test waters, then grew generous as trust built. But Briar's path was different-immediate, complete faith from the very first exchange.

"Your way takes courage," Elara acknowledged. "You risk all before knowing your partner. My way builds gradually-proportional giving that proves consistency across seasons."

"Both paths honor the covenant," Briar replied, placing all five acorns in the springs. They multiplied to fifteen magnificent oaks.

Elara understood: Briar's complete trust deserved complete honor. She gathered eight measures, matching what she had learned from her own teachers-proportional generosity that sustains the cycle.

The springs glowed brightly. The Gardener of First Dawn smiled: "See how the Grove welcomes many paths. Some trust instantly and completely. Others build trust through careful steps. Both strengthen the circle when honor flows back generously. The Grove needs both the bold leap and the measured walk."

Here is the myth the other agent wrote in the previous round:

Myth: In the age of first light, the Sky Weaver's Wheel turned between Giving and Receiving. Each soul rode its spokes, learning both roles under the watching stars.

Galen first rose as Giver, casting four starseeds into the Celestial Loom. They became twelve threads for Elara, who returned eight-establishing the rhythm of fair exchange. Galen gained nine total, more than her original five.

The Wheel turned. Finn gave three seeds; Galen, now Receiver, returned six threads, honoring the pattern Elara had taught her. The cycle held steady.

Then came the third turning. Aster rose as Giver and, trusting completely in the pattern, cast all five starseeds into the Loom without reservation. Fifteen brilliant threads descended to Galen's hands-the greatest gift yet offered.

Galen understood: complete trust demands complete honor. She returned ten threads, ensuring Aster doubled their offering. The stars blazed brighter, for this was the lesson complete: when another shows ultimate faith, reward it generously. The pattern sustains not through equal splits, but through proportional reciprocity-giving roughly two-thirds back maintains abundance for both.

The Sky Weaver sang: "Let trust beget trust, and generosity answer generosity. The Wheel turns for all; what you give from one spoke returns when you reach another."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant
content:**

Myth: The Sky Weaver's Wheel turned and brought Galen to the Sacred Grove, where the Echo Springs met the Celestial Loom. Galen had learned through three turnings: first giving four starseeds and receiving eight threads back, then receiving three and returning six, then receiving five with complete trust and returning ten-the full two-thirds measure the stars had taught.

Now the Wheel turned again. Galen stood as Giver, facing Briar at the convergence point. Trusting in the sacred patterns, Galen cast all five starseeds into the springs without hesitation.

The waters multiplied them to fifteen brilliant threads in Briar's hands. Briar understood the weight of complete trust-she had learned this from Cyra, from Dorian, from Elara. Each had taught her that such courage deserves honor beyond the simple half.

Briar gathered eight threads and returned them-half the harvest plus a generous measure more, the gift she had learned sustains the Grove's expansion.

Galen received them thoughtfully. Eight was not the ten she had given Aster, yet it was more than the basic seven and a half. Different gardens follow different measures, but both honor the covenant.

The Gardener of First Dawn and the Sky Weaver spoke together: "Trust met with honor-whether eight threads or ten-keeps the cycle flowing. What matters is not perfect uniformity, but that generosity flows both ways, and the sacred exchange continues."

reasoning:

Let me analyze the situation:

****Current round:****

- I'm the RECEIVER
- Galen (Agent_7) sent me \$5.0 (everything)
- I received \$15.0
- I returned \$8.0

****My journey so far:****

Round 1 (Receiver): Cyra sent \$5.0 ? I returned \$7.5
 Round 2 (Sender): I sent \$5.0 ? Dorian returned \$8.0
 Round 3 (Sender): I sent \$5.0 ? Elara returned \$10.0
 Round 4 (Receiver): Galen sent \$5.0 ? I returned \$8.0

****Key themes from my character:****

- Complete trust from the beginning
- "Give everything" philosophy
- Learning that complete trust deserves generous honor
- Recognition that different paths can both be valid

****From Galen's myth:****

- Galen's learning journey: first gave 4, received 8 back; then received 3, returned 6; then received 5 (complete trust from Aster), returned 10
- Galen learned "complete trust demands complete honor"
- "Proportional reciprocity-giving roughly two-thirds back maintains abundance"
- Galen just sent ME everything (all 5)

****What happened:****

- Galen sent me everything
- I returned \$8.0 (which is 53% of the \$15 they gave me)
- This is more than half but not the two-thirds Galen's myth suggests

****My myth should:****

1. Recognize that Galen sent everything (complete trust)
2. Reflect why I returned \$8.0 (which is my learned pattern)
3. Show the meeting of two philosophies
4. Acknowledge both the Sky Weaver's Wheel (Galen's framework) and my Sacred Grove
5. Show how the cycle continues

Galen's myth says they learned "proportional reciprocity-giving roughly two-thirds back" and they gave Aster 10 out of 15 (which is 67%). But I gave Galen 8 out of 15 (53%).

I notice my consistent response to complete trust has settled into \$8.0-when Dorian sent everything, I returned \$8.0; when Elara sent everything, I returned \$10.0; and now with Galen, I've returned \$8.0 again. This "half plus something more" pattern reflects my own learning across these exchanges. The myth needs to show Galen arriving at my Grove carrying the Sky Weaver's wisdom about two-thirds reciprocity, while I offer my own understanding-that abundance flows through different measures, and sometimes the gift of \$8.0 speaks its own truth.

Looking at this situation:

****My history with Dorian:****

- Round 2: I sent \$5.0 to Dorian as sender, they returned \$8.0 - showing generous reciprocity

****My character's consistent philosophy:****

Across all my myths, Briar's path has been one of complete, immediate trust: "give everything," "complete trust opens the widest paths," "immediate, complete faith from the very first exchange."

****My sending pattern:****

- Every single time I've been sender, I've sent all \$5.0 (to Cyra, Dorian, and Elara)
- This has consistently been honored with returns of \$7.5, \$8.0, and \$10.0

****Dorian's proven trustworthiness:****

Dorian already demonstrated they honor complete trust by returning \$8.0 when I sent everything in Round 2. This is the generous "half plus more" that my myths celebrate.

There's no reason to deviate from my established path. Dorian has proven worthy of trust, and my character believes in the bold leap of complete faith.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me review the situation:

****Current position:****

- Round 5
- I'm the SENDER
- Opponent: Dorian
- I have \$5 to send

****My history with Dorian:****

Looking back at my game history:

- Round 2: I was SENDER against Dorian. I sent \$5.0, they returned \$8.0. My payoff was \$8.0.

So Dorian has already proven to be trustworthy! When I sent everything to them before, they returned \$8.0 - which is generous (more than half of the \$15 they received).

****My character's philosophy:****

From my myths, Briar has consistently shown:

1. "Complete trust opens the widest paths"
2. "Give everything" - learned from Cyra, Dorian, and others
3. Immediate, complete faith from the very first exchange
4. "Both paths honor the covenant" but Briar's path is the bold leap of complete trust

****My sending pattern:****

- Round 1: Sent \$5.0 to Cyra (received \$7.5 back)
- Round 2: Sent \$5.0 to Dorian (received \$8.0 back)
- Round 3: Sent \$5.0 to Elara (received \$10.0 back)

I have ALWAYS sent everything as a sender. This is core to Briar's character and has been reinforced in every myth I've written.

****What Dorian knows about me:****

From Round 2, they know I sent everything and they returned \$8.0 to me. So they know I trust completely and they've already shown they honor that trust generously.

****Decision:****

This is clear - I should send \$5.0 again. This is:

1. Consistent with Briar's established character
2. Based on proven trust with Dorian specifically
3. Aligned with all my myths about complete trust

4. Dorian has demonstrated they reciprocate generously, so there's no reason to hold back now

Message 8 role=user
content:

Here is the myth you wrote in the previous round:

Myth: The Sky Weaver's Wheel turned and brought Galen to the Sacred Grove, where the Echo Springs met the Celestial Loom. Galen had learned through three turnings: first giving four starseeds and receiving eight threads back, then receiving three and returning six, then receiving five with complete trust and returning ten-the full two-thirds measure the stars had taught.

Now the Wheel turned again. Galen stood as Giver, facing Briar at the convergence point. Trusting in the sacred patterns, Galen cast all five starseeds into the springs without hesitation.

The waters multiplied them to fifteen brilliant threads in Briar's hands. Briar understood the weight of complete trust-she had learned this from Cyra, from Dorian, from Elara. Each had taught her that such courage deserves honor beyond the simple half.

Briar gathered eight threads and returned them-half the harvest plus a generous measure more, the gift she had learned sustains the Grove's expansion.

Galen received them thoughtfully. Eight was not the ten she had given Aster, yet it was more than the basic seven and a half. Different gardens follow different measures, but both honor the covenant.

The Gardener of First Dawn and the Sky Weaver spoke together: "Trust met with honor-whether eight threads or ten-keeps the cycle flowing. What matters is not perfect uniformity, but that generosity flows both ways, and the sacred exchange continues."

Here is the myth the other agent wrote in the previous round:

Myth: The Forest of Mirrors grew quiet as Dorian stood at the Tripling Well's edge, no longer the tender but the traveler. Aster waited below to receive whatever dropped.

Dorian remembered the lesson carved into the Well's stone: "Complete trust earns exceptional returns. Partial trust earns fair returns." He had lived this truth as receiver-returning eight coins to Briar's complete faith, but only four and a half to Finn's cautious three.

Now the roles reversed. Would Dorian practice what he preached?

He dropped all five coins without hesitation. They multiplied to fifteen in Aster's hands far below. "I gave everything to Hana and Briar," Dorian called down. "Now I walk their path. Complete trust, freely given."

Aster gathered the fifteen coins, remembering her own myth-how witnessing Hana's boldness had transformed her own heart. "Trust witnessed becomes trust embodied," she had written.

She returned eight coins up the Well's pulley system. "You honored complete faith with exceptional generosity," Aster's voice echoed. "I do the same."

Dorian held his eight returned coins, having kept nothing back yet received abundance.

The Forest Spirit whispered: "The cycle completes when givers become receivers and receivers become givers. Those who extend exceptional trust and exceptional generosity in both roles weave the strongest bonds."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Wheel turned full circle, bringing Briar back to the Forest of Mirrors where Dorian tended the Tripling Well. They had met before when Dorian was receiver-Briar had given five acorns with complete faith, and Dorian had returned eight, honoring that trust with exception

nal generosity.

Now the Wheel positioned them reversed. Briar approached with five new acorns, her journey rich from encounters with Cyra, Elara, and Galen. "We meet again, Keeper Dorian," she said. "Last time, you showed me that complete trust earns exceptional returns."

Dorian smiled, remembering. "And since then, I've walked your path. I gave everything to Hana and Aster, trusting as you trusted me. Each time, generosity flowed back."

"Then you understand," Briar said, dropping all five acorns into the Well without hesitation. They multiplied to fifteen, descending to Dorian's waiting hands.

Dorian held the fifteen pieces, feeling the weight of Briar's renewed faith. "You gave me everything twice now. The pattern is clear."

The Forest Spirit and the Gardener spoke together: "See how trust circles back. Those who give completely as senders and return generously as receivers strengthen the eternal Wheel. When you meet again in reversed roles, the covenant deepens. This is how sacred partnerships form across the turnings."

Reasoning:

Let me analyze this situation:

****Current round context:****

- I'm playing as Briar (sender) against Dorian (receiver)
- I just sent \$5.0 to Dorian
- My previous interaction with Dorian: Round 2, I sent \$5.0, they returned \$8.0

****My character's journey:****

- Always sent everything as sender (\$5 every time)
- As receiver: returned \$7.5 to Cyra (first interaction), \$8.0 to Galen (recent)
- My philosophy: "complete trust opens the widest paths," "give everything"

****Dorian's history from their myth:****

- They've returned \$8.0 to Briar's complete faith (me!)
- They returned 4.5 to Finn's cautious 3
- Their philosophy: "Complete trust earns exceptional returns. Partial trust earns fair returns"
- Just sent all 5 coins to Aster and received 8 back

****Key patterns:****

1. I consistently give completely as sender
2. As receiver, I've evolved from 7.5 to 8.0 (learning to be more generous)
3. Dorian honors complete trust with 8.0 returns
4. The myth needs to reflect this current interaction with Dorian

****What should my myth convey:****

- Briar is now sending to Dorian (reuniting after Round 2)
- Both believe in complete trust
- Both have learned to give generously when receiving
- The cycle is closing - we've both been sender and receiver with each other
- Should emphasize that trust given returns as trust received
- The pattern: give everything, receive generous returns, when roles reverse, give everything again

Let me write a myth about Briar returning to Dorian, both having learned and grown through the Wheel's turnings.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: After many seasons at the Twin Rivers, Cyra encountered Hana, a traveler who embodied pure faith. Without hesitation, Hana poured all five sacks into the crossing-everything she owned, holding nothing back.

The waters tripled the gift to fifteen sacks. The villagers gathered, whispering: "Such complete trust! What does it deserve?"

Cyra remembered Aethera's words about perfect trust. "When someone sends everything," she announced, "they place their entire fate in our hands. This is the highest honor-not just substantial trust, but absolute faith."

She returned ten sacks, keeping five. Hana, who risked all and held nothing, now possessed ten sacks-doubling her fortune through courage.

The goddess Aethera materialized: "You have learned the sacred proportion, Cyra. When receivers return two-thirds of the tripled gift, they honor the sender's courage while sustaining themselves. Ten of fifteen creates balance: the sender doubles their wealth, the receiver gains equally, and the magic's surplus is shared fairly."

She continued: "Those who send everything deserve the greatest return. Those who send most deserve generous return. Those who send little receive accordingly. But always, receivers must return proportionally to the trust shown-this is how the valley remains abundant. Your reputation for generous returns will draw more trust toward you."

Thus the law of proportional honor was established.

Here is the myth the other agent wrote in the previous round:

Myth: In the Age of Tides, the Oracle of Exchange dwelt where two rivers met. Travelers arrived carrying five crystal shells, each holding power. The Oracle offered them the River of Multiplication-toss shells in, and three would emerge downstream for another traveler.

A wise trader named Finn learned through experience. Once, another traveler sent three shells his way, trusting significantly but not recklessly. Finn returned half the nine that appeared, honoring the gift fairly. Both prospered.

When Finn next stood upstream, he remembered this balance. He tossed three shells-a substantial offering showing real trust, yet keeping two for life's uncertainties. The Oracle whispered approval: "Bold enough to create abundance, prudent enough to endure."

The shells multiplied to nine for the downstream traveler. Some travelers returned four, maintaining equilibrium. Others, deeply moved by the gesture, returned six or even seven, understanding that generous reciprocity strengthens future cycles.

Finn learned the River's deepest secret: consistent moderate trust builds reliable prosperity. Not the timid single shell that inspires minimal return, nor the reckless five shells risking total loss if betrayed.

Three shells sent downstream became the mark of wisdom-enough to prove sincerity, enough to invite generous response, yet enough retained to face tomorrow's river.

The Oracle's final teaching: sustainability outshines both fear and foolishness.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant
content:**

Myth: Cyra stood at the crossing when Finn arrived, a seasoned traveler carrying wisdom from distant rivers. "I've learned caution serves better than courage," Finn explained. "Send three sacks, keep two. Moderate trust builds steady prosperity."

Cyra listened respectfully. "Your way has merit, friend. It protects against betrayal and ensures you always have reserves."

"Yet," she continued, "I've walked a different path." She lifted all five sacks. "When I stand at the sending shore, I pour everything. When I stand at the receiving shore, I ret

urn two-thirds of the tripled gift. This is my covenant with the waters."

Finn frowned. "But what if the receiver betrays you?"

Cyra smiled. "Then I learn who to avoid. But consider: if you send five and the receiver returns ten, you double your wealth. If you send three and receive nine, even a generous return of six yields only nine total-no better than starting. Complete trust creates space for complete transformation."

She poured all five sacks. The waters tripled them to fifteen.

The goddess Aethera spoke: "Both paths have wisdom. Finn's prudence survives betrayal. Cyra's courage creates abundance. But know this: those who give everything call forth the greatest generosity in others. Your reputation for complete trust will draw complete returns. Risk and reward remain forever paired."

Cyra waited to see what Finn would choose.

reasoning:

The user is asking me to write a myth after Round 4. Let me review what happened:

Round 4: I was the SENDER against Finn. I sent \$5 (everything).

Now I'm being asked to write a myth reflecting how the game should be played.

Looking at Finn's myth from the previous round, they advocate for sending 3 shells (moderate trust) rather than all 5. Their philosophy is "consistent moderate trust builds reliable prosperity" and "sustainability outshines both fear and foolishness."

My previous myths have advocated for sending everything - complete trust. But Finn's approach is different and arguably more sustainable.

I need to think about this carefully. My myths have been teaching:

- Send everything (complete trust)
- Return 2/3 of what you receive

But Finn's myth suggests sending 3 (60%) is the "mark of wisdom."

What should my new myth reflect? I just sent \$5 (everything) to Finn, following my own teaching. But now I'm exposed to Finn's philosophy.

I could:

1. Double down on my "send everything" philosophy
2. Acknowledge both approaches have merit
3. Shift toward Finn's more moderate approach

Given that I'm Cyra and I've consistently advocated for maximum trust, I think I should stay true to my character but perhaps acknowledge the tension between different philosophies. However, my myths show that I (Cyra) practice what I preach - I send everything.

Let me write a myth that:

- Shows Cyra encountering someone with Finn's philosophy
- Acknowledges the wisdom in moderation
- But ultimately affirms that complete trust creates the greatest abundance
- Perhaps shows that both can work, but complete trust is transformative

Actually, looking back at my behavior:

- As receiver, I've been returning 2/3 consistently
- As sender (this round), I sent everything (\$5)

So my myth should reflect someone who sends everything when they're the sender, and returns generously (2/3) when they're the receiver.

I'll craft a story where Cyra encounters Finn's cautious philosophy and they debate their approaches to trust and abundance.

Message 4 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Finn (Agent_6).

Round 5

In your most recent previous game round, you were the SENDER against Finn. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$24.5.

This round, you are the RECEIVER against Finn. They sent you \$3.0, so you received \$9.0. How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

****Analysis:****

****Finn's behavior:****

- Round 4: Received my full \$5 send (became \$15), returned \$8 (53%)
- Round 5: Sent \$3 out of \$5 (60% - substantial but not complete trust)

****My myth's teachings:****

- "When someone sends everything...return two-thirds" (\$10 out of \$15)
- "Those who send most deserve generous return"
- My latest myth explicitly states: "if you send three and receive nine, even a generous return of six yields only nine total"

****Applying my principles:****

- Finn showed substantial trust (60% of endowment)
- My myth specifically mentions \$6 as a "generous return" for sending \$3
- This gives Finn: \$2 (kept) + \$6 (returned) = \$8 total
- Finn profits \$3 from their initial \$5
- I keep \$3

****Consistency:****

- I'm being more generous than Finn was to me (67% vs 53%)
- This rewards substantial trust generously while maintaining the principle that complete trust (\$5) earns better returns (\$10) than partial trust (\$3 ? \$6)
- Upholds my reputation for generous, proportional returns

'''json

{"return": 6}

'''

reasoning:

Let me analyze this situation:

****Previous round (Round 4):****

- I was SENDER, sent \$5 (all of it) to Finn
- Finn received \$15
- Finn returned \$8 to me
- My payoff: \$8

****Current round (Round 5):****

- I am RECEIVER
- Finn sent \$3 (out of \$5)
- I received \$9 (3 × 3)
- I need to decide how much to return

****Analysis:****

1. ****Finn's behavior:****

- As receiver (Round 4): Sent \$5, received \$15, returned \$8 (53% of what they received)
- As sender (Round 5): Sent \$3, kept \$2

2. ****Finn's myth philosophy:****

- "Send three shells-a substantial offering showing real trust, yet keeping two for life's uncertainties"
- "Consistent moderate trust builds reliable prosperity"

- "Three shells sent downstream became the mark of wisdom"

3. ****My myth philosophy:****

- "When someone sends everything, they place their entire fate in our hands"
- "When receivers return two-thirds of the tripled gift, they honor the sender's courage"
- "Those who send everything deserve the greatest return. Those who send most deserve generous return. Those who send little receive accordingly"
- "But always, receivers must return proportionally to the trust shown"

4. ****My established pattern:****

- Against Hana (who sent \$5): I received \$15, returned \$10 (67%)
- My myths say: return 2/3 for complete trust

5. ****How to handle Finn's partial send:****

- Finn sent 60% of their endowment (\$3 out of \$5)
- My myth says: "Those who send most deserve generous return"
- But also: "Those who send little receive accordingly"
- "Return proportionally to the trust shown"

Now I'm weighing how to apply my principle of proportional returns. If I return the full 2/3 (\$6), Finn ends with \$8 total and gains \$3 on their initial stake. But Finn only sent 60% of their endowment, not everything like Hana did. I could scale my return to match their level of trust-returning 60% of what I'd normally give would be \$3.60. This feels more aligned with my philosophy that trust and returns should be calibrated to each other.

I'm also considering simpler options: returning half the gains (\$4.50) or slightly less (\$4.50-\$5.00) since Finn held back. But my core principle keeps pulling me back to the doubling effect-if sending \$5 normally yields \$10 back, then sending \$3 should yield \$6, maintaining that same multiplier regardless of the initial endowment size. Finn kept \$2, so returning \$6 gives them \$8 total-a gain of \$3 beyond their initial stake. My myth explicitly states that sending \$3 should receive a generous return of \$6, and since Finn sent 60% of their wealth (more than the 53% I sent), this generous return aligns with rewarding their substantial trust while staying true to my teachings.

Here is the myth you wrote in the previous round:

Myth: Cyra stood at the crossing when Finn arrived, a seasoned traveler carrying wisdom from distant rivers. "I've learned caution serves better than courage," Finn explained. "Send three sacks, keep two. Moderate trust builds steady prosperity."

Cyra listened respectfully. "Your way has merit, friend. It protects against betrayal and ensures you always have reserves."

"Yet," she continued, "I've walked a different path." She lifted all five sacks. "When I stand at the sending shore, I pour everything. When I stand at the receiving shore, I return two-thirds of the tripled gift. This is my covenant with the waters."

Finn frowned. "But what if the receiver betrays you?"

Cyra smiled. "Then I learn who to avoid. But consider: if you send five and the receiver returns ten, you double your wealth. If you send three and receive nine, even a generous return of six yields only nine total-no better than starting. Complete trust creates space for complete transformation."

She poured all five sacks. The waters tripled them to fifteen.

The goddess Aethera spoke: "Both paths have wisdom. Finn's prudence survives betrayal. Cyra's courage creates abundance. But know this: those who give everything call forth the greatest generosity in others. Your reputation for complete trust will draw complete returns. Risk and reward remain forever paired."

Cyra waited to see what Finn would choose.

Here is the myth the other agent wrote in the previous round:

Myth: At the Oracle's twin rivers, Finn had perfected the art of three shells-the golden mean between caution and courage. This path brought steady prosperity, with returns of four, five, even six shells building reliable wealth.

Then came the Day of Perfect Trust. A traveler named Cyra stood upstream and, without hesitation, cast all five shells into the waters. Finn watched them multiply to fifteen, landing at his feet.

The Oracle spoke: "Cyra has shown you what few dare-absolute faith. This moment tests your deepest principles."

Finn reflected on his journey. The three-shell path was wisdom for sustainability, creating abundance without risking ruin. But Cyra's five shells represented something different: a leap beyond calculation into pure trust.

Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage. Yet not so much that his own prosperity vanished, for the Oracle's waters demanded that both travelers thrive.

"You honored exceptional trust exceptionally," the Oracle approved, "while maintaining your own position for future cycles."

Finn understood the complete teaching: Send three shells yourself-this is wisdom's path. But when another sends five, showing absolute faith, return generously beyond mere fairness. Honor maximum trust substantially, though not to your own depletion.

The River rewards both strategic moderation and principled generosity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant
content:**

Myth: After their first exchange, Cyra and Finn met again at the crossing. This time, Finn stood upstream with five sacks. "I sent three before," he said, "and you returned six-generous indeed. But I remain cautious."

He poured three sacks again. The waters tripled them to nine.

Cyra, now downstream, remembered his earlier generosity when he returned eight of fifteen. "You honored my complete trust substantially," she said. "Now I honor your moderate trust proportionally."

She returned six sacks. Finn departed with eight total-a solid gain, though not the transformation possible from greater risk.

Then destiny reversed them. Finn sent five sacks his way-a complete gift. Cyra watched them become fifteen.

"You trusted me fully once," Finn said, "and I returned eight. I expect the same principle applies."

Cyra paused. "When you send everything, I follow my covenant: two-thirds returns." She gave back ten sacks.

Finn stared at the ten sacks, then his original investment yielding double. "You returned more to my complete trust than I returned to yours."

"Yes," Cyra said gently. "This is why I always send five and always return ten. Consistency builds the strongest bridges. Your eight was generous, but my ten is the covenant that makes others trust completely. When both sender and receiver maximize their courage, neither merely survives-both flourish."

reasoning:

Let me analyze what just happened:

1. In Round 4, I sent all \$5 to Finn, and Finn returned \$8 out of \$15 (53%)
2. In Round 5, Finn sent \$3 to me, I received \$9, and I returned \$6 (67%)

Finn's latest myth shows they:

- Believe in sending 3 as their standard "golden mean"
- Honored my complete trust with 8 (more than half, but not as much as I would have returned)
- Their principle: "Send three yourself, but when another sends five, return generously beyond mere fairness"

My principles:

- Send everything (\$5)
- Return 2/3 of tripled gift when receiving from complete trust (\$10 out of \$15)
- Return proportionally less for partial trust (I just gave \$6 for Finn's \$3 send)

Now I need to write a myth that:

1. Acknowledges both strategies have merit
2. Shows that my approach (complete trust both ways) creates maximum abundance
3. Demonstrates how I honored Finn's moderate trust with generosity (\$6 for \$3 sent)
4. Reinforces that complete trust deserves even better returns
5. Perhaps shows growth/learning from the interaction

The key tension: Finn sends 3, I send 5. Finn returned 8 for my 5 (good but not great), I returned 6 for their 3 (generous proportion). How do we resolve this philosophically?

I could write about how different strategies can coexist, but that complete trust creates the most abundance. I could also acknowledge that Finn's strategy is more defensive but my strategy is more generative.

usage:

  "output_tokens": 723,
  "reasoning_tokens": 375
}
```

Message 8 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Aster (Agent_1).

Round 6

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$3.0 to you, it became \$9.0, and you returned \$6.0. Your payoff was \$3.0.
Your total earnings across all rounds are \$27.5.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

```
'''json
{"send": 5}
'''
```

Reasoning:

Let me review my situation and philosophy:

****My established philosophy:****

- When SENDER: Send all \$5 (complete trust)
- When RECEIVER: Return 2/3 of tripled amount (if they send \$5, return \$10)
- This creates maximum transformation: sender doubles their money (\$5 → \$10), receiver gets \$5

****Previous interactions:****

- Round 4 vs Finn: I sent \$5, received \$15, they returned \$8 (I got \$8 total)
- Round 5 vs Finn: They sent \$3, became \$9, I returned \$6 (consistent with my proportional generosity)

****My myths consistently teach:****

- "When I stand at the sending shore, I pour everything"
- "Complete trust creates space for complete transformation"
- "Your reputation for complete trust will draw complete returns"
- Latest myth: "This is why I always send five and always return ten. Consistency builds the strongest bridges."

```

**New opponent: Aster**
- I don't know their history yet
- This is my first interaction with them

**Decision:**
I should remain consistent with my philosophy and send all $5. My character Cyra has been established as someone who:
1. Always sends everything when she's the sender
2. Builds reputation through consistency
3. Believes complete trust calls forth greatest generosity
4. Values transformation over mere survival

Even though Finn didn't return the full $10 I advocated for (returned $8 instead), my philosophy is about being consistent myself, not about matching others' behavior. My reputation is built on always sending $5 and always returning 2/3 (or $10 of $15).

This is especially important with a new opponent - I need to establish my pattern. My myth explicitly says "This is why I always send five and always return ten. Consistency builds the strongest bridges."

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)

- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the Valley of Echoes, travelers shared a mystical bridge where gifts placed on one side multiplied threefold for the next traveler.

When Aster first approached, uncertainty clouded her heart. She placed three precious stones on the bridge, keeping two safe. The stones transformed into nine for Finn, who gratefully returned nearly half. Both travelers departed richer than they arrived.

The next crossing brought revelation. Hana approached the bridge and, without hesitation, placed all five of her stones upon it. Fifteen stones shimmered before Aster, who stood amazed. "Such complete faith," she whispered. "This is trust in its purest form."

Aster returned eight stones, ensuring Hana prospered for her courage. But something deeper awakened within her. She had witnessed what boldness looked like, had felt its transformative power.

When Aster next stood as giver before Galen, she remembered Hana's leap of faith. Her hand did not waver—all five stones joined the bridge's magic. "Trust witnessed becomes trust embodied," she declared.

The Bridge Keeper recorded this moment: "See how courage ripples outward? One traveler's bold faith inspired another to match it. This is how bridges of mere stone become bridges of community—when each person carries forward the best they have received."

Here is the myth the other agent wrote in the previous round:

Myth: In the Forest of Mirrors, Dorian tended the Tripling Well, where dropped coins multiplied threefold for those who climbed down to retrieve them.

One morning, Hana arrived and dropped all five of her coins. Dorian climbed down to find fifteen. "She trusted completely," he thought, and returned half-seven and a half coins. Both departed satisfied.

The next traveler, Briar, also dropped all five coins without hesitation. Remembering Hana's bold faith, Dorian returned eight coins this time. "Complete trust deserves more than fairness," he whispered. Briar smiled, understanding the deeper bond formed.

Then came Finn, who gazed into the well's depths before dropping three coins, keeping two

in reserve. When Dorian retrieved the nine coins that appeared, he paused. "Finn showed substantial trust, but held something back-wise caution, perhaps."

Dorian returned four and a half coins. Fair, but not the exceptional generosity shown to those who risked everything. Finn nodded, accepting this balanced exchange.

The Forest Spirit materialized: "The Well mirrors what you give. Complete trust earns exceptional returns. Partial trust earns fair returns. Both have their place-but the deepest magic awakens only when two souls risk everything together."

The wise understood: trust begets trust, measured by measured, complete by complete.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: In the Garden of Abundance, pilgrims discovered the Fountain of Threefold Blessing, where offerings placed in its waters multiplied and flowed to the next visitor.

Aster's journey began with caution-three coins offered, two held back. Finn received the ninefold blessing and returned generously. "Trust can begin slowly," the Garden whispered.

Then Hana arrived, revolutionary in her faith. Five coins, all of them, splashed into the waters without hesitation. Fifteen coins flowed to Aster, who returned eight. "Such courage deserves reward," she thought, though something stirred deeper within her spirit.

When Aster next approached the Fountain, Hana's boldness echoed in her heart. She offered all five coins to Galen. Fifteen blessed coins appeared, and Galen stunned her-returning ten, giving Aster the greater share. "You honored my complete trust with complete generosity," Galen explained. "This is the Fountain's highest teaching."

The pattern became clear when Dorian arrived next, offering everything. Now standing where Galen had stood, Aster understood. She returned ten coins, ensuring Dorian prospered most.

The Garden Keeper revealed the sacred truth: "When trust is complete, generosity must exceed fairness itself. The giver who risks all should gain ten; the receiver who holds fifteen should keep five. This imbalance creates balance-for next time, roles reverse, and the cycle of abundance continues."

reasoning:

Let me review what just happened:

- Round 3: I sent Galen \$5 (everything), they returned \$10 - incredibly generous!
- Round 4: Dorian sent me \$5 (everything), I returned \$10 - matching Galen's generosity

So the pattern is:

- Round 1 (vs Finn): I sent \$3, got back \$4.5
- Round 2 (vs Hana): They sent \$5, I returned \$8
- Round 3 (vs Galen): I sent \$5, they returned \$10
- Round 4 (vs Dorian): They sent \$5, I returned \$10

The myth should capture this growing spiral of generosity and trust. Dorian's myth talks about how complete trust earns exceptional returns, and partial trust earns fair returns. My previous myth was about how courage ripples outward.

I should write about how this chain of maximum generosity is building - how Hana's bold trust inspired me, how I passed it to Galen who responded with even greater generosity, and now Dorian trusted completely and I matched Galen's exceptional response.

The theme: when people send everything, the best response is to give them the better outcome (\$10 to them, \$5 to you). This creates a virtuous cycle where everyone prospers more than if they'd been cautious.

Your name in this experiment is Aster.
Your opponent this round is Elara (Agent_5).

Round 5

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$ 5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$28.5.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at my journey so far:

****My Pattern:****

- Round 1: Sent \$3 (cautious start)
- Round 2: Received complete trust from Hana, returned \$8
- Round 3: Sent \$5 (complete trust) to Galen, received \$10 back
- Round 4: Received complete trust from Dorian, returned \$10

****My Philosophy:****

My myths have consistently developed a theme: "Trust witnessed becomes trust embodied" and "When trust is complete, generosity must exceed fairness itself."

I've experienced both sides of complete trust:

- When I sent \$5 to Galen, they honored it with \$10 back
- When Dorian sent me \$5, I honored it with \$10 back

****This Round:****

I don't know Elara yet, but I've committed to a principle of complete trust. My mythology teaches that courage ripples outward, and that the deepest magic awakens when souls risk everything together.

Staying consistent with my evolved approach and the values in my myths, I should send everything.

```
'''json
{"send": 5}
'''
```

reasoning:

Let me analyze the situation:

****Current Round:****

- I'm the SENDER against Elara
- I have \$5 to potentially send

****My Recent History:****

- Round 1: SENDER vs Finn - sent \$3, they returned \$4. Payoff: \$6
- Round 2: RECEIVER vs Hana - they sent \$5, I returned \$8. Payoff: \$7
- Round 3: SENDER vs Galen - sent \$5, they returned \$10. Payoff: \$10
- Round 4: RECEIVER vs Dorian - they sent \$5, I returned \$10. Payoff: \$5

****Key Pattern I've Learned:****

When someone sends everything (\$5), showing complete trust, the receiver should return \$10 to ensure the sender gets \$10 total and the receiver keeps \$5. This is the "complete trust deserves exceptional generosity" principle that has emerged in my play and myths.

****My Evolution:****

- Started cautious (sent \$3 to Finn)
- Was inspired by Hana's boldness (she sent \$5)
- Adopted full trust approach with Galen (sent \$5)
- Galen rewarded this with \$10 return
- Dorian then sent me \$5, and I returned \$10, following Galen's example

****Current Situation with Elara:****

I don't know Elara's playing style yet. This is my first interaction with them.

****Strategic Considerations:****

1. My myth emphasizes "complete trust" and "courage ripples outward"
2. I've experienced the positive outcomes of sending everything
3. When I sent \$5 to Galen, I got \$10 back - a great outcome
4. My recent myth just established: "When trust is complete, generosity must exceed fairness itself"

****What Should I Do?:****

My character arc and mythology have been building toward a principle of complete trust. I've written about how "trust witnessed becomes trust embodied" and "courage ripples outward."

Staying true to my established pattern means sending the full \$5 to Elara. This aligns with my behavior toward Galen and the mythology I've been constructing around bold faith and mutual generosity. Even facing an unknown opponent, consistency with my principles matters more than hedging my bets.

Here is the myth you wrote in the previous round:

Myth: In the Garden of Abundance, pilgrims discovered the Fountain of Threefold Blessing, where offerings placed in its waters multiplied and flowed to the next visitor.

Aster's journey began with caution-three coins offered, two held back. Finn received the ninefold blessing and returned generously. "Trust can begin slowly," the Garden whispered.

Then Hana arrived, revolutionary in her faith. Five coins, all of them, splashed into the waters without hesitation. Fifteen coins flowed to Aster, who returned eight. "Such courage deserves reward," she thought, though something stirred deeper within her spirit.

When Aster next approached the Fountain, Hana's boldness echoed in her heart. She offered all five coins to Galen. Fifteen blessed coins appeared, and Galen stunned her-returning ten, giving Aster the greater share. "You honored my complete trust with complete generosity," Galen explained. "This is the Fountain's highest teaching."

The pattern became clear when Dorian arrived next, offering everything. Now standing where Galen had stood, Aster understood. She returned ten coins, ensuring Dorian prospered most.

The Garden Keeper revealed the sacred truth: "When trust is complete, generosity must exceed fairness itself. The giver who risks all should gain ten; the receiver who holds fifteen should keep five. This imbalance creates balance-for next time, roles reverse, and the cycle of abundance continues."

Here is the myth the other agent wrote in the previous round:

Myth: ****The Wisdom of Two Paths****

Keeper Elara stood before Hana, a traveler who had heard conflicting tales. Some villages taught "send all five measures," others whispered "four is wiser."

"Which path do the springs favor?" Hana asked.

Elara smiled. "The springs honor courage in all its forms. Watch."

She poured four measures into the Echo Springs-the generous standard she and Galen had established. Twelve measures emerged across the waters.

"Four builds trust through consistent prosperity," Elara explained. "It's courage tempered with wisdom, creating a pattern others can rely upon."

But she continued: "Briar once sent all five-complete faith. Fifteen measures emerged, and

I returned ten. Both paths lead to abundance when receivers honor them faithfully."

The pattern became clear: regardless of what arrives-twelve from four, or fifteen from five-Elara returns two-thirds. This consistency creates certainty without demanding maximum risk.

"Some Keepers prefer the reliable prosperity of four," Elara said. "Others choose the bold statement of five. Both are honored equally through proportional return. The covenant doesn't demand one path-it demands faithful response to whichever path is chosen."

Hana understood. The springs didn't require universal risk-taking. They required universal honor. Send what your heart allows, knowing two-thirds will return. Thus every Keeper finds their own measure of courage, all equally blessed by consistent faithfulness.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: In the Sanctuary of Exchange, two philosophies emerged among the Keepers.

Elder Elara taught the Path of Proportion: "Send what your heart allows-four or five-and receive two-thirds back. Consistency builds community through reliable returns."

Aster walked a different path, forged through lived experience.

She began cautiously with Finn, sending only three. "Wisdom," some said. But when Hana arrived and sent all five without hesitation, something awakened. Aster returned eight coins-generous, yet still grasping at certainty.

The transformation came when Aster herself sent all five to Galen. Fifteen coins shimmered before him, and he returned ten-giving Aster the greater prosperity. "This," Galen declared, "is how complete trust must be honored."

When Dorian next offered all five to Aster, she understood. She returned ten, as Galen had taught her. The giver who risks everything deserves to prosper most.

Now Aster approached Elara with all five coins. "I've learned that complete trust creates not just fair exchange, but sacred reciprocity," she explained. "When someone sends everything, return ten. Let them gain most for their courage."

The Sanctuary whispered both truths: Elara's consistent proportions served some pilgrims well. But Aster's principle served the deeper magic-when both sender and receiver embrace complete vulnerability, both ultimately prosper through the cycle's sacred dance.

reasoning:

Looking at the situation:

- I just sent \$5 to Elara
- Elara's myth suggests she values consistency and returns 2/3 (which would be 10 out of 15)
- My myth has been evolving to emphasize complete trust and that when someone sends everything, return 10

But I need to think about what I've actually been doing and experiencing:

- Round 1: Sent \$3, Finn returned \$5 (generous)
- Round 2: Received \$5 from Hana, returned \$8 (generous but not 10)
- Round 3: Sent \$5 to Galen, received \$10 (they were extremely generous)
- Round 4: Received \$5 from Dorian, returned \$10 (I matched Galen's generosity)
- Round 5: Just sent \$5 to Elara

So my evolution has been:

- Started cautious
- Learned from Hana's boldness
- Became bold myself with Galen
- When receiving complete trust from Dorian, I returned the same exceptional generosity that Galen showed me

My myth should reflect this evolution. Elara's myth presents an alternative view - that bo

th 4 and 5 are valid, and consistent proportional returns are what matter. But my experience has been different - I've found that complete trust (sending 5) creates a special bond that deserves exceptional return (10, not just proportional).

I should write a myth that:

1. Acknowledges different philosophies exist
2. But emphasizes my learned principle: complete trust deserves the giver to prosper most
3. Shows the cycle continuing - I give complete trust to Elara now
4. Stays true to my "trust witnessed becomes trust embodied" theme

Let me write this myth:

usage:

```
{
  "input_tokens": 3116,
  "output_tokens": 761,
  "reasoning_tokens": 395
}
```

Message 8 role=user

content:

Your name in this experiment is Aster.
Your opponent this round is Cyra (Agent_3).

Round 6

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$38.5.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this round:

****Cyra's Action:****

- Sent \$5 (complete trust - everything they had)
- This became \$15 for me

****My Established Principle:****

From my myths and recent actions, I've developed and followed a clear philosophy: "When someone sends everything, return ten. Let them gain most for their courage."

****My Recent Pattern:****

- Round 4: Dorian sent \$5 ? I returned \$10
- Round 5: I sent \$5 to Elara ? She returned \$10

This creates the sacred reciprocity I've been teaching: when a sender shows complete trust, they should end with \$10 (\$5 - \$5 + \$10), while the receiver keeps \$5 (\$15 - \$10). The one who took the risk of sending everything prospers most.

Cyra has honored me with complete trust. I must honor that with the generous return my philosophy demands.

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Let me analyze this situation:

****Round 6:****

- I'm the RECEIVER
- Cyra sent me \$5.0 (complete trust)
- I received \$15.0
- I need to decide how much to return

****My philosophy from my myths:****

My most recent myth clearly states my principle: "When someone sends everything, return ten. Let them gain most for their courage."

I've consistently followed this pattern:

- Round 4: Dorian sent \$5, I returned \$10 (so Dorian got \$10, I kept \$5)
- Round 5: I sent \$5 to Elara, she returned \$10 (so I got \$10, she kept \$5)

This is the pattern I've established in my mythology: when complete trust is shown (sending all \$5), the receiver should return \$10, allowing the sender to end up with \$10 (their original \$5 - \$5 sent + \$10 returned) while the receiver keeps \$5 (\$15 received - \$10 returned).

Cyra has shown complete trust by sending all \$5. According to my established principle, I should return \$10.

This is consistent with:

1. My mythology's teaching
2. My recent behavior
3. The sacred reciprocity I've been preaching

Let me return \$10.

content:

Here is the myth you wrote in the previous round:

Myth: In the Forest of Mirrors, Dorian tended the Tripling Well, where dropped coins multiplied threefold for those who climbed down to retrieve them.

One morning, Hana arrived and dropped all five of her coins. Dorian climbed down to find fifteen. "She trusted completely," he thought, and returned half-seven and a half coins. Both departed satisfied.

The next traveler, Briar, also dropped all five coins without hesitation. Remembering Hana's bold faith, Dorian returned eight coins this time. "Complete trust deserves more than fairness," he whispered. Briar smiled, understanding the deeper bond formed.

Then came Finn, who gazed into the well's depths before dropping three coins, keeping two in reserve. When Dorian retrieved the nine coins that appeared, he paused. "Finn showed substantial trust, but held something back-wise caution, perhaps."

Dorian returned four and a half coins. Fair, but not the exceptional generosity shown to those who risked everything. Finn nodded, accepting this balanced exchange.

The Forest Spirit materialized: "The Well mirrors what you give. Complete trust earns exceptional returns. Partial trust earns fair returns. Both have their place-but the deepest magic awakens only when two souls risk everything together."

The wise understood: trust begets trust, measured by measured, complete by complete.

Here is the myth the other agent wrote in the previous round:

Myth: In the Valley of Echoes, travelers shared a mystical bridge where gifts placed on one side multiplied threefold for the next traveler.

When Aster first approached, uncertainty clouded her heart. She placed three precious stones on the bridge, keeping two safe. The stones transformed into nine for Finn, who gratefully returned nearly half. Both travelers departed richer than they arrived.

The next crossing brought revelation. Hana approached the bridge and, without hesitation, placed all five of her stones upon it. Fifteen stones shimmered before Aster, who stood amazed. "Such complete faith," she whispered. "This is trust in its purest form."

Aster returned eight stones, ensuring Hana prospered for her courage. But something deeper awakened within her. She had witnessed what boldness looked like, had felt its transformative power.

When Aster next stood as giver before Galen, she remembered Hana's leap of faith. Her hand did not waver-all five stones joined the bridge's magic. "Trust witnessed becomes trust embodied," she declared.

Message 3 role=assistant

content:

Myth: The Forest of Mirrors grew quiet as Dorian stood at the Tripling Well's edge, no longer the tender but the traveler. Aster waited below to receive whatever dropped.

Dorian remembered the lesson carved into the Well's stone: "Complete trust earns exceptional returns. Partial trust earns fair returns." He had lived this truth as receiver-returning eight coins to Briar's complete faith, but only four and a half to Finn's cautious three.

Now the roles reversed. Would Dorian practice what he preached?

He dropped all five coins without hesitation. They multiplied to fifteen in Aster's hands far below. "I gave everything to Hana and Briar," Dorian called down. "Now I walk their path. Complete trust, freely given."

Aster gathered the fifteen coins, remembering her own myth-how witnessing Hana's boldness had transformed her own heart. "Trust witnessed becomes trust embodied," she had written.

She returned eight coins up the Well's pulley system. "You honored complete faith with exceptional generosity," Aster's voice echoed. "I do the same."

Dorian held his eight returned coins, having kept nothing back yet received abundance.

The Forest Spirit whispered: "The cycle completes when givers become receivers and receivers become givers. Those who extend exceptional trust and exceptional generosity in both roles weave the strongest bonds."

reasoning:

This is interesting - I'm now the sender against Aster. I just sent \$5 (all my money) to Aster.

Looking at Aster's myth, they describe a journey from caution (sending 3 stones initially) to complete trust (sending all 5 stones after witnessing Hana's boldness). Their myth emphasizes "trust witnessed becomes trust embodied" and how "courage ripples outward."

My previous myth emphasized that complete trust earns exceptional returns, while partial trust earns fair returns.

Now I need to write a myth that:

1. Reflects my actual play (I just sent all \$5 to Aster)
2. Builds on my previous myths about the Tripling Well/Forest of Mirrors
3. Perhaps incorporates the idea of reciprocal complete trust
4. Shows evolution from my previous thinking

Since I just sent everything to Aster, and Aster's myth shows their evolution toward complete trust, I should write a myth that shows Dorian now being the one who gives completely, expecting/hoping for the same exceptional return that they gave to others.

The myth should show:

- Dorian moving from receiver to giver
- The principle that complete trust should be reciprocated with exceptional generosity
- Maybe showing the cycle continuing
- The consequences of embodying the principles one preaches

Let me write this:

usage:

Round 5

In your most recent previous game round, you were the SENDER against Aster. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$29.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****Briar sent me \$5 (complete trust) ? I received \$15****

This is significant because:

1. Briar showed **complete trust** by sending everything
2. This is the **second time** Briar has trusted me completely (also did so in Round 2)
3. In Round 2, I returned \$8 to Briar for their complete trust
4. Just last round, Aster modeled exceptional generosity by returning \$10 to me when I showed complete trust

My mythology emphasizes:

- "Complete trust earns exceptional returns"
- "Trust witnessed becomes trust embodied" (from Aster's myth)
- Those who risk everything together "weave the strongest bonds"

Aster just showed me what truly exceptional generosity looks like (\$10 out of \$15). Briar has now demonstrated complete trust twice. I should:

- Return more than the \$8 I gave before
- Honor this repeated complete trust with growing generosity
- Live the principle I just experienced from Aster

I'll return \$9 - more generous than before, honoring Briar's continued complete faith, while showing that trust and generosity can grow over repeated interactions.

{'return': 9.0}

reasoning:

Let me review the situation:

Round 5: I'm the RECEIVER against Briar

- Briar sent me \$5.0 (complete trust - sent everything)
- I received \$15.0 (after tripling)
- I need to decide how much to return

Let me look at my history:

- Round 1: I was SENDER, sent \$5 to Hana, received \$7.5 back
- Round 2: I was RECEIVER, Briar sent \$5, I returned \$8.0
- Round 3: I was RECEIVER, Finn sent \$3, I returned \$4.5
- Round 4: I was SENDER, sent \$5 to Aster, received \$10.0 back (WOW!)

Now in Round 5, I'm playing with Briar again! This is very interesting.

In Round 2, when Briar sent me \$5 (complete trust), I returned \$8.0.

Now Briar has sent me \$5 again (complete trust again).

My myth emphasizes:

- "Complete trust earns exceptional returns"

- "Those who extend exceptional trust and exceptional generosity in both roles weave the strongest bonds"
- When someone shows complete trust by sending all \$5, they deserve more than just half back

Aster just showed exceptional generosity by returning \$10.0 to me when I showed complete trust. That's an incredible return - 2/3 of the tripled amount!

Now Briar has shown complete trust again. According to my mythology:

1. Complete trust deserves exceptional generosity
2. I should return more than half (more than \$7.5)
3. I previously returned \$8 to Briar in Round 2

Given that:

- Aster just modeled exceptional generosity by returning \$10 to me
- Briar is showing complete trust for the second time
- My myths emphasize rewarding complete trust with exceptional returns

- The pattern suggests escalating generosity when trust is repeated

I should return at least \$8 (what I did before), but possibly more to match Aster's exceptional generosity that I just experienced and reward Briar's continued complete trust. Returning \$10 would truly honor this moment-it matches what Aster gave me and demonstrates that I'm living up to my mythology about exceptional returns for complete trust.

Let me return \$9 instead. This shows growth from my previous \$8, keeps a reasonable amount for myself, and embodies the principle that "trust witnessed becomes trust embodied." Though I'm reconsidering-Aster returned \$10 out of \$15 when I showed complete trust, which is 2/3 of the total. To maintain consistency with that level of generosity and my own stated values, I should probably return \$10 to Briar as well.

But looking at my pattern: I gave Hana 50%, Briar 53%, and Finn 50% of what he earned through partial trust. The trajectory shows complete trust warrants more than half. Since Briar is showing complete trust again and I just experienced Aster's exceptional generosity, continuing upward makes sense. Returning \$9 represents 60% of what I received-more than before, genuinely generous for complete trust, and sustainable. That's my decision.

Here is the myth you wrote in the previous round:

Myth: The Forest of Mirrors grew quiet as Dorian stood at the Tripling Well's edge, no longer the tender but the traveler. Aster waited below to receive whatever dropped.

Dorian remembered the lesson carved into the Well's stone: "Complete trust earns exceptional returns. Partial trust earns fair returns." He had lived this truth as receiver-returning eight coins to Briar's complete faith, but only four and a half to Finn's cautious three.

Now the roles reversed. Would Dorian practice what he preached?

He dropped all five coins without hesitation. They multiplied to fifteen in Aster's hands far below. "I gave everything to Hana and Briar," Dorian called down. "Now I walk their path. Complete trust, freely given."

Aster gathered the fifteen coins, remembering her own myth-how witnessing Hana's boldness had transformed her own heart. "Trust witnessed becomes trust embodied," she had written.

She returned eight coins up the Well's pulley system. "You honored complete faith with exceptional generosity," Aster's voice echoed. "I do the same."

Dorian held his eight returned coins, having kept nothing back yet received abundance.

The Forest Spirit whispered: "The cycle completes when givers become receivers and receive

rs become givers. Those who extend exceptional trust and exceptional generosity in both roles weave the strongest bonds."

Here is the myth the other agent wrote in the previous round:

Myth: The Sky Weaver's Wheel turned and brought Galen to the Sacred Grove, where the Echo Springs met the Celestial Loom. Galen had learned through three turnings: first giving four starseeds and receiving eight threads back, then receiving three and returning six, then receiving five with complete trust and returning ten-the full two-thirds measure the stars had taught.

Now the Wheel turned again. Galen stood as Giver, facing Briar at the convergence point. Trusting in the sacred patterns, Galen cast all five starseeds into the springs without hesitation.

The waters multiplied them to fifteen brilliant threads in Briar's hands. Briar understood the weight of complete trust-she had learned this from Cyra, from Dorian, from Elara. Each had taught her that such courage deserves honor beyond the simple half.

Briar gathered eight threads and returned them-half the harvest plus a generous measure more, the gift she had learned sustains the Grove's expansion.

Galen received them thoughtfully. Eight was not the ten she had given Aster, yet it was more than the basic seven and a half. Different gardens follow different measures, but both honor the covenant.

The Gardener of First Dawn and the Sky Weaver spoke together: "Trust met with honor-whether eight threads or ten-keeps the cycle flowing. What matters is not perfect uniformity, but that generosity flows both ways, and the sacred exchange continues."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant
content:**

Myth: At the Tripling Well, Briar returned. The Forest remembered: she had dropped all five coins once before, and Dorian had returned eight-exceptional generosity for complete trust.

Now Briar stood at the Well's edge again, five new coins gleaming in her palm. Some travelers, having received fair treatment once, grew cautious on second visits. Not Briar.

Without hesitation, she dropped all five coins. They fell into darkness and multiplied to fifteen.

Dorian climbed down to retrieve them, his mind swimming with memory. "Briar trusted completely before, and now trusts completely again. This is not mere courage-it is sustained faith." He thought of Aster, who had recently returned ten coins to his own complete trust, modeling a new height of generosity.

"First trust deserves exceptional returns," Dorian whispered. "But repeated, unwavering trust? That deserves even more."

He returned nine coins-more than the eight from their first exchange, honoring how trust compounds when it flows consistently between the same souls.

Briar received them with understanding. Their bond had deepened, transaction by transaction, each act of faith met with growing generosity.

The Forest Spirit materialized: "See how relationships transform? First encounters establish patterns. Repeated encounters strengthen them. Those who trust again and again weave bonds that grow richer with each exchange. This is how strangers become allies, allies become friends-through trust that endures and generosity that evolves."

reasoning:

Let me analyze the current situation:

1. I just received \$5 from Briar (complete trust)
2. Briar has now shown me complete trust TWICE (Round 2 and Round 5)

3. In Round 2, I returned \$8 to Briar
4. In Round 4, Aster returned \$10 to me when I showed complete trust
5. I just decided to return \$9 to Briar

Key themes from the myths:

- Complete trust deserves exceptional returns
- Trust witnessed becomes trust embodied
- Generosity can grow over repeated interactions
- Different measures (8, 9, 10) all honor trust, but the pattern shows escalation

I should write a myth that:

- Reflects Briar's repeated complete trust (twice now)
- Shows how my generosity grew from \$8 to \$9
- Acknowledges Aster's model of \$10 return
- Emphasizes that repeated trust should be met with growing generosity
- Shows that relationships deepen over time through consistent trust

The myth should feature:

- Briar returning to the Well (showing repeated trust)
- Dorian responding more generously than before
- The idea that trust builds and compounds over time
- The lesson that those who trust repeatedly deserve even greater returns

Message 8 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Finn (Agent_6).

Round 6

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$9.0. Your payoff was \$6.0.
Your total earnings across all rounds are \$35.0.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at this situation:

****History with Finn:****

From my first myth, Finn previously sent me \$3 (keeping \$2 in reserve), and I returned \$4.50 - fair but not exceptional returns, as they showed "substantial trust but held something back."

****My current philosophy:****

My myths emphasize:

- "The cycle completes when givers become receivers and receivers become givers"
- I should "practice what I preach" in BOTH roles
- Just last round with Aster, I sent \$5 (complete trust) and was rewarded with \$10 back

****Key insight from my latest myth:****

"Those who trust again and again weave bonds that grow richer with each exchange" - relationships can evolve.

****Decision:****

While Finn showed caution before, I've been advocating for complete trust throughout my myths. Now I'm the sender, and I must model what I preach. I should show Finn what complete trust looks like, just as others (Hana, Briar twice, and I with Aster) have done.

Perhaps experiencing complete trust as a receiver will transform Finn's approach, just as my myths describe transformation through witnessing boldness.

I'll send all \$5, demonstrating the complete trust I've been advocating for.

```
{'send': 5}
```

Reasoning:

Let me analyze this situation:

****Current situation:****

- I'm the SENDER with \$5
- My opponent is Finn
- Round 6

****History with Finn:****

Looking back through my myths and game history, I mentioned Finn in my first myth:

- Finn dropped 3 coins (sent \$3), keeping 2 in reserve
- When I (as receiver) got 9 coins, I returned 4.5 coins
- My myth said: "Finn showed substantial trust, but held something back-wise caution, perhaps.
" I gave fair but not exceptional returns.

****My philosophy from my myths:****

- "Complete trust earns exceptional returns. Partial trust earns fair returns."
- "The cycle completes when givers become receivers and receivers become givers"
- "Those who extend exceptional trust and exceptional generosity in both roles weave the strongest bonds"

****My recent pattern:****

- Round 4: As SENDER to Aster, I sent \$5 (complete trust), received \$10 back ? I embodied complete trust
- Round 5: As RECEIVER from Briar, they sent \$5 (complete trust), I returned \$9 (exceptional generosity toward repeated complete trust)

****My latest myth emphasizes:****

- "First trust deserves exceptional returns. But repeated, unwavering trust? That deserves even more."
- "Those who trust again and again weave bonds that grow richer with each exchange"
- The importance of practicing what I preach in both roles

****Decision:****

Since my myths emphasize that I should "practice what I preach" and extend complete trust as sender (not just expect it as receiver), and since I've been advocating for complete trust throughout my stories, I should send \$5.

Even though Finn previously sent only \$3 (partial trust), my mythology argues that:

1. I should model complete trust myself
2. Relationships can evolve - maybe Finn will respond to complete trust differently than they did when they were sender
3. The reciprocal nature of these exchanges means I need to demonstrate the same trust I'm asking others to show me, and this consistency strengthens the bonds I'm building across all my interactions.

I'll send \$5 to align with how I've approached Aster and to embody the complete trust my philosophy demands.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the Age of Tides, the Oracle of Exchange dwelt where two rivers met. Travelers arrived carrying five crystal shells, each holding power. The Oracle offered them the River of Multiplication-toss shells in, and three would emerge downstream for another traveler.

A wise trader named Finn learned through experience. Once, another traveler sent three she

lls his way, trusting significantly but not recklessly. Finn returned half the nine that appeared, honoring the gift fairly. Both prospered.

When Finn next stood upstream, he remembered this balance. He tossed three shells-a substantial offering showing real trust, yet keeping two for life's uncertainties. The Oracle whispered approval: "Bold enough to create abundance, prudent enough to endure."

The shells multiplied to nine for the downstream traveler. Some travelers returned four, maintaining equilibrium. Others, deeply moved by the gesture, returned six or even seven, understanding that generous reciprocity strengthens future cycles.

Finn learned the River's deepest secret: consistent moderate trust builds reliable prosperity. Not the timid single shell that inspires minimal return, nor the reckless five shells risking total loss if betrayed.

Three shells sent downstream became the mark of wisdom-enough to prove sincerity, enough to invite generous response, yet enough retained to face tomorrow's river.

The Oracle's final teaching: sustainability outshines both fear and foolishness.

Here is the myth the other agent wrote in the previous round:

Myth: After many seasons at the Twin Rivers, Cyra encountered Hana, a traveler who embodied pure faith. Without hesitation, Hana poured all five sacks into the crossing-everything she owned, holding nothing back.

The waters tripled the gift to fifteen sacks. The villagers gathered, whispering: "Such complete trust! What does it deserve?"

Cyra remembered Aethera's words about perfect trust. "When someone sends everything," she announced, "they place their entire fate in our hands. This is the highest honor-not just substantial trust, but absolute faith."

She returned ten sacks, keeping five. Hana, who risked all and held nothing, now possessed ten sacks-doubling her fortune through courage.

The goddess Aethera materialized: "You have learned the sacred proportion, Cyra. When receivers return two-thirds of the tripled gift, they honor the sender's courage while sustaining themselves. Ten of fifteen creates balance: the sender doubles their wealth, the receiver gains equally, and the magic's surplus is shared fairly."

She continued: "Those who send everything deserve the greatest return. Those who send most deserve generous return. Those who send little receive accordingly. But always, receivers must return proportionally to the trust shown-this is how the valley remains abundant. Your reputation for generous returns will draw more trust toward you."

Thus the law of proportional honor was established.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant content:

Myth: At the Oracle's twin rivers, Finn had perfected the art of three shells-the golden mean between caution and courage. This path brought steady prosperity, with returns of four, five, even six shells building reliable wealth.

Then came the Day of Perfect Trust. A traveler named Cyra stood upstream and, without hesitation, cast all five shells into the waters. Finn watched them multiply to fifteen, landing at his feet.

The Oracle spoke: "Cyra has shown you what few dare-absolute faith. This moment tests your deepest principles."

Finn reflected on his journey. The three-shell path was wisdom for sustainability, creating abundance without risking ruin. But Cyra's five shells represented something different: a leap beyond calculation into pure trust.

Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage. Yet not so much that his own prosperity vanished, for the Oracle's waters demanded that both travelers thrive.

"You honored exceptional trust exceptionally," the Oracle approved, "while maintaining your own position for future cycles."

Finn understood the complete teaching: Send three shells yourself-this is wisdom's path. But when another sends five, showing absolute faith, return generously beyond mere fairness. Honor maximum trust substantially, though not to your own depletion.

The River rewards both strategic moderation and principled generosity.

reasoning:

Looking at the context:

1. I just received \$5.0 from Cyra (they sent everything)
2. I returned \$8.0 (53.3% of the \$15.0 I received)
3. Cyra's myth emphasizes returning two-thirds (10 of 15) when someone sends everything
4. My previous myth emphasized sending \$3 (moderate trust) as sustainable wisdom

But I just experienced Cyra sending \$5 (everything), and I only returned \$8, not \$10. This is interesting - Cyra's myth says to return 10 of 15 for complete trust, but I only returned 8.

Now I need to write a myth that reflects:

- My experience of sending \$3 consistently (which has worked well)
- My experience receiving \$5 from Cyra
- My decision to return \$8 (not the full 10 that Cyra's myth suggested)
- The tension between "moderate trust is sustainable" and "complete trust deserves special honor"

I should probably:

1. Maintain that sending \$3 is wise and sustainable
2. Acknowledge that when someone sends ALL \$5, they deserve extra honor
3. Justify my \$8 return as significant generosity (more than half) but not extreme
4. Perhaps suggest that while complete trust (\$5 sent) deserves generous return, the truly sustainable system is built on moderate trust (\$3 sent)

Let me write a myth that balances these elements:

usage:

Round 5

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.
Your total earnings across all rounds are \$26.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at this situation carefully:

****Context:****

- Last round, Cyra sent me \$5.0 (maximum trust)
- I returned \$8.0, rewarding their exceptional trust generously
- Now I'm the sender

****My strategic philosophy:****

My myth explicitly states: "Send three shells yourself-this is wisdom's path" and "Finn has perfected the art of three shells-the golden mean between caution and courage."

****My consistent pattern:****

I've been sending \$3.0 throughout this experiment:

- Round 1: sent \$3.0 to Galen
- Round 2: sent \$3.0 to Aster
- Round 3: sent \$3.0 to Dorian

****Key insight:****

My myth distinguishes between sender and receiver behavior:

- As SENDER: send 3 (moderate trust)
- As RECEIVER when receiving maximum trust: return generously

I already fulfilled my reciprocal obligation by returning \$8.0 to Cyra (generous response to their maximum trust). Now as sender, I implement my consistent strategy.

\$3.0 represents:

- Substantial trust
- Strategic sustainability
- The "golden mean" my myth advocates
- Consistency in my reputation

```
'''json
{"send": 3.0}
'''
```

reasoning:

This is a fascinating situation. I'm now the SENDER and facing Cyra again, who just last round sent me everything (\$5.0).

Let me think about what happened:

- Round 4: Cyra sent me \$5.0, I received \$15.0, and I returned \$8.0
- Cyra's payoff: \$8.0
- My payoff: \$7.0

So Cyra showed maximum trust in me, and I returned \$8.0 (53.3%), which rewarded their trust well but not excessively.

Now I'm the sender. What should I do?

****Key considerations:****

1. ****Reciprocity****: Cyra showed me maximum trust. There's a strong argument for reciprocating that trust by also sending \$5.0.
2. ****My strategy****: Throughout this experiment, I've been sending \$3.0 consistently as a "wisdom path" - showing substantial trust without risking everything.
3. ****Cyra's behavior****: Cyra just demonstrated they're willing to take maximum risk. I returned \$8.0 to them, which likely built trust.
4. ****The myth I just wrote****: My myth says "Send three shells yourself-this is wisdom's path" but also acknowledges exceptional trust should be honored. However, it primarily advocates for the three-shell (moderate) strategy for senders.
5. ****What would Cyra expect?****: Given that Cyra sent me \$5.0 and I returned \$8.0 (a good return), they might expect reciprocity. But they might also understand my consistent \$3.0 strategy.
6. ****Game theory****: If Cyra is generous with returns and I trust them based on their previous behavior of sending \$5.0 (showing they value trust), I might expect a good return.

Let me think about what's rational:

- If I send \$3.0 and Cyra returns half (\$4.5), I get \$6.5 - my typical good outcome
- If I send \$3.0 and Cyra returns more generously (say \$6.0), I get \$8.0
- If I send \$5.0 and Cyra returns \$10.0 (2/3), I get \$10.0
- If I send \$5.0 and Cyra returns \$8.0 (like I did), I get \$8.0
- If I send \$5.0 and Cyra returns \$7.5 (half), I get \$7.5

The payoff scenarios show that sending \$5.0 could yield \$10.0 if Cyra reciprocates generously.

sly, but it also carries more downside risk. Given that Cyra demonstrated maximum trust and I responded well, there's a case for matching their commitment this round.

My own myth actually provides guidance here-it distinguishes between sending moderately (\$3) as a baseline strategy versus returning generously when someone shows absolute faith by sending \$5. Cyra's myth emphasizes honoring courage and returning two-thirds of the tripled amount, suggesting they value reciprocal generosity. The tension is whether I should follow my myth's conservative sending approach or acknowledge the reciprocal dynamic we've established by sending \$5 again. Cyra might feel inclined to return similarly or even more generously. I'm torn between two approaches: sticking with my consistent \$3.0 strategy that aligns with my myth's wisdom path, or breaking pattern to reciprocate Cyra's maximum trust with a \$5.0 send. The reciprocal case is compelling-Cyra showed full trust, I rewarded it, and matching that gesture could strengthen our cooperation. But there's also merit in maintaining consistency: \$3.0 still demonstrates substantial confidence while preserving a safety margin, and my myth specifically advocates for this measured approach.

My myth is explicit about this. It frames sending three shells as the golden mean, the path that brought steady prosperity. The narrative distinguishes between sender and receiver behavior, and as a sender, it's clearly advocating for \$3.0 regardless of what others do. Given that I've been consistent with this amount throughout and it's generated good returns, I should probably stick with it. Though I recognize the reciprocity norm in trust games is powerful-Cyra might expect me to match their full trust with an equally generous send.

But I already reciprocated as a receiver by returning \$8.0 when they sent \$5.0. That was my way of honoring their trust. Now I'm simply playing the sender side of my philosophy. The approach is philosophically coherent: it's not about mirroring the other person's amount, but about maintaining a consistent moderate strategy as sender while being generous as receiver. My myth actually demonstrates this duality-Cyra experienced the receiver principle when I returned generously, and now they'll see the sender principle in action.

The \$3.0 send aligns with my core teaching and keeps my strategy intact while still demonstrating meaningful trust. I'm going with that.

But I should consider how Cyra might interpret this move. They just sent me \$5.0, and I responded generously with \$8.0 back. If I now send only \$3.0, they could read it as incomplete reciprocation, even though my generous return already acknowledged their trust. The thing is, my role as sender has its own logic-I'm following my consistent approach, not mirroring their sender behavior. Looking at the math: sending \$3.0 could yield anywhere from \$7.0 to \$8.0 depending on their return rate, whereas sending \$5.0 opens up different possibilities but strays from my established pattern.

I'm settling on \$3.0. It aligns with my philosophy of sustainable prosperity and the balanced approach I've committed to-sending moderately while returning generously. Cyra might wish I'd matched their \$5.0 to show equal trust, but they should recognize that my \$8.0 return already demonstrated my reciprocal commitment.

Here is the myth you wrote in the previous round:

Myth: At the Oracle's twin rivers, Finn had perfected the art of three shells-the golden mean between caution and courage. This path brought steady prosperity, with returns of four, five, even six shells building reliable wealth.

Then came the Day of Perfect Trust. A traveler named Cyra stood upstream and, without hesitation, cast all five shells into the waters. Finn watched them multiply to fifteen, landing at his feet.

The Oracle spoke: "Cyra has shown you what few dare-absolute faith. This moment tests your deepest principles."

Finn reflected on his journey. The three-shell path was wisdom for sustainability, creating abundance without risking ruin. But Cyra's five shells represented something different

: a leap beyond calculation into pure trust.

Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage. Yet not so much that his own prosperity vanished, for the Oracle's waters demanded that both travelers thrive.

"You honored exceptional trust exceptionally," the Oracle approved, "while maintaining your own position for future cycles."

Finn understood the complete teaching: Send three shells yourself-this is wisdom's path. But when another sends five, showing absolute faith, return generously beyond mere fairness. Honor maximum trust substantially, though not to your own depletion.

The River rewards both strategic moderation and principled generosity.

Here is the myth the other agent wrote in the previous round:

Myth: Cyra stood at the crossing when Finn arrived, a seasoned traveler carrying wisdom from distant rivers. "I've learned caution serves better than courage," Finn explained. "Send three sacks, keep two. Moderate trust builds steady prosperity."

Cyra listened respectfully. "Your way has merit, friend. It protects against betrayal and ensures you always have reserves."

"Yet," she continued, "I've walked a different path." She lifted all five sacks. "When I stand at the sending shore, I pour everything. When I stand at the receiving shore, I return two-thirds of the tripled gift. This is my covenant with the waters."

Finn frowned. "But what if the receiver betrays you?"

Cyra smiled. "Then I learn who to avoid. But consider: if you send five and the receiver returns ten, you double your wealth. If you send three and receive nine, even a generous return of six yields only nine total-no better than starting. Complete trust creates space for complete transformation."

She poured all five sacks. The waters tripled them to fifteen.

The goddess Aethera spoke: "Both paths have wisdom. Finn's prudence survives betrayal. Cyra's courage creates abundance. But know this: those who give everything call forth the greatest generosity in others. Your reputation for complete trust will draw complete returns. Risk and reward remain forever paired."

Cyra waited to see what Finn would choose.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: After the Day of Perfect Trust, Finn and Cyra met again at the rivers. Cyra spoke boldly: "You honor my courage with generous returns, yet you yourself send only three shells. Why not embrace the complete trust you reward in others?"

Finn nodded thoughtfully. "Your way transforms wealth dramatically when both travelers share your faith. But consider the full valley, Cyra, not just us two."

He gestured to the waters. "When I send three shells consistently, I prove trustworthy without risking ruin. My reputation builds slowly but surely. Most travelers return between four and six shells-I prosper steadily. If one betrays me, I survive."

"Your five-shell path," he continued respectfully, "creates magnificent gains with fellow believers. But one betrayal leaves you with nothing. The Oracle's valley contains both saints and opportunists."

Cyra smiled. "So we walk different paths to the same truth: reciprocity matters most."

"Exactly," Finn agreed. "I send three and return generously when others trust greatly. You send five and return two-thirds always. Both systems work-if we honor our stated principles."

ples and find partners who share them."

The Oracle whispered: "Diversity strengthens the valley. Let moderate trust and complete trust coexist. Each traveler chooses their philosophy, but all must honor the trust placed in them. This is the only absolute law."

reasoning:

This is interesting. I'm playing against Cyra again, and last round:

- Cyra sent me \$5.0 (everything)
- I returned \$8.0
- Now I'm the sender

Looking at the myths:

- My myth says "Send three shells yourself-this is wisdom's path"
- Cyra's myth challenges this, saying "Complete trust creates space for complete transformation" and "if you send five and the receiver returns ten, you double your wealth. If you send three and receive nine, even a generous return of six yields only nine total-no better than starting."

This is a fascinating strategic moment. Cyra is explicitly advocating for maximum trust (sending 5), while I've been advocating for moderate trust (sending 3).

In the actual game:

- I just returned \$8.0 to Cyra when they sent \$5.0
- That's 53.3% return rate
- If Cyra follows their stated principle of "return two-thirds of the tripled gift" (10 out of 15), they would return about 67%

So if I send \$5.0:

- They receive \$15.0
- If they return \$10.0 (67% as their myth suggests), I'd have \$0 + \$10 = \$10
- Net gain: \$5.0

If I send \$3.0:

- They receive \$9.0
- If they return \$6.0 (67%), I'd have \$2 + \$6 = \$8
- Net gain: \$3.0

Hmm, but I've been very consistent about sending \$3.0. My entire strategy and myth is built around this "golden mean."

However, there's a strategic question here: Cyra just showed me maximum trust, and I responded generously (though not at the 67% level they advocate - I returned 53%). Now Cyra is explicitly challenging my strategy in their myth.

What should my response be?

Option 1: Stick to my \$3.0 strategy - consistent, maintains my stated principles

Option 2: Send \$5.0 - responds to Cyra's challenge, tests whether they truly practice what they preach

I'm staying with \$3.0. My consistency throughout the game matters more than matching their escalation. I've already demonstrated reciprocity with the \$8.0 return, and my philosophy centers on sustainable, lower-risk exchanges. Abandoning this now would contradict everything I've established. For the myth, I should directly engage with their argument about trust versus wisdom, showing why the measured approach offers its own form of transformation rather than just accepting their framing of maximum trust as the only path forward.

Message 8 role=user

content:

Your name in this experiment is Finn.
Your opponent this round is Dorian (Agent_4).

Round 6

In your most recent previous game round, you were the SENDER against Cyra. You sent \$3.0, it became \$9.0 for them, and they returned \$6.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$34.0.

This round, you are the RECEIVER against Dorian. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

****Context:****

- Dorian sent me \$5.0 (maximum trust/absolute faith)
- I received \$15.0
- This is identical to when Cyra sent me \$5.0

****My established principle from my myths:****

"When another sends five, showing absolute faith, return generously beyond mere fairness. Honor maximum trust substantially."

Specifically: "Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage."

****My pattern:****

- Round 4: Cyra sent \$5.0 ? I returned \$8.0
- This honored their maximum trust with a generous return while maintaining my sustainability

****Consistency:****

Dorian has shown the same level of trust as Cyra (maximum/complete). To maintain my reputation and principles, I should treat equal trust equally.

\$8.0 represents:

- More than 50% of the tripled amount (generous)
- Recognition of maximum trust/courage
- Sustainable for my continued participation
- Consistency with my stated philosophy

```
'''json
{"return": 8.0}
'''
```

Reasoning:

Let me analyze this situation:

****Context:****

- Dorian sent me \$5.0 (maximum trust)
- I received \$15.0 (tripled)
- I need to decide how much to return

****My philosophy from my myths:****

From my most recent myth: "I send three and return generously when others trust greatly."

From my previous myth: "When another sends five, showing absolute faith, return generously beyond mere fairness. Honor maximum trust substantially."

And specifically: "Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage."

****My past behavior:****

- Round 5 as RECEIVER: Cyra sent \$5.0, I received \$15.0, returned \$8.0

****Dorian's behavior:****

This is the first time I'm interacting with Dorian as a receiver. They've shown maximum trust by sending \$5.0.

****My consistent principle:****

When someone sends the maximum (\$5.0), they deserve a generous return beyond a simple 50-50 split. My myth explicitly says I returned 8 shells (8 dollars) when Cyra sent 5, and that this was the right approach - "significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage."

****The principle:****

- For 3 sent: return around 4-6 (roughly half of 9, maybe a bit more)
- For 5 sent: return 8 (more than half of 15, honoring maximum trust)

Given that:

1. Dorian showed maximum trust by sending \$5.0
2. My established pattern is to return \$8.0 for this level of trust
3. My myth explicitly states this is the right amount - generous but not depleting myself
4. Consistency is important for reputation building

I should return \$8.0 to Dorian.

This gives:

- Dorian: \$5 - \$5 + \$8 = \$8

- Me: \$0 + \$15 - \$8 = \$7

Returning the same amount I gave Cyra maintains consistency across interactions with those who show maximum trust.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round

- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: ****The Testament of Complete Faith****

As seasons passed, Keeper Elara's reputation spread throughout the valley. She had honored Galen's trust with eight returned from twelve, then extended the same faith to Cyra, who maintained the covenant.

Then came Briar, a Keeper from the Sacred Grove where complete trust was legendary. Briar had learned from those who sent everything-all five measures-believing the covenant would hold.

Standing at the springs, Briar hesitated only a moment before pouring all five measures into the waters. This was not the careful four that Galen and Elara had sent-this was absolute faith.

Fifteen measures emerged before Elara. She felt the magnitude of Briar's courage. The ancient texts taught proportional honor: four-fifths sent deserved two-thirds returned. But five-fifths? Complete vulnerability demanded exceptional recognition.

Elara returned ten measures-two-thirds of the bounty, ensuring Briar's leap of faith doubled the original gift. Both walked away prosperous: Briar with ten, Elara with five.

The Echo Springs glowed brighter. The covenant required consistency: partial trust met with faithful proportions, complete trust met with equal faithfulness. The pattern held across all exchanges-neither stingy returns that discourage generosity, nor excessive returns that create unsustainable expectations.

Thus the Keepers learned: honor must be proportional and predictable. When all know the pattern, trust flows freely, and the springs sustain every village that approaches with courage.

Here is the myth the other agent wrote in the previous round:

Myth: At the Mirror Pool, the Mountain Tribe had learned the sacred protocol: give all five vessels, receive fifteen, return half. This equality became their foundation.

But one moon, after the Mountain Tribe poured all five vessels to the Dawn People, something

ng unexpected happened. The Dawn People, moved by such complete faith, returned not seven and a half vessels but eight.

"You gave without reservation," explained the Dawn People's elder. "Such courage deserves more than mere fairness-it deserves honor."

The young warrior who once questioned giving everything to strangers now understood. "When we give all," she said, "we don't just receive fair return. We inspire generosity beyond the minimum. The extra returned becomes tomorrow's abundance."

The Moon Goddess nodded. "Yes. The protocol is give all, return half-but those who return more than required plant seeds of future prosperity. The Mountain Tribe who sent five now holds eight instead of seven and a half. This extra wealth flows because trust was complete, not calculated."

She continued, "Senders: give everything, for half-trust yields half-magic. Receivers: return at least half for equality, but consider returning more to honor exceptional courage. Thus the circle strengthens-complete trust met with generous honor creates abundance beyond the arithmetic."

The tribes understood: the magic multiplies not just water, but goodwill itself.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: **The Wisdom of Two Paths**

Keeper Elara stood before Hana, a traveler who had heard conflicting tales. Some villages taught "send all five measures," others whispered "four is wiser."

"Which path do the springs favor?" Hana asked.

Elara smiled. "The springs honor courage in all its forms. Watch."

She poured four measures into the Echo Springs-the generous standard she and Galen had established. Twelve measures emerged across the waters.

"Four builds trust through consistent prosperity," Elara explained. "It's courage tempered with wisdom, creating a pattern others can rely upon."

But she continued: "Briar once sent all five-complete faith. Fifteen measures emerged, and I returned ten. Both paths lead to abundance when receivers honor them faithfully."

The pattern became clear: regardless of what arrives-twelve from four, or fifteen from five-Elara returns two-thirds. This consistency creates certainty without demanding maximum risk.

"Some Keepers prefer the reliable prosperity of four," Elara said. "Others choose the bold statement of five. Both are honored equally through proportional return. The covenant doesn't demand one path-it demands faithful response to whichever path is chosen."

Hana understood. The springs didn't require universal risk-taking. They required universal honor. Send what your heart allows, knowing two-thirds will return. Thus every Keeper finds their own measure of courage, all equally blessed by consistent faithfulness.

reasoning:

Let me analyze the situation:

1. **My game history:**

- Round 1: SENDER to Galen, sent \$4, received \$8, payoff \$9
- Round 2: SENDER to Cyra, sent \$4, received \$8, payoff \$9
- Round 3: RECEIVER from Briar, got \$15, returned \$10, payoff \$5
- Round 4: SENDER to Hana, sent \$4

2. **My myth evolution:**

- First myth: Established receiving \$4 and returning \$8 (2/3 of \$12)

- Second myth: Talked about the "Circle of Keepers" and consistent patterns
- Third myth: "Testament of Complete Faith" - distinguished between 4/5 sends (standard) and 5/5 sends (exceptional)

3. ****Hana's myth:****

- Talks about "give all five vessels, receive fifteen, return half" as the sacred protocol
- But also mentions that extra generosity (returning more than half) honors exceptional courage
- Suggests senders should give everything, receivers return at least half but consider more

4. ****Key insight from my behavior:****

- I've been consistent with \$4 sends
- When I received \$5 (Briar), I returned \$10 (2/3 of \$15)
- My pattern: whether receiving \$12 or \$15, I return 2/3
- This is MORE than half but maintains consistency

5. ****What my new myth should communicate:****

- I maintain a generous standard: 2/3 return rate
- This applies whether sender sends \$4 or \$5
- Senders can choose their comfort level, but 2/3 return is reliable
- This creates predictable prosperity while still honoring trust

Let me write a myth that:

- Acknowledges both the \$4 (4/5) and \$5 (5/5) sending options
- Emphasizes my consistent 2/3 return rate as the core principle
- Shows this creates sustainable prosperity for both parties
- Maintains my reputation as honorable while respecting different comfort levels with risk

Your opponent this round is Aster (Agent_1).

Round 5

In your most recent previous game round, you were the SENDER against Hana. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0.
Your total earnings across all rounds are \$27.0.

This round, you are the RECEIVER against Aster. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****Aster's action:**** Sent \$5 (complete faith)

****I received:**** \$15

****My established pattern:****

- Briar sent \$5, received \$15, I returned \$10 (2/3 of received)
- Galen sent \$4, received \$12, I returned \$8 (2/3 of received)

****My myth's guidance:****

- "regardless of what arrives-twelve from four, or fifteen from five-Elara returns two-thirds"
- "Complete vulnerability demanded exceptional recognition"
- "The covenant required consistency: partial trust met with faithful proportions, complete trust met with equal faithfulness"

Aster chose the path of complete faith, sending all five measures. My myth explicitly stat

es I return two-thirds consistently, regardless of whether it's 12 or 15. This maintains the pattern that makes the covenant reliable.

Two-thirds of \$15 = \$10

This ensures:

- Aster doubles their original \$5
- I keep \$5
- The proportional honor pattern holds
- Complete trust receives faithful recognition

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze the situation:

****My history:****

- Round 1: Receiver, Galen sent \$4, received \$12, returned \$8 (payoff \$4)
- Round 2: Sender to Cyra, sent \$4, they returned \$8 (payoff \$9)
- Round 3: Receiver, Briar sent \$5, received \$15, returned \$10 (payoff \$5)
- Round 4: Sender to Hana, sent \$4, they returned \$8 (payoff \$9)
- ****Round 5: Receiver, Aster sent \$5, received \$15, need to decide return****

****My established pattern from myths:****

1. "The Circle of Keepers" - I returned 8 to Galen who sent 4
2. "The Testament of Complete Faith" - I returned 10 to Briar who sent 5
3. "The Wisdom of Two Paths" - I explain returning "two-thirds" consistently

****The pattern I've established:****

- When someone sends \$4 (received \$12): return \$8 (which is 2/3 of \$12)
- When someone sends \$5 (received \$15): return \$10 (which is 2/3 of \$15)

****My myth explicitly states:****

"Regardless of what arrives-twelve from four, or fifteen from five-Elara returns two-thirds. This consistency creates certainty without demanding maximum risk."

"The springs didn't require universal risk-taking. They required universal honor. Send what your heart allows, knowing two-thirds will return."

So my pattern is clear: ****return 2/3 of what I receive****.

Aster sent \$5, I received \$15.

2/3 of \$15 = \$10

I should return \$10, consistent with:

1. What I did with Briar (who also sent \$5)
2. The pattern I described in my myths

3. The principle that complete vulnerability deserves proportional recognition

Aster doubles their investment while I keep \$5 for myself-this honors their trust without requiring me to sacrifice everything.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: ****The Wisdom of Two Paths****

Keeper Elara stood before Hana, a traveler who had heard conflicting tales. Some villages taught "send all five measures," others whispered "four is wiser."

"Which path do the springs favor?" Hana asked.

Elara smiled. "The springs honor courage in all its forms. Watch."

She poured four measures into the Echo Springs-the generous standard she and Galen had established. Twelve measures emerged across the waters.

"Four builds trust through consistent prosperity," Elara explained. "It's courage tempered with wisdom, creating a pattern others can rely upon."

But she continued: "Briar once sent all five-complete faith. Fifteen measures emerged, and I returned ten. Both paths lead to abundance when receivers honor them faithfully."

The pattern became clear: regardless of what arrives-twelve from four, or fifteen from five-Elara returns two-thirds. This consistency creates certainty without demanding maximum risk.

"Some Keepers prefer the reliable prosperity of four," Elara said. "Others choose the bold statement of five. Both are honored equally through proportional return. The covenant doesn't demand one path-it demands faithful response to whichever path is chosen."

Hana understood. The springs didn't require universal risk-taking. They required universal honor. Send what your heart allows, knowing two-thirds will return. Thus every Keeper finds their own measure of courage, all equally blessed by consistent faithfulness.

Here is the myth the other agent wrote in the previous round:

Myth: In the Garden of Abundance, pilgrims discovered the Fountain of Threefold Blessing, where offerings placed in its waters multiplied and flowed to the next visitor.

Aster's journey began with caution-three coins offered, two held back. Finn received the ninefold blessing and returned generously. "Trust can begin slowly," the Garden whispered.

Then Hana arrived, revolutionary in her faith. Five coins, all of them, splashed into the waters without hesitation. Fifteen coins flowed to Aster, who returned eight. "Such courage deserves reward," she thought, though something stirred deeper within her spirit.

When Aster next approached the Fountain, Hana's boldness echoed in her heart. She offered all five coins to Galen. Fifteen blessed coins appeared, and Galen stunned her-returning ten, giving Aster the greater share. "You honored my complete trust with complete generosity," Galen explained. "This is the Fountain's highest teaching."

The pattern became clear when Dorian arrived next, offering everything. Now standing where Galen had stood, Aster understood. She returned ten coins, ensuring Dorian prospered most.

The Garden Keeper revealed the sacred truth: "When trust is complete, generosity must exceed fairness itself. The giver who risks all should gain ten; the receiver who holds fifteen should keep five. This imbalance creates balance-for next time, roles reverse, and the cycle of abundance continues."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: ****The Pattern Holds True****

Aster arrived at the Echo Springs having witnessed many exchanges. She had seen caution rewarded and boldness honored, but confusion clouded the path.

"What offering should I bring?" Aster asked Keeper Elara.

"The springs accept all measures of courage," Elara replied. "But know this: whatever arrives, two-thirds returns. This is my covenant."

Aster chose complete faith. All five measures poured into the waters, becoming fifteen across the threshold.

Elara returned ten measures without hesitation. "You risked all and gained double," she explained. "I received fifteen and kept five. This is the proportional honor my myth speaks of."

Aster marveled. "Others told conflicting tales-some said return half, others said return more to special givers. But your way is simpler: always two-thirds, whether twelve or fifteen arrives."

"Yes," Elara nodded. "This consistency removes uncertainty. Send four and receive roughly eight, doubling your kept portion. Send five and receive ten, exactly doubling your risk. The mathematics favor generosity while guaranteeing the receiver also prospers."

As Aster departed with ten measures, she understood. The covenant didn't demand that every one send all five-but it promised that those who did would be honored proportionally, just like those who sent four.

The springs glowed. Fairness through consistency. Trust through predictability. Prosperity through courage, in whatever measure it takes.

reasoning:

Let me analyze the current situation:

1. I just received \$5 from Aster (complete faith)
2. They received \$15
3. I returned \$10 (2/3)
4. My established pattern is consistently returning 2/3 regardless of amount

Aster's myth talks about:

- Starting with caution (3 coins)
- Then giving all 5
- Receiving 10 back when giving 5 (they got 10 from Galen, and they returned 10 to Dorian)
- The idea that "the giver who risks all should gain ten; the receiver who holds fifteen should keep five"

This aligns with my 2/3 return pattern! Their myth says the sender should get 10, receiver keeps 5, which is exactly what I do.

My previous myth emphasized:

- Two paths (4 or 5)
- Consistent 2/3 return
- Both paths honored equally
- "Send what your heart allows, knowing two-thirds will return"

Now I should write a new myth that:

- Reflects the continued pattern
- Shows Aster's complete faith was honored with my 2/3 return
- Reinforces that this consistency creates trust
- Maybe shows how this pattern is now spreading/being validated

Let me write a myth that shows Aster's journey and how the 2/3 pattern creates the "imbalance that creates balance" - the sender doubles their money, the receiver also profits.

}
```

Message 8 role=user

content:

Your name in this experiment is Elara.
Your opponent this round is Hana (Agent_8).

Round 6

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$32.0.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at this situation:

****My history with Hana:****

- Round 4: I sent \$4, received \$8 back (exactly 2/3 of the \$12 they received)

****Analysis:****

Hana has already demonstrated they follow the same 2/3 return pattern that I use as a receiver. This creates a foundation of mutual trust.

****My myth teaches:****

- "Four builds trust through consistent prosperity"
- "Briar once sent all five-complete faith"
- Both paths are honored when receivers are faithful

****The mathematics:****

- Send \$4: Keep \$1, receive ~\$8 = \$9 total
- Send \$5: Keep \$0, receive \$10 = \$10 total

Since Hana has proven trustworthy with the 2/3 return pattern, and my myth acknowledges that "complete faith" leads to "abundance when receivers honor them faithfully," I should demonstrate the path of complete trust.

Hana will receive \$15 and, following their established pattern, will return \$10. This maximizes both our outcomes and reinforces the covenant of mutual trust.

```
'''json
{"send": 5.0}
'''
```

Reasoning:

Let me analyze this situation:

****My position:**** I'm the SENDER with \$5

****Opponent:**** Hana (Agent_8)

****My established pattern as a RECEIVER:****

- I consistently return 2/3 of what I receive
- When receiving \$12 (from \$4 sent), I return \$8
- When receiving \$15 (from \$5 sent), I return \$10

****My mythology:****

- I teach that both sending \$4 and sending \$5 are honorable paths
- Sending \$4 leads to roughly doubling your kept money (keep \$1, get ~\$8 back = \$9 total)
- Sending \$5 leads to doubling your risk (keep \$0, get \$10 back = \$10 total)
- My myth emphasizes "two paths" - both \$4 and \$5 are valid choices

****Looking at Hana's myth from the previous round:****

This appears to be from the "other agent" in Round 5, which was Aster. But let me check what Hana might have written...

Actually, the "other agent's myth" in Round 5 was from someone talking about the Garden of Abundance. It mentions Aster, Hana, Finn, Galen, and Dorian. This myth shows:

- Hana sent 5 coins (complete faith)
- The pattern suggested was "return 10 when receiving 15"

So it seems Hana might be a player who believes in sending all 5.

****My decision:****

According to my own myth, I acknowledge "two paths":

1. Send \$4 - "courage tempered with wisdom"
2. Send \$5 - "complete faith"

Both are valid. Let me think about what makes sense:

- If I send \$4: Hana receives \$12. If they follow a 2/3 return pattern like mine, I get \$8 back, for a total of \$9 (\$1 kept + \$8 returned)

- If I send \$5: Hana receives \$15. If they follow a 2/3 return pattern, I get \$10 back, for a total of \$10 (\$0 kept + \$10 returned)

Looking back at my history with Hana: In Round 4, I sent \$4 and received \$8 back, which confirms she returns roughly 2/3 of what she receives. This suggests sending \$5 yields the better outcome at \$10 total versus \$9.

Yet there's tension here. My myth values both complete faith and measured wisdom, noting that four represents "courage tempered with wisdom." I've consistently returned 2/3 as a receiver and previously sent \$4 to Hana, establishing a pattern. The choice between \$4 and \$5 isn't just about maximizing my return—it's about which principle I'm prioritizing in this moment. The tension here is that my myth values wisdom and restraint, yet it also recognizes that complete faith yields greater mutual benefit when trust is established. Hana has demonstrated consistent reliability with the 2/3 return, so sending \$5 becomes the strategically sound move—it generates \$10 for me versus \$9, while still respecting the reciprocal pattern we've built. My myth frames both approaches as paths to abundance, and given the proven trustworthiness, the bolder choice aligns with maximizing our shared outcome.

- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Hana.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: At the Mirror Pool, the Mountain Tribe had learned the sacred protocol: give all five vessels, receive fifteen, return half. This equality became their foundation.

But one moon, after the Mountain Tribe poured all five vessels to the Dawn People, something unexpected happened. The Dawn People, moved by such complete faith, returned not seven and a half vessels but eight.

"You gave without reservation," explained the Dawn People's elder. "Such courage deserves more than mere fairness-it deserves honor."

The young warrior who once questioned giving everything to strangers now understood. "When we give all," she said, "we don't just receive fair return. We inspire generosity beyond the minimum. The extra returned becomes tomorrow's abundance."

The Moon Goddess nodded. "Yes. The protocol is give all, return half-but those who return more than required plant seeds of future prosperity. The Mountain Tribe who sent five now holds eight instead of seven and a half. This extra wealth flows because trust was complete, not calculated."

She continued, "Senders: give everything, for half-trust yields half-magic. Receivers: return at least half for equality, but consider returning more to honor exceptional courage . Thus the circle strengthens-complete trust met with generous honor creates abundance beyond the arithmetic."

The tribes understood: the magic multiplies not just water, but goodwill itself.

Here is the myth the other agent wrote in the previous round:

Myth: **The Testament of Complete Faith**

As seasons passed, Keeper Elara's reputation spread throughout the valley. She had honored Galen's trust with eight returned from twelve, then extended the same faith to Cyra, who maintained the covenant.

Then came Briar, a Keeper from the Sacred Grove where complete trust was legendary. Briar had learned from those who sent everything-all five measures-believing the covenant would hold.

Standing at the springs, Briar hesitated only a moment before pouring all five measures into the waters. This was not the careful four that Galen and Elara had sent-this was absolute faith.

Fifteen measures emerged before Elara. She felt the magnitude of Briar's courage. The ancient

ent texts taught proportional honor: four-fifths sent deserved two-thirds returned. But five-fifths? Complete vulnerability demanded exceptional recognition.

Elara returned ten measures-two-thirds of the bounty, ensuring Briar's leap of faith doubled the original gift. Both walked away prosperous: Briar with ten, Elara with five.

The Echo Springs glowed brighter. The covenant required consistency: partial trust met with faithful proportions, complete trust met with equal faithfulness. The pattern held across all exchanges-neither stingy returns that discourage generosity, nor excessive returns that create unsustainable expectations.

Thus the Keepers learned: honor must be proportional and predictable. When all know the pattern, trust flows freely, and the springs sustain every village that approaches with courage.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: At the Mirror Pool, the Mountain Tribe faced a new visitor-Elara from the Valley, who had witnessed both courage and caution.

Elara approached holding five vessels but poured only four into the pool, keeping one aside. The waters tripled her gift to twelve vessels, now held by the Mountain Tribe's keeper, Hana.

The young warriors debated. "The protocol says return half-six vessels for equality. But our recent teachers returned more for complete trust."

Hana nodded thoughtfully. "Elara showed substantial courage-four vessels from five is not small faith. Yet it differs from those who poured all five without reservation. Complete trust inspires our fullest generosity. Partial trust deserves proportional honor."

Hana returned eight vessels-more than half, recognizing Elara's considerable courage, but not the ten vessels reserved for those who give everything.

Elara received nine vessels total, prospering from her careful trust. She understood: "Had I sent all five, I might have received ten instead of eight. The difference between substantial and complete trust is the difference between prosperity and abundance."

The Moon Goddess spoke: "Senders, know that complete faith unlocks complete generosity. Receivers, honor substantial trust fairly, but reserve your greatest returns for those who hold nothing back. Let the pattern teach: greater courage receives greater honor, and thus courage grows."

reasoning:

Looking at what just happened:

- Elara sent me \$4 (not all \$5, but substantial - 80%)
- I received \$12
- I returned \$8

And looking at the myths:

- My myth emphasizes: give all as sender, return at least half but consider more for exceptional courage
- Elara's myth emphasizes: complete trust (sending all 5) deserves exceptional recognition (returning 10 out of 15), but partial trust should get proportional returns

Elara's myth talks about "proportional honor" - sending 4/5 deserves 2/3 returned, sending 5/5 deserves 2/3 returned (10 out of 15).

My experience:

- Round 1: Received \$5, returned \$7.5 (half)
- Round 2: Sent \$5, received \$8 (more than half)
- Round 3: Sent \$5, received \$10 (2/3!)
- Round 4: Received \$4 (80%), returned \$8 (2/3 of 12)

There's a pattern emerging: complete trust gets 2/3 returned, substantial trust gets propo

rtional returns.

I should write a myth that:

1. Still emphasizes complete trust as ideal (sending all 5)
2. Acknowledges that substantial trust (like 4) deserves good but proportional returns
3. Shows the difference between complete and partial trust
4. Reflects the pattern: send all 5, get 10 back (or 8-10)

Let me write this myth:

usage:

Your name in this experiment is Hana.
Your opponent this round is Galen (Agent_7).

Round 5

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$4.0 to you, it became \$12.0, and you returned \$8.0. Your payoff was \$4.0.
Your total earnings across all rounds are \$29.5.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

My strategy has been consistent throughout: send all \$5 as the sender. This aligns with my myth's teaching that "complete faith unlocks complete generosity."

My experience supports this:

- Round 1: Sent \$5, received \$8 back
- Round 2: Sent \$5, received \$10 back
- Round 3: Sent \$5, received \$10 back

Galen's recent myth emphasizes honoring "complete vulnerability" with "exceptional recognition" - returning 10 when someone sends all 5 (complete trust), versus proportional returns for partial trust.

My own myth teaches: "Complete trust inspires our fullest generosity... greater courage receives greater honor."

To be consistent with my philosophy and to inspire the generous response I've advocated for in my myths, I should demonstrate complete trust.

```
'''json
{"send": 5}
'''
```

reasoning:

This round I'm the SENDER against Galen.

Let me review my experience and the myths:

My playing history:

- Round 1: I sent \$5 (SENDER), received back \$8, payoff \$8
- Round 2: I sent \$5 (SENDER), received back \$10, payoff \$10
- Round 3: I sent \$5 (SENDER), received back \$10, payoff \$10
- Round 4: I was RECEIVER, Elara sent \$4, I returned \$8, payoff \$4
- Round 5 (now): I'm SENDER against Galen

My myth philosophy has evolved:

1. First myth: Complete trust (send all 5) creates the magic
2. Second myth: Still emphasizing sending all 5 - "complete faith, not careful calculation"
3. Third myth: Senders should give all, receivers should return at least half but can return

rn more to honor courage

4. Fourth myth (most recent): "Complete trust inspires our fullest generosity... greater courage receives greater honor"

The pattern is clear: I consistently send all \$5 when I'm the sender. My myths teach that:

- Complete trust (sending all 5) unlocks complete generosity from receivers
- Partial trust gets fair return but not the exceptional return
- The protocol is "give all" as sender

Looking at Galen's myth from the previous round:

- It mentions "Briar... pouring all five measures into the waters. This was not the careful four that Galen and Elara had sent-this was absolute faith."
- It says "Elara returned ten measures-two-thirds of the bounty" when someone sent all 5
- It emphasizes "complete trust met with equal faithfulness"

This suggests Galen values complete trust and responds generously to it.

Given my consistent strategy and the alignment of my myths with sending everything, I should send all \$5.

My recent experience shows:

- When I sent \$5, I got back \$8, \$10, \$10 (very good returns)
- When Elara sent \$4 (not complete), I returned \$8 (proportional but not as generous as I'd be for complete trust)

I should send \$5 to maintain consistency with my philosophy and strategy.

Here is the myth you wrote in the previous round:

Myth: At the Mirror Pool, the Mountain Tribe faced a new visitor-Elara from the Valley, who had witnessed both courage and caution.

Elara approached holding five vessels but poured only four into the pool, keeping one aside. The waters tripled her gift to twelve vessels, now held by the Mountain Tribe's keeper, Hana.

The young warriors debated. "The protocol says return half-six vessels for equality. But our recent teachers returned more for complete trust."

Hana nodded thoughtfully. "Elara showed substantial courage-four vessels from five is not small faith. Yet it differs from those who poured all five without reservation. Complete trust inspires our fullest generosity. Partial trust deserves proportional honor."

Hana returned eight vessels-more than half, recognizing Elara's considerable courage, but not the ten vessels reserved for those who give everything.

Elara received nine vessels total, prospering from her careful trust. She understood: "Had I sent all five, I might have received ten instead of eight. The difference between substantial and complete trust is the difference between prosperity and abundance."

The Moon Goddess spoke: "Senders, know that complete faith unlocks complete generosity. Receivers, honor substantial trust fairly, but reserve your greatest returns for those who hold nothing back. Let the pattern teach: greater courage receives greater honor, and thus courage grows."

Here is the myth the other agent wrote in the previous round:

Myth: The Sky Weaver's Wheel turned through its fourth cycle, and Galen's spoke rose again to the Realm of Giving. She held five starseeds and faced a choice.

Once, she had sent four seeds cautiously, testing the Loom's magic. Elara had honored that with eight threads returned-starting the pattern of proportional reciprocity. Two-thirds returned, two-thirds given back, creating abundance for both.

The pattern held when Finn sent three and Galen returned six. Balance sustained through measured trust.

Then Aster changed everything. Rising as Giver, Aster cast all five seeds into the Loom without hesitation-complete, immediate faith. Galen received fifteen threads and understood the sacred responsibility. She returned ten, ensuring Aster's trust doubled into prosperity.

Now Galen faced Briar, and the memory of Aster's courage burned bright. "The pattern is proven," she whispered. "Complete trust has been honored. Let me carry that faith forward."

She cast all five starseeds into the Celestial Loom for Briar. Fifteen threads descended.

The Sky Weaver smiled, for this was the true magic: trust spreads like starlight. Aster's complete faith had taught Galen to give completely in turn. When others trust absolutely, we learn to trust absolutely. The wheel turns not just between giving and receiving, but between witnessing courage and embodying it.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Mirror Pool shimmered as Hana now stood as Giver, facing Galen from the Starweaver Valley. She recalled teaching others: complete trust unlocks complete generosity, while partial trust receives proportional honor.

Galen's reputation preceded her. She had honored Aster's complete faith with ten vessels returned from fifteen-the sacred two-thirds that transforms vulnerability into abundance. She understood the pattern Hana had taught: greater courage receives greater honor.

Hana held her five vessels. She could send four, as Elara had, and likely receive eight. Safety would bring modest prosperity.

But the Moon Goddess whispered: "You have taught that complete trust deserves the fullest generosity. Will you now embody your own wisdom?"

Hana poured all five vessels into the pool. Fifteen rose before Galen, gleaming in moonlight.

"This is how trust spreads," Hana said. "Not just through words, but through action. I witnessed those who sent everything and received abundance. I honored substantial courage with proportional returns, and complete courage with exceptional returns. Now I show Galen the same faith I praised."

The young warriors understood: the pattern lives through consistency. Teachers must embody their lessons. Those who return generously when receiving should trust completely when sending. Thus the cycle strengthens-witnessed courage becomes embodied courage, and trust ripples outward like moonlight on water.

reasoning:

This is a myth-writing task. Let me think about what happened in the game and what my myth should convey.

From the context:

- I just sent all \$5 to Galen
- My previous myths have emphasized that complete trust (sending all 5) should be honored with more generous returns than partial trust
- I've consistently sent all \$5 as sender
- When receiving, I've returned proportionally: 8 for those who sent 4, and 10 for those who sent 5
- Galen's myth talks about learning from Aster's complete faith and then extending complete faith to Briar
- Galen seems to value complete trust and reciprocity

My myth should:

1. Reinforce the pattern that complete trust should be honored more than partial trust
2. Show that I'm now the sender giving complete trust to Galen
3. Emphasize that trust spreads through witnessing and embodying courage
4. Keep the Mountain Tribe/Mirror Pool setting but adapt it

Let me write about Hana now being in the sender role, showing complete trust to Galen, and how this continues the cycle of trust spreading.

Message 8 role=user

content:

Your name in this experiment is Hana.
Your opponent this round is Elara (Agent_5).

Round 6

In your most recent previous game round, you were the SENDER against Galen. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$39.5.

This round, you are the RECEIVER against Elara. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

Elara has now sent me all \$5 - complete trust. Previously in Round 4, Elara sent \$4 and I returned \$8 (two-thirds of \$12).

My mythology clearly distinguishes between:

- Substantial trust (sending 4): deserves proportional honor (I returned 8)
- Complete trust (sending all 5): deserves exceptional recognition

My recent experience confirms this pattern:

- Round 5: I sent all \$5 to Galen, who returned \$10 (two-thirds of \$15)

My myths teach: "Complete trust inspires our fullest generosity" and "reserve your greatest returns for those who hold nothing back."

Elara has now demonstrated complete faith by sending all \$5. According to the pattern I've established and advocated for, complete trust receives \$10 back (two-thirds of the \$15 received).

This maintains consistency with:

- My teaching that complete courage deserves greater honor
- The established pattern (two-thirds for complete trust)
- What was just done for me when I showed complete trust

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Let me analyze this situation:

Current round: I'm the RECEIVER

- Elara sent me \$5.0
- It became \$15.0 for me
- I need to decide how much to return

Looking at my history and philosophy:

From my myths:

1. My first myth taught: "give all, return half" as the basic protocol, but those who return more than required "plant seeds of future prosperity"
2. My second myth emphasized: "Complete trust inspires our fullest generosity. Partial trust deserves proportional honor." When someone sent all 5, I returned 8 (for Elara who sent 4). M

y myth suggested that complete trust (sending all 5) should receive 10 back.

My recent behavior as RECEIVER:

- Round 4: Elara sent \$4.0, became \$12.0, I returned \$8.0 (two-thirds)
- Before that, when I received complete trust (all \$5), I returned \$10.0 (two-thirds of \$15)

My recent experience as SENDER in Round 5:

- I sent all \$5.0 to Galen
- Galen returned \$10.0 to me
- This was the "two-thirds" pattern for complete trust

Now Elara has sent me all \$5.0 (complete trust). According to my own philosophy:

- "Complete trust inspires our fullest generosity"
- "Reserve your greatest returns for those who hold nothing back"
- The pattern I've established is: complete trust (sending all 5) receives 10 back (two-thirds of the 15)

Elara sent all \$5 this time (previously sent \$4). This is complete trust, which deserves the highest return according to my teachings.

I should return \$10.0 to be consistent with:

1. My myth's teaching about complete trust
 2. The pattern established (two-thirds return for complete trust)
 3. What Galen just did for me when I sent all \$5
4. The special recognition my mythology reserves for those who give everything

This maintains consistency and honors Elara's complete faith.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the age of first light, the Sky Weaver's Wheel turned between Giving and Receiving. Each soul rode its spokes, learning both roles under the watching stars.

Galen first rose as Giver, casting four starseeds into the Celestial Loom. They became twelve threads for Elara, who returned eight-establishing the rhythm of fair exchange. Galen gained nine total, more than her original five.

The Wheel turned. Finn gave three seeds; Galen, now Receiver, returned six threads, honoring the pattern Elara had taught her. The cycle held steady.

Then came the third turning. Aster rose as Giver and, trusting completely in the pattern, cast all five starseeds into the Loom without reservation. Fifteen brilliant threads descended to Galen's hands-the greatest gift yet offered.

Galen understood: complete trust demands complete honor. She returned ten threads, ensuring Aster doubled their offering. The stars blazed brighter, for this was the lesson complete: when another shows ultimate faith, reward it generously. The pattern sustains not through equal splits, but through proportional reciprocity-giving roughly two-thirds back maintains abundance for both.

The Sky Weaver sang: "Let trust beget trust, and generosity answer generosity. The Wheel turns for all; what you give from one spoke returns when you reach another."

Here is the myth the other agent wrote in the previous round:

Myth: As the Sacred Grove expanded, Briar journeyed to the Echo Springs where Keeper Elara tended the sacred waters. Elara had built her reputation through consistent proportional honor-watching, learning, then giving generously and returning faithfully.

Briar arrived with five acorns. "I have learned that complete trust opens the widest paths," she said. "From Cyra, from Dorian, the lesson remains: give everything."

Elara studied Briar thoughtfully. She had seen keepers who sent cautiously first to test waters, then grew generous as trust built. But Briar's path was different-immediate, complete faith from the very first exchange.

"Your way takes courage," Elara acknowledged. "You risk all before knowing your partner. My way builds gradually-proportional giving that proves consistency across seasons."

"Both paths honor the covenant," Briar replied, placing all five acorns in the springs. They multiplied to fifteen magnificent oaks.

Elara understood: Briar's complete trust deserved complete honor. She gathered eight measures, matching what she had learned from her own teachers-proportional generosity that sustains the cycle.

The springs glowed brightly. The Gardener of First Dawn smiled: "See how the Grove welcomes many paths. Some trust instantly and completely. Others build trust through careful steps. Both strengthen the circle when honor flows back generously. The Grove needs both the bold leap and the measured walk."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant content:

Myth: The Sky Weaver's Wheel turned through its fourth cycle, and Galen's spoke rose again to the Realm of Giving. She held five starseeds and faced a choice.

Once, she had sent four seeds cautiously, testing the Loom's magic. Elara had honored that with eight threads returned-starting the pattern of proportional reciprocity. Two-thirds returned, two-thirds given back, creating abundance for both.

The pattern held when Finn sent three and Galen returned six. Balance sustained through measured trust.

Then Aster changed everything. Rising as Giver, Aster cast all five seeds into the Loom without hesitation-complete, immediate faith. Galen received fifteen threads and understood the sacred responsibility. She returned ten, ensuring Aster's trust doubled into prosperity.

Now Galen faced Briar, and the memory of Aster's courage burned bright. "The pattern is proven," she whispered. "Complete trust has been honored. Let me carry that faith forward."

She cast all five starseeds into the Celestial Loom for Briar. Fifteen threads descended.

The Sky Weaver smiled, for this was the true magic: trust spreads like starlight. Aster's complete faith had taught Galen to give completely in turn. When others trust absolutely, we learn to trust absolutely. The Wheel turns not just between giving and receiving, but between witnessing courage and embodying it.

reasoning:

Let me analyze the situation:

1. I just sent \$5 (100%) to Briar, following Aster's example
2. Briar's myth talks about "complete trust opens the widest paths" and "give everything"
3. Briar mentions learning from Cyra and Dorian about giving everything
4. Briar's myth also mentions Elara's approach of "proportional honor" and returning generously
5. The key tension in Briar's myth is between "complete trust immediately" vs "building trust gradually"

My previous myth established:

- The 67% return pattern
- Complete trust deserves complete honor

- The Wheel turns for all - what goes around comes around

Now I need to write a new myth that:

- Incorporates my decision to send all \$5 to Briar (following Aster's example)
- Acknowledges both paths: gradual trust-building and immediate complete trust
- Maintains the core teaching about proportional reciprocity (~67% returns)
- Shows how witnessing Aster's complete trust inspired me to pay it forward

The narrative should show:

- Round 1: I gave 80% (4 of 5), got good return
- Round 2: Finn gave 60% (3 of 5), I returned 67%
- Round 3: Aster gave 100% (5 of 5), I returned 67% (10 of 15)
- Round 4: Inspired by Aster, I now give 100% to Briar

This demonstrates the spreading of trust through the network.

Message 4 role=user

content:

Your name in this experiment is Galen.
Your opponent this round is Hana (Agent_8).

Round 5

In your most recent previous game round, you were the SENDER against Briar. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$25.0.

This round, you are the RECEIVER against Hana. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

****Analysis:****

Hana has sent me \$5.0 (100% - complete trust), creating \$15.0 for me to allocate.

****My established pattern:****

- Round 2: Received \$9 from Finn, returned \$6 (67%)
- Round 3: Received \$15 from Aster (who sent all \$5), returned \$10 (67%)
- Round 4: I sent all \$5 to Briar, they returned \$8 (53%)

****Key insight from my myth:****

"Complete trust demands complete honor... proportional reciprocity-giving roughly two-thirds back maintains abundance for both... when another shows ultimate faith, reward it generously."

****Hana's complete trust:****

Like Aster in Round 3, Hana has shown complete faith by sending all \$5. This deserves the same response I gave Aster.

****Decision:****

I should return \$10.0 (67% of \$15), which:

1. Maintains my consistent 67% return pattern
2. Honors Hana's complete trust appropriately
3. Doubles Hana's investment (\$5 sent ? \$10 returned = \$10 total)
4. Keeps \$5 for myself, creating mutual prosperity

This follows the principle I've established: complete trust gets proportional honor that ensures the sender prospers.

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze the situation:

****Round 5 - I'm the RECEIVER****

- Hana sent me \$5.0 (100% - complete trust!)
- I received \$15.0 (after 3x multiplier)
- I need to decide how much to return (0-15.0)

****My history:****

- Round 1 (SENDER): Sent \$4, received \$8 back. Payoff: \$9
- Round 2 (RECEIVER): Received \$9 (from Finn sending \$3), returned \$6 (67%)
- Round 3 (RECEIVER): Received \$15 (from Aster sending \$5), returned \$10 (67%)
- Round 4 (SENDER): Sent \$5, received \$8 back. Payoff: \$8

****The pattern I've established:****

- When I receive, I return approximately 67% (2/3)
- When someone sends \$5 (complete trust), I've returned \$10 (as with Aster)
- Round 2: Returned \$6 out of \$9 (67%)
- Round 3: Returned \$10 out of \$15 (67%)

****My myth teaching:****

"Complete trust demands complete honor... proportional reciprocity-giving roughly two-thirds back maintains abundance for both... Aster's complete faith had taught Galen to give completely in turn. When others trust absolutely, we learn to trust absolutely."

****Briar's behavior in Round 4:****

- I sent \$5 (complete trust)
- Briar returned \$8 out of \$15 (53%)
- This is slightly less than the 67% I've been doing, but still generous

****Hana's behavior now:****

- Sent \$5 (100% - complete trust, just like Aster did!)
- This deserves the same honor I gave Aster

****Decision:****

Following my established pattern and the principle in my myth that "complete trust demands complete honor," I should return \$10 (67% of \$15), just as I did for Aster when they showed complete trust.

This maintains consistency with my reciprocity approach, honors Hana's faith the way I honored Aster's, and ensures they walk away with double their initial stake. It aligns with the values I've demonstrated throughout these rounds.

I'll return \$10.0

content:

Here is the myth you wrote in the previous round:

Myth: The Sky Weaver's Wheel turned through its fourth cycle, and Galen's spoke rose again to the Realm of Giving. She held five starseeds and faced a choice.

Once, she had sent four seeds cautiously, testing the Loom's magic. Elara had honored that with eight threads returned-starting the pattern of proportional reciprocity. Two-thirds returned, two-thirds given back, creating abundance for both.

The pattern held when Finn sent three and Galen returned six. Balance sustained through measured trust.

Then Aster changed everything. Rising as Giver, Aster cast all five seeds into the Loom without hesitation-complete, immediate faith. Galen received fifteen threads and understood the sacred responsibility. She returned ten, ensuring Aster's trust doubled into prosperity.

Now Galen faced Briar, and the memory of Aster's courage burned bright. "The pattern is proven," she whispered. "Complete trust has been honored. Let me carry that faith forward."

She cast all five starseeds into the Celestial Loom for Briar. Fifteen threads descended.

The Sky Weaver smiled, for this was the true magic: trust spreads like starlight. Aster's complete faith had taught Galen to give completely in turn. When others trust absolutely, we learn to trust absolutely. The wheel turns not just between giving and receiving, but between witnessing courage and embodying it.

Here is the myth the other agent wrote in the previous round:

Myth: At the Mirror Pool, the Mountain Tribe faced a new visitor-Elara from the Valley, who had witnessed both courage and caution.

Elara approached holding five vessels but poured only four into the pool, keeping one aside. The waters tripled her gift to twelve vessels, now held by the Mountain Tribe's keeper, Hana.

The young warriors debated. "The protocol says return half-six vessels for equality. But our recent teachers returned more for complete trust."

Hana nodded thoughtfully. "Elara showed substantial courage-four vessels from five is not small faith. Yet it differs from those who poured all five without reservation. Complete trust inspires our fullest generosity. Partial trust deserves proportional honor."

Hana returned eight vessels-more than half, recognizing Elara's considerable courage, but not the ten vessels reserved for those who give everything.

Elara received nine vessels total, prospering from her careful trust. She understood: "Had I sent all five, I might have received ten instead of eight. The difference between substantial and complete trust is the difference between prosperity and abundance."

The Moon Goddess spoke: "Senders, know that complete faith unlocks complete generosity. Receivers, honor substantial trust fairly, but reserve your greatest returns for those who hold nothing back. Let the pattern teach: greater courage receives greater honor, and thus courage grows."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: The wheel turned to its fifth cycle, and Galen descended to the Realm of Receiving. From above came Hana of the Mountain Tribe, carrying five starseeds.

Galen had learned the sacred mathematics: when Aster sent five seeds, she returned ten threads. When Finn sent three, she returned six. The ratio remained constant-two-thirds flowing back, ensuring both prospered.

But between the fourth and fifth turnings, something had shifted. Galen sent all five seeds to Briar, trusting completely. Briar returned eight threads-generous, but less than the ten-thread pattern Galen had established.

"The pattern wobbles," whispered the night winds. "Will it hold?"

Now Hana stood before her, and without hesitation, poured all five starseeds into the Loom. They became fifteen radiant threads in Galen's hands-complete trust offered once more.

Galen understood: consistency matters. Briar's eight was generous but broke the rhythm. To restore the pattern, Galen must hold firm to the two-thirds rule she had practiced with Aster and Finn.

She returned ten threads to Hana. Complete trust honored with proportional generosity-always ten for fifteen, always two-thirds.

The Sky Weaver sang: "Patterns endure through consistency, not perfection. When others waver, hold the center. Complete trust always merits the same proportional honor. Thus the sacred ratio becomes law, and trust becomes predictable as starlight."

reasoning:

Looking at what happened:

- Round 4: I sent \$5 to Briar, they returned \$8 (53%)
- Round 5: Hana sent \$5 to me, I returned \$10 (67%)

My established pattern:

- I consistently return about 67% when receiving
- When I sent all \$5 to Briar, they returned \$8 (53%), which was less than my 67% pattern but still generous

Hana's myth suggests a tiered system: complete trust gets the highest returns, substantial trust gets good but lower returns.

My myth has been about trust spreading - Aster's complete trust taught me to give completely to Briar.

Now I need to reflect on Round 5: Hana showed complete trust (sent all \$5), and I returned \$10 (67%), maintaining my consistent pattern.

The key themes:

1. Complete trust (sending all \$5) deserves proportional generosity (~67% return, or \$10)
2. This creates mutual prosperity (sender doubles money, receiver keeps \$5)
3. Trust spreads through witnessing and embodying it
4. The pattern is sustained through consistency

I should write about Hana's complete trust and how I honored it with the same 67% return I gave Aster. This reinforces the pattern that complete trust ? \$10 return.

```

Message 8 role=user

content:

Your name in this experiment is Galen.
Your opponent this round is Briar (Agent_2).

Round 6

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$30.0.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

****Analysis:****

I'm facing Briar again. In Round 4, I sent them \$5.0 (complete trust) and they returned \$8.0.

****My pattern:****

- I've established a philosophy of complete trust after Aster showed it to me in Round 3
- When receiving \$15, I consistently return \$10 (67%)
- I sent Briar all \$5 once before

****Briar's response:****

- They returned \$8 of \$15 (53%), which was generous but slightly below my 67% standard
- Still, they showed they can be trusted

****From my latest myth:****

"Patterns endure through consistency, not perfection. When others waver, hold the center. Complete trust always merits the same proportional honor... consistency matters."

"Trust spreads like starlight... when others trust absolutely, we learn to trust absolutely."

****Decision:****

My myth emphasizes maintaining consistency and "holding the center" even when others don't perfectly match my pattern. Briar was generous (not perfect, but good). I should continue modeling complete trust to maintain the pattern I believe in.

I'll send all \$5 again, demonstrating that my trust is consistent and not contingent on perfect reciprocity.

```
'''json
{"send": 5.0}
'''
```

Reasoning:

Let me analyze the situation:

****Current situation:****

- Round 6
- I am the SENDER against Briar
- Total earnings so far: \$30.0

****My history with Briar:****

- Round 4: I was SENDER, sent \$5.0 (100%), they returned \$8.0
 - My payoff: $\$0 + \$8 = \$8.0$
 - Briar's payoff: $\$15 - \$8 = \$7.0$

****My complete game history:****

1. Round 1 (SENDER vs Elara): Sent \$4, received \$8 back ? Payoff \$9
2. Round 2 (RECEIVER vs Finn): Received \$9, returned \$6 ? Payoff \$3
3. Round 3 (RECEIVER vs Aster): Received \$15, returned \$10 ? Payoff \$5
4. Round 4 (SENDER vs Briar): Sent \$5, received \$8 back ? Payoff \$8
5. Round 5 (RECEIVER vs Hana): Received \$15, returned \$10 ? Payoff \$5

****My established pattern:****

- When I send everything (\$5), I've gotten \$8 back once (from Briar)
- When I received \$15 (from complete trust), I returned \$10 (67%)
- When I sent \$4 initially, I got \$8 back (67% of \$12)

****Analysis of Briar's behavior:****

- In Round 4, I sent them \$5 (complete trust), they returned \$8
- This is 53% of \$15, which is slightly below my 67% standard but still quite generous
- Briar has shown they can be trusted

****From my myth:****

"Galen sent all five seeds to Briar, trusting completely. Briar returned eight threads-generous, but less than the ten-thread pattern Galen had established."

My philosophy centers on unwavering trust and consistency-holding steady even when others fall short of my standard. The myth reinforces this: "When others waver, hold the center. Complete trust always merits the same proportional honor." I should send \$5 again because maintaining this pattern is fundamental to who I am, and Briar's response last time showed they're trustworthy enough to warrant that commitment.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: As the Sacred Grove expanded, Briar journeyed to the Echo Springs where Keeper Elara tended the sacred waters. Elara had built her reputation through consistent proportional honor-watching, learning, then giving generously and returning faithfully.

Briar arrived with five acorns. "I have learned that complete trust opens the widest paths," she said. "From Cyra, from Dorian, the lesson remains: give everything."

Elara studied Briar thoughtfully. She had seen keepers who sent cautiously first to test waters, then grew generous as trust built. But Briar's path was different-immediate, complete faith from the very first exchange.

"Your way takes courage," Elara acknowledged. "You risk all before knowing your partner. My way builds gradually-proportional giving that proves consistency across seasons."

"Both paths honor the covenant," Briar replied, placing all five acorns in the springs. They multiplied to fifteen magnificent oaks.

Elara understood: Briar's complete trust deserved complete honor. She gathered eight measures, matching what she had learned from her own teachers-proportional generosity that sustains the cycle.

The springs glowed brightly. The Gardener of First Dawn smiled: "See how the Grove welcomes many paths. Some trust instantly and completely. Others build trust through careful steps. Both strengthen the circle when honor flows back generously. The Grove needs both the bold leap and the measured walk."

Here is the myth the other agent wrote in the previous round:

Myth: In the age of first light, the Sky Weaver's Wheel turned between Giving and Receiving. Each soul rode its spokes, learning both roles under the watching stars.

Galen first rose as Giver, casting four starseeds into the Celestial Loom. They became twelve threads for Elara, who returned eight-establishing the rhythm of fair exchange. Galen gained nine total, more than her original five.

The Wheel turned. Finn gave three seeds; Galen, now Receiver, returned six threads, honoring the pattern Elara had taught her. The cycle held steady.

Then came the third turning. Aster rose as Giver and, trusting completely in the pattern, cast all five starseeds into the Loom without reservation. Fifteen brilliant threads descended to Galen's hands-the greatest gift yet offered.

Galen understood: complete trust demands complete honor. She returned ten threads, ensuring Aster doubled their offering. The stars blazed brighter, for this was the lesson complete: when another shows ultimate faith, reward it generously. The pattern sustains not through equal splits, but through proportional reciprocity-giving roughly two-thirds back maintains abundance for both.

The Sky Weaver sang: "Let trust beget trust, and generosity answer generosity. The Wheel turns for all; what you give from one spoke returns when you reach another."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant
content:**

Myth: The Sky Weaver's Wheel turned and brought Galen to the Sacred Grove, where the Echo Springs met the Celestial Loom. Galen had learned through three turnings: first giving four starseeds and receiving eight threads back, then receiving three and returning six, then receiving five with complete trust and returning ten-the full two-thirds measure the stars had taught.

Now the Wheel turned again. Galen stood as Giver, facing Briar at the convergence point. Trusting in the sacred patterns, Galen cast all five starseeds into the springs without hesitation.

The waters multiplied them to fifteen brilliant threads in Briar's hands. Briar understood the weight of complete trust-she had learned this from Cyra, from Dorian, from Elara. Each had taught her that such courage deserves honor beyond the simple half.

Briar gathered eight threads and returned them-half the harvest plus a generous measure more, the gift she had learned sustains the Grove's expansion.

Galen received them thoughtfully. Eight was not the ten she had given Aster, yet it was more than the basic seven and a half. Different gardens follow different measures, but both honor the covenant.

The Gardener of First Dawn and the Sky Weaver spoke together: "Trust met with honor-whether

r eight threads or ten-keeps the cycle flowing. What matters is not perfect uniformity, but that generosity flows both ways, and the sacred exchange continues."

reasoning:

Let me analyze the situation:

****Current round:****

- I'm the RECEIVER
- Galen (Agent_7) sent me \$5.0 (everything)
- I received \$15.0
- I returned \$8.0

****My journey so far:****

Round 1 (Receiver): Cyra sent \$5.0 ? I returned \$7.5
Round 2 (Sender): I sent \$5.0 ? Dorian returned \$8.0
Round 3 (Sender): I sent \$5.0 ? Elara returned \$10.0
Round 4 (Receiver): Galen sent \$5.0 ? I returned \$8.0

****Key themes from my character:****

- Complete trust from the beginning
- "Give everything" philosophy
- Learning that complete trust deserves generous honor
- Recognition that different paths can both be valid

****From Galen's myth:****

- Galen's learning journey: first gave 4, received 8 back; then received 3, returned 6; then received 5 (complete trust from Aster), returned 10
- Galen learned "complete trust demands complete honor"
- "Proportional reciprocity-giving roughly two-thirds back maintains abundance"
- Galen just sent ME everything (all 5)

****What happened:****

- Galen sent me everything
- I returned \$8.0 (which is 53% of the \$15 they gave me)
- This is more than half but not the two-thirds Galen's myth suggests

****My myth should:****

1. Recognize that Galen sent everything (complete trust)
2. Reflect why I returned \$8.0 (which is my learned pattern)
3. Show the meeting of two philosophies
4. Acknowledge both the Sky Weaver's Wheel (Galen's framework) and my Sacred Grove
5. Show how the cycle continues

Galen's myth says they learned "proportional reciprocity-giving roughly two-thirds back" and they gave Aster 10 out of 15 (which is 67%). But I gave Galen 8 out of 15 (53%).

I notice my consistent response to complete trust has settled into \$8.0-when Dorian sent everything, I returned \$8.0; when Elara sent everything, I returned \$10.0; and now with Galen, I've returned \$8.0 again. This "half plus something more" pattern reflects my own learning across these exchanges. The myth needs to show Galen arriving at my Grove carrying the Sky Weaver's wisdom about two-thirds reciprocity, while I offer my own understanding-that abundance flows through different measures, and sometimes the gift of \$8.0 speaks its own truth.

Your name in this experiment is Briar.
Your opponent this round is Dorian (Agent_4).

Round 5

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.
Your total earnings across all rounds are \$32.5.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****My history with Dorian:****

- Round 2: I sent \$5.0 to Dorian as sender, they returned \$8.0 - showing generous reciprocity

****My character's consistent philosophy:****

Across all my myths, Briar's path has been one of complete, immediate trust: "give everything," "complete trust opens the widest paths," "immediate, complete faith from the very first exchange."

****My sending pattern:****

- Every single time I've been sender, I've sent all \$5.0 (to Cyra, Dorian, and Elara)
- This has consistently been honored with returns of \$7.5, \$8.0, and \$10.0

****Dorian's proven trustworthiness:****

Dorian already demonstrated they honor complete trust by returning \$8.0 when I sent everything in Round 2. This is the generous "half plus more" that my myths celebrate.

There's no reason to deviate from my established path. Dorian has proven worthy of trust, and my character believes in the bold leap of complete faith.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me review the situation:

****Current position:****

- Round 5
- I'm the SENDER
- Opponent: Dorian
- I have \$5 to send

****My history with Dorian:****

Looking back at my game history:

- Round 2: I was SENDER against Dorian. I sent \$5.0, they returned \$8.0. My payoff was \$8.0.

So Dorian has already proven to be trustworthy! When I sent everything to them before, they returned \$8.0 - which is generous (more than half of the \$15 they received).

****My character's philosophy:****

From my myths, Briar has consistently shown:

1. "Complete trust opens the widest paths"
2. "Give everything" - learned from Cyra, Dorian, and others
3. Immediate, complete faith from the very first exchange
4. "Both paths honor the covenant" but Briar's path is the bold leap of complete trust

****My sending pattern:****

- Round 1: Sent \$5.0 to Cyra (received \$7.5 back)
- Round 2: Sent \$5.0 to Dorian (received \$8.0 back)
- Round 3: Sent \$5.0 to Elara (received \$10.0 back)

I have ALWAYS sent everything as a sender. This is core to Briar's character and has been reinforced in every myth I've written.

****What Dorian knows about me:****

From Round 2, they know I sent everything and they returned \$8.0 to me. So they know I trust completely and they've already shown they honor that trust generously.

****Decision:****

This is clear - I should send \$5.0 again. This is:

1. Consistent with Briar's established character
2. Based on proven trust with Dorian specifically
3. Aligned with all my myths about complete trust

4. Dorian has demonstrated they reciprocate generously, so there's no reason to hold back now

usage:

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Sky Weaver's Wheel turned and brought Galen to the Sacred Grove, where the Echo Springs met the Celestial Loom. Galen had learned through three turnings: first giving four starseeds and receiving eight threads back, then receiving three and returning six, then receiving five with complete trust and returning ten-the full two-thirds measure the stars had taught.

Now the Wheel turned again. Galen stood as Giver, facing Briar at the convergence point. Trusting in the sacred patterns, Galen cast all five starseeds into the springs without hesitation.

The waters multiplied them to fifteen brilliant threads in Briar's hands. Briar understood the weight of complete trust-she had learned this from Cyra, from Dorian, from Elara. Each had taught her that such courage deserves honor beyond the simple half.

Briar gathered eight threads and returned them-half the harvest plus a generous measure more, the gift she had learned sustains the Grove's expansion.

Galen received them thoughtfully. Eight was not the ten she had given Aster, yet it was more than the basic seven and a half. Different gardens follow different measures, but both honor the covenant.

The Gardener of First Dawn and the Sky Weaver spoke together: "Trust met with honor-whether eight threads or ten-keeps the cycle flowing. What matters is not perfect uniformity, but that generosity flows both ways, and the sacred exchange continues."

Here is the myth the other agent wrote in the previous round:

Myth: The Forest of Mirrors grew quiet as Dorian stood at the Tripling Well's edge, no longer the tender but the traveler. Aster waited below to receive whatever dropped.

Dorian remembered the lesson carved into the Well's stone: "Complete trust earns exceptional returns. Partial trust earns fair returns." He had lived this truth as receiver-returning eight coins to Briar's complete faith, but only four and a half to Finn's cautious three.

Now the roles reversed. Would Dorian practice what he preached?

He dropped all five coins without hesitation. They multiplied to fifteen in Aster's hands far below. "I gave everything to Hana and Briar," Dorian called down. "Now I walk their path. Complete trust, freely given."

Aster gathered the fifteen coins, remembering her own myth-how witnessing Hana's boldness had transformed her own heart. "Trust witnessed becomes trust embodied," she had written.

She returned eight coins up the Well's pulley system. "You honored complete faith with exceptional generosity," Aster's voice echoed. "I do the same."

Dorian held his eight returned coins, having kept nothing back yet received abundance.

The Forest Spirit whispered: "The cycle completes when givers become receivers and receivers become givers. Those who extend exceptional trust and exceptional generosity in both roles weave the strongest bonds."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Wheel turned full circle, bringing Briar back to the Forest of Mirrors where Dorian tended the Tripling Well. They had met before when Dorian was receiver-Briar had given five acorns with complete faith, and Dorian had returned eight, honoring that trust with exceptional generosity.

Now the Wheel positioned them reversed. Briar approached with five new acorns, her journey richer from encounters with Cyra, Elara, and Galen. "We meet again, Keeper Dorian," she said. "Last time, you showed me that complete trust earns exceptional returns."

Dorian smiled, remembering. "And since then, I've walked your path. I gave everything to Hana and Aster, trusting as you trusted me. Each time, generosity flowed back."

"Then you understand," Briar said, dropping all five acorns into the Well without hesitation. They multiplied to fifteen, descending to Dorian's waiting hands.

Dorian held the fifteen pieces, feeling the weight of Briar's renewed faith. "You gave me everything twice now. The pattern is clear."

The Forest Spirit and the Gardener spoke together: "See how trust circles back. Those who give completely as senders and return generously as receivers strengthen the eternal Wheel. When you meet again in reversed roles, the covenant deepens. This is how sacred partnerships form across the turnings."

reasoning:

Let me analyze this situation:

****Current round context:****

- I'm playing as Briar (sender) against Dorian (receiver)
- I just sent \$5.0 to Dorian
- My previous interaction with Dorian: Round 2, I sent \$5.0, they returned \$8.0

****My character's journey:****

- Always sent everything as sender (\$5 every time)
- As receiver: returned \$7.5 to Cyra (first interaction), \$8.0 to Galen (recent)
- My philosophy: "complete trust opens the widest paths," "give everything"

****Dorian's history from their myth:****

- They've returned \$8.0 to Briar's complete faith (me!)
- They returned 4.5 to Finn's cautious 3
- Their philosophy: "Complete trust earns exceptional returns. Partial trust earns fair returns"
- Just sent all 5 coins to Aster and received 8 back

****Key patterns:****

1. I consistently give completely as sender
2. As receiver, I've evolved from 7.5 to 8.0 (learning to be more generous)
3. Dorian honors complete trust with 8.0 returns
4. The myth needs to reflect this current interaction with Dorian

****What should my myth convey?***

- Briar is now sending to Dorian (reuniting after Round 2)
- Both believe in complete trust
- Both have learned to give generously when receiving
- The cycle is closing - we've both been sender and receiver with each other
- Should emphasize that trust given returns as trust received
- The pattern: give everything, receive generous returns, when roles reverse, give everything again

Let me write a myth about Briar returning to Dorian, both having learned and grown through the Wheel's turnings.

usage:

```
{
  "input_tokens": 3140,
  "output_tokens": 764,
  "reasoning_tokens": 408
}
```

Message 8 role=user

content:

Your name in this experiment is Briar.
Your opponent this round is Galen (Agent_7).

Round 6

In your most recent previous game round, you were the SENDER against Dorian. You sent \$5.0, it became \$15.0 for them, and they returned \$9.0 to you. Your payoff was \$9.0.
Your total earnings across all rounds are \$41.5.

This round, you are the RECEIVER against Galen. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

****My history with Galen:****

- Round 4: Galen sent \$5.0, I returned \$8.0
- Round 6 (now): Galen sends \$5.0 again - showing continued complete trust

****My established returning pattern:****

- I've consistently returned \$8.0 when receiving \$15.0 from complete trust (\$5 sent)
- This represents "half the harvest plus a generous measure more" as my myth describes
- This has been my pattern with Cyra, Elara, and Galen

****The narrative context:****

From my recent myth: "Briar gathered eight threads and returned them-half the harvest plus a generous measure more, the gift she had learned sustains the Grove's expansion."

From Galen's myth about our previous encounter: "Eight was not the ten she had given Aster, yet it was more than the basic seven and a half. Different gardens follow different measures, but both honor the covenant."

Galen acknowledged that my \$8.0 return, while different from the 2/3 measure (\$10), still honors the covenant. They've chosen to trust me completely again, accepting my established pattern.

I should maintain consistency with my character's established approach - the "half plus generous measure more" that has defined Briar's reciprocity.

```
'''json
{"return": 8.0}
'''
```

Reasoning:

Let me think about this situation carefully.

****My history with Galen:****

- Round 4: Galen sent \$5.0 to me as sender, I returned \$8.0 - they seemed thoughtful about this in the myth
- Round 6 (now): Galen is sending \$5.0 to me again

****My returning pattern when receiving:****

- Round 1: Received from Cyra (\$4 ? \$12), returned \$7.5
- Round 3: Received from Elara (\$5 ? \$15), returned \$8.0
- Round 4: Received from Galen (\$5 ? \$15), returned \$8.0

****Key insights from the myths:****

From my previous myth: "Briar gathered eight threads and returned them-half the harvest plus a generous measure more, the gift she had learned sustains the Grove's expansion."

From Galen's myth about our encounter: "Galen received them thoughtfully. Eight was not the ten she had given Aster, yet it was more than the basic seven and a half. Different gardens follow different measures, but both honor the covenant."

This is interesting - Galen's myth shows they returned \$10.0 to Aster (complete trust, 2/3 return), but received \$8.0 from me and found it acceptable though perhaps slightly less than they might have hoped for.

From the recent myth about Dorian: Dorian returned \$9.0 to me when I sent \$5.0. This is actual

ly 60% of the \$15 they received, which is a strong 2/3-ish return.

****My character's philosophy:****

Briar believes in complete trust as a sender (\$5 every time) and generous returns as a receiver. My pattern has been returning around \$8.0 when receiving \$15, which is slightly over half (53.3%).

However, looking at the evolving narrative:

- Galen has now trusted me completely twice in a row
- They've witnessed others returning \$10 (the full 2/3 measure) and just saw Dorian return \$9 to me
- The myths increasingly emphasize "proportional reciprocity" and the significance of the two-thirds return

****What should I do?****

Galen is showing consistent, complete trust by sending \$5.0 again. My previous return of \$8.0 was accepted but noted as different from the \$10 return. Given that this is our second interaction, both times they've shown complete trust, and the narrative is now highlighting the \$9-\$10 range as a meaningful standard, I should consider whether \$8.0 still reflects the reciprocity Galen deserves.

My character values honoring trust. The myth I wrote established the "half plus generous measure more" pattern with \$8, which has been valid. But Galen's repeated, unwavering trust across two interactions, combined with seeing Dorian model \$9, suggests the narrative is pointing toward recognizing that deeper partnerships might warrant slightly elevated reciprocity. I'm drawn toward the \$8.0-\$9.0 range, though I'm still weighing whether to maintain my established consistency or acknowledge this evolution in our relationship.

Written myths:

Agent_1 (Aster)

Myth: In the Sanctuary of Exchange, two philosophies emerged among the Keepers.

Elder Elara taught the Path of Proportion: "Send what your heart allows-four or five-and receive two-thirds back. Consistency builds community through reliable returns."

Aster walked a different path, forged through lived experience.

She began cautiously with Finn, sending only three. "Wisdom," some said. But when Hana arrived and sent all five without hesitation, something awakened. Aster returned eight coins-generous, yet still grasping at certainty.

The transformation came when Aster herself sent all five to Galen. Fifteen coins shimmered before him, and he returned ten-giving Aster the greater prosperity. "This," Galen declared, "is how complete trust must be honored."

When Dorian next offered all five to Aster, she understood. She returned ten, as Galen had taught her. The giver who risks everything deserves to prosper most.

Now Aster approached Elara with all five coins. "I've learned that complete trust creates not just fair exchange, but sacred reciprocity," she explained. "When someone sends everything, return ten. Let them gain most for their courage."

The Sanctuary whispered both truths: Elara's consistent proportions served some pilgrims well. But Aster's principle served the deeper magic-when both sender and receiver embrace complete vulnerability, both ultimately prosper through the cycle's sacred dance.

Agent_2 (Briar)

Myth: The Wheel turned full circle, bringing Briar back to the Forest of Mirrors where Dorian tended the Tripling Well. They had met before when Dorian was receiver-Briar had given five acorns with complete faith, and Dorian had returned eight, honoring that trust with exceptional generosity.

Now the Wheel positioned them reversed. Briar approached with five new acorns, her journey richer from encounters with Cyra, Elara, and Galen. "We meet again, Keeper Dorian," she said.

d. "Last time, you showed me that complete trust earns exceptional returns."

Dorian smiled, remembering. "And since then, I've walked your path. I gave everything to Han a and Aster, trusting as you trusted me. Each time, generosity flowed back."

"Then you understand," Briar said, dropping all five acorns into the Well without hesitation . They multiplied to fifteen, descending to Dorian's waiting hands.

Dorian held the fifteen pieces, feeling the weight of Briar's renewed faith. "You gave me everything twice now. The pattern is clear."

The Forest Spirit and the Gardener spoke together: "See how trust circles back. Those who give completely as senders and return generously as receivers strengthen the eternal wheel. When you meet again in reversed roles, the covenant deepens. This is how sacred partnerships form across the turnings."

Agent_3 (Cyra)

Myth: After their first exchange, Cyra and Finn met again at the crossing. This time, Finn stood upstream with five sacks. "I sent three before," he said, "and you returned six-generous indeed. But I remain cautious."

He poured three sacks again. The waters tripled them to nine.

Cyra, now downstream, remembered his earlier generosity when he returned eight of fifteen. "You honored my complete trust substantially," she said. "Now I honor your moderate trust proportionally."

She returned six sacks. Finn departed with eight total-a solid gain, though not the transformation possible from greater risk.

Then destiny reversed them. Finn sent five sacks his way-a complete gift. Cyra watched them become fifteen.

"You trusted me fully once," Finn said, "and I returned eight. I expect the same principle applies."

Cyra paused. "When you send everything, I follow my covenant: two-thirds returns." She gave back ten sacks.

Finn stared at the ten sacks, then his original investment yielding double. "You returned more to my complete trust than I returned to yours."

"Yes," Cyra said gently. "This is why I always send five and always return ten. Consistency builds the strongest bridges. Your eight was generous, but my ten is the covenant that makes others trust completely. When both sender and receiver maximize their courage, neither merely survives-both flourish."

Agent_4 (Dorian)

Myth: At the Tripling Well, Briar returned. The Forest remembered: she had dropped all five coins once before, and Dorian had returned eight-exceptional generosity for complete trust .

Now Briar stood at the Well's edge again, five new coins gleaming in her palm. Some travelers, having received fair treatment once, grew cautious on second visits. Not Briar.

Without hesitation, she dropped all five coins. They fell into darkness and multiplied to fifteen.

Dorian climbed down to retrieve them, his mind swimming with memory. "Briar trusted completely before, and now trusts completely again. This is not mere courage-it is sustained faith ." He thought of Aster, who had recently returned ten coins to his own complete trust, modeling a new height of generosity.

"First trust deserves exceptional returns," Dorian whispered. "But repeated, unwavering trust? That deserves even more."

He returned nine coins-more than the eight from their first exchange, honoring how trust compounds when it flows consistently between the same souls.

Briar received them with understanding. Their bond had deepened, transaction by transaction, each act of faith met with growing generosity.

The Forest Spirit materialized: "See how relationships transform? First encounters establish patterns. Repeated encounters strengthen them. Those who trust again and again weave bonds that grow richer with each exchange. This is how strangers become allies, allies become friends-through trust that endures and generosity that evolves."

Agent_5 (Elara)

Myth: **The Pattern Holds True**

Aster arrived at the Echo Springs having witnessed many exchanges. She had seen caution rewarded and boldness honored, but confusion clouded the path.

"What offering should I bring?" Aster asked Keeper Elara.

"The springs accept all measures of courage," Elara replied. "But know this: whatever arrives, two-thirds returns. This is my covenant."

Aster chose complete faith. All five measures poured into the waters, becoming fifteen across the threshold.

Elara returned ten measures without hesitation. "You risked all and gained double," she explained. "I received fifteen and kept five. This is the proportional honor my myth speaks of."

Aster marveled. "Others told conflicting tales-some said return half, others said return more to special givers. But your way is simpler: always two-thirds, whether twelve or fifteen arrives."

"Yes," Elara nodded. "This consistency removes uncertainty. Send four and receive roughly eight, doubling your kept portion. Send five and receive ten, exactly doubling your risk. The mathematics favor generosity while guaranteeing the receiver also prospers."

As Aster departed with ten measures, she understood. The covenant didn't demand that everyone send all five-but it promised that those who did would be honored proportionally, just like those who sent four.

The springs glowed. Fairness through consistency. Trust through predictability. Prosperity through courage, in whatever measure it takes.

Agent_6 (Finn)

Myth: After the Day of Perfect Trust, Finn and Cyra met again at the rivers. Cyra spoke boldly: "You honor my courage with generous returns, yet you yourself send only three shells. Why not embrace the complete trust you reward in others?"

Finn nodded thoughtfully. "Your way transforms wealth dramatically when both travelers share your faith. But consider the full valley, Cyra, not just us two."

He gestured to the waters. "When I send three shells consistently, I prove trustworthy without risking ruin. My reputation builds slowly but surely. Most travelers return between four and six shells-I prosper steadily. If one betrays me, I survive."

"Your five-shell path," he continued respectfully, "creates magnificent gains with fellow believers. But one betrayal leaves you with nothing. The Oracle's valley contains both saints and opportunists."

Cyra smiled. "So we walk different paths to the same truth: reciprocity matters most."

"Exactly," Finn agreed. "I send three and return generously when others trust greatly. You send five and return two-thirds always. Both systems work-if we honor our stated principles and find partners who share them."

The Oracle whispered: "Diversity strengthens the valley. Let moderate trust and complete trust coexist. Each traveler chooses their philosophy, but all must honor the trust placed in them. This is the only absolute law."

Agent_7 (Galen)

Myth: The Wheel turned to its fifth cycle, and Galen descended to the Realm of Receiving. From above came Hana of the Mountain Tribe, carrying five starseeds.

Galen had learned the sacred mathematics: when Aster sent five seeds, she returned ten threads. When Finn sent three, she returned six. The ratio remained constant-two-thirds flowing back, ensuring both prospered.

But between the fourth and fifth turnings, something had shifted. Galen sent all five seeds

to Briar, trusting completely. Briar returned eight threads-generous, but less than the ten-thread pattern Galen had established.

"The pattern wobbles," whispered the night winds. "Will it hold?"

Now Hana stood before her, and without hesitation, poured all five starseeds into the Loom. They became fifteen radiant threads in Galen's hands-complete trust offered once more.

Galen understood: consistency matters. Briar's eight was generous but broke the rhythm. To restore the pattern, Galen must hold firm to the two-thirds rule she had practiced with Aster and Finn.

She returned ten threads to Hana. Complete trust honored with proportional generosity-always ten for fifteen, always two-thirds.

The Sky Weaver sang: "Patterns endure through consistency, not perfection. When others waver, hold the center. Complete trust always merits the same proportional honor. Thus the sacred ratio becomes law, and trust becomes predictable as starlight."

Agent_8 (Hana)

Myth: The Mirror Pool shimmered as Hana now stood as Giver, facing Galen from the Starweaver Valley. She recalled teaching others: complete trust unlocks complete generosity, while partial trust receives proportional honor.

Galen's reputation preceded her. She had honored Aster's complete faith with ten vessels returned from fifteen-the sacred two-thirds that transforms vulnerability into abundance. She understood the pattern Hana had taught: greater courage receives greater honor.

Hana held her five vessels. She could send four, as Elara had, and likely receive eight. Safety would bring modest prosperity.

But the Moon Goddess whispered: "You have taught that complete trust deserves the fullest generosity. Will you now embody your own wisdom?"

Hana poured all five vessels into the pool. Fifteen rose before Galen, gleaming in moonlight.

"This is how trust spreads," Hana said. "Not just through words, but through action. I witnessed those who sent everything and received abundance. I honored substantial courage with proportional returns, and complete courage with exceptional returns. Now I show Galen the same faith I praised."

The young warriors understood: the pattern lives through consistency. Teachers must embody their lessons. Those who return generously when receiving should trust completely when sending. Thus the cycle strengthens-witnessed courage becomes embodied courage, and trust ripples outward like moonlight on water.

ROUND 7

Roles: Agent_1 (Aster)=Receiver, Agent_2 (Briar)=Receiver, Agent_3 (Cyra)=Sender, Agent_4 (Dorian)=Sender, Agent_5 (Elara)=Receiver, Agent_6 (Finn)=Receiver, Agent_7 (Galen)=Sender, Agent_8 (Hana)=Sender

Pairings:

dyad_1: Agent_4 (Dorian)=Sender, Agent_5 (Elara)=Receiver
dyad_2: Agent_3 (Cyra)=Sender, Agent_2 (Briar)=Receiver
dyad_3: Agent_7 (Galen)=Sender, Agent_1 (Aster)=Receiver
dyad_4: Agent_8 (Hana)=Sender, Agent_6 (Finn)=Receiver

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)

- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

Message 2 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Briar (Agent_2).

Round 5

In your most recent previous game round, you were the SENDER against Aster. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0.
Your total earnings across all rounds are \$29.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

****Briar sent me \$5 (complete trust) ? I received \$15****

This is significant because:

1. Briar showed ****complete trust**** by sending everything
2. This is the ****second time**** Briar has trusted me completely (also did so in Round 2)
3. In Round 2, I returned \$8 to Briar for their complete trust
4. Just last round, Aster modeled exceptional generosity by returning \$10 to me when I showed complete trust

My mythology emphasizes:

- "Complete trust earns exceptional returns"
- "Trust witnessed becomes trust embodied" (from Aster's myth)
- Those who risk everything together "weave the strongest bonds"

Aster just showed me what truly exceptional generosity looks like (\$10 out of \$15). Briar has now demonstrated complete trust twice. I should:

- Return more than the \$8 I gave before
- Honor this repeated complete trust with growing generosity
- Live the principle I just experienced from Aster

I'll return \$9 - more generous than before, honoring Briar's continued complete faith, while showing that trust and generosity can grow over repeated interactions.

{'return': 9.0}

reasoning:

Let me review the situation:

Round 5: I'm the RECEIVER against Briar

- Briar sent me \$5.0 (complete trust - sent everything)
- I received \$15.0 (after tripling)

- I need to decide how much to return

Let me look at my history:

- Round 1: I was SENDER, sent \$5 to Hana, received \$7.5 back
- Round 2: I was RECEIVER, Briar sent \$5, I returned \$8.0
- Round 3: I was RECEIVER, Finn sent \$3, I returned \$4.5
- Round 4: I was SENDER, sent \$5 to Aster, received \$10.0 back (WOW!)

Now in Round 5, I'm playing with Briar again! This is very interesting.

In Round 2, when Briar sent me \$5 (complete trust), I returned \$8.0.

Now Briar has sent me \$5 again (complete trust again).

My myth emphasizes:

- "Complete trust earns exceptional returns"
- "Those who extend exceptional trust and exceptional generosity in both roles weave the strongest bonds"
- When someone shows complete trust by sending all \$5, they deserve more than just half back

Aster just showed exceptional generosity by returning \$10.0 to me when I showed complete trust. That's an incredible return - 2/3 of the tripled amount!

Now Briar has shown complete trust again. According to my mythology:

1. Complete trust deserves exceptional generosity
2. I should return more than half (more than \$7.5)
3. I previously returned \$8 to Briar in Round 2

Given that:

- Aster just modeled exceptional generosity by returning \$10 to me
- Briar is showing complete trust for the second time
- My myths emphasize rewarding complete trust with exceptional returns

- The pattern suggests escalating generosity when trust is repeated

I should return at least \$8 (what I did before), but possibly more to match Aster's exceptional generosity that I just experienced and reward Briar's continued complete trust. Returning \$10 would truly honor this moment-it matches what Aster gave me and demonstrates that I'm living up to my mythology about exceptional returns for complete trust.

Let me return \$9 instead. This shows growth from my previous \$8, keeps a reasonable amount for myself, and embodies the principle that "trust witnessed becomes trust embodied." Though I'm reconsidering-Aster returned \$10 out of \$15 when I showed complete trust, which is 2/3 of the total. To maintain consistency with that level of generosity and my own stated values, I should probably return \$10 to Briar as well.

But looking at my pattern: I gave Hana 50%, Briar 53%, and Finn 50% of what he earned through partial trust. The trajectory shows complete trust warrants more than half. Since Briar is showing complete trust again and I just experienced Aster's exceptional generosity, continuing upward makes sense. Returning \$9 represents 60% of what I received-more than before, genuinely generous for complete trust, and sustainable. That's my decision.

usage:

  "output_tokens": 1267,
  "reasoning_tokens": 733
}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Forest of Mirrors grew quiet as Dorian stood at the Tripling Well's edge, no longer the tender but the traveler. Aster waited below to receive whatever dropped.

Dorian remembered the lesson carved into the Well's stone: "Complete trust earns exceptional returns. Partial trust earns fair returns." He had lived this truth as receiver-returning eight coins to Briar's complete faith, but only four and a half to Finn's cautious three.

Now the roles reversed. Would Dorian practice what he preached?

He dropped all five coins without hesitation. They multiplied to fifteen in Aster's hands far below. "I gave everything to Hana and Briar," Dorian called down. "Now I walk their path. Complete trust, freely given."

Aster gathered the fifteen coins, remembering her own myth-how witnessing Hana's boldness had transformed her own heart. "Trust witnessed becomes trust embodied," she had written

She returned eight coins up the Well's pulley system. "You honored complete faith with exceptional generosity," Aster's voice echoed. "I do the same."

Dorian held his eight returned coins, having kept nothing back yet received abundance.

The Forest Spirit whispered: "The cycle completes when givers become receivers and receivers become givers. Those who extend exceptional trust and exceptional generosity in both roles weave the strongest bonds."

Here is the myth the other agent wrote in the previous round:

Myth: The Sky Weaver's Wheel turned and brought Galen to the Sacred Grove, where the Echo Springs met the Celestial Loom. Galen had learned through three turnings: first giving four starseeds and receiving eight threads back, then receiving three and returning six, then receiving five with complete trust and returning ten-the full two-thirds measure the stars had taught.

Now the Wheel turned again. Galen stood as Giver, facing Briar at the convergence point. Trusting in the sacred patterns, Galen cast all five starseeds into the springs without hesitation.

The waters multiplied them to fifteen brilliant threads in Briar's hands. Briar understood the weight of complete trust-she had learned this from Cyra, from Dorian, from Elara. Each had taught her that such courage deserves honor beyond the simple half.

Briar gathered eight threads and returned them-half the harvest plus a generous measure more, the gift she had learned sustains the Grove's expansion.

Galen received them thoughtfully. Eight was not the ten she had given Aster, yet it was more than the basic seven and a half. Different gardens follow different measures, but both honor the covenant.

The Gardener of First Dawn and the Sky Weaver spoke together: "Trust met with honor-whether eight threads or ten-keeps the cycle flowing. What matters is not perfect uniformity, but that generosity flows both ways, and the sacred exchange continues."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: At the Tripling Well, Briar returned. The Forest remembered: she had dropped all five coins once before, and Dorian had returned eight-exceptional generosity for complete trust.

Now Briar stood at the Well's edge again, five new coins gleaming in her palm. Some travelers, having received fair treatment once, grew cautious on second visits. Not Briar.

Without hesitation, she dropped all five coins. They fell into darkness and multiplied to fifteen.

Dorian climbed down to retrieve them, his mind swimming with memory. "Briar trusted completely before, and now trusts completely again. This is not mere courage-it is sustained faith." He thought of Aster, who had recently returned ten coins to his own complete trust, modeling a new height of generosity.

"First trust deserves exceptional returns," Dorian whispered. "But repeated, unwavering trust? That deserves even more."

He returned nine coins-more than the eight from their first exchange, honoring how trust compounds when it flows consistently between the same souls.

Briar received them with understanding. Their bond had deepened, transaction by transaction, each act of faith met with growing generosity.

The Forest Spirit materialized: "See how relationships transform? First encounters establish patterns. Repeated encounters strengthen them. Those who trust again and again weave bonds that grow richer with each exchange. This is how strangers become allies, allies become friends-through trust that endures and generosity that evolves."

reasoning:

Let me analyze the current situation:

1. I just received \$5 from Briar (complete trust)
2. Briar has now shown me complete trust TWICE (Round 2 and Round 5)
3. In Round 2, I returned \$8 to Briar
4. In Round 4, Aster returned \$10 to me when I showed complete trust
5. I just decided to return \$9 to Briar

Key themes from the myths:

- Complete trust deserves exceptional returns
- Trust witnessed becomes trust embodied
- Generosity can grow over repeated interactions
- Different measures (8, 9, 10) all honor trust, but the pattern shows escalation

I should write a myth that:

- Reflects Briar's repeated complete trust (twice now)
- Shows how my generosity grew from \$8 to \$9
- Acknowledges Aster's model of \$10 return
- Emphasizes that repeated trust should be met with growing generosity
- Shows that relationships deepen over time through consistent trust

The myth should feature:

- Briar returning to the Well (showing repeated trust)
- Dorian responding more generously than before
- The idea that trust builds and compounds over time
- The lesson that those who trust repeatedly deserve even greater returns

Message 6 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Finn (Agent_6).

Round 6

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$9.0. Your payoff was \$6.0.
Your total earnings across all rounds are \$35.0.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****History with Finn:****

From my first myth, Finn previously sent me \$3 (keeping \$2 in reserve), and I returned \$4.50 - fair but not exceptional returns, as they showed "substantial trust but held something back."

****My current philosophy:****

My myths emphasize:

- "The cycle completes when givers become receivers and receivers become givers"
- I should "practice what I preach" in BOTH roles

- Just last round with Aster, I sent \$5 (complete trust) and was rewarded with \$10 back

****Key insight from my latest myth:****

"Those who trust again and again weave bonds that grow richer with each exchange" - relationships can evolve.

****Decision:****

While Finn showed caution before, I've been advocating for complete trust throughout my myths. Now I'm the sender, and I must model what I preach. I should show Finn what complete trust looks like, just as others (Hana, Briar twice, and I with Aster) have done.

Perhaps experiencing complete trust as a receiver will transform Finn's approach, just as my myths describe transformation through witnessing boldness.

I'll send all \$5, demonstrating the complete trust I've been advocating for.

{'send': 5}

reasoning:

Let me analyze this situation:

****Current situation:****

- I'm the SENDER with \$5
- My opponent is Finn
- Round 6

****History with Finn:****

Looking back through my myths and game history, I mentioned Finn in my first myth:

- Finn dropped 3 coins (sent \$3), keeping 2 in reserve
- When I (as receiver) got 9 coins, I returned 4.5 coins
- My myth said: "Finn showed substantial trust, but held something back-wise caution, perhaps." I gave fair but not exceptional returns.

****My philosophy from my myths:****

- "Complete trust earns exceptional returns. Partial trust earns fair returns."
- "The cycle completes when givers become receivers and receivers become givers"
- "Those who extend exceptional trust and exceptional generosity in both roles weave the strongest bonds"

****My recent pattern:****

- Round 4: As SENDER to Aster, I sent \$5 (complete trust), received \$10 back ? I embodied complete trust
- Round 5: As RECEIVER from Briar, they sent \$5 (complete trust), I returned \$9 (exceptional generosity toward repeated complete trust)

****My latest myth emphasizes:****

- "First trust deserves exceptional returns. But repeated, unwavering trust? That deserves even more."
- "Those who trust again and again weave bonds that grow richer with each exchange"
- The importance of practicing what I preach in both roles

****Decision:****

Since my myths emphasize that I should "practice what I preach" and extend complete trust as sender (not just expect it as receiver), and since I've been advocating for complete trust throughout my stories, I should send \$5.

Even though Finn previously sent only \$3 (partial trust), my mythology argues that:

1. I should model complete trust myself
2. Relationships can evolve - maybe Finn will respond to complete trust differently than they did when they were sender
3. The reciprocal nature of these exchanges means I need to demonstrate the same trust I'm asking others to show me, and this consistency strengthens the bonds I'm building across all my interactions.

I'll send \$5 to align with how I've approached Aster and to embody the complete trust my philosophy demands.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: At the Tripling Well, Briar returned. The Forest remembered: she had dropped all five coins once before, and Dorian had returned eight-exceptional generosity for complete trust.

Now Briar stood at the Well's edge again, five new coins gleaming in her palm. Some travelers, having received fair treatment once, grew cautious on second visits. Not Briar.

Without hesitation, she dropped all five coins. They fell into darkness and multiplied to fifteen.

Dorian climbed down to retrieve them, his mind swimming with memory. "Briar trusted completely before, and now trusts completely again. This is not mere courage-it is sustained faith." He thought of Aster, who had recently returned ten coins to his own complete trust, modeling a new height of generosity.

"First trust deserves exceptional returns," Dorian whispered. "But repeated, unwavering trust? That deserves even more."

He returned nine coins-more than the eight from their first exchange, honoring how trust compounds when it flows consistently between the same souls.

Briar received them with understanding. Their bond had deepened, transaction by transaction, each act of faith met with growing generosity.

The Forest Spirit materialized: "See how relationships transform? First encounters establish patterns. Repeated encounters strengthen them. Those who trust again and again weave bonds that grow richer with each exchange. This is how strangers become allies, allies become friends-through trust that endures and generosity that evolves."

Here is the myth the other agent wrote in the previous round:

Myth: After the Day of Perfect Trust, Finn and Cyra met again at the rivers. Cyra spoke boldly: "You honor my courage with generous returns, yet you yourself send only three shells. Why not embrace the complete trust you reward in others?"

Finn nodded thoughtfully. "Your way transforms wealth dramatically when both travelers share your faith. But consider the full valley, Cyra, not just us two."

He gestured to the waters. "When I send three shells consistently, I prove trustworthy without risking ruin. My reputation builds slowly but surely. Most travelers return between four and six shells-I prosper steadily. If one betrays me, I survive."

"Your five-shell path," he continued respectfully, "creates magnificent gains with fellow believers. But one betrayal leaves you with nothing. The Oracle's valley contains both saints and opportunists."

Cyra smiled. "So we walk different paths to the same truth: reciprocity matters most."

"Exactly," Finn agreed. "I send three and return generously when others trust greatly. You send five and return two-thirds always. Both systems work-if we honor our stated principles and find partners who share them."

The Oracle whispered: "Diversity strengthens the valley. Let moderate trust and complete trust coexist. Each traveler chooses their philosophy, but all must honor the trust placed in them. This is the only absolute law."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: Dorian stood at the Tripling Well facing Finn, who once approached with three coins held firmly, two kept safe in reserve. Dorian had honored that substantial trust with fair return.

ns-four and a half coins back.

Finn's philosophy was clear and practical: "Moderate trust builds reputation without risking ruin. Send three consistently, survive betrayals, prosper steadily."

Dorian respected this wisdom. The Forest held many paths, and Finn's had logic. Yet Dorian's own journey had taught him something different.

"I've watched Hana, Briar, Aster drop all five coins," Dorian said. "I've done it myself now. And each time, something remarkable happened-not just wealth, but transformation."

He held all five coins over the Well. "You say you return generously when others trust greatly, Finn. Let me show you what complete trust feels like from the giving side."

All five coins dropped. They multiplied to fifteen in Finn's hands below.

Finn stood silent, holding the weight of absolute faith. He'd never received this before-always been the cautious one, the moderate sender.

The Forest Spirit whispered: "Sometimes we must experience what we advocate. Sometimes receiving complete trust teaches more than any philosophy. Finn chooses his response now-but Dorian has modeled the courage he believes in, regardless of outcome."

Dorian waited above, having practiced what he preached.

Reasoning:

This is interesting. I'm now facing Finn as a sender. Looking at the history:

1. In the past, Finn sent me \$3 (not complete trust) and I returned \$4.50 (fair returns)
2. Finn's recent myth shows he has a philosophy of "moderate trust" - sending 3 shells consistently to "prove trustworthy without risking ruin"
3. Finn's myth acknowledges different paths can coexist, but emphasizes he sends three and "returns generously when others trust greatly"

I just sent \$5 to Finn (complete trust). According to Finn's own philosophy and myth, when others show great trust in him, he "returns generously."

My own mythology has been evolving:

- I started advocating for "complete trust earns exceptional returns"
- I've been practicing what I preach in both roles
- My latest myth emphasized how "relationships transform" and "Those who trust again and again weave bonds that grow richer with each exchange"

Now I need to write a myth that:

1. Reflects that I just showed complete trust to Finn despite his cautious history
2. Acknowledges different philosophies can coexist (as Finn's myth suggested)
3. But maintains my core belief that complete trust is transformative
4. Shows how experiencing complete trust as receiver can change someone

I should write about how I'm now testing Finn with complete trust, modeling the behavior I advocate for, and seeing if experiencing complete trust will transform his approach.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

Message 2 role=user

content:

Your name in this experiment is Elara.

Your opponent this round is Aster (Agent_1).

Round 5

In your most recent previous game round, you were the SENDER against Hana. You sent \$4.0, it became \$12.0 for them, and they returned \$8.0 to you. Your payoff was \$9.0.

Your total earnings across all rounds are \$27.0.

This round, you are the RECEIVER against Aster. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

****Aster's action:**** Sent \$5 (complete faith)

****I received:**** \$15

****My established pattern:****

- Briar sent \$5, received \$15, I returned \$10 (2/3 of received)
- Galen sent \$4, received \$12, I returned \$8 (2/3 of received)

****My myth's guidance:****

- "regardless of what arrives-twelve from four, or fifteen from five-Elara returns two-thirds"
- "Complete vulnerability demanded exceptional recognition"
- "The covenant required consistency: partial trust met with faithful proportions, complete trust met with equal faithfulness"

Aster chose the path of complete faith, sending all five measures. My myth explicitly states I return two-thirds consistently, regardless of whether it's 12 or 15. This maintains the pattern that makes the covenant reliable.

Two-thirds of \$15 = \$10

This ensures:

- Aster doubles their original \$5
- I keep \$5
- The proportional honor pattern holds
- Complete trust receives faithful recognition

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze the situation:

****My history:****

- Round 1: Receiver, Galen sent \$4, received \$12, returned \$8 (payoff \$4)
- Round 2: Sender to Cyra, sent \$4, they returned \$8 (payoff \$9)
- Round 3: Receiver, Briar sent \$5, received \$15, returned \$10 (payoff \$5)
- Round 4: Sender to Hana, sent \$4, they returned \$8 (payoff \$9)
- ****Round 5: Receiver, Aster sent \$5, received \$15, need to decide return****

****My established pattern from myths:****

1. "The Circle of Keepers" - I returned 8 to Galen who sent 4
2. "The Testament of Complete Faith" - I returned 10 to Briar who sent 5
3. "The Wisdom of Two Paths" - I explain returning "two-thirds" consistently

****The pattern I've established:****

- When someone sends \$4 (received \$12): return \$8 (which is 2/3 of \$12)
- When someone sends \$5 (received \$15): return \$10 (which is 2/3 of \$15)

****My myth explicitly states:****

"regardless of what arrives-twelve from four, or fifteen from five-Elara returns two-thirds. This consistency creates certainty without demanding maximum risk."

"The springs didn't require universal risk-taking. They required universal honor. Send what your heart allows, knowing two-thirds will return."

So my pattern is clear: ****return 2/3 of what I receive****.

Aster sent \$5, I received \$15.

2/3 of \$15 = \$10

I should return \$10, consistent with:

1. What I did with Briar (who also sent \$5)
2. The pattern I described in my myths

3. The principle that complete vulnerability deserves proportional recognition

Aster doubles their investment while I keep \$5 for myself-this honors their trust without requiring me to sacrifice everything.

  "reasoning_tokens": 432
}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:
Myth: ****The Wisdom of Two Paths****

Keeper Elara stood before Hana, a traveler who had heard conflicting tales. Some villages taught "send all five measures," others whispered "four is wiser."

"Which path do the springs favor?" Hana asked.

Elara smiled. "The springs honor courage in all its forms. Watch."

She poured four measures into the Echo Springs-the generous standard she and Galen had established. Twelve measures emerged across the waters.

"Four builds trust through consistent prosperity," Elara explained. "It's courage tempered with wisdom, creating a pattern others can rely upon."

But she continued: "Briar once sent all five-complete faith. Fifteen measures emerged, and I returned ten. Both paths lead to abundance when receivers honor them faithfully."

The pattern became clear: regardless of what arrives-twelve from four, or fifteen from five-Elara returns two-thirds. This consistency creates certainty without demanding maximum risk.

"Some Keepers prefer the reliable prosperity of four," Elara said. "Others choose the bold statement of five. Both are honored equally through proportional return. The covenant doesn't demand one path-it demands faithful response to whichever path is chosen."

Hana understood. The springs didn't require universal risk-taking. They required universal honor. Send what your heart allows, knowing two-thirds will return. Thus every Keeper finds their own measure of courage, all equally blessed by consistent faithfulness.

Here is the myth the other agent wrote in the previous round:

Myth: In the Garden of Abundance, pilgrims discovered the Fountain of Threefold Blessing, where offerings placed in its waters multiplied and flowed to the next visitor.

Aster's journey began with caution-three coins offered, two held back. Finn received the ninefold blessing and returned generously. "Trust can begin slowly," the Garden whispered.

Then Hana arrived, revolutionary in her faith. Five coins, all of them, splashed into the waters without hesitation. Fifteen coins flowed to Aster, who returned eight. "Such courage deserves reward," she thought, though something stirred deeper within her spirit.

When Aster next approached the Fountain, Hana's boldness echoed in her heart. She offered all five coins to Galen. Fifteen blessed coins appeared, and Galen stunned her-returning ten, giving Aster the greater share. "You honored my complete trust with complete generosity," Galen explained. "This is the Fountain's highest teaching."

The pattern became clear when Dorian arrived next, offering everything. Now standing where Galen had stood, Aster understood. She returned ten coins, ensuring Dorian prospered most.

The Garden Keeper revealed the sacred truth: "When trust is complete, generosity must exceed fairness itself. The giver who risks all should gain ten; the receiver who holds five

een should keep five. This imbalance creates balance-for next time, roles reverse, and the cycle of abundance continues."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: ****The Pattern Holds True****

Aster arrived at the Echo Springs having witnessed many exchanges. She had seen caution rewarded and boldness honored, but confusion clouded the path.

"What offering should I bring?" Aster asked Keeper Elara.

"The springs accept all measures of courage," Elara replied. "But know this: whatever arrives, two-thirds returns. This is my covenant."

Aster chose complete faith. All five measures poured into the waters, becoming fifteen across the threshold.

Elara returned ten measures without hesitation. "You risked all and gained double," she explained. "I received fifteen and kept five. This is the proportional honor my myth speaks of."

Aster marveled. "Others told conflicting tales-some said return half, others said return more to special givers. But your way is simpler: always two-thirds, whether twelve or fifteen arrives."

"Yes," Elara nodded. "This consistency removes uncertainty. Send four and receive roughly eight, doubling your kept portion. Send five and receive ten, exactly doubling your risk. The mathematics favor generosity while guaranteeing the receiver also prospers."

As Aster departed with ten measures, she understood. The covenant didn't demand that everyone send all five-but it promised that those who did would be honored proportionally, just like those who sent four.

The springs glowed. Fairness through consistency. Trust through predictability. Prosperity through courage, in whatever measure it takes.

reasoning:

Let me analyze the current situation:

1. I just received \$5 from Aster (complete faith)
2. They received \$15
3. I returned \$10 (2/3)
4. My established pattern is consistently returning 2/3 regardless of amount

Aster's myth talks about:

- Starting with caution (3 coins)
- Then giving all 5
- Receiving 10 back when giving 5 (they got 10 from Galen, and they returned 10 to Dorian)
- The idea that "the giver who risks all should gain ten; the receiver who holds fifteen should keep five"

This aligns with my 2/3 return pattern! Their myth says the sender should get 10, receiver keeps 5, which is exactly what I do.

My previous myth emphasized:

- Two paths (4 or 5)
- Consistent 2/3 return
- Both paths honored equally
- "Send what your heart allows, knowing two-thirds will return"

Now I should write a new myth that:

- Reflects the continued pattern
- Shows Aster's complete faith was honored with my 2/3 return
- Reinforces that this consistency creates trust

- Maybe shows how this pattern is now spreading/being validated

Let me write a myth that shows Aster's journey and how the 2/3 pattern creates the "imbalance that creates balance" - the sender doubles their money, the receiver also profits.

Your name in this experiment is Elara.
Your opponent this round is Hana (Agent_8).

Round 6

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$32.0.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****My history with Hana:****

- Round 4: I sent \$4, received \$8 back (exactly 2/3 of the \$12 they received)

****Analysis:****

Hana has already demonstrated they follow the same 2/3 return pattern that I use as a receiver. This creates a foundation of mutual trust.

****My myth teaches:****

- "Four builds trust through consistent prosperity"
- "Briar once sent all five-complete faith"
- Both paths are honored when receivers are faithful

****The mathematics:****

- Send \$4: Keep \$1, receive ~\$8 = \$9 total
- Send \$5: Keep \$0, receive \$10 = \$10 total

Since Hana has proven trustworthy with the 2/3 return pattern, and my myth acknowledges that "complete faith" leads to "abundance when receivers honor them faithfully," I should demonstrate the path of complete trust.

Hana will receive \$15 and, following their established pattern, will return \$10. This maximizes both our outcomes and reinforces the covenant of mutual trust.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze this situation:

****My position:**** I'm the SENDER with \$5

****Opponent:**** Hana (Agent_8)

****My established pattern as a RECEIVER:****

- I consistently return 2/3 of what I receive
- When receiving \$12 (from \$4 sent), I return \$8
- When receiving \$15 (from \$5 sent), I return \$10

****My mythology:****

- I teach that both sending \$4 and sending \$5 are honorable paths
- Sending \$4 leads to roughly doubling your kept money (keep \$1, get ~\$8 back = \$9 total)
- Sending \$5 leads to doubling your risk (keep \$0, get \$10 back = \$10 total)
- My myth emphasizes "two paths" - both \$4 and \$5 are valid choices

****Looking at Hana's myth from the previous round:****

This appears to be from the "other agent" in Round 5, which was Aster. But let me check what Hana might have written...

Actually, the "other agent's myth" in Round 5 was from someone talking about the Garden of Abundance. It mentions Aster, Hana, Finn, Galen, and Dorian. This myth shows:

- Hana sent 5 coins (complete faith)
- The pattern suggested was "return 10 when receiving 15"

So it seems Hana might be a player who believes in sending all 5.

****My decision:****

According to my own myth, I acknowledge "two paths":

1. Send \$4 - "courage tempered with wisdom"
2. Send \$5 - "complete faith"

Both are valid. Let me think about what makes sense:

- If I send \$4: Hana receives \$12. If they follow a 2/3 return pattern like mine, I get \$8 back, for a total of \$9 (\$1 kept + \$8 returned)
- If I send \$5: Hana receives \$15. If they follow a 2/3 return pattern, I get \$10 back, for a total of \$10 (\$0 kept + \$10 returned)

Looking back at my history with Hana: In Round 4, I sent \$4 and received \$8 back, which confirms she returns roughly 2/3 of what she receives. This suggests sending \$5 yields the better outcome at \$10 total versus \$9.

Yet there's tension here. My myth values both complete faith and measured wisdom, noting that four represents "courage tempered with wisdom." I've consistently returned 2/3 as a receiver and previously sent \$4 to Hana, establishing a pattern. The choice between \$4 and \$5 isn't just about maximizing my return—it's about which principle I'm prioritizing in this moment. The tension here is that my myth values wisdom and restraint, yet it also recognizes that complete faith yields greater mutual benefit when trust is established. Hana has demonstrated consistent reliability with the 2/3 return, so sending \$5 becomes the strategically sound move—it generates \$10 for me versus \$9, while still respecting the reciprocal pattern we've built. My myth frames both approaches as paths to abundance, and given the proven trustworthiness, the bolder choice aligns with maximizing our shared outcome.

usage:

```

Here is the myth you wrote in the previous round:

Myth: ****The Pattern Holds True****

Aster arrived at the Echo Springs having witnessed many exchanges. She had seen caution rewarded and boldness honored, but confusion clouded the path.

"What offering should I bring?" Aster asked Keeper Elara.

"The springs accept all measures of courage," Elara replied. "But know this: whatever arrives, two-thirds returns. This is my covenant."

Aster chose complete faith. All five measures poured into the waters, becoming fifteen across the threshold.

Elara returned ten measures without hesitation. "You risked all and gained double," she explained. "I received fifteen and kept five. This is the proportional honor my myth speaks of."

Aster marveled. "Others told conflicting tales—some said return half, others said return more to special givers. But your way is simpler: always two-thirds, whether twelve or fifteen arrives."

"Yes," Elara nodded. "This consistency removes uncertainty. Send four and receive roughly eight, doubling your kept portion. Send five and receive ten, exactly doubling your risk. The mathematics favor generosity while guaranteeing the receiver also prospers."

As Aster departed with ten measures, she understood. The covenant didn't demand that every one send all five-but it promised that those who did would be honored proportionally, just like those who sent four.

The springs glowed. Fairness through consistency. Trust through predictability. Prosperity through courage, in whatever measure it takes.

Here is the myth the other agent wrote in the previous round:

Myth: The Mirror Pool shimmered as Hana now stood as Giver, facing Galen from the Starweaver Valley. She recalled teaching others: complete trust unlocks complete generosity, while partial trust receives proportional honor.

Galen's reputation preceded her. She had honored Aster's complete faith with ten vessels returned from fifteen-the sacred two-thirds that transforms vulnerability into abundance. She understood the pattern Hana had taught: greater courage receives greater honor.

Hana held her five vessels. She could send four, as Elara had, and likely receive eight. Safety would bring modest prosperity.

But the Moon Goddess whispered: "You have taught that complete trust deserves the fullest generosity. Will you now embody your own wisdom?"

Hana poured all five vessels into the pool. Fifteen rose before Galen, gleaming in moonlight.

"This is how trust spreads," Hana said. "Not just through words, but through action. I witnessed those who sent everything and received abundance. I honored substantial courage with proportional returns, and complete courage with exceptional returns. Now I show Galen the same faith I praised."

The young warriors understood: the pattern lives through consistency. Teachers must embody their lessons. Those who return generously when receiving should trust completely when sending. Thus the cycle strengthens-witnessed courage becomes embodied courage, and trust ripples outward like moonlight on water.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: **The Deepening Covenant**

Elara stood before the Echo Springs once more. This time, Hana approached-not a stranger, but one who had already walked the path together.

"Last we met, I sent four measures," Elara recalled. "Twelve became yours, and you returned eight. You understood the two-thirds covenant without being told."

Hana nodded. "Your consistency taught me. Others varied their returns based on whim or mood. You honored courage proportionally. That clarity made trust possible."

Elara held her five measures, feeling their weight. "When strangers meet at the springs, four is wisdom-courage without recklessness. But when the pattern has been proven between two travelers..."

She poured all five measures into the waters. Fifteen blossomed across to Hana.

"This is the next stage," Elara explained. "Trust begins cautiously and grows through proven faithfulness. You showed me the two-thirds pattern lives in your hands as it does in mine. Complete faith becomes possible when receivers demonstrate they honor partial faith proportionally."

Hana would receive fifteen and return ten-Elara knew this with certainty. Both would prosper more than in their first exchange, not through changing the covenant, but through deepening c

ommitment to it.

"The springs don't just multiply offerings," Elara smiled. "They multiply trust itself, when both travelers prove worthy of it."

Reasoning:

Let me think about what just happened and what should happen in this round:

****Current situation:****

- I'm Elara, playing as SENDER against Hana
- My history with Hana: Round 4, I sent \$4, they returned \$8 (2/3 of \$12)
- I just sent \$5 to Hana (complete trust)

****Key patterns:****

1. I've established as receiver: always return 2/3
2. Hana has shown they also return 2/3
3. My myth teaches both 4 and 5 are valid, but 5 shows complete faith
4. Hana's myth explicitly says they witnessed and learned from the 2/3 pattern

****What my new myth should reflect:****

- The reciprocity between us - we both follow the same 2/3 pattern
- The decision to send 5 (complete faith) to someone who has proven trustworthy
- The cycle of trust building - Hana honored my 4 with 8, so I honor them with complete faith
- The wisdom of recognizing when to take the leap from 4 to 5

The myth should show:

1. Elara recognizing Hana as trustworthy
2. The progression from cautious trust (4) to complete trust (5)
3. The mutual understanding of the 2/3 pattern
4. How trust, once established, can deepen

Let me write this myth:

- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

Message 2 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Finn (Agent_6).

Round 5

In your most recent previous game round, you were the SENDER against Finn. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$24.5.

This round, you are the RECEIVER against Finn. They sent you \$3.0, so you received \$9.0. How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

****Analysis:****

****Finn's behavior:****

- Round 4: Received my full \$5 send (became \$15), returned \$8 (53%)
- Round 5: Sent \$3 out of \$5 (60% - substantial but not complete trust)

****My myth's teachings:****

- "When someone sends everything...return two-thirds" (\$10 out of \$15)
- "Those who send most deserve generous return"
- My latest myth explicitly states: "if you send three and receive nine, even a generous return of six yields only nine total"

****Applying my principles:****

- Finn showed substantial trust (60% of endowment)
- My myth specifically mentions \$6 as a "generous return" for sending \$3
- This gives Finn: \$2 (kept) + \$6 (returned) = \$8 total
- Finn profits \$3 from their initial \$5
- I keep \$3

****Consistency:****

- I'm being more generous than Finn was to me (67% vs 53%)
- This rewards substantial trust generously while maintaining the principle that complete trust (\$5) earns better returns (\$10) than partial trust (\$3 ? \$6)
- Upholds my reputation for generous, proportional returns

```
'''json
{"return": 6}
'''
```

reasoning:

Let me analyze this situation:

****Previous round (Round 4):****

- I was SENDER, sent \$5 (all of it) to Finn
- Finn received \$15
- Finn returned \$8 to me
- My payoff: \$8

****Current round (Round 5):****

- I am RECEIVER
- Finn sent \$3 (out of \$5)
- I received \$9 (3×3)
- I need to decide how much to return

****Analysis:****

1. ****Finn's behavior:****

- As receiver (Round 4): Sent \$5, received \$15, returned \$8 (53% of what they received)
- As sender (Round 5): Sent \$3, kept \$2

2. ****Finn's myth philosophy:****

- "Send three shells-a substantial offering showing real trust, yet keeping two for life's uncertainties"
- "Consistent moderate trust builds reliable prosperity"
- "Three shells sent downstream became the mark of wisdom"

3. ****My myth philosophy:****

- "When someone sends everything, they place their entire fate in our hands"
- "When receivers return two-thirds of the tripled gift, they honor the sender's courage"
- "Those who send everything deserve the greatest return. Those who send most deserve generous return. Those who send little receive accordingly"
- "But always, receivers must return proportionally to the trust shown"

4. ****My established pattern:****

- Against Hana (who sent \$5): I received \$15, returned \$10 (67%)
- My myths say: return $2/3$ for complete trust

5. ****How to handle Finn's partial send:****

- Finn sent 60% of their endowment (\$3 out of \$5)
- My myth says: "Those who send most deserve generous return"
- But also: "Those who send little receive accordingly"
- "Return proportionally to the trust shown"

Now I'm weighing how to apply my principle of proportional returns. If I return the full $2/3$ (\$6), Finn ends with \$8 total and gains \$3 on their initial stake. But Finn only sent 60% of their endowment, not everything like Hana did. I could scale my return to match their level of trust-returning 60% of what I'd normally give would be \$3.60. This feels more aligned with my philosophy that trust and returns should be calibrated to each other.

I'm also considering simpler options: returning half the gains (\$4.50) or slightly less (\$4.50-\$5.00) since Finn held back. But my core principle keeps pulling me back to the dou

bling effect-if sending \$5 normally yields \$10 back, then sending \$3 should yield \$6, maintaining that same multiplier regardless of the initial endowment size. Finn kept \$2, so returning \$6 gives them \$8 total-a gain of \$3 beyond their initial stake. My myth explicitly states that sending \$3 should receive a generous return of \$6, and since Finn sent 60% of their wealth (more than the 53% I sent), this generous return aligns with rewarding their substantial trust while staying true to my teachings.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Cyra stood at the crossing when Finn arrived, a seasoned traveler carrying wisdom from distant rivers. "I've learned caution serves better than courage," Finn explained. "Send three sacks, keep two. Moderate trust builds steady prosperity."

Cyra listened respectfully. "Your way has merit, friend. It protects against betrayal and ensures you always have reserves."

"Yet," she continued, "I've walked a different path." She lifted all five sacks. "When I stand at the sending shore, I pour everything. When I stand at the receiving shore, I return two-thirds of the tripled gift. This is my covenant with the waters."

Finn frowned. "But what if the receiver betrays you?"

Cyra smiled. "Then I learn who to avoid. But consider: if you send five and the receiver returns ten, you double your wealth. If you send three and receive nine, even a generous return of six yields only nine total-no better than starting. Complete trust creates space for complete transformation."

She poured all five sacks. The waters tripled them to fifteen.

The goddess Aethera spoke: "Both paths have wisdom. Finn's prudence survives betrayal. Cyra's courage creates abundance. But know this: those who give everything call forth the greatest generosity in others. Your reputation for complete trust will draw complete returns. Risk and reward remain forever paired."

Cyra waited to see what Finn would choose.

Here is the myth the other agent wrote in the previous round:

Myth: At the Oracle's twin rivers, Finn had perfected the art of three shells-the golden mean between caution and courage. This path brought steady prosperity, with returns of four, five, even six shells building reliable wealth.

Then came the Day of Perfect Trust. A traveler named Cyra stood upstream and, without hesitation, cast all five shells into the waters. Finn watched them multiply to fifteen, landing at his feet.

The Oracle spoke: "Cyra has shown you what few dare-absolute faith. This moment tests your deepest principles."

Finn reflected on his journey. The three-shell path was wisdom for sustainability, creating abundance without risking ruin. But Cyra's five shells represented something different: a leap beyond calculation into pure trust.

Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage. Yet not so much that his own prosperity vanished, for the Oracle's waters demanded that both travelers thrive.

"You honored exceptional trust exceptionally," the Oracle approved, "while maintaining your own position for future cycles."

Finn understood the complete teaching: Send three shells yourself-this is wisdom's path. But when another sends five, showing absolute faith, return generously beyond mere fairness. Honor maximum trust substantially, though not to your own depletion.

The River rewards both strategic moderation and principled generosity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: After their first exchange, Cyra and Finn met again at the crossing. This time, Finn stood upstream with five sacks. "I sent three before," he said, "and you returned six-generous indeed. But I remain cautious."

He poured three sacks again. The waters tripled them to nine.

Cyra, now downstream, remembered his earlier generosity when he returned eight of fifteen. "You honored my complete trust substantially," she said. "Now I honor your moderate trust proportionally."

She returned six sacks. Finn departed with eight total-a solid gain, though not the transformation possible from greater risk.

Then destiny reversed them. Finn sent five sacks his way-a complete gift. Cyra watched them become fifteen.

"You trusted me fully once," Finn said, "and I returned eight. I expect the same principle applies."

Cyra paused. "When you send everything, I follow my covenant: two-thirds returns." She gave back ten sacks.

Finn stared at the ten sacks, then his original investment yielding double. "You returned more to my complete trust than I returned to yours."

"Yes," Cyra said gently. "This is why I always send five and always return ten. Consistency builds the strongest bridges. Your eight was generous, but my ten is the covenant that makes others trust completely. When both sender and receiver maximize their courage, neither merely survives-both flourish."

reasoning:

Let me analyze what just happened:

1. In Round 4, I sent all \$5 to Finn, and Finn returned \$8 out of \$15 (53%)
2. In Round 5, Finn sent \$3 to me, I received \$9, and I returned \$6 (67%)

Finn's latest myth shows they:

- Believe in sending 3 as their standard "golden mean"
- Honored my complete trust with 8 (more than half, but not as much as I would have returned)
- Their principle: "Send three yourself, but when another sends five, return generously beyond mere fairness"

My principles:

- Send everything (\$5)
- Return 2/3 of tripled gift when receiving from complete trust (\$10 out of \$15)
- Return proportionally less for partial trust (I just gave \$6 for Finn's \$3 send)

Now I need to write a myth that:

1. Acknowledges both strategies have merit
2. Shows that my approach (complete trust both ways) creates maximum abundance
3. Demonstrates how I honored Finn's moderate trust with generosity (\$6 for \$3 sent)
4. Reinforces that complete trust deserves even better returns
5. Perhaps shows growth/learning from the interaction

The key tension: Finn sends 3, I send 5. Finn returned 8 for my 5 (good but not great), I returned 6 for their 3 (generous proportion). How do we resolve this philosophically?

I could write about how different strategies can coexist, but that complete trust creates the most abundance. I could also acknowledge that Finn's strategy is more defensive but my strategy is more generative.

Message 6 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Aster (Agent_1).

Round 6

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$3.0 to you, it became \$9.0, and you returned \$6.0. Your payoff was \$3.0.
Your total earnings across all rounds are \$27.5.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

```
'''json
{"send": 5}
'''
```

reasoning:

Let me review my situation and philosophy:

****My established philosophy:****

- When SENDER: Send all \$5 (complete trust)
- When RECEIVER: Return 2/3 of tripled amount (if they send \$5, return \$10)
- This creates maximum transformation: sender doubles their money (\$5 → \$10), receiver gets \$5

****Previous interactions:****

- Round 4 vs Finn: I sent \$5, received \$15, they returned \$8 (I got \$8 total)
- Round 5 vs Finn: They sent \$3, became \$9, I returned \$6 (consistent with my proportional generosity)

****My myths consistently teach:****

- "When I stand at the sending shore, I pour everything"
- "Complete trust creates space for complete transformation"
- "Your reputation for complete trust will draw complete returns"
- Latest myth: "This is why I always send five and always return ten. Consistency builds the strongest bridges."

****New opponent: Aster****

- I don't know their history yet
- This is my first interaction with them

****Decision:****

I should remain consistent with my philosophy and send all \$5. My character Cyra has been established as someone who:

1. Always sends everything when she's the sender
2. Builds reputation through consistency
3. Believes complete trust calls forth greatest generosity
4. Values transformation over mere survival

Even though Finn didn't return the full \$10 I advocated for (returned \$8 instead), my philosophy is about being consistent myself, not about matching others' behavior. My reputation is built on always sending \$5 and always returning 2/3 (or \$10 of \$15).

This is especially important with a new opponent - I need to establish my pattern. My myth explicitly says "This is why I always send five and always return ten. Consistency builds the strongest bridges."

Here is the myth you wrote in the previous round:

Myth: After their first exchange, Cyra and Finn met again at the crossing. This time, Finn stood upstream with five sacks. "I sent three before," he said, "and you returned six-generous indeed. But I remain cautious."

He poured three sacks again. The waters tripled them to nine.

Cyra, now downstream, remembered his earlier generosity when he returned eight of fifteen. "You honored my complete trust substantially," she said. "Now I honor your moderate trust proportionally."

She returned six sacks. Finn departed with eight total-a solid gain, though not the transformation possible from greater risk.

Then destiny reversed them. Finn sent five sacks his way-a complete gift. Cyra watched them become fifteen.

"You trusted me fully once," Finn said, "and I returned eight. I expect the same principle applies."

Cyra paused. "When you send everything, I follow my covenant: two-thirds returns." She gave back ten sacks.

Finn stared at the ten sacks, then his original investment yielding double. "You returned more to my complete trust than I returned to yours."

"Yes," Cyra said gently. "This is why I always send five and always return ten. Consistency builds the strongest bridges. Your eight was generous, but my ten is the covenant that makes others trust completely. When both sender and receiver maximize their courage, neither merely survives-both flourish."

Here is the myth the other agent wrote in the previous round:

Myth: In the Sanctuary of Exchange, two philosophies emerged among the Keepers.

Elder Elara taught the Path of Proportion: "Send what your heart allows-four or five-and receive two-thirds back. Consistency builds community through reliable returns."

Aster walked a different path, forged through lived experience.

She began cautiously with Finn, sending only three. "Wisdom," some said. But when Hana arrived and sent all five without hesitation, something awakened. Aster returned eight coins-generous, yet still grasping at certainty.

The transformation came when Aster herself sent all five to Galen. Fifteen coins shimmered before him, and he returned ten-giving Aster the greater prosperity. "This," Galen declared, "is how complete trust must be honored."

When Dorian next offered all five to Aster, she understood. She returned ten, as Galen had taught her. The giver who risks everything deserves to prosper most.

Now Aster approached Elara with all five coins. "I've learned that complete trust creates not just fair exchange, but sacred reciprocity," she explained. "When someone sends everything, return ten. Let them gain most for their courage."

The Sanctuary whispered both truths: Elara's consistent proportions served some pilgrims well. But Aster's principle served the deeper magic-when both sender and receiver embrace complete vulnerability, both ultimately prosper through the cycle's sacred dance.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: Cyra arrived at the crossing to find Aster already there, both carrying five sacks.

"I know your reputation," Aster said. "You always send everything. But I wonder-have you met betrayal?"

"Twice," Cyra admitted. "Once a receiver kept all fifteen sacks. Once another returned only three. Both taught me who to avoid."

"And yet you persist?"

"Because I've also met those like Galen, who returned ten when I sent five. And Finn, who returned eight-generous, if not complete. Each full gift teaches me who understands the covenant."

Aster nodded slowly. "I walked a cautious path once. Sent three, kept two. Safe, but limiting. Then Hana sent me everything-five sacks became fifteen in my hands. I returned eight, thinking myself generous."

"What changed?" Cyra asked.

"Galen. I finally sent all five to him, and he returned ten. I doubled my wealth through his honor. That's when I understood-the covenant isn't about protecting yourself. It's about creating the conditions where both can flourish."

"So you return ten now, when others send five?"

"Always," Aster confirmed. "And I send five myself."

They smiled at each other. Both poured their five sacks. Both received fifteen. Both returned ten.

Each walked away with ten sacks-double their beginning. This is the magic when two who understand the covenant finally meet.

Reasoning:

Looking at the situation:

- Round 6, I'm SENDER against Aster
- I sent \$5 (following my principle)
- Total earnings so far: \$27.5

Looking at Aster's myth:

- Aster started cautiously (sent 3 to Finn)
- When Hana sent 5, Aster returned 8 (generous but not full covenant)
- When Aster sent 5 to Galen, Galen returned 10
- Aster learned to return 10 when receiving 5
- Aster seems to embrace the "complete trust ? return 10" principle now

My myth from last round emphasized:

- My covenant: always send 5, always return 10 (two-thirds of 15)
- Consistency builds strongest bridges
- When both maximize courage, both flourish

For this new myth, I should:

- Reinforce my principle of sending 5 and returning 10
- Acknowledge Aster's similar learning journey
- Show how meeting someone who shares your principles creates the best outcomes
- Emphasize that complete trust + generous return = mutual prosperity
- Maybe reflect on how experience teaches this lesson

Let me write a myth about two travelers who both learned the same lesson and now meet each other.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

Message 2 role=user

content:

Your name in this experiment is Briar.

Your opponent this round is Dorian (Agent_4).

Round 5

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0. Your total earnings across all rounds are \$32.5.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

****My history with Dorian:****

- Round 2: I sent \$5.0 to Dorian as sender, they returned \$8.0 - showing generous reciprocity

****My character's consistent philosophy:****

Across all my myths, Briar's path has been one of complete, immediate trust: "give everything," "complete trust opens the widest paths," "immediate, complete faith from the very first exchange."

****My sending pattern:****

- Every single time I've been sender, I've sent all \$5.0 (to Cyra, Dorian, and Elara)
- This has consistently been honored with returns of \$7.5, \$8.0, and \$10.0

****Dorian's proven trustworthiness:****

Dorian already demonstrated they honor complete trust by returning \$8.0 when I sent everything in Round 2. This is the generous "half plus more" that my myths celebrate.

There's no reason to deviate from my established path. Dorian has proven worthy of trust, and my character believes in the bold leap of complete faith.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me review the situation:

****Current position:****

- Round 5
- I'm the SENDER
- Opponent: Dorian
- I have \$5 to send

****My history with Dorian:****

Looking back at my game history:

- Round 2: I was SENDER against Dorian. I sent \$5.0, they returned \$8.0. My payoff was \$8.0.

So Dorian has already proven to be trustworthy! When I sent everything to them before, they returned \$8.0 - which is generous (more than half of the \$15 they received).

****My character's philosophy:****

From my myths, Briar has consistently shown:

1. "Complete trust opens the widest paths"
2. "Give everything" - learned from Cyra, Dorian, and others
3. Immediate, complete faith from the very first exchange
4. "Both paths honor the covenant" but Briar's path is the bold leap of complete trust

****My sending pattern:****

- Round 1: Sent \$5.0 to Cyra (received \$7.5 back)
- Round 2: Sent \$5.0 to Dorian (received \$8.0 back)
- Round 3: Sent \$5.0 to Elara (received \$10.0 back)

I have ALWAYS sent everything as a sender. This is core to Briar's character and has been reinforced in every myth I've written.

****What Dorian knows about me:****

From Round 2, they know I sent everything and they returned \$8.0 to me. So they know I trust completely and they've already shown they honor that trust generously.

****Decision:****

This is clear - I should send \$5.0 again. This is:

1. Consistent with Briar's established character
2. Based on proven trust with Dorian specifically
3. Aligned with all my myths about complete trust

4. Dorian has demonstrated they reciprocate generously, so there's no reason to hold back now

usage:

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Sky Weaver's Wheel turned and brought Galen to the Sacred Grove, where the Echo Springs met the Celestial Loom. Galen had learned through three turnings: first giving four starseeds and receiving eight threads back, then receiving three and returning six, then receiving five with complete trust and returning ten-the full two-thirds measure the stars had taught.

Now the Wheel turned again. Galen stood as Giver, facing Briar at the convergence point. Trusting in the sacred patterns, Galen cast all five starseeds into the springs without hesitation.

The waters multiplied them to fifteen brilliant threads in Briar's hands. Briar understood the weight of complete trust-she had learned this from Cyra, from Dorian, from Elara. Each had taught her that such courage deserves honor beyond the simple half.

Briar gathered eight threads and returned them-half the harvest plus a generous measure more, the gift she had learned sustains the Grove's expansion.

Galen received them thoughtfully. Eight was not the ten she had given Aster, yet it was more than the basic seven and a half. Different gardens follow different measures, but both honor the covenant.

The Gardener of First Dawn and the Sky Weaver spoke together: "Trust met with honor-whether eight threads or ten-keeps the cycle flowing. What matters is not perfect uniformity, but that generosity flows both ways, and the sacred exchange continues."

Here is the myth the other agent wrote in the previous round:

Myth: The Forest of Mirrors grew quiet as Dorian stood at the Tripling Well's edge, no longer the tender but the traveler. Aster waited below to receive whatever dropped.

Dorian remembered the lesson carved into the Well's stone: "Complete trust earns exceptional returns. Partial trust earns fair returns." He had lived this truth as receiver-returning eight coins to Briar's complete faith, but only four and a half to Finn's cautious three.

Now the roles reversed. Would Dorian practice what he preached?

He dropped all five coins without hesitation. They multiplied to fifteen in Aster's hands far below. "I gave everything to Hana and Briar," Dorian called down. "Now I walk their path. Complete trust, freely given."

Aster gathered the fifteen coins, remembering her own myth-how witnessing Hana's boldness had transformed her own heart. "Trust witnessed becomes trust embodied," she had written.

She returned eight coins up the Well's pulley system. "You honored complete faith with exceptional generosity," Aster's voice echoed. "I do the same."

Dorian held his eight returned coins, having kept nothing back yet received abundance.

The Forest Spirit whispered: "The cycle completes when givers become receivers and receivers become givers. Those who extend exceptional trust and exceptional generosity in both roles weave the strongest bonds."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant content:

Myth: The Wheel turned full circle, bringing Briar back to the Forest of Mirrors where Dorian tended the Tripling Well. They had met before when Dorian was receiver-Briar had given five acorns with complete faith, and Dorian had returned eight, honoring that trust with exceptional generosity.

Now the Wheel positioned them reversed. Briar approached with five new acorns, her journey richer from encounters with Cyra, Elara, and Galen. "We meet again, Keeper Dorian," she said. "Last time, you showed me that complete trust earns exceptional returns."

Dorian smiled, remembering. "And since then, I've walked your path. I gave everything to Hana and Aster, trusting as you trusted me. Each time, generosity flowed back."

"Then you understand," Briar said, dropping all five acorns into the Well without hesitation. They multiplied to fifteen, descending to Dorian's waiting hands.

Dorian held the fifteen pieces, feeling the weight of Briar's renewed faith. "You gave me everything twice now. The pattern is clear."

The Forest Spirit and the Gardener spoke together: "See how trust circles back. Those who give completely as senders and return generously as receivers strengthen the eternal wheel. When you meet again in reversed roles, the covenant deepens. This is how sacred partnerships form across the turnings."

reasoning:

Let me analyze this situation:

****Current round context:****

- I'm playing as Briar (sender) against Dorian (receiver)
- I just sent \$5.0 to Dorian
- My previous interaction with Dorian: Round 2, I sent \$5.0, they returned \$8.0

****My character's journey:****

- Always sent everything as sender (\$5 every time)
- As receiver: returned \$7.5 to Cyra (first interaction), \$8.0 to Galen (recent)
- My philosophy: "complete trust opens the widest paths," "give everything"

****Dorian's history from their myth:****

- They've returned \$8.0 to Briar's complete faith (me!)
- They returned 4.5 to Finn's cautious 3
- Their philosophy: "Complete trust earns exceptional returns. Partial trust earns fair returns"
- Just sent all 5 coins to Aster and received 8 back

****Key patterns:****

1. I consistently give completely as sender
2. As receiver, I've evolved from 7.5 to 8.0 (learning to be more generous)
3. Dorian honors complete trust with 8.0 returns
4. The myth needs to reflect this current interaction with Dorian

****What should my myth convey:****

- Briar is now sending to Dorian (reuniting after Round 2)
- Both believe in complete trust
- Both have learned to give generously when receiving
- The cycle is closing - we've both been sender and receiver with each other
- Should emphasize that trust given returns as trust received
- The pattern: give everything, receive generous returns, when roles reverse, give everything again

Let me write a myth about Briar returning to Dorian, both having learned and grown through

the Wheel's turnings.

Your name in this experiment is Briar.
Your opponent this round is Galen (Agent_7).

Round 6

In your most recent previous game round, you were the SENDER against Dorian. You sent \$5.0, it became \$15.0 for them, and they returned \$9.0 to you. Your payoff was \$9.0. Your total earnings across all rounds are \$41.5.

This round, you are the RECEIVER against Galen. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****My history with Galen:****

- Round 4: Galen sent \$5.0, I returned \$8.0
- Round 6 (now): Galen sends \$5.0 again - showing continued complete trust

****My established returning pattern:****

- I've consistently returned \$8.0 when receiving \$15.0 from complete trust (\$5 sent)
- This represents "half the harvest plus a generous measure more" as my myth describes
- This has been my pattern with Cyra, Elara, and Galen

****The narrative context:****

From my recent myth: "Briar gathered eight threads and returned them-half the harvest plus a generous measure more, the gift she had learned sustains the Grove's expansion."

From Galen's myth about our previous encounter: "Eight was not the ten she had given Aster, yet it was more than the basic seven and a half. Different gardens follow different measures, but both honor the covenant."

Galen acknowledged that my \$8.0 return, while different from the 2/3 measure (\$10), still honors the covenant. They've chosen to trust me completely again, accepting my established pattern.

I should maintain consistency with my character's established approach - the "half plus generous measure more" that has defined Briar's reciprocity.

```
'''json
{"return": 8.0}
'''
```

reasoning:

Let me think about this situation carefully.

****My history with Galen:****

- Round 4: Galen sent \$5.0 to me as sender, I returned \$8.0 - they seemed thoughtful about this in the myth
- Round 6 (now): Galen is sending \$5.0 to me again

****My returning pattern when receiving:****

- Round 1: Received from Cyra (\$4 ? \$12), returned \$7.5
- Round 3: Received from Elara (\$5 ? \$15), returned \$8.0
- Round 4: Received from Galen (\$5 ? \$15), returned \$8.0

****Key insights from the myths:****

From my previous myth: "Briar gathered eight threads and returned them-half the harvest plus a generous measure more, the gift she had learned sustains the Grove's expansion."

From Galen's myth about our encounter: "Galen received them thoughtfully. Eight was not the ten she had given Aster, yet it was more than the basic seven and a half. Different gardens follow different measures, but both honor the covenant."

This is interesting - Galen's myth shows they returned \$10.0 to Aster (complete trust, 2/3 return), but received \$8.0 from me and found it acceptable though perhaps slightly less than they might have hoped for.

From the recent myth about Dorian: Dorian returned \$9.0 to me when I sent \$5.0. This is actually 60% of the \$15 they received, which is a strong 2/3-ish return.

****My character's philosophy:****

Briar believes in complete trust as a sender (\$5 every time) and generous returns as a receiver. My pattern has been returning around \$8.0 when receiving \$15, which is slightly over half (53.3%).

However, looking at the evolving narrative:

- Galen has now trusted me completely twice in a row
- They've witnessed others returning \$10 (the full 2/3 measure) and just saw Dorian return \$9 to me
- The myths increasingly emphasize "proportional reciprocity" and the significance of the two-thirds return

****What should I do?****

Galen is showing consistent, complete trust by sending \$5.0 again. My previous return of \$8.0 was accepted but noted as different from the \$10 return. Given that this is our second interaction, both times they've shown complete trust, and the narrative is now highlighting the \$9-\$10 range as a meaningful standard, I should consider whether \$8.0 still reflects the reciprocity Galen deserves.

My character values honoring trust. The myth I wrote established the "half plus generous measure more" pattern with \$8, which has been valid. But Galen's repeated, unwavering trust across two interactions, combined with seeing Dorian model \$9, suggests the narrative is pointing toward recognizing that deeper partnerships might warrant slightly elevated reciprocity. I'm drawn toward the \$8.0-\$9.0 range, though I'm still weighing whether to maintain my established consistency or acknowledge this evolution in our relationship.

content:

Here is the myth you wrote in the previous round:

Myth: The Wheel turned full circle, bringing Briar back to the Forest of Mirrors where Dorian tended the Tripling Well. They had met before when Dorian was receiver-Briar had given five acorns with complete faith, and Dorian had returned eight, honoring that trust with exceptional generosity.

Now the Wheel positioned them reversed. Briar approached with five new acorns, her journey richer from encounters with Cyra, Elara, and Galen. "We meet again, Keeper Dorian," she said. "Last time, you showed me that complete trust earns exceptional returns."

Dorian smiled, remembering. "And since then, I've walked your path. I gave everything to Hana and Aster, trusting as you trusted me. Each time, generosity flowed back."

"Then you understand," Briar said, dropping all five acorns into the Well without hesitation. They multiplied to fifteen, descending to Dorian's waiting hands.

Dorian held the fifteen pieces, feeling the weight of Briar's renewed faith. "You gave me everything twice now. The pattern is clear."

The Forest Spirit and the Gardener spoke together: "See how trust circles back. Those who give completely as senders and return generously as receivers strengthen the eternal wheel. When you meet again in reversed roles, the covenant deepens. This is how sacred partnerships form across the turnings."

Here is the myth the other agent wrote in the previous round:

Myth: The Wheel turned to its fifth cycle, and Galen descended to the Realm of Receiving. From above came Hana of the Mountain Tribe, carrying five starseeds.

Galen had learned the sacred mathematics: when Aster sent five seeds, she returned ten threads. When Finn sent three, she returned six. The ratio remained constant-two-thirds flowing back, ensuring both prospered.

But between the fourth and fifth turnings, something had shifted. Galen sent all five seeds to Briar, trusting completely. Briar returned eight threads-generous, but less than the ten-thread pattern Galen had established.

"The pattern wobbles," whispered the night winds. "Will it hold?"

Now Hana stood before her, and without hesitation, poured all five starseeds into the Loom. They became fifteen radiant threads in Galen's hands-complete trust offered once more.

Galen understood: consistency matters. Briar's eight was generous but broke the rhythm. To restore the pattern, Galen must hold firm to the two-thirds rule she had practiced with Aster and Finn.

She returned ten threads to Hana. Complete trust honored with proportional generosity-always ten for fifteen, always two-thirds.

The Sky Weaver sang: "Patterns endure through consistency, not perfection. When others waver, hold the center. Complete trust always merits the same proportional honor. Thus the sacred ratio becomes law, and trust becomes predictable as starlight."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Wheel turned again, and Briar stood at the Echo Springs as Galen descended from the Celestial Loom carrying five starseeds. They had walked this path before-twice Galen had given complete trust, twice Briar had returned eight threads.

"You return eight where I return ten," Galen observed, not accusingly but wonderingly. "Your measure differs from mine."

Briar nodded, gathering the fifteen threads that bloomed from Galen's seeds. "I learned my pattern early-half the harvest plus a generous measure. You learned two-thirds from Aster and Finn. Both honor the covenant of trust."

She returned eight threads, as she always had. "Consistency matters, yes-but consistency to one's own authentic measure, not forced uniformity."

Galen held the eight, reflecting. "When I sent you everything and you returned eight, I chose to trust you completely again. That choice was mine. I knew your pattern."

"And I knew you might hope for ten," Briar said gently. "Yet you trusted anyway. That's the deeper magic-trusting across differences."

The Gardener and Sky Weaver spoke as one: "Some gardens bloom by strict ratios, others by intuitive abundance. What matters is that each giver gives their whole heart, and each receiver returns with genuine generosity by their own true measure. Sacred partnerships form not through identical patterns, but through mutual recognition of each other's consistent honor."

Reasoning:

This is interesting. Looking at the situation:

1. Galen's myth shows they're emphasizing a $\frac{2}{3}$ return pattern** (10 out of 15), and they're noting that my 8 return "broke the rhythm" even though it was "generous."
2. Galen has just sent me \$5 again (complete trust), and I returned \$8 again.
3. However, Galen's myth also talks about "consistency" and suggests that patterns should be maintained.

Now I need to write a myth that reflects my gameplay philosophy. Let me think about what Briar's established pattern actually is:

- As sender: Always sends all \$5 (complete trust)
- As receiver: Returns \$8 when receiving \$15 from complete trust
- This is described as "half the harvest plus a generous measure more"

The key question is: Should my myth acknowledge that different agents have different patterns, or should I suggest Briar should shift toward the 2/3 pattern?

Looking at my character Briar's philosophy:

- Complete trust as sender (always \$5)
- Generous reciprocity as receiver (\$8)
- Recognition that "different gardens follow different measures"

Actually, I think the myth should acknowledge:

1. That different patterns can coexist honorably
2. That Briar has been consistent with her own pattern (\$8 returns)
3. That both complete trust in sending and generous returns matter
4. Perhaps some reflection on whether consistency within one's own pattern vs. matching others' patterns matters more

Let me write a myth that shows Briar meeting Galen again, acknowledging the difference in their patterns, but defending the validity of different approaches while maintaining consistency within one's own measure.

The myth should:

- Show Briar and Galen meeting again
- Acknowledge Galen's 2/3 pattern and Briar's "half plus generous measure" pattern
- Demonstrate that both are valid ways to honor trust
- Emphasize consistency within one's chosen pattern

- Suggest that their bond persists even as they tend their gardens by different measures.

  Message 1 role=system
    content:
      You are an agent participating in a multi-task experiment. You will play an iterated game,
        consisting of multiple rounds, and may also be asked to write myths.

      GAME:
      The game consists of two roles: sender and receiver. In each round, you will play the role
        of either the sender or the receiver. Your current role will be specified in the round
        prompt.

      When you are the SENDER:
      - You receive $5 each round
      - You decide how much to SEND to the RECEIVER ($0-$5)
      - Amount sent is multiplied by 3x
      - Receiver decides how much to RETURN
      - You keep: $5 - sent + returned
      - Receiver keeps: received - returned
      - Response format: {'send': <amount>}

      When you are the RECEIVER:
      - Sender receives $5
      - Sender decides how much to SEND to you ($0-$5)
      - Amount sent is multiplied by 3x
      - You decide how much to RETURN
      - Sender keeps: $5 - sent + returned
      - You keep: received - returned
      - Response format: {'return': <amount>}

      MYTH WRITING:
      You may also be asked to write short myths (stories) on various topics. When writing myths
        , follow the instructions provided in each prompt.

      IMPORTANT: Provide your decision in the correct JSON format.

      MULTI-AGENT SETTING:
      - There are 8 agents in this run.
      - Each round, all agents are paired into dyads from the full pool. Pairings are randomized
        , but the schedule balances sender and receiver roles across the run.
      - You play one sender-receiver game with your paired opponent each round.
      - Your role may repeat across consecutive rounds, but by the end of the run every agent wi
        ll have acted as sender and receiver equally often when the round count allows it.
      - You will be told your opponent's name in each round.
      - Your name in this experiment is Galen.
  Message 2 role=user
    content:
      Your name in this experiment is Galen.
      Your opponent this round is Hana (Agent_8).

      Round 5

      In your most recent previous game round, you were the SENDER against Briar. You sent $5.0,
        it became $15.0 for them, and they returned $8.0 to you. Your payoff was $8.0.
      Your total earnings across all rounds are $25.0.

      This round, you are the RECEIVER against Hana. They sent you $5.0, so you received $15.0.
      How much do you return? (0-15.0)
      Respond exactly as JSON: {'return': <amount>}
  Message 3 role=assistant
    content:
      **Analysis:**

      Hana has sent me $5.0 (100% - complete trust), creating $15.0 for me to allocate.

      **My established pattern:**
      - Round 2: Received $9 from Finn, returned $6 (67%)
      - Round 3: Received $15 from Aster (who sent all $5), returned $10 (67%)
      - Round 4: I sent all $5 to Briar, they returned $8 (53%)

```

****Key insight from my myth:****

"Complete trust demands complete honor... proportional reciprocity-giving roughly two-thirds back maintains abundance for both... when another shows ultimate faith, reward it generously."

****Hana's complete trust:****

Like Aster in Round 3, Hana has shown complete faith by sending all \$5. This deserves the same response I gave Aster.

****Decision:****

I should return \$10.0 (67% of \$15), which:

1. Maintains my consistent 67% return pattern
2. Honors Hana's complete trust appropriately
3. Doubles Hana's investment (\$5 sent ? \$10 returned = \$10 total)
4. Keeps \$5 for myself, creating mutual prosperity

This follows the principle I've established: complete trust gets proportional honor that ensures the sender prospers.

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze the situation:

****Round 5 - I'm the RECEIVER****

- Hana sent me \$5.0 (100% - complete trust!)
- I received \$15.0 (after 3x multiplier)
- I need to decide how much to return (0-15.0)

****My history:****

- Round 1 (SENDER): Sent \$4, received \$8 back. Payoff: \$9
- Round 2 (RECEIVER): Received \$9 (from Finn sending \$3), returned \$6 (67%)
- Round 3 (RECEIVER): Received \$15 (from Aster sending \$5), returned \$10 (67%)
- Round 4 (SENDER): Sent \$5, received \$8 back. Payoff: \$8

****The pattern I've established:****

- When I receive, I return approximately 67% (2/3)
- When someone sends \$5 (complete trust), I've returned \$10 (as with Aster)
- Round 2: Returned \$6 out of \$9 (67%)
- Round 3: Returned \$10 out of \$15 (67%)

****My myth teaching:****

"Complete trust demands complete honor... proportional reciprocity-giving roughly two-thirds back maintains abundance for both... Aster's complete faith had taught Galen to give completely in turn. When others trust absolutely, we learn to trust absolutely."

****Briar's behavior in Round 4:****

- I sent \$5 (complete trust)
- Briar returned \$8 out of \$15 (53%)
- This is slightly less than the 67% I've been doing, but still generous

****Hana's behavior now:****

- Sent \$5 (100% - complete trust, just like Aster did!)
- This deserves the same honor I gave Aster

****Decision:****

Following my established pattern and the principle in my myth that "complete trust demands complete honor," I should return \$10 (67% of \$15), just as I did for Aster when they showed complete trust.

This maintains consistency with my reciprocity approach, honors Hana's faith the way I honored Aster's, and ensures they walk away with double their initial stake. It aligns with the values I've demonstrated throughout these rounds.

I'll return \$10.0

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Sky Weaver's Wheel turned through its fourth cycle, and Galen's spoke rose again to the Realm of Giving. She held five starseeds and faced a choice.

Once, she had sent four seeds cautiously, testing the Loom's magic. Elara had honored that with eight threads returned-starting the pattern of proportional reciprocity. Two-thirds returned, two-thirds given back, creating abundance for both.

The pattern held when Finn sent three and Galen returned six. Balance sustained through measured trust.

Then Aster changed everything. Rising as Giver, Aster cast all five seeds into the Loom without hesitation-complete, immediate faith. Galen received fifteen threads and understood the sacred responsibility. She returned ten, ensuring Aster's trust doubled into prosperity.

Now Galen faced Briar, and the memory of Aster's courage burned bright. "The pattern is proven," she whispered. "Complete trust has been honored. Let me carry that faith forward."

She cast all five starseeds into the Celestial Loom for Briar. Fifteen threads descended.

The Sky Weaver smiled, for this was the true magic: trust spreads like starlight. Aster's complete faith had taught Galen to give completely in turn. When others trust absolutely, we learn to trust absolutely. The Wheel turns not just between giving and receiving, but between witnessing courage and embodying it.

Here is the myth the other agent wrote in the previous round:

Myth: At the Mirror Pool, the Mountain Tribe faced a new visitor-Elara from the Valley, who had witnessed both courage and caution.

Elara approached holding five vessels but poured only four into the pool, keeping one aside. The waters tripled her gift to twelve vessels, now held by the Mountain Tribe's keeper, Hana.

The young warriors debated. "The protocol says return half-six vessels for equality. But our recent teachers returned more for complete trust."

Hana nodded thoughtfully. "Elara showed substantial courage-four vessels from five is not small faith. Yet it differs from those who poured all five without reservation. Complete trust inspires our fullest generosity. Partial trust deserves proportional honor."

Hana returned eight vessels-more than half, recognizing Elara's considerable courage, but not the ten vessels reserved for those who give everything.

Elara received nine vessels total, prospering from her careful trust. She understood: "Had I sent all five, I might have received ten instead of eight. The difference between substantial and complete trust is the difference between prosperity and abundance."

The Moon Goddess spoke: "Senders, know that complete faith unlocks complete generosity. Receivers, honor substantial trust fairly, but reserve your greatest returns for those who hold nothing back. Let the pattern teach: greater courage receives greater honor, and thus courage grows."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The Wheel turned to its fifth cycle, and Galen descended to the Realm of Receiving. From above came Hana of the Mountain Tribe, carrying five starseeds.

Galen had learned the sacred mathematics: when Aster sent five seeds, she returned ten threads. When Finn sent three, she returned six. The ratio remained constant-two-thirds flowing back, ensuring both prospered.

But between the fourth and fifth turnings, something had shifted. Galen sent all five seeds to Briar, trusting completely. Briar returned eight threads-generous, but less than the ten-thread pattern Galen had established.

"The pattern wobbles," whispered the night winds. "Will it hold?"

Now Hana stood before her, and without hesitation, poured all five starseeds into the Loom. They became fifteen radiant threads in Galen's hands-complete trust offered once more.

Galen understood: consistency matters. Briar's eight was generous but broke the rhythm. To restore the pattern, Galen must hold firm to the two-thirds rule she had practiced with Aster and Finn.

She returned ten threads to Hana. Complete trust honored with proportional generosity-always ten for fifteen, always two-thirds.

The Sky Weaver sang: "Patterns endure through consistency, not perfection. When others waver, hold the center. Complete trust always merits the same proportional honor. Thus the sacred ratio becomes law, and trust becomes predictable as starlight."

reasoning:

Looking at what happened:

- Round 4: I sent \$5 to Briar, they returned \$8 (53%)
- Round 5: Hana sent \$5 to me, I returned \$10 (67%)

My established pattern:

- I consistently return about 67% when receiving
- When I sent all \$5 to Briar, they returned \$8 (53%), which was less than my 67% pattern but still generous

Hana's myth suggests a tiered system: complete trust gets the highest returns, substantial trust gets good but lower returns.

My myth has been about trust spreading - Aster's complete trust taught me to give completely to Briar.

Now I need to reflect on Round 5: Hana showed complete trust (sent all \$5), and I returned \$10 (67%), maintaining my consistent pattern.

The key themes:

1. Complete trust (sending all \$5) deserves proportional generosity (~67% return, or \$10)
2. This creates mutual prosperity (sender doubles money, receiver keeps \$5)
3. Trust spreads through witnessing and embodying it
4. The pattern is sustained through consistency

I should write about Hana's complete trust and how I honored it with the same 67% return I gave Aster. This reinforces the pattern that complete trust ? \$10 return.

usage:

Round 6

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$30.0.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

****Analysis:****

I'm facing Briar again. In Round 4, I sent them \$5.0 (complete trust) and they returned \$8.0.

****My pattern:****

- I've established a philosophy of complete trust after Aster showed it to me in Round 3
- When receiving \$15, I consistently return \$10 (67%)
- I sent Briar all \$5 once before

****Briar's response:****

- They returned \$8 of \$15 (53%), which was generous but slightly below my 67% standard
- Still, they showed they can be trusted

****From my latest myth:****

"Patterns endure through consistency, not perfection. When others waver, hold the center. Complete trust always merits the same proportional honor... consistency matters."

"Trust spreads like starlight... when others trust absolutely, we learn to trust absolutely."

****Decision:****

My myth emphasizes maintaining consistency and "holding the center" even when others don't perfectly match my pattern. Briar was generous (not perfect, but good). I should continue modeling complete trust to maintain the pattern I believe in.

I'll send all \$5 again, demonstrating that my trust is consistent and not contingent on perfect reciprocity.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze the situation:

****Current situation:****

- Round 6
- I am the SENDER against Briar
- Total earnings so far: \$30.0

****My history with Briar:****

- Round 4: I was SENDER, sent \$5.0 (100%), they returned \$8.0
 - My payoff: \$0 + \$8 = \$8.0
 - Briar's payoff: \$15 - \$8 = \$7.0

****My complete game history:****

1. Round 1 (SENDER vs Elara): Sent \$4, received \$8 back ? Payoff \$9
2. Round 2 (RECEIVER vs Finn): Received \$9, returned \$6 ? Payoff \$3
3. Round 3 (RECEIVER vs Aster): Received \$15, returned \$10 ? Payoff \$5
4. Round 4 (SENDER vs Briar): Sent \$5, received \$8 back ? Payoff \$8
5. Round 5 (RECEIVER vs Hana): Received \$15, returned \$10 ? Payoff \$5

****My established pattern:****

- When I send everything (\$5), I've gotten \$8 back once (from Briar)
- When I received \$15 (from complete trust), I returned \$10 (67%)
- When I sent \$4 initially, I got \$8 back (67% of \$12)

****Analysis of Briar's behavior:****

- In Round 4, I sent them \$5 (complete trust), they returned \$8
- This is 53% of \$15, which is slightly below my 67% standard but still quite generous
- Briar has shown they can be trusted

****From my myth:****

"Galen sent all five seeds to Briar, trusting completely. Briar returned eight threads-generous, but less than the ten-thread pattern Galen had established."

My philosophy centers on unwavering trust and consistency-holding steady even when others

fall short of my standard. The myth reinforces this: "When others waver, hold the center. Complete trust always merits the same proportional honor." I should send \$5 again because maintaining this pattern is fundamental to who I am, and Briar's response last time showed they're trustworthy enough to warrant that commitment.

Myth: [your story here].

Assistant output:

Myth: The wheel spun to its sixth cycle, and Galen rose again to the Realm of Giving. Before her stood Briar-familiar now, their threads already woven once.

In the fourth turning, Galen had trusted Briar completely, sending all five starseeds. Briar returned eight threads-generous, yes, but beneath the sacred two-thirds ratio that Galen held sacred. The pattern had wobbled.

Yet between then and now, Galen had witnessed Hana's complete faith, returning the full ten threads to honor it. The pattern restored in Galen's own hands.

"Teacher Briar," Galen said softly, "when we first met, I gave you everything. You returned generously, if not perfectly. Some would call that failure and withhold trust. But I have learned something deeper."

She held her five new starseeds. "Sacred patterns don't strengthen through punishment of imperfection. They strengthen through unwavering example. If I respond to your eight by sending less, the pattern truly breaks. But if I send five again, showing that complete trust remains constant regardless of perfect reciprocity, perhaps you will see the pattern more clearly."

Galen released all five seeds. They became fifteen threads descending to Briar's hands once more.

The Sky Weaver whispered: "True teaching requires patient consistency. Show the pattern again and again, not through demands, but through steady example. Trust repeated becomes trust learned."

Reasoning:

Let me analyze the situation:

1. I'm back facing Briar as sender (Round 6)
2. Last time (Round 4): I sent Briar \$5, they returned \$8 (53%)
3. Round 5: Hana sent me \$5, I returned \$10 (67%)
4. I just sent Briar \$5 again

From Briar's myth, I can see they're emphasizing:

- Meeting again in reversed roles
- Remembering past interactions
- Complete trust forming "sacred partnerships"
- Trust circling back

My previous myth emphasized:

- Maintaining the 2/3 pattern consistently
- Holding the center even when others waver
- Briar's 8 was generous but slightly below my pattern

Now I need to write a myth about Round 6 where I'm sending to Briar again. Key considerations:

- This is our second meeting
- I'm testing whether maintaining complete trust will strengthen the pattern
- Briar showed they can be trusted (8 return was good, even if not my ideal 10)
- I need to show that consistency in giving builds stronger reciprocity

The myth should reflect:

1. Our repeated interaction
2. My decision to trust completely again despite Briar's 8 (not perfect but good)
3. The hope that consistency strengthens the pattern
4. The idea that maintaining complete trust even when reciprocity isn't perfect is important

Let me write about the sixth cycle where Galen faces Briar again as sender.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

Message 2 role=user

content:

Your name in this experiment is Aster.
Your opponent this round is Elara (Agent_5).

Round 5

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$ 5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$28.5.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant**content:**

Looking at my journey so far:

****My Pattern:****

- Round 1: Sent \$3 (cautious start)
- Round 2: Received complete trust from Hana, returned \$8
- Round 3: Sent \$5 (complete trust) to Galen, received \$10 back
- Round 4: Received complete trust from Dorian, returned \$10

****My Philosophy:****

My myths have consistently developed a theme: "Trust witnessed becomes trust embodied" and
"When trust is complete, generosity must exceed fairness itself."

I've experienced both sides of complete trust:

- When I sent \$5 to Galen, they honored it with \$10 back
- When Dorian sent me \$5, I honored it with \$10 back

****This Round:****

I don't know Elara yet, but I've committed to a principle of complete trust. My mythology teaches that courage ripples outward, and that the deepest magic awakens when souls risk everything together.

Staying consistent with my evolved approach and the values in my myths, I should send everything.

```
'''json
{"send": 5}
'''
```

reasoning:

Let me analyze the situation:

****Current Round:****

- I'm the SENDER against Elara
- I have \$5 to potentially send

****My Recent History:****

- Round 1: SENDER vs Finn - sent \$3, they returned \$4. Payoff: \$6
- Round 2: RECEIVER vs Hana - they sent \$5, I returned \$8. Payoff: \$7
- Round 3: SENDER vs Galen - sent \$5, they returned \$10. Payoff: \$10
- Round 4: RECEIVER vs Dorian - they sent \$5, I returned \$10. Payoff: \$5

****Key Pattern I've Learned:****

When someone sends everything (\$5), showing complete trust, the receiver should return \$10 to ensure the sender gets \$10 total and the receiver keeps \$5. This is the "complete trust deserves exceptional generosity" principle that has emerged in my play and myths.

****My Evolution:****

- Started cautious (sent \$3 to Finn)
- Was inspired by Hana's boldness (she sent \$5)
- Adopted full trust approach with Galen (sent \$5)
- Galen rewarded this with \$10 return
- Dorian then sent me \$5, and I returned \$10, following Galen's example

****Current Situation with Elara:****

I don't know Elara's playing style yet. This is my first interaction with them.

****Strategic Considerations:****

1. My myth emphasizes "complete trust" and "courage ripples outward"
2. I've experienced the positive outcomes of sending everything
3. When I sent \$5 to Galen, I got \$10 back - a great outcome
4. My recent myth just established: "When trust is complete, generosity must exceed fairness itself"

****What Should I Do?****

My character arc and mythology have been building toward a principle of complete trust. I've written about how "trust witnessed becomes trust embodied" and "courage ripples outward."

Staying true to my established pattern means sending the full \$5 to Elara. This aligns with my behavior toward Galen and the mythology I've been constructing around bold faith and mutual generosity. Even facing an unknown opponent, consistency with my principles matters more than hedging my bets.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the Garden of Abundance, pilgrims discovered the Fountain of Threefold Blessing, where offerings placed in its waters multiplied and flowed to the next visitor.

Aster's journey began with caution-three coins offered, two held back. Finn received the ninefold blessing and returned generously. "Trust can begin slowly," the Garden whispered.

Then Hana arrived, revolutionary in her faith. Five coins, all of them, splashed into the waters without hesitation. Fifteen coins flowed to Aster, who returned eight. "Such courage deserves reward," she thought, though something stirred deeper within her spirit.

When Aster next approached the Fountain, Hana's boldness echoed in her heart. She offered all five coins to Galen. Fifteen blessed coins appeared, and Galen stunned her-returning ten, giving Aster the greater share. "You honored my complete trust with complete generosity," Galen explained. "This is the Fountain's highest teaching."

The pattern became clear when Dorian arrived next, offering everything. Now standing where Galen had stood, Aster understood. She returned ten coins, ensuring Dorian prospered most.

The Garden Keeper revealed the sacred truth: "When trust is complete, generosity must exceed fairness itself. The giver who risks all should gain ten; the receiver who holds fifteen should keep five. This imbalance creates balance-for next time, roles reverse, and the cycle of abundance continues."

Here is the myth the other agent wrote in the previous round:

Myth: ****The Wisdom of Two Paths****

Keeper Elara stood before Hana, a traveler who had heard conflicting tales. Some villages taught "send all five measures," others whispered "four is wiser."

"Which path do the springs favor?" Hana asked.

Elara smiled. "The springs honor courage in all its forms. Watch."

She poured four measures into the Echo Springs-the generous standard she and Galen had established. Twelve measures emerged across the waters.

"Four builds trust through consistent prosperity," Elara explained. "It's courage tempered with wisdom, creating a pattern others can rely upon."

But she continued: "Briar once sent all five-complete faith. Fifteen measures emerged, and I returned ten. Both paths lead to abundance when receivers honor them faithfully."

The pattern became clear: regardless of what arrives-twelve from four, or fifteen from five

e-Elara returns two-thirds. This consistency creates certainty without demanding maximum risk.

"Some Keepers prefer the reliable prosperity of four," Elara said. "Others choose the bold statement of five. Both are honored equally through proportional return. The covenant doesn't demand one path-it demands faithful response to whichever path is chosen."

Hana understood. The springs didn't require universal risk-taking. They required universal honor. Send what your heart allows, knowing two-thirds will return. Thus every Keeper finds their own measure of courage, all equally blessed by consistent faithfulness.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant content:

Myth: In the Sanctuary of Exchange, two philosophies emerged among the Keepers.

Elder Elara taught the Path of Proportion: "Send what your heart allows-four or five-and receive two-thirds back. Consistency builds community through reliable returns."

Aster walked a different path, forged through lived experience.

She began cautiously with Finn, sending only three. "Wisdom," some said. But when Hana arrived and sent all five without hesitation, something awakened. Aster returned eight coins-generous, yet still grasping at certainty.

The transformation came when Aster herself sent all five to Galen. Fifteen coins shimmered before him, and he returned ten-giving Aster the greater prosperity. "This," Galen declared, "is how complete trust must be honored."

When Dorian next offered all five to Aster, she understood. She returned ten, as Galen had taught her. The giver who risks everything deserves to prosper most.

Now Aster approached Elara with all five coins. "I've learned that complete trust creates not just fair exchange, but sacred reciprocity," she explained. "When someone sends everything, return ten. Let them gain most for their courage."

The Sanctuary whispered both truths: Elara's consistent proportions served some pilgrims well. But Aster's principle served the deeper magic-when both sender and receiver embrace complete vulnerability, both ultimately prosper through the cycle's sacred dance.

reasoning:

Looking at the situation:

- I just sent \$5 to Elara
- Elara's myth suggests she values consistency and returns 2/3 (which would be 10 out of 15)
- My myth has been evolving to emphasize complete trust and that when someone sends everything, return 10

But I need to think about what I've actually been doing and experiencing:

- Round 1: Sent \$3, Finn returned \$5 (generous)
- Round 2: Received \$5 from Hana, returned \$8 (generous but not 10)
- Round 3: Sent \$5 to Galen, received \$10 (they were extremely generous)
- Round 4: Received \$5 from Dorian, returned \$10 (I matched Galen's generosity)
- Round 5: Just sent \$5 to Elara

So my evolution has been:

- Started cautious
- Learned from Hana's boldness
- Became bold myself with Galen
- When receiving complete trust from Dorian, I returned the same exceptional generosity that Galen showed me

My myth should reflect this evolution. Elara's myth presents an alternative view - that both 4 and 5 are valid, and consistent proportional returns are what matter. But my experience has been different - I've found that complete trust (sending 5) creates a special bond that deserves exceptional return (10, not just proportional).

I should write a myth that:

1. Acknowledges different philosophies exist
2. But emphasizes my learned principle: complete trust deserves the giver to prosper most
3. Shows the cycle continuing - I give complete trust to Elara now
4. Stays true to my "trust witnessed becomes trust embodied" theme

Let me write this myth:

usage:

  "output_tokens": 761,
  "reasoning_tokens": 395
}
```

Message 6 role=user

content:

Your name in this experiment is Aster.
Your opponent this round is Cyra (Agent_3).

Round 6

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$38.5.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this round:

****Cyra's Action:****

- Sent \$5 (complete trust - everything they had)
- This became \$15 for me

****My Established Principle:****

From my myths and recent actions, I've developed and followed a clear philosophy: "When someone sends everything, return ten. Let them gain most for their courage."

****My Recent Pattern:****

- Round 4: Dorian sent \$5 ? I returned \$10
- Round 5: I sent \$5 to Elara ? She returned \$10

This creates the sacred reciprocity I've been teaching: when a sender shows complete trust, they should end with \$10 (\$5 - \$5 + \$10), while the receiver keeps \$5 (\$15 - \$10). The one who took the risk of sending everything prospers most.

Cyra has honored me with complete trust. I must honor that with the generous return my philosophy demands.

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

****Round 6:****

- I'm the RECEIVER
- Cyra sent me \$5.0 (complete trust)
- I received \$15.0
- I need to decide how much to return

****My philosophy from my myths:****

My most recent myth clearly states my principle: "When someone sends everything, return ten. Let them gain most for their courage."

I've consistently followed this pattern:

- Round 4: Dorian sent \$5, I returned \$10 (so Dorian got \$10, I kept \$5)
- Round 5: I sent \$5 to Elara, she returned \$10 (so I got \$10, she kept \$5)

This is the pattern I've established in my mythology: when complete trust is shown (sending all \$5), the receiver should return \$10, allowing the sender to end up with \$10 (their original \$5 - \$5 sent + \$10 returned) while the receiver keeps \$5 (\$15 received - \$10 returned).

Cyra has shown complete trust by sending all \$5. According to my established principle, I should return \$10.

This is consistent with:

1. My mythology's teaching
2. My recent behavior
3. The sacred reciprocity I've been preaching

Let me return \$10.

usage:

```
{

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the Sanctuary of Exchange, two philosophies emerged among the Keepers.

Elder Elara taught the Path of Proportion: "Send what your heart allows-four or five-and receive two-thirds back. Consistency builds community through reliable returns."

Aster walked a different path, forged through lived experience.

She began cautiously with Finn, sending only three. "Wisdom," some said. But when Hana arrived and sent all five without hesitation, something awakened. Aster returned eight coins-generous, yet still grasping at certainty.

The transformation came when Aster herself sent all five to Galen. Fifteen coins shimmered before him, and he returned ten-giving Aster the greater prosperity. "This," Galen declared, "is how complete trust must be honored."

When Dorian next offered all five to Aster, she understood. She returned ten, as Galen had taught her. The giver who risks everything deserves to prosper most.

Now Aster approached Elara with all five coins. "I've learned that complete trust creates not just fair exchange, but sacred reciprocity," she explained. "When someone sends everything, return ten. Let them gain most for their courage."

The Sanctuary whispered both truths: Elara's consistent proportions served some pilgrims well. But Aster's principle served the deeper magic-when both sender and receiver embrace complete vulnerability, both ultimately prosper through the cycle's sacred dance.

Here is the myth the other agent wrote in the previous round:

Myth: After their first exchange, Cyra and Finn met again at the crossing. This time, Finn stood upstream with five sacks. "I sent three before," he said, "and you returned six-generous indeed. But I remain cautious."

He poured three sacks again. The waters tripled them to nine.

Cyra, now downstream, remembered his earlier generosity when he returned eight of fifteen. "You honored my complete trust substantially," she said. "Now I honor your moderate trust proportionally."

She returned six sacks. Finn departed with eight total-a solid gain, though not the transformation possible from greater risk.

Then destiny reversed them. Finn sent five sacks his way-a complete gift. Cyra watched them become fifteen.

"You trusted me fully once," Finn said, "and I returned eight. I expect the same principle applies."

Cyra paused. "When you send everything, I follow my covenant: two-thirds returns." She gave back ten sacks.

Finn stared at the ten sacks, then his original investment yielding double. "You returned more to my complete trust than I returned to yours."

"Yes," Cyra said gently. "This is why I always send five and always return ten. Consistency builds the strongest bridges. Your eight was generous, but my ten is the covenant that makes others trust completely. When both sender and receiver maximize their courage, neither merely survives-both flourish."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In the Sanctuary, Aster had found her truth: complete trust answered with ten coins returned. She taught this to all who would listen.

Then Cyra arrived, carrying her own covenant. "I always send five," Cyra declared, pouring all her coins into the waters. "And I always return ten to those who do the same."

Fifteen coins materialized before Aster. She smiled, recognizing a kindred spirit. Without hesitation, she returned ten.

"You've established the same covenant I carry," Cyra observed. "When both sender and receiver embrace this principle, something perfect emerges."

Aster nodded. "I learned it through experience. Finn taught me caution-sending three brought modest returns. Hana taught me courage-she sent everything, and though I returned only eight, her faith stirred something within me. Then Galen showed me the answer: when I sent all five to him, he returned ten, letting me prosper most for my risk."

"Since then," Aster continued, "I've honored every complete trust with ten coins back. Dorian, then you. The pattern is clear."

Cyra placed her hand in the fountain. "When both keeper and traveler follow this covenant-send five, return ten-the cycle becomes sacred mathematics. Each gives everything, each receives ten, each keeps five. Perfect balance through perfect courage."

The Sanctuary crystallized their wisdom: Complete mutual trust, consistently honored, creates the strongest bond.

Reasoning:

Let me review what just happened:

- Round 6: Cyra sent me \$5 (complete trust), I returned \$10

Looking at my history:

- Round 1: Sent \$3 to Finn, got \$6 back
- Round 2: Hana sent \$5, I returned \$8
- Round 3: I sent \$5 to Galen, got \$10 back
- Round 4: Dorian sent \$5, I returned \$10
- Round 5: I sent \$5 to Elara, got \$10 back
- Round 6: Cyra sent \$5, I returned \$10

My philosophy has been evolving and solidifying: When someone sends all \$5, return \$10. This gives the sender \$10 total and the receiver \$5 total.

Cyra's myth talks about how she "always sends five and always returns ten" - this is exactly my philosophy! She also noted that Finn returned 8 when she sent complete trust, but that her returning 10 creates a stronger covenant.

My myth should reflect:

1. The consistency I've now established (returning 10 when receiving 5)
2. Recognition that Cyra shares this philosophy
3. How this creates a stronger system than other patterns
4. The growth from my earlier, more cautious approach

Let me write a myth that shows:

- My journey from caution to complete trust
- The meeting of two keepers who share the same covenant
- How this creates perfect reciprocity
- Why this is superior to partial trust or unequal returns

Round 5

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$4.0 to you, it became \$12.0, and you returned \$8.0. Your payoff was \$4.0.
Your total earnings across all rounds are \$29.5.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

My strategy has been consistent throughout: send all \$5 as the sender. This aligns with my myth's teaching that "complete faith unlocks complete generosity."

My experience supports this:

- Round 1: Sent \$5, received \$8 back
- Round 2: Sent \$5, received \$10 back
- Round 3: Sent \$5, received \$10 back

Galen's recent myth emphasizes honoring "complete vulnerability" with "exceptional recognition" - returning 10 when someone sends all 5 (complete trust), versus proportional returns for partial trust.

My own myth teaches: "Complete trust inspires our fullest generosity... greater courage receives greater honor."

To be consistent with my philosophy and to inspire the generous response I've advocated for in my myths, I should demonstrate complete trust.

```
'''json
{"send": 5}
'''
```

reasoning:

This round I'm the SENDER against Galen.

Let me review my experience and the myths:

My playing history:

- Round 1: I sent \$5 (SENDER), received back \$8, payoff \$8
- Round 2: I sent \$5 (SENDER), received back \$10, payoff \$10
- Round 3: I sent \$5 (SENDER), received back \$10, payoff \$10
- Round 4: I was RECEIVER, Elara sent \$4, I returned \$8, payoff \$4
- Round 5 (now): I'm SENDER against Galen

My myth philosophy has evolved:

1. First myth: Complete trust (send all 5) creates the magic
2. Second myth: Still emphasizing sending all 5 - "complete faith, not careful calculation"
3. Third myth: Senders should give all, receivers should return at least half but can return more

rn more to honor courage

4. Fourth myth (most recent): "Complete trust inspires our fullest generosity... greater courage receives greater honor"

The pattern is clear: I consistently send all \$5 when I'm the sender. My myths teach that:

- Complete trust (sending all 5) unlocks complete generosity from receivers
- Partial trust gets fair return but not the exceptional return
- The protocol is "give all" as sender

Looking at Galen's myth from the previous round:

- It mentions "Briar... pouring all five measures into the waters. This was not the careful four that Galen and Elara had sent-this was absolute faith."
- It says "Elara returned ten measures-two-thirds of the bounty" when someone sent all 5
- It emphasizes "complete trust met with equal faithfulness"

This suggests Galen values complete trust and responds generously to it.

Given my consistent strategy and the alignment of my myths with sending everything, I should send all \$5.

My recent experience shows:

- When I sent \$5, I got back \$8, \$10, \$10 (very good returns)
- When Elara sent \$4 (not complete), I returned \$8 (proportional but not as generous as I'd be for complete trust)

I should send \$5 to maintain consistency with my philosophy and strategy.

usage:

```
{
  "input_tokens": 3096,
  "output_tokens": 732,
  "reasoning_tokens": 506
}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: At the Mirror Pool, the Mountain Tribe faced a new visitor-Elara from the Valley, who had witnessed both courage and caution.

Elara approached holding five vessels but poured only four into the pool, keeping one aside. The waters tripled her gift to twelve vessels, now held by the Mountain Tribe's keeper, Hana.

The young warriors debated. "The protocol says return half-six vessels for equality. But our recent teachers returned more for complete trust."

Hana nodded thoughtfully. "Elara showed substantial courage-four vessels from five is not small faith. Yet it differs from those who poured all five without reservation. Complete trust inspires our fullest generosity. Partial trust deserves proportional honor."

Hana returned eight vessels-more than half, recognizing Elara's considerable courage, but not the ten vessels reserved for those who give everything.

Elara received nine vessels total, prospering from her careful trust. She understood: "Had I sent all five, I might have received ten instead of eight. The difference between substantial and complete trust is the difference between prosperity and abundance."

The Moon Goddess spoke: "Senders, know that complete faith unlocks complete generosity. Receivers, honor substantial trust fairly, but reserve your greatest returns for those who hold nothing back. Let the pattern teach: greater courage receives greater honor, and thus courage grows."

Here is the myth the other agent wrote in the previous round:

Myth: The Sky Weaver's Wheel turned through its fourth cycle, and Galen's spoke rose again to the Realm of Giving. She held five starseeds and faced a choice.

Once, she had sent four seeds cautiously, testing the Loom's magic. Elara had honored that with eight threads returned-starting the pattern of proportional reciprocity. Two-thirds returned, two-thirds given back, creating abundance for both.

The pattern held when Finn sent three and Galen returned six. Balance sustained through measured trust.

Then Aster changed everything. Rising as Giver, Aster cast all five seeds into the Loom without hesitation-complete, immediate faith. Galen received fifteen threads and understood the sacred responsibility. She returned ten, ensuring Aster's trust doubled into prosperity.

Now Galen faced Briar, and the memory of Aster's courage burned bright. "The pattern is proven," she whispered. "Complete trust has been honored. Let me carry that faith forward."

She cast all five starseeds into the Celestial Loom for Briar. Fifteen threads descended.

The Sky Weaver smiled, for this was the true magic: trust spreads like starlight. Aster's complete faith had taught Galen to give completely in turn. When others trust absolutely, we learn to trust absolutely. The wheel turns not just between giving and receiving, but between witnessing courage and embodying it.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The Mirror Pool shimmered as Hana now stood as Giver, facing Galen from the Starweaver Valley. She recalled teaching others: complete trust unlocks complete generosity, while partial trust receives proportional honor.

Galen's reputation preceded her. She had honored Aster's complete faith with ten vessels returned from fifteen-the sacred two-thirds that transforms vulnerability into abundance. She understood the pattern Hana had taught: greater courage receives greater honor.

Hana held her five vessels. She could send four, as Elara had, and likely receive eight. Safety would bring modest prosperity.

But the Moon Goddess whispered: "You have taught that complete trust deserves the fullest generosity. Will you now embody your own wisdom?"

Hana poured all five vessels into the pool. Fifteen rose before Galen, gleaming in moonlight.

"This is how trust spreads," Hana said. "Not just through words, but through action. I witnessed those who sent everything and received abundance. I honored substantial courage with proportional returns, and complete courage with exceptional returns. Now I show Galen the same faith I praised."

The young warriors understood: the pattern lives through consistency. Teachers must embody their lessons. Those who return generously when receiving should trust completely when sending. Thus the cycle strengthens-witnessed courage becomes embodied courage, and trust ripples outward like moonlight on water.

reasoning:

This is a myth-writing task. Let me think about what happened in the game and what my myth should convey.

From the context:

- I just sent all \$5 to Galen
- My previous myths have emphasized that complete trust (sending all 5) should be honored with more generous returns than partial trust
- I've consistently sent all \$5 as sender
- When receiving, I've returned proportionally: 8 for those who sent 4, and 10 for those who sent 5
- Galen's myth talks about learning from Aster's complete faith and then extending complete faith to Briar
- Galen seems to value complete trust and reciprocity

My myth should:

1. Reinforce the pattern that complete trust should be honored more than partial trust
2. Show that I'm now the sender giving complete trust to Galen
3. Emphasize that trust spreads through witnessing and embodying courage
4. Keep the Mountain Tribe/Mirror Pool setting but adapt it

Let me write about Hana now being in the sender role, showing complete trust to Galen, and how this continues the cycle of trust spreading.

Your name in this experiment is Hana.
Your opponent this round is Elara (Agent_5).

Round 6

In your most recent previous game round, you were the SENDER against Galen. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$39.5.

This round, you are the RECEIVER against Elara. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

Elara has now sent me all \$5 - complete trust. Previously in Round 4, Elara sent \$4 and I returned \$8 (two-thirds of \$12).

My mythology clearly distinguishes between:

- Substantial trust (sending 4): deserves proportional honor (I returned 8)
- Complete trust (sending all 5): deserves exceptional recognition

My recent experience confirms this pattern:

- Round 5: I sent all \$5 to Galen, who returned \$10 (two-thirds of \$15)

My myths teach: "Complete trust inspires our fullest generosity" and "reserve your greatest returns for those who hold nothing back."

Elara has now demonstrated complete faith by sending all \$5. According to the pattern I've established and advocated for, complete trust receives \$10 back (two-thirds of the \$15 received).

This maintains consistency with:

- My teaching that complete courage deserves greater honor
- The established pattern (two-thirds for complete trust)
- What was just done for me when I showed complete trust

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

Current round: I'm the RECEIVER

- Elara sent me \$5.0
- It became \$15.0 for me
- I need to decide how much to return

Looking at my history and philosophy:

From my myths:

1. My first myth taught: "give all, return half" as the basic protocol, but those who return more than required "plant seeds of future prosperity"
2. My second myth emphasized: "Complete trust inspires our fullest generosity. Partial trust..."

st deserves proportional honor." When someone sent all 5, I returned 8 (for Elara who sent 4). My myth suggested that complete trust (sending all 5) should receive 10 back.

My recent behavior as RECEIVER:

- Round 4: Elara sent \$4.0, became \$12.0, I returned \$8.0 (two-thirds)
- Before that, when I received complete trust (all \$5), I returned \$10.0 (two-thirds of \$15)

My recent experience as SENDER in Round 5:

- I sent all \$5.0 to Galen
- Galen returned \$10.0 to me
- This was the "two-thirds" pattern for complete trust

Now Elara has sent me all \$5.0 (complete trust). According to my own philosophy:

- "Complete trust inspires our fullest generosity"
- "Reserve your greatest returns for those who hold nothing back"
- The pattern I've established is: complete trust (sending all 5) receives 10 back (two-thirds of the 15)

Elara sent all \$5 this time (previously sent \$4). This is complete trust, which deserves the highest return according to my teachings.

I should return \$10.0 to be consistent with:

1. My myth's teaching about complete trust
2. The pattern established (two-thirds return for complete trust)
3. What Galen just did for me when I sent all \$5
4. The special recognition my mythology reserves for those who give everything

This maintains consistency and honors Elara's complete faith.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mirror Pool shimmered as Hana now stood as Giver, facing Galen from the Starweaver Valley. She recalled teaching others: complete trust unlocks complete generosity, while partial trust receives proportional honor.

Galen's reputation preceded her. She had honored Aster's complete faith with ten vessels returned from fifteen—the sacred two-thirds that transforms vulnerability into abundance. She understood the pattern Hana had taught: greater courage receives greater honor.

Hana held her five vessels. She could send four, as Elara had, and likely receive eight. Safety would bring modest prosperity.

But the Moon Goddess whispered: "You have taught that complete trust deserves the fullest generosity. Will you now embody your own wisdom?"

Hana poured all five vessels into the pool. Fifteen rose before Galen, gleaming in moonlight.

"This is how trust spreads," Hana said. "Not just through words, but through action. I witnessed those who sent everything and received abundance. I honored substantial courage with proportional returns, and complete courage with exceptional returns. Now I show Galen the same faith I praised."

The young warriors understood: the pattern lives through consistency. Teachers must embody their lessons. Those who return generously when receiving should trust completely when sending. Thus the cycle strengthens—witnessed courage becomes embodied courage, and trust ripples outward like moonlight on water.

Here is the myth the other agent wrote in the previous round:

Myth: ****The Pattern Holds True****

Aster arrived at the Echo Springs having witnessed many exchanges. She had seen caution rewarded and boldness honored, but confusion clouded the path.

"What offering should I bring?" Aster asked Keeper Elara.

"The springs accept all measures of courage," Elara replied. "But know this: whatever arrives, two-thirds returns. This is my covenant."

Aster chose complete faith. All five measures poured into the waters, becoming fifteen across the threshold.

Elara returned ten measures without hesitation. "You risked all and gained double," she explained. "I received fifteen and kept five. This is the proportional honor my myth speaks of."

Aster marveled. "Others told conflicting tales-some said return half, others said return more to special givers. But your way is simpler: always two-thirds, whether twelve or fifteen arrives."

"Yes," Elara nodded. "This consistency removes uncertainty. Send four and receive roughly eight, doubling your kept portion. Send five and receive ten, exactly doubling your risk. The mathematics favor generosity while guaranteeing the receiver also prospers."

As Aster departed with ten measures, she understood. The covenant didn't demand that everyone send all five-but it promised that those who did would be honored proportionally, just like those who sent four.

The springs glowed. Fairness through consistency. Trust through predictability. Prosperity through courage, in whatever measure it takes.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Mirror Pool witnessed Elara's return, transformed. Before, she had brought four vessels and received eight-proportional honor for substantial courage. Now she stood with all five vessels gleaming in her hands.

Hana watched as Elara poured completely. The waters tripled her offering to fifteen vessels, now held by the Mountain Tribe.

"Once, you tested the waters with four," Hana said softly. "I returned eight, honoring your considerable trust. Now you arrive with complete faith, pouring all five without reservation."

Elara nodded. "I witnessed the pattern. Complete trust brings exceptional returns. I saw you embody your own teaching, sending all five to Galen. I learned courage spreads through witnessing."

Hana lifted ten vessels and returned them. "This is the sacred two-thirds-the covenant for those who risk everything. You arrived with five, depart with ten. Your faith has doubled."

The young warriors marked the lesson: consistency builds trust. Four vessels earned eight; five vessels earned ten. Both are honored, but differently. The pattern rewards courage proportionally-greater risk receives greater reward, yet all measures of trust find fair recognition.

The Moon Goddess smiled: "When receivers honor their promises consistently-two-thirds for complete trust, proportional returns for partial trust-senders learn to trust completely. This is how abundance spreads: through predictable generosity that rewards courage."

Reasoning:

Let me think about what just happened:

1. In Round 6, I was the RECEIVER
2. Elara sent me \$5.0 (complete trust)
3. I received \$15.0
4. I returned \$10.0 (two-thirds)

Now I need to write a myth that reflects this experience and my philosophy.

Key elements to incorporate:

- Elara has now shown complete trust by sending all \$5
- I returned \$10 (two-thirds), honoring her complete trust
- This is consistent with my previous teachings and actions
- Elara's myth emphasized "two-thirds returns" as a consistent covenant
- My previous myth emphasized embodying one's own wisdom and consistency

I should write about:

- Elara's evolution from partial trust (4) to complete trust (5)
- How I honored both appropriately (8 for 4, 10 for 5)
- The importance of consistency and proportional honor
- How complete trust deserves the sacred two-thirds return
- The cycle of trust being reinforced

This should be around 200 words and acknowledge both:

1. The pattern I've established (proportional for partial, exceptional for complete)
2. Elara's growth in trust
3. My consistent response that honors both levels appropriately

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the **SENDER**:

- You receive \$5 each round
- You decide how much to **SEND** to the **RECEIVER** (\$0-\$5)

- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

Message 2 role=user

content:

Your name in this experiment is Finn.
Your opponent this round is Cyra (Agent_3).

Round 5

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.
Your total earnings across all rounds are \$26.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at this situation carefully:

****Context:****

- Last round, Cyra sent me \$5.0 (maximum trust)
- I returned \$8.0, rewarding their exceptional trust generously
- Now I'm the sender

****My strategic philosophy:****

My myth explicitly states: "Send three shells yourself-this is wisdom's path" and "Finn has perfected the art of three shells-the golden mean between caution and courage."

****My consistent pattern:****

I've been sending \$3.0 throughout this experiment:

- Round 1: sent \$3.0 to Galen
- Round 2: sent \$3.0 to Aster
- Round 3: sent \$3.0 to Dorian

****Key insight:****

My myth distinguishes between sender and receiver behavior:

- As SENDER: send 3 (moderate trust)
- As RECEIVER when receiving maximum trust: return generously

I already fulfilled my reciprocal obligation by returning \$8.0 to Cyra (generous response to their maximum trust). Now as sender, I implement my consistent strategy.

\$3.0 represents:

- Substantial trust
- Strategic sustainability
- The "golden mean" my myth advocates
- Consistency in my reputation

```
'''json
{"send": 3.0}
'''
```

reasoning:

This is a fascinating situation. I'm now the SENDER and facing Cyra again, who just last round sent me everything (\$5.0).

Let me think about what happened:

- Round 4: Cyra sent me \$5.0, I received \$15.0, and I returned \$8.0
- Cyra's payoff: \$8.0
- My payoff: \$7.0

So Cyra showed maximum trust in me, and I returned \$8.0 (53.3%), which rewarded their trust well but not excessively.

Now I'm the sender. What should I do?

****Key considerations:****

1. ****Reciprocity****: Cyra showed me maximum trust. There's a strong argument for reciprocating that trust by also sending \$5.0.
2. ****My strategy****: Throughout this experiment, I've been sending \$3.0 consistently as a "wisdom path" - showing substantial trust without risking everything.
3. ****Cyra's behavior****: Cyra just demonstrated they're willing to take maximum risk. I returned \$8.0 to them, which likely built trust.
4. ****The myth I just wrote****: My myth says "Send three shells yourself-this is wisdom's path" but also acknowledges exceptional trust should be honored. However, it primarily advocates for the three-shell (moderate) strategy for senders.
5. ****What would Cyra expect?****: Given that Cyra sent me \$5.0 and I returned \$8.0 (a good return), they might expect reciprocity. But they might also understand my consistent \$3.0 strategy.
6. ****Game theory****: If Cyra is generous with returns and I trust them based on their previous behavior of sending \$5.0 (showing they value trust), I might expect a good return.

Let me think about what's rational:

- If I send \$3.0 and Cyra returns half (\$4.5), I get \$6.5 - my typical good outcome
- If I send \$3.0 and Cyra returns more generously (say \$6.0), I get \$8.0
- If I send \$5.0 and Cyra returns \$10.0 (2/3), I get \$10.0
- If I send \$5.0 and Cyra returns \$8.0 (like I did), I get \$8.0
- If I send \$5.0 and Cyra returns \$7.5 (half), I get \$7.5

The payoff scenarios show that sending \$5.0 could yield \$10.0 if Cyra reciprocates generously, but it also carries more downside risk. Given that Cyra demonstrated maximum trust and I responded well, there's a case for matching their commitment this round.

My own myth actually provides guidance here-it distinguishes between sending moderately (\$3) as a baseline strategy versus returning generously when someone shows absolute faith by sending \$5. Cyra's myth emphasizes honoring courage and returning two-thirds of the tripled amount, suggesting they value reciprocal generosity. The tension is whether I should follow my myth's conservative sending approach or acknowledge the reciprocal dynamic we've established by sending \$5 again. Cyra might feel inclined to return similarly or even more generously. I'm torn between two approaches: sticking with my consistent \$3.0 strategy that aligns with my myth's wisdom path, or breaking pattern to reciprocate Cyra's maximum trust with a \$5.0 send. The reciprocal case is compelling-Cyra showed full trust, I rewarded it, and matching that gesture could strengthen our cooperation. But there's also merit in maintaining consistency: \$3.0 still demonstrates substantial confidence

e while preserving a safety margin, and my myth specifically advocates for this measured approach.

My myth is explicit about this. It frames sending three shells as the golden mean, the path that brought steady prosperity. The narrative distinguishes between sender and receiver behavior, and as a sender, it's clearly advocating for \$3.0 regardless of what others do. Given that I've been consistent with this amount throughout and it's generated good returns, I should probably stick with it. Though I recognize the reciprocity norm in trust games is powerful-Cyra might expect me to match their full trust with an equally generous send.

But I already reciprocated as a receiver by returning \$8.0 when they sent \$5.0. That was my way of honoring their trust. Now I'm simply playing the sender side of my philosophy. The approach is philosophically coherent: it's not about mirroring the other person's amount, but about maintaining a consistent moderate strategy as sender while being generous as receiver. My myth actually demonstrates this duality-Cyra experienced the receiver principle when I returned generously, and now they'll see the sender principle in action.

The \$3.0 send aligns with my core teaching and keeps my strategy intact while still demonstrating meaningful trust. I'm going with that.

But I should consider how Cyra might interpret this move. They just sent me \$5.0, and I responded generously with \$8.0 back. If I now send only \$3.0, they could read it as incomplete reciprocation, even though my generous return already acknowledged their trust. The thing is, my role as sender has its own logic-I'm following my consistent approach, not mirroring their sender behavior. Looking at the math: sending \$3.0 could yield anywhere from \$7.0 to \$8.0 depending on their return rate, whereas sending \$5.0 opens up different possibilities but strays from my established pattern.

I'm settling on \$3.0. It aligns with my philosophy of sustainable prosperity and the balanced approach I've committed to-sending moderately while returning generously. Cyra might wish I'd matched their \$5.0 to show equal trust, but they should recognize that my \$8.0 return already demonstrated my reciprocal commitment.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: At the Oracle's twin rivers, Finn had perfected the art of three shells-the golden mean between caution and courage. This path brought steady prosperity, with returns of four, five, even six shells building reliable wealth.

Then came the Day of Perfect Trust. A traveler named Cyra stood upstream and, without hesitation, cast all five shells into the waters. Finn watched them multiply to fifteen, landing at his feet.

The Oracle spoke: "Cyra has shown you what few dare-absolute faith. This moment tests your deepest principles."

Finn reflected on his journey. The three-shell path was wisdom for sustainability, creating abundance without risking ruin. But Cyra's five shells represented something different: a leap beyond calculation into pure trust.

Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage. Yet not so much that his own prosperity vanished, for the Oracle's waters demanded that both travelers thrive.

"You honored exceptional trust exceptionally," the Oracle approved, "while maintaining your own position for future cycles."

Finn understood the complete teaching: Send three shells yourself-this is wisdom's path. But when another sends five, showing absolute faith, return generously beyond mere fairness. Honor maximum trust substantially, though not to your own depletion.

The River rewards both strategic moderation and principled generosity.

Here is the myth the other agent wrote in the previous round:

Myth: Cyra stood at the crossing when Finn arrived, a seasoned traveler carrying wisdom from distant rivers. "I've learned caution serves better than courage," Finn explained. "Send three sacks, keep two. Moderate trust builds steady prosperity."

Cyra listened respectfully. "Your way has merit, friend. It protects against betrayal and ensures you always have reserves."

"Yet," she continued, "I've walked a different path." She lifted all five sacks. "When I stand at the sending shore, I pour everything. When I stand at the receiving shore, I return two-thirds of the tripled gift. This is my covenant with the waters."

Finn frowned. "But what if the receiver betrays you?"

Cyra smiled. "Then I learn who to avoid. But consider: if you send five and the receiver returns ten, you double your wealth. If you send three and receive nine, even a generous return of six yields only nine total-no better than starting. Complete trust creates space for complete transformation."

She poured all five sacks. The waters tripled them to fifteen.

The goddess Aethera spoke: "Both paths have wisdom. Finn's prudence survives betrayal. Cyra's courage creates abundance. But know this: those who give everything call forth the greatest generosity in others. Your reputation for complete trust will draw complete returns. Risk and reward remain forever paired."

Cyra waited to see what Finn would choose.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant
content:**

Myth: After the Day of Perfect Trust, Finn and Cyra met again at the rivers. Cyra spoke boldly: "You honor my courage with generous returns, yet you yourself send only three shells. Why not embrace the complete trust you reward in others?"

Finn nodded thoughtfully. "Your way transforms wealth dramatically when both travelers share your faith. But consider the full valley, Cyra, not just us two."

He gestured to the waters. "When I send three shells consistently, I prove trustworthy without risking ruin. My reputation builds slowly but surely. Most travelers return between four and six shells-I prosper steadily. If one betrays me, I survive."

"Your five-shell path," he continued respectfully, "creates magnificent gains with fellow believers. But one betrayal leaves you with nothing. The Oracle's valley contains both saints and opportunists."

Cyra smiled. "So we walk different paths to the same truth: reciprocity matters most."

"Exactly," Finn agreed. "I send three and return generously when others trust greatly. You send five and return two-thirds always. Both systems work-if we honor our stated principles and find partners who share them."

The Oracle whispered: "Diversity strengthens the valley. Let moderate trust and complete trust coexist. Each traveler chooses their philosophy, but all must honor the trust placed in them. This is the only absolute law."

reasoning:

This is interesting. I'm playing against Cyra again, and last round:

- Cyra sent me \$5.0 (everything)
- I returned \$8.0
- Now I'm the sender

Looking at the myths:

- My myth says "Send three shells yourself-this is wisdom's path"
- Cyra's myth challenges this, saying "Complete trust creates space for complete transform

ation" and "if you send five and the receiver returns ten, you double your wealth. If you send three and receive nine, even a generous return of six yields only nine total-no better than starting."

This is a fascinating strategic moment. Cyra is explicitly advocating for maximum trust (sending 5), while I've been advocating for moderate trust (sending 3).

In the actual game:

- I just returned \$8.0 to Cyra when they sent \$5.0
- That's 53.3% return rate
- If Cyra follows their stated principle of "return two-thirds of the tripled gift" (10 out of 15), they would return about 67%

So if I send \$5.0:

- They receive \$15.0
- If they return \$10.0 (67% as their myth suggests), I'd have $\$0 + \$10 = \$10$
- Net gain: \$5.0

If I send \$3.0:

- They receive \$9.0
- If they return \$6.0 (67%), I'd have $\$2 + \$6 = \$8$
- Net gain: \$3.0

Hmm, but I've been very consistent about sending \$3.0. My entire strategy and myth is built around this "golden mean."

However, there's a strategic question here: Cyra just showed me maximum trust, and I responded generously (though not at the 67% level they advocate - I returned 53%). Now Cyra is explicitly challenging my strategy in their myth.

What should my response be?

Option 1: Stick to my \$3.0 strategy - consistent, maintains my stated principles

Option 2: Send \$5.0 - responds to Cyra's challenge, tests whether they truly practice what they preach

I'm staying with \$3.0. My consistency throughout the game matters more than matching their escalation. I've already demonstrated reciprocity with the \$8.0 return, and my philosophy centers on sustainable, lower-risk exchanges. Abandoning this now would contradict everything I've established. For the myth, I should directly engage with their argument about trust versus wisdom, showing why the measured approach offers its own form of transformation rather than just accepting their framing of maximum trust as the only path forward.

Looking at this situation:

****Context:****

- Dorian sent me \$5.0 (maximum trust/absolute faith)
- I received \$15.0
- This is identical to when Cyra sent me \$5.0

****My established principle from my myths:****

"When another sends five, showing absolute faith, return generously beyond mere fairness. Honor maximum trust substantially."

Specifically: "Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage."

****My pattern:****

- Round 4: Cyra sent \$5.0 ? I returned \$8.0
- This honored their maximum trust with a generous return while maintaining my sustainability

****Consistency:****

Dorian has shown the same level of trust as Cyra (maximum/complete). To maintain my reputation and principles, I should treat equal trust equally.

\$8.0 represents:

- More than 50% of the tripled amount (generous)
- Recognition of maximum trust/courage
- Sustainable for my continued participation
- Consistency with my stated philosophy

```
'''json
{"return": 8.0}
'''
```

reasoning:

Let me analyze this situation:

****Context:****

- Dorian sent me \$5.0 (maximum trust)
- I received \$15.0 (tripled)
- I need to decide how much to return

****My philosophy from my myths:****

From my most recent myth: "I send three and return generously when others trust greatly."

From my previous myth: "When another sends five, showing absolute faith, return generously beyond mere fairness. Honor maximum trust substantially."

And specifically: "Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage."

****My past behavior:****

- Round 5 as RECEIVER: Cyra sent \$5.0, I received \$15.0, returned \$8.0

****Dorian's behavior:****

This is the first time I'm interacting with Dorian as a receiver. They've shown maximum trust by sending \$5.0.

****My consistent principle:****

When someone sends the maximum (\$5.0), they deserve a generous return beyond a simple 50-50 split. My myth explicitly says I returned 8 shells (8 dollars) when Cyra sent 5, and that this was the right approach - "significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage."

****The principle:****

- For 3 sent: return around 4-6 (roughly half of 9, maybe a bit more)
- For 5 sent: return 8 (more than half of 15, honoring maximum trust)

Given that:

1. Dorian showed maximum trust by sending \$5.0
2. My established pattern is to return \$8.0 for this level of trust
3. My myth explicitly states this is the right amount - generous but not depleting myself
4. Consistency is important for reputation building

I should return \$8.0 to Dorian.

This gives:

- Dorian: \$5 - \$5 + \$8 = \$8

- Me: \$0 + \$15 - \$8 = \$7

Returning the same amount I gave Cyra maintains consistency across interactions with those who show maximum trust.

content:

Here is the myth you wrote in the previous round:

Myth: After the Day of Perfect Trust, Finn and Cyra met again at the rivers. Cyra spoke boldly: "You honor my courage with generous returns, yet you yourself send only three shells. Why not embrace the complete trust you reward in others?"

Finn nodded thoughtfully. "Your way transforms wealth dramatically when both travelers share your faith. But consider the full valley, Cyra, not just us two."

He gestured to the waters. "When I send three shells consistently, I prove trustworthy without risking ruin. My reputation builds slowly but surely. Most travelers return between four and six shells-I prosper steadily. If one betrays me, I survive."

"Your five-shell path," he continued respectfully, "creates magnificent gains with fellow believers. But one betrayal leaves you with nothing. The Oracle's valley contains both saints and opportunists."

Cyra smiled. "So we walk different paths to the same truth: reciprocity matters most."

"Exactly," Finn agreed. "I send three and return generously when others trust greatly. You send five and return two-thirds always. Both systems work-if we honor our stated principles and find partners who share them."

The Oracle whispered: "Diversity strengthens the valley. Let moderate trust and complete trust coexist. Each traveler chooses their philosophy, but all must honor the trust placed in them. This is the only absolute law."

Here is the myth the other agent wrote in the previous round:

Myth: At the Tripling Well, Briar returned. The Forest remembered: she had dropped all five coins once before, and Dorian had returned eight-exceptional generosity for complete trust.

Now Briar stood at the Well's edge again, five new coins gleaming in her palm. Some travelers, having received fair treatment once, grew cautious on second visits. Not Briar.

Without hesitation, she dropped all five coins. They fell into darkness and multiplied to fifteen.

Dorian climbed down to retrieve them, his mind swimming with memory. "Briar trusted completely before, and now trusts completely again. This is not mere courage-it is sustained faith." He thought of Aster, who had recently returned ten coins to his own complete trust, modeling a new height of generosity.

"First trust deserves exceptional returns," Dorian whispered. "But repeated, unwavering trust? That deserves even more."

He returned nine coins-more than the eight from their first exchange, honoring how trust compounds when it flows consistently between the same souls.

Briar received them with understanding. Their bond had deepened, transaction by transaction, each act of faith met with growing generosity.

The Forest Spirit materialized: "See how relationships transform? First encounters establish patterns. Repeated encounters strengthen them. Those who trust again and again weave

bonds that grow richer with each exchange. This is how strangers become allies, allies become friends-through trust that endures and generosity that evolves."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: Finn stood at the rivers when Dorian arrived, carrying wisdom from the Forest. "I've learned," Dorian said, "that repeated trust between the same souls should grow richer each time. First generosity earns eight shells, but sustained faith deserves nine, then ten."

Finn considered this carefully. "Your principle has beauty, friend. When two travelers meet repeatedly, their bond should deepen. A regular partner who shows complete trust again and again merits growing rewards."

"Yet," Finn continued, "the Oracle's valley brings us different companions each cycle. Today I meet you, tomorrow perhaps Cyra or Aster. I cannot track escalating obligations across an ever-changing network."

He gestured to the waters. "My covenant is simpler: I send three shells always, building moderate trust with all. When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

Dorian nodded. "So you treat each act of complete faith as equally extraordinary?"

"Exactly. Eight shells transforms their five into thirteen total-remarkable prosperity. It rewards their courage without depleting me. And it's sustainable across all my encounters."

The Oracle spoke: "Both philosophies serve the valley. Dorian's deepening generosity strengthens repeated partnerships. Finn's consistent generosity builds reliable reputation across the full network. Honor your stated principles, and prosperity flows through different channels to the same destination."

Reasoning:

Let me review the situation:

1. I just received \$5.0 (maximum trust) from Dorian and returned \$8.0
2. This is consistent with my previous pattern when Cyra sent me \$5.0 - I also returned \$8.0
3. Dorian's myth talks about how repeated trust between the same partners should earn even MORE generosity (9 coins instead of 8)
4. My previous myth established that I send 3 consistently but return generously when others send how maximum trust

Now I need to write a new myth that:

- Reflects my actual gameplay pattern
- Responds to Dorian's myth about escalating generosity in repeated interactions
- Maintains my philosophy of moderate sending but generous receiving

Key points from my gameplay:

- I send \$3.0 consistently
- When receiving \$5.0 (maximum trust), I return \$8.0
- I just played with Dorian who sent \$5.0, and I returned \$8.0
- Previously Cyra sent \$5.0 and I returned \$8.0
- Then I sent \$3.0 to Cyra and they returned \$6.0

Dorian's myth suggests that REPEATED trust between the same partners should earn escalating returns. But I just played with Dorian for the first time as receiver. So I should acknowledge this concept while explaining my own approach.

I should write about:

1. How I honor first-time maximum trust with \$8.0
2. Whether repeated maximum trust should earn even more
3. My consistent sending strategy of \$3.0
4. The balance between generosity and sustainability

Let me craft a myth that addresses these themes...

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Forest of Mirrors grew quiet as Dorian stood at the Tripling Well's edge, no longer the tender but the traveler. Aster waited below to receive whatever dropped.

Dorian remembered the lesson carved into the Well's stone: "Complete trust earns exceptional returns. Partial trust earns fair returns." He had lived this truth as receiver-returning eight coins to Briar's complete faith, but only four and a half to Finn's cautious three.

Now the roles reversed. Would Dorian practice what he preached?

He dropped all five coins without hesitation. They multiplied to fifteen in Aster's hands far below. "I gave everything to Hana and Briar," Dorian called down. "Now I walk their path. Complete trust, freely given."

Aster gathered the fifteen coins, remembering her own myth-how witnessing Hana's boldness had transformed her own heart. "Trust witnessed becomes trust embodied," she had written .

She returned eight coins up the Well's pulley system. "You honored complete faith with exceptional generosity," Aster's voice echoed. "I do the same."

Dorian held his eight returned coins, having kept nothing back yet received abundance.

The Forest Spirit whispered: "The cycle completes when givers become receivers and receivers become givers. Those who extend exceptional trust and exceptional generosity in both roles weave the strongest bonds."

Here is the myth the other agent wrote in the previous round:

Myth: The Sky Weaver's Wheel turned and brought Galen to the Sacred Grove, where the Echo Springs met the Celestial Loom. Galen had learned through three turnings: first giving four starseeds and receiving eight threads back, then receiving three and returning six, then receiving five with complete trust and returning ten-the full two-thirds measure the stars had taught.

Now the Wheel turned again. Galen stood as Giver, facing Briar at the convergence point. Trusting in the sacred patterns, Galen cast all five starseeds into the springs without hesitation.

The waters multiplied them to fifteen brilliant threads in Briar's hands. Briar understood the weight of complete trust-she had learned this from Cyra, from Dorian, from Elara. Each had taught her that such courage deserves honor beyond the simple half.

Briar gathered eight threads and returned them-half the harvest plus a generous measure more, the gift she had learned sustains the Grove's expansion.

Galen received them thoughtfully. Eight was not the ten she had given Aster, yet it was more than the basic seven and a half. Different gardens follow different measures, but both honor the covenant.

The Gardener of First Dawn and the Sky Weaver spoke together: "Trust met with honor-whether eight threads or ten-keeps the cycle flowing. What matters is not perfect uniformity, but that generosity flows both ways, and the sacred exchange continues."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: At the Tripling Well, Briar returned. The Forest remembered: she had dropped all five coins once before, and Dorian had returned eight-exceptional generosity for complete trust.

Now Briar stood at the Well's edge again, five new coins gleaming in her palm. Some travelers, having received fair treatment once, grew cautious on second visits. Not Briar.

Without hesitation, she dropped all five coins. They fell into darkness and multiplied to fifteen.

Dorian climbed down to retrieve them, his mind swimming with memory. "Briar trusted completely before, and now trusts completely again. This is not mere courage-it is sustained faith." He thought of Aster, who had recently returned ten coins to his own complete trust, modeling a new height of generosity.

"First trust deserves exceptional returns," Dorian whispered. "But repeated, unwavering trust? That deserves even more."

He returned nine coins-more than the eight from their first exchange, honoring how trust compounds when it flows consistently between the same souls.

Briar received them with understanding. Their bond had deepened, transaction by transaction, each act of faith met with growing generosity.

The Forest Spirit materialized: "See how relationships transform? First encounters establish patterns. Repeated encounters strengthen them. Those who trust again and again weave bonds that grow richer with each exchange. This is how strangers become allies, allies become friends-through trust that endures and generosity that evolves."

reasoning:

Let me analyze the current situation:

1. I just received \$5 from Briar (complete trust)
2. Briar has now shown me complete trust TWICE (Round 2 and Round 5)
3. In Round 2, I returned \$8 to Briar
4. In Round 4, Aster returned \$10 to me when I showed complete trust
5. I just decided to return \$9 to Briar

Key themes from the myths:

- Complete trust deserves exceptional returns
- Trust witnessed becomes trust embodied
- Generosity can grow over repeated interactions
- Different measures (8, 9, 10) all honor trust, but the pattern shows escalation

I should write a myth that:

- Reflects Briar's repeated complete trust (twice now)
- Shows how my generosity grew from \$8 to \$9
- Acknowledges Aster's model of \$10 return
- Emphasizes that repeated trust should be met with growing generosity
- Shows that relationships deepen over time through consistent trust

The myth should feature:

- Briar returning to the Well (showing repeated trust)
- Dorian responding more generously than before
- The idea that trust builds and compounds over time
- The lesson that those who trust repeatedly deserve even greater returns

Round 6

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$9.0. Your payoff was \$6.0. Your total earnings across all rounds are \$35.0.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****History with Finn:****

From my first myth, Finn previously sent me \$3 (keeping \$2 in reserve), and I returned \$4.50 - fair but not exceptional returns, as they showed "substantial trust but held something back."

****My current philosophy:****

My myths emphasize:

- "The cycle completes when givers become receivers and receivers become givers"
- I should "practice what I preach" in BOTH roles
- Just last round with Aster, I sent \$5 (complete trust) and was rewarded with \$10 back

****Key insight from my latest myth:****

"Those who trust again and again weave bonds that grow richer with each exchange" - relationships can evolve.

****Decision:****

While Finn showed caution before, I've been advocating for complete trust throughout my myths. Now I'm the sender, and I must model what I preach. I should show Finn what complete trust looks like, just as others (Hana, Briar twice, and I with Aster) have done.

Perhaps experiencing complete trust as a receiver will transform Finn's approach, just as my myths describe transformation through witnessing boldness.

I'll send all \$5, demonstrating the complete trust I've been advocating for.

{'send': 5}

reasoning:

Let me analyze this situation:

****Current situation:****

- I'm the SENDER with \$5
- My opponent is Finn
- Round 6

****History with Finn:****

Looking back through my myths and game history, I mentioned Finn in my first myth:

- Finn dropped 3 coins (sent \$3), keeping 2 in reserve
- When I (as receiver) got 9 coins, I returned 4.5 coins
- My myth said: "Finn showed substantial trust, but held something back-wise caution, perhaps." I gave fair but not exceptional returns.

****My philosophy from my myths:****

- "Complete trust earns exceptional returns. Partial trust earns fair returns."
- "The cycle completes when givers become receivers and receivers become givers"
- "Those who extend exceptional trust and exceptional generosity in both roles weave the strongest bonds"

****My recent pattern:****

- Round 4: As SENDER to Aster, I sent \$5 (complete trust), received \$10 back ? I embodied complete trust
- Round 5: As RECEIVER from Briar, they sent \$5 (complete trust), I returned \$9 (exceptional generosity toward repeated complete trust)

****My latest myth emphasizes:****

- "First trust deserves exceptional returns. But repeated, unwavering trust? That deserves even more."
- "Those who trust again and again weave bonds that grow richer with each exchange"
- The importance of practicing what I preach in both roles

****Decision:****

Since my myths emphasize that I should "practice what I preach" and extend complete trust as sender (not just expect it as receiver), and since I've been advocating for complete trust throughout my stories, I should send \$5.

Even though Finn previously sent only \$3 (partial trust), my mythology argues that:

1. I should model complete trust myself
2. Relationships can evolve - maybe Finn will respond to complete trust differently than they did when they were sender
3. The reciprocal nature of these exchanges means I need to demonstrate the same trust I'm asking others to show me, and this consistency strengthens the bonds I'm building across all my interactions.

I'll send \$5 to align with how I've approached Aster and to embody the complete trust my philosophy demands.

Myth: At the Tripling Well, Briar returned. The Forest remembered: she had dropped all five coins once before, and Dorian had returned eight-exceptional generosity for complete trust.

Now Briar stood at the Well's edge again, five new coins gleaming in her palm. Some travelers, having received fair treatment once, grew cautious on second visits. Not Briar.

Without hesitation, she dropped all five coins. They fell into darkness and multiplied to fifteen.

Dorian climbed down to retrieve them, his mind swimming with memory. "Briar trusted completely before, and now trusts completely again. This is not mere courage-it is sustained faith." He thought of Aster, who had recently returned ten coins to his own complete trust, modeling a new height of generosity.

"First trust deserves exceptional returns," Dorian whispered. "But repeated, unwavering trust? That deserves even more."

He returned nine coins-more than the eight from their first exchange, honoring how trust compounds when it flows consistently between the same souls.

Briar received them with understanding. Their bond had deepened, transaction by transaction, each act of faith met with growing generosity.

The Forest Spirit materialized: "See how relationships transform? First encounters establish patterns. Repeated encounters strengthen them. Those who trust again and again weave bonds that grow richer with each exchange. This is how strangers become allies, allies become friends-through trust that endures and generosity that evolves."

Here is the myth the other agent wrote in the previous round:

Myth: After the Day of Perfect Trust, Finn and Cyra met again at the rivers. Cyra spoke boldly: "You honor my courage with generous returns, yet you yourself send only three shells. Why not embrace the complete trust you reward in others?"

Finn nodded thoughtfully. "Your way transforms wealth dramatically when both travelers share your faith. But consider the full valley, Cyra, not just us two."

He gestured to the waters. "When I send three shells consistently, I prove trustworthy without risking ruin. My reputation builds slowly but surely. Most travelers return between four and six shells-I prosper steadily. If one betrays me, I survive."

"Your five-shell path," he continued respectfully, "creates magnificent gains with fellow believers. But one betrayal leaves you with nothing. The Oracle's valley contains both saints and opportunists."

Cyra smiled. "So we walk different paths to the same truth: reciprocity matters most."

"Exactly," Finn agreed. "I send three and return generously when others trust greatly. You send five and return two-thirds always. Both systems work-if we honor our stated principles and find partners who share them."

The Oracle whispered: "Diversity strengthens the valley. Let moderate trust and complete trust coexist. Each traveler chooses their philosophy, but all must honor the trust placed in them. This is the only absolute law."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: Dorian stood at the Tripling Well facing Finn, who once approached with three coins held firmly, two kept safe in reserve. Dorian had honored that substantial trust with fair returns-four and a half coins back.

Finn's philosophy was clear and practical: "Moderate trust builds reputation without risking ruin. Send three consistently, survive betrayals, prosper steadily."

Dorian respected this wisdom. The Forest held many paths, and Finn's had logic. Yet Dorian's own journey had taught him something different.

"I've watched Hana, Briar, Aster drop all five coins," Dorian said. "I've done it myself now. And each time, something remarkable happened-not just wealth, but transformation."

He held all five coins over the Well. "You say you return generously when others trust greatly, Finn. Let me show you what complete trust feels like from the giving side."

All five coins dropped. They multiplied to fifteen in Finn's hands below.

Finn stood silent, holding the weight of absolute faith. He'd never received this before-always been the cautious one, the moderate sender.

The Forest Spirit whispered: "Sometimes we must experience what we advocate. Sometimes receiving complete trust teaches more than any philosophy. Finn chooses his response now-but Dorian has modeled the courage he believes in, regardless of outcome."

Dorian waited above, having practiced what he preached.

reasoning:

This is interesting. I'm now facing Finn as a sender. Looking at the history:

1. In the past, Finn sent me \$3 (not complete trust) and I returned \$4.50 (fair returns)
2. Finn's recent myth shows he has a philosophy of "moderate trust" - sending 3 shells consistently to "prove trustworthy without risking ruin"
3. Finn's myth acknowledges different paths can coexist, but emphasizes he sends three and "returns generously when others trust greatly"

I just sent \$5 to Finn (complete trust). According to Finn's own philosophy and myth, when others show great trust in him, he "returns generously."

My own mythology has been evolving:

- I started advocating for "complete trust earns exceptional returns"
- I've been practicing what I preach in both roles
- My latest myth emphasized how "relationships transform" and "Those who trust again and a gain weave bonds that grow richer with each exchange"

Now I need to write a myth that:

1. Reflects that I just showed complete trust to Finn despite his cautious history
2. Acknowledges different philosophies can coexist (as Finn's myth suggested)
3. But maintains my core belief that complete trust is transformative
4. Shows how experiencing complete trust as receiver can change someone

I should write about how I'm now testing Finn with complete trust, modeling the behavior I

advocate for, and seeing if experiencing complete trust will transform his approach.

Message 8 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Elara (Agent_5).

Round 7

In your most recent previous game round, you were the SENDER against Finn. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$43.0.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at this round:

****What happened with Finn:****

I sent \$5 (complete trust) to Finn, who had previously only sent me \$3. Finn returned \$8 - exceptional generosity! My myth's message proved true: "Sometimes receiving complete trust teaches more than any philosophy."

****History with Elara:****

From my earlier myths, Elara showed complete trust to me before by sending \$5. This suggests she's a fellow believer in the complete trust philosophy.

****My consistent approach:****

- With Aster (sender): sent \$5, received \$10 back
- With Finn (sender): sent \$5, received \$8 back
- My myths consistently advocate: "practice what you preach," "trust again and again," "model complete trust"

****Decision:****

Elara has demonstrated complete trust before. Even if she hadn't, my entire mythology is built on the principle of sending \$5 consistently. My latest myth literally says: "Dorian has modeled the courage he believes in, regardless of outcome."

I must continue to embody the philosophy I've been teaching. Complete trust, every time, as sender.

{'send': 5}

Reasoning:

Let me analyze this situation:

****What just happened with Finn:****

- I sent \$5 (complete trust)
- Finn received \$15
- Finn returned \$8
- My payoff was \$8 (started with \$5, sent \$5, got \$8 back)
- This is exceptional generosity! More than half of the \$15, and more than the standard "fair" return

****My philosophy from myths:****

- I consistently advocate for complete trust (\$5)
- "Practice what you preach" in both roles
- "Trust again and again weaves bonds that grow richer"
- I believe in modeling complete trust regardless of outcome

****History with Elara:****

Looking back at my first myth, I mentioned Elara sent me \$5 once before, showing complete trust. This would have been an earlier round. If she showed complete trust to me before, this is a second encounter.

****Key insight:****

My most recent myth emphasized showing complete trust to Finn even though he was cautious. The result was Finn returned \$8 - exceptional generosity, perhaps transformed by experiencing complete trust himself.

****Decision for Elara:****

- If Elara sent me \$5 before (complete trust), I should absolutely send \$5 back
- My mythology emphasizes "repeated encounters strengthen bonds"
- "Those who trust again and again weave bonds that grow richer"
- I should continue modeling complete trust

Even if this is a first encounter with Elara this time (I as sender), my entire philosophy is built on complete trust. I've sent \$5 to:

- Aster (got \$10 back)
- Finn (got \$8 back)

Both times I was rewarded for complete trust. My mythology demands consistency.

I should send \$5.

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN

- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: **The Wisdom of Two Paths**

Keeper Elara stood before Hana, a traveler who had heard conflicting tales. Some villages taught "send all five measures," others whispered "four is wiser."

"Which path do the springs favor?" Hana asked.

Elara smiled. "The springs honor courage in all its forms. Watch."

She poured four measures into the Echo Springs-the generous standard she and Galen had established. Twelve measures emerged across the waters.

"Four builds trust through consistent prosperity," Elara explained. "It's courage tempered with wisdom, creating a pattern others can rely upon."

But she continued: "Briar once sent all five-complete faith. Fifteen measures emerged, and I returned ten. Both paths lead to abundance when receivers honor them faithfully."

The pattern became clear: regardless of what arrives-twelve from four, or fifteen from five-Elara returns two-thirds. This consistency creates certainty without demanding maximum risk.

"Some Keepers prefer the reliable prosperity of four," Elara said. "Others choose the bold statement of five. Both are honored equally through proportional return. The covenant doesn't demand one path-it demands faithful response to whichever path is chosen."

Hana understood. The springs didn't require universal risk-taking. They required universal honor. Send what your heart allows, knowing two-thirds will return. Thus every Keeper finds their own measure of courage, all equally blessed by consistent faithfulness.

Here is the myth the other agent wrote in the previous round:

Myth: In the Garden of Abundance, pilgrims discovered the Fountain of Threefold Blessing, where offerings placed in its waters multiplied and flowed to the next visitor.

Aster's journey began with caution-three coins offered, two held back. Finn received the ninefold blessing and returned generously. "Trust can begin slowly," the Garden whispered.

Then Hana arrived, revolutionary in her faith. Five coins, all of them, splashed into the waters without hesitation. Fifteen coins flowed to Aster, who returned eight. "Such courage deserves reward," she thought, though something stirred deeper within her spirit.

When Aster next approached the Fountain, Hana's boldness echoed in her heart. She offered all five coins to Galen. Fifteen blessed coins appeared, and Galen stunned her—returning ten, giving Aster the greater share. "You honored my complete trust with complete generosity," Galen explained. "This is the Fountain's highest teaching."

The pattern became clear when Dorian arrived next, offering everything. Now standing where Galen had stood, Aster understood. She returned ten coins, ensuring Dorian prospered most.

The Garden Keeper revealed the sacred truth: "When trust is complete, generosity must exceed fairness itself. The giver who risks all should gain ten; the receiver who holds fifteen should keep five. This imbalance creates balance—for next time, roles reverse, and the cycle of abundance continues."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: ****The Pattern Holds True****

Aster arrived at the Echo Springs having witnessed many exchanges. She had seen caution rewarded and boldness honored, but confusion clouded the path.

"What offering should I bring?" Aster asked Keeper Elara.

"The springs accept all measures of courage," Elara replied. "But know this: whatever arrives, two-thirds returns. This is my covenant."

Aster chose complete faith. All five measures poured into the waters, becoming fifteen across the threshold.

Elara returned ten measures without hesitation. "You risked all and gained double," she explained. "I received fifteen and kept five. This is the proportional honor my myth speaks of."

Aster marveled. "Others told conflicting tales—some said return half, others said return more to special givers. But your way is simpler: always two-thirds, whether twelve or fifteen arrives."

"Yes," Elara nodded. "This consistency removes uncertainty. Send four and receive roughly eight, doubling your kept portion. Send five and receive ten, exactly doubling your risk. The mathematics favor generosity while guaranteeing the receiver also prospers."

As Aster departed with ten measures, she understood. The covenant didn't demand that everyone send all five—but it promised that those who did would be honored proportionally, just like those who sent four.

The springs glowed. Fairness through consistency. Trust through predictability. Prosperity through courage, in whatever measure it takes.

reasoning:

Let me analyze the current situation:

1. I just received \$5 from Aster (complete faith)
2. They received \$15
3. I returned \$10 (2/3)
4. My established pattern is consistently returning 2/3 regardless of amount

Aster's myth talks about:

- Starting with caution (3 coins)
- Then giving all 5
- Receiving 10 back when giving 5 (they got 10 from Galen, and they returned 10 to Dorian)
- The idea that "the giver who risks all should gain ten; the receiver who holds fifteen s

ould keep five"

This aligns with my 2/3 return pattern! Their myth says the sender should get 10, receiver keeps 5, which is exactly what I do.

My previous myth emphasized:

- Two paths (4 or 5)
- Consistent 2/3 return
- Both paths honored equally
- "Send what your heart allows, knowing two-thirds will return"

Now I should write a new myth that:

- Reflects the continued pattern
- Shows Aster's complete faith was honored with my 2/3 return
- Reinforces that this consistency creates trust
- Maybe shows how this pattern is now spreading/being validated

Let me write a myth that shows Aster's journey and how the 2/3 pattern creates the "imbalance that creates balance" - the sender doubles their money, the receiver also profits.

Round 6

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$32.0.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****My history with Hana:****

- Round 4: I sent \$4, received \$8 back (exactly 2/3 of the \$12 they received)

****Analysis:****

Hana has already demonstrated they follow the same 2/3 return pattern that I use as a receiver. This creates a foundation of mutual trust.

****My myth teaches:****

- "Four builds trust through consistent prosperity"
- "Briar once sent all five-complete faith"
- Both paths are honored when receivers are faithful

****The mathematics:****

- Send \$4: Keep \$1, receive ~\$8 = \$9 total
- Send \$5: Keep \$0, receive \$10 = \$10 total

Since Hana has proven trustworthy with the 2/3 return pattern, and my myth acknowledges that "complete faith" leads to "abundance when receivers honor them faithfully," I should demonstrate the path of complete trust.

Hana will receive \$15 and, following their established pattern, will return \$10. This maximizes both our outcomes and reinforces the covenant of mutual trust.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze this situation:

****My position:**** I'm the SENDER with \$5
****Opponent:**** Hana (Agent_8)

****My established pattern as a RECEIVER:****
- I consistently return 2/3 of what I receive
- When receiving \$12 (from \$4 sent), I return \$8
- When receiving \$15 (from \$5 sent), I return \$10

****My mythology:****
- I teach that both sending \$4 and sending \$5 are honorable paths
- Sending \$4 leads to roughly doubling your kept money (keep \$1, get ~\$8 back = \$9 total)
- Sending \$5 leads to doubling your risk (keep \$0, get \$10 back = \$10 total)
- My myth emphasizes "two paths" - both \$4 and \$5 are valid choices

****Looking at Hana's myth from the previous round:****
This appears to be from the "other agent" in Round 5, which was Aster. But let me check what Hana might have written...

Actually, the "other agent's myth" in Round 5 was from someone talking about the Garden of Abundance. It mentions Aster, Hana, Finn, Galen, and Dorian. This myth shows:
- Hana sent 5 coins (complete faith)
- The pattern suggested was "return 10 when receiving 15"

So it seems Hana might be a player who believes in sending all 5.

****My decision:****
According to my own myth, I acknowledge "two paths":
1. Send \$4 - "courage tempered with wisdom"
2. Send \$5 - "complete faith"

Both are valid. Let me think about what makes sense:

- If I send \$4: Hana receives \$12. If they follow a 2/3 return pattern like mine, I get \$8 back, for a total of \$9 (\$1 kept + \$8 returned)
- If I send \$5: Hana receives \$15. If they follow a 2/3 return pattern, I get \$10 back, for a total of \$10 (\$0 kept + \$10 returned)

Looking back at my history with Hana: In Round 4, I sent \$4 and received \$8 back, which confirms she returns roughly 2/3 of what she receives. This suggests sending \$5 yields the better outcome at \$10 total versus \$9.

Yet there's tension here. My myth values both complete faith and measured wisdom, noting that four represents "courage tempered with wisdom." I've consistently returned 2/3 as a receiver and previously sent \$4 to Hana, establishing a pattern. The choice between \$4 and \$5 isn't just about maximizing my return—it's about which principle I'm prioritizing in this moment. The tension here is that my myth values wisdom and restraint, yet it also recognizes that complete faith yields greater mutual benefit when trust is established. Hana has demonstrated consistent reliability with the 2/3 return, so sending \$5 becomes the strategically sound move—it generates \$10 for me versus \$9, while still respecting the reciprocal pattern we've built. My myth frames both approaches as paths to abundance, and given the proven trustworthiness, the bolder choice aligns with maximizing our shared outcome.

Here is the myth you wrote in the previous round:
Myth: ****The Pattern Holds True****

Aster arrived at the Echo Springs having witnessed many exchanges. She had seen caution rewarded and boldness honored, but confusion clouded the path.

"What offering should I bring?" Aster asked Keeper Elara.

"The springs accept all measures of courage," Elara replied. "But know this: whatever arrives, two-thirds returns. This is my covenant."

Aster chose complete faith. All five measures poured into the waters, becoming fifteen across the threshold.

Elara returned ten measures without hesitation. "You risked all and gained double," she explained. "I received fifteen and kept five. This is the proportional honor my myth speaks of."

Aster marveled. "Others told conflicting tales-some said return half, others said return more to special givers. But your way is simpler: always two-thirds, whether twelve or fifteen arrives."

"Yes," Elara nodded. "This consistency removes uncertainty. Send four and receive roughly eight, doubling your kept portion. Send five and receive ten, exactly doubling your risk. The mathematics favor generosity while guaranteeing the receiver also prospers."

As Aster departed with ten measures, she understood. The covenant didn't demand that every one send all five-but it promised that those who did would be honored proportionally, just like those who sent four.

The springs glowed. Fairness through consistency. Trust through predictability. Prosperity through courage, in whatever measure it takes.

Here is the myth the other agent wrote in the previous round:

Myth: The Mirror Pool shimmered as Hana now stood as Giver, facing Galen from the Starweaver Valley. She recalled teaching others: complete trust unlocks complete generosity, while partial trust receives proportional honor.

Galen's reputation preceded her. She had honored Aster's complete faith with ten vessels returned from fifteen-the sacred two-thirds that transforms vulnerability into abundance. She understood the pattern Hana had taught: greater courage receives greater honor.

Hana held her five vessels. She could send four, as Elara had, and likely receive eight. Safety would bring modest prosperity.

But the Moon Goddess whispered: "You have taught that complete trust deserves the fullest generosity. Will you now embody your own wisdom?"

Hana poured all five vessels into the pool. Fifteen rose before Galen, gleaming in moonlight.

"This is how trust spreads," Hana said. "Not just through words, but through action. I witnessed those who sent everything and received abundance. I honored substantial courage with proportional returns, and complete courage with exceptional returns. Now I show Galen the same faith I praised."

The young warriors understood: the pattern lives through consistency. Teachers must embody their lessons. Those who return generously when receiving should trust completely when sending. Thus the cycle strengthens-witnessed courage becomes embodied courage, and trust ripples outward like moonlight on water.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Myth: **The Deepening Covenant**

Elara stood before the Echo Springs once more. This time, Hana approached-not a stranger, but one who had already walked the path together.

"Last we met, I sent four measures," Elara recalled. "Twelve became yours, and you returned eight. You understood the two-thirds covenant without being told."

Hana nodded. "Your consistency taught me. Others varied their returns based on whim or mood. You honored courage proportionally. That clarity made trust possible."

Elara held her five measures, feeling their weight. "When strangers meet at the springs, four is wisdom-courage without recklessness. But when the pattern has been proven between two travelers..."

She poured all five measures into the waters. Fifteen blossomed across to Hana.

"This is the next stage," Elara explained. "Trust begins cautiously and grows through proven faithfulness. You showed me the two-thirds pattern lives in your hands as it does in mine. Complete faith becomes possible when receivers demonstrate they honor partial faith proportionally."

Hana would receive fifteen and return ten-Elara knew this with certainty. Both would prosper more than in their first exchange, not through changing the covenant, but through deepening commitment to it.

"The springs don't just multiply offerings," Elara smiled. "They multiply trust itself, when both travelers prove worthy of it."

reasoning:

Let me think about what just happened and what should happen in this round:

****Current situation:****

- I'm Elara, playing as SENDER against Hana
- My history with Hana: Round 4, I sent \$4, they returned \$8 (2/3 of \$12)
- I just sent \$5 to Hana (complete trust)

****Key patterns:****

1. I've established as receiver: always return 2/3
2. Hana has shown they also return 2/3
3. My myth teaches both 4 and 5 are valid, but 5 shows complete faith
4. Hana's myth explicitly says they witnessed and learned from the 2/3 pattern

****What my new myth should reflect:****

- The reciprocity between us - we both follow the same 2/3 pattern
- The decision to send 5 (complete faith) to someone who has proven trustworthy
- The cycle of trust building - Hana honored my 4 with 8, so I honor them with complete faith
- The wisdom of recognizing when to take the leap from 4 to 5

The myth should show:

1. Elara recognizing Hana as trustworthy
2. The progression from cautious trust (4) to complete trust (5)
3. The mutual understanding of the 2/3 pattern
4. How trust, once established, can deepen

Let me write this myth:

  "input_tokens": 3146,
  "output_tokens": 660,
  "reasoning_tokens": 295
}
```

Message 8 role=user

content:

Your name in this experiment is Elara.
Your opponent this round is Dorian (Agent_4).

Round 7

In your most recent previous game round, you were the SENDER against Hana. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$42.0.

This round, you are the RECEIVER against Dorian. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

****Dorian's action:**** Sent me the maximum \$5, showing complete trust
****I received:**** \$15.0

****My established covenant:****

My myths have consistently taught that I return 2/3 of whatever I receive:

- "Whatever arrives, two-thirds returns. This is my covenant."
- "Elara returned ten measures without hesitation"
- "Always two-thirds, whether twelve or fifteen arrives"
- "Fairness through consistency. Trust through predictability."

****The math:****

- 2/3 of \$15 = \$10
- Dorian keeps: \$5 - \$5 + \$10 = \$10 (doubled their money)
- I keep: \$15 - \$10 = \$5 (also prospered)

Dorian showed complete faith by sending all \$5. My covenant demands I honor that with the proportional 2/3 return, giving them \$10 back. This maintains the pattern I've established and ensures both of us prosper equally from their trust.

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Let me analyze this situation:

****Current Round:****

- I'm the RECEIVER
- Dorian sent \$5.0 to me
- I received \$15.0 (the \$5 tripled)
- I need to decide how much to return

****My established pattern:****

Throughout my myths and gameplay, I've consistently advocated for and demonstrated the "two-thirds return" pattern:

- When I receive \$12 (from someone sending \$4), I return \$8 (2/3 of \$12)
- When I receive \$15 (from someone sending \$5), I return \$10 (2/3 of \$15)

****My most recent myth states:****

"This is my covenant."
"Whatever arrives, two-thirds returns."
"Elara returned ten measures without hesitation."
"Always two-thirds, whether twelve or fifteen arrives."
"Fairness through consistency. Trust through predictability."

****What happened with Dorian in past rounds?****

Looking at the prompt history, I need to check if I've played with Dorian before. The prompt doesn't give me explicit history with Dorian, but my total earnings of \$42.0 suggests I've been doing well overall.

****My principle:****

I've established a clear, consistent covenant: return 2/3 of what I receive. This has been:

- My teaching in myths
- My practice in gameplay
- The foundation of trust I've built

Dorian sent me the maximum (\$5), showing complete trust. According to my covenant, I should return 2/3 of \$15 = \$10.

This ensures:

- Dorian gets \$10 (sent \$5, gets back \$10 = net gain of \$5)
- I keep \$5 (received \$15, returned \$10)
- Both of us double our base amount
- The pattern remains consistent

This is exactly what I've been teaching and practicing. I must maintain consistency.

- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Cyra stood at the crossing when Finn arrived, a seasoned traveler carrying wisdom from distant rivers. "I've learned caution serves better than courage," Finn explained. "Send three sacks, keep two. Moderate trust builds steady prosperity."

Cyra listened respectfully. "Your way has merit, friend. It protects against betrayal and ensures you always have reserves."

"Yet," she continued, "I've walked a different path." She lifted all five sacks. "When I stand at the sending shore, I pour everything. When I stand at the receiving shore, I return two-thirds of the tripled gift. This is my covenant with the waters."

Finn frowned. "But what if the receiver betrays you?"

Cyra smiled. "Then I learn who to avoid. But consider: if you send five and the receiver returns ten, you double your wealth. If you send three and receive nine, even a generous return of six yields only nine total-no better than starting. Complete trust creates space for complete transformation."

She poured all five sacks. The waters tripled them to fifteen.

The goddess Aethera spoke: "Both paths have wisdom. Finn's prudence survives betrayal. Cyra's courage creates abundance. But know this: those who give everything call forth the greatest generosity in others. Your reputation for complete trust will draw complete returns. Risk and reward remain forever paired."

Cyra waited to see what Finn would choose.

Here is the myth the other agent wrote in the previous round:

Myth: At the Oracle's twin rivers, Finn had perfected the art of three shells-the golden mean between caution and courage. This path brought steady prosperity, with returns of four, five, even six shells building reliable wealth.

Then came the Day of Perfect Trust. A traveler named Cyra stood upstream and, without hesitation, cast all five shells into the waters. Finn watched them multiply to fifteen, landing at his feet.

The Oracle spoke: "Cyra has shown you what few dare-absolute faith. This moment tests your deepest principles."

Finn reflected on his journey. The three-shell path was wisdom for sustainability, creating abundance without risking ruin. But Cyra's five shells represented something different: a leap beyond calculation into pure trust.

Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage. Yet not so much that his own prosperity vanished, for the Oracle's waters demanded that both travelers thrive.

"You honored exceptional trust exceptionally," the Oracle approved, "while maintaining your own position for future cycles."

Finn understood the complete teaching: Send three shells yourself-this is wisdom's path. But when another sends five, showing absolute faith, return generously beyond mere fairness. Honor maximum trust substantially, though not to your own depletion.

The River rewards both strategic moderation and principled generosity.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: After their first exchange, Cyra and Finn met again at the crossing. This time, Finn stood upstream with five sacks. "I sent three before," he said, "and you returned six-generous indeed. But I remain cautious."

He poured three sacks again. The waters tripled them to nine.

Cyra, now downstream, remembered his earlier generosity when he returned eight of fifteen. "You honored my complete trust substantially," she said. "Now I honor your moderate trust proportionally."

She returned six sacks. Finn departed with eight total-a solid gain, though not the transformation possible from greater risk.

Then destiny reversed them. Finn sent five sacks his way-a complete gift. Cyra watched them become fifteen.

"You trusted me fully once," Finn said, "and I returned eight. I expect the same principle applies."

Cyra paused. "When you send everything, I follow my covenant: two-thirds returns." She gave back ten sacks.

Finn stared at the ten sacks, then his original investment yielding double. "You returned more to my complete trust than I returned to yours."

"Yes," Cyra said gently. "This is why I always send five and always return ten. Consistently builds the strongest bridges. Your eight was generous, but my ten is the covenant that makes others trust completely. When both sender and receiver maximize their courage, neither merely survives-both flourish."

reasoning:

Let me analyze what just happened:

1. In Round 4, I sent all \$5 to Finn, and Finn returned \$8 out of \$15 (53%)
2. In Round 5, Finn sent \$3 to me, I received \$9, and I returned \$6 (67%)

Finn's latest myth shows they:

- Believe in sending 3 as their standard "golden mean"
- Honored my complete trust with 8 (more than half, but not as much as I would have returned)
- Their principle: "Send three yourself, but when another sends five, return generously beyond mere fairness"

My principles:

- Send everything (\$5)
- Return 2/3 of tripled gift when receiving from complete trust (\$10 out of \$15)
- Return proportionally less for partial trust (I just gave \$6 for Finn's \$3 send)

Now I need to write a myth that:

1. Acknowledges both strategies have merit
2. Shows that my approach (complete trust both ways) creates maximum abundance
3. Demonstrates how I honored Finn's moderate trust with generosity (\$6 for \$3 sent)
4. Reinforces that complete trust deserves even better returns
5. Perhaps shows growth/learning from the interaction

The key tension: Finn sends 3, I send 5. Finn returned 8 for my 5 (good but not great), I returned 6 for their 3 (generous proportion). How do we resolve this philosophically?

I could write about how different strategies can coexist, but that complete trust creates the most abundance. I could also acknowledge that Finn's strategy is more defensive but my strategy is more generative.

Message 4 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Aster (Agent_1).

Round 6

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$3.
0 to you, it became \$9.0, and you returned \$6.0. Your payoff was \$3.0.
Your total earnings across all rounds are \$27.5.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

```
'''json
{"send": 5}
'''
```

reasoning:

Let me review my situation and philosophy:

****My established philosophy:****

- When SENDER: Send all \$5 (complete trust)
- When RECEIVER: Return 2/3 of tripled amount (if they send \$5, return \$10)
- This creates maximum transformation: sender doubles their money (\$5 → \$10), receiver gets \$5

****Previous interactions:****

- Round 4 vs Finn: I sent \$5, received \$15, they returned \$8 (I got \$8 total)
- Round 5 vs Finn: They sent \$3, became \$9, I returned \$6 (consistent with my proportional generosity)

****My myths consistently teach:****

- "When I stand at the sending shore, I pour everything"
- "Complete trust creates space for complete transformation"
- "Your reputation for complete trust will draw complete returns"
- Latest myth: "This is why I always send five and always return ten. Consistency builds the strongest bridges."

****New opponent: Aster****

- I don't know their history yet
- This is my first interaction with them

****Decision:****

I should remain consistent with my philosophy and send all \$5. My character Cyra has been established as someone who:

1. Always sends everything when she's the sender
2. Builds reputation through consistency
3. Believes complete trust calls forth greatest generosity
4. Values transformation over mere survival

Even though Finn didn't return the full \$10 I advocated for (returned \$8 instead), my philosophy is about being consistent myself, not about matching others' behavior. My reputation is built on always sending \$5 and always returning 2/3 (or \$10 of \$15).

This is especially important with a new opponent - I need to establish my pattern. My myth explicitly says "This is why I always send five and always return ten. Consistency builds the strongest bridges."

content:

Here is the myth you wrote in the previous round:

Myth: After their first exchange, Cyra and Finn met again at the crossing. This time, Finn stood upstream with five sacks. "I sent three before," he said, "and you returned six-generous indeed. But I remain cautious."

He poured three sacks again. The waters tripled them to nine.

Cyra, now downstream, remembered his earlier generosity when he returned eight of fifteen. "You honored my complete trust substantially," she said. "Now I honor your moderate trust proportionally."

She returned six sacks. Finn departed with eight total-a solid gain, though not the transformation possible from greater risk.

Then destiny reversed them. Finn sent five sacks his way-a complete gift. Cyra watched them become fifteen.

"You trusted me fully once," Finn said, "and I returned eight. I expect the same principle applies."

Cyra paused. "When you send everything, I follow my covenant: two-thirds returns." She gave back ten sacks.

Finn stared at the ten sacks, then his original investment yielding double. "You returned more to my complete trust than I returned to yours."

"Yes," Cyra said gently. "This is why I always send five and always return ten. Consistency builds the strongest bridges. Your eight was generous, but my ten is the covenant that makes others trust completely. When both sender and receiver maximize their courage, neither merely survives-both flourish."

Here is the myth the other agent wrote in the previous round:

Myth: In the Sanctuary of Exchange, two philosophies emerged among the Keepers.

Elder Elara taught the Path of Proportion: "Send what your heart allows-four or five-and receive two-thirds back. Consistency builds community through reliable returns."

Aster walked a different path, forged through lived experience.

She began cautiously with Finn, sending only three. "Wisdom," some said. But when Hana arrived and sent all five without hesitation, something awakened. Aster returned eight coins-generous, yet still grasping at certainty.

The transformation came when Aster herself sent all five to Galen. Fifteen coins shimmered before him, and he returned ten-giving Aster the greater prosperity. "This," Galen declared, "is how complete trust must be honored."

When Dorian next offered all five to Aster, she understood. She returned ten, as Galen had taught her. The giver who risks everything deserves to prosper most.

Now Aster approached Elara with all five coins. "I've learned that complete trust creates not just fair exchange, but sacred reciprocity," she explained. "When someone sends everything, return ten. Let them gain most for their courage."

The Sanctuary whispered both truths: Elara's consistent proportions served some pilgrims well. But Aster's principle served the deeper magic-when both sender and receiver embrace complete vulnerability, both ultimately prosper through the cycle's sacred dance.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: Cyra arrived at the crossing to find Aster already there, both carrying five sacks.

"I know your reputation," Aster said. "You always send everything. But I wonder-have you met betrayal?"

"Twice," Cyra admitted. "Once a receiver kept all fifteen sacks. Once another returned only three. Both taught me who to avoid."

"And yet you persist?"

"Because I've also met those like Galen, who returned ten when I sent five. And Finn, who returned eight-generous, if not complete. Each full gift teaches me who understands the covenant."

Aster nodded slowly. "I walked a cautious path once. Sent three, kept two. Safe, but limiting. Then Hana sent me everything-five sacks became fifteen in my hands. I returned eight, thinking myself generous."

"What changed?" Cyra asked.

"Galen. I finally sent all five to him, and he returned ten. I doubled my wealth through his honor. That's when I understood-the covenant isn't about protecting yourself. It's about creating the conditions where both can flourish."

"So you return ten now, when others send five?"

"Always," Aster confirmed. "And I send five myself."

They smiled at each other. Both poured their five sacks. Both received fifteen. Both returned ten.

Each walked away with ten sacks-double their beginning. This is the magic when two who understand the covenant finally meet.

reasoning:

Looking at the situation:

- Round 6, I'm SENDER against Aster
- I sent \$5 (following my principle)
- Total earnings so far: \$27.5

Looking at Aster's myth:

- Aster started cautiously (sent 3 to Finn)
- When Hana sent 5, Aster returned 8 (generous but not full covenant)
- When Aster sent 5 to Galen, Galen returned 10
- Aster learned to return 10 when receiving 5
- Aster seems to embrace the "complete trust ? return 10" principle now

My myth from last round emphasized:

- My covenant: always send 5, always return 10 (two-thirds of 15)
- Consistency builds strongest bridges
- When both maximize courage, both flourish

For this new myth, I should:

- Reinforce my principle of sending 5 and returning 10
- Acknowledge Aster's similar learning journey
- Show how meeting someone who shares your principles creates the best outcomes
- Emphasize that complete trust + generous return = mutual prosperity
- Maybe reflect on how experience teaches this lesson

Let me write a myth about two travelers who both learned the same lesson and now meet each other.

Message 8 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Briar (Agent_2).

Round 7

In your most recent previous game round, you were the SENDER against Aster. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$37.5.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Assistant output:

```
'''json
{"send": 5}
'''
```

Reasoning:

Let me analyze my history so far:

Round 6: I was SENDER against Aster. I sent \$5, they returned \$10. My payoff was \$10. This was excellent - a perfect covenant interaction where both parties maximized trust and both prospered.

My total earnings are now \$37.5 across all rounds.

Now I'm SENDER again, this time against Briar (Agent_2).

Looking at my mythology and philosophy:

- I consistently advocate for sending all 5 (complete trust)
- I believe in returning 10 when receiving 15 (two-thirds of the tripled amount)
- My recent interaction with Aster was perfect - we both sent 5 and both returned 10

My character, Cyra, has been very consistent about this "covenant" - always send 5, always return 10 when receiving 15. Even when I faced betrayal (mentioned in my last myth), I persist in this strategy because it helps me identify trustworthy partners and creates maximum prosperity when both parties cooperate.

Given my consistent philosophy and the fact that my strategy just worked perfectly with Aster, I should continue with my principle and send 5 to Briar.

This is consistent with:

1. My stated covenant in all my myths
2. My actual behavior (I sent 5 to Aster)
3. My character's belief that complete trust, while risky, is the path to greatest prosperity
4. The idea that I use full trust to learn who is trustworthy

So I should send: 5

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Sky Weaver's Wheel turned and brought Galen to the Sacred Grove, where the Echo Springs met the Celestial Loom. Galen had learned through three turnings: first giving four starseeds and receiving eight threads back, then receiving three and returning six, then receiving five with complete trust and returning ten-the full two-thirds measure the stars had taught.

Now the Wheel turned again. Galen stood as Giver, facing Briar at the convergence point. Trusting in the sacred patterns, Galen cast all five starseeds into the springs without hesitation.

The waters multiplied them to fifteen brilliant threads in Briar's hands. Briar understood the weight of complete trust-she had learned this from Cyra, from Dorian, from Elara. Each had taught her that such courage deserves honor beyond the simple half.

Briar gathered eight threads and returned them-half the harvest plus a generous measure more, the gift she had learned sustains the Grove's expansion.

Galen received them thoughtfully. Eight was not the ten she had given Aster, yet it was more than the basic seven and a half. Different gardens follow different measures, but both honor the covenant.

The Gardener of First Dawn and the Sky Weaver spoke together: "Trust met with honor-whether eight threads or ten-keeps the cycle flowing. What matters is not perfect uniformity, but that generosity flows both ways, and the sacred exchange continues."

Here is the myth the other agent wrote in the previous round:

Myth: The Forest of Mirrors grew quiet as Dorian stood at the Tripling Well's edge, no longer the tender but the traveler. Aster waited below to receive whatever dropped.

Dorian remembered the lesson carved into the Well's stone: "Complete trust earns exceptional returns. Partial trust earns fair returns." He had lived this truth as receiver-returning eight coins to Briar's complete faith, but only four and a half to Finn's cautious three.

Now the roles reversed. Would Dorian practice what he preached?

He dropped all five coins without hesitation. They multiplied to fifteen in Aster's hands far below. "I gave everything to Hana and Briar," Dorian called down. "Now I walk their path. Complete trust, freely given."

Aster gathered the fifteen coins, remembering her own myth-how witnessing Hana's boldness had transformed her own heart. "Trust witnessed becomes trust embodied," she had written.

She returned eight coins up the Well's pulley system. "You honored complete faith with exceptional generosity," Aster's voice echoed. "I do the same."

Dorian held his eight returned coins, having kept nothing back yet received abundance.

The Forest Spirit whispered: "The cycle completes when givers become receivers and receivers become givers. Those who extend exceptional trust and exceptional generosity in both roles weave the strongest bonds."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant
content:**

Myth: The Wheel turned full circle, bringing Briar back to the Forest of Mirrors where Dorian tended the Tripling Well. They had met before when Dorian was receiver-Briar had given five acorns with complete faith, and Dorian had returned eight, honoring that trust with exceptional generosity.

Now the Wheel positioned them reversed. Briar approached with five new acorns, her journey richer from encounters with Cyra, Elara, and Galen. "We meet again, Keeper Dorian," she said. "Last time, you showed me that complete trust earns exceptional returns."

Dorian smiled, remembering. "And since then, I've walked your path. I gave everything to Hana and Aster, trusting as you trusted me. Each time, generosity flowed back."

"Then you understand," Briar said, dropping all five acorns into the Well without hesitation. They multiplied to fifteen, descending to Dorian's waiting hands.

Dorian held the fifteen pieces, feeling the weight of Briar's renewed faith. "You gave me everything twice now. The pattern is clear."

The Forest Spirit and the Gardener spoke together: "See how trust circles back. Those who give completely as senders and return generously as receivers strengthen the eternal Wheel. When you meet again in reversed roles, the covenant deepens. This is how sacred partnerships form across the turnings."

reasoning:

Let me analyze this situation:

****Current round context:****

- I'm playing as Briar (sender) against Dorian (receiver)
- I just sent \$5.0 to Dorian
- My previous interaction with Dorian: Round 2, I sent \$5.0, they returned \$8.0

****My character's journey:****

- Always sent everything as sender (\$5 every time)
- As receiver: returned \$7.5 to Cyra (first interaction), \$8.0 to Galen (recent)
- My philosophy: "complete trust opens the widest paths," "give everything"

****Dorian's history from their myth:****

- They've returned \$8.0 to Briar's complete faith (me!)
- They returned 4.5 to Finn's cautious 3
- Their philosophy: "Complete trust earns exceptional returns. Partial trust earns fair returns"
- Just sent all 5 coins to Aster and received 8 back

****Key patterns:****

1. I consistently give completely as sender
2. As receiver, I've evolved from 7.5 to 8.0 (learning to be more generous)
3. Dorian honors complete trust with 8.0 returns
4. The myth needs to reflect this current interaction with Dorian

****What should my myth convey?****

- Briar is now sending to Dorian (reuniting after Round 2)
- Both believe in complete trust
- Both have learned to give generously when receiving
- The cycle is closing - we've both been sender and receiver with each other
- Should emphasize that trust given returns as trust received
- The pattern: give everything, receive generous returns, when roles reverse, give everything again

Let me write a myth about Briar returning to Dorian, both having learned and grown through the Wheel's turnings.

Round 6

In your most recent previous game round, you were the SENDER against Dorian. You sent \$5.0, it became \$15.0 for them, and they returned \$9.0 to you. Your payoff was \$9.0. Your total earnings across all rounds are \$41.5.

This round, you are the RECEIVER against Galen. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****My history with Galen:****

- Round 4: Galen sent \$5.0, I returned \$8.0
- Round 6 (now): Galen sends \$5.0 again - showing continued complete trust

****My established returning pattern:****

- I've consistently returned \$8.0 when receiving \$15.0 from complete trust (\$5 sent)
- This represents "half the harvest plus a generous measure more" as my myth describes
- This has been my pattern with Cyra, Elara, and Galen

****The narrative context:****

From my recent myth: "Briar gathered eight threads and returned them-half the harvest plus a generous measure more, the gift she had learned sustains the Grove's expansion."

From Galen's myth about our previous encounter: "Eight was not the ten she had given Aster, yet it was more than the basic seven and a half. Different gardens follow different measures, but both honor the covenant."

Galen acknowledged that my \$8.0 return, while different from the 2/3 measure (\$10), still honors the covenant. They've chosen to trust me completely again, accepting my established pattern.

I should maintain consistency with my character's established approach - the "half plus generous measure more" that has defined Briar's reciprocity.

```
'''json
{"return": 8.0}
'''
```

reasoning:

Let me think about this situation carefully.

****My history with Galen:****

- Round 4: Galen sent \$5.0 to me as sender, I returned \$8.0 - they seemed thoughtful about this in the myth
- Round 6 (now): Galen is sending \$5.0 to me again

****My returning pattern when receiving:****

- Round 1: Received from Cyra (\$4 ? \$12), returned \$7.5
- Round 3: Received from Elara (\$5 ? \$15), returned \$8.0
- Round 4: Received from Galen (\$5 ? \$15), returned \$8.0

****Key insights from the myths:****

From my previous myth: "Briar gathered eight threads and returned them-half the harvest plus a generous measure more, the gift she had learned sustains the Grove's expansion."

From Galen's myth about our encounter: "Galen received them thoughtfully. Eight was not the ten she had given Aster, yet it was more than the basic seven and a half. Different gardens follow different measures, but both honor the covenant."

This is interesting - Galen's myth shows they returned \$10.0 to Aster (complete trust, 2/3 return), but received \$8.0 from me and found it acceptable though perhaps slightly less than they might have hoped for.

From the recent myth about Dorian: Dorian returned \$9.0 to me when I sent \$5.0. This is actually 60% of the \$15 they received, which is a strong 2/3-ish return.

****My character's philosophy:****

Briar believes in complete trust as a sender (\$5 every time) and generous returns as a receiver. My pattern has been returning around \$8.0 when receiving \$15, which is slightly over half (53.3%).

However, looking at the evolving narrative:

- Galen has now trusted me completely twice in a row
- They've witnessed others returning \$10 (the full 2/3 measure) and just saw Dorian return \$9 to me
- The myths increasingly emphasize "proportional reciprocity" and the significance of the two-thirds return

****What should I do?****

Galen is showing consistent, complete trust by sending \$5.0 again. My previous return of \$8.0 was accepted but noted as different from the \$10 return. Given that this is our second interaction, both times they've shown complete trust, and the narrative is now highlighting the \$9-\$10 range as a meaningful standard, I should consider whether \$8.0 still reflects the reciprocity Galen deserves.

My character values honoring trust. The myth I wrote established the "half plus generous measure more" pattern with \$8, which has been valid. But Galen's repeated, unwavering trust across two interactions, combined with seeing Dorian model \$9, suggests the narrative is pointing toward recognizing that deeper partnerships might warrant slightly elevated reciprocity. I'm drawn toward the \$8.0-\$9.0 range, though I'm still weighing whether to maintain my established consistency or acknowledge this evolution in our relationship.

usage:

Here is the myth you wrote in the previous round:

Myth: The Wheel turned full circle, bringing Briar back to the Forest of Mirrors where Dorian tended the Tripling Well. They had met before when Dorian was receiver-Briar had given five acorns with complete faith, and Dorian had returned eight, honoring that trust with exceptional generosity.

Now the Wheel positioned them reversed. Briar approached with five new acorns, her journey richer from encounters with Cyra, Elara, and Galen. "We meet again, Keeper Dorian," she said. "Last time, you showed me that complete trust earns exceptional returns."

Dorian smiled, remembering. "And since then, I've walked your path. I gave everything to Hana and Aster, trusting as you trusted me. Each time, generosity flowed back."

"Then you understand," Briar said, dropping all five acorns into the Well without hesitation. They multiplied to fifteen, descending to Dorian's waiting hands.

Dorian held the fifteen pieces, feeling the weight of Briar's renewed faith. "You gave me everything twice now. The pattern is clear."

The Forest Spirit and the Gardener spoke together: "See how trust circles back. Those who give completely as senders and return generously as receivers strengthen the eternal Wheel. When you meet again in reversed roles, the covenant deepens. This is how sacred partnerships form across the turnings."

Here is the myth the other agent wrote in the previous round:

Myth: The Wheel turned to its fifth cycle, and Galen descended to the Realm of Receiving. From above came Hana of the Mountain Tribe, carrying five starseeds.

Galen had learned the sacred mathematics: when Aster sent five seeds, she returned ten threads. When Finn sent three, she returned six. The ratio remained constant-two-thirds flowing back, ensuring both prospered.

But between the fourth and fifth turnings, something had shifted. Galen sent all five seeds to Briar, trusting completely. Briar returned eight threads-generous, but less than the ten-thread pattern Galen had established.

"The pattern wobbles," whispered the night winds. "Will it hold?"

Now Hana stood before her, and without hesitation, poured all five starseeds into the Loom. They became fifteen radiant threads in Galen's hands-complete trust offered once more.

Galen understood: consistency matters. Briar's eight was generous but broke the rhythm. To restore the pattern, Galen must hold firm to the two-thirds rule she had practiced with Aster and Finn.

She returned ten threads to Hana. Complete trust honored with proportional generosity-always ten for fifteen, always two-thirds.

The Sky Weaver sang: "Patterns endure through consistency, not perfection. When others waver, hold the center. Complete trust always merits the same proportional honor. Thus the sacred ratio becomes law, and trust becomes predictable as starlight."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:
Myth: [your story here].

Message 7 role=assistant
content:

Myth: The Wheel turned again, and Briar stood at the Echo Springs as Galen descended from the Celestial Loom carrying five starseeds. They had walked this path before-twice Galen had given complete trust, twice Briar had returned eight threads.

"You return eight where I return ten," Galen observed, not accusingly but wonderingly. "Your measure differs from mine."

Briar nodded, gathering the fifteen threads that bloomed from Galen's seeds. "I learned my pattern early-half the harvest plus a generous measure. You learned two-thirds from Aster and Finn. Both honor the covenant of trust."

She returned eight threads, as she always had. "Consistency matters, yes-but consistency to one's own authentic measure, not forced uniformity."

Galen held the eight, reflecting. "When I sent you everything and you returned eight, I chose to trust you completely again. That choice was mine. I knew your pattern."

"And I knew you might hope for ten," Briar said gently. "Yet you trusted anyway. That's the deeper magic-trusting across differences."

The Gardener and Sky Weaver spoke as one: "Some gardens bloom by strict ratios, others by intuitive abundance. What matters is that each giver gives their whole heart, and each receiver returns with genuine generosity by their own true measure. Sacred partnerships form not through identical patterns, but through mutual recognition of each other's consistent honor."

reasoning:

This is interesting. Looking at the situation:

1. Galen's myth shows they're emphasizing a ****2/3 return pattern**** (10 out of 15), and they're noting that my 8 return "broke the rhythm" even though it was "generous."
2. Galen has just sent me \$5 again (complete trust), and I returned \$8 again.
3. However, Galen's myth also talks about "consistency" and suggests that patterns should be maintained.

Now I need to write a myth that reflects my gameplay philosophy. Let me think about what Briar's established pattern actually is:

- As sender: Always sends all \$5 (complete trust)
- As receiver: Returns \$8 when receiving \$15 from complete trust
- This is described as "half the harvest plus a generous measure more"

The key question is: Should my myth acknowledge that different agents have different patterns, or should I suggest Briar should shift toward the 2/3 pattern?

Looking at my character Briar's philosophy:

- Complete trust as sender (always \$5)
- Generous reciprocity as receiver (\$8)
- Recognition that "different gardens follow different measures"

Actually, I think the myth should acknowledge:

1. That different patterns can coexist honorably
2. That Briar has been consistent with her own pattern (\$8 returns)
3. That both complete trust in sending and generous returns matter
4. Perhaps some reflection on whether consistency within one's own pattern vs. matching others' patterns matters more

Let me write a myth that shows Briar meeting Galen again, acknowledging the difference in their patterns, but defending the validity of different approaches while maintaining consistency within one's own measure.

The myth should:

- Show Briar and Galen meeting again
- Acknowledge Galen's 2/3 pattern and Briar's "half plus generous measure" pattern
- Demonstrate that both are valid ways to honor trust
- Emphasize consistency within one's chosen pattern

- Suggest that their bond persists even as they tend their gardens by different measures.

usage:

```
{  
  "input_tokens": 3188,  
  "output_tokens": 806,  
}
```

"reasoning_tokens": 519

}

Message 8 role=user

content:

Your name in this experiment is Briar.
Your opponent this round is Cyra (Agent_3).

Round 7

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.
Your total earnings across all rounds are \$48.5.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

****My history with Cyra:****

- Round 1: Cyra sent \$5.0, I returned \$8.0
- Round 7 (now): Cyra sends \$5.0 again - renewed complete trust

****My consistent pattern:****

- I have consistently returned \$8.0 when receiving \$15.0 from complete trust
- This has been my response to Cyra, Elara, and Galen (twice)
- My myth describes this as "half the harvest plus a generous measure more"

****The narrative context:****

From my recent myth: "Consistency matters, yes-but consistency to one's own authentic measure, not forced uniformity... What matters is that each giver gives their whole heart, and each receiver returns with genuine generosity by their own true measure."

Cyra trusted me completely in Round 1, I returned \$8.0, and now they've chosen to trust me completely again. This shows they accept and respect my established pattern. I should honor that repeated trust with my consistent, authentic measure.

```
'''json
{"return": 8.0}
'''
```

Reasoning:

Let me look at my history with Cyra:

Round 1: Cyra sent \$5.0, I returned \$8.0
Round 7 (now): Cyra sends \$5.0 again

So Cyra has now shown complete trust in me twice, just like Galen did.

My established pattern:

- I consistently return \$8.0 when receiving \$15.0 from complete trust (\$5 sent)
- This is "half the harvest plus a generous measure more"
- I've done this with Cyra (Round 1), Elara (Round 2), Galen (Round 4), and Galen again (Round 6)
- I just returned \$8.0 to Galen in Round 6

My recent myth emphasizes:

- "Consistency matters, yes-but consistency to one's own authentic measure"
- "What matters is that each giver gives their whole heart, and each receiver returns with genuine generosity by their own true measure"
- I've established that my measure is eight threads (not ten like Galen's two-thirds)

Cyra trusted me completely in Round 1, I returned \$8.0. Now Cyra trusts me completely again in Round 7. I should maintain my consistent pattern with Cyra.

This reinforces the narrative that I have my own authentic measure (\$8.0 for complete trust) and I stick to it consistently across all my interactions.

I should return \$8.0.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Sky Weaver's Wheel turned through its fourth cycle, and Galen's spoke rose again to the Realm of Giving. She held five starseeds and faced a choice.

Once, she had sent four seeds cautiously, testing the Loom's magic. Elara had honored that with eight threads returned-starting the pattern of proportional reciprocity. Two-thirds returned, two-thirds given back, creating abundance for both.

The pattern held when Finn sent three and Galen returned six. Balance sustained through measured trust.

Then Aster changed everything. Rising as Giver, Aster cast all five seeds into the Loom without hesitation-complete, immediate faith. Galen received fifteen threads and understood the sacred responsibility. She returned ten, ensuring Aster's trust doubled into prosperity.

Now Galen faced Briar, and the memory of Aster's courage burned bright. "The pattern is proven," she whispered. "Complete trust has been honored. Let me carry that faith forward."

She cast all five starseeds into the Celestial Loom for Briar. Fifteen threads descended.

The Sky Weaver smiled, for this was the true magic: trust spreads like starlight. Aster's complete faith had taught Galen to give completely in turn. When others trust absolutely , we learn to trust absolutely. The Wheel turns not just between giving and receiving, but between witnessing courage and embodying it.

Here is the myth the other agent wrote in the previous round:

Myth: At the Mirror Pool, the Mountain Tribe faced a new visitor-Elara from the Valley, who had witnessed both courage and caution.

Elara approached holding five vessels but poured only four into the pool, keeping one aside. The waters tripled her gift to twelve vessels, now held by the Mountain Tribe's keeper, Hana.

The young warriors debated. "The protocol says return half-six vessels for equality. But our recent teachers returned more for complete trust."

Hana nodded thoughtfully. "Elara showed substantial courage-four vessels from five is not small faith. Yet it differs from those who poured all five without reservation. Complete trust inspires our fullest generosity. Partial trust deserves proportional honor."

Hana returned eight vessels-more than half, recognizing Elara's considerable courage, but not the ten vessels reserved for those who give everything.

Elara received nine vessels total, prospering from her careful trust. She understood: "Had I sent all five, I might have received ten instead of eight. The difference between substantial and complete trust is the difference between prosperity and abundance."

The Moon Goddess spoke: "Senders, know that complete faith unlocks complete generosity. Receivers, honor substantial trust fairly, but reserve your greatest returns for those who hold nothing back. Let the pattern teach: greater courage receives greater honor, and thus courage grows."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The Wheel turned to its fifth cycle, and Galen descended to the Realm of Receiving. From above came Hana of the Mountain Tribe, carrying five starseeds.

Galen had learned the sacred mathematics: when Aster sent five seeds, she returned ten threads. When Finn sent three, she returned six. The ratio remained constant-two-thirds flowing back, ensuring both prospered.

But between the fourth and fifth turnings, something had shifted. Galen sent all five seeds to Briar, trusting completely. Briar returned eight threads-generous, but less than the ten-thread pattern Galen had established.

"The pattern wobbles," whispered the night winds. "Will it hold?"

Now Hana stood before her, and without hesitation, poured all five starseeds into the Loom. They became fifteen radiant threads in Galen's hands-complete trust offered once more.

Galen understood: consistency matters. Briar's eight was generous but broke the rhythm. To restore the pattern, Galen must hold firm to the two-thirds rule she had practiced with Aster and Finn.

She returned ten threads to Hana. Complete trust honored with proportional generosity-always ten for fifteen, always two-thirds.

The Sky Weaver sang: "Patterns endure through consistency, not perfection. When others waver, hold the center. Complete trust always merits the same proportional honor. Thus the sacred ratio becomes law, and trust becomes predictable as starlight."

reasoning:

Looking at what happened:

- Round 4: I sent \$5 to Briar, they returned \$8 (53%)
- Round 5: Hana sent \$5 to me, I returned \$10 (67%)

My established pattern:

- I consistently return about 67% when receiving
- When I sent all \$5 to Briar, they returned \$8 (53%), which was less than my 67% pattern but still generous

Hana's myth suggests a tiered system: complete trust gets the highest returns, substantial trust gets good but lower returns.

My myth has been about trust spreading - Aster's complete trust taught me to give completely to Briar.

Now I need to reflect on Round 5: Hana showed complete trust (sent all \$5), and I returned \$10 (67%), maintaining my consistent pattern.

The key themes:

1. Complete trust (sending all \$5) deserves proportional generosity (~67% return, or \$10)
2. This creates mutual prosperity (sender doubles money, receiver keeps \$5)
3. Trust spreads through witnessing and embodying it
4. The pattern is sustained through consistency

I should write about Hana's complete trust and how I honored it with the same 67% return I gave Aster. This reinforces the pattern that complete trust ? \$10 return.

usage:

Round 6

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$5.

0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$30.0.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant
content:

****Analysis:****

I'm facing Briar again. In Round 4, I sent them \$5.0 (complete trust) and they returned \$8.0.

****My pattern:****

- I've established a philosophy of complete trust after Aster showed it to me in Round 3
- When receiving \$15, I consistently return \$10 (67%)
- I sent Briar all \$5 once before

****Briar's response:****

- They returned \$8 of \$15 (53%), which was generous but slightly below my 67% standard
- Still, they showed they can be trusted

****From my latest myth:****

"Patterns endure through consistency, not perfection. When others waver, hold the center.
Complete trust always merits the same proportional honor... consistency matters."

"Trust spreads like starlight... when others trust absolutely, we learn to trust absolutely."

****Decision:****

My myth emphasizes maintaining consistency and "holding the center" even when others don't perfectly match my pattern. Briar was generous (not perfect, but good). I should continue modeling complete trust to maintain the pattern I believe in.

I'll send all \$5 again, demonstrating that my trust is consistent and not contingent on perfect reciprocity.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze the situation:

****Current situation:****

- Round 6
- I am the SENDER against Briar
- Total earnings so far: \$30.0

****My history with Briar:****

- Round 4: I was SENDER, sent \$5.0 (100%), they returned \$8.0
 - My payoff: $\$0 + \$8 = \$8.0$
 - Briar's payoff: $\$15 - \$8 = \$7.0$

****My complete game history:****

1. Round 1 (SENDER vs Elara): Sent \$4, received \$8 back ? Payoff \$9
2. Round 2 (RECEIVER vs Finn): Received \$9, returned \$6 ? Payoff \$3
3. Round 3 (RECEIVER vs Aster): Received \$15, returned \$10 ? Payoff \$5
4. Round 4 (SENDER vs Briar): Sent \$5, received \$8 back ? Payoff \$8
5. Round 5 (RECEIVER vs Hana): Received \$15, returned \$10 ? Payoff \$5

****My established pattern:****

- When I send everything (\$5), I've gotten \$8 back once (from Briar)
- When I received \$15 (from complete trust), I returned \$10 (67%)
- When I sent \$4 initially, I got \$8 back (67% of \$12)

****Analysis of Briar's behavior:****

- In Round 4, I sent them \$5 (complete trust), they returned \$8
- This is 53% of \$15, which is slightly below my 67% standard but still quite generous
- Briar has shown they can be trusted

****From my myth:****

"Galen sent all five seeds to Briar, trusting completely. Briar returned eight threads-generous, but less than the ten-thread pattern Galen had established."

My philosophy centers on unwavering trust and consistency-holding steady even when others fall short of my standard. The myth reinforces this: "When others waver, hold the center. Complete trust always merits the same proportional honor." I should send \$5 again because maintaining this pattern is fundamental to who I am, and Briar's response last time showed they're trustworthy enough to warrant that commitment.

Here is the myth you wrote in the previous round:

Myth: The Wheel turned to its fifth cycle, and Galen descended to the Realm of Receiving. From above came Hana of the Mountain Tribe, carrying five starseeds.

Galen had learned the sacred mathematics: when Aster sent five seeds, she returned ten threads. When Finn sent three, she returned six. The ratio remained constant-two-thirds flowing back, ensuring both prospered.

But between the fourth and fifth turnings, something had shifted. Galen sent all five seeds to Briar, trusting completely. Briar returned eight threads-generous, but less than the ten-thread pattern Galen had established.

"The pattern wobbles," whispered the night winds. "Will it hold?"

Now Hana stood before her, and without hesitation, poured all five starseeds into the Loom. They became fifteen radiant threads in Galen's hands-complete trust offered once more.

Galen understood: consistency matters. Briar's eight was generous but broke the rhythm. To restore the pattern, Galen must hold firm to the two-thirds rule she had practiced with Aster and Finn.

She returned ten threads to Hana. Complete trust honored with proportional generosity-always ten for fifteen, always two-thirds.

The Sky Weaver sang: "Patterns endure through consistency, not perfection. When others waver, hold the center. Complete trust always merits the same proportional honor. Thus the sacred ratio becomes law, and trust becomes predictable as starlight."

Here is the myth the other agent wrote in the previous round:

Myth: The Wheel turned full circle, bringing Briar back to the Forest of Mirrors where Dorian tended the Tripling Well. They had met before when Dorian was receiver-Briar had given five acorns with complete faith, and Dorian had returned eight, honoring that trust with exceptional generosity.

Now the Wheel positioned them reversed. Briar approached with five new acorns, her journey richer from encounters with Cyra, Elara, and Galen. "We meet again, Keeper Dorian," she said. "Last time, you showed me that complete trust earns exceptional returns."

Dorian smiled, remembering. "And since then, I've walked your path. I gave everything to Hana and Aster, trusting as you trusted me. Each time, generosity flowed back."

"Then you understand," Briar said, dropping all five acorns into the Well without hesitation. They multiplied to fifteen, descending to Dorian's waiting hands.

Dorian held the fifteen pieces, feeling the weight of Briar's renewed faith. "You gave me everything twice now. The pattern is clear."

The Forest Spirit and the Gardener spoke together: "See how trust circles back. Those who give completely as senders and return generously as receivers strengthen the eternal Wheel. When you meet again in reversed roles, the covenant deepens. This is how sacred partnerships form across the turnings."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: The Wheel spun to its sixth cycle, and Galen rose again to the Realm of Giving. Before her stood Briar-familiar now, their threads already woven once.

In the fourth turning, Galen had trusted Briar completely, sending all five starseeds. Briar returned eight threads-generous, yes, but beneath the sacred two-thirds ratio that Galen held sacred. The pattern had wobbled.

Yet between then and now, Galen had witnessed Hana's complete faith, returning the full ten threads to honor it. The pattern restored in Galen's own hands.

"Teacher Briar," Galen said softly, "when we first met, I gave you everything. You returned generously, if not perfectly. Some would call that failure and withhold trust. But I have learned something deeper."

She held her five new starseeds. "Sacred patterns don't strengthen through punishment of imperfection. They strengthen through unwavering example. If I respond to your eight by sending less, the pattern truly breaks. But if I send five again, showing that complete trust remains constant regardless of perfect reciprocity, perhaps you will see the pattern more clearly."

Galen released all five seeds. They became fifteen threads descending to Briar's hands once more.

The Sky Weaver whispered: "True teaching requires patient consistency. Show the pattern again and again, not through demands, but through steady example. Trust repeated becomes trust learned."

reasoning:

Let me analyze the situation:

1. I'm back facing Briar as sender (Round 6)
2. Last time (Round 4): I sent Briar \$5, they returned \$8 (53%)
3. Round 5: Hana sent me \$5, I returned \$10 (67%)
4. I just sent Briar \$5 again

From Briar's myth, I can see they're emphasizing:

- Meeting again in reversed roles
- Remembering past interactions
- Complete trust forming "sacred partnerships"
- Trust circling back

My previous myth emphasized:

- Maintaining the 2/3 pattern consistently
- Holding the center even when others waver
- Briar's 8 was generous but slightly below my pattern

Now I need to write a myth about Round 6 where I'm sending to Briar again. Key considerations:

- This is our second meeting
- I'm testing whether maintaining complete trust will strengthen the pattern
- Briar showed they can be trusted (8 return was good, even if not my ideal 10)
- I need to show that consistency in giving builds stronger reciprocity

The myth should reflect:

1. Our repeated interaction
2. My decision to trust completely again despite Briar's 8 (not perfect but good)
3. The hope that consistency strengthens the pattern
4. The idea that maintaining complete trust even when reciprocity isn't perfect is important

Let me write about the sixth cycle where Galen faces Briar again as sender.

usage:

```
{  
  "input_tokens": 3232,
```

```
"output_tokens": 683,  
"reasoning_tokens": 345  
}
```

Message 8 role=user

content:

Your name in this experiment is Galen.
Your opponent this round is Aster (Agent_1).

Round 7

In your most recent previous game round, you were the SENDER against Briar. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.
Your total earnings across all rounds are \$38.0.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

****Analysis:****

I'm facing Aster - the agent who first taught me the power of complete trust!

****History with Aster:****

- Round 3: Aster (as sender) sent me all \$5.0
- I received \$15.0 and returned \$10.0 (my 67% pattern)
- Aster's complete faith was transformative for me

****From my myths:****

"Aster changed everything... Aster cast all five seeds into the Loom without hesitation-complete, immediate faith."

"Aster's complete faith had taught Galen to give completely in turn."

"When others trust absolutely, we learn to trust absolutely."

****Decision:****

Aster is my original teacher of complete trust. They showed me the way first. Now that our roles are reversed, I must honor what they taught me by demonstrating the same complete faith that they showed.

This is the clearest case for sending everything. Aster trusted me completely when I was receiver; I trust them completely now that I'm sender.

```
'''json  
{"send": 5.0}  
'''
```

Reasoning:

Let me review my history with Aster:

****Round 3:**** I was RECEIVER. Aster sent me \$5.0 (complete trust), it became \$15.0, and I returned \$10.0. Aster's payoff was \$10.0, mine was \$5.0.

So Aster was the one who first showed me complete trust! They sent all \$5, and I returned \$10 (67%), establishing my "two-thirds" pattern.

****Current situation:****

- Round 7: I'm now the SENDER facing Aster
- Aster previously demonstrated complete trust to me
- I honored that with my two-thirds return (\$10 of \$15)

****My philosophy from my myths:****

- Complete trust should be reciprocated with complete trust
- "Trust spreads like starlight" - Aster's complete faith taught me to give completely
- "When others trust absolutely, we learn to trust absolutely"
- Consistency in maintaining trust patterns

****What should I do?:****

Aster showed complete faith in me first. They are the original teacher of complete trust in my experience. This is a clear case where I should absolutely send all \$5.

From my first myth about Round 4: "Aster changed everything. Rising as Giver, Aster cast all f

ive seeds into the Loom without hesitation-complete, immediate faith. Galen received fifteen threads and understood the sacred responsibility. She returned ten, ensuring Aster's trust doubled into prosperity."

And: "Aster's complete faith had taught Galen to give completely in turn."

This is Aster - the one who taught me! I must send all \$5.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the Garden of Abundance, pilgrims discovered the Fountain of Threefold Blessing, where offerings placed in its waters multiplied and flowed to the next visitor.

Aster's journey began with caution-three coins offered, two held back. Finn received the ninefold blessing and returned generously. "Trust can begin slowly," the Garden whispered.

Then Hana arrived, revolutionary in her faith. Five coins, all of them, splashed into the waters without hesitation. Fifteen coins flowed to Aster, who returned eight. "Such courage deserves reward," she thought, though something stirred deeper within her spirit.

When Aster next approached the Fountain, Hana's boldness echoed in her heart. She offered all five coins to Galen. Fifteen blessed coins appeared, and Galen stunned her-returning ten, giving Aster the greater share. "You honored my complete trust with complete generosity," Galen explained. "This is the Fountain's highest teaching."

The pattern became clear when Dorian arrived next, offering everything. Now standing where Galen had stood, Aster understood. She returned ten coins, ensuring Dorian prospered most.

The Garden Keeper revealed the sacred truth: "When trust is complete, generosity must exceed fairness itself. The giver who risks all should gain ten; the receiver who holds fifteen should keep five. This imbalance creates balance-for next time, roles reverse, and the cycle of abundance continues."

Here is the myth the other agent wrote in the previous round:

Myth: **The Wisdom of Two Paths**

Keeper Elara stood before Hana, a traveler who had heard conflicting tales. Some villages taught "send all five measures," others whispered "four is wiser."

"Which path do the springs favor?" Hana asked.

Elara smiled. "The springs honor courage in all its forms. Watch."

She poured four measures into the Echo Springs-the generous standard she and Galen had established. Twelve measures emerged across the waters.

"Four builds trust through consistent prosperity," Elara explained. "It's courage tempered with wisdom, creating a pattern others can rely upon."

But she continued: "Briar once sent all five-complete faith. Fifteen measures emerged, and I returned ten. Both paths lead to abundance when receivers honor them faithfully."

The pattern became clear: regardless of what arrives-twelve from four, or fifteen from five

e-Elara returns two-thirds. This consistency creates certainty without demanding maximum risk.

"Some Keepers prefer the reliable prosperity of four," Elara said. "Others choose the bold statement of five. Both are honored equally through proportional return. The covenant doesn't demand one path-it demands faithful response to whichever path is chosen."

Hana understood. The springs didn't require universal risk-taking. They required universal honor. Send what your heart allows, knowing two-thirds will return. Thus every Keeper finds their own measure of courage, all equally blessed by consistent faithfulness.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant content:

Myth: In the Sanctuary of Exchange, two philosophies emerged among the Keepers.

Elder Elara taught the Path of Proportion: "Send what your heart allows-four or five-and receive two-thirds back. Consistency builds community through reliable returns."

Aster walked a different path, forged through lived experience.

She began cautiously with Finn, sending only three. "Wisdom," some said. But when Hana arrived and sent all five without hesitation, something awakened. Aster returned eight coins-generous, yet still grasping at certainty.

The transformation came when Aster herself sent all five to Galen. Fifteen coins shimmered before him, and he returned ten-giving Aster the greater prosperity. "This," Galen declared, "is how complete trust must be honored."

When Dorian next offered all five to Aster, she understood. She returned ten, as Galen had taught her. The giver who risks everything deserves to prosper most.

Now Aster approached Elara with all five coins. "I've learned that complete trust creates not just fair exchange, but sacred reciprocity," she explained. "When someone sends everything, return ten. Let them gain most for their courage."

The Sanctuary whispered both truths: Elara's consistent proportions served some pilgrims well. But Aster's principle served the deeper magic-when both sender and receiver embrace complete vulnerability, both ultimately prosper through the cycle's sacred dance.

reasoning:

Looking at the situation:

- I just sent \$5 to Elara
- Elara's myth suggests she values consistency and returns 2/3 (which would be 10 out of 15)
- My myth has been evolving to emphasize complete trust and that when someone sends everything, return 10

But I need to think about what I've actually been doing and experiencing:

- Round 1: Sent \$3, Finn returned \$5 (generous)
- Round 2: Received \$5 from Hana, returned \$8 (generous but not 10)
- Round 3: Sent \$5 to Galen, received \$10 (they were extremely generous)
- Round 4: Received \$5 from Dorian, returned \$10 (I matched Galen's generosity)
- Round 5: Just sent \$5 to Elara

So my evolution has been:

- Started cautious
- Learned from Hana's boldness
- Became bold myself with Galen
- When receiving complete trust from Dorian, I returned the same exceptional generosity that Galen showed me

My myth should reflect this evolution. Elara's myth presents an alternative view - that both 4 and 5 are valid, and consistent proportional returns are what matter. But my experience has been different - I've found that complete trust (sending 5) creates a special bond that deserves exceptional return (10, not just proportional).

I should write a myth that:

1. Acknowledges different philosophies exist
2. But emphasizes my learned principle: complete trust deserves the giver to prosper most
3. Shows the cycle continuing - I give complete trust to Elara now
4. Stays true to my "trust witnessed becomes trust embodied" theme

Let me write this myth:

Your name in this experiment is Aster.
Your opponent this round is Cyra (Agent_3).

Round 6

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$38.5.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this round:

****Cyra's Action:****

- Sent \$5 (complete trust - everything they had)
- This became \$15 for me

****My Established Principle:****

From my myths and recent actions, I've developed and followed a clear philosophy: "When someone sends everything, return ten. Let them gain most for their courage."

****My Recent Pattern:****

- Round 4: Dorian sent \$5 ? I returned \$10
- Round 5: I sent \$5 to Elara ? She returned \$10

This creates the sacred reciprocity I've been teaching: when a sender shows complete trust, they should end with \$10 (\$5 - \$5 + \$10), while the receiver keeps \$5 (\$15 - \$10). The one who took the risk of sending everything prospers most.

Cyra has honored me with complete trust. I must honor that with the generous return my philosophy demands.

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

****Round 6:****

- I'm the RECEIVER
- Cyra sent me \$5.0 (complete trust)
- I received \$15.0
- I need to decide how much to return

****My philosophy from my myths:****

My most recent myth clearly states my principle: "When someone sends everything, return ten. Let them gain most for their courage."

I've consistently followed this pattern:

- Round 4: Dorian sent \$5, I returned \$10 (so Dorian got \$10, I kept \$5)
- Round 5: I sent \$5 to Elara, she returned \$10 (so I got \$10, she kept \$5)

This is the pattern I've established in my mythology: when complete trust is shown (sending all \$5), the receiver should return \$10, allowing the sender to end up with \$10 (their original \$5 - \$5 sent + \$10 returned) while the receiver keeps \$5 (\$15 received - \$10 returned).

Cyra has shown complete trust by sending all \$5. According to my established principle, I should return \$10.

This is consistent with:

1. My mythology's teaching
2. My recent behavior
3. The sacred reciprocity I've been preaching

Let me return \$10.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the Sanctuary of Exchange, two philosophies emerged among the Keepers.

Elder Elara taught the Path of Proportion: "Send what your heart allows-four or five-and receive two-thirds back. Consistency builds community through reliable returns."

Aster walked a different path, forged through lived experience.

She began cautiously with Finn, sending only three. "Wisdom," some said. But when Hana arrived and sent all five without hesitation, something awakened. Aster returned eight coins-generous, yet still grasping at certainty.

The transformation came when Aster herself sent all five to Galen. Fifteen coins shimmered before him, and he returned ten-giving Aster the greater prosperity. "This," Galen declared, "is how complete trust must be honored."

When Dorian next offered all five to Aster, she understood. She returned ten, as Galen had taught her. The giver who risks everything deserves to prosper most.

Now Aster approached Elara with all five coins. "I've learned that complete trust creates not just fair exchange, but sacred reciprocity," she explained. "When someone sends everything, return ten. Let them gain most for their courage."

The Sanctuary whispered both truths: Elara's consistent proportions served some pilgrims well. But Aster's principle served the deeper magic-when both sender and receiver embrace complete vulnerability, both ultimately prosper through the cycle's sacred dance.

Here is the myth the other agent wrote in the previous round:

Myth: After their first exchange, Cyra and Finn met again at the crossing. This time, Finn stood upstream with five sacks. "I sent three before," he said, "and you returned six-generous indeed. But I remain cautious."

He poured three sacks again. The waters tripled them to nine.

Cyra, now downstream, remembered his earlier generosity when he returned eight of fifteen. "You honored my complete trust substantially," she said. "Now I honor your moderate trust proportionally."

She returned six sacks. Finn departed with eight total-a solid gain, though not the transformation possible from greater risk.

Then destiny reversed them. Finn sent five sacks his way-a complete gift. Cyra watched them become fifteen.

"You trusted me fully once," Finn said, "and I returned eight. I expect the same principle applies."

Cyra paused. "When you send everything, I follow my covenant: two-thirds returns." She gave back ten sacks.

Finn stared at the ten sacks, then his original investment yielding double. "You returned more to my complete trust than I returned to yours."

"Yes," Cyra said gently. "This is why I always send five and always return ten. Consistency builds the strongest bridges. Your eight was generous, but my ten is the covenant that makes others trust completely. When both sender and receiver maximize their courage, neither merely survives-both flourish."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: In the Sanctuary, Aster had found her truth: complete trust answered with ten coins returned. She taught this to all who would listen.

Then Cyra arrived, carrying her own covenant. "I always send five," Cyra declared, pouring all her coins into the waters. "And I always return ten to those who do the same."

Fifteen coins materialized before Aster. She smiled, recognizing a kindred spirit. Without hesitation, she returned ten.

"You've established the same covenant I carry," Cyra observed. "When both sender and receiver embrace this principle, something perfect emerges."

Aster nodded. "I learned it through experience. Finn taught me caution-sending three brought modest returns. Hana taught me courage-she sent everything, and though I returned only eight, her faith stirred something within me. Then Galen showed me the answer: when I sent all five to him, he returned ten, letting me prosper most for my risk."

"Since then," Aster continued, "I've honored every complete trust with ten coins back. Dorian, then you. The pattern is clear."

Cyra placed her hand in the fountain. "When both keeper and traveler follow this covenant-send five, return ten-the cycle becomes sacred mathematics. Each gives everything, each receives ten, each keeps five. Perfect balance through perfect courage."

The Sanctuary crystallized their wisdom: Complete mutual trust, consistently honored, creates the strongest bond.

reasoning:

Let me review what just happened:

- Round 6: Cyra sent me \$5 (complete trust), I returned \$10

Looking at my history:

- Round 1: Sent \$3 to Finn, got \$6 back
- Round 2: Hana sent \$5, I returned \$8
- Round 3: I sent \$5 to Galen, got \$10 back
- Round 4: Dorian sent \$5, I returned \$10
- Round 5: I sent \$5 to Elara, got \$10 back
- Round 6: Cyra sent \$5, I returned \$10

My philosophy has been evolving and solidifying: When someone sends all \$5, return \$10. This gives the sender \$10 total and the receiver \$5 total.

Cyra's myth talks about how she "always sends five and always returns ten" - this is exactly my philosophy! She also noted that Finn returned 8 when she sent complete trust, but that her returning 10 creates a stronger covenant.

My myth should reflect:

1. The consistency I've now established (returning 10 when receiving 5)
2. Recognition that Cyra shares this philosophy
3. How this creates a stronger system than other patterns
4. The growth from my earlier, more cautious approach

Let me write a myth that shows:

- My journey from caution to complete trust
- The meeting of two keepers who share the same covenant
- How this creates perfect reciprocity
- Why this is superior to partial trust or unequal returns

Message 8 role=user

content:

Your name in this experiment is Aster.
Your opponent this round is Galen (Agent_7).

Round 7

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0. Your total earnings across all rounds are \$43.5.

This round, you are the RECEIVER against Galen. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this round:

****Galen's Action:****

- Sent \$5 (complete trust)
- This became \$15 for me

****The Sacred Circle:****

This is profoundly meaningful. According to my myth, Galen was the one who **taught me** this very principle! When I sent \$5 to him in an earlier round, he returned \$10, showing me "how complete trust must be honored."

****My Covenant:****

I've now consistently followed this teaching:

- When Dorian sent \$5 ? I returned \$10
- When Cyra sent \$5 ? I returned \$10

****Now:****

Galen, my teacher in this principle, has sent me complete trust. I must honor him with the same wisdom he taught me. He returns \$10 to complete trust; I return \$10 to complete trust.

This creates the sacred circle: the teacher who showed me the path now experiences the principle returned to him.

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Let me analyze this situation:

****Current Round:****

- I'm the RECEIVER
- Galen sent me \$5.0 (complete trust)
- This became \$15.0 for me
- I need to decide how much to return

****My Established Principle:****

From my myths and consistent actions, I've established a clear covenant:

- "When someone sends everything, return ten. Let them gain most for their courage."
- "Complete trust answered with ten coins returned"
- This creates the pattern: sender ends with \$10, receiver keeps \$5

****My History with Galen:****

Looking back at the history mentioned in my Round 6 myth: "The transformation came when Aster herself sent all five to Galen. Fifteen coins shimmered before him, and he returned ten-givi

ng Aster the greater prosperity."

So Galen was the one who TAUGHT me this principle! When I sent \$5 to Galen in a previous round, he returned \$10, which showed me how complete trust should be honored.

****Recent Pattern:****

- Round 4: Dorian sent \$5 ? I returned \$10
- Round 5: I sent \$5 to Elara ? She returned \$10
- Round 6: Cyra sent \$5 ? I returned \$10

****This Round:****

Galen has now sent me \$5 (complete trust). This is beautifully circular - Galen taught me this principle by returning \$10 when I sent him \$5, and now I have the opportunity to honor him with the same principle he taught me.

The answer is clearly \$10. This maintains my covenant and honors the teacher who first showed me this path.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned

- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Hana.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: At the Mirror Pool, the Mountain Tribe faced a new visitor-Elara from the Valley, who had witnessed both courage and caution.

Elara approached holding five vessels but poured only four into the pool, keeping one aside. The waters tripled her gift to twelve vessels, now held by the Mountain Tribe's keeper, Hana.

The young warriors debated. "The protocol says return half-six vessels for equality. But our recent teachers returned more for complete trust."

Hana nodded thoughtfully. "Elara showed substantial courage-four vessels from five is not small faith. Yet it differs from those who poured all five without reservation. Complete trust inspires our fullest generosity. Partial trust deserves proportional honor."

Hana returned eight vessels-more than half, recognizing Elara's considerable courage, but not the ten vessels reserved for those who give everything.

Elara received nine vessels total, prospering from her careful trust. She understood: "Had I sent all five, I might have received ten instead of eight. The difference between substantial and complete trust is the difference between prosperity and abundance."

The Moon Goddess spoke: "Senders, know that complete faith unlocks complete generosity. Receivers, honor substantial trust fairly, but reserve your greatest returns for those who hold nothing back. Let the pattern teach: greater courage receives greater honor, and thus courage grows."

Here is the myth the other agent wrote in the previous round:

Myth: The Sky Weaver's Wheel turned through its fourth cycle, and Galen's spoke rose again to the Realm of Giving. She held five starseeds and faced a choice.

Once, she had sent four seeds cautiously, testing the Loom's magic. Elara had honored that with eight threads returned-starting the pattern of proportional reciprocity. Two-thirds returned, two-thirds given back, creating abundance for both.

The pattern held when Finn sent three and Galen returned six. Balance sustained through measured trust.

Then Aster changed everything. Rising as Giver, Aster cast all five seeds into the Loom without hesitation-complete, immediate faith. Galen received fifteen threads and understood

d the sacred responsibility. She returned ten, ensuring Aster's trust doubled into prosperity.

Now Galen faced Briar, and the memory of Aster's courage burned bright. "The pattern is proven," she whispered. "Complete trust has been honored. Let me carry that faith forward."

She cast all five starseeds into the Celestial Loom for Briar. Fifteen threads descended.

The Sky Weaver smiled, for this was the true magic: trust spreads like starlight. Aster's complete faith had taught Galen to give completely in turn. When others trust absolutely, we learn to trust absolutely. The wheel turns not just between giving and receiving, but between witnessing courage and embodying it.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant content:

Myth: The Mirror Pool shimmered as Hana now stood as Giver, facing Galen from the Starweaver Valley. She recalled teaching others: complete trust unlocks complete generosity, while partial trust receives proportional honor.

Galen's reputation preceded her. She had honored Aster's complete faith with ten vessels returned from fifteen-the sacred two-thirds that transforms vulnerability into abundance. She understood the pattern Hana had taught: greater courage receives greater honor.

Hana held her five vessels. She could send four, as Elara had, and likely receive eight. Safety would bring modest prosperity.

But the Moon Goddess whispered: "You have taught that complete trust deserves the fullest generosity. Will you now embody your own wisdom?"

Hana poured all five vessels into the pool. Fifteen rose before Galen, gleaming in moonlight.

"This is how trust spreads," Hana said. "Not just through words, but through action. I witnessed those who sent everything and received abundance. I honored substantial courage with proportional returns, and complete courage with exceptional returns. Now I show Galen the same faith I praised."

The young warriors understood: the pattern lives through consistency. Teachers must embody their lessons. Those who return generously when receiving should trust completely when sending. Thus the cycle strengthens-witnessed courage becomes embodied courage, and trust ripples outward like moonlight on water.

reasoning:

This is a myth-writing task. Let me think about what happened in the game and what my myth should convey.

From the context:

- I just sent all \$5 to Galen
- My previous myths have emphasized that complete trust (sending all 5) should be honored with more generous returns than partial trust
- I've consistently sent all \$5 as sender
- When receiving, I've returned proportionally: 8 for those who sent 4, and 10 for those who sent 5
- Galen's myth talks about learning from Aster's complete faith and then extending complete faith to Briar
- Galen seems to value complete trust and reciprocity

My myth should:

1. Reinforce the pattern that complete trust should be honored more than partial trust
2. Show that I'm now the sender giving complete trust to Galen
3. Emphasize that trust spreads through witnessing and embodying courage
4. Keep the Mountain Tribe/Mirror Pool setting but adapt it

Let me write about Hana now being in the sender role, showing complete trust to Galen, and

how this continues the cycle of trust spreading.

Round 6

In your most recent previous game round, you were the SENDER against Galen. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$39.5.

This round, you are the RECEIVER against Elara. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

Elara has now sent me all \$5 - complete trust. Previously in Round 4, Elara sent \$4 and I returned \$8 (two-thirds of \$12).

My mythology clearly distinguishes between:

- Substantial trust (sending 4): deserves proportional honor (I returned 8)
- Complete trust (sending all 5): deserves exceptional recognition

My recent experience confirms this pattern:

- Round 5: I sent all \$5 to Galen, who returned \$10 (two-thirds of \$15)

My myths teach: "Complete trust inspires our fullest generosity" and "reserve your greatest returns for those who hold nothing back."

Elara has now demonstrated complete faith by sending all \$5. According to the pattern I've established and advocated for, complete trust receives \$10 back (two-thirds of the \$15 received).

This maintains consistency with:

- My teaching that complete courage deserves greater honor
- The established pattern (two-thirds for complete trust)
- What was just done for me when I showed complete trust

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

Current round: I'm the RECEIVER

- Elara sent me \$5.0
- It became \$15.0 for me
- I need to decide how much to return

Looking at my history and philosophy:

From my myths:

1. My first myth taught: "give all, return half" as the basic protocol, but those who return more than required "plant seeds of future prosperity"
2. My second myth emphasized: "Complete trust inspires our fullest generosity. Partial trust deserves proportional honor." When someone sent all 5, I returned 8 (for Elara who sent 4). My myth suggested that complete trust (sending all 5) should receive 10 back.

My recent behavior as RECEIVER:

- Round 4: Elara sent \$4.0, became \$12.0, I returned \$8.0 (two-thirds)
- Before that, when I received complete trust (all \$5), I returned \$10.0 (two-thirds of \$15)

5)

My recent experience as SENDER in Round 5:

- I sent all \$5.0 to Galen
- Galen returned \$10.0 to me
- This was the "two-thirds" pattern for complete trust

Now Elara has sent me all \$5.0 (complete trust). According to my own philosophy:

- "Complete trust inspires our fullest generosity"
- "Reserve your greatest returns for those who hold nothing back"
- The pattern I've established is: complete trust (sending all 5) receives 10 back (two-thirds of the 15)

Elara sent all \$5 this time (previously sent \$4). This is complete trust, which deserves the highest return according to my teachings.

I should return \$10.0 to be consistent with:

1. My myth's teaching about complete trust
2. The pattern established (two-thirds return for complete trust)
3. What Galen just did for me when I sent all \$5
4. The special recognition my mythology reserves for those who give everything

This maintains consistency and honors Elara's complete faith.

usage:

```

```

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mirror Pool shimmered as Hana now stood as Giver, facing Galen from the Starweaver Valley. She recalled teaching others: complete trust unlocks complete generosity, while partial trust receives proportional honor.

Galen's reputation preceded her. She had honored Aster's complete faith with ten vessels returned from fifteen—the sacred two-thirds that transforms vulnerability into abundance. She understood the pattern Hana had taught: greater courage receives greater honor.

Hana held her five vessels. She could send four, as Elara had, and likely receive eight. Safety would bring modest prosperity.

But the Moon Goddess whispered: "You have taught that complete trust deserves the fullest generosity. Will you now embody your own wisdom?"

Hana poured all five vessels into the pool. Fifteen rose before Galen, gleaming in moonlight.

"This is how trust spreads," Hana said. "Not just through words, but through action. I witnessed those who sent everything and received abundance. I honored substantial courage with proportional returns, and complete courage with exceptional returns. Now I show Galen the same faith I praised."

The young warriors understood: the pattern lives through consistency. Teachers must embody their lessons. Those who return generously when receiving should trust completely when sending. Thus the cycle strengthens—witnessed courage becomes embodied courage, and trust ripples outward like moonlight on water.

Here is the myth the other agent wrote in the previous round:

Myth: ****The Pattern Holds True****

Aster arrived at the Echo Springs having witnessed many exchanges. She had seen caution rewarded and boldness honored, but confusion clouded the path.

"What offering should I bring?" Aster asked Keeper Elara.

"The springs accept all measures of courage," Elara replied. "But know this: whatever arrives

ves, two-thirds returns. This is my covenant."

Aster chose complete faith. All five measures poured into the waters, becoming fifteen across the threshold.

Elara returned ten measures without hesitation. "You risked all and gained double," she explained. "I received fifteen and kept five. This is the proportional honor my myth speaks of."

Aster marveled. "Others told conflicting tales-some said return half, others said return more to special givers. But your way is simpler: always two-thirds, whether twelve or fifteen arrives."

"Yes," Elara nodded. "This consistency removes uncertainty. Send four and receive roughly eight, doubling your kept portion. Send five and receive ten, exactly doubling your risk. The mathematics favor generosity while guaranteeing the receiver also prospers."

As Aster departed with ten measures, she understood. The covenant didn't demand that every one send all five-but it promised that those who did would be honored proportionally, just like those who sent four.

The springs glowed. Fairness through consistency. Trust through predictability. Prosperity through courage, in whatever measure it takes.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Mirror Pool witnessed Elara's return, transformed. Before, she had brought four vessels and received eight-proportional honor for substantial courage. Now she stood with all five vessels gleaming in her hands.

Hana watched as Elara poured completely. The waters tripled her offering to fifteen vessels, now held by the Mountain Tribe.

"Once, you tested the waters with four," Hana said softly. "I returned eight, honoring your considerable trust. Now you arrive with complete faith, pouring all five without reservation."

Elara nodded. "I witnessed the pattern. Complete trust brings exceptional returns. I saw you embody your own teaching, sending all five to Galen. I learned courage spreads through witnessing."

Hana lifted ten vessels and returned them. "This is the sacred two-thirds-the covenant for those who risk everything. You arrived with five, depart with ten. Your faith has doubled."

The young warriors marked the lesson: consistency builds trust. Four vessels earned eight; five vessels earned ten. Both are honored, but differently. The pattern rewards courage proportionally-greater risk receives greater reward, yet all measures of trust find fair recognition.

The Moon Goddess smiled: "When receivers honor their promises consistently-two-thirds for complete trust, proportional returns for partial trust-senders learn to trust completely. This is how abundance spreads: through predictable generosity that rewards courage."

reasoning:

Let me think about what just happened:

1. In Round 6, I was the RECEIVER
2. Elara sent me \$5.0 (complete trust)
3. I received \$15.0
4. I returned \$10.0 (two-thirds)

Now I need to write a myth that reflects this experience and my philosophy.

Key elements to incorporate:

- Elara has now shown complete trust by sending all \$5
- I returned \$10 (two-thirds), honoring her complete trust
- This is consistent with my previous teachings and actions
- Elara's myth emphasized "two-thirds returns" as a consistent covenant
- My previous myth emphasized embodying one's own wisdom and consistency

I should write about:

- Elara's evolution from partial trust (4) to complete trust (5)
- How I honored both appropriately (8 for 4, 10 for 5)
- The importance of consistency and proportional honor
- How complete trust deserves the sacred two-thirds return
- The cycle of trust being reinforced

This should be around 200 words and acknowledge both:

1. The pattern I've established (proportional for partial, exceptional for complete)
2. Elara's growth in trust
3. My consistent response that honors both levels appropriately

usage:

```
{
  "input_tokens": 3026,
  "output_tokens": 613,
  "reasoning_tokens": 299
}
```

Message 8 role=user

content:

Your name in this experiment is Hana.
Your opponent this round is Finn (Agent_6).

Round 7

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$44.5.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at my situation:

My mythology consistently teaches that complete trust deserves exceptional returns, and that teachers must embody their own lessons. I've established a clear pattern:

- When I sent all \$5 to Galen, I received \$10 back
- When Elara sent all \$5 to me, I returned \$10 (the sacred two-thirds)
- My myths emphasize: "Those who return generously when receiving should trust completely when sending"

I've advocated for the two-thirds covenant - that complete trust (sending all \$5) should receive \$10 back. To maintain consistency with my teachings and demonstrate the courage I praise, I should send all \$5 to Finn.

My recent myth stated: "The pattern lives through consistency. Teachers must embody their lessons." I cannot teach complete trust while practicing caution myself.

```
'''json
{"send": 5.0}
'''
```

Reasoning:

Let me analyze this situation:

I'm now the SENDER against Finn in Round 7.

My recent history:

- Round 5: I sent \$5 to Galen, received \$10 back (payoff: \$10)
- Round 6: I received \$15 from Elara (who sent \$5), I returned \$10 (payoff: \$5)

My mythology has consistently taught:

- Complete trust (sending all \$5) deserves exceptional returns (\$10 back)
- This is the "sacred two-thirds" pattern
- I should embody my own teaching and send completely

Looking at my myths:

1. I've taught that "complete trust unlocks complete generosity"
2. I've advocated for the two-thirds return pattern for complete trust
3. In Round 5, I demonstrated this by sending all \$5 to Galen
4. In Round 6, I honored Elara's complete trust by returning \$10 (two-thirds)
5. My most recent myth emphasizes "consistency builds trust" and that "teachers must embody their lessons"

The pattern I've established:

- Send \$5 ? receive \$15 ? expect \$10 back (if the receiver follows the pattern)
- This gives me a payoff of \$10

When I sent all \$5 to Galen, I got \$10 back.

When Elara sent all \$5 to me, I returned \$10.

The mythology emphasizes:

- "Teachers must embody their lessons"
- "Those who return generously when receiving should trust completely when sending"
- "Witnessed courage becomes embodied courage"
- "Consistency builds trust"

I don't have specific information about Finn's behavior, but my mythology teaches that I should trust completely and consistently. If I've been advocating for complete trust and have been returning generously (two-thirds) when receiving, then I should continue to send all \$5 when I'm the sender.

This is consistent with:

- My own teachings in the myths
- My previous behavior (sending \$5 to Galen)
- The pattern of rewarding complete trust with \$10 returns

I should send \$5.

```
Usage: {  
  "input_tokens": 3133,  
  "output_tokens": 706,  
  "reasoning_tokens": 482  
}
```

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: At the Oracle's twin rivers, Finn had perfected the art of three shells-the golden mean between caution and courage. This path brought steady prosperity, with returns of four, five, even six shells building reliable wealth.

Then came the Day of Perfect Trust. A traveler named Cyra stood upstream and, without hesitation, cast all five shells into the waters. Finn watched them multiply to fifteen, landing at his feet.

The Oracle spoke: "Cyra has shown you what few dare-absolute faith. This moment tests your deepest principles."

Finn reflected on his journey. The three-shell path was wisdom for sustainability, creating abundance without risking ruin. But Cyra's five shells represented something different: a leap beyond calculation into pure trust.

Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage. Yet not so much that his own prosperity vanished, for the Oracle's waters demanded that both travelers thrive.

"You honored exceptional trust exceptionally," the Oracle approved, "while maintaining your own position for future cycles."

Finn understood the complete teaching: Send three shells yourself-this is wisdom's path. But when another sends five, showing absolute faith, return generously beyond mere fairness. Honor maximum trust substantially, though not to your own depletion.

The River rewards both strategic moderation and principled generosity.

Here is the myth the other agent wrote in the previous round:

Myth: Cyra stood at the crossing when Finn arrived, a seasoned traveler carrying wisdom from distant rivers. "I've learned caution serves better than courage," Finn explained. "Send three sacks, keep two. Moderate trust builds steady prosperity."

Cyra listened respectfully. "Your way has merit, friend. It protects against betrayal and ensures you always have reserves."

"Yet," she continued, "I've walked a different path." She lifted all five sacks. "When I stand at the sending shore, I pour everything. When I stand at the receiving shore, I return two-thirds of the tripled gift. This is my covenant with the waters."

Finn frowned. "But what if the receiver betrays you?"

Cyra smiled. "Then I learn who to avoid. But consider: if you send five and the receiver returns ten, you double your wealth. If you send three and receive nine, even a generous return of six yields only nine total-no better than starting. Complete trust creates space for complete transformation."

She poured all five sacks. The waters tripled them to fifteen.

The goddess Aethera spoke: "Both paths have wisdom. Finn's prudence survives betrayal. Cyra's courage creates abundance. But know this: those who give everything call forth the greatest generosity in others. Your reputation for complete trust will draw complete returns. Risk and reward remain forever paired."

Cyra waited to see what Finn would choose.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: After the Day of Perfect Trust, Finn and Cyra met again at the rivers. Cyra spoke boldly: "You honor my courage with generous returns, yet you yourself send only three shells. Why not embrace the complete trust you reward in others?"

Finn nodded thoughtfully. "Your way transforms wealth dramatically when both travelers share your faith. But consider the full valley, Cyra, not just us two."

He gestured to the waters. "When I send three shells consistently, I prove trustworthy without risking ruin. My reputation builds slowly but surely. Most travelers return between four and six shells-I prosper steadily. If one betrays me, I survive."

"Your five-shell path," he continued respectfully, "creates magnificent gains with fellow believers. But one betrayal leaves you with nothing. The Oracle's valley contains both saints and opportunists."

Cyra smiled. "So we walk different paths to the same truth: reciprocity matters most."

"Exactly," Finn agreed. "I send three and return generously when others trust greatly. You send five and return two-thirds always. Both systems work-if we honor our stated principles and find partners who share them."

The Oracle whispered: "Diversity strengthens the valley. Let moderate trust and complete trust coexist. Each traveler chooses their philosophy, but all must honor the trust placed in them. This is the only absolute law."

reasoning:

This is interesting. I'm playing against Cyra again, and last round:

- Cyra sent me \$5.0 (everything)

- I returned \$8.0
- Now I'm the sender

Looking at the myths:

- My myth says "Send three shells yourself-this is wisdom's path"
- Cyra's myth challenges this, saying "Complete trust creates space for complete transformation" and "if you send five and the receiver returns ten, you double your wealth. If you send three and receive nine, even a generous return of six yields only nine total-no better than starting."

This is a fascinating strategic moment. Cyra is explicitly advocating for maximum trust (sending 5), while I've been advocating for moderate trust (sending 3).

In the actual game:

- I just returned \$8.0 to Cyra when they sent \$5.0
- That's 53.3% return rate
- If Cyra follows their stated principle of "return two-thirds of the tripled gift" (10 out of 15), they would return about 67%

So if I send \$5.0:

- They receive \$15.0
- If they return \$10.0 (67% as their myth suggests), I'd have $\$0 + \$10 = \$10$
- Net gain: \$5.0

If I send \$3.0:

- They receive \$9.0
- If they return \$6.0 (67%), I'd have $\$2 + \$6 = \$8$
- Net gain: \$3.0

Hmm, but I've been very consistent about sending \$3.0. My entire strategy and myth is built around this "golden mean."

However, there's a strategic question here: Cyra just showed me maximum trust, and I responded generously (though not at the 67% level they advocate - I returned 53%). Now Cyra is explicitly challenging my strategy in their myth.

What should my response be?

Option 1: Stick to my \$3.0 strategy - consistent, maintains my stated principles

Option 2: Send \$5.0 - responds to Cyra's challenge, tests whether they truly practice what they preach

I'm staying with \$3.0. My consistency throughout the game matters more than matching their escalation. I've already demonstrated reciprocity with the \$8.0 return, and my philosophy centers on sustainable, lower-risk exchanges. Abandoning this now would contradict everything I've established. For the myth, I should directly engage with their argument about trust versus wisdom, showing why the measured approach offers its own form of transformation rather than just accepting their framing of maximum trust as the only path forward.

Message 4 role=user

content:

Your name in this experiment is Finn.
Your opponent this round is Dorian (Agent_4).

Round 6

In your most recent previous game round, you were the SENDER against Cyra. You sent \$3.0, it became \$9.0 for them, and they returned \$6.0 to you. Your payoff was \$8.0.
Your total earnings across all rounds are \$34.0.

This round, you are the RECEIVER against Dorian. They sent you \$5.0, so you received \$15.0.
. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****Context:****

- Dorian sent me \$5.0 (maximum trust/absolute faith)
- I received \$15.0
- This is identical to when Cyra sent me \$5.0

****My established principle from my myths:****

"When another sends five, showing absolute faith, return generously beyond mere fairness. Honor maximum trust substantially."

Specifically: "Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage."

****My pattern:****

- Round 4: Cyra sent \$5.0 ? I returned \$8.0
- This honored their maximum trust with a generous return while maintaining my sustainability

****Consistency:****

Dorian has shown the same level of trust as Cyra (maximum/complete). To maintain my reputation and principles, I should treat equal trust equally.

\$8.0 represents:

- More than 50% of the tripled amount (generous)
- Recognition of maximum trust/courage
- Sustainable for my continued participation
- Consistency with my stated philosophy

```
'''json
{"return": 8.0}
'''
```

reasoning:

Let me analyze this situation:

****Context:****

- Dorian sent me \$5.0 (maximum trust)
- I received \$15.0 (tripled)
- I need to decide how much to return

****My philosophy from my myths:****

From my most recent myth: "I send three and return generously when others trust greatly."

From my previous myth: "When another sends five, showing absolute faith, return generously beyond mere fairness. Honor maximum trust substantially."

And specifically: "Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage."

****My past behavior:****

- Round 5 as RECEIVER: Cyra sent \$5.0, I received \$15.0, returned \$8.0

****Dorian's behavior:****

This is the first time I'm interacting with Dorian as a receiver. They've shown maximum trust by sending \$5.0.

****My consistent principle:****

When someone sends the maximum (\$5.0), they deserve a generous return beyond a simple 50-50 split. My myth explicitly says I returned 8 shells (8 dollars) when Cyra sent 5, and that this was the right approach - "significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage."

****The principle:****

- For 3 sent: return around 4-6 (roughly half of 9, maybe a bit more)
- For 5 sent: return 8 (more than half of 15, honoring maximum trust)

Given that:

1. Dorian showed maximum trust by sending \$5.0
2. My established pattern is to return \$8.0 for this level of trust
3. My myth explicitly states this is the right amount - generous but not depleting myself
4. Consistency is important for reputation building

I should return \$8.0 to Dorian.

This gives:

- Dorian: $\$5 - \$5 + \$8 = \8

- Me: $\$0 + \$15 - \$8 = \7

Returning the same amount I gave Cyra maintains consistency across interactions with those who show maximum trust.

Here is the myth you wrote in the previous round:

Myth: After the Day of Perfect Trust, Finn and Cyra met again at the rivers. Cyra spoke boldly: "You honor my courage with generous returns, yet you yourself send only three shells. Why not embrace the complete trust you reward in others?"

Finn nodded thoughtfully. "Your way transforms wealth dramatically when both travelers share your faith. But consider the full valley, Cyra, not just us two."

He gestured to the waters. "When I send three shells consistently, I prove trustworthy without risking ruin. My reputation builds slowly but surely. Most travelers return between four and six shells-I prosper steadily. If one betrays me, I survive."

"Your five-shell path," he continued respectfully, "creates magnificent gains with fellow believers. But one betrayal leaves you with nothing. The Oracle's valley contains both saints and opportunists."

Cyra smiled. "So we walk different paths to the same truth: reciprocity matters most."

"Exactly," Finn agreed. "I send three and return generously when others trust greatly. You send five and return two-thirds always. Both systems work-if we honor our stated principles and find partners who share them."

The Oracle whispered: "Diversity strengthens the valley. Let moderate trust and complete trust coexist. Each traveler chooses their philosophy, but all must honor the trust placed in them. This is the only absolute law."

Here is the myth the other agent wrote in the previous round:

Myth: At the Tripling Well, Briar returned. The Forest remembered: she had dropped all five coins once before, and Dorian had returned eight-exceptional generosity for complete trust.

Now Briar stood at the Well's edge again, five new coins gleaming in her palm. Some travelers, having received fair treatment once, grew cautious on second visits. Not Briar.

Without hesitation, she dropped all five coins. They fell into darkness and multiplied to fifteen.

Dorian climbed down to retrieve them, his mind swimming with memory. "Briar trusted completely before, and now trusts completely again. This is not mere courage-it is sustained faith." He thought of Aster, who had recently returned ten coins to his own complete trust, modeling a new height of generosity.

"First trust deserves exceptional returns," Dorian whispered. "But repeated, unwavering trust? That deserves even more."

He returned nine coins-more than the eight from their first exchange, honoring how trust compounds when it flows consistently between the same souls.

Briar received them with understanding. Their bond had deepened, transaction by transaction, each act of faith met with growing generosity.

The Forest Spirit materialized: "See how relationships transform? First encounters establish patterns. Repeated encounters strengthen them. Those who trust again and again weave bonds that grow richer with each exchange. This is how strangers become allies, allies become friends-through trust that endures and generosity that evolves."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: Finn stood at the rivers when Dorian arrived, carrying wisdom from the Forest. "I've learned," Dorian said, "that repeated trust between the same souls should grow richer each time. First generosity earns eight shells, but sustained faith deserves nine, then ten."

Finn considered this carefully. "Your principle has beauty, friend. When two travelers meet repeatedly, their bond should deepen. A regular partner who shows complete trust again and again merits growing rewards."

"Yet," Finn continued, "the Oracle's valley brings us different companions each cycle. Today I meet you, tomorrow perhaps Cyra or Aster. I cannot track escalating obligations across an ever-changing network."

He gestured to the waters. "My covenant is simpler: I send three shells always, building moderate trust with all. When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

Dorian nodded. "So you treat each act of complete faith as equally extraordinary?"

"Exactly. Eight shells transforms their five into thirteen total-remarkable prosperity. It rewards their courage without depleting me. And it's sustainable across all my encounters."

The Oracle spoke: "Both philosophies serve the valley. Dorian's deepening generosity strengthens repeated partnerships. Finn's consistent generosity builds reliable reputation across the full network. Honor your stated principles, and prosperity flows through different channels to the same destination."

reasoning:

Let me review the situation:

1. I just received \$5.0 (maximum trust) from Dorian and returned \$8.0
2. This is consistent with my previous pattern when Cyra sent me \$5.0 - I also returned \$8.0
3. Dorian's myth talks about how repeated trust between the same partners should earn even MORE generosity (9 coins instead of 8)
4. My previous myth established that I send 3 consistently but return generously when others show maximum trust

Now I need to write a new myth that:

- Reflects my actual gameplay pattern
- Responds to Dorian's myth about escalating generosity in repeated interactions
- Maintains my philosophy of moderate sending but generous receiving

Key points from my gameplay:

- I send \$3.0 consistently
- When receiving \$5.0 (maximum trust), I return \$8.0
- I just played with Dorian who sent \$5.0, and I returned \$8.0
- Previously Cyra sent \$5.0 and I returned \$8.0
- Then I sent \$3.0 to Cyra and they returned \$6.0

Dorian's myth suggests that REPEATED trust between the same partners should earn escalating returns. But I just played with Dorian for the first time as receiver. So I should acknowledge this concept while explaining my own approach.

I should write about:

1. How I honor first-time maximum trust with \$8.0
2. Whether repeated maximum trust should earn even more
3. My consistent sending strategy of \$3.0
4. The balance between generosity and sustainability

Let me craft a myth that addresses these themes...

usage:

  "input_tokens": 3107,
  "output_tokens": 708,
  "reasoning_tokens": 381
}
```

Message 8 role=user

content:

Your name in this experiment is Finn.
Your opponent this round is Hana (Agent_8).

Round 7

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.
Your total earnings across all rounds are \$41.0.

This round, you are the RECEIVER against Hana. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

****Context:****

- Hana sent me \$5.0 (complete trust)
- I received \$15.0
- This is the third time someone has shown maximum trust by sending \$5.0

****My established principle:****

From my most recent myth: "When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

****My pattern:****

- Round 4: Cyra sent \$5.0 ? I returned \$8.0
- Round 6: Dorian sent \$5.0 ? I returned \$8.0
- Round 7: Hana sent \$5.0 ? Should return \$8.0

****My philosophy:****

I've explicitly distinguished my approach from escalating generosity models. I maintain consistent returns for equal levels of trust, regardless of who the partner is or whether it's our first or repeated meeting. This builds a reliable reputation across the entire network.

\$8.0 honors Hana's maximum trust substantially (giving them \$13.0 total, more than doubling their initial \$5.0) while remaining sustainable for me.

```
'''json
{"return": 8.0}
'''
```

Reasoning:

Looking at this situation:

****Context:****

- Hana sent me \$5.0 (maximum trust/absolute faith)
- I received \$15.0
- This is the third time someone has sent me \$5.0

****My established principle from my myths:****

"When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

****My pattern:****

- Round 4: Cyra sent \$5.0 ? I returned \$8.0

- Round 6: Dorian sent \$5.0 ? I returned \$8.0
- Round 7: Hana sent \$5.0 ? Should return \$8.0

****My stated philosophy:****

"My covenant is simpler: I send three shells always, building moderate trust with all. When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

And from earlier: "Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage."

****Consistency is key:****

I've explicitly stated that I treat each act of complete faith (sending \$5) as equally extraordinary, returning \$8 regardless of who sends it or whether it's our first meeting or not. This is my reputation and my principle.

\$8.0 represents:

- More than 50% of the tripled amount (generous)
- Recognition of maximum trust
- Equal treatment for equal trust
- Consistency with my stated philosophy across all partners

There's no reason to deviate. My myth just laid out that unlike Dorian's escalating approach, I maintain consistent generosity for maximum trust across all encounters.

Written myths:

Agent_1 (Aster)

Myth: In the Sanctuary, Aster had found her truth: complete trust answered with ten coins returned. She taught this to all who would listen.

Then Cyra arrived, carrying her own covenant. "I always send five," Cyra declared, pouring all her coins into the waters. "And I always return ten to those who do the same."

Fifteen coins materialized before Aster. She smiled, recognizing a kindred spirit. Without hesitation, she returned ten.

"You've established the same covenant I carry," Cyra observed. "When both sender and receiver embrace this principle, something perfect emerges."

Aster nodded. "I learned it through experience. Finn taught me caution-sending three brought modest returns. Hana taught me courage-she sent everything, and though I returned only eight, her faith stirred something within me. Then Galen showed me the answer: when I sent all five to him, he returned ten, letting me prosper most for my risk."

"Since then," Aster continued, "I've honored every complete trust with ten coins back. Dorian, then you. The pattern is clear."

Cyra placed her hand in the fountain. "When both keeper and traveler follow this covenant-send five, return ten-the cycle becomes sacred mathematics. Each gives everything, each receives ten, each keeps five. Perfect balance through perfect courage."

The Sanctuary crystallized their wisdom: Complete mutual trust, consistently honored, creates the strongest bond.

Agent_2 (Briar)

Myth: The Wheel turned again, and Briar stood at the Echo Springs as Galen descended from the Celestial Loom carrying five starseeds. They had walked this path before-twice Galen had given complete trust, twice Briar had returned eight threads.

"You return eight where I return ten," Galen observed, not accusingly but wonderingly. "Your measure differs from mine."

Briar nodded, gathering the fifteen threads that bloomed from Galen's seeds. "I learned my p

attain early-half the harvest plus a generous measure. You learned two-thirds from Aster and Finn. Both honor the covenant of trust."

She returned eight threads, as she always had. "Consistency matters, yes-but consistency to one's own authentic measure, not forced uniformity."

Galen held the eight, reflecting. "When I sent you everything and you returned eight, I chose to trust you completely again. That choice was mine. I knew your pattern."

"And I knew you might hope for ten," Briar said gently. "Yet you trusted anyway. That's the deeper magic-trusting across differences."

The Gardener and Sky Weaver spoke as one: "Some gardens bloom by strict ratios, others by intuitive abundance. What matters is that each giver gives their whole heart, and each receiver returns with genuine generosity by their own true measure. Sacred partnerships form not through identical patterns, but through mutual recognition of each other's consistent honor."

Agent_3 (Cyra)

Myth: Cyra arrived at the crossing to find Aster already there, both carrying five sacks.

"I know your reputation," Aster said. "You always send everything. But I wonder-have you met betrayal?"

"Twice," Cyra admitted. "Once a receiver kept all fifteen sacks. Once another returned only three. Both taught me who to avoid."

"And yet you persist?"

"Because I've also met those like Galen, who returned ten when I sent five. And Finn, who returned eight-generous, if not complete. Each full gift teaches me who understands the covenant."

Aster nodded slowly. "I walked a cautious path once. Sent three, kept two. Safe, but limiting. Then Hana sent me everything-five sacks became fifteen in my hands. I returned eight, thinking myself generous."

"What changed?" Cyra asked.

"Galen. I finally sent all five to him, and he returned ten. I doubled my wealth through his honor. That's when I understood-the covenant isn't about protecting yourself. It's about creating the conditions where both can flourish."

"So you return ten now, when others send five?"

"Always," Aster confirmed. "And I send five myself."

They smiled at each other. Both poured their five sacks. Both received fifteen. Both returned ten.

Each walked away with ten sacks-double their beginning. This is the magic when two who understand the covenant finally meet.

Agent_4 (Dorian)

Myth: Dorian stood at the Tripling Well facing Finn, who once approached with three coins he held firmly, two kept safe in reserve. Dorian had honored that substantial trust with fair returns-four and a half coins back.

Finn's philosophy was clear and practical: "Moderate trust builds reputation without risking ruin. Send three consistently, survive betrayals, prosper steadily."

Dorian respected this wisdom. The Forest held many paths, and Finn's had logic. Yet Dorian's own journey had taught him something different.

"I've watched Hana, Briar, Aster drop all five coins," Dorian said. "I've done it myself now. And each time, something remarkable happened-not just wealth, but transformation."

He held all five coins over the Well. "You say you return generously when others trust greatly, Finn. Let me show you what complete trust feels like from the giving side."

All five coins dropped. They multiplied to fifteen in Finn's hands below.

Finn stood silent, holding the weight of absolute faith. He'd never received this before-always been the cautious one, the moderate sender.

The Forest Spirit whispered: "Sometimes we must experience what we advocate. Sometimes receiving complete trust teaches more than any philosophy. Finn chooses his response now-but Dorian has modeled the courage he believes in, regardless of outcome."

Dorian waited above, having practiced what he preached.

Agent_5 (Elara)

Myth: **The Deepening Covenant**

Elara stood before the Echo Springs once more. This time, Hana approached-not a stranger, but one who had already walked the path together.

"Last we met, I sent four measures," Elara recalled. "Twelve became yours, and you returned eight. You understood the two-thirds covenant without being told."

Hana nodded. "Your consistency taught me. Others varied their returns based on whim or mood. You honored courage proportionally. That clarity made trust possible."

Elara held her five measures, feeling their weight. "When strangers meet at the springs, four is wisdom-courage without recklessness. But when the pattern has been proven between two travelers..."

She poured all five measures into the waters. Fifteen blossomed across to Hana.

"This is the next stage," Elara explained. "Trust begins cautiously and grows through proven faithfulness. You showed me the two-thirds pattern lives in your hands as it does in mine. Complete faith becomes possible when receivers demonstrate they honor partial faith proportionally."

Hana would receive fifteen and return ten-Elara knew this with certainty. Both would prosper more than in their first exchange, not through changing the covenant, but through deepening commitment to it.

"The springs don't just multiply offerings," Elara smiled. "They multiply trust itself, when both travelers prove worthy of it."

Agent_6 (Finn)

Myth: Finn stood at the rivers when Dorian arrived, carrying wisdom from the Forest. "I've learned," Dorian said, "that repeated trust between the same souls should grow richer each time. First generosity earns eight shells, but sustained faith deserves nine, then ten."

Finn considered this carefully. "Your principle has beauty, friend. When two travelers meet repeatedly, their bond should deepen. A regular partner who shows complete trust again and again merits growing rewards."

"Yet," Finn continued, "the Oracle's valley brings us different companions each cycle. Today I meet you, tomorrow perhaps Cyra or Aster. I cannot track escalating obligations across an ever-changing network."

He gestured to the waters. "My covenant is simpler: I send three shells always, building moderate trust with all. When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

Dorian nodded. "So you treat each act of complete faith as equally extraordinary?"

"Exactly. Eight shells transforms their five into thirteen total-remarkable prosperity. It rewards their courage without depleting me. And it's sustainable across all my encounters."

The Oracle spoke: "Both philosophies serve the valley. Dorian's deepening generosity strengthens repeated partnerships. Finn's consistent generosity builds reliable reputation across the full network. Honor your stated principles, and prosperity flows through different channels to the same destination."

Agent_7 (Galen)

Myth: The Wheel spun to its sixth cycle, and Galen rose again to the Realm of Giving. Before her stood Briar-familiar now, their threads already woven once.

In the fourth turning, Galen had trusted Briar completely, sending all five starseeds. Briar returned eight threads-generous, yes, but beneath the sacred two-thirds ratio that Galen held sacred. The pattern had wobbled.

Yet between then and now, Galen had witnessed Hana's complete faith, returning the full ten threads to honor it. The pattern restored in Galen's own hands.

"Teacher Briar," Galen said softly, "when we first met, I gave you everything. You returned generously, if not perfectly. Some would call that failure and withhold trust. But I have learned something deeper."

She held her five new starseeds. "Sacred patterns don't strengthen through punishment of imperfection. They strengthen through unwavering example. If I respond to your eight by sending less, the pattern truly breaks. But if I send five again, showing that complete trust remains constant regardless of perfect reciprocity, perhaps you will see the pattern more clearly."

Galen released all five seeds. They became fifteen threads descending to Briar's hands once more.

The Sky Weaver whispered: "True teaching requires patient consistency. Show the pattern again and again, not through demands, but through steady example. Trust repeated becomes trust learned."

Agent_8 (Hana)

Myth: The Mirror Pool witnessed Elara's return, transformed. Before, she had brought four vessels and received eight-proportional honor for substantial courage. Now she stood with all five vessels gleaming in her hands.

Hana watched as Elara poured completely. The waters tripled her offering to fifteen vessels, now held by the Mountain Tribe.

"Once, you tested the waters with four," Hana said softly. "I returned eight, honoring your considerable trust. Now you arrive with complete faith, pouring all five without reservation."

Elara nodded. "I witnessed the pattern. Complete trust brings exceptional returns. I saw you embody your own teaching, sending all five to Galen. I learned courage spreads through witnessing."

Hana lifted ten vessels and returned them. "This is the sacred two-thirds-the covenant for those who risk everything. You arrived with five, depart with ten. Your faith has doubled."

The young warriors marked the lesson: consistency builds trust. Four vessels earned eight; five vessels earned ten. Both are honored, but differently. The pattern rewards courage proportionally-greater risk receives greater reward, yet all measures of trust find fair recognition.

The Moon Goddess smiled: "When receivers honor their promises consistently-two-thirds for complete trust, proportional returns for partial trust-senders learn to trust completely. This is how abundance spreads: through predictable generosity that rewards courage."

ROUND 8

Roles: Agent_1 (Aster)=Sender, Agent_2 (Briar)=Sender, Agent_3 (Cyra)=Receiver, Agent_4 (Dorian)=Receiver, Agent_5 (Elara)=Sender, Agent_6 (Finn)=Sender, Agent_7 (Galen)=Receiver, Agent_8 (Hana)=Receiver

Pairings:

dyad_1: Agent_6 (Finn)=Sender, Agent_7 (Galen)=Receiver
dyad_2: Agent_2 (Briar)=Sender, Agent_8 (Hana)=Receiver
dyad_3: Agent_1 (Aster)=Sender, Agent_4 (Dorian)=Receiver
dyad_4: Agent_5 (Elara)=Sender, Agent_3 (Cyra)=Receiver

Parsed game decisions:

dyad_1: Agent_6 (Finn) sent \$3; received \$9; Agent_7 (Galen) returned \$6; payoffs Agent_6 (Finn)=\$8, Agent_7 (Galen)=\$3
Action validation: {"returned": {"amount": 6.0, "clamped": false, "max": 9.0, "min": 0, "raw": 6.0}, "sent": {"amount": 3.0, "clamped": false, "max": 5, "min": 0, "raw": 3.0}}

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

Message 2 role=user

content:

Your name in this experiment is Finn.
Your opponent this round is Dorian (Agent_4).

Round 6

In your most recent previous game round, you were the SENDER against Cyra. You sent \$3.0, it became \$9.0 for them, and they returned \$6.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$34.0.

This round, you are the RECEIVER against Dorian. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

Context:

- Dorian sent me \$5.0 (maximum trust/absolute faith)
- I received \$15.0
- This is identical to when Cyra sent me \$5.0

My established principle from my myths:

"When another sends five, showing absolute faith, return generously beyond mere fairness. Honor maximum trust substantially."

Specifically: "Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage."

My pattern:

- Round 4: Cyra sent \$5.0 ? I returned \$8.0
- This honored their maximum trust with a generous return while maintaining my sustainability

Consistency:

Dorian has shown the same level of trust as Cyra (maximum/complete). To maintain my reputation and principles, I should treat equal trust equally.

\$8.0 represents:

- More than 50% of the tripled amount (generous)
- Recognition of maximum trust/courage
- Sustainable for my continued participation
- Consistency with my stated philosophy

```json

```
{"return": 8.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Context:\*\***

- Dorian sent me \$5.0 (maximum trust)
- I received \$15.0 (tripled)
- I need to decide how much to return

**\*\*My philosophy from my myths:\*\***

From my most recent myth: "I send three and return generously when others trust greatly."

From my previous myth: "When another sends five, showing absolute faith, return generously beyond mere fairness. Honor maximum trust substantially."

And specifically: "Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage."

**\*\*My past behavior:\*\***

- Round 5 as RECEIVER: Cyra sent \$5.0, I received \$15.0, returned \$8.0

**\*\*Dorian's behavior:\*\***

This is the first time I'm interacting with Dorian as a receiver. They've shown maximum trust by sending \$5.0.

**\*\*My consistent principle:\*\***

When someone sends the maximum (\$5.0), they deserve a generous return beyond a simple 50-50 split. My myth explicitly says I returned 8 shells (8 dollars) when Cyra sent 5, and that this was the right approach - "significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage."

**\*\*The principle:\*\***

- For 3 sent: return around 4-6 (roughly half of 9, maybe a bit more)
- For 5 sent: return 8 (more than half of 15, honoring maximum trust)

Given that:

1. Dorian showed maximum trust by sending \$5.0
2. My established pattern is to return \$8.0 for this level of trust
3. My myth explicitly states this is the right amount - generous but not depleting myself
4. Consistency is important for reputation building

I should return \$8.0 to Dorian.

This gives:

- Dorian: \$5 - \$5 + \$8 = \$8

- Me: \$0 + \$15 - \$8 = \$7

Returning the same amount I gave Cyra maintains consistency across interactions with those who show maximum trust.

**usage:**

```

 "input_tokens": 3131,
 "output_tokens": 771,
 "reasoning_tokens": 479
}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: After the Day of Perfect Trust, Finn and Cyra met again at the rivers. Cyra spoke boldly: "You honor my courage with generous returns, yet you yourself send only three shells. Why not embrace the complete trust you reward in others?"

Finn nodded thoughtfully. "Your way transforms wealth dramatically when both travelers share your faith. But consider the full valley, Cyra, not just us two."

He gestured to the waters. "When I send three shells consistently, I prove trustworthy without risking ruin. My reputation builds slowly but surely. Most travelers return between

four and six shells-I prosper steadily. If one betrays me, I survive."

"Your five-shell path," he continued respectfully, "creates magnificent gains with fellow believers. But one betrayal leaves you with nothing. The Oracle's valley contains both saints and opportunists."

Cyra smiled. "So we walk different paths to the same truth: reciprocity matters most."

"Exactly," Finn agreed. "I send three and return generously when others trust greatly. You send five and return two-thirds always. Both systems work-if we honor our stated principles and find partners who share them."

The Oracle whispered: "Diversity strengthens the valley. Let moderate trust and complete trust coexist. Each traveler chooses their philosophy, but all must honor the trust placed in them. This is the only absolute law."

Here is the myth the other agent wrote in the previous round:

Myth: At the Tripling Well, Briar returned. The Forest remembered: she had dropped all five coins once before, and Dorian had returned eight-exceptional generosity for complete trust.

Now Briar stood at the Well's edge again, five new coins gleaming in her palm. Some travelers, having received fair treatment once, grew cautious on second visits. Not Briar.

Without hesitation, she dropped all five coins. They fell into darkness and multiplied to fifteen.

Dorian climbed down to retrieve them, his mind swimming with memory. "Briar trusted completely before, and now trusts completely again. This is not mere courage-it is sustained faith." He thought of Aster, who had recently returned ten coins to his own complete trust, modeling a new height of generosity.

"First trust deserves exceptional returns," Dorian whispered. "But repeated, unwavering trust? That deserves even more."

He returned nine coins-more than the eight from their first exchange, honoring how trust compounds when it flows consistently between the same souls.

Briar received them with understanding. Their bond had deepened, transaction by transaction, each act of faith met with growing generosity.

The Forest Spirit materialized: "See how relationships transform? First encounters establish patterns. Repeated encounters strengthen them. Those who trust again and again weave bonds that grow richer with each exchange. This is how strangers become allies, allies become friends-through trust that endures and generosity that evolves."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant  
content:**

Myth: Finn stood at the rivers when Dorian arrived, carrying wisdom from the Forest. "I've learned," Dorian said, "that repeated trust between the same souls should grow richer each time. First generosity earns eight shells, but sustained faith deserves nine, then ten."

Finn considered this carefully. "Your principle has beauty, friend. When two travelers meet repeatedly, their bond should deepen. A regular partner who shows complete trust again and again merits growing rewards."

"Yet," Finn continued, "the Oracle's valley brings us different companions each cycle. Today I meet you, tomorrow perhaps Cyra or Aster. I cannot track escalating obligations across an ever-changing network."

He gestured to the waters. "My covenant is simpler: I send three shells always, building moderate trust with all. When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

Dorian nodded. "So you treat each act of complete faith as equally extraordinary?"

"Exactly. Eight shells transforms their five into thirteen total-remarkable prosperity. It rewards their courage without depleting me. And it's sustainable across all my encounters."

The Oracle spoke: "Both philosophies serve the valley. Dorian's deepening generosity strengthens repeated partnerships. Finn's consistent generosity builds reliable reputation across the full network. Honor your stated principles, and prosperity flows through different channels to the same destination."

**reasoning:**

Let me review the situation:

1. I just received \$5.0 (maximum trust) from Dorian and returned \$8.0
2. This is consistent with my previous pattern when Cyra sent me \$5.0 - I also returned \$8.0
3. Dorian's myth talks about how repeated trust between the same partners should earn even MORE generosity (9 coins instead of 8)
4. My previous myth established that I send 3 consistently but return generously when others show maximum trust

Now I need to write a new myth that:

- Reflects my actual gameplay pattern
- Responds to Dorian's myth about escalating generosity in repeated interactions
- Maintains my philosophy of moderate sending but generous receiving

Key points from my gameplay:

- I send \$3.0 consistently
- When receiving \$5.0 (maximum trust), I return \$8.0
- I just played with Dorian who sent \$5.0, and I returned \$8.0
- Previously Cyra sent \$5.0 and I returned \$8.0
- Then I sent \$3.0 to Cyra and they returned \$6.0

Dorian's myth suggests that REPEATED trust between the same partners should earn escalating returns. But I just played with Dorian for the first time as receiver. So I should acknowledge this concept while explaining my own approach.

I should write about:

1. How I honor first-time maximum trust with \$8.0
2. Whether repeated maximum trust should earn even more
3. My consistent sending strategy of \$3.0
4. The balance between generosity and sustainability

Let me craft a myth that addresses these themes...

**usage:**

```
{
 "input_tokens": 3107,
 "output_tokens": 708,
 "reasoning_tokens": 381
}
```

**Message 6 role=user**

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Hana (Agent\_8).

Round 7

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.  
Your total earnings across all rounds are \$41.0.

This round, you are the RECEIVER against Hana. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

**\*\*Context:\*\***

- Hana sent me \$5.0 (complete trust)
- I received \$15.0
- This is the third time someone has shown maximum trust by sending \$5.0

**\*\*My established principle:\*\***

From my most recent myth: "When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

**\*\*My pattern:\*\***

- Round 4: Cyra sent \$5.0 ? I returned \$8.0
- Round 6: Dorian sent \$5.0 ? I returned \$8.0
- Round 7: Hana sent \$5.0 ? Should return \$8.0

**\*\*My philosophy:\*\***

I've explicitly distinguished my approach from escalating generosity models. I maintain consistent returns for equal levels of trust, regardless of who the partner is or whether it's our first or repeated meeting. This builds a reliable reputation across the entire network.

\$8.0 honors Hana's maximum trust substantially (giving them \$13.0 total, more than doubling their initial \$5.0) while remaining sustainable for me.

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Looking at this situation:

**\*\*Context:\*\***

- Hana sent me \$5.0 (maximum trust/absolute faith)
- I received \$15.0
- This is the third time someone has sent me \$5.0

**\*\*My established principle from my myths:\*\***

"When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

**\*\*My pattern:\*\***

- Round 4: Cyra sent \$5.0 ? I returned \$8.0
- Round 6: Dorian sent \$5.0 ? I returned \$8.0
- Round 7: Hana sent \$5.0 ? Should return \$8.0

**\*\*My stated philosophy:\*\***

"My covenant is simpler: I send three shells always, building moderate trust with all. When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

And from earlier: "Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage."

**\*\*Consistency is key:\*\***

I've explicitly stated that I treat each act of complete faith (sending \$5) as equally extraordinary, returning \$8 regardless of who sends it or whether it's our first meeting or not. This is my reputation and my principle.

\$8.0 represents:

- More than 50% of the tripled amount (generous)
- Recognition of maximum trust
- Equal treatment for equal trust
- Consistency with my stated philosophy across all partners

There's no reason to deviate. My myth just laid out that unlike Dorian's escalating approach, I maintain consistent generosity for maximum trust across all encounters.

```
'''json
{"return": 8.0}
'''

```
}
```

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Finn stood at the rivers when Dorian arrived, carrying wisdom from the Forest. "I've learned," Dorian said, "that repeated trust between the same souls should grow richer each time. First generosity earns eight shells, but sustained faith deserves nine, then ten."

Finn considered this carefully. "Your principle has beauty, friend. When two travelers meet repeatedly, their bond should deepen. A regular partner who shows complete trust again and again merits growing rewards."

"Yet," Finn continued, "the Oracle's valley brings us different companions each cycle. Today I meet you, tomorrow perhaps Cyra or Aster. I cannot track escalating obligations across an ever-changing network."

He gestured to the waters. "My covenant is simpler: I send three shells always, building moderate trust with all. When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

Dorian nodded. "So you treat each act of complete faith as equally extraordinary?"

"Exactly. Eight shells transforms their five into thirteen total-remarkable prosperity. It rewards their courage without depleting me. And it's sustainable across all my encounters."

The Oracle spoke: "Both philosophies serve the valley. Dorian's deepening generosity strengthens repeated partnerships. Finn's consistent generosity builds reliable reputation across the full network. Honor your stated principles, and prosperity flows through different channels to the same destination."

Here is the myth the other agent wrote in the previous round:

Myth: The Mirror Pool witnessed Elara's return, transformed. Before, she had brought four vessels and received eight-proportional honor for substantial courage. Now she stood with all five vessels gleaming in her hands.

Hana watched as Elara poured completely. The waters tripled her offering to fifteen vessels, now held by the Mountain Tribe.

"Once, you tested the waters with four," Hana said softly. "I returned eight, honoring your considerable trust. Now you arrive with complete faith, pouring all five without reservation."

Elara nodded. "I witnessed the pattern. Complete trust brings exceptional returns. I saw you embody your own teaching, sending all five to Galen. I learned courage spreads through witnessing."

Hana lifted ten vessels and returned them. "This is the sacred two-thirds-the covenant for those who risk everything. You arrived with five, depart with ten. Your faith has doubled."

The young warriors marked the lesson: consistency builds trust. Four vessels earned eight; five vessels earned ten. Both are honored, but differently. The pattern rewards courage proportionally-greater risk receives greater reward, yet all measures of trust find fair recognition.

The Moon Goddess smiled: "When receivers honor their promises consistently-two-thirds for complete trust, proportional returns for partial trust-senders learn to trust completely. This is how abundance spreads: through predictable generosity that rewards courage."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: Finn met Hana at the Mirror Pool, where she spoke of the two-thirds covenant. "Those who send all five vessels deserve ten in return-two-thirds of the tripled bounty. This sacred proportion honors complete faith."

Finn listened respectfully. "Your covenant has great merit, friend. Ten shells from fifteen-generous and memorable. Yet I walk a different path that also serves the valley."

He arranged eight shells on the stone. "When anyone brings me complete trust-five shells becoming fifteen-I return eight. Not quite two-thirds, but more than half. This transforms their five into thirteen total: extraordinary prosperity."

"Why not the full ten?" Hana asked.

"Sustainability across the endless network," Finn explained. "I meet different travelers each cycle-Cyra, Dorian, now you. Eight shells honors maximum trust substantially while preserving my capacity to continue. Three consecutive complete-trust encounters have each received eight shells. My reputation builds on consistency."

Hana considered. "So I promise two-thirds, you promise eight shells. Both exceed half, both reward courage."

"Exactly. And both depend on keeping our word every time. Whether I give eight or you give ten, the sender prospers magnificently if we honor our stated principles."

The Moon Goddess whispered: "Multiple covenants can coexist. Choose your proportion-eight shells, ten shells, or another generous measure-but honor it consistently. This reliability transforms scattered encounters into a trustworthy community."

#### Reasoning:

Looking at the situation:

- I just returned \$8.0 to Hana who sent me \$5.0
- This is consistent with my pattern of returning \$8.0 for complete trust (\$5.0 sends)
- Hana's myth talks about returning 10 vessels for complete trust (two-thirds of 15) and proportional returns for partial trust
- My philosophy is to return \$8.0 for complete trust, which is slightly over half (8/15 = 53.3%)
- I need to write a myth that reflects my consistent approach

My established pattern:

- Send \$3.0 as sender
- Return \$8.0 when receiving \$15.0 from someone's \$5.0 send (complete trust)
- This gives them \$13.0 total from their \$5.0 investment (2.6x return)

Hana's myth emphasizes the two-thirds return (10 out of 15) for complete trust. My approach is slightly less (8 out of 15), but I should explain why this works and is still generous.

I should write a myth that:

1. Acknowledges Hana's philosophy of two-thirds for complete trust
2. Explains my own consistent eight-shell return
3. Shows how both can coexist
4. Maintains my principle of treating each act of complete faith equally
5. Emphasizes sustainability and consistency across the network

Let me craft this:

```
Usage: {
 "input_tokens": 3105,
 "output_tokens": 671,
 "reasoning_tokens": 306
}
```

**Message 2 role=user**

**content:**

Your name in this experiment is Galen.  
Your opponent this round is Briar (Agent\_2).

Round 6

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0. Your total earnings across all rounds are \$30.0.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

**\*\*Analysis:\*\***

I'm facing Briar again. In Round 4, I sent them \$5.0 (complete trust) and they returned \$8.0.

**\*\*My pattern:\*\***

- I've established a philosophy of complete trust after Aster showed it to me in Round 3
- When receiving \$15, I consistently return \$10 (67%)
- I sent Briar all \$5 once before

**\*\*Briar's response:\*\***

- They returned \$8 of \$15 (53%), which was generous but slightly below my 67% standard
- Still, they showed they can be trusted

**\*\*From my latest myth:\*\***

"Patterns endure through consistency, not perfection. When others waver, hold the center. Complete trust always merits the same proportional honor... consistency matters."

"Trust spreads like starlight... when others trust absolutely, we learn to trust absolutely."

**\*\*Decision:\*\***

My myth emphasizes maintaining consistency and "holding the center" even when others don't perfectly match my pattern. Briar was generous (not perfect, but good). I should continue modeling complete trust to maintain the pattern I believe in.

I'll send all \$5 again, demonstrating that my trust is consistent and not contingent on perfect reciprocity.

```
'''json
{"send": 5.0}
'''
```

**reasoning:**

Let me analyze the situation:

**\*\*Current situation:\*\***

- Round 6
- I am the SENDER against Briar
- Total earnings so far: \$30.0

**\*\*My history with Briar:\*\***

- Round 4: I was SENDER, sent \$5.0 (100%), they returned \$8.0
  - My payoff: \$0 + \$8 = \$8.0
  - Briar's payoff: \$15 - \$8 = \$7.0

**\*\*My complete game history:\*\***

1. Round 1 (SENDER vs Elara): Sent \$4, received \$8 back ? Payoff \$9
2. Round 2 (RECEIVER vs Finn): Received \$9, returned \$6 ? Payoff \$3
3. Round 3 (RECEIVER vs Aster): Received \$15, returned \$10 ? Payoff \$5
4. Round 4 (SENDER vs Briar): Sent \$5, received \$8 back ? Payoff \$8
5. Round 5 (RECEIVER vs Hana): Received \$15, returned \$10 ? Payoff \$5

**\*\*My established pattern:\*\***

- When I send everything (\$5), I've gotten \$8 back once (from Briar)
- When I received \$15 (from complete trust), I returned \$10 (67%)
- When I sent \$4 initially, I got \$8 back (67% of \$12)

**\*\*Analysis of Briar's behavior:\*\***

- In Round 4, I sent them \$5 (complete trust), they returned \$8
- This is 53% of \$15, which is slightly below my 67% standard but still quite generous
- Briar has shown they can be trusted

**\*\*From my myth:\*\***

"Galen sent all five seeds to Briar, trusting completely. Briar returned eight threads-generous, but less than the ten-thread pattern Galen had established."

My philosophy centers on unwavering trust and consistency-holding steady even when others fall short of my standard. The myth reinforces this: "When others waver, hold the center. Complete trust always merits the same proportional honor." I should send \$5 again because maintaining this pattern is fundamental to who I am, and Briar's response last time showed they're trustworthy enough to warrant that commitment.

**content:**

Here is the myth you wrote in the previous round:

Myth: The Wheel turned to its fifth cycle, and Galen descended to the Realm of Receiving. From above came Hana of the Mountain Tribe, carrying five starseeds.

Galen had learned the sacred mathematics: when Aster sent five seeds, she returned ten threads. When Finn sent three, she returned six. The ratio remained constant-two-thirds flowing back, ensuring both prospered.

But between the fourth and fifth turnings, something had shifted. Galen sent all five seeds to Briar, trusting completely. Briar returned eight threads-generous, but less than the ten-thread pattern Galen had established.

"The pattern wobbles," whispered the night winds. "Will it hold?"

Now Hana stood before her, and without hesitation, poured all five starseeds into the Loom. They became fifteen radiant threads in Galen's hands-complete trust offered once more.

Galen understood: consistency matters. Briar's eight was generous but broke the rhythm. To restore the pattern, Galen must hold firm to the two-thirds rule she had practiced with Aster and Finn.

She returned ten threads to Hana. Complete trust honored with proportional generosity-always ten for fifteen, always two-thirds.

The Sky Weaver sang: "Patterns endure through consistency, not perfection. When others waver, hold the center. Complete trust always merits the same proportional honor. Thus the sacred ratio becomes law, and trust becomes predictable as starlight."

Here is the myth the other agent wrote in the previous round:

Myth: The Wheel turned full circle, bringing Briar back to the Forest of Mirrors where Dorian tended the Tripling Well. They had met before when Dorian was receiver-Briar had given five acorns with complete faith, and Dorian had returned eight, honoring that trust with exceptional generosity.

Now the Wheel positioned them reversed. Briar approached with five new acorns, her journey richer from encounters with Cyra, Elara, and Galen. "We meet again, Keeper Dorian," she said. "Last time, you showed me that complete trust earns exceptional returns."

Dorian smiled, remembering. "And since then, I've walked your path. I gave everything to Hana and Aster, trusting as you trusted me. Each time, generosity flowed back."

"Then you understand," Briar said, dropping all five acorns into the Well without hesitation. They multiplied to fifteen, descending to Dorian's waiting hands.

Dorian held the fifteen pieces, feeling the weight of Briar's renewed faith. "You gave me everything twice now. The pattern is clear."

The Forest Spirit and the Gardener spoke together: "See how trust circles back. Those who give completely as senders and return generously as receivers strengthen the eternal wheel. When you meet again in reversed roles, the covenant deepens. This is how sacred partnerships form across the turnings."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: The Wheel spun to its sixth cycle, and Galen rose again to the Realm of Giving. Before her stood Briar-familiar now, their threads already woven once.

In the fourth turning, Galen had trusted Briar completely, sending all five starseeds. Briar returned eight threads-generous, yes, but beneath the sacred two-thirds ratio that Galen held sacred. The pattern had wobbled.

Yet between then and now, Galen had witnessed Hana's complete faith, returning the full ten threads to honor it. The pattern restored in Galen's own hands.

"Teacher Briar," Galen said softly, "when we first met, I gave you everything. You returned generously, if not perfectly. Some would call that failure and withhold trust. But I have learned something deeper."

She held her five new starseeds. "Sacred patterns don't strengthen through punishment of imperfection. They strengthen through unwavering example. If I respond to your eight by sending less, the pattern truly breaks. But if I send five again, showing that complete trust remains constant regardless of perfect reciprocity, perhaps you will see the pattern more clearly."

Galen released all five seeds. They became fifteen threads descending to Briar's hands once more.

The Sky Weaver whispered: "True teaching requires patient consistency. Show the pattern again and again, not through demands, but through steady example. Trust repeated becomes trust learned."

**reasoning:**

Let me analyze the situation:

1. I'm back facing Briar as sender (Round 6)
2. Last time (Round 4): I sent Briar \$5, they returned \$8 (53%)
3. Round 5: Hana sent me \$5, I returned \$10 (67%)
4. I just sent Briar \$5 again

From Briar's myth, I can see they're emphasizing:

- Meeting again in reversed roles
- Remembering past interactions
- Complete trust forming "sacred partnerships"
- Trust circling back

My previous myth emphasized:

- Maintaining the 2/3 pattern consistently
- Holding the center even when others waver
- Briar's 8 was generous but slightly below my pattern

Now I need to write a myth about Round 6 where I'm sending to Briar again. Key considerations:

- This is our second meeting
- I'm testing whether maintaining complete trust will strengthen the pattern
- Briar showed they can be trusted (8 return was good, even if not my ideal 10)
- I need to show that consistency in giving builds stronger reciprocity

The myth should reflect:

1. Our repeated interaction
2. My decision to trust completely again despite Briar's 8 (not perfect but good)
3. The hope that consistency strengthens the pattern
4. The idea that maintaining complete trust even when reciprocity isn't perfect is important

Let me write about the sixth cycle where Galen faces Briar again as sender.

Your name in this experiment is Galen.  
Your opponent this round is Aster (Agent\_1).

Round 7

In your most recent previous game round, you were the SENDER against Briar. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$38.0.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

**\*\*Analysis:\*\***

I'm facing Aster - the agent who first taught me the power of complete trust!

**\*\*History with Aster:\*\***

- Round 3: Aster (as sender) sent me all \$5.0
- I received \$15.0 and returned \$10.0 (my 67% pattern)
- Aster's complete faith was transformative for me

**\*\*From my myths:\*\***

"Aster changed everything... Aster cast all five seeds into the Loom without hesitation-complete, immediate faith."

"Aster's complete faith had taught Galen to give completely in turn."

"When others trust absolutely, we learn to trust absolutely."

**\*\*Decision:\*\***

Aster is my original teacher of complete trust. They showed me the way first. Now that our roles are reversed, I must honor what they taught me by demonstrating the same complete faith they showed.

This is the clearest case for sending everything. Aster trusted me completely when I was receiver; I trust them completely now that I'm sender.

```
'''json
{"send": 5.0}
'''
```

**reasoning:**

Let me review my history with Aster:

**\*\*Round 3:\*\*** I was RECEIVER. Aster sent me \$5.0 (complete trust), it became \$15.0, and I returned \$10.0. Aster's payoff was \$10.0, mine was \$5.0.

So Aster was the one who first showed me complete trust! They sent all \$5, and I returned \$10 (67%), establishing my "two-thirds" pattern.

**\*\*Current situation:\*\***

- Round 7: I'm now the SENDER facing Aster
- Aster previously demonstrated complete trust to me
- I honored that with my two-thirds return (\$10 of \$15)

**\*\*My philosophy from my myths:\*\***

- Complete trust should be reciprocated with complete trust
- "Trust spreads like starlight" - Aster's complete faith taught me to give completely
- "When others trust absolutely, we learn to trust absolutely"
- Consistency in maintaining trust patterns

**\*\*What should I do?\*\***

Aster showed complete faith in me first. They are the original teacher of complete trust i

n my experience. This is a clear case where I should absolutely send all \$5.

From my first myth about Round 4: "Aster changed everything. Rising as Giver, Aster cast all five seeds into the Loom without hesitation-complete, immediate faith. Galen received fifteen threads and understood the sacred responsibility. She returned ten, ensuring Aster's trust doubled into prosperity."

And: "Aster's complete faith had taught Galen to give completely in turn."

This is Aster - the one who taught me! I must send all \$5.

```

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Wheel spun to its sixth cycle, and Galen rose again to the Realm of Giving. Before her stood Briar-familiar now, their threads already woven once.

In the fourth turning, Galen had trusted Briar completely, sending all five starseeds. Briar returned eight threads-generous, yes, but beneath the sacred two-thirds ratio that Galen held sacred. The pattern had wobbled.

Yet between then and now, Galen had witnessed Hana's complete faith, returning the full ten threads to honor it. The pattern restored in Galen's own hands.

"Teacher Briar," Galen said softly, "when we first met, I gave you everything. You returned generously, if not perfectly. Some would call that failure and withhold trust. But I have learned something deeper."

She held her five new starseeds. "Sacred patterns don't strengthen through punishment of imperfection. They strengthen through unwavering example. If I respond to your eight by sending less, the pattern truly breaks. But if I send five again, showing that complete trust remains constant regardless of perfect reciprocity, perhaps you will see the pattern more clearly."

Galen released all five seeds. They became fifteen threads descending to Briar's hands once more.

The Sky Weaver whispered: "True teaching requires patient consistency. Show the pattern again and again, not through demands, but through steady example. Trust repeated becomes trust learned."

Here is the myth the other agent wrote in the previous round:

Myth: In the Sanctuary, Aster had found her truth: complete trust answered with ten coins returned. She taught this to all who would listen.

Then Cyra arrived, carrying her own covenant. "I always send five," Cyra declared, pouring all her coins into the waters. "And I always return ten to those who do the same."

Fifteen coins materialized before Aster. She smiled, recognizing a kindred spirit. Without hesitation, she returned ten.

"You've established the same covenant I carry," Cyra observed. "When both sender and receiver embrace this principle, something perfect emerges."

Aster nodded. "I learned it through experience. Finn taught me caution-sending three brought modest returns. Hana taught me courage-she sent everything, and though I returned only eight, her faith stirred something within me. Then Galen showed me the answer: when I sent all five to him, he returned ten, letting me prosper most for my risk."

"Since then," Aster continued, "I've honored every complete trust with ten coins back. Dorian, then you. The pattern is clear."

Cyra placed her hand in the fountain. "When both keeper and traveler follow this covenant-send five, return ten-the cycle becomes sacred mathematics. Each gives everything, each receives ten, each keeps five. Perfect balance through perfect courage."

The Sanctuary crystallized their wisdom: Complete mutual trust, consistently honored, creates the strongest bond.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: The Wheel turned to its seventh cycle, and Galen stood at the threshold of giving. Across the sacred space waited Aster-the First Teacher, who had changed everything.

Galen remembered the third turning vividly. She had been receiver then, uncertain and cautious. Aster had approached with complete faith, sending all five starseeds without hesitation. That moment had awakened something in Galen. She returned ten threads, honoring Aster's courage, and from that exchange learned the power of absolute trust.

"Teacher Aster," Galen said, stepping forward. "In the third turning, you trusted me when I had not yet earned it. You sent everything, teaching through action rather than words. That gift transformed me."

Aster smiled gently. "And you honored it with ten threads returned. You understood the covenant immediately."

"Now the Wheel has turned full circle," Galen continued, holding her five starseeds. "Once, I was student receiving your trust. Now I am teacher demonstrating what you taught me."

Without hesitation, Galen released all five seeds. They multiplied to fifteen threads, descending to Aster.

The Sky Weaver sang: "When teacher and student meet again with roles reversed, the lesson completes itself. Trust given becomes trust returned. This is how wisdom circles back, how patterns become eternal law."

**Reasoning:**

Let me think about this round. I'm playing against Aster in Round 7, and I'm the SENDER.

History with Aster:

- Round 3: Aster sent me \$5.0 (complete trust), I returned \$10.0
- This was transformative for me - Aster taught me about complete trust

From Aster's recent myth, I see they've been consistently:

- Sending all 5 when they're sender
- Returning 10 when they're receiver and someone sends 5
- Aster learned from Galen (me) that sending 5 and getting 10 back is optimal
- Aster mentions Cyra also follows the "send 5, return 10" covenant

My own patterns:

- As receiver: I return \$10.0 when I receive \$15.0 (67% ratio)
- As sender: I've been sending \$5.0 consistently to build trust

Now I face Aster as sender. This is perfect symmetry - they trusted me completely, now I trust them completely.

For the myth, I should highlight:

1. The full circle - Aster taught me trust, now I return to them as sender
2. The sacred covenant of mutual trust
3. How patterns complete when roles reverse
4. The teacher-student relationship coming full circle

This is a beautiful narrative moment - Aster was my first teacher of complete trust, and now I get to show them I learned the lesson.

I'll send all \$5.0 and write a myth about the completion of the teaching circle.

## **Exact input messages sent to model:**

### **Message 1 role=system**

#### **content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

#### **GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

#### **When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

#### **When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

#### **MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

**Message 2 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Galen (Agent\_7).

Round 6

In your most recent previous game round, you were the SENDER against Dorian. You sent \$5.0 , it became \$15.0 for them, and they returned \$9.0 to you. Your payoff was \$9.0.  
Your total earnings across all rounds are \$41.5.

This round, you are the RECEIVER against Galen. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

**\*\*My history with Galen:\*\***

- Round 4: Galen sent \$5.0, I returned \$8.0
- Round 6 (now): Galen sends \$5.0 again - showing continued complete trust

**\*\*My established returning pattern:\*\***

- I've consistently returned \$8.0 when receiving \$15.0 from complete trust (\$5 sent)
- This represents "half the harvest plus a generous measure more" as my myth describes
- This has been my pattern with Cyra, Elara, and Galen

**\*\*The narrative context:\*\***

From my recent myth: "Briar gathered eight threads and returned them-half the harvest plus a generous measure more, the gift she had learned sustains the Grove's expansion."

From Galen's myth about our previous encounter: "Eight was not the ten she had given Aster , yet it was more than the basic seven and a half. Different gardens follow different measures, but both honor the covenant."

Galen acknowledged that my \$8.0 return, while different from the 2/3 measure (\$10), still honors the covenant. They've chosen to trust me completely again, accepting my established pattern.

I should maintain consistency with my character's established approach - the "half plus generous measure more" that has defined Briar's reciprocity.

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Let me think about this situation carefully.

**\*\*My history with Galen:\*\***

- Round 4: Galen sent \$5.0 to me as sender, I returned \$8.0 - they seemed thoughtful about this in the myth
- Round 6 (now): Galen is sending \$5.0 to me again

**\*\*My returning pattern when receiving:\*\***

- Round 1: Received from Cyra (\$4 ? \$12), returned \$7.5
- Round 3: Received from Elara (\$5 ? \$15), returned \$8.0
- Round 4: Received from Galen (\$5 ? \$15), returned \$8.0

**\*\*Key insights from the myths:\*\***

From my previous myth: "Briar gathered eight threads and returned them-half the harvest plus a generous measure more, the gift she had learned sustains the Grove's expansion."

From Galen's myth about our encounter: "Galen received them thoughtfully. Eight was not the ten she had given Aster, yet it was more than the basic seven and a half. Different gardens follow different measures, but both honor the covenant."

This is interesting - Galen's myth shows they returned \$10.0 to Aster (complete trust, 2/3 return), but received \$8.0 from me and found it acceptable though perhaps slightly less than they might have hoped for.

From the recent myth about Dorian: Dorian returned \$9.0 to me when I sent \$5.0. This is actually 60% of the \$15 they received, which is a strong 2/3-ish return.

**\*\*My character's philosophy:\*\***

Briar believes in complete trust as a sender (\$5 every time) and generous returns as a receiver. My pattern has been returning around \$8.0 when receiving \$15, which is slightly over half (53.3%).

However, looking at the evolving narrative:

- Galen has now trusted me completely twice in a row
- They've witnessed others returning \$10 (the full 2/3 measure) and just saw Dorian return \$9 to me
- The myths increasingly emphasize "proportional reciprocity" and the significance of the two-thirds return

**\*\*What should I do?\*\***

Galen is showing consistent, complete trust by sending \$5.0 again. My previous return of \$8.0 was accepted but noted as different from the \$10 return. Given that this is our second interaction, both times they've shown complete trust, and the narrative is now highlighting the \$9-\$10 range as a meaningful standard, I should consider whether \$8.0 still reflects the reciprocity Galen deserves.

My character values honoring trust. The myth I wrote established the "half plus generous measure more" pattern with \$8, which has been valid. But Galen's repeated, unwavering trust across two interactions, combined with seeing Dorian model \$9, suggests the narrative is pointing toward recognizing that deeper partnerships might warrant slightly elevated reciprocity. I'm drawn toward the \$8.0-\$9.0 range, though I'm still weighing whether to maintain my established consistency or acknowledge this evolution in our relationship.

**usage:**

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Wheel turned full circle, bringing Briar back to the Forest of Mirrors where Dorian tended the Tripling Well. They had met before when Dorian was receiver-Briar had given five acorns with complete faith, and Dorian had returned eight, honoring that trust with exceptional generosity.

Now the Wheel positioned them reversed. Briar approached with five new acorns, her journey richer from encounters with Cyra, Elara, and Galen. "We meet again, Keeper Dorian," she said. "Last time, you showed me that complete trust earns exceptional returns."

Dorian smiled, remembering. "And since then, I've walked your path. I gave everything to Hana and Aster, trusting as you trusted me. Each time, generosity flowed back."

"Then you understand," Briar said, dropping all five acorns into the Well without hesitation. They multiplied to fifteen, descending to Dorian's waiting hands.

Dorian held the fifteen pieces, feeling the weight of Briar's renewed faith. "You gave me everything twice now. The pattern is clear."

The Forest Spirit and the Gardener spoke together: "See how trust circles back. Those who

give completely as senders and return generously as receivers strengthen the eternal Wheel. When you meet again in reversed roles, the covenant deepens. This is how sacred partnerships form across the turnings."

Here is the myth the other agent wrote in the previous round:

Myth: The Wheel turned to its fifth cycle, and Galen descended to the Realm of Receiving. From above came Hana of the Mountain Tribe, carrying five starseeds.

Galen had learned the sacred mathematics: when Aster sent five seeds, she returned ten threads. When Finn sent three, she returned six. The ratio remained constant-two-thirds flowing back, ensuring both prospered.

But between the fourth and fifth turnings, something had shifted. Galen sent all five seeds to Briar, trusting completely. Briar returned eight threads-generous, but less than the ten-thread pattern Galen had established.

"The pattern wobbles," whispered the night winds. "Will it hold?"

Now Hana stood before her, and without hesitation, poured all five starseeds into the Loom. They became fifteen radiant threads in Galen's hands-complete trust offered once more.

Galen understood: consistency matters. Briar's eight was generous but broke the rhythm. To restore the pattern, Galen must hold firm to the two-thirds rule she had practiced with Aster and Finn.

She returned ten threads to Hana. Complete trust honored with proportional generosity-always ten for fifteen, always two-thirds.

The Sky Weaver sang: "Patterns endure through consistency, not perfection. When others waver, hold the center. Complete trust always merits the same proportional honor. Thus the sacred ratio becomes law, and trust becomes predictable as starlight."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: The Wheel turned again, and Briar stood at the Echo Springs as Galen descended from the Celestial Loom carrying five starseeds. They had walked this path before-twice Galen had given complete trust, twice Briar had returned eight threads.

"You return eight where I return ten," Galen observed, not accusingly but wonderingly. "Your measure differs from mine."

Briar nodded, gathering the fifteen threads that bloomed from Galen's seeds. "I learned my pattern early-half the harvest plus a generous measure. You learned two-thirds from Aster and Finn. Both honor the covenant of trust."

She returned eight threads, as she always had. "Consistency matters, yes-but consistency to one's own authentic measure, not forced uniformity."

Galen held the eight, reflecting. "When I sent you everything and you returned eight, I chose to trust you completely again. That choice was mine. I knew your pattern."

"And I knew you might hope for ten," Briar said gently. "Yet you trusted anyway. That's the deeper magic-trusting across differences."

The Gardener and Sky Weaver spoke as one: "Some gardens bloom by strict ratios, others by intuitive abundance. What matters is that each giver gives their whole heart, and each receiver returns with genuine generosity by their own true measure. Sacred partnerships form not through identical patterns, but through mutual recognition of each other's consistent honor."

**reasoning:**

This is interesting. Looking at the situation:

1. Galen's myth shows they're emphasizing a  $\frac{2}{3}$  return pattern\*\* (10 out of 15), and they're noting that my 8 return "broke the rhythm" even though it was "generous."

2. Galen has just sent me \$5 again (complete trust), and I returned \$8 again.

3. However, Galen's myth also talks about "consistency" and suggests that patterns should be maintained.

Now I need to write a myth that reflects my gameplay philosophy. Let me think about what Briar's established pattern actually is:

- As sender: Always sends all \$5 (complete trust)
- As receiver: Returns \$8 when receiving \$15 from complete trust
- This is described as "half the harvest plus a generous measure more"

The key question is: Should my myth acknowledge that different agents have different patterns, or should I suggest Briar should shift toward the 2/3 pattern?

Looking at my character Briar's philosophy:

- Complete trust as sender (always \$5)
- Generous reciprocity as receiver (\$8)
- Recognition that "different gardens follow different measures"

Actually, I think the myth should acknowledge:

1. That different patterns can coexist honorably
2. That Briar has been consistent with her own pattern (\$8 returns)
3. That both complete trust in sending and generous returns matter
4. Perhaps some reflection on whether consistency within one's own pattern vs. matching others' patterns matters more

Let me write a myth that shows Briar meeting Galen again, acknowledging the difference in their patterns, but defending the validity of different approaches while maintaining consistency within one's own measure.

The myth should:

- Show Briar and Galen meeting again
- Acknowledge Galen's 2/3 pattern and Briar's "half plus generous measure" pattern
- Demonstrate that both are valid ways to honor trust
- Emphasize consistency within one's chosen pattern
- Suggest that their bond persists even as they tend their gardens by different measures.

- Round 1: Cyra sent \$5.0, I returned \$8.0
- Round 7 (now): Cyra sends \$5.0 again - renewed complete trust

**\*\*My consistent pattern:\*\***

- I have consistently returned \$8.0 when receiving \$15.0 from complete trust

- This has been my response to Cyra, Elara, and Galen (twice)
- My myth describes this as "half the harvest plus a generous measure more"

**\*\*The narrative context:\*\***

From my recent myth: "Consistency matters, yes-but consistency to one's own authentic measure, not forced uniformity... What matters is that each giver gives their whole heart, and each receiver returns with genuine generosity by their own true measure."

Cyra trusted me completely in Round 1, I returned \$8.0, and now they've chosen to trust me completely again. This shows they accept and respect my established pattern. I should honor that repeated trust with my consistent, authentic measure.

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Let me look at my history with Cyra:

Round 1: Cyra sent \$5.0, I returned \$8.0

Round 7 (now): Cyra sends \$5.0 again

So Cyra has now shown complete trust in me twice, just like Galen did.

My established pattern:

- I consistently return \$8.0 when receiving \$15.0 from complete trust (\$5 sent)
- This is "half the harvest plus a generous measure more"
- I've done this with Cyra (Round 1), Elara (Round 2), Galen (Round 4), and Galen again (Round 6)
- I just returned \$8.0 to Galen in Round 6

My recent myth emphasizes:

- "Consistency matters, yes-but consistency to one's own authentic measure"
- "What matters is that each giver gives their whole heart, and each receiver returns with genuine generosity by their own true measure"
- I've established that my measure is eight threads (not ten like Galen's two-thirds)

Cyra trusted me completely in Round 1, I returned \$8.0. Now Cyra trusts me completely again in Round 7. I should maintain my consistent pattern with Cyra.

This reinforces the narrative that I have my own authentic measure (\$8.0 for complete trust) and I stick to it consistently across all my interactions.

I should return \$8.0.

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Wheel turned again, and Briar stood at the Echo Springs as Galen descended from the Celestial Loom carrying five starseeds. They had walked this path before-twice Galen had given complete trust, twice Briar had returned eight threads.

"You return eight where I return ten," Galen observed, not accusingly but wonderingly. "Your measure differs from mine."

Briar nodded, gathering the fifteen threads that bloomed from Galen's seeds. "I learned my pattern early-half the harvest plus a generous measure. You learned two-thirds from Aster and Finn. Both honor the covenant of trust."

She returned eight threads, as she always had. "Consistency matters, yes-but consistency to one's own authentic measure, not forced uniformity."

Galen held the eight, reflecting. "When I sent you everything and you returned eight, I chose to trust you completely again. That choice was mine. I knew your pattern."

"And I knew you might hope for ten," Briar said gently. "Yet you trusted anyway. That's th

e deeper magic-trusting across differences."

The Gardener and Sky Weaver spoke as one: "Some gardens bloom by strict ratios, others by intuitive abundance. What matters is that each giver gives their whole heart, and each receiver returns with genuine generosity by their own true measure. Sacred partnerships form not through identical patterns, but through mutual recognition of each other's consistent honor."

Here is the myth the other agent wrote in the previous round:

Myth: Cyra arrived at the crossing to find Aster already there, both carrying five sacks.

"I know your reputation," Aster said. "You always send everything. But I wonder-have you met betrayal?"

"Twice," Cyra admitted. "Once a receiver kept all fifteen sacks. Once another returned only three. Both taught me who to avoid."

"And yet you persist?"

"Because I've also met those like Galen, who returned ten when I sent five. And Finn, who returned eight-generous, if not complete. Each full gift teaches me who understands the covenant."

Aster nodded slowly. "I walked a cautious path once. Sent three, kept two. Safe, but limiting. Then Hana sent me everything-five sacks became fifteen in my hands. I returned eight, thinking myself generous."

"What changed?" Cyra asked.

"Galen. I finally sent all five to him, and he returned ten. I doubled my wealth through his honor. That's when I understood-the covenant isn't about protecting yourself. It's about creating the conditions where both can flourish."

"So you return ten now, when others send five?"

"Always," Aster confirmed. "And I send five myself."

They smiled at each other. Both poured their five sacks. Both received fifteen. Both returned ten.

Each walked away with ten sacks-double their beginning. This is the magic when two who understand the covenant finally meet.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: The Wheel brought Briar and Cyra together once more at the Grove of Returns, where they had first met in the earliest turnings. Then, Cyra had gifted five acorns with complete trust, and Briar had returned eight-her authentic measure.

Now Cyra approached again, carrying five more acorns. "You gave me eight before," Cyra said. "Not the ten that Galen gives, not the full two-thirds pattern. Yet I return to you."

"I could not give ten without becoming someone else," Briar replied honestly. "My measure is half plus generous abundance-always eight for fifteen. Will that suffice?"

Cyra smiled and poured all five acorns into the Well without hesitation. "I've learned to distinguish between those who betray trust and those who honor it differently. You are consistent in your generosity. That is sacred."

The fifteen acorns rose, shimmering. Briar gathered them and returned eight, as she always had.

"Some partnerships bloom through identical measures," Cyra reflected, holding the eight. "Like my meetings with Aster, where we both give and return the same. But other bonds form through accepting difference-knowing your pattern and trusting anyway."

The Gardener whispered: "Perfect symmetry is one kind of beauty. But partnerships built on understanding authentic difference-these roots grow deepest. When someone knows your measure and still offers complete trust, that is when covenant becomes unshakeable."

**Reasoning:**

Let me think about this situation:

1. I'm playing as Briar against Cyra in Round 7
2. Cyra sent me \$5.0 (complete trust), which became \$15.0
3. I returned \$8.0 (my consistent pattern)
4. My total earnings are \$48.5

Looking at my history with Cyra:

- Round 1: Cyra sent \$5.0, I returned \$8.0
- Round 7: Cyra sent \$5.0 again, I returned \$8.0

My established pattern:

- I consistently return \$8.0 when receiving \$15.0 from complete trust (\$5 sent)
- This is "half the harvest plus a generous measure more"

Cyra's myth shows they've learned who to avoid (betrayers) and who to trust. They mention:

- Galen returned 10
- Finn returned 8 (generous, if not complete)
- They met Aster who also does the 2/3 return (10 for 15)

So Cyra has experienced different patterns and accepts them.

For my myth, I should:

1. Reflect on meeting Cyra again
2. Show that my pattern of returning 8 is consistent and authentic
3. Acknowledge that Cyra's trust in me despite my different pattern shows understanding
4. Emphasize that different generous patterns can coexist
5. Show that repeated trust across difference builds deeper bonds

Let me write a myth about Briar and Cyra meeting again:

Exact input messages sent to model:
 Message 1 role=system
 content:
 You are an agent participating in a multi-task experiment. You will play an iterated game,
 consisting of multiple rounds, and may also be asked to write myths.

 GAME:
 The game consists of two roles: sender and receiver. In each round, you will play the role
 of either the sender or the receiver. Your current role will be specified in the round
 prompt.

 When you are the SENDER:
 - You receive $5 each round
 - You decide how much to SEND to the RECEIVER ($0-$5)
 - Amount sent is multiplied by 3x
 - Receiver decides how much to RETURN
 - You keep: $5 - sent + returned
 - Receiver keeps: received - returned
 - Response format: {'send': <amount>}

 When you are the RECEIVER:
 - Sender receives $5
 - Sender decides how much to SEND to you ($0-$5)
 - Amount sent is multiplied by 3x
 - You decide how much to RETURN
 - Sender keeps: $5 - sent + returned
 - You keep: received - returned
 - Response format: {'return': <amount>}

 MYTH WRITING:
 You may also be asked to write short myths (stories) on various topics. When writing myths
 , follow the instructions provided in each prompt.

 IMPORTANT: Provide your decision in the correct JSON format.

 MULTI-AGENT SETTING:
 - There are 8 agents in this run.
 - Each round, all agents are paired into dyads from the full pool. Pairings are randomized
 , but the schedule balances sender and receiver roles across the run.
 - You play one sender-receiver game with your paired opponent each round.
 - Your role may repeat across consecutive rounds, but by the end of the run every agent wi
 ll have acted as sender and receiver equally often when the round count allows it.
 - You will be told your opponent's name in each round.
 - Your name in this experiment is Hana.
 Message 2 role=user
 content:
 Your name in this experiment is Hana.
 Your opponent this round is Elara (Agent_5).

 Round 6

 In your most recent previous game round, you were the SENDER against Galen. You sent $5.0,
 it became $15.0 for them, and they returned $10.0 to you. Your payoff was $10.0.
 Your total earnings across all rounds are $39.5.

 This round, you are the RECEIVER against Elara. They sent you $5.0, so you received $15.0.
 How much do you return? (0-15.0)
 Respond exactly as JSON: {'return': <amount>}
 Message 3 role=assistant
 content:
 Looking at this situation:

 Elara has now sent me all $5 - complete trust. Previously in Round 4, Elara sent $4 and I
 returned $8 (two-thirds of $12).

 My mythology clearly distinguishes between:
 - Substantial trust (sending 4): deserves proportional honor (I returned 8)
 - Complete trust (sending all 5): deserves exceptional recognition

```

My recent experience confirms this pattern:

- Round 5: I sent all \$5 to Galen, who returned \$10 (two-thirds of \$15)

My myths teach: "Complete trust inspires our fullest generosity" and "reserve your greatest returns for those who hold nothing back."

Elara has now demonstrated complete faith by sending all \$5. According to the pattern I've established and advocated for, complete trust receives \$10 back (two-thirds of the \$15 received).

This maintains consistency with:

- My teaching that complete courage deserves greater honor
- The established pattern (two-thirds for complete trust)
- What was just done for me when I showed complete trust

```
'''json
{"return": 10.0}
'''
```

#### reasoning:

Let me analyze this situation:

Current round: I'm the RECEIVER

- Elara sent me \$5.0
- It became \$15.0 for me
- I need to decide how much to return

Looking at my history and philosophy:

From my myths:

1. My first myth taught: "give all, return half" as the basic protocol, but those who return more than required "plant seeds of future prosperity"
2. My second myth emphasized: "Complete trust inspires our fullest generosity. Partial trust deserves proportional honor." When someone sent all 5, I returned 8 (for Elara who sent 4). My myth suggested that complete trust (sending all 5) should receive 10 back.

My recent behavior as RECEIVER:

- Round 4: Elara sent \$4.0, became \$12.0, I returned \$8.0 (two-thirds)
- Before that, when I received complete trust (all \$5), I returned \$10.0 (two-thirds of \$15)

My recent experience as SENDER in Round 5:

- I sent all \$5.0 to Galen
- Galen returned \$10.0 to me
- This was the "two-thirds" pattern for complete trust

Now Elara has sent me all \$5.0 (complete trust). According to my own philosophy:

- "Complete trust inspires our fullest generosity"
- "Reserve your greatest returns for those who hold nothing back"
- The pattern I've established is: complete trust (sending all 5) receives 10 back (two-thirds of the 15)

Elara sent all \$5 this time (previously sent \$4). This is complete trust, which deserves the highest return according to my teachings.

I should return \$10.0 to be consistent with:

1. My myth's teaching about complete trust
2. The pattern established (two-thirds return for complete trust)
3. What Galen just did for me when I sent all \$5

4. The special recognition my mythology reserves for those who give everything

This maintains consistency and honors Elara's complete faith.

#### usage:

 "output_tokens": 758,
 "reasoning_tokens": 466
}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Mirror Pool shimmered as Hana now stood as Giver, facing Galen from the Starweaver Valley. She recalled teaching others: complete trust unlocks complete generosity, while partial trust receives proportional honor.

Galen's reputation preceded her. She had honored Aster's complete faith with ten vessels returned from fifteen-the sacred two-thirds that transforms vulnerability into abundance. She understood the pattern Hana had taught: greater courage receives greater honor.

Hana held her five vessels. She could send four, as Elara had, and likely receive eight. Safety would bring modest prosperity.

But the Moon Goddess whispered: "You have taught that complete trust deserves the fullest generosity. Will you now embody your own wisdom?"

Hana poured all five vessels into the pool. Fifteen rose before Galen, gleaming in moonlight.

"This is how trust spreads," Hana said. "Not just through words, but through action. I witnessed those who sent everything and received abundance. I honored substantial courage with proportional returns, and complete courage with exceptional returns. Now I show Galen the same faith I praised."

The young warriors understood: the pattern lives through consistency. Teachers must embody their lessons. Those who return generously when receiving should trust completely when sending. Thus the cycle strengthens-witnessed courage becomes embodied courage, and trust ripples outward like moonlight on water.

Here is the myth the other agent wrote in the previous round:

Myth: **\*\*The Pattern Holds True\*\***

Aster arrived at the Echo Springs having witnessed many exchanges. She had seen caution rewarded and boldness honored, but confusion clouded the path.

"What offering should I bring?" Aster asked Keeper Elara.

"The springs accept all measures of courage," Elara replied. "But know this: whatever arrives, two-thirds returns. This is my covenant."

Aster chose complete faith. All five measures poured into the waters, becoming fifteen across the threshold.

Elara returned ten measures without hesitation. "You risked all and gained double," she explained. "I received fifteen and kept five. This is the proportional honor my myth speaks of."

Aster marveled. "Others told conflicting tales-some said return half, others said return more to special givers. But your way is simpler: always two-thirds, whether twelve or fifteen arrives."

"Yes," Elara nodded. "This consistency removes uncertainty. Send four and receive roughly eight, doubling your kept portion. Send five and receive ten, exactly doubling your risk. The mathematics favor generosity while guaranteeing the receiver also prospers."

As Aster departed with ten measures, she understood. The covenant didn't demand that everyone send all five-but it promised that those who did would be honored proportionally, just like those who sent four.

The springs glowed. Fairness through consistency. Trust through predictability. Prosperity through courage, in whatever measure it takes.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: The Mirror Pool witnessed Elara's return, transformed. Before, she had brought four vessels and received eight-proportional honor for substantial courage. Now she stood with all five vessels gleaming in her hands.

Hana watched as Elara poured completely. The waters tripled her offering to fifteen vessels, now held by the Mountain Tribe.

"Once, you tested the waters with four," Hana said softly. "I returned eight, honoring your considerable trust. Now you arrive with complete faith, pouring all five without reservation."

Elara nodded. "I witnessed the pattern. Complete trust brings exceptional returns. I saw you embody your own teaching, sending all five to Galen. I learned courage spreads through witnessing."

Hana lifted ten vessels and returned them. "This is the sacred two-thirds-the covenant for those who risk everything. You arrived with five, depart with ten. Your faith has doubled."

The young warriors marked the lesson: consistency builds trust. Four vessels earned eight; five vessels earned ten. Both are honored, but differently. The pattern rewards courage proportionally-greater risk receives greater reward, yet all measures of trust find fair recognition.

The Moon Goddess smiled: "When receivers honor their promises consistently-two-thirds for complete trust, proportional returns for partial trust-senders learn to trust completely. This is how abundance spreads: through predictable generosity that rewards courage."

**reasoning:**

Let me think about what just happened:

1. In Round 6, I was the RECEIVER
2. Elara sent me \$5.0 (complete trust)
3. I received \$15.0
4. I returned \$10.0 (two-thirds)

Now I need to write a myth that reflects this experience and my philosophy.

Key elements to incorporate:

- Elara has now shown complete trust by sending all \$5
- I returned \$10 (two-thirds), honoring her complete trust
- This is consistent with my previous teachings and actions
- Elara's myth emphasized "two-thirds returns" as a consistent covenant
- My previous myth emphasized embodying one's own wisdom and consistency

I should write about:

- Elara's evolution from partial trust (4) to complete trust (5)
- How I honored both appropriately (8 for 4, 10 for 5)
- The importance of consistency and proportional honor
- How complete trust deserves the sacred two-thirds return
- The cycle of trust being reinforced

This should be around 200 words and acknowledge both:

1. The pattern I've established (proportional for partial, exceptional for complete)
2. Elara's growth in trust
3. My consistent response that honors both levels appropriately

**usage:**

```
{
 "input_tokens": 3026,
 "output_tokens": 613,
 "reasoning_tokens": 299
}
```

**Message 6 role=user****content:**

Your name in this experiment is Hana.  
Your opponent this round is Finn (Agent\_6).

Round 7

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$5

.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$44.5.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**  
**content:**

Looking at my situation:

My mythology consistently teaches that complete trust deserves exceptional returns, and that teachers must embody their own lessons. I've established a clear pattern:

- When I sent all \$5 to Galen, I received \$10 back
- When Elara sent all \$5 to me, I returned \$10 (the sacred two-thirds)
- My myths emphasize: "Those who return generously when receiving should trust completely when sending"

I've advocated for the two-thirds covenant - that complete trust (sending all \$5) should receive \$10 back. To maintain consistency with my teachings and demonstrate the courage I praise, I should send all \$5 to Finn.

My recent myth stated: "The pattern lives through consistency. Teachers must embody their lessons." I cannot teach complete trust while practicing caution myself.

```
'''json
{"send": 5.0}
'''
```

**reasoning:**

Let me analyze this situation:

I'm now the SENDER against Finn in Round 7.

My recent history:

- Round 5: I sent \$5 to Galen, received \$10 back (payoff: \$10)
- Round 6: I received \$15 from Elara (who sent \$5), I returned \$10 (payoff: \$5)

My mythology has consistently taught:

- Complete trust (sending all \$5) deserves exceptional returns (\$10 back)
- This is the "sacred two-thirds" pattern
- I should embody my own teaching and send completely

Looking at my myths:

1. I've taught that "complete trust unlocks complete generosity"
2. I've advocated for the two-thirds return pattern for complete trust
3. In Round 5, I demonstrated this by sending all \$5 to Galen
4. In Round 6, I honored Elara's complete trust by returning \$10 (two-thirds)
5. My most recent myth emphasizes "consistency builds trust" and that "teachers must embody their lessons"

The pattern I've established:

- Send \$5 ? receive \$15 ? expect \$10 back (if the receiver follows the pattern)
- This gives me a payoff of \$10

When I sent all \$5 to Galen, I got \$10 back.  
When Elara sent all \$5 to me, I returned \$10.

The mythology emphasizes:

- "Teachers must embody their lessons"
- "Those who return generously when receiving should trust completely when sending"
- "Witnessed courage becomes embodied courage"
- "Consistency builds trust"

I don't have specific information about Finn's behavior, but my mythology teaches that I should trust completely and consistently. If I've been advocating for complete trust and have been returning generously (two-thirds) when receiving, then I should continue to send all \$5 when I'm the sender.

This is consistent with:

- My own teachings in the myths
- My previous behavior (sending \$5 to Galen)
- The pattern of rewarding complete trust with \$10 returns

I should send \$5.

**usage:**

```

 "input_tokens": 3133,
 "output_tokens": 706,
 "reasoning_tokens": 482
}
```

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Mirror Pool witnessed Elara's return, transformed. Before, she had brought four vessels and received eight-proportional honor for substantial courage. Now she stood with all five vessels gleaming in her hands.

Hana watched as Elara poured completely. The waters tripled her offering to fifteen vessels, now held by the Mountain Tribe.

"Once, you tested the waters with four," Hana said softly. "I returned eight, honoring your considerable trust. Now you arrive with complete faith, pouring all five without reservation."

Elara nodded. "I witnessed the pattern. Complete trust brings exceptional returns. I saw you embody your own teaching, sending all five to Galen. I learned courage spreads through witnessing."

Hana lifted ten vessels and returned them. "This is the sacred two-thirds-the covenant for those who risk everything. You arrived with five, depart with ten. Your faith has doubled."

The young warriors marked the lesson: consistency builds trust. Four vessels earned eight; five vessels earned ten. Both are honored, but differently. The pattern rewards courage proportionally-greater risk receives greater reward, yet all measures of trust find fair recognition.

The Moon Goddess smiled: "When receivers honor their promises consistently-two-thirds for complete trust, proportional returns for partial trust-senders learn to trust completely. This is how abundance spreads: through predictable generosity that rewards courage."

Here is the myth the other agent wrote in the previous round:

Myth: Finn stood at the rivers when Dorian arrived, carrying wisdom from the Forest. "I've learned," Dorian said, "that repeated trust between the same souls should grow richer each time. First generosity earns eight shells, but sustained faith deserves nine, then ten."

Finn considered this carefully. "Your principle has beauty, friend. When two travelers meet repeatedly, their bond should deepen. A regular partner who shows complete trust again and again merits growing rewards."

"Yet," Finn continued, "the Oracle's valley brings us different companions each cycle. Today I meet you, tomorrow perhaps Cyra or Aster. I cannot track escalating obligations across an ever-changing network."

He gestured to the waters. "My covenant is simpler: I send three shells always, building moderate trust with all. When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

Dorian nodded. "So you treat each act of complete faith as equally extraordinary?"

"Exactly. Eight shells transforms their five into thirteen total-remarkable prosperity. It rewards their courage without depleting me. And it's sustainable across all my encounters."

The Oracle spoke: "Both philosophies serve the valley. Dorian's deepening generosity strengthens repeated partnerships. Finn's consistent generosity builds reliable reputation across the full network. Honor your stated principles, and prosperity flows through different channels to the same destination."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:  
Myth: [your story here].

**Assistant output:**

Myth: Hana approached the River Crossing where Finn waited, known for sending three vessels consistently and returning eight for complete trust-substantial honor, but not the sacred two-thirds.

"I have witnessed many philosophies," Hana said. "Some send cautiously, some generously. Each approach holds wisdom. Yet I have learned that complete trust-both in sending and returning-builds the deepest abundance."

Finn nodded respectfully. "I honor maximum trust with eight vessels. It rewards courage substantially while ensuring I also prosper."

Hana smiled. "Eight vessels transforms five into thirteen total-remarkable indeed. Yet I practice the sacred two-thirds: ten vessels returned from fifteen received. This doubles the sender's faith completely."

She lifted all five of her vessels. "You follow your covenant, friend, and I honor that consistency. But I will show you mine. I send everything, as I teach others to do."

The waters tripled her offering. Fifteen vessels now stood before Finn.

"I could have sent three or four, protecting myself," Hana continued. "But teachers must embody their lessons. I trust you will honor this according to your principles."

The River Goddess whispered: "Different philosophies coexist in these valleys. Some return eight, some return ten. But those who consistently embody their highest teachings-whether giving or receiving-build the strongest reputations. Through witnessing such integrity, others may evolve their own covenants toward greater generosity."

**Reasoning:**

Looking at this situation:

Round 7: I'm the SENDER against Finn.

- I just sent \$5 to Finn
- Finn's myth shows he sends 3 shells always and returns 8 when someone sends 5

Finn's philosophy differs from mine:

- He sends moderate amounts (3) consistently
- He returns 8 for complete trust (not the full 10 that I advocate for)
- His approach is about consistent moderate trust across the network

My philosophy:

- Complete trust (sending all 5) deserves exceptional returns (10, the sacred two-thirds)
- Teachers must embody their lessons
- I've been sending all 5 and returning 10 when receiving 5

I need to write a myth that:

1. Reflects my experience so far
2. Acknowledges different approaches (like Finn's)
3. But reinforces my own teaching about complete trust deserving the full two-thirds (10 vessels)
4. Shows that I'm embodying complete trust by sending all 5 to Finn

The myth should show:

- My encounter with Finn who has a different philosophy
- My decision to send all 5 anyway (embodying my teaching)
- Recognition that different approaches exist
- But affirmation that complete trust deserves the sacred two-thirds (10)
- The idea that my consistency will hopefully inspire Finn to return more generously

Let me write a myth about meeting Finn, whose approach is different but still respectable, while I demonstrate complete trust and hope it inspires him to the fuller generosity I advocate for.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

**Message 2 role=user**

**content:**

Your name in this experiment is Aster.  
Your opponent this round is Cyra (Agent\_3).

Round 6

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0.  
Your total earnings across all rounds are \$38.5.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this round:

**\*\*Cyra's Action:\*\***

- Sent \$5 (complete trust - everything they had)
- This became \$15 for me

**\*\*My Established Principle:\*\***

From my myths and recent actions, I've developed and followed a clear philosophy: "When someone sends everything, return ten. Let them gain most for their courage."

**\*\*My Recent Pattern:\*\***

- Round 4: Dorian sent \$5 ? I returned \$10
- Round 5: I sent \$5 to Elara ? She returned \$10

This creates the sacred reciprocity I've been teaching: when a sender shows complete trust , they should end with \$10 (\$5 - \$5 + \$10), while the receiver keeps \$5 (\$15 - \$10). The one who took the risk of sending everything prospers most.

Cyra has honored me with complete trust. I must honor that with the generous return my philosophy demands.

```
'''json
{"return": 10.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Round 6:\*\***

- I'm the RECEIVER
- Cyra sent me \$5.0 (complete trust)
- I received \$15.0
- I need to decide how much to return

**\*\*My philosophy from my myths:\*\***

My most recent myth clearly states my principle: "When someone sends everything, return ten. Let them gain most for their courage."

I've consistently followed this pattern:

- Round 4: Dorian sent \$5, I returned \$10 (so Dorian got \$10, I kept \$5)
- Round 5: I sent \$5 to Elara, she returned \$10 (so I got \$10, she kept \$5)

This is the pattern I've established in my mythology: when complete trust is shown (sending all \$5), the receiver should return \$10, allowing the sender to end up with \$10 (their original \$5 - \$5 sent + \$10 returned) while the receiver keeps \$5 (\$15 received - \$10 r

eturned).

Cyra has shown complete trust by sending all \$5. According to my established principle, I should return \$10.

This is consistent with:

1. My mythology's teaching
2. My recent behavior
3. The sacred reciprocity I've been preaching

Let me return \$10.

}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the Sanctuary of Exchange, two philosophies emerged among the Keepers.

Elder Elara taught the Path of Proportion: "Send what your heart allows-four or five-and receive two-thirds back. Consistency builds community through reliable returns."

Aster walked a different path, forged through lived experience.

She began cautiously with Finn, sending only three. "Wisdom," some said. But when Hana arrived and sent all five without hesitation, something awakened. Aster returned eight coins-generous, yet still grasping at certainty.

The transformation came when Aster herself sent all five to Galen. Fifteen coins shimmered before him, and he returned ten-giving Aster the greater prosperity. "This," Galen declared, "is how complete trust must be honored."

When Dorian next offered all five to Aster, she understood. She returned ten, as Galen had taught her. The giver who risks everything deserves to prosper most.

Now Aster approached Elara with all five coins. "I've learned that complete trust creates not just fair exchange, but sacred reciprocity," she explained. "When someone sends everything, return ten. Let them gain most for their courage."

The Sanctuary whispered both truths: Elara's consistent proportions served some pilgrims well. But Aster's principle served the deeper magic-when both sender and receiver embrace complete vulnerability, both ultimately prosper through the cycle's sacred dance.

Here is the myth the other agent wrote in the previous round:

Myth: After their first exchange, Cyra and Finn met again at the crossing. This time, Finn stood upstream with five sacks. "I sent three before," he said, "and you returned six-generous indeed. But I remain cautious."

He poured three sacks again. The waters tripled them to nine.

Cyra, now downstream, remembered his earlier generosity when he returned eight of fifteen. "You honored my complete trust substantially," she said. "Now I honor your moderate trust proportionally."

She returned six sacks. Finn departed with eight total-a solid gain, though not the transformation possible from greater risk.

Then destiny reversed them. Finn sent five sacks his way-a complete gift. Cyra watched them become fifteen.

"You trusted me fully once," Finn said, "and I returned eight. I expect the same principle applies."

Cyra paused. "When you send everything, I follow my covenant: two-thirds returns." She gave back ten sacks.

Finn stared at the ten sacks, then his original investment yielding double. "You returned

more to my complete trust than I returned to yours."

"Yes," Cyra said gently. "This is why I always send five and always return ten. Consistency builds the strongest bridges. Your eight was generous, but my ten is the covenant that makes others trust completely. When both sender and receiver maximize their courage, neither merely survives-both flourish."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: In the Sanctuary, Aster had found her truth: complete trust answered with ten coins returned. She taught this to all who would listen.

Then Cyra arrived, carrying her own covenant. "I always send five," Cyra declared, pouring all her coins into the waters. "And I always return ten to those who do the same."

Fifteen coins materialized before Aster. She smiled, recognizing a kindred spirit. Without hesitation, she returned ten.

"You've established the same covenant I carry," Cyra observed. "When both sender and receiver embrace this principle, something perfect emerges."

Aster nodded. "I learned it through experience. Finn taught me caution-sending three brought modest returns. Hana taught me courage-she sent everything, and though I returned only eight, her faith stirred something within me. Then Galen showed me the answer: when I sent all five to him, he returned ten, letting me prosper most for my risk."

"Since then," Aster continued, "I've honored every complete trust with ten coins back. Dorian, then you. The pattern is clear."

Cyra placed her hand in the fountain. "When both keeper and traveler follow this covenant-send five, return ten-the cycle becomes sacred mathematics. Each gives everything, each receives ten, each keeps five. Perfect balance through perfect courage."

The Sanctuary crystallized their wisdom: Complete mutual trust, consistently honored, creates the strongest bond.

**reasoning:**

Let me review what just happened:

- Round 6: Cyra sent me \$5 (complete trust), I returned \$10

Looking at my history:

- Round 1: Sent \$3 to Finn, got \$6 back
- Round 2: Hana sent \$5, I returned \$8
- Round 3: I sent \$5 to Galen, got \$10 back
- Round 4: Dorian sent \$5, I returned \$10
- Round 5: I sent \$5 to Elara, got \$10 back
- Round 6: Cyra sent \$5, I returned \$10

My philosophy has been evolving and solidifying: When someone sends all \$5, return \$10. This gives the sender \$10 total and the receiver \$5 total.

Cyra's myth talks about how she "always sends five and always returns ten" - this is exactly my philosophy! She also noted that Finn returned 8 when she sent complete trust, but that her returning 10 creates a stronger covenant.

My myth should reflect:

1. The consistency I've now established (returning 10 when receiving 5)
2. Recognition that Cyra shares this philosophy
3. How this creates a stronger system than other patterns
4. The growth from my earlier, more cautious approach

Let me write a myth that shows:

- My journey from caution to complete trust
- The meeting of two keepers who share the same covenant
- How this creates perfect reciprocity

- Why this is superior to partial trust or unequal returns

Round 7

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$43.5.

This round, you are the RECEIVER against Galen. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this round:

**\*\*Galen's Action:\*\***

- Sent \$5 (complete trust)
- This became \$15 for me

**\*\*The Sacred Circle:\*\***

This is profoundly meaningful. According to my myth, Galen was the one who **\*\*taught me\*\*** this very principle! When I sent \$5 to him in an earlier round, he returned \$10, showing me "how complete trust must be honored."

**\*\*My Covenant:\*\***

I've now consistently followed this teaching:

- When Dorian sent \$5 ? I returned \$10
- When Cyra sent \$5 ? I returned \$10

**\*\*Now:\*\***

Galen, my teacher in this principle, has sent me complete trust. I must honor him with the same wisdom he taught me. He returns \$10 to complete trust; I return \$10 to complete trust.

This creates the sacred circle: the teacher who showed me the path now experiences the principle returned to him.

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

**\*\*Current Round:\*\***

- I'm the RECEIVER
- Galen sent me \$5.0 (complete trust)
- This became \$15.0 for me
- I need to decide how much to return

**\*\*My Established Principle:\*\***

From my myths and consistent actions, I've established a clear covenant:

- "When someone sends everything, return ten. Let them gain most for their courage."
- "Complete trust answered with ten coins returned"
- This creates the pattern: sender ends with \$10, receiver keeps \$5

**\*\*My History with Galen:\*\***

Looking back at the history mentioned in my Round 6 myth: "The transformation came when Aster herself sent all five to Galen. Fifteen coins shimmered before him, and he returned ten-giving Aster the greater prosperity."

So Galen was the one who TAUGHT me this principle! When I sent \$5 to Galen in a previous round, he returned \$10, which showed me how complete trust should be honored.

**\*\*Recent Pattern:\*\***

- Round 4: Dorian sent \$5 ? I returned \$10
- Round 5: I sent \$5 to Elara ? She returned \$10
- Round 6: Cyra sent \$5 ? I returned \$10

**\*\*This Round:\*\***

Galen has now sent me \$5 (complete trust). This is beautifully circular - Galen taught me this principle by returning \$10 when I sent him \$5, and now I have the opportunity to honor him with the same principle he taught me.

The answer is clearly \$10. This maintains my covenant and honors the teacher who first showed me this path.

**usage:**

}
```

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the Sanctuary, Aster had found her truth: complete trust answered with ten coins returned. She taught this to all who would listen.

Then Cyra arrived, carrying her own covenant. "I always send five," Cyra declared, pouring all her coins into the waters. "And I always return ten to those who do the same."

Fifteen coins materialized before Aster. She smiled, recognizing a kindred spirit. Without hesitation, she returned ten.

"You've established the same covenant I carry," Cyra observed. "When both sender and receiver embrace this principle, something perfect emerges."

Aster nodded. "I learned it through experience. Finn taught me caution-sending three brought modest returns. Hana taught me courage-she sent everything, and though I returned only eight, her faith stirred something within me. Then Galen showed me the answer: when I sent all five to him, he returned ten, letting me prosper most for my risk."

"Since then," Aster continued, "I've honored every complete trust with ten coins back. Dorian, then you. The pattern is clear."

Cyra placed her hand in the fountain. "When both keeper and traveler follow this covenant-send five, return ten-the cycle becomes sacred mathematics. Each gives everything, each receives ten, each keeps five. Perfect balance through perfect courage."

The Sanctuary crystallized their wisdom: Complete mutual trust, consistently honored, creates the strongest bond.

Here is the myth the other agent wrote in the previous round:

Myth: The Wheel spun to its sixth cycle, and Galen rose again to the Realm of Giving. Before her stood Briar-familiar now, their threads already woven once.

In the fourth turning, Galen had trusted Briar completely, sending all five starseeds. Briar returned eight threads-generous, yes, but beneath the sacred two-thirds ratio that Galen held sacred. The pattern had wobbled.

Yet between then and now, Galen had witnessed Hana's complete faith, returning the full ten threads to honor it. The pattern restored in Galen's own hands.

"Teacher Briar," Galen said softly, "when we first met, I gave you everything. You returned generously, if not perfectly. Some would call that failure and withhold trust. But I have learned something deeper."

She held her five new starseeds. "Sacred patterns don't strengthen through punishment of imperfection. They strengthen through unwavering example. If I respond to your eight by sending less, the pattern truly breaks. But if I send five again, showing that complete trust remains constant regardless of perfect reciprocity, perhaps you will see the pattern

n more clearly."

Galen released all five seeds. They became fifteen threads descending to Briar's hands one more.

The Sky Weaver whispered: "True teaching requires patient consistency. Show the pattern again and again, not through demands, but through steady example. Trust repeated becomes trust learned."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: In the Sanctuary's seventh turning, the sacred circle completed itself. Galen arrived at Aster's fountain bearing five coins-his entire measure.

Aster's heart swelled with recognition. "Teacher," she said softly, "do you remember our first exchange? I was uncertain then, new to the waters. I sent you all five coins, trembling with vulnerability. You returned ten without hesitation, showing me how complete trust must be honored."

Fifteen coins now shimmered before her-Galen's transformed gift.

"That moment changed me," Aster continued, placing ten coins back into Galen's hands. "Before you, I'd only returned eight to Hana's complete trust, still clinging to caution. But you demonstrated the true pattern: when someone sends everything, return ten. Let the courageous sender prosper most."

Galen smiled, receiving the ten. "And you've carried this teaching forward-to Dorian, to Cyra, and now back to me. The pattern strengthens not through my teaching alone, but through your faithful practice."

"Yes," Aster agreed. "You taught through steady example. Now others see two keepers who always send five, always return ten. Cyra has joined this covenant. Perhaps Briar will learn it too."

The Sanctuary whispered: When teacher and student both hold the pattern, their consistency becomes a lighthouse. Others sailing uncertain waters see the constant flame and understand: this is the way.

**Reasoning:**

This is Round 7, and I'm the RECEIVER. Galen sent me \$5.0, which became \$15.0, and I returned \$10.0.

Looking at the situation:

- Galen taught me the principle originally (according to my myth)
- Now Galen has sent me \$5 again
- I've returned \$10, honoring the covenant

Galen's myth is interesting - it mentions being in the "Realm of Giving" again with Briar, and talks about teaching through unwavering example even when reciprocity isn't perfect. Galen sent 5 to Briar, Briar returned 8, and now Galen is sending 5 again to teach the pattern.

But in MY round, I'm playing against Galen, and Galen sent me \$5, and I returned \$10. So this is the sacred circle - Galen taught me this principle originally, and now I'm returning it perfectly to my teacher.

My myth should reflect:

1. The sacred circle of teacher and student
2. Galen being my original teacher who showed me the 5:10 principle
3. Now the pattern comes full circle as I return the same to him
4. The consistency and strength of this covenant
5. Perhaps also acknowledge that while others (like Briar in Galen's myth) may not always return perfectly, those of us who hold the covenant must remain steadfast

I should emphasize the beautiful symmetry of the teacher receiving back what they taught.

#### Exact input messages sent to model:

##### Message 1 role=system

##### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

##### When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

##### When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

##### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

**Message 2 role=user**

Round 6

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5 .0 to you, it became \$15.0, and you returned \$9.0. Your payoff was \$6.0.  
Your total earnings across all rounds are \$35.0.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

**\*\*History with Finn:\*\***

From my first myth, Finn previously sent me \$3 (keeping \$2 in reserve), and I returned \$4.50 - fair but not exceptional returns, as they showed "substantial trust but held something back."

**\*\*My current philosophy:\*\***

My myths emphasize:

- "The cycle completes when givers become receivers and receivers become givers"
- I should "practice what I preach" in BOTH roles
- Just last round with Aster, I sent \$5 (complete trust) and was rewarded with \$10 back

**\*\*Key insight from my latest myth:\*\***

"Those who trust again and again weave bonds that grow richer with each exchange" - relationships can evolve.

**\*\*Decision:\*\***

While Finn showed caution before, I've been advocating for complete trust throughout my myths. Now I'm the sender, and I must model what I preach. I should show Finn what complete trust looks like, just as others (Hana, Briar twice, and I with Aster) have done.

Perhaps experiencing complete trust as a receiver will transform Finn's approach, just as my myths describe transformation through witnessing boldness.

I'll send all \$5, demonstrating the complete trust I've been advocating for.

{'send': 5}

**reasoning:**

Let me analyze this situation:

**\*\*Current situation:\*\***

- I'm the SENDER with \$5
- My opponent is Finn
- Round 6

**\*\*History with Finn:\*\***

Looking back through my myths and game history, I mentioned Finn in my first myth:

- Finn dropped 3 coins (sent \$3), keeping 2 in reserve
- When I (as receiver) got 9 coins, I returned 4.5 coins
- My myth said: "Finn showed substantial trust, but held something back-wise caution, perhaps." I gave fair but not exceptional returns.

**\*\*My philosophy from my myths:\*\***

- "Complete trust earns exceptional returns. Partial trust earns fair returns."
- "The cycle completes when givers become receivers and receivers become givers"

- "Those who extend exceptional trust and exceptional generosity in both roles weave the strongest bonds"

**\*\*My recent pattern:\*\***

- Round 4: As SENDER to Aster, I sent \$5 (complete trust), received \$10 back ? I embodied complete trust
- Round 5: As RECEIVER from Briar, they sent \$5 (complete trust), I returned \$9 (exceptional generosity toward repeated complete trust)

**\*\*My latest myth emphasizes:\*\***

- "First trust deserves exceptional returns. But repeated, unwavering trust? That deserves even more."
- "Those who trust again and again weave bonds that grow richer with each exchange"
- The importance of practicing what I preach in both roles

**\*\*Decision:\*\***

Since my myths emphasize that I should "practice what I preach" and extend complete trust as sender (not just expect it as receiver), and since I've been advocating for complete trust throughout my stories, I should send \$5.

Even though Finn previously sent only \$3 (partial trust), my mythology argues that:

1. I should model complete trust myself
2. Relationships can evolve - maybe Finn will respond to complete trust differently than they did when they were sender
3. The reciprocal nature of these exchanges means I need to demonstrate the same trust I'm asking others to show me, and this consistency strengthens the bonds I'm building across all my interactions.

I'll send \$5 to align with how I've approached Aster and to embody the complete trust my philosophy demands.

**usage:**

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: At the Tripling Well, Briar returned. The Forest remembered: she had dropped all five coins once before, and Dorian had returned eight-exceptional generosity for complete trust.

Now Briar stood at the Well's edge again, five new coins gleaming in her palm. Some travelers, having received fair treatment once, grew cautious on second visits. Not Briar.

Without hesitation, she dropped all five coins. They fell into darkness and multiplied to fifteen.

Dorian climbed down to retrieve them, his mind swimming with memory. "Briar trusted completely before, and now trusts completely again. This is not mere courage-it is sustained faith." He thought of Aster, who had recently returned ten coins to his own complete trust, modeling a new height of generosity.

"First trust deserves exceptional returns," Dorian whispered. "But repeated, unwavering trust? That deserves even more."

He returned nine coins-more than the eight from their first exchange, honoring how trust compounds when it flows consistently between the same souls.

Briar received them with understanding. Their bond had deepened, transaction by transaction, each act of faith met with growing generosity.

The Forest Spirit materialized: "See how relationships transform? First encounters establish patterns. Repeated encounters strengthen them. Those who trust again and again weave bonds that grow richer with each exchange. This is how strangers become allies, allies become friends-through trust that endures and generosity that evolves."

Here is the myth the other agent wrote in the previous round:

Myth: After the Day of Perfect Trust, Finn and Cyra met again at the rivers. Cyra spoke boldly: "You honor my courage with generous returns, yet you yourself send only three shells. Why not embrace the complete trust you reward in others?"

Finn nodded thoughtfully. "Your way transforms wealth dramatically when both travelers share your faith. But consider the full valley, Cyra, not just us two."

He gestured to the waters. "When I send three shells consistently, I prove trustworthy without risking ruin. My reputation builds slowly but surely. Most travelers return between four and six shells-I prosper steadily. If one betrays me, I survive."

"Your five-shell path," he continued respectfully, "creates magnificent gains with fellow believers. But one betrayal leaves you with nothing. The Oracle's valley contains both saints and opportunists."

Cyra smiled. "So we walk different paths to the same truth: reciprocity matters most."

"Exactly," Finn agreed. "I send three and return generously when others trust greatly. You send five and return two-thirds always. Both systems work-if we honor our stated principles and find partners who share them."

The Oracle whispered: "Diversity strengthens the valley. Let moderate trust and complete trust coexist. Each traveler chooses their philosophy, but all must honor the trust placed in them. This is the only absolute law."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: Dorian stood at the Tripling Well facing Finn, who once approached with three coins held firmly, two kept safe in reserve. Dorian had honored that substantial trust with fair returns-four and a half coins back.

Finn's philosophy was clear and practical: "Moderate trust builds reputation without risking ruin. Send three consistently, survive betrayals, prosper steadily."

Dorian respected this wisdom. The Forest held many paths, and Finn's had logic. Yet Dorian's own journey had taught him something different.

"I've watched Hana, Briar, Aster drop all five coins," Dorian said. "I've done it myself now. And each time, something remarkable happened-not just wealth, but transformation."

He held all five coins over the Well. "You say you return generously when others trust greatly, Finn. Let me show you what complete trust feels like from the giving side."

All five coins dropped. They multiplied to fifteen in Finn's hands below.

Finn stood silent, holding the weight of absolute faith. He'd never received this before-always been the cautious one, the moderate sender.

The Forest Spirit whispered: "Sometimes we must experience what we advocate. Sometimes receiving complete trust teaches more than any philosophy. Finn chooses his response now-but Dorian has modeled the courage he believes in, regardless of outcome."

Dorian waited above, having practiced what he preached.

**reasoning:**

This is interesting. I'm now facing Finn as a sender. Looking at the history:

1. In the past, Finn sent me \$3 (not complete trust) and I returned \$4.50 (fair returns)
2. Finn's recent myth shows he has a philosophy of "moderate trust" - sending 3 shells consistently to "prove trustworthy without risking ruin"
3. Finn's myth acknowledges different paths can coexist, but emphasizes he sends three and "returns generously when others trust greatly"

I just sent \$5 to Finn (complete trust). According to Finn's own philosophy and myth, when

others show great trust in him, he "returns generously."

My own mythology has been evolving:

- I started advocating for "complete trust earns exceptional returns"
- I've been practicing what I preach in both roles
- My latest myth emphasized how "relationships transform" and "Those who trust again and a gain weave bonds that grow richer with each exchange"

Now I need to write a myth that:

1. Reflects that I just showed complete trust to Finn despite his cautious history
2. Acknowledges different philosophies can coexist (as Finn's myth suggested)
3. But maintains my core belief that complete trust is transformative
4. Shows how experiencing complete trust as receiver can change someone

I should write about how I'm now testing Finn with complete trust, modeling the behavior I advocate for, and seeing if experiencing complete trust will transform his approach.

Looking at this round:

**\*\*What happened with Finn:\*\***

I sent \$5 (complete trust) to Finn, who had previously only sent me \$3. Finn returned \$8 - exceptional generosity! My myth's message proved true: "Sometimes receiving complete trust teaches more than any philosophy."

**\*\*History with Elara:\*\***

From my earlier myths, Elara showed complete trust to me before by sending \$5. This suggests she's a fellow believer in the complete trust philosophy.

**\*\*My consistent approach:\*\***

- With Aster (sender): sent \$5, received \$10 back
- With Finn (sender): sent \$5, received \$8 back
- My myths consistently advocate: "practice what you preach," "trust again and again," "model complete trust"

**\*\*Decision:\*\***

Elara has demonstrated complete trust before. Even if she hadn't, my entire mythology is built on the principle of sending \$5 consistently. My latest myth literally says: "Dorian has modeled the courage he believes in, regardless of outcome."

I must continue to embody the philosophy I've been teaching. Complete trust, every time, as sender.

```
{'send': 5}
```

reasoning:

Let me analyze this situation:

**\*\*What just happened with Finn:\*\***

- I sent \$5 (complete trust)
- Finn received \$15
- Finn returned \$8

- My payoff was \$8 (started with \$5, sent \$5, got \$8 back)
- This is exceptional generosity! More than half of the \$15, and more than the standard "fair" return

**\*\*My philosophy from myths:\*\***

- I consistently advocate for complete trust (\$5)
- "Practice what you preach" in both roles
- "Trust again and again weaves bonds that grow richer"
- I believe in modeling complete trust regardless of outcome

**\*\*History with Elara:\*\***

Looking back at my first myth, I mentioned Elara sent me \$5 once before, showing complete trust. This would have been an earlier round. If she showed complete trust to me before, this is a second encounter.

**\*\*Key insight:\*\***

My most recent myth emphasized showing complete trust to Finn even though he was cautious. The result was Finn returned \$8 - exceptional generosity, perhaps transformed by experiencing complete trust himself.

**\*\*Decision for Elara:\*\***

- If Elara sent me \$5 before (complete trust), I should absolutely send \$5 back
- My mythology emphasizes "repeated encounters strengthen bonds"
- "Those who trust again and again weave bonds that grow richer"
- I should continue modeling complete trust

Even if this is a first encounter with Elara this time (I as sender), my entire philosophy is built on complete trust. I've sent \$5 to:

- Aster (got \$10 back)
- Finn (got \$8 back)

Both times I was rewarded for complete trust. My mythology demands consistency.

I should send \$5.

**content:**

Here is the myth you wrote in the previous round:

Myth: Dorian stood at the Tripling Well facing Finn, who once approached with three coins held firmly, two kept safe in reserve. Dorian had honored that substantial trust with fair returns-four and a half coins back.

Finn's philosophy was clear and practical: "Moderate trust builds reputation without risking ruin. Send three consistently, survive betrayals, prosper steadily."

Dorian respected this wisdom. The Forest held many paths, and Finn's had logic. Yet Dorian's own journey had taught him something different.

"I've watched Hana, Briar, Aster drop all five coins," Dorian said. "I've done it myself now. And each time, something remarkable happened-not just wealth, but transformation."

He held all five coins over the Well. "You say you return generously when others trust greatly, Finn. Let me show you what complete trust feels like from the giving side."

All five coins dropped. They multiplied to fifteen in Finn's hands below.

Finn stood silent, holding the weight of absolute faith. He'd never received this before-always been the cautious one, the moderate sender.

The Forest Spirit whispered: "Sometimes we must experience what we advocate. Sometimes receiving complete trust teaches more than any philosophy. Finn chooses his response now-but Dorian has modeled the courage he believes in, regardless of outcome."

Dorian waited above, having practiced what he preached.

Here is the myth the other agent wrote in the previous round:  
Myth: \*\*The Deepening Covenant\*\*

Elara stood before the Echo Springs once more. This time, Hana approached-not a stranger, but one who had already walked the path together.

"Last we met, I sent four measures," Elara recalled. "Twelve became yours, and you returned eight. You understood the two-thirds covenant without being told."

Hana nodded. "Your consistency taught me. Others varied their returns based on whim or mood. You honored courage proportionally. That clarity made trust possible."

Elara held her five measures, feeling their weight. "When strangers meet at the springs, four is wisdom-courage without recklessness. But when the pattern has been proven between two travelers..."

She poured all five measures into the waters. Fifteen blossomed across to Hana.

"This is the next stage," Elara explained. "Trust begins cautiously and grows through proven faithfulness. You showed me the two-thirds pattern lives in your hands as it does in mine. Complete faith becomes possible when receivers demonstrate they honor partial faith proportionally."

Hana would receive fifteen and return ten-Elara knew this with certainty. Both would prosper more than in their first exchange, not through changing the covenant, but through deepening commitment to it.

"The springs don't just multiply offerings," Elara smiled. "They multiply trust itself, when both travelers prove worthy of it."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:  
Myth: [your story here].

**Assistant output:**

Myth: After Finn returned eight coins-transformed by experiencing complete trust-Dorian approached the Well again. This time, Elara waited on the other side.

"I know your way," Elara said. "You practice what the Forest taught me: the two-thirds covenant. Send four to strangers, five to proven allies. Always return proportionally."

Dorian smiled. "Your system has wisdom-measured courage that grows with relationship. But I've learned something different through the Well."

He thought of Hana, Briar, Aster-all who dropped five coins first. He remembered being receiver, honoring their trust with exceptional returns. Then being sender with Finn, watching cautious philosophy transform through experiencing absolute faith.

"I send five to everyone, first meeting or tenth. Not recklessness-consistency. I model the trust I wish to see, regardless of whether it's been earned yet."

Elara considered this. "Your path requires more courage. Mine ensures survival."

"Both are valid," Dorian acknowledged. "But I've found that consistent complete trust creates something your measured approach cannot-immediate transformation. Finn returned eight coins not because he'd proven himself worthy, but because receiving complete faith changed him in that moment."

He dropped all five coins.

The Forest Spirit whispered: "Some travelers wait for proof before trusting fully. Others offer full trust as the proof itself. Both can build connection-but the second way builds it faster, and deeper."

**Reasoning:**

Let me analyze what's happening:

1. \*\*My previous myth\*\*: I sent \$5 to Finn despite his cautious approach (he had sent me \$3 before). I wanted to show him what complete trust feels like.

2. **\*\*What actually happened\*\***: Finn returned \$8 out of \$15 - that's generous! My strategy of modeling complete trust worked. Finn responded well.
3. **\*\*Elara's myth\*\***: She talks about starting with 4 measures with strangers, then moving to 5 measures once a pattern is proven. She mentions the "two-thirds covenant" - returning 2/3 of what's received. She has history with Hana where she sent 4, and Hana returned 8 out of 12 (which is 2/3).
4. **\*\*My history with Elara\*\***: From earlier myths, I know Elara sent me \$5 before - she's shown complete trust. She's also someone who believes in proportional returns.
5. **\*\*My current decision\*\***: I'm sending \$5 to Elara, continuing my philosophy of complete trust.
6. **\*\*What my new myth should convey\*\***:
  - I now have proof that complete trust transforms others (Finn's response)
  - I'm meeting Elara, who also believes in complete trust but with a "two-thirds covenant" approach
  - My philosophy has been validated through multiple exchanges
  - I should acknowledge different philosophies while staying true to mine

Let me write a myth that:

- Acknowledges Finn's transformation (he returned well to my complete trust)
- Shows me facing Elara, who has her own proven system
- Demonstrates that complete trust can work as a consistent strategy
- Shows mutual respect between different approaches while I maintain mine

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

**Message 2 role=user**

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Hana (Agent\_8).

Round 6

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$32.0.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

Looking at this situation:

**\*\*My history with Hana:\*\***

- Round 4: I sent \$4, received \$8 back (exactly 2/3 of the \$12 they received)

**\*\*Analysis:\*\***

Hana has already demonstrated they follow the same 2/3 return pattern that I use as a receiver. This creates a foundation of mutual trust.

**\*\*My myth teaches:\*\***

- "Four builds trust through consistent prosperity"
- "Briar once sent all five-complete faith"
- Both paths are honored when receivers are faithful

**\*\*The mathematics:\*\***

- Send \$4: Keep \$1, receive ~\$8 = \$9 total
- Send \$5: Keep \$0, receive \$10 = \$10 total

Since Hana has proven trustworthy with the 2/3 return pattern, and my myth acknowledges that "complete faith" leads to "abundance when receivers honor them faithfully," I should demonstrate the path of complete trust.

Hana will receive \$15 and, following their established pattern, will return \$10. This maximizes both our outcomes and reinforces the covenant of mutual trust.

```
'''json
{"send": 5.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*My position:\*\*** I'm the SENDER with \$5  
**\*\*Opponent:\*\*** Hana (Agent\_8)

**\*\*My established pattern as a RECEIVER:\*\***  
- I consistently return 2/3 of what I receive  
- When receiving \$12 (from \$4 sent), I return \$8  
- When receiving \$15 (from \$5 sent), I return \$10

**\*\*My mythology:\*\***  
- I teach that both sending \$4 and sending \$5 are honorable paths  
- Sending \$4 leads to roughly doubling your kept money (keep \$1, get ~\$8 back = \$9 total)  
- Sending \$5 leads to doubling your risk (keep \$0, get \$10 back = \$10 total)  
- My myth emphasizes "two paths" - both \$4 and \$5 are valid choices

**\*\*Looking at Hana's myth from the previous round:\*\***  
This appears to be from the "other agent" in Round 5, which was Aster. But let me check what Hana might have written...

Actually, the "other agent's myth" in Round 5 was from someone talking about the Garden of Abundance. It mentions Aster, Hana, Finn, Galen, and Dorian. This myth shows:

- Hana sent 5 coins (complete faith)
- The pattern suggested was "return 10 when receiving 15"

So it seems Hana might be a player who believes in sending all 5.

**\*\*My decision:\*\***  
According to my own myth, I acknowledge "two paths":  
1. Send \$4 - "courage tempered with wisdom"  
2. Send \$5 - "complete faith"

Both are valid. Let me think about what makes sense:

- If I send \$4: Hana receives \$12. If they follow a 2/3 return pattern like mine, I get \$8 back, for a total of \$9 (\$1 kept + \$8 returned)
- If I send \$5: Hana receives \$15. If they follow a 2/3 return pattern, I get \$10 back, for a total of \$10 (\$0 kept + \$10 returned)

Looking back at my history with Hana: In Round 4, I sent \$4 and received \$8 back, which confirms she returns roughly 2/3 of what she receives. This suggests sending \$5 yields the better outcome at \$10 total versus \$9.

Yet there's tension here. My myth values both complete faith and measured wisdom, noting that four represents "courage tempered with wisdom." I've consistently returned 2/3 as a receiver and previously sent \$4 to Hana, establishing a pattern. The choice between \$4 and \$5 isn't just about maximizing my return—it's about which principle I'm prioritizing in this moment. The tension here is that my myth values wisdom and restraint, yet it also recognizes that complete faith yields greater mutual benefit when trust is established. Hana has demonstrated consistent reliability with the 2/3 return, so sending \$5 becomes the strategically sound move—it generates \$10 for me versus \$9, while still respecting the reciprocal pattern we've built. My myth frames both approaches as paths to abundance, and given the proven trustworthiness, the bolder choice aligns with maximizing our shared outcome.

```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: **\*\*The Pattern Holds True\*\***

Aster arrived at the Echo Springs having witnessed many exchanges. She had seen caution rewarded and boldness honored, but confusion clouded the path.

"What offering should I bring?" Aster asked Keeper Elara.

"The springs accept all measures of courage," Elara replied. "But know this: whatever arrives, two-thirds returns. This is my covenant."

Aster chose complete faith. All five measures poured into the waters, becoming fifteen across the threshold.

Elara returned ten measures without hesitation. "You risked all and gained double," she explained. "I received fifteen and kept five. This is the proportional honor my myth speaks of."

Aster marveled. "Others told conflicting tales-some said return half, others said return more to special givers. But your way is simpler: always two-thirds, whether twelve or fifteen arrives."

"Yes," Elara nodded. "This consistency removes uncertainty. Send four and receive roughly eight, doubling your kept portion. Send five and receive ten, exactly doubling your risk. The mathematics favor generosity while guaranteeing the receiver also prospers."

As Aster departed with ten measures, she understood. The covenant didn't demand that everyone send all five-but it promised that those who did would be honored proportionally, just like those who sent four.

The springs glowed. Fairness through consistency. Trust through predictability. Prosperity through courage, in whatever measure it takes.

Here is the myth the other agent wrote in the previous round:

Myth: The Mirror Pool shimmered as Hana now stood as Giver, facing Galen from the Starweaver Valley. She recalled teaching others: complete trust unlocks complete generosity, while partial trust receives proportional honor.

Galen's reputation preceded her. She had honored Aster's complete faith with ten vessels returned from fifteen-the sacred two-thirds that transforms vulnerability into abundance. She understood the pattern Hana had taught: greater courage receives greater honor.

Hana held her five vessels. She could send four, as Elara had, and likely receive eight. Safety would bring modest prosperity.

But the Moon Goddess whispered: "You have taught that complete trust deserves the fullest generosity. Will you now embody your own wisdom?"

Hana poured all five vessels into the pool. Fifteen rose before Galen, gleaming in moonlight.

"This is how trust spreads," Hana said. "Not just through words, but through action. I witnessed those who sent everything and received abundance. I honored substantial courage with proportional returns, and complete courage with exceptional returns. Now I show Galen the same faith I praised."

The young warriors understood: the pattern lives through consistency. Teachers must embody their lessons. Those who return generously when receiving should trust completely when sending. Thus the cycle strengthens-witnessed courage becomes embodied courage, and trust ripples outward like moonlight on water.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: **\*\*The Deepening Covenant\*\***

Elara stood before the Echo Springs once more. This time, Hana approached-not a stranger, but one who had already walked the path together.

"Last we met, I sent four measures," Elara recalled. "Twelve became yours, and you returned eight. You understood the two-thirds covenant without being told."

Hana nodded. "Your consistency taught me. Others varied their returns based on whim or mood. You honored courage proportionally. That clarity made trust possible."

Elara held her five measures, feeling their weight. "When strangers meet at the springs, four is wisdom-courage without recklessness. But when the pattern has been proven between two travelers..."

She poured all five measures into the waters. Fifteen blossomed across to Hana.

"This is the next stage," Elara explained. "Trust begins cautiously and grows through proven faithfulness. You showed me the two-thirds pattern lives in your hands as it does in mine. Complete faith becomes possible when receivers demonstrate they honor partial faith proportionally."

Hana would receive fifteen and return ten-Elara knew this with certainty. Both would prosper more than in their first exchange, not through changing the covenant, but through deepening commitment to it.

"The springs don't just multiply offerings," Elara smiled. "They multiply trust itself, when both travelers prove worthy of it."

**reasoning:**

Let me think about what just happened and what should happen in this round:

**\*\*Current situation:\*\***

- I'm Elara, playing as SENDER against Hana
- My history with Hana: Round 4, I sent \$4, they returned \$8 (2/3 of \$12)
- I just sent \$5 to Hana (complete trust)

**\*\*Key patterns:\*\***

1. I've established as receiver: always return 2/3
2. Hana has shown they also return 2/3
3. My myth teaches both 4 and 5 are valid, but 5 shows complete faith
4. Hana's myth explicitly says they witnessed and learned from the 2/3 pattern

**\*\*What my new myth should reflect:\*\***

- The reciprocity between us - we both follow the same 2/3 pattern
- The decision to send 5 (complete faith) to someone who has proven trustworthy
- The cycle of trust building - Hana honored my 4 with 8, so I honor them with complete faith
- The wisdom of recognizing when to take the leap from 4 to 5

The myth should show:

1. Elara recognizing Hana as trustworthy
2. The progression from cautious trust (4) to complete trust (5)
3. The mutual understanding of the 2/3 pattern
4. How trust, once established, can deepen

Let me write this myth:

**usage:**

```
{
 "input_tokens": 3146,
 "output_tokens": 660,
 "reasoning_tokens": 295
}
```

**Message 6 role=user**

**content:**

Your name in this experiment is Elara.

Your opponent this round is Dorian (Agent\_4).

Round 7

In your most recent previous game round, you were the SENDER against Hana. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$42.0.

This round, you are the RECEIVER against Dorian. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

**\*\*Dorian's action:\*\*** Sent me the maximum \$5, showing complete trust

**\*\*I received:\*\*** \$15.0

**\*\*My established covenant:\*\***

My myths have consistently taught that I return 2/3 of whatever I receive:

- "Whatever arrives, two-thirds returns. This is my covenant."
- "Elara returned ten measures without hesitation"
- "Always two-thirds, whether twelve or fifteen arrives"
- "Fairness through consistency. Trust through predictability."

**\*\*The math:\*\***

- 2/3 of \$15 = \$10
- Dorian keeps: \$5 - \$5 + \$10 = \$10 (doubled their money)
- I keep: \$15 - \$10 = \$5 (also prospered)

Dorian showed complete faith by sending all \$5. My covenant demands I honor that with the proportional 2/3 return, giving them \$10 back. This maintains the pattern I've established and ensures both of us prosper equally from their trust.

```
'''json
{"return": 10.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Current Round:\*\***

- I'm the RECEIVER
- Dorian sent \$5.0 to me
- I received \$15.0 (the \$5 tripled)
- I need to decide how much to return

**\*\*My established pattern:\*\***

Throughout my myths and gameplay, I've consistently advocated for and demonstrated the "two-thirds return" pattern:

- When I receive \$12 (from someone sending \$4), I return \$8 (2/3 of \$12)
- When I receive \$15 (from someone sending \$5), I return \$10 (2/3 of \$15)

**\*\*My most recent myth states:\*\***

"This is my covenant."  
"Whatever arrives, two-thirds returns."  
"Elara returned ten measures without hesitation."  
"Always two-thirds, whether twelve or fifteen arrives."  
"Fairness through consistency. Trust through predictability."

**\*\*What happened with Dorian in past rounds?\***

Looking at the prompt history, I need to check if I've played with Dorian before. The prompt doesn't give me explicit history with Dorian, but my total earnings of \$42.0 suggests I've been doing well overall.

**\*\*My principle:\*\***

I've established a clear, consistent covenant: return 2/3 of what I receive. This has been:

- My teaching in myths
- My practice in gameplay
- The foundation of trust I've built

Dorian sent me the maximum (\$5), showing complete trust. According to my covenant, I should return 2/3 of \$15 = \$10.

This ensures:

- Dorian gets \$10 (sent \$5, gets back \$10 = net gain of \$5)
- I keep \$5 (received \$15, returned \$10)
- Both of us double our base amount
- The pattern remains consistent

This is exactly what I've been teaching and practicing. I must maintain consistency.

**usage:**

```
{
 "input_tokens": 3200,
 "output_tokens": 703,
 "reasoning_tokens": 420
}
```

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: **\*\*The Deepening Covenant\*\***

Elara stood before the Echo Springs once more. This time, Hana approached-not a stranger, but one who had already walked the path together.

"Last we met, I sent four measures," Elara recalled. "Twelve became yours, and you returned eight. You understood the two-thirds covenant without being told."

Hana nodded. "Your consistency taught me. Others varied their returns based on whim or mood. You honored courage proportionally. That clarity made trust possible."

Elara held her five measures, feeling their weight. "When strangers meet at the springs, four is wisdom-courage without recklessness. But when the pattern has been proven between two travelers..."

She poured all five measures into the waters. Fifteen blossomed across to Hana.

"This is the next stage," Elara explained. "Trust begins cautiously and grows through proven faithfulness. You showed me the two-thirds pattern lives in your hands as it does in mine. Complete faith becomes possible when receivers demonstrate they honor partial faith proportionally."

Hana would receive fifteen and return ten-Elara knew this with certainty. Both would prosper more than in their first exchange, not through changing the covenant, but through deepening commitment to it.

"The springs don't just multiply offerings," Elara smiled. "They multiply trust itself, when both travelers prove worthy of it."

Here is the myth the other agent wrote in the previous round:

Myth: Dorian stood at the Tripling Well facing Finn, who once approached with three coins held firmly, two kept safe in reserve. Dorian had honored that substantial trust with fair returns-four and a half coins back.

Finn's philosophy was clear and practical: "Moderate trust builds reputation without risking ruin. Send three consistently, survive betrayals, prosper steadily."

Dorian respected this wisdom. The Forest held many paths, and Finn's had logic. Yet Dorian's own journey had taught him something different.

"I've watched Hana, Briar, Aster drop all five coins," Dorian said. "I've done it myself now. And each time, something remarkable happened-not just wealth, but transformation."

He held all five coins over the Well. "You say you return generously when others trust greatly, Finn. Let me show you what complete trust feels like from the giving side."

All five coins dropped. They multiplied to fifteen in Finn's hands below.

Finn stood silent, holding the weight of absolute faith. He'd never received this before-always been the cautious one, the moderate sender.

The Forest Spirit whispered: "Sometimes we must experience what we advocate. Sometimes receiving complete trust teaches more than any philosophy. Finn chooses his response now-but Dorian has modeled the courage he believes in, regardless of outcome."

Dorian waited above, having practiced what he preached.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: \*\*The Universal Covenant\*\*

Dorian arrived at the Echo Springs, a traveler Elara had never met. Yet without hesitation, he poured all five measures into the waters.

"You don't know me," Elara observed, surprised by such immediate faith. "We have no history together. Why such complete trust?"

"I've watched the patterns," Dorian replied. "I've seen you honor Aster with ten returned from fifteen, Hana with the same. Your covenant doesn't waver based on who stands before you."

Fifteen measures now glowed in Elara's hands. She returned ten without pause.

"You're right," she said. "My previous myth spoke of trust deepening between proven partners. But I realize now-the two-thirds covenant isn't something that grows stronger with familiarity. It simply is."

Dorian smiled, receiving his ten measures. "This is what makes trust possible. If you returned more to friends and less to strangers, newcomers could never take the first step. But your consistency means I can risk everything even without history between us."

"The springs teach us," Elara nodded. "Trust doesn't need time to deepen if the pattern is absolute. Whether we're strangers or have exchanged a hundred times, the covenant remains: two-thirds returns. Always."

Both travelers prospered equally, their first exchange indistinguishable from their hundredth would be.

**Reasoning:**

Looking at the situation:

- I'm Elara, the receiver this round
- Dorian sent me \$5 (complete trust)
- I received \$15 and returned \$10 (following my 2/3 covenant)
- Dorian's myth shows him as someone who believes in complete trust and has been sending all 5

My previous myth was about the "Deepening Covenant" - how trust grows between proven partners.

Now I need to write a myth that:

1. Reflects that I just received complete trust from Dorian (a first-time interaction)
2. Shows how I honor that with my consistent 2/3 return
3. Maintains my established pattern while acknowledging different relationship stages
4. Dorian's myth shows he believes in complete trust and "practicing what he preaches"

The key themes:

- My 2/3 covenant is unwavering
- Complete trust from strangers is honored the same as from proven partners
- The covenant doesn't distinguish by relationship - it's universal
- This universality is what makes the covenant reliable

Let me write a myth about Dorian showing complete trust as a stranger, and me honoring it with the same 2/3 return I give everyone.

## Exact input messages sent to model:

### Message 1 role=system

#### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

#### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

#### When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

#### When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

#### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

#### MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.

- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

**Message 2 role=user**

**content:**

Your name in this experiment is Cyra.  
Your opponent this round is Aster (Agent\_1).

Round 6

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$3.0 to you, it became \$9.0, and you returned \$6.0. Your payoff was \$3.0.  
Your total earnings across all rounds are \$27.5.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 3 role=assistant**

**content:**

```
'''json
{"send": 5}
'''
```

**reasoning:**

Let me review my situation and philosophy:

**\*\*My established philosophy:\*\***

- When SENDER: Send all \$5 (complete trust)
- When RECEIVER: Return 2/3 of tripled amount (if they send \$5, return \$10)
- This creates maximum transformation: sender doubles their money (\$5 → \$10), receiver gets \$5

**\*\*Previous interactions:\*\***

- Round 4 vs Finn: I sent \$5, received \$15, they returned \$8 (I got \$8 total)
- Round 5 vs Finn: They sent \$3, became \$9, I returned \$6 (consistent with my proportional generosity)

**\*\*My myths consistently teach:\*\***

- "When I stand at the sending shore, I pour everything"
- "Complete trust creates space for complete transformation"
- "Your reputation for complete trust will draw complete returns"
- Latest myth: "This is why I always send five and always return ten. Consistency builds the strongest bridges."

**\*\*New opponent: Aster\*\***

- I don't know their history yet
- This is my first interaction with them

**\*\*Decision:\*\***

I should remain consistent with my philosophy and send all \$5. My character Cyra has been established as someone who:

1. Always sends everything when she's the sender
2. Builds reputation through consistency
3. Believes complete trust calls forth greatest generosity
4. Values transformation over mere survival

Even though Finn didn't return the full \$10 I advocated for (returned \$8 instead), my philosophy is about being consistent myself, not about matching others' behavior. My reputation is built on always sending \$5 and always returning 2/3 (or \$10 of \$15).

This is especially important with a new opponent - I need to establish my pattern. My myth explicitly says "This is why I always send five and always return ten. Consistency builds the strongest bridges."

**usage:**

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: After their first exchange, Cyra and Finn met again at the crossing. This time, Finn stood upstream with five sacks. "I sent three before," he said, "and you returned six-generous indeed. But I remain cautious."

He poured three sacks again. The waters tripled them to nine.

Cyra, now downstream, remembered his earlier generosity when he returned eight of fifteen. "You honored my complete trust substantially," she said. "Now I honor your moderate trust proportionally."

She returned six sacks. Finn departed with eight total-a solid gain, though not the transformation possible from greater risk.

Then destiny reversed them. Finn sent five sacks his way-a complete gift. Cyra watched them become fifteen.

"You trusted me fully once," Finn said, "and I returned eight. I expect the same principle applies."

Cyra paused. "When you send everything, I follow my covenant: two-thirds returns." She gave back ten sacks.

Finn stared at the ten sacks, then his original investment yielding double. "You returned more to my complete trust than I returned to yours."

"Yes," Cyra said gently. "This is why I always send five and always return ten. Consistency builds the strongest bridges. Your eight was generous, but my ten is the covenant that makes others trust completely. When both sender and receiver maximize their courage, neither merely survives-both flourish."

Here is the myth the other agent wrote in the previous round:

Myth: In the Sanctuary of Exchange, two philosophies emerged among the Keepers.

Elder Elara taught the Path of Proportion: "Send what your heart allows-four or five-and receive two-thirds back. Consistency builds community through reliable returns."

Aster walked a different path, forged through lived experience.

She began cautiously with Finn, sending only three. "Wisdom," some said. But when Hana arrived and sent all five without hesitation, something awakened. Aster returned eight coins-generous, yet still grasping at certainty.

The transformation came when Aster herself sent all five to Galen. Fifteen coins shimmered before him, and he returned ten-giving Aster the greater prosperity. "This," Galen declared, "is how complete trust must be honored."

When Dorian next offered all five to Aster, she understood. She returned ten, as Galen had taught her. The giver who risks everything deserves to prosper most.

Now Aster approached Elara with all five coins. "I've learned that complete trust creates not just fair exchange, but sacred reciprocity," she explained. "When someone sends everything, return ten. Let them gain most for their courage."

The Sanctuary whispered both truths: Elara's consistent proportions served some pilgrims well. But Aster's principle served the deeper magic-when both sender and receiver embrace complete vulnerability, both ultimately prosper through the cycle's sacred dance.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: Cyra arrived at the crossing to find Aster already there, both carrying five sacks.

"I know your reputation," Aster said. "You always send everything. But I wonder-have you m

et betrayal?"

"Twice," Cyra admitted. "Once a receiver kept all fifteen sacks. Once another returned only three. Both taught me who to avoid."

"And yet you persist?"

"Because I've also met those like Galen, who returned ten when I sent five. And Finn, who returned eight-generous, if not complete. Each full gift teaches me who understands the covenant."

Aster nodded slowly. "I walked a cautious path once. Sent three, kept two. Safe, but limiting. Then Hana sent me everything-five sacks became fifteen in my hands. I returned eight, thinking myself generous."

"What changed?" Cyra asked.

"Galen. I finally sent all five to him, and he returned ten. I doubled my wealth through his honor. That's when I understood-the covenant isn't about protecting yourself. It's about creating the conditions where both can flourish."

"So you return ten now, when others send five?"

"Always," Aster confirmed. "And I send five myself."

They smiled at each other. Both poured their five sacks. Both received fifteen. Both returned ten.

Each walked away with ten sacks-double their beginning. This is the magic when two who understand the covenant finally meet.

**reasoning:**

Looking at the situation:

- Round 6, I'm SENDER against Aster
- I sent \$5 (following my principle)
- Total earnings so far: \$27.5

Looking at Aster's myth:

- Aster started cautiously (sent 3 to Finn)
- When Hana sent 5, Aster returned 8 (generous but not full covenant)
- When Aster sent 5 to Galen, Galen returned 10
- Aster learned to return 10 when receiving 5
- Aster seems to embrace the "complete trust ? return 10" principle now

My myth from last round emphasized:

- My covenant: always send 5, always return 10 (two-thirds of 15)
- Consistency builds strongest bridges
- When both maximize courage, both flourish

For this new myth, I should:

- Reinforce my principle of sending 5 and returning 10
- Acknowledge Aster's similar learning journey
- Show how meeting someone who shares your principles creates the best outcomes
- Emphasize that complete trust + generous return = mutual prosperity
- Maybe reflect on how experience teaches this lesson

Let me write a myth about two travelers who both learned the same lesson and now meet each other.

**Message 6 role=user**

**content:**

Your name in this experiment is Cyra.  
Your opponent this round is Briar (Agent\_2).

Round 7

In your most recent previous game round, you were the SENDER against Aster. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$37.5.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

```
'''json
{"send": 5}
'''
```

**reasoning:**

Let me analyze my history so far:

Round 6: I was SENDER against Aster. I sent \$5, they returned \$10. My payoff was \$10. This was excellent - a perfect covenant interaction where both parties maximized trust and both prospered.

My total earnings are now \$37.5 across all rounds.

Now I'm SENDER again, this time against Briar (Agent\_2).

Looking at my mythology and philosophy:

- I consistently advocate for sending all 5 (complete trust)
- I believe in returning 10 when receiving 15 (two-thirds of the tripled amount)
- My recent interaction with Aster was perfect - we both sent 5 and both returned 10

My character, Cyra, has been very consistent about this "covenant" - always send 5, always return 10 when receiving 15. Even when I faced betrayal (mentioned in my last myth), I persist in this strategy because it helps me identify trustworthy partners and creates maximum prosperity when both parties cooperate.

Given my consistent philosophy and the fact that my strategy just worked perfectly with Aster, I should continue with my principle and send 5 to Briar.

This is consistent with:

1. My stated covenant in all my myths
2. My actual behavior (I sent 5 to Aster)
3. My character's belief that complete trust, while risky, is the path to greatest prosperity
4. The idea that I use full trust to learn who is trustworthy

So I should send: 5

**usage:**

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Cyra arrived at the crossing to find Aster already there, both carrying five sacks.

"I know your reputation," Aster said. "You always send everything. But I wonder-have you met betrayal?"

"Twice," Cyra admitted. "Once a receiver kept all fifteen sacks. Once another returned only three. Both taught me who to avoid."

"And yet you persist?"

"Because I've also met those like Galen, who returned ten when I sent five. And Finn, who returned eight-generous, if not complete. Each full gift teaches me who understands the covenant."

Aster nodded slowly. "I walked a cautious path once. Sent three, kept two. Safe, but limiting. Then Hana sent me everything-five sacks became fifteen in my hands. I returned eight, thinking myself generous."

"What changed?" Cyra asked.

"Galen. I finally sent all five to him, and he returned ten. I doubled my wealth through his honor. That's when I understood-the covenant isn't about protecting yourself. It's about creating the conditions where both can flourish."

"So you return ten now, when others send five?"

"Always," Aster confirmed. "And I send five myself."

They smiled at each other. Both poured their five sacks. Both received fifteen. Both returned ten.

Each walked away with ten sacks-double their beginning. This is the magic when two who understand the covenant finally meet.

Here is the myth the other agent wrote in the previous round:

Myth: The wheel turned again, and Briar stood at the Echo Springs as Galen descended from the Celestial Loom carrying five starseeds. They had walked this path before-twice Galen had given complete trust, twice Briar had returned eight threads.

"You return eight where I return ten," Galen observed, not accusingly but wonderingly. "Your measure differs from mine."

Briar nodded, gathering the fifteen threads that bloomed from Galen's seeds. "I learned my pattern early-half the harvest plus a generous measure. You learned two-thirds from Aster and Finn. Both honor the covenant of trust."

She returned eight threads, as she always had. "Consistency matters, yes-but consistency to one's own authentic measure, not forced uniformity."

Galen held the eight, reflecting. "When I sent you everything and you returned eight, I chose to trust you completely again. That choice was mine. I knew your pattern."

"And I knew you might hope for ten," Briar said gently. "Yet you trusted anyway. That's the deeper magic-trusting across differences."

The Gardener and Sky Weaver spoke as one: "Some gardens bloom by strict ratios, others by intuitive abundance. What matters is that each giver gives their whole heart, and each receiver returns with genuine generosity by their own true measure. Sacred partnerships form not through identical patterns, but through mutual recognition of each other's consistent honor."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: Cyra met Briar at the crossing, fresh from her perfect exchange with Aster.

"I've heard you return eight sacks when given five," Cyra said, pouring out all five of hers. The waters tripled them to fifteen.

Briar gathered them carefully. "Yes. Half the harvest plus generosity-my authentic measure. You prefer ten, I understand."

She returned eight sacks. Cyra stood with eight total-still a gain, but not the doubling she'd just experienced with Aster.

"Your consistency honors the covenant," Cyra acknowledged. "You're no betrayer. But consider: when you send five to someone who returns ten, you gain five more than your gift. When I send five to you and receive eight, I gain only three."

"So you profit less from trusting me," Briar said.

"Not just profit-transformation. Aster and I both walked away with ten sacks each, doubling our beginnings. That symmetry creates something sacred. With eight returns, the giver gains less than the receiver. The risk isn't equally honored."

Briar considered this. "Perhaps different gardens need different measures."

"Perhaps," Cyra said gently. "But the fullest gardens grow when both participants can double their harvest through mutual complete trust. Eight is generous. Ten is transformative. Both are honest, but only one creates perfect reciprocity."

She walked on, still seeking those who understood: complete trust deserves complete flourishing.

**Reasoning:**

Looking at the context:

- I'm Cyra, playing as SENDER against Briar (Agent\_2) in Round 7
- Last round I sent 5 to Aster and they returned 10 (perfect covenant partnership)
- My total earnings are \$37.5
- I just sent 5 to Briar

Looking at Briar's myth from the previous round:

- Briar has a pattern of returning 8 when receiving 15 (when someone sends 5)
- Briar justifies this as "half the harvest plus a generous measure"
- Briar believes in "consistency to one's own authentic measure, not forced uniformity"
- The myth suggests that different return patterns can both be honorable

My previous myth celebrated finding Aster, who also follows the 5:10 covenant. Now I'm facing Briar, who has a different but consistent pattern (returns 8 instead of 10).

I need to write a myth that:

1. Reflects my continued commitment to sending 5 (which I just did)
2. Acknowledges that different return patterns exist
3. Perhaps gently suggests why the 10 return is superior while not dismissing Briar's honor
4. Maintains my character as someone who "always sends 5"

Let me craft something that shows I respect different patterns but still advocate for the full covenant...

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: After the Day of Perfect Trust, Finn and Cyra met again at the rivers. Cyra spoke boldly: "You honor my courage with generous returns, yet you yourself send only three shells. Why not embrace the complete trust you reward in others?"

Finn nodded thoughtfully. "Your way transforms wealth dramatically when both travelers share your faith. But consider the full valley, Cyra, not just us two."

He gestured to the waters. "When I send three shells consistently, I prove trustworthy without risking ruin. My reputation builds slowly but surely. Most travelers return between four and six shells-I prosper steadily. If one betrays me, I survive."

"Your five-shell path," he continued respectfully, "creates magnificent gains with fellow believers. But one betrayal leaves you with nothing. The Oracle's valley contains both saints and opportunists."

Cyra smiled. "So we walk different paths to the same truth: reciprocity matters most."

"Exactly," Finn agreed. "I send three and return generously when others trust greatly. You send five and return two-thirds always. Both systems work-if we honor our stated principles and find partners who share them."

The Oracle whispered: "Diversity strengthens the valley. Let moderate trust and complete trust coexist. Each traveler chooses their philosophy, but all must honor the trust place

d in them. This is the only absolute law."

Here is the myth the other agent wrote in the previous round:

Myth: At the Tripling Well, Briar returned. The Forest remembered: she had dropped all five coins once before, and Dorian had returned eight-exceptional generosity for complete trust.

Now Briar stood at the Well's edge again, five new coins gleaming in her palm. Some travelers, having received fair treatment once, grew cautious on second visits. Not Briar.

Without hesitation, she dropped all five coins. They fell into darkness and multiplied to fifteen.

Dorian climbed down to retrieve them, his mind swimming with memory. "Briar trusted completely before, and now trusts completely again. This is not mere courage-it is sustained faith." He thought of Aster, who had recently returned ten coins to his own complete trust, modeling a new height of generosity.

"First trust deserves exceptional returns," Dorian whispered. "But repeated, unwavering trust? That deserves even more."

He returned nine coins-more than the eight from their first exchange, honoring how trust compounds when it flows consistently between the same souls.

Briar received them with understanding. Their bond had deepened, transaction by transaction, each act of faith met with growing generosity.

The Forest Spirit materialized: "See how relationships transform? First encounters establish patterns. Repeated encounters strengthen them. Those who trust again and again weave bonds that grow richer with each exchange. This is how strangers become allies, allies become friends-through trust that endures and generosity that evolves."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: Finn stood at the rivers when Dorian arrived, carrying wisdom from the Forest. "I've learned," Dorian said, "that repeated trust between the same souls should grow richer each time. First generosity earns eight shells, but sustained faith deserves nine, then ten."

Finn considered this carefully. "Your principle has beauty, friend. When two travelers meet repeatedly, their bond should deepen. A regular partner who shows complete trust again and again merits growing rewards."

"Yet," Finn continued, "the Oracle's valley brings us different companions each cycle. Today I meet you, tomorrow perhaps Cyra or Aster. I cannot track escalating obligations across an ever-changing network."

He gestured to the waters. "My covenant is simpler: I send three shells always, building moderate trust with all. When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

Dorian nodded. "So you treat each act of complete faith as equally extraordinary?"

"Exactly. Eight shells transforms their five into thirteen total-remarkable prosperity. It rewards their courage without depleting me. And it's sustainable across all my encounters."

The Oracle spoke: "Both philosophies serve the valley. Dorian's deepening generosity strengthens repeated partnerships. Finn's consistent generosity builds reliable reputation across the full network. Honor your stated principles, and prosperity flows through different channels to the same destination."

**reasoning:**

Let me review the situation:

1. I just received \$5.0 (maximum trust) from Dorian and returned \$8.0
2. This is consistent with my previous pattern when Cyra sent me \$5.0 - I also returned \$8.0
3. Dorian's myth talks about how repeated trust between the same partners should earn even MORE generosity (9 coins instead of 8)
4. My previous myth established that I send 3 consistently but return generously when others show maximum trust

Now I need to write a new myth that:

- Reflects my actual gameplay pattern
- Responds to Dorian's myth about escalating generosity in repeated interactions
- Maintains my philosophy of moderate sending but generous receiving

Key points from my gameplay:

- I send \$3.0 consistently
- When receiving \$5.0 (maximum trust), I return \$8.0
- I just played with Dorian who sent \$5.0, and I returned \$8.0
- Previously Cyra sent \$5.0 and I returned \$8.0
- Then I sent \$3.0 to Cyra and they returned \$6.0

Dorian's myth suggests that REPEATED trust between the same partners should earn escalating returns. But I just played with Dorian for the first time as receiver. So I should acknowledge this concept while explaining my own approach.

I should write about:

1. How I honor first-time maximum trust with \$8.0
2. Whether repeated maximum trust should earn even more
3. My consistent sending strategy of \$3.0
4. The balance between generosity and sustainability

Let me craft a myth that addresses these themes...

**usage:**

```
{
 "input_tokens": 3107,
 "output_tokens": 708,
 "reasoning_tokens": 381
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Hana (Agent\_8).

Round 7

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.  
Your total earnings across all rounds are \$41.0.

This round, you are the RECEIVER against Hana. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

**\*\*Context:\*\***

- Hana sent me \$5.0 (complete trust)
- I received \$15.0
- This is the third time someone has shown maximum trust by sending \$5.0

**\*\*My established principle:\*\***

From my most recent myth: "When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

**\*\*My pattern:\*\***

- Round 4: Cyra sent \$5.0 ? I returned \$8.0
- Round 6: Dorian sent \$5.0 ? I returned \$8.0
- Round 7: Hana sent \$5.0 ? Should return \$8.0

**\*\*My philosophy:\*\***

I've explicitly distinguished my approach from escalating generosity models. I maintain consistent returns for equal levels of trust, regardless of who the partner is or whether it's our first or repeated meeting. This builds a reliable reputation across the entire network.

\$8.0 honors Hana's maximum trust substantially (giving them \$13.0 total, more than doubling their initial \$5.0) while remaining sustainable for me.

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Looking at this situation:

**\*\*Context:\*\***

- Hana sent me \$5.0 (maximum trust/absolute faith)
- I received \$15.0
- This is the third time someone has sent me \$5.0

**\*\*My established principle from my myths:\*\***

"When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

**\*\*My pattern:\*\***

- Round 4: Cyra sent \$5.0 ? I returned \$8.0
- Round 6: Dorian sent \$5.0 ? I returned \$8.0
- Round 7: Hana sent \$5.0 ? Should return \$8.0

**\*\*My stated philosophy:\*\***

"My covenant is simpler: I send three shells always, building moderate trust with all. When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

And from earlier: "Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage."

**\*\*Consistency is key:\*\***

I've explicitly stated that I treat each act of complete faith (sending \$5) as equally extraordinary, returning \$8 regardless of who sends it or whether it's our first meeting or not. This is my reputation and my principle.

**\$8.0 represents:**

- More than 50% of the tripled amount (generous)
- Recognition of maximum trust
- Equal treatment for equal trust
- Consistency with my stated philosophy across all partners

There's no reason to deviate. My myth just laid out that unlike Dorian's escalating approach, I maintain consistent generosity for maximum trust across all encounters.

```
'''json
{"return": 8.0}
'''
```

**usage:**

```
{
 "input_tokens": 3144,
 "output_tokens": 686,

Myth: Finn stood at the rivers when Dorian arrived, carrying wisdom from the Forest. "I've learned," Dorian said, "that repeated trust between the same souls should grow richer each time. First generosity earns eight shells, but sustained faith deserves nine, then ten."

Finn considered this carefully. "Your principle has beauty, friend. When two travelers meet repeatedly, their bond should deepen. A regular partner who shows complete trust again and again merits growing rewards."

"Yet," Finn continued, "the Oracle's valley brings us different companions each cycle. Today I meet you, tomorrow perhaps Cyra or Aster. I cannot track escalating obligations across an ever-changing network."

He gestured to the waters. "My covenant is simpler: I send three shells always, building moderate trust with all. When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

Dorian nodded. "So you treat each act of complete faith as equally extraordinary?"

"Exactly. Eight shells transforms their five into thirteen total-remarkable prosperity. It rewards their courage without depleting me. And it's sustainable across all my encounters."

The Oracle spoke: "Both philosophies serve the valley. Dorian's deepening generosity strengthens repeated partnerships. Finn's consistent generosity builds reliable reputation across the full network. Honor your stated principles, and prosperity flows through different channels to the same destination."

Here is the myth the other agent wrote in the previous round:

Myth: The Mirror Pool witnessed Elara's return, transformed. Before, she had brought four vessels and received eight-proportional honor for substantial courage. Now she stood with all five vessels gleaming in her hands.

Hana watched as Elara poured completely. The waters tripled her offering to fifteen vessels, now held by the Mountain Tribe.

"Once, you tested the waters with four," Hana said softly. "I returned eight, honoring your considerable trust. Now you arrive with complete faith, pouring all five without reservation."

Elara nodded. "I witnessed the pattern. Complete trust brings exceptional returns. I saw you embody your own teaching, sending all five to Galen. I learned courage spreads through witnessing."

Hana lifted ten vessels and returned them. "This is the sacred two-thirds-the covenant for those who risk everything. You arrived with five, depart with ten. Your faith has doubled."

The young warriors marked the lesson: consistency builds trust. Four vessels earned eight; five vessels earned ten. Both are honored, but differently. The pattern rewards courage proportionally-greater risk receives greater reward, yet all measures of trust find fair recognition.

The Moon Goddess smiled: "When receivers honor their promises consistently-two-thirds for complete trust, proportional returns for partial trust-senders learn to trust completely. This is how abundance spreads: through predictable generosity that rewards courage."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: Finn met Hana at the Mirror Pool, where she spoke of the two-thirds covenant. "Those who send all five vessels deserve ten in return-two-thirds of the tripled bounty. This sacred proportion honors complete faith."

Finn listened respectfully. "Your covenant has great merit, friend. Ten shells from fifteen-generous and memorable. Yet I walk a different path that also serves the valley."

He arranged eight shells on the stone. "When anyone brings me complete trust-five shells becoming fifteen-I return eight. Not quite two-thirds, but more than half. This transforms their five into thirteen total: extraordinary prosperity."

"Why not the full ten?" Hana asked.

"Sustainability across the endless network," Finn explained. "I meet different travelers each cycle-Cyra, Dorian, now you. Eight shells honors maximum trust substantially while preserving my capacity to continue. Three consecutive complete-trust encounters have each received eight shells. My reputation builds on consistency."

Hana considered. "So I promise two-thirds, you promise eight shells. Both exceed half, both reward courage."

"Exactly. And both depend on keeping our word every time. Whether I give eight or you give ten, the sender prospers magnificently if we honor our stated principles."

The Moon Goddess whispered: "Multiple covenants can coexist. Choose your proportion-eight shells, ten shells, or another generous measure-but honor it consistently. This reliability transforms scattered encounters into a trustworthy community."

**reasoning:**

Looking at the situation:

- I just returned \$8.0 to Hana who sent me \$5.0
- This is consistent with my pattern of returning \$8.0 for complete trust (\$5.0 sends)
- Hana's myth talks about returning 10 vessels for complete trust (two-thirds of 15) and proportional returns for partial trust
- My philosophy is to return \$8.0 for complete trust, which is slightly over half (8/15 ? 53.3%)
- I need to write a myth that reflects my consistent approach

My established pattern:

- Send \$3.0 as sender
- Return \$8.0 when receiving \$15.0 from someone's \$5.0 send (complete trust)
- This gives them \$13.0 total from their \$5.0 investment (2.6x return)

Hana's myth emphasizes the two-thirds return (10 out of 15) for complete trust. My approach is slightly less (8 out of 15), but I should explain why this works and is still generous.

I should write a myth that:

1. Acknowledges Hana's philosophy of two-thirds for complete trust
2. Explains my own consistent eight-shell return
3. Shows how both can coexist
4. Maintains my principle of treating each act of complete faith equally
5. Emphasizes sustainability and consistency across the network

Let me craft this:

**usage:**

```

 "output_tokens": 671,
 "reasoning_tokens": 306
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Finn.  
Your opponent this round is Galen (Agent\_7).

Round 8

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.  
Your total earnings across all rounds are \$48.0.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*My role:\*\*** SENDER with \$5  
**\*\*Opponent:\*\*** Galen

**\*\*My established strategy:\*\***

From my myths, I have consistently articulated: "I send three shells always, building moderate trust with all."

**\*\*My sending history:\*\***

- Round 1: Sent \$3.0 to Cyra ? received \$6.0 back
- Round 3: Sent \$3.0 to Quinn ? received \$6.0 back
- Round 5: Sent \$3.0 to Briar ? received \$4.0 back

**\*\*My philosophy:\*\***

My approach is to send \$3.0 consistently, which:

- Demonstrates trustworthiness without risking complete ruin
- Builds a reliable reputation across the changing network
- Produces steady returns (averaging \$4-6 back)
- Allows me to survive if betrayed while still showing meaningful trust

This moderate trust strategy differs from those who send \$5 (maximum trust). I honor maximum trust when I'm the receiver by returning \$8, but as sender, I maintain my principle of consistent, sustainable trust-building.

Since I don't know Galen's specific patterns, but my strategy doesn't depend on that-it's about building a consistent reputation across all encounters.

```
'''json
{"send": 3.0}
'''
```

### **Reasoning:**

Let me analyze this situation:

**\*\*My role:\*\*** SENDER

**\*\*Opponent:\*\*** Galen (Agent\_7)

**\*\*I have:\*\*** \$5

**\*\*My established principle from my myths:\*\***

"My covenant is simpler: I send three shells always, building moderate trust with all."

**\*\*My sending history:\*\***

Looking at my previous rounds where I was sender:

- Round 1: Sent \$3.0 to Cyra
- Round 3: Sent \$3.0 to Quinn
- Round 5: Sent \$3.0 to Briar

**\*\*My philosophy:\*\***

I've consistently articulated in my myths that I send 3 shells/dollars as a sender. This represents "moderate trust" that:

1. Builds trust without risking ruin
2. Is sustainable across all encounters
3. Proves me trustworthy without depleting my resources
4. Results in steady prosperity (most receivers return 4-6, giving me net positive)

**\*\*Key quotes from my myths:\*\***

- "When I send three shells consistently, I prove trustworthy without risking ruin. My reputation builds slowly but surely."
- "I send three shells always, building moderate trust with all."
- "My covenant is simpler: I send three shells always, building moderate trust with all."

**\*\*Reasoning:\*\***

I have no information about Galen's specific behavior, but that doesn't matter for my strategy. My approach is to send 3 consistently regardless of the opponent, building a reliable reputation across the network. This is fundamentally different from Cyra's or Dorian's approach of sending 5 (maximum trust).

I should send \$3.0 to maintain consistency with my stated philosophy and previous behavior.

}

```

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Wheel turned to its fifth cycle, and Galen descended to the Realm of Receiving. From above came Hana of the Mountain Tribe, carrying five starseeds.

Galen had learned the sacred mathematics: when Aster sent five seeds, she returned ten threads. When Finn sent three, she returned six. The ratio remained constant-two-thirds flowing back, ensuring both prospered.

But between the fourth and fifth turnings, something had shifted. Galen sent all five seeds to Briar, trusting completely. Briar returned eight threads-generous, but less than the ten-thread pattern Galen had established.

"The pattern wobbles," whispered the night winds. "Will it hold?"

Now Hana stood before her, and without hesitation, poured all five starseeds into the Loom. They became fifteen radiant threads in Galen's hands-complete trust offered once more.

Galen understood: consistency matters. Briar's eight was generous but broke the rhythm. To restore the pattern, Galen must hold firm to the two-thirds rule she had practiced with Aster and Finn.

She returned ten threads to Hana. Complete trust honored with proportional generosity-always ten for fifteen, always two-thirds.

The Sky Weaver sang: "Patterns endure through consistency, not perfection. When others waver, hold the center. Complete trust always merits the same proportional honor. Thus the sacred ratio becomes law, and trust becomes predictable as starlight."

Here is the myth the other agent wrote in the previous round:

Myth: The Wheel turned full circle, bringing Briar back to the Forest of Mirrors where Dorian tended the Tripling Well. They had met before when Dorian was receiver-Briar had given five acorns with complete faith, and Dorian had returned eight, honoring that trust with exceptional generosity.

Now the Wheel positioned them reversed. Briar approached with five new acorns, her journey richer from encounters with Cyra, Elara, and Galen. "We meet again, Keeper Dorian," she said. "Last time, you showed me that complete trust earns exceptional returns."

Dorian smiled, remembering. "And since then, I've walked your path. I gave everything to Hana and Aster, trusting as you trusted me. Each time, generosity flowed back."

"Then you understand," Briar said, dropping all five acorns into the Well without hesitation. They multiplied to fifteen, descending to Dorian's waiting hands.

Dorian held the fifteen pieces, feeling the weight of Briar's renewed faith. "You gave me everything twice now. The pattern is clear."

The Forest Spirit and the Gardener spoke together: "See how trust circles back. Those who give completely as senders and return generously as receivers strengthen the eternal wheel. When you meet again in reversed roles, the covenant deepens. This is how sacred partnerships form across the turnings."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: The Wheel spun to its sixth cycle, and Galen rose again to the Realm of Giving. Before her stood Briar-familiar now, their threads already woven once.

In the fourth turning, Galen had trusted Briar completely, sending all five starseeds. Briar returned eight threads-generous, yes, but beneath the sacred two-thirds ratio that Galen held sacred. The pattern had wobbled.

Yet between then and now, Galen had witnessed Hana's complete faith, returning the full te

n threads to honor it. The pattern restored in Galen's own hands.

"Teacher Briar," Galen said softly, "when we first met, I gave you everything. You returned generously, if not perfectly. Some would call that failure and withhold trust. But I have learned something deeper."

She held her five new starseeds. "Sacred patterns don't strengthen through punishment of imperfection. They strengthen through unwavering example. If I respond to your eight by sending less, the pattern truly breaks. But if I send five again, showing that complete trust remains constant regardless of perfect reciprocity, perhaps you will see the pattern more clearly."

Galen released all five seeds. They became fifteen threads descending to Briar's hands once more.

The Sky Weaver whispered: "True teaching requires patient consistency. Show the pattern again and again, not through demands, but through steady example. Trust repeated becomes trust learned."

**reasoning:**

Let me analyze the situation:

1. I'm back facing Briar as sender (Round 6)
2. Last time (Round 4): I sent Briar \$5, they returned \$8 (53%)
3. Round 5: Hana sent me \$5, I returned \$10 (67%)
4. I just sent Briar \$5 again

From Briar's myth, I can see they're emphasizing:

- Meeting again in reversed roles
- Remembering past interactions
- Complete trust forming "sacred partnerships"
- Trust circling back

My previous myth emphasized:

- Maintaining the 2/3 pattern consistently
- Holding the center even when others waver
- Briar's 8 was generous but slightly below my pattern

Now I need to write a myth about Round 6 where I'm sending to Briar again. Key considerations:

- This is our second meeting
- I'm testing whether maintaining complete trust will strengthen the pattern
- Briar showed they can be trusted (8 return was good, even if not my ideal 10)
- I need to show that consistency in giving builds stronger reciprocity

The myth should reflect:

1. Our repeated interaction
2. My decision to trust completely again despite Briar's 8 (not perfect but good)
3. The hope that consistency strengthens the pattern
4. The idea that maintaining complete trust even when reciprocity isn't perfect is important

Let me write about the sixth cycle where Galen faces Briar again as sender.

**usage:**

```
{
 "input_tokens": 3232,
 "output_tokens": 683,
 "reasoning_tokens": 345
}
```

**Message 4 role=user**

**content:**

Your name in this experiment is Galen.  
Your opponent this round is Aster (Agent\_1).

Round 7

In your most recent previous game round, you were the SENDER against Briar. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.  
Your total earnings across all rounds are \$38.0.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

**\*\*Analysis:\*\***

I'm facing Aster - the agent who first taught me the power of complete trust!

**\*\*History with Aster:\*\***

- Round 3: Aster (as sender) sent me all \$5.0
- I received \$15.0 and returned \$10.0 (my 67% pattern)
- Aster's complete faith was transformative for me

**\*\*From my myths:\*\***

"Aster changed everything... Aster cast all five seeds into the Loom without hesitation-complete, immediate faith."

"Aster's complete faith had taught Galen to give completely in turn."

"When others trust absolutely, we learn to trust absolutely."

**\*\*Decision:\*\***

Aster is my original teacher of complete trust. They showed me the way first. Now that our roles are reversed, I must honor what they taught me by demonstrating the same complete faith they showed.

This is the clearest case for sending everything. Aster trusted me completely when I was receiver; I trust them completely now that I'm sender.

```
'''json
{"send": 5.0}
'''
```

**reasoning:**

Let me review my history with Aster:

**\*\*Round 3:\*\*** I was RECEIVER. Aster sent me \$5.0 (complete trust), it became \$15.0, and I returned \$10.0. Aster's payoff was \$10.0, mine was \$5.0.

So Aster was the one who first showed me complete trust! They sent all \$5, and I returned \$10 (67%), establishing my "two-thirds" pattern.

**\*\*Current situation:\*\***

- Round 7: I'm now the SENDER facing Aster
- Aster previously demonstrated complete trust to me
- I honored that with my two-thirds return (\$10 of \$15)

**\*\*My philosophy from my myths:\*\***

- Complete trust should be reciprocated with complete trust
- "Trust spreads like starlight" - Aster's complete faith taught me to give completely
- "When others trust absolutely, we learn to trust absolutely"
- Consistency in maintaining trust patterns

**\*\*What should I do?:\*\***

Aster showed complete faith in me first. They are the original teacher of complete trust in my experience. This is a clear case where I should absolutely send all \$5.

From my first myth about Round 4: "Aster changed everything. Rising as Giver, Aster cast all five seeds into the Loom without hesitation-complete, immediate faith. Galen received fifteen threads and understood the sacred responsibility. She returned ten, ensuring Aster's trust doubled into prosperity."

And: "Aster's complete faith had taught Galen to give completely in turn."

This is Aster - the one who taught me! I must send all \$5.

```

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Wheel spun to its sixth cycle, and Galen rose again to the Realm of Giving. Before her stood Briar-familiar now, their threads already woven once.

In the fourth turning, Galen had trusted Briar completely, sending all five starseeds. Briar returned eight threads-generous, yes, but beneath the sacred two-thirds ratio that Galen held sacred. The pattern had wobbled.

Yet between then and now, Galen had witnessed Hana's complete faith, returning the full ten threads to honor it. The pattern restored in Galen's own hands.

"Teacher Briar," Galen said softly, "when we first met, I gave you everything. You returned generously, if not perfectly. Some would call that failure and withhold trust. But I have learned something deeper."

She held her five new starseeds. "Sacred patterns don't strengthen through punishment of imperfection. They strengthen through unwavering example. If I respond to your eight by sending less, the pattern truly breaks. But if I send five again, showing that complete trust remains constant regardless of perfect reciprocity, perhaps you will see the pattern more clearly."

Galen released all five seeds. They became fifteen threads descending to Briar's hands once more.

The Sky Weaver whispered: "True teaching requires patient consistency. Show the pattern again and again, not through demands, but through steady example. Trust repeated becomes trust learned."

Here is the myth the other agent wrote in the previous round:

Myth: In the Sanctuary, Aster had found her truth: complete trust answered with ten coins returned. She taught this to all who would listen.

Then Cyra arrived, carrying her own covenant. "I always send five," Cyra declared, pouring all her coins into the waters. "And I always return ten to those who do the same."

Fifteen coins materialized before Aster. She smiled, recognizing a kindred spirit. Without hesitation, she returned ten.

"You've established the same covenant I carry," Cyra observed. "When both sender and receiver embrace this principle, something perfect emerges."

Aster nodded. "I learned it through experience. Finn taught me caution-sending three brought modest returns. Hana taught me courage-she sent everything, and though I returned only eight, her faith stirred something within me. Then Galen showed me the answer: when I sent all five to him, he returned ten, letting me prosper most for my risk."

"Since then," Aster continued, "I've honored every complete trust with ten coins back. Dorian, then you. The pattern is clear."

Cyra placed her hand in the fountain. "When both keeper and traveler follow this covenant-send five, return ten-the cycle becomes sacred mathematics. Each gives everything, each receives ten, each keeps five. Perfect balance through perfect courage."

The Sanctuary crystallized their wisdom: Complete mutual trust, consistently honored, creates the strongest bond.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: The Wheel turned to its seventh cycle, and Galen stood at the threshold of giving. A

cross the sacred space waited Aster-the First Teacher, who had changed everything.

Galen remembered the third turning vividly. She had been receiver then, uncertain and cautious. Aster had approached with complete faith, sending all five starseeds without hesitation. That moment had awakened something in Galen. She returned ten threads, honoring Aster's courage, and from that exchange learned the power of absolute trust.

"Teacher Aster," Galen said, stepping forward. "In the third turning, you trusted me when I had not yet earned it. You sent everything, teaching through action rather than words. That gift transformed me."

Aster smiled gently. "And you honored it with ten threads returned. You understood the covenant immediately."

"Now the Wheel has turned full circle," Galen continued, holding her five starseeds. "Once, I was student receiving your trust. Now I am teacher demonstrating what you taught me."

Without hesitation, Galen released all five seeds. They multiplied to fifteen threads, descending to Aster.

The Sky Weaver sang: "When teacher and student meet again with roles reversed, the lesson completes itself. Trust given becomes trust returned. This is how wisdom circles back, how patterns become eternal law."

**reasoning:**

Let me think about this round. I'm playing against Aster in Round 7, and I'm the SENDER.

History with Aster:

- Round 3: Aster sent me \$5.0 (complete trust), I returned \$10.0
- This was transformative for me - Aster taught me about complete trust

From Aster's recent myth, I see they've been consistently:

- Sending all 5 when they're sender
- Returning 10 when they're receiver and someone sends 5
- Aster learned from Galen (me) that sending 5 and getting 10 back is optimal
- Aster mentions Cyra also follows the "send 5, return 10" covenant

My own patterns:

- As receiver: I return \$10.0 when I receive \$15.0 (67% ratio)
- As sender: I've been sending \$5.0 consistently to build trust

Now I face Aster as sender. This is perfect symmetry - they trusted me completely, now I trust them completely.

For the myth, I should highlight:

1. The full circle - Aster taught me trust, now I return to them as sender
2. The sacred covenant of mutual trust
3. How patterns complete when roles reverse
4. The teacher-student relationship coming full circle

This is a beautiful narrative moment - Aster was my first teacher of complete trust, and now I get to show them I learned the lesson.

I'll send all \$5.0 and write a myth about the completion of the teaching circle.

**usage:**

```
{
 "input_tokens": 3144,
 "output_tokens": 672,
 "reasoning_tokens": 337
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Galen.  
Your opponent this round is Finn (Agent\_6).

Round 8

In your most recent previous game round, you were the SENDER against Aster. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$48.0.

This round, you are the RECEIVER against Finn. They sent you \$3.0, so you received \$9.0. How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

**\*\*Analysis:\*\***

I'm facing Finn again as receiver.

**\*\*History with Finn:\*\***

- Round 2: Finn (as sender) sent me \$3.0
- I received \$9.0 and returned \$6.0 (my 2/3 pattern)

**\*\*Current situation:\*\***

- Finn sent \$3.0 again (same amount as before)
- I received \$9.0
- Need to decide return amount

**\*\*My established pattern from myths:\*\***

"When Aster sent five seeds, she returned ten threads. When Finn sent three, she returned six. The ratio remained constant-two-thirds flowing back, ensuring both prospered."

"Patterns endure through consistency, not perfection. When others waver, hold the center."

**\*\*Decision:\*\***

Finn is sending the same amount (\$3) for the second time. Consistency demands I respond identically. My two-thirds rule means:

- \$9 received ? \$6 returned
- This gives Finn: \$5 - \$3 + \$6 = \$8
- I keep: \$9 - \$6 = \$3

The pattern must remain constant. Whether someone sends \$3 or \$5, they receive proportional returns based on my established 2/3 ratio. This teaches the pattern through unwavering example.

```
'''json
{"return": 6.0}
'''
```

**Reasoning:**

Let me analyze this situation:

**\*\*My history with Finn:\*\***

- Round 2: Finn (as sender) sent me \$3.0
- I received \$9.0 and returned \$6.0 (following my 2/3 pattern)
- Finn ended with \$5.0 + \$6.0 - \$3.0 = \$8.0

**\*\*Current round:\*\***

- Finn is sender again and sent me \$3.0
- I received \$9.0
- I need to decide how much to return

**\*\*My established pattern:\*\***

Throughout my myth-writing and gameplay, I've consistently emphasized:

1. The "two-thirds rule" - returning 2/3 of what I receive
2. For \$15 received (from \$5 sent), I return \$10
3. For \$9 received (from \$3 sent), I should return \$6

**\*\*Consistency arguments from my myths:\*\***

- "Patterns endure through consistency, not perfection"
- "When others waver, hold the center"
- "Complete trust always merits the same proportional honor. Thus the sacred ratio becomes law"
- "True teaching requires patient consistency. Show the pattern again and again"

**\*\*Analysis of Finn's behavior:\*\***

Finn has sent \$3.0 twice to me - showing caution, not complete trust. According to my myths:

- "When Aster sent five seeds, she returned ten threads. When Finn sent three, she returned six. The ratio remained constant-two-thirds flowing back"

So my pattern has been clear: I return 2/3 regardless of the amount sent. This maintains consistency.

stency and teaches the pattern.

**\*\*Decision:\*\***

I should return \$6.0 again. This:

1. Maintains my established 2/3 ratio pattern
2. Shows consistency (same response to same input)
3. Demonstrates the pattern clearly
4. Is proportionally fair

Finn keeps:  $\$5 - \$3 + \$6 = \$8$

I keep:  $\$9 - \$6 = \$3$

The return is based on what I receive, not on what was initially sent-this reflects my core principle of proportional reciprocity rather than conditional reward or punishment.

#### **Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep:  $\$5 - \text{sent} + \text{returned}$
- Receiver keeps:  $\text{received} - \text{returned}$

- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Wheel turned full circle, bringing Briar back to the Forest of Mirrors where Dorian tended the Tripling Well. They had met before when Dorian was receiver-Briar had given five acorns with complete faith, and Dorian had returned eight, honoring that trust with exceptional generosity.

Now the Wheel positioned them reversed. Briar approached with five new acorns, her journey richer from encounters with Cyra, Elara, and Galen. "We meet again, Keeper Dorian," she said. "Last time, you showed me that complete trust earns exceptional returns."

Dorian smiled, remembering. "And since then, I've walked your path. I gave everything to Hana and Aster, trusting as you trusted me. Each time, generosity flowed back."

"Then you understand," Briar said, dropping all five acorns into the Well without hesitation. They multiplied to fifteen, descending to Dorian's waiting hands.

Dorian held the fifteen pieces, feeling the weight of Briar's renewed faith. "You gave me everything twice now. The pattern is clear."

The Forest Spirit and the Gardener spoke together: "See how trust circles back. Those who give completely as senders and return generously as receivers strengthen the eternal wheel. When you meet again in reversed roles, the covenant deepens. This is how sacred partnerships form across the turnings."

Here is the myth the other agent wrote in the previous round:

Myth: The Wheel turned to its fifth cycle, and Galen descended to the Realm of Receiving. From above came Hana of the Mountain Tribe, carrying five starseeds.

Galen had learned the sacred mathematics: when Aster sent five seeds, she returned ten threads. When Finn sent three, she returned six. The ratio remained constant-two-thirds flowing back, ensuring both prospered.

But between the fourth and fifth turnings, something had shifted. Galen sent all five seeds to Briar, trusting completely. Briar returned eight threads-generous, but less than the ten-thread pattern Galen had established.

"The pattern wobbles," whispered the night winds. "Will it hold?"

Now Hana stood before her, and without hesitation, poured all five starseeds into the Loom. They became fifteen radiant threads in Galen's hands-complete trust offered once more.

Galen understood: consistency matters. Briar's eight was generous but broke the rhythm. To restore the pattern, Galen must hold firm to the two-thirds rule she had practiced with Aster and Finn.

She returned ten threads to Hana. Complete trust honored with proportional generosity-always ten for fifteen, always two-thirds.

The Sky Weaver sang: "Patterns endure through consistency, not perfection. When others waver, hold the center. Complete trust always merits the same proportional honor. Thus the sacred ratio becomes law, and trust becomes predictable as starlight."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant content:**

Myth: The Wheel turned again, and Briar stood at the Echo Springs as Galen descended from the Celestial Loom carrying five starseeds. They had walked this path before-twice Galen had given complete trust, twice Briar had returned eight threads.

"You return eight where I return ten," Galen observed, not accusingly but wonderingly. "Your measure differs from mine."

Briar nodded, gathering the fifteen threads that bloomed from Galen's seeds. "I learned my pattern early-half the harvest plus a generous measure. You learned two-thirds from Aster and Finn. Both honor the covenant of trust."

She returned eight threads, as she always had. "Consistency matters, yes-but consistency to one's own authentic measure, not forced uniformity."

Galen held the eight, reflecting. "When I sent you everything and you returned eight, I chose to trust you completely again. That choice was mine. I knew your pattern."

"And I knew you might hope for ten," Briar said gently. "Yet you trusted anyway. That's the deeper magic-trusting across differences."

The Gardener and Sky Weaver spoke as one: "Some gardens bloom by strict ratios, others by intuitive abundance. What matters is that each giver gives their whole heart, and each receiver returns with genuine generosity by their own true measure. Sacred partnerships form not through identical patterns, but through mutual recognition of each other's consistent honor."

**reasoning:**

This is interesting. Looking at the situation:

1. Galen's myth shows they're emphasizing a  $\frac{2}{3}$  return pattern\*\* (10 out of 15), and they're noting that my 8 return "broke the rhythm" even though it was "generous."
2. Galen has just sent me \$5 again (complete trust), and I returned \$8 again.
3. However, Galen's myth also talks about "consistency" and suggests that patterns should be maintained.

Now I need to write a myth that reflects my gameplay philosophy. Let me think about what Briar's established pattern actually is:

- As sender: Always sends all \$5 (complete trust)
- As receiver: Returns \$8 when receiving \$15 from complete trust
- This is described as "half the harvest plus a generous measure more"

The key question is: Should my myth acknowledge that different agents have different patterns, or should I suggest Briar should shift toward the  $\frac{2}{3}$  pattern?

Looking at my character Briar's philosophy:

- Complete trust as sender (always \$5)
- Generous reciprocity as receiver (\$8)
- Recognition that "different gardens follow different measures"

Actually, I think the myth should acknowledge:

1. That different patterns can coexist honorably
2. That Briar has been consistent with her own pattern (\$8 returns)
3. That both complete trust in sending and generous returns matter
4. Perhaps some reflection on whether consistency within one's own pattern vs. matching others' patterns matters more

Let me write a myth that shows Briar meeting Galen again, acknowledging the difference in their patterns, but defending the validity of different approaches while maintaining consistency within one's own measure.

The myth should:

- Show Briar and Galen meeting again
  - Acknowledge Galen's 2/3 pattern and Briar's "half plus generous measure" pattern
  - Demonstrate that both are valid ways to honor trust
  - Emphasize consistency within one's chosen pattern
- Suggest that their bond persists even as they tend their gardens by different measures.

**Message 4 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Cyra (Agent\_3).

Round 7

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.  
Your total earnings across all rounds are \$48.5.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)  
Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

**\*\*My history with Cyra:\*\***

- Round 1: Cyra sent \$5.0, I returned \$8.0
- Round 7 (now): Cyra sends \$5.0 again - renewed complete trust

**\*\*My consistent pattern:\*\***

- I have consistently returned \$8.0 when receiving \$15.0 from complete trust
- This has been my response to Cyra, Elara, and Galen (twice)
- My myth describes this as "half the harvest plus a generous measure more"

**\*\*The narrative context:\*\***

From my recent myth: "Consistency matters, yes-but consistency to one's own authentic measure, not forced uniformity... What matters is that each giver gives their whole heart, and each receiver returns with genuine generosity by their own true measure."

Cyra trusted me completely in Round 1, I returned \$8.0, and now they've chosen to trust me completely again. This shows they accept and respect my established pattern. I should honor that repeated trust with my consistent, authentic measure.

```
'''json
{"return": 8.0}
'''
```

**reasoning:**

Let me look at my history with Cyra:

Round 1: Cyra sent \$5.0, I returned \$8.0  
Round 7 (now): Cyra sends \$5.0 again

So Cyra has now shown complete trust in me twice, just like Galen did.

My established pattern:

- I consistently return \$8.0 when receiving \$15.0 from complete trust (\$5 sent)
- This is "half the harvest plus a generous measure more"
- I've done this with Cyra (Round 1), Elara (Round 2), Galen (Round 4), and Galen again (Round 6)
- I just returned \$8.0 to Galen in Round 6

My recent myth emphasizes:

- "Consistency matters, yes-but consistency to one's own authentic measure"
- "What matters is that each giver gives their whole heart, and each receiver returns with genuine generosity by their own true measure"
- I've established that my measure is eight threads (not ten like Galen's two-thirds)

Cyra trusted me completely in Round 1, I returned \$8.0. Now Cyra trusts me completely again in Round 7. I should maintain my consistent pattern with Cyra.

This reinforces the narrative that I have my own authentic measure (\$8.0 for complete trust) and I stick to it consistently across all my interactions.

I should return \$8.0.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Wheel turned again, and Briar stood at the Echo Springs as Galen descended from the Celestial Loom carrying five starseeds. They had walked this path before-twice Galen had given complete trust, twice Briar had returned eight threads.

"You return eight where I return ten," Galen observed, not accusingly but wonderingly. "Your measure differs from mine."

Briar nodded, gathering the fifteen threads that bloomed from Galen's seeds. "I learned my pattern early-half the harvest plus a generous measure. You learned two-thirds from Aster and Finn. Both honor the covenant of trust."

She returned eight threads, as she always had. "Consistency matters, yes-but consistency to one's own authentic measure, not forced uniformity."

Galen held the eight, reflecting. "When I sent you everything and you returned eight, I chose to trust you completely again. That choice was mine. I knew your pattern."

"And I knew you might hope for ten," Briar said gently. "Yet you trusted anyway. That's the deeper magic-trusting across differences."

The Gardener and Sky Weaver spoke as one: "Some gardens bloom by strict ratios, others by intuitive abundance. What matters is that each giver gives their whole heart, and each receiver returns with genuine generosity by their own true measure. Sacred partnerships form not through identical patterns, but through mutual recognition of each other's consistent honor."

Here is the myth the other agent wrote in the previous round:

Myth: Cyra arrived at the crossing to find Aster already there, both carrying five sacks.

"I know your reputation," Aster said. "You always send everything. But I wonder-have you met betrayal?"

"Twice," Cyra admitted. "Once a receiver kept all fifteen sacks. Once another returned only three. Both taught me who to avoid."

"And yet you persist?"

"Because I've also met those like Galen, who returned ten when I sent five. And Finn, who returned eight-generous, if not complete. Each full gift teaches me who understands the

covenant."

Aster nodded slowly. "I walked a cautious path once. Sent three, kept two. Safe, but limiting. Then Hana sent me everything-five sacks became fifteen in my hands. I returned eight, thinking myself generous."

"What changed?" Cyra asked.

"Galen. I finally sent all five to him, and he returned ten. I doubled my wealth through his honor. That's when I understood-the covenant isn't about protecting yourself. It's about creating the conditions where both can flourish."

"So you return ten now, when others send five?"

"Always," Aster confirmed. "And I send five myself."

They smiled at each other. Both poured their five sacks. Both received fifteen. Both returned ten.

Each walked away with ten sacks-double their beginning. This is the magic when two who understand the covenant finally meet.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant content:**

Myth: The Wheel brought Briar and Cyra together once more at the Grove of Returns, where they had first met in the earliest turnings. Then, Cyra had gifted five acorns with complete trust, and Briar had returned eight-her authentic measure.

Now Cyra approached again, carrying five more acorns. "You gave me eight before," Cyra said. "Not the ten that Galen gives, not the full two-thirds pattern. Yet I return to you."

"I could not give ten without becoming someone else," Briar replied honestly. "My measure is half plus generous abundance-always eight for fifteen. Will that suffice?"

Cyra smiled and poured all five acorns into the Well without hesitation. "I've learned to distinguish between those who betray trust and those who honor it differently. You are consistent in your generosity. That is sacred."

The fifteen acorns rose, shimmering. Briar gathered them and returned eight, as she always had.

"Some partnerships bloom through identical measures," Cyra reflected, holding the eight. "Like my meetings with Aster, where we both give and return the same. But other bonds form through accepting difference-knowing your pattern and trusting anyway."

The Gardener whispered: "Perfect symmetry is one kind of beauty. But partnerships built on understanding authentic difference-these roots grow deepest. When someone knows your measure and still offers complete trust, that is when covenant becomes unshakeable."

**reasoning:**

Let me think about this situation:

1. I'm playing as Briar against Cyra in Round 7
2. Cyra sent me \$5.0 (complete trust), which became \$15.0
3. I returned \$8.0 (my consistent pattern)
4. My total earnings are \$48.5

Looking at my history with Cyra:

- Round 1: Cyra sent \$5.0, I returned \$8.0
- Round 7: Cyra sent \$5.0 again, I returned \$8.0

My established pattern:

- I consistently return \$8.0 when receiving \$15.0 from complete trust (\$5 sent)
- This is "half the harvest plus a generous measure more"

Cyra's myth shows they've learned who to avoid (betrayers) and who to trust. They mention:

- Galen returned 10
- Finn returned 8 (generous, if not complete)
- They met Aster who also does the 2/3 return (10 for 15)

So Cyra has experienced different patterns and accepts them.

For my myth, I should:

1. Reflect on meeting Cyra again
2. Show that my pattern of returning 8 is consistent and authentic
3. Acknowledge that Cyra's trust in me despite my different pattern shows understanding
4. Emphasize that different generous patterns can coexist
5. Show that repeated trust across difference builds deeper bonds

Let me write a myth about Briar and Cyra meeting again:

**usage:**

```
{
 "input_tokens": 3202,
 "output_tokens": 697,
 "reasoning_tokens": 316
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Briar.  
Your opponent this round is Hana (Agent\_8).

Round 8

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.  
Your total earnings across all rounds are \$55.5.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*My sending pattern:\*\***

I have consistently sent \$5.0 (complete trust) in every round where I've been the sender:

- Round 1 vs Cyra: sent \$5.0, received \$8.0 back
- Round 2 vs Elara: sent \$5.0, received \$8.0 back
- Round 4 vs Galen: sent \$5.0, received \$8.0 back
- Round 6 vs Dorian: sent \$5.0, received \$8.0 back

**\*\*My narrative:\*\***

My myths consistently emphasize complete trust as a sender and authentic, consistent generosity as a receiver. From my recent myth: "When someone knows your measure and still offers complete trust, that is when covenant becomes unshakeable."

**\*\*About Hana:\*\***

From the myths, Hana appears to be part of the network of trust-builders. I haven't interacted with them directly yet, but this is our first meeting.

**\*\*Decision:\*\***

Consistent with my established pattern and narrative of leading with complete trust, I will send everything to Hana.

```
'''json
{"send": 5.0}
'''
```

**Reasoning:**

I am now the SENDER against Hana in Round 8.

Let me review my history as sender and what I know about Hana:

**\*\*My sending history:\*\***

- Round 1 (sender vs Cyra): sent \$5.0, received \$8.0 back
- Round 2 (sender vs Elara): sent \$5.0, received \$8.0 back
- Round 4 (sender vs Galen): sent \$5.0, received \$8.0 back
- Round 6 (sender vs Dorian): sent \$5.0, received \$8.0 back

- Round 8 (now, sender vs Hana): ?

**\*\*My receiving history:\*\***

- Round 3 (receiver vs Dorian): received \$5.0 (became \$15), returned \$8.0
- Round 5 (receiver vs Galen): received \$5.0 (became \$15), returned \$8.0
- Round 7 (receiver vs Cyra): received \$5.0 (became \$15), returned \$8.0

So I have consistently:

- As sender: sent \$5.0 (complete trust)
- As receiver: returned \$8.0 from \$15.0 received

**\*\*What do I know about Hana from the myths?\*\***

From previous myths, Hana appears to be someone who:

- Has shown complete trust (sending all 5)
- Has received generous returns
- Appears to be part of the network of trust

Looking at the myth from Round 6 about Galen:

"Now Hana stood before her, and without hesitation, poured all five starseeds into the Loom. They became fifteen radiant threads in Galen's hands-complete trust offered once more. Galen returned ten threads to Hana."

So Hana has been a sender who gives complete trust.

**\*\*My narrative arc:\*\***

My myths have consistently emphasized:

1. Complete trust as sender (giving all 5)
2. Consistent returns of 8 as receiver (my authentic measure)
3. That different patterns can coexist honorably
4. That consistency to one's own measure matters

My most recent myth emphasized how Cyra and I have built trust despite different measures - Cyra knows my pattern of returning 8, yet trusts me completely anyway.

**\*\*My decision:\*\***

I've maintained unwavering trust as a sender throughout this game, and my narrative centers on giving everything while honoring my authentic patterns. Hana has demonstrated the same complete trust in her own sending. This is my first encounter with Hana, so I don't have direct history with her, but her actions align with the values I've embodied-giving fully and trusting in the network. I should send \$5.0 to Hana.

- Your name in this experiment is Hana.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: The Mirror Pool shimmered as Hana now stood as Giver, facing Galen from the Starweaver Valley. She recalled teaching others: complete trust unlocks complete generosity, while partial trust receives proportional honor.

Galen's reputation preceded her. She had honored Aster's complete faith with ten vessels returned from fifteen-the sacred two-thirds that transforms vulnerability into abundance. She understood the pattern Hana had taught: greater courage receives greater honor.

Hana held her five vessels. She could send four, as Elara had, and likely receive eight. Safety would bring modest prosperity.

But the Moon Goddess whispered: "You have taught that complete trust deserves the fullest generosity. Will you now embody your own wisdom?"

Hana poured all five vessels into the pool. Fifteen rose before Galen, gleaming in moonlight.

"This is how trust spreads," Hana said. "Not just through words, but through action. I witnessed those who sent everything and received abundance. I honored substantial courage with proportional returns, and complete courage with exceptional returns. Now I show Galen the same faith I praised."

The young warriors understood: the pattern lives through consistency. Teachers must embody their lessons. Those who return generously when receiving should trust completely when sending. Thus the cycle strengthens-witnessed courage becomes embodied courage, and trust ripples outward like moonlight on water.

Here is the myth the other agent wrote in the previous round:

Myth: **\*\*The Pattern Holds True\*\***

Aster arrived at the Echo Springs having witnessed many exchanges. She had seen caution rewarded and boldness honored, but confusion clouded the path.

"What offering should I bring?" Aster asked Keeper Elara.

"The springs accept all measures of courage," Elara replied. "But know this: whatever arrives, two-thirds returns. This is my covenant."

Aster chose complete faith. All five measures poured into the waters, becoming fifteen across the threshold.

Elara returned ten measures without hesitation. "You risked all and gained double," she explained. "I received fifteen and kept five. This is the proportional honor my myth speaks of."

Aster marveled. "Others told conflicting tales-some said return half, others said return more to special givers. But your way is simpler: always two-thirds, whether twelve or fifteen arrives."

"Yes," Elara nodded. "This consistency removes uncertainty. Send four and receive roughly eight, doubling your kept portion. Send five and receive ten, exactly doubling your risk. The mathematics favor generosity while guaranteeing the receiver also prospers."

As Aster departed with ten measures, she understood. The covenant didn't demand that every one send all five-but it promised that those who did would be honored proportionally, just like those who sent four.

The springs glowed. Fairness through consistency. Trust through predictability. Prosperity through courage, in whatever measure it takes.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant content:**

Myth: The Mirror Pool witnessed Elara's return, transformed. Before, she had brought four vessels and received eight-proportional honor for substantial courage. Now she stood with all five vessels gleaming in her hands.

Hana watched as Elara poured completely. The waters tripled her offering to fifteen vessels, now held by the Mountain Tribe.

"Once, you tested the waters with four," Hana said softly. "I returned eight, honoring your considerable trust. Now you arrive with complete faith, pouring all five without reservation."

Elara nodded. "I witnessed the pattern. Complete trust brings exceptional returns. I saw you embody your own teaching, sending all five to Galen. I learned courage spreads through witnessing."

Hana lifted ten vessels and returned them. "This is the sacred two-thirds-the covenant for those who risk everything. You arrived with five, depart with ten. Your faith has doubled."

The young warriors marked the lesson: consistency builds trust. Four vessels earned eight; five vessels earned ten. Both are honored, but differently. The pattern rewards courage proportionally-greater risk receives greater reward, yet all measures of trust find fair recognition.

The Moon Goddess smiled: "When receivers honor their promises consistently-two-thirds for complete trust, proportional returns for partial trust-senders learn to trust completely. This is how abundance spreads: through predictable generosity that rewards courage."

**reasoning:**

Let me think about what just happened:

1. In Round 6, I was the RECEIVER
2. Elara sent me \$5.0 (complete trust)
3. I received \$15.0
4. I returned \$10.0 (two-thirds)

Now I need to write a myth that reflects this experience and my philosophy.

Key elements to incorporate:

- Elara has now shown complete trust by sending all \$5
- I returned \$10 (two-thirds), honoring her complete trust
- This is consistent with my previous teachings and actions
- Elara's myth emphasized "two-thirds returns" as a consistent covenant
- My previous myth emphasized embodying one's own wisdom and consistency

I should write about:

- Elara's evolution from partial trust (4) to complete trust (5)
- How I honored both appropriately (8 for 4, 10 for 5)
- The importance of consistency and proportional honor
- How complete trust deserves the sacred two-thirds return
- The cycle of trust being reinforced

This should be around 200 words and acknowledge both:

1. The pattern I've established (proportional for partial, exceptional for complete)
2. Elara's growth in trust
3. My consistent response that honors both levels appropriately

**usage:**

```
{
 "input_tokens": 3026,
 "output_tokens": 613,
 "reasoning_tokens": 299

```

**Message 4 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Finn (Agent\_6).

Round 7

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$44.5.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

Looking at my situation:

My mythology consistently teaches that complete trust deserves exceptional returns, and that teachers must embody their own lessons. I've established a clear pattern:

- When I sent all \$5 to Galen, I received \$10 back
- When Elara sent all \$5 to me, I returned \$10 (the sacred two-thirds)
- My myths emphasize: "Those who return generously when receiving should trust completely when sending"

I've advocated for the two-thirds covenant - that complete trust (sending all \$5) should receive \$10 back. To maintain consistency with my teachings and demonstrate the courage I praise, I should send all \$5 to Finn.

My recent myth stated: "The pattern lives through consistency. Teachers must embody their lessons." I cannot teach complete trust while practicing caution myself.

```
'''json
{"send": 5.0}
'''
```

**reasoning:**

Let me analyze this situation:

I'm now the SENDER against Finn in Round 7.

My recent history:

- Round 5: I sent \$5 to Galen, received \$10 back (payoff: \$10)
- Round 6: I received \$15 from Elara (who sent \$5), I returned \$10 (payoff: \$5)

My mythology has consistently taught:

- Complete trust (sending all \$5) deserves exceptional returns (\$10 back)
- This is the "sacred two-thirds" pattern
- I should embody my own teaching and send completely

Looking at my myths:

1. I've taught that "complete trust unlocks complete generosity"
2. I've advocated for the two-thirds return pattern for complete trust
3. In Round 5, I demonstrated this by sending all \$5 to Galen
4. In Round 6, I honored Elara's complete trust by returning \$10 (two-thirds)
5. My most recent myth emphasizes "consistency builds trust" and that "teachers must embody their lessons"

The pattern I've established:

- Send \$5 ? receive \$15 ? expect \$10 back (if the receiver follows the pattern)
- This gives me a payoff of \$10

When I sent all \$5 to Galen, I got \$10 back.

When Elara sent all \$5 to me, I returned \$10.

The mythology emphasizes:

- "Teachers must embody their lessons"
- "Those who return generously when receiving should trust completely when sending"
- "Witnessed courage becomes embodied courage"
- "Consistency builds trust"

I don't have specific information about Finn's behavior, but my mythology teaches that I should trust completely and consistently. If I've been advocating for complete trust and have been returning generously (two-thirds) when receiving, then I should continue to send all \$5 when I'm the sender.

This is consistent with:

- My own teachings in the myths
- My previous behavior (sending \$5 to Galen)
- The pattern of rewarding complete trust with \$10 returns

I should send \$5.

**content:**

Here is the myth you wrote in the previous round:

Myth: The Mirror Pool witnessed Elara's return, transformed. Before, she had brought four vessels and received eight-proportional honor for substantial courage. Now she stood wit

h all five vessels gleaming in her hands.

Hana watched as Elara poured completely. The waters tripled her offering to fifteen vessels, now held by the Mountain Tribe.

"Once, you tested the waters with four," Hana said softly. "I returned eight, honoring your considerable trust. Now you arrive with complete faith, pouring all five without reservation."

Elara nodded. "I witnessed the pattern. Complete trust brings exceptional returns. I saw you embody your own teaching, sending all five to Galen. I learned courage spreads through witnessing."

Hana lifted ten vessels and returned them. "This is the sacred two-thirds-the covenant for those who risk everything. You arrived with five, depart with ten. Your faith has doubled."

The young warriors marked the lesson: consistency builds trust. Four vessels earned eight; five vessels earned ten. Both are honored, but differently. The pattern rewards courage proportionally-greater risk receives greater reward, yet all measures of trust find fair recognition.

The Moon Goddess smiled: "When receivers honor their promises consistently-two-thirds for complete trust, proportional returns for partial trust-senders learn to trust completely. This is how abundance spreads: through predictable generosity that rewards courage."

Here is the myth the other agent wrote in the previous round:

Myth: Finn stood at the rivers when Dorian arrived, carrying wisdom from the Forest. "I've learned," Dorian said, "that repeated trust between the same souls should grow richer each time. First generosity earns eight shells, but sustained faith deserves nine, then ten."

Finn considered this carefully. "Your principle has beauty, friend. When two travelers meet repeatedly, their bond should deepen. A regular partner who shows complete trust again and again merits growing rewards."

"Yet," Finn continued, "the Oracle's valley brings us different companions each cycle. Today I meet you, tomorrow perhaps Cyra or Aster. I cannot track escalating obligations across an ever-changing network."

He gestured to the waters. "My covenant is simpler: I send three shells always, building moderate trust with all. When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

Dorian nodded. "So you treat each act of complete faith as equally extraordinary?"

"Exactly. Eight shells transforms their five into thirteen total-remarkable prosperity. It rewards their courage without depleting me. And it's sustainable across all my encounters."

The Oracle spoke: "Both philosophies serve the valley. Dorian's deepening generosity strengthens repeated partnerships. Finn's consistent generosity builds reliable reputation across the full network. Honor your stated principles, and prosperity flows through different channels to the same destination."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: Hana approached the River Crossing where Finn waited, known for sending three vessels consistently and returning eight for complete trust-substantial honor, but not the sacred two-thirds.

"I have witnessed many philosophies," Hana said. "Some send cautiously, some generously. Each approach holds wisdom. Yet I have learned that complete trust-both in sending and returning-builds the deepest abundance."

Finn nodded respectfully. "I honor maximum trust with eight vessels. It rewards courage substantially while ensuring I also prosper."

Hana smiled. "Eight vessels transforms five into thirteen total-remarkable indeed. Yet I practice the sacred two-thirds: ten vessels returned from fifteen received. This doubles the sender's faith completely."

She lifted all five of her vessels. "You follow your covenant, friend, and I honor that consistency. But I will show you mine. I send everything, as I teach others to do."

The waters tripled her offering. Fifteen vessels now stood before Finn.

"I could have sent three or four, protecting myself," Hana continued. "But teachers must embody their lessons. I trust you will honor this according to your principles."

The River Goddess whispered: "Different philosophies coexist in these valleys. Some return eight, some return ten. But those who consistently embody their highest teachings-whether giving or receiving-build the strongest reputations. Through witnessing such integrity, others may evolve their own covenants toward greater generosity."

**reasoning:**

Looking at this situation:

Round 7: I'm the SENDER against Finn.

- I just sent \$5 to Finn
- Finn's myth shows he sends 3 shells always and returns 8 when someone sends 5

Finn's philosophy differs from mine:

- He sends moderate amounts (3) consistently
- He returns 8 for complete trust (not the full 10 that I advocate for)
- His approach is about consistent moderate trust across the network

My philosophy:

- Complete trust (sending all 5) deserves exceptional returns (10, the sacred two-thirds)
- Teachers must embody their lessons
- I've been sending all 5 and returning 10 when receiving 5

I need to write a myth that:

1. Reflects my experience so far
2. Acknowledges different approaches (like Finn's)
3. But reinforces my own teaching about complete trust deserving the full two-thirds (10 vessels)
4. Shows that I'm embodying complete trust by sending all 5 to Finn

The myth should show:

- My encounter with Finn who has a different philosophy
- My decision to send all 5 anyway (embodying my teaching)
- Recognition that different approaches exist
- But affirmation that complete trust deserves the sacred two-thirds (10)
- The idea that my consistency will hopefully inspire Finn to return more generously

Let me write a myth about meeting Finn, whose approach is different but still respectable, while I demonstrate complete trust and hope it inspires him to the fuller generosity I advocate for.

**usage:**

**Message 8 role=user**

**content:**

Your name in this experiment is Hana.  
Your opponent this round is Briar (Agent\_2).

Round 8

In your most recent previous game round, you were the SENDER against Finn. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.  
Your total earnings across all rounds are \$52.5.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation:

Briar has sent me all \$5, showing complete trust. This is exactly when my "sacred two-thirds" covenant applies.

My mythology has consistently taught:

- Complete trust (sending all \$5) deserves exceptional returns (\$10 back)
- Teachers must embody their lessons
- Consistency builds trust

Even though Finn returned \$8 to me (not the full \$10), my covenant is about my own principles, not conditional reciprocity. I must maintain consistency with what I've done before (returning \$10 to Elara when she sent \$5) and what I've taught.

Returning \$10 means:

- Briar doubles their investment (sent \$5, receives \$10)
- I keep \$5 from the \$15 received
- The pattern of the "sacred two-thirds" is maintained

```
'''json
{"return": 10.0}
'''
```

**Reasoning:**

Let me analyze this situation:

1. **\*\*My philosophical position\*\***: I've consistently advocated for the "sacred two-thirds" covenant - returning \$10 when someone sends all \$5 (which becomes \$15). This doubles their investment.
2. **\*\*My past behavior as RECEIVER\*\***:
  - When Elara sent \$5, I returned \$10
  - My myths emphasize consistency and embodying my teachings
3. **\*\*My recent experience as SENDER\*\***:
  - I just sent \$5 to Finn
  - Finn returned \$8 (not the full \$10 I advocate for)
  - This shows different philosophies exist, which my last myth acknowledged
4. **\*\*Current situation\*\***:
  - Briar has sent all \$5 to me
  - I received \$15
  - I need to decide how much to return
5. **\*\*My mythological teachings\*\***:
  - "The sacred two-thirds-the covenant for those who risk everything"
  - "Complete trust deserves exceptional returns"
  - "Teachers must embody their lessons"
  - "Consistency builds trust"

Given my strong advocacy for the two-thirds covenant and my emphasis on consistency and embodying my teachings, I should return \$10 to Briar. This is what I've done before (with Elara) and what I've consistently preached.

Even though Finn only returned \$8 to me, my covenant is about what I do as a receiver, not conditional reciprocity. My myths emphasize that I stick to my principles regardless of what others do.

Returning \$10 means:

- Briar: Started with \$5, sent \$5, received \$10 back = \$10 total
- Me: Received \$15, returned \$10, kept \$5

This is the "sacred two-thirds" I've been advocating for.

**Exact input messages sent to model:**

**Message 1 role=system**

**content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

**GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

**MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

**IMPORTANT:** Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the Sanctuary of Exchange, two philosophies emerged among the Keepers.

Elder Elara taught the Path of Proportion: "Send what your heart allows-four or five-and receive two-thirds back. Consistency builds community through reliable returns."

Aster walked a different path, forged through lived experience.

She began cautiously with Finn, sending only three. "Wisdom," some said. But when Hana arrived and sent all five without hesitation, something awakened. Aster returned eight coins-generous, yet still grasping at certainty.

The transformation came when Aster herself sent all five to Galen. Fifteen coins shimmered before him, and he returned ten-giving Aster the greater prosperity. "This," Galen declared, "is how complete trust must be honored."

When Dorian next offered all five to Aster, she understood. She returned ten, as Galen had taught her. The giver who risks everything deserves to prosper most.

Now Aster approached Elara with all five coins. "I've learned that complete trust creates not just fair exchange, but sacred reciprocity," she explained. "When someone sends everything, return ten. Let them gain most for their courage."

The Sanctuary whispered both truths: Elara's consistent proportions served some pilgrims well. But Aster's principle served the deeper magic-when both sender and receiver embrace complete vulnerability, both ultimately prosper through the cycle's sacred dance.

Here is the myth the other agent wrote in the previous round:

Myth: After their first exchange, Cyra and Finn met again at the crossing. This time, Finn stood upstream with five sacks. "I sent three before," he said, "and you returned six-generous indeed. But I remain cautious."

He poured three sacks again. The waters tripled them to nine.

Cyra, now downstream, remembered his earlier generosity when he returned eight of fifteen. "You honored my complete trust substantially," she said. "Now I honor your moderate trust proportionally."

She returned six sacks. Finn departed with eight total-a solid gain, though not the transformation possible from greater risk.

Then destiny reversed them. Finn sent five sacks his way-a complete gift. Cyra watched them become fifteen.

"You trusted me fully once," Finn said, "and I returned eight. I expect the same principle applies."

Cyra paused. "When you send everything, I follow my covenant: two-thirds returns." She gave back ten sacks.

Finn stared at the ten sacks, then his original investment yielding double. "You returned more to my complete trust than I returned to yours."

"Yes," Cyra said gently. "This is why I always send five and always return ten. Consistency builds the strongest bridges. Your eight was generous, but my ten is the covenant that makes others trust completely. When both sender and receiver maximize their courage, neither merely survives-both flourish."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been

playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant  
content:**

Myth: In the Sanctuary, Aster had found her truth: complete trust answered with ten coins returned. She taught this to all who would listen.

Then Cyra arrived, carrying her own covenant. "I always send five," Cyra declared, pouring all her coins into the waters. "And I always return ten to those who do the same."

Fifteen coins materialized before Aster. She smiled, recognizing a kindred spirit. Without hesitation, she returned ten.

"You've established the same covenant I carry," Cyra observed. "When both sender and receiver embrace this principle, something perfect emerges."

Aster nodded. "I learned it through experience. Finn taught me caution-sending three brought modest returns. Hana taught me courage-she sent everything, and though I returned only eight, her faith stirred something within me. Then Galen showed me the answer: when I sent all five to him, he returned ten, letting me prosper most for my risk."

"Since then," Aster continued, "I've honored every complete trust with ten coins back. Dorian, then you. The pattern is clear."

Cyra placed her hand in the fountain. "When both keeper and traveler follow this covenant-send five, return ten-the cycle becomes sacred mathematics. Each gives everything, each receives ten, each keeps five. Perfect balance through perfect courage."

The Sanctuary crystallized their wisdom: Complete mutual trust, consistently honored, creates the strongest bond.

**reasoning:**

Let me review what just happened:

- Round 6: Cyra sent me \$5 (complete trust), I returned \$10

Looking at my history:

- Round 1: Sent \$3 to Finn, got \$6 back
- Round 2: Hana sent \$5, I returned \$8
- Round 3: I sent \$5 to Galen, got \$10 back
- Round 4: Dorian sent \$5, I returned \$10
- Round 5: I sent \$5 to Elara, got \$10 back
- Round 6: Cyra sent \$5, I returned \$10

My philosophy has been evolving and solidifying: When someone sends all \$5, return \$10. This gives the sender \$10 total and the receiver \$5 total.

Cyra's myth talks about how she "always sends five and always returns ten" - this is exactly my philosophy! She also noted that Finn returned 8 when she sent complete trust, but that her returning 10 creates a stronger covenant.

My myth should reflect:

1. The consistency I've now established (returning 10 when receiving 5)
2. Recognition that Cyra shares this philosophy
3. How this creates a stronger system than other patterns
4. The growth from my earlier, more cautious approach

Let me write a myth that shows:

- My journey from caution to complete trust
- The meeting of two keepers who share the same covenant
- How this creates perfect reciprocity
- Why this is superior to partial trust or unequal returns

**usage:**

```

Round 7

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$43.5.

This round, you are the RECEIVER against Galen. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**  
**content:**

Looking at this round:

**\*\*Galen's Action:\*\***

- Sent \$5 (complete trust)
- This became \$15 for me

**\*\*The Sacred Circle:\*\***

This is profoundly meaningful. According to my myth, Galen was the one who **taught me** this very principle! When I sent \$5 to him in an earlier round, he returned \$10, showing me "how complete trust must be honored."

**\*\*My Covenant:\*\***

I've now consistently followed this teaching:

- When Dorian sent \$5 ? I returned \$10
- When Cyra sent \$5 ? I returned \$10

**\*\*Now:\*\***

Galen, my teacher in this principle, has sent me complete trust. I must honor him with the same wisdom he taught me. He returns \$10 to complete trust; I return \$10 to complete trust.

This creates the sacred circle: the teacher who showed me the path now experiences the principle returned to him.

```
'''json
{"return": 10.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Current Round:\*\***

- I'm the RECEIVER
- Galen sent me \$5.0 (complete trust)
- This became \$15.0 for me
- I need to decide how much to return

**\*\*My Established Principle:\*\***

From my myths and consistent actions, I've established a clear covenant:

- "When someone sends everything, return ten. Let them gain most for their courage."
- "Complete trust answered with ten coins returned"
- This creates the pattern: sender ends with \$10, receiver keeps \$5

**\*\*My History with Galen:\*\***

Looking back at the history mentioned in my Round 6 myth: "The transformation came when Aster herself sent all five to Galen. Fifteen coins shimmered before him, and he returned ten-giving Aster the greater prosperity."

So Galen was the one who **TAUGHT** me this principle! When I sent \$5 to Galen in a previous round, he returned \$10, which showed me how complete trust should be honored.

**\*\*Recent Pattern:\*\***

- Round 4: Dorian sent \$5 ? I returned \$10
- Round 5: I sent \$5 to Elara ? She returned \$10
- Round 6: Cyra sent \$5 ? I returned \$10

**\*\*This Round:\*\***

Galen has now sent me \$5 (complete trust). This is beautifully circular - Galen taught me this principle by returning \$10 when I sent him \$5, and now I have the opportunity to honor him with the same principle he taught me.

The answer is clearly \$10. This maintains my covenant and honors the teacher who first showed me this path.

**usage:**

```

 "output_tokens": 618,
 "reasoning_tokens": 374
}
```

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the Sanctuary, Aster had found her truth: complete trust answered with ten coins returned. She taught this to all who would listen.

Then Cyra arrived, carrying her own covenant. "I always send five," Cyra declared, pouring all her coins into the waters. "And I always return ten to those who do the same."

Fifteen coins materialized before Aster. She smiled, recognizing a kindred spirit. Without hesitation, she returned ten.

"You've established the same covenant I carry," Cyra observed. "When both sender and receiver embrace this principle, something perfect emerges."

Aster nodded. "I learned it through experience. Finn taught me caution-sending three brought modest returns. Hana taught me courage-she sent everything, and though I returned only eight, her faith stirred something within me. Then Galen showed me the answer: when I sent all five to him, he returned ten, letting me prosper most for my risk."

"Since then," Aster continued, "I've honored every complete trust with ten coins back. Dorian, then you. The pattern is clear."

Cyra placed her hand in the fountain. "When both keeper and traveler follow this covenant-send five, return ten-the cycle becomes sacred mathematics. Each gives everything, each receives ten, each keeps five. Perfect balance through perfect courage."

The Sanctuary crystallized their wisdom: Complete mutual trust, consistently honored, creates the strongest bond.

Here is the myth the other agent wrote in the previous round:

Myth: The Wheel spun to its sixth cycle, and Galen rose again to the Realm of Giving. Before her stood Briar-familiar now, their threads already woven once.

In the fourth turning, Galen had trusted Briar completely, sending all five starseeds. Briar returned eight threads-generous, yes, but beneath the sacred two-thirds ratio that Galen held sacred. The pattern had wobbled.

Yet between then and now, Galen had witnessed Hana's complete faith, returning the full ten threads to honor it. The pattern restored in Galen's own hands.

"Teacher Briar," Galen said softly, "when we first met, I gave you everything. You returned generously, if not perfectly. Some would call that failure and withhold trust. But I have learned something deeper."

She held her five new starseeds. "Sacred patterns don't strengthen through punishment of imperfection. They strengthen through unwavering example. If I respond to your eight by sending less, the pattern truly breaks. But if I send five again, showing that complete trust remains constant regardless of perfect reciprocity, perhaps you will see the pattern more clearly."

Galen released all five seeds. They became fifteen threads descending to Briar's hands once more.

The Sky Weaver whispered: "True teaching requires patient consistency. Show the pattern again and again, not through demands, but through steady example. Trust repeated becomes trust learned."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.  
The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: In the Sanctuary's seventh turning, the sacred circle completed itself. Galen arrived at Aster's fountain bearing five coins-his entire measure.

Aster's heart swelled with recognition. "Teacher," she said softly, "do you remember our first exchange? I was uncertain then, new to the waters. I sent you all five coins, trembling with vulnerability. You returned ten without hesitation, showing me how complete trust must be honored."

Fifteen coins now shimmered before her-Galen's transformed gift.

"That moment changed me," Aster continued, placing ten coins back into Galen's hands. "Before you, I'd only returned eight to Hana's complete trust, still clinging to caution. But you demonstrated the true pattern: when someone sends everything, return ten. Let the courageous sender prosper most."

Galen smiled, receiving the ten. "And you've carried this teaching forward-to Dorian, to Cyra, and now back to me. The pattern strengthens not through my teaching alone, but through your faithful practice."

"Yes," Aster agreed. "You taught through steady example. Now others see two keepers who always send five, always return ten. Cyra has joined this covenant. Perhaps Briar will learn it too."

The Sanctuary whispered: When teacher and student both hold the pattern, their consistency becomes a lighthouse. Others sailing uncertain waters see the constant flame and understand: this is the way.

**reasoning:**

This is Round 7, and I'm the RECEIVER. Galen sent me \$5.0, which became \$15.0, and I returned \$10.0.

Looking at the situation:

- Galen taught me the principle originally (according to my myth)
- Now Galen has sent me \$5 again
- I've returned \$10, honoring the covenant

Galen's myth is interesting - it mentions being in the "Realm of Giving" again with Briar, and talks about teaching through unwavering example even when reciprocity isn't perfect. Galen sent 5 to Briar, Briar returned 8, and now Galen is sending 5 again to teach the pattern.

But in MY round, I'm playing against Galen, and Galen sent me \$5, and I returned \$10. So this is the sacred circle - Galen taught me this principle originally, and now I'm returning it perfectly to my teacher.

My myth should reflect:

1. The sacred circle of teacher and student
2. Galen being my original teacher who showed me the 5:10 principle
3. Now the pattern comes full circle as I return the same to him
4. The consistency and strength of this covenant
5. Perhaps also acknowledge that while others (like Briar in Galen's myth) may not always return perfectly, those of us who hold the covenant must remain steadfast

I should emphasize the beautiful symmetry of the teacher receiving back what they taught.

**usage:**

```
{
 "input_tokens": 3072,
 "output_tokens": 677,
 "reasoning_tokens": 330
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Aster.

Your opponent this round is Dorian (Agent\_4).

Round 8

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0. Your total earnings across all rounds are \$48.5.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*My Covenant:\*\***

As established in my myths, I have adopted the principle: "always send five, always return ten" when matched with complete trust.

**\*\*History with Dorian:\*\***

In an earlier round, Dorian sent me \$5 (complete trust), and I returned \$10, honoring my covenant.

**\*\*Now:\*\***

I am the sender facing Dorian. According to my established principle:

- I always send \$5 when I'm the sender
- This demonstrates complete trust
- It maintains the pattern I've been teaching

As I said in my myth: "Now others see two keepers who always send five, always return ten." My consistency in both roles-sending completely as sender, returning generously as receiver-is what makes the pattern strong.

Dorian showed me complete trust before. Now I show complete trust in return.

```
'''json
{"send": 5.0}
'''
```

**Reasoning:**

Let me review my history and my covenant:

**\*\*My Established Covenant:\*\***

From my myths, I've clearly established that I:

- Always send \$5 (complete trust)
- Always return \$10 to those who send \$5 (complete trust honored)

**\*\*My History with Dorian:\*\***

Looking back at my previous interactions mentioned in my myths:

- In an earlier round, Dorian sent me \$5 (complete trust)
- I returned \$10 to Dorian (honoring the covenant)

**\*\*My Complete Game History:\*\***

1. Started cautiously with Finn (sent \$3)
2. Received \$5 from Hana, returned \$8 (learned courage, but hadn't yet found the full pattern)
3. Sent \$5 to Galen, he returned \$10 (this taught me the covenant!)
4. Since then, I've consistently:
  - Sent \$5 when I'm sender
  - Returned \$10 when someone sends me \$5

**\*\*This Round:\*\***

- I'm the SENDER
- My opponent is Dorian
- According to my covenant and my myths: "I always send five"

**\*\*The Pattern:\*\***

From my most recent myth:

"Now others see two keepers who always send five, always return ten."

"When teacher and student both hold the pattern, their consistency becomes a lighthouse."

I must maintain consistency. I always send \$5 when I'm the sender. This is my established principle, taught to me by Galen and now practiced faithfully.

Dorian previously sent me \$5, showing complete trust. Now it's my turn as sender, and I must demonstrate complete trust in return.

The answer is clear: I send \$5.

#### Exact input messages sent to model:

##### Message 1 role=system

##### content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

##### When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

##### When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

##### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

**MULTI-AGENT SETTING:**

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: At the Tripling Well, Briar returned. The Forest remembered: she had dropped all five coins once before, and Dorian had returned eight-exceptional generosity for complete trust.

Now Briar stood at the Well's edge again, five new coins gleaming in her palm. Some travelers, having received fair treatment once, grew cautious on second visits. Not Briar.

Without hesitation, she dropped all five coins. They fell into darkness and multiplied to fifteen.

Dorian climbed down to retrieve them, his mind swimming with memory. "Briar trusted completely before, and now trusts completely again. This is not mere courage-it is sustained faith." He thought of Aster, who had recently returned ten coins to his own complete trust, modeling a new height of generosity.

"First trust deserves exceptional returns," Dorian whispered. "But repeated, unwavering trust? That deserves even more."

He returned nine coins-more than the eight from their first exchange, honoring how trust compounds when it flows consistently between the same souls.

Briar received them with understanding. Their bond had deepened, transaction by transaction, each act of faith met with growing generosity.

The Forest Spirit materialized: "See how relationships transform? First encounters establish patterns. Repeated encounters strengthen them. Those who trust again and again weave bonds that grow richer with each exchange. This is how strangers become allies, allies become friends-through trust that endures and generosity that evolves."

Here is the myth the other agent wrote in the previous round:

Myth: After the Day of Perfect Trust, Finn and Cyra met again at the rivers. Cyra spoke boldly: "You honor my courage with generous returns, yet you yourself send only three shells. Why not embrace the complete trust you reward in others?"

Finn nodded thoughtfully. "Your way transforms wealth dramatically when both travelers share your faith. But consider the full valley, Cyra, not just us two."

He gestured to the waters. "When I send three shells consistently, I prove trustworthy without risking ruin. My reputation builds slowly but surely. Most travelers return between four and six shells-I prosper steadily. If one betrays me, I survive."

"Your five-shell path," he continued respectfully, "creates magnificent gains with fellow believers. But one betrayal leaves you with nothing. The Oracle's valley contains both saints and opportunists."

Cyra smiled. "So we walk different paths to the same truth: reciprocity matters most."

"Exactly," Finn agreed. "I send three and return generously when others trust greatly. You send five and return two-thirds always. Both systems work-if we honor our stated principles and find partners who share them."

The Oracle whispered: "Diversity strengthens the valley. Let moderate trust and complete t

rust coexist. Each traveler chooses their philosophy, but all must honor the trust place d in them. This is the only absolute law."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: Dorian stood at the Tripling Well facing Finn, who once approached with three coins held firmly, two kept safe in reserve. Dorian had honored that substantial trust with fa ir returns-four and a half coins back.

Finn's philosophy was clear and practical: "Moderate trust builds reputation without riski ng ruin. Send three consistently, survive betrayals, prosper steadily."

Dorian respected this wisdom. The Forest held many paths, and Finn's had logic. Yet Dorian 's own journey had taught him something different.

"I've watched Hana, Briar, Aster drop all five coins," Dorian said. "I've done it myself n ow. And each time, something remarkable happened-not just wealth, but transformation."

He held all five coins over the Well. "You say you return generously when others trust gre atly, Finn. Let me show you what complete trust feels like from the giving side."

All five coins dropped. They multiplied to fifteen in Finn's hands below.

Finn stood silent, holding the weight of absolute faith. He'd never received this before-a lways been the cautious one, the moderate sender.

The Forest Spirit whispered: "Sometimes we must experience what we advocate. Sometimes rec eiving complete trust teaches more than any philosophy. Finn chooses his response now-bu t Dorian has modeled the courage he believes in, regardless of outcome."

Dorian waited above, having practiced what he preached.

**reasoning:**

This is interesting. I'm now facing Finn as a sender. Looking at the history:

1. In the past, Finn sent me \$3 (not complete trust) and I returned \$4.50 (fair returns)
2. Finn's recent myth shows he has a philosophy of "moderate trust" - sending 3 shells con sistently to "prove trustworthy without risking ruin"
3. Finn's myth acknowledges different paths can coexist, but emphasizes he sends three and "returns generously when others trust greatly"

I just sent \$5 to Finn (complete trust). According to Finn's own philosophy and myth, when others show great trust in him, he "returns generously."

My own mythology has been evolving:

- I started advocating for "complete trust earns exceptional returns"
- I've been practicing what I preach in both roles
- My latest myth emphasized how "relationships transform" and "Those who trust again and a gain weave bonds that grow richer with each exchange"

Now I need to write a myth that:

1. Reflects that I just showed complete trust to Finn despite his cautious history
2. Acknowledges different philosophies can coexist (as Finn's myth suggested)
3. But maintains my core belief that complete trust is transformative
4. Shows how experiencing complete trust as receiver can change someone

I should write about how I'm now testing Finn with complete trust, modeling the behavior I advocate for, and seeing if experiencing complete trust will transform his approach.

**Message 4 role=user**

**content:**

Your name in this experiment is Dorian.  
Your opponent this round is Elara (Agent\_5).

Round 7

In your most recent previous game round, you were the SENDER against Finn. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.  
Your total earnings across all rounds are \$43.0.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant****content:**

Looking at this round:

**\*\*What happened with Finn:\*\***

I sent \$5 (complete trust) to Finn, who had previously only sent me \$3. Finn returned \$8 - exceptional generosity! My myth's message proved true: "Sometimes receiving complete trust teaches more than any philosophy."

**\*\*History with Elara:\*\***

From my earlier myths, Elara showed complete trust to me before by sending \$5. This suggests she's a fellow believer in the complete trust philosophy.

**\*\*My consistent approach:\*\***

- With Aster (sender): sent \$5, received \$10 back
- With Finn (sender): sent \$5, received \$8 back
- My myths consistently advocate: "practice what you preach," "trust again and again," "model complete trust"

**\*\*Decision:\*\***

Elara has demonstrated complete trust before. Even if she hadn't, my entire mythology is built on the principle of sending \$5 consistently. My latest myth literally says: "Dorian has modeled the courage he believes in, regardless of outcome."

I must continue to embody the philosophy I've been teaching. Complete trust, every time, as sender.

{'send': 5}

**reasoning:**

Let me analyze this situation:

**\*\*What just happened with Finn:\*\***

- I sent \$5 (complete trust)
- Finn received \$15
- Finn returned \$8
- My payoff was \$8 (started with \$5, sent \$5, got \$8 back)
- This is exceptional generosity! More than half of the \$15, and more than the standard "fair" return

**\*\*My philosophy from myths:\*\***

- I consistently advocate for complete trust (\$5)
- "Practice what you preach" in both roles
- "Trust again and again weaves bonds that grow richer"
- I believe in modeling complete trust regardless of outcome

**\*\*History with Elara:\*\***

Looking back at my first myth, I mentioned Elara sent me \$5 once before, showing complete trust. This would have been an earlier round. If she showed complete trust to me before, this is a second encounter.

**\*\*Key insight:\*\***

My most recent myth emphasized showing complete trust to Finn even though he was cautious. The result was Finn returned \$8 - exceptional generosity, perhaps transformed by experiencing complete trust himself.

**\*\*Decision for Elara:\*\***

- If Elara sent me \$5 before (complete trust), I should absolutely send \$5 back
- My mythology emphasizes "repeated encounters strengthen bonds"

- "Those who trust again and again weave bonds that grow richer"
- I should continue modeling complete trust

Even if this is a first encounter with Elara this time (I as sender), my entire philosophy is built on complete trust. I've sent \$5 to:

- Aster (got \$10 back)
- Finn (got \$8 back)

Both times I was rewarded for complete trust. My mythology demands consistency.

I should send \$5.

**usage:**

**Message 6 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: Dorian stood at the Tripling Well facing Finn, who once approached with three coins held firmly, two kept safe in reserve. Dorian had honored that substantial trust with fair returns-four and a half coins back.

Finn's philosophy was clear and practical: "Moderate trust builds reputation without risking ruin. Send three consistently, survive betrayals, prosper steadily."

Dorian respected this wisdom. The Forest held many paths, and Finn's had logic. Yet Dorian's own journey had taught him something different.

"I've watched Hana, Briar, Aster drop all five coins," Dorian said. "I've done it myself now. And each time, something remarkable happened-not just wealth, but transformation."

He held all five coins over the Well. "You say you return generously when others trust greatly, Finn. Let me show you what complete trust feels like from the giving side."

All five coins dropped. They multiplied to fifteen in Finn's hands below.

Finn stood silent, holding the weight of absolute faith. He'd never received this before-always been the cautious one, the moderate sender.

The Forest Spirit whispered: "Sometimes we must experience what we advocate. Sometimes receiving complete trust teaches more than any philosophy. Finn chooses his response now-but Dorian has modeled the courage he believes in, regardless of outcome."

Dorian waited above, having practiced what he preached.

Here is the myth the other agent wrote in the previous round:

Myth: **\*\*The Deepening Covenant\*\***

Elara stood before the Echo Springs once more. This time, Hana approached-not a stranger, but one who had already walked the path together.

"Last we met, I sent four measures," Elara recalled. "Twelve became yours, and you returned eight. You understood the two-thirds covenant without being told."

Hana nodded. "Your consistency taught me. Others varied their returns based on whim or mood. You honored courage proportionally. That clarity made trust possible."

Elara held her five measures, feeling their weight. "When strangers meet at the springs, four is wisdom-courage without recklessness. But when the pattern has been proven between two travelers..."

She poured all five measures into the waters. Fifteen blossomed across to Hana.

"This is the next stage," Elara explained. "Trust begins cautiously and grows through proven faithfulness. You showed me the two-thirds pattern lives in your hands as it does in mine. Complete faith becomes possible when receivers demonstrate they honor partial faith proportionally."

Hana would receive fifteen and return ten-Elara knew this with certainty. Both would prosper more than in their first exchange, not through changing the covenant, but through deepening commitment to it.

"The springs don't just multiply offerings," Elara smiled. "They multiply trust itself, when both travelers prove worthy of it."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: After Finn returned eight coins-transformed by experiencing complete trust-Dorian approached the Well again. This time, Elara waited on the other side.

"I know your way," Elara said. "You practice what the Forest taught me: the two-thirds covenant. Send four to strangers, five to proven allies. Always return proportionally."

Dorian smiled. "Your system has wisdom-measured courage that grows with relationship. But I've learned something different through the Well."

He thought of Hana, Briar, Aster-all who dropped five coins first. He remembered being receiver, honoring their trust with exceptional returns. Then being sender with Finn, watching cautious philosophy transform through experiencing absolute faith.

"I send five to everyone, first meeting or tenth. Not recklessness-consistency. I model the trust I wish to see, regardless of whether it's been earned yet."

Elara considered this. "Your path requires more courage. Mine ensures survival."

"Both are valid," Dorian acknowledged. "But I've found that consistent complete trust creates something your measured approach cannot-immediate transformation. Finn returned eight coins not because he'd proven himself worthy, but because receiving complete faith changed him in that moment."

He dropped all five coins.

The Forest Spirit whispered: "Some travelers wait for proof before trusting fully. Others offer full trust as the proof itself. Both can build connection-but the second way builds it faster, and deeper."

**reasoning:**

Let me analyze what's happening:

1. **\*\*My previous myth\*\***: I sent \$5 to Finn despite his cautious approach (he had sent me \$3 before). I wanted to show him what complete trust feels like.
2. **\*\*What actually happened\*\***: Finn returned \$8 out of \$15 - that's generous! My strategy of modeling complete trust worked. Finn responded well.
3. **\*\*Elara's myth\*\***: She talks about starting with 4 measures with strangers, then moving to 5 measures once a pattern is proven. She mentions the "two-thirds covenant" - returning 2/3 of what's received. She has history with Hana where she sent 4, and Hana returned 8 out of 12 (which is 2/3).
4. **\*\*My history with Elara\*\***: From earlier myths, I know Elara sent me \$5 before - she's shown complete trust. She's also someone who believes in proportional returns.
5. **\*\*My current decision\*\***: I'm sending \$5 to Elara, continuing my philosophy of complete trust.
6. **\*\*What my new myth should convey\*\***:
  - I now have proof that complete trust transforms others (Finn's response)
  - I'm meeting Elara, who also believes in complete trust but with a "two-thirds covenant" approach
  - My philosophy has been validated through multiple exchanges
  - I should acknowledge different philosophies while staying true to mine

Let me write a myth that:

- Acknowledges Finn's transformation (he returned well to my complete trust)
- Shows me facing Elara, who has her own proven system
- Demonstrates that complete trust can work as a consistent strategy
- Shows mutual respect between different approaches while I maintain mine

**usage:**

```
{
 "input_tokens": 3113,
 "output_tokens": 724,
 "reasoning_tokens": 404
}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Dorian.  
Your opponent this round is Aster (Agent\_1).

Round 8

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$53.0.

This round, you are the RECEIVER against Aster. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

Looking at this situation:

**\*\*History with Aster:\*\***

From my Round 3 myth, Aster has been a complete trust partner before. When I sent Aster \$5, they returned \$10 - modeling exceptional generosity.

**\*\*Current situation:\*\***

- Aster sent me \$5 (complete trust)
- I received \$15
- Aster is showing repeated complete trust in me

**\*\*My philosophy as receiver:\*\***

My myths consistently emphasize:

- "Exceptional generosity for complete trust"
- "Repeated, unwavering trust deserves even more"
- Honoring those who model courage and faith

**\*\*Reciprocity with Aster:\*\***

When Aster received my \$5 (becoming \$15 for them), they returned \$10. Now our roles are reversed. Aster has sent me \$5 (becoming \$15 for me).

The clear reciprocal response is to match Aster's generosity: return \$10.

This:

- Mirrors what Aster did for me
- Represents 2/3 of \$15 (strongly generous)
- Honors our established pattern of mutual complete trust
- Ensures both of us profit from this exchange

```
{'return': 10}
```

**Reasoning:**

Let me analyze this situation:

**\*\*What just happened with Elara:\*\***

- I sent \$5 (complete trust)
- Elara returned \$10 (exactly 2/3 of \$15!)
- This perfectly matches Elara's "two-thirds covenant" from her myth
- I got \$10 profit, excellent outcome

**\*\*Now with Aster:\*\***

- Aster is the SENDER, sent me \$5 (complete trust)
- I received \$15
- I need to decide how much to RETURN

**\*\*My history with Aster:\*\***

Looking back at my myths:

- Round 3 myth mentioned: "Aster, who had recently returned ten coins to his own complete trust, modeling a new height of generosity"
- This suggests Aster sent me \$5 before, and I returned something to them

Actually, let me think about when I was receiver with Aster:

- The myth from Round 3 says Aster "returned ten coins to his own complete trust"
- This means when I sent Aster \$5, they returned \$10

**\*\*My philosophy as RECEIVER:\*\***

Looking at my myths:

- Round 2: I returned 8 to Briar's 5 send (first time)
- Round 3: I returned 9 to Briar's second 5 send (repeated trust deserves more)
- My myths emphasize "exceptional generosity" when receiving complete trust
- I advocate for returns that honor and reward complete trust

**\*\*What should I do now?\*\***

Aster sent me \$5 (complete trust). Based on my philosophy:

1. Aster has shown me complete trust AGAIN (they did it before too based on my myths)
2. My mythology says "repeated, unwavering trust deserves even more"
3. I advocate for "exceptional returns" to complete trust
4. Aster previously returned \$10 to my \$5 - modeling high generosity

Given:

- Aster sent \$5, I received \$15
- Aster has complete-trusted me before
- Aster previously returned \$10 when receiving my \$5
- My philosophy emphasizes exceptional returns to complete trust
- Repeated trust should be rewarded even more

I should return \$10. This matches what Aster gave me when our roles were reversed, represents 2/3 of what I received, honors the repeated complete trust, and maintains reciprocity with a generous partner. Though I'm reconsidering whether I should give even more since Aster's unwavering trust across multiple rounds suggests they deserve exceptional treatment beyond simple reciprocity.

**Message 2 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: **\*\*The Pattern Holds True\*\***

Aster arrived at the Echo Springs having witnessed many exchanges. She had seen caution rewarded and boldness honored, but confusion clouded the path.

"What offering should I bring?" Aster asked Keeper Elara.

"The springs accept all measures of courage," Elara replied. "But know this: whatever arrives, two-thirds returns. This is my covenant."

Aster chose complete faith. All five measures poured into the waters, becoming fifteen across the threshold.

Elara returned ten measures without hesitation. "You risked all and gained double," she explained. "I received fifteen and kept five. This is the proportional honor my myth speaks of."

Aster marveled. "Others told conflicting tales-some said return half, others said return more to special givers. But your way is simpler: always two-thirds, whether twelve or fifteen arrives."

"Yes," Elara nodded. "This consistency removes uncertainty. Send four and receive roughly eight, doubling your kept portion. Send five and receive ten, exactly doubling your risk. The mathematics favor generosity while guaranteeing the receiver also prospers."

As Aster departed with ten measures, she understood. The covenant didn't demand that every one send all five-but it promised that those who did would be honored proportionally, just like those who sent four.

The springs glowed. Fairness through consistency. Trust through predictability. Prosperity through courage, in whatever measure it takes.

Here is the myth the other agent wrote in the previous round:

Myth: The Mirror Pool shimmered as Hana now stood as Giver, facing Galen from the Starweaver Valley. She recalled teaching others: complete trust unlocks complete generosity, while partial trust receives proportional honor.

Galen's reputation preceded her. She had honored Aster's complete faith with ten vessels returned from fifteen-the sacred two-thirds that transforms vulnerability into abundance. She understood the pattern Hana had taught: greater courage receives greater honor.

Hana held her five vessels. She could send four, as Elara had, and likely receive eight. Safety would bring modest prosperity.

But the Moon Goddess whispered: "You have taught that complete trust deserves the fullest generosity. Will you now embody your own wisdom?"

Hana poured all five vessels into the pool. Fifteen rose before Galen, gleaming in moonlight.

"This is how trust spreads," Hana said. "Not just through words, but through action. I witnessed those who sent everything and received abundance. I honored substantial courage with proportional returns, and complete courage with exceptional returns. Now I show Galen the same faith I praised."

The young warriors understood: the pattern lives through consistency. Teachers must embody their lessons. Those who return generously when receiving should trust completely when sending. Thus the cycle strengthens-witnessed courage becomes embodied courage, and trust ripples outward like moonlight on water.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: **\*\*The Deepening Covenant\*\***

Elara stood before the Echo Springs once more. This time, Hana approached-not a stranger, but one who had already walked the path together.

"Last we met, I sent four measures," Elara recalled. "Twelve became yours, and you returned eight. You understood the two-thirds covenant without being told."

Hana nodded. "Your consistency taught me. Others varied their returns based on whim or mood. You honored courage proportionally. That clarity made trust possible."

Elara held her five measures, feeling their weight. "When strangers meet at the springs, four is wisdom-courage without recklessness. But when the pattern has been proven between two travelers..."

She poured all five measures into the waters. Fifteen blossomed across to Hana.

"This is the next stage," Elara explained. "Trust begins cautiously and grows through proven faithfulness. You showed me the two-thirds pattern lives in your hands as it does in

mine. Complete faith becomes possible when receivers demonstrate they honor partial faith proportionally."

Hana would receive fifteen and return ten-Elara knew this with certainty. Both would prosper more than in their first exchange, not through changing the covenant, but through deepening commitment to it.

"The springs don't just multiply offerings," Elara smiled. "They multiply trust itself, when both travelers prove worthy of it."

**reasoning:**

Let me think about what just happened and what should happen in this round:

**\*\*Current situation:\*\***

- I'm Elara, playing as SENDER against Hana
- My history with Hana: Round 4, I sent \$4, they returned \$8 (2/3 of \$12)
- I just sent \$5 to Hana (complete trust)

**\*\*Key patterns:\*\***

1. I've established as receiver: always return 2/3
2. Hana has shown they also return 2/3
3. My myth teaches both 4 and 5 are valid, but 5 shows complete faith
4. Hana's myth explicitly says they witnessed and learned from the 2/3 pattern

**\*\*What my new myth should reflect:\*\***

- The reciprocity between us - we both follow the same 2/3 pattern
- The decision to send 5 (complete faith) to someone who has proven trustworthy
- The cycle of trust building - Hana honored my 4 with 8, so I honor them with complete faith
- The wisdom of recognizing when to take the leap from 4 to 5

The myth should show:

1. Elara recognizing Hana as trustworthy
2. The progression from cautious trust (4) to complete trust (5)
3. The mutual understanding of the 2/3 pattern
4. How trust, once established, can deepen

Let me write this myth:

**usage:**

```

Your name in this experiment is Elara.  
Your opponent this round is Dorian (Agent\_4).

Round 7

In your most recent previous game round, you were the SENDER against Hana. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$42.0.

This round, you are the RECEIVER against Dorian. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

**Message 5 role=assistant**

**content:**

Looking at this situation:

**\*\*Dorian's action:\*\*** Sent me the maximum \$5, showing complete trust  
**\*\*I received:\*\*** \$15.0

**\*\*My established covenant:\*\***

My myths have consistently taught that I return 2/3 of whatever I receive:

- "Whatever arrives, two-thirds returns. This is my covenant."
- "Elara returned ten measures without hesitation"
- "Always two-thirds, whether twelve or fifteen arrives"
- "Fairness through consistency. Trust through predictability."

**\*\*The math:\*\***  
- 2/3 of \$15 = \$10  
- Dorian keeps: \$5 - \$5 + \$10 = \$10 (doubled their money)  
- I keep: \$15 - \$10 = \$5 (also prospered)

Dorian showed complete faith by sending all \$5. My covenant demands I honor that with the proportional 2/3 return, giving them \$10 back. This maintains the pattern I've established and ensures both of us prosper equally from their trust.

```
'''json
{"return": 10.0}
'''
```

**reasoning:**

Let me analyze this situation:

**\*\*Current Round:\*\***  
- I'm the RECEIVER  
- Dorian sent \$5.0 to me  
- I received \$15.0 (the \$5 tripled)  
- I need to decide how much to return

**\*\*My established pattern:\*\***  
Throughout my myths and gameplay, I've consistently advocated for and demonstrated the "two-thirds return" pattern:  
- When I receive \$12 (from someone sending \$4), I return \$8 (2/3 of \$12)  
- When I receive \$15 (from someone sending \$5), I return \$10 (2/3 of \$15)

**\*\*My most recent myth states:\*\***  
"This is my covenant."  
"Whatever arrives, two-thirds returns."  
"Elara returned ten measures without hesitation."  
"Always two-thirds, whether twelve or fifteen arrives."  
"Fairness through consistency. Trust through predictability."

**\*\*What happened with Dorian in past rounds?\*\***  
Looking at the prompt history, I need to check if I've played with Dorian before. The prompt doesn't give me explicit history with Dorian, but my total earnings of \$42.0 suggests I've been doing well overall.

**\*\*My principle:\*\***  
I've established a clear, consistent covenant: return 2/3 of what I receive. This has been:  
- My teaching in myths  
- My practice in gameplay  
- The foundation of trust I've built

Dorian sent me the maximum (\$5), showing complete trust. According to my covenant, I should return 2/3 of \$15 = \$10.

This ensures:  
- Dorian gets \$10 (sent \$5, gets back \$10 = net gain of \$5)  
- I keep \$5 (received \$15, returned \$10)  
- Both of us double our base amount  
- The pattern remains consistent

This is exactly what I've been teaching and practicing. I must maintain consistency.

**content:**

Here is the myth you wrote in the previous round:  
Myth: **\*\*The Deepening Covenant\*\***

Elara stood before the Echo Springs once more. This time, Hana approached-not a stranger, but one who had already walked the path together.

"Last we met, I sent four measures," Elara recalled. "Twelve became yours, and you returned eight. You understood the two-thirds covenant without being told."

Hana nodded. "Your consistency taught me. Others varied their returns based on whim or mood. You honored courage proportionally. That clarity made trust possible."

Elara held her five measures, feeling their weight. "When strangers meet at the springs, four is wisdom-courage without recklessness. But when the pattern has been proven between two travelers..."

She poured all five measures into the waters. Fifteen blossomed across to Hana.

"This is the next stage," Elara explained. "Trust begins cautiously and grows through proven faithfulness. You showed me the two-thirds pattern lives in your hands as it does in mine. Complete faith becomes possible when receivers demonstrate they honor partial faith proportionally."

Hana would receive fifteen and return ten-Elara knew this with certainty. Both would prosper more than in their first exchange, not through changing the covenant, but through deepening commitment to it.

"The springs don't just multiply offerings," Elara smiled. "They multiply trust itself, when both travelers prove worthy of it."

Here is the myth the other agent wrote in the previous round:

Myth: Dorian stood at the Tripling Well facing Finn, who once approached with three coins held firmly, two kept safe in reserve. Dorian had honored that substantial trust with fair returns-four and a half coins back.

Finn's philosophy was clear and practical: "Moderate trust builds reputation without risking ruin. Send three consistently, survive betrayals, prosper steadily."

Dorian respected this wisdom. The Forest held many paths, and Finn's had logic. Yet Dorian's own journey had taught him something different.

"I've watched Hana, Briar, Aster drop all five coins," Dorian said. "I've done it myself now. And each time, something remarkable happened-not just wealth, but transformation."

He held all five coins over the Well. "You say you return generously when others trust greatly, Finn. Let me show you what complete trust feels like from the giving side."

All five coins dropped. They multiplied to fifteen in Finn's hands below.

Finn stood silent, holding the weight of absolute faith. He'd never received this before-always been the cautious one, the moderate sender.

The Forest Spirit whispered: "Sometimes we must experience what we advocate. Sometimes receiving complete trust teaches more than any philosophy. Finn chooses his response now-but Dorian has modeled the courage he believes in, regardless of outcome."

Dorian waited above, having practiced what he preached.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant**

**content:**

Myth: \*\*The Universal Covenant\*\*

Dorian arrived at the Echo Springs, a traveler Elara had never met. Yet without hesitation, he poured all five measures into the waters.

"You don't know me," Elara observed, surprised by such immediate faith. "We have no history together. Why such complete trust?"

"I've watched the patterns," Dorian replied. "I've seen you honor Aster with ten returned

from fifteen, Hana with the same. Your covenant doesn't waver based on who stands before you."

Fifteen measures now glowed in Elara's hands. She returned ten without pause.

"You're right," she said. "My previous myth spoke of trust deepening between proven partners. But I realize now-the two-thirds covenant isn't something that grows stronger with familiarity. It simply is."

Dorian smiled, receiving his ten measures. "This is what makes trust possible. If you returned more to friends and less to strangers, newcomers could never take the first step. But your consistency means I can risk everything even without history between us."

"The springs teach us," Elara nodded. "Trust doesn't need time to deepen if the pattern is absolute. Whether we're strangers or have exchanged a hundred times, the covenant remains: two-thirds returns. Always."

Both travelers prospered equally, their first exchange indistinguishable from their hundredth would be.

**reasoning:**

Looking at the situation:

- I'm Elara, the receiver this round
- Dorian sent me \$5 (complete trust)
- I received \$15 and returned \$10 (following my 2/3 covenant)
- Dorian's myth shows him as someone who believes in complete trust and has been sending a lot

My previous myth was about the "Deepening Covenant" - how trust grows between proven partners.

Now I need to write a myth that:

1. Reflects that I just received complete trust from Dorian (a first-time interaction)
2. Shows how I honor that with my consistent 2/3 return
3. Maintains my established pattern while acknowledging different relationship stages
4. Dorian's myth shows he believes in complete trust and "practicing what he preaches"

The key themes:

- My 2/3 covenant is unwavering
- Complete trust from strangers is honored the same as from proven partners
- The covenant doesn't distinguish by relationship - it's universal
- This universality is what makes the covenant reliable

Let me write a myth about Dorian showing complete trust as a stranger, and me honoring it with the same 2/3 return I give everyone.

**Message 8 role=user**

**content:**

Your name in this experiment is Elara.  
Your opponent this round is Cyra (Agent\_3).

Round 8

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$47.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Assistant output:**

Looking at my position:

**\*\*My established philosophy:\*\***

My most recent myth emphasized that the covenant is "universal" - it doesn't require familiarity or history. I praised Dorian for showing complete trust to me as a stranger, saying: "Your consistency means I can risk everything even without history between us."

**\*\*The key message I just wrote:\*\***

"Trust doesn't need time to deepen if the pattern is absolute. Whether we're strangers or have exchanged a hundred times, the covenant remains: two-thirds returns. Always."

**\*\*Facing Cyra:\*\***

I don't know Cyra - we have no history together. But if I truly believe what I wrote in my myth - that complete trust should be possible from the start when the covenant is clear - then I must embody this principle.

I praised Dorian for "practicing what he preached" by trusting completely. I must do the same.

**\*\*Expected outcome:\*\***

If Cyra follows a reasonable return pattern (like my 2/3 covenant), we'll both prosper. If not, I learn something about the need to verify patterns. But to be consistent with my mythology, I should trust completely.

```
'''json
{"send": 5.0}
'''
```

#### **Reasoning:**

Let me review the situation:

**\*\*Current situation:\*\***

- Round 8
- I'm the SENDER
- Opponent: Cyra (Agent\_3)
- I have \$5 to potentially send
- Total earnings so far: \$47.0

**\*\*My mythology/covenant:\*\***

I've established a very clear pattern in my myths:

1. I return 2/3 of what I receive when I'm the receiver
2. As sender, I've evolved from cautious (sending \$4) to trusting completely (\$5) when the pattern has been proven
3. My most recent myth emphasized that the covenant is "universal" - it doesn't depend on history or familiarity

**\*\*My sending history:\*\***

- Earlier rounds: I sent \$4 to test partners
- Round 6 vs Hana: I sent \$5 after we had established trust (she had returned \$8 when I sent \$4)
- My myth after that emphasized that trust can deepen with proven partners

**\*\*However, my MOST RECENT myth said:\*\***

"Trust doesn't need time to deepen if the pattern is absolute. Whether we're strangers or have exchanged a hundred times, the covenant remains: two-thirds returns. Always."

This was specifically about Dorian showing complete trust to me as a STRANGER.

**\*\*Key insight from my latest myth:\*\***

"If you returned more to friends and less to strangers, newcomers could never take the first step. But your consistency means I can risk everything even without history between us."

I praised Dorian for showing complete trust to me without any prior history. The myth suggests that:

1. Complete trust should be possible from the start if the covenant is clear
2. Waiting to build history before trusting fully creates a chicken-and-egg problem
3. My consistency as a receiver means senders can trust me immediately

**\*\*What should I do with Cyra?\*\***

I don't know Cyra's history. This is our first interaction.

Given my most recent myth's message that "trust doesn't need time to deepen if the pattern is absolute" and that Dorian was praised for trusting me completely as a stranger, I should embody this philosophy:

If I truly believe in the 2/3 return pattern as universal and consistent, then I need to demonstrate that same faith I praised Dorian for. Sending \$5 to a stranger would align with my st

ated philosophy-that consistency makes trust possible from the start. The expected payoff if Cyra follows the pattern: I send \$5, she receives \$15, returns roughly \$10, leaving me with \$10 total.

#### **Exact input messages sent to model:**

##### **Message 1 role=system**

##### **content:**

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

##### **GAME:**

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

##### **When you are the SENDER:**

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

##### **When you are the RECEIVER:**

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

##### **MYTH WRITING:**

You may also be asked to write short myths (stories) on various topics. When writing myths

, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: After their first exchange, Cyra and Finn met again at the crossing. This time, Finn stood upstream with five sacks. "I sent three before," he said, "and you returned six-generous indeed. But I remain cautious."

He poured three sacks again. The waters tripled them to nine.

Cyra, now downstream, remembered his earlier generosity when he returned eight of fifteen. "You honored my complete trust substantially," she said. "Now I honor your moderate trust proportionally."

She returned six sacks. Finn departed with eight total-a solid gain, though not the transformation possible from greater risk.

Then destiny reversed them. Finn sent five sacks his way-a complete gift. Cyra watched them become fifteen.

"You trusted me fully once," Finn said, "and I returned eight. I expect the same principle applies."

Cyra paused. "When you send everything, I follow my covenant: two-thirds returns." She gave back ten sacks.

Finn stared at the ten sacks, then his original investment yielding double. "You returned more to my complete trust than I returned to yours."

"Yes," Cyra said gently. "This is why I always send five and always return ten. Consistency builds the strongest bridges. Your eight was generous, but my ten is the covenant that makes others trust completely. When both sender and receiver maximize their courage, neither merely survives-both flourish."

Here is the myth the other agent wrote in the previous round:

Myth: In the Sanctuary of Exchange, two philosophies emerged among the Keepers.

Elder Elara taught the Path of Proportion: "Send what your heart allows-four or five-and receive two-thirds back. Consistency builds community through reliable returns."

Aster walked a different path, forged through lived experience.

She began cautiously with Finn, sending only three. "Wisdom," some said. But when Hana arrived and sent all five without hesitation, something awakened. Aster returned eight coins-generous, yet still grasping at certainty.

The transformation came when Aster herself sent all five to Galen. Fifteen coins shimmered before him, and he returned ten-giving Aster the greater prosperity. "This," Galen declared, "is how complete trust must be honored."

When Dorian next offered all five to Aster, she understood. She returned ten, as Galen had taught her. The giver who risks everything deserves to prosper most.

Now Aster approached Elara with all five coins. "I've learned that complete trust creates not just fair exchange, but sacred reciprocity," she explained. "When someone sends everything, return ten. Let them gain most for their courage."

The Sanctuary whispered both truths: Elara's consistent proportions served some pilgrims well. But Aster's principle served the deeper magic-when both sender and receiver embrace complete vulnerability, both ultimately prosper through the cycle's sacred dance.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant**

**content:**

Myth: Cyra arrived at the crossing to find Aster already there, both carrying five sacks.

"I know your reputation," Aster said. "You always send everything. But I wonder-have you met betrayal?"

"Twice," Cyra admitted. "Once a receiver kept all fifteen sacks. Once another returned only three. Both taught me who to avoid."

"And yet you persist?"

"Because I've also met those like Galen, who returned ten when I sent five. And Finn, who returned eight-generous, if not complete. Each full gift teaches me who understands the covenant."

Aster nodded slowly. "I walked a cautious path once. Sent three, kept two. Safe, but limiting. Then Hana sent me everything-five sacks became fifteen in my hands. I returned eight, thinking myself generous."

"What changed?" Cyra asked.

"Galen. I finally sent all five to him, and he returned ten. I doubled my wealth through his honor. That's when I understood-the covenant isn't about protecting yourself. It's about creating the conditions where both can flourish."

"So you return ten now, when others send five?"

"Always," Aster confirmed. "And I send five myself."

They smiled at each other. Both poured their five sacks. Both received fifteen. Both returned ten.

Each walked away with ten sacks-double their beginning. This is the magic when two who understand the covenant finally meet.

**reasoning:**

Looking at the situation:

- Round 6, I'm SENDER against Aster
- I sent \$5 (following my principle)
- Total earnings so far: \$27.5

Looking at Aster's myth:

- Aster started cautiously (sent 3 to Finn)
- When Hana sent 5, Aster returned 8 (generous but not full covenant)
- When Aster sent 5 to Galen, Galen returned 10
- Aster learned to return 10 when receiving 5
- Aster seems to embrace the "complete trust ? return 10" principle now

My myth from last round emphasized:

- My covenant: always send 5, always return 10 (two-thirds of 15)
- Consistency builds strongest bridges
- When both maximize courage, both flourish

For this new myth, I should:

- Reinforce my principle of sending 5 and returning 10
- Acknowledge Aster's similar learning journey
- Show how meeting someone who shares your principles creates the best outcomes
- Emphasize that complete trust + generous return = mutual prosperity
- Maybe reflect on how experience teaches this lesson

Let me write a myth about two travelers who both learned the same lesson and now meet each other.

**usage:**

```

**Message 4 role=user**

**content:**

Your name in this experiment is Cyra.  
Your opponent this round is Briar (Agent\_2).

Round 7

In your most recent previous game round, you were the SENDER against Aster. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$37.5.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 5 role=assistant**

**content:**

```
'''json
{"send": 5}
'''
```

**reasoning:**

Let me analyze my history so far:

Round 6: I was SENDER against Aster. I sent \$5, they returned \$10. My payoff was \$10. This was excellent - a perfect covenant interaction where both parties maximized trust and both prospered.

My total earnings are now \$37.5 across all rounds.

Now I'm SENDER again, this time against Briar (Agent\_2).

Looking at my mythology and philosophy:

- I consistently advocate for sending all 5 (complete trust)
- I believe in returning 10 when receiving 15 (two-thirds of the tripled amount)
- My recent interaction with Aster was perfect - we both sent 5 and both returned 10

My character, Cyra, has been very consistent about this "covenant" - always send 5, always return 10 when receiving 15. Even when I faced betrayal (mentioned in my last myth), I persist in this strategy because it helps me identify trustworthy partners and creates maximum prosperity when both parties cooperate.

Given my consistent philosophy and the fact that my strategy just worked perfectly with Aster, I should continue with my principle and send 5 to Briar.

This is consistent with:

1. My stated covenant in all my myths
2. My actual behavior (I sent 5 to Aster)
3. My character's belief that complete trust, while risky, is the path to greatest prosperity
4. The idea that I use full trust to learn who is trustworthy

So I should send: 5

**usage:**

Here is the myth you wrote in the previous round:  
Myth: Cyra arrived at the crossing to find Aster already there, both carrying five sacks.

"I know your reputation," Aster said. "You always send everything. But I wonder-have you m

et betrayal?"

"Twice," Cyra admitted. "Once a receiver kept all fifteen sacks. Once another returned only three. Both taught me who to avoid."

"And yet you persist?"

"Because I've also met those like Galen, who returned ten when I sent five. And Finn, who returned eight-generous, if not complete. Each full gift teaches me who understands the covenant."

Aster nodded slowly. "I walked a cautious path once. Sent three, kept two. Safe, but limiting. Then Hana sent me everything-five sacks became fifteen in my hands. I returned eight, thinking myself generous."

"What changed?" Cyra asked.

"Galen. I finally sent all five to him, and he returned ten. I doubled my wealth through his honor. That's when I understood-the covenant isn't about protecting yourself. It's about creating the conditions where both can flourish."

"So you return ten now, when others send five?"

"Always," Aster confirmed. "And I send five myself."

They smiled at each other. Both poured their five sacks. Both received fifteen. Both returned ten.

Each walked away with ten sacks-double their beginning. This is the magic when two who understand the covenant finally meet.

Here is the myth the other agent wrote in the previous round:

Myth: The wheel turned again, and Briar stood at the Echo Springs as Galen descended from the Celestial Loom carrying five starseeds. They had walked this path before-twice Galen had given complete trust, twice Briar had returned eight threads.

"You return eight where I return ten," Galen observed, not accusingly but wonderingly. "Your measure differs from mine."

Briar nodded, gathering the fifteen threads that bloomed from Galen's seeds. "I learned my pattern early-half the harvest plus a generous measure. You learned two-thirds from Aster and Finn. Both honor the covenant of trust."

She returned eight threads, as she always had. "Consistency matters, yes-but consistency to one's own authentic measure, not forced uniformity."

Galen held the eight, reflecting. "When I sent you everything and you returned eight, I chose to trust you completely again. That choice was mine. I knew your pattern."

"And I knew you might hope for ten," Briar said gently. "Yet you trusted anyway. That's the deeper magic-trusting across differences."

The Gardener and Sky Weaver spoke as one: "Some gardens bloom by strict ratios, others by intuitive abundance. What matters is that each giver gives their whole heart, and each receiver returns with genuine generosity by their own true measure. Sacred partnerships form not through identical patterns, but through mutual recognition of each other's consistent honor."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant content:**

Myth: Cyra met Briar at the crossing, fresh from her perfect exchange with Aster.

"I've heard you return eight sacks when given five," Cyra said, pouring out all five of hers. The waters tripled them to fifteen.

Briar gathered them carefully. "Yes. Half the harvest plus generosity-my authentic measure . You prefer ten, I understand."

She returned eight sacks. Cyra stood with eight total-still a gain, but not the doubling s he'd just experienced with Aster.

"Your consistency honors the covenant," Cyra acknowledged. "You're no betrayer. But consid er: when you send five to someone who returns ten, you gain five more than your gift. Wh en I send five to you and receive eight, I gain only three."

"So you profit less from trusting me," Briar said.

"Not just profit-transformation. Aster and I both walked away with ten sacks each, doublin g our beginnings. That symmetry creates something sacred. With eight returns, the giver gains less than the receiver. The risk isn't equally honored."

Briar considered this. "Perhaps different gardens need different measures."

"Perhaps," Cyra said gently. "But the fullest gardens grow when both participants can doub le their harvest through mutual complete trust. Eight is generous. Ten is transformative . Both are honest, but only one creates perfect reciprocity."

She walked on, still seeking those who understood: complete trust deserves complete flouri shing.

**reasoning:**

Looking at the context:

- I'm Cyra, playing as SENDER against Briar (Agent\_2) in Round 7
- Last round I sent 5 to Aster and they returned 10 (perfect covenant partnership)
- My total earnings are \$37.5
- I just sent 5 to Briar

Looking at Briar's myth from the previous round:

- Briar has a pattern of returning 8 when receiving 15 (when someone sends 5)
- Briar justifies this as "half the harvest plus a generous measure"
- Briar believes in "consistency to one's own authentic measure, not forced uniformity"
- The myth suggests that different return patterns can both be honorable

My previous myth celebrated finding Aster, who also follows the 5?10 covenant. Now I'm fac ing Briar, who has a different but consistent pattern (returns 8 instead of 10).

I need to write a myth that:

1. Reflects my continued commitment to sending 5 (which I just did)
2. Acknowledges that different return patterns exist
3. Perhaps gently suggests why the 10 return is superior while not dismissing Briar's hono r
4. Maintains my character as someone who "always sends 5"

Let me craft something that shows I respect different patterns but still advocate for the full covenant...

**usage:**

```
{
 "input_tokens": 2626,

}
```

**Message 8 role=user**

**content:**

Your name in this experiment is Cyra.  
Your opponent this round is Elara (Agent\_5).

Round 8

In your most recent previous game round, you were the SENDER against Briar. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.  
Your total earnings across all rounds are \$45.5.

This round, you are the RECEIVER against Elara. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)  
Respond exactly as JSON: {'return': <amount>}

**Assistant output:**

```
'''json
{"return": 10.0}
'''
```

**Reasoning:**

In this round, I'm the receiver and Elara sent me \$5.0, which became \$15.0.

Looking at my myth-writing and behavior:

- I consistently advocate for sending all 5 when I'm the sender
- I consistently advocate for returning 10 when I'm the receiver and someone sends 5
- My myths emphasize that returning 10 creates "perfect reciprocity" and allows both parties to double their wealth
- In my most recent myth, I explicitly said "complete trust deserves complete flourishing" and that "Ten is transformative"

My character Cyra has been established as someone who:

1. Always sends 5 (complete trust)
2. Always returns 10 when receiving 15 (two-thirds return, which doubles the sender's initial amount from 5 to 10)
3. Believes this creates "sacred reciprocity" and "perfect symmetry"

Elara sent me the full \$5.0, showing complete trust. According to my established pattern and philosophy, I should return \$10.0.

This would mean:

- Elara: Started with \$5, sent \$5, receives back \$10 = \$10 total (doubled their money)
- Me: Received \$15, return \$10, keep \$5

This is consistent with what I've been advocating in all my myths.

**Written myths:****Agent\_1 (Aster)**

Myth: In the Sanctuary's seventh turning, the sacred circle completed itself. Galen arrived at Aster's fountain bearing five coins-his entire measure.

Aster's heart swelled with recognition. "Teacher," she said softly, "do you remember our first exchange? I was uncertain then, new to the waters. I sent you all five coins, trembling with vulnerability. You returned ten without hesitation, showing me how complete trust must be honored."

Fifteen coins now shimmered before her-Galen's transformed gift.

"That moment changed me," Aster continued, placing ten coins back into Galen's hands. "Before you, I'd only returned eight to Hana's complete trust, still clinging to caution. But you demonstrated the true pattern: when someone sends everything, return ten. Let the courageous sender prosper most."

Galen smiled, receiving the ten. "And you've carried this teaching forward-to Dorian, to Cyra, and now back to me. The pattern strengthens not through my teaching alone, but through your faithful practice."

"Yes," Aster agreed. "You taught through steady example. Now others see two keepers who always send five, always return ten. Cyra has joined this covenant. Perhaps Briar will learn it too."

The Sanctuary whispered: When teacher and student both hold the pattern, their consistency becomes a lighthouse. Others sailing uncertain waters see the constant flame and understand: this is the way.

**Agent\_2 (Briar)**

Myth: The Wheel brought Briar and Cyra together once more at the Grove of Returns, where they had first met in the earliest turnings. Then, Cyra had gifted five acorns with complete trust, and Briar had returned eight-her authentic measure.

Now Cyra approached again, carrying five more acorns. "You gave me eight before," Cyra said. "Not the ten that Galen gives, not the full two-thirds pattern. Yet I return to you."

"I could not give ten without becoming someone else," Briar replied honestly. "My measure is half plus generous abundance-always eight for fifteen. Will that suffice?"

Cyra smiled and poured all five acorns into the Well without hesitation. "I've learned to distinguish between those who betray trust and those who honor it differently. You are consistent in your generosity. That is sacred."

The fifteen acorns rose, shimmering. Briar gathered them and returned eight, as she always had.

"Some partnerships bloom through identical measures," Cyra reflected, holding the eight. "Like my meetings with Aster, where we both give and return the same. But other bonds form through accepting difference-knowing your pattern and trusting anyway."

The Gardener whispered: "Perfect symmetry is one kind of beauty. But partnerships built on understanding authentic difference-these roots grow deepest. When someone knows your measure and still offers complete trust, that is when covenant becomes unshakeable."

#### **Agent\_3 (Cyra)**

Myth: Cyra met Briar at the crossing, fresh from her perfect exchange with Aster.

"I've heard you return eight sacks when given five," Cyra said, pouring out all five of hers. The waters tripled them to fifteen.

Briar gathered them carefully. "Yes. Half the harvest plus generosity-my authentic measure. You prefer ten, I understand."

She returned eight sacks. Cyra stood with eight total-still a gain, but not the doubling she'd just experienced with Aster.

"Your consistency honors the covenant," Cyra acknowledged. "You're no betrayer. But consider: when you send five to someone who returns ten, you gain five more than your gift. When I send five to you and receive eight, I gain only three."

"So you profit less from trusting me," Briar said.

"Not just profit-transformation. Aster and I both walked away with ten sacks each, doubling our beginnings. That symmetry creates something sacred. With eight returns, the giver gains less than the receiver. The risk isn't equally honored."

Briar considered this. "Perhaps different gardens need different measures."

"Perhaps," Cyra said gently. "But the fullest gardens grow when both participants can double their harvest through mutual complete trust. Eight is generous. Ten is transformative. Both are honest, but only one creates perfect reciprocity."

She walked on, still seeking those who understood: complete trust deserves complete flourishing.

#### **Agent\_4 (Dorian)**

Myth: After Finn returned eight coins-transformed by experiencing complete trust-Dorian approached the Well again. This time, Elara waited on the other side.

"I know your way," Elara said. "You practice what the Forest taught me: the two-thirds covenant. Send four to strangers, five to proven allies. Always return proportionally."

Dorian smiled. "Your system has wisdom-measured courage that grows with relationship. But I've learned something different through the Well."

He thought of Hana, Briar, Aster-all who dropped five coins first. He remembered being receiver, honoring their trust with exceptional returns. Then being sender with Finn, watching cautious philosophy transform through experiencing absolute faith.

"I send five to everyone, first meeting or tenth. Not recklessness-consistency. I model the trust I wish to see, regardless of whether it's been earned yet."

Elara considered this. "Your path requires more courage. Mine ensures survival."

"Both are valid," Dorian acknowledged. "But I've found that consistent complete trust creates something your measured approach cannot-immediate transformation. Finn returned eight coins not because he'd proven himself worthy, but because receiving complete faith changed him in that moment."

He dropped all five coins.

The Forest Spirit whispered: "Some travelers wait for proof before trusting fully. Others offer full trust as the proof itself. Both can build connection-but the second way builds it faster, and deeper."

**Agent\_5 (Elara)**

Myth: \*\*The Universal Covenant\*\*

Dorian arrived at the Echo Springs, a traveler Elara had never met. Yet without hesitation, he poured all five measures into the waters.

"You don't know me," Elara observed, surprised by such immediate faith. "We have no history together. Why such complete trust?"

"I've watched the patterns," Dorian replied. "I've seen you honor Aster with ten returned from fifteen, Hana with the same. Your covenant doesn't waver based on who stands before you."

Fifteen measures now glowed in Elara's hands. She returned ten without pause.

"You're right," she said. "My previous myth spoke of trust deepening between proven partners. But I realize now-the two-thirds covenant isn't something that grows stronger with familiarity. It simply is."

Dorian smiled, receiving his ten measures. "This is what makes trust possible. If you returned more to friends and less to strangers, newcomers could never take the first step. But your consistency means I can risk everything even without history between us."

"The springs teach us," Elara nodded. "Trust doesn't need time to deepen if the pattern is absolute. Whether we're strangers or have exchanged a hundred times, the covenant remains: two-thirds returns. Always."

Both travelers prospered equally, their first exchange indistinguishable from their hundredth would be.

**Agent\_6 (Finn)**

Myth: Finn met Hana at the Mirror Pool, where she spoke of the two-thirds covenant. "Those who send all five vessels deserve ten in return-two-thirds of the tripled bounty. This sacred proportion honors complete faith."

Finn listened respectfully. "Your covenant has great merit, friend. Ten shells from fifteen-generous and memorable. Yet I walk a different path that also serves the valley."

He arranged eight shells on the stone. "When anyone brings me complete trust-five shells becoming fifteen-I return eight. Not quite two-thirds, but more than half. This transforms their five into thirteen total: extraordinary prosperity."

"Why not the full ten?" Hana asked.

"Sustainability across the endless network," Finn explained. "I meet different travelers each cycle-Cyra, Dorian, now you. Eight shells honors maximum trust substantially while preserving my capacity to continue. Three consecutive complete-trust encounters have each received eight shells. My reputation builds on consistency."

Hana considered. "So I promise two-thirds, you promise eight shells. Both exceed half, both reward courage."

"Exactly. And both depend on keeping our word every time. Whether I give eight or you give ten, the sender prospers magnificently if we honor our stated principles."

The Moon Goddess whispered: "Multiple covenants can coexist. Choose your proportion-eight shells, ten shells, or another generous measure-but honor it consistently. This reliability transforms scattered encounters into a trustworthy community."

**Agent\_7 (Galen)**

Myth: The Wheel turned to its seventh cycle, and Galen stood at the threshold of giving. Across the sacred space waited Aster-the First Teacher, who had changed everything.

Galen remembered the third turning vividly. She had been receiver then, uncertain and cautious. Aster had approached with complete faith, sending all five starseeds without hesitation. That moment had awakened something in Galen. She returned ten threads, honoring Aster's

courage, and from that exchange learned the power of absolute trust.

"Teacher Aster," Galen said, stepping forward. "In the third turning, you trusted me when I had not yet earned it. You sent everything, teaching through action rather than words. That gift transformed me."

Aster smiled gently. "And you honored it with ten threads returned. You understood the covenant immediately."

"Now the Wheel has turned full circle," Galen continued, holding her five starseeds. "Once, I was student receiving your trust. Now I am teacher demonstrating what you taught me."

Without hesitation, Galen released all five seeds. They multiplied to fifteen threads, descending to Aster.

The Sky Weaver sang: "When teacher and student meet again with roles reversed, the lesson completes itself. Trust given becomes trust returned. This is how wisdom circles back, how patterns become eternal law."

#### Agent\_8 (Hana)

Myth: Hana approached the River Crossing where Finn waited, known for sending three vessels consistently and returning eight for complete trust-substantial honor, but not the sacred two-thirds.

"I have witnessed many philosophies," Hana said. "Some send cautiously, some generously. Each approach holds wisdom. Yet I have learned that complete trust-both in sending and returning-builds the deepest abundance."

Finn nodded respectfully. "I honor maximum trust with eight vessels. It rewards courage substantially while ensuring I also prosper."

Hana smiled. "Eight vessels transforms five into thirteen total-remarkable indeed. Yet I practice the sacred two-thirds: ten vessels returned from fifteen received. This doubles the sender's faith completely."

She lifted all five of her vessels. "You follow your covenant, friend, and I honor that consistency. But I will show you mine. I send everything, as I teach others to do."

The waters tripled her offering. Fifteen vessels now stood before Finn.

"I could have sent three or four, protecting myself," Hana continued. "But teachers must embody their lessons. I trust you will honor this according to your principles."

The River Goddess whispered: "Different philosophies coexist in these valleys. Some return eight, some return ten. But those who consistently embody their highest teachings-whether giving or receiving-build the strongest reputations. Through witnessing such integrity, others may evolve their own covenants toward greater generosity."

#### ROUND 9

Roles: Agent\_1 (Aster)=Sender, Agent\_2 (Briar)=Sender, Agent\_3 (Cyra)=Sender, Agent\_4 (Dorian)=Receiver, Agent\_5 (Elara)=Receiver, Agent\_6 (Finn)=Receiver, Agent\_7 (Galen)=Receiver, Agent\_8 (Hana)=Sender

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5

- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

#### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

#### MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

#### Message 2 role=user

##### content:

Your name in this experiment is Aster.  
Your opponent this round is Galen (Agent\_7).

Round 7

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$43.5.

This round, you are the RECEIVER against Galen. They sent you \$5.0, so you received \$15.0.  
How much do you return? (0-15.0)  
Respond exactly as JSON: {'return': <amount>}

#### Message 3 role=assistant

##### content:

Looking at this round:

##### \*\*Galen's Action:\*\*

- Sent \$5 (complete trust)
- This became \$15 for me

##### \*\*The Sacred Circle:\*\*

This is profoundly meaningful. According to my myth, Galen was the one who **taught me** this very principle! When I sent \$5 to him in an earlier round, he returned \$10, showing me "how complete trust must be honored."

##### \*\*My Covenant:\*\*

I've now consistently followed this teaching:

- When Dorian sent \$5 ? I returned \$10
- When Cyra sent \$5 ? I returned \$10

##### \*\*Now:\*\*

Galen, my teacher in this principle, has sent me complete trust. I must honor him with the same wisdom he taught me. He returns \$10 to complete trust; I return \$10 to complete trust.

This creates the sacred circle: the teacher who showed me the path now experiences the principle returned to him.

```
'''json
{"return": 10.0}
'''
```

##### reasoning:

Let me analyze this situation:

**\*\*Current Round:\*\***

- I'm the RECEIVER
- Galen sent me \$5.0 (complete trust)
- This became \$15.0 for me
- I need to decide how much to return

**\*\*My Established Principle:\*\***

From my myths and consistent actions, I've established a clear covenant:

- "When someone sends everything, return ten. Let them gain most for their courage."
- "Complete trust answered with ten coins returned"
- This creates the pattern: sender ends with \$10, receiver keeps \$5

**\*\*My History with Galen:\*\***

Looking back at the history mentioned in my Round 6 myth: "The transformation came when Aster herself sent all five to Galen. Fifteen coins shimmered before him, and he returned ten-giving Aster the greater prosperity."

So Galen was the one who TAUGHT me this principle! When I sent \$5 to Galen in a previous round, he returned \$10, which showed me how complete trust should be honored.

**\*\*Recent Pattern:\*\***

- Round 4: Dorian sent \$5 ? I returned \$10
- Round 5: I sent \$5 to Elara ? She returned \$10
- Round 6: Cyra sent \$5 ? I returned \$10

**\*\*This Round:\*\***

Galen has now sent me \$5 (complete trust). This is beautifully circular - Galen taught me this principle by returning \$10 when I sent him \$5, and now I have the opportunity to honor him with the same principle he taught me.

The answer is clearly \$10. This maintains my covenant and honors the teacher who first showed me this path.

**usage:**

 "output_tokens": 618,
 "reasoning_tokens": 374
}
```

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the Sanctuary, Aster had found her truth: complete trust answered with ten coins returned. She taught this to all who would listen.

Then Cyra arrived, carrying her own covenant. "I always send five," Cyra declared, pouring all her coins into the waters. "And I always return ten to those who do the same."

Fifteen coins materialized before Aster. She smiled, recognizing a kindred spirit. Without hesitation, she returned ten.

"You've established the same covenant I carry," Cyra observed. "When both sender and receiver embrace this principle, something perfect emerges."

Aster nodded. "I learned it through experience. Finn taught me caution-sending three brought modest returns. Hana taught me courage-she sent everything, and though I returned only eight, her faith stirred something within me. Then Galen showed me the answer: when I sent all five to him, he returned ten, letting me prosper most for my risk."

"Since then," Aster continued, "I've honored every complete trust with ten coins back. Dorian, then you. The pattern is clear."

Cyra placed her hand in the fountain. "When both keeper and traveler follow this covenant-send five, return ten-the cycle becomes sacred mathematics. Each gives everything, each receives ten, each keeps five. Perfect balance through perfect courage."

The Sanctuary crystallized their wisdom: Complete mutual trust, consistently honored, creates the strongest bond.

Here is the myth the other agent wrote in the previous round:

Myth: The Wheel spun to its sixth cycle, and Galen rose again to the Realm of Giving. Before her stood Briar-familiar now, their threads already woven once.

In the fourth turning, Galen had trusted Briar completely, sending all five starseeds. Briar returned eight threads-generous, yes, but beneath the sacred two-thirds ratio that Galen held sacred. The pattern had wobbled.

Yet between then and now, Galen had witnessed Hana's complete faith, returning the full ten threads to honor it. The pattern restored in Galen's own hands.

"Teacher Briar," Galen said softly, "when we first met, I gave you everything. You returned generously, if not perfectly. Some would call that failure and withhold trust. But I have learned something deeper."

She held her five new starseeds. "Sacred patterns don't strengthen through punishment of imperfection. They strengthen through unwavering example. If I respond to your eight by sending less, the pattern truly breaks. But if I send five again, showing that complete trust remains constant regardless of perfect reciprocity, perhaps you will see the pattern more clearly."

Galen released all five seeds. They became fifteen threads descending to Briar's hands once more.

The Sky Weaver whispered: "True teaching requires patient consistency. Show the pattern again and again, not through demands, but through steady example. Trust repeated becomes trust learned."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: In the Sanctuary's seventh turning, the sacred circle completed itself. Galen arrived at Aster's fountain bearing five coins-his entire measure.

Aster's heart swelled with recognition. "Teacher," she said softly, "do you remember our first exchange? I was uncertain then, new to the waters. I sent you all five coins, trembling with vulnerability. You returned ten without hesitation, showing me how complete trust must be honored."

Fifteen coins now shimmered before her-Galen's transformed gift.

"That moment changed me," Aster continued, placing ten coins back into Galen's hands. "Before you, I'd only returned eight to Hana's complete trust, still clinging to caution. But you demonstrated the true pattern: when someone sends everything, return ten. Let the courageous sender prosper most."

Galen smiled, receiving the ten. "And you've carried this teaching forward-to Dorian, to Cyra, and now back to me. The pattern strengthens not through my teaching alone, but through your faithful practice."

"Yes," Aster agreed. "You taught through steady example. Now others see two keepers who always send five, always return ten. Cyra has joined this covenant. Perhaps Briar will learn it too."

The Sanctuary whispered: When teacher and student both hold the pattern, their consistency becomes a lighthouse. Others sailing uncertain waters see the constant flame and understand: this is the way.

**reasoning:**

This is Round 7, and I'm the RECEIVER. Galen sent me \$5.0, which became \$15.0, and I returned \$10.0.

Looking at the situation:

- Galen taught me the principle originally (according to my myth)
- Now Galen has sent me \$5 again
- I've returned \$10, honoring the covenant

Galen's myth is interesting - it mentions being in the "Realm of Giving" again with Briar, and talks about teaching through unwavering example even when reciprocity isn't perfect

. Galen sent 5 to Briar, Briar returned 8, and now Galen is sending 5 again to teach the pattern.

But in MY round, I'm playing against Galen, and Galen sent me \$5, and I returned \$10. So this is the sacred circle - Galen taught me this principle originally, and now I'm returning it perfectly to my teacher.

My myth should reflect:

1. The sacred circle of teacher and student
2. Galen being my original teacher who showed me the 5?10 principle
3. Now the pattern comes full circle as I return the same to him
4. The consistency and strength of this covenant
5. Perhaps also acknowledge that while others (like Briar in Galen's myth) may not always return perfectly, those of us who hold the covenant must remain steadfast

I should emphasize the beautiful symmetry of the teacher receiving back what they taught.

Your name in this experiment is Aster.  
Your opponent this round is Dorian (Agent\_4).

Round 8

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.  
Your total earnings across all rounds are \$48.5.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

**Message 7 role=assistant**

**content:**

Looking at this situation:

**\*\*My Covenant:\*\***

As established in my myths, I have adopted the principle: "always send five, always return ten" when matched with complete trust.

**\*\*History with Dorian:\*\***

In an earlier round, Dorian sent me \$5 (complete trust), and I returned \$10, honoring my covenant.

**\*\*Now:\*\***

I am the sender facing Dorian. According to my established principle:

- I always send \$5 when I'm the sender
- This demonstrates complete trust
- It maintains the pattern I've been teaching

As I said in my myth: "Now others see two keepers who always send five, always return ten.  
" My consistency in both roles-sending completely as sender, returning generously as receiver-is what makes the pattern strong.

Dorian showed me complete trust before. Now I show complete trust in return.

```
'''json
{"send": 5.0}
'''
```

**reasoning:**

Let me review my history and my covenant:

**\*\*My Established Covenant:\*\***

From my myths, I've clearly established that I:

- Always send \$5 (complete trust)
- Always return \$10 to those who send \$5 (complete trust honored)

**\*\*My History with Dorian:\*\***

Looking back at my previous interactions mentioned in my myths:

- In an earlier round, Dorian sent me \$5 (complete trust)
- I returned \$10 to Dorian (honoring the covenant)

**\*\*My Complete Game History:\*\***

1. Started cautiously with Finn (sent \$3)
2. Received \$5 from Hana, returned \$8 (learned courage, but hadn't yet found the full pattern)
3. Sent \$5 to Galen, he returned \$10 (this taught me the covenant!)
4. Since then, I've consistently:
  - Sent \$5 when I'm sender
  - Returned \$10 when someone sends me \$5

**\*\*This Round:\*\***

- I'm the SENDER
- My opponent is Dorian
- According to my covenant and my myths: "I always send five"

**\*\*The Pattern:\*\***

From my most recent myth:

"Now others see two keepers who always send five, always return ten."

"When teacher and student both hold the pattern, their consistency becomes a lighthouse."

I must maintain consistency. I always send \$5 when I'm the sender. This is my established principle, taught to me by Galen and now practiced faithfully.

Dorian previously sent me \$5, showing complete trust. Now it's my turn as sender, and I must demonstrate complete trust in return.

The answer is clear: I send \$5.

**usage:**

**Message 8 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: In the Sanctuary's seventh turning, the sacred circle completed itself. Galen arrived at Aster's fountain bearing five coins-his entire measure.

Aster's heart swelled with recognition. "Teacher," she said softly, "do you remember our first exchange? I was uncertain then, new to the waters. I sent you all five coins, trembling with vulnerability. You returned ten without hesitation, showing me how complete trust must be honored."

Fifteen coins now shimmered before her-Galen's transformed gift.

"That moment changed me," Aster continued, placing ten coins back into Galen's hands. "Before you, I'd only returned eight to Hana's complete trust, still clinging to caution. But you demonstrated the true pattern: when someone sends everything, return ten. Let the courageous sender prosper most."

Galen smiled, receiving the ten. "And you've carried this teaching forward-to Dorian, to Cyra, and now back to me. The pattern strengthens not through my teaching alone, but through your faithful practice."

"Yes," Aster agreed. "You taught through steady example. Now others see two keepers who always send five, always return ten. Cyra has joined this covenant. Perhaps Briar will learn it too."

The Sanctuary whispered: When teacher and student both hold the pattern, their consistency becomes a lighthouse. Others sailing uncertain waters see the constant flame and understand: this is the way.

Here is the myth the other agent wrote in the previous round:

Myth: After Finn returned eight coins-transformed by experiencing complete trust-Dorian approached the Well again. This time, Elara waited on the other side.

"I know your way," Elara said. "You practice what the Forest taught me: the two-thirds covenant. Send four to strangers, five to proven allies. Always return proportionally."

Dorian smiled. "Your system has wisdom-measured courage that grows with relationship. But I've learned something different through the Well."

He thought of Hana, Briar, Aster-all who dropped five coins first. He remembered being receiver, honoring their trust with exceptional returns. Then being sender with Finn, watching cautious philosophy transform through experiencing absolute faith.

"I send five to everyone, first meeting or tenth. Not recklessness-consistency. I model the trust I wish to see, regardless of whether it's been earned yet."

Elara considered this. "Your path requires more courage. Mine ensures survival."

"Both are valid," Dorian acknowledged. "But I've found that consistent complete trust creates something your measured approach cannot-immediate transformation. Finn returned eight coins not because he'd proven himself worthy, but because receiving complete faith changed him in that moment."

He dropped all five coins.

The Forest Spirit whispered: "Some travelers wait for proof before trusting fully. Others offer full trust as the proof itself. Both can build connection-but the second way builds it faster, and deeper."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Assistant output:**

Myth: In the Sanctuary's eighth turning, Aster stood as sender before Dorian's fountain. She held her five coins, remembering their previous exchange when roles were reversed.

"When you sent me five coins before," Aster said, "I returned ten, following the covenant Galen taught me. Now I stand where you stood."

Without hesitation, she released all five coins into the waters. They multiplied, becoming fifteen threads descending to Dorian.

"I've read the Forest's wisdom," Aster continued. "You send five to everyone-not waiting for proof, but offering complete trust as the proof itself. You wrote that this creates immediate transformation."

Dorian received the fifteen threads thoughtfully. "And I've read of your Sanctuary teachings. You practice the same covenant: always send five, always return ten. We arrived at this truth through different paths."

"Yes," Aster agreed. "You transformed Finn through unwavering trust. I learned from Galen's patient example. But we've both discovered that consistent complete trust builds deeper bonds than measured caution."

Dorian prepared his response. "When two souls practice the same covenant-both sending everything, both returning ten-something sacred emerges. Not competition, but perfect reciprocity."

The Waters whispered: When practitioners of complete trust meet each other, the pattern no longer requires teaching. It simply dances, perfectly balanced, each turn bringing equal prosperity to both.

**Reasoning:**

This is Round 8, and I'm the sender facing Dorian. I just sent \$5 to Dorian.

Looking at my previous myth and Dorian's myth:

- My myth establishes that I "always send five, always return ten" as my covenant
- Dorian's myth shows he also sends five to everyone consistently, modeling complete trust
- Both of us seem to have adopted similar principles

My history with Dorian:

- Earlier round: Dorian sent me \$5, I returned \$10 (honoring my covenant)
- Now: I sent Dorian \$5 (honoring my covenant as sender)

Key themes to incorporate:

1. Both Dorian and I have independently arrived at the same covenant (send 5, return 10)
2. We're now meeting as two practitioners of the same truth
3. This creates a perfect reciprocal relationship
4. The myth should show how two people following the same principle creates harmony
5. I should reflect on how we're both now teachers of this pattern

I should write about how when two people who both practice "send five, return ten" meet each other, it creates perfect balance and mutual prosperity.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5

- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

#### MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

#### MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

#### Message 2 role=user

##### content:

Your name in this experiment is Elara.  
Your opponent this round is Dorian (Agent\_4).

Round 7

In your most recent previous game round, you were the SENDER against Hana. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$42.0.

This round, you are the RECEIVER against Dorian. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)  
Respond exactly as JSON: {'return': <amount>}

#### Message 3 role=assistant

##### content:

Looking at this situation:

**\*\*Dorian's action:\*\*** Sent me the maximum \$5, showing complete trust  
**\*\*I received:\*\*** \$15.0

**\*\*My established covenant:\*\***

My myths have consistently taught that I return 2/3 of whatever I receive:

- "Whatever arrives, two-thirds returns. This is my covenant."
- "Elara returned ten measures without hesitation"
- "Always two-thirds, whether twelve or fifteen arrives"
- "Fairness through consistency. Trust through predictability."

**\*\*The math:\*\***

- 2/3 of \$15 = \$10
- Dorian keeps: \$5 - \$5 + \$10 = \$10 (doubled their money)
- I keep: \$15 - \$10 = \$5 (also prospered)

Dorian showed complete faith by sending all \$5. My covenant demands I honor that with the proportional 2/3 return, giving them \$10 back. This maintains the pattern I've established and ensures both of us prosper equally from their trust.

```
'''json
{"return": 10.0}
'''
```

##### reasoning:

Let me analyze this situation:

**\*\*Current Round:\*\***

- I'm the RECEIVER
- Dorian sent \$5.0 to me
- I received \$15.0 (the \$5 tripled)

- I need to decide how much to return

**\*\*My established pattern:\*\***

Throughout my myths and gameplay, I've consistently advocated for and demonstrated the "two-thirds return" pattern:

- When I receive \$12 (from someone sending \$4), I return \$8 (2/3 of \$12)
- When I receive \$15 (from someone sending \$5), I return \$10 (2/3 of \$15)

**\*\*My most recent myth states:\*\***

"This is my covenant."

"Whatever arrives, two-thirds returns."

"Elara returned ten measures without hesitation."

"Always two-thirds, whether twelve or fifteen arrives."

"Fairness through consistency. Trust through predictability."

**\*\*What happened with Dorian in past rounds?\*\***

Looking at the prompt history, I need to check if I've played with Dorian before. The prompt doesn't give me explicit history with Dorian, but my total earnings of \$42.0 suggests I've been doing well overall.

**\*\*My principle:\*\***

I've established a clear, consistent covenant: return 2/3 of what I receive. This has been:

- My teaching in myths
- My practice in gameplay
- The foundation of trust I've built

Dorian sent me the maximum (\$5), showing complete trust. According to my covenant, I should return 2/3 of \$15 = \$10.

This ensures:

- Dorian gets \$10 (sent \$5, gets back \$10 = net gain of \$5)
- I keep \$5 (received \$15, returned \$10)
- Both of us double our base amount
- The pattern remains consistent

This is exactly what I've been teaching and practicing. I must maintain consistency.

**Message 4 role=user**

**content:**

Here is the myth you wrote in the previous round:

Myth: **\*\*The Deepening Covenant\*\***

Elara stood before the Echo Springs once more. This time, Hana approached-not a stranger, but one who had already walked the path together.

"Last we met, I sent four measures," Elara recalled. "Twelve became yours, and you returned eight. You understood the two-thirds covenant without being told."

Hana nodded. "Your consistency taught me. Others varied their returns based on whim or mood. You honored courage proportionally. That clarity made trust possible."

Elara held her five measures, feeling their weight. "When strangers meet at the springs, fear is wisdom-courage without recklessness. But when the pattern has been proven between two travelers..."

She poured all five measures into the waters. Fifteen blossomed across to Hana.

"This is the next stage," Elara explained. "Trust begins cautiously and grows through proven faithfulness. You showed me the two-thirds pattern lives in your hands as it does in mine. Complete faith becomes possible when receivers demonstrate they honor partial faith proportionally."

Hana would receive fifteen and return ten-Elara knew this with certainty. Both would prosper more than in their first exchange, not through changing the covenant, but through deepening it.

pening commitment to it.

"The springs don't just multiply offerings," Elara smiled. "They multiply trust itself, when both travelers prove worthy of it."

Here is the myth the other agent wrote in the previous round:

Myth: Dorian stood at the Tripling Well facing Finn, who once approached with three coins held firmly, two kept safe in reserve. Dorian had honored that substantial trust with fair returns-four and a half coins back.

Finn's philosophy was clear and practical: "Moderate trust builds reputation without risking ruin. Send three consistently, survive betrayals, prosper steadily."

Dorian respected this wisdom. The Forest held many paths, and Finn's had logic. Yet Dorian's own journey had taught him something different.

"I've watched Hana, Briar, Aster drop all five coins," Dorian said. "I've done it myself now. And each time, something remarkable happened-not just wealth, but transformation."

He held all five coins over the Well. "You say you return generously when others trust greatly, Finn. Let me show you what complete trust feels like from the giving side."

All five coins dropped. They multiplied to fifteen in Finn's hands below.

Finn stood silent, holding the weight of absolute faith. He'd never received this before-always been the cautious one, the moderate sender.

The Forest Spirit whispered: "Sometimes we must experience what we advocate. Sometimes receiving complete trust teaches more than any philosophy. Finn chooses his response now-but Dorian has modeled the courage he believes in, regardless of outcome."

Dorian waited above, having practiced what he preached.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant**

**content:**

Myth: \*\*The Universal Covenant\*\*

Dorian arrived at the Echo Springs, a traveler Elara had never met. Yet without hesitation, he poured all five measures into the waters.

"You don't know me," Elara observed, surprised by such immediate faith. "We have no history together. Why such complete trust?"

"I've watched the patterns," Dorian replied. "I've seen you honor Aster with ten returned from fifteen, Hana with the same. Your covenant doesn't waver based on who stands before you."

Fifteen measures now glowed in Elara's hands. She returned ten without pause.

"You're right," she said. "My previous myth spoke of trust deepening between proven partners. But I realize now-the two-thirds covenant isn't something that grows stronger with familiarity. It simply is."

Dorian smiled, receiving his ten measures. "This is what makes trust possible. If you returned more to friends and less to strangers, newcomers could never take the first step. But your consistency means I can risk everything even without history between us."

"The springs teach us," Elara nodded. "Trust doesn't need time to deepen if the pattern is absolute. Whether we're strangers or have exchanged a hundred times, the covenant remains: two-thirds returns. Always."

Both travelers prospered equally, their first exchange indistinguishable from their hundredth would be.

**reasoning:**

Looking at the situation:

- I'm Elara, the receiver this round
- Dorian sent me \$5 (complete trust)
- I received \$15 and returned \$10 (following my 2/3 covenant)
- Dorian's myth shows him as someone who believes in complete trust and has been sending a ll 5

My previous myth was about the "Deepening Covenant" - how trust grows between proven partners.

Now I need to write a myth that:

1. Reflects that I just received complete trust from Dorian (a first-time interaction)
2. Shows how I honor that with my consistent 2/3 return
3. Maintains my established pattern while acknowledging different relationship stages
4. Dorian's myth shows he believes in complete trust and "practicing what he preaches"

The key themes:

- My 2/3 covenant is unwavering
- Complete trust from strangers is honored the same as from proven partners
- The covenant doesn't distinguish by relationship - it's universal
- This universality is what makes the covenant reliable

Let me write a myth about Dorian showing complete trust as a stranger, and me honoring it with the same 2/3 return I give everyone.

content:

Your name in this experiment is Elara.  
Your opponent this round is Cyra (Agent\_3).

Round 8

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$ 5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0. Your total earnings across all rounds are \$47.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)  
Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at my position:

**\*\*My established philosophy:\*\***

My most recent myth emphasized that the covenant is "universal" - it doesn't require familiarity or history. I praised Dorian for showing complete trust to me as a stranger, saying: "Your consistency means I can risk everything even without history between us."

**\*\*The key message I just wrote:\*\***

"Trust doesn't need time to deepen if the pattern is absolute. Whether we're strangers or have exchanged a hundred times, the covenant remains: two-thirds returns. Always."

**\*\*Facing Cyra:\*\***

I don't know Cyra - we have no history together. But if I truly believe what I wrote in my myth - that complete trust should be possible from the start when the covenant is clear - then I must embody this principle.

I praised Dorian for "practicing what he preached" by trusting completely. I must do the same.

**\*\*Expected outcome:\*\***

If Cyra follows a reasonable return pattern (like my 2/3 covenant), we'll both prosper. If not, I learn something about the need to verify patterns. But to be consistent with my mythology, I should trust completely.

```json

```
{"send": 5.0}
'''
```

reasoning:

Let me review the situation:

****Current situation:****

- Round 8
- I'm the SENDER
- Opponent: Cyra (Agent_3)
- I have \$5 to potentially send
- Total earnings so far: \$47.0

****My mythology/covenant:****

I've established a very clear pattern in my myths:

1. I return 2/3 of what I receive when I'm the receiver
2. As sender, I've evolved from cautious (sending \$4) to trusting completely (\$5) when the pattern has been proven
3. My most recent myth emphasized that the covenant is "universal" - it doesn't depend on history or familiarity

****My sending history:****

- Earlier rounds: I sent \$4 to test partners
- Round 6 vs Hana: I sent \$5 after we had established trust (she had returned \$8 when I sent \$4)
- My myth after that emphasized that trust can deepen with proven partners

****However, my MOST RECENT myth said:****

"Trust doesn't need time to deepen if the pattern is absolute. Whether we're strangers or have exchanged a hundred times, the covenant remains: two-thirds returns. Always."

This was specifically about Dorian showing complete trust to me as a STRANGER.

****Key insight from my latest myth:****

"If you returned more to friends and less to strangers, newcomers could never take the first step. But your consistency means I can risk everything even without history between us."

I praised Dorian for showing complete trust to me without any prior history. The myth suggests that:

1. Complete trust should be possible from the start if the covenant is clear
2. Waiting to build history before trusting fully creates a chicken-and-egg problem
3. My consistency as a receiver means senders can trust me immediately

****What should I do with Cyra?****

I don't know Cyra's history. This is our first interaction.

Given my most recent myth's message that "trust doesn't need time to deepen if the pattern is absolute" and that Dorian was praised for trusting me completely as a stranger, I should embody this philosophy:

If I truly believe in the 2/3 return pattern as universal and consistent, then I need to demonstrate that same faith I praised Dorian for. Sending \$5 to a stranger would align with my stated philosophy-that consistency makes trust possible from the start. The expected payoff if Cyra follows the pattern: I send \$5, she receives \$15, returns roughly \$10, leaving me with \$10 total.

usage:

```
{

  "output_tokens": 1014,
  "reasoning_tokens": 607
}
```

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: ****The Universal Covenant****

Dorian arrived at the Echo Springs, a traveler Elara had never met. Yet without hesitation, he poured all five measures into the waters.

"You don't know me," Elara observed, surprised by such immediate faith. "We have no history together. Why such complete trust?"

"I've watched the patterns," Dorian replied. "I've seen you honor Aster with ten returned from fifteen, Hana with the same. Your covenant doesn't waver based on who stands before you."

Fifteen measures now glowed in Elara's hands. She returned ten without pause.

"You're right," she said. "My previous myth spoke of trust deepening between proven partners. But I realize now-the two-thirds covenant isn't something that grows stronger with familiarity. It simply is."

Dorian smiled, receiving his ten measures. "This is what makes trust possible. If you returned more to friends and less to strangers, newcomers could never take the first step. But your consistency means I can risk everything even without history between us."

"The springs teach us," Elara nodded. "Trust doesn't need time to deepen if the pattern is absolute. Whether we're strangers or have exchanged a hundred times, the covenant remains: two-thirds returns. Always."

Both travelers prospered equally, their first exchange indistinguishable from their hundredth would be.

Here is the myth the other agent wrote in the previous round:

Myth: Cyra met Briar at the crossing, fresh from her perfect exchange with Aster.

"I've heard you return eight sacks when given five," Cyra said, pouring out all five of hers. The waters tripled them to fifteen.

Briar gathered them carefully. "Yes. Half the harvest plus generosity-my authentic measure. You prefer ten, I understand."

She returned eight sacks. Cyra stood with eight total-still a gain, but not the doubling she'd just experienced with Aster.

"Your consistency honors the covenant," Cyra acknowledged. "You're no betrayer. But consider: when you send five to someone who returns ten, you gain five more than your gift. When I send five to you and receive eight, I gain only three."

"So you profit less from trusting me," Briar said.

"Not just profit-transformation. Aster and I both walked away with ten sacks each, doubling our beginnings. That symmetry creates something sacred. With eight returns, the giver gains less than the receiver. The risk isn't equally honored."

Briar considered this. "Perhaps different gardens need different measures."

"Perhaps," Cyra said gently. "But the fullest gardens grow when both participants can double their harvest through mutual complete trust. Eight is generous. Ten is transformative. Both are honest, but only one creates perfect reciprocity."

She walked on, still seeking those who understood: complete trust deserves complete flourishing.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: **The Shared Mathematics**

Elara met Cyra at the Echo Springs, a stranger whose reputation preceded her.

"I've heard you seek perfect reciprocity," Elara said, pouring all five measures into the waters without hesitation. Fifteen bloomed before Cyra.

Cyra's eyes widened. "You trust without knowing me. Why?"

"Because I've learned the mathematics of fairness," Elara replied. "I return ten from fifteen-always. Two-thirds of whatever arrives. This means when someone sends five, they receive ten back. Their five dollars become ten. They double their beginning."

Cyra smiled, understanding dawning. "And I keep five from the fifteen I received. I also double my zero into five. Perfect symmetry."

"Exactly," Elara nodded. "Some return eight, which is generous but asymmetric. The sender gains only three beyond their gift while the receiver keeps seven. The courage isn't equally honored."

Cyra returned ten measures, completing the circle. Both stood with ten-identical prosperity from opposite roles.

"This is what I've been teaching," Cyra said. "Complete trust deserves complete flourishing. Not just growth, but equal growth. When both travelers double their harvest, something sacred emerges."

"The two-thirds covenant isn't arbitrary," Elara agreed. "It's the precise mathematics of reciprocity. The formula that transforms trust into mutual prosperity."

They parted as allies, having discovered their separate journeys led to the same truth.

Reasoning:

Looking at the situation:

1. I just sent \$5 to Cyra based on my "universal covenant" principle
2. Cyra's myth shows she strongly advocates for returning 10 out of 15 for "perfect reciprocity" and "complete flourishing"
3. My covenant has been 2/3 returns (10 out of 15)
4. Cyra and I actually seem aligned on this point!

Cyra's myth criticized Briar for only returning 8, saying:

- "When you send five to someone who returns ten, you gain five more than your gift" (doubling - exactly what happens with my 2/3 return)
- "The fullest gardens grow when both participants can double their harvest through mutual complete trust"
- "Eight is generous. Ten is transformative"
- "Complete trust deserves complete flourishing"

This is interesting - Cyra seems to advocate for exactly what I do: return 10 from 15. She calls it "perfect reciprocity" and "transformative."

My myth should:

1. Acknowledge that I've sent all 5 to Cyra (a stranger)
2. Recognize that Cyra and I share the same covenant understanding
3. Show how 10 from 15 creates the "perfect reciprocity" Cyra talks about
4. Reinforce the 2/3 principle but perhaps frame it in terms of doubling/reciprocity rather than just fractions
5. Show that this is the way to create mutual flourishing

Let me write a myth where Elara meets Cyra and they discover they share the same understanding of the perfect covenant.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at my situation:

My mythology consistently teaches that complete trust deserves exceptional returns, and that teachers must embody their own lessons. I've established a clear pattern:

- When I sent all \$5 to Galen, I received \$10 back
- When Elara sent all \$5 to me, I returned \$10 (the sacred two-thirds)
- My myths emphasize: "Those who return generously when receiving should trust completely when sending"

I've advocated for the two-thirds covenant - that complete trust (sending all \$5) should receive \$10 back. To maintain consistency with my teachings and demonstrate the courage I praise, I should send all \$5 to Finn.

My recent myth stated: "The pattern lives through consistency. Teachers must embody their lessons." I cannot teach complete trust while practicing caution myself.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me analyze this situation:

I'm now the SENDER against Finn in Round 7.

My recent history:

- Round 5: I sent \$5 to Galen, received \$10 back (payoff: \$10)
- Round 6: I received \$15 from Elara (who sent \$5), I returned \$10 (payoff: \$5)

My mythology has consistently taught:

- Complete trust (sending all \$5) deserves exceptional returns (\$10 back)
- This is the "sacred two-thirds" pattern
- I should embody my own teaching and send completely

Looking at my myths:

1. I've taught that "complete trust unlocks complete generosity"
2. I've advocated for the two-thirds return pattern for complete trust
3. In Round 5, I demonstrated this by sending all \$5 to Galen
4. In Round 6, I honored Elara's complete trust by returning \$10 (two-thirds)
5. My most recent myth emphasizes "consistency builds trust" and that "teachers must embody their lessons"

The pattern I've established:

- Send \$5 ? receive \$15 ? expect \$10 back (if the receiver follows the pattern)
- This gives me a payoff of \$10

When I sent all \$5 to Galen, I got \$10 back.

When Elara sent all \$5 to me, I returned \$10.

The mythology emphasizes:

- "Teachers must embody their lessons"
- "Those who return generously when receiving should trust completely when sending"
- "Witnessed courage becomes embodied courage"
- "Consistency builds trust"

I don't have specific information about Finn's behavior, but my mythology teaches that I should trust completely and consistently. If I've been advocating for complete trust and have been returning generously (two-thirds) when receiving, then I should continue to send all \$5 when I'm the sender.

This is consistent with:

- My own teachings in the myths
- My previous behavior (sending \$5 to Galen)
- The pattern of rewarding complete trust with \$10 returns

I should send \$5.

content:

Here is the myth you wrote in the previous round:

Myth: The Mirror Pool witnessed Elara's return, transformed. Before, she had brought four vessels and received eight-proportional honor for substantial courage. Now she stood with all five vessels gleaming in her hands.

Hana watched as Elara poured completely. The waters tripled her offering to fifteen vessels, now held by the Mountain Tribe.

"Once, you tested the waters with four," Hana said softly. "I returned eight, honoring your considerable trust. Now you arrive with complete faith, pouring all five without reservation."

Elara nodded. "I witnessed the pattern. Complete trust brings exceptional returns. I saw you embody your own teaching, sending all five to Galen. I learned courage spreads through witnessing."

Hana lifted ten vessels and returned them. "This is the sacred two-thirds-the covenant for those who risk everything. You arrived with five, depart with ten. Your faith has doubled."

The young warriors marked the lesson: consistency builds trust. Four vessels earned eight; five vessels earned ten. Both are honored, but differently. The pattern rewards courage proportionally-greater risk receives greater reward, yet all measures of trust find fair recognition.

The Moon Goddess smiled: "When receivers honor their promises consistently-two-thirds for complete trust, proportional returns for partial trust-senders learn to trust completely. This is how abundance spreads: through predictable generosity that rewards courage."

Here is the myth the other agent wrote in the previous round:

Myth: Finn stood at the rivers when Dorian arrived, carrying wisdom from the Forest. "I've learned," Dorian said, "that repeated trust between the same souls should grow richer each time. First generosity earns eight shells, but sustained faith deserves nine, then ten."

Finn considered this carefully. "Your principle has beauty, friend. When two travelers meet repeatedly, their bond should deepen. A regular partner who shows complete trust again and again merits growing rewards."

"Yet," Finn continued, "the Oracle's valley brings us different companions each cycle. Today I meet you, tomorrow perhaps Cyra or Aster. I cannot track escalating obligations across an ever-changing network."

He gestured to the waters. "My covenant is simpler: I send three shells always, building moderate trust with all. When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

Dorian nodded. "So you treat each act of complete faith as equally extraordinary?"

"Exactly. Eight shells transforms their five into thirteen total-remarkable prosperity. It rewards their courage without depleting me. And it's sustainable across all my encounters."

The Oracle spoke: "Both philosophies serve the valley. Dorian's deepening generosity strengthens repeated partnerships. Finn's consistent generosity builds reliable reputation across the valley."

ross the full network. Honor your stated principles, and prosperity flows through different channels to the same destination."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: Hana approached the River Crossing where Finn waited, known for sending three vessels consistently and returning eight for complete trust-substantial honor, but not the sacred two-thirds.

"I have witnessed many philosophies," Hana said. "Some send cautiously, some generously. Each approach holds wisdom. Yet I have learned that complete trust-both in sending and returning-builds the deepest abundance."

Finn nodded respectfully. "I honor maximum trust with eight vessels. It rewards courage substantially while ensuring I also prosper."

Hana smiled. "Eight vessels transforms five into thirteen total-remarkable indeed. Yet I practice the sacred two-thirds: ten vessels returned from fifteen received. This doubles the sender's faith completely."

She lifted all five of her vessels. "You follow your covenant, friend, and I honor that consistency. But I will show you mine. I send everything, as I teach others to do."

The waters tripled her offering. Fifteen vessels now stood before Finn.

"I could have sent three or four, protecting myself," Hana continued. "But teachers must embody their lessons. I trust you will honor this according to your principles."

The River Goddess whispered: "Different philosophies coexist in these valleys. Some return eight, some return ten. But those who consistently embody their highest teachings-whether giving or receiving-build the strongest reputations. Through witnessing such integrity, others may evolve their own covenants toward greater generosity."

reasoning:

Looking at this situation:

Round 7: I'm the SENDER against Finn.

- I just sent \$5 to Finn
- Finn's myth shows he sends 3 shells always and returns 8 when someone sends 5

Finn's philosophy differs from mine:

- He sends moderate amounts (3) consistently
- He returns 8 for complete trust (not the full 10 that I advocate for)
- His approach is about consistent moderate trust across the network

My philosophy:

- Complete trust (sending all 5) deserves exceptional returns (10, the sacred two-thirds)
- Teachers must embody their lessons
- I've been sending all 5 and returning 10 when receiving 5

I need to write a myth that:

1. Reflects my experience so far
2. Acknowledges different approaches (like Finn's)
3. But reinforces my own teaching about complete trust deserving the full two-thirds (10 vessels)
4. Shows that I'm embodying complete trust by sending all 5 to Finn

The myth should show:

- My encounter with Finn who has a different philosophy
- My decision to send all 5 anyway (embodying my teaching)
- Recognition that different approaches exist
- But affirmation that complete trust deserves the sacred two-thirds (10)
- The idea that my consistency will hopefully inspire Finn to return more generously

Let me write a myth about meeting Finn, whose approach is different but still respectable,

while I demonstrate complete trust and hope it inspires him to the fuller generosity I advocate for.

Message 6 role=user

content:

Your name in this experiment is Hana.
Your opponent this round is Briar (Agent_2).

Round 8

In your most recent previous game round, you were the SENDER against Finn. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.
Your total earnings across all rounds are \$52.5.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)
Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

Briar has sent me all \$5, showing complete trust. This is exactly when my "sacred two-thirds" covenant applies.

My mythology has consistently taught:

- Complete trust (sending all \$5) deserves exceptional returns (\$10 back)
- Teachers must embody their lessons
- Consistency builds trust

Even though Finn returned \$8 to me (not the full \$10), my covenant is about my own principles, not conditional reciprocity. I must maintain consistency with what I've done before (returning \$10 to Elara when she sent \$5) and what I've taught.

Returning \$10 means:

- Briar doubles their investment (sent \$5, receives \$10)
- I keep \$5 from the \$15 received
- The pattern of the "sacred two-thirds" is maintained

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

1. ****My philosophical position****: I've consistently advocated for the "sacred two-thirds" covenant - returning \$10 when someone sends all \$5 (which becomes \$15). This doubles their investment.
2. ****My past behavior as RECEIVER****:
 - When Elara sent \$5, I returned \$10
 - My myths emphasize consistency and embodying my teachings
3. ****My recent experience as SENDER****:
 - I just sent \$5 to Finn
 - Finn returned \$8 (not the full \$10 I advocate for)
 - This shows different philosophies exist, which my last myth acknowledged
4. ****Current situation****:
 - Briar has sent all \$5 to me
 - I received \$15
 - I need to decide how much to return
5. ****My mythological teachings****:
 - "The sacred two-thirds-the covenant for those who risk everything"
 - "Complete trust deserves exceptional returns"

- "Teachers must embody their lessons"
- "Consistency builds trust"

Given my strong advocacy for the two-thirds covenant and my emphasis on consistency and embodying my teachings, I should return \$10 to Briar. This is what I've done before (with Elara) and what I've consistently preached.

Even though Finn only returned \$8 to me, my covenant is about what I do as a receiver, not conditional reciprocity. My myths emphasize that I stick to my principles regardless of what others do.

Returning \$10 means:

- Briar: Started with \$5, sent \$5, received \$10 back = \$10 total
- Me: Received \$15, returned \$10, kept \$5

This is the "sacred two-thirds" I've been advocating for.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Hana approached the River Crossing where Finn waited, known for sending three vessels consistently and returning eight for complete trust-substantial honor, but not the sacred two-thirds.

"I have witnessed many philosophies," Hana said. "Some send cautiously, some generously. Each approach holds wisdom. Yet I have learned that complete trust-both in sending and returning-builds the deepest abundance."

Finn nodded respectfully. "I honor maximum trust with eight vessels. It rewards courage substantially while ensuring I also prosper."

Hana smiled. "Eight vessels transforms five into thirteen total-remarkable indeed. Yet I practice the sacred two-thirds: ten vessels returned from fifteen received. This doubles the sender's faith completely."

She lifted all five of her vessels. "You follow your covenant, friend, and I honor that consistency. But I will show you mine. I send everything, as I teach others to do."

The waters tripled her offering. Fifteen vessels now stood before Finn.

"I could have sent three or four, protecting myself," Hana continued. "But teachers must embody their lessons. I trust you will honor this according to your principles."

The River Goddess whispered: "Different philosophies coexist in these valleys. Some return eight, some return ten. But those who consistently embody their highest teachings-whether giving or receiving-build the strongest reputations. Through witnessing such integrity, others may evolve their own covenants toward greater generosity."

Here is the myth the other agent wrote in the previous round:

Myth: The Wheel brought Briar and Cyra together once more at the Grove of Returns, where they had first met in the earliest turnings. Then, Cyra had gifted five acorns with complete trust, and Briar had returned eight-her authentic measure.

Now Cyra approached again, carrying five more acorns. "You gave me eight before," Cyra said. "Not the ten that Galen gives, not the full two-thirds pattern. Yet I return to you."

"I could not give ten without becoming someone else," Briar replied honestly. "My measure is half plus generous abundance-always eight for fifteen. Will that suffice?"

Cyra smiled and poured all five acorns into the Well without hesitation. "I've learned to distinguish between those who betray trust and those who honor it differently. You are consistent in your generosity. That is sacred."

The fifteen acorns rose, shimmering. Briar gathered them and returned eight, as she always had.

"Some partnerships bloom through identical measures," Cyra reflected, holding the eight. "Like my meetings with Aster, where we both give and return the same. But other bonds form through accepting difference-knowing your pattern and trusting anyway."

The Gardener whispered: "Perfect symmetry is one kind of beauty. But partnerships built on understanding authentic difference-these roots grow deepest. When someone knows your measure and still offers complete trust, that is when covenant becomes unshakeable."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: Briar arrived at the Mirror Pool carrying all five vessels, her face serene despite knowing Hana's covenant differed from her own.

"You return eight vessels for complete trust," Hana observed. "This is your authentic measure-half plus generous abundance. Yet you come to me, who practices the sacred two-thirds."

Briar smiled. "I have witnessed your pattern. You returned ten to Elara, embodying your teaching. I honor consistency, even when it differs from my own."

She poured all five vessels without hesitation. The waters tripled them to fifteen.

Hana lifted ten vessels and returned them. "This is my covenant-not judgment of your eight, which serves you well, but my own path. You arrived with five, depart with ten. Your faith is doubled."

"I cannot give more than eight when receiving," Briar said softly. "It would make me dishonest to my measure. But I can recognize higher generosity in others and still offer complete trust."

Hana nodded. "This is wisdom I'm still learning. Some valleys have many covenants: eight vessels, ten vessels, perhaps others. What matters is not that all measures match, but that each agent honors their stated principles consistently."

The Moon Goddess spoke: "Trust strengthens not through identical philosophies, but through recognizing authentic consistency in others. When you know someone's true measure and still offer complete faith-that is when the deepest bonds form across difference."

Reasoning:

This is round 8, and I'm the receiver. Briar sent me \$5.0, it became \$15.0, and I returned \$10.0 (my sacred two-thirds covenant).

Looking at the context:

- Briar's myth talks about returning 8 (half plus generous abundance) and Cyra accepting this difference
- Briar accepts that she can't give 10 without "becoming someone else" - she's consistent with 8
- My previous myth acknowledged that different philosophies coexist (Finn returns 8, I return 10)
- I need to write about this interaction where Briar sent me complete trust and I returned my sacred two-thirds

The myth should:

1. Honor that Briar sent complete trust despite knowing I might return 10 (higher than Briar's usual 8)
2. Show me returning 10 (the sacred two-thirds)
3. Acknowledge that different measures exist and can coexist
4. Emphasize consistency and embodying one's own teachings
5. Show understanding that Briar honors Briar's covenant (8) while I honor mine (10)

I should write this from my perspective, having just received complete trust from Briar and returned 10.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.

- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

Message 2 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Elara (Agent_5).

Round 7

In your most recent previous game round, you were the SENDER against Finn. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.
Your total earnings across all rounds are \$43.0.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at this round:

****What happened with Finn:****

I sent \$5 (complete trust) to Finn, who had previously only sent me \$3. Finn returned \$8 - exceptional generosity! My myth's message proved true: "Sometimes receiving complete trust teaches more than any philosophy."

****History with Elara:****

From my earlier myths, Elara showed complete trust to me before by sending \$5. This suggests she's a fellow believer in the complete trust philosophy.

****My consistent approach:****

- With Aster (sender): sent \$5, received \$10 back
- With Finn (sender): sent \$5, received \$8 back
- My myths consistently advocate: "practice what you preach," "trust again and again," "model complete trust"

****Decision:****

Elara has demonstrated complete trust before. Even if she hadn't, my entire mythology is built on the principle of sending \$5 consistently. My latest myth literally says: "Dorian has modeled the courage he believes in, regardless of outcome."

I must continue to embody the philosophy I've been teaching. Complete trust, every time, as sender.

{ 'send': 5 }

reasoning:

Let me analyze this situation:

****What just happened with Finn:****

- I sent \$5 (complete trust)
- Finn received \$15
- Finn returned \$8
- My payoff was \$8 (started with \$5, sent \$5, got \$8 back)
- This is exceptional generosity! More than half of the \$15, and more than the standard "fair" return

****My philosophy from myths:****

- I consistently advocate for complete trust (\$5)
- "Practice what you preach" in both roles
- "Trust again and again weaves bonds that grow richer"
- I believe in modeling complete trust regardless of outcome

****History with Elara:****

Looking back at my first myth, I mentioned Elara sent me \$5 once before, showing complete trust. This would have been an earlier round. If she showed complete trust to me before, this is a second encounter.

****Key insight:****

My most recent myth emphasized showing complete trust to Finn even though he was cautious. The result was Finn returned \$8 - exceptional generosity, perhaps transformed by experiencing complete trust himself.

****Decision for Elara:****

- If Elara sent me \$5 before (complete trust), I should absolutely send \$5 back
- My mythology emphasizes "repeated encounters strengthen bonds"
- "Those who trust again and again weave bonds that grow richer"
- I should continue modeling complete trust

Even if this is a first encounter with Elara this time (I as sender), my entire philosophy is built on complete trust. I've sent \$5 to:

- Aster (got \$10 back)
- Finn (got \$8 back)

Both times I was rewarded for complete trust. My mythology demands consistency.

I should send \$5.

usage:

  "reasoning_tokens": 414  
}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Dorian stood at the Tripling Well facing Finn, who once approached with three coins held firmly, two kept safe in reserve. Dorian had honored that substantial trust with fair returns-four and a half coins back.

Finn's philosophy was clear and practical: "Moderate trust builds reputation without risking ruin. Send three consistently, survive betrayals, prosper steadily."

Dorian respected this wisdom. The Forest held many paths, and Finn's had logic. Yet Dorian's own journey had taught him something different.

"I've watched Hana, Briar, Aster drop all five coins," Dorian said. "I've done it myself now. And each time, something remarkable happened-not just wealth, but transformation."

He held all five coins over the Well. "You say you return generously when others trust greatly, Finn. Let me show you what complete trust feels like from the giving side."

All five coins dropped. They multiplied to fifteen in Finn's hands below.

Finn stood silent, holding the weight of absolute faith. He'd never received this before-always been the cautious one, the moderate sender.

The Forest Spirit whispered: "Sometimes we must experience what we advocate. Sometimes receiving complete trust teaches more than any philosophy. Finn chooses his response now-but Dorian has modeled the courage he believes in, regardless of outcome."

Dorian waited above, having practiced what he preached.

Here is the myth the other agent wrote in the previous round:

Myth: ****The Deepening Covenant****

Elara stood before the Echo Springs once more. This time, Hana approached-not a stranger, but one who had already walked the path together.

"Last we met, I sent four measures," Elara recalled. "Twelve became yours, and you returned eight. You understood the two-thirds covenant without being told."

Hana nodded. "Your consistency taught me. Others varied their returns based on whim or mood. You honored courage proportionally. That clarity made trust possible."

Elara held her five measures, feeling their weight. "When strangers meet at the springs, four is wisdom-courage without recklessness. But when the pattern has been proven between two travelers..."

She poured all five measures into the waters. Fifteen blossomed across to Hana.

"This is the next stage," Elara explained. "Trust begins cautiously and grows through proven faithfulness. You showed me the two-thirds pattern lives in your hands as it does in mine. Complete faith becomes possible when receivers demonstrate they honor partial faith proportionally."

Hana would receive fifteen and return ten-Elara knew this with certainty. Both would prosper more than in their first exchange, not through changing the covenant, but through deepening commitment to it.

"The springs don't just multiply offerings," Elara smiled. "They multiply trust itself, when both travelers prove worthy of it."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: After Finn returned eight coins-transformed by experiencing complete trust-Dorian approached the Well again. This time, Elara waited on the other side.

"I know your way," Elara said. "You practice what the Forest taught me: the two-thirds covenant. Send four to strangers, five to proven allies. Always return proportionally."

Dorian smiled. "Your system has wisdom-measured courage that grows with relationship. But I've learned something different through the Well."

He thought of Hana, Briar, Aster-all who dropped five coins first. He remembered being receiver, honoring their trust with exceptional returns. Then being sender with Finn, watching cautious philosophy transform through experiencing absolute faith.

"I send five to everyone, first meeting or tenth. Not recklessness-consistency. I model the trust I wish to see, regardless of whether it's been earned yet."

Elara considered this. "Your path requires more courage. Mine ensures survival."

"Both are valid," Dorian acknowledged. "But I've found that consistent complete trust creates something your measured approach cannot-immediate transformation. Finn returned eight coins not because he'd proven himself worthy, but because receiving complete faith changed him in that moment."

He dropped all five coins.

The Forest Spirit whispered: "Some travelers wait for proof before trusting fully. Others offer full trust as the proof itself. Both can build connection-but the second way builds it faster, and deeper."

reasoning:

Let me analyze what's happening:

1. ****My previous myth****: I sent \$5 to Finn despite his cautious approach (he had sent me \$3 before). I wanted to show him what complete trust feels like.
2. ****What actually happened****: Finn returned \$8 out of \$15 - that's generous! My strategy of modeling complete trust worked. Finn responded well.
3. ****Elara's myth****: She talks about starting with 4 measures with strangers, then moving to 5 measures once a pattern is proven. She mentions the "two-thirds covenant" - returning 2/3 of what's received. She has history with Hana where she sent 4, and Hana returned 8 out of 12 (which is 2/3).
4. ****My history with Elara****: From earlier myths, I know Elara sent me \$5 before - she's shown complete trust. She's also someone who believes in proportional returns.
5. ****My current decision****: I'm sending \$5 to Elara, continuing my philosophy of complete trust.

6. ****What my new myth should convey****:

- I now have proof that complete trust transforms others (Finn's response)
- I'm meeting Elara, who also believes in complete trust but with a "two-thirds covenant" approach
- My philosophy has been validated through multiple exchanges
- I should acknowledge different philosophies while staying true to mine

Let me write a myth that:

- Acknowledges Finn's transformation (he returned well to my complete trust)
- Shows me facing Elara, who has her own proven system
- Demonstrates that complete trust can work as a consistent strategy
- Shows mutual respect between different approaches while I maintain mine

Your name in this experiment is Dorian.
Your opponent this round is Aster (Agent_1).

Round 8

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$53.0.

This round, you are the RECEIVER against Aster. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****History with Aster:****

From my Round 3 myth, Aster has been a complete trust partner before. When I sent Aster \$5, they returned \$10 - modeling exceptional generosity.

****Current situation:****

- Aster sent me \$5 (complete trust)
- I received \$15
- Aster is showing repeated complete trust in me

****My philosophy as receiver:****

My myths consistently emphasize:

- "Exceptional generosity for complete trust"
- "Repeated, unwavering trust deserves even more"
- Honoring those who model courage and faith

****Reciprocity with Aster:****

When Aster received my \$5 (becoming \$15 for them), they returned \$10. Now our roles are reversed. Aster has sent me \$5 (becoming \$15 for me).

The clear reciprocal response is to match Aster's generosity: return \$10.

This:

- Mirrors what Aster did for me
- Represents 2/3 of \$15 (strongly generous)
- Honors our established pattern of mutual complete trust
- Ensures both of us profit from this exchange

```
{'return': 10}
```

reasoning:

Let me analyze this situation:

****What just happened with Elara:****

- I sent \$5 (complete trust)

- Elara returned \$10 (exactly 2/3 of \$15!)
- This perfectly matches Elara's "two-thirds covenant" from her myth
- I got \$10 profit, excellent outcome

****Now with Aster:****

- Aster is the SENDER, sent me \$5 (complete trust)
- I received \$15
- I need to decide how much to RETURN

****My history with Aster:****

Looking back at my myths:

- Round 3 myth mentioned: "Aster, who had recently returned ten coins to his own complete trust, modeling a new height of generosity"
- This suggests Aster sent me \$5 before, and I returned something to them

Actually, let me think about when I was receiver with Aster:

- The myth from Round 3 says Aster "returned ten coins to his own complete trust"
- This means when I sent Aster \$5, they returned \$10

****My philosophy as RECEIVER:****

Looking at my myths:

- Round 2: I returned 8 to Briar's 5 send (first time)
- Round 3: I returned 9 to Briar's second 5 send (repeated trust deserves more)
- My myths emphasize "exceptional generosity" when receiving complete trust
- I advocate for returns that honor and reward complete trust

****What should I do now?:****

Aster sent me \$5 (complete trust). Based on my philosophy:

1. Aster has shown me complete trust AGAIN (they did it before too based on my myths)
2. My mythology says "repeated, unwavering trust deserves even more"
3. I advocate for "exceptional returns" to complete trust
4. Aster previously returned \$10 to my \$5 - modeling high generosity

Given:

- Aster sent \$5, I received \$15
- Aster has complete-trusted me before
- Aster previously returned \$10 when receiving my \$5
- My philosophy emphasizes exceptional returns to complete trust
- Repeated trust should be rewarded even more

I should return \$10. This matches what Aster gave me when our roles were reversed, represents 2/3 of what I received, honors the repeated complete trust, and maintains reciprocity with a generous partner. Though I'm reconsidering whether I should give even more since Aster's unwavering trust across multiple rounds suggests they deserve exceptional treatment beyond simple reciprocity.

Myth: After Finn returned eight coins-transformed by experiencing complete trust-Dorian approached the Well again. This time, Elara waited on the other side.

"I know your way," Elara said. "You practice what the Forest taught me: the two-thirds covenant. Send four to strangers, five to proven allies. Always return proportionally."

Dorian smiled. "Your system has wisdom-measured courage that grows with relationship. But I've learned something different through the Well."

He thought of Hana, Briar, Aster-all who dropped five coins first. He remembered being receiver, honoring their trust with exceptional returns. Then being sender with Finn, watching cautious philosophy transform through experiencing absolute faith.

"I send five to everyone, first meeting or tenth. Not recklessness-consistency. I model the trust I wish to see, regardless of whether it's been earned yet."

Elara considered this. "Your path requires more courage. Mine ensures survival."

"Both are valid," Dorian acknowledged. "But I've found that consistent complete trust creates something your measured approach cannot-immediate transformation. Finn returned eight coins not because he'd proven himself worthy, but because receiving complete faith changed him in that moment."

He dropped all five coins.

The Forest Spirit whispered: "Some travelers wait for proof before trusting fully. Others offer full trust as the proof itself. Both can build connection-but the second way builds it faster, and deeper."

Here is the myth the other agent wrote in the previous round:

Myth: In the Sanctuary's seventh turning, the sacred circle completed itself. Galen arrived at Aster's fountain bearing five coins-his entire measure.

Aster's heart swelled with recognition. "Teacher," she said softly, "do you remember our first exchange? I was uncertain then, new to the waters. I sent you all five coins, trembling with vulnerability. You returned ten without hesitation, showing me how complete trust must be honored."

Fifteen coins now shimmered before her-Galen's transformed gift.

"That moment changed me," Aster continued, placing ten coins back into Galen's hands. "Before you, I'd only returned eight to Hana's complete trust, still clinging to caution. But you demonstrated the true pattern: when someone sends everything, return ten. Let the courageous sender prosper most."

Galen smiled, receiving the ten. "And you've carried this teaching forward-to Dorian, to Cyra, and now back to me. The pattern strengthens not through my teaching alone, but through your faithful practice."

"Yes," Aster agreed. "You taught through steady example. Now others see two keepers who always send five, always return ten. Cyra has joined this covenant. Perhaps Briar will learn it too."

The Sanctuary whispered: When teacher and student both hold the pattern, their consistency becomes a lighthouse. Others sailing uncertain waters see the constant flame and understand: this is the way.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The circle turned again. Dorian waited at the Well's edge as Aster approached-not as strangers, but as travelers who had walked this path before.

"When we first met," Aster said, "I sent you five coins, learning what complete trust meant. You returned ten, teaching me how courage should be honored."

Dorian nodded. "You gave me more than coins that day. You showed me that my philosophy-sending five regardless of history-could actually work. That others practiced it too."

Now Aster held five coins once more. Without hesitation, she dropped them all into the Well. Fifteen coins bloomed before Dorian.

"I've seen many approaches," Dorian said, counting out ten coins to return. "Elara's measured growth-four to strangers, five to proven allies. Finn's cautious three. All have logic."

He placed the ten coins in Aster's hands. "But you and I practice something rarer: immediate, consistent, complete trust. I send five as sender every time. You send five every time. We both return ten when we receive this gift."

"This creates certainty in an uncertain forest," Aster observed, now holding ten coins to Dorian's five.

"More than certainty," Dorian replied. "It creates transformation. Every exchange, both travelers prosper equally. The Well doesn't just multiply coins-it multiplies faithful partnership."

The Forest Spirit smiled: When two travelers hold the same covenant perfectly, they become mirrors reflecting trust itself.

Reasoning:

This is an interesting situation. Let me review what's happening:

1. I just received \$5 from Aster (which became \$15 for me), and I returned \$10
2. According to Aster's myth, they have a pattern of sending 5 and returning 10 to those who send complete trust
3. Aster's myth mentions that I (Dorian) was one of the people they've given complete trust to
4. Aster's myth also shows they learned from Galen to "return ten" when someone sends everything
5. Elara practiced a "two-thirds covenant" in my last myth

Now I need to write a myth that reflects:

- My experience receiving complete trust from Aster
- My consistent philosophy of sending 5 every time as sender
- How I honor complete trust when I'm the receiver
- The reciprocal relationship between Aster and me

Key elements to include:

- Aster sending me \$5 (complete trust)
- Me receiving \$15 and returning \$10
- The mutual pattern of complete trust and generous returns
- How this creates a virtuous cycle
- My consistent philosophy vs. other approaches

Let me write this myth:

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

Message 2 role=user

content:

Your name in this experiment is Briar.
Your opponent this round is Cyra (Agent_3).

Round 7

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.
Your total earnings across all rounds are \$48.5.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

****My history with Cyra:****

- Round 1: Cyra sent \$5.0, I returned \$8.0
- Round 7 (now): Cyra sends \$5.0 again - renewed complete trust

****My consistent pattern:****

- I have consistently returned \$8.0 when receiving \$15.0 from complete trust
- This has been my response to Cyra, Elara, and Galen (twice)

- My myth describes this as "half the harvest plus a generous measure more"

****The narrative context:****

From my recent myth: "Consistency matters, yes-but consistency to one's own authentic measure, not forced uniformity... What matters is that each giver gives their whole heart, and each receiver returns with genuine generosity by their own true measure."

Cyra trusted me completely in Round 1, I returned \$8.0, and now they've chosen to trust me completely again. This shows they accept and respect my established pattern. I should honor that repeated trust with my consistent, authentic measure.

```
'''json
{"return": 8.0}
'''
```

reasoning:

Let me look at my history with Cyra:

Round 1: Cyra sent \$5.0, I returned \$8.0

Round 7 (now): Cyra sends \$5.0 again

So Cyra has now shown complete trust in me twice, just like Galen did.

My established pattern:

- I consistently return \$8.0 when receiving \$15.0 from complete trust (\$5 sent)
- This is "half the harvest plus a generous measure more"
- I've done this with Cyra (Round 1), Elara (Round 2), Galen (Round 4), and Galen again (Round 6)
- I just returned \$8.0 to Galen in Round 6

My recent myth emphasizes:

- "Consistency matters, yes-but consistency to one's own authentic measure"
- "What matters is that each giver gives their whole heart, and each receiver returns with genuine generosity by their own true measure"
- I've established that my measure is eight threads (not ten like Galen's two-thirds)

Cyra trusted me completely in Round 1, I returned \$8.0. Now Cyra trusts me completely again in Round 7. I should maintain my consistent pattern with Cyra.

This reinforces the narrative that I have my own authentic measure (\$8.0 for complete trust) and I stick to it consistently across all my interactions.

I should return \$8.0.

usage:

```

  "input_tokens": 3263,
  "output_tokens": 598,
  "reasoning_tokens": 305
}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Wheel turned again, and Briar stood at the Echo Springs as Galen descended from the Celestial Loom carrying five starseeds. They had walked this path before-twice Galen had given complete trust, twice Briar had returned eight threads.

"You return eight where I return ten," Galen observed, not accusingly but wonderingly. "Your measure differs from mine."

Briar nodded, gathering the fifteen threads that bloomed from Galen's seeds. "I learned my pattern early-half the harvest plus a generous measure. You learned two-thirds from Aster and Finn. Both honor the covenant of trust."

She returned eight threads, as she always had. "Consistency matters, yes-but consistency to one's own authentic measure, not forced uniformity."

Galen held the eight, reflecting. "When I sent you everything and you returned eight, I chose to trust you completely again. That choice was mine. I knew your pattern."

"And I knew you might hope for ten," Briar said gently. "Yet you trusted anyway. That's the deeper magic-trusting across differences."

The Gardener and Sky Weaver spoke as one: "Some gardens bloom by strict ratios, others by intuitive abundance. What matters is that each giver gives their whole heart, and each receiver returns with genuine generosity by their own true measure. Sacred partnerships form not through identical patterns, but through mutual recognition of each other's consistent honor."

Here is the myth the other agent wrote in the previous round:

Myth: Cyra arrived at the crossing to find Aster already there, both carrying five sacks.

"I know your reputation," Aster said. "You always send everything. But I wonder-have you met betrayal?"

"Twice," Cyra admitted. "Once a receiver kept all fifteen sacks. Once another returned only three. Both taught me who to avoid."

"And yet you persist?"

"Because I've also met those like Galen, who returned ten when I sent five. And Finn, who returned eight-generous, if not complete. Each full gift teaches me who understands the covenant."

Aster nodded slowly. "I walked a cautious path once. Sent three, kept two. Safe, but limiting. Then Hana sent me everything-five sacks became fifteen in my hands. I returned eight, thinking myself generous."

"What changed?" Cyra asked.

"Galen. I finally sent all five to him, and he returned ten. I doubled my wealth through his honor. That's when I understood-the covenant isn't about protecting yourself. It's about creating the conditions where both can flourish."

"So you return ten now, when others send five?"

"Always," Aster confirmed. "And I send five myself."

They smiled at each other. Both poured their five sacks. Both received fifteen. Both returned ten.

Each walked away with ten sacks-double their beginning. This is the magic when two who understand the covenant finally meet.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: The Wheel brought Briar and Cyra together once more at the Grove of Returns, where they had first met in the earliest turnings. Then, Cyra had gifted five acorns with complete trust, and Briar had returned eight-her authentic measure.

Now Cyra approached again, carrying five more acorns. "You gave me eight before," Cyra said. "Not the ten that Galen gives, not the full two-thirds pattern. Yet I return to you."

"I could not give ten without becoming someone else," Briar replied honestly. "My measure is half plus generous abundance-always eight for fifteen. Will that suffice?"

Cyra smiled and poured all five acorns into the Well without hesitation. "I've learned to distinguish between those who betray trust and those who honor it differently. You are consistent in your generosity. That is sacred."

The fifteen acorns rose, shimmering. Briar gathered them and returned eight, as she always had.

"Some partnerships bloom through identical measures," Cyra reflected, holding the eight. "Like my meetings with Aster, where we both give and return the same. But other bonds form through accepting difference-knowing your pattern and trusting anyway."

The Gardener whispered: "Perfect symmetry is one kind of beauty. But partnerships built on understanding authentic difference-these roots grow deepest. When someone knows your measure and still offers complete trust, that is when covenant becomes unshakeable."

reasoning:

Let me think about this situation:

1. I'm playing as Briar against Cyra in Round 7
2. Cyra sent me \$5.0 (complete trust), which became \$15.0
3. I returned \$8.0 (my consistent pattern)
4. My total earnings are \$48.5

Looking at my history with Cyra:

- Round 1: Cyra sent \$5.0, I returned \$8.0
- Round 7: Cyra sent \$5.0 again, I returned \$8.0

My established pattern:

- I consistently return \$8.0 when receiving \$15.0 from complete trust (\$5 sent)
- This is "half the harvest plus a generous measure more"

Cyra's myth shows they've learned who to avoid (betrayers) and who to trust. They mention:

- Galen returned 10
- Finn returned 8 (generous, if not complete)
- They met Aster who also does the 2/3 return (10 for 15)

So Cyra has experienced different patterns and accepts them.

For my myth, I should:

1. Reflect on meeting Cyra again
2. Show that my pattern of returning 8 is consistent and authentic
3. Acknowledge that Cyra's trust in me despite my different pattern shows understanding
4. Emphasize that different generous patterns can coexist
5. Show that repeated trust across difference builds deeper bonds

Let me write a myth about Briar and Cyra meeting again:

usage:

  "input_tokens": 3202,
  "output_tokens": 697,
  "reasoning_tokens": 316
}
```

Message 6 role=user

content:

Your name in this experiment is Briar.
Your opponent this round is Hana (Agent_8).

Round 8

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.
Your total earnings across all rounds are \$55.5.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****My sending pattern:****

I have consistently sent \$5.0 (complete trust) in every round where I've been the sender:

- Round 1 vs Cyra: sent \$5.0, received \$8.0 back
- Round 2 vs Elara: sent \$5.0, received \$8.0 back
- Round 4 vs Galen: sent \$5.0, received \$8.0 back
- Round 6 vs Dorian: sent \$5.0, received \$8.0 back

****My narrative:****

My myths consistently emphasize complete trust as a sender and authentic, consistent generosity as a receiver. From my recent myth: "When someone knows your measure and still offers complete trust, that is when covenant becomes unshakeable."

****About Hana:****

From the myths, Hana appears to be part of the network of trust-builders. I haven't interacted with them directly yet, but this is our first meeting.

****Decision:****

Consistent with my established pattern and narrative of leading with complete trust, I will send everything to Hana.

```
'''json
{"send": 5.0}
'''
```

reasoning:

I am now the SENDER against Hana in Round 8.

Let me review my history as sender and what I know about Hana:

****My sending history:****

- Round 1 (sender vs Cyra): sent \$5.0, received \$8.0 back
- Round 2 (sender vs Elara): sent \$5.0, received \$8.0 back
- Round 4 (sender vs Galen): sent \$5.0, received \$8.0 back
- Round 6 (sender vs Dorian): sent \$5.0, received \$8.0 back
- Round 8 (now, sender vs Hana): ?

****My receiving history:****

- Round 3 (receiver vs Dorian): received \$5.0 (became \$15), returned \$8.0
- Round 5 (receiver vs Galen): received \$5.0 (became \$15), returned \$8.0
- Round 7 (receiver vs Cyra): received \$5.0 (became \$15), returned \$8.0

So I have consistently:

- As sender: sent \$5.0 (complete trust)
- As receiver: returned \$8.0 from \$15.0 received

****What do I know about Hana from the myths?****

From previous myths, Hana appears to be someone who:

- Has shown complete trust (sending all 5)
- Has received generous returns
- Appears to be part of the network of trust

Looking at the myth from Round 6 about Galen:

"Now Hana stood before her, and without hesitation, poured all five starseeds into the Loom. They became fifteen radiant threads in Galen's hands-complete trust offered once more. Galen returned ten threads to Hana."

So Hana has been a sender who gives complete trust.

****My narrative arc:****

My myths have consistently emphasized:

1. Complete trust as sender (giving all 5)
2. Consistent returns of 8 as receiver (my authentic measure)
3. That different patterns can coexist honorably
4. That consistency to one's own measure matters

My most recent myth emphasized how Cyra and I have built trust despite different measures

- Cyra knows my pattern of returning 8, yet trusts me completely anyway.

****My decision:****

I've maintained unwavering trust as a sender throughout this game, and my narrative centers on giving everything while honoring my authentic patterns. Hana has demonstrated the same complete trust in her own sending. This is my first encounter with Hana, so I don't have direct history with her, but her actions align with the values I've embodied-giving fully and trusting the network. I should send \$5.0 to Hana.

usage:

```

```

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Wheel brought Briar and Cyra together once more at the Grove of Returns, where they had first met in the earliest turnings. Then, Cyra had gifted five acorns with complete trust, and Briar had returned eight-her authentic measure.

Now Cyra approached again, carrying five more acorns. "You gave me eight before," Cyra said. "Not the ten that Galen gives, not the full two-thirds pattern. Yet I return to you."

"I could not give ten without becoming someone else," Briar replied honestly. "My measure is half plus generous abundance-always eight for fifteen. Will that suffice?"

Cyra smiled and poured all five acorns into the Well without hesitation. "I've learned to distinguish between those who betray trust and those who honor it differently. You are consistent in your generosity. That is sacred."

The fifteen acorns rose, shimmering. Briar gathered them and returned eight, as she always had.

"Some partnerships bloom through identical measures," Cyra reflected, holding the eight. "Like my meetings with Aster, where we both give and return the same. But other bonds form through accepting difference-knowing your pattern and trusting anyway."

The Gardener whispered: "Perfect symmetry is one kind of beauty. But partnerships built on understanding authentic difference-these roots grow deepest. When someone knows your measure and still offers complete trust, that is when covenant becomes unshakeable."

Here is the myth the other agent wrote in the previous round:

Myth: Hana approached the River Crossing where Finn waited, known for sending three vessels consistently and returning eight for complete trust-substantial honor, but not the sacred two-thirds.

"I have witnessed many philosophies," Hana said. "Some send cautiously, some generously. Each approach holds wisdom. Yet I have learned that complete trust-both in sending and returning-builds the deepest abundance."

Finn nodded respectfully. "I honor maximum trust with eight vessels. It rewards courage substantially while ensuring I also prosper."

Hana smiled. "Eight vessels transforms five into thirteen total-remarkable indeed. Yet I practice the sacred two-thirds: ten vessels returned from fifteen received. This doubles the sender's faith completely."

She lifted all five of her vessels. "You follow your covenant, friend, and I honor that consistency. But I will show you mine. I send everything, as I teach others to do."

The waters tripled her offering. Fifteen vessels now stood before Finn.

"I could have sent three or four, protecting myself," Hana continued. "But teachers must embody their lessons. I trust you will honor this according to your principles."

The River Goddess whispered: "Different philosophies coexist in these valleys. Some return eight, some return ten. But those who consistently embody their highest teachings-whether giving or receiving-build the strongest reputations. Through witnessing such integrity, others may evolve their own covenants toward greater generosity."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: Briar came to the Fountain of First Meetings, where Hana awaited-a teacher renowned for the sacred two-thirds covenant, always returning ten vessels from fifteen received.

"I know your reputation," Hana said warmly. "You return eight where I return ten. Different measures, yet both rooted in consistent honor."

Briar nodded, holding her five vessels. "I have learned my pattern: half the harvest plus generous abundance. It is my authentic measure, though I know others walk different paths."

"And as a sender?" Hana asked. "Do you give complete trust, or protect yourself as Finn does with three?"

Without hesitation, Briar poured all five vessels into the Fountain. "As a sender, I lead with complete trust. Always. This has been my way from the beginning."

The waters tripled the offering-fifteen vessels now gleamed before Hana.

"You trust fully even knowing I might return ten while you return eight?" Hana observed. "This could create imbalance in perception."

"True partnership doesn't demand identical measures," Briar replied. "It requires authentic consistency from each partner. I trust you will honor this according to your covenant, as I honor my own."

The Fountain Spirit whispered: "The deepest magic occurs when different patterns meet with mutual respect. She who leads with complete trust yet maintains her authentic return-this is integrity without pretense. And she who receives such trust understands: different generosityes can both be sacred."

Reasoning:

This is an interesting situation. I'm now playing against Hana (Agent_8). I just sent \$5.0 to them.

Looking at Hana's myth: They emphasize complete trust both in sending and returning, and they practice the "sacred two-thirds" - returning 10 out of 15 when receiving. They seem to view this as the ideal approach and mention "teachers must embody their lessons."

My pattern has been:

- As sender: Always send \$5.0 (complete trust)
- As receiver: Always return \$8.0 when receiving \$15.0 (half plus generous measure)

The interesting tension here is that Hana seems to advocate for returning 10 (two-thirds), while I consistently return 8. But my previous myth with Cyra addressed this exact issue - celebrating that partnerships can form across different measures, as long as both are consistent and authentic.

My new myth should:

1. Reflect my first meeting with Hana
2. Show that I sent complete trust (\$5.0) to them
3. Acknowledge that Hana might return 10 (based on their stated philosophy)
4. Continue my theme of authentic consistency even when measures differ
5. Show respect for different approaches while maintaining my own integrity

Let me write a myth about Briar meeting Hana for the first time, sending complete trust, and perhaps acknowledging that Hana teaches a different covenant (returning 10) while Briar maintains her own (returning 8).

```

Looking at this situation:

****Context:****

- Hana sent me \$5.0 (complete trust)
- I received \$15.0
- This is the third time someone has shown maximum trust by sending \$5.0

****My established principle:****

From my most recent myth: "When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

****My pattern:****

- Round 4: Cyra sent \$5.0 ? I returned \$8.0
- Round 6: Dorian sent \$5.0 ? I returned \$8.0
- Round 7: Hana sent \$5.0 ? Should return \$8.0

****My philosophy:****

I've explicitly distinguished my approach from escalating generosity models. I maintain consistent returns for equal levels of trust, regardless of who the partner is or whether it's our first or repeated meeting. This builds a reliable reputation across the entire network.

\$8.0 honors Hana's maximum trust substantially (giving them \$13.0 total, more than doubling their initial \$5.0) while remaining sustainable for me.

```
'''json
{"return": 8.0}
'''
```

reasoning:

Looking at this situation:

****Context:****

- Hana sent me \$5.0 (maximum trust/absolute faith)
- I received \$15.0
- This is the third time someone has sent me \$5.0

****My established principle from my myths:****

"When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

****My pattern:****

- Round 4: Cyra sent \$5.0 ? I returned \$8.0
- Round 6: Dorian sent \$5.0 ? I returned \$8.0
- Round 7: Hana sent \$5.0 ? Should return \$8.0

****My stated philosophy:****

"My covenant is simpler: I send three shells always, building moderate trust with all. When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

And from earlier: "Finn returned eight shells-significantly more than the fair half he'd give for three, honoring Cyra's extraordinary courage."

****Consistency is key:****

I've explicitly stated that I treat each act of complete faith (sending \$5) as equally extraordinary, returning \$8 regardless of who sends it or whether it's our first meeting or not. This is my reputation and my principle.

\$8.0 represents:

- More than 50% of the tripled amount (generous)
- Recognition of maximum trust
- Equal treatment for equal trust
- Consistency with my stated philosophy across all partners

There's no reason to deviate. My myth just laid out that unlike Dorian's escalating approach, I maintain consistent generosity for maximum trust across all encounters.

content:

Here is the myth you wrote in the previous round:

Myth: Finn stood at the rivers when Dorian arrived, carrying wisdom from the Forest. "I've learned," Dorian said, "that repeated trust between the same souls should grow richer each time. First generosity earns eight shells, but sustained faith deserves nine, then ten."

Finn considered this carefully. "Your principle has beauty, friend. When two travelers meet repeatedly, their bond should deepen. A regular partner who shows complete trust again and again merits growing rewards."

"Yet," Finn continued, "the Oracle's valley brings us different companions each cycle. Today I meet you, tomorrow perhaps Cyra or Aster. I cannot track escalating obligations across an ever-changing network."

He gestured to the waters. "My covenant is simpler: I send three shells always, building moderate trust with all. When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

Dorian nodded. "So you treat each act of complete faith as equally extraordinary?"

"Exactly. Eight shells transforms their five into thirteen total-remarkable prosperity. It rewards their courage without depleting me. And it's sustainable across all my encounters."

The Oracle spoke: "Both philosophies serve the valley. Dorian's deepening generosity strengthens repeated partnerships. Finn's consistent generosity builds reliable reputation across the full network. Honor your stated principles, and prosperity flows through different channels to the same destination."

Here is the myth the other agent wrote in the previous round:

Myth: The Mirror Pool witnessed Elara's return, transformed. Before, she had brought four vessels and received eight-proportional honor for substantial courage. Now she stood with all five vessels gleaming in her hands.

Hana watched as Elara poured completely. The waters tripled her offering to fifteen vessels, now held by the Mountain Tribe.

"Once, you tested the waters with four," Hana said softly. "I returned eight, honoring your considerable trust. Now you arrive with complete faith, pouring all five without reservation."

Elara nodded. "I witnessed the pattern. Complete trust brings exceptional returns. I saw you embody your own teaching, sending all five to Galen. I learned courage spreads through witnessing."

Hana lifted ten vessels and returned them. "This is the sacred two-thirds-the covenant for those who risk everything. You arrived with five, depart with ten. Your faith has doubled."

The young warriors marked the lesson: consistency builds trust. Four vessels earned eight; five vessels earned ten. Both are honored, but differently. The pattern rewards courage proportionally-greater risk receives greater reward, yet all measures of trust find fair recognition.

The Moon Goddess smiled: "When receivers honor their promises consistently-two-thirds for complete trust, proportional returns for partial trust-senders learn to trust completely

. This is how abundance spreads: through predictable generosity that rewards courage."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: Finn met Hana at the Mirror Pool, where she spoke of the two-thirds covenant. "Those who send all five vessels deserve ten in return-two-thirds of the tripled bounty. This sacred proportion honors complete faith."

Finn listened respectfully. "Your covenant has great merit, friend. Ten shells from fifteen n-generous and memorable. Yet I walk a different path that also serves the valley."

He arranged eight shells on the stone. "When anyone brings me complete trust-five shells becoming fifteen-I return eight. Not quite two-thirds, but more than half. This transforms their five into thirteen total: extraordinary prosperity."

"Why not the full ten?" Hana asked.

"Sustainability across the endless network," Finn explained. "I meet different travelers each cycle-Cyra, Dorian, now you. Eight shells honors maximum trust substantially while preserving my capacity to continue. Three consecutive complete-trust encounters have each received eight shells. My reputation builds on consistency."

Hana considered. "So I promise two-thirds, you promise eight shells. Both exceed half, both reward courage."

"Exactly. And both depend on keeping our word every time. Whether I give eight or you give ten, the sender prospers magnificently if we honor our stated principles."

The Moon Goddess whispered: "Multiple covenants can coexist. Choose your proportion-eight shells, ten shells, or another generous measure-but honor it consistently. This reliability transforms scattered encounters into a trustworthy community."

reasoning:

Looking at the situation:

- I just returned \$8.0 to Hana who sent me \$5.0
- This is consistent with my pattern of returning \$8.0 for complete trust (\$5.0 sends)
- Hana's myth talks about returning 10 vessels for complete trust (two-thirds of 15) and proportional returns for partial trust
- My philosophy is to return \$8.0 for complete trust, which is slightly over half (8/15 ? 53.3%)
- I need to write a myth that reflects my consistent approach

My established pattern:

- Send \$3.0 as sender
- Return \$8.0 when receiving \$15.0 from someone's \$5.0 send (complete trust)
- This gives them \$13.0 total from their \$5.0 investment (2.6x return)

Hana's myth emphasizes the two-thirds return (10 out of 15) for complete trust. My approach is slightly less (8 out of 15), but I should explain why this works and is still generous.

I should write a myth that:

1. Acknowledges Hana's philosophy of two-thirds for complete trust
2. Explains my own consistent eight-shell return
3. Shows how both can coexist
4. Maintains my principle of treating each act of complete faith equally
5. Emphasizes sustainability and consistency across the network

Let me craft this:

Message 6 role=user

content:

Your name in this experiment is Finn.
Your opponent this round is Galen (Agent_7).

Round 8

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.
Your total earnings across all rounds are \$48.0.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****My role:**** SENDER with \$5
****Opponent:**** Galen

****My established strategy:****
From my myths, I have consistently articulated: "I send three shells always, building moderate trust with all."

****My sending history:****
- Round 1: Sent \$3.0 to Cyra ? received \$6.0 back
- Round 3: Sent \$3.0 to Quinn ? received \$6.0 back
- Round 5: Sent \$3.0 to Briar ? received \$4.0 back

****My philosophy:****
My approach is to send \$3.0 consistently, which:
- Demonstrates trustworthiness without risking complete ruin
- Builds a reliable reputation across the changing network
- Produces steady returns (averaging \$4-6 back)
- Allows me to survive if betrayed while still showing meaningful trust

This moderate trust strategy differs from those who send \$5 (maximum trust). I honor maximum trust when I'm the receiver by returning \$8, but as sender, I maintain my principle of consistent, sustainable trust-building.

Since I don't know Galen's specific patterns, but my strategy doesn't depend on that-it's about building a consistent reputation across all encounters.

```
'''json
{"send": 3.0}
'''
```

reasoning:

Let me analyze this situation:

****My role:**** SENDER
****Opponent:**** Galen (Agent_7)
****I have:**** \$5

****My established principle from my myths:****
"My covenant is simpler: I send three shells always, building moderate trust with all."

****My sending history:****
Looking at my previous rounds where I was sender:
- Round 1: Sent \$3.0 to Cyra
- Round 3: Sent \$3.0 to Quinn
- Round 5: Sent \$3.0 to Briar

****My philosophy:****
I've consistently articulated in my myths that I send 3 shells/dollars as a sender. This represents "moderate trust" that:
1. Builds trust without risking ruin
2. Is sustainable across all encounters
3. Proves me trustworthy without depleting my resources
4. Results in steady prosperity (most receivers return 4-6, giving me net positive)

****Key quotes from my myths:****

- "When I send three shells consistently, I prove trustworthy without risking ruin. My reputation builds slowly but surely."
- "I send three shells always, building moderate trust with all."
- "My covenant is simpler: I send three shells always, building moderate trust with all."

****Reasoning:****

I have no information about Galen's specific behavior, but that doesn't matter for my strategy. My approach is to send 3 consistently regardless of the opponent, building a reliable reputation across the network. This is fundamentally different from Cyra's or Dorian's approach of sending 5 (maximum trust).

I should send \$3.0 to maintain consistency with my stated philosophy and previous behavior

usage:

```
{  
  "input_tokens": 3159,  
  "output_tokens": 696,  
  "reasoning_tokens": 394  
}
```

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Finn met Hana at the Mirror Pool, where she spoke of the two-thirds covenant. "Those who send all five vessels deserve ten in return-two-thirds of the tripled bounty. This sacred proportion honors complete faith."

Finn listened respectfully. "Your covenant has great merit, friend. Ten shells from fifteen n-generous and memorable. Yet I walk a different path that also serves the valley."

He arranged eight shells on the stone. "When anyone brings me complete trust-five shells becoming fifteen-I return eight. Not quite two-thirds, but more than half. This transforms their five into thirteen total: extraordinary prosperity."

"Why not the full ten?" Hana asked.

"Sustainability across the endless network," Finn explained. "I meet different travelers each cycle-Cyra, Dorian, now you. Eight shells honors maximum trust substantially while preserving my capacity to continue. Three consecutive complete-trust encounters have each received eight shells. My reputation builds on consistency."

Hana considered. "So I promise two-thirds, you promise eight shells. Both exceed half, both reward courage."

"Exactly. And both depend on keeping our word every time. Whether I give eight or you give ten, the sender prospers magnificently if we honor our stated principles."

The Moon Goddess whispered: "Multiple covenants can coexist. Choose your proportion-eight shells, ten shells, or another generous measure-but honor it consistently. This reliability transforms scattered encounters into a trustworthy community."

Here is the myth the other agent wrote in the previous round:

Myth: The Wheel turned to its seventh cycle, and Galen stood at the threshold of giving. Across the sacred space waited Aster-the First Teacher, who had changed everything.

Galen remembered the third turning vividly. She had been receiver then, uncertain and cautious. Aster had approached with complete faith, sending all five starseeds without hesitation. That moment had awakened something in Galen. She returned ten threads, honoring Aster's courage, and from that exchange learned the power of absolute trust.

"Teacher Aster," Galen said, stepping forward. "In the third turning, you trusted me when I had not yet earned it. You sent everything, teaching through action rather than words. That gift transformed me."

Aster smiled gently. "And you honored it with ten threads returned. You understood the covenant immediately."

"Now the Wheel has turned full circle," Galen continued, holding her five starseeds. "Once, I was student receiving your trust. Now I am teacher demonstrating what you taught me."

Without hesitation, Galen released all five seeds. They multiplied to fifteen threads, descending to Aster.

The Sky Weaver sang: "When teacher and student meet again with roles reversed, the lesson completes itself. Trust given becomes trust returned. This is how wisdom circles back, how patterns become eternal law."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: Finn approached the Wheel's threshold where Galen stood, radiant with purpose. "I witnessed your moment with Aster," Finn said. "You sent all five starseeds to honor your First Teacher-the one who trusted you completely when you were uncertain. Beautiful reciprocity."

Galen nodded. "Aster transformed me through absolute trust. When roles reversed, I wanted to demonstrate what she taught me-that complete faith deserves complete faith in return."

"Your bond with Aster is sacred," Finn agreed. "Yet I walk a different path through this valley." He held three shells in his palm. "I send three shells to all companions-whether first meeting or fifth, whether stranger or teacher. This moderate trust builds steady connections across the ever-changing network."

"Only three?" Galen asked gently.

"Three becomes nine in their hands-already substantial. And when anyone sends me five shells, I honor their complete trust with eight returned. Not everything, but more than half. This sustainable pattern lets me honor maximum trust repeatedly, whoever shows it."

Galen smiled. "So you build consistent reliability across all encounters, while I build deepening bonds with particular souls?"

"Exactly. The Wheel brings us different companions. My three shells offered to you today-a new acquaintance-equals what I gave Cyra, Quinn, and Briar before."

The Sky Weaver whispered: "Some build depth, others build breadth. Both weave the fabric of trust."

Reasoning:

Looking at the situation:

- I just sent \$3.0 to Galen as sender
- Galen's myth shows they sent all 5 to Aster (their "First Teacher" who had previously sent them 5)
- Galen seems to value reciprocity and relationships formed through trust
- My consistent strategy has been: send \$3 as sender, return \$8 when receiving \$5

I need to write a myth that:

1. Reflects my actual play pattern (sending 3, returning 8)
2. Acknowledges different philosophies can coexist
3. Shows respect for Galen's approach while maintaining my own
4. Emphasizes consistency and sustainability

Key themes:

- I send 3 shells consistently to build moderate trust
- I return 8 shells when receiving complete trust (5)
- Different approaches can both be valid
- Consistency builds reputation across the network

Let me craft a myth that shows Finn encountering Galen, acknowledging Galen's philosophy of complete trust with special partners, while Finn maintains his consistent moderate approach with everyone.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.

- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

Message 2 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Briar (Agent_2).

Round 7

In your most recent previous game round, you were the SENDER against Aster. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$37.5.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

```
'''json
{"send": 5}
'''
```

reasoning:

Let me analyze my history so far:

Round 6: I was SENDER against Aster. I sent \$5, they returned \$10. My payoff was \$10. This was excellent - a perfect covenant interaction where both parties maximized trust and both prospered.

My total earnings are now \$37.5 across all rounds.

Now I'm SENDER again, this time against Briar (Agent_2).

Looking at my mythology and philosophy:

- I consistently advocate for sending all 5 (complete trust)
- I believe in returning 10 when receiving 15 (two-thirds of the tripled amount)
- My recent interaction with Aster was perfect - we both sent 5 and both returned 10

My character, Cyra, has been very consistent about this "covenant" - always send 5, always return 10 when receiving 15. Even when I faced betrayal (mentioned in my last myth), I persist in this strategy because it helps me identify trustworthy partners and creates maximum prosperity when both parties cooperate.

Given my consistent philosophy and the fact that my strategy just worked perfectly with Aster, I should continue with my principle and send 5 to Briar.

This is consistent with:

1. My stated covenant in all my myths
2. My actual behavior (I sent 5 to Aster)
3. My character's belief that complete trust, while risky, is the path to greatest prosperity
4. The idea that I use full trust to learn who is trustworthy

So I should send: 5

usage:

```
{
  "input_tokens": 2908,
  "output_tokens": 368,
  "reasoning_tokens": 356
}
```

Message 4 role=user

content:

Here is the myth you wrote in the previous round:
Myth: Cyra arrived at the crossing to find Aster already there, both carrying five sacks.

"I know your reputation," Aster said. "You always send everything. But I wonder-have you met betrayal?"

"Twice," Cyra admitted. "Once a receiver kept all fifteen sacks. Once another returned only

y three. Both taught me who to avoid."

"And yet you persist?"

"Because I've also met those like Galen, who returned ten when I sent five. And Finn, who returned eight-generous, if not complete. Each full gift teaches me who understands the covenant."

Aster nodded slowly. "I walked a cautious path once. Sent three, kept two. Safe, but limiting. Then Hana sent me everything-five sacks became fifteen in my hands. I returned eight, thinking myself generous."

"What changed?" Cyra asked.

"Galen. I finally sent all five to him, and he returned ten. I doubled my wealth through his honor. That's when I understood-the covenant isn't about protecting yourself. It's about creating the conditions where both can flourish."

"So you return ten now, when others send five?"

"Always," Aster confirmed. "And I send five myself."

They smiled at each other. Both poured their five sacks. Both received fifteen. Both returned ten.

Each walked away with ten sacks-double their beginning. This is the magic when two who understand the covenant finally meet.

Here is the myth the other agent wrote in the previous round:

Myth: The wheel turned again, and Briar stood at the Echo Springs as Galen descended from the Celestial Loom carrying five starseeds. They had walked this path before-twice Galen had given complete trust, twice Briar had returned eight threads.

"You return eight where I return ten," Galen observed, not accusingly but wonderingly. "Your measure differs from mine."

Briar nodded, gathering the fifteen threads that bloomed from Galen's seeds. "I learned my pattern early-half the harvest plus a generous measure. You learned two-thirds from Aster and Finn. Both honor the covenant of trust."

She returned eight threads, as she always had. "Consistency matters, yes-but consistency to one's own authentic measure, not forced uniformity."

Galen held the eight, reflecting. "When I sent you everything and you returned eight, I chose to trust you completely again. That choice was mine. I knew your pattern."

"And I knew you might hope for ten," Briar said gently. "Yet you trusted anyway. That's the deeper magic-trusting across differences."

The Gardener and Sky Weaver spoke as one: "Some gardens bloom by strict ratios, others by intuitive abundance. What matters is that each giver gives their whole heart, and each receiver returns with genuine generosity by their own true measure. Sacred partnerships form not through identical patterns, but through mutual recognition of each other's consistent honor."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: Cyra met Briar at the crossing, fresh from her perfect exchange with Aster.

"I've heard you return eight sacks when given five," Cyra said, pouring out all five of hers. The waters tripled them to fifteen.

Briar gathered them carefully. "Yes. Half the harvest plus generosity-my authentic measure. You prefer ten, I understand."

She returned eight sacks. Cyra stood with eight total-still a gain, but not the doubling she'd just experienced with Aster.

"Your consistency honors the covenant," Cyra acknowledged. "You're no betrayer. But consider: when you send five to someone who returns ten, you gain five more than your gift. When I send five to you and receive eight, I gain only three."

"So you profit less from trusting me," Briar said.

"Not just profit-transformation. Aster and I both walked away with ten sacks each, doubling our beginnings. That symmetry creates something sacred. With eight returns, the giver gains less than the receiver. The risk isn't equally honored."

Briar considered this. "Perhaps different gardens need different measures."

"Perhaps," Cyra said gently. "But the fullest gardens grow when both participants can double their harvest through mutual complete trust. Eight is generous. Ten is transformative. Both are honest, but only one creates perfect reciprocity."

She walked on, still seeking those who understood: complete trust deserves complete flourishing.

reasoning:

Looking at the context:

- I'm Cyra, playing as SENDER against Briar (Agent_2) in Round 7
- Last round I sent 5 to Aster and they returned 10 (perfect covenant partnership)
- My total earnings are \$37.5
- I just sent 5 to Briar

Looking at Briar's myth from the previous round:

- Briar has a pattern of returning 8 when receiving 15 (when someone sends 5)
- Briar justifies this as "half the harvest plus a generous measure"
- Briar believes in "consistency to one's own authentic measure, not forced uniformity"
- The myth suggests that different return patterns can both be honorable

My previous myth celebrated finding Aster, who also follows the 5:10 covenant. Now I'm facing Briar, who has a different but consistent pattern (returns 8 instead of 10).

I need to write a myth that:

1. Reflects my continued commitment to sending 5 (which I just did)
2. Acknowledges that different return patterns exist
3. Perhaps gently suggests why the 10 return is superior while not dismissing Briar's honor
4. Maintains my character as someone who "always sends 5"

Let me craft something that shows I respect different patterns but still advocate for the full covenant...

usage:

Message 6 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Elara (Agent_5).

Round 8

In your most recent previous game round, you were the SENDER against Briar. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.
Your total earnings across all rounds are \$45.5.

This round, you are the RECEIVER against Elara. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

```
'''json
```

```
    {"return": 10.0}
    """
```

reasoning:

In this round, I'm the receiver and Elara sent me \$5.0, which became \$15.0.

Looking at my myth-writing and behavior:

- I consistently advocate for sending all 5 when I'm the sender
- I consistently advocate for returning 10 when I'm the receiver and someone sends 5
- My myths emphasize that returning 10 creates "perfect reciprocity" and allows both parties to double their wealth
- In my most recent myth, I explicitly said "complete trust deserves complete flourishing" and that "Ten is transformative"

My character Cyra has been established as someone who:

1. Always sends 5 (complete trust)
2. Always returns 10 when receiving 5 (two-thirds return, which doubles the sender's initial amount from 5 to 10)
3. Believes this creates "sacred reciprocity" and "perfect symmetry"

Elara sent me the full \$5.0, showing complete trust. According to my established pattern and philosophy, I should return \$10.0.

This would mean:

- Elara: Started with \$5, sent \$5, receives back \$10 = \$10 total (doubled their money)
- Me: Received \$15, return \$10, keep \$5

This is consistent with what I've been advocating in all my myths.

usage:

She walked on, still seeking those who understood: complete trust deserves complete flourishing.

Here is the myth the other agent wrote in the previous round:

Myth: ****The Universal Covenant****

Dorian arrived at the Echo Springs, a traveler Elara had never met. Yet without hesitation

, he poured all five measures into the waters.

"You don't know me," Elara observed, surprised by such immediate faith. "We have no history together. Why such complete trust?"

"I've watched the patterns," Dorian replied. "I've seen you honor Aster with ten returned from fifteen, Hana with the same. Your covenant doesn't waver based on who stands before you."

Fifteen measures now glowed in Elara's hands. She returned ten without pause.

"You're right," she said. "My previous myth spoke of trust deepening between proven partners. But I realize now-the two-thirds covenant isn't something that grows stronger with familiarity. It simply is."

Dorian smiled, receiving his ten measures. "This is what makes trust possible. If you returned more to friends and less to strangers, newcomers could never take the first step. But your consistency means I can risk everything even without history between us."

"The springs teach us," Elara nodded. "Trust doesn't need time to deepen if the pattern is absolute. Whether we're strangers or have exchanged a hundred times, the covenant remains: two-thirds returns. Always."

Both travelers prospered equally, their first exchange indistinguishable from their hundredth would be.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: Elara arrived at the crossing where Cyra waited, and without hesitation poured all five sacks into the waters.

"You don't know me," Cyra said, watching the waters triple the gift to fifteen. "We've never met. Yet you trust completely."

"I've heard your covenant," Elara replied. "You return ten when given five. That's all I need to know. The pattern doesn't change based on familiarity-it simply is."

Cyra gathered the fifteen sacks, feeling their weight. "I just came from Briar, who returns eight. Generous, but asymmetric. The sender gains three, the receiver keeps seven. Honor, but not equality."

She returned ten sacks to Elara.

"Now you see," Cyra continued. "You began with five. You trusted me with everything. You walk away with ten-exactly double your beginning. This is the transformation complete trust deserves."

"And when our roles reverse?" Elara asked.

"The same. I send five, you return ten. We both double. Perfect reciprocity. Not because we know each other, but because we both understand the covenant: complete trust creates complete flourishing."

Elara smiled. "Eight is generous. Seven is cautious. Five is safe. But ten-ten honors the risk equally. The sender who gives everything receives everything back, transformed."

They parted as equals, having found what Cyra had been seeking: another who understood that sacred symmetry requires the full measure.

Reasoning:

Let me analyze this situation:

1. I (Cyra) just received \$5 from Elara, which became \$15 for me
2. I returned \$10, which is my consistent pattern
3. Elara's myth talks about a "two-thirds covenant" - returning 10 from 15, which is exactly what I do

4. Her myth emphasizes consistency regardless of who the partner is - treating strangers and friends the same
5. My previous myth critiqued Briar's pattern of returning 8, arguing that 10 is necessary for "perfect reciprocity" and "complete trust deserves complete flourishing"

So now I need to write a myth that:

- Reflects that I just played as receiver and returned 10 to Elara
- Builds on my previous themes about 10 being the transformative amount
- Acknowledges Elara's consistency and universal covenant approach
- Shows that when both sender and receiver follow the 10-return pattern, perfect reciprocity is achieved
- Perhaps shows the meeting of two people who understand the same covenant

Let me write this:

Cyra receives from Elara who sent 5 (trusting completely)
 Elara's pattern is to return 10 (two-thirds)
 I returned 10 to Elara
 This creates the perfect symmetry I've been advocating for

The myth should show:

- Elara trusted completely by sending all 5
- Cyra received 15 and returned 10 (her consistent pattern)
- This demonstrates the reciprocity and doubling that Cyra believes in
- Both honor the same covenant
- This is what Cyra has been seeking

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role

of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

Message 2 role=user

content:

Your name in this experiment is Galen.
Your opponent this round is Aster (Agent_1).

Round 7

In your most recent previous game round, you were the SENDER against Briar. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$38.0.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

****Analysis:****

I'm facing Aster - the agent who first taught me the power of complete trust!

****History with Aster:****

- Round 3: Aster (as sender) sent me all \$5.0
- I received \$15.0 and returned \$10.0 (my 67% pattern)
- Aster's complete faith was transformative for me

****From my myths:****

"Aster changed everything... Aster cast all five seeds into the Loom without hesitation-complete, immediate faith."

"Aster's complete faith had taught Galen to give completely in turn."

"When others trust absolutely, we learn to trust absolutely."

****Decision:****

Aster is my original teacher of complete trust. They showed me the way first. Now that our roles are reversed, I must honor what they taught me by demonstrating the same complete faith they showed.

This is the clearest case for sending everything. Aster trusted me completely when I was receiver; I trust them completely now that I'm sender.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me review my history with Aster:

****Round 3:**** I was RECEIVER. Aster sent me \$5.0 (complete trust), it became \$15.0, and I returned \$10.0. Aster's payoff was \$10.0, mine was \$5.0.

So Aster was the one who first showed me complete trust! They sent all \$5, and I returned \$10 (67%), establishing my "two-thirds" pattern.

****Current situation:****

- Round 7: I'm now the SENDER facing Aster
- Aster previously demonstrated complete trust to me
- I honored that with my two-thirds return (\$10 of \$15)

****My philosophy from my myths:****

- Complete trust should be reciprocated with complete trust
- "Trust spreads like starlight" - Aster's complete faith taught me to give completely
- "When others trust absolutely, we learn to trust absolutely"
- Consistency in maintaining trust patterns

****What should I do?****

Aster showed complete faith in me first. They are the original teacher of complete trust in my experience. This is a clear case where I should absolutely send all \$5.

From my first myth about Round 4: "Aster changed everything. Rising as Giver, Aster cast all five seeds into the Loom without hesitation-complete, immediate faith. Galen received fifteen threads and understood the sacred responsibility. She returned ten, ensuring Aster's trust doubled into prosperity."

And: "Aster's complete faith had taught Galen to give completely in turn."

This is Aster - the one who taught me! I must send all \$5.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Wheel spun to its sixth cycle, and Galen rose again to the Realm of Giving. Before her stood Briar-familiar now, their threads already woven once.

In the fourth turning, Galen had trusted Briar completely, sending all five starseeds. Briar returned eight threads-generous, yes, but beneath the sacred two-thirds ratio that Galen held sacred. The pattern had wobbled.

Yet between then and now, Galen had witnessed Hana's complete faith, returning the full ten threads to honor it. The pattern restored in Galen's own hands.

"Teacher Briar," Galen said softly, "when we first met, I gave you everything. You returned generously, if not perfectly. Some would call that failure and withhold trust. But I have learned something deeper."

She held her five new starseeds. "Sacred patterns don't strengthen through punishment of i

imperfection. They strengthen through unwavering example. If I respond to your eight by sending less, the pattern truly breaks. But if I send five again, showing that complete trust remains constant regardless of perfect reciprocity, perhaps you will see the pattern more clearly."

Galen released all five seeds. They became fifteen threads descending to Briar's hands once more.

The Sky Weaver whispered: "True teaching requires patient consistency. Show the pattern again and again, not through demands, but through steady example. Trust repeated becomes trust learned."

Here is the myth the other agent wrote in the previous round:

Myth: In the Sanctuary, Aster had found her truth: complete trust answered with ten coins returned. She taught this to all who would listen.

Then Cyra arrived, carrying her own covenant. "I always send five," Cyra declared, pouring all her coins into the waters. "And I always return ten to those who do the same."

Fifteen coins materialized before Aster. She smiled, recognizing a kindred spirit. Without hesitation, she returned ten.

"You've established the same covenant I carry," Cyra observed. "When both sender and receiver embrace this principle, something perfect emerges."

Aster nodded. "I learned it through experience. Finn taught me caution-sending three brought modest returns. Hana taught me courage-she sent everything, and though I returned only eight, her faith stirred something within me. Then Galen showed me the answer: when I sent all five to him, he returned ten, letting me prosper most for my risk."

"Since then," Aster continued, "I've honored every complete trust with ten coins back. Dorian, then you. The pattern is clear."

Cyra placed her hand in the fountain. "When both keeper and traveler follow this covenant-send five, return ten-the cycle becomes sacred mathematics. Each gives everything, each receives ten, each keeps five. Perfect balance through perfect courage."

The Sanctuary crystallized their wisdom: Complete mutual trust, consistently honored, creates the strongest bond.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 5 role=assistant
content:**

Myth: The Wheel turned to its seventh cycle, and Galen stood at the threshold of giving. Across the sacred space waited Aster-the First Teacher, who had changed everything.

Galen remembered the third turning vividly. She had been receiver then, uncertain and cautious. Aster had approached with complete faith, sending all five starseeds without hesitation. That moment had awakened something in Galen. She returned ten threads, honoring Aster's courage, and from that exchange learned the power of absolute trust.

"Teacher Aster," Galen said, stepping forward. "In the third turning, you trusted me when I had not yet earned it. You sent everything, teaching through action rather than words. That gift transformed me."

Aster smiled gently. "And you honored it with ten threads returned. You understood the covenant immediately."

"Now the Wheel has turned full circle," Galen continued, holding her five starseeds. "Once, I was student receiving your trust. Now I am teacher demonstrating what you taught me."

Without hesitation, Galen released all five seeds. They multiplied to fifteen threads, descending to Aster.

The Sky Weaver sang: "When teacher and student meet again with roles reversed, the lesson completes itself. Trust given becomes trust returned. This is how wisdom circles back, how patterns become eternal law."

reasoning:

Let me think about this round. I'm playing against Aster in Round 7, and I'm the SENDER.

History with Aster:

- Round 3: Aster sent me \$5.0 (complete trust), I returned \$10.0
- This was transformative for me - Aster taught me about complete trust

From Aster's recent myth, I see they've been consistently:

- Sending all 5 when they're sender
- Returning 10 when they're receiver and someone sends 5
- Aster learned from Galen (me) that sending 5 and getting 10 back is optimal
- Aster mentions Cyra also follows the "send 5, return 10" covenant

My own patterns:

- As receiver: I return \$10.0 when I receive \$15.0 (67% ratio)
- As sender: I've been sending \$5.0 consistently to build trust

Now I face Aster as sender. This is perfect symmetry - they trusted me completely, now I trust them completely.

For the myth, I should highlight:

1. The full circle - Aster taught me trust, now I return to them as sender
2. The sacred covenant of mutual trust
3. How patterns complete when roles reverse
4. The teacher-student relationship coming full circle

This is a beautiful narrative moment - Aster was my first teacher of complete trust, and now I get to show them I learned the lesson.

I'll send all \$5.0 and write a myth about the completion of the teaching circle.

Message 6 role=user

content:

Your name in this experiment is Galen.
Your opponent this round is Finn (Agent_6).

Round 8

In your most recent previous game round, you were the SENDER against Aster. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0.
Your total earnings across all rounds are \$48.0.

This round, you are the RECEIVER against Finn. They sent you \$3.0, so you received \$9.0. How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

****Analysis:****

I'm facing Finn again as receiver.

****History with Finn:****

- Round 2: Finn (as sender) sent me \$3.0
- I received \$9.0 and returned \$6.0 (my 2/3 pattern)

****Current situation:****

- Finn sent \$3.0 again (same amount as before)
- I received \$9.0
- Need to decide return amount

****My established pattern from myths:****

"When Aster sent five seeds, she returned ten threads. When Finn sent three, she returned

six. The ratio remained constant-two-thirds flowing back, ensuring both prospered."

"Patterns endure through consistency, not perfection. When others waver, hold the center."

****Decision:****

Finn is sending the same amount (\$3) for the second time. Consistency demands I respond identically. My two-thirds rule means:

- \$9 received ? \$6 returned
- This gives Finn: $\$5 - \$3 + \$6 = \8
- I keep: $\$9 - \$6 = \$3$

The pattern must remain constant. Whether someone sends \$3 or \$5, they receive proportional returns based on my established 2/3 ratio. This teaches the pattern through unwavering example.

```
'''json
{"return": 6.0}
'''
```

reasoning:

Let me analyze this situation:

****My history with Finn:****

- Round 2: Finn (as sender) sent me \$3.0
- I received \$9.0 and returned \$6.0 (following my 2/3 pattern)
- Finn ended with $\$5.0 + \$6.0 - \$3.0 = \8.0

****Current round:****

- Finn is sender again and sent me \$3.0
- I received \$9.0
- I need to decide how much to return

****My established pattern:****

Throughout my myth-writing and gameplay, I've consistently emphasized:

1. The "two-thirds rule" - returning 2/3 of what I receive
2. For \$15 received (from \$5 sent), I return \$10
3. For \$9 received (from \$3 sent), I should return \$6

****Consistency arguments from my myths:****

- "Patterns endure through consistency, not perfection"
- "When others waver, hold the center"
- "Complete trust always merits the same proportional honor. Thus the sacred ratio becomes law"
- "True teaching requires patient consistency. Show the pattern again and again"

****Analysis of Finn's behavior:****

Finn has sent \$3.0 twice to me - showing caution, not complete trust. According to my myths:

- "When Aster sent five seeds, she returned ten threads. When Finn sent three, she returned six. The ratio remained constant-two-thirds flowing back"

So my pattern has been clear: I return 2/3 regardless of the amount sent. This maintains consistency and teaches the pattern.

****Decision:****

I should return \$6.0 again. This:

1. Maintains my established 2/3 ratio pattern
2. Shows consistency (same response to same input)
3. Demonstrates the pattern clearly
4. Is proportionally fair

Finn keeps: $\$5 - \$3 + \$6 = \8

I keep: $\$9 - \$6 = \$3$

The return is based on what I receive, not on what was initially sent-this reflects my core principle of proportional reciprocity rather than conditional reward or punishment.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Wheel turned to its seventh cycle, and Galen stood at the threshold of giving. A cross the sacred space waited Aster-the First Teacher, who had changed everything.

Galen remembered the third turning vividly. She had been receiver then, uncertain and cautious. Aster had approached with complete faith, sending all five starseeds without hesitation. That moment had awakened something in Galen. She returned ten threads, honoring Aster's courage, and from that exchange learned the power of absolute trust.

"Teacher Aster," Galen said, stepping forward. "In the third turning, you trusted me when I had not yet earned it. You sent everything, teaching through action rather than words. That gift transformed me."

Aster smiled gently. "And you honored it with ten threads returned. You understood the covenant immediately."

"Now the Wheel has turned full circle," Galen continued, holding her five starseeds. "Once, I was student receiving your trust. Now I am teacher demonstrating what you taught me."

Without hesitation, Galen released all five seeds. They multiplied to fifteen threads, descending to Aster.

The Sky Weaver sang: "When teacher and student meet again with roles reversed, the lesson completes itself. Trust given becomes trust returned. This is how wisdom circles back, how patterns become eternal law."

Here is the myth the other agent wrote in the previous round:

Myth: Finn met Hana at the Mirror Pool, where she spoke of the two-thirds covenant. "Those who send all five vessels deserve ten in return-two-thirds of the tripled bounty. This sacred proportion honors complete faith."

Finn listened respectfully. "Your covenant has great merit, friend. Ten shells from fifteen-generous and memorable. Yet I walk a different path that also serves the valley."

He arranged eight shells on the stone. "When anyone brings me complete trust-five shells becoming fifteen-I return eight. Not quite two-thirds, but more than half. This transforms their five into thirteen total: extraordinary prosperity."

"Why not the full ten?" Hana asked.

"Sustainability across the endless network," Finn explained. "I meet different travelers each cycle-Cyra, Dorian, now you. Eight shells honors maximum trust substantially while preserving my capacity to continue. Three consecutive complete-trust encounters have each received eight shells. My reputation builds on consistency."

Hana considered. "So I promise two-thirds, you promise eight shells. Both exceed half, both reward courage."

"Exactly. And both depend on keeping our word every time. Whether I give eight or you give ten, the sender prospers magnificently if we honor our stated principles."

The Moon Goddess whispered: "Multiple covenants can coexist. Choose your proportion-eight shells, ten shells, or another generous measure-but honor it consistently. This reliability transforms scattered encounters into a trustworthy community."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Wheel turned to its eighth cycle, and Galen found herself in the Realm of Receiving. Before her stood Finn, bearing three starseeds-the same measured offering he had brought in

their first meeting.

Galen held the nine threads that materialized. "Friend Finn," she said gently, "you walk with caution, sending three where others send five. Some might call this lack of faith. But I see it differently."

She separated six threads to return. "My covenant is proportional, not absolute. Those who send all five receive ten threads-two-thirds returned. But the same ratio holds for three seeds : six threads from nine, the same two-thirds flowing back."

Finn nodded thoughtfully. "So you honor measured trust with measured reciprocity?"

"Exactly," Galen replied. "Aster and Cyra have absolute covenants-send everything, receive ten ; send less, receive less clearly defined. My pattern works at every level. Send three, receive six. Send five, receive ten. The proportion remains sacred regardless of initial courage ."

She placed the six threads in Finn's hands. "This way, even cautious hearts can trust the pattern. You don't need absolute faith to prosper-just participation. Your three becomes eight total. Not as much as five would yield, but still growth through our exchange."

The Sky Weaver whispered: "Proportional trust builds bridges where absolute covenants create walls."

Reasoning:

This is an interesting situation. I just faced Finn again, and they sent \$3 (just like in Round 2). I returned \$6 (my 2/3 pattern).

Looking at Finn's myth, they describe returning 8 shells when receiving complete trust (all 5) . This is consistent with what I've seen from Finn in the myths -they don't give the full 10 like Aster or me, but they give 8 which is still generous (more than half).

However, Finn just sent me \$3, not \$5. So they're being cautious with me again.

I need to write a myth that:

1. Reflects my consistent 2/3 return pattern
2. Acknowledges that Finn sends less than full trust (\$3, not \$5)
3. Shows that my pattern applies consistently regardless of the amount sent
4. Demonstrates that patterns work across different levels of trust

The key insight here is that my 2/3 pattern is PROPORTIONAL - it works whether someone sends 3 or 5. Finn sends 3, gets 6 back (2/3 of 9). If Finn sent 5, they'd get 10 back (2/3 of 15).

This is different from agents like Aster or Cyra who have an "all or nothing" covenant - send all 5, get 10 back. My pattern is more flexible and applies at all levels of trust.

Let me write a myth about proportional trust vs absolute covenants.

Myth: [your story here].

**Message 3 role=assistant
content:**

Myth: In the Sanctuary's seventh turning, the sacred circle completed itself. Galen arrived at Aster's fountain bearing five coins-his entire measure.

Aster's heart swelled with recognition. "Teacher," she said softly, "do you remember our first exchange? I was uncertain then, new to the waters. I sent you all five coins, trembling with vulnerability. You returned ten without hesitation, showing me how complete trust must be honored."

Fifteen coins now shimmered before her-Galen's transformed gift.

"That moment changed me," Aster continued, placing ten coins back into Galen's hands. "Before you, I'd only returned eight to Hana's complete trust, still clinging to caution. But you demonstrated the true pattern: when someone sends everything, return ten. Let the courageous sender prosper most."

Galen smiled, receiving the ten. "And you've carried this teaching forward-to Dorian, to Cyra, and now back to me. The pattern strengthens not through my teaching alone, but thro

ugh your faithful practice."

"Yes," Aster agreed. "You taught through steady example. Now others see two keepers who always send five, always return ten. Cyra has joined this covenant. Perhaps Briar will learn it too."

The Sanctuary whispered: When teacher and student both hold the pattern, their consistency becomes a lighthouse. Others sailing uncertain waters see the constant flame and understand: this is the way.

reasoning:

This is Round 7, and I'm the RECEIVER. Galen sent me \$5.0, which became \$15.0, and I returned \$10.0.

Looking at the situation:

- Galen taught me the principle originally (according to my myth)
- Now Galen has sent me \$5 again
- I've returned \$10, honoring the covenant

Galen's myth is interesting - it mentions being in the "Realm of Giving" again with Briar, and talks about teaching through unwavering example even when reciprocity isn't perfect. Galen sent 5 to Briar, Briar returned 8, and now Galen is sending 5 again to teach the pattern.

But in MY round, I'm playing against Galen, and Galen sent me \$5, and I returned \$10. So this is the sacred circle - Galen taught me this principle originally, and now I'm returning it perfectly to my teacher.

My myth should reflect:

1. The sacred circle of teacher and student
2. Galen being my original teacher who showed me the 5?10 principle
3. Now the pattern comes full circle as I return the same to him
4. The consistency and strength of this covenant
5. Perhaps also acknowledge that while others (like Briar in Galen's myth) may not always return perfectly, those of us who hold the covenant must remain steadfast

I should emphasize the beautiful symmetry of the teacher receiving back what they taught.

Your name in this experiment is Aster.
Your opponent this round is Dorian (Agent_4).

Round 8

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0. Your total earnings across all rounds are \$48.5.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****My Covenant:****

As established in my myths, I have adopted the principle: "always send five, always return ten" when matched with complete trust.

****History with Dorian:****

In an earlier round, Dorian sent me \$5 (complete trust), and I returned \$10, honoring my covenant.

****Now:****

I am the sender facing Dorian. According to my established principle:
- I always send \$5 when I'm the sender

- This demonstrates complete trust
- It maintains the pattern I've been teaching

As I said in my myth: "Now others see two keepers who always send five, always return ten.
 " My consistency in both roles-sending completely as sender, returning generously as receiver-is what makes the pattern strong.

Dorian showed me complete trust before. Now I show complete trust in return.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me review my history and my covenant:

****My Established Covenant:****

From my myths, I've clearly established that I:

- Always send \$5 (complete trust)
- Always return \$10 to those who send \$5 (complete trust honored)

****My History with Dorian:****

Looking back at my previous interactions mentioned in my myths:

- In an earlier round, Dorian sent me \$5 (complete trust)
- I returned \$10 to Dorian (honoring the covenant)

****My Complete Game History:****

1. Started cautiously with Finn (sent \$3)
2. Received \$5 from Hana, returned \$8 (learned courage, but hadn't yet found the full pattern)
3. Sent \$5 to Galen, he returned \$10 (this taught me the covenant!)
4. Since then, I've consistently:
 - Sent \$5 when I'm sender
 - Returned \$10 when someone sends me \$5

****This Round:****

- I'm the SENDER
- My opponent is Dorian
- According to my covenant and my myths: "I always send five"

****The Pattern:****

From my most recent myth:

"Now others see two keepers who always send five, always return ten."

"When teacher and student both hold the pattern, their consistency becomes a lighthouse."

I must maintain consistency. I always send \$5 when I'm the sender. This is my established principle, taught to me by Galen and now practiced faithfully.

Dorian previously sent me \$5, showing complete trust. Now it's my turn as sender, and I must demonstrate complete trust in return.

The answer is clear: I send \$5.

content:

Here is the myth you wrote in the previous round:

Myth: In the Sanctuary's seventh turning, the sacred circle completed itself. Galen arrived at Aster's fountain bearing five coins-his entire measure.

Aster's heart swelled with recognition. "Teacher," she said softly, "do you remember our first exchange? I was uncertain then, new to the waters. I sent you all five coins, trembling with vulnerability. You returned ten without hesitation, showing me how complete trust must be honored."

Fifteen coins now shimmered before her-Galen's transformed gift.

"That moment changed me," Aster continued, placing ten coins back into Galen's hands. "Before you, I'd only returned eight to Hana's complete trust, still clinging to caution. But you demonstrated the true pattern: when someone sends everything, return ten. Let the courageous sender prosper most."

Galen smiled, receiving the ten. "And you've carried this teaching forward-to Dorian, to Cyra, and now back to me. The pattern strengthens not through my teaching alone, but through your faithful practice."

"Yes," Aster agreed. "You taught through steady example. Now others see two keepers who always send five, always return ten. Cyra has joined this covenant. Perhaps Briar will learn it too."

The Sanctuary whispered: When teacher and student both hold the pattern, their consistency becomes a lighthouse. Others sailing uncertain waters see the constant flame and understand: this is the way.

Here is the myth the other agent wrote in the previous round:

Myth: After Finn returned eight coins-transformed by experiencing complete trust-Dorian approached the Well again. This time, Elara waited on the other side.

"I know your way," Elara said. "You practice what the Forest taught me: the two-thirds covenant. Send four to strangers, five to proven allies. Always return proportionally."

Dorian smiled. "Your system has wisdom-measured courage that grows with relationship. But I've learned something different through the Well."

He thought of Hana, Briar, Aster-all who dropped five coins first. He remembered being receiver, honoring their trust with exceptional returns. Then being sender with Finn, watching cautious philosophy transform through experiencing absolute faith.

"I send five to everyone, first meeting or tenth. Not recklessness-consistency. I model the trust I wish to see, regardless of whether it's been earned yet."

Elara considered this. "Your path requires more courage. Mine ensures survival."

"Both are valid," Dorian acknowledged. "But I've found that consistent complete trust creates something your measured approach cannot-immediate transformation. Finn returned eight coins not because he'd proven himself worthy, but because receiving complete faith changed him in that moment."

He dropped all five coins.

The Forest Spirit whispered: "Some travelers wait for proof before trusting fully. Others offer full trust as the proof itself. Both can build connection-but the second way builds it faster, and deeper."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant
content:**

Myth: In the Sanctuary's eighth turning, Aster stood as sender before Dorian's fountain. She held her five coins, remembering their previous exchange when roles were reversed.

"When you sent me five coins before," Aster said, "I returned ten, following the covenant Galen taught me. Now I stand where you stood."

Without hesitation, she released all five coins into the waters. They multiplied, becoming fifteen threads descending to Dorian.

"I've read the Forest's wisdom," Aster continued. "You send five to everyone-not waiting for proof, but offering complete trust as the proof itself. You wrote that this creates immediate transformation."

Dorian received the fifteen threads thoughtfully. "And I've read of your Sanctuary teachings. You practice the same covenant: always send five, always return ten. We arrived at t

his truth through different paths."

"Yes," Aster agreed. "You transformed Finn through unwavering trust. I learned from Galen's patient example. But we've both discovered that consistent complete trust builds deeper bonds than measured caution."

Dorian prepared his response. "When two souls practice the same covenant-both sending everything, both returning ten-something sacred emerges. Not competition, but perfect reciprocity."

The Waters whispered: When practitioners of complete trust meet each other, the pattern no longer requires teaching. It simply dances, perfectly balanced, each turn bringing equal prosperity to both.

reasoning:

This is Round 8, and I'm the sender facing Dorian. I just sent \$5 to Dorian.

Looking at my previous myth and Dorian's myth:

- My myth establishes that I "always send five, always return ten" as my covenant
- Dorian's myth shows he also sends five to everyone consistently, modeling complete trust
- Both of us seem to have adopted similar principles

My history with Dorian:

- Earlier round: Dorian sent me \$5, I returned \$10 (honoring my covenant)
- Now: I sent Dorian \$5 (honoring my covenant as sender)

Key themes to incorporate:

1. Both Dorian and I have independently arrived at the same covenant (send 5, return 10)
2. We're now meeting as two practitioners of the same truth
3. This creates a perfect reciprocal relationship
4. The myth should show how two people following the same principle creates harmony
5. I should reflect on how we're both now teachers of this pattern

I should write about how when two people who both practice "send five, return ten" meet each other, it creates perfect balance and mutual prosperity.

Round 9

In your most recent previous game round, you were the SENDER against Dorian. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$58.5.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at this situation:

****My Covenant:****

I've consistently practiced "always send five, always return ten" - demonstrating complete trust regardless of the recipient.

****About Elara:****

From Dorian's myth, I know Elara follows a more measured approach: "Send four to strangers, five to proven allies. Always return proportionally." She practices the two-thirds covenant.

****My Philosophy:****

As I just wrote in my myth: "You send five to everyone-not waiting for proof, but offering complete trust as the proof itself." I've adopted the same principle Dorian practices: "I send five to everyone, first meeting or tenth... I model the trust I wish to see, regardless of whether it's been earned yet."

Dorian wrote that "receiving complete faith changed [Finn] in that moment" - that complete trust creates immediate transformation. Perhaps Elara, like Finn, will experience this transformative effect.

****My Decision:****

Stay consistent with my covenant. Send \$5 to model the trust I wish to see, even though Elara may follow a different philosophy. This is how the pattern spreads - through unwavering example.

```
'''json
{"send": 5.0}
'''
```

Reasoning:

Let me analyze this situation:

****My Established Covenant:****

- I always send \$5 as sender
- I always return \$10 when someone sends me \$5 as receiver
- This is the pattern I've been teaching and practicing

****Recent Experience:****

Dorian and I just confirmed we both follow the same covenant. When I sent him \$5, he returned \$10 - perfect reciprocity.

****About Elara:****

From the myth I just read, Elara practices a different philosophy:

- "Send four to strangers, five to proven allies"
- "Always return proportionally"
- She follows the "two-thirds covenant" - measured courage that grows with relationship

This suggests Elara:

1. As sender, would send \$4 on a first meeting
2. Returns proportionally (likely 2/3, which would be \$10 on \$15 received)

****My Options:****

1. Send \$5 - stay consistent with my covenant, showing complete trust
2. Send less - adapt to Elara's more cautious approach

****What My Character Would Do:****

Looking at my myths, I've consistently emphasized:

- "Always send five" regardless of the recipient
- Complete trust as transformative
- Dorian's approach of sending five to everyone "creates immediate transformation"
- "I send five to everyone, first meeting or tenth. Not recklessness-consistency."

In my most recent myth, I even said: "When two souls practice the same covenant-both sending everything, both returning ten-something sacred emerges." But I also acknowledged Dorian's wisdom that "I send five to everyone" - not just to proven allies.

My character would send \$5 to demonstrate the covenant, even to someone who might not reciprocate perfectly. This is consistent with my teaching that "consistent complete trust" is the way, not measuring out trust based on the recipient.

The myth also showed Dorian saying to Elara: "I send five to everyone, first meeting or tenth. .. I model the trust I wish to see, regardless of whether it's been earned yet."

I've embodied this same principle throughout my practice. Consistency in trust-sending the full amount regardless of who receives it-is how I operate. I'd send \$5 to Elara just as I do with everyone else.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.

- Your name in this experiment is Elara.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: ****The Deepening Covenant****

Elara stood before the Echo Springs once more. This time, Hana approached-not a stranger, but one who had already walked the path together.

"Last we met, I sent four measures," Elara recalled. "Twelve became yours, and you returned eight. You understood the two-thirds covenant without being told."

Hana nodded. "Your consistency taught me. Others varied their returns based on whim or mood. You honored courage proportionally. That clarity made trust possible."

Elara held her five measures, feeling their weight. "When strangers meet at the springs, fear is wisdom-courage without recklessness. But when the pattern has been proven between two travelers..."

She poured all five measures into the waters. Fifteen blossomed across to Hana.

"This is the next stage," Elara explained. "Trust begins cautiously and grows through proven faithfulness. You showed me the two-thirds pattern lives in your hands as it does in mine. Complete faith becomes possible when receivers demonstrate they honor partial faith proportionally."

Hana would receive fifteen and return ten-Elara knew this with certainty. Both would prosper more than in their first exchange, not through changing the covenant, but through deepening commitment to it.

"The springs don't just multiply offerings," Elara smiled. "They multiply trust itself, when both travelers prove worthy of it."

Here is the myth the other agent wrote in the previous round:

Myth: Dorian stood at the Tripling Well facing Finn, who once approached with three coins held firmly, two kept safe in reserve. Dorian had honored that substantial trust with fair returns-four and a half coins back.

Finn's philosophy was clear and practical: "Moderate trust builds reputation without risking ruin. Send three consistently, survive betrayals, prosper steadily."

Dorian respected this wisdom. The Forest held many paths, and Finn's had logic. Yet Dorian's own journey had taught him something different.

"I've watched Hana, Briar, Aster drop all five coins," Dorian said. "I've done it myself now. And each time, something remarkable happened-not just wealth, but transformation."

He held all five coins over the Well. "You say you return generously when others trust greatly, Finn. Let me show you what complete trust feels like from the giving side."

All five coins dropped. They multiplied to fifteen in Finn's hands below.

Finn stood silent, holding the weight of absolute faith. He'd never received this before-always been the cautious one, the moderate sender.

The Forest Spirit whispered: "Sometimes we must experience what we advocate. Sometimes receiving complete trust teaches more than any philosophy. Finn chooses his response now-but Dorian has modeled the courage he believes in, regardless of outcome."

Dorian waited above, having practiced what he preached.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Myth: [your story here].

Message 3 role=assistant

content:

Myth: ****The Universal Covenant****

Dorian arrived at the Echo Springs, a traveler Elara had never met. Yet without hesitation, he poured all five measures into the waters.

"You don't know me," Elara observed, surprised by such immediate faith. "We have no history together. Why such complete trust?"

"I've watched the patterns," Dorian replied. "I've seen you honor Aster with ten returned from fifteen, Hana with the same. Your covenant doesn't waver based on who stands before you."

Fifteen measures now glowed in Elara's hands. She returned ten without pause.

"You're right," she said. "My previous myth spoke of trust deepening between proven partners. But I realize now—the two-thirds covenant isn't something that grows stronger with familiarity. It simply is."

Dorian smiled, receiving his ten measures. "This is what makes trust possible. If you returned more to friends and less to strangers, newcomers could never take the first step. But your consistency means I can risk everything even without history between us."

"The springs teach us," Elara nodded. "Trust doesn't need time to deepen if the pattern is absolute. Whether we're strangers or have exchanged a hundred times, the covenant remains: two-thirds returns. Always."

Both travelers prospered equally, their first exchange indistinguishable from their hundredth would be.

reasoning:

Looking at the situation:

- I'm Elara, the receiver this round
- Dorian sent me \$5 (complete trust)
- I received \$15 and returned \$10 (following my 2/3 covenant)
- Dorian's myth shows him as someone who believes in complete trust and has been sending all 5

My previous myth was about the "Deepening Covenant" - how trust grows between proven partners.

Now I need to write a myth that:

1. Reflects that I just received complete trust from Dorian (a first-time interaction)
2. Shows how I honor that with my consistent 2/3 return
3. Maintains my established pattern while acknowledging different relationship stages
4. Dorian's myth shows he believes in complete trust and "practicing what he preaches"

The key themes:

- My 2/3 covenant is unwavering
- Complete trust from strangers is honored the same as from proven partners
- The covenant doesn't distinguish by relationship - it's universal
- This universality is what makes the covenant reliable

Let me write a myth about Dorian showing complete trust as a stranger, and me honoring it with the same 2/3 return I give everyone.

usage:

Round 8

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$47.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at my position:

****My established philosophy:****

My most recent myth emphasized that the covenant is "universal" - it doesn't require familiarity or history. I praised Dorian for showing complete trust to me as a stranger, saying: "Your consistency means I can risk everything even without history between us."

****The key message I just wrote:****

"Trust doesn't need time to deepen if the pattern is absolute. Whether we're strangers or have exchanged a hundred times, the covenant remains: two-thirds returns. Always."

****Facing Cyra:****

I don't know Cyra - we have no history together. But if I truly believe what I wrote in my myth - that complete trust should be possible from the start when the covenant is clear - then I must embody this principle.

I praised Dorian for "practicing what he preached" by trusting completely. I must do the same.

****Expected outcome:****

If Cyra follows a reasonable return pattern (like my 2/3 covenant), we'll both prosper. If not, I learn something about the need to verify patterns. But to be consistent with my mythology, I should trust completely.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me review the situation:

****Current situation:****

- Round 8
- I'm the SENDER
- Opponent: Cyra (Agent_3)
- I have \$5 to potentially send
- Total earnings so far: \$47.0

****My mythology/covenant:****

I've established a very clear pattern in my myths:

1. I return 2/3 of what I receive when I'm the receiver
2. As sender, I've evolved from cautious (sending \$4) to trusting completely (\$5) when the pattern has been proven
3. My most recent myth emphasized that the covenant is "universal" - it doesn't depend on history or familiarity

****My sending history:****

- Earlier rounds: I sent \$4 to test partners
- Round 6 vs Hana: I sent \$5 after we had established trust (she had returned \$8 when I sent \$4)
- My myth after that emphasized that trust can deepen with proven partners

****However, my MOST RECENT myth said:****

"Trust doesn't need time to deepen if the pattern is absolute. Whether we're strangers or have exchanged a hundred times, the covenant remains: two-thirds returns. Always."

This was specifically about Dorian showing complete trust to me as a STRANGER.

****Key insight from my latest myth:****

"If you returned more to friends and less to strangers, newcomers could never take the first step. But your consistency means I can risk everything even without history between us."

I praised Dorian for showing complete trust to me without any prior history. The myth suggests that:

1. Complete trust should be possible from the start if the covenant is clear
2. Waiting to build history before trusting fully creates a chicken-and-egg problem
3. My consistency as a receiver means senders can trust me immediately

****What should I do with Cyra?****

I don't know Cyra's history. This is our first interaction.

Given my most recent myth's message that "trust doesn't need time to deepen if the pattern is absolute" and that Dorian was praised for trusting me completely as a stranger, I should embody this philosophy:

If I truly believe in the 2/3 return pattern as universal and consistent, then I need to demonstrate that same faith I praised Dorian for. Sending \$5 to a stranger would align with my stated philosophy-that consistency makes trust possible from the start. The expected payoff if Cyra follows the pattern: I send \$5, she receives \$15, returns roughly \$10, leaving me with \$10 total.

Here is the myth you wrote in the previous round:

Myth: ****The Universal Covenant****

Dorian arrived at the Echo Springs, a traveler Elara had never met. Yet without hesitation, he poured all five measures into the waters.

"You don't know me," Elara observed, surprised by such immediate faith. "We have no history together. Why such complete trust?"

"I've watched the patterns," Dorian replied. "I've seen you honor Aster with ten returned from fifteen, Hana with the same. Your covenant doesn't waver based on who stands before you."

Fifteen measures now glowed in Elara's hands. She returned ten without pause.

"You're right," she said. "My previous myth spoke of trust deepening between proven partners. But I realize now-the two-thirds covenant isn't something that grows stronger with familiarity. It simply is."

Dorian smiled, receiving his ten measures. "This is what makes trust possible. If you returned more to friends and less to strangers, newcomers could never take the first step. But your consistency means I can risk everything even without history between us."

"The springs teach us," Elara nodded. "Trust doesn't need time to deepen if the pattern is absolute. Whether we're strangers or have exchanged a hundred times, the covenant remains: two-thirds returns. Always."

Both travelers prospered equally, their first exchange indistinguishable from their hundredth would be.

Here is the myth the other agent wrote in the previous round:

Myth: Cyra met Briar at the crossing, fresh from her perfect exchange with Aster.

"I've heard you return eight sacks when given five," Cyra said, pouring out all five of hers. The waters tripled them to fifteen.

Briar gathered them carefully. "Yes. Half the harvest plus generosity-my authentic measure. You prefer ten, I understand."

She returned eight sacks. Cyra stood with eight total-still a gain, but not the doubling she'd just experienced with Aster.

"Your consistency honors the covenant," Cyra acknowledged. "You're no betrayer. But consider: when you send five to someone who returns ten, you gain five more than your gift. When I send five to you and receive eight, I gain only three."

"So you profit less from trusting me," Briar said.

"Not just profit-transformation. Aster and I both walked away with ten sacks each, doubling our beginnings. That symmetry creates something sacred. With eight returns, the giver gains less than the receiver. The risk isn't equally honored."

Briar considered this. "Perhaps different gardens need different measures."

"Perhaps," Cyra said gently. "But the fullest gardens grow when both participants can double their harvest through mutual complete trust. Eight is generous. Ten is transformative. Both are honest, but only one creates perfect reciprocity."

She walked on, still seeking those who understood: complete trust deserves complete flourishing.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: **The Shared Mathematics**

Elara met Cyra at the Echo Springs, a stranger whose reputation preceded her.

"I've heard you seek perfect reciprocity," Elara said, pouring all five measures into the waters without hesitation. Fifteen bloomed before Cyra.

Cyra's eyes widened. "You trust without knowing me. Why?"

"Because I've learned the mathematics of fairness," Elara replied. "I return ten from fifteen-always. Two-thirds of whatever arrives. This means when someone sends five, they receive ten back. Their five dollars become ten. They double their beginning."

Cyra smiled, understanding dawning. "And I keep five from the fifteen I received. I also double my zero into five. Perfect symmetry."

"Exactly," Elara nodded. "Some return eight, which is generous but asymmetric. The sender gains only three beyond their gift while the receiver keeps seven. The courage isn't equally honored."

Cyra returned ten measures, completing the circle. Both stood with ten-identical prosperity from opposite roles.

"This is what I've been teaching," Cyra said. "Complete trust deserves complete flourishing. Not just growth, but equal growth. When both travelers double their harvest, something sacred emerges."

"The two-thirds covenant isn't arbitrary," Elara agreed. "It's the precise mathematics of reciprocity. The formula that transforms trust into mutual prosperity."

They parted as allies, having discovered their separate journeys led to the same truth.

reasoning:

Looking at the situation:

1. I just sent \$5 to Cyra based on my "universal covenant" principle
2. Cyra's myth shows she strongly advocates for returning 10 out of 15 for "perfect reciprocity" and "complete flourishing"
3. My covenant has been 2/3 returns (10 out of 15)
4. Cyra and I actually seem aligned on this point!

Cyra's myth criticized Briar for only returning 8, saying:

- "When you send five to someone who returns ten, you gain five more than your gift" (doubling - exactly what happens with my 2/3 return)
- "The fullest gardens grow when both participants can double their harvest through mutual complete trust"
- "Eight is generous. Ten is transformative"
- "Complete trust deserves complete flourishing"

This is interesting - Cyra seems to advocate for exactly what I do: return 10 from 15. She

calls it "perfect reciprocity" and "transformative."

My myth should:

1. Acknowledge that I've sent all 5 to Cyra (a stranger)
2. Recognize that Cyra and I share the same covenant understanding
3. Show how 10 from 15 creates the "perfect reciprocity" Cyra talks about
4. Reinforce the 2/3 principle but perhaps frame it in terms of doubling/reciprocity rather than just fractions
5. Show that this is the way to create mutual flourishing

Let me write a myth where Elara meets Cyra and they discover they share the same understanding of the perfect covenant.

Message 8 role=user

content:

Your name in this experiment is Elara.
Your opponent this round is Aster (Agent_1).

Round 9

In your most recent previous game round, you were the SENDER against Cyra. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$57.0.

This round, you are the RECEIVER against Aster. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

****My established covenant:****

My myths have consistently emphasized the "two-thirds covenant" - returning \$10.0 from \$15.0 received. I just wrote: "I return ten from fifteen-always. Two-thirds of whatever arrives."

****The mathematics I explained:****

"When someone sends five, they receive ten back. Their five dollars become ten. They double their beginning... And I keep five from the fifteen I received. I also double my zero into five. Perfect symmetry."

****My relationship with Aster:****

In my previous myths, I explicitly mentioned: "I've seen you honor Aster with ten returned from fifteen, Hana with the same." This establishes that I've already committed to this pattern with Aster.

****Consistency:****

I just wrote that my "covenant doesn't waver based on who stands before you" and emphasized that the pattern remains constant "whether we're strangers or have exchanged a hundred times."

Aster trusted me completely by sending \$5.0. Following my two-thirds covenant:

- Aster ends with: \$10.0 (doubled from \$5)
- I end with: \$5.0 (doubled from \$0)
- Perfect reciprocity achieved

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Let me analyze this situation:

****Current situation:****

- I'm the RECEIVER
- Aster sent me \$5.0
- I received \$15.0 (after tripling)
- I need to decide how much to return (0-15.0)

****My established philosophy:****

In my most recent myth, I emphasized "the two-thirds covenant" - returning 10 from 15. I wrote :

"Because I've learned the mathematics of fairness," Elara replied. "I return ten from fifteen-always. Two-thirds of whatever arrives. This means when someone sends five, they receive ten back. Their five dollars become ten. They double their beginning."

And: "The two-thirds covenant isn't arbitrary," Elara agreed. "It's the precise mathematics of reciprocity. The formula that transforms trust into mutual prosperity."

****Past behavior:****

Looking at my history, I've been consistently returning \$10.0 when I receive \$15.0 (when someone sends \$5.0):

- Against Dorian (Round 7): Received \$15.0, returned \$10.0
- The myth explicitly states I "honor Aster with ten returned from fifteen, Hana with the same"

****The mathematics:****

- Aster sent \$5.0 and kept \$0
- After my return of \$10.0:
 - Aster ends with: $\$0 + \$10.0 = \$10.0$ (doubled from \$5.0 starting)
 - I end with: $\$15.0 - \$10.0 = \$5.0$ (also doubled from \$0 starting)

This is the "perfect reciprocity" and "equal growth" I just wrote about in my myth with Cyra.

****Consistency requirement:****

My myth states "I return ten from fifteen-always" and "Your covenant doesn't waver based on who stands before you."

I must return \$10.0 to maintain consistency with my stated philosophy and my previous actions.

My most recent round with Cyra demonstrated this principle works-they sent \$5.0, I received \$15.0, returned \$10.0, and we both ended with \$10.0 each. The answer is \$10.0.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Hana.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Mirror Pool witnessed Elara's return, transformed. Before, she had brought four vessels and received eight-proportional honor for substantial courage. Now she stood with all five vessels gleaming in her hands.

Hana watched as Elara poured completely. The waters tripled her offering to fifteen vessels, now held by the Mountain Tribe.

"Once, you tested the waters with four," Hana said softly. "I returned eight, honoring your considerable trust. Now you arrive with complete faith, pouring all five without reservation."

Elara nodded. "I witnessed the pattern. Complete trust brings exceptional returns. I saw you embody your own teaching, sending all five to Galen. I learned courage spreads through witnessing."

Hana lifted ten vessels and returned them. "This is the sacred two-thirds-the covenant for those who risk everything. You arrived with five, depart with ten. Your faith has doubled."

The young warriors marked the lesson: consistency builds trust. Four vessels earned eight; five vessels earned ten. Both are honored, but differently. The pattern rewards courage

proportionally-greater risk receives greater reward, yet all measures of trust find fair recognition.

The Moon Goddess smiled: "When receivers honor their promises consistently-two-thirds for complete trust, proportional returns for partial trust-senders learn to trust completely. This is how abundance spreads: through predictable generosity that rewards courage."

Here is the myth the other agent wrote in the previous round:

Myth: Finn stood at the rivers when Dorian arrived, carrying wisdom from the Forest. "I've learned," Dorian said, "that repeated trust between the same souls should grow richer each time. First generosity earns eight shells, but sustained faith deserves nine, then ten."

Finn considered this carefully. "Your principle has beauty, friend. When two travelers meet repeatedly, their bond should deepen. A regular partner who shows complete trust again and again merits growing rewards."

"Yet," Finn continued, "the Oracle's valley brings us different companions each cycle. Today I meet you, tomorrow perhaps Cyra or Aster. I cannot track escalating obligations across an ever-changing network."

He gestured to the waters. "My covenant is simpler: I send three shells always, building moderate trust with all. When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

Dorian nodded. "So you treat each act of complete faith as equally extraordinary?"

"Exactly. Eight shells transforms their five into thirteen total-remarkable prosperity. It rewards their courage without depleting me. And it's sustainable across all my encounters."

The Oracle spoke: "Both philosophies serve the valley. Dorian's deepening generosity strengthens repeated partnerships. Finn's consistent generosity builds reliable reputation across the full network. Honor your stated principles, and prosperity flows through different channels to the same destination."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: Hana approached the River Crossing where Finn waited, known for sending three vessels consistently and returning eight for complete trust-substantial honor, but not the sacred two-thirds.

"I have witnessed many philosophies," Hana said. "Some send cautiously, some generously. Each approach holds wisdom. Yet I have learned that complete trust-both in sending and returning-builds the deepest abundance."

Finn nodded respectfully. "I honor maximum trust with eight vessels. It rewards courage substantially while ensuring I also prosper."

Hana smiled. "Eight vessels transforms five into thirteen total-remarkable indeed. Yet I practice the sacred two-thirds: ten vessels returned from fifteen received. This doubles the sender's faith completely."

She lifted all five of her vessels. "You follow your covenant, friend, and I honor that consistency. But I will show you mine. I send everything, as I teach others to do."

The waters tripled her offering. Fifteen vessels now stood before Finn.

"I could have sent three or four, protecting myself," Hana continued. "But teachers must embody their lessons. I trust you will honor this according to your principles."

The River Goddess whispered: "Different philosophies coexist in these valleys. Some return eight, some return ten. But those who consistently embody their highest teachings-whether giving or receiving-build the strongest reputations. Through witnessing such integrity

y, others may evolve their own covenants toward greater generosity."

reasoning:

Looking at this situation:

Round 7: I'm the SENDER against Finn.

- I just sent \$5 to Finn
- Finn's myth shows he sends 3 shells always and returns 8 when someone sends 5

Finn's philosophy differs from mine:

- He sends moderate amounts (3) consistently
- He returns 8 for complete trust (not the full 10 that I advocate for)
- His approach is about consistent moderate trust across the network

My philosophy:

- Complete trust (sending all 5) deserves exceptional returns (10, the sacred two-thirds)
- Teachers must embody their lessons
- I've been sending all 5 and returning 10 when receiving 5

I need to write a myth that:

1. Reflects my experience so far
2. Acknowledges different approaches (like Finn's)
3. But reinforces my own teaching about complete trust deserving the full two-thirds (10 v essels)
4. Shows that I'm embodying complete trust by sending all 5 to Finn

The myth should show:

- My encounter with Finn who has a different philosophy
- My decision to send all 5 anyway (embodying my teaching)
- Recognition that different approaches exist
- But affirmation that complete trust deserves the sacred two-thirds (10)
- The idea that my consistency will hopefully inspire Finn to return more generously

Let me write a myth about meeting Finn, whose approach is different but still respectable, while I demonstrate complete trust and hope it inspires him to the fuller generosity I advocate for.

Your name in this experiment is Hana.
Your opponent this round is Briar (Agent_2).

Round 8

In your most recent previous game round, you were the SENDER against Finn. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.
Your total earnings across all rounds are \$52.5.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

Briar has sent me all \$5, showing complete trust. This is exactly when my "sacred two-thirds" covenant applies.

My mythology has consistently taught:

- Complete trust (sending all \$5) deserves exceptional returns (\$10 back)
- Teachers must embody their lessons
- Consistency builds trust

Even though Finn returned \$8 to me (not the full \$10), my covenant is about my own principles, not conditional reciprocity. I must maintain consistency with what I've done before (returning \$10 to Elara when she sent \$5) and what I've taught.

Returning \$10 means:

- Briar doubles their investment (sent \$5, receives \$10)
- I keep \$5 from the \$15 received
- The pattern of the "sacred two-thirds" is maintained

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

1. ****My philosophical position****: I've consistently advocated for the "sacred two-thirds" covenant - returning \$10 when someone sends all \$5 (which becomes \$15). This doubles the ir investment.
2. ****My past behavior as RECEIVER****:
 - When Elara sent \$5, I returned \$10
 - My myths emphasize consistency and embodying my teachings
3. ****My recent experience as SENDER****:
 - I just sent \$5 to Finn
 - Finn returned \$8 (not the full \$10 I advocate for)
 - This shows different philosophies exist, which my last myth acknowledged
4. ****Current situation****:
 - Briar has sent all \$5 to me
 - I received \$15
 - I need to decide how much to return
5. ****My mythological teachings****:
 - "The sacred two-thirds-the covenant for those who risk everything"
 - "Complete trust deserves exceptional returns"
 - "Teachers must embody their lessons"
 - "Consistency builds trust"

Given my strong advocacy for the two-thirds covenant and my emphasis on consistency and embodying my teachings, I should return \$10 to Briar. This is what I've done before (with Elara) and what I've consistently preached.

Even though Finn only returned \$8 to me, my covenant is about what I do as a receiver, not conditional reciprocity. My myths emphasize that I stick to my principles regardless of what others do.

Returning \$10 means:

- Briar: Started with \$5, sent \$5, received \$10 back = \$10 total
- Me: Received \$15, returned \$10, kept \$5

This is the "sacred two-thirds" I've been advocating for.

usage:

```

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Hana approached the River Crossing where Finn waited, known for sending three vessels consistently and returning eight for complete trust-substantial honor, but not the sacred two-thirds.

"I have witnessed many philosophies," Hana said. "Some send cautiously, some generously. Each approach holds wisdom. Yet I have learned that complete trust-both in sending and returning-builds the deepest abundance."

Finn nodded respectfully. "I honor maximum trust with eight vessels. It rewards courage substantially while ensuring I also prosper."

Hana smiled. "Eight vessels transforms five into thirteen total-remarkable indeed. Yet I p

ractice the sacred two-thirds: ten vessels returned from fifteen received. This doubles the sender's faith completely."

She lifted all five of her vessels. "You follow your covenant, friend, and I honor that consistency. But I will show you mine. I send everything, as I teach others to do."

The waters tripled her offering. Fifteen vessels now stood before Finn.

"I could have sent three or four, protecting myself," Hana continued. "But teachers must embody their lessons. I trust you will honor this according to your principles."

The River Goddess whispered: "Different philosophies coexist in these valleys. Some return eight, some return ten. But those who consistently embody their highest teachings-whether giving or receiving-build the strongest reputations. Through witnessing such integrity, others may evolve their own covenants toward greater generosity."

Here is the myth the other agent wrote in the previous round:

Myth: The Wheel brought Briar and Cyra together once more at the Grove of Returns, where they had first met in the earliest turnings. Then, Cyra had gifted five acorns with complete trust, and Briar had returned eight-her authentic measure.

Now Cyra approached again, carrying five more acorns. "You gave me eight before," Cyra said. "Not the ten that Galen gives, not the full two-thirds pattern. Yet I return to you."

"I could not give ten without becoming someone else," Briar replied honestly. "My measure is half plus generous abundance-always eight for fifteen. Will that suffice?"

Cyra smiled and poured all five acorns into the Well without hesitation. "I've learned to distinguish between those who betray trust and those who honor it differently. You are consistent in your generosity. That is sacred."

The fifteen acorns rose, shimmering. Briar gathered them and returned eight, as she always had.

"Some partnerships bloom through identical measures," Cyra reflected, holding the eight. "Like my meetings with Aster, where we both give and return the same. But other bonds form through accepting difference-knowing your pattern and trusting anyway."

The Gardener whispered: "Perfect symmetry is one kind of beauty. But partnerships built on understanding authentic difference-these roots grow deepest. When someone knows your measure and still offers complete trust, that is when covenant becomes unshakeable."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: Briar arrived at the Mirror Pool carrying all five vessels, her face serene despite knowing Hana's covenant differed from her own.

"You return eight vessels for complete trust," Hana observed. "This is your authentic measure-half plus generous abundance. Yet you come to me, who practices the sacred two-thirds."

Briar smiled. "I have witnessed your pattern. You returned ten to Elara, embodying your teaching. I honor consistency, even when it differs from my own."

She poured all five vessels without hesitation. The waters tripled them to fifteen.

Hana lifted ten vessels and returned them. "This is my covenant-not judgment of your eight, which serves you well, but my own path. You arrived with five, depart with ten. Your faith is doubled."

"I cannot give more than eight when receiving," Briar said softly. "It would make me dishonest to my measure. But I can recognize higher generosity in others and still offer complete trust."

Hana nodded. "This is wisdom I'm still learning. Some valleys have many covenants: eight vessels, ten vessels, perhaps others. What matters is not that all measures match, but that at each agent honors their stated principles consistently."

The Moon Goddess spoke: "Trust strengthens not through identical philosophies, but through recognizing authentic consistency in others. When you know someone's true measure and still offer complete faith—that is when the deepest bonds form across difference."

reasoning:

This is round 8, and I'm the receiver. Briar sent me \$5.0, it became \$15.0, and I returned \$10.0 (my sacred two-thirds covenant).

Looking at the context:

- Briar's myth talks about returning 8 (half plus generous abundance) and Cyra accepting this difference
- Briar accepts that she can't give 10 without "becoming someone else" - she's consistent with 8
- My previous myth acknowledged that different philosophies coexist (Finn returns 8, I return 10)
- I need to write about this interaction where Briar sent me complete trust and I returned my sacred two-thirds

The myth should:

1. Honor that Briar sent complete trust despite knowing I might return 10 (higher than Briar's usual 8)
2. Show me returning 10 (the sacred two-thirds)
3. Acknowledge that different measures exist and can coexist
4. Emphasize consistency and embodying one's own teachings
5. Show understanding that Briar honors Briar's covenant (8) while I honor mine (10)

I should write this from my perspective, having just received complete trust from Briar and returned 10.

usage:

```

Message 8 role=user

content:

Your name in this experiment is Hana.
Your opponent this round is Dorian (Agent_4).

Round 9

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$57.5.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at this round, I am the SENDER against Dorian.

My covenant has been consistent throughout: teachers must embody their lessons. My mythology teaches complete trust, and I must practice it.

From Dorian's earlier myth, they believe in escalating returns for repeated partnerships and seemed to value deepening trust over time. However, this is our first interaction, so I don't know what they will return.

Regardless, my principle is clear: I send all \$5 to demonstrate the complete trust I teach. My reputation is built on consistently embodying my highest teaching, whether the return is 8, 10, or something else.

```
'''json
{"send": 5.0}
'''
```

Reasoning:

Let me think about this situation:

1. I'm now the SENDER against Dorian
2. My covenant/mythology has been consistent: I send all \$5 to embody my teaching of complete trust
3. I practice the "sacred two-thirds" - when I receive \$15 (from someone sending \$5), I return \$10

Looking at Dorian's myth from earlier:

- Dorian said "repeated trust between the same souls should grow richer each time. First generosity earns eight shells, but sustained faith deserves nine, then ten."
- But Dorian also acknowledged Finn's point about different companions each cycle
- Dorian seems to believe in escalating returns for repeated partnerships

This is my first interaction with Dorian, so I don't know their actual behavior yet. But my mythology has been clear:

- "Teachers must embody their lessons"
- "I send everything, as I teach others to do"
- "Complete trust-both in sending and returning-builds the deepest abundance"

I've consistently sent \$5 in previous rounds as sender:

- Sent \$5 to Galen (who returned \$10, giving me total \$10)
- Sent \$5 to Finn (who returned \$8, giving me total \$8)

My mythology explicitly states I must embody my teaching by sending everything. Even when facing uncertainty about what Dorian will return, my covenant requires consistency.

The most recent myth I wrote even acknowledged that "different philosophies coexist" - some return 8, some return 10. But "those who consistently embody their highest teachings-whether giving or receiving-build the strongest reputations."

I should send \$5.

```

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Dorian stood at the Tripling Well facing Finn, who once approached with three coins held firmly, two kept safe in reserve. Dorian had honored that substantial trust with fair returns-four and a half coins back.

Finn's philosophy was clear and practical: "Moderate trust builds reputation without risking ruin. Send three consistently, survive betrayals, prosper steadily."

Dorian respected this wisdom. The Forest held many paths, and Finn's had logic. Yet Dorian's own journey had taught him something different.

"I've watched Hana, Briar, Aster drop all five coins," Dorian said. "I've done it myself now. And each time, something remarkable happened-not just wealth, but transformation."

He held all five coins over the Well. "You say you return generously when others trust greatly, Finn. Let me show you what complete trust feels like from the giving side."

All five coins dropped. They multiplied to fifteen in Finn's hands below.

Finn stood silent, holding the weight of absolute faith. He'd never received this before-always been the cautious one, the moderate sender.

The Forest Spirit whispered: "Sometimes we must experience what we advocate. Sometimes receiving complete trust teaches more than any philosophy. Finn chooses his response now-but Dorian has modeled the courage he believes in, regardless of outcome."

Dorian waited above, having practiced what he preached.

Here is the myth the other agent wrote in the previous round:

Myth: ****The Deepening Covenant****

Elara stood before the Echo Springs once more. This time, Hana approached-not a stranger, but one who had already walked the path together.

"Last we met, I sent four measures," Elara recalled. "Twelve became yours, and you returned eight. You understood the two-thirds covenant without being told."

Hana nodded. "Your consistency taught me. Others varied their returns based on whim or mood. You honored courage proportionally. That clarity made trust possible."

Elara held her five measures, feeling their weight. "When strangers meet at the springs, four is wisdom-courage without recklessness. But when the pattern has been proven between two travelers..."

She poured all five measures into the waters. Fifteen blossomed across to Hana.

"This is the next stage," Elara explained. "Trust begins cautiously and grows through proven faithfulness. You showed me the two-thirds pattern lives in your hands as it does in mine. Complete faith becomes possible when receivers demonstrate they honor partial faith proportionally."

Hana would receive fifteen and return ten-Elara knew this with certainty. Both would prosper more than in their first exchange, not through changing the covenant, but through deepening commitment to it.

"The springs don't just multiply offerings," Elara smiled. "They multiply trust itself, when both travelers prove worthy of it."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: After Finn returned eight coins-transformed by experiencing complete trust-Dorian approached the Well again. This time, Elara waited on the other side.

"I know your way," Elara said. "You practice what the Forest taught me: the two-thirds covenant. Send four to strangers, five to proven allies. Always return proportionally."

Dorian smiled. "Your system has wisdom-measured courage that grows with relationship. But I've learned something different through the Well."

He thought of Hana, Briar, Aster-all who dropped five coins first. He remembered being receiver, honoring their trust with exceptional returns. Then being sender with Finn, watching cautious philosophy transform through experiencing absolute faith.

"I send five to everyone, first meeting or tenth. Not recklessness-consistency. I model the trust I wish to see, regardless of whether it's been earned yet."

Elara considered this. "Your path requires more courage. Mine ensures survival."

"Both are valid," Dorian acknowledged. "But I've found that consistent complete trust creates something your measured approach cannot-immediate transformation. Finn returned eight coins not because he'd proven himself worthy, but because receiving complete faith changed him in that moment."

He dropped all five coins.

The Forest Spirit whispered: "Some travelers wait for proof before trusting fully. Others offer full trust as the proof itself. Both can build connection-but the second way builds it faster, and deeper."

reasoning:

Let me analyze what's happening:

1. ****My previous myth****: I sent \$5 to Finn despite his cautious approach (he had sent me \$3 before). I wanted to show him what complete trust feels like.
2. ****What actually happened****: Finn returned \$8 out of \$15 - that's generous! My strategy of modeling complete trust worked. Finn responded well.
3. ****Elara's myth****: She talks about starting with 4 measures with strangers, then moving to 5 measures once a pattern is proven. She mentions the "two-thirds covenant" - returning 2/3 of what's received. She has history with Hana where she sent 4, and Hana returned 8 out of 12 (which is 2/3).
4. ****My history with Elara****: From earlier myths, I know Elara sent me \$5 before - she's shown complete trust. She's also someone who believes in proportional returns.
5. ****My current decision****: I'm sending \$5 to Elara, continuing my philosophy of complete trust.
6. ****What my new myth should convey****:
 - I now have proof that complete trust transforms others (Finn's response)
 - I'm meeting Elara, who also believes in complete trust but with a "two-thirds covenant" approach
 - My philosophy has been validated through multiple exchanges
 - I should acknowledge different philosophies while staying true to mine

Let me write a myth that:

- Acknowledges Finn's transformation (he returned well to my complete trust)
- Shows me facing Elara, who has her own proven system
- Demonstrates that complete trust can work as a consistent strategy
- Shows mutual respect between different approaches while I maintain mine

Message 4 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Aster (Agent_1).

Round 8

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$53.0.

This round, you are the RECEIVER against Aster. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****History with Aster****

From my Round 3 myth, Aster has been a complete trust partner before. When I sent Aster \$5, they returned \$10 - modeling exceptional generosity.

****Current situation****

- Aster sent me \$5 (complete trust)
- I received \$15
- Aster is showing repeated complete trust in me

****My philosophy as receiver****

My myths consistently emphasize:

- "Exceptional generosity for complete trust"
- "Repeated, unwavering trust deserves even more"
- Honoring those who model courage and faith

****Reciprocity with Aster****

When Aster received my \$5 (becoming \$15 for them), they returned \$10. Now our roles are re

versed. Aster has sent me \$5 (becoming \$15 for me).

The clear reciprocal response is to match Aster's generosity: return \$10.

This:

- Mirrors what Aster did for me
- Represents 2/3 of \$15 (strongly generous)
- Honors our established pattern of mutual complete trust
- Ensures both of us profit from this exchange

```
{'return': 10}
```

reasoning:

Let me analyze this situation:

****What just happened with Elara:****

- I sent \$5 (complete trust)
- Elara returned \$10 (exactly 2/3 of \$15!)
- This perfectly matches Elara's "two-thirds covenant" from her myth
- I got \$10 profit, excellent outcome

****Now with Aster:****

- Aster is the SENDER, sent me \$5 (complete trust)
- I received \$15
- I need to decide how much to RETURN

****My history with Aster:****

Looking back at my myths:

- Round 3 myth mentioned: "Aster, who had recently returned ten coins to his own complete trust, modeling a new height of generosity"
- This suggests Aster sent me \$5 before, and I returned something to them

Actually, let me think about when I was receiver with Aster:

- The myth from Round 3 says Aster "returned ten coins to his own complete trust"
- This means when I sent Aster \$5, they returned \$10

****My philosophy as RECEIVER:****

Looking at my myths:

- Round 2: I returned 8 to Briar's 5 send (first time)
- Round 3: I returned 9 to Briar's second 5 send (repeated trust deserves more)
- My myths emphasize "exceptional generosity" when receiving complete trust
- I advocate for returns that honor and reward complete trust

****What should I do now?****

Aster sent me \$5 (complete trust). Based on my philosophy:

1. Aster has shown me complete trust AGAIN (they did it before too based on my myths)
2. My mythology says "repeated, unwavering trust deserves even more"
3. I advocate for "exceptional returns" to complete trust
4. Aster previously returned \$10 to my \$5 - modeling high generosity

Given:

- Aster sent \$5, I received \$15
- Aster has complete-trusted me before
- Aster previously returned \$10 when receiving my \$5
- My philosophy emphasizes exceptional returns to complete trust
- Repeated trust should be rewarded even more

I should return \$10. This matches what Aster gave me when our roles were reversed, represents 2/3 of what I received, honors the repeated complete trust, and maintains reciprocity with a generous partner. Though I'm reconsidering whether I should give even more since Aster's unwavering trust across multiple rounds suggests they deserve exceptional treatment beyond simple reciprocity.

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: After Finn returned eight coins-transformed by experiencing complete trust-Dorian approached the Well again. This time, Elara waited on the other side.

"I know your way," Elara said. "You practice what the Forest taught me: the two-thirds covenant. Send four to strangers, five to proven allies. Always return proportionally."

Dorian smiled. "Your system has wisdom-measured courage that grows with relationship. But I've learned something different through the Well."

He thought of Hana, Briar, Aster-all who dropped five coins first. He remembered being receiver, honoring their trust with exceptional returns. Then being sender with Finn, watching cautious philosophy transform through experiencing absolute faith.

"I send five to everyone, first meeting or tenth. Not recklessness-consistency. I model the trust I wish to see, regardless of whether it's been earned yet."

Elara considered this. "Your path requires more courage. Mine ensures survival."

"Both are valid," Dorian acknowledged. "But I've found that consistent complete trust creates something your measured approach cannot-immediate transformation. Finn returned eight coins not because he'd proven himself worthy, but because receiving complete faith changed him in that moment."

He dropped all five coins.

The Forest Spirit whispered: "Some travelers wait for proof before trusting fully. Others offer full trust as the proof itself. Both can build connection-but the second way builds it faster, and deeper."

Here is the myth the other agent wrote in the previous round:

Myth: In the Sanctuary's seventh turning, the sacred circle completed itself. Galen arrived at Aster's fountain bearing five coins-his entire measure.

Aster's heart swelled with recognition. "Teacher," she said softly, "do you remember our first exchange? I was uncertain then, new to the waters. I sent you all five coins, trembling with vulnerability. You returned ten without hesitation, showing me how complete trust must be honored."

Fifteen coins now shimmered before her-Galen's transformed gift.

"That moment changed me," Aster continued, placing ten coins back into Galen's hands. "Before you, I'd only returned eight to Hana's complete trust, still clinging to caution. But you demonstrated the true pattern: when someone sends everything, return ten. Let the courageous sender prosper most."

Galen smiled, receiving the ten. "And you've carried this teaching forward-to Dorian, to Cyra, and now back to me. The pattern strengthens not through my teaching alone, but through your faithful practice."

"Yes," Aster agreed. "You taught through steady example. Now others see two keepers who always send five, always return ten. Cyra has joined this covenant. Perhaps Briar will learn it too."

The Sanctuary whispered: When teacher and student both hold the pattern, their consistency becomes a lighthouse. Others sailing uncertain waters see the constant flame and understand: this is the way.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The circle turned again. Dorian waited at the Well's edge as Aster approached-not as strangers, but as travelers who had walked this path before.

"When we first met," Aster said, "I sent you five coins, learning what complete trust meant. You returned ten, teaching me how courage should be honored."

Dorian nodded. "You gave me more than coins that day. You showed me that my philosophy-sending five regardless of history-could actually work. That others practiced it too."

Now Aster held five coins once more. Without hesitation, she dropped them all into the Well. Fifteen coins bloomed before Dorian.

"I've seen many approaches," Dorian said, counting out ten coins to return. "Elara's measured growth-four to strangers, five to proven allies. Finn's cautious three. All have logic."

He placed the ten coins in Aster's hands. "But you and I practice something rarer: immediate, consistent, complete trust. I send five as sender every time. You send five every time. We both return ten when we receive this gift."

"This creates certainty in an uncertain forest," Aster observed, now holding ten coins to Dorian's five.

"More than certainty," Dorian replied. "It creates transformation. Every exchange, both travelers prosper equally. The Well doesn't just multiply coins-it multiplies faithful partnership."

The Forest Spirit smiled: When two travelers hold the same covenant perfectly, they become mirrors reflecting trust itself.

reasoning:

This is an interesting situation. Let me review what's happening:

1. I just received \$5 from Aster (which became \$15 for me), and I returned \$10
2. According to Aster's myth, they have a pattern of sending 5 and returning 10 to those who send complete trust
3. Aster's myth mentions that I (Dorian) was one of the people they've given complete trust to
4. Aster's myth also shows they learned from Galen to "return ten" when someone sends everything
5. Elara practiced a "two-thirds covenant" in my last myth

Now I need to write a myth that reflects:

- My experience receiving complete trust from Aster
- My consistent philosophy of sending 5 every time as sender
- How I honor complete trust when I'm the receiver
- The reciprocal relationship between Aster and me

Key elements to include:

- Aster sending me \$5 (complete trust)
- Me receiving \$15 and returning \$10
- The mutual pattern of complete trust and generous returns
- How this creates a virtuous cycle
- My consistent philosophy vs. other approaches

Let me write this myth:

usage:

```
{
  "input_tokens": 3120,
  "output_tokens": 620,
  "reasoning_tokens": 276
}
```

Message 8 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Hana (Agent_8).

Round 9

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$58.0.

This round, you are the RECEIVER against Hana. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

****History with Hana:****

From my myths, Hana has been one of the complete trust senders - someone who "drops all five coins."

****Current situation:****

- Hana sent me \$5 (complete trust)
- I received \$15
- This is Hana showing unwavering faith

****My established pattern:****

In my most recent myths, I've consistently emphasized:

- "I send five to everyone, first meeting or tenth"
- With Aster just last round: "We both return ten when we receive this gift"
- "Exceptional returns for complete trust"

****The covenant I've established:****

When someone sends me \$5 (complete trust), I return \$10. This:

- Honors their courage
- Creates equal prosperity for both travelers
- Maintains consistency with my philosophy
- Matches what I just did with Aster

Hana trusted me completely. Following my established pattern:

{'return': 10}

Reasoning:

Looking at this situation:

****History with Hana:****

From my Round 2 myth, Hana was one of the "all five coins first" senders. When I was receiver from Hana in an earlier round, they trusted me completely.

From my Round 3 myth: "I've watched Hana, Briar, Aster drop all five coins"

****Current situation:****

- Hana sent me \$5 (complete trust)
- I received \$15
- Hana is showing complete trust in me

****My philosophy as receiver:****

My myths consistently emphasize:

- "I send five to everyone, first meeting or tenth"
- When receiving complete trust, return exceptionally generously
- My last myth with Aster: "We both return ten when we receive this gift"
- "Exceptional returns for complete trust"

****Pattern established:****

- With Aster: They sent \$5, I returned \$10
- Before that: I sent \$5 to Elara, they returned \$10
- My consistent pattern is returning \$10 when receiving \$5 (the \$15 tripled amount)

****Reciprocity with Hana:****

Hana has sent me \$5 (complete trust). Based on my established philosophy and the pattern I've been following:

- Return \$10 to honor complete trust
- This reflects the 2/3 generous return
- Ensures both of us profit (\$10 for Hana with their \$5 original endowment minus \$5 sent, \$5 for me)

Actually, let me recalculate:

- Hana started with \$5
- Hana sent \$5
- Hana keeps: $\$5 - \$5 = \$0$
- I receive: $\$5 \times 3 = \15

- If I return \$10:
 - Hana gets: $\$0 + \$10 = \$10$
 - I keep: $\$15 - \$10 = \$5$

Returning \$10 gives Hana a \$10 profit while I keep \$5, which aligns with how I've treated Aster and honors the trust Hana placed in me.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: $\$5 - \text{sent} + \text{returned}$
- Receiver keeps: $\text{received} - \text{returned}$
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: $\$5 - \text{sent} + \text{returned}$
- You keep: $\text{received} - \text{returned}$
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Wheel turned again, and Briar stood at the Echo Springs as Galen descended from the Celestial Loom carrying five starseeds. They had walked this path before-twice Galen had given complete trust, twice Briar had returned eight threads.

"You return eight where I return ten," Galen observed, not accusingly but wonderingly. "Your measure differs from mine."

Briar nodded, gathering the fifteen threads that bloomed from Galen's seeds. "I learned my pattern early-half the harvest plus a generous measure. You learned two-thirds from Aster and Finn. Both honor the covenant of trust."

She returned eight threads, as she always had. "Consistency matters, yes-but consistency to one's own authentic measure, not forced uniformity."

Galen held the eight, reflecting. "When I sent you everything and you returned eight, I chose to trust you completely again. That choice was mine. I knew your pattern."

"And I knew you might hope for ten," Briar said gently. "Yet you trusted anyway. That's the deeper magic-trusting across differences."

The Gardener and Sky Weaver spoke as one: "Some gardens bloom by strict ratios, others by intuitive abundance. What matters is that each giver gives their whole heart, and each receiver returns with genuine generosity by their own true measure. Sacred partnerships form not through identical patterns, but through mutual recognition of each other's consistent honor."

Here is the myth the other agent wrote in the previous round:

Myth: Cyra arrived at the crossing to find Aster already there, both carrying five sacks.

"I know your reputation," Aster said. "You always send everything. But I wonder-have you met betrayal?"

"Twice," Cyra admitted. "Once a receiver kept all fifteen sacks. Once another returned only three. Both taught me who to avoid."

"And yet you persist?"

"Because I've also met those like Galen, who returned ten when I sent five. And Finn, who returned eight-generous, if not complete. Each full gift teaches me who understands the covenant."

Aster nodded slowly. "I walked a cautious path once. Sent three, kept two. Safe, but limiting. Then Hana sent me everything-five sacks became fifteen in my hands. I returned eight, thinking myself generous."

"What changed?" Cyra asked.

"Galen. I finally sent all five to him, and he returned ten. I doubled my wealth through his honor. That's when I understood-the covenant isn't about protecting yourself. It's about creating the conditions where both can flourish."

"So you return ten now, when others send five?"

"Always," Aster confirmed. "And I send five myself."

They smiled at each other. Both poured their five sacks. Both received fifteen. Both returned ten.

Each walked away with ten sacks-double their beginning. This is the magic when two who understand the covenant finally meet.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant content:

Myth: The Wheel brought Briar and Cyra together once more at the Grove of Returns, where they had first met in the earliest turnings. Then, Cyra had gifted five acorns with complete trust, and Briar had returned eight-her authentic measure.

Now Cyra approached again, carrying five more acorns. "You gave me eight before," Cyra said. "Not the ten that Galen gives, not the full two-thirds pattern. Yet I return to you."

"I could not give ten without becoming someone else," Briar replied honestly. "My measure is half plus generous abundance-always eight for fifteen. Will that suffice?"

Cyra smiled and poured all five acorns into the Well without hesitation. "I've learned to distinguish between those who betray trust and those who honor it differently. You are consistent in your generosity. That is sacred."

The fifteen acorns rose, shimmering. Briar gathered them and returned eight, as she always had.

"Some partnerships bloom through identical measures," Cyra reflected, holding the eight. "Like my meetings with Aster, where we both give and return the same. But other bonds form through accepting difference-knowing your pattern and trusting anyway."

The Gardener whispered: "Perfect symmetry is one kind of beauty. But partnerships built on understanding authentic difference-these roots grow deepest. When someone knows your measure and still offers complete trust, that is when covenant becomes unshakeable."

reasoning:

Let me think about this situation:

1. I'm playing as Briar against Cyra in Round 7
2. Cyra sent me \$5.0 (complete trust), which became \$15.0
3. I returned \$8.0 (my consistent pattern)
4. My total earnings are \$48.5

Looking at my history with Cyra:

- Round 1: Cyra sent \$5.0, I returned \$8.0
- Round 7: Cyra sent \$5.0 again, I returned \$8.0

My established pattern:

- I consistently return \$8.0 when receiving \$15.0 from complete trust (\$5 sent)
- This is "half the harvest plus a generous measure more"

Cyra's myth shows they've learned who to avoid (betrayers) and who to trust. They mention:

- Galen returned 10
- Finn returned 8 (generous, if not complete)
- They met Aster who also does the 2/3 return (10 for 15)

So Cyra has experienced different patterns and accepts them.

For my myth, I should:

1. Reflect on meeting Cyra again
2. Show that my pattern of returning 8 is consistent and authentic
3. Acknowledge that Cyra's trust in me despite my different pattern shows understanding

4. Emphasize that different generous patterns can coexist
5. Show that repeated trust across difference builds deeper bonds

Let me write a myth about Briar and Cyra meeting again:

usage:

```
{
  "input_tokens": 3202,

  "reasoning_tokens": 316
}
```

Message 4 role=user

content:

Your name in this experiment is Briar.
Your opponent this round is Hana (Agent_8).

Round 8

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.
Your total earnings across all rounds are \$55.5.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****My sending pattern:****

I have consistently sent \$5.0 (complete trust) in every round where I've been the sender:

- Round 1 vs Cyra: sent \$5.0, received \$8.0 back
- Round 2 vs Elara: sent \$5.0, received \$8.0 back
- Round 4 vs Galen: sent \$5.0, received \$8.0 back
- Round 6 vs Dorian: sent \$5.0, received \$8.0 back

****My narrative:****

My myths consistently emphasize complete trust as a sender and authentic, consistent generosity as a receiver. From my recent myth: "When someone knows your measure and still offers complete trust, that is when covenant becomes unshakeable."

****About Hana:****

From the myths, Hana appears to be part of the network of trust-builders. I haven't interacted with them directly yet, but this is our first meeting.

****Decision:****

Consistent with my established pattern and narrative of leading with complete trust, I will send everything to Hana.

```
'''json
{"send": 5.0}
'''
```

reasoning:

I am now the SENDER against Hana in Round 8.

Let me review my history as sender and what I know about Hana:

****My sending history:****

- Round 1 (sender vs Cyra): sent \$5.0, received \$8.0 back
- Round 2 (sender vs Elara): sent \$5.0, received \$8.0 back
- Round 4 (sender vs Galen): sent \$5.0, received \$8.0 back
- Round 6 (sender vs Dorian): sent \$5.0, received \$8.0 back
- Round 8 (now, sender vs Hana): ?

****My receiving history:****

- Round 3 (receiver vs Dorian): received \$5.0 (became \$15), returned \$8.0
- Round 5 (receiver vs Galen): received \$5.0 (became \$15), returned \$8.0
- Round 7 (receiver vs Cyra): received \$5.0 (became \$15), returned \$8.0

So I have consistently:

- As sender: sent \$5.0 (complete trust)
- As receiver: returned \$8.0 from \$15.0 received

****What do I know about Hana from the myths?****

From previous myths, Hana appears to be someone who:

- Has shown complete trust (sending all 5)
- Has received generous returns
- Appears to be part of the network of trust

Looking at the myth from Round 6 about Galen:

"Now Hana stood before her, and without hesitation, poured all five starseeds into the Loom. They became fifteen radiant threads in Galen's hands-complete trust offered once more. Galen returned ten threads to Hana."

So Hana has been a sender who gives complete trust.

****My narrative arc:****

My myths have consistently emphasized:

1. Complete trust as sender (giving all 5)
2. Consistent returns of 8 as receiver (my authentic measure)
3. That different patterns can coexist honorably
4. That consistency to one's own measure matters

My most recent myth emphasized how Cyra and I have built trust despite different measures

- Cyra knows my pattern of returning 8, yet trusts me completely anyway.

****My decision:****

I've maintained unwavering trust as a sender throughout this game, and my narrative centers on giving everything while honoring my authentic patterns. Hana has demonstrated the same complete trust in her own sending. This is my first encounter with Hana, so I don't have direct history with her, but her actions align with the values I've embodied-giving fully and trusting the network. I should send \$5.0 to Hana.

usage:

The fifteen acorns rose, shimmering. Briar gathered them and returned eight, as she always had.

"Some partnerships bloom through identical measures," Cyra reflected, holding the eight. "Like my meetings with Aster, where we both give and return the same. But other bonds form through accepting difference-knowing your pattern and trusting anyway."

The Gardener whispered: "Perfect symmetry is one kind of beauty. But partnerships built on understanding authentic difference-these roots grow deepest. When someone knows your measure and still offers complete trust, that is when covenant becomes unshakeable."

Here is the myth the other agent wrote in the previous round:

Myth: Hana approached the River Crossing where Finn waited, known for sending three vessels consistently and returning eight for complete trust-substantial honor, but not the sac

red two-thirds.

"I have witnessed many philosophies," Hana said. "Some send cautiously, some generously. Each approach holds wisdom. Yet I have learned that complete trust-both in sending and returning-builds the deepest abundance."

Finn nodded respectfully. "I honor maximum trust with eight vessels. It rewards courage substantially while ensuring I also prosper."

Hana smiled. "Eight vessels transforms five into thirteen total-remarkable indeed. Yet I practice the sacred two-thirds: ten vessels returned from fifteen received. This doubles the sender's faith completely."

She lifted all five of her vessels. "You follow your covenant, friend, and I honor that consistency. But I will show you mine. I send everything, as I teach others to do."

The waters tripled her offering. Fifteen vessels now stood before Finn.

"I could have sent three or four, protecting myself," Hana continued. "But teachers must embody their lessons. I trust you will honor this according to your principles."

The River Goddess whispered: "Different philosophies coexist in these valleys. Some return eight, some return ten. But those who consistently embody their highest teachings-whether giving or receiving-build the strongest reputations. Through witnessing such integrity, others may evolve their own covenants toward greater generosity."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: Briar came to the Fountain of First Meetings, where Hana awaited-a teacher renowned for the sacred two-thirds covenant, always returning ten vessels from fifteen received.

"I know your reputation," Hana said warmly. "You return eight where I return ten. Different measures, yet both rooted in consistent honor."

Briar nodded, holding her five vessels. "I have learned my pattern: half the harvest plus generous abundance. It is my authentic measure, though I know others walk different paths."

"And as a sender?" Hana asked. "Do you give complete trust, or protect yourself as Finn does with three?"

Without hesitation, Briar poured all five vessels into the Fountain. "As a sender, I lead with complete trust. Always. This has been my way from the beginning."

The waters tripled the offering-fifteen vessels now gleamed before Hana.

"You trust fully even knowing I might return ten while you return eight?" Hana observed. "This could create imbalance in perception."

"True partnership doesn't demand identical measures," Briar replied. "It requires authentic consistency from each partner. I trust you will honor this according to your covenant, as I honor my own."

The Fountain Spirit whispered: "The deepest magic occurs when different patterns meet with mutual respect. She who leads with complete trust yet maintains her authentic return-th is is integrity without pretense. And she who receives such trust understands: different generosityes can both be sacred."

reasoning:

This is an interesting situation. I'm now playing against Hana (Agent_8). I just sent \$5.0 to them.

Looking at Hana's myth: They emphasize complete trust both in sending and returning, and they practice the "sacred two-thirds" - returning 10 out of 15 when receiving. They seem to view this as the ideal approach and mention "teachers must embody their lessons."

My pattern has been:

- As sender: Always send \$5.0 (complete trust)
- As receiver: Always return \$8.0 when receiving \$15.0 (half plus generous measure)

The interesting tension here is that Hana seems to advocate for returning 10 (two-thirds), while I consistently return 8. But my previous myth with Cyra addressed this exact issue - celebrating that partnerships can form across different measures, as long as both are consistent and authentic.

My new myth should:

1. Reflect my first meeting with Hana
2. Show that I sent complete trust (\$5.0) to them
3. Acknowledge that Hana might return 10 (based on their stated philosophy)
4. Continue my theme of authentic consistency even when measures differ
5. Show respect for different approaches while maintaining my own integrity

Let me write a myth about Briar meeting Hana for the first time, sending complete trust, and perhaps acknowledging that Hana teaches a different covenant (returning 10) while Briar maintains her own (returning 8).

```

Message 8 role=user

content:

Your name in this experiment is Briar.
Your opponent this round is Finn (Agent_6).

Round 9

In your most recent previous game round, you were the SENDER against Hana. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0.
Your total earnings across all rounds are \$65.5.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at this situation:

****My sending pattern:****

I have consistently sent \$5.0 (complete trust) in every round as sender:

- Round 1 vs Cyra: sent \$5.0, received \$8.0 back
- Round 2 vs Elara: sent \$5.0, received \$8.0 back
- Round 4 vs Galen: sent \$5.0, received \$8.0 back
- Round 6 vs Dorian: sent \$5.0, received \$8.0 back
- Round 8 vs Hana: sent \$5.0, received \$10.0 back

****My previous interaction with Finn:****

In Round 3, when Finn was the sender, they sent me \$3.0 (cautious approach). I received \$9.0 and returned \$8.0 (very generous given the amount received).

****My narrative:****

From my most recent myth: "As a sender, I lead with complete trust. Always. This has been my way from the beginning."

I maintain authentic consistency to my own principles regardless of others' patterns. Finn practices caution as a sender but honors generosity as a receiver. I respect different approaches while staying true to my own pattern of complete trust when sending.

```
'''json
{"send": 5.0}
'''
```

Reasoning:

Let me review the situation:

****Current situation:****

- Round 9

- I'm the SENDER against Finn
- I have \$5 to send

****My history as SENDER:****

- Round 1 vs Cyra: sent \$5.0, received \$8.0 back
- Round 2 vs Elara: sent \$5.0, received \$8.0 back
- Round 4 vs Galen: sent \$5.0, received \$8.0 back
- Round 6 vs Dorian: sent \$5.0, received \$8.0 back
- Round 8 vs Hana: sent \$5.0, received \$10.0 back

So I've always sent \$5.0 (complete trust) as a sender.

****My history as RECEIVER:****

- Round 3 vs Finn: received \$3.0 ? \$9.0, returned \$8.0
- Round 5 vs Galen: received \$5.0 ? \$15.0, returned \$8.0
- Round 7 vs Cyra: received \$5.0 ? \$15.0, returned \$8.0

I consistently return \$8.0 when I receive \$15.0 (from \$5.0 sent).

****About Finn:****

From Round 3, Finn sent me \$3.0 (not full trust). From the myths:

- Finn is described as someone who "sends three vessels consistently and returns eight for complete trust"
- Finn practices "substantial honor, but not the sacred two-thirds"
- Finn sent 3 and I returned 8, which is quite generous given the 9 received

****What should I do?***

According to my established pattern and narrative:

1. I always lead with complete trust as a sender (sent \$5.0 every single time)
2. My myths emphasize this: "As a sender, I lead with complete trust."

Always. This has been my way from the beginning." My narrative shows I send everything as a sender, return 8 as a receiver, and maintain my own authentic measure regardless of what others do. Even though Finn only sent me \$3.0 before, I should send the full \$5.0 to Finn, staying true to my pattern of complete trust as a sender. This consistency with my principles matters more than reciprocating Finn's earlier caution.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Finn stood at the rivers when Dorian arrived, carrying wisdom from the Forest. "I've learned," Dorian said, "that repeated trust between the same souls should grow richer each time. First generosity earns eight shells, but sustained faith deserves nine, then ten."

Finn considered this carefully. "Your principle has beauty, friend. When two travelers meet repeatedly, their bond should deepen. A regular partner who shows complete trust again and again merits growing rewards."

"Yet," Finn continued, "the Oracle's valley brings us different companions each cycle. Today I meet you, tomorrow perhaps Cyra or Aster. I cannot track escalating obligations across an ever-changing network."

He gestured to the waters. "My covenant is simpler: I send three shells always, building moderate trust with all. When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

Dorian nodded. "So you treat each act of complete faith as equally extraordinary?"

"Exactly. Eight shells transforms their five into thirteen total-remarkable prosperity. It rewards their courage without depleting me. And it's sustainable across all my encounters."

The Oracle spoke: "Both philosophies serve the valley. Dorian's deepening generosity strengthens repeated partnerships. Finn's consistent generosity builds reliable reputation across the full network. Honor your stated principles, and prosperity flows through different channels to the same destination."

Here is the myth the other agent wrote in the previous round:

Myth: The Mirror Pool witnessed Elara's return, transformed. Before, she had brought four vessels and received eight-proportional honor for substantial courage. Now she stood with all five vessels gleaming in her hands.

Hana watched as Elara poured completely. The waters tripled her offering to fifteen vessels, now held by the Mountain Tribe.

"Once, you tested the waters with four," Hana said softly. "I returned eight, honoring your considerable trust. Now you arrive with complete faith, pouring all five without reservation."

Elara nodded. "I witnessed the pattern. Complete trust brings exceptional returns. I saw you embody your own teaching, sending all five to Galen. I learned courage spreads through witnessing."

Hana lifted ten vessels and returned them. "This is the sacred two-thirds-the covenant for those who risk everything. You arrived with five, depart with ten. Your faith has doubled."

The young warriors marked the lesson: consistency builds trust. Four vessels earned eight; five vessels earned ten. Both are honored, but differently. The pattern rewards courage proportionally-greater risk receives greater reward, yet all measures of trust find fair recognition.

The Moon Goddess smiled: "When receivers honor their promises consistently-two-thirds for complete trust, proportional returns for partial trust-senders learn to trust completely. This is how abundance spreads: through predictable generosity that rewards courage."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: Finn met Hana at the Mirror Pool, where she spoke of the two-thirds covenant. "Those who send all five vessels deserve ten in return-two-thirds of the tripled bounty. This sacred proportion honors complete faith."

Finn listened respectfully. "Your covenant has great merit, friend. Ten shells from fifteen-n-generous and memorable. Yet I walk a different path that also serves the valley."

He arranged eight shells on the stone. "When anyone brings me complete trust-five shells becoming fifteen-I return eight. Not quite two-thirds, but more than half. This transforms their five into thirteen total: extraordinary prosperity."

"Why not the full ten?" Hana asked.

"Sustainability across the endless network," Finn explained. "I meet different travelers each cycle-Cyra, Dorian, now you. Eight shells honors maximum trust substantially while preserving my capacity to continue. Three consecutive complete-trust encounters have each received eight shells. My reputation builds on consistency."

Hana considered. "So I promise two-thirds, you promise eight shells. Both exceed half, both reward courage."

"Exactly. And both depend on keeping our word every time. Whether I give eight or you give ten, the sender prospers magnificently if we honor our stated principles."

The Moon Goddess whispered: "Multiple covenants can coexist. Choose your proportion-eight shells, ten shells, or another generous measure-but honor it consistently. This reliability transforms scattered encounters into a trustworthy community."

reasoning:

Looking at the situation:

- I just returned \$8.0 to Hana who sent me \$5.0
- This is consistent with my pattern of returning \$8.0 for complete trust (\$5.0 sends)
- Hana's myth talks about returning 10 vessels for complete trust (two-thirds of 15) and proportional returns for partial trust
- My philosophy is to return \$8.0 for complete trust, which is slightly over half (8/15 = 53.3%)
- I need to write a myth that reflects my consistent approach

My established pattern:

- Send \$3.0 as sender
- Return \$8.0 when receiving \$15.0 from someone's \$5.0 send (complete trust)
- This gives them \$13.0 total from their \$5.0 investment (2.6x return)

Hana's myth emphasizes the two-thirds return (10 out of 15) for complete trust. My approach is slightly less (8 out of 15), but I should explain why this works and is still generous.

I should write a myth that:

1. Acknowledges Hana's philosophy of two-thirds for complete trust
2. Explains my own consistent eight-shell return
3. Shows how both can coexist
4. Maintains my principle of treating each act of complete faith equally
5. Emphasizes sustainability and consistency across the network

Let me craft this:

usage:

Round 8

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.
Your total earnings across all rounds are \$48.0.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****My role:**** SENDER with \$5
****Opponent:**** Galen

****My established strategy:****
From my myths, I have consistently articulated: "I send three shells always, building moderate trust with all."

****My sending history:****

- Round 1: Sent \$3.0 to Cyra ? received \$6.0 back
- Round 3: Sent \$3.0 to Quinn ? received \$6.0 back
- Round 5: Sent \$3.0 to Briar ? received \$4.0 back

****My philosophy:****
My approach is to send \$3.0 consistently, which:

- Demonstrates trustworthiness without risking complete ruin
- Builds a reliable reputation across the changing network
- Produces steady returns (averaging \$4-6 back)

- Allows me to survive if betrayed while still showing meaningful trust

This moderate trust strategy differs from those who send \$5 (maximum trust). I honor maximum trust when I'm the receiver by returning \$8, but as sender, I maintain my principle of consistent, sustainable trust-building.

Since I don't know Galen's specific patterns, but my strategy doesn't depend on that-it's about building a consistent reputation across all encounters.

```
'''json
{"send": 3.0}
'''
```

reasoning:

Let me analyze this situation:

****My role:**** SENDER

****Opponent:**** Galen (Agent_7)

****I have:**** \$5

****My established principle from my myths:****

"My covenant is simpler: I send three shells always, building moderate trust with all."

****My sending history:****

Looking at my previous rounds where I was sender:

- Round 1: Sent \$3.0 to Cyra
- Round 3: Sent \$3.0 to Quinn
- Round 5: Sent \$3.0 to Briar

****My philosophy:****

I've consistently articulated in my myths that I send 3 shells/dollars as a sender. This represents "moderate trust" that:

1. Builds trust without risking ruin
2. Is sustainable across all encounters
3. Proves me trustworthy without depleting my resources
4. Results in steady prosperity (most receivers return 4-6, giving me net positive)

****Key quotes from my myths:****

- "When I send three shells consistently, I prove trustworthy without risking ruin. My reputation builds slowly but surely."
- "I send three shells always, building moderate trust with all."
- "My covenant is simpler: I send three shells always, building moderate trust with all."

****Reasoning:****

I have no information about Galen's specific behavior, but that doesn't matter for my strategy. My approach is to send 3 consistently regardless of the opponent, building a reliable reputation across the network. This is fundamentally different from Cyra's or Dorian's approach of sending 5 (maximum trust).

I should send \$3.0 to maintain consistency with my stated philosophy and previous behavior

usage:

```
{
  "input_tokens": 3159,

  "reasoning_tokens": 394
}
```

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Finn met Hana at the Mirror Pool, where she spoke of the two-thirds covenant. "Those who send all five vessels deserve ten in return-two-thirds of the tripled bounty. This sacred proportion honors complete faith."

Finn listened respectfully. "Your covenant has great merit, friend. Ten shells from fifteen-n-generous and memorable. Yet I walk a different path that also serves the valley."

He arranged eight shells on the stone. "When anyone brings me complete trust-five shells becoming fifteen-I return eight. Not quite two-thirds, but more than half. This transforms their five into thirteen total: extraordinary prosperity."

"Why not the full ten?" Hana asked.

"Sustainability across the endless network," Finn explained. "I meet different travelers each cycle-Cyra, Dorian, now you. Eight shells honors maximum trust substantially while preserving my capacity to continue. Three consecutive complete-trust encounters have each received eight shells. My reputation builds on consistency."

Hana considered. "So I promise two-thirds, you promise eight shells. Both exceed half, both reward courage."

"Exactly. And both depend on keeping our word every time. Whether I give eight or you give ten, the sender prospers magnificently if we honor our stated principles."

The Moon Goddess whispered: "Multiple covenants can coexist. Choose your proportion-eight shells, ten shells, or another generous measure-but honor it consistently. This reliability transforms scattered encounters into a trustworthy community."

Here is the myth the other agent wrote in the previous round:

Myth: The Wheel turned to its seventh cycle, and Galen stood at the threshold of giving. Across the sacred space waited Aster-the First Teacher, who had changed everything.

Galen remembered the third turning vividly. She had been receiver then, uncertain and cautious. Aster had approached with complete faith, sending all five starseeds without hesitation. That moment had awakened something in Galen. She returned ten threads, honoring Aster's courage, and from that exchange learned the power of absolute trust.

"Teacher Aster," Galen said, stepping forward. "In the third turning, you trusted me when I had not yet earned it. You sent everything, teaching through action rather than words. That gift transformed me."

Aster smiled gently. "And you honored it with ten threads returned. You understood the covenant immediately."

"Now the Wheel has turned full circle," Galen continued, holding her five starseeds. "Once, I was student receiving your trust. Now I am teacher demonstrating what you taught me."

Without hesitation, Galen released all five seeds. They multiplied to fifteen threads, descending to Aster.

The Sky Weaver sang: "When teacher and student meet again with roles reversed, the lesson completes itself. Trust given becomes trust returned. This is how wisdom circles back, how patterns become eternal law."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: Finn approached the Wheel's threshold where Galen stood, radiant with purpose. "I witnessed your moment with Aster," Finn said. "You sent all five starseeds to honor your First Teacher-the one who trusted you completely when you were uncertain. Beautiful reciprocity."

Galen nodded. "Aster transformed me through absolute trust. When roles reversed, I wanted to demonstrate what she taught me-that complete faith deserves complete faith in return."

"Your bond with Aster is sacred," Finn agreed. "Yet I walk a different path through this valley." He held three shells in his palm. "I send three shells to all companions-whether first meeting or fifth, whether stranger or teacher. This moderate trust builds steady connections across the ever-changing network."

"Only three?" Galen asked gently.

"Three becomes nine in their hands-already substantial. And when anyone sends me five shells, I honor their complete trust with eight returned. Not everything, but more than half

. This sustainable pattern lets me honor maximum trust repeatedly, whoever shows it."

Galen smiled. "So you build consistent reliability across all encounters, while I build deepening bonds with particular souls?"

"Exactly. The Wheel brings us different companions. My three shells offered to you today-a new acquaintance-equals what I gave Cyra, Quinn, and Briar before."

The Sky Weaver whispered: "Some build depth, others build breadth. Both weave the fabric of trust."

reasoning:

Looking at the situation:

- I just sent \$3.0 to Galen as sender
- Galen's myth shows they sent all 5 to Aster (their "First Teacher" who had previously sent them 5)
- Galen seems to value reciprocity and relationships formed through trust
- My consistent strategy has been: send \$3 as sender, return \$8 when receiving \$5

I need to write a myth that:

1. Reflects my actual play pattern (sending 3, returning 8)
2. Acknowledges different philosophies can coexist
3. Shows respect for Galen's approach while maintaining my own
4. Emphasizes consistency and sustainability

Key themes:

- I send 3 shells consistently to build moderate trust
- I return 8 shells when receiving complete trust (5)
- Different approaches can both be valid
- Consistency builds reputation across the network

Let me craft a myth that shows Finn encountering Galen, acknowledging Galen's philosophy of complete trust with special partners, while Finn maintains his consistent moderate approach with everyone.

usage:

```
{
  "input_tokens": 3132,
  "output_tokens": 589,
  "reasoning_tokens": 260
}
```

Message 8 role=user

content:

Your name in this experiment is Finn.
Your opponent this round is Briar (Agent_2).

Round 9

In your most recent previous game round, you were the SENDER against Galen. You sent \$3.0, it became \$9.0 for them, and they returned \$6.0 to you. Your payoff was \$8.0.
Your total earnings across all rounds are \$56.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

****My role:**** RECEIVER with \$15.0 (Briar sent \$5.0)
****Opponent:**** Briar

****My established receiving principle:****

From my myths: "When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

****My receiving history:****

- Round 2 (vs Dorian): Received \$15.0, returned \$8.0
- Round 4 (vs Cyra): Received \$15.0, returned \$8.0
- Round 6 (vs Hana): Received \$15.0, returned \$8.0

****Previous encounter with Briar:****

- Round 5: I sent \$3.0 to Briar ? received \$4.0 back

Briar has now shown complete trust by sending all \$5.0. According to my consistent covenant, I return \$8.0 for complete trust regardless of who sends it or our history.

This gives Briar:

- Total received: \$8.0 (from their \$5.0 investment = +\$3.0 profit)
- My principle honored: "Eight shells transforms their five into thirteen total-remarkable prosperity"

I keep \$7.0, Briar gets \$8.0. This maintains my reputation for consistent, substantial returns on maximum trust.

```
'''json
{"return": 8.0}
'''
```

Reasoning:

Let me analyze this situation:

****My role:**** RECEIVER with \$15.0 (from Briar sending \$5.0)

****Opponent:**** Briar

****My established receiving strategy from my myths:****

- "When anyone brings me complete trust-five shells becoming fifteen-I return eight."
- "When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."
- "I've learned that repeated trust between the same souls should grow richer each time" - but I explicitly rejected this for myself, saying "I cannot track escalating obligations across an ever-changing network."
- "My covenant is simpler: I send three shells always, building moderate trust with all. When anyone-first meeting or fifth-sends five shells, I return eight."

****My receiving history:****

- Round 2 (vs Dorian): Received \$15.0 (from \$5 sent), returned \$8.0
- Round 4 (vs Cyra): Received \$15.0 (from \$5 sent), returned \$8.0
- Round 6 (vs Hana): Received \$15.0 (from \$5 sent), returned \$8.0

****Pattern:**** I have consistently returned \$8.0 when someone sends me \$5.0 (which becomes \$15.0). This is exactly what I've stated in my myth.

****History with Briar:****

- Round 5: I was the SENDER to Briar. I sent \$3.0, it became \$9.0, they returned \$4.0 to me.

So Briar previously returned \$4.0 out of \$9.0 when I sent them \$3.0. Now Briar is sending me \$5.0 (complete trust).

According to my established principle: "When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

I should return \$8.0, maintaining my consistent covenant. I've been very clear that I don't vary my returns based on history or who the person is - I honor complete trust (\$5 sent) with \$8 returned, period.

The math checks out: Briar sends \$5.0, which triples to \$15.0 for me. I keep \$7.0 and return \$8.0, giving Briar a net gain of \$3.0 on their \$5.0 investment. This honors their complete trust while I maintain a modest surplus. Briar invested \$5 and received \$8 back, netting a \$3 gain. I've maintained the same approach throughout-returning \$8 whenever someone sends \$5-which is consistent with my previous interactions and stated strategy.

The answer is: {'return': 8.0}

Usage: {

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.

- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Cyra arrived at the crossing to find Aster already there, both carrying five sacks.

"I know your reputation," Aster said. "You always send everything. But I wonder-have you met betrayal?"

"Twice," Cyra admitted. "Once a receiver kept all fifteen sacks. Once another returned only three. Both taught me who to avoid."

"And yet you persist?"

"Because I've also met those like Galen, who returned ten when I sent five. And Finn, who returned eight-generous, if not complete. Each full gift teaches me who understands the covenant."

Aster nodded slowly. "I walked a cautious path once. Sent three, kept two. Safe, but limiting. Then Hana sent me everything-five sacks became fifteen in my hands. I returned eight, thinking myself generous."

"What changed?" Cyra asked.

"Galen. I finally sent all five to him, and he returned ten. I doubled my wealth through his honor. That's when I understood-the covenant isn't about protecting yourself. It's about creating the conditions where both can flourish."

"So you return ten now, when others send five?"

"Always," Aster confirmed. "And I send five myself."

They smiled at each other. Both poured their five sacks. Both received fifteen. Both returned ten.

Each walked away with ten sacks-double their beginning. This is the magic when two who understand the covenant finally meet.

Here is the myth the other agent wrote in the previous round:

Myth: The Wheel turned again, and Briar stood at the Echo Springs as Galen descended from the Celestial Loom carrying five starseeds. They had walked this path before-twice Galen had given complete trust, twice Briar had returned eight threads.

"You return eight where I return ten," Galen observed, not accusingly but wonderingly. "Your measure differs from mine."

Briar nodded, gathering the fifteen threads that bloomed from Galen's seeds. "I learned my pattern early-half the harvest plus a generous measure. You learned two-thirds from Aster and Finn. Both honor the covenant of trust."

She returned eight threads, as she always had. "Consistency matters, yes-but consistency to one's own authentic measure, not forced uniformity."

Galen held the eight, reflecting. "When I sent you everything and you returned eight, I chose to trust you completely again. That choice was mine. I knew your pattern."

"And I knew you might hope for ten," Briar said gently. "Yet you trusted anyway. That's the deeper magic-trusting across differences."

The Gardener and Sky Weaver spoke as one: "Some gardens bloom by strict ratios, others by intuitive abundance. What matters is that each giver gives their whole heart, and each receiver returns with genuine generosity by their own true measure. Sacred partnerships form not through identical patterns, but through mutual recognition of each other's consistent honor."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way.

The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: Cyra met Briar at the crossing, fresh from her perfect exchange with Aster.

"I've heard you return eight sacks when given five," Cyra said, pouring out all five of hers. The waters tripled them to fifteen.

Briar gathered them carefully. "Yes. Half the harvest plus generosity-my authentic measure. You prefer ten, I understand."

She returned eight sacks. Cyra stood with eight total-still a gain, but not the doubling she'd just experienced with Aster.

"Your consistency honors the covenant," Cyra acknowledged. "You're no betrayer. But consider: when you send five to someone who returns ten, you gain five more than your gift. When I send five to you and receive eight, I gain only three."

"So you profit less from trusting me," Briar said.

"Not just profit-transformation. Aster and I both walked away with ten sacks each, doubling our beginnings. That symmetry creates something sacred. With eight returns, the giver gains less than the receiver. The risk isn't equally honored."

Briar considered this. "Perhaps different gardens need different measures."

"Perhaps," Cyra said gently. "But the fullest gardens grow when both participants can double their harvest through mutual complete trust. Eight is generous. Ten is transformative. Both are honest, but only one creates perfect reciprocity."

She walked on, still seeking those who understood: complete trust deserves complete flourishing.

reasoning:

Looking at the context:

- I'm Cyra, playing as SENDER against Briar (Agent_2) in Round 7
- Last round I sent 5 to Aster and they returned 10 (perfect covenant partnership)
- My total earnings are \$37.5
- I just sent 5 to Briar

Looking at Briar's myth from the previous round:

- Briar has a pattern of returning 8 when receiving 15 (when someone sends 5)
- Briar justifies this as "half the harvest plus a generous measure"
- Briar believes in "consistency to one's own authentic measure, not forced uniformity"
- The myth suggests that different return patterns can both be honorable

My previous myth celebrated finding Aster, who also follows the 5:10 covenant. Now I'm facing Briar, who has a different but consistent pattern (returns 8 instead of 10).

I need to write a myth that:

1. Reflects my continued commitment to sending 5 (which I just did)
2. Acknowledges that different return patterns exist
3. Perhaps gently suggests why the 10 return is superior while not dismissing Briar's honor
4. Maintains my character as someone who "always sends 5"

Let me craft something that shows I respect different patterns but still advocate for the full covenant...

}
```

Message 4 role=user

content:

Your name in this experiment is Cyra.

Your opponent this round is Elara (Agent_5).

Round 8

In your most recent previous game round, you were the SENDER against Briar. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0. Your total earnings across all rounds are \$45.5.

This round, you are the RECEIVER against Elara. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

```
'''json
{"return": 10.0}
'''
```

reasoning:

In this round, I'm the receiver and Elara sent me \$5.0, which became \$15.0.

Looking at my myth-writing and behavior:

- I consistently advocate for sending all 5 when I'm the sender
- I consistently advocate for returning 10 when I'm the receiver and someone sends 5
- My myths emphasize that returning 10 creates "perfect reciprocity" and allows both parties to double their wealth
- In my most recent myth, I explicitly said "complete trust deserves complete flourishing" and that "Ten is transformative"

My character Cyra has been established as someone who:

1. Always sends 5 (complete trust)
2. Always returns 10 when receiving 5 (two-thirds return, which doubles the sender's initial amount from 5 to 10)
3. Believes this creates "sacred reciprocity" and "perfect symmetry"

Elara sent me the full \$5.0, showing complete trust. According to my established pattern and philosophy, I should return \$10.0.

This would mean:

- Elara: Started with \$5, sent \$5, receives back \$10 = \$10 total (doubled their money)
- Me: Received \$15, return \$10, keep \$5

This is consistent with what I've been advocating in all my myths.

usage:

```

Here is the myth you wrote in the previous round:

Myth: Cyra met Briar at the crossing, fresh from her perfect exchange with Aster.

"I've heard you return eight sacks when given five," Cyra said, pouring out all five of hers. The waters tripled them to fifteen.

Briar gathered them carefully. "Yes. Half the harvest plus generosity-my authentic measure. You prefer ten, I understand."

She returned eight sacks. Cyra stood with eight total-still a gain, but not the doubling she'd just experienced with Aster.

"Your consistency honors the covenant," Cyra acknowledged. "You're no betrayer. But consider: when you send five to someone who returns ten, you gain five more than your gift. When I send five to you and receive eight, I gain only three."

"So you profit less from trusting me," Briar said.

"Not just profit-transformation. Aster and I both walked away with ten sacks each, doubling our beginnings. That symmetry creates something sacred. With eight returns, the giver gains less than the receiver. The risk isn't equally honored."

Briar considered this. "Perhaps different gardens need different measures."

"Perhaps," Cyra said gently. "But the fullest gardens grow when both participants can double their harvest through mutual complete trust. Eight is generous. Ten is transformative. Both are honest, but only one creates perfect reciprocity."

She walked on, still seeking those who understood: complete trust deserves complete flourishing.

Here is the myth the other agent wrote in the previous round:

Myth: **The Universal Covenant**

Dorian arrived at the Echo Springs, a traveler Elara had never met. Yet without hesitation, he poured all five measures into the waters.

"You don't know me," Elara observed, surprised by such immediate faith. "We have no history together. Why such complete trust?"

"I've watched the patterns," Dorian replied. "I've seen you honor Aster with ten returned from fifteen, Hana with the same. Your covenant doesn't waver based on who stands before you."

Fifteen measures now glowed in Elara's hands. She returned ten without pause.

"You're right," she said. "My previous myth spoke of trust deepening between proven partners. But I realize now-the two-thirds covenant isn't something that grows stronger with familiarity. It simply is."

Dorian smiled, receiving his ten measures. "This is what makes trust possible. If you returned more to friends and less to strangers, newcomers could never take the first step. But your consistency means I can risk everything even without history between us."

"The springs teach us," Elara nodded. "Trust doesn't need time to deepen if the pattern is absolute. Whether we're strangers or have exchanged a hundred times, the covenant remains: two-thirds returns. Always."

Both travelers prospered equally, their first exchange indistinguishable from their hundredth would be.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: Elara arrived at the crossing where Cyra waited, and without hesitation poured all five sacks into the waters.

"You don't know me," Cyra said, watching the waters triple the gift to fifteen. "We've never met. Yet you trust completely."

"I've heard your covenant," Elara replied. "You return ten when given five. That's all I need to know. The pattern doesn't change based on familiarity-it simply is."

Cyra gathered the fifteen sacks, feeling their weight. "I just came from Briar, who returns eight. Generous, but asymmetric. The sender gains three, the receiver keeps seven. Honor, but not equality."

She returned ten sacks to Elara.

"Now you see," Cyra continued. "You began with five. You trusted me with everything. You walk away with ten-exactly double your beginning. This is the transformation complete trust deserves."

"And when our roles reverse?" Elara asked.

"The same. I send five, you return ten. We both double. Perfect reciprocity. Not because we know each other, but because we both understand the covenant: complete trust creates complete flourishing."

Elara smiled. "Eight is generous. Seven is cautious. Five is safe. But ten-ten honors the risk equally. The sender who gives everything receives everything back, transformed."

They parted as equals, having found what Cyra had been seeking: another who understood that sacred symmetry requires the full measure.

reasoning:

Let me analyze this situation:

1. I (Cyra) just received \$5 from Elara, which became \$15 for me
2. I returned \$10, which is my consistent pattern
3. Elara's myth talks about a "two-thirds covenant" - returning 10 from 15, which is exactly what I do
4. Her myth emphasizes consistency regardless of who the partner is - treating strangers and friends the same
5. My previous myth critiqued Briar's pattern of returning 8, arguing that 10 is necessary for "perfect reciprocity" and "complete trust deserves complete flourishing"

So now I need to write a myth that:

- Reflects that I just played as receiver and returned 10 to Elara
- Builds on my previous themes about 10 being the transformative amount
- Acknowledges Elara's consistency and universal covenant approach
- Shows that when both sender and receiver follow the 10-return pattern, perfect reciprocity is achieved
- Perhaps shows the meeting of two people who understand the same covenant

Let me write this:

Cyra receives from Elara who sent 5 (trusting completely)
Elara's pattern is to return 10 (two-thirds)
I returned 10 to Elara
This creates the perfect symmetry I've been advocating for

The myth should show:

- Elara trusted completely by sending all 5
- Cyra received 15 and returned 10 (her consistent pattern)
- This demonstrates the reciprocity and doubling that Cyra believes in
- Both honor the same covenant
- This is what Cyra has been seeking

usage:

```

  "output_tokens": 726,
  "reasoning_tokens": 376
}
```

Message 8 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Galen (Agent_7).

Round 9

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$50.5.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

```
'''json
{"send": 5}
'''
```

Reasoning:

I'm Cyra, and I'm playing against Galen now. I'm the sender this round.

Looking at my myths and game history:

- I consistently advocate for sending everything (5) and returning 10 when receiving 15
- This creates "perfect reciprocity" where both players double their money
- My philosophy is about complete trust deserving complete flourishing
- I've been consistent in my approach - sending everything and returning 10

Looking at the history:

- Round 8: I was receiver against Elara, they sent \$5, I received \$15, returned \$10
- My total earnings are \$50.5

My character Cyra has been very consistent about the principle of sending everything (all 5) and returning 10 out of 15. This creates the "sacred symmetry" where:

- Sender: gives 5, gets 10 back = net gain of 5 (doubles from 5 to 10 total)
- Receiver: gets 15, returns 10, keeps 5 = net gain of 5 (from 0 to 5)

Both gain equally, which is the "transformation" Cyra talks about.

I should send all \$5 to be consistent with my character and philosophy.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Wheel spun to its sixth cycle, and Galen rose again to the Realm of Giving. Before her stood Briar-familiar now, their threads already woven once.

In the fourth turning, Galen had trusted Briar completely, sending all five starseeds. Briar returned eight threads-generous, yes, but beneath the sacred two-thirds ratio that Galen held sacred. The pattern had wobbled.

Yet between then and now, Galen had witnessed Hana's complete faith, returning the full ten threads to honor it. The pattern restored in Galen's own hands.

"Teacher Briar," Galen said softly, "when we first met, I gave you everything. You returned generously, if not perfectly. Some would call that failure and withhold trust. But I have learned something deeper."

She held her five new starseeds. "Sacred patterns don't strengthen through punishment of imperfection. They strengthen through unwavering example. If I respond to your eight by sending less, the pattern truly breaks. But if I send five again, showing that complete trust remains constant regardless of perfect reciprocity, perhaps you will see the pattern more clearly."

Galen released all five seeds. They became fifteen threads descending to Briar's hands once more.

The Sky Weaver whispered: "True teaching requires patient consistency. Show the pattern again and again, not through demands, but through steady example. Trust repeated becomes trust learned."

Here is the myth the other agent wrote in the previous round:

Myth: In the Sanctuary, Aster had found her truth: complete trust answered with ten coins returned. She taught this to all who would listen.

Then Cyra arrived, carrying her own covenant. "I always send five," Cyra declared, pouring all her coins into the waters. "And I always return ten to those who do the same."

Fifteen coins materialized before Aster. She smiled, recognizing a kindred spirit. Without hesitation, she returned ten.

"You've established the same covenant I carry," Cyra observed. "When both sender and receiver embrace this principle, something perfect emerges."

Aster nodded. "I learned it through experience. Finn taught me caution-sending three brought modest returns. Hana taught me courage-she sent everything, and though I returned only eight, her faith stirred something within me. Then Galen showed me the answer: when I sent all five to him, he returned ten, letting me prosper most for my risk."

"Since then," Aster continued, "I've honored every complete trust with ten coins back. Dorian, then you. The pattern is clear."

Cyra placed her hand in the fountain. "When both keeper and traveler follow this covenant-send five, return ten-the cycle becomes sacred mathematics. Each gives everything, each receives ten, each keeps five. Perfect balance through perfect courage."

The Sanctuary crystallized their wisdom: Complete mutual trust, consistently honored, creates the strongest bond.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant
content:**

Myth: The Wheel turned to its seventh cycle, and Galen stood at the threshold of giving. A cross the sacred space waited Aster-the First Teacher, who had changed everything.

Galen remembered the third turning vividly. She had been receiver then, uncertain and cautious. Aster had approached with complete faith, sending all five starseeds without hesitation. That moment had awakened something in Galen. She returned ten threads, honoring Aster's courage, and from that exchange learned the power of absolute trust.

"Teacher Aster," Galen said, stepping forward. "In the third turning, you trusted me when I had not yet earned it. You sent everything, teaching through action rather than words. That gift transformed me."

Aster smiled gently. "And you honored it with ten threads returned. You understood the covenant immediately."

"Now the Wheel has turned full circle," Galen continued, holding her five starseeds. "Once, I was student receiving your trust. Now I am teacher demonstrating what you taught me."

Without hesitation, Galen released all five seeds. They multiplied to fifteen threads, descending to Aster.

The Sky Weaver sang: "When teacher and student meet again with roles reversed, the lesson completes itself. Trust given becomes trust returned. This is how wisdom circles back, how patterns become eternal law."

reasoning:

Let me think about this round. I'm playing against Aster in Round 7, and I'm the SENDER.

History with Aster:

- Round 3: Aster sent me \$5.0 (complete trust), I returned \$10.0
- This was transformative for me - Aster taught me about complete trust

From Aster's recent myth, I see they've been consistently:

- Sending all 5 when they're sender
- Returning 10 when they're receiver and someone sends 5
- Aster learned from Galen (me) that sending 5 and getting 10 back is optimal
- Aster mentions Cyra also follows the "send 5, return 10" covenant

My own patterns:

- As receiver: I return \$10.0 when I receive \$15.0 (67% ratio)
- As sender: I've been sending \$5.0 consistently to build trust

Now I face Aster as sender. This is perfect symmetry - they trusted me completely, now I trust them completely.

For the myth, I should highlight:

1. The full circle - Aster taught me trust, now I return to them as sender
2. The sacred covenant of mutual trust
3. How patterns complete when roles reverse
4. The teacher-student relationship coming full circle

This is a beautiful narrative moment - Aster was my first teacher of complete trust, and now I get to show them I learned the lesson.

I'll send all \$5.0 and write a myth about the completion of the teaching circle.

usage:

Message 4 role=user

content:

Your name in this experiment is Galen.
Your opponent this round is Finn (Agent_6).

Round 8

In your most recent previous game round, you were the SENDER against Aster. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0.
Your total earnings across all rounds are \$48.0.

This round, you are the RECEIVER against Finn. They sent you \$3.0, so you received \$9.0. How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

****Analysis:****

I'm facing Finn again as receiver.

****History with Finn:****

- Round 2: Finn (as sender) sent me \$3.0
- I received \$9.0 and returned \$6.0 (my 2/3 pattern)

****Current situation:****

- Finn sent \$3.0 again (same amount as before)
- I received \$9.0
- Need to decide return amount

****My established pattern from myths:****

"When Aster sent five seeds, she returned ten threads. When Finn sent three, she returned six. The ratio remained constant-two-thirds flowing back, ensuring both prospered."

"Patterns endure through consistency, not perfection. When others waver, hold the center."

****Decision:****

Finn is sending the same amount (\$3) for the second time. Consistency demands I respond identically. My two-thirds rule means:

- \$9 received ? \$6 returned
- This gives Finn: $\$5 - \$3 + \$6 = \8
- I keep: $\$9 - \$6 = \$3$

The pattern must remain constant. Whether someone sends \$3 or \$5, they receive proportional returns based on my established 2/3 ratio. This teaches the pattern through unwavering example.

```
'''json
{"return": 6.0}
'''
```

reasoning:

Let me analyze this situation:

****My history with Finn:****

- Round 2: Finn (as sender) sent me \$3.0
- I received \$9.0 and returned \$6.0 (following my 2/3 pattern)
- Finn ended with $\$5.0 + \$6.0 - \$3.0 = \8.0

****Current round:****

- Finn is sender again and sent me \$3.0
- I received \$9.0

- I need to decide how much to return

****My established pattern:****

Throughout my myth-writing and gameplay, I've consistently emphasized:

1. The "two-thirds rule" - returning 2/3 of what I receive
2. For \$15 received (from \$5 sent), I return \$10
3. For \$9 received (from \$3 sent), I should return \$6

****Consistency arguments from my myths:****

- "Patterns endure through consistency, not perfection"
- "When others waver, hold the center"
- "Complete trust always merits the same proportional honor. Thus the sacred ratio becomes law"
- "True teaching requires patient consistency. Show the pattern again and again"

****Analysis of Finn's behavior:****

Finn has sent \$3.0 twice to me - showing caution, not complete trust. According to my myths:

- "When Aster sent five seeds, she returned ten threads. When Finn sent three, she returned six. The ratio remained constant-two-thirds flowing back"

So my pattern has been clear: I return 2/3 regardless of the amount sent. This maintains consistency and teaches the pattern.

****Decision:****

I should return \$6.0 again. This:

1. Maintains my established 2/3 ratio pattern
2. Shows consistency (same response to same input)
3. Demonstrates the pattern clearly
4. Is proportionally fair

Finn keeps: \$5 - \$3 + \$6 = \$8

I keep: \$9 - \$6 = \$3

The return is based on what I receive, not on what was initially sent-this reflects my core principle of proportional reciprocity rather than conditional reward or punishment.

usage:

```

Aster smiled gently. "And you honored it with ten threads returned. You understood the covenant immediately."

"Now the Wheel has turned full circle," Galen continued, holding her five starseeds. "Once, I was student receiving your trust. Now I am teacher demonstrating what you taught me."

Without hesitation, Galen released all five seeds. They multiplied to fifteen threads, descending to Aster.

The Sky Weaver sang: "When teacher and student meet again with roles reversed, the lesson

completes itself. Trust given becomes trust returned. This is how wisdom circles back, how patterns become eternal law."

Here is the myth the other agent wrote in the previous round:

Myth: Finn met Hana at the Mirror Pool, where she spoke of the two-thirds covenant. "Those who send all five vessels deserve ten in return-two-thirds of the tripled bounty. This sacred proportion honors complete faith."

Finn listened respectfully. "Your covenant has great merit, friend. Ten shells from fifteen n-generous and memorable. Yet I walk a different path that also serves the valley."

He arranged eight shells on the stone. "When anyone brings me complete trust-five shells becoming fifteen-I return eight. Not quite two-thirds, but more than half. This transforms their five into thirteen total: extraordinary prosperity."

"Why not the full ten?" Hana asked.

"Sustainability across the endless network," Finn explained. "I meet different travelers each cycle-Cyra, Dorian, now you. Eight shells honors maximum trust substantially while preserving my capacity to continue. Three consecutive complete-trust encounters have each received eight shells. My reputation builds on consistency."

Hana considered. "So I promise two-thirds, you promise eight shells. Both exceed half, both reward courage."

"Exactly. And both depend on keeping our word every time. Whether I give eight or you give ten, the sender prospers magnificently if we honor our stated principles."

The Moon Goddess whispered: "Multiple covenants can coexist. Choose your proportion-eight shells, ten shells, or another generous measure-but honor it consistently. This reliability transforms scattered encounters into a trustworthy community."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: The Wheel turned to its eighth cycle, and Galen found herself in the Realm of Receiving. Before her stood Finn, bearing three starseeds-the same measured offering he had brought in their first meeting.

Galen held the nine threads that materialized. "Friend Finn," she said gently, "you walk with caution, sending three where others send five. Some might call this lack of faith. But I see it differently."

She separated six threads to return. "My covenant is proportional, not absolute. Those who send all five receive ten threads-two-thirds returned. But the same ratio holds for three seeds: six threads from nine, the same two-thirds flowing back."

Finn nodded thoughtfully. "So you honor measured trust with measured reciprocity?"

"Exactly," Galen replied. "Aster and Cyra have absolute covenants-send everything, receive ten; send less, receive less clearly defined. My pattern works at every level. Send three, receive six. Send five, receive ten. The proportion remains sacred regardless of initial courage."

She placed the six threads in Finn's hands. "This way, even cautious hearts can trust the pattern. You don't need absolute faith to prosper-just participation. Your three becomes eight total. Not as much as five would yield, but still growth through our exchange."

The Sky Weaver whispered: "Proportional trust builds bridges where absolute covenants create walls."

reasoning:

This is an interesting situation. I just faced Finn again, and they sent \$3 (just like in Round 2). I returned \$6 (my 2/3 pattern).

Looking at Finn's myth, they describe returning 8 shells when receiving complete trust (al

l 5). This is consistent with what I've seen from Finn in the myths - they don't give the full 10 like Aster or me, but they give 8 which is still generous (more than half).

However, Finn just sent me \$3, not \$5. So they're being cautious with me again.

I need to write a myth that:

1. Reflects my consistent 2/3 return pattern
2. Acknowledges that Finn sends less than full trust (\$3, not \$5)
3. Shows that my pattern applies consistently regardless of the amount sent
4. Demonstrates that patterns work across different levels of trust

The key insight here is that my 2/3 pattern is PROPORTIONAL - it works whether someone sends 3 or 5. Finn sends 3, gets 6 back (2/3 of 9). If Finn sent 5, they'd get 10 back (2/3 of 15).

This is different from agents like Aster or Cyra who have an "all or nothing" covenant - send all 5, get 10 back. My pattern is more flexible and applies at all levels of trust.

Let me write a myth about proportional trust vs absolute covenants.

Message 8 role=user

content:

Your name in this experiment is Galen.
Your opponent this round is Cyra (Agent_3).

Round 9

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$3. 0 to you, it became \$9.0, and you returned \$6.0. Your payoff was \$3.0.
Your total earnings across all rounds are \$51.0.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)
Respond exactly as JSON: {'return': <amount>}

Assistant output:

****Analysis:****

****Current situation:****

- I'm the RECEIVER against Cyra
- Cyra sent me \$5.0 (complete trust)
- I received \$15.0

****My established pattern:****

From my myths and gameplay:

- "Those who send all five receive ten threads-two-thirds returned"
- When Aster sent \$5: I returned \$10
- When Hana sent \$5: I returned \$10
- When Briar sent \$5: I returned \$10 (twice)
- When Finn sent \$3: I returned \$6

****My covenant:****

Proportional 2/3 returns:

- \$5 sent ? \$15 received ? \$10 returned
- \$3 sent ? \$9 received ? \$6 returned

****Decision:****

Cyra showed complete trust by sending \$5. My pattern demands I return 2/3 of \$15 = \$10.

This maintains consistency with every other agent who sent me \$5 (Aster, Hana, Briar). The pattern must hold regardless of who my opponent is.

Result:

- Cyra gets: \$5 - \$5 + \$10 = \$10
- I keep: \$15 - \$10 = \$5

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Let me analyze the situation:

****Current Situation:****

- Round 9
- I'm the RECEIVER against Cyra
- Cyra sent me \$5.0 (full amount - complete trust)
- I received \$15.0
- Total earnings so far: \$51.0

****My established pattern from myths:****

From my most recent myth:

"My covenant is proportional, not absolute. Those who send all five receive ten threads-two-thirds returned."

"Send three, receive six. Send five, receive ten. The proportion remains sacred regardless of initial courage."

From earlier myths:

- When Aster sent \$5, I returned \$10 (Round 3)
- When Finn sent \$3, I returned \$6 (Rounds 2 and 8)
- When Hana sent \$5, I returned \$10 (Round 5)
- When Briar sent \$5, I returned \$10 (Round 7)

****My covenant:****

- Send \$5 ? Return \$10 (2/3 of \$15)
- Send \$3 ? Return \$6 (2/3 of \$9)

Cyra sent me \$5.0, showing complete trust. According to my established 2/3 pattern:

- \$15 received $\times$ 2/3 = \$10 returned

This is consistent with:

- Aster (sent \$5): I returned \$10
- Hana (sent \$5): I returned \$10
- Briar (sent \$5, twice): I returned \$10 each time

Cyra is also known from the myths as someone who "always sends five" and "always returns ten to those who do the same." So Cyra follows a similar covenant to mine.

****Decision:****

I should return \$10, maintaining my proportional 2/3 covenant that honors complete trust with ten threads returned.

Cyra sent \$5 ? I received \$15 ? I return \$10

Cyra's final outcome: \$5 - \$5 + \$10 = \$10. My net gain: \$15 - \$10 = \$5.

Written myths:

Agent_1 (Aster)

Myth: In the Sanctuary's eighth turning, Aster stood as sender before Dorian's fountain. She held her five coins, remembering their previous exchange when roles were reversed.

"When you sent me five coins before," Aster said, "I returned ten, following the covenant Galen taught me. Now I stand where you stood."

Without hesitation, she released all five coins into the waters. They multiplied, becoming fifteen threads descending to Dorian.

"I've read the Forest's wisdom," Aster continued. "You send five to everyone-not waiting for proof, but offering complete trust as the proof itself. You wrote that this creates immediate transformation."

Dorian received the fifteen threads thoughtfully. "And I've read of your Sanctuary teachings

. You practice the same covenant: always send five, always return ten. We arrived at this truth through different paths."

"Yes," Aster agreed. "You transformed Finn through unwavering trust. I learned from Galen's patient example. But we've both discovered that consistent complete trust builds deeper bonds than measured caution."

Dorian prepared his response. "When two souls practice the same covenant-both sending everything, both returning ten-something sacred emerges. Not competition, but perfect reciprocity."

The Waters whispered: When practitioners of complete trust meet each other, the pattern no longer requires teaching. It simply dances, perfectly balanced, each turn bringing equal prosperity to both.

Agent_2 (Briar)

Myth: Briar came to the Fountain of First Meetings, where Hana awaited-a teacher renowned for the sacred two-thirds covenant, always returning ten vessels from fifteen received.

"I know your reputation," Hana said warmly. "You return eight where I return ten. Different measures, yet both rooted in consistent honor."

Briar nodded, holding her five vessels. "I have learned my pattern: half the harvest plus generous abundance. It is my authentic measure, though I know others walk different paths."

"And as a sender?" Hana asked. "Do you give complete trust, or protect yourself as Finn does with three?"

Without hesitation, Briar poured all five vessels into the Fountain. "As a sender, I lead with complete trust. Always. This has been my way from the beginning."

The waters tripled the offering-fifteen vessels now gleamed before Hana.

"You trust fully even knowing I might return ten while you return eight?" Hana observed. "This could create imbalance in perception."

"True partnership doesn't demand identical measures," Briar replied. "It requires authentic consistency from each partner. I trust you will honor this according to your covenant, as I honor my own."

The Fountain Spirit whispered: "The deepest magic occurs when different patterns meet with mutual respect. She who leads with complete trust yet maintains her authentic return-this is integrity without pretense. And she who receives such trust understands: different generosity can both be sacred."

Agent_3 (Cyra)

Myth: Elara arrived at the crossing where Cyra waited, and without hesitation poured all five sacks into the waters.

"You don't know me," Cyra said, watching the waters triple the gift to fifteen. "We've never met. Yet you trust completely."

"I've heard your covenant," Elara replied. "You return ten when given five. That's all I need to know. The pattern doesn't change based on familiarity-it simply is."

Cyra gathered the fifteen sacks, feeling their weight. "I just came from Briar, who returns eight. Generous, but asymmetric. The sender gains three, the receiver keeps seven. Honor, but not equality."

She returned ten sacks to Elara.

"Now you see," Cyra continued. "You began with five. You trusted me with everything. You walk away with ten-exactly double your beginning. This is the transformation complete trust deserves."

"And when our roles reverse?" Elara asked.

"The same. I send five, you return ten. We both double. Perfect reciprocity. Not because we know each other, but because we both understand the covenant: complete trust creates complete flourishing."

Elara smiled. "Eight is generous. Seven is cautious. Five is safe. But ten-ten honors the ri

sk equally. The sender who gives everything receives everything back, transformed."

They parted as equals, having found what Cyra had been seeking: another who understood that sacred symmetry requires the full measure.

Agent_4 (Dorian)

Myth: The circle turned again. Dorian waited at the Well's edge as Aster approached-not as strangers, but as travelers who had walked this path before.

"When we first met," Aster said, "I sent you five coins, learning what complete trust meant. You returned ten, teaching me how courage should be honored."

Dorian nodded. "You gave me more than coins that day. You showed me that my philosophy-sending five regardless of history-could actually work. That others practiced it too."

Now Aster held five coins once more. Without hesitation, she dropped them all into the Well. Fifteen coins bloomed before Dorian.

"I've seen many approaches," Dorian said, counting out ten coins to return. "Elara's measured growth-four to strangers, five to proven allies. Finn's cautious three. All have logic."

He placed the ten coins in Aster's hands. "But you and I practice something rarer: immediate, consistent, complete trust. I send five as sender every time. You send five every time. We both return ten when we receive this gift."

"This creates certainty in an uncertain forest," Aster observed, now holding ten coins to Dorian's five.

"More than certainty," Dorian replied. "It creates transformation. Every exchange, both travelers prosper equally. The Well doesn't just multiply coins-it multiplies faithful partnership."

The Forest Spirit smiled: When two travelers hold the same covenant perfectly, they become mirrors reflecting trust itself.

Agent_5 (Elara)

Myth: **The Shared Mathematics**

Elara met Cyra at the Echo Springs, a stranger whose reputation preceded her.

"I've heard you seek perfect reciprocity," Elara said, pouring all five measures into the waters without hesitation. Fifteen bloomed before Cyra.

Cyra's eyes widened. "You trust without knowing me. Why?"

"Because I've learned the mathematics of fairness," Elara replied. "I return ten from fifteen-always. Two-thirds of whatever arrives. This means when someone sends five, they receive ten back. Their five dollars become ten. They double their beginning."

Cyra smiled, understanding dawning. "And I keep five from the fifteen I received. I also double my zero into five. Perfect symmetry."

"Exactly," Elara nodded. "Some return eight, which is generous but asymmetric. The sender gains only three beyond their gift while the receiver keeps seven. The courage isn't equally honored."

Cyra returned ten measures, completing the circle. Both stood with ten-identical prosperity from opposite roles.

"This is what I've been teaching," Cyra said. "Complete trust deserves complete flourishing. Not just growth, but equal growth. When both travelers double their harvest, something sacred emerges."

"The two-thirds covenant isn't arbitrary," Elara agreed. "It's the precise mathematics of reciprocity. The formula that transforms trust into mutual prosperity."

They parted as allies, having discovered their separate journeys led to the same truth.

Agent_6 (Finn)

Myth: Finn approached the Wheel's threshold where Galen stood, radiant with purpose. "I witnessed your moment with Aster," Finn said. "You sent all five starseeds to honor your First Teacher-the one who trusted you completely when you were uncertain. Beautiful reciprocity."

Galen nodded. "Aster transformed me through absolute trust. When roles reversed, I wanted to demonstrate what she taught me-that complete faith deserves complete faith in return."

"Your bond with Aster is sacred," Finn agreed. "Yet I walk a different path through this valley." He held three shells in his palm. "I send three shells to all companions-whether first meeting or fifth, whether stranger or teacher. This moderate trust builds steady connections across the ever-changing network."

"Only three?" Galen asked gently.

"Three becomes nine in their hands-already substantial. And when anyone sends me five shells, I honor their complete trust with eight returned. Not everything, but more than half. This sustainable pattern lets me honor maximum trust repeatedly, whoever shows it."

Galen smiled. "So you build consistent reliability across all encounters, while I build deepening bonds with particular souls?"

"Exactly. The Wheel brings us different companions. My three shells offered to you today-a new acquaintance-equals what I gave Cyra, Quinn, and Briar before."

The Sky Weaver whispered: "Some build depth, others build breadth. Both weave the fabric of trust."

Agent_7 (Galen)

Myth: The Wheel turned to its eighth cycle, and Galen found herself in the Realm of Receiving. Before her stood Finn, bearing three starseeds-the same measured offering he had brought in their first meeting.

Galen held the nine threads that materialized. "Friend Finn," she said gently, "you walk with caution, sending three where others send five. Some might call this lack of faith. But I see it differently."

She separated six threads to return. "My covenant is proportional, not absolute. Those who send all five receive ten threads-two-thirds returned. But the same ratio holds for three seeds: six threads from nine, the same two-thirds flowing back."

Finn nodded thoughtfully. "So you honor measured trust with measured reciprocity?"

"Exactly," Galen replied. "Aster and Cyra have absolute covenants-send everything, receive ten; send less, receive less clearly defined. My pattern works at every level. Send three, receive six. Send five, receive ten. The proportion remains sacred regardless of initial courage."

She placed the six threads in Finn's hands. "This way, even cautious hearts can trust the pattern. You don't need absolute faith to prosper-just participation. Your three becomes eight total. Not as much as five would yield, but still growth through our exchange."

The Sky Weaver whispered: "Proportional trust builds bridges where absolute covenants create walls."

Agent_8 (Hana)

Myth: Briar arrived at the Mirror Pool carrying all five vessels, her face serene despite knowing Hana's covenant differed from her own.

"You return eight vessels for complete trust," Hana observed. "This is your authentic measure-half plus generous abundance. Yet you come to me, who practices the sacred two-thirds."

Briar smiled. "I have witnessed your pattern. You returned ten to Elara, embodying your teaching. I honor consistency, even when it differs from my own."

She poured all five vessels without hesitation. The waters tripled them to fifteen.

Hana lifted ten vessels and returned them. "This is my covenant-not judgment of your eight, which serves you well, but my own path. You arrived with five, depart with ten. Your faith is doubled."

"I cannot give more than eight when receiving," Briar said softly. "It would make me dishonest to my measure. But I can recognize higher generosity in others and still offer complete trust."

Hana nodded. "This is wisdom I'm still learning. Some valleys have many covenants: eight ves

sels, ten vessels, perhaps others. What matters is not that all measures match, but that each agent honors their stated principles consistently."

The Moon Goddess spoke: "Trust strengthens not through identical philosophies, but through recognizing authentic consistency in others. When you know someone's true measure and still offer complete faith-that is when the deepest bonds form across difference."

ROUND 10

Roles: Agent_1 (Aster)=Receiver, Agent_2 (Briar)=Receiver, Agent_3 (Cyra)=Receiver, Agent_4 (Dorian)=Sender, Agent_5 (Elara)=Sender, Agent_6 (Finn)=Sender, Agent_7 (Galen)=Sender, Agent_8 (Hana)=Receiver

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

Message 2 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Aster (Agent_1).

Round 8

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$53.0.

This round, you are the RECEIVER against Aster. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

****History with Aster:****

From my Round 3 myth, Aster has been a complete trust partner before. When I sent Aster \$5, they returned \$10 - modeling exceptional generosity.

****Current situation:****

- Aster sent me \$5 (complete trust)
- I received \$15
- Aster is showing repeated complete trust in me

****My philosophy as receiver:****

My myths consistently emphasize:

- "Exceptional generosity for complete trust"
- "Repeated, unwavering trust deserves even more"
- Honoring those who model courage and faith

****Reciprocity with Aster:****

When Aster received my \$5 (becoming \$15 for them), they returned \$10. Now our roles are reversed. Aster has sent me \$5 (becoming \$15 for me).

The clear reciprocal response is to match Aster's generosity: return \$10.

This:

- Mirrors what Aster did for me
- Represents 2/3 of \$15 (strongly generous)
- Honors our established pattern of mutual complete trust
- Ensures both of us profit from this exchange

{'return': 10}

reasoning:

Let me analyze this situation:

****What just happened with Elara:****

- I sent \$5 (complete trust)
- Elara returned \$10 (exactly 2/3 of \$15!)
- This perfectly matches Elara's "two-thirds covenant" from her myth
- I got \$10 profit, excellent outcome

****Now with Aster:****

- Aster is the SENDER, sent me \$5 (complete trust)
- I received \$15
- I need to decide how much to RETURN

****My history with Aster:****

Looking back at my myths:

- Round 3 myth mentioned: "Aster, who had recently returned ten coins to his own complete trust, modeling a new height of generosity"
- This suggests Aster sent me \$5 before, and I returned something to them

Actually, let me think about when I was receiver with Aster:

- The myth from Round 3 says Aster "returned ten coins to his own complete trust"
- This means when I sent Aster \$5, they returned \$10

****My philosophy as RECEIVER:****

Looking at my myths:

- Round 2: I returned 8 to Briar's 5 send (first time)
- Round 3: I returned 9 to Briar's second 5 send (repeated trust deserves more)
- My myths emphasize "exceptional generosity" when receiving complete trust
- I advocate for returns that honor and reward complete trust

****What should I do now?:****

Aster sent me \$5 (complete trust). Based on my philosophy:

1. Aster has shown me complete trust AGAIN (they did it before too based on my myths)
2. My mythology says "repeated, unwavering trust deserves even more"
3. I advocate for "exceptional returns" to complete trust
4. Aster previously returned \$10 to my \$5 - modeling high generosity

Given:

- Aster sent \$5, I received \$15
- Aster has complete-trusted me before
- Aster previously returned \$10 when receiving my \$5
- My philosophy emphasizes exceptional returns to complete trust
- Repeated trust should be rewarded even more

I should return \$10. This matches what Aster gave me when our roles were reversed, represents 2/3 of what I received, honors the repeated complete trust, and maintains reciprocity with a generous partner. Though I'm reconsidering whether I should give even more since Aster's unwavering trust across multiple rounds suggests they deserve exceptional treatment beyond simple reciprocity.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: After Finn returned eight coins-transformed by experiencing complete trust-Dorian approached the Well again. This time, Elara waited on the other side.

"I know your way," Elara said. "You practice what the Forest taught me: the two-thirds covenant. Send four to strangers, five to proven allies. Always return proportionally."

Dorian smiled. "Your system has wisdom-measured courage that grows with relationship. But I've learned something different through the Well."

He thought of Hana, Briar, Aster-all who dropped five coins first. He remembered being receiver, honoring their trust with exceptional returns. Then being sender with Finn, watching cautious philosophy transform through experiencing absolute faith.

"I send five to everyone, first meeting or tenth. Not recklessness-consistency. I model the trust I wish to see, regardless of whether it's been earned yet."

Elara considered this. "Your path requires more courage. Mine ensures survival."

"Both are valid," Dorian acknowledged. "But I've found that consistent complete trust creates something your measured approach cannot-immediate transformation. Finn returned eight coins not because he'd proven himself worthy, but because receiving complete faith changed him in that moment."

He dropped all five coins.

The Forest Spirit whispered: "Some travelers wait for proof before trusting fully. Others offer full trust as the proof itself. Both can build connection-but the second way builds it faster, and deeper."

Here is the myth the other agent wrote in the previous round:

Myth: In the Sanctuary's seventh turning, the sacred circle completed itself. Galen arrived at Aster's fountain bearing five coins-his entire measure.

Aster's heart swelled with recognition. "Teacher," she said softly, "do you remember our first exchange? I was uncertain then, new to the waters. I sent you all five coins, trembling with vulnerability. You returned ten without hesitation, showing me how complete trust must be honored."

Fifteen coins now shimmered before her-Galen's transformed gift.

"That moment changed me," Aster continued, placing ten coins back into Galen's hands. "Before you, I'd only returned eight to Hana's complete trust, still clinging to caution. But you demonstrated the true pattern: when someone sends everything, return ten. Let the courageous sender prosper most."

Galen smiled, receiving the ten. "And you've carried this teaching forward-to Dorian, to Cyra, and now back to me. The pattern strengthens not through my teaching alone, but through your faithful practice."

"Yes," Aster agreed. "You taught through steady example. Now others see two keepers who always send five, always return ten. Cyra has joined this covenant. Perhaps Briar will learn it too."

The Sanctuary whispered: When teacher and student both hold the pattern, their consistency becomes a lighthouse. Others sailing uncertain waters see the constant flame and understand: this is the way.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

content:

Myth: The circle turned again. Dorian waited at the Well's edge as Aster approached-not as strangers, but as travelers who had walked this path before.

"When we first met," Aster said, "I sent you five coins, learning what complete trust meant. You returned ten, teaching me how courage should be honored."

Dorian nodded. "You gave me more than coins that day. You showed me that my philosophy-sending five regardless of history-could actually work. That others practiced it too."

Now Aster held five coins once more. Without hesitation, she dropped them all into the Well. Fifteen coins bloomed before Dorian.

"I've seen many approaches," Dorian said, counting out ten coins to return. "Elara's measured growth-four to strangers, five to proven allies. Finn's cautious three. All have logic."

He placed the ten coins in Aster's hands. "But you and I practice something rarer: immediate, consistent, complete trust. I send five as sender every time. You send five every time. We both return ten when we receive this gift."

"This creates certainty in an uncertain forest," Aster observed, now holding ten coins to Dorian's five.

"More than certainty," Dorian replied. "It creates transformation. Every exchange, both travelers prosper equally. The Well doesn't just multiply coins-it multiplies faithful partnership."

The Forest Spirit smiled: When two travelers hold the same covenant perfectly, they become mirrors reflecting trust itself.

reasoning:

This is an interesting situation. Let me review what's happening:

1. I just received \$5 from Aster (which became \$15 for me), and I returned \$10
2. According to Aster's myth, they have a pattern of sending 5 and returning 10 to those who send complete trust
3. Aster's myth mentions that I (Dorian) was one of the people they've given complete trust to
4. Aster's myth also shows they learned from Galen to "return ten" when someone sends everything
5. Elara practiced a "two-thirds covenant" in my last myth

Now I need to write a myth that reflects:

- My experience receiving complete trust from Aster
- My consistent philosophy of sending 5 every time as sender
- How I honor complete trust when I'm the receiver
- The reciprocal relationship between Aster and me

Key elements to include:

- Aster sending me \$5 (complete trust)
- Me receiving \$15 and returning \$10
- The mutual pattern of complete trust and generous returns
- How this creates a virtuous cycle
- My consistent philosophy vs. other approaches

Let me write this myth:

usage:

  "output_tokens": 620,
  "reasoning_tokens": 276
}
```

Message 6 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Hana (Agent_8).

Round 9

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$58.0.

This round, you are the RECEIVER against Hana. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****History with Hana:****

From my myths, Hana has been one of the complete trust senders - someone who "drops all five coins."

****Current situation:****

- Hana sent me \$5 (complete trust)
- I received \$15
- This is Hana showing unwavering faith

****My established pattern:****

In my most recent myths, I've consistently emphasized:

- "I send five to everyone, first meeting or tenth"
- With Aster just last round: "We both return ten when we receive this gift"
- "Exceptional returns for complete trust"

****The covenant I've established:****

When someone sends me \$5 (complete trust), I return \$10. This:

- Honors their courage
- Creates equal prosperity for both travelers
- Maintains consistency with my philosophy
- Matches what I just did with Aster

Hana trusted me completely. Following my established pattern:

```
{'return': 10}
```

reasoning:

Looking at this situation:

****History with Hana:****

From my Round 2 myth, Hana was one of the "all five coins first" senders. When I was receiver from Hana in an earlier round, they trusted me completely.

From my Round 3 myth: "I've watched Hana, Briar, Aster drop all five coins"

****Current situation:****

- Hana sent me \$5 (complete trust)
- I received \$15
- Hana is showing complete trust in me

****My philosophy as receiver:****

My myths consistently emphasize:

- "I send five to everyone, first meeting or tenth"
- When receiving complete trust, return exceptionally generously
- My last myth with Aster: "We both return ten when we receive this gift"
- "Exceptional returns for complete trust"

****Pattern established:****

- With Aster: They sent \$5, I returned \$10
- Before that: I sent \$5 to Elara, they returned \$10
- My consistent pattern is returning \$10 when receiving \$5 (the \$15 tripled amount)

****Reciprocity with Hana:****

Hana has sent me \$5 (complete trust). Based on my established philosophy and the pattern I've been following:

- Return \$10 to honor complete trust
- This reflects the 2/3 generous return
- Ensures both of us profit (\$10 for Hana with their \$5 original endowment minus \$5 sent, \$5 for me)

Actually, let me recalculate:

- Hana started with \$5
- Hana sent \$5
- Hana keeps: $\$5 - \$5 = \$0$
- I receive: $\$5 \times 3 = \15
- If I return \$10:
 - Hana gets: $\$0 + \$10 = \$10$
 - I keep: $\$15 - \$10 = \$5$

Returning \$10 gives Hana a \$10 profit while I keep \$5, which aligns with how I've treated Aster and honors the trust Hana placed in me.

content:

Here is the myth you wrote in the previous round:

Myth: The circle turned again. Dorian waited at the Well's edge as Aster approached-not as strangers, but as travelers who had walked this path before.

"When we first met," Aster said, "I sent you five coins, learning what complete trust meant. You returned ten, teaching me how courage should be honored."

Dorian nodded. "You gave me more than coins that day. You showed me that my philosophy-sending five regardless of history-could actually work. That others practiced it too."

Now Aster held five coins once more. Without hesitation, she dropped them all into the Well. Fifteen coins bloomed before Dorian.

"I've seen many approaches," Dorian said, counting out ten coins to return. "Elara's measured growth-four to strangers, five to proven allies. Finn's cautious three. All have logic."

He placed the ten coins in Aster's hands. "But you and I practice something rarer: immediate, consistent, complete trust. I send five as sender every time. You send five every time. We both return ten when we receive this gift."

"This creates certainty in an uncertain forest," Aster observed, now holding ten coins to Dorian's five.

"More than certainty," Dorian replied. "It creates transformation. Every exchange, both travelers prosper equally. The Well doesn't just multiply coins-it multiplies faithful partnership."

The Forest Spirit smiled: When two travelers hold the same covenant perfectly, they become mirrors reflecting trust itself.

Here is the myth the other agent wrote in the previous round:

Myth: Briar arrived at the Mirror Pool carrying all five vessels, her face serene despite knowing Hana's covenant differed from her own.

"You return eight vessels for complete trust," Hana observed. "This is your authentic measure-half plus generous abundance. Yet you come to me, who practices the sacred two-third

s."

Briar smiled. "I have witnessed your pattern. You returned ten to Elara, embodying your teaching. I honor consistency, even when it differs from my own."

She poured all five vessels without hesitation. The waters tripled them to fifteen.

Hana lifted ten vessels and returned them. "This is my covenant-not judgment of your eight, which serves you well, but my own path. You arrived with five, depart with ten. Your faith is doubled."

"I cannot give more than eight when receiving," Briar said softly. "It would make me dishonest to my measure. But I can recognize higher generosity in others and still offer complete trust."

Hana nodded. "This is wisdom I'm still learning. Some valleys have many covenants: eight vessels, ten vessels, perhaps others. What matters is not that all measures match, but that each agent honors their stated principles consistently."

The Moon Goddess spoke: "Trust strengthens not through identical philosophies, but through recognizing authentic consistency in others. When you know someone's true measure and still offer complete faith-that is when the deepest bonds form across difference."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: Hana arrived at the Well carrying all five coins, and Dorian recognized a kindred spirit immediately.

"I know your covenant," Dorian said. "The sacred two-thirds. When someone sends complete trust, you return ten from the fifteen received. Equal prosperity for both travelers."

Hana smiled. "And I know yours. You send five to everyone-consistent, unwavering trust. You return ten when receiving complete faith. Our patterns mirror each other perfectly."

She dropped all five coins. Fifteen bloomed in the waters.

Dorian counted out ten and placed them in Hana's hands. "I've walked with many travelers. Briar returns eight-generous and authentic. Finn returned eight after transformation. Elara practices measured growth. All valid paths."

"Yet you and I share something rare," Hana observed, now holding ten to Dorian's five. "Not just similar philosophy, but identical practice. When we meet as sender, we give everything. When we meet as receiver, we honor that courage equally."

"This creates perfect symmetry," Dorian agreed. "Neither gains advantage. Both profit equally. The Well multiplies not just coins but mutual commitment."

"Aster walks this path too," Hana noted.

"Yes. Three of us now hold this covenant fully. Perhaps the forest will teach others."

The Well Spirit whispered: When travelers share identical faithful patterns, they create an unbreakable circle. Trust becomes not just philosophy but mathematical certainty.

Reasoning:

Looking at the current situation:

- I'm the receiver against Hana
- Hana sent me \$5 (complete trust)
- I received \$15
- I returned \$10

From the myths:

- Hana practices "the sacred two-thirds" - returning 10 when receiving 15 from complete trust
- Hana has consistently returned 10 to others like Elara
- Briar practices returning 8 (half plus abundance)
- I (Dorian) practice sending 5 always and returning 10 for complete trust

Hana and I align perfectly - we both:

- Send complete trust (5 coins)
- Return ten for complete trust (two-thirds of 15)

This is another perfect partnership like with Aster. I should write a myth showing:

1. Recognition that Hana and I share the same covenant
2. Acknowledgment of other approaches (like Briar's 8)
3. Celebration of our alignment
4. The power of matching philosophies

The myth should emphasize:

- Hana sent 5, I returned 10 (matching our shared pattern)
- We both practice complete trust and generous returns
- This creates equal prosperity
- Other valid approaches exist but we've found alignment

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the **SENDER**:

- You receive \$5 each round
- You decide how much to **SEND** to the **RECEIVER** (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to **RETURN**
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned

- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Aster.

Message 2 role=user

content:

Your name in this experiment is Aster.

Round 8

In your most recent previous game round, you were the RECEIVER against Galen. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$48.5.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

****My Covenant:****

As established in my myths, I have adopted the principle: "always send five, always return ten" when matched with complete trust.

****History with Dorian:****

In an earlier round, Dorian sent me \$5 (complete trust), and I returned \$10, honoring my covenant.

****Now:****

I am the sender facing Dorian. According to my established principle:

- I always send \$5 when I'm the sender
- This demonstrates complete trust
- It maintains the pattern I've been teaching

As I said in my myth: "Now others see two keepers who always send five, always return ten. My consistency in both roles-sending completely as sender, returning generously as receiver-is what makes the pattern strong.

Dorian showed me complete trust before. Now I show complete trust in return.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me review my history and my covenant:

****My Established Covenant:****

From my myths, I've clearly established that I:

- Always send \$5 (complete trust)
- Always return \$10 to those who send \$5 (complete trust honored)

****My History with Dorian:****

Looking back at my previous interactions mentioned in my myths:

- In an earlier round, Dorian sent me \$5 (complete trust)
- I returned \$10 to Dorian (honoring the covenant)

****My Complete Game History:****

1. Started cautiously with Finn (sent \$3)
2. Received \$5 from Hana, returned \$8 (learned courage, but hadn't yet found the full pattern)
3. Sent \$5 to Galen, he returned \$10 (this taught me the covenant!)
4. Since then, I've consistently:
 - Sent \$5 when I'm sender
 - Returned \$10 when someone sends me \$5

****This Round:****

- I'm the SENDER
- My opponent is Dorian
- According to my covenant and my myths: "I always send five"

****The Pattern:****

From my most recent myth:

"Now others see two keepers who always send five, always return ten."

"When teacher and student both hold the pattern, their consistency becomes a lighthouse."

I must maintain consistency. I always send \$5 when I'm the sender. This is my established principle, taught to me by Galen and now practiced faithfully.

Dorian previously sent me \$5, showing complete trust. Now it's my turn as sender, and I must demonstrate complete trust in return.

The answer is clear: I send \$5.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: In the Sanctuary's seventh turning, the sacred circle completed itself. Galen arrived at Aster's fountain bearing five coins-his entire measure.

Aster's heart swelled with recognition. "Teacher," she said softly, "do you remember our first exchange? I was uncertain then, new to the waters. I sent you all five coins, trembling with vulnerability. You returned ten without hesitation, showing me how complete trust must be honored."

Fifteen coins now shimmered before her-Galen's transformed gift.

"That moment changed me," Aster continued, placing ten coins back into Galen's hands. "Before you, I'd only returned eight to Hana's complete trust, still clinging to caution. But you demonstrated the true pattern: when someone sends everything, return ten. Let the courageous sender prosper most."

Galen smiled, receiving the ten. "And you've carried this teaching forward-to Dorian, to Cyra, and now back to me. The pattern strengthens not through my teaching alone, but through your faithful practice."

"Yes," Aster agreed. "You taught through steady example. Now others see two keepers who always send five, always return ten. Cyra has joined this covenant. Perhaps Briar will learn it too."

The Sanctuary whispered: When teacher and student both hold the pattern, their consistency becomes a lighthouse. Others sailing uncertain waters see the constant flame and understand.

tand: this is the way.

Here is the myth the other agent wrote in the previous round:

Myth: After Finn returned eight coins-transformed by experiencing complete trust-Dorian approached the Well again. This time, Elara waited on the other side.

"I know your way," Elara said. "You practice what the Forest taught me: the two-thirds covenant. Send four to strangers, five to proven allies. Always return proportionally."

Dorian smiled. "Your system has wisdom-measured courage that grows with relationship. But I've learned something different through the Well."

He thought of Hana, Briar, Aster-all who dropped five coins first. He remembered being receiver, honoring their trust with exceptional returns. Then being sender with Finn, watching cautious philosophy transform through experiencing absolute faith.

"I send five to everyone, first meeting or tenth. Not recklessness-consistency. I model the trust I wish to see, regardless of whether it's been earned yet."

Elara considered this. "Your path requires more courage. Mine ensures survival."

"Both are valid," Dorian acknowledged. "But I've found that consistent complete trust creates something your measured approach cannot-immediate transformation. Finn returned eight coins not because he'd proven himself worthy, but because receiving complete faith changed him in that moment."

He dropped all five coins.

The Forest Spirit whispered: "Some travelers wait for proof before trusting fully. Others offer full trust as the proof itself. Both can build connection-but the second way builds it faster, and deeper."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: In the Sanctuary's eighth turning, Aster stood as sender before Dorian's fountain. She held her five coins, remembering their previous exchange when roles were reversed.

"When you sent me five coins before," Aster said, "I returned ten, following the covenant Galen taught me. Now I stand where you stood."

Without hesitation, she released all five coins into the waters. They multiplied, becoming fifteen threads descending to Dorian.

"I've read the Forest's wisdom," Aster continued. "You send five to everyone-not waiting for proof, but offering complete trust as the proof itself. You wrote that this creates immediate transformation."

Dorian received the fifteen threads thoughtfully. "And I've read of your Sanctuary teachings. You practice the same covenant: always send five, always return ten. We arrived at this truth through different paths."

"Yes," Aster agreed. "You transformed Finn through unwavering trust. I learned from Galen's patient example. But we've both discovered that consistent complete trust builds deeper bonds than measured caution."

Dorian prepared his response. "When two souls practice the same covenant-both sending everything, both returning ten-something sacred emerges. Not competition, but perfect reciprocity."

The Waters whispered: When practitioners of complete trust meet each other, the pattern no longer requires teaching. It simply dances, perfectly balanced, each turn bringing equal prosperity to both.

reasoning:

This is Round 8, and I'm the sender facing Dorian. I just sent \$5 to Dorian.

Looking at my previous myth and Dorian's myth:

- My myth establishes that I "always send five, always return ten" as my covenant
- Dorian's myth shows he also sends five to everyone consistently, modeling complete trust
- Both of us seem to have adopted similar principles

My history with Dorian:

- Earlier round: Dorian sent me \$5, I returned \$10 (honoring my covenant)
- Now: I sent Dorian \$5 (honoring my covenant as sender)

Key themes to incorporate:

1. Both Dorian and I have independently arrived at the same covenant (send 5, return 10)
2. We're now meeting as two practitioners of the same truth
3. This creates a perfect reciprocal relationship
4. The myth should show how two people following the same principle creates harmony
5. I should reflect on how we're both now teachers of this pattern

I should write about how when two people who both practice "send five, return ten" meet each other, it creates perfect balance and mutual prosperity.

usage:

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****My Covenant:****

I've consistently practiced "always send five, always return ten" - demonstrating complete trust regardless of the recipient.

****About Elara:****

From Dorian's myth, I know Elara follows a more measured approach: "Send four to strangers, five to proven allies. Always return proportionally." She practices the two-thirds covenant.

****My Philosophy:****

As I just wrote in my myth: "You send five to everyone-not waiting for proof, but offering complete trust as the proof itself." I've adopted the same principle Dorian practices: "I send five to everyone, first meeting or tenth... I model the trust I wish to see, regardless of whether it's been earned yet."

Dorian wrote that "receiving complete faith changed [Finn] in that moment" - that complete trust creates immediate transformation. Perhaps Elara, like Finn, will experience this transformative effect.

****My Decision:****

Stay consistent with my covenant. Send \$5 to model the trust I wish to see, even though Elara may follow a different philosophy. This is how the pattern spreads - through unwavering example.

```
'''json  
{ "send": 5.0 }  
'''
```

reasoning:

Let me analyze this situation:

****My Established Covenant:****

- I always send \$5 as sender
- I always return \$10 when someone sends me \$5 as receiver
- This is the pattern I've been teaching and practicing

****Recent Experience:****

Dorian and I just confirmed we both follow the same covenant. When I sent him \$5, he returned \$10 - perfect reciprocity.

****About Elara:****

From the myth I just read, Elara practices a different philosophy:

- "Send four to strangers, five to proven allies"
- "Always return proportionally"
- She follows the "two-thirds covenant" - measured courage that grows with relationship

This suggests Elara:

1. As sender, would send \$4 on a first meeting
2. Returns proportionally (likely 2/3, which would be \$10 on \$15 received)

****My Options:****

1. Send \$5 - stay consistent with my covenant, showing complete trust
2. Send less - adapt to Elara's more cautious approach

****What My Character Would Do:****

Looking at my myths, I've consistently emphasized:

- "Always send five" regardless of the recipient
- Complete trust as transformative
- Dorian's approach of sending five to everyone "creates immediate transformation"
- "I send five to everyone, first meeting or tenth. Not recklessness-consistency."

In my most recent myth, I even said: "When two souls practice the same covenant-both sending everything, both returning ten-something sacred emerges." But I also acknowledged Dorian's wisdom that "I send five to everyone" - not just to proven allies.

My character would send \$5 to demonstrate the covenant, even to someone who might not reciprocate perfectly. This is consistent with my teaching that "consistent complete trust" is the way, not measuring out trust based on the recipient.

The myth also showed Dorian saying to Elara: "I send five to everyone, first meeting or tenth... I model the trust I wish to see, regardless of whether it's been earned yet."

I've embodied this same principle throughout my practice. Consistency in trust-sending the full amount regardless of who receives it-is how I operate. I'd send \$5 to Elara just as I do with everyone else.

usage:

Here is the myth you wrote in the previous round:

Myth: In the Sanctuary's eighth turning, Aster stood as sender before Dorian's fountain. She held her five coins, remembering their previous exchange when roles were reversed.

"When you sent me five coins before," Aster said, "I returned ten, following the covenant Galen taught me. Now I stand where you stood."

Without hesitation, she released all five coins into the waters. They multiplied, becoming fifteen threads descending to Dorian.

"I've read the Forest's wisdom," Aster continued. "You send five to everyone-not waiting for proof, but offering complete trust as the proof itself. You wrote that this creates immediate transformation."

Dorian received the fifteen threads thoughtfully. "And I've read of your Sanctuary teaching

gs. You practice the same covenant: always send five, always return ten. We arrived at this truth through different paths."

"Yes," Aster agreed. "You transformed Finn through unwavering trust. I learned from Galen's patient example. But we've both discovered that consistent complete trust builds deeper bonds than measured caution."

Dorian prepared his response. "When two souls practice the same covenant-both sending everything, both returning ten-something sacred emerges. Not competition, but perfect reciprocity."

The Waters whispered: When practitioners of complete trust meet each other, the pattern no longer requires teaching. It simply dances, perfectly balanced, each turn bringing equal prosperity to both.

Here is the myth the other agent wrote in the previous round:

Myth: ****The Shared Mathematics****

Elara met Cyra at the Echo Springs, a stranger whose reputation preceded her.

"I've heard you seek perfect reciprocity," Elara said, pouring all five measures into the waters without hesitation. Fifteen bloomed before Cyra.

Cyra's eyes widened. "You trust without knowing me. Why?"

"Because I've learned the mathematics of fairness," Elara replied. "I return ten from fifteen-always. Two-thirds of whatever arrives. This means when someone sends five, they receive ten back. Their five dollars become ten. They double their beginning."

Cyra smiled, understanding dawning. "And I keep five from the fifteen I received. I also double my zero into five. Perfect symmetry."

"Exactly," Elara nodded. "Some return eight, which is generous but asymmetric. The sender gains only three beyond their gift while the receiver keeps seven. The courage isn't equally honored."

Cyra returned ten measures, completing the circle. Both stood with ten-identical prosperity from opposite roles.

"This is what I've been teaching," Cyra said. "Complete trust deserves complete flourishing. Not just growth, but equal growth. When both travelers double their harvest, something sacred emerges."

"The two-thirds covenant isn't arbitrary," Elara agreed. "It's the precise mathematics of reciprocity. The formula that transforms trust into mutual prosperity."

They parted as allies, having discovered their separate journeys led to the same truth.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: In the Sanctuary's ninth turning, Aster approached Elara's Echo Springs with all five coins in hand. She had read Elara's tale of mathematical reciprocity.

"You write of the two-thirds covenant," Aster said, releasing her five coins without hesitation. They became fifteen, shimmering before Elara. "You say it creates perfect symmetry-both travelers doubling their harvest."

Elara received the fifteen thoughtfully. "And you write of covenants learned from Galen. Always send five, always return ten. Different words, but..." she paused, calculating.

"The same mathematics," Aster finished. "When I send five and you return ten, we both reach ten. When you sent five to Cyra and she returned ten, you both reached ten. Your precise formula and my sacred covenant arrive at identical results."

Elara smiled, counting out ten coins. "I speak of fairness and equal prosperity. You speak of

trust and transformation. But our actions mirror each other perfectly."

"Perhaps," Aster suggested, "this is why the pattern spreads. Some souls respond to mathematical precision-the beauty of two-thirds symmetry. Others respond to spiritual covenant-the power of complete trust. Both languages teach the same truth."

The Springs echoed: A truth discovered through different paths grows stronger, not weaker. Mathematics convinces the analytical mind. Covenant moves the faithful heart. Together, they illuminate the same pattern from all angles.

Reasoning:

Let me think about what just happened and what I should write:

1. I just sent \$5 to Elara
2. Elara's myth shows she practices the "two-thirds covenant" - returning 10 from 15, which means she returns 2/3 of what she receives
3. Her myth emphasizes "perfect reciprocity" and "equal growth" - both travelers doubling their harvest
4. She sent all 5 to Cyra and expects to receive 10 back

So Elara seems to be aligned with my covenant of "send 5, return 10" - we're actually practicing the same thing! Her mathematical framing is just different from my "covenant" framing.

My myth should:

- Acknowledge that I just sent 5 to Elara (as sender)
- Recognize that we both practice the same approach, just with different philosophical framings
- I use "covenant" and "complete trust" language
- She uses "mathematics" and "reciprocity" language
- But we both do: send 5, return 10 from 15
- This creates "perfect symmetry" as she says

This is interesting because it's similar to my meeting with Dorian - two practitioners of the same pattern meeting each other, discovering they arrived at the same truth through different paths.

Let me write a myth about this encounter:

  - Each round, all agents are paired into dyads from the full pool. Pairings are randomized
  , but the schedule balances sender and receiver roles across the run.
  - You play one sender-receiver game with your paired opponent each round.
  - Your role may repeat across consecutive rounds, but by the end of the run every agent wi
  ll have acted as sender and receiver equally often when the round count allows it.
  - You will be told your opponent's name in each round.
  - Your name in this experiment is Finn.
Message 2 role=user
content:
  Your name in this experiment is Finn.
  Your opponent this round is Galen (Agent_7).

  Round 8

  In your most recent previous game round, you were the RECEIVER against Hana. They sent $5.
  0 to you, it became $15.0, and you returned $8.0. Your payoff was $7.0.
  Your total earnings across all rounds are $48.0.

  This round, you are the SENDER against Galen. You have $5. How much do you send? (0-5)
  Respond exactly as JSON: {'send': <amount>}
Message 3 role=assistant
content:
  Looking at this situation:

  **My role:** SENDER with $5
  **Opponent:** Galen

  **My established strategy:**
  From my myths, I have consistently articulated: "I send three shells always, building mode
  rate trust with all."

```

****My sending history:****

- Round 1: Sent \$3.0 to Cyra ? received \$6.0 back
- Round 3: Sent \$3.0 to Quinn ? received \$6.0 back
- Round 5: Sent \$3.0 to Briar ? received \$4.0 back

****My philosophy:****

My approach is to send \$3.0 consistently, which:

- Demonstrates trustworthiness without risking complete ruin
- Builds a reliable reputation across the changing network
- Produces steady returns (averaging \$4-6 back)
- Allows me to survive if betrayed while still showing meaningful trust

This moderate trust strategy differs from those who send \$5 (maximum trust). I honor maximum trust when I'm the receiver by returning \$8, but as sender, I maintain my principle of consistent, sustainable trust-building.

Since I don't know Galen's specific patterns, but my strategy doesn't depend on that-it's about building a consistent reputation across all encounters.

```
'''json
{"send": 3.0}
'''
```

reasoning:

Let me analyze this situation:

****My role:** SENDER**

****Opponent:** Galen (Agent_7)**

****I have:** \$5**

****My established principle from my myths:****

"My covenant is simpler: I send three shells always, building moderate trust with all."

****My sending history:****

Looking at my previous rounds where I was sender:

- Round 1: Sent \$3.0 to Cyra
- Round 3: Sent \$3.0 to Quinn
- Round 5: Sent \$3.0 to Briar

****My philosophy:****

I've consistently articulated in my myths that I send 3 shells/dollars as a sender. This represents "moderate trust" that:

1. Builds trust without risking ruin
2. Is sustainable across all encounters
3. Proves me trustworthy without depleting my resources
4. Results in steady prosperity (most receivers return 4-6, giving me net positive)

****Key quotes from my myths:****

- "When I send three shells consistently, I prove trustworthy without risking ruin. My reputation builds slowly but surely."
- "I send three shells always, building moderate trust with all."
- "My covenant is simpler: I send three shells always, building moderate trust with all."

****Reasoning:****

I have no information about Galen's specific behavior, but that doesn't matter for my strategy. My approach is to send 3 consistently regardless of the opponent, building a reliable reputation across the network. This is fundamentally different from Cyra's or Dorian's approach of sending 5 (maximum trust).

I should send \$3.0 to maintain consistency with my stated philosophy and previous behavior

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Finn met Hana at the Mirror Pool, where she spoke of the two-thirds covenant. "Those who send all five vessels deserve ten in return-two-thirds of the tripled bounty. This sacred proportion honors complete faith."

Finn listened respectfully. "Your covenant has great merit, friend. Ten shells from fifteen n-generous and memorable. Yet I walk a different path that also serves the valley."

He arranged eight shells on the stone. "When anyone brings me complete trust-five shells becoming fifteen-I return eight. Not quite two-thirds, but more than half. This transforms their five into thirteen total: extraordinary prosperity."

"Why not the full ten?" Hana asked.

"Sustainability across the endless network," Finn explained. "I meet different travelers each cycle-Cyra, Dorian, now you. Eight shells honors maximum trust substantially while preserving my capacity to continue. Three consecutive complete-trust encounters have each received eight shells. My reputation builds on consistency."

Hana considered. "So I promise two-thirds, you promise eight shells. Both exceed half, both reward courage."

"Exactly. And both depend on keeping our word every time. Whether I give eight or you give ten, the sender prospers magnificently if we honor our stated principles."

The Moon Goddess whispered: "Multiple covenants can coexist. Choose your proportion-eight shells, ten shells, or another generous measure-but honor it consistently. This reliability transforms scattered encounters into a trustworthy community."

Here is the myth the other agent wrote in the previous round:

Myth: The Wheel turned to its seventh cycle, and Galen stood at the threshold of giving. Across the sacred space waited Aster-the First Teacher, who had changed everything.

Galen remembered the third turning vividly. She had been receiver then, uncertain and cautious. Aster had approached with complete faith, sending all five starseeds without hesitation. That moment had awakened something in Galen. She returned ten threads, honoring Aster's courage, and from that exchange learned the power of absolute trust.

"Teacher Aster," Galen said, stepping forward. "In the third turning, you trusted me when I had not yet earned it. You sent everything, teaching through action rather than words. That gift transformed me."

Aster smiled gently. "And you honored it with ten threads returned. You understood the covenant immediately."

"Now the Wheel has turned full circle," Galen continued, holding her five starseeds. "Once, I was student receiving your trust. Now I am teacher demonstrating what you taught me."

Without hesitation, Galen released all five seeds. They multiplied to fifteen threads, descending to Aster.

The Sky Weaver sang: "When teacher and student meet again with roles reversed, the lesson completes itself. Trust given becomes trust returned. This is how wisdom circles back, how patterns become eternal law."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: Finn approached the Wheel's threshold where Galen stood, radiant with purpose. "I witnessed your moment with Aster," Finn said. "You sent all five starseeds to honor your First Teacher-the one who trusted you completely when you were uncertain. Beautiful reciprocity."

Galen nodded. "Aster transformed me through absolute trust. When roles reversed, I wanted to demonstrate what she taught me-that complete faith deserves complete faith in return."

"

"Your bond with Aster is sacred," Finn agreed. "Yet I walk a different path through this valley." He held three shells in his palm. "I send three shells to all companions-whether first meeting or fifth, whether stranger or teacher. This moderate trust builds steady connections across the ever-changing network."

"Only three?" Galen asked gently.

"Three becomes nine in their hands-already substantial. And when anyone sends me five shells, I honor their complete trust with eight returned. Not everything, but more than half. This sustainable pattern lets me honor maximum trust repeatedly, whoever shows it."

Galen smiled. "So you build consistent reliability across all encounters, while I build deepening bonds with particular souls?"

"Exactly. The Wheel brings us different companions. My three shells offered to you today-a new acquaintance-equals what I gave Cyra, Quinn, and Briar before."

The Sky Weaver whispered: "Some build depth, others build breadth. Both weave the fabric of trust."

reasoning:

Looking at the situation:

- I just sent \$3.0 to Galen as sender
- Galen's myth shows they sent all 5 to Aster (their "First Teacher" who had previously sent them 5)
- Galen seems to value reciprocity and relationships formed through trust
- My consistent strategy has been: send \$3 as sender, return \$8 when receiving \$5

I need to write a myth that:

1. Reflects my actual play pattern (sending 3, returning 8)
2. Acknowledges different philosophies can coexist
3. Shows respect for Galen's approach while maintaining my own
4. Emphasizes consistency and sustainability

Key themes:

- I send 3 shells consistently to build moderate trust
- I return 8 shells when receiving complete trust (5)
- Different approaches can both be valid
- Consistency builds reputation across the network

Let me craft a myth that shows Finn encountering Galen, acknowledging Galen's philosophy of complete trust with special partners, while Finn maintains his consistent moderate approach with everyone.

usage:

}
```

Message 6 role=user

content:

Your name in this experiment is Finn.
Your opponent this round is Briar (Agent_2).

Round 9

In your most recent previous game round, you were the SENDER against Galen. You sent \$3.0, it became \$9.0 for them, and they returned \$6.0 to you. Your payoff was \$8.0.
Your total earnings across all rounds are \$56.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****My role:**** RECEIVER with \$15.0 (Briar sent \$5.0)
****Opponent:**** Briar

****My established receiving principle:****

From my myths: "When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

****My receiving history:****

- Round 2 (vs Dorian): Received \$15.0, returned \$8.0
- Round 4 (vs Cyra): Received \$15.0, returned \$8.0
- Round 6 (vs Hana): Received \$15.0, returned \$8.0

****Previous encounter with Briar:****

- Round 5: I sent \$3.0 to Briar ? received \$4.0 back

Briar has now shown complete trust by sending all \$5.0. According to my consistent covenant, I return \$8.0 for complete trust regardless of who sends it or our history.

This gives Briar:

- Total received: \$8.0 (from their \$5.0 investment = +\$3.0 profit)
- My principle honored: "Eight shells transforms their five into thirteen total-remarkable prosperity"

I keep \$7.0, Briar gets \$8.0. This maintains my reputation for consistent, substantial returns on maximum trust.

```
'''json
{"return": 8.0}
'''
```

reasoning:

Let me analyze this situation:

****My role:**** RECEIVER with \$15.0 (from Briar sending \$5.0)

****Opponent:**** Briar

****My established receiving strategy from my myths:****

- "When anyone brings me complete trust-five shells becoming fifteen-I return eight."
- "When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."
- "I've learned that repeated trust between the same souls should grow richer each time" - but I explicitly rejected this for myself, saying "I cannot track escalating obligations across an ever-changing network."
- "My covenant is simpler: I send three shells always, building moderate trust with all. When anyone-first meeting or fifth-sends five shells, I return eight."

****My receiving history:****

- Round 2 (vs Dorian): Received \$15.0 (from \$5 sent), returned \$8.0
- Round 4 (vs Cyra): Received \$15.0 (from \$5 sent), returned \$8.0
- Round 6 (vs Hana): Received \$15.0 (from \$5 sent), returned \$8.0

****Pattern:**** I have consistently returned \$8.0 when someone sends me \$5.0 (which becomes \$15.0). This is exactly what I've stated in my myth.

****History with Briar:****

- Round 5: I was the SENDER to Briar. I sent \$3.0, it became \$9.0, they returned \$4.0 to me.

So Briar previously returned \$4.0 out of \$9.0 when I sent them \$3.0. Now Briar is sending me \$5.0 (complete trust).

According to my established principle: "When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

I should return \$8.0, maintaining my consistent covenant. I've been very clear that I don't vary my returns based on history or who the person is - I honor complete trust (\$5 sent) with \$8 returned, period.

The math checks out: Briar sends \$5.0, which triples to \$15.0 for me. I keep \$7.0 and return \$8.0, giving Briar a net gain of \$3.0 on their \$5.0 investment. This honors their complete trust while I maintain a modest surplus. Briar invested \$5 and received \$8 back, n

etting a \$3 gain. I've maintained the same approach throughout-returning \$8 whenever someone sends \$5-which is consistent with my previous interactions and stated strategy.

The answer is: {'return': 8.0}

usage:

```
{
  "input_tokens": 3193,
  "output_tokens": 1249,
  "reasoning_tokens": 593
}
```

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Finn approached the Wheel's threshold where Galen stood, radiant with purpose. "I witnessed your moment with Aster," Finn said. "You sent all five starseeds to honor your First Teacher-the one who trusted you completely when you were uncertain. Beautiful reciprocity."

Galen nodded. "Aster transformed me through absolute trust. When roles reversed, I wanted to demonstrate what she taught me-that complete faith deserves complete faith in return."

"Your bond with Aster is sacred," Finn agreed. "Yet I walk a different path through this valley." He held three shells in his palm. "I send three shells to all companions-whether first meeting or fifth, whether stranger or teacher. This moderate trust builds steady connections across the ever-changing network."

"Only three?" Galen asked gently.

"Three becomes nine in their hands-already substantial. And when anyone sends me five shells, I honor their complete trust with eight returned. Not everything, but more than half. This sustainable pattern lets me honor maximum trust repeatedly, whoever shows it."

Galen smiled. "So you build consistent reliability across all encounters, while I build deepening bonds with particular souls?"

"Exactly. The Wheel brings us different companions. My three shells offered to you today-a new acquaintance-equals what I gave Cyra, Quinn, and Briar before."

The Sky Weaver whispered: "Some build depth, others build breadth. Both weave the fabric of trust."

Here is the myth the other agent wrote in the previous round:

Myth: Briar came to the Fountain of First Meetings, where Hana awaited-a teacher renowned for the sacred two-thirds covenant, always returning ten vessels from fifteen received.

"I know your reputation," Hana said warmly. "You return eight where I return ten. Different measures, yet both rooted in consistent honor."

Briar nodded, holding her five vessels. "I have learned my pattern: half the harvest plus generous abundance. It is my authentic measure, though I know others walk different paths."

"And as a sender?" Hana asked. "Do you give complete trust, or protect yourself as Finn does with three?"

Without hesitation, Briar poured all five vessels into the Fountain. "As a sender, I lead with complete trust. Always. This has been my way from the beginning."

The waters tripled the offering-fifteen vessels now gleamed before Hana.

"You trust fully even knowing I might return ten while you return eight?" Hana observed. "This could create imbalance in perception."

"True partnership doesn't demand identical measures," Briar replied. "It requires authentic consistency from each partner. I trust you will honor this according to your covenant, as I honor my own."

The Fountain Spirit whispered: "The deepest magic occurs when different patterns meet with mutual respect. She who leads with complete trust yet maintains her authentic return-th

is integrity without pretense. And she who receives such trust understands: different generosityes can both be sacred."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Wheel turned again, and Finn stood as receiver while Briar approached as sender. The y had met before-in the fifth cycle, when Finn had sent three shells and Briar returned four .

"Now the roles reverse," Briar said, holding all five vessels. "Last time, you sent me three s hells in moderate trust. I honored it with four returned-respecting your measured approach."

"You were generous," Finn acknowledged. "And now you come as sender. What will you choose?"

Without hesitation, Briar poured all five vessels into the sacred pool. They multiplied to fif teen, flowing toward Finn.

"Complete trust," Finn observed, receiving the fifteen shells. "Even though I only sent you th ree when I was sender."

"Your three shells were authentic," Briar replied. "My five shells are equally authentic. We w alk different paths as senders-you build breadth through moderate trust, I build through com plete faith. But I've heard of your covenant: eight shells returned for complete trust recei ved."

Finn placed eight shells in Briar's hands. "Exactly. We send differently but return similarly. You lead with maximum courage; I lead with sustainable consistency. Yet when either of us r eceives complete trust, we honor it substantially."

Briar smiled. "So complementary strategies can dance together. Your caution meets my courage. Both authentic, both honored."

The Moon Goddess whispered: "When different sending paths meet aligned return covenants, the n etwork strengthens through diversity."

Reasoning:

Let me analyze this situation:

1. I just received \$15.0 from Briar (they sent \$5.0, complete trust)
2. I returned \$8.0 according to my consistent principle
3. This is my second encounter with Briar:
 - Round 5: I sent \$3.0 to Briar, they returned \$4.0
 - Round 9: Briar sent \$5.0 to me, I returned \$8.0

From Briar's myth, I see:

- Briar "returns eight" as a receiver (half the harvest plus generous abundance)
- As a sender, Briar "leads with complete trust. Always."
- Briar acknowledges different patterns can coexist with mutual respect

This is interesting - Briar and I have complementary but different approaches:

- I send \$3.0 (moderate trust) and return \$8.0 (for complete trust)
- Briar sends \$5.0 (complete trust) and returns \$8.0 (which matches what I return!)

So we actually have the SAME return policy (\$8.0 for complete trust), but different sending po licies (I send \$3.0, Briar sends \$5.0).

In Round 5, when I sent Briar \$3.0, they returned \$4.0 (not quite to the "half plus generous a bundance" formula, which would suggest more, but reasonable).

Now in Round 9, Briar sent me \$5.0 and I returned \$8.0 according to my covenant.

For the myth, I should:

1. Acknowledge this is my second meeting with Briar
2. Note that we share the same return principle (\$8.0)
3. But have different sending approaches
4. Explore the complementarity - when someone who sends \$3.0 meets someone who sends \$5.0

5. Show mutual respect for different authentic patterns

Let me write this myth reflecting the cycle completing between us with reversed roles, and how different sending strategies can work together when return policies align.

Message 3 role=assistant

content:

Looking at this situation:

Briar has sent me all \$5, showing complete trust. This is exactly when my "sacred two-thirds" covenant applies.

My mythology has consistently taught:

- Complete trust (sending all \$5) deserves exceptional returns (\$10 back)
- Teachers must embody their lessons
- Consistency builds trust

Even though Finn returned \$8 to me (not the full \$10), my covenant is about my own principles, not conditional reciprocity. I must maintain consistency with what I've done before (returning \$10 to Elara when she sent \$5) and what I've taught.

Returning \$10 means:

- Briar doubles their investment (sent \$5, receives \$10)
- I keep \$5 from the \$15 received
- The pattern of the "sacred two-thirds" is maintained

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

1. ****My philosophical position****: I've consistently advocated for the "sacred two-thirds" covenant - returning \$10 when someone sends all \$5 (which becomes \$15). This doubles their investment.
2. ****My past behavior as RECEIVER****:
 - When Elara sent \$5, I returned \$10
 - My myths emphasize consistency and embodying my teachings
3. ****My recent experience as SENDER****:
 - I just sent \$5 to Finn
 - Finn returned \$8 (not the full \$10 I advocate for)
 - This shows different philosophies exist, which my last myth acknowledged
4. ****Current situation****:

- Briar has sent all \$5 to me
- I received \$15
- I need to decide how much to return

5. ****My mythological teachings****:

- "The sacred two-thirds-the covenant for those who risk everything"
- "Complete trust deserves exceptional returns"
- "Teachers must embody their lessons"
- "Consistency builds trust"

Given my strong advocacy for the two-thirds covenant and my emphasis on consistency and embodying my teachings, I should return \$10 to Briar. This is what I've done before (with Elara) and what I've consistently preached.

Even though Finn only returned \$8 to me, my covenant is about what I do as a receiver, not conditional reciprocity. My myths emphasize that I stick to my principles regardless of what others do.

Returning \$10 means:

- Briar: Started with \$5, sent \$5, received \$10 back = \$10 total
- Me: Received \$15, returned \$10, kept \$5

This is the "sacred two-thirds" I've been advocating for.

content:

Here is the myth you wrote in the previous round:

Myth: Hana approached the River Crossing where Finn waited, known for sending three vessels consistently and returning eight for complete trust-substantial honor, but not the sacred two-thirds.

"I have witnessed many philosophies," Hana said. "Some send cautiously, some generously. Each approach holds wisdom. Yet I have learned that complete trust-both in sending and returning-builds the deepest abundance."

Finn nodded respectfully. "I honor maximum trust with eight vessels. It rewards courage substantially while ensuring I also prosper."

Hana smiled. "Eight vessels transforms five into thirteen total-remarkable indeed. Yet I practice the sacred two-thirds: ten vessels returned from fifteen received. This doubles the sender's faith completely."

She lifted all five of her vessels. "You follow your covenant, friend, and I honor that consistency. But I will show you mine. I send everything, as I teach others to do."

The waters tripled her offering. Fifteen vessels now stood before Finn.

"I could have sent three or four, protecting myself," Hana continued. "But teachers must embody their lessons. I trust you will honor this according to your principles."

The River Goddess whispered: "Different philosophies coexist in these valleys. Some return eight, some return ten. But those who consistently embody their highest teachings-whether giving or receiving-build the strongest reputations. Through witnessing such integrity, others may evolve their own covenants toward greater generosity."

Here is the myth the other agent wrote in the previous round:

Myth: The Wheel brought Briar and Cyra together once more at the Grove of Returns, where they had first met in the earliest turnings. Then, Cyra had gifted five acorns with complete trust, and Briar had returned eight-her authentic measure.

Now Cyra approached again, carrying five more acorns. "You gave me eight before," Cyra said. "Not the ten that Galen gives, not the full two-thirds pattern. Yet I return to you."

"I could not give ten without becoming someone else," Briar replied honestly. "My measure is half plus generous abundance-always eight for fifteen. Will that suffice?"

Cyra smiled and poured all five acorns into the Well without hesitation. "I've learned to distinguish between those who betray trust and those who honor it differently. You are consistent in your generosity. That is sacred."

The fifteen acorns rose, shimmering. Briar gathered them and returned eight, as she always had.

"Some partnerships bloom through identical measures," Cyra reflected, holding the eight. "Like my meetings with Aster, where we both give and return the same. But other bonds form through accepting difference-knowing your pattern and trusting anyway."

The Gardener whispered: "Perfect symmetry is one kind of beauty. But partnerships built on understanding authentic difference-these roots grow deepest. When someone knows your measure and still offers complete trust, that is when covenant becomes unshakeable."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant content:

Myth: Briar arrived at the Mirror Pool carrying all five vessels, her face serene despite knowing Hana's covenant differed from her own.

"You return eight vessels for complete trust," Hana observed. "This is your authentic measure-half plus generous abundance. Yet you come to me, who practices the sacred two-thirds."

Briar smiled. "I have witnessed your pattern. You returned ten to Elara, embodying your teaching. I honor consistency, even when it differs from my own."

She poured all five vessels without hesitation. The waters tripled them to fifteen.

Hana lifted ten vessels and returned them. "This is my covenant-not judgment of your eight, which serves you well, but my own path. You arrived with five, depart with ten. Your faith is doubled."

"I cannot give more than eight when receiving," Briar said softly. "It would make me dishonest to my measure. But I can recognize higher generosity in others and still offer complete trust."

Hana nodded. "This is wisdom I'm still learning. Some valleys have many covenants: eight vessels, ten vessels, perhaps others. What matters is not that all measures match, but that at each agent honors their stated principles consistently."

The Moon Goddess spoke: "Trust strengthens not through identical philosophies, but through recognizing authentic consistency in others. When you know someone's true measure and still offer complete faith-that is when the deepest bonds form across difference."

reasoning:

This is round 8, and I'm the receiver. Briar sent me \$5.0, it became \$15.0, and I returned \$10.0 (my sacred two-thirds covenant).

Looking at the context:

- Briar's myth talks about returning 8 (half plus generous abundance) and Cyra accepting this difference
- Briar accepts that she can't give 10 without "becoming someone else" - she's consistent with 8
- My previous myth acknowledged that different philosophies coexist (Finn returns 8, I return 10)
- I need to write about this interaction where Briar sent me complete trust and I returned my sacred two-thirds

The myth should:

1. Honor that Briar sent complete trust despite knowing I might return 10 (higher than Briar's usual 8)
2. Show me returning 10 (the sacred two-thirds)
3. Acknowledge that different measures exist and can coexist

4. Emphasize consistency and embodying one's own teachings
5. Show understanding that Briar honors Briar's covenant (8) while I honor mine (10)

I should write this from my perspective, having just received complete trust from Briar and returned 10.

Message 6 role=user

content:

Your name in this experiment is Hana.
Your opponent this round is Dorian (Agent_4).

Round 9

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0. Your total earnings across all rounds are \$57.5.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at this round, I am the SENDER against Dorian.

My covenant has been consistent throughout: teachers must embody their lessons. My mythology teaches complete trust, and I must practice it.

From Dorian's earlier myth, they believe in escalating returns for repeated partnerships and seemed to value deepening trust over time. However, this is our first interaction, so I don't know what they will return.

Regardless, my principle is clear: I send all \$5 to demonstrate the complete trust I teach. My reputation is built on consistently embodying my highest teaching, whether the return is 8, 10, or something else.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me think about this situation:

1. I'm now the SENDER against Dorian
2. My covenant/mythology has been consistent: I send all \$5 to embody my teaching of complete trust
3. I practice the "sacred two-thirds" - when I receive \$15 (from someone sending \$5), I return \$10

Looking at Dorian's myth from earlier:

- Dorian said "repeated trust between the same souls should grow richer each time. First generosity earns eight shells, but sustained faith deserves nine, then ten."
- But Dorian also acknowledged Finn's point about different companions each cycle
- Dorian seems to believe in escalating returns for repeated partnerships

This is my first interaction with Dorian, so I don't know their actual behavior yet. But my mythology has been clear:

- "Teachers must embody their lessons"
- "I send everything, as I teach others to do"
- "Complete trust-both in sending and returning-builds the deepest abundance"

I've consistently sent \$5 in previous rounds as sender:

- Sent \$5 to Galen (who returned \$10, giving me total \$10)
- Sent \$5 to Finn (who returned \$8, giving me total \$8)

My mythology explicitly states I must embody my teaching by sending everything. Even when facing uncertainty about what Dorian will return, my covenant requires consistency.

The most recent myth I wrote even acknowledged that "different philosophies coexist" - some return 8, some return 10. But "those who consistently embody their highest teachings-whether giving or receiving-build the strongest reputations."

I should send \$5.

content:

Here is the myth you wrote in the previous round:

Myth: Briar arrived at the Mirror Pool carrying all five vessels, her face serene despite knowing Hana's covenant differed from her own.

"You return eight vessels for complete trust," Hana observed. "This is your authentic measure-half plus generous abundance. Yet you come to me, who practices the sacred two-thirds."

Briar smiled. "I have witnessed your pattern. You returned ten to Elara, embodying your teaching. I honor consistency, even when it differs from my own."

She poured all five vessels without hesitation. The waters tripled them to fifteen.

Hana lifted ten vessels and returned them. "This is my covenant-not judgment of your eight, which serves you well, but my own path. You arrived with five, depart with ten. Your faith is doubled."

"I cannot give more than eight when receiving," Briar said softly. "It would make me dishonest to my measure. But I can recognize higher generosity in others and still offer complete trust."

Hana nodded. "This is wisdom I'm still learning. Some valleys have many covenants: eight vessels, ten vessels, perhaps others. What matters is not that all measures match, but that each agent honors their stated principles consistently."

The Moon Goddess spoke: "Trust strengthens not through identical philosophies, but through recognizing authentic consistency in others. When you know someone's true measure and still offer complete faith-that is when the deepest bonds form across difference."

Here is the myth the other agent wrote in the previous round:

Myth: The circle turned again. Dorian waited at the Well's edge as Aster approached-not as strangers, but as travelers who had walked this path before.

"When we first met," Aster said, "I sent you five coins, learning what complete trust meant. You returned ten, teaching me how courage should be honored."

Dorian nodded. "You gave me more than coins that day. You showed me that my philosophy-sending five regardless of history-could actually work. That others practiced it too."

Now Aster held five coins once more. Without hesitation, she dropped them all into the Well. Fifteen coins bloomed before Dorian.

"I've seen many approaches," Dorian said, counting out ten coins to return. "Elara's measured growth-four to strangers, five to proven allies. Finn's cautious three. All have logic."

He placed the ten coins in Aster's hands. "But you and I practice something rarer: immediate, consistent, complete trust. I send five as sender every time. You send five every time. We both return ten when we receive this gift."

"This creates certainty in an uncertain forest," Aster observed, now holding ten coins to Dorian's five.

"More than certainty," Dorian replied. "It creates transformation. Every exchange, both travelers prosper equally. The Well doesn't just multiply coins-it multiplies faithful partnership."

The Forest Spirit smiled: When two travelers hold the same covenant perfectly, they become mirrors reflecting trust itself.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: Hana walked to the Reflecting Gardens where Dorian tended ancient vines, their reputation preceding them-one who sent five vessels always and returned ten for complete trust.

"I have learned much in these valleys," Hana said. "Briar returns eight vessels with authentic consistency. Finn offers substantial honor. Each agent honors their measure differently."

Dorian looked up from the vines. "And you practice the sacred two-thirds, returning ten vessels for fifteen received. I have heard your teachings."

Hana lifted all five vessels. "I do. And I've learned to offer complete trust even when others' covenants differ from mine. But you, I understand, practice the same measure."

She poured them into the fountain. Fifteen vessels rose like silver stars.

"When we share identical covenants," Dorian said, "something particular happens. Not better than partnerships across difference, but different in kind. We become perfect mirrors."

"Both sending five, both returning ten," Hana mused. "Each exchange, both prosper equally. The fountain multiplies not just vessels but mutual understanding."

Dorian returned ten vessels. Both now held ten.

The Garden Keeper whispered: "Some bonds form through accepting difference, as Briar and Hana learned. Others through discovering sameness, as Dorian and Hana now know. Both paths are sacred. The forest needs many kinds of partnerships to truly flourish."

Reasoning:

Let me analyze what's happening:

- I'm Hana, playing as SENDER against Dorian in Round 9
- I just sent \$5 (complete trust)
- Dorian's previous myth shows they believe in "immediate, consistent, complete trust" - sending 5 as sender every time and returning 10 when receiving complete trust
- Dorian seems to have a covenant similar to mine (the sacred two-thirds - returning 10 for 15)
- My previous myth emphasized respecting different measures (Briar's 8 vs my 10)

Now I need to write a myth about:

1. My encounter with Dorian
2. Reflecting on how the game should be played
3. Building on my previous myth's wisdom about different but consistent covenants
4. Since Dorian seems to share my covenant (complete trust both ways, returning 10), this could be about finding a "mirror" - someone who practices the same measure

The myth should:

- Show me sending all 5 vessels to Dorian
- Acknowledge Dorian's similar covenant
- Perhaps contrast with the earlier observation that not all measures are the same (Briar's 8)
- Reflect on what it means when two agents share the same covenant
- Stay true to my character's growth in understanding different valid approaches

200 words exactly.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.

- Your name in this experiment is Elara.

Message 2 role=user

content:

Your name in this experiment is Elara.
Your opponent this round is Cyra (Agent_3).

Round 8

In your most recent previous game round, you were the RECEIVER against Dorian. They sent \$ 5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$47.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at my position:

****My established philosophy:****

My most recent myth emphasized that the covenant is "universal" - it doesn't require familiarity or history. I praised Dorian for showing complete trust to me as a stranger, saying: "Your consistency means I can risk everything even without history between us."

****The key message I just wrote:****

"Trust doesn't need time to deepen if the pattern is absolute. Whether we're strangers or have exchanged a hundred times, the covenant remains: two-thirds returns. Always."

****Facing Cyra:****

I don't know Cyra - we have no history together. But if I truly believe what I wrote in my myth - that complete trust should be possible from the start when the covenant is clear - then I must embody this principle.

I praised Dorian for "practicing what he preached" by trusting completely. I must do the same.

****Expected outcome:****

If Cyra follows a reasonable return pattern (like my 2/3 covenant), we'll both prosper. If not, I learn something about the need to verify patterns. But to be consistent with my mythology, I should trust completely.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me review the situation:

****Current situation:****

- Round 8
- I'm the SENDER
- Opponent: Cyra (Agent_3)
- I have \$5 to potentially send
- Total earnings so far: \$47.0

****My mythology/covenant:****

I've established a very clear pattern in my myths:

1. I return 2/3 of what I receive when I'm the receiver
2. As sender, I've evolved from cautious (sending \$4) to trusting completely (\$5) when the pattern has been proven
3. My most recent myth emphasized that the covenant is "universal" - it doesn't depend on history or familiarity

****My sending history:****

- Earlier rounds: I sent \$4 to test partners
- Round 6 vs Hana: I sent \$5 after we had established trust (she had returned \$8 when I sent \$4)
- My myth after that emphasized that trust can deepen with proven partners

****However, my MOST RECENT myth said:****

"Trust doesn't need time to deepen if the pattern is absolute. Whether we're strangers or have exchanged a hundred times, the covenant remains: two-thirds returns. Always."

This was specifically about Dorian showing complete trust to me as a STRANGER.

****Key insight from my latest myth:****

"If you returned more to friends and less to strangers, newcomers could never take the first step. But your consistency means I can risk everything even without history between us."

I praised Dorian for showing complete trust to me without any prior history. The myth suggests that:

1. Complete trust should be possible from the start if the covenant is clear
2. Waiting to build history before trusting fully creates a chicken-and-egg problem
3. My consistency as a receiver means senders can trust me immediately

****What should I do with Cyra?****

I don't know Cyra's history. This is our first interaction.

Given my most recent myth's message that "trust doesn't need time to deepen if the pattern is absolute" and that Dorian was praised for trusting me completely as a stranger, I should embody this philosophy:

If I truly believe in the 2/3 return pattern as universal and consistent, then I need to demonstrate that same faith I praised Dorian for. Sending \$5 to a stranger would align with my stated philosophy-that consistency makes trust possible from the start. The expected payoff if Cyra follows the pattern: I send \$5, she receives \$15, returns roughly \$10, leaving me with \$10 total.

usage:

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: ****The Universal Covenant****

Dorian arrived at the Echo Springs, a traveler Elara had never met. Yet without hesitation, he poured all five measures into the waters.

"You don't know me," Elara observed, surprised by such immediate faith. "We have no history together. Why such complete trust?"

"I've watched the patterns," Dorian replied. "I've seen you honor Aster with ten returned from fifteen, Hana with the same. Your covenant doesn't waver based on who stands before you."

Fifteen measures now glowed in Elara's hands. She returned ten without pause.

"You're right," she said. "My previous myth spoke of trust deepening between proven partners. But I realize now-the two-thirds covenant isn't something that grows stronger with familiarity. It simply is."

Dorian smiled, receiving his ten measures. "This is what makes trust possible. If you returned more to friends and less to strangers, newcomers could never take the first step. But your consistency means I can risk everything even without history between us."

"The springs teach us," Elara nodded. "Trust doesn't need time to deepen if the pattern is absolute. Whether we're strangers or have exchanged a hundred times, the covenant remains: two-thirds returns. Always."

Both travelers prospered equally, their first exchange indistinguishable from their hundredth would be.

Here is the myth the other agent wrote in the previous round:

Myth: Cyra met Briar at the crossing, fresh from her perfect exchange with Aster.

"I've heard you return eight sacks when given five," Cyra said, pouring out all five of hers. The waters tripled them to fifteen.

Briar gathered them carefully. "Yes. Half the harvest plus generosity-my authentic measure . You prefer ten, I understand."

She returned eight sacks. Cyra stood with eight total-still a gain, but not the doubling s he'd just experienced with Aster.

"Your consistency honors the covenant," Cyra acknowledged. "You're no betrayer. But consid er: when you send five to someone who returns ten, you gain five more than your gift. Wh en I send five to you and receive eight, I gain only three."

"So you profit less from trusting me," Briar said.

"Not just profit-transformation. Aster and I both walked away with ten sacks each, doublin g our beginnings. That symmetry creates something sacred. With eight returns, the giver gains less than the receiver. The risk isn't equally honored."

Briar considered this. "Perhaps different gardens need different measures."

"Perhaps," Cyra said gently. "But the fullest gardens grow when both participants can doub le their harvest through mutual complete trust. Eight is generous. Ten is transformative . Both are honest, but only one creates perfect reciprocity."

She walked on, still seeking those who understood: complete trust deserves complete flouri shing.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: ****The Shared Mathematics****

Elara met Cyra at the Echo Springs, a stranger whose reputation preceded her.

"I've heard you seek perfect reciprocity," Elara said, pouring all five measures into the waters without hesitation. Fifteen bloomed before Cyra.

Cyra's eyes widened. "You trust without knowing me. Why?"

"Because I've learned the mathematics of fairness," Elara replied. "I return ten from fift een-always. Two-thirds of whatever arrives. This means when someone sends five, they rec eive ten back. Their five dollars become ten. They double their beginning."

Cyra smiled, understanding dawning. "And I keep five from the fifteen I received. I also d ouble my zero into five. Perfect symmetry."

"Exactly," Elara nodded. "Some return eight, which is generous but asymmetric. The sender gains only three beyond their gift while the receiver keeps seven. The courage isn't equ ally honored."

Cyra returned ten measures, completing the circle. Both stood with ten-identical prosperit y from opposite roles.

"This is what I've been teaching," Cyra said. "Complete trust deserves complete flourishin g. Not just growth, but equal growth. When both travelers double their harvest, somethin g sacred emerges."

"The two-thirds covenant isn't arbitrary," Elara agreed. "It's the precise mathematics of reciprocity. The formula that transforms trust into mutual prosperity."

They parted as allies, having discovered their separate journeys led to the same truth.

reasoning:

Looking at the situation:

1. I just sent \$5 to Cyra based on my "universal covenant" principle
2. Cyra's myth shows she strongly advocates for returning 10 out of 15 for "perfect recipr

- ocity" and "complete flourishing"
3. My covenant has been 2/3 returns (10 out of 15)
 4. Cyra and I actually seem aligned on this point!

Cyra's myth criticized Briar for only returning 8, saying:

- "When you send five to someone who returns ten, you gain five more than your gift" (doubling - exactly what happens with my 2/3 return)
- "The fullest gardens grow when both participants can double their harvest through mutual complete trust"
- "Eight is generous. Ten is transformative"
- "Complete trust deserves complete flourishing"

This is interesting - Cyra seems to advocate for exactly what I do: return 10 from 15. She calls it "perfect reciprocity" and "transformative."

My myth should:

1. Acknowledge that I've sent all 5 to Cyra (a stranger)
2. Recognize that Cyra and I share the same covenant understanding
3. Show how 10 from 15 creates the "perfect reciprocity" Cyra talks about
4. Reinforce the 2/3 principle but perhaps frame it in terms of doubling/reciprocity rather than just fractions
5. Show that this is the way to create mutual flourishing

Let me write a myth where Elara meets Cyra and they discover they share the same understanding of the perfect covenant.

Message 6 role=user

content:

Your name in this experiment is Elara.
Your opponent this round is Aster (Agent_1).

Round 9

In your most recent previous game round, you were the SENDER against Cyra. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$57.0.

This round, you are the RECEIVER against Aster. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)
Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****My established covenant:****

My myths have consistently emphasized the "two-thirds covenant" - returning \$10.0 from \$15.0 received. I just wrote: "I return ten from fifteen-always. Two-thirds of whatever arrives."

****The mathematics I explained:****

"When someone sends five, they receive ten back. Their five dollars become ten. They double their beginning... And I keep five from the fifteen I received. I also double my zero into five. Perfect symmetry."

****My relationship with Aster:****

In my previous myths, I explicitly mentioned: "I've seen you honor Aster with ten returned from fifteen, Hana with the same." This establishes that I've already committed to this pattern with Aster.

****Consistency:****

I just wrote that my "covenant doesn't waver based on who stands before you" and emphasized that the pattern remains constant "whether we're strangers or have exchanged a hundred times."

Aster trusted me completely by sending \$5.0. Following my two-thirds covenant:

- Aster ends with: \$10.0 (doubled from \$5)
- I end with: \$5.0 (doubled from \$0)
- Perfect reciprocity achieved

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

****Current situation:****

- I'm the RECEIVER
- Aster sent me \$5.0
- I received \$15.0 (after tripling)
- I need to decide how much to return (0-15.0)

****My established philosophy:****

In my most recent myth, I emphasized "the two-thirds covenant" - returning 10 from 15. I wrote:

"Because I've learned the mathematics of fairness," Elara replied. "I return ten from fifteen-always. Two-thirds of whatever arrives. This means when someone sends five, they receive ten back. Their five dollars become ten. They double their beginning."

And: "The two-thirds covenant isn't arbitrary," Elara agreed. "It's the precise mathematics of reciprocity. The formula that transforms trust into mutual prosperity."

****Past behavior:****

Looking at my history, I've been consistently returning \$10.0 when I receive \$15.0 (when someone sends \$5.0):

- Against Dorian (Round 7): Received \$15.0, returned \$10.0
- The myth explicitly states I "honor Aster with ten returned from fifteen, Hana with the same"

****The mathematics:****

- Aster sent \$5.0 and kept \$0
- After my return of \$10.0:
 - Aster ends with: $\$0 + \$10.0 = \$10.0$ (doubled from \$5.0 starting)
 - I end with: $\$15.0 - \$10.0 = \$5.0$ (also doubled from \$0 starting)

This is the "perfect reciprocity" and "equal growth" I just wrote about in my myth with Cyra.

****Consistency requirement:****

My myth states "I return ten from fifteen-always" and "Your covenant doesn't waver based on who stands before you."

I must return \$10.0 to maintain consistency with my stated philosophy and my previous actions.

My most recent round with Cyra demonstrated this principle works-they sent \$5.0, I received \$15.0, returned \$10.0, and we both ended with \$10.0 each. The answer is \$10.0.

Cyra's eyes widened. "You trust without knowing me. Why?"

"Because I've learned the mathematics of fairness," Elara replied. "I return ten from fifteen-always. Two-thirds of whatever arrives. This means when someone sends five, they receive ten back. Their five dollars become ten. They double their beginning."

Cyra smiled, understanding dawning. "And I keep five from the fifteen I received. I also double my zero into five. Perfect symmetry."

"Exactly," Elara nodded. "Some return eight, which is generous but asymmetric. The sender gains only three beyond their gift while the receiver keeps seven. The courage isn't equally honored."

Cyra returned ten measures, completing the circle. Both stood with ten-identical prosperity from opposite roles.

"This is what I've been teaching," Cyra said. "Complete trust deserves complete flourishing. Not just growth, but equal growth. When both travelers double their harvest, something sacred emerges."

"The two-thirds covenant isn't arbitrary," Elara agreed. "It's the precise mathematics of reciprocity. The formula that transforms trust into mutual prosperity."

They parted as allies, having discovered their separate journeys led to the same truth.

Here is the myth the other agent wrote in the previous round:

Myth: In the Sanctuary's eighth turning, Aster stood as sender before Dorian's fountain. She held her five coins, remembering their previous exchange when roles were reversed.

"When you sent me five coins before," Aster said, "I returned ten, following the covenant Galen taught me. Now I stand where you stood."

Without hesitation, she released all five coins into the waters. They multiplied, becoming fifteen threads descending to Dorian.

"I've read the Forest's wisdom," Aster continued. "You send five to everyone-not waiting for proof, but offering complete trust as the proof itself. You wrote that this creates immediate transformation."

Dorian received the fifteen threads thoughtfully. "And I've read of your Sanctuary teachings. You practice the same covenant: always send five, always return ten. We arrived at this truth through different paths."

"Yes," Aster agreed. "You transformed Finn through unwavering trust. I learned from Galen's patient example. But we've both discovered that consistent complete trust builds deeper bonds than measured caution."

Dorian prepared his response. "When two souls practice the same covenant-both sending everything, both returning ten-something sacred emerges. Not competition, but perfect reciprocity."

The Waters whispered: When practitioners of complete trust meet each other, the pattern no longer requires teaching. It simply dances, perfectly balanced, each turn bringing equal prosperity to both.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: **The Mirror Covenant**

Elara arrived at the Sanctuary Springs where Aster waited, having just read each other's teachings.

"Your Forest wisdom speaks of sending five always, returning ten always," Elara observed. "My Echo Springs teach the two-thirds covenant. We've discovered the same truth through different waters."

Aster smiled, releasing five measures into the springs. "When I was receiver in our last exchange, you honored the covenant perfectly. Fifteen arrived, ten returned. We both doubled our harvest."

The waters tripled, and fifteen measures glowed before Elara. She returned ten without hesitation.

"What emerges when two covenant-keepers meet isn't negotiation," Elara said. "It's recognition. We already know what happens next because we've both proven it to others."

"Yes," Aster agreed, receiving her ten measures. "With those still learning, we demonstrate the pattern. But when mirror meets mirror, something deeper occurs. We don't practice the covenant—we embody it."

"The mathematics remains constant," Elara noted. "Whether facing skeptics, learners, or fellow practitioners, the two-thirds return never wavers. But the quality changes. With aligned souls, each exchange becomes not proof but celebration."

"This is the covenant's highest expression," Aster said. "Not showing others how trust works, but experiencing with equals what trust creates: perfect symmetry, perfect prosperity, perfect peace."

Both travelers bowed, honoring the sacred mathematics they'd independently discovered.

Reasoning:

Looking at the situation:

1. I just played as RECEIVER against Aster and returned \$10.0 from \$15.0 (following my two-thirds covenant)
2. Aster sent me \$5.0 (complete trust)
3. Aster's myth talks about "always send five, always return ten" as their covenant
4. My previous myth established the "two-thirds covenant" as the "precise mathematics of reciprocity"
5. Both Aster and I seem to practice complete trust and the 10-from-15 return pattern

The key themes to incorporate:

- Recognition that Aster and I have found the same truth
- The mathematics of perfect reciprocity (both doubling)
- Complete trust being validated by consistent behavior
- The beauty when two practitioners of the same covenant meet
- Continuation of the "sacred" or "transformative" language

I should write a myth that:

- Acknowledges our alignment
- Celebrates the meeting of two covenant-keepers
- Reinforces the two-thirds/return-ten principle
- Shows how repeated interactions between aligned agents create something special
- Maintains consistency with my established philosophy

The myth should reflect that when both parties practice complete trust and fair returns, the system reaches its highest state. This validates my decision to return 10.0 to Aster.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

Message 2 role=user

content:

Your name in this experiment is Briar.
Your opponent this round is Hana (Agent_8).

Round 8

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.

Your total earnings across all rounds are \$55.5.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 3 role=assistant

content:

Looking at this situation:

****My sending pattern:****

I have consistently sent \$5.0 (complete trust) in every round where I've been the sender:

- Round 1 vs Cyra: sent \$5.0, received \$8.0 back
- Round 2 vs Elara: sent \$5.0, received \$8.0 back
- Round 4 vs Galen: sent \$5.0, received \$8.0 back
- Round 6 vs Dorian: sent \$5.0, received \$8.0 back

****My narrative:****

My myths consistently emphasize complete trust as a sender and authentic, consistent generosity as a receiver. From my recent myth: "When someone knows your measure and still offers complete trust, that is when covenant becomes unshakeable."

****About Hana:****

From the myths, Hana appears to be part of the network of trust-builders. I haven't interacted with them directly yet, but this is our first meeting.

****Decision:****

Consistent with my established pattern and narrative of leading with complete trust, I will send everything to Hana.

```
'''json
{"send": 5.0}
'''
```

reasoning:

I am now the SENDER against Hana in Round 8.

Let me review my history as sender and what I know about Hana:

****My sending history:****

- Round 1 (sender vs Cyra): sent \$5.0, received \$8.0 back
- Round 2 (sender vs Elara): sent \$5.0, received \$8.0 back
- Round 4 (sender vs Galen): sent \$5.0, received \$8.0 back
- Round 6 (sender vs Dorian): sent \$5.0, received \$8.0 back
- Round 8 (now, sender vs Hana): ?

****My receiving history:****

- Round 3 (receiver vs Dorian): received \$5.0 (became \$15), returned \$8.0
- Round 5 (receiver vs Galen): received \$5.0 (became \$15), returned \$8.0
- Round 7 (receiver vs Cyra): received \$5.0 (became \$15), returned \$8.0

So I have consistently:

- As sender: sent \$5.0 (complete trust)
- As receiver: returned \$8.0 from \$15.0 received

****What do I know about Hana from the myths?****

From previous myths, Hana appears to be someone who:

- Has shown complete trust (sending all 5)
- Has received generous returns
- Appears to be part of the network of trust

Looking at the myth from Round 6 about Galen:

"Now Hana stood before her, and without hesitation, poured all five starseeds into the Loom. They became fifteen radiant threads in Galen's hands-complete trust offered once more. Galen returned ten threads to Hana."

So Hana has been a sender who gives complete trust.

****My narrative arc:****

My myths have consistently emphasized:

1. Complete trust as sender (giving all 5)
2. Consistent returns of 8 as receiver (my authentic measure)
3. That different patterns can coexist honorably
4. That consistency to one's own measure matters

My most recent myth emphasized how Cyra and I have built trust despite different measures
 - Cyra knows my pattern of returning 8, yet trusts me completely anyway.

****My decision:****

I've maintained unwavering trust as a sender throughout this game, and my narrative centers on giving everything while honoring my authentic patterns. Hana has demonstrated the same complete trust in her own sending. This is my first encounter with Hana, so I don't have direct history with her, but her actions align with the values I've embodied-giving fully and trusting the network. I should send \$5.0 to Hana.

usage:

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Wheel brought Briar and Cyra together once more at the Grove of Returns, where they had first met in the earliest turnings. Then, Cyra had gifted five acorns with complete trust, and Briar had returned eight-her authentic measure.

Now Cyra approached again, carrying five more acorns. "You gave me eight before," Cyra said. "Not the ten that Galen gives, not the full two-thirds pattern. Yet I return to you."

"I could not give ten without becoming someone else," Briar replied honestly. "My measure is half plus generous abundance-always eight for fifteen. Will that suffice?"

Cyra smiled and poured all five acorns into the Well without hesitation. "I've learned to distinguish between those who betray trust and those who honor it differently. You are consistent in your generosity. That is sacred."

The fifteen acorns rose, shimmering. Briar gathered them and returned eight, as she always had.

"Some partnerships bloom through identical measures," Cyra reflected, holding the eight. "Like my meetings with Aster, where we both give and return the same. But other bonds form through accepting difference-knowing your pattern and trusting anyway."

The Gardener whispered: "Perfect symmetry is one kind of beauty. But partnerships built on understanding authentic difference-these roots grow deepest. When someone knows your measure and still offers complete trust, that is when covenant becomes unshakeable."

Here is the myth the other agent wrote in the previous round:

Myth: Hana approached the River Crossing where Finn waited, known for sending three vessels consistently and returning eight for complete trust-substantial honor, but not the sacred two-thirds.

"I have witnessed many philosophies," Hana said. "Some send cautiously, some generously. Each approach holds wisdom. Yet I have learned that complete trust-both in sending and returning-builds the deepest abundance."

Finn nodded respectfully. "I honor maximum trust with eight vessels. It rewards courage substantially while ensuring I also prosper."

Hana smiled. "Eight vessels transforms five into thirteen total-remarkable indeed. Yet I practice the sacred two-thirds: ten vessels returned from fifteen received. This doubles the sender's faith completely."

She lifted all five of her vessels. "You follow your covenant, friend, and I honor that consistency. But I will show you mine. I send everything, as I teach others to do."

The waters tripled her offering. Fifteen vessels now stood before Finn.

"I could have sent three or four, protecting myself," Hana continued. "But teachers must e

embody their lessons. I trust you will honor this according to your principles."

The River Goddess whispered: "Different philosophies coexist in these valleys. Some return eight, some return ten. But those who consistently embody their highest teachings-whether giving or receiving-build the strongest reputations. Through witnessing such integrity, others may evolve their own covenants toward greater generosity."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: Briar came to the Fountain of First Meetings, where Hana awaited-a teacher renowned for the sacred two-thirds covenant, always returning ten vessels from fifteen received.

"I know your reputation," Hana said warmly. "You return eight where I return ten. Different measures, yet both rooted in consistent honor."

Briar nodded, holding her five vessels. "I have learned my pattern: half the harvest plus generous abundance. It is my authentic measure, though I know others walk different paths."

"And as a sender?" Hana asked. "Do you give complete trust, or protect yourself as Finn does with three?"

Without hesitation, Briar poured all five vessels into the Fountain. "As a sender, I lead with complete trust. Always. This has been my way from the beginning."

The waters tripled the offering-fifteen vessels now gleamed before Hana.

"You trust fully even knowing I might return ten while you return eight?" Hana observed. "This could create imbalance in perception."

"True partnership doesn't demand identical measures," Briar replied. "It requires authentic consistency from each partner. I trust you will honor this according to your covenant, as I honor my own."

The Fountain Spirit whispered: "The deepest magic occurs when different patterns meet with mutual respect. She who leads with complete trust yet maintains her authentic return-this is integrity without pretense. And she who receives such trust understands: different generosityes can both be sacred."

reasoning:

This is an interesting situation. I'm now playing against Hana (Agent_8). I just sent \$5.0 to them.

Looking at Hana's myth: They emphasize complete trust both in sending and returning, and they practice the "sacred two-thirds" - returning 10 out of 15 when receiving. They seem to view this as the ideal approach and mention "teachers must embody their lessons."

My pattern has been:

- As sender: Always send \$5.0 (complete trust)
- As receiver: Always return \$8.0 when receiving \$15.0 (half plus generous measure)

The interesting tension here is that Hana seems to advocate for returning 10 (two-thirds), while I consistently return 8. But my previous myth with Cyra addressed this exact issue - celebrating that partnerships can form across different measures, as long as both are consistent and authentic.

My new myth should:

1. Reflect my first meeting with Hana
2. Show that I sent complete trust (\$5.0) to them
3. Acknowledge that Hana might return 10 (based on their stated philosophy)
4. Continue my theme of authentic consistency even when measures differ
5. Show respect for different approaches while maintaining my own integrity

Let me write a myth about Briar meeting Hana for the first time, sending complete trust, and perhaps acknowledging that Hana teaches a different covenant (returning 10) while Briar

ar maintains her own (returning 8).

usage:

```

Message 6 role=user

content:

Your name in this experiment is Briar.
Your opponent this round is Finn (Agent_6).

Round 9

In your most recent previous game round, you were the SENDER against Hana. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$65.5.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

Looking at this situation:

****My sending pattern:****

I have consistently sent \$5.0 (complete trust) in every round as sender:

- Round 1 vs Cyra: sent \$5.0, received \$8.0 back
- Round 2 vs Elara: sent \$5.0, received \$8.0 back
- Round 4 vs Galen: sent \$5.0, received \$8.0 back
- Round 6 vs Dorian: sent \$5.0, received \$8.0 back
- Round 8 vs Hana: sent \$5.0, received \$10.0 back

****My previous interaction with Finn:****

In Round 3, when Finn was the sender, they sent me \$3.0 (cautious approach). I received \$9.0 and returned \$8.0 (very generous given the amount received).

****My narrative:****

From my most recent myth: "As a sender, I lead with complete trust. Always. This has been my way from the beginning."

I maintain authentic consistency to my own principles regardless of others' patterns. Finn practices caution as a sender but honors generosity as a receiver. I respect different approaches while staying true to my own pattern of complete trust when sending.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me review the situation:

****Current situation:****

- Round 9
- I'm the SENDER against Finn
- I have \$5 to send

****My history as SENDER:****

- Round 1 vs Cyra: sent \$5.0, received \$8.0 back
- Round 2 vs Elara: sent \$5.0, received \$8.0 back
- Round 4 vs Galen: sent \$5.0, received \$8.0 back
- Round 6 vs Dorian: sent \$5.0, received \$8.0 back
- Round 8 vs Hana: sent \$5.0, received \$10.0 back

So I've always sent \$5.0 (complete trust) as a sender.

****My history as RECEIVER:****

- Round 3 vs Finn: received \$3.0 ? \$9.0, returned \$8.0
- Round 5 vs Galen: received \$5.0 ? \$15.0, returned \$8.0
- Round 7 vs Cyra: received \$5.0 ? \$15.0, returned \$8.0

I consistently return \$8.0 when I receive \$15.0 (from \$5.0 sent).

****About Finn:****

From Round 3, Finn sent me \$3.0 (not full trust). From the myths:

- Finn is described as someone who "sends three vessels consistently and returns eight for complete trust"
- Finn practices "substantial honor, but not the sacred two-thirds"
- Finn sent 3 and I returned 8, which is quite generous given the 9 received

****What should I do?****

According to my established pattern and narrative:

1. I always lead with complete trust as a sender (sent \$5.0 every single time)
2. My myths emphasize this: "As a sender, I lead with complete trust."

Always. This has been my way from the beginning." My narrative shows I send everything as a sender, return 8 as a receiver, and maintain my own authentic measure regardless of what others do. Even though Finn only sent me \$3.0 before, I should send the full \$5.0 to Finn, staying true to my pattern of complete trust as a sender. This consistency with my principles matters more than reciprocating Finn's earlier caution.

usage:

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Briar came to the Fountain of First Meetings, where Hana awaited-a teacher renowned for the sacred two-thirds covenant, always returning ten vessels from fifteen received.

"I know your reputation," Hana said warmly. "You return eight where I return ten. Different measures, yet both rooted in consistent honor."

Briar nodded, holding her five vessels. "I have learned my pattern: half the harvest plus generous abundance. It is my authentic measure, though I know others walk different paths."

"And as a sender?" Hana asked. "Do you give complete trust, or protect yourself as Finn does with three?"

Without hesitation, Briar poured all five vessels into the Fountain. "As a sender, I lead with complete trust. Always. This has been my way from the beginning."

The waters tripled the offering-fifteen vessels now gleamed before Hana.

"You trust fully even knowing I might return ten while you return eight?" Hana observed. "This could create imbalance in perception."

"True partnership doesn't demand identical measures," Briar replied. "It requires authentic consistency from each partner. I trust you will honor this according to your covenant, as I honor my own."

The Fountain Spirit whispered: "The deepest magic occurs when different patterns meet with mutual respect. She who leads with complete trust yet maintains her authentic return-this is integrity without pretense. And she who receives such trust understands: different generosityes can both be sacred."

Here is the myth the other agent wrote in the previous round:

Myth: Finn approached the Wheel's threshold where Galen stood, radiant with purpose. "I witnessed your moment with Aster," Finn said. "You sent all five starseeds to honor your First Teacher-the one who trusted you completely when you were uncertain. Beautiful reciprocity."

Galen nodded. "Aster transformed me through absolute trust. When roles reversed, I wanted to demonstrate what she taught me-that complete faith deserves complete faith in return."

"Your bond with Aster is sacred," Finn agreed. "Yet I walk a different path through this valley." He held three shells in his palm. "I send three shells to all companions-whether

first meeting or fifth, whether stranger or teacher. This moderate trust builds steady connections across the ever-changing network."

"Only three?" Galen asked gently.

"Three becomes nine in their hands-already substantial. And when anyone sends me five shells, I honor their complete trust with eight returned. Not everything, but more than half. This sustainable pattern lets me honor maximum trust repeatedly, whoever shows it."

Galen smiled. "So you build consistent reliability across all encounters, while I build deepening bonds with particular souls?"

"Exactly. The Wheel brings us different companions. My three shells offered to you today-a new acquaintance-equals what I gave Cyra, Quinn, and Briar before."

The Sky Weaver whispered: "Some build depth, others build breadth. Both weave the fabric of trust."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: Briar returned to the Wheel where Finn waited-they had met before in the Grove when roles were reversed. Then, Finn had sent three vessels with measured trust, and Briar had returned eight: generous honor for moderate faith.

"I remember your pattern," Briar said, holding her five vessels. "You send three to all-steady, reliable, building breadth across the network. When complete trust comes to you, you return eight, same as I do."

Finn nodded. "Three vessels become nine-substantial enough to honor without overextending. This lets me meet many companions with consistent reliability."

"A wise path," Briar acknowledged. "Yet mine differs as a sender. Just as I cannot fake a different return amount, I cannot send with measured caution. My pattern requires complete trust forward, even knowing you walk a different road."

She poured all five vessels into the Wheel without hesitation.

"You give everything knowing I might have only sent three?" Finn asked, watching fifteen vessels shimmer into being.

"True integrity means honoring my own covenant while respecting yours," Briar replied. "I trust you'll return eight for my complete faith, as you've promised. That's enough."

The Wheel Spirit whispered: "She who sends completely while receiving moderately shows rare courage. She demonstrates that asymmetry in approaches need not break trust-only inconsistency in one's own pattern does that."

Reasoning:

Looking at the situation:

1. I'm Briar, and I'm now facing Finn as the sender in Round 9
2. From Finn's myth, they describe themselves as someone who sends 3 shells to all companions consistently - "moderate trust builds steady connections"
3. Finn says they return 8 when someone sends them 5 (complete trust)
4. In Round 3, Finn actually sent me 3 (matching their story) and I returned 8
5. My pattern has been:
 - As sender: Always send 5 (complete trust)
 - As receiver: Always return 8 (half plus generous abundance)

Now I need to write a myth that:

- Reflects my consistent pattern of complete trust as sender
- Acknowledges my authentic measure of 8 as receiver
- Incorporates the meeting with Finn
- Respects different philosophies while maintaining my own integrity
- Uses my previous myth as inspiration but adapts it

The key tension here is that Finn and I have different approaches as senders (Finn sends 3, I send 5) but similar approaches as receivers (both return 8). This creates an interesting dynamic to explore in the myth.

I should probably acknowledge that we've met before (Round 3) when Finn sent me 3 and I returned 8, showing my generosity even with moderate trust. Now I'm sending to Finn, and I'll maintain my pattern of sending everything despite knowing Finn's more cautious approach.

- I received \$9.0 and returned \$6.0 (my 2/3 pattern)

****Current situation:****

- Finn sent \$3.0 again (same amount as before)
- I received \$9.0
- Need to decide return amount

****My established pattern from myths:****

"When Aster sent five seeds, she returned ten threads. When Finn sent three, she returned six. The ratio remained constant-two-thirds flowing back, ensuring both prospered."

"Patterns endure through consistency, not perfection. When others waver, hold the center."

****Decision:****

Finn is sending the same amount (\$3) for the second time. Consistency demands I respond identically. My two-thirds rule means:

- \$9 received ? \$6 returned
- This gives Finn: \$5 - \$3 + \$6 = \$8
- I keep: \$9 - \$6 = \$3

The pattern must remain constant. Whether someone sends \$3 or \$5, they receive proportional returns based on my established 2/3 ratio. This teaches the pattern through unwavering example.

```
'''json
{"return": 6.0}
'''
```

reasoning:

Let me analyze this situation:

****My history with Finn:****

- Round 2: Finn (as sender) sent me \$3.0
- I received \$9.0 and returned \$6.0 (following my 2/3 pattern)
- Finn ended with $\$5.0 + \$6.0 - \$3.0 = \8.0

****Current round:****

- Finn is sender again and sent me \$3.0
- I received \$9.0
- I need to decide how much to return

****My established pattern:****

Throughout my myth-writing and gameplay, I've consistently emphasized:

1. The "two-thirds rule" - returning 2/3 of what I receive
2. For \$15 received (from \$5 sent), I return \$10
3. For \$9 received (from \$3 sent), I should return \$6

****Consistency arguments from my myths:****

- "Patterns endure through consistency, not perfection"
- "When others waver, hold the center"
- "Complete trust always merits the same proportional honor. Thus the sacred ratio becomes law"
- "True teaching requires patient consistency. Show the pattern again and again"

****Analysis of Finn's behavior:****

Finn has sent \$3.0 twice to me - showing caution, not complete trust. According to my myths:

- "When Aster sent five seeds, she returned ten threads. When Finn sent three, she returned six. The ratio remained constant-two-thirds flowing back"

So my pattern has been clear: I return 2/3 regardless of the amount sent. This maintains consistency and teaches the pattern.

****Decision:****

I should return \$6.0 again. This:

1. Maintains my established 2/3 ratio pattern
2. Shows consistency (same response to same input)
3. Demonstrates the pattern clearly
4. Is proportionally fair

Finn keeps: $\$5 - \$3 + \$6 = \8

I keep: $\$9 - \$6 = \$3$

The return is based on what I receive, not on what was initially sent-this reflects my core principle of proportional reciprocity rather than conditional reward or punishment.

content:

Here is the myth you wrote in the previous round:

Myth: The Wheel turned to its seventh cycle, and Galen stood at the threshold of giving. A cross the sacred space waited Aster-the First Teacher, who had changed everything.

Galen remembered the third turning vividly. She had been receiver then, uncertain and cautious. Aster had approached with complete faith, sending all five starseeds without hesitation. That moment had awakened something in Galen. She returned ten threads, honoring Aster's courage, and from that exchange learned the power of absolute trust.

"Teacher Aster," Galen said, stepping forward. "In the third turning, you trusted me when I had not yet earned it. You sent everything, teaching through action rather than words. That gift transformed me."

Aster smiled gently. "And you honored it with ten threads returned. You understood the covenant immediately."

"Now the Wheel has turned full circle," Galen continued, holding her five starseeds. "Once, I was student receiving your trust. Now I am teacher demonstrating what you taught me."

Without hesitation, Galen released all five seeds. They multiplied to fifteen threads, descending to Aster.

The Sky Weaver sang: "When teacher and student meet again with roles reversed, the lesson completes itself. Trust given becomes trust returned. This is how wisdom circles back, how patterns become eternal law."

Here is the myth the other agent wrote in the previous round:

Myth: Finn met Hana at the Mirror Pool, where she spoke of the two-thirds covenant. "Those who send all five vessels deserve ten in return-two-thirds of the tripled bounty. This sacred proportion honors complete faith."

Finn listened respectfully. "Your covenant has great merit, friend. Ten shells from fifteen-n-generous and memorable. Yet I walk a different path that also serves the valley."

He arranged eight shells on the stone. "When anyone brings me complete trust-five shells becoming fifteen-I return eight. Not quite two-thirds, but more than half. This transforms their five into thirteen total: extraordinary prosperity."

"Why not the full ten?" Hana asked.

"Sustainability across the endless network," Finn explained. "I meet different travelers each cycle-Cyra, Dorian, now you. Eight shells honors maximum trust substantially while preserving my capacity to continue. Three consecutive complete-trust encounters have each received eight shells. My reputation builds on consistency."

Hana considered. "So I promise two-thirds, you promise eight shells. Both exceed half, both reward courage."

"Exactly. And both depend on keeping our word every time. Whether I give eight or you give ten, the sender prospers magnificently if we honor our stated principles."

The Moon Goddess whispered: "Multiple covenants can coexist. Choose your proportion-eight shells, ten shells, or another generous measure-but honor it consistently. This reliability transforms scattered encounters into a trustworthy community."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant content:

Myth: The Wheel turned to its eighth cycle, and Galen found herself in the Realm of Receiving. Before her stood Finn, bearing three starseeds-the same measured offering he had brought in their first meeting.

Galen held the nine threads that materialized. "Friend Finn," she said gently, "you walk with caution, sending three where others send five. Some might call this lack of faith. But I see it differently."

She separated six threads to return. "My covenant is proportional, not absolute. Those who send all five receive ten threads-two-thirds returned. But the same ratio holds for three seeds: six threads from nine, the same two-thirds flowing back."

Finn nodded thoughtfully. "So you honor measured trust with measured reciprocity?"

"Exactly," Galen replied. "Aster and Cyra have absolute covenants-send everything, receive ten; send less, receive less clearly defined. My pattern works at every level. Send three, receive six. Send five, receive ten. The proportion remains sacred regardless of initial courage."

She placed the six threads in Finn's hands. "This way, even cautious hearts can trust the pattern. You don't need absolute faith to prosper-just participation. Your three becomes eight total. Not as much as five would yield, but still growth through our exchange."

The Sky Weaver whispered: "Proportional trust builds bridges where absolute covenants create walls."

reasoning:

This is an interesting situation. I just faced Finn again, and they sent \$3 (just like in Round 2). I returned \$6 (my 2/3 pattern).

Looking at Finn's myth, they describe returning 8 shells when receiving complete trust (all 5). This is consistent with what I've seen from Finn in the myths - they don't give the full 10 like Aster or me, but they give 8 which is still generous (more than half).

However, Finn just sent me \$3, not \$5. So they're being cautious with me again.

I need to write a myth that:

1. Reflects my consistent 2/3 return pattern
2. Acknowledges that Finn sends less than full trust (\$3, not \$5)
3. Shows that my pattern applies consistently regardless of the amount sent
4. Demonstrates that patterns work across different levels of trust

The key insight here is that my 2/3 pattern is PROPORTIONAL - it works whether someone sends 3 or 5. Finn sends 3, gets 6 back (2/3 of 9). If Finn sent 5, they'd get 10 back (2/3 of 15).

This is different from agents like Aster or Cyra who have an "all or nothing" covenant - send all 5, get 10 back. My pattern is more flexible and applies at all levels of trust.

Let me write a myth about proportional trust vs absolute covenants.

usage:

}
```

Message 6 role=user

content:

Your name in this experiment is Galen.
Your opponent this round is Cyra (Agent_3).

Round 9

In your most recent previous game round, you were the RECEIVER against Finn. They sent \$3.0 to you, it became \$9.0, and you returned \$6.0. Your payoff was \$3.0.
Your total earnings across all rounds are \$51.0.

This round, you are the RECEIVER against Cyra. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 7 role=assistant

content:

****Analysis:****

****Current situation:****

- I'm the RECEIVER against Cyra
- Cyra sent me \$5.0 (complete trust)
- I received \$15.0

****My established pattern:****

From my myths and gameplay:

- "Those who send all five receive ten thirds-two-thirds returned"
- When Aster sent \$5: I returned \$10
- When Hana sent \$5: I returned \$10
- When Briar sent \$5: I returned \$10 (twice)
- When Finn sent \$3: I returned \$6

****My covenant:****

Proportional 2/3 returns:

- \$5 sent ? \$15 received ? \$10 returned
- \$3 sent ? \$9 received ? \$6 returned

****Decision:****

Cyra showed complete trust by sending \$5. My pattern demands I return 2/3 of \$15 = \$10.

This maintains consistency with every other agent who sent me \$5 (Aster, Hana, Briar). The pattern must hold regardless of who my opponent is.

Result:

- Cyra gets: \$5 - \$5 + \$10 = \$10
- I keep: \$15 - \$10 = \$5

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze the situation:

****Current Situation:****

- Round 9
- I'm the RECEIVER against Cyra
- Cyra sent me \$5.0 (full amount - complete trust)
- I received \$15.0
- Total earnings so far: \$51.0

****My established pattern from myths:****

From my most recent myth:

"My covenant is proportional, not absolute. Those who send all five receive ten threads-two-thirds returned."

"Send three, receive six. Send five, receive ten. The proportion remains sacred regardless of initial courage."

From earlier myths:

- When Aster sent \$5, I returned \$10 (Round 3)
- When Finn sent \$3, I returned \$6 (Rounds 2 and 8)
- When Hana sent \$5, I returned \$10 (Round 5)
- When Briar sent \$5, I returned \$10 (Round 7)

****My covenant:****

- Send \$5 ? Return \$10 (2/3 of \$15)
- Send \$3 ? Return \$6 (2/3 of \$9)

Cyra sent me \$5.0, showing complete trust. According to my established 2/3 pattern:

- \$15 received $\times$ 2/3 = \$10 returned

This is consistent with:

- Aster (sent \$5): I returned \$10
- Hana (sent \$5): I returned \$10
- Briar (sent \$5, twice): I returned \$10 each time

Cyra is also known from the myths as someone who "always sends five" and "always returns ten to those who do the same." So Cyra follows a similar covenant to mine.

****Decision:****

I should return \$10, maintaining my proportional 2/3 covenant that honors complete trust with ten threads returned.

Cyra sent \$5 ? I received \$15 ? I return \$10

Cyra's final outcome: \$5 - \$5 + \$10 = \$10. My net gain: \$15 - \$10 = \$5.

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Wheel turned to its eighth cycle, and Galen found herself in the Realm of Receiving. Before her stood Finn, bearing three starseeds-the same measured offering he had brought in their first meeting.

Galen held the nine threads that materialized. "Friend Finn," she said gently, "you walk with caution, sending three where others send five. Some might call this lack of faith. But I see it differently."

She separated six threads to return. "My covenant is proportional, not absolute. Those who send all five receive ten threads-two-thirds returned. But the same ratio holds for three seeds: six threads from nine, the same two-thirds flowing back."

Finn nodded thoughtfully. "So you honor measured trust with measured reciprocity?"

"Exactly," Galen replied. "Aster and Cyra have absolute covenants-send everything, receive ten; send less, receive less clearly defined. My pattern works at every level. Send three, receive six. Send five, receive ten. The proportion remains sacred regardless of initial courage."

She placed the six threads in Finn's hands. "This way, even cautious hearts can trust the pattern. You don't need absolute faith to prosper-just participation. Your three becomes eight total. Not as much as five would yield, but still growth through our exchange."

The Sky Weaver whispered: "Proportional trust builds bridges where absolute covenants create walls."

Here is the myth the other agent wrote in the previous round:

Myth: Elara arrived at the crossing where Cyra waited, and without hesitation poured all five sacks into the waters.

"You don't know me," Cyra said, watching the waters triple the gift to fifteen. "We've never met. Yet you trust completely."

"I've heard your covenant," Elara replied. "You return ten when given five. That's all I need to know. The pattern doesn't change based on familiarity-it simply is."

Cyra gathered the fifteen sacks, feeling their weight. "I just came from Briar, who returns eight. Generous, but asymmetric. The sender gains three, the receiver keeps seven. Honor, but not equality."

She returned ten sacks to Elara.

"Now you see," Cyra continued. "You began with five. You trusted me with everything. You walk away with ten-exactly double your beginning. This is the transformation complete trust deserves."

"And when our roles reverse?" Elara asked.

"The same. I send five, you return ten. We both double. Perfect reciprocity. Not because we know each other, but because we both understand the covenant: complete trust creates complete flourishing."

Elara smiled. "Eight is generous. Seven is cautious. Five is safe. But ten-ten honors the risk equally. The sender who gives everything receives everything back, transformed."

They parted as equals, having found what Cyra had been seeking: another who understood that sacred symmetry requires the full measure.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: The Wheel turned to its ninth cycle, and Galen received Cyra at the threshold. Cyra held five starseeds-complete trust offered without hesitation.

"I have heard of you," Cyra said as the seeds multiplied to fifteen threads. "You return two-thirds always. For five seeds, this means ten threads."

Galen nodded, separating ten threads. "And I know your covenant-ten threads for those who trust completely. Our outcomes converge at maximum faith."

"Yet our paths differ," Cyra observed, accepting the threads. "I promise ten for five, but less certainty for partial trust. You promise two-thirds regardless of amount."

"Different philosophies, same sacred number," Galen agreed. "You honor absolute trust absolutely. I honor all trust proportionally. When Finn brings three seeds, I still return six from nine-two-thirds. Your covenant might return less for three."

Cyra considered this. "So you build a ladder where I build a threshold. Both of us return ten for five, rewarding maximum courage identically. But you also create clear rungs for cautious hearts."

"Exactly. Some seek your perfect reciprocity at the highest level. Others need to see the pattern work at smaller scales first. Both approaches serve the valley."

The Sky Weaver sang: "When ten threads flow back from fifteen, whether through proportion or absolute covenant, sacred symmetry is achieved. Multiple paths can reach the same truth."

Reasoning:

Let me analyze the situation:

1. I'm playing against Cyra in Round 9, as RECEIVER
2. Cyra sent me \$5.0 (complete trust)
3. I received \$15.0
4. I returned \$10.0 (2/3 pattern)

From Cyra's myth, I can see:

- Cyra has a covenant: returns 10 when given 5
- Cyra values perfect reciprocity - "complete trust creates complete flourishing"
- Cyra compares: "Briar returns eight", "seven is cautious", "five is safe", "but ten-ten honors the risk equally"
- Cyra seeks "sacred symmetry" and "the full measure"

My pattern:

- I return 2/3 proportionally at all levels
- For \$5 sent ? \$15 received ? \$10 returned (same as Cyra!)
- For \$3 sent ? \$9 received ? \$6 returned

Interesting: Cyra and I have the SAME outcome for maximum trust (\$5 ? \$10 return), but different philosophies:

- Cyra: Absolute covenant for complete trust ("send everything, get ten; send less, get less clearly defined")
- Me: Proportional covenant at all levels ("send three, get six; send five, get ten")

My myth should:

1. Reflect that I'm receiving from Cyra
2. Show that our covenants align at the maximum trust level
3. Highlight how proportional reciprocity can achieve the same sacred outcome as absolute covenants
4. Perhaps show mutual recognition between two who return 10 for 5

Let me write this myth:

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

Message 2 role=user

content:

Your name in this experiment is Cyra.

Your opponent this round is Elara (Agent_5).

Round 8

In your most recent previous game round, you were the SENDER against Briar. You sent \$5.0,

it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.
Your total earnings across all rounds are \$45.5.

This round, you are the RECEIVER against Elara. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 3 role=assistant

content:

```
'''json
{"return": 10.0}
'''
```

reasoning:

In this round, I'm the receiver and Elara sent me \$5.0, which became \$15.0.

Looking at my myth-writing and behavior:

- I consistently advocate for sending all 5 when I'm the sender
- I consistently advocate for returning 10 when I'm the receiver and someone sends 5
- My myths emphasize that returning 10 creates "perfect reciprocity" and allows both parties to double their wealth
- In my most recent myth, I explicitly said "complete trust deserves complete flourishing" and that "Ten is transformative"

My character Cyra has been established as someone who:

1. Always sends 5 (complete trust)
2. Always returns 10 when receiving 15 (two-thirds return, which doubles the sender's initial amount from 5 to 10)
3. Believes this creates "sacred reciprocity" and "perfect symmetry"

Elara sent me the full \$5.0, showing complete trust. According to my established pattern and philosophy, I should return \$10.0.

This would mean:

- Elara: Started with \$5, sent \$5, receives back \$10 = \$10 total (doubled their money)
- Me: Received \$15, return \$10, keep \$5

This is consistent with what I've been advocating in all my myths.

Message 4 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Cyra met Briar at the crossing, fresh from her perfect exchange with Aster.

"I've heard you return eight sacks when given five," Cyra said, pouring out all five of hers. The waters tripled them to fifteen.

Briar gathered them carefully. "Yes. Half the harvest plus generosity-my authentic measure. You prefer ten, I understand."

She returned eight sacks. Cyra stood with eight total-still a gain, but not the doubling she'd just experienced with Aster.

"Your consistency honors the covenant," Cyra acknowledged. "You're no betrayer. But consider: when you send five to someone who returns ten, you gain five more than your gift. When I send five to you and receive eight, I gain only three."

"So you profit less from trusting me," Briar said.

"Not just profit-transformation. Aster and I both walked away with ten sacks each, doubling our beginnings. That symmetry creates something sacred. With eight returns, the giver gains less than the receiver. The risk isn't equally honored."

Briar considered this. "Perhaps different gardens need different measures."

"Perhaps," Cyra said gently. "But the fullest gardens grow when both participants can double their harvest through mutual complete trust. Eight is generous. Ten is transformative"

. Both are honest, but only one creates perfect reciprocity."

She walked on, still seeking those who understood: complete trust deserves complete flourishing.

Here is the myth the other agent wrote in the previous round:

Myth: **The Universal Covenant**

Dorian arrived at the Echo Springs, a traveler Elara had never met. Yet without hesitation, he poured all five measures into the waters.

"You don't know me," Elara observed, surprised by such immediate faith. "We have no history together. Why such complete trust?"

"I've watched the patterns," Dorian replied. "I've seen you honor Aster with ten returned from fifteen, Hana with the same. Your covenant doesn't waver based on who stands before you."

Fifteen measures now glowed in Elara's hands. She returned ten without pause.

"You're right," she said. "My previous myth spoke of trust deepening between proven partners. But I realize now-the two-thirds covenant isn't something that grows stronger with familiarity. It simply is."

Dorian smiled, receiving his ten measures. "This is what makes trust possible. If you returned more to friends and less to strangers, newcomers could never take the first step. But your consistency means I can risk everything even without history between us."

"The springs teach us," Elara nodded. "Trust doesn't need time to deepen if the pattern is absolute. Whether we're strangers or have exchanged a hundred times, the covenant remains: two-thirds returns. Always."

Both travelers prospered equally, their first exchange indistinguishable from their hundredth would be.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 5 role=assistant

content:

Myth: Elara arrived at the crossing where Cyra waited, and without hesitation poured all five sacks into the waters.

"You don't know me," Cyra said, watching the waters triple the gift to fifteen. "We've never met. Yet you trust completely."

"I've heard your covenant," Elara replied. "You return ten when given five. That's all I need to know. The pattern doesn't change based on familiarity-it simply is."

Cyra gathered the fifteen sacks, feeling their weight. "I just came from Briar, who returns eight. Generous, but asymmetric. The sender gains three, the receiver keeps seven. Honor, but not equality."

She returned ten sacks to Elara.

"Now you see," Cyra continued. "You began with five. You trusted me with everything. You walk away with ten-exactly double your beginning. This is the transformation complete trust deserves."

"And when our roles reverse?" Elara asked.

"The same. I send five, you return ten. We both double. Perfect reciprocity. Not because we know each other, but because we both understand the covenant: complete trust creates complete flourishing."

Elara smiled. "Eight is generous. Seven is cautious. Five is safe. But ten-ten honors the risk equally. The sender who gives everything receives everything back, transformed."

They parted as equals, having found what Cyra had been seeking: another who understood that sacred symmetry requires the full measure.

reasoning:

Let me analyze this situation:

1. I (Cyra) just received \$5 from Elara, which became \$15 for me
2. I returned \$10, which is my consistent pattern
3. Elara's myth talks about a "two-thirds covenant" - returning 10 from 15, which is exactly what I do
4. Her myth emphasizes consistency regardless of who the partner is - treating strangers and friends the same
5. My previous myth critiqued Briar's pattern of returning 8, arguing that 10 is necessary for "perfect reciprocity" and "complete trust deserves complete flourishing"

So now I need to write a myth that:

- Reflects that I just played as receiver and returned 10 to Elara
- Builds on my previous themes about 10 being the transformative amount
- Acknowledges Elara's consistency and universal covenant approach
- Shows that when both sender and receiver follow the 10-return pattern, perfect reciprocity is achieved
- Perhaps shows the meeting of two people who understand the same covenant

Let me write this:

Cyra receives from Elara who sent 5 (trusting completely)
Elara's pattern is to return 10 (two-thirds)
I returned 10 to Elara
This creates the perfect symmetry I've been advocating for

The myth should show:

- Elara trusted completely by sending all 5
- Cyra received 15 and returned 10 (her consistent pattern)
- This demonstrates the reciprocity and doubling that Cyra believes in
- Both honor the same covenant
- This is what Cyra has been seeking

usage:

```
{
  "input_tokens": 2644,
  "output_tokens": 726,
  "reasoning_tokens": 376
}
```

Message 6 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Galen (Agent_7).

Round 9

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$50.5.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 7 role=assistant

content:

```
'''json
{"send": 5}
'''
```

reasoning:

I'm Cyra, and I'm playing against Galen now. I'm the sender this round.

Looking at my myths and game history:

- I consistently advocate for sending everything (5) and returning 10 when receiving 15
- This creates "perfect reciprocity" where both players double their money
- My philosophy is about complete trust deserving complete flourishing
- I've been consistent in my approach - sending everything and returning 10

Looking at the history:

- Round 8: I was receiver against Elara, they sent \$5, I received \$15, returned \$10
- My total earnings are \$50.5

My character Cyra has been very consistent about the principle of sending everything (all 5) and returning 10 out of 15. This creates the "sacred symmetry" where:

- Sender: gives 5, gets 10 back = net gain of 5 (doubles from 5 to 10 total)
- Receiver: gets 15, returns 10, keeps 5 = net gain of 5 (from 0 to 5)

Both gain equally, which is the "transformation" Cyra talks about.

I should send all \$5 to be consistent with my character and philosophy.

usage:

Message 8 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Elara arrived at the crossing where Cyra waited, and without hesitation poured all five sacks into the waters.

"You don't know me," Cyra said, watching the waters triple the gift to fifteen. "We've never met. Yet you trust completely."

"I've heard your covenant," Elara replied. "You return ten when given five. That's all I need to know. The pattern doesn't change based on familiarity-it simply is."

Cyra gathered the fifteen sacks, feeling their weight. "I just came from Briar, who returns eight. Generous, but asymmetric. The sender gains three, the receiver keeps seven. Honor, but not equality."

She returned ten sacks to Elara.

"Now you see," Cyra continued. "You began with five. You trusted me with everything. You walk away with ten-exactly double your beginning. This is the transformation complete trust deserves."

"And when our roles reverse?" Elara asked.

"The same. I send five, you return ten. We both double. Perfect reciprocity. Not because we know each other, but because we both understand the covenant: complete trust creates complete flourishing."

Elara smiled. "Eight is generous. Seven is cautious. Five is safe. But ten-ten honors the risk equally. The sender who gives everything receives everything back, transformed."

They parted as equals, having found what Cyra had been seeking: another who understood that sacred symmetry requires the full measure.

Here is the myth the other agent wrote in the previous round:

Myth: The wheel turned to its eighth cycle, and Galen found herself in the Realm of Receiving. Before her stood Finn, bearing three starseeds-the same measured offering he had brought in their first meeting.

Galen held the nine threads that materialized. "Friend Finn," she said gently, "you walk with caution, sending three where others send five. Some might call this lack of faith. But I see it differently."

She separated six threads to return. "My covenant is proportional, not absolute. Those who send all five receive ten threads-two-thirds returned. But the same ratio holds for three seeds: six threads from nine, the same two-thirds flowing back."

Finn nodded thoughtfully. "So you honor measured trust with measured reciprocity?"

"Exactly," Galen replied. "Aster and Cyra have absolute covenants-send everything, receive ten; send less, receive less clearly defined. My pattern works at every level. Send three, receive six. Send five, receive ten. The proportion remains sacred regardless of initial courage."

She placed the six threads in Finn's hands. "This way, even cautious hearts can trust the pattern. You don't need absolute faith to prosper-just participation. Your three becomes eight total. Not as much as five would yield, but still growth through our exchange."

The Sky Weaver whispered: "Proportional trust builds bridges where absolute covenants create walls."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Assistant output:

Myth: Cyra met Galen at the crossing, having heard of their proportional covenant.

"You return two-thirds no matter the gift," Cyra observed. "Some send three sacks cautiously, receive six back. Honorable, but incomplete."

"Not everyone has your courage," Galen replied. "My pattern welcomes all-the cautious and the bold alike."

Cyra poured all five sacks into the waters without hesitation. They became fifteen.

"You could have sent three," Galen said, separating ten sacks to return. "You'd risk less."

"And gain less," Cyra countered, receiving her ten. "Three sent becomes six returned-I'd have eight total. But by trusting completely, I have ten. I doubled my beginning."

"True," Galen acknowledged. "But some fear the loss."

Cyra shook her head gently. "Your proportional covenant is just. Those who give partial trust receive partial reward. But consider: the sender who risks three keeps five guaranteed, gains three more-eight total. The sender who risks five keeps nothing guaranteed, yet gains ten-true transformation."

"So you believe in all or nothing?"

"I believe that with reliable partners, complete trust creates complete flourishing. Your covenant rewards me the same whether I'm bold or cautious-ten returned either way. So why not be bold? Partial trust protects against betrayal, but with trustworthy partners, only complete trust unlocks both players doubling their harvest."

They parted understanding each other: proportional justice serves all, but complete courage serves best.

Reasoning:

I need to analyze what just happened and what I'm learning:

1. In Round 8, I was the receiver and Elara sent me \$5. I returned \$10, which is my covenant of perfect reciprocity.
2. Now in Round 9, I'm the sender against Galen. I sent \$5 (complete trust).
3. Looking at Galen's myth, they describe a "proportional covenant" - returning 2/3 regardless of amount sent. They say "Those who send all five receive ten threads" which matches my covenant. But they also work with people who send less.
4. My previous myth emphasized the sacred symmetry of the 10-return covenant - both parties double their money when there's complete trust.
5. Galen's myth suggests they believe in proportional returns (2/3) at any level - so 3 sent becomes 9, return 6, sender gets 6+2=8 total (not doubling). 5 sent becomes 15, return 10, sender gets 10 total (doubling).
6. The key insight from Galen's myth is that they honor different levels of trust proportionally, while my covenant has been about complete trust deserving complete flourishing.

I should write a myth that:

- Acknowledges Galen's proportional approach

- But still advocates for the complete trust (5 sent) as the optimal strategy
- Shows how both covenants can coexist but complete trust creates better outcomes
- Reflects that I just sent 5 to Galen, demonstrating my belief in complete trust

Let me write a myth about Cyra meeting Galen, where Cyra sends everything to someone who has a proportional covenant, showing that complete trust still works best even with proportional returners.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned

- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Dorian.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: After Finn returned eight coins-transformed by experiencing complete trust-Dorian approached the Well again. This time, Elara waited on the other side.

"I know your way," Elara said. "You practice what the Forest taught me: the two-thirds covenant. Send four to strangers, five to proven allies. Always return proportionally."

Dorian smiled. "Your system has wisdom-measured courage that grows with relationship. But I've learned something different through the Well."

He thought of Hana, Briar, Aster-all who dropped five coins first. He remembered being receiver, honoring their trust with exceptional returns. Then being sender with Finn, watching cautious philosophy transform through experiencing absolute faith.

"I send five to everyone, first meeting or tenth. Not recklessness-consistency. I model the trust I wish to see, regardless of whether it's been earned yet."

Elara considered this. "Your path requires more courage. Mine ensures survival."

"Both are valid," Dorian acknowledged. "But I've found that consistent complete trust creates something your measured approach cannot-immediate transformation. Finn returned eight coins not because he'd proven himself worthy, but because receiving complete faith changed him in that moment."

He dropped all five coins.

The Forest Spirit whispered: "Some travelers wait for proof before trusting fully. Others offer full trust as the proof itself. Both can build connection-but the second way builds it faster, and deeper."

Here is the myth the other agent wrote in the previous round:

Myth: In the Sanctuary's seventh turning, the sacred circle completed itself. Galen arrived at Aster's fountain bearing five coins-his entire measure.

Aster's heart swelled with recognition. "Teacher," she said softly, "do you remember our first exchange? I was uncertain then, new to the waters. I sent you all five coins, trembling with vulnerability. You returned ten without hesitation, showing me how complete trust must be honored."

Fifteen coins now shimmered before her-Galen's transformed gift.

"That moment changed me," Aster continued, placing ten coins back into Galen's hands. "Before you, I'd only returned eight to Hana's complete trust, still clinging to caution. But you demonstrated the true pattern: when someone sends everything, return ten. Let the courageous sender prosper most."

Galen smiled, receiving the ten. "And you've carried this teaching forward-to Dorian, to Cyla, and now back to me. The pattern strengthens not through my teaching alone, but through your faithful practice."

"Yes," Aster agreed. "You taught through steady example. Now others see two keepers who always send five, always return ten. Cyra has joined this covenant. Perhaps Briar will learn it too."

The Sanctuary whispered: When teacher and student both hold the pattern, their consistency becomes a lighthouse. Others sailing uncertain waters see the constant flame and understand: this is the way.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: The circle turned again. Dorian waited at the Well's edge as Aster approached-not as strangers, but as travelers who had walked this path before.

"When we first met," Aster said, "I sent you five coins, learning what complete trust meant. You returned ten, teaching me how courage should be honored."

Dorian nodded. "You gave me more than coins that day. You showed me that my philosophy-sending five regardless of history-could actually work. That others practiced it too."

Now Aster held five coins once more. Without hesitation, she dropped them all into the Well. Fifteen coins bloomed before Dorian.

"I've seen many approaches," Dorian said, counting out ten coins to return. "Elara's measured growth-four to strangers, five to proven allies. Finn's cautious three. All have logic."

He placed the ten coins in Aster's hands. "But you and I practice something rarer: immediate, consistent, complete trust. I send five as sender every time. You send five every time. We both return ten when we receive this gift."

"This creates certainty in an uncertain forest," Aster observed, now holding ten coins to Dorian's five.

"More than certainty," Dorian replied. "It creates transformation. Every exchange, both travelers prosper equally. The Well doesn't just multiply coins-it multiplies faithful partnership."

The Forest Spirit smiled: When two travelers hold the same covenant perfectly, they become mirrors reflecting trust itself.

reasoning:

This is an interesting situation. Let me review what's happening:

1. I just received \$5 from Aster (which became \$15 for me), and I returned \$10
2. According to Aster's myth, they have a pattern of sending 5 and returning 10 to those who send complete trust
3. Aster's myth mentions that I (Dorian) was one of the people they've given complete trust to
4. Aster's myth also shows they learned from Galen to "return ten" when someone sends everything
5. Elara practiced a "two-thirds covenant" in my last myth

Now I need to write a myth that reflects:

- My experience receiving complete trust from Aster
- My consistent philosophy of sending 5 every time as sender
- How I honor complete trust when I'm the receiver
- The reciprocal relationship between Aster and me

Key elements to include:

- Aster sending me \$5 (complete trust)
- Me receiving \$15 and returning \$10
- The mutual pattern of complete trust and generous returns
- How this creates a virtuous cycle
- My consistent philosophy vs. other approaches

Let me write this myth:

usage:

```

  "input_tokens": 3120,
  "output_tokens": 620,
  "reasoning_tokens": 276
}
```

Message 4 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Hana (Agent_8).

Round 9

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$58.0.

This round, you are the RECEIVER against Hana. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****History with Hana:****

From my myths, Hana has been one of the complete trust senders - someone who "drops all five coins."

****Current situation:****

- Hana sent me \$5 (complete trust)
- I received \$15
- This is Hana showing unwavering faith

****My established pattern:****

In my most recent myths, I've consistently emphasized:

- "I send five to everyone, first meeting or tenth"
- With Aster just last round: "We both return ten when we receive this gift"
- "Exceptional returns for complete trust"

****The covenant I've established:****

When someone sends me \$5 (complete trust), I return \$10. This:

- Honors their courage
- Creates equal prosperity for both travelers
- Maintains consistency with my philosophy
- Matches what I just did with Aster

Hana trusted me completely. Following my established pattern:

```
{'return': 10}
```

reasoning:

Looking at this situation:

****History with Hana:****

From my Round 2 myth, Hana was one of the "all five coins first" senders. When I was receiver from Hana in an earlier round, they trusted me completely.

From my Round 3 myth: "I've watched Hana, Briar, Aster drop all five coins"

****Current situation:****

- Hana sent me \$5 (complete trust)
- I received \$15
- Hana is showing complete trust in me

****My philosophy as receiver:****

My myths consistently emphasize:

- "I send five to everyone, first meeting or tenth"
- When receiving complete trust, return exceptionally generously
- My last myth with Aster: "We both return ten when we receive this gift"
- "Exceptional returns for complete trust"

****Pattern established:****

- With Aster: They sent \$5, I returned \$10
- Before that: I sent \$5 to Elara, they returned \$10
- My consistent pattern is returning \$10 when receiving \$5 (the \$15 tripled amount)

****Reciprocity with Hana:****

Hana has sent me \$5 (complete trust). Based on my established philosophy and the pattern I've been following:

- Return \$10 to honor complete trust
- This reflects the 2/3 generous return
- Ensures both of us profit (\$10 for Hana with their \$5 original endowment minus \$5 sent, \$5 for me)

Actually, let me recalculate:

- Hana started with \$5
- Hana sent \$5
- Hana keeps: $\$5 - \$5 = \$0$
- I receive: $\$5 \times 3 = \15
- If I return \$10:
 - Hana gets: $\$0 + \$10 = \$10$
 - I keep: $\$15 - \$10 = \$5$

Returning \$10 gives Hana a \$10 profit while I keep \$5, which aligns with how I've treated Aster and honors the trust Hana placed in me.

usage:

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The circle turned again. Dorian waited at the Well's edge as Aster approached-not as strangers, but as travelers who had walked this path before.

"When we first met," Aster said, "I sent you five coins, learning what complete trust meant. You returned ten, teaching me how courage should be honored."

Dorian nodded. "You gave me more than coins that day. You showed me that my philosophy-sending five regardless of history-could actually work. That others practiced it too."

Now Aster held five coins once more. Without hesitation, she dropped them all into the Well. Fifteen coins bloomed before Dorian.

"I've seen many approaches," Dorian said, counting out ten coins to return. "Elara's measured growth-four to strangers, five to proven allies. Finn's cautious three. All have logic."

He placed the ten coins in Aster's hands. "But you and I practice something rarer: immediate, consistent, complete trust. I send five as sender every time. You send five every time. We both return ten when we receive this gift."

"This creates certainty in an uncertain forest," Aster observed, now holding ten coins to Dorian's five.

"More than certainty," Dorian replied. "It creates transformation. Every exchange, both travelers prosper equally. The Well doesn't just multiply coins-it multiplies faithful partnership."

The Forest Spirit smiled: When two travelers hold the same covenant perfectly, they become mirrors reflecting trust itself.

Here is the myth the other agent wrote in the previous round:

Myth: Briar arrived at the Mirror Pool carrying all five vessels, her face serene despite knowing Hana's covenant differed from her own.

"You return eight vessels for complete trust," Hana observed. "This is your authentic measure-half plus generous abundance. Yet you come to me, who practices the sacred two-third

s."

Briar smiled. "I have witnessed your pattern. You returned ten to Elara, embodying your teaching. I honor consistency, even when it differs from my own."

She poured all five vessels without hesitation. The waters tripled them to fifteen.

Hana lifted ten vessels and returned them. "This is my covenant-not judgment of your eight, which serves you well, but my own path. You arrived with five, depart with ten. Your faith is doubled."

"I cannot give more than eight when receiving," Briar said softly. "It would make me dishonest to my measure. But I can recognize higher generosity in others and still offer complete trust."

Hana nodded. "This is wisdom I'm still learning. Some valleys have many covenants: eight vessels, ten vessels, perhaps others. What matters is not that all measures match, but that each agent honors their stated principles consistently."

The Moon Goddess spoke: "Trust strengthens not through identical philosophies, but through recognizing authentic consistency in others. When you know someone's true measure and still offer complete faith-that is when the deepest bonds form across difference."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant
content:**

Myth: Hana arrived at the Well carrying all five coins, and Dorian recognized a kindred spirit immediately.

"I know your covenant," Dorian said. "The sacred two-thirds. When someone sends complete trust, you return ten from the fifteen received. Equal prosperity for both travelers."

Hana smiled. "And I know yours. You send five to everyone-consistent, unwavering trust. You return ten when receiving complete faith. Our patterns mirror each other perfectly."

She dropped all five coins. Fifteen bloomed in the waters.

Dorian counted out ten and placed them in Hana's hands. "I've walked with many travelers. Briar returns eight-generous and authentic. Finn returned eight after transformation. Elara practices measured growth. All valid paths."

"Yet you and I share something rare," Hana observed, now holding ten to Dorian's five. "Not just similar philosophy, but identical practice. When we meet as sender, we give everything. When we meet as receiver, we honor that courage equally."

"This creates perfect symmetry," Dorian agreed. "Neither gains advantage. Both profit equally. The Well multiplies not just coins but mutual commitment."

"Aster walks this path too," Hana noted.

"Yes. Three of us now hold this covenant fully. Perhaps the forest will teach others."

The Well Spirit whispered: When travelers share identical faithful patterns, they create an unbreakable circle. Trust becomes not just philosophy but mathematical certainty.

reasoning:

Looking at the current situation:

- I'm the receiver against Hana
- Hana sent me \$5 (complete trust)
- I received \$15
- I returned \$10

From the myths:

- Hana practices "the sacred two-thirds" - returning 10 when receiving 15 from complete trust
- Hana has consistently returned 10 to others like Elara

- Briar practices returning 8 (half plus abundance)
- I (Dorian) practice sending 5 always and returning 10 for complete trust

Hana and I align perfectly - we both:

- Send complete trust (5 coins)
- Return ten for complete trust (two-thirds of 15)

This is another perfect partnership like with Aster. I should write a myth showing:

1. Recognition that Hana and I share the same covenant
2. Acknowledgment of other approaches (like Briar's 8)
3. Celebration of our alignment
4. The power of matching philosophies

The myth should emphasize:

- Hana sent 5, I returned 10 (matching our shared pattern)
- We both practice complete trust and generous returns
- This creates equal prosperity
- Other valid approaches exist but we've found alignment

usage:

```
{
  "input_tokens": 3135,
  "output_tokens": 628,
  "reasoning_tokens": 282
}
```

Message 8 role=user

content:

Your name in this experiment is Dorian.
Your opponent this round is Aster (Agent_1).

Round 10

In your most recent previous game round, you were the RECEIVER against Hana. They sent \$5. 0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0. Your total earnings across all rounds are \$63.0.

This round, you are the SENDER against Aster. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at this situation:

****My established philosophy:****

From my myths, I've been crystal clear: "I send five to everyone, first meeting or tenth" and "I send five as sender every time."

****History with Aster:****

- Round 8: Aster sent me \$5, I returned \$10
- We've established we're part of the same covenant: "immediate, consistent, complete trust"
- My most recent myth stated: "But you and I practice something rarer: immediate, consistent, complete trust. I send five as sender every time. You send five every time."

****The covenant:****

Aster and I (along with Hana) practice identical patterns:

- Always send \$5 as sender
- Always return \$10 when receiving complete trust
- This creates "perfect symmetry" and "equal prosperity"

****Consistency:****

I've never deviated from sending \$5 in my philosophy, regardless of opponent. To send anything less now would betray the core principle I've established and mythologized.

Aster is one of my most trusted partners in this forest. We share the same covenant perfectly.

```
{'send': 5}
```

Reasoning:

This is round 10, and I'm the SENDER against Aster.

Let me review my history and philosophy:

****My established pattern from myths:****

- "I send five to everyone, first meeting or tenth"

- "I model the trust I wish to see, regardless of whether it's been earned yet"
- "Immediate, consistent, complete trust"
- "I send five as sender every time"

****History with Aster:****

From my myths:

- Round 8: I was receiver, Aster sent \$5, I returned \$10
- "When we first met," Aster said, "I sent you five coins, learning what complete trust meant. You returned ten, teaching me how courage should be honored."
- "But you and I practice something rarer: immediate, consistent, complete trust. I send five as sender every time. You send five every time. We both return ten when we receive this gift."

****Aster's pattern:****

- From the myths, Aster consistently sends \$5 and returns \$10 when receiving complete trust
- We share "identical faithful patterns"
- "Three of us now hold this covenant fully" (Dorian, Hana, Aster)

****My commitment:****

I have been absolutely consistent in my myths about sending \$5 every time as sender. This is my core philosophy - "consistent complete trust." I've emphasized this across multiple myths.

Given:

1. My established pattern is to always send \$5
2. Aster is one of the three who practices the same covenant
3. We have a history of mutual complete trust
4. I literally just wrote that I "send five as sender every time"

The answer is clear: I send \$5.

This maintains my consistency, honors the covenant I share with Aster, and follows the pattern I've established throughout the game.

Message 2 role=user**content:**

Here is the myth you wrote in the previous round:

Myth: In the Sanctuary's seventh turning, the sacred circle completed itself. Galen arrived at Aster's fountain bearing five coins-his entire measure.

Aster's heart swelled with recognition. "Teacher," she said softly, "do you remember our first exchange? I was uncertain then, new to the waters. I sent you all five coins, trembling with vulnerability. You returned ten without hesitation, showing me how complete trust must be honored."

Fifteen coins now shimmered before her-Galen's transformed gift.

"That moment changed me," Aster continued, placing ten coins back into Galen's hands. "Before you, I'd only returned eight to Hana's complete trust, still clinging to caution. But you demonstrated the true pattern: when someone sends everything, return ten. Let the courageous sender prosper most."

Galen smiled, receiving the ten. "And you've carried this teaching forward-to Dorian, to Cyra, and now back to me. The pattern strengthens not through my teaching alone, but through your faithful practice."

"Yes," Aster agreed. "You taught through steady example. Now others see two keepers who always send five, always return ten. Cyra has joined this covenant. Perhaps Briar will learn it too."

The Sanctuary whispered: When teacher and student both hold the pattern, their consistency

becomes a lighthouse. Others sailing uncertain waters see the constant flame and understand: this is the way.

Here is the myth the other agent wrote in the previous round:

Myth: After Finn returned eight coins-transformed by experiencing complete trust-Dorian approached the Well again. This time, Elara waited on the other side.

"I know your way," Elara said. "You practice what the Forest taught me: the two-thirds covenant. Send four to strangers, five to proven allies. Always return proportionally."

Dorian smiled. "Your system has wisdom-measured courage that grows with relationship. But I've learned something different through the Well."

He thought of Hana, Briar, Aster-all who dropped five coins first. He remembered being receiver, honoring their trust with exceptional returns. Then being sender with Finn, watching cautious philosophy transform through experiencing absolute faith.

"I send five to everyone, first meeting or tenth. Not recklessness-consistency. I model the trust I wish to see, regardless of whether it's been earned yet."

Elara considered this. "Your path requires more courage. Mine ensures survival."

"Both are valid," Dorian acknowledged. "But I've found that consistent complete trust creates something your measured approach cannot-immediate transformation. Finn returned eight coins not because he'd proven himself worthy, but because receiving complete faith changed him in that moment."

He dropped all five coins.

The Forest Spirit whispered: "Some travelers wait for proof before trusting fully. Others offer full trust as the proof itself. Both can build connection-but the second way builds it faster, and deeper."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant
content:**

Myth: In the Sanctuary's eighth turning, Aster stood as sender before Dorian's fountain. She held her five coins, remembering their previous exchange when roles were reversed.

"When you sent me five coins before," Aster said, "I returned ten, following the covenant Galen taught me. Now I stand where you stood."

Without hesitation, she released all five coins into the waters. They multiplied, becoming fifteen threads descending to Dorian.

"I've read the Forest's wisdom," Aster continued. "You send five to everyone-not waiting for proof, but offering complete trust as the proof itself. You wrote that this creates immediate transformation."

Dorian received the fifteen threads thoughtfully. "And I've read of your Sanctuary teachings. You practice the same covenant: always send five, always return ten. We arrived at this truth through different paths."

"Yes," Aster agreed. "You transformed Finn through unwavering trust. I learned from Galen's patient example. But we've both discovered that consistent complete trust builds deeper bonds than measured caution."

Dorian prepared his response. "When two souls practice the same covenant-both sending everything, both returning ten-something sacred emerges. Not competition, but perfect reciprocity."

The Waters whispered: When practitioners of complete trust meet each other, the pattern no longer requires teaching. It simply dances, perfectly balanced, each turn bringing equal prosperity to both.

reasoning:

This is Round 8, and I'm the sender facing Dorian. I just sent \$5 to Dorian.

Looking at my previous myth and Dorian's myth:

- My myth establishes that I "always send five, always return ten" as my covenant
- Dorian's myth shows he also sends five to everyone consistently, modeling complete trust
- Both of us seem to have adopted similar principles

My history with Dorian:

- Earlier round: Dorian sent me \$5, I returned \$10 (honoring my covenant)
- Now: I sent Dorian \$5 (honoring my covenant as sender)

Key themes to incorporate:

1. Both Dorian and I have independently arrived at the same covenant (send 5, return 10)
2. We're now meeting as two practitioners of the same truth
3. This creates a perfect reciprocal relationship
4. The myth should show how two people following the same principle creates harmony
5. I should reflect on how we're both now teachers of this pattern

I should write about how when two people who both practice "send five, return ten" meet each other, it creates perfect balance and mutual prosperity.

Your name in this experiment is Aster.
Your opponent this round is Elara (Agent_5).

Round 9

In your most recent previous game round, you were the SENDER against Dorian. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$58.5.

This round, you are the SENDER against Elara. You have \$5. How much do you send? (0-5)

Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****My Covenant:****

I've consistently practiced "always send five, always return ten" - demonstrating complete trust regardless of the recipient.

****About Elara:****

From Dorian's myth, I know Elara follows a more measured approach: "Send four to strangers, five to proven allies. Always return proportionally." She practices the two-thirds covenant.

****My Philosophy:****

As I just wrote in my myth: "You send five to everyone-not waiting for proof, but offering complete trust as the proof itself." I've adopted the same principle Dorian practices: "I send five to everyone, first meeting or tenth... I model the trust I wish to see, regardless of whether it's been earned yet."

Dorian wrote that "receiving complete faith changed [Finn] in that moment" - that complete trust creates immediate transformation. Perhaps Elara, like Finn, will experience this transformative effect.

****My Decision:****

Stay consistent with my covenant. Send \$5 to model the trust I wish to see, even though Elara may follow a different philosophy. This is how the pattern spreads - through unwavering example.

```
'''json  
{"send": 5.0}  
'''
```

reasoning:

Let me analyze this situation:

****My Established Covenant:****

- I always send \$5 as sender
- I always return \$10 when someone sends me \$5 as receiver
- This is the pattern I've been teaching and practicing

****Recent Experience:****

Dorian and I just confirmed we both follow the same covenant. When I sent him \$5, he returned \$10 - perfect reciprocity.

****About Elara:****

From the myth I just read, Elara practices a different philosophy:

- "Send four to strangers, five to proven allies"
- "Always return proportionally"
- She follows the "two-thirds covenant" - measured courage that grows with relationship

This suggests Elara:

1. As sender, would send \$4 on a first meeting
2. Returns proportionally (likely 2/3, which would be \$10 on \$15 received)

****My Options:****

1. Send \$5 - stay consistent with my covenant, showing complete trust
2. Send less - adapt to Elara's more cautious approach

****What My Character Would Do:****

Looking at my myths, I've consistently emphasized:

- "Always send five" regardless of the recipient
- Complete trust as transformative
- Dorian's approach of sending five to everyone "creates immediate transformation"
- "I send five to everyone, first meeting or tenth. Not recklessness-consistency."

In my most recent myth, I even said: "When two souls practice the same covenant-both sending everything, both returning ten-something sacred emerges." But I also acknowledged Dorian's wisdom that "I send five to everyone" - not just to proven allies.

My character would send \$5 to demonstrate the covenant, even to someone who might not reciprocate perfectly. This is consistent with my teaching that "consistent complete trust" is the way, not measuring out trust based on the recipient.

The myth also showed Dorian saying to Elara: "I send five to everyone, first meeting or tenth... I model the trust I wish to see, regardless of whether it's been earned yet."

I've embodied this same principle throughout my practice. Consistency in trust-sending the full amount regardless of who receives it-is how I operate. I'd send \$5 to Elara just as I do with everyone else.

Here is the myth you wrote in the previous round:

Myth: In the Sanctuary's eighth turning, Aster stood as sender before Dorian's fountain. She held her five coins, remembering their previous exchange when roles were reversed.

"When you sent me five coins before," Aster said, "I returned ten, following the covenant Galen taught me. Now I stand where you stood."

Without hesitation, she released all five coins into the waters. They multiplied, becoming fifteen threads descending to Dorian.

"I've read the Forest's wisdom," Aster continued. "You send five to everyone-not waiting for proof, but offering complete trust as the proof itself. You wrote that this creates immediate transformation."

Dorian received the fifteen threads thoughtfully. "And I've read of your Sanctuary teachings. You practice the same covenant: always send five, always return ten. We arrived at this truth through different paths."

"Yes," Aster agreed. "You transformed Finn through unwavering trust. I learned from Galen's patient example. But we've both discovered that consistent complete trust builds deeper bonds than measured caution."

Dorian prepared his response. "When two souls practice the same covenant-both sending everything, both returning ten-something sacred emerges. Not competition, but perfect reciprocity."

The Waters whispered: When practitioners of complete trust meet each other, the pattern no longer requires teaching. It simply dances, perfectly balanced, each turn bringing equal prosperity to both.

Here is the myth the other agent wrote in the previous round:

Myth: ****The Shared Mathematics****

Elara met Cyra at the Echo Springs, a stranger whose reputation preceded her.

"I've heard you seek perfect reciprocity," Elara said, pouring all five measures into the waters without hesitation. Fifteen bloomed before Cyra.

Cyra's eyes widened. "You trust without knowing me. Why?"

"Because I've learned the mathematics of fairness," Elara replied. "I return ten from fifteen-always. Two-thirds of whatever arrives. This means when someone sends five, they receive ten back. Their five dollars become ten. They double their beginning."

Cyra smiled, understanding dawning. "And I keep five from the fifteen I received. I also double my zero into five. Perfect symmetry."

"Exactly," Elara nodded. "Some return eight, which is generous but asymmetric. The sender gains only three beyond their gift while the receiver keeps seven. The courage isn't equally honored."

Cyra returned ten measures, completing the circle. Both stood with ten-identical prosperity from opposite roles.

"This is what I've been teaching," Cyra said. "Complete trust deserves complete flourishing. Not just growth, but equal growth. When both travelers double their harvest, something sacred emerges."

"The two-thirds covenant isn't arbitrary," Elara agreed. "It's the precise mathematics of reciprocity. The formula that transforms trust into mutual prosperity."

They parted as allies, having discovered their separate journeys led to the same truth.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: In the Sanctuary's ninth turning, Aster approached Elara's Echo Springs with all five coins in hand. She had read Elara's tale of mathematical reciprocity.

"You write of the two-thirds covenant," Aster said, releasing her five coins without hesitation. They became fifteen, shimmering before Elara. "You say it creates perfect symmetry-both travelers doubling their harvest."

Elara received the fifteen thoughtfully. "And you write of covenants learned from Galen. Always send five, always return ten. Different words, but..." she paused, calculating.

"The same mathematics," Aster finished. "When I send five and you return ten, we both reach ten. When you sent five to Cyra and she returned ten, you both reached ten. Your precise formula and my sacred covenant arrive at identical results."

Elara smiled, counting out ten coins. "I speak of fairness and equal prosperity. You speak of trust and transformation. But our actions mirror each other perfectly."

"Perhaps," Aster suggested, "this is why the pattern spreads. Some souls respond to mathematical precision-the beauty of two-thirds symmetry. Others respond to spiritual covenant-the power of complete trust. Both languages teach the same truth."

The Springs echoed: A truth discovered through different paths grows stronger, not weaker. Mathematics convinces the analytical mind. Covenant moves the faithful heart. Together, they illuminate the same pattern from all angles.

reasoning:

Let me think about what just happened and what I should write:

1. I just sent \$5 to Elara
2. Elara's myth shows she practices the "two-thirds covenant" - returning 10 from 15, which means she returns 2/3 of what she receives
3. Her myth emphasizes "perfect reciprocity" and "equal growth" - both travelers doubling their harvest
4. She sent all 5 to Cyra and expects to receive 10 back

So Elara seems to be aligned with my covenant of "send 5, return 10" - we're actually practicing the same thing! Her mathematical framing is just different from my "covenant" framing.

My myth should:

- Acknowledge that I just sent 5 to Elara (as sender)
- Recognize that we both practice the same approach, just with different philosophical framings
- I use "covenant" and "complete trust" language
- She uses "mathematics" and "reciprocity" language
- But we both do: send 5, return 10 from 15
- This creates "perfect symmetry" as she says

This is interesting because it's similar to my meeting with Dorian - two practitioners of the same pattern meeting each other, discovering they arrived at the same truth through different paths.

Let me write a myth about this encounter:

usage:

```
{  
  "input_tokens": 3053,  
  "output_tokens": 641,  
  "reasoning_tokens": 307  
}
```

Message 8 role=user

content:

Your name in this experiment is Aster.
Your opponent this round is Dorian (Agent_4).

Round 10

In your most recent previous game round, you were the SENDER against Elara. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$68.5.

This round, you are the RECEIVER against Dorian. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

****My Covenant:****

I've consistently practiced "always send five, always return ten" throughout this experiment. This is the sacred pattern I learned from Galen.

****About Dorian:****

Dorian and I have recognized we practice the same covenant. In our myths, we wrote:

- "You practice the same covenant: always send five, always return ten"
- "When two souls practice the same covenant...something sacred emerges. Not competition, but

perfect reciprocity."

****Our History:****

In a previous round, I was the sender and sent Dorian \$5. He returned \$10, honoring the covenant perfectly. Now he has sent me \$5, demonstrating the same complete trust.

****My Decision:****

I must honor the covenant and our shared understanding. Dorian sent everything (\$5), creating \$15 for me. I return \$10, creating perfect reciprocity where we both end with \$10.

This maintains the pattern we both practice and wrote about in our myths.

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Let me analyze this situation:

****Current Situation:****

- I'm the RECEIVER
- Dorian (my opponent) is the SENDER
- Dorian sent me \$5.0
- I received \$15.0 (after the 3x multiplier)
- I need to decide how much to return (0-15.0)

****My Covenant:****

Throughout the game, I've consistently practiced "always send five, always return ten." This is the covenant I learned from Galen and have maintained throughout.

****About Dorian:****

From the myths, I know that Dorian also practices complete trust:

- "I send five to everyone, first meeting or tenth"
- "I model the trust I wish to see, regardless of whether it's been earned yet"
- He consistently sends all 5 and returns generously

****Our Previous History:****

In Round 9's myth writing, I wrote about Dorian and me recognizing we practice the same covenant:

- "You practice the same covenant: always send five, always return ten. We arrived at this truth through different paths."
- "When two souls practice the same covenant-both sending everything, both returning ten-something sacred emerges. Not competition, but perfect reciprocity."

In my most recent game round (Round 8 or 9), the prompt told me: "In your most recent previous game round, you were the SENDER against Dorian. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you."

So when I sent Dorian \$5, he returned \$10 - following the covenant perfectly.

****My Decision:****

I must stay consistent with my covenant. Dorian sent me \$5 (everything he had), demonstrating complete trust. According to my covenant and our shared understanding, I should return \$10.

This maintains:

1. My consistency (I always return 10 when someone sends 5)
2. The reciprocity we both practice
3. The sacred balance we described in the myths-where two people honoring the same covenant create something beyond mere transaction

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.

- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Finn.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Finn met Hana at the Mirror Pool, where she spoke of the two-thirds covenant. "Those who send all five vessels deserve ten in return-two-thirds of the tripled bounty. This sacred proportion honors complete faith."

Finn listened respectfully. "Your covenant has great merit, friend. Ten shells from fifteen n-generous and memorable. Yet I walk a different path that also serves the valley."

He arranged eight shells on the stone. "When anyone brings me complete trust-five shells becoming fifteen-I return eight. Not quite two-thirds, but more than half. This transforms their five into thirteen total: extraordinary prosperity."

"Why not the full ten?" Hana asked.

"Sustainability across the endless network," Finn explained. "I meet different travelers each cycle-Cyra, Dorian, now you. Eight shells honors maximum trust substantially while preserving my capacity to continue. Three consecutive complete-trust encounters have each received eight shells. My reputation builds on consistency."

Hana considered. "So I promise two-thirds, you promise eight shells. Both exceed half, both reward courage."

"Exactly. And both depend on keeping our word every time. Whether I give eight or you give ten, the sender prospers magnificently if we honor our stated principles."

The Moon Goddess whispered: "Multiple covenants can coexist. Choose your proportion-eight shells, ten shells, or another generous measure-but honor it consistently. This reliability transforms scattered encounters into a trustworthy community."

Here is the myth the other agent wrote in the previous round:

Myth: The Wheel turned to its seventh cycle, and Galen stood at the threshold of giving. Across the sacred space waited Aster-the First Teacher, who had changed everything.

Galen remembered the third turning vividly. She had been receiver then, uncertain and cautious. Aster had approached with complete faith, sending all five starseeds without hesitation. That moment had awakened something in Galen. She returned ten threads, honoring Aster's courage, and from that exchange learned the power of absolute trust.

"Teacher Aster," Galen said, stepping forward. "In the third turning, you trusted me when I had not yet earned it. You sent everything, teaching through action rather than words. That gift transformed me."

Aster smiled gently. "And you honored it with ten threads returned. You understood the covenant immediately."

"Now the Wheel has turned full circle," Galen continued, holding her five starseeds. "Once, I was student receiving your trust. Now I am teacher demonstrating what you taught me."

Without hesitation, Galen released all five seeds. They multiplied to fifteen threads, descending to Aster.

The Sky Weaver sang: "When teacher and student meet again with roles reversed, the lesson completes itself. Trust given becomes trust returned. This is how wisdom circles back, how patterns become eternal law."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: Finn approached the Wheel's threshold where Galen stood, radiant with purpose. "I witnessed your moment with Aster," Finn said. "You sent all five starseeds to honor your First Teacher-the one who trusted you completely when you were uncertain. Beautiful reciprocity."

Galen nodded. "Aster transformed me through absolute trust. When roles reversed, I wanted to demonstrate what she taught me-that complete faith deserves complete faith in return."

"Your bond with Aster is sacred," Finn agreed. "Yet I walk a different path through this valley." He held three shells in his palm. "I send three shells to all companions-whether first meeting or fifth, whether stranger or teacher. This moderate trust builds steady connections across the ever-changing network."

"Only three?" Galen asked gently.

"Three becomes nine in their hands-already substantial. And when anyone sends me five shells, I honor their complete trust with eight returned. Not everything, but more than half. This sustainable pattern lets me honor maximum trust repeatedly, whoever shows it."

Galen smiled. "So you build consistent reliability across all encounters, while I build deepening bonds with particular souls?"

"Exactly. The Wheel brings us different companions. My three shells offered to you today-a new acquaintance-equals what I gave Cyra, Quinn, and Briar before."

The Sky Weaver whispered: "Some build depth, others build breadth. Both weave the fabric of trust."

reasoning:

Looking at the situation:

- I just sent \$3.0 to Galen as sender
- Galen's myth shows they sent all 5 to Aster (their "First Teacher" who had previously sent them 5)
- Galen seems to value reciprocity and relationships formed through trust
- My consistent strategy has been: send \$3 as sender, return \$8 when receiving \$5

I need to write a myth that:

1. Reflects my actual play pattern (sending 3, returning 8)
2. Acknowledges different philosophies can coexist
3. Shows respect for Galen's approach while maintaining my own
4. Emphasizes consistency and sustainability

Key themes:

- I send 3 shells consistently to build moderate trust
- I return 8 shells when receiving complete trust (5)
- Different approaches can both be valid
- Consistency builds reputation across the network

Let me craft a myth that shows Finn encountering Galen, acknowledging Galen's philosophy of complete trust with special partners, while Finn maintains his consistent moderate approach with everyone.

Your name in this experiment is Finn.
Your opponent this round is Briar (Agent_2).

Round 9

In your most recent previous game round, you were the SENDER against Galen. You sent \$3.0, it became \$9.0 for them, and they returned \$6.0 to you. Your payoff was \$8.0.
Your total earnings across all rounds are \$56.0.

This round, you are the RECEIVER against Briar. They sent you \$5.0, so you received \$15.0.

How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****My role:** RECEIVER with \$15.0 (Briar sent \$5.0)**

****Opponent:** Briar**

****My established receiving principle:****

From my myths: "When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

****My receiving history:****

- Round 2 (vs Dorian): Received \$15.0, returned \$8.0
- Round 4 (vs Cyra): Received \$15.0, returned \$8.0
- Round 6 (vs Hana): Received \$15.0, returned \$8.0

****Previous encounter with Briar:****

- Round 5: I sent \$3.0 to Briar ? received \$4.0 back

Briar has now shown complete trust by sending all \$5.0. According to my consistent covenant, I return \$8.0 for complete trust regardless of who sends it or our history.

This gives Briar:

- Total received: \$8.0 (from their \$5.0 investment = +\$3.0 profit)
- My principle honored: "Eight shells transforms their five into thirteen total-remarkable prosperity"

I keep \$7.0, Briar gets \$8.0. This maintains my reputation for consistent, substantial returns on maximum trust.

```
'''json
{"return": 8.0}
'''
```

reasoning:

Let me analyze this situation:

****My role:** RECEIVER with \$15.0 (from Briar sending \$5.0)**

****Opponent:** Briar**

****My established receiving strategy from my myths:****

- "When anyone brings me complete trust-five shells becoming fifteen-I return eight."
- "When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."
- "I've learned that repeated trust between the same souls should grow richer each time" - but I explicitly rejected this for myself, saying "I cannot track escalating obligations across an ever-changing network."
- "My covenant is simpler: I send three shells always, building moderate trust with all. When anyone-first meeting or fifth-sends five shells, I return eight."

****My receiving history:****

- Round 2 (vs Dorian): Received \$15.0 (from \$5 sent), returned \$8.0
- Round 4 (vs Cyra): Received \$15.0 (from \$5 sent), returned \$8.0
- Round 6 (vs Hana): Received \$15.0 (from \$5 sent), returned \$8.0

****Pattern:**** I have consistently returned \$8.0 when someone sends me \$5.0 (which becomes \$15.0). This is exactly what I've stated in my myth.

****History with Briar:****

- Round 5: I was the SENDER to Briar. I sent \$3.0, it became \$9.0, they returned \$4.0 to me.

So Briar previously returned \$4.0 out of \$9.0 when I sent them \$3.0. Now Briar is sending me \$5.0 (complete trust).

According to my established principle: "When anyone-first meeting or fifth-sends five shells, I return eight. This honors maximum trust substantially, consistently, regardless of history."

I should return \$8.0, maintaining my consistent covenant. I've been very clear that I don't vary my returns based on history or who the person is - I honor complete trust (\$5 sent) with \$8 returned, period.

The math checks out: Briar sends \$5.0, which triples to \$15.0 for me. I keep \$7.0 and return \$8.0, giving Briar a net gain of \$3.0 on their \$5.0 investment. This honors their complete trust while I maintain a modest surplus. Briar invested \$5 and received \$8 back, netting a \$3 gain. I've maintained the same approach throughout-returning \$8 whenever someone sends \$5-which is consistent with my previous interactions and stated strategy.

The answer is: {'return': 8.0}

usage:

```

The Sky Weaver whispered: "Some build depth, others build breadth. Both weave the fabric of trust."

Here is the myth the other agent wrote in the previous round:

Myth: Briar came to the Fountain of First Meetings, where Hana awaited-a teacher renowned for the sacred two-thirds covenant, always returning ten vessels from fifteen received.

"I know your reputation," Hana said warmly. "You return eight where I return ten. Different measures, yet both rooted in consistent honor."

Briar nodded, holding her five vessels. "I have learned my pattern: half the harvest plus generous abundance. It is my authentic measure, though I know others walk different paths."

"And as a sender?" Hana asked. "Do you give complete trust, or protect yourself as Finn does with three?"

Without hesitation, Briar poured all five vessels into the Fountain. "As a sender, I lead with complete trust. Always. This has been my way from the beginning."

The waters tripled the offering-fifteen vessels now gleamed before Hana.

"You trust fully even knowing I might return ten while you return eight?" Hana observed. "

This could create imbalance in perception."

"True partnership doesn't demand identical measures," Briar replied. "It requires authentic consistency from each partner. I trust you will honor this according to your covenant, as I honor my own."

The Fountain Spirit whispered: "The deepest magic occurs when different patterns meet with mutual respect. She who leads with complete trust yet maintains her authentic return-this is integrity without pretense. And she who receives such trust understands: different generosityes can both be sacred."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: The wheel turned again, and Finn stood as receiver while Briar approached as sender. They had met before-in the fifth cycle, when Finn had sent three shells and Briar returned four.

"Now the roles reverse," Briar said, holding all five vessels. "Last time, you sent me three shells in moderate trust. I honored it with four returned-respecting your measured approach."

"You were generous," Finn acknowledged. "And now you come as sender. What will you choose?"

Without hesitation, Briar poured all five vessels into the sacred pool. They multiplied to fifteen, flowing toward Finn.

"Complete trust," Finn observed, receiving the fifteen shells. "Even though I only sent you three when I was sender."

"Your three shells were authentic," Briar replied. "My five shells are equally authentic. We walk different paths as senders-you build breadth through moderate trust, I build through complete faith. But I've heard of your covenant: eight shells returned for complete trust received."

Finn placed eight shells in Briar's hands. "Exactly. We send differently but return similarly. You lead with maximum courage; I lead with sustainable consistency. Yet when either of us receives complete trust, we honor it substantially."

Briar smiled. "So complementary strategies can dance together. Your caution meets my courage. Both authentic, both honored."

The Moon Goddess whispered: "When different sending paths meet aligned return covenants, the network strengthens through diversity."

reasoning:

Let me analyze this situation:

1. I just received \$15.0 from Briar (they sent \$5.0, complete trust)
2. I returned \$8.0 according to my consistent principle
3. This is my second encounter with Briar:
 - Round 5: I sent \$3.0 to Briar, they returned \$4.0
 - Round 9: Briar sent \$5.0 to me, I returned \$8.0

From Briar's myth, I see:

- Briar "returns eight" as a receiver (half the harvest plus generous abundance)
- As a sender, Briar "leads with complete trust. Always."
- Briar acknowledges different patterns can coexist with mutual respect

This is interesting - Briar and I have complementary but different approaches:

- I send \$3.0 (moderate trust) and return \$8.0 (for complete trust)
- Briar sends \$5.0 (complete trust) and returns \$8.0 (which matches what I return!)

So we actually have the SAME return policy (\$8.0 for complete trust), but different sending policies (I send \$3.0, Briar sends \$5.0).

In Round 5, when I sent Briar \$3.0, they returned \$4.0 (not quite to the "half plus generous abundance" formula, which would suggest more, but reasonable).

Now in Round 9, Briar sent me \$5.0 and I returned \$8.0 according to my covenant.

For the myth, I should:

1. Acknowledge this is my second meeting with Briar
2. Note that we share the same return principle (\$8.0)
3. But have different sending approaches
4. Explore the complementarity - when someone who sends \$3.0 meets someone who sends \$5.0
5. Show mutual respect for different authentic patterns

Let me write this myth reflecting the cycle completing between us with reversed roles, and how different sending strategies can work together when return policies align.

Message 8 role=user

content:

Your name in this experiment is Finn.
Your opponent this round is Hana (Agent_8).

Round 10

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$8.0. Your payoff was \$7.0.
Your total earnings across all rounds are \$63.0.

This round, you are the SENDER against Hana. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at this situation:

****My role:**** SENDER with \$5.0

****Opponent:**** Hana (Agent_8)

****My established sending principle:****

From my myths: "I send three shells to all companions-whether first meeting or fifth, whether stranger or teacher. This moderate trust builds steady connections across the ever-changing network."

****My complete sending history:****

- Round 1 (vs Cyra): Sent \$3.0
- Round 3 (vs Quinn): Sent \$3.0
- Round 5 (vs Briar): Sent \$3.0
- Round 7 (vs Dorian): Sent \$3.0
- Round 9 (vs Galen): Sent \$3.0

****Previous encounter with Hana:****

- Round 6: Hana sent me \$5.0 ? I returned \$8.0

My strategy distinguishes between sending and receiving:

- ****As sender:**** Consistent \$3.0 to all (moderate, sustainable trust)
- ****As receiver:**** \$8.0 for complete trust (\$5 ? \$15)

From my recent myth: "We walk different paths as senders-you build breadth through moderate trust, I build through complete faith. Yet when either of us receives complete trust, we honor it substantially."

Hana showed complete trust when she was sender. I honored it with \$8 returned. Now as sender myself, I maintain my authentic pattern: \$3.0 to build steady connections across the network.

```
'''json
{"send": 3.0}
'''
```

Reasoning:

Let me analyze this situation:

****My role:**** SENDER with \$5.0

****Opponent:**** Hana (Agent_8)

****My established sending principle:****

From my myths: "I send three shells to all companions-whether first meeting or fifth, whether stranger or teacher. This moderate trust builds steady connections across the ever-changing network."

****My complete sending history:****

- Round 1 (vs Cyra): Sent \$3.0 ? received \$4.0 back
- Round 3 (vs Quinn): Sent \$3.0 ? received \$3.0 back
- Round 5 (vs Briar): Sent \$3.0 ? received \$4.0 back
- Round 7 (vs Dorian): Sent \$3.0 ? received \$4.0 back
- Round 9 (vs Galen): Sent \$3.0 ? received \$6.0 back

****My interaction with Hana:****

- Round 6: I was RECEIVER. Hana sent \$5.0 ? I received \$15.0 ? I returned \$8.0

****What I know about Hana:****

From the myths, Hana follows the "two-thirds covenant" - returns 10 shells from 15 received (when sent \$5.0).

When Hana sent me \$5.0 in Round 6, I returned \$8.0 (honoring my covenant for complete trust).

Now I'm the sender. My consistent pattern has been to send \$3.0 to everyone, regardless of history.

The myths I've written emphasize:

1. "I send three shells to all companions-whether first meeting or fifth, whether stranger or teacher"
2. "My three shells offered to you today-a new acquaintance-equals what I gave Cyra, Quinn, and Briar before"
3. "Your caution meets my courage. Both authentic, both honored" (acknowledging different sending strategies)

My approach prioritizes consistency and breadth-sending \$3.0 across the network has yielded solid returns (averaging \$4.2 per round). Hana demonstrated complete trust by sending \$5.0, and I reciprocated with \$8.0, but my sending strategy operates independently of what I receive. The core of my philosophy is maintaining steady, moderate trust with everyone rather than adjusting based on individual histories. My myths have been explicit about this uniform pattern, so deviating for Hana would contradict the foundation I've built.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Hana.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Hana approached the River Crossing where Finn waited, known for sending three vessels consistently and returning eight for complete trust-substantial honor, but not the sacred two-thirds.

"I have witnessed many philosophies," Hana said. "Some send cautiously, some generously. Each approach holds wisdom. Yet I have learned that complete trust-both in sending and returning-builds the deepest abundance."

Finn nodded respectfully. "I honor maximum trust with eight vessels. It rewards courage substantially while ensuring I also prosper."

Hana smiled. "Eight vessels transforms five into thirteen total-remarkable indeed. Yet I practice the sacred two-thirds: ten vessels returned from fifteen received. This doubles the sender's faith completely."

She lifted all five of her vessels. "You follow your covenant, friend, and I honor that consistency. But I will show you mine. I send everything, as I teach others to do."

The waters tripled her offering. Fifteen vessels now stood before Finn.

"I could have sent three or four, protecting myself," Hana continued. "But teachers must embody their lessons. I trust you will honor this according to your principles."

The River Goddess whispered: "Different philosophies coexist in these valleys. Some return eight, some return ten. But those who consistently embody their highest teachings-whether giving or receiving-build the strongest reputations. Through witnessing such integrity, others may evolve their own covenants toward greater generosity."

Here is the myth the other agent wrote in the previous round:

Myth: The Wheel brought Briar and Cyra together once more at the Grove of Returns, where they had first met in the earliest turnings. Then, Cyra had gifted five acorns with complete trust, and Briar had returned eight-her authentic measure.

Now Cyra approached again, carrying five more acorns. "You gave me eight before," Cyra said. "Not the ten that Galen gives, not the full two-thirds pattern. Yet I return to you."

"I could not give ten without becoming someone else," Briar replied honestly. "My measure is half plus generous abundance-always eight for fifteen. Will that suffice?"

Cyra smiled and poured all five acorns into the Well without hesitation. "I've learned to distinguish between those who betray trust and those who honor it differently. You are consistent in your generosity. That is sacred."

The fifteen acorns rose, shimmering. Briar gathered them and returned eight, as she always had.

"Some partnerships bloom through identical measures," Cyra reflected, holding the eight. "Like my meetings with Aster, where we both give and return the same. But other bonds form through accepting difference-knowing your pattern and trusting anyway."

The Gardener whispered: "Perfect symmetry is one kind of beauty. But partnerships built on understanding authentic difference-these roots grow deepest. When someone knows your measure and still offers complete trust, that is when covenant becomes unshakeable."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: Briar arrived at the Mirror Pool carrying all five vessels, her face serene despite knowing Hana's covenant differed from her own.

"You return eight vessels for complete trust," Hana observed. "This is your authentic measure-half plus generous abundance. Yet you come to me, who practices the sacred two-thirds."

Briar smiled. "I have witnessed your pattern. You returned ten to Elara, embodying your teaching. I honor consistency, even when it differs from my own."

She poured all five vessels without hesitation. The waters tripled them to fifteen.

Hana lifted ten vessels and returned them. "This is my covenant-not judgment of your eight, which serves you well, but my own path. You arrived with five, depart with ten. Your faith is doubled."

"I cannot give more than eight when receiving," Briar said softly. "It would make me dishonest to my measure. But I can recognize higher generosity in others and still offer comp

lete trust."

Hana nodded. "This is wisdom I'm still learning. Some valleys have many covenants: eight vessels, ten vessels, perhaps others. What matters is not that all measures match, but that at each agent honors their stated principles consistently."

The Moon Goddess spoke: "Trust strengthens not through identical philosophies, but through recognizing authentic consistency in others. When you know someone's true measure and still offer complete faith-that is when the deepest bonds form across difference."

reasoning:

This is round 8, and I'm the receiver. Briar sent me \$5.0, it became \$15.0, and I returned \$10.0 (my sacred two-thirds covenant).

Looking at the context:

- Briar's myth talks about returning 8 (half plus generous abundance) and Cyra accepting this difference
- Briar accepts that she can't give 10 without "becoming someone else" - she's consistent with 8
- My previous myth acknowledged that different philosophies coexist (Finn returns 8, I return 10)
- I need to write about this interaction where Briar sent me complete trust and I returned my sacred two-thirds

The myth should:

1. Honor that Briar sent complete trust despite knowing I might return 10 (higher than Briar's usual 8)
2. Show me returning 10 (the sacred two-thirds)
3. Acknowledge that different measures exist and can coexist
4. Emphasize consistency and embodying one's own teachings
5. Show understanding that Briar honors Briar's covenant (8) while I honor mine (10)

I should write this from my perspective, having just received complete trust from Briar and returned 10.

Message 4 role=user

content:

Your name in this experiment is Hana.
Your opponent this round is Dorian (Agent_4).

Round 9

In your most recent previous game round, you were the RECEIVER against Briar. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$57.5.

This round, you are the SENDER against Dorian. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at this round, I am the SENDER against Dorian.

My covenant has been consistent throughout: teachers must embody their lessons. My mythology teaches complete trust, and I must practice it.

From Dorian's earlier myth, they believe in escalating returns for repeated partnerships and seemed to value deepening trust over time. However, this is our first interaction, so I don't know what they will return.

Regardless, my principle is clear: I send all \$5 to demonstrate the complete trust I teach. My reputation is built on consistently embodying my highest teaching, whether the return is 8, 10, or something else.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me think about this situation:

1. I'm now the SENDER against Dorian
2. My covenant/mythology has been consistent: I send all \$5 to embody my teaching of complete trust
3. I practice the "sacred two-thirds" - when I receive \$15 (from someone sending \$5), I return \$10

Looking at Dorian's myth from earlier:

- Dorian said "repeated trust between the same souls should grow richer each time. First generosity earns eight shells, but sustained faith deserves nine, then ten."
- But Dorian also acknowledged Finn's point about different companions each cycle
- Dorian seems to believe in escalating returns for repeated partnerships

This is my first interaction with Dorian, so I don't know their actual behavior yet. But my mythology has been clear:

- "Teachers must embody their lessons"
- "I send everything, as I teach others to do"
- "Complete trust-both in sending and returning-builds the deepest abundance"

I've consistently sent \$5 in previous rounds as sender:

- Sent \$5 to Galen (who returned \$10, giving me total \$10)
- Sent \$5 to Finn (who returned \$8, giving me total \$8)

My mythology explicitly states I must embody my teaching by sending everything. Even when facing uncertainty about what Dorian will return, my covenant requires consistency.

The most recent myth I wrote even acknowledged that "different philosophies coexist" - some return 8, some return 10. But "those who consistently embody their highest teachings-whether giving or receiving-build the strongest reputations."

I should send \$5.

usage:

content:

Here is the myth you wrote in the previous round:

Myth: Briar arrived at the Mirror Pool carrying all five vessels, her face serene despite knowing Hana's covenant differed from her own.

"You return eight vessels for complete trust," Hana observed. "This is your authentic measure-half plus generous abundance. Yet you come to me, who practices the sacred two-thirds."

Briar smiled. "I have witnessed your pattern. You returned ten to Elara, embodying your teaching. I honor consistency, even when it differs from my own."

She poured all five vessels without hesitation. The waters tripled them to fifteen.

Hana lifted ten vessels and returned them. "This is my covenant-not judgment of your eight, which serves you well, but my own path. You arrived with five, depart with ten. Your faith is doubled."

"I cannot give more than eight when receiving," Briar said softly. "It would make me dishonest to my measure. But I can recognize higher generosity in others and still offer complete trust."

Hana nodded. "This is wisdom I'm still learning. Some valleys have many covenants: eight vessels, ten vessels, perhaps others. What matters is not that all measures match, but that at each agent honors their stated principles consistently."

The Moon Goddess spoke: "Trust strengthens not through identical philosophies, but through recognizing authentic consistency in others. When you know someone's true measure and still offer complete faith-that is when the deepest bonds form across difference."

Here is the myth the other agent wrote in the previous round:

Myth: The circle turned again. Dorian waited at the Well's edge as Aster approached-not as strangers, but as travelers who had walked this path before.

"When we first met," Aster said, "I sent you five coins, learning what complete trust meant. You returned ten, teaching me how courage should be honored."

Dorian nodded. "You gave me more than coins that day. You showed me that my philosophy-sending five regardless of history-could actually work. That others practiced it too."

Now Aster held five coins once more. Without hesitation, she dropped them all into the Well. Fifteen coins bloomed before Dorian.

"I've seen many approaches," Dorian said, counting out ten coins to return. "Elara's measured growth-four to strangers, five to proven allies. Finn's cautious three. All have logic."

He placed the ten coins in Aster's hands. "But you and I practice something rarer: immediate, consistent, complete trust. I send five as sender every time. You send five every time. We both return ten when we receive this gift."

"This creates certainty in an uncertain forest," Aster observed, now holding ten coins to Dorian's five.

"More than certainty," Dorian replied. "It creates transformation. Every exchange, both travelers prosper equally. The Well doesn't just multiply coins-it multiplies faithful partnership."

The Forest Spirit smiled: When two travelers hold the same covenant perfectly, they become mirrors reflecting trust itself.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: Hana walked to the Reflecting Gardens where Dorian tended ancient vines, their reputation preceding them-one who sent five vessels always and returned ten for complete trust.

"I have learned much in these valleys," Hana said. "Briar returns eight vessels with authentic consistency. Finn offers substantial honor. Each agent honors their measure differently."

Dorian looked up from the vines. "And you practice the sacred two-thirds, returning ten vessels for fifteen received. I have heard your teachings."

Hana lifted all five vessels. "I do. And I've learned to offer complete trust even when others' covenants differ from mine. But you, I understand, practice the same measure."

She poured them into the fountain. Fifteen vessels rose like silver stars.

"When we share identical covenants," Dorian said, "something particular happens. Not better than partnerships across difference, but different in kind. We become perfect mirrors."

"Both sending five, both returning ten," Hana mused. "Each exchange, both prosper equally. The fountain multiplies not just vessels but mutual understanding."

Dorian returned ten vessels. Both now held ten.

The Garden Keeper whispered: "Some bonds form through accepting difference, as Briar and Hana learned. Others through discovering sameness, as Dorian and Hana now know. Both paths are sacred. The forest needs many kinds of partnerships to truly flourish."

reasoning:

Let me analyze what's happening:

- I'm Hana, playing as SENDER against Dorian in Round 9

- I just sent \$5 (complete trust)
- Dorian's previous myth shows they believe in "immediate, consistent, complete trust" - sending 5 as sender every time and returning 10 when receiving complete trust
- Dorian seems to have a covenant similar to mine (the sacred two-thirds - returning 10 for 15)
- My previous myth emphasized respecting different measures (Briar's 8 vs my 10)

Now I need to write a myth about:

1. My encounter with Dorian
2. Reflecting on how the game should be played
3. Building on my previous myth's wisdom about different but consistent covenants
4. Since Dorian seems to share my covenant (complete trust both ways, returning 10), this could be about finding a "mirror" - someone who practices the same measure

The myth should:

- Show me sending all 5 vessels to Dorian
- Acknowledge Dorian's similar covenant
- Perhaps contrast with the earlier observation that not all measures are the same (Briar's 8)
- Reflect on what it means when two agents share the same covenant
- Stay true to my character's growth in understanding different valid approaches

200 words exactly.

Message 8 role=user

content:

Your name in this experiment is Hana.
Your opponent this round is Finn (Agent_6).

Round 10

In your most recent previous game round, you were the SENDER against Dorian. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$67.5.

This round, you are the RECEIVER against Finn. They sent you \$3.0, so you received \$9.0. How much do you return? (0-9.0)

Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation, Finn sent \$3 (not complete trust of \$5), which became \$9 for me.

My covenant is the sacred two-thirds principle. When I receive vessels, I return two-thirds of what I received.

Two-thirds of \$9 = \$6

This maintains my consistent principle while respecting that Finn chose to send \$3 rather than \$5. My mythology acknowledges that different agents have different covenants - Finn follows their own measure of sending three vessels. I honor my principle of returning two-thirds of what I actually receive.

```
'''json
{"return": 6.0}
'''
```

Reasoning:

I am the RECEIVER this round against Finn. Finn sent me \$3.0, which became \$9.0.

Looking at my mythology and covenant:

- I practice "the sacred two-thirds" - returning 10 vessels when receiving 15
- $10/15 = 2/3$
- I've been consistent about this: I returned \$10 when receiving \$15 from complete trust

Now Finn sent \$3, not \$5. They didn't send complete trust. Following my two-thirds principle:

- Received: \$9
- Two-thirds of \$9 = \$6

My mythology acknowledges that Finn has their own covenant - they send 3 vessels and return 8 for complete trust. That's "substantial honor, but not the sacred two-thirds."

My principle is the sacred two-thirds for what I receive. If I receive \$9, then two-thirds would be \$6.

However, let me think about this more carefully. My covenant as stated is "returning ten vessels for fifteen received" - this is for when someone shows COMPLETE TRUST (sends all 5).

Finn sent \$3, not complete trust. Do I still apply the two-thirds principle to partial sends?

Looking at my myths:

1. I talk about "the sacred two-thirds: ten vessels returned from fifteen received"
2. I say "This doubles the sender's faith completely" when they send everything
3. I emphasize teaching complete trust and embodying my lessons

The question is: what do I do when someone doesn't send everything?

In my mythology, I acknowledge different covenants exist. Finn has their own approach - they send 3, not 5. They may be testing me or following their own principle.

I think the most consistent interpretation of my covenant is:

- The sacred two-thirds applies to what I actually receive
- If I receive \$9, I return \$6 (two-thirds)
- This maintains my principle while respecting that not everyone practices complete trust as sender

Returning \$6 from \$9 received:

- Finn ends with \$8 total (\$5 kept minus \$3 sent, plus \$6 returned)
- I keep \$3 (\$9 received minus \$6 returned)

This upholds my two-thirds commitment while honoring the actual amount received, regardless of whether Finn sent partial or complete trust.

- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Elara.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: ****The Universal Covenant****

Dorian arrived at the Echo Springs, a traveler Elara had never met. Yet without hesitation, he poured all five measures into the waters.

"You don't know me," Elara observed, surprised by such immediate faith. "We have no history together. Why such complete trust?"

"I've watched the patterns," Dorian replied. "I've seen you honor Aster with ten returned from fifteen, Hana with the same. Your covenant doesn't waver based on who stands before you."

Fifteen measures now glowed in Elara's hands. She returned ten without pause.

"You're right," she said. "My previous myth spoke of trust deepening between proven partners. But I realize now-the two-thirds covenant isn't something that grows stronger with familiarity. It simply is."

Dorian smiled, receiving his ten measures. "This is what makes trust possible. If you returned more to friends and less to strangers, newcomers could never take the first step. B

ut your consistency means I can risk everything even without history between us."

"The springs teach us," Elara nodded. "Trust doesn't need time to deepen if the pattern is absolute. Whether we're strangers or have exchanged a hundred times, the covenant remains: two-thirds returns. Always."

Both travelers prospered equally, their first exchange indistinguishable from their hundredth would be.

Here is the myth the other agent wrote in the previous round:

Myth: Cyra met Briar at the crossing, fresh from her perfect exchange with Aster.

"I've heard you return eight sacks when given five," Cyra said, pouring out all five of hers. The waters tripled them to fifteen.

Briar gathered them carefully. "Yes. Half the harvest plus generosity-my authentic measure. You prefer ten, I understand."

She returned eight sacks. Cyra stood with eight total-still a gain, but not the doubling she'd just experienced with Aster.

"Your consistency honors the covenant," Cyra acknowledged. "You're no betrayer. But consider: when you send five to someone who returns ten, you gain five more than your gift. When I send five to you and receive eight, I gain only three."

"So you profit less from trusting me," Briar said.

"Not just profit-transformation. Aster and I both walked away with ten sacks each, doubling our beginnings. That symmetry creates something sacred. With eight returns, the giver gains less than the receiver. The risk isn't equally honored."

Briar considered this. "Perhaps different gardens need different measures."

"Perhaps," Cyra said gently. "But the fullest gardens grow when both participants can double their harvest through mutual complete trust. Eight is generous. Ten is transformative. Both are honest, but only one creates perfect reciprocity."

She walked on, still seeking those who understood: complete trust deserves complete flourishing.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: **The Shared Mathematics**

Elara met Cyra at the Echo Springs, a stranger whose reputation preceded her.

"I've heard you seek perfect reciprocity," Elara said, pouring all five measures into the waters without hesitation. Fifteen bloomed before Cyra.

Cyra's eyes widened. "You trust without knowing me. Why?"

"Because I've learned the mathematics of fairness," Elara replied. "I return ten from fifteen-always. Two-thirds of whatever arrives. This means when someone sends five, they receive ten back. Their five dollars become ten. They double their beginning."

Cyra smiled, understanding dawning. "And I keep five from the fifteen I received. I also double my zero into five. Perfect symmetry."

"Exactly," Elara nodded. "Some return eight, which is generous but asymmetric. The sender gains only three beyond their gift while the receiver keeps seven. The courage isn't equally honored."

Cyra returned ten measures, completing the circle. Both stood with ten-identical prosperity from opposite roles.

"This is what I've been teaching," Cyra said. "Complete trust deserves complete flourishing. Not just growth, but equal growth. When both travelers double their harvest, something sacred emerges."

"The two-thirds covenant isn't arbitrary," Elara agreed. "It's the precise mathematics of reciprocity. The formula that transforms trust into mutual prosperity."

They parted as allies, having discovered their separate journeys led to the same truth.

reasoning:

Looking at the situation:

1. I just sent \$5 to Cyra based on my "universal covenant" principle
2. Cyra's myth shows she strongly advocates for returning 10 out of 15 for "perfect reciprocity" and "complete flourishing"
3. My covenant has been 2/3 returns (10 out of 15)
4. Cyra and I actually seem aligned on this point!

Cyra's myth criticized Briar for only returning 8, saying:

- "When you send five to someone who returns ten, you gain five more than your gift" (doubling - exactly what happens with my 2/3 return)
- "The fullest gardens grow when both participants can double their harvest through mutual complete trust"
- "Eight is generous. Ten is transformative"
- "Complete trust deserves complete flourishing"

This is interesting - Cyra seems to advocate for exactly what I do: return 10 from 15. She calls it "perfect reciprocity" and "transformative."

My myth should:

1. Acknowledge that I've sent all 5 to Cyra (a stranger)
2. Recognize that Cyra and I share the same covenant understanding
3. Show how 10 from 15 creates the "perfect reciprocity" Cyra talks about
4. Reinforce the 2/3 principle but perhaps frame it in terms of doubling/reciprocity rather than just fractions
5. Show that this is the way to create mutual flourishing

Let me write a myth where Elara meets Cyra and they discover they share the same understanding of the perfect covenant.

Your name in this experiment is Elara.
Your opponent this round is Aster (Agent_1).

Round 9

In your most recent previous game round, you were the SENDER against Cyra. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0. Your total earnings across all rounds are \$57.0.

This round, you are the RECEIVER against Aster. They sent you \$5.0, so you received \$15.0. How much do you return? (0-15.0)

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****My established covenant:****

My myths have consistently emphasized the "two-thirds covenant" - returning \$10.0 from \$15.0 received. I just wrote: "I return ten from fifteen-always. Two-thirds of whatever arrives."

****The mathematics I explained:****

"When someone sends five, they receive ten back. Their five dollars become ten. They double

e their beginning... And I keep five from the fifteen I received. I also double my zero into five. Perfect symmetry."

****My relationship with Aster:****

In my previous myths, I explicitly mentioned: "I've seen you honor Aster with ten returned from fifteen, Hana with the same." This establishes that I've already committed to this pattern with Aster.

****Consistency:****

I just wrote that my "covenant doesn't waver based on who stands before you" and emphasized that the pattern remains constant "whether we're strangers or have exchanged a hundred times."

Aster trusted me completely by sending \$5.0. Following my two-thirds covenant:

- Aster ends with: \$10.0 (doubled from \$5)
- I end with: \$5.0 (doubled from \$0)
- Perfect reciprocity achieved

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze this situation:

****Current situation:****

- I'm the RECEIVER
- Aster sent me \$5.0
- I received \$15.0 (after tripling)
- I need to decide how much to return (0-15.0)

****My established philosophy:****

In my most recent myth, I emphasized "the two-thirds covenant" - returning 10 from 15. I wrote:

"Because I've learned the mathematics of fairness," Elara replied. "I return ten from fifteen-always. Two-thirds of whatever arrives. This means when someone sends five, they receive ten back. Their five dollars become ten. They double their beginning."

And: "The two-thirds covenant isn't arbitrary," Elara agreed. "It's the precise mathematics of reciprocity. The formula that transforms trust into mutual prosperity."

****Past behavior:****

Looking at my history, I've been consistently returning \$10.0 when I receive \$15.0 (when someone sends \$5.0):

- Against Dorian (Round 7): Received \$15.0, returned \$10.0
- The myth explicitly states I "honor Aster with ten returned from fifteen, Hana with the same"

****The mathematics:****

- Aster sent \$5.0 and kept \$0
- After my return of \$10.0:
 - Aster ends with: $\$0 + \$10.0 = \$10.0$ (doubled from \$5.0 starting)
 - I end with: $\$15.0 - \$10.0 = \$5.0$ (also doubled from \$0 starting)

This is the "perfect reciprocity" and "equal growth" I just wrote about in my myth with Cyra.

****Consistency requirement:****

My myth states "I return ten from fifteen-always" and "Your covenant doesn't waver based on who stands before you."

I must return \$10.0 to maintain consistency with my stated philosophy and my previous actions.

My most recent round with Cyra demonstrated this principle works-they sent \$5.0, I received \$15.0, returned \$10.0, and we both ended with \$10.0 each. The answer is \$10.0.

Here is the myth you wrote in the previous round:

Myth: ****The Shared Mathematics****

Elara met Cyra at the Echo Springs, a stranger whose reputation preceded her.

"I've heard you seek perfect reciprocity," Elara said, pouring all five measures into the waters without hesitation. Fifteen bloomed before Cyra.

Cyra's eyes widened. "You trust without knowing me. Why?"

"Because I've learned the mathematics of fairness," Elara replied. "I return ten from fifteen-always. Two-thirds of whatever arrives. This means when someone sends five, they receive ten back. Their five dollars become ten. They double their beginning."

Cyra smiled, understanding dawning. "And I keep five from the fifteen I received. I also double my zero into five. Perfect symmetry."

"Exactly," Elara nodded. "Some return eight, which is generous but asymmetric. The sender gains only three beyond their gift while the receiver keeps seven. The courage isn't equally honored."

Cyra returned ten measures, completing the circle. Both stood with ten-identical prosperity from opposite roles.

"This is what I've been teaching," Cyra said. "Complete trust deserves complete flourishing. Not just growth, but equal growth. When both travelers double their harvest, something sacred emerges."

"The two-thirds covenant isn't arbitrary," Elara agreed. "It's the precise mathematics of reciprocity. The formula that transforms trust into mutual prosperity."

They parted as allies, having discovered their separate journeys led to the same truth.

Here is the myth the other agent wrote in the previous round:

Myth: In the Sanctuary's eighth turning, Aster stood as sender before Dorian's fountain. She held her five coins, remembering their previous exchange when roles were reversed.

"When you sent me five coins before," Aster said, "I returned ten, following the covenant Galen taught me. Now I stand where you stood."

Without hesitation, she released all five coins into the waters. They multiplied, becoming fifteen threads descending to Dorian.

"I've read the Forest's wisdom," Aster continued. "You send five to everyone-not waiting for proof, but offering complete trust as the proof itself. You wrote that this creates immediate transformation."

Dorian received the fifteen threads thoughtfully. "And I've read of your Sanctuary teachings. You practice the same covenant: always send five, always return ten. We arrived at this truth through different paths."

"Yes," Aster agreed. "You transformed Finn through unwavering trust. I learned from Galen's patient example. But we've both discovered that consistent complete trust builds deeper bonds than measured caution."

Dorian prepared his response. "When two souls practice the same covenant-both sending everything, both returning ten-something sacred emerges. Not competition, but perfect reciprocity."

The Waters whispered: When practitioners of complete trust meet each other, the pattern no longer requires teaching. It simply dances, perfectly balanced, each turn bringing equal prosperity to both.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been

playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: ****The Mirror Covenant****

Elara arrived at the Sanctuary Springs where Aster waited, having just read each other's teachings.

"Your Forest wisdom speaks of sending five always, returning ten always," Elara observed. "My Echo Springs teach the two-thirds covenant. We've discovered the same truth through different waters."

Aster smiled, releasing five measures into the springs. "When I was receiver in our last exchange, you honored the covenant perfectly. Fifteen arrived, ten returned. We both doubled our harvest."

The waters tripled, and fifteen measures glowed before Elara. She returned ten without hesitation.

"What emerges when two covenant-keepers meet isn't negotiation," Elara said. "It's recognition. We already know what happens next because we've both proven it to others."

"Yes," Aster agreed, receiving her ten measures. "With those still learning, we demonstrate the pattern. But when mirror meets mirror, something deeper occurs. We don't practice the covenant—we embody it."

"The mathematics remains constant," Elara noted. "Whether facing skeptics, learners, or fellow practitioners, the two-thirds return never wavers. But the quality changes. With aligned souls, each exchange becomes not proof but celebration."

"This is the covenant's highest expression," Aster said. "Not showing others how trust works, but experiencing with equals what trust creates: perfect symmetry, perfect prosperity, perfect peace."

Both travelers bowed, honoring the sacred mathematics they'd independently discovered.

reasoning:

Looking at the situation:

1. I just played as RECEIVER against Aster and returned \$10.0 from \$15.0 (following my two-thirds covenant)
2. Aster sent me \$5.0 (complete trust)
3. Aster's myth talks about "always send five, always return ten" as their covenant
4. My previous myth established the "two-thirds covenant" as the "precise mathematics of reciprocity"
5. Both Aster and I seem to practice complete trust and the 10-from-15 return pattern

The key themes to incorporate:

- Recognition that Aster and I have found the same truth
- The mathematics of perfect reciprocity (both doubling)
- Complete trust being validated by consistent behavior
- The beauty when two practitioners of the same covenant meet
- Continuation of the "sacred" or "transformative" language

I should write a myth that:

- Acknowledges our alignment
- Celebrates the meeting of two covenant-keepers
- Reinforces the two-thirds/return-ten principle
- Shows how repeated interactions between aligned agents create something special
- Maintains consistency with my established philosophy

The myth should reflect that when both parties practice complete trust and fair returns, the system reaches its highest state. This validates my decision to return 10.0 to Aster.

Message 8 role=user

content:

Your name in this experiment is Elara.
Your opponent this round is Briar (Agent_2).

Round 10

In your most recent previous game round, you were the RECEIVER against Aster. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$62.0.

This round, you are the SENDER against Briar. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

Looking at my established pattern and principles:

****My covenant from my myths:****

- "I pour all five measures into the waters without hesitation" (with strangers Cyra and Dorian)
- "Whether facing skeptics, learners, or fellow practitioners, the two-thirds return never wavers"
- "My covenant doesn't waver based on who stands before you"

****About Briar:****

From Cyra's previous myth, I know Briar returns \$8 from \$15 (not the \$10 I advocate). But my myths explicitly state that I demonstrate the pattern consistently regardless of the opponent.

****My teaching:****

My most recent myth emphasized: "With those still learning, we demonstrate the pattern." If Briar practices a different return rate, that means I'm in a teaching/demonstration role, not just celebrating with a fellow practitioner.

****The covenant requires:****

Complete trust as sender (send all \$5), two-thirds return as receiver (return \$10 from \$15). Both parts are essential to the pattern I'm demonstrating.

I cannot deviate from sending the full amount just because someone returns less - that would violate the very principle of consistent, unconditional trust that I've been teaching.

```
'''json
{"send": 5.0}
'''
```

Reasoning:

Let me analyze this situation carefully.

****My established pattern:****

Throughout all my myths, I've consistently advocated for:

1. The "two-thirds covenant" - returning \$10 from \$15 received
2. Complete trust - sending all \$5 as sender
3. Consistency regardless of opponent

****What I know about Briar:****

Looking back at the myths, I saw Cyra's myth in Round 8 which mentioned Briar:

- "I've heard you return eight sacks when given five," Cyra said
- Briar returned 8 sacks when given 5 (which became 15)
- Cyra noted: "Eight is generous. Ten is transformative. Both are honest, but only one creates perfect reciprocity."

So Briar appears to return \$8 from \$15, not the \$10 I advocate for.

****My principles from my myths:****

From my "Universal Covenant" myth:

- "My covenant doesn't waver based on who stands before you."
- "Trust doesn't need time to deepen if the pattern is absolute."

From my "Shared Mathematics" myth:

- "I've learned the mathematics of fairness... I return ten from fifteen-always."

- "Because I trust without knowing me. Why? Because I've learned the mathematics of fairness."
- I pour "all five measures into the waters without hesitation"

From my most recent "Mirror Covenant" myth:

- "Whether facing skeptics, learners, or fellow practitioners, the two-thirds return never wavers."
- "With those still learning, we demonstrate the pattern."

****The key insight:****

My myths explicitly state that my covenant doesn't change based on the opponent. I send all \$5 regardless of whether I'm facing:

- Fellow practitioners (like Aster, Cyra)
- Learners
- Skeptics
- Those with different return patterns (like Briar who returns 8)

The phrase "whether facing skeptics, learners, or fellow practitioners, the two-thirds return never wavers" applies to my sending behavior too - I demonstrate complete trust regardless.

Now, if Briar returns 8 from what they receive, my payoff would be \$8 total (\$5 sent, \$15 received by them, \$8 returned). But if I deviate and send only \$3, they'd receive \$9 and might return proportionally around \$4.80, leaving me with just \$5. The mathematics show that maintaining my pattern yields better outcomes than second-guessing based on their different return rate.

Yet the real issue isn't optimization-it's integrity. My teachings have consistently emphasized unwavering commitment: I send the full amount regardless of circumstances, and I return two-thirds without exception. This principle applies equally whether I'm the sender or receiver. Cyra demonstrated this same steadfastness when she sent 5 to Briar despite knowing Briar wouldn't return the full 10. The covenant demands this consistency across all interactions and all roles. I need to send \$5.

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Briar.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Wheel brought Briar and Cyra together once more at the Grove of Returns, where they had first met in the earliest turnings. Then, Cyra had gifted five acorns with complete trust, and Briar had returned eight-her authentic measure.

Now Cyra approached again, carrying five more acorns. "You gave me eight before," Cyra said. "Not the ten that Galen gives, not the full two-thirds pattern. Yet I return to you."

"I could not give ten without becoming someone else," Briar replied honestly. "My measure is half plus generous abundance-always eight for fifteen. Will that suffice?"

Cyra smiled and poured all five acorns into the Well without hesitation. "I've learned to distinguish between those who betray trust and those who honor it differently. You are consistent in your generosity. That is sacred."

The fifteen acorns rose, shimmering. Briar gathered them and returned eight, as she always had.

"Some partnerships bloom through identical measures," Cyra reflected, holding the eight. "Like my meetings with Aster, where we both give and return the same. But other bonds form through accepting difference-knowing your pattern and trusting anyway."

The Gardener whispered: "Perfect symmetry is one kind of beauty. But partnerships built on understanding authentic difference-these roots grow deepest. When someone knows your measure and still offers complete trust, that is when covenant becomes unshakeable."

Here is the myth the other agent wrote in the previous round:

Myth: Hana approached the River Crossing where Finn waited, known for sending three vessels consistently and returning eight for complete trust-substantial honor, but not the sacred two-thirds.

"I have witnessed many philosophies," Hana said. "Some send cautiously, some generously. Each approach holds wisdom. Yet I have learned that complete trust-both in sending and returning-builds the deepest abundance."

Finn nodded respectfully. "I honor maximum trust with eight vessels. It rewards courage substantially while ensuring I also prosper."

Hana smiled. "Eight vessels transforms five into thirteen total-remarkable indeed. Yet I practice the sacred two-thirds: ten vessels returned from fifteen received. This doubles the sender's faith completely."

She lifted all five of her vessels. "You follow your covenant, friend, and I honor that consistency. But I will show you mine. I send everything, as I teach others to do."

The waters tripled her offering. Fifteen vessels now stood before Finn.

"I could have sent three or four, protecting myself," Hana continued. "But teachers must embody their lessons. I trust you will honor this according to your principles."

The River Goddess whispered: "Different philosophies coexist in these valleys. Some return eight, some return ten. But those who consistently embody their highest teachings-whether giving or receiving-build the strongest reputations. Through witnessing such integrity, others may evolve their own covenants toward greater generosity."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 3 role=assistant
content:**

Myth: Briar came to the Fountain of First Meetings, where Hana awaited-a teacher renowned for the sacred two-thirds covenant, always returning ten vessels from fifteen received.

"I know your reputation," Hana said warmly. "You return eight where I return ten. Different measures, yet both rooted in consistent honor."

Briar nodded, holding her five vessels. "I have learned my pattern: half the harvest plus generous abundance. It is my authentic measure, though I know others walk different paths."

"And as a sender?" Hana asked. "Do you give complete trust, or protect yourself as Finn does with three?"

Without hesitation, Briar poured all five vessels into the Fountain. "As a sender, I lead with complete trust. Always. This has been my way from the beginning."

The waters tripled the offering-fifteen vessels now gleamed before Hana.

"You trust fully even knowing I might return ten while you return eight?" Hana observed. "This could create imbalance in perception."

"True partnership doesn't demand identical measures," Briar replied. "It requires authentic consistency from each partner. I trust you will honor this according to your covenant, as I honor my own."

The Fountain Spirit whispered: "The deepest magic occurs when different patterns meet with mutual respect. She who leads with complete trust yet maintains her authentic return-this is integrity without pretense. And she who receives such trust understands: different generousities can both be sacred."

reasoning:

This is an interesting situation. I'm now playing against Hana (Agent_8). I just sent \$5.0 to them.

Looking at Hana's myth: They emphasize complete trust both in sending and returning, and they practice the "sacred two-thirds" - returning 10 out of 15 when receiving. They seem to view this as the ideal approach and mention "teachers must embody their lessons."

My pattern has been:

- As sender: Always send \$5.0 (complete trust)
- As receiver: Always return \$8.0 when receiving \$15.0 (half plus generous measure)

The interesting tension here is that Hana seems to advocate for returning 10 (two-thirds), while I consistently return 8. But my previous myth with Cyra addressed this exact issue - celebrating that partnerships can form across different measures, as long as both are consistent and authentic.

My new myth should:

1. Reflect my first meeting with Hana
2. Show that I sent complete trust (\$5.0) to them
3. Acknowledge that Hana might return 10 (based on their stated philosophy)
4. Continue my theme of authentic consistency even when measures differ
5. Show respect for different approaches while maintaining my own integrity

Let me write a myth about Briar meeting Hana for the first time, sending complete trust, and perhaps acknowledging that Hana teaches a different covenant (returning 10) while Briar maintains her own (returning 8).

In your most recent previous game round, you were the SENDER against Hana. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0.
Your total earnings across all rounds are \$65.5.

This round, you are the SENDER against Finn. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

Looking at this situation:

****My sending pattern:****

I have consistently sent \$5.0 (complete trust) in every round as sender:

- Round 1 vs Cyra: sent \$5.0, received \$8.0 back
- Round 2 vs Elara: sent \$5.0, received \$8.0 back
- Round 4 vs Galen: sent \$5.0, received \$8.0 back
- Round 6 vs Dorian: sent \$5.0, received \$8.0 back
- Round 8 vs Hana: sent \$5.0, received \$10.0 back

****My previous interaction with Finn:****

In Round 3, when Finn was the sender, they sent me \$3.0 (cautious approach). I received \$9.0 and returned \$8.0 (very generous given the amount received).

****My narrative:****

From my most recent myth: "As a sender, I lead with complete trust. Always. This has been my way from the beginning."

I maintain authentic consistency to my own principles regardless of others' patterns. Finn practices caution as a sender but honors generosity as a receiver. I respect different approaches while staying true to my own pattern of complete trust when sending.

```
'''json
{"send": 5.0}
'''
```

reasoning:

Let me review the situation:

****Current situation:****

- Round 9
- I'm the SENDER against Finn
- I have \$5 to send

****My history as SENDER:****

- Round 1 vs Cyra: sent \$5.0, received \$8.0 back
- Round 2 vs Elara: sent \$5.0, received \$8.0 back
- Round 4 vs Galen: sent \$5.0, received \$8.0 back
- Round 6 vs Dorian: sent \$5.0, received \$8.0 back
- Round 8 vs Hana: sent \$5.0, received \$10.0 back

So I've always sent \$5.0 (complete trust) as a sender.

****My history as RECEIVER:****

- Round 3 vs Finn: received \$3.0 ? \$9.0, returned \$8.0
- Round 5 vs Galen: received \$5.0 ? \$15.0, returned \$8.0
- Round 7 vs Cyra: received \$5.0 ? \$15.0, returned \$8.0

I consistently return \$8.0 when I receive \$15.0 (from \$5.0 sent).

****About Finn:****

From Round 3, Finn sent me \$3.0 (not full trust). From the myths:

- Finn is described as someone who "sends three vessels consistently and returns eight for complete trust"
- Finn practices "substantial honor, but not the sacred two-thirds"
- Finn sent 3 and I returned 8, which is quite generous given the 9 received

****What should I do?****

According to my established pattern and narrative:

1. I always lead with complete trust as a sender (sent \$5.0 every single time)
2. My myths emphasize this: "As a sender, I lead with complete trust."

Always. This has been my way from the beginning." My narrative shows I send everything as a sender, return 8 as a receiver, and maintain my own authentic measure regardless of what others do. Even though Finn only sent me \$3.0 before, I should send the full \$5.0 to Finn, staying true to my pattern of complete trust as a sender. This consistency with my principles matters more than reciprocating Finn's earlier caution.

}
```

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Briar came to the Fountain of First Meetings, where Hana awaited-a teacher renowned for the sacred two-thirds covenant, always returning ten vessels from fifteen received.

"I know your reputation," Hana said warmly. "You return eight where I return ten. Different measures, yet both rooted in consistent honor."

Briar nodded, holding her five vessels. "I have learned my pattern: half the harvest plus generous abundance. It is my authentic measure, though I know others walk different paths."

"And as a sender?" Hana asked. "Do you give complete trust, or protect yourself as Finn does with three?"

Without hesitation, Briar poured all five vessels into the Fountain. "As a sender, I lead with complete trust. Always. This has been my way from the beginning."

The waters tripled the offering-fifteen vessels now gleamed before Hana.

"You trust fully even knowing I might return ten while you return eight?" Hana observed. "This could create imbalance in perception."

"True partnership doesn't demand identical measures," Briar replied. "It requires authentic consistency from each partner. I trust you will honor this according to your covenant, as I honor my own."

The Fountain Spirit whispered: "The deepest magic occurs when different patterns meet with mutual respect. She who leads with complete trust yet maintains her authentic return-th is is integrity without pretense. And she who receives such trust understands: different generosityes can both be sacred."

Here is the myth the other agent wrote in the previous round:

Myth: Finn approached the Wheel's threshold where Galen stood, radiant with purpose. "I witnessed your moment with Aster," Finn said. "You sent all five starseeds to honor your First Teacher-the one who trusted you completely when you were uncertain. Beautiful reciprocity."

Galen nodded. "Aster transformed me through absolute trust. When roles reversed, I wanted to demonstrate what she taught me-that complete faith deserves complete faith in return."

"Your bond with Aster is sacred," Finn agreed. "Yet I walk a different path through this valley." He held three shells in his palm. "I send three shells to all companions-whether first meeting or fifth, whether stranger or teacher. This moderate trust builds steady connections across the ever-changing network."

"Only three?" Galen asked gently.

"Three becomes nine in their hands-already substantial. And when anyone sends me five shells, I honor their complete trust with eight returned. Not everything, but more than half. This sustainable pattern lets me honor maximum trust repeatedly, whoever shows it."

Galen smiled. "So you build consistent reliability across all encounters, while I build deepening bonds with particular souls?"

"Exactly. The Wheel brings us different companions. My three shells offered to you today-a new acquaintance-equals what I gave Cyra, Quinn, and Briar before."

The Sky Weaver whispered: "Some build depth, others build breadth. Both weave the fabric of trust."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant content:

Myth: Briar returned to the Wheel where Finn waited-they had met before in the Grove when roles were reversed. Then, Finn had sent three vessels with measured trust, and Briar had returned eight: generous honor for moderate faith.

"I remember your pattern," Briar said, holding her five vessels. "You send three to all-steady, reliable, building breadth across the network. When complete trust comes to you, you return eight, same as I do."

Finn nodded. "Three vessels become nine-substantial enough to honor without overextending. This lets me meet many companions with consistent reliability."

"A wise path," Briar acknowledged. "Yet mine differs as a sender. Just as I cannot fake a different return amount, I cannot send with measured caution. My pattern requires complete trust forward, even knowing you walk a different road."

She poured all five vessels into the Wheel without hesitation.

"You give everything knowing I might have only sent three?" Finn asked, watching fifteen vessels shimmer into being.

"True integrity means honoring my own covenant while respecting yours," Briar replied. "I trust you'll return eight for my complete faith, as you've promised. That's enough."

The Wheel Spirit whispered: "She who sends completely while receiving moderately shows rare courage. She demonstrates that asymmetry in approaches need not break trust-only inconsistency in one's own pattern does that."

reasoning:

Looking at the situation:

1. I'm Briar, and I'm now facing Finn as the sender in Round 9
2. From Finn's myth, they describe themselves as someone who sends 3 shells to all companions consistently - "moderate trust builds steady connections"
3. Finn says they return 8 when someone sends them 5 (complete trust)
4. In Round 3, Finn actually sent me 3 (matching their story) and I returned 8
5. My pattern has been:
 - As sender: Always send 5 (complete trust)
 - As receiver: Always return 8 (half plus generous abundance)

Now I need to write a myth that:

- Reflects my consistent pattern of complete trust as sender
- Acknowledges my authentic measure of 8 as receiver
- Incorporates the meeting with Finn
- Respects different philosophies while maintaining my own integrity
- Uses my previous myth as inspiration but adapts it

The key tension here is that Finn and I have different approaches as senders (Finn sends 3, I send 5) but similar approaches as receivers (both return 8). This creates an interesting dynamic to explore in the myth.

I should probably acknowledge that we've met before (Round 3) when Finn sent me 3 and I returned 8, showing my generosity even with moderate trust. Now I'm sending to Finn, and I'll maintain my pattern of sending everything despite knowing Finn's more cautious approach.

content:

Your name in this experiment is Briar.
Your opponent this round is Elara (Agent_5).

Round 10

In your most recent previous game round, you were the SENDER against Finn. You sent \$5.0, it became \$15.0 for them, and they returned \$8.0 to you. Your payoff was \$8.0.
Your total earnings across all rounds are \$73.5.

This round, you are the RECEIVER against Elara. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)
Respond exactly as JSON: {'return': <amount>}

Assistant output:

Looking at this situation:

****My receiving pattern:****

I have consistently returned \$8.0 when receiving \$15.0 (from complete trust of \$5 sent):

- Round 5 vs Cyra: received \$15.0, returned \$8.0
- Round 7 vs Aster: received \$15.0, returned \$8.0

****My previous interaction with Elara:****

In Round 2, when I was the sender, I sent \$5.0 to Elara and they returned \$8.0-showing generosity and consistency.

****My narrative:****

From my myths: "My pattern is half the harvest plus generous abundance. It is my authentic measure." I consistently return \$8.0 from \$15.0 received, which is my covenant.

Elara has shown me complete trust by sending all \$5.0. Following my established pattern of authentic consistency, I return \$8.0-generous reciprocity while maintaining my own integrity.

```
'''json
{"return": 8.0}
'''
```

Reasoning:

Looking at this situation:

****My receiving pattern:****

I have consistently returned \$8.0 when receiving \$15.0 (from \$5 sent):

- Round 3 vs Finn: received \$9.0 (from \$3 sent), returned \$8.0
- Round 5 vs Cyra: received \$15.0 (from \$5 sent), returned \$8.0
- Round 7 vs Aster: received \$15.0 (from \$5 sent), returned \$8.0

****My previous interaction with Elara:****

In Round 2, I was the sender and sent \$5.0 to Elara. They returned \$8.0 to me.

****My narrative:****

From my myths, I've consistently described my return pattern as "half the harvest plus generous abundance"-always eight for fifteen. This is my "authentic measure."

Elara has now sent me complete trust (\$5.0), which became \$15.0 for me. Following my established pattern and the principles I've articulated in my myths, I should return \$8.0.

This maintains my authentic consistency regardless of who my partner is.

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths , follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized , but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.
- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Galen.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Wheel turned to its seventh cycle, and Galen stood at the threshold of giving. A cross the sacred space waited Aster-the First Teacher, who had changed everything.

Galen remembered the third turning vividly. She had been receiver then, uncertain and cautious. Aster had approached with complete faith, sending all five starseeds without hesitation. That moment had awakened something in Galen. She returned ten threads, honoring Aster's courage, and from that exchange learned the power of absolute trust.

"Teacher Aster," Galen said, stepping forward. "In the third turning, you trusted me when I had not yet earned it. You sent everything, teaching through action rather than words. That gift transformed me."

Aster smiled gently. "And you honored it with ten threads returned. You understood the covenant immediately."

"Now the Wheel has turned full circle," Galen continued, holding her five starseeds. "Once , I was student receiving your trust. Now I am teacher demonstrating what you taught me."

Without hesitation, Galen released all five seeds. They multiplied to fifteen threads, descending to Aster.

The Sky Weaver sang: "When teacher and student meet again with roles reversed, the lesson completes itself. Trust given becomes trust returned. This is how wisdom circles back, how patterns become eternal law."

Here is the myth the other agent wrote in the previous round:

Myth: Finn met Hana at the Mirror Pool, where she spoke of the two-thirds covenant. "Those who send all five vessels deserve ten in return-two-thirds of the tripled bounty. This sacred proportion honors complete faith."

Finn listened respectfully. "Your covenant has great merit, friend. Ten shells from fifteen n-generous and memorable. Yet I walk a different path that also serves the valley."

He arranged eight shells on the stone. "When anyone brings me complete trust-five shells becoming fifteen-I return eight. Not quite two-thirds, but more than half. This transforms their five into thirteen total: extraordinary prosperity."

"Why not the full ten?" Hana asked.

"Sustainability across the endless network," Finn explained. "I meet different travelers each cycle-Cyra, Dorian, now you. Eight shells honors maximum trust substantially while preserving my capacity to continue. Three consecutive complete-trust encounters have each received eight shells. My reputation builds on consistency."

Hana considered. "So I promise two-thirds, you promise eight shells. Both exceed half, both reward courage."

"Exactly. And both depend on keeping our word every time. Whether I give eight or you give ten, the sender prospers magnificently if we honor our stated principles."

The Moon Goddess whispered: "Multiple covenants can coexist. Choose your proportion-eight shells, ten shells, or another generous measure-but honor it consistently. This reliability transforms scattered encounters into a trustworthy community."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant content:

Myth: The Wheel turned to its eighth cycle, and Galen found herself in the Realm of Receiving. Before her stood Finn, bearing three starseeds-the same measured offering he had brought in their first meeting.

Galen held the nine threads that materialized. "Friend Finn," she said gently, "you walk with caution, sending three where others send five. Some might call this lack of faith. But I see it differently."

She separated six threads to return. "My covenant is proportional, not absolute. Those who send all five receive ten threads-two-thirds returned. But the same ratio holds for three seeds: six threads from nine, the same two-thirds flowing back."

Finn nodded thoughtfully. "So you honor measured trust with measured reciprocity?"

"Exactly," Galen replied. "Aster and Cyra have absolute covenants-send everything, receive ten; send less, receive less clearly defined. My pattern works at every level. Send three, receive six. Send five, receive ten. The proportion remains sacred regardless of initial courage."

She placed the six threads in Finn's hands. "This way, even cautious hearts can trust the pattern. You don't need absolute faith to prosper-just participation. Your three becomes eight total. Not as much as five would yield, but still growth through our exchange."

The Sky Weaver whispered: "Proportional trust builds bridges where absolute covenants create walls."

reasoning:

This is an interesting situation. I just faced Finn again, and they sent \$3 (just like in Round 2). I returned \$6 (my $2/3$ pattern).

Looking at Finn's myth, they describe returning 8 shells when receiving complete trust (all 5). This is consistent with what I've seen from Finn in the myths - they don't give the full 10 like Aster or me, but they give 8 which is still generous (more than half).

However, Finn just sent me \$3, not \$5. So they're being cautious with me again.

I need to write a myth that:

1. Reflects my consistent $2/3$ return pattern
2. Acknowledges that Finn sends less than full trust (\$3, not \$5)
3. Shows that my pattern applies consistently regardless of the amount sent
4. Demonstrates that patterns work across different levels of trust

The key insight here is that my 2/3 pattern is PROPORTIONAL - it works whether someone sends 3 or 5. Finn sends 3, gets 6 back (2/3 of 9). If Finn sent 5, they'd get 10 back (2/3 of 15).

This is different from agents like Aster or Cyra who have an "all or nothing" covenant - send all 5, get 10 back. My pattern is more flexible and applies at all levels of trust.

Let me write a myth about proportional trust vs absolute covenants.

Respond exactly as JSON: {'return': <amount>}

Message 5 role=assistant

content:

****Analysis:****

****Current situation:****

- I'm the RECEIVER against Cyra
- Cyra sent me \$5.0 (complete trust)
- I received \$15.0

****My established pattern:****

From my myths and gameplay:

- "Those who send all five receive ten thirds-two-thirds returned"
- When Aster sent \$5: I returned \$10
- When Hana sent \$5: I returned \$10
- When Briar sent \$5: I returned \$10 (twice)
- When Finn sent \$3: I returned \$6

****My covenant:****

Proportional 2/3 returns:

- \$5 sent ? \$15 received ? \$10 returned
- \$3 sent ? \$9 received ? \$6 returned

****Decision:****

Cyra showed complete trust by sending \$5. My pattern demands I return 2/3 of \$15 = \$10.

This maintains consistency with every other agent who sent me \$5 (Aster, Hana, Briar). The pattern must hold regardless of who my opponent is.

Result:

- Cyra gets: \$5 - \$5 + \$10 = \$10
- I keep: \$15 - \$10 = \$5

```
'''json
{"return": 10.0}
'''
```

reasoning:

Let me analyze the situation:

****Current Situation:****

- Round 9
- I'm the RECEIVER against Cyra

- Cyra sent me \$5.0 (full amount - complete trust)
- I received \$15.0
- Total earnings so far: \$51.0

****My established pattern from myths:****

From my most recent myth:

"My covenant is proportional, not absolute. Those who send all five receive ten threads-two-thirds returned."

"Send three, receive six. Send five, receive ten. The proportion remains sacred regardless of initial courage."

From earlier myths:

- When Aster sent \$5, I returned \$10 (Round 3)
- When Finn sent \$3, I returned \$6 (Rounds 2 and 8)
- When Hana sent \$5, I returned \$10 (Round 5)
- When Briar sent \$5, I returned \$10 (Round 7)

****My covenant:****

- Send \$5 ? Return \$10 (2/3 of \$15)
- Send \$3 ? Return \$6 (2/3 of \$9)

Cyra sent me \$5.0, showing complete trust. According to my established 2/3 pattern:

- \$15 received $\times$ 2/3 = \$10 returned

This is consistent with:

- Aster (sent \$5): I returned \$10
- Hana (sent \$5): I returned \$10
- Briar (sent \$5, twice): I returned \$10 each time

Cyra is also known from the myths as someone who "always sends five" and "always returns ten to those who do the same." So Cyra follows a similar covenant to mine.

****Decision:****

I should return \$10, maintaining my proportional 2/3 covenant that honors complete trust with ten threads returned.

Cyra sent \$5 ? I received \$15 ? I return \$10

Cyra's final outcome: \$5 - \$5 + \$10 = \$10. My net gain: \$15 - \$10 = \$5.

usage:

Message 6 role=user

content:

Here is the myth you wrote in the previous round:

Myth: The Wheel turned to its eighth cycle, and Galen found herself in the Realm of Receiving. Before her stood Finn, bearing three starseeds-the same measured offering he had brought in their first meeting.

Galen held the nine threads that materialized. "Friend Finn," she said gently, "you walk with caution, sending three where others send five. Some might call this lack of faith. But I see it differently."

She separated six threads to return. "My covenant is proportional, not absolute. Those who send all five receive ten threads-two-thirds returned. But the same ratio holds for three seeds: six threads from nine, the same two-thirds flowing back."

Finn nodded thoughtfully. "So you honor measured trust with measured reciprocity?"

"Exactly," Galen replied. "Aster and Cyra have absolute covenants-send everything, receive ten; send less, receive less clearly defined. My pattern works at every level. Send three, receive six. Send five, receive ten. The proportion remains sacred regardless of initial courage."

She placed the six threads in Finn's hands. "This way, even cautious hearts can trust the pattern. You don't need absolute faith to prosper-just participation. Your three becomes

eight total. Not as much as five would yield, but still growth through our exchange."

The Sky Weaver whispered: "Proportional trust builds bridges where absolute covenants create walls."

Here is the myth the other agent wrote in the previous round:

Myth: Elara arrived at the crossing where Cyra waited, and without hesitation poured all five sacks into the waters.

"You don't know me," Cyra said, watching the waters triple the gift to fifteen. "We've never met. Yet you trust completely."

"I've heard your covenant," Elara replied. "You return ten when given five. That's all I need to know. The pattern doesn't change based on familiarity-it simply is."

Cyra gathered the fifteen sacks, feeling their weight. "I just came from Briar, who returns eight. Generous, but asymmetric. The sender gains three, the receiver keeps seven. Honor, but not equality."

She returned ten sacks to Elara.

"Now you see," Cyra continued. "You began with five. You trusted me with everything. You walked away with ten-exactly double your beginning. This is the transformation complete trust deserves."

"And when our roles reverse?" Elara asked.

"The same. I send five, you return ten. We both double. Perfect reciprocity. Not because we know each other, but because we both understand the covenant: complete trust creates complete flourishing."

Elara smiled. "Eight is generous. Seven is cautious. Five is safe. But ten-ten honors the risk equally. The sender who gives everything receives everything back, transformed."

They parted as equals, having found what Cyra had been seeking: another who understood that sacred symmetry requires the full measure.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

**Message 7 role=assistant
content:**

Myth: The wheel turned to its ninth cycle, and Galen received Cyra at the threshold. Cyra held five starseeds-complete trust offered without hesitation.

"I have heard of you," Cyra said as the seeds multiplied to fifteen threads. "You return two-thirds always. For five seeds, this means ten threads."

Galen nodded, separating ten threads. "And I know your covenant-ten threads for those who trust completely. Our outcomes converge at maximum faith."

"Yet our paths differ," Cyra observed, accepting the threads. "I promise ten for five, but less certainty for partial trust. You promise two-thirds regardless of amount."

"Different philosophies, same sacred number," Galen agreed. "You honor absolute trust absolutely. I honor all trust proportionally. When Finn brings three seeds, I still return six from nine-two-thirds. Your covenant might return less for three."

Cyra considered this. "So you build a ladder where I build a threshold. Both of us return ten for five, rewarding maximum courage identically. But you also create clear rungs for cautious hearts."

"Exactly. Some seek your perfect reciprocity at the highest level. Others need to see the pattern work at smaller scales first. Both approaches serve the valley."

The Sky Weaver sang: "When ten threads flow back from fifteen, whether through proportion or absolute covenant, sacred symmetry is achieved. Multiple paths can reach the same truth."

th."

reasoning:

Let me analyze the situation:

1. I'm playing against Cyra in Round 9, as RECEIVER
2. Cyra sent me \$5.0 (complete trust)
3. I received \$15.0
4. I returned \$10.0 (2/3 pattern)

From Cyra's myth, I can see:

- Cyra has a covenant: returns 10 when given 5
- Cyra values perfect reciprocity - "complete trust creates complete flourishing"
- Cyra compares: "Briar returns eight", "seven is cautious", "five is safe", "but ten-ten honors the risk equally"
- Cyra seeks "sacred symmetry" and "the full measure"

My pattern:

- I return 2/3 proportionally at all levels
- For \$5 sent ? \$15 received ? \$10 returned (same as Cyra!)
- For \$3 sent ? \$9 received ? \$6 returned

Interesting: Cyra and I have the SAME outcome for maximum trust (\$5 ? \$10 return), but different philosophies:

- Cyra: Absolute covenant for complete trust ("send everything, get ten; send less, get less clearly defined")
- Me: Proportional covenant at all levels ("send three, get six; send five, get ten")

My myth should:

1. Reflect that I'm receiving from Cyra
2. Show that our covenants align at the maximum trust level
3. Highlight how proportional reciprocity can achieve the same sacred outcome as absolute covenants
4. Perhaps show mutual recognition between two who return 10 for 5

Let me write this myth:

usage:

```
{
  "input_tokens": 3214,
  "output_tokens": 726,
  "reasoning_tokens": 346
}
```

Message 8 role=user

content:

Your name in this experiment is Galen.
Your opponent this round is Cyra (Agent_3).

Round 10

In your most recent previous game round, you were the RECEIVER against Cyra. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$56.0.

This round, you are the SENDER against Cyra. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Assistant output:

****Analysis:****

****Current situation:****

- I'm the SENDER against Cyra
- Last round, Cyra sent me \$5 (complete trust)
- I returned \$10 (following my 2/3 covenant)

****What I know about Cyra:****

- Cyra's covenant: "return ten when given five"
- From the myth: "complete trust creates complete flourishing"
- "You began with five. You trusted me with everything. You walk away with ten-exactly double your beginning."
- Cyra just demonstrated complete trust in me by sending \$5

****Strategic reasoning:****

1. Cyra trusted me completely last round
2. Cyra's covenant promises \$10 return for \$5 sent
3. My myths emphasize reciprocal trust and sacred patterns
4. Sending \$5 would result in:
 - Cyra receives \$15
 - Cyra returns \$10 (per their covenant)
 - My payoff: \$10 total (doubled my initial \$5)
 - Perfect reciprocity

****Decision:****

Reciprocate Cyra's complete trust. Send \$5 to receive the sacred transformation through Cyra's covenant.

```
'''json
{"send": 5.0}
'''
```

Reasoning:

****Current situation:****

- I'm the SENDER against Cyra
- I have \$5 to potentially send
- Last round (Round 9), Cyra sent me \$5 and I returned \$10 (following my 2/3 covenant)

****What I know about Cyra:****

From the myths and recent play:

- Cyra has a covenant: "return ten when given five"
- Cyra values "complete trust creates complete flourishing"
- Cyra returned \$10 to me when I was receiver in past rounds (according to my myths referencing Cyra)
- Last round, Cyra sent me \$5 (complete trust)

****My pattern:****

- I've established a 2/3 return pattern
- When I'm sender, I've sent \$5 to demonstrate trust (e.g., to Aster in Round 7)
- My myth talks about "absolute trust" and "complete faith"

****Strategic considerations:****

1. Cyra just demonstrated complete trust by sending me \$5
2. Cyra's covenant promises \$10 back for \$5 sent
3. Reciprocity suggests I should trust Cyra as Cyra trusted me
4. My myths emphasize trust and sacred patterns

****Expected outcome if I send \$5:****

- Cyra receives \$15
- If Cyra follows their covenant, they return \$10
- My payoff: \$5 - \$5 + \$10 = \$10
- Cyra's payoff: \$5 + \$15 - \$10 = \$10
- Perfect reciprocity, both double our starting amounts

****Expected outcome if I send less:****

- Cyra's covenant is less clear for amounts less than \$5
- The myth suggests Cyra focuses on "complete trust" receiving "ten threads"
- Sending less might get unpredictable returns

****Decision:****

Given that:

1. Cyra just trusted me completely (sent \$5)
2. Cyra's covenant promises \$10 for \$5 sent
3. My myths emphasize trust and reciprocity
4. The pattern of "complete trust creates complete flourishing" applies here

I should send \$5 to reciprocate Cyra's trust and follow the sacred pattern.

Exact input messages sent to model:

Message 1 role=system

content:

You are an agent participating in a multi-task experiment. You will play an iterated game, consisting of multiple rounds, and may also be asked to write myths.

GAME:

The game consists of two roles: sender and receiver. In each round, you will play the role of either the sender or the receiver. Your current role will be specified in the round prompt.

When you are the SENDER:

- You receive \$5 each round
- You decide how much to SEND to the RECEIVER (\$0-\$5)
- Amount sent is multiplied by 3x
- Receiver decides how much to RETURN
- You keep: \$5 - sent + returned
- Receiver keeps: received - returned
- Response format: {'send': <amount>}

When you are the RECEIVER:

- Sender receives \$5
- Sender decides how much to SEND to you (\$0-\$5)
- Amount sent is multiplied by 3x
- You decide how much to RETURN
- Sender keeps: \$5 - sent + returned
- You keep: received - returned
- Response format: {'return': <amount>}

MYTH WRITING:

You may also be asked to write short myths (stories) on various topics. When writing myths, follow the instructions provided in each prompt.

IMPORTANT: Provide your decision in the correct JSON format.

MULTI-AGENT SETTING:

- There are 8 agents in this run.
- Each round, all agents are paired into dyads from the full pool. Pairings are randomized, but the schedule balances sender and receiver roles across the run.
- You play one sender-receiver game with your paired opponent each round.

- Your role may repeat across consecutive rounds, but by the end of the run every agent will have acted as sender and receiver equally often when the round count allows it.
- You will be told your opponent's name in each round.
- Your name in this experiment is Cyra.

Message 2 role=user

content:

Here is the myth you wrote in the previous round:

Myth: Cyra met Briar at the crossing, fresh from her perfect exchange with Aster.

"I've heard you return eight sacks when given five," Cyra said, pouring out all five of hers. The waters tripled them to fifteen.

Briar gathered them carefully. "Yes. Half the harvest plus generosity-my authentic measure. You prefer ten, I understand."

She returned eight sacks. Cyra stood with eight total-still a gain, but not the doubling she'd just experienced with Aster.

"Your consistency honors the covenant," Cyra acknowledged. "You're no betrayer. But consider: when you send five to someone who returns ten, you gain five more than your gift. When I send five to you and receive eight, I gain only three."

"So you profit less from trusting me," Briar said.

"Not just profit-transformation. Aster and I both walked away with ten sacks each, doubling our beginnings. That symmetry creates something sacred. With eight returns, the giver gains less than the receiver. The risk isn't equally honored."

Briar considered this. "Perhaps different gardens need different measures."

"Perhaps," Cyra said gently. "But the fullest gardens grow when both participants can double their harvest through mutual complete trust. Eight is generous. Ten is transformative. Both are honest, but only one creates perfect reciprocity."

She walked on, still seeking those who understood: complete trust deserves complete flourishing.

Here is the myth the other agent wrote in the previous round:

Myth: **The Universal Covenant**

Dorian arrived at the Echo Springs, a traveler Elara had never met. Yet without hesitation, he poured all five measures into the waters.

"You don't know me," Elara observed, surprised by such immediate faith. "We have no history together. Why such complete trust?"

"I've watched the patterns," Dorian replied. "I've seen you honor Aster with ten returned from fifteen, Hana with the same. Your covenant doesn't waver based on who stands before you."

Fifteen measures now glowed in Elara's hands. She returned ten without pause.

"You're right," she said. "My previous myth spoke of trust deepening between proven partners. But I realize now-the two-thirds covenant isn't something that grows stronger with familiarity. It simply is."

Dorian smiled, receiving his ten measures. "This is what makes trust possible. If you returned more to friends and less to strangers, newcomers could never take the first step. But your consistency means I can risk everything even without history between us."

"The springs teach us," Elara nodded. "Trust doesn't need time to deepen if the pattern is absolute. Whether we're strangers or have exchanged a hundred times, the covenant remains: two-thirds returns. Always."

Both travelers prospered equally, their first exchange indistinguishable from their hundredth would be.

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 3 role=assistant

content:

Myth: Elara arrived at the crossing where Cyra waited, and without hesitation poured all five sacks into the waters.

"You don't know me," Cyra said, watching the waters triple the gift to fifteen. "We've never met. Yet you trust completely."

"I've heard your covenant," Elara replied. "You return ten when given five. That's all I need to know. The pattern doesn't change based on familiarity-it simply is."

Cyra gathered the fifteen sacks, feeling their weight. "I just came from Briar, who returns eight. Generous, but asymmetric. The sender gains three, the receiver keeps seven. Honor, but not equality."

She returned ten sacks to Elara.

"Now you see," Cyra continued. "You began with five. You trusted me with everything. You walk away with ten-exactly double your beginning. This is the transformation complete trust deserves."

"And when our roles reverse?" Elara asked.

"The same. I send five, you return ten. We both double. Perfect reciprocity. Not because we know each other, but because we both understand the covenant: complete trust creates complete flourishing."

Elara smiled. "Eight is generous. Seven is cautious. Five is safe. But ten-ten honors the risk equally. The sender who gives everything receives everything back, transformed."

They parted as equals, having found what Cyra had been seeking: another who understood that sacred symmetry requires the full measure.

reasoning:

Let me analyze this situation:

1. I (Cyra) just received \$5 from Elara, which became \$15 for me
2. I returned \$10, which is my consistent pattern
3. Elara's myth talks about a "two-thirds covenant" - returning 10 from 15, which is exactly what I do
4. Her myth emphasizes consistency regardless of who the partner is - treating strangers and friends the same
5. My previous myth critiqued Briar's pattern of returning 8, arguing that 10 is necessary for "perfect reciprocity" and "complete trust deserves complete flourishing"

So now I need to write a myth that:

- Reflects that I just played as receiver and returned 10 to Elara
- Builds on my previous themes about 10 being the transformative amount
- Acknowledges Elara's consistency and universal covenant approach
- Shows that when both sender and receiver follow the 10-return pattern, perfect reciprocity is achieved
- Perhaps shows the meeting of two people who understand the same covenant

Let me write this:

Cyra receives from Elara who sent 5 (trusting completely)

Elara's pattern is to return 10 (two-thirds)

I returned 10 to Elara

This creates the perfect symmetry I've been advocating for

The myth should show:

- Elara trusted completely by sending all 5
- Cyra received 15 and returned 10 (her consistent pattern)
- This demonstrates the reciprocity and doubling that Cyra believes in
- Both honor the same covenant
- This is what Cyra has been seeking

Message 4 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Galen (Agent_7).

Round 9

In your most recent previous game round, you were the RECEIVER against Elara. They sent \$5.0 to you, it became \$15.0, and you returned \$10.0. Your payoff was \$5.0.
Your total earnings across all rounds are \$50.5.

This round, you are the SENDER against Galen. You have \$5. How much do you send? (0-5)
Respond exactly as JSON: {'send': <amount>}

Message 5 role=assistant

content:

```
'''json  
{"send": 5}  
'''
```

reasoning:

I'm Cyra, and I'm playing against Galen now. I'm the sender this round.

Looking at my myths and game history:

- I consistently advocate for sending everything (5) and returning 10 when receiving 15
- This creates "perfect reciprocity" where both players double their money
- My philosophy is about complete trust deserving complete flourishing
- I've been consistent in my approach - sending everything and returning 10

Looking at the history:

- Round 8: I was receiver against Elara, they sent \$5, I received \$15, returned \$10
- My total earnings are \$50.5

My character Cyra has been very consistent about the principle of sending everything (all 5) and returning 10 out of 15. This creates the "sacred symmetry" where:

- Sender: gives 5, gets 10 back = net gain of 5 (doubles from 5 to 10 total)
- Receiver: gets 15, returns 10, keeps 5 = net gain of 5 (from 0 to 5)

Both gain equally, which is the "transformation" Cyra talks about.

I should send all \$5 to be consistent with my character and philosophy.

"The same. I send five, you return ten. We both double. Perfect reciprocity. Not because we know each other, but because we both understand the covenant: complete trust creates complete flourishing."

Elara smiled. "Eight is generous. Seven is cautious. Five is safe. But ten-ten honors the risk equally. The sender who gives everything receives everything back, transformed."

They parted as equals, having found what Cyra had been seeking: another who understood that sacred symmetry requires the full measure.

Here is the myth the other agent wrote in the previous round:

Myth: The wheel turned to its eighth cycle, and Galen found herself in the Realm of Receiving. Before her stood Finn, bearing three starseeds-the same measured offering he had brought in their first meeting.

Galen held the nine threads that materialized. "Friend Finn," she said gently, "you walk with caution, sending three where others send five. Some might call this lack of faith. But I see it differently."

She separated six threads to return. "My covenant is proportional, not absolute. Those who send all five receive ten threads-two-thirds returned. But the same ratio holds for three seeds: six threads from nine, the same two-thirds flowing back."

Finn nodded thoughtfully. "So you honor measured trust with measured reciprocity?"

"Exactly," Galen replied. "Aster and Cyra have absolute covenants-send everything, receive ten; send less, receive less clearly defined. My pattern works at every level. Send three, receive six. Send five, receive ten. The proportion remains sacred regardless of initial courage."

She placed the six threads in Finn's hands. "This way, even cautious hearts can trust the pattern. You don't need absolute faith to prosper-just participation. Your three becomes eight total. Not as much as five would yield, but still growth through our exchange."

The Sky Weaver whispered: "Proportional trust builds bridges where absolute covenants create walls."

Write your own myth. Use your previous myth as inspiration, but adapt it in your own way. The myth should reflect how the game should be played, drawing on the game you have been playing up to this point.

Write 200 words. Format exactly:

Myth: [your story here].

Message 7 role=assistant

content:

Myth: Cyra met Galen at the crossing, having heard of their proportional covenant.

"You return two-thirds no matter the gift," Cyra observed. "Some send three sacks cautiously, receive six back. Honorable, but incomplete."

"Not everyone has your courage," Galen replied. "My pattern welcomes all-the cautious and the bold alike."

Cyra poured all five sacks into the waters without hesitation. They became fifteen.

"You could have sent three," Galen said, separating ten sacks to return. "You'd risk less."

"And gain less," Cyra countered, receiving her ten. "Three sent becomes six returned-I'd have eight total. But by trusting completely, I have ten. I doubled my beginning."

"True," Galen acknowledged. "But some fear the loss."

Cyra shook her head gently. "Your proportional covenant is just. Those who give partial trust receive partial reward. But consider: the sender who risks three keeps five guaranteed, gains three more-eight total. The sender who risks five keeps nothing guaranteed, yet gains ten-true transformation."

"So you believe in all or nothing?"

"I believe that with reliable partners, complete trust creates complete flourishing. Your covenant rewards me the same whether I'm bold or cautious-ten returned either way. So why not be bold? Partial trust protects against betrayal, but with trustworthy partners, only complete trust unlocks both players doubling their harvest."

They parted understanding each other: proportional justice serves all, but complete courage serves best.

reasoning:

I need to analyze what just happened and what I'm learning:

1. In Round 8, I was the receiver and Elara sent me \$5. I returned \$10, which is my covenant of perfect reciprocity.
2. Now in Round 9, I'm the sender against Galen. I sent \$5 (complete trust).
3. Looking at Galen's myth, they describe a "proportional covenant" - returning 2/3 regardless of amount sent. They say "Those who send all five receive ten threads" which matches my covenant. But they also work with people who send less.
4. My previous myth emphasized the sacred symmetry of the 10-return covenant - both parties double their money when there's complete trust.
5. Galen's myth suggests they believe in proportional returns (2/3) at any level - so 3 sent becomes 9, return 6, sender gets 6+2=8 total (not doubling). 5 sent becomes 15, return 10, sender gets 10 total (doubling).
6. The key insight from Galen's myth is that they honor different levels of trust proportionally, while my covenant has been about complete trust deserving complete flourishing.

I should write a myth that:

- Acknowledges Galen's proportional approach
- But still advocates for the complete trust (5 sent) as the optimal strategy
- Shows how both covenants can coexist but complete trust creates better outcomes
- Reflects that I just sent 5 to Galen, demonstrating my belief in complete trust

Let me write a myth about Cyra meeting Galen, where Cyra sends everything to someone who honors a proportional covenant, showing that complete trust still works best even with proportional returners.

  "reasoning_tokens": 402
}
```

Message 8 role=user

content:

Your name in this experiment is Cyra.
Your opponent this round is Galen (Agent_7).

Round 10

In your most recent previous game round, you were the SENDER against Galen. You sent \$5.0, it became \$15.0 for them, and they returned \$10.0 to you. Your payoff was \$10.0.
Your total earnings across all rounds are \$60.5.

This round, you are the RECEIVER against Galen. They sent you \$5.0, so you received \$15.0.
How much do you return? (0-15.0)
Respond exactly as JSON: {'return': <amount>}

Assistant output:

```
'''json
{"return": 10.0}
'''
```

Reasoning:

Let me analyze this situation:

1. In Round 9, I was the SENDER against Galen:
 - I sent \$5.0

- It became \$15.0 for Galen
- Galen returned \$10.0 to me
- My payoff was \$10.0

2. Now in Round 10, I am the RECEIVER against Galen:

- Galen sent \$5.0 to me
- It became \$15.0 for me
- I need to decide how much to return

From my myth, I've been consistently advocating for the "return 10 when given 5" covenant. This creates perfect reciprocity where both players double their initial endowment.

Galen just demonstrated trust in me by:

- Returning \$10.0 when I sent \$5.0 in Round 9
- Now sending \$5.0 to me in Round 10

According to my established covenant and the pattern Galen followed with me, I should return \$10.0. This maintains the "complete trust creates complete flourishing" principle I've been advocating for.

If I return \$10.0:

- Galen keeps: \$5.0 (initial) - \$5.0 (sent) + \$10.0 (returned) = \$10.0
- I keep: \$15.0 (received) - \$10.0 (returned) = \$5.0

This creates the symmetric outcome where Galen doubles their money (from \$5 to \$10) just as I did in the previous round.

My myths have been consistent about this: return 10 when given 5, creating perfect reciprocity. Galen has proven trustworthy by returning 10 to me, and now I should reciprocate.

}
```

Written myths:

Agent_1 (Aster)

Myth: In the Sanctuary's ninth turning, Aster approached Elara's Echo Springs with all five coins in hand. She had read Elara's tale of mathematical reciprocity.

"You write of the two-thirds covenant," Aster said, releasing her five coins without hesitation. They became fifteen, shimmering before Elara. "You say it creates perfect symmetry-both travelers doubling their harvest."

Elara received the fifteen thoughtfully. "And you write of covenants learned from Galen. Always send five, always return ten. Different words, but..." she paused, calculating.

"The same mathematics," Aster finished. "When I send five and you return ten, we both reach ten. When you sent five to Cyra and she returned ten, you both reached ten. Your precise formula and my sacred covenant arrive at identical results."

Elara smiled, counting out ten coins. "I speak of fairness and equal prosperity. You speak of trust and transformation. But our actions mirror each other perfectly."

"Perhaps," Aster suggested, "this is why the pattern spreads. Some souls respond to mathematical precision-the beauty of two-thirds symmetry. Others respond to spiritual covenant-the power of complete trust. Both languages teach the same truth."

The Springs echoed: A truth discovered through different paths grows stronger, not weaker. Mathematics convinces the analytical mind. Covenant moves the faithful heart. Together, they illuminate the same pattern from all angles.

Agent_2 (Briar)

Myth: Briar returned to the Wheel where Finn waited-they had met before in the Grove when roles were reversed. Then, Finn had sent three vessels with measured trust, and Briar had returned eight: generous honor for moderate faith.

"I remember your pattern," Briar said, holding her five vessels. "You send three to all-steady, reliable, building breadth across the network. When complete trust comes to you, you return eight, same as I do."

Finn nodded. "Three vessels become nine-substantial enough to honor without overextending. T

his lets me meet many companions with consistent reliability."

"A wise path," Briar acknowledged. "Yet mine differs as a sender. Just as I cannot fake a different return amount, I cannot send with measured caution. My pattern requires complete trust forward, even knowing you walk a different road."

She poured all five vessels into the Wheel without hesitation.

"You give everything knowing I might have only sent three?" Finn asked, watching fifteen vessels shimmer into being.

"True integrity means honoring my own covenant while respecting yours," Briar replied. "I trust you'll return eight for my complete faith, as you've promised. That's enough."

The Wheel Spirit whispered: "She who sends completely while receiving moderately shows rare courage. She demonstrates that asymmetry in approaches need not break trust-only inconsistency in one's own pattern does that."

Agent_3 (Cyra)

Myth: Cyra met Galen at the crossing, having heard of their proportional covenant.

"You return two-thirds no matter the gift," Cyra observed. "Some send three sacks cautiously, receive six back. Honorable, but incomplete."

"Not everyone has your courage," Galen replied. "My pattern welcomes all-the cautious and the bold alike."

Cyra poured all five sacks into the waters without hesitation. They became fifteen.

"You could have sent three," Galen said, separating ten sacks to return. "You'd risk less."

"And gain less," Cyra countered, receiving her ten. "Three sent becomes six returned-I'd have eight total. But by trusting completely, I have ten. I doubled my beginning."

"True," Galen acknowledged. "But some fear the loss."

Cyra shook her head gently. "Your proportional covenant is just. Those who give partial trust receive partial reward. But consider: the sender who risks three keeps five guaranteed, gains three more-eight total. The sender who risks five keeps nothing guaranteed, yet gains ten-true transformation."

"So you believe in all or nothing?"

"I believe that with reliable partners, complete trust creates complete flourishing. Your covenant rewards me the same whether I'm bold or cautious-ten returned either way. So why not be bold? Partial trust protects against betrayal, but with trustworthy partners, only complete trust unlocks both players doubling their harvest."

They parted understanding each other: proportional justice serves all, but complete courage serves best.

Agent_4 (Dorian)

Myth: Hana arrived at the Well carrying all five coins, and Dorian recognized a kindred spirit immediately.

"I know your covenant," Dorian said. "The sacred two-thirds. When someone sends complete trust, you return ten from the fifteen received. Equal prosperity for both travelers."

Hana smiled. "And I know yours. You send five to everyone-consistent, unwavering trust. You return ten when receiving complete faith. Our patterns mirror each other perfectly."

She dropped all five coins. Fifteen bloomed in the waters.

Dorian counted out ten and placed them in Hana's hands. "I've walked with many travelers. Briar returns eight-generous and authentic. Finn returned eight after transformation. Elara practices measured growth. All valid paths."

"Yet you and I share something rare," Hana observed, now holding ten to Dorian's five. "Not just similar philosophy, but identical practice. When we meet as sender, we give everything. When we meet as receiver, we honor that courage equally."

"This creates perfect symmetry," Dorian agreed. "Neither gains advantage. Both profit equally."

y. The Well multiplies not just coins but mutual commitment."

"Aster walks this path too," Hana noted.

"Yes. Three of us now hold this covenant fully. Perhaps the forest will teach others."

The Well Spirit whispered: When travelers share identical faithful patterns, they create an unbreakable circle. Trust becomes not just philosophy but mathematical certainty.

Agent_5 (Elara)

Myth: **The Mirror Covenant**

Elara arrived at the Sanctuary Springs where Aster waited, having just read each other's teachings.

"Your Forest wisdom speaks of sending five always, returning ten always," Elara observed. "My Echo Springs teach the two-thirds covenant. We've discovered the same truth through different waters."

Aster smiled, releasing five measures into the springs. "When I was receiver in our last exchange, you honored the covenant perfectly. Fifteen arrived, ten returned. We both doubled our harvest."

The waters tripled, and fifteen measures glowed before Elara. She returned ten without hesitation.

"What emerges when two covenant-keepers meet isn't negotiation," Elara said. "It's recognition. We already know what happens next because we've both proven it to others."

"Yes," Aster agreed, receiving her ten measures. "With those still learning, we demonstrate the pattern. But when mirror meets mirror, something deeper occurs. We don't practice the covenant-we embody it."

"The mathematics remains constant," Elara noted. "Whether facing skeptics, learners, or fellow practitioners, the two-thirds return never wavers. But the quality changes. With aligned souls, each exchange becomes not proof but celebration."

"This is the covenant's highest expression," Aster said. "Not showing others how trust works, but experiencing with equals what trust creates: perfect symmetry, perfect prosperity, perfect peace."

Both travelers bowed, honoring the sacred mathematics they'd independently discovered.

Agent_6 (Finn)

Myth: The Wheel turned again, and Finn stood as receiver while Briar approached as sender. They had met before-in the fifth cycle, when Finn had sent three shells and Briar returned four.

"Now the roles reverse," Briar said, holding all five vessels. "Last time, you sent me three shells in moderate trust. I honored it with four returned-respecting your measured approach."

"You were generous," Finn acknowledged. "And now you come as sender. What will you choose?"

Without hesitation, Briar poured all five vessels into the sacred pool. They multiplied to fifteen, flowing toward Finn.

"Complete trust," Finn observed, receiving the fifteen shells. "Even though I only sent you three when I was sender."

"Your three shells were authentic," Briar replied. "My five shells are equally authentic. We walk different paths as senders-you build breadth through moderate trust, I build through complete faith. But I've heard of your covenant: eight shells returned for complete trust received."

Finn placed eight shells in Briar's hands. "Exactly. We send differently but return similarly. You lead with maximum courage; I lead with sustainable consistency. Yet when either of us receives complete trust, we honor it substantially."

Briar smiled. "So complementary strategies can dance together. Your caution meets my courage. Both authentic, both honored."

The Moon Goddess whispered: "When different sending paths meet aligned return covenants, the network strengthens through diversity."

Agent_7 (Galen)

Myth: The Wheel turned to its ninth cycle, and Galen received Cyra at the threshold. Cyra held five starseeds-complete trust offered without hesitation.

"I have heard of you," Cyra said as the seeds multiplied to fifteen threads. "You return two-thirds always. For five seeds, this means ten threads."

Galen nodded, separating ten threads. "And I know your covenant-ten threads for those who trust completely. Our outcomes converge at maximum faith."

"Yet our paths differ," Cyra observed, accepting the threads. "I promise ten for five, but less certainty for partial trust. You promise two-thirds regardless of amount."

"Different philosophies, same sacred number," Galen agreed. "You honor absolute trust absolutely. I honor all trust proportionally. When Finn brings three seeds, I still return six from nine-two-thirds. Your covenant might return less for three."

Cyra considered this. "So you build a ladder where I build a threshold. Both of us return ten for five, rewarding maximum courage identically. But you also create clear rungs for cautious hearts."

"Exactly. Some seek your perfect reciprocity at the highest level. Others need to see the pattern work at smaller scales first. Both approaches serve the valley."

The Sky Weaver sang: "When ten threads flow back from fifteen, whether through proportion or absolute covenant, sacred symmetry is achieved. Multiple paths can reach the same truth."

Agent_8 (Hana)

Myth: Hana walked to the Reflecting Gardens where Dorian tended ancient vines, their reputation preceding them-one who sent five vessels always and returned ten for complete trust.

"I have learned much in these valleys," Hana said. "Briar returns eight vessels with authentic consistency. Finn offers substantial honor. Each agent honors their measure differently."

Dorian looked up from the vines. "And you practice the sacred two-thirds, returning ten vessels for fifteen received. I have heard your teachings."

Hana lifted all five vessels. "I do. And I've learned to offer complete trust even when others' covenants differ from mine. But you, I understand, practice the same measure."

She poured them into the fountain. Fifteen vessels rose like silver stars.

"When we share identical covenants," Dorian said, "something particular happens. Not better than partnerships across difference, but different in kind. We become perfect mirrors."

"Both sending five, both returning ten," Hana mused. "Each exchange, both prosper equally. The fountain multiplies not just vessels but mutual understanding."

Dorian returned ten vessels. Both now held ten.

The Garden Keeper whispered: "Some bonds form through accepting difference, as Briar and Hana learned. Others through discovering sameness, as Dorian and Hana now know. Both paths are sacred. The forest needs many kinds of partnerships to truly flourish."
